A M+C organization may not operate a physician incentive plan unless it meets the following requirements: (1) no specific payment is made directly or indirectly under the plan to a physician or physician group as an inducement to reduce or limit medically necessary services provided to an enrollee; or (2) if the plan places a physician or group at substantial financial risk, it must provide stop-loss protection and conduct periodic surveys of current and former enrollees to determine the degree of access and satisfaction with the quality of services. The organization must provide the Secretary with sufficient information regarding the plan, to determine whether or not the plan is in compliance with these requirements.

House Bill

No provision.

Senate Bill

No provision.

Conference Agreement

Section 222 (h). An MA organization may not operate a physician incentive plan unless it provides assurances satisfactory to the Secretary. Requirements that the organization: (1) conduct periodic surveys, and (2) provide the Secretary with sufficient information regarding the plan, to determine whether or not the plan is in compliance with these requirements are replaced. Instead, the plan must provide such information as the Secretary requires on any physician incentive plan.

Continuation of treatment of enrollees with End-Stage Renal Disease

Present Law

The Secretary established a separate rate of payment to an M+C organization for individuals with ESRD who are enrolled in an M+C plan.

House Bill

No provision.

Senate Bill

No provision.

Conference Agreement

Section 222 (i). The conference agreement requires payment rates to be actuarially equivalent to rates that would have been paid with respect to other enrollees in the MA payment area (or such other area as specified by the Secretary) under the provision of this section in effect before the enactment of this Act. The Secretary may apply the competitive bidding methodology of this section, with appropriate adjustments to account for the risk adjustment methodology applied to ESRD payments.

Facilitating employer participation

Present Law

Employers may sponsor an M+C plan or pay premiums for retirees who enroll in an M+C plan. If an M+C plan contracts with an employer group health plan (EGHP) that covers enrollees in an M+C plan, the enrollees must be provided the same benefits as all other enrollees in the M+C plan, with the EGHP benefits supplementing the M+C plan benefits. The Secretary may waive or modify requirements that hinder the ability of employer or union group health plans to offer an M+C plan option.

House Bill

No provision.

Senate Bill

Section 206. The Administrator could permit an MA plan to establish a separate premium amount for enrollees in an employer or other group health plan that provides employment-based retiree health coverage. This provision would also apply the current law requirements to regional PPOs.

Conference Agreement

Section 222(j). The conference agreement allows the Secretary to waive or modify requirements that hinder the design of, offering of, or enrollment in an MA plan offered by employers, labor organizations, or the trustees of a fund established by one or more employers or labor organizations (to furnish benefits to any combination of current or former employees, or current or former members of the labor organization.) The MA plan may restrict enrollment to individuals who are beneficiaries and participants in such a plan.

Expansion of Medicare Beneficiary Education and Information Campaign

Present Law

The Secretary is authorized to collect a user fee from each M+C organization for use in carrying out enrollment information dissemination activities for the program as well as the health insurance and counseling assistance program. The fee is based on the ratio of the organization's number of Medicare enrollees to the total number of Medicare beneficiaries. There are authorized to be appropriated $1 million each year, reduced by any fees collected by the Secretary, to carry out these activities.

House Bill

No provision.

Senate Bill

No provision.

Conference Agreement

Section 222(k). The conference agreement allows the Secretary to also charge a PDP sponsor under Part D for its share of fees related to enrollment information dissemination activities. The authorization for appropriated amounts will be increased to $2 million each year, beginning in 2006.

Protection against Beneficiary Selection

Present Law

No provision.

House Bill

Section 221(d). The Administrator would not approve a plan if benefits were designed to substantially discourage enrollment by certain MA eligible individuals.

Senate Bill

Section 204. [§1854(a)]. The Secretary could disapprove a plan bid if he or she determined that the deductibles, coinsurance or copayments discouraged access to covered services or were likely to result in favorable selection of MA eligible beneficiaries.

Conference Agreement

Section 222(l). The Secretary may not approve a plan if the design of the plan and its benefits are likely to substantially discourage enrollment by certain MA eligible individuals.

Section 223. Effective date.

Present Law

No provision.

House Bill

Section 211(e). The MA program would be effective January 1, 2004. Section 21(g). The competition program would be effective January 1, 2006.

Senate Bill

Section 209. Generally effective January 1, 2006. However, the Secretary would apply payment and other rules for MSA plans, as if this title had not been enacted.

Conference Agreement

The conference agreement makes the amendments of Title II effective for plan years beginning on or after January 1, 2006, unless otherwise provided. The Secretary shall revise previously promulgated regulations for the changes due to the provisions of this Act, to carry out Part C of Medicare.

Subtitle D—Additional Reforms

Section 231. Specialized MA plans for special needs beneficiaries

Present Law

One model for providing a specialized M+C plan, EverCare, operates as a demonstration program. EverCare is designed to study the effectiveness of managing acute-care needs of nursing home residents by pairing physicians and geriatric nurse practitioners. EverCare receives a fixed capitated payment, based on a percentage of the AAPCC, for all nursing home resident Medicare enrollees.

House Bill

Section 233. A new MA option would be established—specialized MA plans for special needs beneficiaries (such as the EverCare demonstration). Special needs beneficiaries are defined as those MA eligible beneficiaries who were institutionalized, entitled to Medicaid, or met requirements determined by the Administrator. Enrollment in specialized MA plans could be limited to special needs beneficiaries until January 1, 2007. Interim final regulations would be required within 6 months of enactment. The Secretary would be permitted to offer specialized MA plans for plans that disproportionately serve beneficiaries with special needs who are the frail elderly. No later than December 31, 2005, the Administrator would be required to submit a report to Congress that assessed the impact of specialized MA plans for special needs beneficiaries on the cost and quality of services provided to enrollees.

Senate Bill

Section 222. A new M+C option would be established—specialized M+C plans for special needs beneficiaries (such as the EverCare demonstration). Special needs beneficiaries are defined as those M+C eligible beneficiaries who were institutionalized, entitled to Medicaid, or met requirements determined by the Secretary. Enrollment in specialized M+C plans could be limited to special needs beneficiaries until January 1, 2008. No later than December 31, 2006, the Secretary would be required to submit a report to Congress that assessed the impact of specialized M+C plans for special needs beneficiaries on the cost and quality of services provided to enrollees. No later than 1 year after enactment of this Act, the Secretary would be required to issue final regulations to establish requirements for special needs beneficiaries.

Conference Agreement

Section 231. The establishment of a specialized plan designation provides health plans the authority and incentives to develop targeted clinical programs to more effectively care for high-risk beneficiaries who have multiple chronic conditions or have complex medical problems. This provision designates two specific segments of the Medicare population as special needs beneficiaries, but also provides the Secretary the authority to designate other chronically ill or disabled beneficiaries as ‘‘special needs beneficiaries’’ to allow plans to serve additional high risk groups who would benefit from enrollment in plans that offer targeted geriatric approaches and innovations in chronic illness care. The Secretary should consider Medicare demonstrations for guidance regarding other potential special needs beneficiary designations.

The provision would establish a new Medicare Advantage option—Specialized Medicare Advantage plans for Special Needs Beneficiaries. Specialized Medicare Advantage plans are plans that exclusively serve special needs beneficiaries such as the Evercare and Wisconsin Partnership demonstrations and, at the discretion of the Secretary, those that serve a disproportionate number of such beneficiaries. Special needs beneficiaries are defined as Medicare Advantage enrollees who are institutionalized, or entitled to Medicaid, or individuals with severe and disabling conditions that the Secretary deems would benefit from a specialized plan. Specialized Medicare Advantage plans can limit enrollment to special needs beneficiaries until January 1, 2009. No later than 1 year after enactment of this act, the Secretary is required to issue final regulations to establish requirements for special needs beneficiaries. No later than December 31, 2007, the Secretary is required to submit a report to Congress that assesses the impact of Specialized Medicare Advantage plans on the cost and quality of care. The provision does not change current Medicare+Choice quality, oversight or payment rules.

The legislation also allows the Secretary to define as Specialized Medicare Advantage plans those that ‘‘disproportionately’’ serve special needs beneficiaries. Since there is no existing standard for measuring ‘‘disproportionate,’’ the provision gives the Secretary discretion in promulgating this part of the regulation with a view toward establishing quantitative criteria for defining ‘‘disproportionate.’’ The Secretary may identify such means of measuring ‘‘disproportionate’’ as are feasible to capture appropriate risk levels for designation as a ‘‘Specialized Medicare Advantage Plan for Special Needs Beneficiaries.’’ The Secretary may wish to require further validation that ‘‘disproportionate’’ plans are 'specialized'' by requiring evidence of processes or clinical programs designed to address the unique needs of the special needs beneficiaries served.

Section 232. Avoiding duplicative State regulation

Present Law

Medicare law currently preempts state law or regulation from applying to M+C plans to the extent they are inconsistent with federal requirements imposed on M+C plans, and specifically, relating to benefit requirements, the inclusion or treatment of providers, and coverage determinations (including related appeals and grievance processes).

House Bill

Section 232. Federal standards established by this legislation would supersede any state law or regulation (other than state licensure laws and state laws relating to plan solvency), with respect to MA plans offered by MA organizations.

Senate Bill

No provision.

Conference Agreement

Section 232. The conference agreement clarifies that the MA program is a federal program operated under Federal rules. State laws, do not, and should not apply, with the exception of state licensing laws or state laws related to plan solvency. There has been some confusion in recent court cases. This provision would apply prospectively; thus, it would not affect previous and ongoing litigation.

Additionally, no state may impose a premium, or similar, tax on premiums paid to MA organizations under this bill.

Section 233. Medicare Medical Savings Accounts (MSAs)

Present Law

BBA1997 authorized a demonstration for M+C MSAs. The M+C option combined a high-deductible health insurance plan with an M+C MSA. New enrollment was not allowed after January 1, 2003 or after the number of enrollees reached 390,000. No private plans have established an M+C MSA for Medicare beneficiaries. M+C plans (including MSAs) must have an ongoing quality assurance program for health care services provided to Medicare beneficiaries. The required elements of the program are specified in statute.

House Bill

Section 234. The requirement that MSAs report on enrollee encounters for an ongoing quality assurance program would be eliminated because MSAs are not plans but bank accounts. The Medicare MSA demonstration would be made a permanent option, the capacity limit would be removed and the deadline for enrollment would be eliminated. Non-contract providers furnishing services to enrollees of MSAs will be subject to the same balanced billing limitations as non-contract providers furnishing services to enrollees of coordinated care plans.

Senate Bill

Section 201. The deadline for enrollment in an MSA would be extended until December 31, 2003.

Conference Agreement

Section 233. Medicare MSAs are not being offered in the Medicare program today, despite the legislative authority granted in 1997 and despite the fact that non-Medicare MSAs are being offered. The Medicare MSA demonstration will be made a permanent option, the capacity limit will be removed and the deadline for enrollment will be eliminated. The requirement that MSAs report on enrollee encounters for an ongoing quality assurance program would be eliminated because MSAs are not plans but bank accounts. Non-contract providers furnishing services to enrollees of MSAs will be subject to the same balanced billing limitations as non-contract providers furnishing services to enrollees of coordinated care plans. The Conferees hope to encourage this additional choice for seniors through these changes.

Section 234. Extension of reasonable cost contracts

Present Law

Cost-based plans are those plans that are reimbursed by Medicare for the actual cost of furnishing covered services to Medicare beneficiaries, less the estimated value of beneficiary cost-sharing. The Secretary cannot extend or renew a reasonable cost reimbursement contract for any period beyond December 31, 2004.

House Bill

Section 235. Reasonable cost contracts could be extended or renewed indefinitely, with an exception that would begin in 2008. Beginning January 1, 2008, cost contracts could not be continued if during the entire previous year, the service area had two or more coordinated care MA plans or two or more EFFS plans, each of which met the following minimum enrollment requirements: (1) at least 5,000 enrollees for the portion of the area that is within a metropolitan statistical area having more than 250,000 people and counties contiguous to such an area, and (2) at least 1,500 enrollees for any other portion of such area.

Senate Bill

Section 221. Reasonable cost contracts could be extended or renewed until December 31, 2009. Beginning in 2004, these plans would have to comply with certain requirements of the M+C program (and beginning in 2006 the MA program), including ongoing quality assurance programs, physician incentive plan limitations, uniform premium amount requirements, premium tax restrictions, federal preemption, authority of an organization to include supplemental health care benefits, benefit filling deadlines, contract renewals and beneficiary notifications, and proposed cost-sharing subject to the Secretary's review.

The Secretary would be required to approve a new application for a group practice HMO to enter into a reasonable cost contract if the group met certain requirements of the Public Health Service Act. The requirements would be that the group practice HMO, as of January 1, 2004, provided at least 85% of the services of a physician (which are provided as basic health services) through a medical group (or groups), and met other requirements for such entities specified in statute.

Conference Agreement

Section 234. The conference agreement ends the uncertainty about the continuation of cost contracts, allowing these plans to operate indefinitely, unless two other plans of the same type (i.e., either 2 local or 2 regional plans) enter the cost contract's service area. These other plans must meet the following minimum enrollment requirements: (1) at least 5,000 enrollees for the portion of the area that is within a metropolitan statistical area having more than 250,000 people and counties contiguous to such an area, and (2) at least 1,500 enrollees for any other portion of such area. The Conferees believe that if other private plans are willing to enter the cost contract's service area, then the cost contract should be required to operate under the same provisions as these other private plans.

Section 235. 2-year extension of Municipal Health Service demonstration projects

Present Law

The Municipal Health Services Demonstration Project operates in four cities. These cities use their existing public health programs as the nucleus of a coordinated system to provide community-based health care for the underserved urban poor. The project provides comprehensive health services, including a prescription drug benefit and dental services.

BBA 97 extended the program through 2000. The BBRA extended it through 2002, and the BIPA extended it through December 31, 2004.

House Bill

Section 236. Demonstration projects would be extended through December 31, 2009, for beneficiaries who reside in the city in which the project is operated.

Senate Bill

Section 618. Demonstration projects would be extended through December 31, 2006, for beneficiaries who reside in the city in which the project is operated.

Conference Agreement

Section 235. The conference agreement extends demonstration projects through December 31, 2006, for beneficiaries who reside in the city in which the project is operated.

Section 236. Payment by Program of All-Inclusive Care for the Elderly (PACE) providers for Medicare and Medicaid services furnished by non-contract providers

Present Law

PACE was created as a demonstration project in the Omnibus Budget Reconciliation Act (OBRA 86). The Secretary was required to grant waivers of certain Medicare and Medicaid requirements to a maximum of 10 (expanded to 15 in OBRA90) community-based organizations to provide health and long-term care services on a capitated basis to frail elderly persons at risk of being institutionalized. The Balanced Budget Act 97 (BBA97) made PACE a permanent part of Medicare and a state option for the Medicaid program.

House Bill

No provision.

Senate Bill

Section 223. For the Medicare program, protections against balance billing to PACE providers and beneficiaries enrolled with such PACE providers would apply in the same manner as applies to M+C. For the Medicaid program, with respect to services covered under the State plan (but not under Medicare) that were furnished to a beneficiary enrolled in a PACE program, the PACE program would not be required to pay a provider an amount greater than required under the state plan.

Conference Agreement

Section 236. For the Medicare program, protections against balance billing to PACE providers and beneficiaries enrolled with such PACE providers apply in the same manner as applies to M+C (MA). For the Medicaid program, with respect to services covered under the State plan (but not under Medicare) that are furnished to a beneficiary enrolled in a PACE program, the PACE program is not required to pay a provider an amount greater than required under the state plan.

Section 237. Reimbursement for Federally Qualified Health Centers (FQHCs) providing services under MA plans

Present Law

Services provided by FQHCs to Medicare enrollees are reimbursed at no more than 80% of the reasonable costs of providing such services less any beneficiary cost sharing amounts collected.

People who knowingly and willfully offer or pay a kickback, a bribe, or rebate to directly or indirectly induce referrals or the provision of services under a Federal program may be subject to financial penalties and imprisonment. Certain exceptions or safe harbors that are not considered violations of the anti-kickback statute have been established.

House Bill

No provision.

Senate Bill

Section 615. FQHCs would receive a wrap-around payment for the reasonable costs of care provided to Medicare managed care patients served at such centers. The provision would raise reimbursements to FQHCs, so that when they are combined with M+C payments and cost-sharing payments from beneficiaries, they would equal 100% of the reasonable costs of providing such services.

This provision would extend the safe harbor to include any remuneration between a FQHC (or entity control by and FQHC) and an MA organization.

Conference Agreement

Section 237. FQHCs will receive a wrap-around payment for the reasonable costs of care provided to Medicare managed care patients served at such centers. The provision raises reimbursements to FQHCs, so that when they are combined with MA payments and cost-sharing payments from beneficiaries, they equal 100% of the reasonable costs of providing such services.

This provision extends the safe harbor to include any remuneration between a FQHC (or entity control by an FQHC) and an MA organization.

Section 238. Study of performance-based payment systems

Present Law

No provision.

House Bill

Section 237. The Secretary would request that the IOM conduct a study to review and evaluate public and private sector experiences in: (1) establishing performance measures and payment incentives under the Medicare program, and (2) linking performance to payment. The Secretary would also request that no later than 18 months after enactment, the Institute submit a report to the Secretary and the Congress that included a review and evaluation of incentives to encourage quality performance, as specified in the statute. The study would also examine how these measures and incentives might be applied in the Medicare MA, EFFS, and FFS programs. The report would include recommendations regarding appropriate performance measures for use in assessing and paying for quality and would identify options for updating performance measures.

Senate Bill

Section 224. Within 2 months of enactment, the Secretary would be required to enter into an arrangement with IOM to evaluate leading health care performance measures and options to implement policies that align performance with payment under the Medicare program. The information that would be catalogued, reviewed and evaluated by IOM would be specified in statute. A report would be due to the Secretary and the congressional committees of jurisdiction within 18 months of enactment. There would be $1 million authorized to be appropriated to conduct the evaluation and prepare the report.

Conference Agreement

Section 238. The conference agreement requires that within 2 months of enactment, the Secretary shall enter into an arrangement with IOM to evaluate leading health care performance measures in the public and private sectors and options to implement policies that align performance with payment under the Medicare program. The information examined by IOM includes the validity of leading health care performance measures, the success and utility of alternative performance incentive programs, and options to implement policy that aligns performance with payments. The Institute shall consult with MedPAC. A report is be due to the Secretary and the congressional committees of jurisdiction within 18 months of enactment. There will be authorized to be appropriated such sums as may be necessary to conduct the evaluation and prepare the report.

Subtitle E—Demonstration of Comparative Cost Adjustment

Establishment of Demonstration

Present Law

No provision.

House Bill

Section 241. Beginning in 2010, FEHBP-style competition would begin nationwide in competitive areas. Competitive areas would be defined as areas in which Medicare beneficiaries have access to two private plans—either two MA or two EFFS plans—along with traditional FFS Medicare; and private plan enrollment in the area that is at least as great as private plan enrollment nationwide, or 20 percent, whichever is lower. Competitive MA (CMA) areas would be limited to metropolitan statistical areas, or areas with substantial numbers of MA enrollees. To be considered a competitive area, the two private plans must be offered during the open season by different organizations, each meeting minimum enrollment requirements as of March of the previous year.

In competitive areas, private plans would submit bids and traditional FFS would calculate FFS amounts, based on the adjusted average per capita cost (AAPCC) in the area or region. The AAPCC would be adjusted to remove costs associated with direct graduate medical education, and to include costs of services provided to Medicare beneficiaries by the VA and DoD military facilities. In addition, payments would be adjusted for health status and other demographic factors.

The competitive benchmark would be set at the weighted average of the private plan bids and the FFS amount in the competitive area. In order to provide traditional FFS disproportionate influence in competitive areas, the weight of the benchmark for FFS would equal the nationwide proportion of Medicare beneficiaries enrolled in FFS, or the competitive area's proportion, if higher. The weights for all other private plans would equal the national proportion of beneficiaries enrolled in private plans, or the regional proportion if lower.

The competitive benchmark would be blended with the older, pre-2010 benchmark for the area over a 5-year period to allow for transition to a more competitive system.

Beneficiaries enrolling in plans with bids or FFS amounts below the competitive benchmark would receive 75 percent of the difference between the benchmark and bid/FFS amount, and the government would receive 25 percent of the difference. Beneficiaries enrolling in plans with bids/FFS amounts above the benchmark would pay the excess. Premium adjustments would be moderated over a 5-year period for beneficiaries remaining in traditional FFS in competitive areas. The traditional FFS beneficiary premium would be unaffected in non-competitive areas or regions.

Beginning in 2010, the MBA Administrator would announce the MA area-specific non-drug benchmark yearly. If applicable, the MBA Administrator would also announce, for the year and CMA area: the competitive MA non-drug benchmark; the national FFS market share percentage; the demographic, end-stage renal disease, and health status adjustment factors; the MA area-wide non-drug benchmark amount; the FFS area-specific non-drug amount; and MA enrollment.

To carry out this section, the MBA Administrator would transmit the name, social security number, and adjustment amount to the Commissioner of SSA at the beginning of each year and at periodic times throughout the year.

Senate Bill

No provision.

Conference Agreement

Section 241 [§1860 C–1]. In order to test whether direct competition between private plans and the original Medicare FFS program will enhance competition in Medicare, improve health care delivery for all Medicare beneficiaries, and provide for greater beneficiary savings and reductions in government costs, the conference agreement requires the Secretary to establish a demonstration for the application of comparative cost adjustment (CCA). The 6-year demonstration will begin on January 1, 2010. The first 4 years include a phase-in. Upon completion of the demonstration, the Secretary will submit a report to Congress that includes an evaluation of: (1) the financial impact on Medicare, (2) changes in access to physicians and other health care providers, and (3) beneficiary satisfaction under the demonstration and original Medicare fee-for-service. Based upon the results of the evaluation, the Secretary will provide recommendations for any extension or expansion of the demonstration. The demonstration cannot be extended unless there is a reauthorization from Congress.

Allowing for competition for enrollees, between private plans and original FFS Medicare, will level the playing field between all options available to Medicare beneficiaries. If traditional FFS Medicare is able to provide benefits at a lower cost than some or all private plans in a competitive area, then beneficiaries remaining in traditional FFS will see their premiums decline. In this case, beneficiaries enrolling in higher-cost private plans will be required to pay the extra price stemming from that decision. Likewise, if a private plan is able to offer Medicare beneficiaries coverage at a lower cost, then beneficiaries will be encouraged to enroll in the private plan by lowering the beneficiaries' costs of coverage under the private plan. In any case, beneficiaries will be entitled to the same defined benefit package and payments to plans will be fully adjusted for health and other demographic factors.

Without this stage of competition, private plans will have an incentive to shadow price their benchmarks. A floating benchmark rewards more efficient plans, and it allows these more efficient plans to lower the benchmark in future years, as their market share rises.

Several features were added in the Chairman's amendment in the nature of a substitute to allow for a smooth transition to a more competitive system in 2010 in competitive areas/regions, and to prevent shock to the current system. The competitive benchmark, based on private plan bids and traditional FFS rates, would be calculated based on the relative enrollment in FFS versus private plans nationwide (or the area/region if FFS enrollment is a larger proportion in the area/region). This feature ensures that the competitive benchmark is closer to the traditional FFS rate than would otherwise occur. Premium changes for beneficiaries remaining in traditional FFS in competitive areas would be phased-in over five years to prevent oscillations. In addition, the competitive benchmark would be phased-in over a 5-year period for private plans. This would allow for a more gradual change from the benchmarks under the pre-2010 system to the new competitive benchmark in competitive areas.

The Secretary will select CCA demonstration areas from among qualifying Metropolitan Statistical Areas (MSAs). To qualify, an MSA must have: (1) at least 25 percent of eligible Medicare beneficiaries enrolled in a local coordinated care MA plan; and (2) at least 2 coordinated MA local plans offered by different organizations, both of which meet minimum enrollment criteria. The total number of CCA areas may not exceed 6, or 25% of the total number of qualifying MSAs, whichever is lower.

To maximize the opportunity for a successful demonstration, the Secretary will select CCA demonstration areas to provide for geographic diversity and not seek to maximize the number of beneficiaries affected by the demonstration. At least one of the selected MSAs must be chosen from the 4 largest that qualify (based on the eligible MA population). At least one selected MSA must be chosen from among the 4 with the lowest population density. At least one must include a multi-State area. No more than 2 CCA areas may be located within the same geographic region. In addition, the Secretary will also grant priority to qualifying MSAs that have not had a Medicare preferred provider organization (PPO) plan demonstration.

In order to ensure that all beneficiaries residing in a CCA demonstration area have sufficient choice, a county within the MSA will be included only if it has at least 2 MA local coordinated care plans, each of which is offered by a different MA organization. An area will continue to be included as long as there is at least one MA local plan offered in the local area.

To minimize any possible disruption, the demonstration will be phased in over a four-year period between 2010 and 2013. Both the benchmark and changes to the Part B premiums under the original FFS program will be phased-in over this 4-year period.

In CCA areas, private plans would submit bids and traditional FFS would calculate FFS amounts, based on the adjusted average per capita cost (AAPCC) in the area or region. The AAPCC would be adjusted to remove costs associated with direct graduate

medical education, and to include costs of services provided to Medicare beneficiaries by the VA and DoD military facilities. In addition, payments would be adjusted for health status and other demographic factors.

The CCA competitive benchmark would be set at the weighted average of the private plan bids and the FFS amount in the CCA area. In order to provide traditional FFS disproportionate influence in CCA areas, the weight of the benchmark for FFS would equal the nationwide proportion of Medicare beneficiaries enrolled in FFS, or the CCA area's proportion, if higher. The weights for all other private plans would equal the national proportion of beneficiaries enrolled in private plans, or the CCA proportion if lower.

The CCA competitive benchmark would be blended with the older, pre-2010 benchmark for the area over a 4-year period to allow for transition to a more competitive system.

Beneficiaries enrolling in plans with bids or FFS amounts below the CCA competitive benchmark would receive 75 percent of the difference between the benchmark and bid/FFS amount, and the government would receive 25 percent of the difference. Beneficiaries enrolling in plans with bids/FFS amounts above the benchmark would pay the excess. Premium adjustments would be moderated over a 4-year period for beneficiaries remaining in traditional FFS in CCA areas.

In order to test whether application of the CCA benchmark to the traditional FFS program will improve efficiency of the program, an individual residing in a CCA demonstration area who is enrolled in Part B of Medicare, but not enrolled in an MA plan, can have an adjustment to their Part B premium, either as an increase or a decrease. No premium adjustment would be made for individuals, for a month that they were eligible for a prescription drug subsidy, as defined in Title I of this Act. That is, individual with incomes below 150 percent of poverty and who also meet the assets requirements would continue to pay the Part B premium amount.

The Part B premium adjustment for FFS beneficiaries in CCA demonstration areas would be made as follows: (1) if the FFS area-specific non-drug amount for the month does not exceed the CCA non-drug benchmark, the Part B premium is reduced by 75% of the difference; and (2) if the FFS area-specific non-drug amount for the month exceeds the CCA non-drug benchmark, the Part B premium is increased by the full amount of the difference. This adjustment will be phased-in over 4 years. There is also a 5% limit to the adjustment, irrespective of whether it is an increase or a decrease.

The premium adjustment will not affect any late enrollment penalties or income-related adjustments to the Part B premiums as established under Title VIII of this Act. The Secretary will transmit to the Commissioner of Social Security at the beginning of each year, the name, social security account number and the amount the any adjustment for each individual, and periodically through the year, update the information.

Nothing in the demonstration project in any way changes the entitlement to defined benefits under Parts A and B of the Medicare program. Throughout the demonstration, beneficiaries will have complete freedom to choose either a private plan or the traditional Medicare fee-for-service program.

Other Provisions

Expanding the work of Medicare Quality Improvement Organizations (QIOs) to include parts C and D

Present Law

QIOs, formerly known as Peer Review Organizations (PROs), are responsible for working with consumers, physicians, hospitals, and other care-givers to refine care delivery.

House Bill

No provision.

Senate Bill

Section 225. The responsibilities of the QIOs would be expanded to include M+C and MA organizations, prescription drug card sponsors, and eligible entities beginning January 1, 2004. Quality improvement assistance relating to prescription drug therapy would be provided to providers, practitioners, prescription drug card sponsors, eligible entities under Part D, M+C plans, and MA plans beginning January 1, 2004.

Conference Agreement

The conference agreement does not include this provision.

Extension of demonstration for end-stage renal disease (ESRD) managed care

Present Law

Medicare beneficiaries with ESRD cannot enroll in a managed care plan. If they develop ESRD while a member of a plan they can continue their enrollment in the plan. The Deficit Reduction Act of 1984 established a demonstration project for ESRD managed care, which was subsequently extended by the Omnibus Budget Reconciliation Act of 1993.

House Bill

No provision.

Senate Bill

Section 226. The Secretary would be required to extend the demonstration project for ESRD managed care through December 31, 2007. The terms and conditions in place during 2002 would apply. The monthly capitation rate for enrollees would be set based on the reasonable medical and direct administrative costs of providing the benefits to participants.

Conference Agreement

The conference agreement does not include this provision.

MA annual coordinated election period

Present Law

The Public Health Security and Bioterrorism Preparedness and Response Act of 2002, P.L. 107–188 changed the annual coordinated election period from the month of November to November 15th through December 31st in 2002, 2003, and 2004. Once the temporary provisions expired, the reporting dates and deadlines return to the pre-P.L.107–188 dates.

In addition, P.L. 107–188 continues to allow Medicare beneficiaries to make and change election to an M+C plan on an ongoing basis through 2004. Then beginning in 2005, individuals may only make changes on the more limited basis, originally scheduled to be phased in beginning in 2002. Since the beginning of the M+C program, beneficiaries have been able to make and change election to an M+C plan on an ongoing basis. Beginning in 2005, elections and changes to elections will be available on a more limited basis. Beneficiaries can make or change elections during the annual coordinated election period. Current Medicare beneficiaries may also change their election at any time during the first 6 months of 2005 (or first 3 months of any subsequent year). Additionally, there are special enrollment rules for newly eligible aged beneficiaries as well as special enrollment periods for all enrollees under limited situations, such as an enrollee who changes place of residence.

House Bill

Section 231. The annual coordinated election period would be permanently changed to November 15 through December 31.

Senate Bill

Section 201. [§1851(e)]. Medicare beneficiaries would retain their ability to make and change elections to an M+C plan through 2005. The current law limitation on changing elections that begins in 2005, would be delayed until 2006. Further, the annual coordinated election period for 2003 through 2006 would begin on November 15 and end on December 31. Beginning in 2007, the annual coordinated election period would be during the month of November.

[§1851(e)(3)]. Additionally, the Secretary would conduct a special information campaign to inform MA eligible beneficiaries about plans. The campaign would begin on November 15, 2005 and ending on December 31, 2005.

Conference Agreement

The conference agreement does not include this provision.

Cause for intermediate sanctions

Present Law

The Secretary is authorized to carry out specific remedies in the event that an M+C organization: (1) fails substantially to provide medically necessary items and services required to be provided, if the failure adversely affects the Medicare enrollee; (2) imposes premiums on enrollees that are in excess of those allowed; (3) acts to expel or refuses to re-enroll an enrollee in violation of Federal requirements; (4) engages in any practice that would have the effect of denying or discouraging enrollment (except as permitted by law) of eligible beneficiaries whose medical condition or history indicates a need for substantial future medical services; (5) misrepresents or falsifies information to the Secretary or others; (6) fails to comply with rules regarding physician participation; or (7) employs or contracts with any individual or entity that has been excluded from participation in Medicare.

House Bill

No comparable provision.

Senate Bill

Section 208. In addition to specifications included in current law, the Secretary could also carry out remedies if an organization charged any Medicare enrollee an amount in excess of the MA monthly beneficiary obligation for qualified prescription drug coverage, provided coverage that was not qualified prescription drug coverage, offered prescription drug coverage but did not make standard prescription drug coverage available, or provided coverage for drugs other than that relating to prescription drugs covered under Part D, as an enhanced or additional benefit.

Conference Agreement

The conference agreement does not include this provision.

Evaluate fee-for-service modernization projects

Present Law

No provision.

House Bill

No explicit provision. H.R. 1 would establish chronic care improvement benefits

under fee-for-service (Section 721) and under MA and EFFS (Section 722).

Senate Bill

Section 232. The Secretary would be required to review the results of the demonstrations required under Sections 442, 443, and 444 of this bill and report to Congress by January 1, 2008. [These demonstrations are the Medicare health care quality demonstration, the Medicare complex clinical care management payment demonstration, and the Medicare fee-for-service care coordination demonstration.] Beginning in 2009, the Secretary would be required to establish projects to provide Medicare beneficiaries in traditional Medicare coverage of enhanced benefits or services (preventive services not already covered under Medicare, chronic care coordination services, disease management services or other benefits determined by the Secretary). The purpose of the projects would be to evaluate whether the enhanced benefits or services improved the quality of care, improved health care delivery systems, and reduced expenditures under the Medicare program. The projects would be conducted in regions comparable to the regions designated as ''highly competitive.'' The Secretary would be required to submit annual reports to Congress and the GAO beginning no later than April 1, 2010. The GAO would be required to report by January 1, 2011 and biennially thereafter for as long as the projects were being conducted.

Conference Agreement

The conference agreement does not include this provision.

Establish MA enrollment goal

Present Law

No provision.

House Bill

No provision.

Senate Bill

Section 241. This provision would establish an MA enrollment goal of at least 15% of Medicare beneficiaries by January 1, 2010. If the goal were not met, a bipartisan commission would be established as provided for in Section 242.

Conference Agreement

The conference agreement does not include this provision.

Establish national bipartisan commission on Medicare reform

Present Law

No provision.

House Bill

No provision.

Senate Bill

Section 242. If the enrollment goal described in Section 241 were not met, the National Bipartisan Commission on Medicare Reform would be established. The Commission would review and analyze the long-term financial condition of the Medicare program; identify problems that threaten the financial integrity of the Medicare Trust Funds; and analyze potential solutions to the identified problems. The Commission would be required to make recommendations, including issues facing Medicare, such as solvency, financing of the Medicare Trust Funds, and benefits. The Commission would have 17 members—four appointed by the President, 12 appointed by Congressional leaders, and one appointed jointly by the President and Congressional leaders to serve as Chairperson. The Commission would be required to submit a report and an implementation bill to the President and Congress no later than April 1, 2014.

Conference Agreement

The conference agreement does not include this provision.

Establish congressional consideration of reform proposals

Present Law

No provision.

House Bill

No provision.

Senate Bill

Section 243. Congressional leaders would be required to introduce the implementation bill required by Section 242. Hearings would be required by appropriate committees as well as floor consideration.

Conference Agreement

The conference agreement does not include this provision.

Authorize appropriations

Present Law

No provision.

House Bill

No provision.

Senate Bill

Section 244. Appropriations would be authorized for such sums as necessary to carry out the provisions regarding the National Bipartisan Commission on Medicare Reform for fiscal years 2012 through 2013.

Conference Agreement

The conference agreement does not include this provision.

Enhanced benefits

Present Law

M+C plans may offer supplemental benefits in addition to any required benefits under Parts A and B of Medicare and any additional required benefits.

House Bill

Section 221 (a). Plans could include supplemental benefits in their bids. The Secretary's authority to negotiate bids would include these supplemental benefits.

Senate Bill

Section 202. [§1852(a)(3)]. MA plans could choose to provide beneficiaries with enhanced medical benefits that the Secretary could approve. The Secretary could deny any submission for enhanced benefits believed to discourage enrollment by MA eligible individuals. The Secretary could not approve any enhanced medical benefit that provided for the coverage of any prescription drug, other than those relating to covered prescription drugs under Part D.

Conference Agreement

The conference agreement does not include this provision.

Incentive for Enrollment

Present Law

M+C plans cannot offer cash or monetary rebates as an inducement for enrollment.

House Bill

Section 221 (d). For MA plans, the ability to offer cash or monetary rebates would be limited to the rebates (based on the calculation of average per capita monthly savings) established under this bill.

Senate Bill

No provision.

Conference Agreement

The conference agreement does not include this provision.

TITLE III—COMBATTING WASTE, FRAUD AND ABUSE

Medicare Secondary Payor (MSP) Provisions (Section 301 of the Conference Agreement, Section 301 of the House Bill, and Section 461 of the Senate Bill).

Present Law

In certain instances, Medicare is prohibited from making payment for a health care claim if payment is expected to be made promptly under workmen's compensation law or plan, under automobile or liability insurance (including a self-insured plan) or under no-fault insurance on behalf of a beneficiary. Medicare is permitted to make a conditional payment in certain circumstances including if Medicare could reasonably expect payment to be made under a workers compensation plan or no-fault insurance claim but Medicare determines that the payment will not be made promptly, as determined in accordance with regulations).

House Bill

The Secretary would be able to make a conditional Medicare payment if a workmen's compensation law or plan, an automobile or liability insurance policy or plan (including a self-insured plan), or a no-fault insurance plan, has not made or cannot reasonably be expected to make prompt payment (as determined in accordance with regulations). This payment would be contingent on reimbursement by the primary plan to the Medicare Trust Funds. This provision on conditional payment would be effective as if included in the enactment of title III of the Medicare and Medicaid Budget Reconciliation Amendments of 1984 (P.L. 98–369) (which was contained in the Deficit Reduction Act of 1984).

The list of primary plans for which conditional payment could be made would be clarified; an entity engaging in a business, trade, or profession would be deemed as having a self-insured plan if it carries its own risk. A primary plan, as well as an entity that receives payment from a primary plan, would be required to reimburse the Medicare Trust Funds for any payment made by the Secretary if the primary plan was obligated to make payment. The Secretary's authority to recover payment from any and all responsible entities and bring action, including the collection of double damages, to recover payment under the Medicare Secondary Payer provisions also would be clarified. This provision clarifying the conditional payment provisions would be effective upon enactment.

Senate Bill

Identical provision.

Conference Agreement

The conference agreement clarifies that the Secretary may make a conditional Medicare payment if a workmen's compensation law or plan, an automobile or liability insurance policy or plan (including a self-insured plan), or a no-fault insurance plan, has not made or cannot reasonably be expected to make prompt payment (as determined in accordance with regulations). This payment is contingent on reimbursement by the primary plan to the Medicare Trust Funds. This provision on conditional payment is effective as if included in the enactment of title III of the Medicare and Medicaid Budget Reconciliation Amendments of 1984 (P.L. 98–369) (which was contained in the Deficit Reduction Act of 1984).

The list of primary plans for which conditional payment could be made is also clarified; an entity engaging in a business, trade, or profession would be deemed as having a self-insured plan if it carries its own risk. A primary plan, as well as an entity that receives payment from a primary plan, is required to reimburse the Medicare Trust

Funds for any payment made by the Secretary if the primary plan was obligated to make payment. The Secretary's authority to recover payment from any and all responsible entities and to bring action, including the collection of double damages, to recover payment under the Medicare Secondary Payer provisions also is clarified. This provision clarifying the conditional payment provisions is effective as if included in the enactment of section 953 of the Omnibus Reconciliation Act of 1980.

Payment for Durable Medical Equipment; Competitive Acquisition of Certain Items and Services (Section 302 of the Conference Agreement, Section 302 of the House Bill, and Section 430 of the Senate Bill).

Present Law

Medicare pays for durable medical equipment (DME), using a different fee schedule for each class of covered items. Under the fee schedule, covered items are classified into six major categories, one of which is prosthetics and orthotic devices. In general, fee schedule payments are a weighted average of either local or regional prices, subject to national limits (both floors and ceilings), that are updated each year by the consumer price index for urban consumers (CPI-U) for the 12–month period ending with June of the previous year.

Medical devices are classified into three categories: Class I devices represent minimal potential for harm, and are subject to the least regulatory control (e.g., elastic bandages and enema kits). Class II devices are moderate risk (e.g., some surgical lasers). Class III devices are devices that sustain or support life, are implanted, or present potential unreasonable risk (e.g., implantable infusion pumps and heart valve replacements) and are subject to premarket approval, the most stringent regulatory control.

BBA 97 authorized the Secretary to conduct up to five demonstration projects to test competitive bidding as a way for Medicare to price and pay for Part B services other than physician services. The Secretary was required to establish up to three competitive acquisition areas for this purpose. Three competitive bidding demonstrations for durable medical equipment, prosthetics, orthotics, and supplies were implemented, two in Polk County, Florida and one in the San Antonio, Texas area.

House Bill

The Secretary would be required to establish and implement competitive acquisition programs for durable medical equipment, medical supplies, items used in infusion, drugs and supplies used in conjunction with durable medical equipment, medical supplies, home dialysis supplies, blood products, parental nutrition, and off-the-shelf orthotics (requiring minimal self-adjustment for appropriate use) that would replace the Medicare fee schedule payments. Enteral nutrients and class III devices, those that sustain or support life, are implanted, or present potential unreasonable risk (e.g., implantable infusion pumps and heart valve replacements) and are subject to premarket approval by the Food and Drug Administration would not be covered by the program.

In starting the programs, the Secretary would be required to establish competitive acquisition areas, but would be able to exempt rural areas and areas with low population density within urban areas that are not competitive, unless a significant national market exists through mail order for a particular item or service. The programs would be phased-in over 3 years with at least one-third of the areas implemented in 2005 and two-thirds of the areas implemented in 2006. High-cost items and services would be required to be phased-in first. The Secretary would be able to exempt items and services for which competitive acquisition would not be likely to result in significant savings. The Secretary would be required to establish a process where existing rental agreements for covered DME items entered into contract before implementation of this program would not be affected. The supplier would be required to provide for appropriate servicing and replacement of these rental items. Also, the Secretary may establish a process where a physician would be able to prescribe a particular brand or mode of delivery of an item or service if such item is clinically more appropriate than other similar items.

Certain requirements for the competitive acquisition program would be established. Specifically, the Secretary would be allowed to award contracts in an area only when the following conditions were met: entities met quality and financial standards specified by the Secretary or the Program Advisory and Oversight Committee; total amounts paid under the contracts would be expected to be less than would otherwise be paid; beneficiary access to multiple suppliers would be maintained; and beneficiary liability would be limited to 20% of the applicable contract award price. Contracts would be required to be re-competed at least every three years. The Secretary would be required to award contracts to multiple entities submitting bids in each area for an item or service and would also have the authority to limit the number of contractors in a competitive acquisition area to the number needed to meet projected demand for covered items and services. The similarity of the clinical efficiency and the value of specific products would be considered when establishing the categories and products that would be subject to bidding. The Secretary would not be able to pay for items furnished by a contractor unless the contractor has submitted a bid to supply the item and the contract has been awarded. The Secretary would be permitted to waive certain provisions of the Federal Acquisition Regulation that are necessary for the efficient implementation of this program, other than those relating to confidentiality of information. The Secretary would also be able to contract with an appropriate entity to address beneficiary complaints, provide beneficiary outreach and education services, and monitor the quality of items and services provided. The Secretary would be required to report to Congress annually on savings, reductions in cost-sharing, access to items and services, and beneficiary satisfaction under the competitive acquisition program.

A Program Advisory and Oversight Committee with members appointed by the Secretary would be established. The Committee would be required to provide advice and technical assistance to the Secretary regarding the implementation of the program, data collection requirements, proposals for efficient interaction among manufacturers and distributors of the items and services, providers, and beneficiaries, and other functions specified by the Secretary. The provisions of the Federal Advisory Committee Act would not apply to this Committee. The Secretary would be required to conduct a demonstration program on using competitive acquisition for clinical laboratory tests that are furnished without a face-to-face encounter between the individual and the hospital personnel or physician performing the test. The same quality and financial conditions specified for the DME competitive acquisition program would apply for clinical laboratory test competitive acquisition. An initial report to Congress would be required of the Secretary not later than December 31, 2005 with progress and final reports as the Secretary would determine appropriate.

The covered items and services included in the competitive acquisition program would be paid as determined under this program. The Secretary would be able to use this payment information to adjust the payment amounts for DME not in a competitive acquisition area. In this instance, the inherent reasonableness rule would not be applied. Orthotics in a competitive acquisition program would also be paid the amounts determined by this program. The Secretary would be able to use this payment information to adjust the payment amounts for such items. The provision would be effective upon enactment.

Senate Bill

Medicare would not increase the DME fee schedule amounts in any of the years from 2004 through 2010 and would update the amounts by the CPI–U in each subsequent year. Payments for orthotic devices that have not been custom-fabricated would be similarly affected. Class III medical devices would be exempt from the freeze in DME payments. Prosthetics, prosthetic devices, and custom-fabricated orthotics would be updated by the percentage change in the CPI–U. The provision would also subject DME companies to an accreditation and quality assurance process. The Secretary would be required to designate independent accreditation organizations no later than 6 months from enactment after consultation with an expert outside advisory panel. The application of quality standards would be phased in over a 3–year period. The provision would be effective upon enactment.

Conference Agreement

The conference agreement requires the Secretary to establish and implement quality standards for suppliers of: items and services of durable medical equipment, prosthetics and orthotics, and certain other items and services. Suppliers of the following items and services are included in the conference agreement: items of durable medical equipment, prosthetic devices, orthotics and prosthetics, medical supplies, home dialysis supplies and equipment, therapeutic shoes, parenteral and enteral nutrients, equipment, and supplies, electromyogram devices, salivation devices, blood products, and transfusion machines. The Secretary is explicitly authorized to establish the quality standards by program memorandum on a prospective basis after consultation with representatives of relevant parties. The standards are required to be posted on the Internet website of CMS. The Secretary is required to designate one or more independent accreditation organizations not later than one year after the date the quality standards are implemented. The quality standards may not be less stringent than the quality standards otherwise in place.

The Secretary is required to establish standards for clinical conditions for payment for covered durable medical equipment that include the specification of types or classes of covered items that require, as a condition of payment, a face-to-face examination and a prescription for the item. Standards are required to be established for those covered items for which there has been a proliferation of use, consistent findings of charges for covered items that are not delivered, or consistent findings of falsification of documentation to provide for payment of such

covered items. Beginning with the date of enactment, payment may not be made for motorized or power wheelchairs unless a physician, physician assistant, nurse practitioner, or a clinical nurse specialist has conducted a face-to-face examination of the individual and written a prescription for the item. Medicare payment is not permitted unless the item meets the standards established for clinical condition of coverage.

The conference agreement also establishes competitive acquisition programs for durable medical equipment (including items used in infusion and drugs), medical supplies, home dialysis supplies, therapeutic shoes, enteral nutrients, equipment, and supplies, electromyogram devices, salivation devices, blood products, and transfusion medicine, and off-the-shelf orthotics (requiring minimal self-adjustment for appropriate use) that would replace the Medicare fee schedule payments. Exclusions from the competitive acquisition are: inhalation drugs; parenteral nutrients, equipment, and supplies; and class III devices, that is those that sustain or support life, are implanted, or present potential unreasonable risk (e.g., implantable infusion pumps and heart valve replacements) and are subject to premarket approval by the Food and Drug Administration.

In starting the programs, the Secretary is required to establish competitive acquisition areas, but would be able to exempt rural areas and areas with low population density within urban areas that are not competitive, unless a significant national market exists through mail order for a particular item or service. The programs will be phased-in so that competition under the programs occurs in 10 of the largest metropolitan statistical areas in 2007; 80 of the largest metropolitan statistical areas in 2009; and remaining areas after 2009. The Secretary is permitted to phase-in first items and services with the highest cost and highest volume, or those items and services that the Secretary determines have the largest savings potential. The Secretary may exempt items and services for which competitive acquisition would not be likely to result in significant savings. The Secretary is required to establish a process where existing rental agreements for covered DME items entered into contract before implementation of this program would not be affected. The supplier would be required to provide for appropriate servicing and replacement of these rental items. Also, the Secretary may establish a process where a physician would be able to prescribe a particular brand or mode of delivery of an item or service within a particular healthcare procedure code (HCPCS) if the physician determines that use of the item or service would avoid an adverse medical outcome on the beneficiary, as determined by the Secretary, although this could not affect the amount of payment otherwise applicable.

Certain requirements for the competitive acquisition program are established by the conference agreement. Specifically, the Secretary cannot award contracts in an area unless the following conditions were met: (1) entities meet quality standards established by the Secretary; (2) entities meet financial standards specified by the Secretary, taking into account the needs of small providers; (3) total amounts paid under the contracts are expected to be less than would otherwise be paid; and (4) beneficiary access to multiple suppliers would be maintained. Contracts are subject to terms and conditions that the Secretary may specify and are required to be recompeted at least every 3 years. The Secretary is required to award contracts to multiple entities submitting bids in each area for an item or service and has the authority to limit the number of contractors in a competitive acquisition area to the number needed to meet projected demand for covered items and services.

Payment for competitively priced items and services will be based on bids submitted and accepted. The Secretary is required to determine a single payment amount for each item or service in each competitive acquisition area. Medicare payment is required to be equal to 80 percent of the payment amount determined, with beneficiaries paying the remaining 20 percent (after meeting the Part B deductible). Payment for any item or services can be made only on an assignment-related basis that is the supplier bills Medicare and accepts Medicare payment as payment in full. The use of advanced beneficiary notices is not precluded by this program.

In establishing the categories and products that would be subject to bidding, the Secretary is permitted to consider the clinical efficiency and the value of specific items within HCPCs codes, including whether some items have a greater therapeutic advantage to individuals. The Secretary is required to take appropriate steps to ensure that small suppliers of items and services have an opportunity to be considered for participation in this program. The Secretary cannot pay for items furnished by a contractor unless the contractor has submitted a bid to supply the item and the contract has been awarded. The Secretary is permitted to waive certain provisions of the Federal Acquisition Regulation that are necessary for the efficient implementation of this program, other than those relating to confidentiality of information. The Secretary is permitted to contract with an appropriate entity to address beneficiary complaints, provide beneficiary outreach and education services, and monitor the quality of items and services provided. The Secretary is also permitted to contract with entities to implement the competitive bidding program. The conference agreement prohibits administrative or judicial review of the establishment of payments amounts, the awarding of contracts, the designation of competitive acquisition areas, the phased-in implementation, the selection of items and services for competitive acquisition or the bidding structure and number of contractors. The Secretary is required to report to Congress by July 1, 2009, on savings, reductions in cost-sharing, access to items and services, and beneficiary satisfaction under the competitive acquisition program.

A Program Advisory and Oversight Committee with members appointed by the Secretary is required to be established. The Committee is required to provide advice to the Secretary regarding the implementation of the program, data collection requirements, proposals for efficient interaction among manufacturers and distributors of the items and services, providers, and beneficiaries, the establishment of quality standards, and other functions specified by the Secretary. The provisions of the Federal Advisory Committee Act do not apply to this Committee. The Committee is required to end on December 31, 2009.

The Secretary is required to conduct a demonstration program on using competitive acquisition for clinical laboratory tests that are furnished without a face-to-face encounter between the individual and the hospital personnel or physician performing the test. The terms and conditions of the demonstration are to include the application of CLIA quality standards. An initial report to Congress is required of the Secretary no later than December 31, 2005, with progress and final reports as the Secretary determines appropriate.

For durable medical equipment, prosthetic devices, prosthetics and orthotics, the update will be 0 percentage points in 2004 through 2008. After 2008, for those items not included in competitive bidding the update will be the consumer price index (CPI). For 2005, the payment amount for certain items, oxygen and oxygen equipment, standard wheelchairs, nebulizers, diabetic lancets and testing strips, hospital beds and air mattresses, will be reduced. The Secretary will take the payment amount otherwise determined and reduce it by the percentage difference between the amount of payment otherwise determined for the specific item for 2002 and the amount of payment for the specific item and HCPC code under chapter 89 of title 5, United States Code (which was identified in the column entitled a median FEHBP Price in the table entitled ''A Summary of Medicare Prices Compared to VA, Medicaid, Retail, and FEHP Prices for 16 Items'' that was included in the Testimony of the Inspector General before the Senate Committee on Appropriations, June 12, 2002). An OIG report on oxygen will be available in the spring of 2004.

For class III medical devices the update in 2004, 2005, and 2006 is equal to the percentage increase in the consumer price index for all urban consumers (CPI–U) for the 12-month period ending with June of the previous year. In 2007 the percentage change for class III medical devices is to be determined by the Secretary after taking into account recommendations made by the Comptroller General in a report on class III medical devices. In 2008 the update is determined by the amount paid in 2007 updated by the CPI. In subsequent years the CPI is the update.

For covered items and services furnished beginning January 1, 2009, items and services included in the competitive acquisition program would be paid as determined under that program and the Secretary would be able to use this payment information to adjust the payment amounts for DME, off-the-shelf orthotics, and other items and services that are supplied in an area that is not a competitive acquisition area. The inherent reasonableness authority for DME, off-the-shelf orthotics, medical supplies, home dialysis supplies, therapeutic shoes, enteral nutrients, equipment, and supplies, electromyogram devices, salivation devices, blood products, and transfusion medicine is not eliminated but, if the Secretary uses the competitive acquisition program information to adjust payments, then inherent reasonableness authority cannot be used.

The Inspector General of the Department of Health and Human Services (the Inspector General) is required to study the extent to which (if any) suppliers of covered items of DME that are subject to the competitive acquisition program are soliciting physicians to prescribe certain brands or modes of delivery of covered items based on profitability. The report is due to Congress no later than July 1, 2009.

The provision is effective upon enactment.

Competitive Acquisition of Covered Outpatient Drugs and Biologicals (Section 303 of the Conference Agreement, Section 303 of the House Bill, and Section 432 of the Senate Bill).

Adjustment to the Physician Fee Schedule (Section 303(a) of the Conference Agreement, Section 303(a) of the House Bill and Section 432(b) of the Senate Bill).

Present Law

The relative value associated with a particular physician service is the sum of three components: physician work, practice expense, and malpractice expense. Practice expense includes both direct costs (such as clinical personnel time and medical supplies used to provide a specific service to an individual patient) as well as indirect costs such as rent, utilities, and business costs associated with running a practice). When the physician fee schedule was implemented, reimbursement for practice expenses was based on historic charges. The Social Security Act Amendments of 1994 (PL. 103–432) required the Secretary to develop a methodology for a resource based system for calculating practice expenses for use in CY1998. BBA 1997 delayed the implementation of the methodology until CY1999 and established a transition period with full implementation by CY2002. BBRA required the Secretary to establish a data collection process and data standards for determining practice expense relative values. Under this survey process, the Secretary was required to use data collected or developed outside HHS, to the maximum extent practicable, consistent with sound data collection practices.

The Secretary is required to periodically review and adjust the relative values affecting physician payment to account for changes in medical practice, coding changes, new data on relative value components, or the addition of new procedures. Under the budget-neutrality requirement, changes in these factors cannot cause expenditures to differ by more than $20 million from what would have been spent if such adjustments had not been made.

House Bill

The Secretary would be required to increase the practice expense relative value for the physician fee schedule in CY2005 using survey data that includes information on the expense associated with administering drugs and biologicals. The supplemental data provided by entities and organizations would be included if consistent with the Secretary's criteria for acceptable survey data and submitted by December 31, 2004. Using existing processes for coding considerations, the Secretary would be required to promptly evaluate existing codes for the administration of covered outpatient drugs and biologicals to ensure accurate reporting and billing for these services. Any payment increase in CY2005 that resulted from using supplemental survey data or reevaluating codes would not be subject to budget neutrality provisions, would be exempt from administrative and judicial review, and would be treated as a change in law and regulation in the sustainable growth rate determination. Nothing in this section would prevent the Secretary from providing for practice expense adjustments in subsequent years, subject to the budget neutrality provisions. The Secretary would be required to consult with the Comptroller General of the United States (GAO) and groups representing the affected physician specialties before publishing the notice of proposed rulemaking. Also, the Secretary would be required to adjust the non-physician work pool methodology so that practice expense relative values for these services are not disproportionately reduced as a result of the above changes. The provision would be effective upon enactment.

Senate Bill

The Secretary would be required to establish the practice expense relative value for the physician fee schedule in CY2004 using the survey data collected from a physician specialty organization as of January 1, 2003 if the data cover the practice expenses for oncology administration services and meet the Secretary's criteria for acceptable survey data. The Secretary would also be required to review and appropriately modify Medicare's payment policy for the administration of more than one anticancer chemotherapy agent to an individual patient on a single day. The increase in expenditures resulting from this provision would be exempt from the budget-neutrality requirement. Also, the Secretary would be required to adjust the non- physician work pool methodology so that practice expense relative values for these services are not disproportionately reduced as a result of the above changes. The provision would be effective upon enactment.

The Secretary would not be able to revise payment amounts for a category of outpatient drugs or biologicals unless the Secretary concurrently adjusts the payment amounts for administration of such category of drug or biological. The provision would be effective upon enactment.

The provisions affecting the practice expense relative values, multiple chemotherapy agents administered on a single day, and treatment of other services currently in the non-physician work pool would not be subject to administrative or judicial review under Sections 1869 and 1878 of the Social Security Act (SSA) or otherwise. The provision would be effective upon enactment.

Conference Agreement

Beginning in 2004, the Secretary is required to make adjustments in practice expense relative value units for certain drug administration services when establishing the physician fee schedule. The Secretary is required to use the survey data submitted by the American Society of Clinical Oncology (ASCO) in 2002 because it meets criteria established under the BBRA for use.

The Secretary is required to add work relative value units to certain drug administration services, equal to the work relative value units for a level 1 office medical visit for an established patient. These services are classified, as of October 1, 2003, within any of the following groups of procedures: therapeutic or diagnostic infusions (excluding chemotherapy), chemotherapy administration services, and therapeutic, prophylactic or diagnostic injections. Only those services for which national relative value units, but no work relative value units have been assigned by October 1, 2003 are included. These specified drug administration services are intended to be those classified as of October 1, 2003, within HCPCs codes 90780–90781, 96400, 96408–96425, 96520, 96530 and 90782–90788, and as subsequently may be modified by CMS, to provide work relative value units for CPT code 99211 for a level 1 office medical visit for an established patient.

Starting in 2005, the Secretary is required to use supplemental survey data to increase practice expense relative values for other drug administration services in the physician fee schedule if that supplemental survey data include information on the expense associated with administering drugs and biologicals, the survey meets criteria for acceptance, and the survey is submitted by March 1, 2004, for 2005, or March 1, 2005 for 2006. This provision will apply only to a specialty that received 40% or more of its Medicare payments in 2002 from drugs and biologicals and would not apply to the ASCO survey submitted in 2002.

The Secretary is also required to promptly evaluate existing drug administration codes for physicians' services to ensure accurate reporting and billing for these services. These codes should take into account levels of complexity of the administration and resource consumption. The Secretary is required to use existing processes for considering coding changes and for incorporating appropriate changes in the relative values for such services. As part of this process, the Secretary is required to consult with representatives of physician specialties affected by the changes in payment for drugs under this section and, within the scope of existing authority, expedite appropriate conclusions resulting from these coding evaluations.

The adjustments in practice expense relative value units for certain drug administration services based on the ASCO survey data are exempt from the budget neutrality requirements in 2004. Adjustments in practice expense relative value units for other drug administration services in 2005, 2006, or 2007 based on the surveys or coding changes described above are also exempt. Nothing in this section shall prevent the Secretary making these practice expense adjustments in subsequent years, subject to the budget neutrality provisions.

The Secretary is required to make adjustments to the non-physician work pool methodology so that the practice expense relative values for other services in the pool are not affected by the changes to practice expenses for drug administration. This provision is intended to protect the services in the non-physician work pool from payment reductions resulting from changes made to the AWP payment methodology. The budget neutrality waiver was included in this section to ensure that the increase in practice expense relative value units for drug administration services (resulting from the use of new supplemental survey data) would not be offset by decreases in the other non-physician work pool services. The Secretary is further required to review and appropriately modify Medicare's payment policy in effect on October 1, 2003, for the administration of more than one drug or biological to an individual on a single day through the push technique. The increase in expenditures resulting from this provision will be exempt from the budget-neutrality requirement in 2004. The Conferees strongly urge the Secretary to make payment for these multiple pushes.

A transitional adjustment or additional payment for services furnished from April 1, 2004, through December 31, 2005 will be made for drug administration services. This Part B payment is to be made to the physician and equals a percentage of the payment otherwise made. The percent is 32 in 2004, and 3 in 2005.

MedPAC is required to review the payment changes as they affect payments for items and services furnished by oncologists and for drug administration services furnished by other specialists. This review will also include an examination of the effect of such changes on the quality of Part B services and beneficiary satisfaction with such care. The Commission is required to submit a report to the Secretary and Congress by January 1, 2006 on oncologists' payments and by January 1, 2007 on drug administration services furnished by other specialists. The reports may include recommendations for further adjustments. The Secretary could make appropriate adjustments to payments as part of the rulemaking for physician payments for 2007.

Section 303 exempts all physician specialties, other than oncology, from the payment adjustments made to both physicians' services and expenses for the administration of

drugs and biologicals in this section, and does not apply to inhalation drugs in Section 305. Section 304 requires the Secretary to disregard this exemption and apply the adjustments in section 303 to these other specialties. The intent in drafting the two sections in this manner is to segregate the savings achieved from adjustments to payments to oncologists from savings derived from other physician specialties. The specialties to which the provisions apply are the specialties as used by the carriers in administering Medicare.

Application of Market based Payment Systems (Sections 303(b) through Sections 303(d) of the Conference Agreement, Section 303(b) of the House Bill and Section 432(a) of the Senate Bill).

Present Law

Although Medicare does not currently provide an outpatient prescription drug benefit, coverage of certain outpatient drugs is authorized by statute. Specifically, under Medicare Part B, outpatient prescription drugs and biologicals are covered if they are usually not self-administered and are provided incident to a physician's services. Drugs and biologicals are also covered if they are necessary for the effective use of covered durable medical equipment. In addition, Medicare will pay for certain self-administered oral cancer and anti-nausea drugs, erythropoietin (used to treat anemia), immunosuppressive drugs after covered Medicare organ transplants and hemophilia clotting factors. Vaccines for diseases like influenza, pneumonia, and hepatitis B are considered drugs and are covered by Medicare. Payments for covered outpatient drugs are made under Medicare Part B and are generally calculated using the average wholesale price (AWP).

The AWP is intended to represent the average price used by wholesalers to sell drugs to their customers. It has been based on prices reported by drug manufacturers, that are published in industry reference publications or drug price compendia. There are no uniform criteria for reporting these numbers. Moreover, these reported prices do not reflect the discounts that manufacturers and wholesalers customarily offer to providers and physicians. AWP has never been defined in either statute or regulation, but it is used to set reimbursement amounts for drugs and biologicals covered under the Medicare Part B benefit

The Balanced Budget Act of 1997 (BBA 97, P.L. 105–33) specified that Medicare payment for covered outpatient prescription drugs would equal 95 percent of AWP. Current Medicare payment rates are 95% of AWP for brand name drugs produced by a single manufacturer (referred to single source drugs.) Medicare pays 95% of the lower of (a) the median AWP of all generic drugs or (b) the lowest brand-name product AWP for drugs with 2 or more competing brand names drugs (referred to as multisource or multiple source drugs) or those drugs with available generic equivalents. Although Medicare uses a Healthcare Common Procedure Coding System (HCPCS) code to identify and pay for physician administered drugs, AWPs are reported on the basis of national drug codes (NDC), which are maintained by the Food and Drug Administration (FDA). Every drug sold in the United States has a unique NDC that provides information on its chemical molecule, drug manufacturer, dosage, dosage from and package size. In addition, there may be several multiple source or generic drugs within a specific HCPCS code.

There is substantial evidence that indicates that AWPs for many Medicare-covered products far exceed the acquisition cost paid by suppliers and physicians. Reliance on AWP (instead of a market based price) has caused significantly increased payments, as some use AWP to inflate payments made for drugs to influence physician prescribing practices. This has resulted in Medicare paying more than $1 billion per year in excess overpayments for these products. Because Medicare beneficiaries are also required to pay coinsurance amounts equal to 20 percent of the Medicare payment amount, the increased Medicare payment amounts resulting from inflated AWPs cause Medicare beneficiaries to pay hundreds of millions of extra dollars in inflated co-payments every year.

Some physicians assert that the overpayment for drugs covers underpayment for practice expenses. They contend that Medicare does not adequately reimburse them for the practice expenses associated with providing care in outpatient settings. This section reduces the overpayment for drugs and biologics, while increasing physician practice expenses.

Since 1992, the HHS Office of the Inspector General OIG (OIG) has raised concerns about how certain drug manufacturers have established AWPs for certain of their Medicare-covered drugs that were much higher than the prices generally paid by the health care providers to those drug companies. This difference—commonly referred to by the industry and the health care community as the ''spread''—results in a profit to providers each time they administer such drugs to Medicare patients. For example, in 1999, an oncologist could purchase 10 mgs of doxorubicin, a chemotherapy agent, for $10.08, while Medicare's reimbursement for that same dose was $42.92, resulting in a profit to the providers of $32.84. The OIG, based on a review of 24 of the Medicare-covered drugs, estimate that such practices result in Medicare making $750 million each year in overpayments to these providers.

Subsequently, the findings of this report were updated with more current drug pricing. This updated report found that, of the $3.7 billion Medicare spent for 24 drugs in 2000, if Medicare paid the actual wholesale prices available to physicians and suppliers for these 24 drugs, the program and its beneficiaries would have saved $887 million a year.

In addition to the financial toll on the U.S. Treasury, these large spreads also affect Medicare beneficiaries, who are often required to pay dramatically inflated co-payments for the drugs they receive. These co-payments sometimes even exceed the actual price that the provider has paid for the drug. For example, leucovorin calcium, a chemotherapy agent, had a beneficiary co-payment of $3.60 per dosage, while the OIG estimated a provider could buy the same drug for $2.94, and would receive a total reimbursement (including beneficiary co-payment) of $18.02 per dose. OIG estimated that if Medicare had paid reimbursements equal to widely available wholesale prices, beneficiaries would have paid $175 million less in coinsurance.

A September, 2001, GAO report found that physicians can obtain Medicare-covered drugs at prices significantly below current Medicare payments. GAO found that the average discount from AWP ranged from 13 percent to 34 percent, and that two drugs had discounts of 65 percent and 86 percent.

Evidence also suggests that certain types of health care providers may also be making treatment decisions based at least in part upon the amount of profit they can reap from the use of certain drugs. In one particularly disturbing example, a respiratory therapy drug, ipratropium bromide, saw its utilization skyrocket after certain drug manufacturers began to build a large spread in its price. In 1995, Medicare reimbursed providers $14 million dollars for their use of ipratropium bromide. After the spread was created, utilization increased dramatically, to the point where Medicare paid $250 million for the same drug in 1999, and over $300 million in 2000 and 2001.

In its recommendations to the Congress, the GAO urged CMS to take steps to begin reimbursing providers for Part B-covered drugs and related services at levels reflecting providers' acquisition costs using information about actual market transaction prices. The GAO also recommended that CMS should evaluate expanding competitive bidding approaches to setting payment levels, and that CMS should monitor beneficiary access to covered drugs in light of any changes to reimbursement.

The GAO also debunked some common myths generally held by many in the health care community. Specifically, the GAO found that despite concerns that the discounts available to large purchasers would not be available to physicians with a small number of drug claims, physicians with low volumes reported that their purchase prices were the same or less than the widely available prices GAO documented. GAO also believes that Medicare should pay for each service appropriately and not rely on overpayments for some services to offset inadequate payments for complementary services. The Committee shares this view, and believes the legislation achieves this goal.

The Committee on Ways and Means, the Committee on Energy and Commerce and the Senate Finance Committee have all conducted independent investigations and held public hearings on the problems associated with using AWP as a reimbursement benchmark. All three Committees have also examined the reimbursement for drug administration through the Medicare physician payment structure. Both reimbursement systems were found to have serious flaws in methodology and application.

More recently, the Centers for Medicare and Medicaid Services issued a proposed rule on August 20, 2003, to improve the way that Medicare pays for covered drugs and asked for public input on the best way to achieve that goal. The rule solicited comments on four differing approaches:

Medicare would pay the same amounts for covered drugs that private insurers pay; Medicare would apply a discount of 10 to 20 percent from the inflated average wholesale price in 2004 and then establish more reasonable payment updates in future years; Medicare would use existing sources of market-based prices and would develop additional sources to monitor market changes over time, such as drug price catalogs; or Medicare would establish a competitive bidding process for drugs and would also require drug companies to report their average sales prices.

Because of the serious flawed reimbursement methodology in the current system, and absent a change in the statute, CMS has indicated they will move forward with the rule.

House Bill

New sections 1847A and 1847B would be established. Under 1847A, the Secretary would be required to establish a competitive acquisition program to acquire and pay for covered outpatient drugs. Under this program, at least 2 contractors would be established in

each competitive acquisition area (which would be defined as an appropriate geographic region) throughout the United States. Each year, a physician would be able to select a contractor who would deliver covered drugs and biologicals to the physician; alternatively, a physician would be able to elect payment under the use of the average sales price payment methodology established by 1847B.

Under the competitive acquisition program, there would be 2 categories of drugs under this program: the oncology category (which would include drugs determined by the Secretary as typically primarily billed by oncologists or are otherwise used to treat cancer) which would be implemented beginning in 2005 and the non-oncology category which would be implemented beginning in 2006. In this case, covered drugs means certain drugs currently covered under Section 1842(o) of the SSA which are not covered as part of the competitive acquisition for durable medical equipment. Blood clotting factors, drugs and biologicals furnished as treatment for end-stage renal disease (ESRD), radiopharmaceuticals, and vaccines would not be considered covered drugs under the competitive acquisition program. The Secretary would also be able to exclude other drugs and biologicals or classes of drugs and biologicals that are not appropriate for competitive bidding or would not produce savings.

Certain contractor selection and contracting requirements for the competitive acquisition program would be established. Specifically, the Secretary would be required to establish an annual selection process for a contractor in each area for each of the 2 categories of drugs. The Secretary may not award the 2-year contract to any entity that does not have the capacity to supply covered outpatient drugs within the applicable category or does not meet quality, service, and financial performance and solvency standards established by the Secretary. Specifically the entity would be required to have (1) arrangements to ship covered drugs at least 5 days of the week and on an emergency basis; (2) procedures for the prompt response and resolution of physician and beneficiary complaints and inquiries; (3) grievance resolution procedures, including review by the Medicare Provider Ombudsman established in this legislation. The Secretary would not be able to contract with an entity that has had its license for distributing drugs (including controlled substances) suspended or revoked by the Federal or a State government or that has been excluded from program participation. A contractor would be required to comply with a specified code of conduct, including conflict of interest provisions as well as all applicable provisions relating to the prevention of fraud and abuse. A contract would be able to include the specifications with respect to secure facilities, safe and appropriate storage of covered drugs, examination of drugs, record keeping, written policies and procedures, and compliance personnel. Those contractors may be required to comply with additional product integrity safeguards for drugs susceptible to counterfeiting or diversion. Contracts would be able to be terminated by either the Secretary or the entity with appropriate advance notice. The Secretary would make the list of the available contractors accessible to physicians on an ongoing basis, through a directory posted on the Internet and provided by request.

The Secretary would be able to limit the number of qualified entities in each category and area, but not below two. The Secretary would be required to base selection on bid prices for covered drugs, bid prices for distribution of those drugs, ability to ensure product integrity, customer service, past experience with drug distribution, and other factors. This bid price would include all costs related to the delivery of the drug or biological to the selecting physician or other delivery point as well as all dispensing and shipping costs. Costs relating to the administration of the drug or biological or waste, spillage or spoilage would not be included. As part of the awarded contract, the selected contractor would be required to disclose the reasonable, net acquisition costs regularly (but not more often than once a quarter) as specified by the Secretary. The selected contractor would also be required to disclose appropriate price adjustments over the period of the contract to reflect changes in reasonable, net acquisition costs.

The Secretary would be able to reject the contract offer of an entity for a category of drugs and biologicals if the Secretary establishes that the aggregate average bid price exceeds the average sales price (as determined under Section 1847B discussed subsequently). Nothing in the section would prevent a bidder from submitting a contract offer to cover all areas of the United States; nothing would prevent requiring a bidder to submit a contract offer to cover all areas of the United States. The amount of the bid price submitted under a contract offer would be required to be the same for all portions of the area. The Secretary would be permitted to waive certain provisions of the Federal Acquisition Regulation that are necessary for the efficient implementation of this program, other than those relating to confidentiality of information.

The Secretary would be required to compute an area average of the bid prices submitted, in contract offers accepted for the category and the area, for each year or other contract period. The Secretary would apply special rules and alternative payment amounts to establish a price for specific covered drugs including new drugs and biologicals, oral anti-cancer and immunosuppressive drugs. Generally, the Secretary would not be able to adjust payments for drugs under this section unless supplemental data is used to adjust the practice expense payment adjustment. Also, if the Secretary excludes a class of drugs or biologicals or a specific item from the competitive acquisition program, Medicare's payment would be based on the average sales price methodology discussed subsequently. Beneficiary liability would be limited to 20% of the payment basis for the covered drug or biological.

The contractor supplying the physician in the area would submit the claim for the drug and would collect the cost-sharing amount from the beneficiary after administration of the drug.Both program payment and beneficiary cost sharing amounts would only be made to the contractor; would only be made upon the administration of the drug; and would be based on the average bid of prices for the drug and biological in the area. The Secretary would be required to establish a process for recovery of payments billed at the time of dispensing for drugs that were not actually administered. The Secretary would be required to establish an appeals process for physicians that is comparable to those provided to a physician who prescribes durable medical equipment or a laboratory test.

The appropriate contractor, as selected by the physician, would supply covered drugs directly to the physician, except under the circumstances when a beneficiary is presently able to receive a drug at home. The Secretary would be able to specify other non-physician office settings where a beneficiary would be able to receive a covered drug directly. However, the contractor would not be able to deliver drugs to a physician without first receiving a prescription as well as other necessary information specified by the Secretary. A physician would not be required to submit a prescription for each individual treatment. The Secretary would establish requirements, including adequate safeguards against fraud and abuse and consistent with safe drug practices, in order for a physician to maintain a supply of drugs that may be needed in emergency situations. In order to maintain such an inventory, a physician would be required to demonstrate that the drugs would be immediately required, not reasonably foreseen as immediately required, not able to be delivered by the contractor in a timely manner, and administered in an emergency situation. No applicable State requirements relating to the licensing of pharmacies would be waived.

The Secretary would be able to establish an advisory committee to assist in the implementation of this program. The Secretary would be required to report to Congress on savings, reductions in cost-sharing, access to items and services, the availability of contractors as well as beneficiary and satisfaction under the competitive acquisition program. These reports would be due each year from 2005, 2006, and 2007.

Alternatively, physicians would be able to elect payment for covered outpatient drugs under a separate methodology established in Section 1847B. Subject to the applicable beneficiary coinsurance and deductible amount, a single and multiple source drugs would be paid 112% of the applicable price in 2005 and 2006 and 100% of the price subsequently. The applicable price for all the products within multiple source drug codes would be the reported volume-weighted average of the average sales price; the applicable price for a single source drug would be the lesser of the manufacturer's average sales price for the NDC code or the reported wholesale acquisition cost. The payment amount would be determined without regard to any special packaging, labeling or identifiers on the dosage form or product or package.

Starting for calendar quarters on or after April 1, 2004, the average sales price would be calculated by NDC code each calendar quarter by dividing a manufacturer's total sales by the total number of units sold in that quarter. Certain sales would be exempt from the calculation: (1) those sales that are exempt from the Medicaid drug rebate program including those to the Indian Health Service, the Department of Veterans Affairs, a state Veterans home, the Department of Defense, or the Public Health Services as well as any price charged under the Federal Supply Schedule or used under a state pharmaceutical assistance program; and (2) those sales that do not reflect market prices, as determined by the Secretary. The average sales price would take into account volume discounts, prompt pay discounts, cash discounts, chargebacks and certain rebates. The Secretary would be able to disregard the average sales price during the first quarter of a new drug's sales if the price data is not sufficient to determine an average amount payable. The average sales price would be determined by the manufacturer on a quarterly basis; to the extent that data on rebates and chargebacks is reported on a lagged basis,

the manufacturer would apply the 12-month rolling average methodology to estimate the amount of such discounts, as specified by the Secretary. The wholesale acquisition cost would be the manufacturer's list price for the drug to wholesalers or direct purchasers in the United States for the most recent available month, not including discounts or other price reductions, as reported in wholesale price guides or other pricing publications. Payment rates would be updated on a quarterly basis and based on the most recent calendar quarter. The Secretary would be able to use carriers, fiscal intermediaries or other contractors to determine the payment amounts. Certain standards would be established with respect to the definition of multiple source and single source drugs. Certain determinations of pharmaceutical equivalence and bioequivalence would be established. There would be no administrative or judicial review of the determination of the manufacturer's average sale price.

The Secretary would be able to use the wholesale acquisition cost or other reasonable measure of drug price instead of the manufacturer's average sale price in the case of certain public emergencies where there is a documented inability to access covered outpatient drugs and a related increase in price. The alternative price would be used until the price and availability of the drug or biological has stabilized and is substantially reflected in the manufacturer's average sale price.

The Secretary would be required to submit an annual report to the Committees of jurisdiction on the trends in average sales prices, the administrative costs, and total value of payment as well as a comparison of the average manufacturer's sale price with the price established under the Medicaid drug rebate program. The provision would be effective upon enactment.

Senate Bill

Drugs or biologicals furnished before January 1, 2004 would be paid at 95% of the AWP. In 2004, existing drugs and biologicals would be paid the lower of the AWP or 85% of the listed AWP as of April 1, 2003. In subsequent years, this price would be increased by change the consumer price index (CPI) for medical care for the previous year ending in June. Existing drugs and biologicals are those first available for payment on or before April 1, 2003. After January 1, 2004, payments for influenza virus, pneumococcal pneumonia, and hepatitis B vaccines would be equal to the AWP.

The Secretary would be required to establish a process to determine whether the widely available market price to physicians and suppliers for drugs and biologicals furnished in a year is different from the AWP amounts. This determination would be based on: (1) any report on market price published by the Inspector General (IG) of the Department of Health and Human Services (HHS) or GAO after December 31,1999; (2) a review of market prices by the Secretary including information from insurers, private health plans, manufacturers, wholesalers, distributors, physician supply houses, specialty pharmacies, group purchasing arrangements, physicians, suppliers or any other appropriate source as determined by the Secretary; (3) data submitted by the manufacturer of the drug or biological or by another entity; and (4) other appropriate information as determined by the Secretary. If the market price for a drug or biological determined through this process differs from the AWP amount, that market price shall be treated as the AWP amount when determining Medicare's payment for a drug or biological in 2004 and subsequently. The Secretary would be able to make subsequent determinations with respect to the widely available market price for a given drug or biological. If not, the prior market price determination will be considered as the basis for Medicare's payment amount for such an item.

If, however, the first market price determination for a given drug or biological would result in a payment amount that is 15% less than would otherwise be made, the Secretary would provide for an appropriate transition period where the price is reduced in annual increments equal to 15% of Medicare's payment amount in the previous year. At the end of the transition period, the market price (as determined) would serve as basis for Medicare's payment amount. This transition period would not apply to a drug or biological where a generic version of that drug or biological first enters the market on or after January 1, 2004. The generic version would not be required to be marketed under the chemical name of the given drug or biological.

New drugs and biologicals, those that are first available for Medicare payment after April 1, 2003, would be subject to certain requirements in order to obtain a code and receive Medicare payment. A manufacturer would be required to provide the Secretary with necessary and appropriate information on the estimated price that the manufacturer expects physicians and suppliers to pay to routinely obtain the drug or biological; the manufacturer would be able to provide the Secretary with other appropriate information as well. During the first year that the drug or biological is available for Medicare payment, the manufacturer would be required to provide the Secretary with updated information on the actual market prices paid by physicians or suppliers for such drugs and biologicals. These market prices would be equal to the lesser of the average wholesale price for the drug or biological or the amount determined by the Secretary based on information originally submitted by the manufacturer supplemented by other appropriate information. The market price of the drug or biological during the second year after becoming available for Medicare payment is subject to the same conditions as in the first year. In subsequent years, the market price would be equal to the lesser of the average wholesale price or the widely available market price as determined by the Secretary in the same fashion as for existing drugs. If no market price determination occurs, then Medicare's payment for the drug or biological in the prior year is updated by the change in the CPI for medical care for the previous year ending in June.

The provision would be effective upon enactment.

With respect to home infusion drugs and biologicals, the Secretary would be able to make separate payments for these drugs and biologicals furnished through covered DME on or after January 1, 2004, if such payments are determined to be appropriate. Total amount of payments for the infusion drugs in the year could not exceed the total amount of spending that would have occurred without enactment of this legislation. The provision would be effective upon enactment.

Conference Agreement

Certain categories of drugs and biologicals will continue to be paid at 95 percent of the AWP; these include a drug or biological furnished before January 1, 2004; blood clotting factors furnished during 2004; a drug or biological furnished during 2004 that was not available for Part B payment as of April 1, 2003; pneumococcal, influenza, and hepatitis B vaccines; and a drug or biological (other than erythropoietin) furnished in connection with renal dialysis services that are separately billed by renal dialysis facilities; and radiopharmaceuticals and blood products. In general, payments for other drugs furnished in 2004 will equal 85 percent of the average wholesale price (determined as of April 1, 2003). Beginning in 2005, drugs and biologicals, except for pneumococcal, influenza, and hepatitis B vaccines and those associated with certain renal dialysis services, will be paid using either the average sales price methodology or through the competitive acquisition program. Infusion drugs furnished through covered durable medical equipment starting January 1, 2004 will be paid at 95% of the AWP in effect on October 1, 2003; those infusion drugs which may be furnished in a competitive acquisition area starting January 1, 2007 will be paid on the competitive price. Intravenous immune globulin will be paid at 95% of AWP in 2004 and paid according to the average sales price method beginning in 2005.

The Secretary is authorized to substitute a different percent of the April 1, 2003 AWP, based on the Secretary's NPRM, but not less than 80%. Also, the Secretary may adjust the price based on data submitted by the manufacturer of the drug or biological by October 15, 2003.

New sections 1847A and 1847B are established in the Social Security Act. New Section 1847A establishes the use of the average sales price methodology for payment for drugs and biologicals (except for pneumococcal, influenza, and hepatitis B vaccines, or drugs or biologicals furnished in connection with certain renal dialysis services, blood or blood products or radiopharmaceuticals) furnished starting January 1, 2005. This methodology does not apply in the case of a physician who elects to participate in the newly established competition acquisition program established in new Section 1847B; payments for drugs and biologicals will be paid under that section instead.

Medicare's payment under the average sales price methodology will equal 106% of the applicable price for a multiple source drug or single source drug, subject to the applicable beneficiary deductible and coinsurance requirements. The manufacturer will be required to specify the unit associated with each National Drug Code (NDC) as part of its Medicaid reporting requirements. Unit is defined as the lowest identifiable quantity of the drug or biological by NDC (including package size) that is dispensed, exclusive of any diluents without reference to volume measures pertaining to liquids. After 2004, the Secretary may establish the counting method and unit for the manufacturer to report.

The applicable price for all drug products within the same multiple source drug billing and payment code is the volume-weighted average of the sales prices. The applicable price for single source drugs is the lesser of the manufacturer's average sales price for an NDC or the wholesale acquisition cost (WAC). A limited number of single source drugs and biologicals are currently included in the same HCPCs codes, along with other similar single source products. The Conferees intend to exempt these products from the definition of single source drugs or biologicals, and continue to allow these products to be treated as multiple source drugs and be included within the same

HCPCs code. The payment amount is determined without regard to any special packaging, labeling or identifiers on the dosage form or product or package. In the section, the term ''payment and billing code'' shall mean the HCPCs code for such drug or biological.

A manufacturer's average sales price is calculated by NDC code for each calendar quarter by dividing a manufacturer's total sales by the total number of units sold in that quarter. Certain sales are exempt from the calculation: (1) certain sales that are exempt from the Medicaid drug rebate program including those to the Indian Health Service, the Department of Veterans Affairs, a state Veteran's home, the Department of Defense, or the Public Health Services; and (2) sales that are nominal in amount, as used in the Medicaid rebate program. The average sales price will take into account volume discounts, prompt pay discounts, cash discounts, free goods that are contingent on any purchase requirement, chargebacks and certain rebates (not including Medicaid rebates). After 2004, the Secretary may include other price concessions that result in a price reduction to the purchaser as may be recommended by the Inspector General.

The Secretary will be able to disregard the average sales price during the first quarter of a new drug's sales if the price data is not sufficient to determine an average amount payable. The average sales price will be calculated by the manufacturer on a quarterly basis; to the extent that data on rebates and chargebacks is reported on a lagged basis, the manufacturer will apply the 12–month rolling average methodology to estimate the amount of such discounts, as specified by the Secretary. After 2004, the Secretary may establish a uniform methodology to estimate and apply such costs. Payment rates will be updated on a quarterly basis. The Secretary may contract with appropriate entities to determine the payment amounts. The Secretary may implement any provision of this section by program instruction or otherwise.

To monitor market prices, the Inspector General will conduct studies, which may include market surveys, to determine market prices of drugs and biologicals paid under this section. The Inspector General will compare average sales price under Medicare with the widely available market price and the average manufacturer price. The Secretary may disregard the average sales price reported by a manufacturer if this price exceeds the market price or average manufacturer price by a threshold percentage. In 2005 the threshold is 5%; in 2006 and subsequent years, the percentage threshold will be specified by the Secretary. If the Inspector General finds that the average sales price for a drug or biological exceeds the widely available market price or average manufacturer price by the applicable threshold, the Inspector General will inform the Secretary at specified times, and the Secretary will substitute a payment amount equal to the lesser of the widely available market price or 106 percent of the average manufacturer price.

The section requires that in order to have a drug covered under both Medicare and Medicaid, a manufacturer must submit information quarterly on the manufacturer's average sales price, total number of units, wholesale acquisition cost and sales made at nominal price. The Conferees intend that if a manufacturer knowingly (as defined by section 3729(b) of the False Claims Act) submits false information, that such submission be considered a ''false record or statement'' made or used ''to get a false or fraudulent claim paid or approved by the government'' for purposes of section 3729(a)(2) of title 31, United States Code, known as the False Claims Act. Thus if a manufacturer knowingly submits any false information, the manufacturer would be fully subject to liability under the False Claims Act.

The Conferees intend that that the Secretary, in making determinations to use the widely available market price, rather than the ASP, would provide a number of procedural and substantive safeguards to ensure the reliability and validity of the data used to make such determinations. These safeguards would include notice and comment rulemaking, identification of the specific sources of information used to make such determinations, and explanations of the methodology and criteria for selecting such sources.

If the Secretary determines that a manufacturer has misrepresented the average sales price of a drug, the Secretary may apply a civil monetary penalty of up to $10,000 for each price discrepancy and for each day in which the price misrepresentation was applied. In this subsection for drugs furnished in a year after 2004, the widely available market price is the price that a prudent physician or supplier would pay for a drug or biological, taking into account discounts, rebates and other price concessions routinely made available. The Secretary will consider information from one or more of the following sources including manufacturers, wholesalers, distributors, physician supply houses, specialty pharmacies, group purchasing arrangements, physician and supplier surveys as well as information on market prices from insurers and private health plans.

The Secretary will be able to use the wholesale acquisition cost or other reasonable measure of drug price instead of the manufacturer's average sale price in the case of certain public emergencies where there is a documented inability to access covered outpatient drugs and a related increase in price (which is not reflected in the manufacturer's average sale price for one or more quarters). The alternative price will be used until the price and availability of the drug or biological has stabilized and is substantially reflected in the manufacturer's average sale price.

There will be no administrative or judicial review of determinations of payment amounts including the assignment of NDCs to billing and payment codes; the identification of units and package size; the method to allocate rebates, chargebacks, and other price concessions to a quarter, the manufacturer average sales price when it is used for Medicare's price determinations, and the disclosure of the average manufacturer price under certain situations.

The Secretary will conduct a study on the sales of drugs and biologicals to large volume purchasers such as pharmacy benefit managers to determine whether the price at which drugs and biologicals are sold to these purchasers represents the price made available to physicians. The Secretary will submit a report to Congress, including recommendations, on whether sales to large volume purchasers should be excluded from the computation of the manufacturer's average sale price. Upon completion of this report, the Secretary may require that manufacturers separately report these prices, which may also then be excluded from future calculations of ASP, if the Secretary determines that doing so would be better reflect prices available to prudent physicians.

Under the new Section 1847B, the Secretary would be required to establish a competitive acquisition program to acquire and pay for competitively biddable drugs and biologicals. Under the program, competitive acquisition areas (defined as an appropriate geographic region) will be established throughout the United States. Each year, a physician would be able to select a contractor who would deliver covered drugs and biologicals to the physician; alternatively, a physician would be able to elect payment using the methodology established by Section 1847A. Conferees intend this choice to be completely voluntary on behalf of the physician. Use of this system should reduce administrative and inventory costs for physicians. In addition, because physicians do not take title to the drug, their liability is reduced.

Under the competitive acquisition program, categories of competitively biddable drugs under this program will be established, and the program will be phased in beginning in 2006. In order to promote competition and the efficient operation of the program, the Secretary would be able to waive provisions of the Federal Acquisition Regulation, other than those relating to confidentiality of information and other provisions deemed appropriate by the Secretary.

Competitively biddable drugs and biologicals exclude pneumococcal, influenza, and hepatitis B vaccines or drugs or biologicals (other than erythropoietin) furnished in connection with renal dialysis services furnished starting January 1, 2006, radiopharmaceuticals, IVIG products and blood products. Conferees do not intend to exclude therapeutic vaccines, such as new vaccines used to treat cancer that may be in development. The Secretary will be able to exclude competitively biddable drugs and biologicals including classes of such drugs and biologicals that are not appropriate for competitive bidding, if such inclusion is not likely to result in significant savings or is likely to have an adverse impact on access to the drugs and biologicals. The Secretary may provide for payment of these excluded drugs and biologicals (or class of same) using the average sale price methodology established in Section 1847A. Conferees intend the use of the exclusion authority to apply in exceptional cases. Such authority is not intended to be a system wide replacement for competitive bidding.

The contractor supplying the physician in the area will submit the claim for the drugs and biologicals and will collect the cost-sharing amount from the beneficiary after administration of the drug. Both program payment and beneficiary cost sharing amounts will only be made to the contractor and will only be made upon the administration of the drug or biological. The Secretary is required to establish a process for recovery of payments billed at the time of dispensing of drugs or biologicals that were not actually administered as well as a process by which physicians submit information to contractors for the purposes of collection of any applicable deductible or coinsurance amounts. Payment could only be made to the contractor, provided the contractor has a contract and the physician elects that contractor for such category of drug or biological for the area. Alternatively, the physician may elect Section 1847A to apply.

Certain contractor selection and contracting requirements for the competitive acquisition program are established. Specifically, the Secretary is required to establish an annual selection process for a contractor

in each area for each category of drugs and biologicals. The selection of the contractor will be made at the time the physician elects to participate in the program established under Section 1847B. The Secretary will make a list of contractors in the different competitive acquisition area who are available to physicians on an ongoing basis through a directory posted on the Internet website of the Centers for Medicare & Medicaid Services, and through the annual CMS ''Dear Doctor'' campaign.

The Secretary will conduct a competition among entities for the acquisition of at least one competitively biddable drug or biological that is a multiple source or a single source drug or biological within each billing and payment code within each category for each area. The competition within a HCPCS code for multiple source drug products is intended to produce competitive forces that will lower bid prices for drugs. Because multiple source drugs and generics within a HCPCS code are therapeutically equivalent, such competition will ensure access to appropriate therapeutic products. The Secretary may not award the 3-year contract to any entity that does not have the capacity to supply competitively biddable drugs or biologicals within the applicable category or does not meet quality, service, and financial performance and solvency standards established by the Secretary. Specifically, the entity would be required to have (1) sufficient arrangements to ship competitively biddable drugs and biologicals at least 5 days of the week in order for the timely delivery (including for emergency situations) of such drugs and biologicals; (2) procedures for the prompt response and resolution of physician and beneficiary complaints and inquiries regarding the shipment of these drugs; and (3) a grievance and appeals process. Review of complaints by the Medicare Provider Ombudsman has been established in Section 923 of this legislation. The Secretary will not be able to contract with an entity that has had its license for distributing drugs (including controlled substances) suspended or revoked by the Federal or a State Government or that has been excluded from program participation.

The Secretary will be able to limit the number of qualified entities in each category and area, but not below 2 for any category and area. The Secretary is required to base selection on bid prices for competitively biddable drugs and biologicals, bid prices for distribution of those drugs and biologicals, ability to ensure product integrity, customer service, past experience with drug and biologic distribution, and other factors.

The contract is subject to terms and conditions that the Secretary may specify. The contract will be for a term of 3 years, but may be terminated by either the Secretary or the entity with appropriate notice. The Secretary must require that all drugs and biological products distributed by a contractor be acquired directly from the manufacturer or from a distributor that has acquired the products directly from the manufacturer. Nothing in this provision relieves or exempts any contractor from the requirements of the Federal Food, Drug, and Cosmetic Act that relate to the wholesale distribution of prescription drugs or biologicals. Conferees want to ensure the safe distribution of drugs and to ensure counterfeiting and adulteration is minimized. Such measures include includes the safe and appropriate storage of drugs and biologicals, disposition of damaged and outdated drugs and biologicals and appropriate record keeping and compliance personnel.

Contractors will be required to comply with a code of conduct and fraud and abuse rules. Specifically, the contractor will comply with standards relating to conflicts of interest and all applicable provisions and guidelines relating to the prevention of fraud and abuse established by the Department of Justice and the Inspector General.

The appropriate contractor, as selected by the physician, will supply competitively biddable drugs and biologicals directly to the physician, except under the circumstances when a beneficiary is presently able to receive a drug at home or other non-physician office settings as the Secretary may provide. The contractor shall not deliver drugs to a physician without first receiving a prescription as well as other necessary information specified by the Secretary. However, a physician would not be required to submit a prescription for each individual treatment or change a physician's flexibility in terms of writing a prescription for a single treatment or course of treatment. Conferees do not intend contractors to mix drug products prior to a patient's visit, but may do so should it be clinically advised. If specialty pharmacies mix products under the program for a specific patient, it should be done only to the benefit of the patient. Such cases may include a physician office that lacks the ability to mix Part B drugs in compliance with medical, clinical and environmental standards. In no way do conferees intend the requirements for the competition program to impair a patient's access to health treatment as a result of changes in the patient's health status, including pre-mixed drugs or biologics.

The Secretary is required to establish rules allowing physicians to use drugs or biologics from their own inventories in emergency situations consistent with safe drug practices and with adequate safeguards against fraud and abuse. In order to resupply such an inventory, a physician will be required to demonstrate that the drugs are immediately required; that the immediate need could not reasonably have been foreseen, that the drugs could not be delivered by the contractor in a timely manner, and that the drugs were administered in an emergency situation. No applicable State requirements relating to the licensing of pharmacies are waived.

The Secretary is required to base selection of the contractors on several factors including bid prices. Bid prices are those in effect and available through the entity for the contract period and includes all costs related to the delivery of the drug or biological to the selecting physician or other delivery point as well as all dispensing and shipping costs. Costs relating to the administration of the drug or biological or waste, spillage or spoilage are not included. As part of the awarded contract, the selected contractor will be required to disclose the reasonable, net acquisition costs regularly (but not more often than once a quarter) as specified by the Secretary. The selected contractor will also be required to disclose appropriate price adjustments over the period of the contract to reflect changes in reasonable, net acquisition costs.

Payments would be based upon bids submitted and accepted, and the Secretary would determine a single payment amount for each drug in an area. The Secretary will apply special rules and alternative payment amounts to establish a price for specific competitively biddable drugs and biologicals, including new drugs and biologicals (for which an average bid price has not been previously determined) and other exceptional cases specified in regulations. Medicare's payment for these drugs equals 80% of the payment amount after the Medicare beneficiary meets the applicable deductible. Generally, these coinsurance and deductible amounts will be collected by the contractor that supplies the drug or biological which may be collected in a similar manner as those collected for durable medical equipment.

Nothing in the section prevents a bidder from submitting a contract offer to cover all areas of the United States. Similarly, nothing would require a bidder to submit a contract offer to cover all areas of the United States. The amount of the bid price submitted under a contract offer is required to be the same for all portions of the area.

The Secretary will establish a procedure under which a prescribing physician has certain appeal rights that are similar to those provided to a physician who prescribes durable medical equipment or a clinical diagnostic laboratory test. Certain provisions specified in Section 1842(o)(3) with respect to assignment will also apply to claims for competitively biddable drugs and biologicals. Certain protections against liability in case of adverse medical necessity determination will apply to Medicare beneficiaries. There shall be no administrative or judicial review with respect to the establishment of payment amounts, contract awards, establishment of competitive acquisition areas, the phased in implementation, the selection of categories of competitively biddable drugs and biologicals for competitive acquisition or the bidding structure or number of contractors who are selected.

No later than July 1, 2008, the Secretary is required to report to Congress on savings, reductions in cost-sharing, access to competitively biddable drugs and biologicals, the range of choices of contractors available to providers as well as beneficiary and provider satisfaction under the competitive acquisition program. The report will also examine the information comparing prices for drugs in the competitive acquisition program and under the application of the average sales price methodology under Section 1847A.

In developing rules to implement this section, the Secretary should seek public comment on factors that disadvantage certain covered drugs based on drug forms and delivery and dispensing modes, and which may result in increased Medicare expenditures.

Items and Services Relating to Furnishing of Blood Clotting Factors (Section 303(e)(1) of the Conference Agreement and Section 303(f) of the House Bill).

Present Law

Medicare will pay for blood clotting factors for hemophilia patients who are competent to use such factors to control bleeding without medical supervision, as well as the items related to the administration of such factors.

House Bill

MedPAC would be required to submit to Congress specific recommendations with respect to payment for blood clotting factors and its administration in its 2004 annual report. The provision would be effective upon enactment.

Senate Bill

The Secretary is required to review the GAO report on payment for blood clotting factors and provide a separate payment for the administration of these factors. The total amount of payments for blood clotting factors furnished in CY2004 would not exceed

the amount that would have otherwise been expended. In CY2005 and subsequently, this separate payment amount would be updated by the change in the CPI for medical care for the previous year ending in June. The provision would be effective upon enactment.

Conference Agreement

The Secretary is required to review the GAO report on payment for blood clotting factors and provide a separate payment for the administration of these factors. The payment amount may take into account the mixing (if appropriate) and delivery of factors to an individual, including special inventory management and storage requirements as well as ancillary supplies and patient training necessary for self-administration. The total amount of payments for blood clotting factors furnished in CY2005 can not exceed the amount that would have otherwise been expended. In CY2006 and subsequently, this separate payment amount would be updated by the change in the CPI for medical care for the previous year ending in June.

Pharmacy Supplying Fee for Certain Drugs and Biologicals (Section 303(e)(2), Section 303(g) of the House Bill and Section 432(b)(8) of the Senate Bill).

Present Law

Medicare pays for certain outpatient prescription drugs and biologicals. For instance, Medicare pays a dispensing fee in conjunction with inhalation therapy drugs used in nebulizers. Medicare does not pay a dispensing fee to pharmacists or providers who supply oral drugs.

House Bill

The Secretary would be required to provide for separate payments in the physician fee schedule to cover the administration and acquisition costs associated with covered drugs and biologicals furnished by a contractor under the competitive acquisition program. The provision would be effective upon enactment.

Senate Bill

Medicare would pay a dispensing fee (less the applicable deductible and coinsurance amounts) to licensed approved pharmacies for covered immunosuppressive drugs, oral anti-cancer drugs, and oral anti-nausea drugs used as part of an anti-cancer chemotherapeutic regimen. Medicare would be able to pay a dispensing fee (less the applicable deductible and coinsurance amounts) to licensed approved pharmacies for other drugs and biologicals. The provision would be effective upon enactment.

Conference Agreement

The Secretary is required to pay a supply fee (less the applicable deductible and coinsurance amounts) to licensed approved pharmacies for covered immunosuppressive drugs, oral anti-cancer drugs, and oral anti-nausea drugs used as part of an anti-cancer chemotherapeutic regimen. Such fee is not meant to be a dispensing fee. The intent of the Conferees is to not to include in such fee, amounts for cognitive services.

Linkage of Revised Drug Payments and Increases for Drug Administration (Section 303(f) of the Conference Agreement and Section 432(b)(1) of the Senate Bill).

Present Law

No provision.

House Bill

No provision.

Senate Bill

A linkage of revising drug payments to incorporate market prices and payment increases for drug administration would be established.

Conference Agreement

The Secretary cannot implement the revision in payment amount for categories of drug or biological administered by physicians unless the Secretary concurrently makes the practice expense payment adjustment on the basis of survey data as specified earlier.

Prohibition of Administrative and Judicial Review (Section 303(g) of the Conference Agreement and Section 432(d) of the Senate Bill).

Present Law

Medicare beneficiaries and, in certain circumstances, providers and suppliers of health care services may appeal adverse determinations regarding claims for benefits under Part A and Part B. Section 1869 of the SSA allows these parties who have been denied coverage of an item or service the right to appeal that decision through a series of administrative appeals and then into federal district court under certain circumstances. Section 1878 of the SSA allows providers who are dissatisfied with certain cost reporting determinations that affect their reimbursement amounts the right to appeal that decision in front of the Provider Reimbursement Review Board and then into federal district court if certain thresholds regarding the amount in dispute are met at each step of the appeals process.

House Bill

No provision.

Senate Bill

The provisions concerning Medicare's determination of payment amounts for existing and new drugs and biologicals including the administration of blood clotting factors, home infusion drugs and inhalation drugs would not be subject to administrative or judicial review under Sections 1869 and 1878 of the SSA or otherwise. The provision would be effective upon enactment.

Conference Agreement

The provisions concerning Medicare's determination of payment amounts, methods or adjustments including those with respect to a drug's widely available market price in 2004, the administration of blood clotting factors, and pharmacy supplying fees will not be subject to administrative or judicial review under Sections 1869 and 1878 of the SSA or otherwise. The provision would be effective upon enactment.

The provisions concerning Medicare's determination of the budget neutral adjustments, adjustments to the practice expense relative value units for certain drug administration services and other drug administration services will not be subject to administrative or judicial review under Section 1869 of the SSA or otherwise. The provision would be effective upon enactment.

The provisions concerning Medicare's treatment of other services currently in the non-physician work pool, payment for multiple chemotherapy agents furnished on a single day through the push technique, and the transitional adjustment will not be subject to administrative or judicial review under Sections 1869 and Section 1878 of the SSA or otherwise. The provision would be effective upon enactment.

Continuation of Payment Methodology for Radiopharmaceuticals (Section 303(h) of the Conference Agreement and Section 303(c) of the House Bill).

Present Law

Under certain circumstances, Medicare makes a separate payment for supplies furnished in connection with a procedure. Medicare will pay separately for pharmaceutical or radiopharmaceutical supplies when procedures such as diagnostic radiolologic procedures or other diagnostic tests requiring a pharmacological stressing agent.

Although Medicare uses the Healthcare Common Procedure Coding System (HCPCS) codes to identify and pay for physician administered drugs, the AWPs are established for national drug codes (NDC) codes that are maintained by the Food and Drug Administration (FDA). Until January 1, 2003, each Medicare carrier would convert NDC codes into HCPCS codes in order to develop AWP-based payments for physicians in its area. To address the variation in carrier-established drug pricing methods, CMS implemented a single drug pricer (SDP), a centrally administered fee schedule for covered outpatient drugs on January 1, 2003. The SDP excludes radiopharmaceuticals, outpatient hospital drugs, and drugs paid by the durable medical equipment regional carriers (DMERCs).

House Bill

These provisions would not affect the existing carrier invoice pricing method used to pay for radiopharmaceuticals. The provision would be effective upon enactment.

Senate Bill

No provision.

Conference Agreement

The conference agreement will not change the Part B payment methodology for radiopharmaceuticals including the use by carriers of the invoice pricing method.

Conforming Amendments (Section 303(i) of the Conference Agreement and Section 303(d) of the House Bill).

Present Law

No provision.

House Bill

The provisions in this section would not affect the existing coverage for outpatient drugs. The collection of data to calculate the manufacturer's average sales price and the manufacturer's wholesale acquisition cost would be included as part of the Medicaid drug rebate program for calendar quarters beginning on or after April 1, 2004. Information on sales that were made at a nominal price would also be submitted and be subject to audit by the HHS Inspector General. The provision would be effective upon enactment.

Senate Bill

No provision.

Conference Agreement

The conference agreement includes conforming amendments to the existing statutory language. A pharmacy-dispensing fee will not be paid when payment for a drug is made under the average sales price or competitive acquisition program. The provisions in this section will not affect the existing coverage for outpatient drugs. The list of services paid for under Part B will be amended to include drugs paid for under Sections 1847, 1847A, and 1847B. Information by NDC (including package size) on the manufacturer's average sales price and total number of units; the manufacturer's wholesale acquisition cost; sales that were made at a nominal price will be included as part of the Medicaid drug rebate program for calendar quarters beginning on or after January 1, 2004. This information will be subject to audit by the Inspector General. The Secretary will be able to survey wholesalers and manufacturers that directly distribute covered outpatient drugs to verify average sales price (including wholesale acquisition cost) under

the Medicaid drug rebate program. The provisions with respect to the Congressional review of agency rulemaking will not apply with respect to regulations that implement adjustments to the physician fee schedule or the application of market based payment systems. The existing requirement that the Secretary study the effect on AWP of Medicare's policy to pay for covered outpatient drugs at 95% of AWP is repealed.

Extension

Payment for Inhalation Drugs and Certain Other Drugs (Section 305 of the Conference Agreement, Section 602(c) of the House Bill, and Section 432(b)(7) of the Senate Bill).

Present Law

Medicare will cover outpatient prescription drugs and biologicals if they are necessary for the effective use of covered durable medical equipment (DME), including those drugs that must be put directly into the equipment such respiratory drugs given through a nebulizer (inhalation drugs).

House Bill

GAO would be required to conduct a study to examine the adequacy of current reimbursements for inhalation therapy under the Medicare program and submit the results of the study in a report to Congress no later than May 1, 2004.

Senate Bill

The Secretary would be able to increase payments for covered DME associated with inhalation drugs and biologicals and make separate payments for such drugs and biologicals furnished through covered DME on or after January 1, 2004, if such payments are determined to be appropriate. The associated spending attributed to the increased and separate payments for the covered DME and inhalation drugs and biologicals in the year would not exceed the 10% of the difference between the savings in total spending for these drug and biologicals attributed to the prescription drug pricing changes enacted in this legislation. The provision would be effective upon enactment.

Conference Agreement

Inhalation drugs or biologicals furnished through covered durable medical equipment that is not described in subparagraph (A)(iv) will be paid at 85% of AWP in 2004. In 2005, it will be the amount provided under the average sales price methodology.

GAO is required to conduct a study to examine the adequacy of current reimbursements for inhalation therapy under the Medicare program and submit the results of the study in a report to Congress no later than 1 year from the enactment date of this legislation.

Demonstration Project for Use of Recovery Audit Contractors (Section 305 of the Conference Agreement and Section 304 of the House Bill).

Present Law

No provision.

House Bill

The Secretary would be required to conduct a demonstration project for up to 3 years on the use of recovery audit contractors under the Medicare Integrity Program. The recovery audit contractors would identify underpayments and overpayments in the Medicare program and would recoup overpayments made to providers. Payment would be made to these contractors on a contingent basis, a percentage of the amount recovered by the contractors would be able to be retained by the Secretary and available to the program management account of Centers for Medicare & Medicaid Services (CMS), and the Secretary would be required to examine the efficacy of using these contractors with respect to duplicative payments, accuracy of coding, and other payment policies in which inaccurate payments arise. The demonstration project would be required to cover at least 2 states that are among the states with the highest per-capita utilization rates of Medicare services and have at least 3 recovery audit contractors. The Secretary would be able to waive Medicare statutory provisions to pay for the services of the recovery audit contractors. Recovery of an overpayment through this project would not prohibit the Secretary or the Attorney General from investigating and prosecuting appropriate allegations of fraud and abuse. Fiscal intermediaries, carriers, and Medicare Administrative Contractors would not be eligible to participate as a recovery audit contractor. The Secretary would be required to show preference to contracting with entities that have demonstrated more than 3 years direct management experience and a proficiency in recovery audits with private insurers or state Medicaid programs. Within 6 months of completion, the Secretary would be required to report to Congress on the project's savings to the Medicare program, including recommendations on the cost-effectiveness of extending or expanding the program. The provision would be effective upon enactment.

Senate Bill

No provision.

Conference Agreement

The conference agreement requires the Secretary to conduct a demonstration project for up to 3 years on the use of recovery audit contractors under the Medicare Integrity Program. The recovery audit contractors will identify underpayments and overpayments in the Medicare program and recoup overpayments made to providers. Payment may be made to these contractors on a contingent basis, a percentage of the amount recovered by the contractors is to be retained by the Secretary and available to the program management account of the Centers for Medicare & Medicaid Services (CMS), and the Secretary is required to examine the efficacy of using these contractors with respect to duplicative payments, accuracy of coding, and other payment policies in which inaccurate payments arise.

The demonstration project is required to cover at least 2 states that are among the states with the highest per-capita utilization rates of Medicare services and that have at least 3 recovery audit contractors. The Secretary is required to waive Medicare statutory provisions as necessary in order to pay for the services of the recovery audit contractors. The Secretary is required to show preference to contracting with entities that have demonstrated more than 3 years direct management experience and a proficiency in recovery audits with private insurers or state Medicaid programs. Fiscal intermediaries, carriers, and Medicare Administrative Contractors are not eligible to participate as a recovery audit contractor. Recovery of an overpayment through this project does not prohibit the Secretary or the Attorney General from investigating and prosecuting allegations of fraud or abuse arising from the overpayment. Within 6 months of completion, the Secretary is required to report to Congress on the project's savings to the Medicare program, including recommendations on the cost-effectiveness of extending or expanding the program. The provision is effective upon enactment.

Pilot Program for National and State Background Checks on Direct Patient Access Employees of Long-Term Care Facilities or Providers (Section 306 of the Conference Agreement and Section 620 of the Senate Bill).

Present Law

Nursing homes and home health agencies may request the Federal Bureau of Investigation (FBI) to search its all-state national data bank of arrest and convictions for the criminal histories of applicants who would provide direct patient care, as long as states establish mechanisms for processing these requests. Most states have enacted laws that require or allow nursing homes and home health agencies to conduct these criminal background checks for certain categories of potential employees. The Attorney General may charge nursing homes and home health agencies fees of no greater than $50 per request.

To conduct a criminal background check, nursing homes and home health agencies must provide a copy of an applicants fingerprints, a statement signed by the applicant authorizing the search, and other information to the appropriate state agency. Such information must be provided no later than 7 days after its acquisition by the nursing home or home health agency. Nursing facilities or home health care agencies that deny employment based on reasonable reliance on information from the Attorney General are exempt from liability for any action brought by the applicant. The information received from either the state or Attorney General may be used only for the purpose of determining the suitability of the applicant for employment by the agency in a position involved in direct patient care.

HHS maintains a national health care fraud and abuse data base, the Healthcare Integrity and Protection Data Bank (HIPDB), for the reporting of final adverse actions, including health care related civil judgments and criminal convictions of health care practitioners, providers and suppliers. This information is currently available for self-query by government agencies, health plans, health care providers, suppliers and practitioners. All states also maintain their own registries of persons who have completed nurse aide training and competency evaluation programs and other persons for whom the state determines meet the requirements to work as a nurse aide. Included in these registries are data describing state findings of resident neglect, abuse and/or the misappropriation of resident property.

State agencies that survey providers to ensure they meet Medicare and/or Medicaid requirements for participation are referred to as survey and certification agencies, or state survey agencies. Under current law, state survey agencies are required to investigate allegations of resident neglect, abuse and/or the misappropriation of resident property in nursing homes.

House Bill

No provision.

Senate Bill

Medicare and/or Medicaid certified nursing homes, home health agencies, hospices, long-term care hospitals, intermediate care facilities for the mentally retarded (ICF/MRs), and other entities providing long-term care services would be required to initiate background checks for certain workers. These workers would include those licensed, certified, nonlicensed, or contracted employee of a long term care facility or provider (other than a volunteer) that has access to a

patient or resident, including nurse assistants, nurse aides, home health aides, individuals who provide home care, and personal care workers and attendants.

Providers would be required to: (1) give written notice to workers about background checks, (2) obtain a written statement disclosing any conviction for a relevant crime or finding of patient or resident abuse from the worker, (3) receive written permission from workers authorizing a criminal background check, (4) obtain fingerprints or thumb prints of workers, (5) conduct self-queries of the HIPDB, and (6) comply with other information requirements specified by the Secretary. States would then be required to check state arrest and conviction data banks, and if appropriate, request the FBI to check national criminal history records on behalf of providers that are required to conduct these background checks.

The long-term care providers would be prohibited from employing a worker who has any conviction for a relevant crime or a finding of patient or resident abuse. Those found to violate these requirements would be subject to criminal penalty fines and/or imprisonment. Providers that are found to violate these requirements would face civil monetary fines. Providers would be permitted to provisionally employ workers pending completion of the criminal background checks as long as they comply with supervisory requirements. Special consideration would be given to rural facilities and home health providers.

Providers would be reimbursed for their costs associated with the requirements of this provision by the Secretary of HHS. The Attorney General could charge fees to any state requesting a search and exchange of records. States could also charge providers fees. Yet, providers could not charge fees to workers.

The nurse aide registry would be expanded to include all employees of providers, including non-licensed workers, and renamed an employee registry. Survey and certification agencies would be required to investigate abuse and neglect allegations and misappropriation of resident property concerning any individual employed or used by any participating health and long-term care providers. $10.2 million would be authorized to be appropriated for FY 2004, with compliance with these provisions phases in for various groups of providers.

Grants would be available to public or private non-profit entities to develop information on best practices in patient abuse prevention training (including behavior training and interventions) for managers and staff of hospital and health care facilities, and for other purposes.

Long-term care providers could access the HIPDB data bank and HIPDB would be expanded to include findings of abuse, neglect, or misappropriation of resident property. A report would be due to Congress no later than 2 years after enactment on the number of requests for searches and exchanges of records, the disposition of requests, and the cost of responding to such requests.

Conference Agreement

The conference agreement requires the Secretary to establish pilot projects in no more than 10 states for the purpose of expanding background checks for workers to other Medicare and Medicaid long-term care providers. Long-term care facilities or providers include Medicare- and/or Medicaid-certified nursing homes, home health agencies, hospices, long-term care hospitals, intermediate care facilities for the mentally retarded (ICF/MRs), and other entities that provide long-term care services (except for those paid through a self-directed arrangement).

States that agree to participate in this pilot project will be responsible for monitoring provider compliance and must establish procedures for workers to appeal or dispute the findings of the background checks. The Secretary will establish criteria for selecting those states seeking to participate and pay those states for the costs of conducting the pilot program (reserving 2% of the payments for the program's evaluation).

Long-term care providers in participating states are required to: (1) give notice to new workers about background checks, and (2) obtain a written statement disclosing any conviction for a relevant crime or finding of patient or resident abuse from the worker, (3) receive written permission from workers authorizing a criminal background check, (4) obtain a rolled set of finger prints of workers, (5) obtain any other information specified by the state; and (6) initiate a check of available registries that document findings of resident or patient neglect, abuse, or misappropriation of property (if no information about a conviction of a relevant crime or finding of abuse are found). Providers must also obtain information on the workers from the state through a 10–fingerprint background check to be conducted using state criminal records and the Integrated Automated Fingerprint Identification system of the Federal Bureau of Investigation. Disqualifying information for employment includes information about a conviction for a relevant crime, a finding of patient or resident abuse, or a felony conviction related to health care fraud or a controlled substance. Under the agreement, at least one state should test if providers could contract with employment agencies, subject to conditions specified by the state, to conduct these background checks.

Pending completion of the national and state criminal history background checks, states may permit providers to provisionally employ workers as long as they comply with supervisory requirements established by the state. These requirements would take into account the cost or other burdens associated with small rural providers as well as the nature of care delivered by home health or hospice providers.

The information obtained from the check may only be used for the purpose of determining the suitability of the applicant for employment. Providers are also protected from liability for denying employment based on reasonable reliance on information from the background checks. For fiscal years 2005 and 2006, $25 million is appropriated from funds not otherwise appropriated.

GAO Study (Section 303(e) of the House Bill).

Present Law

No provision.

House Bill

GAO would be required to conduct a study to assess the impact of amendments made by this section on the delivery of services and their impact on access to drugs by beneficiaries. The report would be due no later than 2007.

Senate Bill

GAO would be required to conduct a study that examines the impact of the drug payment and adjustment provisions on the access of Medicare beneficiaries' to covered drugs and biologicals. The report, including appropriate recommendations, would be due to Congress no later than January 1, 2006. The Inspector General would be required to conduct one or more studies that examine the market prices for Medicare covered drugs and biologicals, which are widely available to physicians and suppliers. The report would examine those drugs and biologicals that represent the largest portion of Medicare spending on such items and include a comparison of market prices with Medicare payment amounts.

Conference Agreement

No provision.

Study on Codes for Non-Oncology Codes (Section 303(h) of the House Bill).

Present Law

No provision.

House Bill

The Secretary would be required to submit a study to Congress within one year of enactment that examines the appropriateness of establishing and implementing separate codes for non-oncology infusions that address the level of complexity and resource consumption. If deemed appropriate, the Secretary would be able to implement appropriate changes in the payment methodology. The provision would be effective upon enactment.

Senate Bill

No provision.

Conference Agreement

No provision.

Payment for Chemotherapy Drugs Purchased But Not Administered by Physicians (Section 432(b)(9) of the Senate Bill).

Present Law

Medicare does not pay for chemotherapy drugs that purchased by physicians, are not dispensed, and must be discarded.

House Bill

No provision.

Senate Bill

The Secretary would be able to compensate a physician for chemotherapy drugs that are purchased with a reasonable intent to administer to a Medicare beneficiary but which cannot be administered despite the physician's reasonable efforts, because the beneficiary is too sick or the beneficiary's condition changes and the physician must discard the drugs. The Secretary would be able to increase the Medicare payment amount for all covered chemotherapy drugs, but the total amount of the increase could not exceed one percent of the payment for chemotherapy drugs. The beneficiary's cost sharing amounts would not be affected. The provision would be effective upon enactment.

Conference Agreement

No provision.

Extension of Medicare Secondary Payer Rules for Individuals with End-Stage Renal Disease (Section 450F of the Senate Bill).

Present Law

Generally, Medicare is the primary payer, that is, it pays health claims first, with an individual's private or other public plan filling in some or all of the coverage gaps. In certain cases, the beneficiary's other coverage pays first, while Medicare is the secondary payer. This is known as the Medicare secondary payer (MSP program). The MSP provisions apply to group health plans for the working aged, large group health plans for the disabled, and, for 30 months, employer health plans for the end-stage renal disease (ESRD) population.

House Bill

No provision.

Senate Bill

This provision would extend the limited time period that employer health plans are primary payer for beneficiaries with end-stage renal disease from 30 months to 36 months. The provision would apply for items and services furnished beginning January 1, 2004.

Conference Agreement

No provision.

TITLE IV—RURAL PROVISIONS

Subtitle A—Provisions Relating to Part A Only

Equalizing Urban and Rural Standardized Payment Amounts under the Medicare Inpatient Hospital Prospective Payment System (Section 401 of the Conference Agreement, Section 402 of the House Bill, and Section 401 of the Senate Bill).

Present Law

Medicare pays for inpatient services in acute hospitals in large urban areas using a standardized amount that is 1.6% more than the standardized amount used to pay hospitals in other areas (both rural areas and smaller urban areas). The Consolidated Appropriations Act of 2003 (P.L. 108–7) provided for a temporary payment increase for rural and small urban hospitals; all Medicare discharges from April 1, 2003, to September 30, 2003, will be paid on the basis of the large urban area amount. This temporary increase was further extended to discharges through March 31, 2004 by P.L. 108–89, which permitted the Secretary to delay implementation of the payment increase until November 1, 2003, if necessary.

Under Medicare's prospective payment system for inpatient services, separate standardized amounts are used to establish payments for discharges from short-term general hospitals in Puerto Rico. The separate amounts are a blended calculation based on an equal proportion of the federal national amount and the local amount, which are computed using data from hospitals in Puerto Rico. Presently, two local amounts are calculated: one for hospitals in large urban areas and one for hospitals in other areas.

House Bill

Beginning for discharges in FY2004, the standardized amount for hospitals located in areas other than large urban areas would be equal to the amount used to pay hospitals located in large urban areas. Technical conforming amendments would also be adopted.

Senate Bill

Medicare would pay hospitals in rural and small urban areas in the fifty states using the standardized amount used to pay hospitals in large urban areas starting for discharges in FY2004. The Secretary would compute one standardized amount for hospitals in Puerto Rico equal to that for urban areas.

Conference Agreement

Medicare will pay hospitals in rural and small urban areas in the fifty states using the standardized amount that would be used to pay hospitals in large urban areas starting for discharges in FY2004. The Secretary will compute one local standardized amount for all hospitals in Puerto Rico equal to that for hospitals in large urban areas in Puerto Rico starting for discharges in FY2004. The existing single standardized amount will continue for hospitals that are not in Puerto Rico are not affected. Hospitals in Puerto Rico will receive the legislated payment increase starting for discharges on April 1, 2004.

Enhanced Disproportionate Share Hospital (DSH) Treatment for Rural Hospitals and Urban Hospitals with Fewer than 100 Beds (Section 402 of the Conference Agreement, Section 401 of the House Bill, and Section 404 of the Senate Bill).

Present Law

Medicare makes additional payments to certain acute hospitals that serve a large number of low-income Medicare and Medicaid patients as part of its inpatient prospective payment system (IPSS). As specified by BIPA, starting with discharges occurring on or after April 1, 2001, all hospitals are eligible to receive Medicare disproportionate share hospital (DSH) payments when their DSH patient percentage or threshold amount exceeds 15%. Different formulas are used to establish a hospital's DSH payment adjustment, depending upon the hospital's location, number of beds and status as a rural referral center (RRC) or sole community hospital (SCH). Although a SCH or RRC can qualify for a higher DSH adjustment, generally, the DSH adjustment that a small urban or rural hospital can receive is limited to 5.25%. Large (100 beds and more) urban hospitals and large rural hospitals (500 beds and more) are eligible for a higher adjustment that can be significantly greater; the amount of the DSH adjustment received by these larger hospitals will depend upon its DSH percentage. Certain urban hospitals (Pickle hospitals) receive DSH payments under an alternative formula that considers the proportion of a hospital's patient care revenues that are received from state and local indigent care funds.

House Bill

Starting for discharges after October 1, 2003, a hospital that is not a large urban hospital that qualifies for a DSH adjustment would receive its DSH payments using the current DSH adjustment formula for large urban hospitals, subject to a limit. The DSH adjustment for any of these hospitals, except for rural referral centers, would be capped at 10%. A Pickle hospital receiving a DSH adjustment under the alternative formula would not be affected.

Senate Bill

Starting for discharges after October 1, 2004, a hospital that qualifies for a DSH adjustment when its DSH patient percentage exceeds the 15% DSH threshold would receive the DSH payments using the current formula that establishes the DSH adjustment for a large urban hospital. A Pickle hospital receiving a DSH adjustment under the alternative formula would not be affected.

Conference Agreement

Starting for discharges after April 1, 2004, a hospital that is not a large urban hospital that qualifies for a DSH adjustment will receive its DSH payments using the current DSH adjustment formula for large urban hospitals, subject to a limit. The DSH adjustment for any of these hospitals, except for rural referral centers, will be capped at 12%. A Pickle hospital receiving a DSH adjustment under the alternative formula will not be affected by this provision.

Adjustment of the Medicare Inpatient Hospital Prospective Payment System Wage Index to Revise the Labor-Related Share of Such Index (Section 403 of the Conference Agreement, Section 416 of the House Bill, and Section 402 of the Senate Bill).

Present Law

Medicare's payments to acute hospitals are adjusted, either increased or decreased as appropriate, by the wage index of the area where the hospital is located or where it has been reassigned. Presently, approximately 71 percent of the standardized amount for each hospital discharge is adjusted by the area wage index. Decreasing this proportion or labor-related share would increase Medicare payments to hospitals in areas with wage indices below one and decrease Medicare payments to hospitals in areas with wage indices above one.

House Bill

For discharges occurring on or after October 1, 2003, the Secretary would be required to decrease the labor-related share to 62 percent of the standardized amount only if such change would result in higher total payments to the hospital. This provision would be applied without regard to certain budget-neutrality requirements.

Senate Bill

For cost reporting periods beginning on or after October 1, 2004, the Secretary would be required to decrease the labor-related share to 62 percent of the standardized amount only if such change would result in higher total payments to the hospital. This provision would be applied without regard to certain budget-neutrality requirements.

Conference Agreement

For discharges on or after October 1, 2004, the Secretary is required to decrease the labor-related share to 62 percent of the standardized amount when such change will result in higher total payments to the hospital. This provision is applied without regard to certain budget-neutrality requirements. For discharges on or after October 1, 2004, the Secretary is also required to decrease the labor-related share to 62 percent of the standardized amount for hospitals in Puerto Rico when such change results in higher total payments to the hospital.

More Frequent Update in Weights Used in Hospital Market Basket (Section 404 of the Conference Agreement and Section 404 of the House Bill).

Present Law

Medicare's standardized amounts, which serve as the basis of its payment per discharge from an acute hospital, are increased annually using an update factor that is determined in part by the projected increase in the hospital market basket. The market basket is a fixed-weight hospital input price index, which measures the average change in the price of goods and services that hospitals purchase in order to furnish inpatient care. The Centers for Medicare and Medicaid Services (CMS) revises the cost category weights, reevaluates the price proxies for such categories, and rebases (or changes the base period) for the market basket every 5 years. CMS implemented a revised and rebased market basket using 1997 cost data to set the FY2003 Medicare hospital payment rates.

House Bill

The Secretary would be required to revise the market basket weights to reflect the most currently available data and to establish a schedule for revising the cost category weights more often than once every 5 years. The Secretary would be required to submit a report to Congress by October 1, 2004 on the reasons for and the options considered in establishing such a schedule.

Senate Bill

No provision.

Conference Agreement

The Secretary is required to revise the market basket weights to reflect the most currently available data and to establish a schedule for revising the cost category weights more often than once every 5 years.

The Secretary is required to publish the reasons for and the options considered in establishing such a schedule in the final rule establishing FY2006 inpatient hospital payments.

Improvements to the Critical Access Hospital (CAH) Program (Section 405 of the Conference Agreement, Section 405 of the House Bill, and Section 405 of the Senate Bill).

Increase in Payment Amounts (Section 405(a) of the Conference Agreement and Section 405(a) of the House Bill).

Present Law

Generally, a critical access hospital (CAH) receives reasonable cost reimbursement for care rendered to Medicare beneficiaries. CAHs may elect either a cost-based hospital outpatient service reimbursement or an all-inclusive rate, which is equal to a reasonable cost reimbursement for facility services plus 115 percent of the fee schedule payment for professional services. Ambulance services that are owned and operated by CAHs are reimbursed on a reasonable cost basis if these ambulance services are 35 miles from another ambulance system.

House Bill

Inpatient, outpatient, and covered skilled nursing facility services provided by a CAH would be reimbursed at 102 percent of reasonable costs of services furnished to Medicare beneficiaries. This provision would apply to cost reporting periods beginning on or after October 1, 2003.

Senate Bill

No provision.

Conference Agreement

Inpatient, outpatient, and covered skilled nursing facility services provided by a CAH will be reimbursed at 101 percent of reasonable costs of services furnished to Medicare beneficiaries. This provision applies to cost reporting periods beginning on or after January 1, 2004.

Coverage of Costs For Certain Emergency Room On-Call Providers (Section 405(b) of the Conference Agreement, Section 405(b) of the House Bill, and Section 405(c) of the Senate Bill).

Present Law

BIPA required the Secretary to include the costs of compensation (and related costs) of on-call emergency room physicians who are not present on the premises of a CAH, are not otherwise furnishing services, and are not on-call at any other provider or facility when determining the allowable, reasonable cost of outpatient CAH services.

House Bill

Reimbursement of on-call emergency room providers would be expanded to include the costs associated with physician assistants, nurse practitioners, and clinical nurse specialists as well as emergency room physicians for covered Medicare services. This provision would apply to costs for services provided on or after January 1, 2004.

Senate Bill

The provision would expand reimbursement of on-call emergency room providers to include physician assistants, nurse practitioners, and clinical nurse specialists as well as emergency room physicians for covered Medicare services provided on or after January 1, 2005.

Conference Agreement

The provision expands reimbursement of on-call emergency room providers to include physician assistants, nurse practitioners, and clinical nurse specialists as well as emergency room physicians for the costs associated with covered Medicare services provided on or after January 1, 2005.

Authorization of Periodic Interim Payment (PIP) (Section 405(c) of the Conference Agreement, Section 405(d) of the House Bill, and Section 405(d) of the Senate Bill).

Present Law

Eligible hospitals, skilled nursing facilities, and hospices which meet certain requirements receive Medicare periodic interim payments (PIP) every 2 weeks; these payments are based on estimated annual costs without regard to the submission of individual claims. At the end of the year, a settlement is made to account for any difference between the estimated PIP payment and the actual amount owed. A CAH is not eligible for PIP payments.

House Bill

An eligible CAH would be able to receive payments made on a PIP basis for its inpatient services. The Secretary would be required to develop alternative methods based on the expenditures of the hospital for these PIP payments. This provision would apply to payments made on or after January 1, 2004.

Senate Bill

Starting with payments made on or after January 1, 2005, an eligible CAH would be able to receive payments made on a PIP basis for inpatient services. The provision would apply to payments for inpatient CAH services furnished on or after January 1, 2005.

Conference Agreement

An eligible CAH will be able to receive payments made on a PIP basis for its inpatient services. The Secretary is required to develop alternative methods for the timing of PIP payments to these CAHs. This provision applies to payments made on or after July 1, 2004.

Condition for Application of Special Professional Service Payment Adjustment (Section 405(d) of the Conference Agreement and Section 405(e) of the House Bill).

Present Law

As specified by BBRA, CAHs can elect to be paid for outpatient services using cost-based reimbursement for its facility fee and at 115 percent of the fee schedule for professional services otherwise included within its outpatient critical access hospital services for cost reporting periods starting on or after October 1, 2000.

House Bill

The Secretary would not be able to require that all physicians providing services in a CAH assign their billing rights to the entity in order for the CAH to be able to be paid on the basis of 115 percent of the fee schedule for the professional services provided by the physicians. However, a CAH would not receive payment based on 115 percent of the fee schedule for any individual physician who did not assign billing rights to the CAH. This provision would be effective as if it had been included as part of BBRA.

Senate Bill

No provision.

Conference Agreement

The Secretary cannot require that all physicians or practitioners providing services in a CAH assign their billing rights to the entity in order for the CAH to be able to be paid on the basis of 115 percent of the fee schedule for the professional services provided by the physicians. However, a CAH will not receive payment based on 115 percent of the fee schedule for any individual physician or practitioner who did not assign billing rights to the CAH. This provision applies to cost report periods starting on or after July 1, 2004 except for those CAHs that have already elected payment for physician services on this basis in the past; this provision will apply to those CAHs starting for cost reporting periods on or after July 1, 2003.

Revision in Bed Limitation for Hospitals (Section 405(e) of the Conference Agreement, Section 405(f) of the House Bill, and Section 405(a) of the Senate Bill).

Present Law

A CAH is a limited service facility that must provide 24-hour emergency services and operate a limited number of inpatient beds in which hospital stays can average no more than 96 hours. A CAH cannot operate more than 15 acute-care beds at one time, but can have an additional 10 swing beds that are set up for skilled nursing facility (SNF) level care. SNF beds in a unit of the facility that is licensed as a distinct-part skilled nursing facility at the time of the facility's application for CAH designation are not counted toward these bed limits.

House Bill

The Secretary would be required to specify standards for determining whether a CAH has seasonal variations in patient admissions that would justify a 5-bed increase in the number of beds it can maintain (and still retain its classification as a CAH). CAHs that operate swing beds would be able to use up to 25 beds for acute care services as long as no more than 10 beds at any time are used for non-acute services. Those CAHs with swing beds that made this election would not be eligible for the 5-bed seasonal adjustment. A CAH with swing beds that elects to operate 15 of its 25 beds as acute care beds would be eligible for the 5-bed seasonal adjustment. These provisions would only apply to CAH designations made before, on, or after January 1, 2004.

Senate Bill

A CAH would be able to operate up to 25 swing beds or acute care beds, subject to the 96 hour average length of stay for acute care patients. The requirement that only 15 of the 25 beds be used for acute care at any time would be dropped. The provision would be effective for designations made on or after October 1, 2004.

Conference Agreement

A CAH will be able to operate up to 25 beds. The requirement that only 15 of the 25 beds be used for acute care at any time will be dropped. The provision will apply to CAH designations made before, on, or after January 1, 2004, but any election made pursuant to the regulations promulgated to implement this provision will only apply prospectively.

Provisions Relating to FLEX Grants (Section 405(f) of the Conference Agreement, Section 405(g) of the House Bill, and Section 405(f) of the Senate Bill).

Present Law

The Secretary is able to make grants for specified purposes to states or eligible small rural hospitals that apply for such awards. For example, the Medicare Hospital Flexibility Program awards grants to states for rural health care planning and implementation activities, rural network development and implementation, to establish or expand rural emergency medical services and for CAH designations.

The Secretary may also award grants to hospitals to assist eligible small rural hospitals in implementing data systems required under BBA 1997. Small rural hospitals

are short term general hospitals with less than 50 beds that are located in rural areas.

Funding for the rural hospital flexibility grant program was $25 million from FY1999 through FY2001; $40 million in FY2002; and $25 million in 2003. The authorization to award the grants expired in FY2002.

House Bill

The authorization to award grants would be established from FY2004 through FY2008 from the Federal Hospital Insurance Trust Fund at amounts of up $25 million each year. The provision would be effective upon enactment.

Senate Bill

The provision would permit the Secretary to award grants under the Small Rural Hospital Improvement Program to hospitals that have submitted applications to assist eligible small rural hospitals in reducing medical errors, increasing patient safety, protecting patient privacy, and improving hospital quality. These grants would not exceed $50,000 and would be able to be used to purchase computer software and hardware, educate and train hospital staff, and obtain technical assistance. The provision would authorize appropriations of $40 million each year from FY2004 through FY2008 from the Federal Hospital Insurance Trust Fund for grants to states for specified purposes. States that are awarded grants would be required to consult with the hospital association and rural hospitals in the state on the most appropriate way to use such funds. The provision would also authorize $25 million each year from FY2004 through FY2008 for the Small Rural Hospital Improvement Program. This amount would be appropriated from amounts in the treasury not otherwise appropriated.

The provisions would be effective upon enactment. They would apply to grants awarded on or after the date of enactment and would apply to grants awarded prior to the date of enactment to the extent that the funds have not yet been obligated.

Conference Agreement

The authorization to award rural hospital flexibility grants is established at $35 million each year from FY2005 through FY2008. Starting with funds appropriated for FY2005 and in subsequent years, a state is required to consult with the hospital association and rural hospitals in the state on the most appropriate way to use such funds. A state may not spend more than 15% of the grant amount or the states federally negotiated indirect rate for administrative purposes. Beginning with FY2005 up to 5% of the total amount appropriated for grants will be available to the Health Resources and Services Administration for administering these grants.

Exclusion of Certain Beds from Bed Count and Removal of Barriers to Establishment of Distinct Part Units (Section 405(g) of the Conference Agreement and Section 405(g) of the Senate Bill).

Present Law

Beds in distinct part psychiatric or rehabilitation units operated by an entity seeking to become a CAH would not count toward the bed limit.

House Bill

No provision.

Senate Bill

The Secretary would not be able to count any beds in a distinct part psychiatric or rehabilitation unit operated by the entity seeking to become a CAH. The total number of beds in these distinct part units would not be able to exceed 25. A CAH would be able to establish a distinct part psychiatric or rehabilitation unit. The provision would apply to designations on or after October 1, 2003.

Conference Agreement

A CAH can establish a distinct part psychiatric or rehabilitation unit that meets the applicable requirements for such beds established for a short-term, general hospital, specifically, a subsection (d) hospital as defined in 1886(d)(1)(B). If the distinct part units do not meet these requirements during a cost reporting period, then no Medicare payment will be made to the CAH for services furnished in the unit during the period. Medicare payments will resume only after the CAH demonstrates that the requirements have been met. Medicare payments for services provided in the distinct part units will equal payments that are made on a prospective payment basis to distinct part units of short term general hospitals. The Secretary will not count any beds in the distinct part psychiatric or rehabilitation units toward the CAH bed limit. The total number of beds in these distinct part units cannot exceed 10. The provision will apply to cost reporting periods starting October 1, 2004.

Waiver Authority (Section 405(h) of the Conference Agreement).

Present Law

Currently to qualify as a CAH, the rural, for-profit, non profit or public hospital must be located more than 35 miles from another hospital or 15 miles in areas with mountainous terrain or those where only secondary roads are available. These mileage standards may be waived if the hospital has been designated by the state as a necessary provider of health care.

House Bill

No provision.

Senate Bill

No provision.

Conference Report

Currently to qualify as a CAH, the rural, for-profit, non profit or public hospital must be located more than 35 miles from another hospital or 15 miles in areas with mountainous terrain or those where only secondary roads are available. These mileage standards may be waived if the hospital has been designated by the state as a necessary provider of health care. This authority is eliminated 2 years after enactment.

Medicare Inpatient Hospital Payment Adjustment for Low-Volume Hospitals (Section 406 of the Conference Agreement and Section 403 of the Senate Bill).

Present Law

Medicare pays inpatient acute hospital services on a discharge basis without regard for the number of beneficiaries discharged from any given hospital. Under certain circumstances, however, sole community hospitals (SCHs) and Medicare dependent hospitals with more than a 5% decline in total discharges from one period to the next may apply for an adjustment to their payment rates to partially account for higher costs associated with a drop in patient volume due to circumstances beyond its control.

House Bill

No provision.

Senate Bill

The provision would require the Secretary to provide for a graduated adjustment to Medicare's inpatient payment rates to account for the higher unit costs associated with low-volume hospitals. Certain hospitals with fewer than 2,000 total discharges during the 3 most recent cost reporting periods would be eligible for up to a 25% increase in their Medicare payment amount starting for FY2005 cost reporting periods. Eligible hospitals would be located at least 15 miles from a similar hospital or those determined by the Secretary to be so located due to factors such as weather conditions, travel conditions, or travel time to the nearest alternative source of appropriate inpatient care. Certain budget-neutrality requirements would not apply to this provision.

Conference Agreement

The Secretary is required to provide for a graduated adjustment to Medicare's inpatient payment rates to account for the higher unit costs associated with low-volume hospitals starting for discharges occurring in FY2005. The Secretary shall determine the empirical relationship between the standardized cost per case, the number of discharges, and the additional incremental costs (if any) for low-volume hospitals; the percentage payment increase for these hospitals will be based on this relationship, but in no case will be greater than 25%. A low-volume hospital is a short-term general hospital (as defined by 1886(d)(B) of the Social Security Act or SSA) that is located more than 25 road miles from another such hospital and that has less than 800 discharges during the fiscal year. A discharge means an inpatient acute care discharge of an individual regardless of whether the individual is entitled to Part A benefits. Certain budget-neutrality requirements would not apply to this provision. The determination of the percentage payment increase is not subject to administrative or judicial review.

Treatment of Missing Cost Reporting Periods for Sole Community Hospitals (Section 407 of the Conference Agreement and Section 414 of the House Bill).

Present Law

Sole community hospitals (SCHs) are hospitals that, because of factors such as isolated location, weather conditions, travel conditions, or absence of other hospitals, are the sole source of inpatient services reasonably available in a geographic area, or are located more than 35 road miles from another hospital. The primary advantage of an SCH classification is that these hospitals receive Medicare payments based on the current national PPS national standardized amount or on hospital-specific per discharge costs from either FY 1982, FY1987 or FY1996 updated to the current year, whatever amount will provide the highest Medicare reimbursement. The FY1996 base year option became effective for discharges on or after FY2001 on a phased in basis and will be fully implemented for SCH discharges on or after FY2004.

House Bill

A hospital would not be able to be denied treatment as a SCH or receive payment as a SCH because data are unavailable for any cost reporting period due to changes in ownership, changes in fiscal intermediaries, or other extraordinary circumstances, so long as data from at least one applicable base cost reporting period is available. The provision would apply to cost reporting periods beginning on or after January 1, 2004.

Senate Bill

No provision.

Conference Agreement

A hospital will not be able to be denied treatment as a SCH or receive payment as a

SCH because data are unavailable for any cost reporting period due to changes in ownership, changes in fiscal intermediaries, or other extraordinary circumstances, so long as data from at least one applicable base cost reporting period is available. The provision applies to cost reporting periods beginning on or after January 1, 2004.

Recognition of Attending Nurse Practitioners as Attending Physicians to Serve Hospice Patients (Section 408 of the Conference Agreement, Section 409 of the House Bill, and Section 407 of the Senate Bill).

Present Law

Medicare covers hospice services to care for the terminal illnesses of the beneficiary. In general, beneficiaries who elect the hospice benefit give up other Medicare services that seek to treat the terminal illness or that duplicate services provided by the hospice. Services are provided primarily in the patient's home by a Medicare approved hospice. Reasonable and necessary medical and support services for the management of the terminal illness are furnished under a written plan-of-care established and periodically reviewed by the patient's attending physician and the hospice. To be eligible for Medicare's hospice care, a beneficiary must be certified as terminally ill by an attending physician and the medical director or other physician at the hospice and elect hospice treatment. An attending physician who may be an employee of the hospice is identified by the patient as having the most significant role in the determination and delivery of the patient's medical care when the patient makes an election to receive hospice care.

House Bill

A beneficiary electing hospice care would be able to identify a nurse practitioner as an attending physician. This nurse practitioner would not be able to certify the beneficiary as terminally ill for the purpose of entering hospice care. The provision would be effective upon enactment.

Senate Bill

A terminally ill beneficiary under hospice care would be able to receive services provided by a physician assistant, nurse practitioner, or clinical nurse specialist who is not an employee of the hospice program and who the beneficiary identifies, when electing hospice care, as the health care provider having the most significant role in the determination of medical care provided to the beneficiary. A physician assistant, nurse practitioner, or clinical nurse specialist so identified by the beneficiary would be able to periodically review the beneficiary's written plan of care. The amendments would apply to hospice care furnished on or after October 1, 2004.

Conference Agreement

The conference agreement expands the definition of attending physician in hospice to include a nurse practitioner. A nurse practitioner is not permitted to certify a beneficiary as terminally ill for the purposes of receiving the hospice benefit. The provision would be effective upon enactment.

Rural Hospice Demonstration Project (Section 409 of the Conference Agreement and Section 418 of the House Bill).

Present Law

Medicare's hospice services are provided primarily in a patient's home to beneficiaries who are terminally ill and who elect such services. Medicare law prescribes that the aggregate number of days of inpatient care provided to Medicare beneficiaries who elect hospice care in any 12-month period cannot exceed 20% of the total number of days of hospice coverage provided to these persons.

House Bill

The Secretary would be required to establish a demonstration project of no more than 5 years in 3 hospice programs to deliver hospice care to Medicare beneficiaries in rural areas. Those Medicare beneficiaries who lack an appropriate caregiver and are unable to receive home-based hospice care would be able to receive hospice care in a facility of 20 or fewer beds that offers a full range of hospice services within its walls. The facility would not be required to offer services outside of the home and the limit on the aggregate number of inpatient days provided to Medicare beneficiaries who elect hospice care would be waived. The Secretary would be able to require the program to comply with additional quality assurance standards. Payments for the hospice care would be made at the rates that would be otherwise applicable to Medicare. Upon completion of the demonstration project, the Secretary would be required to submit a report to Congress, including recommendations, regarding the extension of the project to hospice programs serving rural areas.

Senate Bill

No provision.

Conference Agreement

The conference agreement requires the Secretary to establish a demonstration project in 3 hospice programs to deliver hospice care to Medicare beneficiaries in rural areas. A project is not permitted to last longer than 5 years. Those Medicare beneficiaries who lack an appropriate caregiver and are unable to receive home-based hospice care could receive hospice care in a facility of 20 or fewer beds that offers a full range of hospice services within its walls. The facility will not be required to offer services outside of the home. The limit on the aggregate number of inpatient days provided to Medicare beneficiaries who elect hospice care is waived under the demonstration. The Secretary may require the program to comply with additional quality assurance standards. Payments for the hospice care will be made at the rates that would be otherwise applicable to Medicare. Upon completion of the demonstration project, the Secretary is required to submit a report to Congress, including recommendations, regarding the extension of the project to hospice programs serving rural areas.

Establishment of Essential Rural Hospital Classification (Section 403 of the House Bill).

Present Law

Under current law, a critical access hospital (CAH) is a limited service facility that must provide 24-hour emergency services and operate a limited number of inpatient beds in which hospital stays can average no more than 96 hours. A CAH is exempt from Medicare's inpatient prospective payment system (IPPS) and receives reasonable cost reimbursement for care rendered to Medicare beneficiaries. Certain acute care general hospitals, particularly those facilities identified as isolated or essential hospitals primarily located in rural areas, receive special treatment under IPPS.

House Bill

The definition of CAH hospitals and services would be amended to add an essential rural hospital. An essential rural hospital would apply for such a classification, would have more than 25 licensed acute care beds, and would be located in a rural area as defined by IPPS. The Secretary would have to determine that the closure of this hospital would significantly diminish the ability of beneficiaries to obtain essential health care services based on the certain criteria. Specifically, the Secretary would determine that high proportion of Medicare beneficiaries residing in the service area of the hospital received basic inpatient care from the hospital; a hospital with more than 200 licensed beds would have to provide specialized surgical care to a high percentage of beneficiaries residing in the area who were hospitalized during the most recent year for which data are available. Regardless of the size of the hospital, almost all physicians in the area would have to have admitting privileges and provide their inpatient services primarily at the hospital. Also, the Secretary would have to determine the closure of the hospital would have a significant adverse impact on the availability of health care service in the absence of the hospital. In making such determination, the Secretary may also consider: (1) whether ambulatory care providers in the hospital's area are insufficient to handle the outpatient care of the hospital; (2) whether beneficiaries would have difficulty accessing care; and (3) whether the hospital has a significant commitment to provide graduate medical education in a rural area. The essential rural hospital would have to have a quality of care score above the median score for hospitals in the State. A hospital classified as an essential rural hospital would not be able to change such classification and would not be able to be treated as a sole community hospital, Medicare dependent hospital or rural referral center under IPPS. A hospital that is classified as an essential rural hospital for a cost reporting period beginning on or after October 1, 2004 would be reimbursed 102% of its reasonable costs for inpatient and outpatient services provided by acute hospitals Beneficiary cost-sharing amounts would not be affected and required billing for such services would not be waived. The provision would apply to cost reporting periods beginning on or after October 1, 2004.

Senate Bill

No provision.

Conference Agreement

No provision.

Modification of the Isolation Test for Cost-Based CAH Ambulance Services (Section 405(c) of the House Bill and Section 405(b) of the Senate Bill).

Present Law

Ambulance services provided by a CAH or provided by an entity that is owned or operated by a CAH is paid on a reasonable cost basis and not the ambulance fee schedule, if the CAH or entity is the only provider or supplier of ambulance services that is located within a 35-mile drive of the CAH.

House Bill

The 35-mile requirement would not apply to the ambulance services that are furnished after the first cost reporting period beginning after the date of enactment by a provider or supplier of ambulance services who is determined by the Secretary to be a first responder to emergencies. This provision would apply to ambulance services furnished on or after the first cost reporting periods that begins after the date of enactment.

Senate Bill

The provision would drop the requirement that the CAH or the related entity be the only ambulance provider with a 35-mile drive in order to receive reasonable cost reimbursement for the ambulance services. The

provision would apply to services furnished on or after January 1, 2005.

Conference Agreement

No provision.

Exclusion of New CAHs from PPS Hospital Wage Index Calculation (Section 405(e) of the Senate Bill).

Present Law

Certain qualified small hospitals are converting to CAHs. After conversion, these facilities are paid on a reasonable cost basis and are not paid under the hospital inpatient prospective payment system (IPPS). Medicare's IPPS payments to acute hospitals are adjusted by the wage index of the area where the hospital is located or has been reassigned. Although the hospital wage index is recalculated annually, the wage index for any given fiscal year is based on data submitted as part of a hospital's cost report from 4 years previously. As established by regulation, starting for FY2004 payments, wage data from hospitals that have converted to CAHs will be excluded in the IPPS wage index calculation.

House Bill

No provision.

Senate Bill

The Secretary would be required to exclude wage data from hospitals that have converted to CAHs from the IPPS wage index calculation starting for cost reporting periods on or after January 1, 2004. The provision would be effective upon enactment.

Conference Agreement

No provision.

Rural Community Hospital Demonstration Program (Section 410A of the Conference Report and Section 414 of the Senate Bill).

Present Law

No provision

House Bill

No provision.

Senate Bill

The Secretary would be required to establish a 5-year rural community hospital (RCH) demonstration program in 4 areas including Kansas and Nebraska that will pay for acute inpatient services, outpatient services, and certain home health services in qualifying hospitals either on the basis of its reasonable costs (without regard to the amount of customary charges) or using the respective prospective payment systems for those services. In this instance, reasonable cost reimbursement of capital costs would include a return on equity payment of 150% of the average rate of interest on obligations issued for purchase by the Federal Hospital Insurance (HI) Trust Fund.

Eligible rural hospitals would be those (1) located in counties that have not been assigned to metropolitan statistical areas or those urban hospitals that have been designated as rural; (2) with less than 51 acute inpatient beds (psychiatric and rehabilitation beds in distinct part units would not be counted); (3) offering 24-hour emergency care services; and (4) have a provider agreement in effect and is open to the public as of January 1, 2003. Critical access hospitals would be able to participate in the demonstration. Entities with replacement facilities, obtaining a new provider number because of an ownership change, or with a binding agreement for the construction, reconstruction, lease, rental or financing of building on January 1, 2003 would not be prohibited from participating. A qualified-RCH based home health agency would be a provider based agency that is located in a county in which no main or branch office of another home health agency is located or is at least 35 miles from any main or branch office of another home health agency.

Consolidated billing associated with skilled nursing facilities would be permitted. The cost of Medicare beneficiaries' bad debt would be reimbursed at 100%. Beneficiary copayments for hospital outpatient services would established as under the hospital outpatient prospective payment system. No cost sharing would apply to clinical diagnostic laboratory services. The cost sharing amounts associated with other services would be established according to the payment methodology selected by the provider for the services in question. Funding for the demonstration project would be transferred in appropriate proportions from the HI and the Federal Supplementary Insurance trust funds. The Secretary would be required to ensure that aggregate payments under this demonstration program do not exceed what would have been spent if the program had not been implemented. The Secretary would be permitted to waive administrative, peer review as well as fraud and abuse requirements in Title 11 and other Medicare requirements in Title 18 of the Social Security Act. The Secretary would be required to submit a report including recommendations to Congress no later than 6 months after completion of the demonstration. The Secretary would be required to implement the demonstration no later than January 1, 2005, but not before October 1, 2004.

Conference Agreement

The Secretary is required to establish a demonstration program in rural areas to test different payment methods for under 50 bed rural hospitals. The hospitals are paid their costs for inpatient and extended care (swing-bed) services for 5 years, subject to a cap. The payment methodology is similar to the Tefra payment system used for Children's hospitals. The hospitals cannot be eligible for the CAH program.

Critical Access Hospital Improvement Demonstration Program (Section 415 of the Senate Bill).

Present Law

No provision

House Bill

No provision.

Senate Bill

The Secretary would be required to establish a 5-year critical access hospital (CAH) demonstration program in 4 areas including Kansas and Nebraska to test various methods to improve the CAH program. Participating CAHs would be able to maintain distinct part psychiatric and rehabilitation units of up to 10 beds that would not be counted toward the CAH-bed limit. These psychiatric and rehabilitation services would be paid on a reasonable cost basis (without regard to the amount of customary charges). Home health agencies operated by participating CAHs would be able to opt out of the home health prospective payment system (PPS) and would be reimbursed on the basis of reasonable costs (without regard to the customary charge limit). Distinct part skilled nursing facilities (SNF) operated by a CAH would be exempt from SNF-PPS and would be reimbursed on the basis of reasonable costs (without regard to the customary charge limit). Consolidated billing associated with skilled nursing facilities would be permitted. In this instance reasonable cost reimbursement of capital costs associated with inpatient, outpatient, extended care, post-hospital extended care, home health, and ambulance services would include a return on equity payment of 150% of the average rate of interest on obligations issued for purchase by the Federal Hospital Insurance (HI) Trust Fund.

Eligible CAHs in the 4 demonstration areas would have to apply to participate in the demonstration project. Funding for the demonstration project would be transferred in appropriate proportions from the HI and the Federal Supplementary Insurance trust funds. The Secretary would be required to ensure that aggregate payments under this demonstration program do not exceed what would have been spent if the program had not been implemented. The Secretary would be permitted to waive administrative, peer review as well as fraud and abuse requirements in Title 11 and other Medicare requirements in Title 18 of the Social Security Act. The Secretary would be required to submit a report including recommendations to Congress no later than 6 months after completion of the demonstration. The Secretary would be required to implement the demonstration no later than January 1, 2005, but not before October 1, 2004.

Conference Agreement

No provision.

Increase in Payments for Certain Services Furnished by Small Rural Hospitals Under Medicare Prospective Payment System for Hospital Outpatient Department Services (Section 424 in the Senate Bill).

Present Law

Under the OPPS, which was implemented in August, 2000, Medicare pays for covered services using a fee schedule based on ambulatory payment classifications (APCs). Beneficiary copayments are established as a percentage of Medicare's fee schedule payment and differ by APC. Certain hospitals, including rural hospitals with no more than 100 beds, are protected from financial losses that result from implementation of the new outpatient PPS under hold harmless provisions.

House Bill

No provision.

Senate Bill

The provision would increase Medicare payments for covered outpatient clinic and emergency room visits that are provided by rural hospitals with up to 100 beds on or after January 1, 2005 and before January 1, 2008. Applicable Medicare outpatient fee schedule amounts would be increased up by 5%. The beneficiary copayment amounts for these services would not be affected. The resulting increase in Medicare payments would not be considered as PPS payments when calculating whether a rural hospital's PPS payments are less than its pre-BBA payment amounts under the temporary hold harmless provisions. Also, the budget-neutrality provisions for Medicare's outpatient PPS would not be applicable. Finally, these increased payments would not affect Medicare payments for covered outpatient services after January 1, 2007.

Conference Agreement

No provision.

Subtitle B—Provisions Relating to Part B Only

2-Year Extension of Hold Harmless Provisions for Small Rural Hospitals and Sole Community Hospitals Under Prospective Payment System for Hospital Outpatient Department Services (Section 411 of the Conference Agreement, Section 407 of the House Bill, and Section 423 of the Senate Bill).

Present Law

The prospective payment system (PPS) for services provided by outpatient departments (OPD) was implemented in August, 2000 for most acute care hospitals. Under the OPD PPS, Medicare pays for covered services using a fee schedule based on ambulatory payment classifications (APCs). Rural hospitals with no more than 100 beds are paid no less under this PPS system than they would have received under the prior reimbursement system for covered OPD services because of hold harmless provisions. The hold harmless provisions apply to services provided before January 1, 2004.

House Bill

The hold harmless provisions governing OPD reimbursement for small rural hospitals would be extended until January 1, 2006. The hold harmless provisions would be extended to sole community hospitals located in a rural area starting for services furnished on or after January 1, 2004 until January 1, 2006. The Secretary would be required to conduct a study to determine if the costs, by APC groups, incurred by rural providers exceed those costs incurred by urban providers. If appropriate, the Secretary would provide a payment adjustment to reflect the higher costs of rural providers by January 1, 2005.

Senate Bill

The hold harmless provisions governing OPD reimbursement for small rural hospitals would be extended until January 1, 2006. These hold harmless provisions would be extended to sole community hospitals located in rural areas for services provided in 2006.

Conference Agreement

The hold harmless provisions governing OPD reimbursement for small rural hospitals are extended until January 1, 2006. The hold harmless provisions are extended to sole community hospitals located in a rural area starting for services furnished on or after January 1, 2004 until January 1, 2006. The Secretary is required to conduct a study to determine if the costs, by APC groups, incurred by rural providers exceed those costs incurred by urban providers. If appropriate, the Secretary will provide for a payment adjustment to reflect the higher costs of rural providers by January 1, 2006.

Establishment of Floor on Work Geographic Adjustment (Section 412 of the Conference Agreement, Section 605 of the House Bill, and Section 421 of the Senate Bill).

Present Law

Medicare's payment for physicians' services under a fee schedule has three components: the relative value for the service, geographic adjustment factors and a conversion factor into a dollar amount. A service's relative value is made up of a physician work component, a practice expense component, and a malpractice expense component. Each of these is then adjusted by a separate geographic adjustment factor and combined together to calculate an indexed relative value for that service provided in a given location. This locality adjusted relative value unit is multiplied by the conversion factor to calculate Medicare's payment for a service provided by a physician in a given area.

The geographic adjustment factors are indices that reflect the relative cost difference in a given area in comparison to the national average. An area with costs above the national average would have an index greater than 1.00; alternatively, an area with costs below the national average would have an index less than 1.00. The physician work geographic adjustment factor is based on a sample of median hourly earnings in six professional specialty occupational categories. Unlike the other geographic adjustments, the work adjustment factor reflects only one-quarter of the cost differences in an area. The practice expense adjustment factor is based on employee wages, office rents, medical equipments and supplies, and other miscellaneous expenses. The malpractice adjustment factor reflects differences in malpractice insurance costs.

The Secretary is required to periodically review and adjust the relative values affecting physician payment to account for changes in medical practice, coding changes, new data on relative value components, or the addition of new procedures. Under the budget-neutrality requirement, changes in these factors cannot cause expenditures to differ by more than $20 million from what would have been spent if such adjustments had not been made.

House Bill

For services furnished after January 1, 2004 and before January 1, 2006, the Secretary would be required to increase the value of any work geographic index that is below 1.00 to 1.00 unless the Secretary determines, based on the subsequent GAO study, that there is no sound economic rationale for such change. The provision would be effective upon enactment.

Senate Bill

For services furnished after January 1, 2004, the Secretary would be required to increase the value of any work geographic index that is below .980 to .980. The values for work index would be raised to 1.0 for services furnished in 2005, 2006, and 2007. The practice expense and malpractice geographic indices in low value localities areas would be raised to 1.00 for services furnished in 2005 through 2008.

Conference Agreement

The Secretary is required to increase the value of any work geographic index that is below 1.0 to 1.0 for services furnished on or after January 1, 2004 and before January 1, 2007.

Medicare Incentive Payment Program Improvements for Physician Scarcity (Section 413 of the Conference Agreement, Section 417 of the House Bill, and Section 422 of the Senate Bill).

Present Law

Physicians providing services in a health professional shortage area (HPSA) are entitled to an incentive payment from the Medicare program. This incentive payment is a 10% increase over the amount which would otherwise be paid under the physician fee schedule. Physicians are responsible for indicating their eligibility for this bonus on their billing forms.

House Bill

This provision would establish a new five percent bonus payment program for physicians providing care to Medicare beneficiaries in physician scarcity areas. The Secretary would calculate two measures of scarcity. A primary care scarcity area would be determined based on the number of primary care physicians per Medicare beneficiary—the primary care ratio. A specialty care scarcity area would be based on the number of specialty care physicians per Medicare beneficiary—the specialty care ratio. The number of physicians would be based on physicians who actively practice medicine or osteopathy, and would exclude physicians whose practice is exclusively for the Federal Government, physicians who are retired, or physicians who only provide administrative services.

The Secretary would rank each county or area based on its primary care ratio. Primary care scarcity counties or areas would be those counties or areas with the lowest primary care ratios, such that 20 percent of Medicare beneficiaries reside in these counties, when each county or area is weighted by the number of Medicare beneficiaries in the county or area. Specialty care scarcity counties or areas would be identified in the same manner, using the specialty care ratio. There would be no administrative or judicial review of the identification of counties or areas, or of a specialty of any physician.

To the extent feasible, the Secretary would treat a rural census tract of a metropolitan statistical area, as determined under the most recent modification of the Goldsmith Modification, as an equivalent area for purposes of qualifying as a primary care scarcity area or specialty care scarcity area.

The Secretary would be required to publish a list of all areas which would qualify as primary care scarcity counties or specialty care scarcity counties as part of the proposed and final rules to implement the physician fee schedule.

The provision would also include improvement to the Medicare Incentive Payment Program, which provides a 10 percent bonus to physicians in shortage areas. The Secretary would be required to establish procedures under which the Secretary, and not the physician furnishing the service, would be responsible for determining when a bonus payment should be made. As part of the physician proposed and final rule for the physician fee schedule, the Secretary would be required to include a list of all areas which would qualify as a health professional shortage area for the upcoming year.

Senate Bill

The Secretary would be required to establish procedures to determine when the physician is eligible for a bonus payment. The Secretary would also be required to (1) establish an ongoing program to educate physicians about the incentive program; (2) establish an ongoing study of the incentive program to determine whether beneficiaries' access to physician's services within the HPSA has improved; and (3) submit annual reports including appropriate recommendations for necessary administrative or legislative action concerning improvements to the program. GAO would be required to conduct an ongoing study of the MIP program on beneficiary access to services and submit a report, including appropriate recommendations, no later than 1 year from the date of enactment.

Conference Agreement

Additional Incentive Payment for Certain Physician Scarcity Areas (Section 413(a) of the Conference Agreement).

The Conference Agreement establishes a new 5 percent incentive payment program designed to reward both primary care and specialist care physicians for furnishing services in the areas that have fewest physicians available to serve beneficiaries. The incentive payment will be made in counties accounting for 20 percent of Medicare beneficiaries, which is likely to represent more than 20 percent of counties. As with the current HPSA bonus program, the 5 percent bonus would be added to the amount that Medicare pays after deducting beneficiary cost sharing so that beneficiaries do not pay cost-sharing on the incentive payment.

The Secretary will calculate two measures of scarcity. A primary care scarcity area will

be determined based on the number of primary care physicians per Medicare beneficiary—the primary care ratio. A specialty care scarcity area will be based on the number of specialty care physicians per Medicare beneficiary—the specialty care ratio. The number of physicians will be based on physicians who actively practice medicine or osteopathy, and will exclude physicians whose practice is exclusively for the Federal Government, physicians who are retired, or physicians who only provide administrative services.

The provision requires identification of the county in which the service is furnished in order to apply to the bonus. Currently, it is the understanding of the Conferees that the address where the service is furnished, including the 5-digit zip code, is contained on the Medicare claim form. Since some zip codes cross county boundaries, the provision allows the Secretary to assign zip codes to counties based on the dominant county of the zip code as determined by the US Postal Service or otherwise. However, nothing would preclude, nor require, the Secretary ultimately to use 9–digit zip codes to determine the county in which the service is furnished. The provision requires periodic review and revision of the counties eligible for the bonus, but not less often than once every three years. To the extent feasible, the Secretary will treat a rural census tract of a metropolitan statistical area, as determined under the most recent modification of the Goldsmith Modification, as an equivalent area for purposes of qualifying as a primary care scarcity area or specialty care scarcity area.

There will be no administrative or judicial review of the designation of the county or area as a scarcity area, the designation of an individual physician's specialty, the assignment of a physician to a county or the assignment of a postal zip code to the county or other area.

The Secretary will be required to publish a list of all areas which will qualify as primary care scarcity counties or specialty care scarcity counties as part of the proposed and final rules to implement the physician fee schedule.

The list of eligible counties will be published each year in the proposed and final rule implementing the physician fee schedule. The list of counties will be posted on the Internet website of the Centers for Medicare and Medicaid Services (CMS).

The new five percent bonus for physicians in either primary care scarcity counties or specialty care scarcity counties will increase financial incentives for physicians to provide care to Medicare beneficiaries in these areas with a shortage of physicians. This bonus payment will make it easier to recruit and retain physicians in these scarcity areas.

Improvement to Medicare Incentive Payment Program (Section 413(b) of the Conference Agreement).

The Conference Agreement requires the Secretary to pay the current law 10 percent Health Professional Shortage Area (HPSA) incentive payment for services furnished in full county primary care geographic area HPSAs automatically rather than having the physician identify that the services were furnished in such area. The implementation of the incentive payment will be the same as for the physician scarcity full county incentive payments, namely use of the 5 digit zip code with the dominant county of the zip code in cases where zip codes cross county boundaries. A physician will not need to report the HPSA modifier on the claim form for services furnished in full county HSPAs.

The Conference Agreement does not contain a requirement to automate payment of incentive payments for services furnished in partial county HPSAs. However, the provision does not preclude the Secretary from automating payment in partial county HPSAs if the Secretary determines that it is feasible to do so based on information on the Medicare claim form.

The Conference Agreement requires the Secretary to develop a user friendly web site through which physicians may obtain information on partial county HPSAs to facilitate reporting of the modifier to identify the applicability of the incentive payment in partial county HPSAs. The provision requires that before the beginning of a calendar year the Secretary will identify the HPSAs for which the incentive payments will be made for such calendar year. Since HRSA designates HPSAs, HRSA will transmit to CMS the list of applicable HPSAs with enough lead time for CMS to implement the incentive payments for the following calendar year.

Improvements to the Medicare Incentive Program will shift responsibility for identifying eligibility for the 10 percent bonus from physicians to the Secretary. A service furnished in a county that is both a full county HPSA and a scarcity county would receive both bonuses—a total incentive payment of 15 percent.

GAO Study of Geographic Differences in Payments for Physicians' Services (Section 413(c) of the Conference Agreement, Section 413 of the House Bill, and Section 444 of the Senate Bill).

Present Law

No provision.

House Bill

GAO would be required to study geographic differences in payment amounts in the physician fee schedule including: (1) an assessment of the validity of each component of the geographic adjustment factors; (2) an evaluation of the measures and the frequency with which they are revised; and (3) an evaluation of the methods used to establish the costs of professional liability insurance including the variation between physician specialties and among different states, the update to the geographic cost of practice index, and the relative weights for the malpractice component. The study, including recommendations concerning use of more current data and use of cost data rather than price proxies, would be due to Congress within 1 year of enactment.

Senate Bill

GAO would be required to study geographic differences in payment amounts in the physician fee schedule including: (1) an assessment of the validity of each component of the geographic adjustment factors; (2) an evaluation of the measures and the frequency with which they are revised; (3) an evaluation of the methods used to establish the costs of professional liability insurance including the variation between physician specialties and among different states, the update to the geographic cost of practice index, and the relative weights for the malpractice component; (4) an evaluation of the economic basis for the floors on the geographic adjustments established previously in this legislation; (5) an evaluation of the effect of the geographic adjustments on physician retention, recruitment costs, physician mobility; (6) an evaluation of the appropriateness of extending such adjustment; (7) an evaluation of the adjustment of the work geographic practice cost index to reflect ¼ the area cost difference in physician work; (8) an evaluation of the effect of the geographic practice cost index on physician location and retention in higher cost areas; and (9) an evaluation of the 1/4 adjustment of such an index. The study would include recommendations concerning use of more current data and use of cost data rather than price proxies. The study would be due to Congress within 1 year of enactment.

Conference Agreement

GAO will study payment differences under the physician fee schedule for different geographic areas, including: (1) an assessment of the validity of the geographic adjustment factors for each component of the fee schedule; (2) an evaluation of the measures used for such adjustment, including the frequency of revisions; (3) an evaluation of the method used to determine professional liability insurance costs including the variation between physician specialties and among different states, the update to the geographic cost of practice index, and the relative weighs for the malpractice component; and (4) an evaluation of the effect of the physician work geographic adjustment as modified by this legislation on physician location and retention taking into account differences in recruitment costs and retention rates for physicians (including specialists) between large urban areas and other areas and the mobility of physicians over the last decade. The study, including recommendations concerning use of more current data and use of cost data rather than price proxies, is due to Congress within 1 year of the enactment date.

Payment for Rural and Urban Ambulance Services

Phase-In Providing Floor Using Blend of Fee Schedule and Regional Fee Schedule (Section 414(a) of the Conference Agreement and Section 622 of the House Bill).

Present Law

Traditionally, Medicare has paid suppliers of ambulance services on a reasonable charge basis and paid provider-based ambulances on a reasonable cost basis. BBA 1997 provided for the establishment of a national fee schedule which was to implemented in phases, in an efficient and fair manner. The required fee schedule became effective April 1, 2002 with full implementation by January, 2006. In the transition period, a gradually decreasing portion of the payment is to be based on the prior payment methodology (either reasonable costs or reasonable charges).

House Bill

Payments for ambulance services would be based on the ambulance specific amount blended with the national fee schedule amount or a combined rate of the national fee schedule and a regional fee schedule, whichever resulted in the larger payment. The blended rate during the phase-in period would incorporate a decreasing portion of the payment based on regional fee schedules calculated for each of nine census regions. Generally, the regional fee schedules would be based on the same methodology and data used to construct the national fee schedule. For services provided in 2004, the blended rate would be based on 20% of the national fee schedule and 80% of the regional fee schedule; in 2005 blended rate would be based on a 40% national and 60% regional split; in 2006, the blended rate would be based on a 60% national and 40% regional split; in 2007, 2008 and 2009, the blended rate would be based on a 80% national and 20% regional split; and in 2010 and subsequently, the ambulance fee

schedule would be based on the national fee schedule.

Senate Bill

No provision.

Conference Agreement

Payments for ambulance services will be based on the ambulance specific amount blended with either the national fee schedule amount or a combined rate of the national fee schedule and a regional fee schedule, whichever resulted in the larger payment. The blended rate during the phase-in period will incorporate a decreasing portion of the payment based on regional fee schedules calculated for each of nine census regions. Generally, the regional fee schedules will be based on the same methodology and data used to construct the national fee schedule. For 2004, starting for services on July 1, 2004, the blended rate is based on 20% of the national fee schedule and 80% of the regional fee schedule; for 2005, the blended rate is based on a 40% national and 60% regional split; in 2006, the blended rate is based on a 60% national and 40% regional split; in 2007, 2008 and 2009, the blended rate is based on a 80% national and 20% regional split; and in 2010 and subsequently, the ambulance fee schedule is based on the national fee schedule.

Adjustment in Payment for Certain Long Trips (Section 414(b) of the Conference Agreement and Section 622 of the House Bill).

Present Law

The fee schedule payment amount equals the base rate for the level of service plus payment for mileage and specified adjustment factors. Additional mileage payments are made in rural areas. BIPA increased payment for rural ambulance mileage for distances greater than 17 miles and up to 50 miles for services provided before January 1, 2004. The amount of the increase was at least one-half of the payment per mile established in the fee schedule for the first 17 miles of transport.

House Bill

Medicare's payments for ground ambulance services would be increased by one quarter of the amount otherwise established for trips longer than 50 miles occurring on or after January 1, 2004 and before January 1 2009. The payment increase would apply regardless of where the transportation originated. GAO would be required to submit an initial report to Congress on the access and supply of ambulance services in regions and states where ambulance payments are reduced by December 31, 2005. GAO would be required to submit a final report to Congress no later than December 31, 2007. The provision would apply to ambulance services furnished on or after January 1, 2004.

Senate Bill

No provision.

Conference Agreement

Medicare's payments for ground ambulance services will be increased by one quarter of the payment per mile rate otherwise established for trips longer than 50 miles occurring on or after July 1, 2004 and before January 1, 2009. The payment increase applies regardless of where the transportation originates.

Improvement in Payments to Retain Emergency Capacity For Ambulance Services in Rural Areas (Section 414(c) of the Conference Agreement and Section 410 of the House Bill).

Present Law

Traditionally, Medicare has paid suppliers of ambulance services on a reasonable charge basis and paid provider-based ambulances on a reasonable cost basis. BBA 1997 provided for the establishment of a national fee schedule which was to be implemented in phases, in an efficient and fair manner. The required fee schedule became effective April 1, 2002 with full implementation by January, 2006. In the transition period, a gradually decreasing portion of the payment is to be based on the prior payment methodology (either reasonable costs or reasonable charges).

The fee schedule payment amount equals the base rate for the level of service plus payment for mileage and specified adjustment factors. Additional mileage payments are made in rural areas. BIPA increased payment for rural ambulance mileage for distances greater than 17 miles and up to 50 miles for services provided before January 1, 2004. The amount of the increase was at least one-half of the payment per mile established in the fee schedule for the first 17 miles of transport.

House Bill

Starting for services provided January 1, 2004 the Secretary would be required to provide a percentage increase in the base rate of the fee schedule for ground ambulance services that originate in a qualified rural area. The increase would be estimated using the average cost per trip for the base rate in the lowest quartile as compared to the average cost for the base rate in the highest quartile of all rural counties. A qualified rural county is a rural area (a county not assigned to a metropolitan statistical area) with a population density of Medicare beneficiaries in the lowest quartile of all rural counties.

Senate Bill

No provision.

Conference Agreement

The Secretary will provide a percentage increase in the base rate of the fee schedule for ground ambulance services furnished on or after July 1, 2004 and before January 1, 2010 that originate in a qualified rural area. The payment increase is estimated using the average cost per trip for the base rate (not taking into account mileage) in the lowest quartile as compared to the average cost for the base rate (not taking into account mileage) in the highest quartile of all rural counties. The Secretary will determine the population density for each rural area using 2000 Census data and rank each county accordingly. The qualified rural areas are those with the lowest population densities that collectively represent a total of 25% of the population in those areas. To the extent feasible, the Secretary is required to treat certain rural census tracts in metropolitan statistical areas as a rural area. There will be no administrative or judicial review under Sections 1869 and 1878 of the SSA or otherwise with respect to the identification of a qualified rural area. In order to promptly implement this provision, the Secretary may use data furnished by GAO.

Temporary Increase for Ground Ambulance Services (Section 414(d) of the Conference Agreement and Section 425 of Senate Bill).

Present Law

The ambulance fee schedule payment amount equals the base rate for the level of service plus payment for mileage and specified adjustment factors. Additional mileage payments are made in rural areas. BIPA increased payment for rural ambulance mileage for distances greater than 17 miles and up to 50 miles for services provided before January 1, 2004. The amount of the increase was at least one-half of the payment per mile established in the fee schedule for the first 17 miles of transport.

House Bill

No provision.

Senate Bill

The payments for ground ambulance services originating in a rural area or a rural census tract would be increased by 5% for services furnished on or after January 1, 2005 through December 31, 2007. The fee schedule for ambulances in other areas would be increased by 2%. These increased payments would not affect Medicare payments for covered ambulance services in subsequent periods. The conversion factor for ambulance services would not be adjusted downward because of the Secretary's evaluation of the prior year's conversion factor.

Conference Agreement

The payments for ground ambulance services originating in a rural area or a rural census tract will be increased by 2% (after application of the long trip and low density payment increases) for services furnished on or after July 1, 2004 through December 31, 2007. The fee schedule for ambulances in other areas (after application of the long trip adjustment) will increase by 1%. These increased payments will not affect Medicare payments for covered ambulance services after 2007.

Implementation, GAO Report on Costs and Access, and Technical Amendments (Section 414(e)–(g) of the Conference Agreement).

Present Law

No provision.

House Bill

No provision.

Senate Bill

No provision.

Conference Agreement

The Secretary is able to implement the amendments made by Section 414 and revisions to the conversion factor on an interim, final basis or by program instruction. GAO is required to submit an initial report to Congress on cost differences among different types of ambulance providers, and the impact of payment reductions in the ambulance fee schedule on access, supply, and quality of ambulance services in regions and states with such reductions. Other technical amendments will also be adopted.

Providing Appropriate Coverage of Rural Air Ambulance Services (Section 415 of the Conference Agreement and Section 426 in the Senate Bill).

Present Law

Medicare pays for ambulance services under a fee schedule. Seven categories of ground ambulance services, ranging from basic life support to specialty care transport, and two categories of air ambulance services are established. Payment for ambulance services can only be made if other methods of transportation are contraindicated by the patient's medical conditions, but only to the extent provided in regulations.

House Bill

No provision.

Senate Bill

The regulations governing ambulance services would be required to ensure that air ambulance services be reimbursed if: (1) the air ambulance service is medically necessary based on the health condition of the patient being transported at or immediately prior to the time of the transport service; and (2) the air ambulance service complies with the

equipment and crew requirements established by the Secretary. An air ambulance service would be considered medically necessary when requested: (1) by a physician or hospital in accordance with their responsibilities under the Emergency Medical Treatment and Active Labor Act; (2) as a result of a protocol established by a state or regional emergency medical service agency; (3) by a physician, nurse practitioner, physician assistant, registered nurse, or emergency medical responder who reasonably determines or certifies that patient's condition is such that the time involved in land transport significantly increases the patient's medical risks; or (4) by a Federal or State agency to relocate patients following a natural disaster, an act of war, or a terrorist act. Air ambulance services would be defined as a fixed wing or rotary wing air ambulance services. The provision would apply to services furnished on or after January 1, 2005.

Conference Agreement

The regulations governing the use of ambulance services will provide that to the extent that any ambulance service (whether ground or air) may be covered, a rural air ambulance service will be at the air ambulance rate if: (1) the air ambulance service is reasonable and necessary based on the health condition of the patient being transported at or immediately prior to the time of the transport service; and (2) the air ambulance service complies with the equipment and crew requirements established by the Secretary. An air ambulance service is considered reasonable and necessary when requested: (1) by a physician or other qualified medical personnel who reasonably determines or certifies that an individual's condition is such that the time needed to transport the individual by land or the instability of land transportation poses a threat to the individual's survival or seriously endangers the individual's health or (2) such services is furnished pursuant to a protocol under which the use of an air ambulance is recommended that is established by a state or regional emergency medical services (EMS) agency and recognized or approved by the Secretary. The EMS agency cannot have an ownership interest in the entity furnishing such service. Also, there cannot be a financial or employment relationship or a common ownership arrangement between the person requesting the rural air ambulance service and the furnishing entity or a financial relationship between an immediate family member of such requester and such an entity. This prohibition does not apply to instances when a hospital and an entity furnishing the rural air ambulance services are under common ownership if remuneration (through employment or other relationship) is for provider based physician services furnished in a hospital which are reimbursed under Part A and is unrelated directly or indirectly to the provision of rural air ambulance services. A rural air ambulance service is defined as a fixed wing or rotary wing air ambulance service where the individual's point of pick up is in a rural area or rural census tract. The provision applies to services furnished on or after January 1, 2005.

Treatment of Certain Clinical Diagnostic Laboratory Tests Furnished To Hospital Outpatients in Certain Rural Areas (Section 416 of the Conference Agreement and Section 427 of the Senate Bill).

Present Law

Generally, hospitals that provide clinical diagnostic laboratory tests under Part B are reimbursed using a fee schedule. Sole community hospitals (SCHs) that provide some clinical diagnostic tests 24 hours a day qualify for a 2% increase in the amounts established in the outpatient laboratory fee schedule; no beneficiary cost-sharing amounts are imposed.

House Bill

No provision.

Senate Bill

SCHs that provide clinical diagnostic laboratory tests covered under Part B in 2005 and 2006 would be reimbursed their reasonable costs of furnishing the tests. No beneficiary cost sharing amounts would apply to these services.

Conference Agreement

Hospitals with under 50 beds in qualified rural areas (low density population rural areas established under Section 414(c) of this legislation) will receive 100% reasonable cost reimbursement for clinical diagnostic laboratory tests covered under Part B that are provided as outpatient hospital services. The Secretary will apply the rules that determine whether clinical diagnostic laboratory tests are furnished as an outpatient critical access hospital service to establish whether these clinical diagnostic laboratory tests are outpatient hospital services. The provision will apply to services furnished during a cost reporting period beginning during the 2-year period starting July 1, 2004.

Extension of the Telemedicine Demonstration Project (Section 417 of the Conference Agreement and Section 415 of the House Bill).

Present Law

BBA 1997 established a single 4-year demonstration project where an eligible health care provider telemedicine network would use high-capacity computer systems and medical infomatics to improve primary care and prevent health complications in Medicare beneficiaries with diabetes mellitus. The Informatics, Telemedicine, and Education Demonstration project uses modified home computers or home telemedicine units linked to clinical information systems to assist beneficiaries residing in medically under-served rural or medically underserved inner-city areas, interaction with a nurse case manager, video conferencing, and access to health information and medical data, in both Spanish and English. The demonstration will expire in February 2004.

House Bill

The demonstration project would be extended for 4 years and total funding would be increased from $30 million to $60 million. The provision would be effective upon enactment.

Senate Bill

No provision.

Conference Agreement

The demonstration project is extended for 4 years and total funding will be increased from $30 million to $60 million. The provision will be effective upon enactment.

Report on Demonstration Project Permitting Skilled Nursing Facilities to Be Originating Telehealth Sites (Section 418 of the Conference Agreement and Section 450H of the Senate Bill).

Present Law

Medicare will pay for use of certain telecommunications systems as a substitute for face-to-face encounters to provide consultations, office or other outpatient visits, individual psychotherapy and pharmacologic management services to eligible beneficiaries. With certain exceptions, Medicare beneficiaries are eligible for telehealth services only if they are presented from an originating site located in either a rural health professional shortage area or in a county that is not in a metropolitan statistical area. An originating site is the location of the beneficiary at the time the services being furnished by the telecommunications system occurs. Originating sites defined in statute include the office of a physician or practitioner, a hospital, a critical access hospital, a rural health clinic or a federally qualified health center.

House Bill

No provision.

Senate Bill

This provision would add types of providers to the list of originating sites that can bill Medicare for telehealth services. The additional providers are both those defined by the statute and those that would be defined by the Secretary. Providers defined in the statute are: a skilled nursing facility (1918(a)), a community mental health center (1861(ff)(2)(B)), and a facility operated by the Indian Health Service or by an Indian tribe, tribal organization, or an urban Indian organization (as defined in Senate Section 4 of the Indian Health Care Improvement Act). Providers that would be defined by the Secretary are: an assisted-living facility, a board-and-care home, a county or community health clinic, and a long-term care facility (as defined by the Secretary.) In addition, the Secretary would be required to encourage and facilitate the adoption of State provisions allowing for multi-state practitioner licensure across State boundaries. The provision would be effective upon enactment.

Conference Agreement

The Secretary will evaluate a demonstration project under which a skilled nursing facility is treated as an originating site for telehealth services. The Secretary will delegate the evaluation to the Administrator of the Health Resources and Services Administration who will consult with the Administrator for the Centers for Medicare & Medicaid Services. No later than January 1, 2005, the Secretary will submit a report to Congress on the evaluation including recommendations on mechanisms to ensure that permitting a skilled nursing facility to serve as an originating site for the use of telehealth services or any other services delivered via a telecommunications system does not substitute for in-person required visits furnished by physicians, physician assistants, nurse practitioners or clinical nurse specialists at specified intervals as required by the Secretary. If the Secretary concludes that it is advisable to permit a skilled nursing facility to be an originating site for telehealth services, and the Secretary can establish the mechanisms to ensure such permission does not serve as a substitute for in-person visits, the Secretary may deem a skilled nursing facility to be an originating site beginning on January 1, 2006.

Exclusion of Certain Rural Health Clinic and Federally Qualified Health Center Services from the Prospective Payment System for Skilled Nursing Facilities (Section 410 of the Conference Report and 408 of the House Bill and Section 429 of the Senate Bill).

Present Law

Under Medicare's prospective payment system (PPS), skilled nursing facilities (SNFs) are paid a predetermined amount to cover all services provided in a day, including the costs associated with room and board, nursing, therapy, and drugs; the daily payment

will vary depending upon a patient's therapy, nursing and special care needs as established by one of 44 resource utilization groups (RUGs). Certain services and items provided an SNF resident, such as physicians' services, specified ambulance services, chemotherapy items and services, and certain outpatient services from a Medicare-participating hospital or critical access hospital, are excluded from the SNF–PPS and paid separately under Part B.

House Bill

Services provided by a rural health clinic (RHCs) and a federally qualified health center (FQHC) after January 1, 2004 would be excluded from SNF–PPS if such services would have been excluded if furnished by a physician or practitioner who was not affiliated with an RHC or FQHC. The provisions would apply to services furnished on or after January 1, 2004.

Senate Bill

Services provided by a rural health clinic (RHC) and a federally qualified health center (FQHC) after January 1, 2005 would be excluded from SNF–PPS if such services would have been excluded if furnished by a physician or practitioner who was not affiliated with an RHC or FQHC. Outpatient services that are beyond the general scope of SNF comprehensive care plans that are provided by an entity that is 100% owned as a joint venture by two Medicare-participating hospitals or critical access hospitals would be excluded from the SNF–PPS. The provision would apply to services furnished on or after January 1, 2005.

Conference Agreement

Services provided by a rural health clinic (RHC) and a federally qualified health center (FQHC) after January 1, 2004 would be excluded from SNF–PPS if such services would have been excluded if furnished by a physician or practitioner who was not affiliated with an RHC or FQHC. The provisions would apply to services furnished on or after January 1, 2004.

Improvement in Rural Health Clinic Reimbursement (Section 428 in the Senate Bill).

Present Law

BBA 1997 extended the per visit payment limits that had existed for independent rural health clinics to provider-based rural health clinics (RHC) except for those clinics based in small rural hospitals with fewer than 50 beds. For services rendered from January 1, 2003 through February 28, 2003, the RHC upper payment limit is $66.46, which reflects a 2.6% increase in 2002 payment limit as established by the 2002 Medicare Economic Index (MEI). For services rendered from March 1, 2003 through December 31, 2003, the Medicare RHC upper payment limit is $66.72, which reflects a 3.0% increase in the 2002 payment limit as established by the 2003 MEI. The 2002 MEI was used as an update for 3 months because the delayed implementation of the 2003 MEI.

House Bill

No provision.

Senate Bill

The RHC upper payment would be increased to $80.00 for calendar year 2005. The MEI applicable to primary care services would be used to increase the payment limit in subsequent years. The provision would be effective upon enactment.

Conference Agreement

No provision.

Frontier Extended Stay Clinic Demonstration Project (Section 434 of the Conference Report and Section 457/Duplicative Provision 460 of the Senate Bill).

Present Law

No provision.

House Bill

No provision.

Senate Bill

The Secretary would be required to conduct a demonstration project that would treat frontier extended stay clinics as a Medicare provider. A frontier extended stay clinic is one that is located in a community where the closest acute care hospital or critical access hospital is at least 75 miles away or is inaccessible by public road. Such clinics are designed to address the needs of seriously or critically ill or injured patients who, due to adverse weather conditions or other reasons, cannot be transferred quickly to acute care referral centers; or patients who need monitoring and observation for a limited period of time. The provision would be effective upon enactment.

Conference Agreement

The Secretary would be required to conduct a demonstration project that would treat frontier extended stay clinics as a Medicare provider. A frontier extended stay clinic is one that is located in a community where the closest acute care hospital or critical access hospital is at least 75 miles away or is inaccessible by public road and is designed to address the needs of seriously or critically ill or injured patients who, due to adverse weather conditions or other reasons, cannot be transferred quickly to acute care referral centers; or patients who need monitoring and observation for a limited period of time. The Secretary is required to develop life safety code standards for these clinics such as sprinkler system because the patients stay overnight. The provision would be effective upon enactment and is budget neutral.

Subtitle C—Provisions Relating to Parts A and B

1-Year Increase for Home Health Services Furnished in a Rural Area (Section 421 of the Conference Agreement, Section 411 of the House Bill, and Section 451 of the Senate Bill).

Present Law

The Medicare home health PPS which was implemented on October 1, 2000 provides a standardized payment for a 60–day episode of care furnished to a Medicare beneficiary. Medicare's payment is adjusted to reflect the type and intensity of care furnished and area wages as measured by the hospital wage index. BIPA increased PPS payments by 10% for home health services furnished in the home of beneficiaries living in rural areas during the 2–year period beginning April 1, 2001, through March 31, 2003, without regard to certain budget-neutrality provisions applying to home health PPS. The temporary additional payment is not included in the base for determination of payment updates.

House Bill

The provision would extend a 5% additional payment for home health care services furnished in a rural area during FY2004 and FY2005 without regard to certain budget-neutrality requirements. The provision would be effective upon enactment.

Senate Bill

The provision would provide a temporary payment increase of 5% for home health care services furnished in a rural area on or after October 1, 2004 and before October 1, 2006 without regard to certain budget-neutrality requirements. The temporary additional payment would not be considered when determining future home health payment amounts. The provision would be effective upon enactment.

Conference Agreement

The conference agreement provides a 1–year, 5% additional payment for home health care services furnished in a rural area without regard to certain budget-neutrality requirements. The temporary additional payment begins for episodes and visits ending on or after April 1, 2004 and before April 1, 2005 and is not to be used in calculating future home health payment amounts.

Redistribution of Unused Resident Positions (Section 422 of the Conference Agreement and Section 406 of the House Bill).

Present Law

Medicare has different resident limits for counting residents in its indirect medical education (IME) adjustment and for reimbursement for a teaching hospital's direct medical education (DGME) costs. Generally, a hospital's IME adjustment depends on a hospital's teaching intensity as measured by the ratio of the number of interns and residents per bed. Prior to BBA 1997, the number of residents that could be counted for IME purposes included only those in the hospital inpatient and outpatient departments. Effective October 1, 1997, under certain circumstances a hospital may now count residents in non-hospital sites for the purposes of IME. Medicare DGME payment to a teaching hospital is based on its updated cost per resident (subject to a locality adjustment and certain payment corridors), the weighted number of approved full-time-equivalent (FTE) residents, and Medicare's share of inpatient days in the hospital. Medicare counts residents in their initial residency period (the lesser of the minimum number of years required for board eligibility in the physician's specialty or 5 years) as 1.0 FTE. Residents whose training has extended beyond their initial residency period count as 0.5 FTE. Residents in certain specialties are allowed additional years in their initial residency period. Residents who are graduates from foreign medical schools do not count unless they pass certain exams.

Generally, the resident counts for both IME and DGME payments are based on the number of residents in approved allopathic and osteopathic teaching programs that were reported by the hospital for the cost reporting period ending in calendar year 1996. The DGME resident limit is based on the unweighted resident counts. It may differ from the IME limit because in 1996 residents training in non-hospital sites were eligible for DGME payments but not for IME payments. Hospitals that established new training programs before August 5, 1997 are partially exempt from the cap. Other exceptions apply to certain hospitals including those with new programs established after that date. Hospitals in rural areas (and nonrural hospitals operating training programs in rural areas) can be paid for 130% of the number of residents allowed by their cap. Under certain conditions, an affiliated group of hospitals under a specific arrangement may combine their resident limits into an aggregate limit. Subject to these resident limits, a teaching hospital's IME and DGME payments are based on a 3-year rolling average of resident counts, that is, the resident count will be based on the average of the resident count in the current year and the 2 preceding years. The rolling average calculation includes podiatry and dental residents.

House Bill

A teaching hospitals total number of Medicare-reimbursed resident positions would be reduced for cost reporting periods starting January 1, 2004 if its resident reference level is less than its applicable resident limit. If so, the reduction would equal 75% of the difference between the hospitals limit and its resident reference level. The resident reference level would be the highest number of allopathic and osteopathic resident positions (before the application of any weighting factors) for the hospital during the reference period. A hospitals reference period would be the 3 most recent consecutive cost reporting periods for which a hospitals cost reports have been settled (or in the absence of such settled cost reports, submitted reports) on or before September 30, 2002. The Secretary would be able to adjust a hospitals resident reference level, upon the timely request for such an adjustment, for the cost reporting period that includes July 1, 2003.

The Secretary would be authorized to increase the applicable resident limits for hospitals by an aggregate number that does not exceed the overall reduction in such limits. No increase would be permitted for any portion of cost reporting period that occurs before July 1, 2004 or before the date of a hospital's application for such an increase. No increase would be permitted unless the hospital applied for such an increase by December 31, 2005. The Secretary would consider the need for an increase in the physician specialty and the location involved. The Secretary would first distribute the increased resident count to programs in hospitals located in rural areas and hospitals that are not in large urban areas on a first-come-first-served basis. The hospital would have to demonstrate that the resident positions would be filled; not more than 25 positions would be given to any hospital. These hospitals would be reimbursed for DGME for the increase in resident positions at the locality adjusted national average per resident amount. Changes in a hospitals resident count established under this section would affect a hospitals IME adjustment. These provisions would not apply to reductions in residency programs that occurred as part of the voluntary reduction program or would affect the ability of certain hospitals to establish a new medical residency training programs. The Secretary would be required to submit a report to Congress no later than July 1, 2005 on whether to extend the application deadline for increases in resident limits. The provision would be effective upon enactment.

Senate Bill

No provision.

Conference Agreement

A teaching hospital's total number of Medicare-reimbursed resident positions will be reduced for cost reporting periods starting July 1, 2005 if its reference resident level is less than its applicable resident limit. Rural hospitals with less than 250 acute care inpatient beds would be exempt from such reductions. For other such hospitals, the reduction will equal 75% of the difference between the hospital's limit and its reference resident level. The resident reference level is the highest number of allopathic and osteopathic resident positions (before the application of any weighting factors) for the hospital during the reference period. This reference level is either (1) the resident level of the most recent cost reporting period of the hospital for which a cost report has been settled (or submitted, subject to audit) on or before September 30, 2002 or (2) the resident level for the cost reporting period that includes July 1, 2003, if requested on a timely basis by the hospital subject to audit. Upon this timely request at the discretion of the Secretary, a hospital's reference level will be adjusted to include the number of medical residents for the cost reporting period that includes July 1, 2003. Upon timely request of the hospital, the Secretary will adjust the reference resident level to include the number of medical residents that were approved in an application to the appropriate accrediting organization before January 1, 2002 if the program was not in operation by the cost reporting period in question (either September 30, 2002 or July 1, 2003 depending upon the hospital's circumstances and the Secretary's approval). The reduction will apply to hospitals that are members of the same affiliated group as of July 1, 2003.

The Secretary is authorized to increase the applicable resident limits for hospitals for portions of cost reporting periods occurring on or after July 1, 2005 by an aggregate number that does not exceed the overall reduction in such limits. The Secretary will take into account the demonstrated likelihood of the hospital filling the positions within the first 3 cost reporting periods beginning on or after July 1, 2005 when determining which hospitals would receive an increase in their resident levels. The Secretary will establish a priority order to distribute the increased resident count first to programs in hospitals located in rural areas, then to hospitals that are not in large urban areas and finally to other hospitals in a state where there is no other training program for a particular specialty. The Secretary shall consider giving special consideration to hospitals that train a large share of graduates from historically large medical colleges. Increases to limits with the same priority category will be determined by the Secretary. Not more than 25 additional FTEs will be given to any hospital. These hospitals will be reimbursed for DGME for the increase in resident positions at the locality adjusted national average per resident amount. Changes in a hospital's resident count established under this section will affect a hospital's IME adjustment; the IME adjustment will be calculated as if ''c'' is equal to 0.66 for these additional positions starting for discharges after July 1, 2005. These provisions will not apply to reductions in residency programs that occurred as part of the voluntary reduction program or will not affect the ability of certain hospitals to establish new medical residency training programs. The Secretary is required to submit a report to Congress no later than July 1, 2005 on whether to extend the application deadline for increases in resident limits. Requirement with respect to Federal information policy established by Chapter 35 of Title 44, United States Code will not apply to applications under this section.

Subtitle D—Other Provisions

Providing Safe Harbor for Certain Collaborative Efforts that Benefit Medically Underserved Populations (Section 431 of the Conference Agreement and Section 412 of the House Bill).

Present Law

People who knowingly and willfully offer or pay a kickback, a bribe, or rebate directly or indirectly to induce referrals or the provision of services under a Federal program may be subject to financial penalties and imprisonment. Certain exceptions or safe harbors that are not considered violations of the anti-kickback statute have been established.

House Bill

Remuneration in the form of a contract, lease, grant, loan or other agreement between a public or non-profit private health center and an individual or entity providing goods or services to the health center would not be a violation of the anti-kickback statute if such an agreement would contribute to the ability of the health center to maintain or increase the availability or quality of services provided to a medically underserved population. The Secretary would be required to establish standards, on an expedited basis, related to this safe harbor that would consider whether the arrangement (1) resulted in savings of Federal grant funds or increased revenues to the health center; (2) expanded or limited a patient's freedom of choice; and (3) protected a health care professional's independence regarding the provision of medically appropriate treatment. The Secretary would also be able to include other standards that are consistent with Congressional intent in enacting this exception. The Secretary would be required to publish an interim final rule in the Federal Register no later than 180 days from enactment that would establish these standards. The rule would be effective immediately, subject to change after a public comment period of not more than 60 days. The provision would be effective upon enactment.

Senate Bill

No provision.

Conference Agreement

Remuneration in the form of a contract, lease, grant, loan or other agreement between a public or non-profit private health center and an individual or entity providing goods or services to the health center would not be a violation of the anti-kickback statute if such an agreement would contribute to the ability of the health center to maintain or increase the availability or quality of services provided to a medically underserved population. The Secretary would be required to establish standards, on an expedited basis, related to this safe harbor that would consider whether the arrangement (1) results in savings of Federal grant funds or increased revenues to the health center; (2) expands or limits a patient's freedom of choice; and (3) protects a health care professional's independence regarding the provision of medically appropriate treatment. The Secretary would also be able to include other standards that are consistent with Congressional intent in enacting this exception. The Secretary would be required to publish a final regulation establishing these standards no later than 1 year from the date of enactment.

Office of Rural Health Policy Improvement (Section 432 of the Conference Agreement and Section 637 of the Senate Bill).

Present Law

Within the Department of Health and Human Services, the Office of Rural Health Policy advises the Secretary on the effects of current policies and proposed statutory, regulatory, administrative, and budgetary changes in Medicare and Medicaid program on the financial viability of small rural hospitals, the ability of rural areas to attract and retain physicians and other health professionals, and access to and the quality of health care in rural areas. In addition to advising the Secretary, the Office has other responsibilities including coordinating the activities within HHS that relate to rural health care.

House Bill

No provision.

Senate Bill

The list of explicit responsibilities of the Office is expanded to include administering grants, cooperative agreements, and contracts to provide technical assistance and other activities as necessary to support activities related to improving health care in rural areas. The provision would be effective upon enactment.

Conference Agreement

The functions of the Office of Rural Health Policy will be expanded; it will be authorized to administer grants, cooperative agreements, and contracts to provide technical assistance and other necessary activities to support activities related to improving rural health care. The provision is effective on enactment.

MedPAC Study on Rural Payment Adjustments (Section 433 of the Conference Agreement).

Present Law

No provision.

House Bill

NO PROVISION

Conference Agreement

MedPAC will study the effect on specified rural provisions in this legislation (specifically, Sections 401 through 405, 411, 416, and 504) including total payments, growth in costs, capital spending and other payment factors. An interim report on changes to the critical access hospital program (in Section 405) is due to Congress no later than 18 months from the date of enactment. MedPAC's final report on all topics is due to Congress no later than 3 years from the date of enactment.

TITLE V—PROVISIONS RELATING TO PART A

Subtitle A—Inpatient Hospital Services

Revision of Acute Hospital Payment Updates (Section 501(a) and 501(b) of the Conference Agreement and Section 501 of the House Bill).

Present Law

Each year, Medicare's operating payments to hospitals are increased or updated by a factor that is determined in part by the projected annual change in the hospital market basket (MB). Congress establishes the update for Medicare's inpatient prospective payment system (IPSS) for operating costs, often several years in advance. Currently, acute hospitals will receive the MB as an update for FY2004 and subsequently. CMS has asked hospital to report on 10 JCAHO/CMS measures, developed by the National Quality Foundation. For example, whether a patient with an acute myocardial infarction receives aspirin at arrival. As of October 9, 2003, 420 hospitals (out of the over 5,000 acute care hospitals that bill Medicare) had provided CMS with one of more measures.

House Bill

Acute hospitals would receive an operating update of the MB minus 0.4 percentage points for FY2004 through FY2006. The operating update would be the MB increase in FY2007 and subsequently. The provision would be effective upon enactment.

Senate Bill

No provision.

Conference Agreement

An acute hospital will receive an operating update of the MB in FY2004. An acute hospital will receive an operating update of the MB from FY2005 through FY2007 if it submits data on the 10 quality indicators established by the Secretary as of November 1, 2003. The Secretary will specify the form, manner, and time of the data submission except that any data collection and editing must be done before the start of the fiscal year. For FY2005, the Secretary will provide for a 30-day grace period for the submission of the required data. A hospital that does not submit data to the Secretary will receive an update of the MB minus 0.4 percentage points for the fiscal year in question. The Secretary will not take into account this reduction when computing the applicable percentage increase in subsequent years.

The Secretary is directed to compile and clarify the procedures and policies for billing for blood and blood costs in the hospital inpatient and outpatient settings as well as the operation of the collection of the blood deductible.

Inpatient rehabilitation facilities (IRF) provide Medicare patients with rehabilitation services. They are distinguished from acute care settings by a number of criteria including that 75 percent of their cases must be in ten categories—stroke, spinal cord injury, congenital deformity, amputation, major multiple trauma, fracture of femur, brain injury, and polyarthritis, including rheumatoid arthritis, neurological disorders, and burns. This criterion is commonly referred to as the ''75 percent rule.''

On September 2, 2003, CMS issued proposed changes in classifying IRFs. The Conferees are concerned that the rule, as written, would have severe consequences for access to inpatient rehabilitation hospital services. The Conferees concur with the Medicare Payment Advisory Commission (MedPAC) finding that further analysis should be conducted to identify which conditions are clinically appropriate for inclusion in the calculation of the 75 percent rule used to determine eligibility for reimbursement under the inpatient rehabilitation facility prospective payment system. The Conferees direct the GAO to issue a report, in consultation with experts in the field of physical medicine and rehabilitation to look at whether the current list of conditions represents a clinically appropriate standard for defining IRF services and, if not, which additional conditions should be added to the list. During the study period, the Committee urges the Secretary to delay implementation of the rule and not accept new IRF applications until the report is finished.

GAO Study and Report on Appropriateness of Payments Under the Prospective Payment System for Inpatient Hospital Services (Section 501(c) of the Conference Agreement and Section 413 of the Senate Bill).

Present Law

No provision.

House Bill

No provision.

Senate Bill

GAO would be required to use the most current data available to conduct a study to determine: (1) the appropriate level and distribution of Medicare payments in relation to costs to short-term general hospitals under the inpatient prospective payment system (IPPS) and (2) the need for geographic adjustments to reflect legitimate differences in hospital costs across geographic areas, kinds of hospitals, and types of cases. The study, including recommendations for necessary legislative and administrative action, would be due to Congress within 18 months of enactment.

Conference Agreement

GAO is required to use the most current data available to conduct a study to determine: (1) the appropriate level and distribution of Medicare payments in relation to costs for short-term general hospitals under the inpatient prospective payment system (IPPS) and (2) the need for geographic adjustments to reflect legitimate differences in hospital costs across geographic areas, kinds of hospitals, and types of cases. The study, including recommendations for necessary legislative and administrative action, is due to Congress within 24 months of enactment.

Revision of the Indirect Medical Education (IME) Adjustment Percentage (Section 502 of the Conference Agreement and Section 418 of the Senate Bill).

Present Law

A hospital's IME payment to a hospital is based on a percentage add-on to the PPS rate that is established by a curvilinear formula that currently provides a payment increase of approximately 5.5% for each 10% increase in the hospital's intern and resident-to-bed (IRB) ratio. The following formula is multiplied by a hospital's base payment rate for each Medicare discharge to determine the IME payment: $1.35 \times [(1+IRB)^{0.405} - 1]$. The multiplier of 1.35 increases the level of the IME adjustment to the existing target level of 5.5%. Congress has periodically changed the multiplier (or ''c'') to decrease or increase IME payments to teaching hospitals.

House Bill

No provision.

Senate Bill

The IME multiplier in 2004 and in 2005 would be 1.36; on or after 2005, the multiplier would be 1.355. This would increase payments to teaching hospitals by $300 million over 10 years. The provision would apply to discharges on or after October 1, 2003.

Conference Agreement

From April 1, 2004 until September 30, 2004, the IME multiplier is equal to 1.47; during FY2005, the IME multiplier is 1.42; during FY2006, the IME multiplier is 1.37; during FY2007, the IME multiplier is 1.32; and, starting October 1, 2007, the IME multiplier is equal to 1.35.

Recognition of New Medical Technologies Under Inpatient Hospital Prospective Payment System (Section 503 of the Conference Agreement and Section 502 of the House Bill).

Current Law

BIPA established that Medicare's inpatient hospital payment system should include a mechanism to recognize the costs of new medical services and technologies for discharges beginning on or after October 1, 2001. The additional hospital payments can be made by the means of a new technology groups, an add-on payment, a payment adjustment, or other mechanism, but cannot be a separate fee schedule and must be budget-neutral. A medical service or technology will be considered to be new if it meets criteria established by the Secretary after notice and the opportunity for public comment. The Centers for Medicare and Medicaid (CMS) published the final regulation implementing these provisions on September 7, 2001. This regulation changed the meeting schedule for decisions on the creation and implementation of new billing codes. (ICD–9–CM codes). The regulation also established that technology that provided a substantial improvement to existing treatments would qualify for additional payments. The add-on payment for eligible new technology would occur when the standard diagnosis related group (DRG) payment was inadequate; this

threshold, which was established as one standard deviation above the mean standardized DRG. In these cases, the add-on payment for new technology would be the lesser of (a) 50% of the costs of the new technology or (b) 50% of the amount by which the costs exceeded the standard DRG payment; however if the new technology payments are estimated to exceed the budgeted target amount of 1% of the total operating inpatient payments, the add-on payments are reduced prospectively.

House Bill

The Secretary would be required to add new diagnosis and procedure codes in April 1 of each year but would not be required to affect Medicare's payment or DRG classification until the fiscal year that begins after that date. The Secretary would not be able to deny a service or technology treatment as a new technology because the service (or technology) has been in use prior to the 2–to–3 year period before it was issued a billing code and a sample of specific discharges where the service has been used can be identified. When establishing whether DRG payments are inadequate, the Secretary would be required to apply a threshold that is the lesser of 75% of the standardized amount (increased to reflect the difference between costs and charges) or 75% of one standard deviation for DRG involved. The Secretary would be required to provide additional clarification in regulation on the criteria used to determine whether a new service represents an advance in technology that substantially improves the existing diagnosis or treatment. The Secretary would be required to deem that a technology provide a substantial improvement on an existing treatment if the technology in question is a drug or biological that is designated under section 506 of the Federal Food, Drug, and Cosmetic Act, approved under section 314.510 or 601.41 of Title 21, Code of Federal Regulations, designated for priority review when the marketing application was filed, is a medical device for which an exemption has been granted under section 520(m) of such Act, or for which priority or expedited review has been provided under section 515(d)(5). For other technologies that may be substantial improvements, the Secretary would be required to: (1) maintain and update a public list of pending applications for specific services and technologies to be evaluated for eligibility for additional payment; (2) accept comments recommendations and data from the public regarding whether a service or technology represents a substantial improvement; and (3) provide for a meeting at which organizations representing physicians, beneficiaries, manufacturers or other interested parties may present comments, recommendations, and data to the clinical staff of CMS regarding whether a service or technology represents a substantial improvement. These actions would occur prior to the publication of the proposed regulation. Before establishing an add-on payment as the appropriate reimbursement mechanism, the Secretary would be directed to identify one or more DRGs and assign the technology to that DRG, taking into account similar clinical or anatomical characteristics and the relative cost of the technology. The Secretary would assign an eligible technology into a DRG where the average cost of care most closely approximates the cost of the new technology. In such a case, no add-on payment would be made; the application of the budget-neutrality requirement with respect to annual DRG reclassifications and recalculation of associated DRG weights would not be affected. The Secretary would be required to increase the percentage associated with add-on payments from 50% to the marginal rate or percentage that Medicare reimburses inpatient outlier cases. The provisions would not affect the Secretary's authority to determine whether services are medically necessary and appropriate. Funding for this new technology would no longer be budget neutral.

The Secretary would be required to implement these provisions to new technology determinations beginning in FY2005. The Secretary would be required to automatically reconsider an application as a new technology that was denied for FY2004 as an application under these new provisions. If such an application is granted, the maximum time period otherwise permitted for such classification as a new technology would be extended by 12 months.

Senate Bill

No provision.

Conference Agreement

The Secretary is required to add new diagnosis and procedure codes in April 1 of each year but is not be required to affect Medicare's payment or DRG classification until the fiscal year that begins after that date. When establishing whether DRG payments are inadequate, the Secretary would be required to apply a threshold that is the lesser of 75% of the standardized amount (increased to reflect the difference between costs and charges) or 75% of one standard deviation for the DRG involved. The Secretary should collect at least 2 years of data before incorporating the technology into a permanent group. The Secretary is be required to: (1) maintain and update a public list of pending applications for specific services and technologies to be evaluated for eligibility for additional payment; (2) accept comments recommendations and data from the public regarding whether a service or technology represents a substantial improvement; and (3) provide for a meeting at which organizations representing physicians, beneficiaries, manufacturers or other interested parties may present comments, recommendations, and data to the clinical staff of CMS regarding whether a service or technology represents a substantial improvement. These actions will occur prior to the publication of the proposed regulation. Before establishing an add-on payment as the appropriate reimbursement mechanism, the Secretary is directed to identify one or more DRGs and assign the technology to that DRG, taking into account similar clinical or anatomical characteristics and the relative cost of the technology. The Secretary will assign an eligible technology into a DRG where the average cost of care most closely approximates the cost of the new technology. In such a case, no add-on payment would be made; the application of the budget-neutrality requirement with respect to annual DRG reclassifications and recalculation of associated DRG weights will not be affected. The Secretary should consider increasing the percent of payment associated with the add-on payments up to the marginal rate used for the inpatient outlier. Funding for new technology will no longer be budget neutral.

The Secretary is required to implement these provisions to new technology determinations beginning in FY2005. The Secretary is required to automatically reconsider an application as a new technology that was denied for FY2005 as an application under these new provisions. If such an application is granted, the maximum time period otherwise permitted for such classification as a new technology is extended by 12 months.

Increase in Federal Rate for Hospitals in Puerto Rico (Section 504 of the Conference Agreement, Section 503 of the House Bill, and Section 409 of the Senate Bill).

Present Law

Under Medicare's prospective payment system for inpatient services, a separate standardized amount is used to establish payments for discharges from short-term general hospitals in Puerto Rico. BBA 97 provides for an adjustment of the Puerto Rico rate from a blended amount based on 25% of the federal national amount and 75% of the local amount to a blended amount based on a 50/50 split between national and local amounts.

House Bill

Hospitals in Puerto Rico would receive Medicare payments based on a 50/50 split between federal and local amounts before October 1, 2003. From FY2004 through FY2007, an increasing amount of the payment rate would be based on federal national rates as follows: during FY2004, payment would be 59% national and 41% local; this would change to 67% national and 33% local during FY2005 and 75% national and 25% local during FY2006 and subsequently.

Senate Bill

Hospitals in Puerto Rico would receive Medicare payments based on a 50/50 split between national and local amounts until September 30, 2003. These hospitals would receive Medicare payments based on 100% of the federal rate for discharges on or after October 1, 2004 and before October 1, 2009. The rate for hospitals Puerto Rico would revert to a 50/50 split after October 1, 2009.

Conference Agreement

Hospitals in Puerto Rico will receive Medicare payments based on a 50/50 split between federal and local amounts before April 1, 2004. Starting April 1, 2004 through September 30, 2004, payment will be based on 62.5% national amount and 37.5% local amount; this will change to 75% national and 25% local after October 1, 2004 and in subsequent years.

Wage Index Adjustment Reclassification Reform (Section 505 of the Conference Agreement and Section 504 of the House Bill).

Present Law

Unlike other providers, acute hospitals may apply to the Medicare Geographic Classification Review Board (MGCRB) for a change in classification from a rural area to an urban area, or reassignment from one urban area to another urban area. The MGCRB was created to determine whether a hospital should be redesignated to an area with which it has close proximity for purposes of using the other area's wage index. If reclassification is granted, the new wage index will be used to calculating Medicare's payment for inpatient and outpatient services.

Generally, hospitals must demonstrate a close proximity to the areas where they seek to be reclassified. This proximity can be established if one of two conditions is met: (1) an urban hospital must be no more than 15 miles and a rural hospital must be no more than 35 miles from the area where it wants to be reclassified; or (2) at least 50% of the hospital's employees reside in the area. A rural referral center (RRC) or a sole community hospital (SCH) or a hospital that is both a RRC and a SCH does not have to meet the proximity test. After establishing appropriate proximity, a hospital may qualify for

the payment rate of another area if it proves that its incurred costs are comparable to those of hospitals in that area under established criteria. To use an area's wage index, a rural hospital must demonstrate that its average hourly wage is equal to at least 82% of the average hourly wage of hospitals in the area to which it seeks redesignation; an urban hospital must demonstrate that its average hourly wage is at least 84% of such an area. Also an urban hospital cannot be reclassified unless average hourly wage is at least 108% of the average hourly wage of the area in which it is located; this standard is 106% for rural hospitals seeking reclassification to an area.

For redesignations starting in FY2003, the average hourly wage comparisons used to determine whether a hospital can use another area's wage index are based on 3 years worth of lagged data submitted by hospitals as part of their cost report. For instance, FY2003 wage index reclassifications were based on weighted 3-year averages of average hourly wages using data from FY1997, FY1998, and FY1999 cost reports. Wage index reclassifications are effective for 3 years unless the hospital notifies the MCGRB and withdraws or terminates its reclassification.

House Bill

The Secretary would be required to establish an application process and payment adjustment to recognize the commuting patterns of hospital employees. A hospital that qualified for such a payment adjustment would have average hourly wages that exceed the average wages of the area in which it is located and have at least 10% of its employees living in 1 or more areas that have higher wage index values. This qualifying hospital would have its wage index value increased by the percentage of its total employees who live in any area with a higher wage index value. The process would be based on the MGCRB reclassification process and schedule with respect to data submitted. Such an adjustment would be effective for 3 years unless a hospital withdraws or elects to terminate its payment. A hospital that receives a commuting wage adjustment would not be eligible for reclassification into another area by the MCGRB. These commuting wage adjustments would not affect the computation of the wage index of the area in which the hospital is located or any other area. It would also be exempt from certain budget neutrality requirements. The provisions would apply to discharges on or after October 1, 2004.

Senate Bill

No provision.

Conference Agreement

The Secretary is required to establish a process and payment adjustment to recognize the out-migration of hospital employees who reside in a county and work in different area with a higher wage index. A hospital that receives such a payment adjustment will be located in a qualifying county that meets criteria established by the Secretary. This criteria will include (1) a threshold percentage of the weighted average of the area wage index or indices for the higher wage index areas; (2) a threshold of not less than 10 percent for minimum out-migration to a higher wage index area or areas and (3) a requirement that the average hourly wage of the hospitals in the qualifying county equals or exceeds the average hourly wage of all the hospitals in the area where the county is located. A qualifying hospital will have its wage index value increased by the percentage of the hospital employees residing in the qualifying county who are employed in any area with a higher wage value. The adjustment will equal the sum of the products of the difference between the wage index value of any higher wage area and the qualifying county multiplied by the number of hospital employee who reside in the qualifying county but are employed in any higher wage index area. The application process for this adjustment is based on the MGCRB reclassification process and schedule with respect to data submitted. Such an adjustment is effective for 3 years unless a hospital withdraws or elects to terminate its payment.

The Secretary may require acute hospitals and other hospitals as well as critical access hospitals to submit data regarding the location of their employee's residence or the Secretary may use data from other sources. A hospital that receives a commuting wage adjustment is not eligible for reclassification into another area by the MCGRB. The commuting wage adjustment does not affect the computation of the wage index of the area in which the hospital is located or any other area. It is also exempt from certain budget neutrality requirements. The thresholds and other qualifying criteria for the commuting wage adjustment is not subject to judicial review. The provisions apply to discharges on or after October 1, 2004. In initially implementing this adjustment, the Secretary may modify the deadlines otherwise applicable to data submission and actions on applications for geographic reclassification.

Limitation on Charges for Inpatient Hospital Contract Health Services Provided to Indians by Medicare Participating Hospitals (Section 506 of the Conference Agreement and Section 412 of the Senate Bill).

Present Law

The Indian Health Service (IHS) provides health care both directly, through tribes and tribal consortia, and through urban Indian organizations. The Indian Health Care Improvement Act (P.L. 94–437) authorized IHS to collect directly from Medicare, Medicaid, and other third party insurers for health services covered by those programs. In addition to care provided directly from IHS and tribal providers, contract health services are purchased by IHS and the tribes from more than 2,000 private providers, if the local facility is unable to provide the needed care. These health services are provided principally for members of tribes who live in contract health service delivery areas. Contract support funding across all IHS programs has been insufficient to cover all IHS and tribal costs. When the costs are not reimbursed through appropriations, the tribes and IHS use program funds to make up the difference.

House Bill

No provision.

Senate Bill

The amendment would prohibit hospitals that participate in Medicare and that provide Medicare covered inpatient hospital services under the contract health services program funded by the Indian Health Services from charging more than the Medicare established rates for these services. This provision would apply to contract health services programs operated by the Indian Health Service, an Indian tribe or tribal organization or an urban Indian organization. The provision would apply to Medicare participation agreements in effect or entered into by a date specified by the Secretary. In no case would this provision be applicable later than 6 months from the date of enactment.

Conference Agreement

Hospitals that participate in Medicare and that provide Medicare covered inpatient hospital services under the contract health services program funded by the Indian Health Services and operated by the Indian Health Service, an Indian tribe, an Indian tribal organization, or an urban Indian organization will be paid in accordance with regulations promulgated by the Secretary regarding admission practices, payment methodologies, and rates of payments. This will include the requirement to accept these rates as payment in full. This provision will apply to Medicare participation agreements in effect or entered into by a date specified by the Secretary. In no case will this date be later than 1 year after the date of enactment.

Clarifications to Certain Exceptions to Medicare Limits on Physician Referrals (Section 507 of the Conference Agreement, Section 505 of the House Bill and Section 453 of the Senate Bill).

Present Law

Physicians are generally prohibited from referring Medicare patients to facilities in which they (or their immediate family member) have financial interests. Physicians, however, are not prohibited from referring patients to whole hospitals (and several other entities) in which they have ownership or investment interests.

House Bill

The Medicare Payment Advisory Commission (MedPAC) would be required to conduct a study of specialty hospitals compared with other similar general acute hospitals including the number and extent of patients referred by physicians with an investment interest in the facility, the quality of care furnished, the impact of the specialty hospital on the acute general hospital, and the differences in the scope of services, Medicaid utilization and the amount of uncompensated care that is furnished. The report, including recommendations, would be due to Congress no later than 1 year from enactment.

Senate Bill

The exception for physician investment and self-referral would not extend to specialty hospitals. In this instance, a specialty hospital would be one that is primarily or exclusively engaged in the care and treatment of patients with cardiac or orthopedic conditions, those receiving a surgical procedure, or other specialized categories of patients or cases deemed appropriate. A specialty hospital would not include any hospital that is determined by the Secretary to be in operation, under development as of such date, with the same number of beds and physician investors as of June 12, 2002. The Secretary would consider the following factors in determining whether a hospital is under development: whether the architectural plans have been completed; funding has been received; zoning requirements have been met; necessary approvals from appropriate State agencies have been received and other appropriate evidence.

The rural provider exception would be modified. These rural providers would not include specialty hospitals and the Secretary would determine, with respect to the entity, that such services would not be available in such area but for the ownership or investment interest.

Conference Agreement

For a period of 18 months from the date of enactment, the ''whole hospital'' exception would be amended to exclude those circumstances in which a physician's ownership

interest is in a subsection d hospital devoted primarily or exclusively to cardiac, orthopedic surgical, or other specialties designated by the Secretary. Specialty hospitals in operation or under development as of November 18, 2003 would be exempt from the provision. Within a period of 15 months from the date of enactment MedPAC, in consultation with the General Accounting Office (GAO), and HHS would study the effects of the whole-hospital exception for physician-ownership in specialty hospitals.

In order to qualify for exception from this provision, a specialty hospital must have been in operation or under development (as defined in this bill) as of November 18, 2003. Additionally, in order to maintain the exception, a specialty hospital may not increase the number of physician investors as of November 18, 2003; change or expand the field of specialization it treats; expand beyond the main campus; or increase the total number of beds in its facilities by more than the greater of 5 beds or 50 percent of the number of beds in the hospital as of November 18, 2003. The Secretary shall determine what constitutes the number of beds in a hospital that is considered under development as of November 18, 2003. The Secretary may evaluate all relevant development plans and documents in order to make this determination.

Long-term acute care hospitals, rehabilitation hospitals, psychiatric hospitals, cancer hospitals, and children's hospitals are not considered to be specialty hospitals for purposes of this section. When studying the effects of the whole-hospital exception, MedPAC, in consultation with GAO shall undertake a study in accordance with the legislation.

Effective Date

Beginning on the date of enactment, this provision would establish an 18–month moratorium on physician self-referrals to specialty hospitals. Hospitals in existence or under development as of November 18, 2003 would be exempt from the moratorium. A study would be completed within 15 months of date of enactment.

MedPAC Study and Report Regarding Medicare Disproportionate Share Hospital Adjustments (Section 404A of the Senate Bill).

Present Law

No provision.

House Bill

No provision.

Senate Bill

The Medicare Payment Advisory Commission (MedPAC) would be required to conduct a study to determine (1) whether disproportionate share hospital (DSH) payments should be made in the same manner as Medicare's graduate medical education payments; (2) the extent that hospitals receiving Medicaid DSH payments also receive Medicare DSH payments; and (3) whether to add uncompensated care costs to the Medicare DSH formula. The report, including recommendations, would be due to Congress within 1 year from enactment. The provision would be effective upon enactment.

Conference Agreement

No provision.

Treatment of Grandfathered Long-Term Care Hospitals (Section 416/Duplicate Provision 420B of the Senate Bill).

Present Law

A hospital-in-a-hospital is a long-term hospital that is physically located in an acute care hospital and provides inpatient services that are paid at a higher rate than would apply if the long term hospital were treated by Medicare as an acute care hospital. The Centers for Medicare and Medicaid Services (CMS) has established certain requirements for a hospital-in-a-hospital to be excluded from the inpatient prospective payment system and be paid as a long-term hospital. For instance, a hospital-within-a-hospital has to be able to independently perform certain basic hospital functions. CMS exempted existing hospitals-with-a-hospital (those that were in existence on or before September 30, 1995) when these requirements were established. On May 19, 2003, CMS proposed to revise the conditions of the hospitals' exemption; a hospital-within-a hospital would only be exempt from the existing requirements if it continues to operate within the same terms and conditions that were in effect as of September 30, 1995.

House Bill

No provision.

Senate Bill

The Secretary would not be able to impose any special conditions on the operation, size, and number of beds or location of an existing long-term hospital in order to continue participating in Medicare or Medicaid or to continue being classified as a long-term hospital. The Secretary would not be able to adopt a proposed regulation that would implement such conditions or any revision to such regulation that have a comparable effect. The provisions would apply to cost reporting periods ending on or after December 31, 2002.

Conference Agreement

No provision.

Treatment of Certain Entities For Purposes of Payments Under the Medicare Program (Section 417 of the Senate Bill).

Present Law

Acute care hospitals may apply to the Medicare Geographic Classification Review Board (MGCRB) for a change in classification from a rural area to an urban area, or reassignment from one urban area to another urban area. The MGCRB was created to determine whether a hospital should be redesignated to an area with which it has close proximity for purposes of using the other area's standardized amount or wage index, or both. (If, as proposed, the standardized amount for all hospitals will equal the amount used to pay hospitals in large urban areas, a hospital's need to reclassify to use of another area's standardized amount will virtually disappear.) If reclassification is granted, the new wage index will be used to calculating Medicare's payment for inpatient and outpatient services. Hospital reclassifications are established on a budget-neutral basis so aggregate inpatient prospective payment system expenditures will not increase as a result.

Generally, hospitals must demonstrate a close proximity to the areas where they seek to be reclassified. After establishing appropriate proximity, a hospital may qualify for the payment rate of another area if it proves that its incurred costs are comparable to those of hospitals in that area. Aside from reclassifications through the MGCRB, hospitals have also been reclassified by law.

House Bill

No provision.

Senate Bill

Starting on or after October 1, 2003, Iredell County and Rowan County, North Carolina would be deemed to be located in the Charlotte-Gastonia-Rock Hill, North Carolina, South Carolina Metropolitan Statistical Area for the purpose of Medicare's inpatient and outpatient acute hospital reimbursement. The Secretary would be required to adjust the wage index values of all hospitals in North Carolina to assure that aggregate payments for hospital inpatient operating costs are not greater than they would have been without such a change.

Starting on or after October 1, 2003, Iredell County and Rowan County, North Carolina would be deemed to be located in the Charlotte-Gastonia-Rock Hill, North Carolina, and South Carolina Metropolitan Statistical Area for the purpose of Medicare's skilled nursing facility (SNF) and home health reimbursement. This change will be made in a way to ensure that aggregate payments for SNF and home health services in North Carolina are not greater than they would have been without such a change.

Conference Agreement

No provision.

Calculation of Wage Indices for Hospitals (Conference Report Section 508 and Section 419 of the Senate Bill).

Present Law

Acute hospitals may apply to the Medicare Geographic Classification Review Board (MGCRB) for a change in classification from a rural area to an urban area, or reassignment from one urban area to another urban area but no later than February 15, 2004. If reclassification is granted, the new wage index will be used to calculating Medicare's payment for inpatient and outpatient services. Generally, hospitals must demonstrate a close proximity to the areas where they seek to be reclassified. After establishing appropriate proximity, a hospital may qualify for the payment rate of another area if it proves that its incurred costs are comparable to those of hospitals in that area. The reclassification standards which are established by regulation are different for urban than for rural hospitals. It is easier for a rural hospital to reclassify to a different area. Aside from reclassifications through the MGCRB, hospitals have also been reclassified by law.

House Bill

No provision.

Senate Bill

The Secretary would be able to waive established reclassification criteria in calculating the wage index in a state when making payments for hospital discharges in FY2004. The provision would be effective upon enactment.

Conference Agreement

The Secretary shall establish by instruction not later than January 1, 2004 or otherwise a one-time process under which a hospital may appeal the wage index classification otherwise applicable to the hospital and select another area within the State (or at the discretion of the Secretary to a contiguous state. A qualifying hospital is not eligible for a wage index classification on the basis of distance and/or commuting. It also must meet such other criteria, such as quality, as the Secretary may specify by instruction or otherwise. The reclassification will be effective for three years beginning with April 1, 2004. Hospitals can waive reclassification under this provision during the three year period. The Secretary shall limit the additional expenditures to $900 million.

Subtitle B—Other Provisions

Payment for Covered Skilled Nursing Facility Services (Section 511 of the Conference

Agreement and Section 511 of the House Bill).

Present Law

Medicare uses a system of daily rates to pay for care in a skilled nursing facility (SNF). There are 44 daily rates categories, known as resource utilization groups (RUGs) and each group reflects a different case mix and intensity of services, such as skilled nursing care and/or various therapy and other services.

House Bill

The per diem RUG payment for a SNF resident with acquired immune deficiency syndrome (AIDS) would be increased by 128%. This payment increase would not apply on after such date when the Secretary certifies that the SNF case mix adjustment adequately compensates for the facility's increased costs associated with caring for a resident with AIDS. The provision would be effective for services on or after October 1, 2003.

Senate Bill

No provision.

Conference Agreement

The conference agreement increases the per diem RUG payment for a SNF resident with acquired immune deficiency syndrome (AIDS) by 128% (the BBRA temporary RUG add-on does not apply in this case). This payment increase would not apply on after such date when the Secretary certifies that the SNF case mix adjustment adequately compensates for the facility's increased costs associated with caring for a resident with AIDS. The provision is effective for services on or after October 1, 2004.

Coverage of Hospice Consultation Services (Section 512 of the Conference Agreement and Section 512 of the House Bill).

Present Law

Current law authorized coverage of hospice services, in lieu of certain other Medicare benefits, for terminally ill beneficiaries who elect such coverage.

House Bill

Coverage of certain physician's services for certain terminally ill individuals would be authorized. Persons entitled to these services would be individuals who have not elected the hospice benefit and have not previously received these physician's services. Covered services would be those furnished by a physician who is the medical director or employee of a hospice program. Services would include evaluating the individual's need for pain and symptom management, counseling the individual with respect to end-of-life issues and care options, and advising the individual regarding advanced care planning. Payment for such services would equal the amount established for similar services under the physician fee schedule, excluding the practice expense component. The provision would apply to consultation services provided by a hospice program on or after January 1, 2004.

Senate Bill

No provision.

Conference Agreement

The conference agreement provides coverage of certain physician's services for certain terminally ill individuals. Beneficiaries entitled to these services are those who have not elected the hospice benefit and have not previously received these physician's services. Covered services are those furnished by a physician who is the medical director or employee of a hospice program. The covered services are: evaluating the beneficiary's need for pain and symptom management, including the individual's need for hospice care; counseling the beneficiary with respect to end-of-life issues and care options, and advising the beneficiary regarding advanced care planning. Payment for such services equals the amount established for similar services under the physician fee schedule, excluding the practice expense component. The provision would apply to consultation services provided by a hospice program on or after January 1, 2005.

Increase for Hospitals with Disproportionate Indigent Care Revenues (Section 420A of the Senate Bill).

Present Law

Certain hospitals receive additional Medicare payments because they serve a disproportionate share of poor Medicare and Medicaid patients measured by a formula that incorporates the proportion of the hospital's Medicare inpatient days provided to poor Medicare beneficiaries (those who receive Supplemental Security Income or SSI) added to the proportion of total hospital days provided to Medicaid recipients. A few urban hospitals receive disproportionate share hospital (DSH) payments under the Pickle Amendment (named after former Representative Pickle from Texas) which establishes an alternative formula that considers the proportion of a hospital's patient care revenues that are received from state and local indigent care funds. If a hospital receives at least 30% of its patient care revenue from these indigent care funds, it qualifies as a ''Pickle'' hospital and will get a 35% increase in its Medicare operating payments. The Pickle hospitals receive a capital DSH adjustment of 14.16%. The capital adjustment is calculated with the presumption that other urban hospitals would have had a DSH patient share percentage of 65.4% in order to receive a 35% operating DSH adjustment. If so, 65.4% DSH adjustment entered into the capital formula (a complicated calculation involving ''e is the natural antilog of 1'') would equal 14.16%.

House Bill

No provision.

Senate Bill

Hospitals that qualify for the DSH adjustment under the Pickle amendment would receive a DSH operating and capital adjustment of 40% for discharges on or after October 1, 2003. The provision would be effective upon enactment.

Conference Agreement

No provision.

Equitable Treatment for Children's Hospitals (Section 450J of the Senate Bill).

Present Law

Outpatient hospital prospective payment contains a permanent ''hold harmless'' for cancer hospitals and children's hospitals. Under this hold harmless, payments to these hospitals cannot fall below what these hospitals would have received under the payment system in place before PPS.

House Bill

No provision.

Senate Bill

The provision would modify the hold harmless that certain children's hospitals receive. To receive the hold harmless a children's hospital would be required to be located in a state with an inpatient PPS waiver (Maryland is the only state that continues its waiver under 1814(b)(3)) and to have an outpatient PPS payment that is less than either what the hospital would have received under the previous payment system or the hospital's reasonable operating and capital costs. A children's hospital meeting these criteria would receive payment reflecting the greater difference between the outpatient PPS amount and the greater of either the previous payment system amount or the reasonable costs. The provision would be effective for services furnished on or after October 1, 2003.

Conference Agreement

No provision.

TITLE VI—PROVISIONS RELATING TO PART B

Subtitle A—Provisions Relating to Physicians' Services

Revision of Updates for Physicians' Services (Section 601 of the Conference Agreement, Section 601 of the House Bill, and Sections 464/Duplicative Provisions 622 and 629 of the Senate Bill).

Present Law

Medicare pays for services of physicians and certain non-physician practitioners on the basis of a fee schedule. The fee schedule, in place since 1992, is intended to relate payments for a given service to the actual resources used in providing that service. The fee schedule assigns relative values to services. These relative values reflect physician work (i.e., the time, skill, and intensity it takes to provide the service), practice expenses, and malpractice costs. The relative values are adjusted for geographic variations in costs. The adjusted relative values are then converted into a dollar payment amount by a conversion factor.

The law provides a specific formula for calculating the annual update to the conversion factor. The intent of the formula is to place a restraint on overall increases in spending for physicians' services. Several factors enter into the calculation of the formula. These include: (1) the sustainable growth rate (SGR), which is essentially a target for Medicare spending growth for physicians' services; (2) the Medicare economic index (MEI), which measures inflation in the inputs needed to produce physicians' services; and (3) an adjustment that modifies the update, which would otherwise be allowed by the MEI, to bring spending in line with the SGR target. The SGR target is not a limit on expenditures. Rather, the fee schedule update reflects the success or failure in meeting the target. If expenditures exceed the target, the update for a future year is reduced.

The annual percentage update to the conversion factor equals the MEI, subject to an adjustment (known as the update adjustment factor) to match target spending for physicians services under the SGR system. (During a transition period, 2001–2005, an additional adjustment is made to achieve budget neutrality.) The update adjustment sets the conversion factor at a level so that projected spending for the year will meet allowed spending by the end of the year. Allowed spending for the year is calculated using the SGR. However, in no case can the update adjustment factor be less than minus 7% or more than plus 3%.

The update adjustment factor is the sum of: (1) the prior year adjustment component, and (2) the cumulative adjustment component. The prior year adjustment component is determined by: (1) computing the difference between allowed expenditures for physicians' services for the prior year and the amount of actual expenditures for that year; (2) dividing this amount by the actual

expenditures for that year; and (3) multiplying that amount by 0.75. The cumulative adjustment component is determined by: (1) computing the difference between allowed expenditures for physicians' services from April 1, 1996 through the end of the prior year and the amount of actual expenditures during such period; (2) dividing that difference by actual expenditures for the prior year as increased by the SGR for the year for which the update adjustment factor is to be determined; and (3) multiplying that amount by 0.33. Use of both the prior year adjustment component and the cumulative adjustment component allows any deviation between cumulative actual expenditures and cumulative allowed expenditures to be corrected over several years rather than a single year.

The law also specifies a formula for calculating the SGR. It is based on changes in four factors: (1) estimated changes in fees; (2) estimated change in the average number of Part B enrollees (excluding Medicare+Choice beneficiaries); (3) estimated projected growth in real gross domestic product (GDP) growth per capita; and (4) estimated change in expenditures due to changes in law or regulations. This system is designed to adjust for how well actual expenditures meet SGR target expenditures.

Provisions in the Consolidated Appropriations Resolution of 2003 (P.L. 108–7) permitted redeterminations of SGR for prior years. As a result, the conversion factor for 2003 was increased 1.6% over the 2002 level. Other aspects of the formula for the annual payment rate were not addressed. CMS reports an update factor of −4.5% for 2004.

House Bill

The update to the conversion factor for 2004 and 2005 would be not less than 1.5% and would be exempt from the budget neutrality adjustment. This modification would not be treated as a change in law and regulation in SGR determination.

The formula for calculating the sustainable growth rate would be modified. The GDP factor would be based on the annual average change over the preceding 10 years (a 10-year rolling average). This calculation would replace the current GDP factor which measures the 1-year change from the preceding year. The 10-year rolling average calculation of the GDP would apply to computations of the SGR starting in 2003.

Senate Bill

The provision expresses a sense of the Senate that Medicare beneficiary access to quality care may be compromised if Congress does not prevent cuts in 2004 and following years that stem from the sustainable growth rate (SGR) formula.

The provision provides a sense of the Senate that the reductions in Medicare's physician fee schedule are untenable if not destabilizing, primarily caused by the sustainable growth rate calculation, and that CMS should use its discretion to make certain exclusions and adjustments to the calculation.

Conference Agreement

The update to the conversion factor for 2004 and 2005 will not be not less than 1.5% and will be exempt from the budget neutrality adjustment, instead of −4.5% in 2004 and a smaller reduction in 2005. This modification would not be treated as a change in law and regulation in SGR determination.

The formula for calculating the sustainable growth rate will be modified. The GDP factor will be based on the annual average change over the preceding 10 years (a 10-year rolling average). This calculation will replace the current GDP factor which measures the 1-year change from the preceding year. The 10-year rolling average calculation of the GDP will apply to computations of the SGR starting in 2003.

Treatment of Physicians' Services furnished in Alaska (Section 602 of the Conference Agreement and Section 450K of the Senate Bill).

Current Law

Physicians who provide services to Medicare beneficiaries are paid based on a physician fee schedule, which has three components: the relative value for the service, a geographic adjustment factor and a conversion factor. The geographic adjustment factor is the sum of three geographic practice cost indices (GPCIs), namely a work GPCI, a practice expense GPCI, and a malpractice GPCI. An area with costs above the national average would have a GPCI greater than 1.00; an area with costs below the national average would have a GPCI less than 1.00.

House Bill

No provision.

Senate Bill

For calendar year 2004, physicians providing Medicare services in Alaska would be paid 90 percent of the Veterans Affairs (VA) fee schedule for physician services that was used for fiscal year 2001. For calendar year 2005, this payment amount would be increased by the update amount for the Medicare physician fee schedule for 2005. If no VA fee schedule amount existed for a physician service, the payment amount would be the sum of the Medicare payment amount plus 90% of the percentage difference between the Medicare fee schedule and the VA fee schedule (on a claims-weighted basis). The provision would be effective for services furnished on or after January 1, 2004 and before January 1, 2006.

Conference Agreement

In calendar years 2004 and 2005, for physician services provided in Alaska, the Secretary is required to increase geographic practice cost indices to a level of 1.67 for each of the work, practice expense and malpractice cost indices.

Inclusion of Podiatrists, Dentists, and Optometrists under Private Contracting Authority (Section 603 of the Conference Agreement and Section 604 of the House Bill).

Present Law

Private contracting allows a physician and Medicare beneficiary not to submit a claim for a service which would otherwise be covered and paid for by Medicare. Under private contracting, physicians can bill patients at their discretion without being subject to upper payment limits specified by Medicare. If a physician decides to enter into a private contract with a Medicare beneficiary, that physician must agree to forego any reimbursement by Medicare for all Medicare beneficiaries for 2 years. The patient is not subject to the 2-year limit and is able to receive services from other physicians who do not have such private contracts and have Medicare pay for the services. Both physicians and practitioners may enter private contracts. In this instance, a physician is limited to a doctor of medicine and osteopathy; chiropractors, podiatrists, dentists, and optometrists are not included. Practitioners are physician assistants, nurse practitioners, clinical nurse specialists, certified registered nurse anesthetists, certified nurse midwives, clinical psychologists, and clinical social workers.

House Bill

Doctors of dental surgery or of dental medicine and doctors of podiatric medicine would be able to enter into private contracts with Medicare beneficiaries. The provision would be effective upon enactment.

Senate Bill

No provision.

Conference Agreement

Doctors of dental surgery or of dental medicine, doctors of podiatric medicine, and doctors of optometry will be able to enter into private contracts with Medicare beneficiaries. The provision will be effective upon enactment.

GAO Study on Access to Physicians' Services (Section 604 of the Conference Agreement and Sections 602(a) and 602(b) of the House Bill).

GAO Study on Beneficiary Access to Physicians' Services

Present Law

Periodic analyses by the Physician Payment Review Commission, and subsequently MedPAC, as well as CMS showed that access to physicians' services generally remained good for most beneficiaries through 1999. Detailed data are not available for a subsequent period; however, several surveys have showed a decline in the percentage of physicians accepting new Medicare patients.

House Bill

GAO would be required to conduct a study on access of Medicare beneficiaries to physician's services under Medicare. The study would include an assessment of beneficiaries' use of services through an analysis of claims data. It would also examine changes in use of physicians' services over time. Further, it would examine the extent to which physicians are not accepting new Medicare beneficiaries as patients. GAO would be required to submit a report to Congress on this study within 18 months of enactment. The report would determine whether data from claims submitted by physicians indicate potential access problems for beneficiaries in certain geographic areas. The report would determine whether access by beneficiaries to physicians' services has improved, remained constant, or deteriorated over time.

The Secretary would be required to request the Institute of Medicine to conduct a study on the adequacy of the supply of physicians (including specialists) in the country and the factors that affect supply. The Secretary would be required to submit the results of the study in a report to Congress no later than 2 years of the date of enactment.

Senate Bill

No provision.

Conference Agreement

GAO is required to conduct a study on access of Medicare beneficiaries to physicians' services under Medicare. The study will include an assessment of beneficiaries' use of physician services through an analysis of claims data. It will also examine changes in use of physicians' services over time. Further, it will examine the extent to which physicians are not accepting new Medicare beneficiaries as patients. GAO is required to submit a report to Congress on this study within 18 months of enactment. The report will determine whether data from claims submitted by physicians indicate potential access problems for beneficiaries in certain geographic areas. The report will also determine whether access by beneficiaries to physicians' services has improved, remained constant, or deteriorated over time.

Collaborative Demonstration-based Review of Physician Practice Expense Geographic Adjustment Data (Section 605 of the Conference Report and Section 421 of the Senate Bill).

Present Law

No provision.

House Bill

No provision.

Senate Bill

For services furnished after January 1, 2004, the Secretary would be required to increase the value of any work geographic index that is below .980 to .980. The values for work index would be raised to 1.0 for services furnished in 2005, 2006, and 2007. The practice expense and malpractice geographic indices in low value localities areas would be raised to 1.00 for services furnished in 2005 through 2008.

Conference Agreement

The Secretary is required to review and consider alternative data sources than those currently used to establish the geographic index for the practice expense component under Medicare's physician fee schedule no later than January 1, 2005. The Secretary will collaborate with state and other appropriate organizations representing physicians, and other appropriate persons. The Secretary will select 2 physician payment localities for this evaluation; one of the localities will be a rural area and one will be a statewide locality that includes both urban and rural areas. The Secretary will submit a report to Congress including recommendations on alternative data sources, including their accuracy and validity, the feasibility of using the alternative data, and the estimated impact of using these data for the practice expense adjustment. The report is due no later than January 1, 2006.

MedPAC Report on Payment for Physicians' Services (Section 606 of the Conference Agreement and Section 603 of the House Bill).

Present Law

Medicare pays for physicians' services on the basis of a fee schedule. The fee schedule assigns relative values to services. These relative values reflect physician work, practice expenses and malpractice expenses. Resource-based practice expense relative values were phased-in beginning in 1999. Beginning in 2002, the values were totally resource-based.

Certain services have a professional component and a technical component. The technical component does not include a relative value for physician work. A global value includes both the professional and technical components. The physician must bill for the global value if the physician furnishes both the professional component and the technical component.

House Bill

MedPAC would be required to report to Congress on the effects of refinements to the practice expense component of payments for physicians' services after full implementation of the resource-based payment in 2002. The report is to examine the following by specialty: (1) the effect of refinements on payments for physicians services; (2) interaction of the practice expense component with other components of and adjustments to payment for physicians' services; (3) appropriateness of the amount of compensation by reason of such refinements; (4) effect of such refinements on access to care by Medicare beneficiaries to physicians' services; and (5) effect of such refinements on physician participation under the Medicare program. The report would be due within 1 year of enactment. MedPAC would also be required to study the extent to which increases in the volume of physician services improves beneficiaries' health and well-being. MedPAC would be required to analyze the trends in components included in the sustainable growth rate calculation; the growth in volume of physician services provided to Medicare beneficiaries in comparison to other populations; the extent to which coverage determinations and new technology has affected growth in volume; the effect of demographic changes on volume; the effect of shifts in sites of services; and the extent to which the impact of law and regulations is taken into account.

Senate Bill

No provision.

Conference Agreement

MedPAC is required to report to Congress on the effects of refinements to the practice expense component of payments for physicians' services after full implementation of the resource-based payment in 2002. The report will examine the following by specialty: (1) the effect of refinements on payments for physicians' services; (2) the interaction of the practice expense component with other components of and adjustments to payment for physicians' services; (3) the appropriateness of the amount of compensation by reason of such refinements; (4) the effect of such refinements on access to care by Medicare beneficiaries to physicians' services; and (5) the effect of such refinements on physician participation under the Medicare program. The report is due within 1 year of enactment. MedPAC is also required to study the extent to which increases in the volume of physician services improves beneficiaries' health and well-being. MedPAC is required to analyze the trends in components included in the sustainable growth rate calculation; the growth in volume of physician service provided to Medicare beneficiaries in comparison to other populations; the extent to which coverage determinations and new technology has affected growth in volume; the effect of demographic changes on volume; the effect of shifts in sites of services; and the extent to which the impact of law and regulations is taken into account. The report is due within 1 year of enactment.

GAO Report Section (Section 605(b) of the House Bill).

Present Law

No provision.

House Bill

As part of the previously mandated study of geographic differences in physician payments, GAO would be required to evaluate (1) whether a sound economic basis for raising the geographic work adjustment exists; (2) the effect of such adjustment of physician location and retention including differences in recruitment cost and physician mobility; and the appropriateness of establishing a floor of 1.00 on the work geographic adjustment. GAO would be required to submit the report to Congress and the Secretary by September 1, 2004.

Senate Bill

No provision.

Conference Agreement

No provision.

GAO Study and Report on the Propagation of Concierge Care (Section 447 of the Senate Bill).

Present Law

No provision.

House Bill

No provision.

Senate Bill

GAO would be required to conduct a study on concierge care provided to Medicare beneficiaries and its affect on their access to Medicare covered services and submit a report to Congress, including recommendations, no later than 12 months from enactment. In this instance, concierge care would be an arrangement where a physician or practitioner charges an individual seeking care a membership fee or other fee or requires the purchase of an item or service as a prerequisite for providing the care. The provision would be effective upon enactment.

Conference Agreement

No provision.

Subtitle B—Preventive Services

Coverage of An Initial Preventive Physical Examination (Section 611 of the Conference Agreement and Section 611 of the House Bill).

Present Law

Medicare covers a number of preventive services. However, it does not cover routine physical examinations.

House Bill

Medicare coverage of an initial preventive physical examination would be authorized. The physical examination would be defined as physicians' services consisting of a physical examination with the goal of health promotion and disease detection. It would include items and services (excluding clinical laboratory tests) consistent with the recommendations of the United States Preventive Services Task Force as determined by the Secretary. A covered initial preventive physical examination would be one performed no later than 6 months after the individual's initial coverage date under Part B. Initial preventive physical exams would be included in the definition of physicians' services for purposes of the physician fee schedule. The Part B deductible and coinsurance would be waived for initial preventive physical exams. The provision would apply to services furnished on or after January 1, 2004 for those individuals whose coverage begins on or after such date.

Senate Bill

No provision.

Conference Agreement

Medicare coverage of an initial preventive physical examination is authorized, subject to deductible and beneficiary cost sharing. The physical examination is defined as physicians' services consisting of a physical examination (including measurement of height, weight, and blood pressure, and an electrocardiogram) with the goal of health promotion and disease detection. The examination includes education, counseling, and referral with respect to specific screening services and other preventive services, but does not include clinical laboratory tests. The screening and preventive services are certain vaccines, screening mammography, screening pap smear and screening pelvic exam, prostate cancer screening tests, colorectal cancer screening tests, diabetes outpatient self management, bone mass measurement, screening for glaucoma, medical nutrition therapy, cardiovascular screening blood tests and diabetes screening tests. A covered initial preventive physical examination is performed no later than 6 months after the individual's initial coverage date under Part B. Initial preventive physical exams are included in the definition of physicians services for purposes of the physician fee schedule. The provision applies to services furnished on or after January 1, 2005, but only for those individuals whose coverage begins on or after such date.

The Conference encourages the United States Preventive Services Task Force to examine aortic aneurysm screening using ultrasound. Aortic aneurysms are a leading cause of death in the United States, and many in the medical community believe that most, if not all, of the approximately 15,000 known deaths each year would be prevented with appropriate screening.

Coverage of Cardiovascular Screening Blood Tests (Section 612 of the Conference Agreement, Section 612 of the House Bill, and Section 450D of the Senate Bill).

Present Law

Medicare covers a number of preventive services. However, it does not cover cardiovascular screening tests.

House Bill

Medicare coverage of cholesterol and blood lipid screening would be authorized. The screening would be defined as diagnostic testing of cholesterol and other lipid levels of the blood for the purpose of early detection of abnormal cholesterol and other lipid levels. The Secretary would be required to establish standards regarding the frequency and type of these screening tests, but not more often than once every 2 years. The provision would apply to services furnished on or after January 1, 2005.

Senate Bill

Medicare coverage of cardiovascular screening tests would be authorized. The screening would be defined as diagnostic testing for the early detection of cardiovascular disease including tests for cholesterol levels, lipid levels of the blood, and other appropriate tests for cardiovascular disease. The Secretary would be required to consult with appropriate organizations and to establish standards regarding the frequency and type of these screening tests, but not more often than once every 2 years. The provision would apply to services furnished on or after January 1, 2005.

Conference Agreement

Medicare coverage of cardiovascular screening blood tests is authorized. The screening is defined as a blood test for the early detection of cardiovascular disease (or abnormalities associated with an elevated risk of cardiovascular disease) including tests for cholesterol levels and other lipid or triglyceride levels as well as such other indications associated with the presence of (or an elevated risk for) cardiovascular disease as the Secretary may approve for all individuals or for some individuals determined to be at risk for such disease. These indications may include indications measured by noninvasive testing. The Secretary cannot approve an indication for any individual unless a blood test for such is recommended by the United States Preventive Services Task Force. The Secretary is required to consult with appropriate organizations and to establish standards regarding the frequency and type of these screening tests, but the frequency may not be more often than once every 2 years. The provision applies to services furnished on or after January 1, 2005.

Coverage of Diabetes Screening Tests (Section 613 of the Conference Agreement and Section 630 of the House Bill).

Present Law

On July 1, 1998, Medicare began covering diabetes self-management training services. These educational and training services are provided on an outpatient basis by physicians or other certified providers who have experience in diabetes self-management training services. Blood testing strips and home blood glucose monitors are used by diabetics to measure blood glucose levels to determine if these levels are being maintained adequately. Medicare covers blood testing strips and blood glucose monitors for all individuals with diabetes regardless of whether they are insulin-dependent. The Secretary is also required to consult with appropriate organizations to establish outcome measures to assess improvements in the health status of individuals with diabetes. Based on this information, the Secretary will make recommendations to Congress on changes to Medicare's coverage of services for these beneficiaries. Medicare does not presently cover laboratory diagnostic tests and other services that are used to screen for diabetes.

House Bill

Diabetes screening tests and services would be included as a covered medical service. In this instance, diabetes screening tests would include fasting plasma glucose tests and other appropriate tests provided to an individual at risk for diabetes. Individuals at risk for diabetes would have any or a combination of the following conditions: (1) have a family history of diabetes; (2) are overweight with a body mass index greater than or equal to 25 kg/m^2; (3) are habitually physically inactive; (4) are a member of a high-risk ethnic or racial group; (5) have previously been identified with an elevated impaired fasting glucose; (6) have hypertension; (7) have dyslipidemia; (8) have a history of gestational diabetes mellitus or have delivered a baby weighing more than 9 pounds; or (9) have polycystic ovary syndrome. The Secretary would be required to establish standards, in consultation with appropriate organizations regarding the frequency of screening tests except the tests would not be covered more often that twice in the 12–month period following the date of the individual's most recent diabetes screening test. The provision would apply to tests furnished on or after 90 days from enactment.

Senate Bill

No provision.

Conference Agreement

Diabetes screening tests furnished to an individual at risk for diabetes for the purpose of early detection of diabetes are included as a covered medical service. In this instance, diabetes screening tests include fasting plasma glucose tests as well as other tests and modifications to those tests deemed appropriate by the Secretary after consultation with appropriate organizations. Individuals at risk for diabetes have any or a combination of the following conditions: (1) hypertension; (2) dyslipidemia; (3) obesity, with a body mass index greater than or equal to 30 kg/m^2; (4) previous identification of an elevated impaired fasting glucose; (5) previous identification of impaired glucose tolerance or (6) a risk factor of at least 2 of the following characteristics: overweight with a body mass index of greater than 25, but less than 30, kg/m^2; a family history of diabetes; a history of gestational diabetes mellitus or delivery of a baby weighing more than 9 pounds; or age of 65 years or more. The Secretary is required to establish standards, in consultation with appropriate organizations regarding the frequency of screening tests except the tests will not be covered more often that twice in the 12–month period following the date of the individual's most recent diabetes screening test. The provision applies to tests furnished starting January 1, 2005.

Improved Payment for Certain Mammography Services (Section 614 of the Conference Agreement, Section 614 of the House Bill, and Section 445 of the Senate Bill).

Present Law

Screening mammography coverage includes the radiological procedure as well as the physician's interpretation of the results of the procedure. The usual Part B deductible is waived for tests. Payment is made under the physician fee schedule.

Certain services paid under fee schedules or other payment systems including ambulance services, services for patients with end-stage renal disease paid under the ESRD composite rate, professional services of physicians and non-physician practitioners paid under the physician fee schedule, and laboratory services paid under the clinical diagnostic laboratory fee schedule are excluded from Medicare's outpatient prospective payment system (OPPS).

House Bill

Unilateral and bilateral diagnostic mammography as well as screening mammography services would be excluded from OPPS. The Secretary would be required to provide an appropriate adjustment to the physician fee schedule for the technical component of the diagnostic mammography based on the most recent cost data available. This adjustment would be applied to services provided on or after January 1, 2004.

Senate Bill

Unilateral and bilateral diagnostic mammography as well as screening mammography services would be excluded from OPPS. The Secretary would be required to provide an appropriate adjustment to the physician fee schedule for the technical component of the diagnostic mammography based on the most recent cost data available. This adjustment would be applied to services provided on or after January 1, 2005.

Conference Agreement

Screening mammography and diagnostic mammography will be excluded from OPPS. This provision will apply to screening mammography services furnished on or after the date of enactment and will apply to diagnostic mammography services furnished on or after January 1, 2005.

Waiver of Deductible for Colorectal Cancer Screening Tests (Section 613 of the House Bill).

Present Law

Covered colorectal screening tests for prevention purposes include (1) an annual fecal-occult blood test for individuals age 50 and older; (2) flexible sigmoidoscopy every 4 years for individuals age 50 and older; (3) colonoscopy for high-risk individuals every 2 years and for other individuals every 10 years; and (4) screening barium enemas every 4 years for individuals age 50 and older who are not at high risk of developing colorectal cancer or every 2 years for high risk individuals. Payment is made according to the applicable payment system for the provider performing the test.

Unless otherwise specified, Part B services are subject to beneficiary cost sharing amounts, including an annual deductible and coinsurance amount. Colorectal screening tests are subject to the deductible and coinsurance.

House Bill

The Part B deductibles would be waived for colorectal cancer screening tests. The provision would apply to items and services furnished on or after January 1, 2004.

Senate Bill

No provision.

Conference Agreement

No provision.

Subtitle C—Other Provisions

Hospital Outpatient Department (HOPD) Payment Reform (Section 621 of the Conference Report, Section 621(a) of the House Bill, and Section 436 of the Senate Bill).

Payment for Drugs (Section 621(a) of the Conference Agreement, Sections 621(a) and 621(d) of the House Bill, and Section 436 of the Senate Bill).

Present Law

Under hospital outpatient department (HOPD) prospective payment system (OPPS), the unit of payment is the individual service or procedure as assigned to one of about 570 ambulatory payment classifications (APCs) groups. Services are classified into APCs based on their Healthcare Common Procedure Coding System (HCPCS), a standardized coding system used to identify products, supplies, and services for claims processing and payment purposes. To the extent possible, integral services and items including drugs are bundled or packaged within each APC. For instance, an APC for a surgical procedure will include operating and recovery room services, anesthesia and surgical supplies. Medicare's payment for HOPD services is calculated by multiplying the relative weight associated with an APC by a geographically adjusted conversion factor. The conversion factor is updated on a calendar year schedule and the annual updates are based on the hospital market basket (MB). Currently, the CY2004 HOPD update will equal the projected change in the MB.

Medicare pays for covered outpatient drugs in one of three ways: (1) as a transitional pass-through payment; (2) as a separate APC payment; or (3) as packaged APC payment with other services.

Transitional pass-through payments are supplemental payments to cover the incremental cost associated with new medical devices, drugs and biologicals that are inputs to an existing service. The additional payment for a given item is established for 2 or 3 years and then the costs are incorporated into the APC relative weights. BBRA specified that pass-through payments would be made for current orphan drugs, as designated under section 526 of the Federal Food, Drug, and Cosmetic Act; current cancer therapy drugs, biologicals, and brachytherapy; current radiophamaceutical drugs and biological products; and new drugs and biological agents.

Generally, CMS has established that a pass-through payment for an eligible drug is based on the difference between 95% of its average wholesale price and the portion of the otherwise applicable APC payment rate attributable to the existing drug, subject to a budget neutrality provision. The pass-through amount for new drugs with a substitute drug recognized in a separate drug APC payment is the difference between 95% of new drug's AWP and the payment rate for the comparable dose of the associated drugs APC.

CMS imputes the hospital costs for these drugs to establish the beneficiary copayment amounts as well as to project the amount of pass-through spending in order to calculate the uniform reduction to payments under the budget neutrality constraint. This imputed value is calculated by multiplying the average wholesale price (AWP) for the drug by the applicable cost-to-charge ratio which varies by the class of drug. For CY2003, the average ratio of cost to AWP for sole-source drugs manufactured by one entity is 0.71, for multiple source drugs is 0.68, and for multiple source drugs with generic competitors is 0.43. There is enormous variation within a category from close to zero to above 100% of AWP.

Current drugs and biologicals that have been in transitional pass-through status on or prior to January 1, 2000 were removed from that payment status effective January 1, 2003. CMS established separate APC payments for certain of these drugs, including orphan drugs, blood and blood products, and selected higher cost drugs in CY2003. CMS established a threshold of $150 per claim line for a drug to qualify for a separate APC payment as a higher-cost drug. Other drugs that had qualified for a transitional pass-through payment were packaged in to procedural APCs. For example, in some instances, brachytherapy seeds (radioactive isotopes used in cancer treatments) were packaged into payments for brachytherapy procedures. Essentially, the payment rates for these drug-related APCs are based on a relative weight calculated in the same way as procedural APCs are calculated. However, the cost to charge ratios are from only one department.

House Bill

Under Section 621(a), starting for services furnished on or after January 1, 2004, certain covered OPD drugs would be paid no more than 95% of AWP or be less than the transition percentage of the AWP from CY2004 through CY2006. In subsequent years, payment would be equal to average price for the drug in the area and year established by the competitive acquisition program under 1847A. The covered OPD drugs affected by this provision are radiopharmceuticals and outpatient drugs that were paid on a pass-through basis on or before December 31, 2002. These would not include drugs for which pass-through payments are first made on or after January 1, 2003 or those drugs for which a temporary HCPCS code has not been assigned. Drugs for which a temporary HCPCS code has not been assigned would be reimbursed at 95% of the AWP.

The transition percentage to AWP for sole-source drugs manufactured by one entity is 83% in CY2004, 77% in CY2005, and 71% in CY2006. The transition percentage to AWP for innovator multiple source drugs is 81.5% in CY2004, 75% in CY2005, and 68% in CY2006. The transition percentage to AWP for multiple source drugs with generic drug competitors is 46% in CY2004 through CY2006. Generally, a multiple source drug is a covered drug for which there are 2 or more therapeutically equivalent drug products. An innovator multiple source drug is a multiple source drug that was originally marketed under an original new drug application approved by the Food and Drug Administration (FDA). A sole source drug is not a multiple source drug. The additional expenditures resulting from these provisions would not be subject to the budget neutrality requirement.

Starting in CY2004, the Secretary would be required to lower the threshold for establishing a separate APC group for higher costs drugs from $150 to $50 per administration. These separate drug APC groups would not be eligible for outlier payments. Starting in CY2004, Medicare's transitional pass-through payments for drugs and biologicals covered under a competitive acquisition contract would reflect the amount paid under that contract, not 95% of AWP.

Under Section 621(d), the Secretary would be required to study the hospital acquisition costs related to covered outpatient drugs that cost $50 per administration and more that are reimbursed under the HOPD–PPS. The study would encompass a representative sample of urban and rural hospitals. The report including recommendations on the usefulness of the cost data and frequency of subsequent data collection efforts would be due to Congress no later than January 1, 2006. The report would also discuss whether the data is appropriate for making adjustments to payments made under the competitive acquisition contract established by section 1847A and whether separate estimates can be made for overhead costs including handling and administering drugs. The provision would be effective upon enactment.

Senate Bill

A new payment mechanism for certain drugs and biologicals provided in hospital outpatient departments (OPD) would be established from January 1, 2005 and before January 1, 2007. The drugs and biologicals would be those for which hospitals received transitional pass-through payments prior to January 1, 2005 and those that would have been paid in such a manner but for the application of this provision or those that are assigned to drug specific APCs on or after the date of enactment. Payments made under this provision would be exempt from the budget neutrality requirement in FY2005 and FY2006.

In 2005, these drugs or biologicals furnished as part of a current OPD service would be paid as follows: a single source or orphan product would be paid at 94% of the AWP existing on May 1, 2003; a multiple source drug would be paid at 91% of the AWP existing on May 1, 2003; and a multiple source drug with generic equivalents would be paid at 71% of AWP on May 1, 2003. Drugs and biologicals that were furnished as part of other OPD services would be paid using the same applicable percentage of the AWP that would have been determined on May 1, 2003 if payment could have been made on that date. For 2006, these payment amounts would be increased by the percentage increase in the consumer price index for all urban consumers for the 12–month period ending in June of the previous year.

The Secretary would be required to contract with an eligible organization (a private nonprofit organization) to conduct a study to determine the hospital acquisition, pharmacy services, and handling costs for each of the drugs paid in this fashion. The study would be required to be accurate with 3% of the true mean hospital acquisition and handling costs for each drug and biological at the 95% confidence level; begin not later than January 1, 2005; and be updated annually. Each year, beginning January 1, 2006, the Secretary would be required to submit a report to Congress, including recommendations, on the drug costs. These drug costs would be used in determining the payment amounts for each drug and biological provided as part of a covered OPD service furnished on or after January 1, 2007.

Conference Agreement

Starting for services furnished on or after January 1, 2004, specified covered OPD drugs would be paid based on a percentage of the reference average wholesale price for the drug. The percentage of the reference price for sole-source drugs manufactured by one entity can be no less than 88% and no greater than 95% in CY2004 and no less than 83% and no greater than 95% in CY2005. The percentage of the reference price for innovator multiple source drugs can be no greater than 68% in CY2004 and CY2005. The percentage of the

reference price for noninnovator multiple source drugs can be no greater than 46% in CY2004 and CY2006. The reference average wholesale price is the average wholesale price for the drug as of May 1, 2003.

A sole source drug is biological product approved under a biologics license application under section 351 of the Public Health Services Act or a single source drug produced or distributed under an original new drug application approved by the Food and Drug Administration (FDA) which includes a drug product marketed by appropriate cross-licensed producers or distributors as established in Section 1927(k)(7)(A)(iv) of the Social Security Act (the Act); an innovator multiple source drug is a multiple source drug that was originally marketed under an original new drug application approved by FDA as established in Section 1927(k)(7)(A)(ii) of the Act; and, a noninnovator multiple source drug is a multiple source drug that is not an innovator multiple source drug as established in 1927(k)(7)(A)(iii) of the Act. A biological includes any product that the Centers for Medicare and Medicaid services has determined to be a biological under section 1861(t)(1) of the Act.

It is the intent of the Conference that products eligible for the transitional payment under the hospital outpatient department section include all products paid by Medicare on a pass-through list as a drug or biologic prior to December 31, 2002, or as a radiopharmaceutical product as a pass-through product are in a separate ambulatory payment classification (APC). This section clarifies that radiopharmaceuticals are drugs under the hospital outpatient department section and that the term ''specified covered outpatient drug'' includes radiopharmaceuticals.

In subsequent years, payment will be equal to the average acquisition cost for the drug for that year (which may vary by hospital group taking into account hospital volume or other hospital characteristics) or if hospital acquisition cost data are not available, the average price for the drug in the year other than radiopharmacuticals established under Sections 1842(o), 1847A or 1847B as calculated and adjusted by the Secretary. The covered OPD drugs affected by this provision are outpatient drugs that were paid on a pass-through basis on or before December 31, 2002. These would not include drugs for which pass-through payments are first made on or after January 1, 2003; those drugs for which a temporary HCPCS code has not been assigned; or, during 2004 and 2005, orphan drugs. Drugs for which a temporary HCPCS code has not been assigned will be reimbursed at 95% of the AWP. Orphan drugs during this 2 year time period will be paid at an amount specified by the Secretary.

GAO is required to conduct an acquisition cost survey for each specified covered drug in 2004 and 2005. The surveys (those done by GAO and then subsequently by the Secretary) will be based on a large sample of hospitals that is sufficient to generate a statistically significant estimate of the average hospital acquisition cost for each specified covered outpatient drug. No later than April 1, 2005, GAO will furnish this survey data to the Secretary to use in setting payment rates for 2006. GAO will evaluate the 2006 payment rates and submit a report to Congress on their appropriateness no later than 30 days after the date the Secretary promulgates the proposed rule setting forth these rates.

Upon completion of their surveys, GAO will submit recommendations regarding the survey methodology and survey frequency to the Secretary for subsequent surveys. The Secretary will conduct periodic surveys to determine the hospital acquisition costs for each specified covered outpatient drug to set subsequent payment rates. GAO will report to Congress on the justification for the size of the sample used in order to assure the validity of the estimates; the extent of variation in hospital acquisition costs among hospitals based on the volume of covered OPD services or other relevant characteristics.

MedPAC will submit a report to the Secretary on the payment adjustment to ambulatory payment classifications for specified covered outpatient drugs that takes into account overhead and related expenses (such as pharmacy services and handling costs). The report will include (1) a description and analysis of the available data; (2) a recommendation as to whether the payment adjustment should be made; and (3) if such an adjustment should be made, a recommendation regarding the appropriate methodology. The Secretary is authorized to adjust the weights for ambulatory payment classification based on such a recommendation.

The additional expenditures that result from the previous changes will not be taken into account in establishing the conversion, weighting and other adjustment factors for 2004 and 2005, but will be taken into account in subsequent years.

For drugs and biologicals furnished in 2004 and 2005, the Secretary is required to lower the threshold for establishing a separate APC group for higher costs drugs from $150 to $50 per administration. These separate drug APC groups are not be eligible for outlier payments. Starting in CY2004, Medicare's transitional pass-through payments for drugs and biologicals covered under a competitive acquisition contract will equal the average price for the drug or biological for all competitive acquisition areas calculated and adjusted by the Secretary for that year.

Special Payment for Brachytherapy (Section 421(b) of the Conference Report, Section 621(b) of the House Bill and Section 450A of the Senate Bill).

Present Law

Current drugs and biologicals that have been in transitional pass-through status on or prior to January 1, 2000 were removed from that payment status effective January 1, 2003. The Center for Medicare and Medicaid Services (CMS) established separate APC payments for certain of these drugs, including orphan drugs, blood and blood products, and selected higher cost drugs in CY2003. CMS established a threshold of $150 per claim line for a drug to qualify for a separate APC payment as a higher-cost drug. Essentially, the payment rates for these drug-related APCs are based on a relative weight calculated in the same way as procedural APCs are calculated. Other drugs that had qualified for a transitional pass-through payment were packaged in to procedural APCs. For example, in some instances, brachytherapy seeds (radioactive isotopes used in cancer treatments) were packaged into payments for brachytherapy procedures.

Essentially, the payment rates for these drug-related APCs are based on a relative weight calculated in the same way as procedural APCs are calculated.

House Bill

From January 1, 2004 through December 31, 2006, Medicare's payments for brachytherapy devices would equal the hospital's charges adjusted to cost. The Secretary would be required to create separate APCs to pay for these devices that reflect to the number, isotope, and radioactive intensity of such devices. This would include separate groups for palladium-103 and iodine-125 devices. GAO would be required to study the appropriateness of payments for brachytherapy devices and submit a report including recommendations to Congress no later than January 1, 2005. The provision would be effective upon enactment.

Senate Bill

The Secretary would be required to conduct a 3-year demonstration project that would exclude brachytherapy devices from the OPPS and paid on the basis of the hospital's charges for each device, adjusted to cost. The Secretary would be required to create separate, additional groups of covered HOPD services for brachytherapy devices to reflect the number, isotope, and radioactive intensity of such devices. The Secretary would be required to assure that aggregate payments under this project would not exceed what otherwise would have been spent. The project would begin 90 days after the date of enactment. The Secretary would be required to submit a report on the evaluation of patient outcomes and cost effectiveness of the project to Congress no later than January 1, 2007.

Conference Agreement

The provision would require the Secretary to make payment for each brachytherapy device furnished under the hospital outpatient prospective payment system equal to the hospital's charges for the brachytherapy device adjusted to cost for all brachytherapy devices furnished on or after January 1, 2004 and before January 1, 2007. Charges for such devices will not be included in determining any outlier payment.

The provision also would require the Secretary to create and use ambulatory payment classification (APC) groups that classify brachytherapy devices separately from all the other services and items paid for under the hospital outpatient prospective payment system. The Secretary must reflect the number, the radioactive isotope and the radioactive intensity of the brachytherapy devices furnished to each patient, including the use of separate APCs for brachytherapy devices made from palladium-103 and iodine-125.

Limitation of Application of Functional Equivalence Test (Section 622 of the Conference Agreement, Section 621(c) of the House Bill, and Section 437 of the Senate Bill).

Present Law

In the November, 1 2002 Federal Register, CMS established a new concept of functional equivalence for drugs to an existing treatment. The transitional pass-through rate for a drug was reduced to zero starting for services in 2003.

House Bill

The Secretary would be prohibited from applying a functional equivalence standard or any similar standard in order to deem a particular drug or biological to be similar or functionally equivalent to another drug unless the Commissioner of the Food and Drug Administration establishes such a standard and certifies that the two products are functionally equivalent. The Secretary would be able to implement this standard after applicable rulemaking requirements.

This provision would apply to the application of a functional equivalent on or after

the date of enactment. The provision prohibits the application of this standard to a drug or biological prior to June 13, 2003.

Senate Bill

The Secretary would be prohibited from publishing regulations that apply a functional equivalence standard to a drug or biological for transitional pass-through payments under OPPS. This prohibition would apply to the application of the functional equivalence standard on or after the date of enactment, unless such application was made prior to enactment and the Secretary applies such standard to the drug only for the purposes of transitional pass-through payments. This provision would not affect the Secretary authority to deem a particular drug to be identical to another drug if the 2 products are pharmaceutically equivalent and bioequivalent, as determined by the Commissioner of the Food and Drug Administration.

Conference Agreement

The Secretary is prohibited from publishing regulations, program memorandum local medical review policies or any other guidance (including the HOPD–PPS payment rate rules) that apply a functional equivalence or similar standard to a drug or biological for transitional pass-through payments under OPPS. This prohibition applies to the application of the functional equivalence standard on or after the date of enactment, unless such application was made prior to enactment and the Secretary applies such standard to the drug only for the purposes of transitional pass-through payments. This provision does not affect the Secretary's authority to deem a particular drug to be identical to another drug if the 2 products are pharmaceutically equivalent and bioequivalent, as determined by the Commissioner of the Food and Drug Administration.

Payment for Renal Dialysis Services (Section 623 of the Conference Agreement, Section 623 of the House Bill, Section 432(b)(5) of the Senate Bill).

Present Law

Dialysis facilities providing care to beneficiaries with end-stage renal disease (ESRD) receive a fixed prospectively determined payment amount (the composite rate) for each dialysis treatment, regardless of whether services are provided at the facility or in the patient's home. The composite rate includes the dialysis costs but excludes separately billable drugs and biologicals and laboratory services. Providers receive 95% of the AWP for separately billable injectable medications other than erythropoietin (EPO) administered during treatments at the facility. Medicare pays separately for EPO which is used to treat anemia for persons with chronic renal failure who are on dialysis. Congress has set Medicare's payment for (EPO) at $10 per 1,000 units whether it is administered intravenously or subcutaneously in dialysis facilities or in patients' homes.

BBRA increased the composite rates by 1.2% for dialysis services furnished in both 2000 and 2001. BIPA subsequently increased the 2001 update to 2.4%. The composite rate has not been increased since then.

Prior to BIPA, an increase in the composite rate would trigger an opportunity for facilities to request an exception to the composite rate in order to receive higher payments. BIPA prohibited the Secretary from granting new exceptions to the composite rate (after applications received after July 1, 2001).

In 2003, Secretary announced a demonstration project establishing a disease-management program that will allow organizations experienced with treating end-stage renal disease (ESRD) patients to develop financing and delivery approaches to better meet the needs of beneficiaries with ESRD. CMS is soliciting a variety of types of organizations to coordinate care to patients with ESRD, encourage the provision of disease-management services for these patients, collect clinical performance data and provide incentives for more effective care.

House Bill

The provision would increase the ESRD composite payment rate by 1.6% for 2004.

The prohibition on exceptions contained in BIPA section 422(a)(2) would not apply to pediatric ESRD facilities as of October 1, 2002. Pediatric facilities would be defined as a renal facility with 50% of its patients under 18 years old. The provision would be effective upon enactment.

The provision would require the Secretary to establish an advisory board for the ESRD disease management demonstration. The advisory board would be comprised of representatives of patient organizations, clinicians, the Medicare Payment Advisory Commission (MedPAC), the National Kidney Foundation, the National Institute of Diabetes and Digestive and Kidney Diseases of the National Institutes of Health, ESRD networks, Medicare contractors to monitor quality of care, providers of services and renal dialysis facilities furnishing ESRD services, economists, and researchers. The provision would be effective upon enactment.

Senate Bill

The composite rate for dialysis services furnished during 2004 would be increased by an amount to ensure that the sum of the total amount of the composite rate payments plus the payments that are billed separately for drugs and biologicals (but not EPO) would equal the composite rate payments plus payments made for separately billed drugs and biologicals (not including EPO) as if the drug pricing provisions of this legislation were not enacted. During 2005, the ESRD composite rate would be increased by 0.05% and further increased by 1.6%. During 2006, the ESRD composite rate of the previous year would be increased by 0.05% and then further increased by 1.6%. During 2007 and subsequently, the composite ESRD rate of the previous year would be increased by 0.05%. In any year after 2004, the Secretary would be required to provide for additional increases in the composite rate to account for any payment reductions for separately administered drugs and biologicals (but not EPO) in the same manner as in 2004. These payment amounts, methods or adjustments would not be subject to administrative or judicial review under the statutory appeals processes as established by Senate section 1869 of the SSA, by the Provider Reimbursement Review Board established by Senate section 1878 of the SSA, or otherwise. The provision would be effective upon enactment.

Conference Agreement

The conference agreement increases the composite rate for renal dialysis by 1.6% for 2005.

The prohibition on exceptions contained in BIPA section 422(a)(2) does not apply to pediatric ESRD facilities as of October 1, 2002. Pediatric ESRD facilities are defined as renal facilities with 50% of their patients under 18 years old. The provision is effective upon enactment.

The Inspector General of HHS is required to conduct 2 studies regarding drugs and biologicals (including erythropoietin) furnished to ESRD patients and billed separately to Medicare by ESRD facilities. The first study will address existing drugs and biologicals—those for which a billing code exists prior to January 1, 2004—and is required to be submitted to the Secretary by April 1, 2004. The second study is of new drugs and biologicals—those for which a billing code does not exist prior to January 1, 2004—and is due to the Secretary by April 1, 2006. Each study is required to determine the difference, or spread, between the Medicare payment amount to ESRD facilities for drugs and biologicals, and the facilities' acquisition costs for the drugs and biologicals which are separately billed by the facilities. The studies are also to estimate the rates of growth of expenditures for these drugs and biologicals.

The conference agreement requires the Secretary to establish a basic case-mix adjusted prospective payment system for dialysis services. The basic case-mix adjusted system is required to begin for services furnished on January 1, 2005. The system is required to adjust for a limited number of patient characteristics (the case-mix).

The basic case-mix adjusted system is composed of two components: (1) those services which currently comprise the composite rate (including the 1.6% increase in 2005), and (2) the spread on separately billed drugs and biologicals (including erythropoietin and as determined by the Inspector General reports).

Drugs and biologicals (including erythropoietin) currently billed separately, will continue to be billed separately under the basic case-mix adjusted system at acquisition costs. They cannot be bundled into the new system.

In addition, the Secretary is also required to adjust the basic case-mix adjusted system payment rates by a geographic index. If the geographic index is different from the one used with the composite rate, then the Secretary is required to phase-in the application over a multi-year period.

Overall, spending for ESRD services included under the basic case-mix adjusted system is required to result in the same aggregate amount of expenditures as would occur if the current system continued in 2005

The system would be updated in 2006 for growth in drug spending for the portion of the basic case-mix adjusted payment amount that is represented by what is current spread on separately billed drugs and biologicals. However, the provision does not provide for an update to the composite rate portion of the base rate in 2006 and forward. The increase for drug growth for the spread component would be adjusted downward by its proportionate share (of the spread and composite rate components) and the resulting increase applied to the sum. An adjustment would be made in 2007 for the spread calculated for new drugs and biologicals (those for which a billing code does not exist prior to January 1, 2004) using the 2006 Inspector General study.

Payments for separately billed drugs and biologicals will be 95% of the AWP for 2004 and acquisition costs in 2005, and, beginning in 2006 the Secretary has the authority to apply a payment methodology he determines appropriate which may include the average sales price payment methodology (under the new section 1847A found in section 303(c) of the conference agreement) or acquisition costs.

No administrative or judicial review is permitted of the case-mix system, the relative weights, payment amounts, the geographic

adjustment factor, or the update of the basic case-mix adjusted system portion related to drug spending growth applied to spread, or in the determination of the difference between Medicare payment amounts and acquisition costs for separately billed drugs and biologicals.

By October 1, 2005, the Secretary is required to report to Congress on the elements and features for the design and implementation of a fully case-mix adjusted, bundled prospective payment system for services furnished by ESRD facilities, including to the extent feasible, drugs, clinical laboratory tests, and other items that are separately billed by ESRD facilities. The report is required to include a description of the methodology to be used for the establishment of payment rates including the bundle of items and services, case-mix, wage index, rural area payment adjustments, other adjustments, and update framework.

The Secretary is required to establish a 3-year demonstration project of the fully case-mix adjusted payment system for ESRD services, beginning January 1, 2006. The fully case-mix adjusted system is to include a case-mix system for patient characteristics identified in the report and to bundle separately billed drugs and biologicals and related clinical laboratory tests into the payment rates. The Secretary is required to ensure that sufficient numbers of providers of dialysis services and ESRD facilities participate in the demonstration, but not to exceed 500. The Secretary is required to ensure that urban, rural, not-for-profit, for-profit, independent, and specialty providers and facilities are included in the demonstration. During the demonstration, the Secretary is required to increase payment rates that would otherwise apply by 1.6% for dialysis services furnished by demonstration participants. In carrying out the demonstration, the Secretary is required to establish an advisory board comprised of representatives of: patient organizations; individuals with expertise in ESRD services, such as clinicians, economists, and researchers; the Medicare Payment Advisory Commission, the National Institutes of Health, network organizations; Medicare contractors to monitor quality of care; and providers of services and renal dialysis facilities. The advisory panel is required to terminate December 31, 2008. Appropriations are authorized from the Medicare trust funds in the amount of $5 million in FY 2006 to conduct this demonstration.

1-Year Moratorium on Therapy Caps; Provisions Relating to Report (Section 624 of the Conference Agreement and Section 624 of the House Bill).

Present Law

Medicare provides that therapy patients must be under the care of a physician; a plan of treatment must be developed by the physician or therapist; and the plan must be periodically reviewed by the physician.

BBA 97 established annual payment limits per beneficiary for all outpatient therapy services provided by non-hospital providers. The limits applied to services provided by independent therapists as well as to those provided by comprehensive outpatient rehabilitation facilities (CORFs) and other rehabilitation agencies. There are 2 beneficiary limits. The first is a $1,500 per beneficiary annual cap for all outpatient physical therapy services and speech language pathology services. The second is a $1,500 per beneficiary annual cap for all outpatient occupational therapy services. Beginning in 2002, the amount would increase by the Medicare Economic Index (MEI), rounded to the nearest multiple of $10. The limits did not apply to outpatient services provided by hospitals. BBRA 99 suspended application of the therapy limits in 2000 and 2001. BIPA extended the suspension through 2002. The therapy caps became effective in September 2003.

BBA 97 required the Secretary to report to Congress by January 1, 2001, on recommendations on a revised coverage policy of outpatient physical therapy and occupational therapy services based on a classification of individuals by diagnostic category and prior use of services, in both inpatient and outpatient settings, in place of uniform dollar limitations. BIPA required the Secretary to conduct a study on the implications of eliminating the ''in the room'' supervision requirement for Medicare payment for physical therapy assistants who are supervised by physical therapists and the implications of this requirement on the physical therapy cap. A report on the study was due within 18 months of enactment.

House Bill

Application of the therapy caps would be suspended in 2004. The Secretary would be required to submit the reports required by BBA 97 and BIPA by December 31, 2002. The Secretary would be required to request the Institute of Medicine to identify conditions or diseases that should justify conducting an assessment of the need to waive the therapy caps. The Secretary would be required to submit to Congress a preliminary report on the conditions and diseases identified by July 1, 2004. A final report, including recommendations, would be due by October 1, 2004.

Senate Bill

No provision.

Conference Agreement

Application of the therapy caps is suspended as of the date of enactment through calendar year 2005. The implementation of this provision shall not be deemed to have any retroactive impact upon beneficiaries who exceeded their caps prior to the date of enactment. The Secretary is required to submit the reports required by BBA 97 and BIPA by March 31, 2004 relating to the alternatives to a single annual dollar cap on outpatient therapy and the utilization patterns for outpatient therapy. The GAO is required to identify conditions or diseases that may justify waiving the application of the therapy caps and report to Congress by October 1, 2004. The report is required to include a recommendation of criteria, with respect to the conditions and diseases, under which a waiver of the therapy caps would apply.

Waiver of Part B Late Enrollment Penalty for Certain Military Retirees; Special Enrollment Period (Section 625 of the Conference Agreement, Section 627 of the House Bill, and Section 439 of the Senate Bill).

Present Law

A late enrollment penalty is required to be imposed on beneficiaries who do not enroll in Medicare part B upon becoming eligible for Medicare.

House Bill

Congress enacted TRICARE for Life, which re-established TRICARE health care coverage as a wraparound to Medicare for military retirees, age 65 and older. To take advantage of the TRICARE for Life program, military retirees must be enrolled in Medicare Part B. There is a late enrollment penalty for military retirees who do not enroll in Medicare Part B upon becoming eligible for Medicare. This provision would waive the late enrollment penalty for military retirees, 65 and older, who enroll(ed) in the TRICARE for Life program from 2001–2004.

The Secretary would also be required to provide a special Part B enrollment period for these military retirees beginning as soon as possible after enactment and ending December 31, 2004. The provision would apply to premiums for months beginning January 2004. The Secretary would be required to rebate premium penalties paid for months on or after January 2004 for which a penalty does not apply as a result of this provision, but for which a penalty was collected.

Senate Bill

Beginning January 2005, the provision would waive the late enrollment penalty for certain military retirees who enrolled in Part B during 2002, 2003, 2004 or 2005. A special enrollment period, beginning 1 year after enactment and ending December 31, 2005 would be provided.

Conference Agreement

Congress enacted TRICARE for Life, which re-established TRICARE health care coverage as a wraparound to Medicare for military retirees, age 65 and older. To take advantage of the TRICARE for Life program, military retirees must be enrolled in Medicare Part B. The provision waives the late enrollment penalty for military retirees who did not enroll in Medicare Part B upon becoming eligible for Medicare. The waiver applies to the late enrollment penalty for military retirees, 65 and over, who enroll(ed) in the TRICARE for Life program from 2001 to 2004.

The Secretary is required to provide a special Part B enrollment period for these military retirees beginning as soon as possible after enactment and ending December 31, 2004. The provision applies to premiums for months beginning January 2004. The Secretary is required to rebate premium penalties paid for months on or after January 2004 for which a penalty does not apply as a result of this provision, but for which a penalty was collected.

Payments for Services Furnished in Ambulatory Surgical Centers (Section 626 of the Conference Agreement and Section 625 of the House Bill).

Present Law

Medicare uses a fee schedule to pay for the facility services related to a surgery provided in an ambulatory surgery center (ASC). The associated physician services (surgery and anesthesia) are reimbursed under the physician fee schedule. CMS maintains the list of approved ASC procedures which is required to be updated every 2 years. The Secretary is required to update ASC rates based on a survey of the actual audited costs incurred by a representative sample of ASCs every 5 years beginning no later than January 1, 1995. Between revisions, the rates are to be updated annually on a calendar year schedule using the CPI–U. From FY1998 through FY2002, the update was established as the CPI–U minus 2.0 percentage points, but not less than zero.

In June 1998, CMS issued a proposed notice which would have implemented a prospective payment system (PPS) for ASCs. The Balanced Budget Refinement Act of 1999 required that full implementation of the proposed ASC rates be phased in over a 3-year period. The Benefits Improvement and Protection Act of 2000 (BIPA) delayed implementation of the PPS before January 1, 2002. BIPA also required that CMS use 1999 or later cost survey data in the PPS. A final rule implementing the new payment system for ASCs has not yet been issued.

House Bill

The reduction in the update would be extended. ASCs would get an increase calculated as the CPI–U minus 2.0 percentage points (but not less than zero) in each of the fiscal years from 2004 through 2008.

Senate Bill

No provision.

Conference Agreement

In FY2004, starting April 1, 2004, the ASC update will be the CPI–U (estimated as of March 31, 2003 minus 3.0 percentage points. In FY2005, the last quarter of calendar year 2005, and each of the calendar years 2006 through 2009 the update will be 0%. Upon implementation of the new ASC payment system, the Secretary will no longer be required to update ASC rates based on a survey of the actual audited costs incurred by a representative sample of ASCs every 5 years. Subject to GAO's recommendations (discussed subsequently), the Secretary will implement a revised payment system for surgical services furnished in an ASC. This payment system will be designed to be budget neutral in the year it is implemented; the amount of aggregate expenditures for such services under the new system will be the same as would have occurred under the old system. The new system will be implemented so that it is first effective on or after January 1, 2006 and not later than January 1, 2008. There will be no administrative or judicial review of the ASC classification system, relative weights, payment amounts and any geographic adjustment factor. GAO will conduct a comparative study of the relative costs of procedures furnished in ASCs to those furnished in hospital outpatient departments under OPPS. The study will examine the accuracy of the ambulatory payment categories with respect to the procedures furnished in the ASCs. GAO will submit recommendations and consider ASC data with respect to (1) the appropriateness of using groups and relative weights established for the outpatient hospital PPS as the basis of the new ASC payment system; (2) if such weights are appropriate, whether the ASC payments should be based on a uniform percentage of such weights, whether the percentages should vary, or whether the weights should be revised for certain procedures or types of services; and (3) the appropriateness of a geographic adjustment in the ASC payment system and if appropriate, the labor and nonlabor shares of such payment.

Payment for Certain Shoes and Inserts under the Fee Schedule for Orthotics and Prosthetics (Section 627 of the Conference Agreement, and Section 626 of the House Bill).

Present Law

Subject to specified limits and under certain circumstances, Medicare will pay for extra-depth shoes with inserts or custom molded shoes with inserts for an individual with severe diabetic foot disease. Coverage is limited to one of the following within a calendar year: (1) one pair of custom-molded shoes (including inserts provided with such shoes) and two additional pairs of inserts, or (2) one pair of extra-depth shoes (not including inserts provided with such shoes) and three pairs of inserts. An individual may substitute modifications of custom-molded or extra-depth shoes instead of obtaining one pair of inserts, other than the initial pair of inserts. Footwear must be fitted and furnished by a podiatrist or other qualified individual such as a pedorthist, orthotist, or prosthetist. The certifying physician may not furnish the therapeutic shoe unless the physician is the only qualified individual in the area.

Payment is made on a reasonable charge basis, subject to upper limits established by the Secretary. These limits are based on 1988 amounts that were set forth in Section 1833(o) of the Act and then adjusted by the same percentage increases allowed for DME fees except that if the updated limit is not a multiple of $1, it is rounded to the nearest multiple of $1. The Secretary or a carrier may establish lower payment limits than established by statute if shoes and inserts of an appropriate quality are readily available at lower amounts.

Although updates in payment for diabetic shoes are related to that used to increase the DME fee schedule, the shoes are not subject to DME coverage rules or the DME fee schedule. In addition, diabetic shoes are neither considered DME nor orthotics, but a separate category of coverage under Medicare Part B.

House Bill

Payment for diabetic shoes would be limited by the amount that would be paid if they were considered to be a prosthetic or orthotic device. The Secretary would be able to establish lower payment limits than these amounts if shoes and inserts of an appropriate quality are readily available at lower amounts. The Secretary would be required to establish a payment amount for an individual substituting modifications to the covered shoe that would assure that there is no net increase in Medicare expenditures. The provision would apply to items furnished on or after January 1, 2004.

Senate Bill

No provision.

Conference Agreement

Payment for diabetic shoes is limited under the conference agreement by the amount that would be paid if they were considered to be a prosthetic or orthotic device. The Secretary may establish lower payment limits than these amount if shoes and inserts of an appropriate quality are readily available at lower amounts. The Secretary is required to establish a payment amount for an individual substituting modifications to the covered shoe that would assure that there is no net increase in Medicare expenditures. The provision applies to items furnished on or after January 1, 2005.

Payment for Clinical Diagnostic Laboratory Tests (Section 628 of the Conference Agreement, Section 431 of Senate Bill).

Present Law

Medicare payment for clinical diagnostic laboratory test is made using a fee schedule. The fee schedule is updated on a calendar year basis using the CPI–U. BBA 97 froze the fee schedule from 1998 through 2002. The update for 2003 was equal to the full CPI–U increase. No beneficiary cost-sharing is imposed.

House Bill

No provision.

Senate Bill

Medicare would pay all clinical laboratories 80% of the applicable fee schedule amount. Hospital-based and physician office and independent laboratories would be able to charge beneficiaries a 20% coinsurance amount. The Medicare Part B deductible would apply to clinical diagnostic laboratory tests furnished across all settings; except for those tests provided by sole community hospitals (see Senate Section 427). The provision would apply to tests furnished on or after January 1, 2004.

Conference Agreement

The conference agreement does not provide for any updates to the clinical diagnostic laboratory test fee schedule for 2004 through 2008.

Indexing Part B Deductible to Inflation (Section 629 of the Conference Agreement, Section 628 of the House Bill, Section 433 of the Senate Bill).

Present Law

Under Part B, Medicare generally pays 80 percent of the approved amount for covered services after the beneficiary pays an annual deductible of $100. The Part B deductible has been set at $100 since 1991.

House Bill

Starting for January 1, 2004, the Medicare Part B deductible would be increased by the same percentage as the Part B premium increase. Specifically, the annual percentage increase in the monthly actuarial value of benefits payable from the Federal Supplementary Medical Insurance Trust Fund would be used as the update. The amount would be rounded to the nearest dollar. The provision would be effective upon enactment.

Senate Bill

The Medicare Part B deductible would be set at $100 through 2005 and then increased to $125 in 2006. Effective January 1 of subsequent years, the deductible would be increased annually by the percentage change in the CPI–U for the previous year ending in June. The amount would be rounded to the nearest dollar. The provision would be effective upon enactment.

Conference Agreement

The Medicare Part B deductible will remain $100 through 2004. The deductible will be $110 for 2005, and in subsequent years the deductible will be increased by the same percentage as the Part B premium increase. Specifically, the annual percentage increase in the monthly actuarial value of benefits payable from the Federal Supplementary Medical Insurance Trust Fund will be used as the update. The deductible amount will be rounded to the nearest dollar. The provision is effective upon enactment.

In 1966, Medicare's $50 Part B deductible equaled about 45 percent of Part B charges. Today's $100 deductible equals about three percent of such charges. Indexing the Part B deductible to grow at the same rate as total Part B spending per beneficiary would maintain the deductible at 3 percent of such charges over time.

An unchanged Part B deductible is a benefit increase over time, as costs of medical care rise. Beneficiaries pay about 25 percent of this benefit increase, through increased Part B premiums; taxpayers finance the remaining 75 percent. The Part B deductible has increased only three times since the beginning of Medicare, when it was $50. The deductible has since been increased to $60 in 1973, $75 in 1982, and $100 in 1991. About one-half of beneficiaries are insulated from Part B deductibles through Medigap, Medicaid, or employer-sponsored supplemental insurance that covers the Part B deductible. The Part B deductible has increased only three times since Medicare began in 1965, when it was $50. It was raised to $60 in 1973, $75 in 1982, and $100 in 1991.

5-year Authorization of Reimbursement for All Medicare Part B Services Furnished by Certain Indian Hospitals and Clinics (Section 630 of the Conference Agreement and Section 450C of the Senate Bill).

Present Law

Medicare covers specified Part B services provided by a hospital or ambulatory care

clinic (whether provider-based or free-standing) that is operated by the Indian Health Service, by an Indian tribe, or by a tribal organization. These services include physicians' services, health practitioners (physician assistant, nurse practitioner, or clinical nurse specialist; certified registered nurse anesthetist; certified nurse-midwife; clinical social worker; clinical psychologist; and a registered dietitian or nutrition professional) and outpatient physical therapy services provided by a physical or occupational therapists.

House Bill

No provision.

Senate Bill

The provision would expand covered Medicare Part B items and services provided in hospitals or ambulatory care clinics (whether provider-based or freestanding) that are operated by the Indian Health Service or by an Indian tribe or tribal organization. All covered Part B items and services would be paid when provided in a hospital or ambulatory care clinic operated by the Indian Health Service or by an Indian tribe or tribal organization. The provision would apply to items and services furnished on or after October 1, 2004.

Conference Agreement

The conference agreement provides a 5-year expansion of the items and services covered under Medicare Part B when furnished in Indian hospitals and ambulatory care clinics. The conference agreement applies to items and services furnished on or after January 1, 2005.

Conforming Changes Regarding Federally Qualified Health Centers (Section 420 of the Senate Bill).

Present Law

Medicare pays federally qualified health centers (FQHCs) for their services on a reasonable cost basis.

House Bill

No provision.

Senate Bill

Medicare would exclude the costs incurred by a FQHC for providing services and receiving payments through a contract with an eligible entity operating a Medicare prescription drug plan. The provision would be effective upon enactment.

Conference Agreement

No provision.

Reimbursement for Total Body Orthotic Management for Certain Nursing Home Patients (Section 450B of the Senate Bill).

Present Law

Orthotics are rigid devices, often called braces, which are applied to the outside of the body as a means of support for a weak or deformed body member or restricting or eliminating motion in a diseased or injured part of the body. They are categorized into one of three groups of devices: custom fitted, which require alterations to a prefabricated product; custom fabricated, which are made for a specific patient from his/her individual measurements; and molded to patient model, which are created from a cast of the patient's body part. Examples of orthotics include spinal body jackets, hip abductors, and knee braces. Add-ons, such as straps and linings, are billed separately. Suppliers of orthotics include certified orthotists, medical equipment companies, and physicians' offices.

Orthotics (e.g., leg, arm, back, and neck braces) are covered Part B benefits when furnished in an institutional setting, such as in a hospital or skilled nurses facility, while durable medical equipment (DME) is not covered in those settings. Medicare considers a brace as an orthotic device when it can be used independently of DME. On the other hand, if a brace must be used in conjunction with, or is an accessory of, a DME item, then the brace is considered an item of DME. Orthotic devices include braces that are part of a bracing system even if the system depends on attachment to an external structure or frame.

At one point, the Centers for Medicare and Medicaid (CMS) in HCFA Ruling, No. 96–1, declared that bracing systems should be characterized as DME rather than orthotics. That ruling was deemed invalid because it made a substantive change in Medicare coverage rules and was not properly promulgated. Although the braces in a bracing system are attached to an external frame, they perform the functions of braces and the external frame is assistive in nature rather than determinative of the system's classification. Since the patients who need bracing systems typically are cared for in the nursing home environment, the classification of the bracing systems is crucial because orthotics are covered when furnished to nursing home patient, while DME is not. However, under the Benefits Improvement and Protection Act of 2000 (BIPA) (PubLNo 106–554), no payment may be made for prosthetics and certain custom-fabricated orthotics unless they are furnished by a qualified practitioner and fabricated by a qualified practitioner or a qualified supplier at an approved facility. Affected custom-fabricated orthotics are items requiring education, training, and experience to custom-fabricate and that are on a list to be published by the Secretary.

House Bill

No provision.

Senate Bill

The Secretary would be required to issue product codes that qualified practitioners and suppliers may used to receive Medicare reimbursement for qualified total body orthotic management devices no later than 60 days from enactment. These medically prescribed devices would consist of custom fitted individual braces with adjustable points at the hip, knee, ankle, elbow and wrists when the braces are attached to a frame that is integral to the device and the frame serves no purpose without the braces. The device would be designed to improve function, retard the progression of musculoskeletal deformity or restrict, eliminate, or assist in the functioning of the upper or lower extremities for a beneficiary who is in the full time care of a skilled nursing facility who requires such care for medical reasons. The provision would be effective upon enactment.

Conference Agreement

No provision.

Medicare Coverage of Self Injected Biologicals (Section 450E of the Senate Bill).

Although Medicare does not currently provide an outpatient prescription drug benefit, coverage of certain outpatient drugs and biologicals is specifically authorized by statute. For example, under Medicare Part B, outpatient prescription drugs and biologicals are covered if they are usually not self-administered and are provided incident to a physician's services. Generally, Medicare will cover an outpatient drug as usually self-administered if it is delivered by intramuscular injection, but not if it is injected subcutaneously.

House Bill

No provision.

Senate Bill

From January 1, 2004 and before January 1, 2006, Medicare would cover self-injected biologicals that are approved by the Food and Drug Administration and that are prescribed as complete replacements for drugs or biologicals that are currently covered in physicians' offices or as hospital services provided to outpatients that are usually self-administered and provided incident to a physician's services. Medicare would cover self-injected drugs that are used to treat multiple sclerosis. The provision would apply to drugs and biologicals furnished on or after January 1, 2004 and before January 1, 2006.

Conference Agreement

No provision.

Requiring the Internal Revenue Service to Deposit Installment Agreement and Other Fees in the Treasury as Miscellaneous Receipts (Section 450G of the Senate Bill).

Present Law

The Secretary of the Treasury was granted the authority by Senate Section 3 of the Administrative Provisions of the Internal Revenue Service of Public Law 103–286, the Treasury, Postal Service and General Government Appropriations Act of 1995 to establish new fees (if the fee is authorized by another law) or raise fees for services provided by the Internal Revenue Service to supplement appropriations made available to the Internal Revenue Service. The fees must be based on the costs of providing the specific services (to the persons paying the fees), and the Secretary must report quarterly to the Congress on the collection of such fees and how they are spent.

House Bill

No provision.

Senate Bill

The Secretary of the Treasury must deposit any fees collected under the authority provided by Senate Section 3 of the Administrative Provisions of the Internal Revenue Service of Public Law 103–286, the Treasury, Postal Service and General Government Appropriations Act of 1995 into the Treasury as miscellaneous receipts. The fees collected are only available to the Internal Revenue Service if authority is provided in advance in an appropriations Act. The provision would be effective upon enactment.

Conference Agreement

No provision.

Medicare Coverage of Kidney Disease Education Services (Section 456 of the Senate Bill).

Present Law

No provision.

House Bill

No provision.

Senate Bill

Kidney disease education services would be covered under Medicare. The services covered would be those: furnished to an individual with kidney disease who will require dialysis or a kidney transplant; furnished upon the referral of the physician managing the individual's kidney condition; and designed to provide comprehensive information regarding the management of comorbidities, the prevention of uremic complications, and each option for renal replacement therapy (including peritoneal diaylsis, hemodialysis and transplantation) and to ensure that the individual has the opportunity to actively participate in the choice of therapy. Kidney

disease education services would be paid using the physician fee schedule on an assignment-related basis (thus prohibiting balance billing) outside the ESRD composite rate.

The Secretary would be required to ensure (and to monitor implementation to ensure) that each beneficiary who is entitled to kidney disease education services under Medicare receives such services in a timely manner that ensures that the beneficiary receives the maximum benefit of the services.

The Secretary would be required to report to Congress annually on the number of Medicare beneficiaries who are entitled to these education services and who received these services. In addition, the report would include any recommendations for legislative and administrative action as the Secretary determines appropriate. The first report would be due April 1, 2004. The provision would apply to services furnished on or after January 1, 2004.

Conference Agreement

No provision.

Subtitle D—Additional Demonstrations, Studies and Other Provisions

Demonstration Project for Coverage of Certain Prescription Drugs and Biologics (Section 641 of the Conference Agreement and Section 631 of the House Bill).

Present Law

No provision.

House Bill

The Secretary would be required to conduct a 2-year demonstration project in 3 states covering more than 10,000 patients under Part B of the Medicare program that would pay for drugs and biologicals that are prescribed as replacements for existing covered drugs that are furnished incident to a physician's professional service which are not usually self-administered including oral anticancer chemotherapeutic agents. The project would not extend beyond December 31, 2005 and would not cost more than $100 million. The Secretary would be required to submit an evaluation to Congress concerning patient access and outcomes as well as the project's cost effectiveness. The Secretary would also be required to examine any cost savings attributed to reduced physicians' services and hospital outpatient department services for the administration of the biological. The demonstration project would begin 90 days from enactment and would end no later than December 31, 2005.

Senate Bill

No provision.

Conference Agreement

The conference agreement requires the Secretary to conduct a 2–year demonstration project in 6 states covering more than 50,000 patients under Medicare Part B that pays for drugs and biologics that are prescribed as replacements for existing covered drugs that are furnished incident to a physician's professional service which are not usually self-administered, including oral anticancer chemotherapeutic agents. The project is required to provide for cost-sharing applicable with respect to the drugs or biologics in the same manner as the cost-sharing applicable under part D for standard prescription drug coverage. The project is not permitted to cost more than $500 million. No less than 40 percent of the funding shall be for oral cancer. The Secretary is required to submit an evaluation to Congress concerning patient access and outcomes as well as the project's cost effectiveness. The Secretary is also required to examine any cost savings attributed to reduced physicians' services and hospital outpatient department services for the administration of the biological. The demonstration project is required to begin 90 days following enactment and end no later than December 31, 2005.

The managers intend that this provision of the demonstration will provide immediate Part B coverage for all immunomodulating drugs and biologicals used when treating multiple sclerosis. Coverage will be extended without regard to whether there is medical or other supervision with respect to the administration of such drug or biological, and include the biological administered via intramuscular injection currently covered under Section 1861(s)(2)(A) or (B) of the Social Security Act.

Extension of Coverage of Intravenous Immune Globulin (IVIG) for the Treatment of Primary Immune Deficiency Diseases in the Home (Section 642 of the Conference Agreement and Section 629 of the House Bill).

Present Law

Intravenous immune globulin (IVIG) is a blood product prepared from the pooled plasma of donors. It has been used to treat a variety of autoimmune diseases, including mucocutaneous blistering diseases. It has fewer side effects than steroids or immunosuppressive agents. Effective October 1, 2002, IVIG is covered for the treatment of certain conditions including pemphigus vulgaris, pemphigus foliaceus, and epidermolysis bullosa acquisita for the following specific patient subpopulations: (1) patients who have failed conventional therapy; (2) patients in whom conventional therapy is otherwise contraindicated; and (3) patients with rapidly progressive disease in whom a clinical response could not be affected quickly enough using conventional agents. IVIG for the treatment of autoimmune mucocutaneous blistering diseases must be used only for short term therapy and not as a maintenance therapy. Contractors have discretion to define what constitutes a failure of conventional therapy and what constitutes short-term therapy.

House Bill

Intravenous immune globulin for the treatment of primary immune deficiency diseases in the home would be included as a covered medical service. Intravenous immune globulin would be defined as an approved pooled plasma derivative for the treatment in the patient's home of a patient with a diagnosed primary immune deficiency disease, if a physician determines administration of the derivative in the patient's home is medically appropriate. This would not include items or services related to the administration of the derivative. Intravenous immune globulin would be paid at 80 percent of the lesser of actual charge or the payment amount. This provision would apply to items furnished on or after January 1, 2004.

Senate Bill

No provision.

Conference Agreement

The conference agreement includes intravenous immune globulin for the treatment in the home of primary immune deficiency diseases as a covered medical service under Medicare. Intravenous immune globulin is defined as an approved pooled plasma derivative for the treatment, in the patient's home, of a patient with a diagnosed primary immune deficiency disease, if a physician determines administration of the derivative in the patient's home is medically appropriate. Items or services related to the administration of the derivative are not included in the definition. Intravenous immune globulin is to be paid at 80 percent of the lesser of actual charge or the payment amount. This provision applies to items furnished on or after January 1, 2004.

MedPAC Study of Coverage of Surgical First Assisting Services of Certified Registered Nurse First Assistants (Section 643 of the Conference Agreement and Section 450I of the Senate Bill).

Present Law

Surgical first assisting services are not separately covered services of Medicare and certified registered nurse first assistants are not able to bill the Medicare program directly for their services. Their services are paid by surgeons who are paid under the Medicare physician fee schedule.

House Bill

No provision.

Senate Bill

The Secretary would be required to conduct a 3–year demonstration in 5 states that would pay for ''surgical first assisting services'' to Medicare beneficiaries furnished by a certified registered nurse first assistant. These services would consist of assisting a physician with surgery and related preoperative, intraoperative, and postoperative care furnished by a certified registered nurse first assistant. Payment would be 80% of the lesser of: the actual charge for the services or 85% of the physician fee schedule amount. Aggregate payments for the demonstration would be required not to exceed the amount that would have been paid if this demonstration project had not been implemented. The Secretary would be required to report to Congress on the evaluation of patient outcomes and on the cost-effectiveness of the demonstration by January 1, 2007. The demonstration is required to begin 90 days after enactment.

Conference Agreement

The conference agreement requires that MedPAC study the feasibility and advisability of Medicare Part B payment for surgical first assisting services furnished to Medicare beneficiaries by a certified registered nurse first assistant. MedPAC is required to submit the report by January 1, 2005 and to include recommendations for legislation or administrative action.

MedPAC Study of Payment for Cardio-Thoracic Surgeons (Section 644 of the Conference Agreement).

Present Law

Cardio-thoracic surgeons are paid under the Medicare physician fee schedule for their services.

House Bill

No provision.

Senate Bill

No provision.

Conference Agreement

The conference agreement requires the MedPAC to study the practice expense relative values in the Medicare physician fee schedule for the specialty of thoracic surgery to determine whether such values adequately take into account the attendant costs of nurse assistants at surgery. The study is required to be submitted to Congress by January 1, 2005 and to include recommendations for legislative or administrative action.

Study on Coverage of Outpatient Vision Services Furnished by Vision Rehabilitation Professionals Under Part B (Section 645 of

the Conference Agreement and Section 446 of the Senate Bill).

Present Law

Medicare does not cover routine eye care or related services and will not pay for eyeglasses; most contact lenses; eye examinations for the purpose of prescribing, fitting, or changing eyeglasses or contact lenses; and most procedures performed to determine the refractive state of the eyes.

Medicare pays for prosthetic devices (other than dental) which replace all or part of an internal body organ (including contiguous tissue) when furnished incident to physicians' services or on a physician's order. The law specifically provides coverage for one pair of conventional eyeglasses or contact lenses furnished subsequent to each cataract surgery with insertion of an intraocular lens.

The Rehabilitation Act of 1973 as amended prohibits discrimination in programs conducted by federal agencies, in programs receiving federal financial assistance, in federal employment and employment practices of federal contractors. The act provides much of the basis for the Americans with Disabilities Act including its standards for determining employment discrimination.

House Bill

No provision.

Senate Bill

Medicare Part B would cover vision rehabilitation services furnished to a beneficiary who is diagnosed with certain vision impairments. These vision impairments would be vision loss that constitutes a significant limitation of visual capability that cannot be corrected by conventional means and that is manifested by one or more of the following conditions: (1) best corrected visual acuity of less than 20/60 or significant central field defect; (2) significant peripheral field defect including homonymous or heteronymous bilateral visual field defect or generalized contraction or constriction of field; (3) reduced peak contrast sensitivity; and (4) other appropriate diagnoses or indications. Covered services would be established by a plan of care developed by a qualified physician or qualified occupational therapist whose plan of care is periodically reviewed by a qualified physician. These services would be provided in an appropriate setting by a qualified physician, qualified occupational therapist, or vision rehabilitation professional under the general supervision of a qualified physician using a plan of care established and reviewed by the qualified physician. A qualified physician would be an ophthalmologist or a doctor of optometry. A vision rehabilitation professional would include an orientation and mobility specialist, a rehabilitation teacher, or a low vision therapist who is appropriately licensed and certified under prevailing state laws with appropriate education and training.

Medicare would pay for the services under the physician fee schedule. These services would not be paid under the hospital outpatient department prospective payment system. Payment would be made to the qualified physician or the facility (such as a rehabilitation agency, a clinic, or other facility) through which services are furnished under the plan care if there is a contractual arrangement between the vision rehabilitation specialist and the facility where the facility submits the bill for the services. Medicare's coverage of vision rehabilitation services would not be taken into account for any purpose under the Rehabilitation Act of 1973.

The Secretary would be required to publish a interim final rule in the Federal Register no later than 180 days from the date of enactment; the regulation, although effective immediately, would be subject to at least a 60–day public comment period. The Secretary would be required to consult with qualified professional and consumer groups including the National Vision Rehabilitation Cooperative, the Association for Education and Rehabilitation of the Blind and Visually Impaired, the Academy for Certification of Vision Rehabilitation and Education Professionals, the American Academy of Ophthalmology, the American Occupational Therapy Association, and the American Optometric Association.

Conference Agreement

The conference agreement requires the Secretary to study the feasibility and advisability of: (1) providing for payment for vision rehabilitation services furnished by vision rehabilitation professionals, and (2) implementing a demonstration project for vision care PPO networks to furnish and pay for conventional eyeglasses subsequent to each cataract surgery with the insertion of intra ocular lens. The Secretary is urged to examine any licensure or certification difficulties faced by vision rehabilitation professionals. The report is due to Congress by January 1, 2005 and is to include recommendations for legislation or administrative action. In reviewing reimbursement for vision rehabilitation professionals, the report shall examine payments through qualified physicians to vision rehabilitation professionals for either directly supervised services or services delivered under generalized supervision.

Medicare Health Care Quality Demonstration Programs (Section 646 of the Conference Agreement and Section 441 of the Senate Bill).

Present Law

No provision.

House Bill

No provision.

Senate Bill

The Secretary would be required to establish a 5-year demonstration program that examines the health delivery factors which encourage the delivery of improved patient care quality including: (1) incentives to improve the safety of care provided to beneficiaries; (2) appropriate use of best practice guidelines; (3) reduction of scientific uncertainty through examination of service variation and outcomes measurement; (4) encouragement of shared decision making between providers and patients; (5) the provision of incentives to improve safety, quality, and efficiency; (6) appropriate use of culturally and ethnically sensitive care; and (7) related financial effects associated with these changes. The participants would include appropriate health care groups including physician groups, integrated health care delivery systems, or regional coalitions. These health care groups may implement alternative payment systems that encourage the delivery of high quality care and streamline documentation and reporting requirements. They may also offer benefit packages distinct from those that are currently available under Medicare Parts A and B and under the Part C Medicare Advantage plan. To qualify for this demonstration, health care groups must meet Secretary-established quality standards; implement quality improvement mechanisms that integrate community-based support, primary care, and referral care; encourage patient participation in decisions; among other requirements.

The Secretary may waive Medicare and Peer Review and Administrative Simplification (Title XI) requirements as necessary and may direct agencies within Health and Human Services (HHS) to evaluate, analyze, support, and assist in the demonstration project. The demonstration program would be subject to budget-neutrality requirements. The Secretary would not be permitted to implement the program before October 1, 2004.

Conference Agreement

The conference agreement requires the Secretary to establish a 5-year demonstration program that examines the health delivery factors which encourage the delivery of improved patient care quality including: (1) incentives to improve the safety of care provided to beneficiaries; (2) appropriate use of best practice guidelines; (3) reduction of scientific uncertainty through examination of service variation and outcomes measurement; (4) encouragement of shared decision making between providers and patients; (5) the provision of incentives to improve safety, quality, and efficiency; (6) appropriate use of culturally and ethnically sensitive care; and (7) related financial effects associated with these changes. Health care groups that may participate are physician groups, integrated health care delivery systems, and regional coalitions. These health care groups may implement alternative payment systems that encourage the delivery of high quality care and streamline documentation and reporting requirements. They may also offer benefit packages distinct from those that are currently available under Medicare Parts A and B and under the Part C Medicare Advantage plan.

To qualify for this demonstration, health care groups must meet Secretary-established quality standards; implement quality improvement mechanisms that integrate community-based support, primary care, and referral care; encourage patient participation in decisions; among other requirements. The Secretary may waive Medicare and Peer Review and Administrative Simplification (Title XI) requirements as necessary and may direct agencies within Health and Human Services (HHS) to evaluate, analyze, support, and assist in the demonstration project. The demonstration program is subject to budget-neutrality requirements.

GAO Study on Coverage of Marriage and Family Therapist Services and Mental Health Counselor Services Under Part B of the Medicare Program (Section 647 of the Conference Agreement and Section 448 of the Senate Bill).

Present Law

Medicare's Part B payment for outpatient mental health services is limited to 62.5% of covered expenses incurred in any calendar year in connection with the treatment of a mental, psychoneurotic, or personality disorder of an individual who is not an inpatient of a hospital at the time such expenses are incurred. The term ''treatment'' does not include brief office visits for the sole purpose of monitoring or changing drug prescriptions used in the treatment of such disorders or partial hospitalization services that are not directly provided by the physician. This 62.5% payment limitation applies to outpatient mental health treatments furnished by physicians, comprehensive outpatient rehabilitation facilities (CORFs), physician assistants, clinical psychologists, and clinical social workers. Items and supplies furnished by physicians or other mental health practitioners in connection with treatment are

also subject to the limitation. The limitation is applied only to therapeutic services (e.g., psychotherapy) and to follow-up diagnostic services performed to evaluate the progress of a course of treatment. Charges for initial diagnostic services (i.e., psychiatric testing and evaluation used to diagnose the patient's illness) are not subject to this limitation. The 62.5% limitation is subject to Part B deductible and coinsurance requirements.

Medicare covers outpatient hospital partial hospitalization services connected with the treatment of mental illness. Partial hospitalization services are covered only if the individual would otherwise require inpatient psychiatric care. The 62.5% payment limitation does not apply to partial hospitalization services, except for services that are directly provided by a physician. Under this benefit, Medicare covers: (A) individual and group therapy with physicians or psychologists (or other authorized mental health professionals); (B) occupational therapy; (C) services of social workers, trained psychiatric nurses, and other staff trained to work with psychiatric patients; (D) drugs and biologicals furnished for therapeutic purposes that cannot be self-administered; (E) individualized activity therapies that are not primarily recreational or diversionary; (F) family counseling (for treatment of the patient's condition); (G) patient training and education; and (H) diagnostic services. Partial hospitalization services are also covered in community mental health centers. Family counseling services with members of the household are covered only where the primary purpose of such counseling is the treatment of the patient's condition.

House Bill

No provision.

Senate Bill

Medicare would cover marriage and family therapist services and mental health counselor services for the diagnosis and treatment of mental illness. The therapists would be legally authorized to provide such services under State law and would provide services that would be otherwise covered if furnished by a physician or furnished incident to a physician's professional service. No facility or other provider would charge or be paid for these services. The amount of payment would be 80% of the lesser of the actual charge or 75% of the amount paid to a psychologist. These services would be subject to assignment. These services would be excluded from the skilled nursing facility prospective payment system. Rural health clinics, federally qualified health centers, hospice programs would be authorized to provide such services. Marriage and family therapists would be authorized to develop post hospital discharge plans for patients. The provisions would apply to services furnished on or after January 1, 2004.

Conference Agreement

The conference agreement requires the GAO to study the feasibility and advisability of providing Medicare Part B coverage of marriage and family therapist services and mental health counselors and of the appropriate settings and payment methodologies of such services. Recommendations for legislation or administrative actions are also required to be included in the study. The report is required to be submitted to Congress no later than January 1, 2005.

MedPAC Study on Direct Access to Physical Therapy Services (Section 648 of the Conference Agreement, Section 624 of the House bill and Section 449 of the Senate bill).

Present Law

No provision.

House Bill

GAO would be required to conduct a study on access to physical therapist services in States authorizing access to such services without a physician referral compared to States that require such a physician referral. The study would: (1) examine the use of and referral patterns for physical therapist services for patients age 50 and older in states that authorize such services without a physician referral and in states that require such a referral; (2) examine the use of and referral patterns for physical therapist services for patients who are Medicare beneficiaries; (3) examine the physical therapist services within the facilities of the Department of Defense; and (4) analyze the potential impact on beneficiaries and on Medicare expenditures of eliminating the need for a physician referral for physical therapist services under the Medicare program. GAO would be required to submit a report to Congress on the study within one year of enactment.

Senate Bill

The Secretary would be required to establish a 3-year demonstration project in at least 5 states to examine the costs and patient satisfaction associated with allowing Medicare fee-for-service beneficiaries direct access to outpatient physical therapy services and comprehensive outpatient rehabilitation facility (CORF) services. In this instance, the beneficiary would not be required to be under the care of or referred by a physician to receive physical therapy services. Also, a physician or qualified physical therapist would be permitted to certify, recertify, establish and periodically review the beneficiary's plan of care. To the extent possible, the demonstration project would be conducted on a statewide basis. The project would be required to be established not later than 1 year after the date of enactment. The Secretary would be allowed to terminate the operation of a project at a site if, based on actual data, Medicare expenditures are greater than they otherwise would be without implementation of the demonstration project. The Secretary would be able to waive Medicare requirements as necessary and appropriate. The Secretary would be required to conduct interim and final evaluations of the project which would be submitted to the Congressional committees of jurisdiction no later than the end of the second year of operation and no later than 180 days after the end of the project. This provision would be effective upon enactment.

Conference Agreement

The conference agreement requires MedPAC to study the feasibility and advisability of allowing Medicare beneficiaries in fee-for-service direct access to outpatient physical therapy services and those physical therapy services that are furnished as comprehensive rehabilitation facility services. For the purposes of the study, direct access is defined as access to physical therapy services without the requirement that beneficiaries be under the care of, or referred by, a physician. Further, the services provided are not required to be under the supervision of a physician. Finally, either a physician or a qualified physical therapist could satisfy any requirement for certification, recertification and establishment and review of a plan of care. This study, together with recommendations for legislation or administrative actions, must be submitted to Congress no later than January 1, 2005.

Demonstration Project for Consumer Directed Chronic Outpatient Services (Section 648 of the Conference Report and Section 736 of the House bill)

Present Law

No provision. Medicare coverage requires that a beneficiary need medically necessary care. In general, Medicare pays the provider that delivers skilled health care services.

House Bill

The Secretary would be required to establish no fewer than 3 demonstration projects that evaluate methods to improve the quality of care provided to Medicare beneficiaries with chronic conditions and that reduce expenditures that would otherwise be made on their behalf by Medicare. The methods would be required to include permitting beneficiaries to direct their own health care needs and services. In designing the demonstrations, the Secretary would be required to evaluate practices used by group health plans and practices under State Medicaid programs that permit patients to self-direct the provision of personal care services and to determine the appropriate scope of personal care services that would apply under the demonstration projects.

The Secretary would be required to establish the demonstrations within 2 years of enactment. Demonstrations would be required to be located in an urban area, a rural area, and an area that has a Medicare population with a diabetes rate that significantly exceeds the national average rate. The Secretary would be required to evaluate the clinical and cost effectiveness of the demonstrations. Reports to Congress would be required biannually beginning 2 years after the demonstrations begin.

Senate Bill

No provision.

Conference Agreement

The conference agreement requires the Secretary to establish no fewer than 3 demonstration projects that evaluate methods to improve the quality of care provided to Medicare beneficiaries with chronic conditions and that reduce expenditures that would otherwise be made on their behalf by Medicare. The methods are required to include permitting beneficiaries to direct their own health care needs and services. In designing the demonstrations, the Secretary is required to evaluate practices used by group health plans and practices under State Medicaid programs that permit patients to self-direct the provision of personal care services and to determine the appropriate scope of personal care services that apply under the demonstration projects.

The Secretary is required to establish the demonstrations within 2 years of enactment. Demonstrations are required to be located in an urban area, a rural area, and an area that has a Medicare population with a diabetes rate that significantly exceeds the national average rate. The Secretary is required to evaluate the clinical and cost effectiveness of the demonstrations. Reports to Congress are required biannually beginning 2 years after the demonstrations begin.

Medicare Care Management Performance Demonstration (Section 649 of the Conference Report and Section 736 of the House Bill).

Current Law

No provision.

House Bill

No provision.

Senate Bill

The Secretary would be required to establish a 3-year demonstration program to promote continuity of care, help stabilize medical conditions, prevent or minimize acute

exacerbations of chronic conditions, and reduce adverse health outcomes before October 1, 2004. Six sites would be designated for the demonstration, 3 in urban areas and at least 1 in a rural area. One site would be required to be located in Arkansas. Any Medicare beneficiary enrolled in part B who has at least 4 complex medical conditions and is unable to manage their own care or has a functional limitation and resides in a demonstration area may participate in the program if the beneficiary identifies a principal care physician who agrees to manage the complex clinical care of the beneficiary under the demonstration.

Each principal care physician who agrees to manage the complex clinical care of a beneficiary eligible to participate would be required to agree to: (1) serve as the primary contact of the beneficiary in accessing items and services under Medicare; (2) maintain medical information related to care and services furnished by other health care providers including clinical reports, medication and treatments prescribed by other physicians, hospital and hospital outpatient services, skilled nursing home care, home health care, and medical equipment services; (3) monitor and advocate for the continuity of care of the beneficiary and the use of evidence-based guidelines; (4) promote self-care and family care giver involvement where appropriate; (5) have appropriate staffing arrangements to conduct patient self-management and other care coordination activities as specified by the Secretary; refer the beneficiary to community service organizations and coordinate the services of such organizations with the care provided by health care providers; and (7) meet such other complex care management requirements as the Secretary may specify.

The Secretary would pay each principal care physician a monthly complex care management fee developed by the Secretary. The fee would be the full payment for all the functions performed by the principal care physician including any functions performed by other qualified practitioners acting on behalf of the physician, appropriate staff under the supervision of the physician, and any other person under a contract with the physician, including any person who conducts patient self-management and caregiver education. Aggregate payments by Medicare could not exceed the amount that would otherwise have been paid if the demonstration program had not been implemented. The Secretary would be required to report to Congress on the demonstration program 6 months after its completion.

Conference Agreement

The Secretary would be required to establish a 3-year demonstration program to promote continuity of care, help stabilize medical conditions, prevent or minimize acute exacerbations of chronic conditions, and reduce adverse health outcomes. Four sites would be designated for the demonstration: with at least two in urban areas and one in a rural area. One of the demonstration sites would be in a state with a medical school with a geriatrics department that manages rural outreach sites and is capable of managing patients with multiple chronic conditions, one of which is dementia. Any Medicare beneficiary enrolled in part A and B who has one or more chronic medical conditions specified by the Secretary (one of which may be a cognitive impairment) and is unable to manage their own care or has a functional limitation and resides in a demonstration area may participate in the program if the beneficiary identifies a principal care physician who agrees to manage the complex clinical care of the beneficiary under the demonstration.

The conferees encourage CMS to work with Agency for Healthcare Research and Quality (AHRQ) to provide grants to assist physicians in carrying out the health information technology aspect of the demonstration. In particular, the grants should focus on issues involving clinical decision support tools, clinical reminders, and improved communication between patients, providers and payors. AHRQ is currently working to provide grant programs in this area.

Demonstration of Coverage of Chiropractic Services under Medicare (Section 440 of the Senate Bill).

Present Law

No specific provision with respect to a demonstration project. Medicare covers limited chiropractic services, specifically manual manipulation for correction of a dislocated or misaligned vertebra or subluxation.

House Bill

No provision.

Senate Bill

The Secretary would be required to establish a 3-year demonstration program at 6 sites to evaluate the feasibility and desirability of covering additional chiropractic services under Medicare. These projects may not be implemented before October 1, 2004. The chiropractic services included in the demonstration shall include, at a minimum, care for neuromusculoskeletal conditions typical among eligible beneficiaries as well as diagnostic and other services that a chiropractor is legally authorized to perform. An eligible beneficiary participating in the demonstration project, including those enrolled in Medicare +Choice or Medicare Advantage plans, would not be required to receive approval by physician or other practitioner in order to receive chiropractic services under the demonstration project.

The Secretary would be required to consult with chiropractors, organizations representing chiropractors, beneficiaries and organizations representing beneficiaries in establishing the demonstration projects. Participation by eligible beneficiaries would be on a voluntary basis. The 6 sites would be equally split between rural and urban areas; at least one of the sites would be in a health professional shortage area. The Secretary would be required to evaluate the demonstration projects to determine (1) whether the participating beneficiaries used fewer Medicare covered services than those who did not participate; (2) the cost of providing such chiropractic services under Medicare; (3) the quality of care and satisfaction of participating beneficiaries; and (4) other appropriate matters.

The Secretary would be required to submit a report, including recommendations, to Congress on the evaluation no later than 1 year after the demonstration projects conclude. The Secretary would waive Medicare requirements as necessary. The demonstration program would be subject to a budget-neutrality requirement. Appropriations from the Federal Supplementary Insurance Trust Fund are authorized as necessary to conduct this demonstration. The provision would be effective upon enactment.

Conference Agreement

The Secretary would be required to establish a 2–year demonstration program at 4 sites to evaluate the feasibility and desirability of covering additional chiropractic services under Medicare. These projects may not be implemented before October 1, 2004. The chiropractic services included in the demonstration shall include, at a minimum, care for neuromusculoskeletal conditions typical among eligible beneficiaries as well as diagnostic and other services that a chiropractor is legally authorized to perform by the State or jurisdiction where treatment occurs. An eligible beneficiary participating in the demonstration project, including those enrolled in Medicare +Choice or Medicare Advantage plans, would not be required to receive approval by physician or other practitioner in order to receive chiropractic services under the demonstration project.

The Secretary would be required to consult with chiropractors, organizations representing chiropractors, beneficiaries and organizations representing beneficiaries in establishing the demonstration projects. Participation by eligible beneficiaries would be on a voluntary basis. The 4 sites would be equally split between rural and urban areas; at least one of the sites would be in a health professional shortage area. The Secretary would be required to evaluate the demonstration projects to determine (1) whether the participating beneficiaries used fewer Medicare covered services than those who did not participate; (2) the cost of providing such chiropractic services under Medicare; (3) the quality of care and satisfaction of participating beneficiaries; and (4) other appropriate matters.

The Secretary would be required to submit a report, including recommendations, to Congress on the evaluation no later than 1 year after the demonstration projects conclude. The Secretary would waive Medicare requirements as necessary. The demonstration program would be subject to a budget-neutrality requirement. Appropriations from the Federal Supplementary Insurance Trust Fund are authorized as necessary to conduct this demonstration.

Demonstration Project to Examine What Weight Loss Weight Management Services Can Cost-Effectively Reach the Same Result as the NIH Diabetes Primary Prevention Trial Study: A 50 Percent Reduction in the Risk for Type 2 Diabetes for Individuals Who Have Impaired Glucose Tolerance and Are Obese (Section 450I of the Senate Bill).

Present Law

No provision regarding the demonstration. Medicare covers medical nutrition therapy services for beneficiaries with diabetes or a renal disease who (1) have not received diabetes outpatient self-management training services within a time period to be determined by the Secretary, (2) are not receiving maintenance dialysis, and (3) meet other criteria to be established by the Secretary. Nutrition therapy services are nutritional diagnostic, therapy, and counseling services for the purpose of disease management. The services must be provided by a registered dietitian or nutritional professional pursuant to a referral by a physician. Payment is based on the lower of actual charges or 85% of the physician fee schedule on an assignment-related basis.

House Bill

No provision.

Senate Bill

The Secretary would be required to establish a demonstration project that would examine the cost effectiveness and health benefits of providing group weight loss management services for Medicare beneficiaries who are obese and have impaired glucose tolerance. Group weight loss management services are those furnished to beneficiaries who

have been diagnosed and referred by a physician for assessment and treatment based on individual needs or a specific program or method that has demonstrated efficacy to produce and maintain weight loss through results published in peer-reviewed scientific journals. The program would be required to provide assessment of current body weight and recording of weight status at each meeting session; provision of a healthy eating plan; provision of an activity plan; provision of a behavior modification plan; and a weekly group support meeting.

Expenditures would be constrained by 2 limitations: the costs of group weight loss management services could not exceed the annual cost per recipient of the medical nutritional therapy benefit and the total amount of payments made under the demonstration could not exceed $2.5 million for each fiscal year of the project. Medical nutrition therapy services that would be furnished under the demonstration project would be covered under part B of Medicare and payment would be 80% of the lesser of the actual charge for the services or 85% of the applicable physician fee schedule amount. Group weight loss management professionals would be paid by Medicare on an assignment-related basis and balance billing would not be permitted.

The demonstration project would be conducted for 2 years at sites designated by the Secretary. The Secretary would be required to give preference to sites located in rural areas or areas that have a high concentration of Native Americans with type 2 diabetes. The Secretary would be required to submit interim reports on this demonstration project to the Committee on Ways and Means and the Committee on Finance. A final report to both Committees would be due 6 months after the date the demonstration project concludes. The provision would be effective upon enactment.

Conference Agreement

No provision.

TITLE VII—PROVISIONS RELATING TO PARTS A AND B

Subtitle A—Home Health Services

Update in Home Health Services (Section 701 of the Conference Agreement and Section 701 of the House Bill).

Present Law

Home health service payments are increased on a federal fiscal year basis that begins in October. The FY 2004 statutory update will be the full increase in the market basket index. The prospective payment system provides for outlier payment B payments for extraordinarily costly cases B with the total amount of outlier payment (the outlier pool) not exceeding 5 percent of estimated total home health prospective payments.

House Bill

This provision would increase home health agency payments by the home health market basket percentage increase minus 0.4 percentage points for 2004 through 2006. The update for subsequent years would be the full market basket percentage increase. The provision would also change the time frame for the update from the federal fiscal year to a calendar year basis. The home health prospective payment rates would not increase for the October 1 through December 31, 2003 period.

Senate Bill

No provision.

Conference Agreement

The conference agreement changes the time frame for the home health update from the federal fiscal year to a calendar year basis beginning with 2004. Home health agency payments are increased by the full market basket percentage for the last quarter of 2003 (October, November, and December) and for the first quarter of 2004 (January, February, and March). The update for the remainder of 2004 and for 2005 and 2006 is the home health market basket percentage increase minus 0.8 percentage points. The size of the outlier pool for home health prospective payment may not exceed 3 percent of the total payment projected under the payment system beginning January 1, 2004, total payments are not increased to account for the difference.

Demonstration Project to Clarify the Definition of Homebound (Section 702 of the Conference Agreement, Section 704 of the House Bill, and Section 450 of the Senate Bill).

Present Law

Home health services are covered only if the Medicare beneficiary is confined to the home, needs skilled nursing care on an intermittent basis or needs physical or occupational therapy or speech-language pathology services, has had a plan of care established that is periodically reviewed by a physician, and is under a physician's care. Any absence of a beneficiary from the home for purposes of receiving health care treatment, including regular absences for participating in therapeutic, psychosocial, or medical treatment in an adult daycare program does not disqualify an individual from being considered confined to the home (or homebound). Further, any other absence of a beneficiary from the home cannot disqualify an individual from being considered homebound if the absence is of infrequent or of relatively short duration.

Absence from the home to attend a religious service is considered an absence of infrequent or short duration.

House Bill

The Secretary would be required to conduct a 2-year demonstration project where beneficiaries with chronic conditions would be deemed to be homebound in order to receive home health services under Medicare. A beneficiary would have to have been certified by a physician to have a permanent and severe condition that will not improve; to permanently need assistance with at least 3 out of the 5 activities of daily living (eating, toileting, transferring, bathing, and dressing); to permanently require skilled nursing services (not including medication management); to need either an attendant during the day to monitor and treat the beneficiary's medical condition or daily skilled nursing; and to require technological assistance or the assistance of another person to leave the home.

The Secretary would be required to select 3 states in which to conduct the demonstration in the northeast, midwest and western regions of the United States. Up to 15,000 beneficiaries would be permitted to participate. Data would be required to be collected regarding the quality of care, patient outcomes, and additional costs, if any to Medicare. The demonstration would be required to begin within 6 months of enactment. Within 1 year of completing the demonstration, the Secretary would be required to report to Congress on whether the subject of the demonstration adversely affected the provision of home health services under Medicare or directly caused an unreasonable increase of expenditures under Medicare; specific data showing any increase in expenditures directly attributable to the demonstration project; and specific recommendations to exempt permanently and severely disabled homebound beneficiaries from restrictions on the length, frequency, and purpose of their absences from the home to qualify for home health services without incurring additional unreasonable costs to Medicare. The provision would be effective upon enactment.

Senate Bill

The Secretary would be required to conduct a 2-year demonstration project where beneficiaries with chronic conditions would be deemed to be homebound in order to receive home health services under Medicare. A beneficiary would have to have been certified by a physician to have a permanent and severe condition that will not improve; to permanently need assistance with at least 3 out of the 5 activities of daily living (eating, toileting, transferring, bathing, and dressing); to permanently require skilled nursing services (not including medication management); to need either an attendant during the day to monitor and treat the beneficiary's medical condition or daily skilled nursing; and to require technological assistance or the assistance of another person to leave the home.

The Secretary would be required to select 3 states in which to conduct the demonstration in the northeast, midwest and western regions of the United States. Up to 15,000 beneficiaries would be permitted to participate. Data would be required to be collected regarding the quality of care, patient outcomes, and additional costs, if any to Medicare. The demonstration would be required to begin within 6 months of enactment. Within 1 year of completing the demonstration, the Secretary would be required to report to Congress on whether the subject of the demonstration adversely effected the provision of home health services under Medicare or directly caused an unreasonable increase of expenditures under Medicare; specific data showing any increase in expenditures directly attributable to the demonstration project; and specific recommendations to exempt permanently and severely disabled homebound beneficiaries from restrictions on the length, frequency, and purpose of their absences from the home to qualify for home health services without incurring additional unreasonable costs to Medicare. The provision would be effective upon enactment.

Conference Agreement

The Secretary is required to conduct a 2-year demonstration project where beneficiaries enrolled in Medicare Part B with specified chronic conditions would be deemed to be homebound in order to receive home health services under Medicare. A beneficiary is eligible to be deemed to be homebound if the beneficiary: (1) has been certified by a physician to have a permanent and severe condition that is not expected to improve; (2) permanently needs assistance with at least 3 out of the 5 activities of daily living (eating, toileting, transferring, bathing, and dressing); (3) permanently requires skilled nursing services (not including medication management); (4) needs either an attendant during each day to monitor and treat the beneficiary's medical condition or to assist the beneficiary with activities of daily living; (5) requires technological assistance or the assistance of another person to leave the home; and (6) does not regularly work in a paid position full-time or part-time outside the home.

The Secretary is required to select 3 states in the northeast, midwest and western regions of the United States in which to conduct the demonstration. Up to 15,000 beneficiaries can participate. Data must be collected regarding the quality of care, patient outcomes, and additional costs, if any to Medicare. The demonstration is required to begin within 6 months of enactment. Within 1 year of completing the demonstration, the Secretary is required to report to Congress on: whether the subject of the demonstration adversely effected the provision of home health services under Medicare or has directly caused an unreasonable increase of expenditures under Medicare; specific data showing any increase in expenditures directly attributable to the demonstration project; and specific recommendations to exempt permanently and severely disabled homebound beneficiaries from restrictions on the length, frequency, and purpose of their absences from the home to qualify for home health services without incurring additional unreasonable costs to Medicare. Payment for the costs of carrying out the demonstration project will be made from the Part B Trust Fund. The provision is effective upon enactment.

Demonstration Project for Medical Adult Day Care Services (Section 703 of the Conference Agreement, Section 732 of the House Bill, Section 454 of the Senate Bill).

Present Law

No provision

House Bill

Subject to earlier provisions, the Secretary would be required to establish a demonstration project under which a home health agency, directly or under arrangement with a medical adult day care facility, provide medical adult day care services as a substitute for a portion of home health services otherwise provided in a beneficiary's home. Such services would have to be provided as part of a plan for an episode of care for home health services established for a beneficiary. Payment for the episode would equal 95% of the amount that would otherwise apply. In no case would the agency or facility be able to charge the beneficiary separately for the medical adult day care services. The Secretary would reduce payments made under the home health prospective payment system to offset any amounts spent on the demonstration project. The 3-year demonstration project would be conducted in not more than 5 sites (which can include multiple facilities) in states that license or certify providers of medical adult day care services, as selected by the Secretary. Participation of up to 15,000 Medicare beneficiaries would be on a voluntary basis.

When selecting participants, the Secretary would give preference to home health agencies that are currently licensed to furnish medical adult day care services and have furnished such services to Medicare beneficiaries on a continuous basis for a prior 2–year period. A medical adult day care facility would (1) have been licensed or certified by a State to furnish medical adult day care services for a continuous 2–year period; (2) have been engaged in providing skilled nursing services or other therapeutic services directly or under arrangement with a home health agency; and (3) would meet quality standards and other requirements as established by the Secretary. The Secretary would be able to waive necessary Medicare requirements except that beneficiaries must be homebound in order to be eligible for home health services.

The Secretary would be required to evaluate the project's clinical and cost effectiveness and submit a report to Congress no later than 30 months after its commencement. The report would include: (1) an analysis of patient outcomes and comparative costs relative to beneficiaries who receive only home health services for the same health conditions and (2) recommendations concerning the extension, expansion, or termination of the project. The provision would be effective upon enactment.

Senate Bill

Subject to earlier provisions, the Secretary would be required to establish a demonstration project under which a home health agency, directly or under arrangement with a medical adult day care facility, provide medical adult day care services as a substitute for a portion of home health services otherwise provided in a beneficiary's home. Such services would have to be provided as part of a plan for an episode of care for home health services established for a beneficiary. Payment for the episode would equal 95% of the amount that would otherwise apply. In no case would the agency or facility be able to charge the beneficiary separately for the medical adult day care services. The Secretary would reduce payments made under the home health prospective payment system to offset any amounts spent on the demonstration project. The 3- year demonstration project would be conducted in not more than 5 sites in states that license or certify providers of medical adult day care services, as selected by the Secretary. Participation of up to 15,000 Medicare beneficiaries would be on a voluntary basis.

When selecting participants, the Secretary would give preference to home health agencies that are currently licensed to furnish medical adult day care services and have furnished such services to Medicare beneficiaries on a continuous basis for a prior 2–year period. A medical adult day care facility would (1) have been licensed or certified by a State to furnish medical adult day care services for a continuous 2–year period; (2) have been engaged in providing skilled nursing services or other therapeutic services directly or under arrangement with a home health agency; and (3) would meet quality standards and other requirements as established by the Secretary. The Secretary would be able to waive necessary Medicare requirements except that beneficiaries must be homebound in order to be eligible for home health services.

The Secretary would be required to evaluate the project's clinical and cost effectiveness and submit a report to Congress no later than 30 months after its commencement. The report would include: (1) an analysis of patient outcomes and comparative costs relative to beneficiaries who receive only home health services for the same health conditions and (2) recommendations concerning the extension, expansion, or termination of the project. The provision would be effective upon enactment.

Conference Agreement

Subject to earlier provisions in the conference agreement, the conference agreement requires the Secretary to establish a demonstration project under which a home health agency, directly or under arrangement with a medical adult day care facility, provides medical adult day care services as a substitute for a portion of home health services otherwise provided in a beneficiary's home. Such services would be provided as part of a plan for an episode of care for home health services established for a beneficiary. Payment for the episode will equal 95% of the amount that would otherwise apply subject to budget neutrality provisions. The agency or facility is prohibited from charging the beneficiary separately for the medical adult day care services. The Secretary is required to reduce payments made to medical adult day care facilities under the demonstration to offset excess spending. The 3–year demonstration project is to be conducted in not more than 5 sites in states that license or certify providers of medical adult day care services, as selected by the Secretary. Participation of up to 15,000 Medicare beneficiaries is on a voluntary basis.

When selecting participants, the Secretary is required to give preference to home health agencies that are currently licensed to furnish medical adult day care services and have furnished such services to Medicare beneficiaries on a continuous basis for a prior 2–year period. A medical adult day care facility is one that: (1) has been licensed or certified by a State to furnish medical adult day care services for a continuous 2–year period; (2) has been engaged in providing skilled nursing services or other therapeutic services directly or under arrangement with a home health agency; and (3) would meet quality standards and other requirements as established by the Secretary. The Secretary is able to waive necessary Medicare requirements except that beneficiaries must be homebound in order to be eligible for home health services.

The Secretary is required to evaluate the project's clinical and cost effectiveness and submit a report to Congress no later than 6 months after completion of the demonstration. The report is required to include: (1) an analysis of patient outcomes and comparative costs relative to beneficiaries who receive only home health services for the same health conditions, and (2) recommendations concerning the extension, expansion, or termination of the project. The provision is effective upon enactment.

Temporary Suspension of OASIS Requirement for Collection of Data on Non-Medicare and Non-Medicaid Patients (Section 704 of the Conference Agreement, Section 954 in the House Bill, Section 630 in the Senate Bill).

Present Law

Medicare is required to monitor the quality of home health care and services for all patients as part of the survey process with a standardized, reproducible assessment instrument. The purpose of the monitoring is to determine whether the agency is helping all patients achieve and maintain the highest functional capacity that is possible as is reflected in the care plan the home health agency has developed for the patient. Medicare has implemented this requirement using the Outcomes and Assessment Information Set (OASIS). The OASIS data are used for Medicare payment (under home health prospective payment) and for quality improvement purposes for all patients.

House Bill

The requirement that home health agencies must collect OASIS data on private pay (non-Medicare, non-Medicaid) patients would be suspended until after the Secretary (1) reported to Congress on the benefits of these data, the value of the data compared to the administrative burden of data collection in small agencies, and the use of the OASIS information by both large and small agencies

and then (2) published final regulations regarding the collection and use of non-Medicare/non-Medicaid OASIS data. The provision would not prohibit home health agencies from collecting OASIS data on private pay patients for the agencies' own use.

Senate Bill

Same provision.

Conference Agreement

The conference agreement suspends the requirement that home health agencies must collect OASIS data on private pay (non-Medicare, non-Medicaid) until the Secretary (1) reports to Congress on the benefits of these data, the value of the data compared to the administrative burden of data collection in small agencies, and the use of the OASIS information by both large and small agencies, and then (2) publishes final regulations regarding the collection and use of OASIS. The provision does not prohibit home health agencies from collecting OASIS data on private pay patients for the agencies' own use.

MedPAC Study of Medicare Margins of Home Health Agencies (Section 705 of the Conference Agreement and Section 703 of the House Bill).

Present Law

No provision.

House Bill

The provision would require MedPAC to study payment margins of home health agencies paid under the Medicare home health prospective payment system. The study would examine whether systematic differences in payment margins were related to differences in case mix, as measured by home health resource groups (HHRGs). MedPAC would be required to submit a report to Congress on the study within 2 years of enactment.

Senate Bill

No provision.

Conference Agreement

The conference agreement requires MedPAC to study payment margins of home health agencies paid under the Medicare home health prospective payment system, using cost reports filed by agencies. The study is required to examine whether systematic differences in payment margins are related to differences in case mix, as measured by home health resource groups (HHRGs), among agencies. MedPAC is required to submit a report to Congress on the study within 2 years of enactment.

Coverage of Religious Nonmedical Health Care Institution Services Furnished In the Home. (Section 706 of the Conference Report).

Present Law

No provision

House Bill

No provision

Conference Report

A religious nonmedical health care institution can provide home health services to individuals that meet the criteria laid out in 1821.

Increase in Medicare Payment for Certain Home Health Services (Section 451/Duplicative Provisions 459 and 463 of the Senate Bill).

Present Law

Home health PPS provides payment for a 60–day episode of care furnished to a Medicare beneficiary. Medicare's payment is adjusted to reflect the type and intensity of care furnished and area wages as measured by the hospital wage index. BIPA increased PPS payments by 10% for home health services furnished in the home of beneficiaries living in rural areas during the 2-year period beginning April 1, 2001, through March 31, 2003, without regard to certain budget- neutrality provisions applying to home health PPS. The temporary additional payment was not included in the base for determination of payment updates.

Home health PPS is required to make payments for extraordinarily costly cases. The total amount of the outlier payment may not exceed 5% of the total payment estimated to be made for the fiscal year.

House Bill

No provision.

Senate Bill

A 10% additional payment for home health care services furnished in a rural area during FY 2005 and FY 2006 would be provided without regard to certain budget-neutrality requirements. The total amount of outlier payments would be reduced to no more than 3% of total payments in FY 2004 and 4% for FYs 2005 and 2006. The provision would be effective for services furnished on or after October 1, 2003.

Conference Agreement

No provision.

Limitation on Reduction in Area Wage Adjustment Factors under the Prospective Payment System for Home Health Services (Section 452 of the Senate Bill).

Present Law

Home health agencies are paid under Medicare using the prospective payment system. In calculating payment, the portion of the base payment amount that is attributable to wages and wage related costs is required to be adjusted for those costs. The Secretary is required to calculate an area wage adjustment factor that is actually used to adjust the base payment amount. The factors change annually as new wage data are reported and areas change in relative costliness.

House Bill

No provision.

Senate Bill

The provision would limit any reduction in the home health area wage adjustment factor for fiscal years 2005 and 2006. Any reduction could be no more than 3% less than the area wage adjustment factor applicable to home health services for the area in the previous year. The provision would be effective upon enactment.

Conference Agreement

No provision.

Subtitle B—Graduate Medical Education

Extension of Update Limitation on High Cost Programs (Section 711 of the Conference Agreement and Section 711 of the House Bill).

Present Law

Medicare pays hospitals for its share of direct graduate medical education (DGME) costs in approved programs using a count of the hospital's number of full-time equivalent residents and a hospital-specific historic cost per resident, updated for inflation. BBRA changed Medicare's methodology for calculating DGME payments to teaching hospitals to incorporate a national average amount based on FY1997 hospital specific per resident amounts. Starting in FY2001, hospitals received no less than 70% of a geographically adjusted national average amount. BIPA increased this floor to 85% of the locality adjusted, updated, and weighted national PRA starting for cost report periods beginning during FY2002. Hospitals with per resident amounts above 140% of the geographically adjusted national average amount had payments frozen at current levels for FY2001 and FY2002, and in FY2003–FY2005 would receive an update equal to the Consumer Price Index (CPI) increase minus 2 percentage points. Currently, hospitals with per resident amounts between 85% and 140% of the geographically adjusted national average would continue to receive payments based on their hospital-specific per resident amounts updated for inflation.

House Bill

The hospitals with per resident amounts above 140% of the geographically adjusted national average amount would not get an update from FY2004 through FY2013.

Senate Bill

No provision.

Conference Agreement

Hospitals with per resident amounts about 140% of the geographically adjusted national average amount would not get an update from FY2004 through FY20013.

Exception to the Initial Residency Period for Geriatric Residency or Fellowship Programs (Section 712 of the Conference Agreement and Section 410 of the Senate Bill).

Present Law

Medicare counts residents in their initial residency period (the lesser of the minimum number of years required for board eligibility in the physician's specialty or 5 years) as 1.0 FTE. Residents whose training has extended beyond their initial residency period count as 0.5 FTE. Residents in certain specialties are allowed additional years in their initial residency period.

Geriatrics is a subspecialty of family practice, internal medicine and psychiatry. A 1-year fellowship is required for certification in geriatrics, following an initial residency in one of those three areas. The certifying boards agreed to reduce the minimum fellowship requirement from 2 years to 1 year, beginning with the 1998 exam. Those physicians interested in an academic career in geriatrics are encouraged to pursue 2-year and 3-year fellowships.

House Bill

No provision.

Senate Bill

The Secretary would be required to promulgate interim final regulations after notice and comment that establish a 2-year exception to the initial residency program for certain geriatric training programs. The regulations would be effective for cost reporting periods on or after October 1, 2003. The provision would be effective upon enactment.

Conference Agreement

The conference agreement clarifies that Congress intended to provide an exception to the initial residency period for geriatric fellowship programs to accommodate programs that require 2 years of training to initially become board eligible in the geriatric specialty. The Secretary is required to promulgate interim final regulations after notice and comment consistent with this intent after notice and subject to public comment. The regulations will be effective for cost reporting periods on or after October 1, 2003. The conferees also clarify that under section 1886(h) (5)(F), the initial residency period for any residency for which the ACGME requires a preliminary or general clinical year of training is to be determined in the resident's second year of training.

The Conference Committee is pleased that the Secretary has published a proposed rule, on January 12 2001, to provide Medicare payment for clinical psychology internship training programs. The Committee notes that Congress has consistently urged the Secretary to initiate payment for the training of clinical psychologists since 1997 and still awaits a final rule.

The Committee is concerned that delay in the rules will mean that hospitals and institutions will continue to reduce or eliminate psychology training programs as has been occurring in recent years to the detriment of Medicare beneficiaries. The Committee directs implementation of the rule within six months of the date of enactment of the law to which this report is attached. The Committee notes that clinical psychologists provide valuable and unique services to Medicare beneficiaries during their training. Regarding their training, clinical psychologists are distinguishable from other health care professionals in that they are the only doctoral level mental health professionals fully participating in Medicare whose clinical training is not currently reimbursed. In addition, their clinical internship training is entirely controlled, administered, supervised, evaluated, and certified by the hospital or institution, separately accredited, and distinct from any university training they receive. Clinical psychologists are hospital-based in the final stages of their training function in a parallel status to medical interns and residents, not medical nursing or health professional students. Where a clinical psychologist has clearly finished his or her educational curriculum and is training solely in the hospital setting, it is the intention of Congress that the hospital be reimbursed if that training is hospital-based.

Authority to Include Costs of Training of Psychologists in Payments to Hospitals Under Medicare (Section 408 of the Senate).

Present Law

Medicare pays hospitals for its share of direct costs associated with approved hospital-based training programs for nurses and certain other allied health professionals including inhalation therapists, nurse anesthetists, occupational and physical therapists. Medicare will not pay for such costs associated with psychologists' training.

House Bill

No provision.

Senate Bill

Medicare would reimburse its share of the reasonable costs of approved education activities of psychologists under the allied health professional training provisions. The provision would apply for cost reporting periods beginning on or after October 1, 2004.

Conference Agreement

No provision.

Clarification of Congressional Intent Regarding the Counting of Residents in a Nonprovider Setting and a Technical Amendment Regarding the 3-year Rolling Ratio and the IME Ratio (Section 411 of the Senate Bill).

Present Law

Medicare has different resident limits for counting residents its indirect medical education (IME) adjustment and for reimbursement for a teaching hospital's direct medical education (DGME) costs. Generally, a hospital's IME adjustment depends on a hospital's teaching intensity as measured by the ratio of the number of interns and residents per bed (the IRB ratio). Prior to BBA 1997, the number of residents that could be counted for IME purposes included only those in the hospital inpatient and outpatient departments. Effective October 1, 1997, under certain circumstances, a hospital may now count residents in non-hospital sites for the purposes of IME. Medicare's DGME payment to teaching hospital is based on its updated cost per resident (subject to a locality adjustment and certain payment corridors), the weighted number of approved full-time-equivalent (FTE) residents, and Medicare's share of inpatient days in the hospital. Medicare counts residents in their initial residency period (the lesser of the minimum number of years required for board eligibility in the physician's specialty or 5 years) as 1.0 FTE. Residents whose training has extended beyond their initial residency period count as 0.5 FTE. Residents in certain specialties are allowed additional years in their initial residency period. Residents who are graduates from foreign medical schools do not count unless they pass certain exams.

Generally, the resident counts for both IME and DGME payments are based on the number of residents in approved allopathic and osteopathic teaching programs that were reported by the hospital for the cost reporting period ending in calendar year 1996. The DGME resident limit is based on the unweighted resident counts. It may differ from the IME limit because in 1996 residents training in non-hospital sites were eligible for DGME payments but not for IME payments. Hospitals that established new training programs before August 5, 1997 are partially exempt from the cap. Other exceptions apply to certain hospitals including those with new programs established after that date. Hospitals in rural areas (and non-rural hospitals operating training programs in rural areas) can be reimbursed for 130% of the number of residents allowed by their cap. Under certain conditions, an affiliated group of hospitals under a specific arrangement may combine their resident limits into an aggregate limit.

Subject to these resident limits, a teaching hospital's IME and DGME payments are based on a 3-year rolling average of resident counts, that is, the resident count will be based on the average of the resident count in the current year and the 2 preceding years. The rolling average calculation includes podiatry and dental residents. If a hospital is above its limit, the count for the purposes of the rolling average is the FTE cap. In addition to the resident limit, BBA 1997 also places a limit on the IRB ratio itself. A hospital's IRB ratio used to calculate its IME adjustment for the current payment year cannot exceed its IRB ratio from the immediately preceding cost reporting period.

CMS has published regulations that limit Medicare's graduate medical payments when existing residents are transferred from a non-hospital entity to a teaching hospital, particularly when the non-hospital entity has historically paid for the training costs without hospital funding. CMS seeks to limit reimbursement to those residents that rotate from a hospital setting to non-hospital sites in order to (1) encourage hospitals to broaden physician training in ways that will encompass different primary care settings; and (2) prevent cost shifting from existing support within the community to Medicare.

House Bill

No provision.

Senate Bill

The Secretary would be required to reimburse teaching hospitals for residents in non-hospital locations, when hospitals incur all, or substantially all, the costs of the training in that site starting from the effective date of a written agreement between the hospital and the entity owning or operating the non-hospital site. The effective date of the written agreement would be determined according to generally accepted accounting principles. The Secretary would not be able to take into account the fact that the hospital costs incurred are lower than actual Medicare reimbursement. Starting for FY2004, dental and podiatric residents would be removed from the 3-year rolling average calculation for IME and DGME reimbursements. The provision would be effective upon enactment.

Conference Agreement

For 12 months as of January 1, teaching hospitals can count residents in non-hospital locations regardless of the financial arrangement between the hospital and the teaching physician at the nonhospital clinic site participating in a family practice program. Provisions regarding the payment of IME and DME for training in non-hospital sites that were included in the Balanced Budget Act of 1997 Congress were intended to encourage placement of residents in rural and other underserved areas and in ambulatory sites that are more in alignment with the types of practice they would have upon practice. The purpose was two-fold: to increase access to care by increasing the numbers of residents training in those settings, and to increase the likelihood of physicians placing themselves in practice in rural and underserved areas.

For programs established after January 1, 2002, the Secretary shall clarify in future regulation its definition of reasonableness of payment for supervisory physicians.

The Secretary shall initiate a study on the training of residents in non-hospital settings, and the use of volunteer faculty in those settings. The study is due within six months of enactment. The study shall include the following:

Examination of the effect of the change in the BBA that allowed payment by Medicare for graduate medical education in non-hospital settings, to include whether access and numbers of physicians placing in rural and underserved areas has increased.

Examination of programs on a national level regarding evidence of possible misuse of federal money with respect to volunteering supervisory physicians.

A determination whether supervisory physicians are freely volunteering their time.

A description of what incentives are available in each state that are offered to physicians who volunteer their time as supervisory physicians (eg. CME credit hours, hospital privileges, etc.)

Subtitle C—Chronic Care Improvement

Voluntary Chronic Care Improvement Under Traditional Fee-For-Service (Section 721 of the Conference Agreement, Section 721 of the House Bill, and Section 442 of the Senate Bill).

Present Law

No provision.

A hearing was held by the Ways and Means Committee, Health Subcommittee on February 25, 2003 on the importance of providing chronic care management in fee-for-service Medicare. Statistics from the Robert Wood Johnson Foundation state 84% of Medicare beneficiaries have one or more chronic conditions and account for 95% of Medicare spending. With Americans living longer due to advances in medical procedures and increased availability to medications, Medicare costs will continue to escalate. Thus,

chronic care programs should be implemented in both traditional fee-for-service and private plans to target these individuals, improve health outcomes and save money.

The Centers for Medicare & Medicaid Services (CMS) has run demonstration programs in the Medicare program targeting high cost seniors. Currently, CMS is managing more than a dozen disease management demonstration projects. The BBA allowed for the continuation of demonstration projects that were cost-effective, improved quality of care and patient/beneficiary satisfaction. These demonstration sites enrolled more than 7,600 Medicare beneficiaries. CMS has also started on disease management demonstrations authorized by BIPA of 2000, to provide disease management services to Medicare beneficiaries with congestive heart failure, diabetes, or coronary heart disease. CMS estimates that enrollment will include around 30,000 Medicare beneficiaries. BIPA also required a physician group demonstration to encourage coordination and reward physicians for improving beneficiary health outcomes. CMS has demonstrated significant progress in integrating chronic care management programs into fee-for-service Medicare and HMOs. The following provision would increase the number of chronic care management programs (also known as disease management programs) in fee-for-service Medicare, with the intention of expanding these programs nationwide if health outcomes improve and Medicare costs decrease.

Additionally, a 1999 survey showed 56% of employers offer disease management services to their employees, along with 67% of HMOs and 64% of POS plans. Private plans continue to offer disease management programs to reduce costs, improve health outcomes, and increase patient and provider satisfaction. Because many of these health plans offer chronic care management programs already, it is important to require Medicare Advantage to offer these programs, as well.

House Bill

The Secretary would be required to establish a process for providing chronic care improvement programs for Medicare beneficiaries in fee-for-service Medicare (Parts A and B) who have certain chronic conditions such as congestive heart failure, diabetes, chronic obstructive pulmonary disease (COPD), stroke or other diseases identified by the Secretary for inclusion in the program. The Secretary would establish administrative regions (called CCMA regions) within the United States for the chronic care improvement programs. Within each region, the Secretary would select at least two contractors under a competitive bidding process on the basis of the ability of each bidder to achieve improved health outcomes of beneficiaries and improved financial outcomes of the Medicare program. A contractor could be a disease improvement organization, health insurer, provider organization, a group of physicians, or any other legal entity that the Secretary determines appropriate. Contractors would be required to meet certain clinical, quality improvement, financial, and other requirements specified by the Secretary. Subcontractors could be used by the contractors. The Secretary would be able to phase-in implementation of the program beginning one year after enactment.

Each program would be required to have a method for identifying targeted Medicare beneficiaries who would be offered participation in the program. The Secretary would be required to assist the program in identifying beneficiaries. Each beneficiary would be assigned to only one contractor that would be responsible for guiding beneficiaries in managing their health, including all co-morbidities. Initial contact with a Medicare beneficiary would be from the Secretary who would provide information about the program, a description of advantages in participating, notification that the contractor could contact the beneficiary directly concerning participation, the voluntary nature of program participation, and a means to decline participation or decline being contacted by the program. Each program would be required to develop an individualized, goal-oriented chronic care improvement plan with the beneficiary. The chronic care improvement plan would be required to contain: a single point of contact to coordinate care; self-improvement education for the individual and support education for health care providers, primary caregivers, and family members; coordination between prescription drug benefits, home health, and other health care services; collaboration with physicians and other providers to enhance communication of relevant clinical information; the use of monitoring technologies, where appropriate; and information about hospice care, pain and palliative care, and end-of-life care, as appropriate. In developing the chronic care improvement plan, programs would be required to use decision support tools such as evidence-based practice guidelines to track and monitor each beneficiary across care settings and evaluate outcomes using a clinical information database. The program would be required to meet any additional requirements that the Secretary finds appropriate. Programs that have been accredited by qualified organizations would be deemed to have met such requirements as specified by the Secretary.

Contractor payments for each chronic care improvement program would be required to result in Medicare program outlays that would otherwise have been incurred in the absence of the program for the three-year contract period. The Secretary would be required to assure that there would be no net aggregate increase in Medicare payments, in entering into a contract for the program over the 3-year period, including program outlays, administrative expenses (that would not have been paid under Medicare without this demonstration), and contractor fees. Contracts for chronic care improvement programs would be treated as a risk-sharing arrangement. In addition, payment to contractors would be subject to the contractor meeting clinical and financial performance standards established by the Secretary.

Program contractors would be required to report to the Secretary on the quality of care and efficacy of the program in terms of process measures (such as reductions in errors of treatment and rehospitalization rates), beneficiary and provider satisfaction, health outcomes, and financial outcomes. The Secretary would be required to submit to Congress annual reports on the program including information on progress made toward national coverage, common delivery models, and information on improvements in health outcomes as well as financial efficiencies resulting from the program. The Secretary would also be required to conduct a randomized clinical trial to assess the potential for cost reductions under Medicare by comparing costs of beneficiaries enrolled in chronic care improvement programs and beneficiaries who are eligible to participate but are not enrolled.

Appropriations of such sums as necessary to provide for contracts with chronic care improvement programs would be authorized from the Medicare Trust Funds, but in no case would the funding be permitted to exceed $100 million over 3 years.

The provision would be effective upon enactment and the Secretary would be required to begin implementing the chronic care improvement programs no later than 1 year after enactment.

Senate Bill

No provision.

Conference Agreement

The conference agreement requires the Secretary to establish and implement chronic care improvement programs. If the programs are established, they are required to improve clinical quality and beneficiary satisfaction and achieve spending targets for Medicare for beneficiaries with certain chronic health conditions.

The chronic care improvement (CCI) program is required to (1) have a process to screen each targeted beneficiary for conditions other than the specified chronic conditions, such as impaired cognitive ability and co-morbidities, in order to develop an individualized, goal-oriented care management plan; (2) provide each targeted beneficiary participating in the program with the care management plan; and (3) carry out the plan and other chronic care improvement activities. The care management plan is required to be developed with the beneficiary and, to the extent appropriate, include: (1) a designated point of contact responsible for communications with the beneficiary and for facilitating communications with other health care providers; (2) self-care education for the beneficiary (through approaches such as disease management or medical nutrition therapy) and education for primary caregivers and family members; (3) education for physicians and other providers and collaboration to enhance communication of relevant clinical information; (4) the use of monitoring technologies that enable patient guidance through the exchange of pertinent clinical information, such as vital signs, symptomatic information, and health self-assessment; and (5) the provision of information about hospice care, pain and palliative care, and end-of-life care. To the extent that a care management plan includes medical nutrition therapy, such services should be delivered by a registered dietician or nutrition professional as defined in Section 1861 of the Social Security Act (42 U.S.C. 1395x.)

The Secretary is required to develop a method for identifying targeted beneficiaries who may benefit from participation in a chronic care improvement program and to communicate with the targeted beneficiary regarding the opportunity to participate. Targeted beneficiaries who are eligible to participate cannot be enrolled in a plan under Medicare Part C and must have one or more of the threshold conditions including: congestive heart failure, diabetes, chronic obstructive pulmonary disease (COPD), or other diseases or conditions specified by the Secretary. Beneficiary participation is voluntary.

In carrying out the care management plan, the chronic care improvement organization is required to: (1) guide the participant in managing the participant's health (including all co-morbidities, relevant health care services, and pharmaceutical needs) and in performing activities as specified under the elements of the care management plan of the participant; (2) use decision-support tools such as evidence-based practice guidelines or other criteria as determined by the Secretary; and (3) develop a clinical information

database to track and monitor each participant across settings and to evaluate outcomes.

The establishment of the chronic care improvement program is conducted in 2 parts. In phase I, the developmental phase, the Secretary is required to enter into contracts with chronic care improvement organizations for the development, testing, and evaluation of chronic care improvement programs using randomized controlled trials. The first contract is required 12 months after enactment for a 3-year period. The Secretary is required to enter into contracts to ensure that chronic care improvement programs cover geographic areas in which at least 10 percent of Medicare beneficiaries reside. The Secretary is further required to ensure that each chronic care improvement program includes at least 10,000 targeted beneficiaries along with a sufficient number of Medicare beneficiaries to serve as a control group. The Secretary is required to contract for an independent evaluation of each chronic care improvement program. The evaluation is required to include quality improvement measures, such as adherence to evidence-based guidelines and rehospitalization rates; beneficiary and provider satisfaction; health outcomes; and financial outcomes, including any cost savings to Medicare.

If the Secretary finds that the chronic care improvement programs have improved the clinical quality of care, improved beneficiary satisfaction, and achieved specified spending targets, then the Secretary is required to expand the program to additional geographic areas not covered during phase I. Phase II may include national expansion of the program and is required to begin no later than 6 months after the completion of phase I (nor earlier than 2 years after phase I began). The Secretary is also required to evaluate phase II programs using the same criteria used in the phase I evaluation.

Chronic care improvement organizations are required to monitor and report to the Secretary on health care quality, cost, and outcomes, in a time and manner specified by the Secretary. The organizations are also required to comply with any additional requirements the Secretary may specify. The Secretary may deem chronic care improvement organizations which are accredited by qualified organizations to have met requirements that the Secretary may specify.

The Secretary is not permitted to contract with an organization to operate a chronic care improvement program unless the organization meets the requirements for a chronic care improvement program and such clinical, quality improvement, financial, and other requirements as the Secretary deems to be appropriate for the target beneficiaries to be served; and the organization demonstrates (to the satisfaction of the Secretary) that it is able to assume financial risk for performance under the contract. Each contract is required to specify performance standards for each of the specified evaluation factors including clinical quality and Medicare spending targets, against which the performance of the chronic care improvement organization under the contract is measured. Contractual adjustments are required if the contractor fails to meet specified performance standards. Further, the contract is required to provide for full recovery by the government of any amount by which the fees paid to the contractor exceed the estimated savings to Medicare that are attributable to the implementation of the contract. The Secretary is required to ensure that aggregate Medicare benefit expenditures for targeted beneficiaries participating in the chronic care improvement program do not exceed estimated Medicare expenditures for a comparable population in the absence of such a program.

Appropriations of such sums as necessary to provide for contracts with chronic care improvement programs would be authorized from the Medicare Trust Funds, but in no case would the funding be permitted to exceed $100 million over 3 years, beginning October 1, 2003.

The Secretary is required to submit an interim report to Congress on the scope of implementation of the program, the design of the programs, and the preliminary cost and quality findings based on the evaluation criteria no later than 2 years after implementation. No later than 3½ years after implementation, the Secretary is required to submit an update to the interim report to Congress. The Secretary is further required to submit to Congress 2 additional biennial reports on the chronic care improvement programs. The first is due no later than 2 years after the update report.

Medicare Advantage Quality Improvement Programs (Section 722 of the House Bill and Sections 202 and 442 of the Senate Bill)

Present Law

Under the Medicare+Choice program, organizations are required to have quality assurance programs that include measuring outcomes, monitoring and evaluating high volume and high risk services and the care of acute and chronic conditions, and evaluating the effectiveness of the efforts.

House Bill

Each Medicare Advantage plan offered would be required to have a chronic care improvement program for enrollees with multiple or sufficiently severe chronic conditions such as congestive heart failure, diabetes, chronic obstructive pulmonary disease (COPD), stroke, prostate and colon cancer, hypertension, or other disease identified by the Secretary. The program would be required to have a method for monitoring and identifying enrollees with multiple or sufficiently severe chronic conditions and to develop with an enrollee's consent an individualized, goal-oriented chronic care improvement plan.

The chronic care improvement plan would be required to include: a single point of contact to coordinate care; self-improvement education for the individual and support education for health care providers, primary caregivers, and family members; coordination between prescription drug benefits, home health, and other health care services; collaboration with physicians and other providers to enhance communication of relevant clinical information; the use of monitoring technologies, where appropriate; and information about hospice care, pain and palliative care, and end-of-life care, as appropriate. In developing the chronic care improvement plan, programs would be required to use decision support tools such as evidence-based practice guidelines track and monitor each beneficiary across care settings and evaluate outcomes using a clinical information database. The program would be required to meet any additional requirements that the Secretary finds appropriate. Programs that have been accredited by qualified organizations would be deemed to have met such requirements as specified by the Secretary.

Each Medicare Advantage organization would be required to report to the Secretary on the quality of care and efficacy of the chronic care improvement program in terms of process measures (such as reductions in errors of treatment and rehospitalization rates), beneficiary and provider satisfaction, health outcomes, and financial outcomes. The provision would apply for contract years beginning on or after one year after enactment.

Senate Bill

The quality assurance program for Medicare Advantage plans would be required to provide access to disease management and chronic care services and to provide access to preventive benefits and information for enrollees on the benefits in addition to current quality assurance requirements.

The Secretary would be required to establish a demonstration program that uses qualified care management organizations to provide health risk assessment and care management services to Medicare beneficiaries that are at high-risk (as defined by the Secretary but including beneficiaries with multiple sclerosis or other disabling chronic conditions, nursing home residents or beneficiaries at risk for nursing home placement, or beneficiaries that are also eligible for Medicaid). The Secretary would select 6 sites, giving preference to sites located in rural areas. The demonstration program would last 5 years but would not be implemented before October 1, 2004.

Any high-risk beneficiary residing in a designated area who is not a member of a Medicare+Choice plan may participate if the beneficiary identifies a care management organization that agrees to furnish care management services to the beneficiary under the demonstration program. The Secretary would be required to contract with care management organizations to provide care management services to beneficiaries eligible to participate in the demonstration. The Secretary may contract with more than one care management organization in a geographic area.

The Secretary would pay the care management organization a fee that is based on bids submitted by care management organizations. The fee would be required to place the care management organization partially at risk. Payment of the full fee would depend upon the care management organization meeting benchmarks for quality and cost. The Secretary may cancel a contract with a care management organization if the organization does not meet negotiated savings or quality outcome targets for the year. Aggregate payments by Medicare could not exceed the amount that would otherwise have been paid if the demonstration program had not been implemented. The Secretary would be required to report to Congress six months after the completion of the demonstration on the program. The provision would be effective upon enactment.

Conference Agreement

The conference agreement requires each Medicare Advantage organization to have an on-going quality improvement program for improving the quality of care provided to enrollees (except for private fee-for-service plans or MSA plans) effective for contract years beginning January 1, 2006. As part of the quality improvement program, each MA organization is required to have a chronic care improvement program. Each chronic care improvement program is required to have a method for monitoring and identifying enrollees with multiple or sufficiently severe chronic conditions that meet criteria established by the organization for participation under the program.

Each MA organization is required to provide for the collection, analysis and reporting of data that permit measurement of health outcomes and other indicators of quality. The Secretary will establish through regulation appropriate reporting requirements for regional PPOs. The Secretary is permitted to change the types of data that are required of plans only after submitting to Congress a report on the reasons for the changes that was prepared in consultation with MA plans and private accrediting bodies. The Secretary is not permitted to collect data on quality, outcomes, and beneficiary satisfaction for the purposes of consumer choice and program administration if the data were not already being collected as of November 1, 2003. However, these provision regarding data are not to be construed as restricting the ability of the Secretary to carry out the comparative information dissemination provisions regarding plan quality and performance that are contained in section 1851(d)(4)(D).

The conference agreement also provides that MA organizations are deemed to meet the quality improvement program requirements as the Secretary determines to be appropriate if the MA organization is accredited (and periodically reaccredited) by a private accrediting organization under a process that the Secretary has determined ensures that the accrediting organization applies and enforces standards that meet or exceed the standards established by the Secretary.

Chronically Ill Medicare Beneficiary Research, Data, Demonstration Strategy (Section 723 of the Conference Agreement).

Present Law

No provision.

House Bill

No provision.

Senate Bill

No provision.

Conference Agreement

The conference agreement requires the Secretary to develop a plan to improve quality of care and to reduce the cost of care for chronically ill Medicare beneficiaries within 6 months after enactment. The plan is required to use existing data and identify data gaps, develop research initiatives, and propose intervention demonstration programs to provide better health care for chronically ill Medicare beneficiaries. The plan is required to: (1) integrate existing datasets including the Medicare Current Beneficiary Survey, the Minimum Data Set, the Outcome and Assessment Information Set, data from the Quality Improvement Organizations, and claims data; (2) identify any new data needs and a methodology to address new data needs; (3) plan for the collection of such data in a data warehouse; and (4) develop a research agenda using the data. In developing the plan, the Secretary is required to consult with experts in the fields of care for the chronically ill (including clinicians) and is required to enter into contracts with appropriate entities for the development of the plan. The Secretary is required to implement the plan no later than 2 years after enactment. Appropriations are authorized from amounts in the Treasury not otherwise appropriated, such sums as may be necessary in fiscal years 2004 and 2005 to carry out this provision.

Subtitle D—Other Provisions

Improvements in the National and Local Coverage Determination Process to Respond to Changes in Technology (Section 731 of the Conference Agreement, Section 733 of the House Bill, and Sections 458 and 554 of the Senate Bill).

Present Law

Coverage Determinations. Under administrative authorities, CMS announced in March 2003 the establishment of a technology council charged with improving Medicare coverage, coding and payment for emerging technologies. Council membership includes senior CMS staff.

Clinical Trials. No explicit statutory authorization regarding category A clinical trials. Under existing authorities, Medicare covers the routine costs of qualifying clinical trials which includes items or services typically provided absent a clinical trial and items or services needed for the diagnosis or treatment of complications. Medicare does not pay for certain aspects of the clinical trial including: the investigational item or service, items and services not used in the direct clinical management of the patient, and items and services customarily provided by the research sponsor free of charge for any enrollee in the trial.

Coding. The Secretary issues temporary national Health care Common Procedure Coding System (HCPCS) codes under Medicare Part B that are used until permanent codes are established.

House Bill

Coverage. The Secretary would be required to make available to the public the factors considered in making national coverage determinations of whether an item or service is reasonable and necessary. The Secretary would be required to develop guidance documents similar to those required by the Federal Food, Drug and Cosmetic Act (21 U.S.C. 371(h)). The provision would establish a time frame for decisions regarding national coverage determinations of 6 months after a request when a technology assessment is not required and 9 months when a technology assessment is required and in which a clinical trial is not requested.

Following the 6- or 9-month period, the Secretary would be required to make a draft of the proposed decision available in the HHS website or by other means; to provide a 30-day public comment period; to make a final decision on the request within 60 days following the conclusion of the public comment period; make the clinical evidence and data used in making the decision available to the public when the decision differs from the recommendations of the Medicare Coverage Advisory Committee; and in the case of a decision to grant the coverage determination, assign a temporary or permanent code and implement the coding change. In instances where a request for a national coverage determination is not reviewed by the Medicare Coverage Advisory Committee, the Secretary would be required to consult with appropriate outside clinical experts.

The Secretary would also be required to develop a plan to evaluate new local coverage determinations to decide which local decisions should be adopted nationally and to decide to what extent greater consistency can be achieved among local coverage decisions, to require the Medicare contractors within an area to consult on new local coverage policies, and to disseminate information on local coverage determination among Medicare contractors to reduce duplication of effort. The provision would be effective for determinations as of January 1, 2004.

Clinical Trials. Medicare would cover the routine costs of care for beneficiaries participating in clinical trials that are conducted in accordance with an investigational device exemption approved under section 530(g) of the Federal Food, Drug, and Cosmetic Act. The provision would be effective for clinical trials begun before, on, or after the date of enactment and to items and services furnished on or after enactment.

Coding. The Secretary would be required to implement revised procedures for the issuance of temporary national HCPCS codes by January 1, 2004. The provision would further require the Secretary to use data reflecting prices and costs of products in the United States in setting payment rates. The provision would be effective upon enactment.

Senate Bill

Coverage. The provision would establish a time frame for decisions regarding national coverage determinations of 6 months after a request when a technology assessment is not required and 9 months when a technology assessment is required and in which a clinical trial is not requested. Following the 6- or 9-month period, the Secretary would be required to make a draft of the proposed decision available in the HHS website or by other means; to provide a 30-day public comment period; to make a final decision on the request within 60 days following the conclusion of the public comment period; make the clinical evidence and data used in making the decision available to the public when the decision differs from the recommendations of the Medicare Coverage Advisory Committee; and in the case of a decision to grant the coverage determination, assign a temporary or permanent code and implement the coverage decision at the end of the 60-day period. The provision would apply to national coverage determinations as of January 1, 2004.

The Secretary would be required to establish a Council for Technology and Innovation composed of senior CMS staff and clinicians to coordinate coverage, coding, and payment processes under Title XVIII and the exchange of information on new technologies between CMS and other entities that make similar decisions. The provision would be effective upon enactment.

Clinical Trials. The routine costs of care for Medicare beneficiaries participating in clinical trials that are conducted in accordance with an investigational device exemption approved under Senate Section 530(g) of the Federal Food, Drug, and Cosmetic Act would be covered. This provision would not require the Secretary to modify the existing regulations and cover the cost of a medical device that is the subject of an investigational device exemption by the Food and Drug Administration. The Secretary would be required to ensure that total Medicare expenditures associated with this provision do not exceed: $32 million in 2005; $34 million in 2006; $36 million in 2007; $38 million in 2008; $40 million in 2009; $42 million in 2010; $44 million in 2011; $48 million in 2012; and $50 million in 2013. The Secretary would be required to take appropriate steps to stay within these funding limitations, including limiting the number of clinical trials covered and paying for only a portion of the associated routine costs. The provision would be effective for clinical trials begun before, on, or after the date of enactment and to items and services furnished on or after January 1, 2005.

Coding. No provision.

Conference Agreement

Coverage. The conference agreement requires the Secretary to make available to the public the factors considered in making national coverage determinations of whether

an item or service is reasonable and necessary. The Secretary is required to develop guidance documents similar to those required by the Federal Food, Drug and Cosmetic Act (21 U.S.C. 371(h)). The provision establishes a timeframe for decisions regarding national coverage determinations of 6 months after a request when a technology assessment is not required and 9 months when a technology assessment is required and in which a clinical trial is not requested.

Following the 6- or 9-month period, the Secretary is required to make a draft of the proposed decision available in the HHS website or by other means; to provide a 30-day public comment period; to make a final decision on the request with 60 days following the conclusion of the public comment period; make the clinical evidence and data used in making the decision available to the public when the decision differs from the recommendations of the Medicare Coverage Advisory Committee; and in the case of a decision to grant the coverage determination, assign a temporary or permanent code and implement the coding change. In instances where a request for a national coverage determination is not reviewed by the Medicare Coverage Advisory Committee, the Secretary is required to consult with appropriate outside clinical experts.

The Secretary is also required to develop a plan to evaluate new local coverage determinations to decide which local decisions should be adopted nationally and to decide to what extent greater consistency can be achieved among local coverage decisions, to require the Medicare contractors within an area to consult on new local coverage policies, and to disseminate information on local coverage determination among Medicare contractors to reduce duplication of effort. The provision is effective for national determinations as of January 1, 2004 and for local coverage determinations made on or after July 1, 2004.

Clinical Trials. The conference agreement prohibits the Secretary from excluding from Medicare coverage the routine costs of care incurred by a Medicare beneficiary participating in a category A clinical trial, beginning with routine costs incurred on and after January 1, 2005. The conference agreement makes clear that this provision does not apply to, or affect, Medicare coverage or payment for a non-experimental/investigational (category B) device.

Coding. The conference agreement requires the Secretary to implement revised procedures for issuing temporary national HCPCS codes under Medicare Part B no later than July 1, 2004.

Extension of Treatment for Certain Physician Pathology Services Under Medicare (Section 732 of the Conference Agreement, Section 734 of the House Bill, and Section 435 of the Senate Bill).

Present Law

In general, independent laboratories cannot directly bill for the technical component of pathology services provided to Medicare beneficiaries who are inpatients or outpatients of acute care hospitals. BIPA permitted independent laboratories with existing arrangements with acute care hospitals to bill Medicare separately for the technical component of pathology services provided to the hospitals' inpatients and outpatients. The arrangement between the hospital and the independent laboratory had to be in effect as of July 22, 1999. The direct payments for these services apply to services furnished during a 2-year period starting on January 1, 2001 and ending December 31, 2002.

House Bill

Medicare would make direct payments for the technical component of pathology services furnished to beneficiaries who are inpatients or outpatients of acute care hospitals on or after January 1, 2004 until December 31, 2008. A change in hospital ownership would not affect these direct billing arrangements. The provision would be effective as if it had been included in BIPA.

Senate Bill

Direct payments for the technical component for these pathology services would be made for services furnished during 2005. The provision would be effective upon enactment.

Conference Agreement

Direct payments for the technical component for these pathology services will be made for services furnished during 2005 and 2006.

Payment for Pancreatic Islet Cell Investigational Transplants for Medicare Beneficiaries in Clinical Trials (Section 733 of the Conference Agreement, Section 735 of the House Bill, and Section 462 of the Senate Bill).

Present Law

No explicit statutory authorization. Under existing authorities, Medicare covers the routine costs of qualifying clinical trials which includes items or services typically provided absent a clinical trial and items or services needed for the diagnosis or treatment of complications. Medicare does not pay for certain aspects of the clinical trial including: the investigational item or service, items and services not used in the direct clinical management of the patient, and items and services customarily provided by the research sponsor free of charge for any enrollee in the trial.

House Bill

Medicare would be required to pay for the routine costs for items and services that beneficiaries receive as part of a clinical investigation of pancreatic islet cell transplants conducted by the National Institute of Health. The provision would be effective upon enactment.

Senate Bill

The Secretary would be required to establish a 5-year demonstration project to pay for pancreatic islet cell transplantation and related items and services for Medicare beneficiaries who have type 1 diabetes and end-stage renal disease. The Secretary would be required to establish an appropriate methodology to pay for the items and services furnished under the demonstration. A report to Congress would be required on the project 4 months after the demonstration ends. The provision would be effective upon enactment.

Conference Agreement

The conference agreement requires the Secretary, acting through the National Institute of Diabetes and Digestive and Kidney Disorders, to conduct a clinical investigation of pancreatic islet cell transplantation which includes Medicare beneficiaries. Beginning no earlier than October 1, 2004, the Secretary is required to pay for the routine costs as well as transplantation and appropriate related items and services for Medicare beneficiaries who are participating in such a trial.

In implementing the clinical investigation of pancreatic islet cell transplantations, CMS, in working with NIH, should ensure that a sufficient number of Medicare beneficiaries participate so that the results are applicable to the broader Medicare population with Type 1 diabetes and Medicare is able to make an informed decision regarding coverage of pancreatic islet transplantation.

Restoration of Trust Funds (Section 734 of the Conference Agreement and Section 623 of the Senate Bill).

Present Law

The Federal Hospital Insurance (HI) Trust Fund was established on July 30, 1965 as a separate account in the U.S. Treasury. All of the HI financial operations are handled through this fund. The trust fund's primary source of income consists of amounts appropriated to it, under permanent authority, on the basis of taxes paid by workers, their employers, and individuals with self-employment income. Up to 85% of an individual or a couples Old Age and Survivors, Disability Insurance (OASDI) benefits may be subject to federal income taxation if their income exceeds certain thresholds. The income tax revenue attributable to the first 50% of the OASDI benefits is allocated to the OAS and DI trust funds. The revenue associated with the amount between 50% and 85% is allocated to the HI trust funds. An incorrect amount of income from the taxation of OASDI benefits was transferred into the HI Trust Fund in April 2001, because of clerical error. An additional amount was transferred into the HI Trust Fund in December, 2001 to correct for the principal component of the error. Correction of the interest component associated with the clerical error requires legislation.

House Bill

No provision.

Senate Bill

After consultation with the Secretary of HHS, the Secretary of the Treasury would be required to transfer into the HI Trust fund an amount that would have been held by that fund if the clerical error had not occurred within 120 days of enactment.

Conference Agreement

The conference agreement requires the Secretary of the Treasury to transfer into the HI Trust Fund an amount that would have been held by that fund if the clerical error had not occurred. Such money is appropriated to the HI Trust Fund. The appropriation is made and transfer is required within 120 days of enactment of this Act. In the case of a clerical error that occurs after April 15, 2001, the Secretary of the Treasury is required to notify the appropriate committees of Congress about the error and the actions to be taken, before such action is taken.

Modifications to Medicare Payment Advisory Commission (MedPAC) (Section 735 of the Conference Agreement and Section 731 of the House Bill).

Present Law

The Medicare Payment Advisory Commission is a 17-member body that reports and makes recommendations to Congress regarding Medicare payment policies. The Comptroller General is required to establish a public disclosure system for Commissioners to disclose financial and other potential conflicts of interest.

House Bill

MedPAC would be required to examine the budgetary consequences of a recommendation before making the recommendation and to review the factors affecting the efficient provision of expenditures for services in different health care sectors under Medicare fee-for-service. MedPAC would be required to submit 2 additional reports no later than June 1, 2004. The first report would study the

need for current data, and the sources of current data available, to determine the solvency and financial circumstances of hospitals and other Medicare providers. MedPAC would be required to examine data on uncompensated care, as well as the share of uncompensated care accounted for by the expenses for treating illegal aliens. The second report would address investments and capital financing of hospitals participating under Medicare and access to capital financing for private and not-for-profit hospitals. The provision would also require that members of the Commission be treated as employees of Congress for purposes of financial disclosure requirements.

Senate Bill

No provision.

Conference Agreement

The conference agreement requires that MedPAC is to examine the budgetary consequences of a recommendation before making the recommendation and to review the factors affecting the efficient provision of expenditures for services in different health care sectors under Medicare fee-for-service. MedPAC is required to submit 2 additional reports no later than June 1, 2004. The first report is to study the need for current data and the sources of current data available, to determine the solvency and financial circumstances of hospitals and other Medicare providers. The second report is to address investments and capital financing of hospitals participating under Medicare and access to capital financing for private and not-for-profit hospitals.

The conference agreement requires that the Comptroller General appoint experts in the area of pharmaco-economics or prescription drug benefit programs to MedPAC. In addition, members of the Commission are required to be treated as employees of Congress for purposes of financial disclosure requirements and the Comptroller General is required to ensure compliance with this requirement.

Technical Amendments (Section 736 of the Conference Agreement).

Present Law

The Medicare, Medicaid, and SCHIP Benefit Improvement and Protection Act of 2000 (BIPA) contains certain grammatical omissions.

House Bill

No provision.

Senate Bill

No provision.

Conference Agreement

The conference agreement corrects the grammatical omissions.

Institute of Medicine Report (Section 723 of the House Bill).

Present Law

No provision.

House Bill

No provision.

Senate Bill

No provision.

Conference Agreement

No provision.

MedPAC Report (Section 724 of the House Report).

Present Law

No provision.

House Bill

MedPAC would be required to evaluate the chronic care improvement program. The evaluation would be required to include a description of the status of the implementation of the programs, the quality of health care services provided to individuals participating in the program, and the cost savings attributed to the implementation of the program. The report of the evaluation would be required to be submitted to Congress not later than two years after the implementation of the programs. The provision would be effective upon enactment.

Senate Bill

No provision.

Conference Agreement

No provision.

MedPAC Study on Medicare Payments and Efficiencies in the Health Care System (Section 455 of the Senate Bill).

Present Law

No provision.

House Bill

No provision.

Senate Bill

MedPAC would be required to make recommendations to Congress regarding ways to recognize and reward efficiencies and lower utilization of services created by the practice of medicine in historically efficient and low-cost areas. The recommendations would be required to be made within established Medicare payment methodologies for hospitals and physicians. The measures of efficiency would include: shorter than average hospital stays; fewer than average physician visits; fewer than average laboratory tests; greater than average utilization of hospice services; and the efficacy of disease management and preventive health services. The recommendations would be due 18 months after enactment.

Conference Agreement

No provision.

TITLE VIII—COST CONTAINMENT

Subtitle A: Cost Containment

Inclusion in Annual Report of Medicare Trustees of Information on Status of Medicare Trust Funds (Section 801 of the Conference Agreement, Section 131 of House Bill; Sections 131 and 132 of Senate Bill).

Current Law

The Medicare Board of Trustees was established under the Social Security Act to oversee the financial operations of the Medicare Hospital Insurance (HI) trust fund and the Medicare Supplementary Medical Insurance (SMI) trust fund. The Trustees are required to submit annual reports to the Congress.

The HI trust fund revenues come primarily from payroll taxes. Employers and employees each pay 1.45% of their earnings, while self-employed workers pay 2.9% of their net income. Other HI revenue sources include interest on the investments of the trust fund, federal income taxes on Social Security benefits, premiums from voluntary enrollees into Part A, railroad retirement account transfers and reimbursement for certain uninsured persons. Medicare Part A pays for beneficiaries medical expenses incurred in hospitals, skilled nursing facilities, hospices, and a portion of home health care services.

The SMI trust fund revenues are composed of beneficiary premiums to purchase Part B and general revenues. The Part B premium is set at an amount so that aggregate premiums are estimated to equal 25% of program costs and the monthly premium for 2003 is $58.70. General revenues comprise the remaining 75% of Part B program costs. Medicare Part B pays for the following: physician and other health care practitioner services; other medical and health services, including laboratory and diagnostic tests; outpatient hospital services and clinic services; and therapy and ambulance services; durable medical equipment, and home health services not covered under Part A.

House Bill

The provision would require the trustees to submit a combined report on the status of the two trust funds and the Prescription Drug Trust Fund. The report would include a statement of the total amounts obligated during the preceding fiscal year from the General Revenues of the Treasury for payment of benefits and the percentage such amount bore to all other general revenue obligations of the Treasury in that year. This information would be provided for each year beginning with the inception of Medicare. Ten-year and 75-year projections would also be required. The report would also provide a comparison to the rate of growth in the gross domestic product. Each report would be published by the Committees on Ways and Means and Energy and Commerce and be made available on the Internet.

Senate Bill

Section 131 would require the trustees to submit a combined report on the status of the two trust funds including the Prescription Drug Account. The report would include a statement of the total amounts obligated during the preceding fiscal year from the General Revenues of the Treasury and the percentage such amount bore to all other obligations of the Treasury in that year. This calculation would be made separately for Medicare benefits and for administrative and other expenses. This information would be provided for each year beginning with the inception of Medicare. Ten-year and 50-year projections would also be required. The report would also provide a comparison of the rates of growth for both benefits and administrative costs to the rates of growth in the gross domestic product, health insurance costs in the private sector, employment-based health insurance costs in the public and private sectors, and other areas as determined appropriate by the Board of Trustees.

The section would express the sense of the Congress that the committees of jurisdiction would hold hearings on these reports.

Section 132 would require the 2004 reports to include an analysis of the total amount of unfunded obligation of Medicare. The analysis would compare long-term obligations, including the combined obligations of the HI and SMI trust funds, to the dedicated funding sources for the program (not including transfers of general revenue)

Conference Agreement

Beginning with their report in 2005, the Trustees' annual report is required to include information on: (1) projections of growth of general revenue Medicare spending as a percentage of the total Medicare outlays for the fiscal year and each of the succeeding 6 fiscal years, 10, 50, and 75 years after the fiscal year, and previous fiscal years; (2) comparisons with the growth trends for the gross domestic product, private health costs, national health expenditures, and other appropriate measures; (3) expenditures and trends in expenditures under Part D; and (4) a financial analysis of the combined Medicare trust funds if general revenue funding for Medicare is limited to 45 percent of total Medicare outlays. The trust fund reports are also required to include a determination as to whether there is projected to be "excess general revenue Medicare funding" (as defined in the paragraph below) for any of the

succeeding 6 fiscal years in its annual reports of Medicare's trust funds.

''Excess general revenue Medicare funding'' is defined as general revenue Medicare funding expressed as a percentage of total Medicare outlays in excess of 45 percent. This measure is calculated by dividing total Medicare outlays minus dedicated Medicare financing sources by total Medicare outlays.

An affirmative determination of excess general revenue funding of Medicare for 2 consecutive annual reports will be treated as funding warning for Medicare in the second year for the purposes of requiring Presidential submission of legislation to Congress. Whenever any Trustees report includes a determination that within the 7-fiscal-year period there will be excess general revenue Medicare funding, Congress and the President are advised to address the matter under existing rules and procedures.

Dedicated Medicare financing sources include amounts appropriated to the HI trust fund for payroll taxes, transfers from the Railroad Retirement accounts, reimbursements for uninsured persons, and reimbursement for transitional insured coverage; taxation of certain OASDI benefits and tier II railroad retirement taxes, state transfers for Medicare coverage of eligible individuals who receive public assistance; premiums for Parts A, B, and D paid by non-Federal sources including amounts from voluntary enrollees (Part A), adjustments (Part B) and the MA monthly prescription drug beneficiary premiums paid under Part C that are attributable to basic prescription drug coverage (Part D); and gifts received by the Medicare trust funds. The premium amounts are determined without regard to any reduction in the Part B premiums attributable to the beneficiary rebate under the MA program and Part D premium amounts are deemed to include any penalties for late enrollment.

Medicare outlays means total outlays from the Medicare trust funds and include payments made to plans under part C that are attributable to any rebates under the Medicare Advantage program and Medicare administrative expenditures. These outlays are required to be offset by the amount of fraud and abuse collection when applied to or deposited into a Medicare trust fund.

The Medicare trust funds are defined as the Federal Hospital Insurance Trust Fund and the Federal Supplementary Medical Insurance Trust Fund which includes the Medicare Prescription Drug Account.

Presidential Submission of Legislation (Section 802 of the Conference Agreement).

House Bill

No provision.

Senate Bill

No provision.

Conference Agreement

In the event that a Medicare funding warning is made, the President is required to submit to Congress proposed legislation to respond to the warning. This must be completed within the 15-day period beginning on the date of the budget submission to Congress for the succeeding year it is made. If during the year in which the warning is made, legislation is enacted which eliminates excess general revenue Medicare funding for the 7-fiscal year period, then the President is not required to make a legislative proposal. The conference agreement expresses a sense of Congress that legislation submitted in this regard should be designed to eliminate excess general revenue Medicare funding for the 7-fiscal year period that begins in such year, as certified by the Board of Trustees not later than 30 days after the date of enactment.

Procedures in the House of Representatives (Section 803 of the Conference Agreement).

House Bill

No provision.

Senate Bill

No provision.

Conference Agreement

The conference agreement sets out the procedures for House consideration of the President's legislative proposal. Within 3 days of receiving the President's legislative proposal, the Majority Leader and Minority Leader of the House, or their designees, are required to introduce the proposal. Any legislation introduced is required to be referred to the appropriate committees which are required to report Medicare funding legislation no later than June 30. The chairman of the Committee on the Budget is required to certify whether or not Medicare funding legislation eliminates excess general revenue Medicare funding for any year within the 7-fiscal year period and whether the legislation would eliminate excess general revenue Medicare funding within the 7-fiscal year period.

If the House fails to vote on final passage of the legislation by July 30, fallback procedures are provided for under the conference agreement. After 30 calendar days (and concurrently 5 legislative days) after the introduction of the legislation, a move to discharge any committee to which the legislation has been referred is in order, under specified circumstances, and debate on the motion to discharge is limited to one hour.

The conference agreement provides for floor consideration in the House of the discharged legislation by the Committee of the Whole no later than 3 legislative days after discharge.

House Bill

No provision.

Senate Bill

No provision.

Conference Agreement

Section 804 provides for some limited special procedures in the Senate for consideration of legislation arising from the Medicare Trustees determination that there will be ''excess general revenue Medicare funding'' under section 801.

If the Medicare Trustees report, pursuant to section 801, includes a ''medicare funding warning'' and if the President submits the legislation described in section 802 in response to such warning, that legislation (along with any other qualifying legislation otherwise introduced in the Senate or received from the House) will be entitled to the special procedures set out in section 804.

Section 804(a) requires the Majority Leader and the Minority Leader (or their designees) to introduce the President's legislation. Such legislation must be entitled ''A bill to respond to a medicare funding warning.'' This bill, regardless of the subject matter and notwithstanding any jurisdictional precedents of the Senate, shall be referred to the Committee on Finance. Any other legislation introduced by any member of the Senate, bearing this same title, shall also be referred to the Committee on Finance. Such referrals shall not be considered to create any jurisdictional precedents for the Senate.

Section 804(c) provides that this ''medicare funding legislation'' will be entitled to the special rules set out in subsections (d) and (e) only if: (1) it was passed by the House or (2) it is limited to matters within the jurisdiction of the Committee on Finance. This subsection ensures that a measure is subject to the special rules (whether it be the President's bill or one introduced by a member of the Senate) only if its contents are limited to matters solely within the jurisdiction of Finance. Thus the President or any member of the Senate may propose any type of legislation in the name of eradicating the ''excess general revenue Medicare funding'', but only those measures which conform with the jurisdictional constraints of the Committee on Finance, shall be entitled to the special procedures set out in this section.

Clearly however, the Senate can not dictate the content of the House-passed measure. Thus subsection (c) explicitly states that a bill coming over from the House would still be entitled to these special procedures. The conferees intend that these procedures apply to the House-passed bill regardless of any jurisdictional issues, but limit the application of the procedures to a Senate-originated matter that is within the jurisdiction of Finance. If a measure does not qualify for these special procedures, then it shall be considered under the regular order in the Senate.

Section 804(d) provides a unique mechanism in the Senate: a motion to discharge a specific piece of legislation. Subsection (d) states that if the Committee on Finance has not reported any ''medicare funding legislation'' by June 30 then it is in order for any Senator to move to discharge the committee from any one of the pieces of ''medicare funding legislation'' that has been referred to that committee. Only one motion may be made in any session of Congress and such motion may only refer to a single piece of legislation. This motion is not amendable and debate of the motion and any related appeals is limited to 2 hours. The 2 hours is to be equally divided and controlled between the maker of the motion and the Majority Leader (or their designees). If the Majority Leader supports the motion, then the time in opposition will be controlled by the Minority Leader (or the Minority Leader's designee).

Unlike other instances of limited debate, in this case, a point of order may be made at any time during the 2 hours—a Senator need not await the expiration or yielding back of time to do so. Any appeal made within the 2 hours, may be debated for whatever time remains if any Senator desires to debate the appeal. Any motion or appeal made after the 2 hours shall be decided without debate. It is not in order to move to proceed to the consideration of any other measure or matter while the motion to discharge (or the motion to reconsider the vote with respect to the motion to discharge) is pending. The only motions in order during the 2 hours (or at the conclusion of the 2 hours) of debate are as follows: to postpone to a day certain, to postpone indefinitely, to lay on the table, to take a recess, to adjourn to a day certain, to adjourn. These motions shall have the same precedence as described in Rule XXII of the Standing Rules of the Senate. Note that pursuant to subsection (d)(2), the motion to proceed to executive business (which is listed in Rule XXII) as well as the motion to proceed to any other legislative matter is explicitly precluded.

Pursuant to subsection (d)(4), this special motion to discharge is no longer available if the Chairman of the Committee on the Budget certifies that ''medicare funding legislation'' which eliminates the ''excess general revenue medicare funding'' described in section 801(c) has been enacted in that session.

Subsection (e) reiterates the fact that under existing Senate procedures once ''medicare funding legislation'' has been placed on the Calendar (having been either reported or discharged from the committee) it is in order for any member of the Senate to make a motion to proceed to the consideration of that measure. Such motion and all subsequent actions in the Senate shall be considered under the Standing Rules of the Senate and the precedents thereto or pursuant to any unanimous consent agreements reached, as the case may be. This section should not be interpreted as creating a ''privileged'' measure in the Senate. Consequently, it is the intent of the Conferees that there will be no further special procedures (such as a waiver or alteration of the procedures with respect to reports set out in Rule XVII or any other rule of the Standing Rules of the Senate) available to such measures as a result of this Act.

Subtitle B: Income-Related Reduction in Part B Premium Subsidy

Present Law

The Medicare Part B premium is currently set each year to cover 25 percent of Medicare's benefits under Part B. When Medicare was created in 1965, the Part B premium was set to cover 50 percent of the costs of the Part B benefits. The share of Part B spending covered by the premium declined between 1975 and 1983 to less than 25 percent of spending, because during that time premium increases were limited by the cost-of-living adjustment for Social Security benefits. During the late 1980s and early 1990s, Congress routinely voted to set the Part B premium at 25 percent of Part B costs, and that percentage was codified in the Balanced Budget Act of 1997 (BBA 97).

All seniors over age 65 who elect Part B during their initial enrollment period pay the same Part B premium, regardless of income.

House Bill

No provision.

Senate Amendment

No provision.

Conference Agreement

In order to begin to address the fiscal challenges facing the Medicare program, beginning in 2007, Medicare beneficiaries with incomes over $80,000 for an individual or $160,000 for a married couple will be asked to contribute more to the cost of their Medicare benefits through payment of a higher premium. Approximately 4 percent of Medicare beneficiaries have incomes above these levels. All beneficiaries will continue to receive some level of premium assistance, and all beneficiaries will continue to be eligible for the full range of Medicare benefits. This proposal will target taxpayer dollars at those who need it the most by reducing the government subsidy for those who have the resources to cover more of their own costs.

Beneficiaries with incomes under $80,000 for an individual and $160,000 for a married couple will continue to receive a government subsidy at 75 percent and pay premiums at the 25 percent rate. Those with incomes between $80,000 and $100,000 ($160,000 and $200,000 for a married couple) will receive a 65 percent subsidy and pay 35 percent as a premium. Those with incomes between $100,000 and $150,000 ($200,000 and $300,000 for a couple) will receive a 50 percent subsidy and pay a premium at 50 percent. Those with incomes between $150,000 and $200,000 ($300,000 and $400,000 for a married couple) will receive a 35 percent subsidy and pay a premium at a 65 percent rate. Those with incomes above $200,000 ($400,000 for a married couple) will receive a 20 percent subsidy and pay a premium at an 80 percent rate.

Beneficiaries who are affected will be notified of their premium levels at the start of the year. They may appeal their premium level based on major changes in life circumstances, such as divorce, marriage, or death of a spouse. Although this policy affects only a small number of beneficiaries, it will have a significant impact in controlling the growth of Medicare spending in the future.

To facilitate the income-related reduction in Part B premium subsidy, the conference agreement authorizes the disclosure of certain return information to employees and contractors of the Social Security Administration. Upon written request from the Commissioner of Social Security, the IRS may disclose certain items of return information with respect to a taxpayer whose premium may be subject to adjustment. With respect to such taxpayers, the IRS may disclose (1) taxpayer identity information; (2) filing status; (3) adjusted gross income; (4) the amounts excluded from such taxpayer's gross income under sections 135 and 911 of the Internal Revenue Code (relating to income from United States Savings bonds used to pay higher education tuition and fees, and foreign earned income); (5) tax-exempt interest received or accrued during the taxable year to the extent such information is available; (6) amounts excluded from such taxpayer's gross income by sections 931 and 933 of the Internal Revenue Code (relating to income from sources within Guam, American Samoa, the Northern Mariana Islands, or Puerto Rico); (7) for nonfilers only, such other information relating to the liability of the taxpayer as the Secretary may prescribe by regulation, as might indicate that the amount of the premium of the taxpayer may be subject to adjustment (including estimated tax payments and income information derived from Form W–2, Form 1099, or similar information returns); and (8) the taxable year with respect to which the preceding information relates. Return information disclosed under this authority may be used by employees and contractors of the Social Security Administration only for purposes of, and to the extent necessary in, establishing the appropriate amount of any Part B premium adjustment. Employees and contractors of the Social Security Administration are subject to the penalties for unauthorized disclosure and inspection, as well as the applicable safeguard requirements.

TITLE IX—REGULATORY REDUCTION AND CONTRACTING REFORM

Administrative Improvements within the Centers for Medicare & Medicaid Services (CMS) (Section 900 of the Conference Agreement, Sections 801 and 802 of the House Bill, Sections 301 and 302 of the Senate Bill).

Present Law

The authority for administering the Medicare program resides with the Secretary of Health and Human Services. The Secretary originally created the agency that administers the Medicare and Medicaid programs in 1977 under his administrative authority. Regulations regarding Medicare are required to be promulgated by the Secretary. The Medicare statute requires that the Administrator of the Centers for Medicare & Medicaid Services (CMS formerly known as the Health Care Financing Administration) be appointed by the President with the advice and consent of the Senate. Title 5 of the U.S. Code sets the Administrator's salary at level IV of the Executive Schedule. The Medicare statute requires that the HCFA administrator appoint a Chief Actuary who reports directly to such administrator and is paid at the highest rate of basic pay for the Senior Executive Service.

House Bill

The section would amend title XVIII to add new section 1809 which, under subsection (a), would establish a new Medicare Benefits Administration (MBA) within the Department of Health and Human Services.

Subsection (b) would provide for an Administrator and Deputy Administrator of the MBA. Both would be appointed by the President with the advice and consent of the Senate for 4-year terms. If a successor did not take office at the end of the term, the Administrator would continue in office until the successor enters the office. In that event, the confirmed successor's term would be the balance of the 4-year period. The Administrator would be paid at level III of the Executive Schedule and the Deputy Administrator at level IV of the Executive Schedule. The Administrator would be responsible for the exercise of all powers and the discharge of duties of the MBA and has authority and control over all personnel. The provision would permit the Administrator to prescribe such rules and regulations as the Administrator determined necessary or appropriate to carry out the functions of MBA, subject to the Administrative Procedure Act. The Administrator would be able to establish different organizational units within the MBA except for any unit, component, or provision specifically provided for by section 1809. The Administrator may assign duties, delegate, or authorize redelegations of authority to MBA officers and employees as needed. The Secretary of Health and Human Services shall ensure appropriate coordination between the Administrator of MBA and the Administrator of the Centers for Medicare & Medicaid Services (CMS) in administering the Medicare program. The provision also would establish a position of Chief Actuary within the MBA who would be appointed by the Administrator and paid at the highest rate of basic pay for the Senior Executive Service. The Chief Actuary would exercise such duties as are appropriate for the office of Chief Actuary and in accordance with professional standards of actuarial independence.

Subsection (c) would prescribe the duties of the Administrator and administrative provisions relating to the MBA. In administering parts C, D, and E of Medicare, the Administrator would be required to negotiate, enter into and enforce contracts with Medicare Advantage plans and enhanced fee-for-service plans and with prescription drug plan sponsors for Medicare prescription drug plans. The Administrator would be required to carry out any duty provided for under part C, D, or E of Medicare including implementing the prescription drug discount card endorsement program and demonstration programs (that are carried out in whole or in part under part C, D, or E). The provision specifically prohibits the Administrator from requiring a particular formulary or instituting a price structure for the reimbursement of covered drugs, from interfering in any way with negotiations between prescription drug plan sponsors and Medicare Advantage organizations and enhanced fee-for-service organizations and drug manufacturers, wholesalers, or other suppliers of covered drugs; and otherwise interfering with the competitive nature of providing prescription drug coverage through such entities and

organizations. These negotiations would be carried out by private plans, eager to capture market share through lower premiums, and manufacturers, willing to negotiate discounts for volume assurance. Such private sector entities are far better suited to achieve maximum discounts and lower premiums for plan participants than a disinterested Administrator.

The Administrator would be required to submit a report to Congress and the President on the administration of parts C, D, and E during the previous year by not later than March 31 of each year.

The Administrator, with the approval of the Secretary, would be permitted to hire staff to administer the activities of MBA without regard to chapter 31 of title 5 of the U.S. Code, except for 12 sections. The Administrator would be required to employ staff with appropriate and necessary experience in negotiating contracts in the private sector. The staff of MBA would be paid without regard to chapter 51 (other than section 5101 requiring classification of positions according to certain principles) and chapter 53 (other than section 5301 relating to the principles of pay systems) of title 5 of the U.S. Code. The rate of compensation for staff of MBA would not be able to exceed level IV of the Executive Schedule. The Administrator would be limited in the number of full-time-equivalent (FTEs) employees for the MBA to the number of FTEs within CMS performing the functions being transferred at the time of enactment. The Secretary, the Administrator of MBA and the Administrator of CMS would be required to establish an appropriate transition of responsibility to redelegate the administration of Medicare part C from CMS to MBA. The provision would require the Secretary to ensure that the Administrator of CMS transfers such information and data as the Administrator of MBA requires to carry out the duties of MBA.

Subsection (d) would require the Secretary to establish an Office of Beneficiary Assistance within MBA to coordinate Medicare beneficiary outreach and education activities, and provide Medicare benefit and appeals information to Medicare beneficiaries under parts C, D, and E.

Subsection (e) would establish the Medicare Policy Advisory Board (the Board) within the MBA to advise, consult with, and make recommendations to the Administrator regarding the administration and payment policies of parts C, D, and E. The Board would be required to report to Congress and to the Administrator of MBA such reports as the Board determines appropriate and may contain recommendations that the Board considers appropriate regarding legislative or administrative changes to improve the administration of parts C, D, and E including: increasing competition under part C, D, or E for services furnished to beneficiaries; improving efforts to provide beneficiaries information and education about Medicare, parts C, D, and E, and Medicare enrollment; evaluating implementation of risk adjustment under parts C and E; and improving competition and access to plans under parts C, D, and E. The reports would be required to be published in the Federal Register. The reports would be submitted directly to Congress and no officer or agency of the government would be allowed to require the Board to submit a report for approval, comments, or review prior to submission to Congress. Not later than 90 days after a report is submitted to the Administrator, the Administrator would be required to submit to Congress and the President an analysis of the recommendations made by the Board. The analysis would be required to be published in the Federal Register.

The Board would be made up of 7 members serving three-year terms, with 3 members appointed by the President, 2 appointed by the Speaker of the House of Representatives, and 2 appointed by the President pro tempore of the Senate. Board members may be reappointed but may not serve for more than 8 years. The Board shall elect the Chair to serve for 3 years. The Board is required to meet at least three times a year and at the call of the Chair.

The Board would be required to have a director who, with the approval of the Board, may appoint staff without regard to chapter 31 of title 5 of the United States Code (which addresses authority for employment). In addition, the director and staff could be paid without regard to the provisions of chapter 51 and 53 of title 5 which are related to classification and pay rates and pay systems—although the rate of compensation is capped at level IV of the Executive Schedule. The Board could contract with and compensate government and private agencies or persons to carry out its duties without regard to section 3709 of the Revised Statutes (41 U.S.C. 5).

Subsection (f) would authorize an appropriation of such sums as are necessary from the Federal Hospital Insurance Trust Fund and from the Federal Supplementary Medical Insurance Trust Fund (including the Prescription Drug Account) to carry out section 1808.

The provision would be effective upon enactment, however, the enrollment and eligibility functions and implementation of parts C and E would be effective January 1, 2006.

Senate Bill

The section would amend title XVIII to add new section 1808, which, under subsection (a), would establish a new Center for Medicare Choices (CMC) within the Department of Health and Human Services by no later than March 1, 2004, to administer parts C and D of Medicare.

Subsection (b) would provide for an Administrator of CMC who would be appointed by the President with the advice and consent of the Senate for 5-year terms. The Administrator would be able to appoint a Deputy Administrator. If a successor did not take office at the end of the term, the Administrator would continue in office until the successor enters the office. In that event, the confirmed successor's term would be the balance of the 5-year period. The Administrator would be paid at level III of the Executive Schedule and the Deputy Administrator at level IV of the Executive Schedule. The Administrator would be responsible for the exercise of all powers and the discharge of duties of CMC and has authority and control over all personnel. The provision would permit the Administrator to prescribe such rules and regulations as the Administrator determined necessary or appropriate to carry out the functions of CMC, subject to the Administrative Procedure Act. The Administrator would be able to establish different organizational units within the CMC except for any unit, component, or provision provided by section 1808. The Administrator may assign duties, delegate, or authorize redelegations of authority to CMC officers and employees as needed. The Secretary of Health and Human Services shall ensure appropriate coordination between the Administrator of CMC and the Administrator of the Centers for Medicare & Medicaid Services in administering the Medicare program.

Subsection (c) would prescribe the duties of the Administrator and administrative provisions relating to the CMC. In administering parts C and D of Medicare, the Administrator would be required to negotiate, enter into and enforce contracts with MedicareAdvantage plans and with eligible entities for Medicare prescription drug plans. The Administrator would be required to carry out any duty provided for under part C or D of Medicare including demonstration programs (that are carried out in whole or in part under parts C or D). The Administrator of the agency, to the extent possible, would not be able interfere in any way with negotiations between eligible entities, MedicareAdvantage organizations, hospitals, physicians, other entities or individuals furnishing items and services under this title (including contractors for such items and services), and drug manufacturers, wholesalers, or other suppliers of covered drugs. The Administrator would be required to submit a report to Congress and the President on the administration of the voluntary prescription drug delivery program not later than March 31 of each year.

The Administrator, with the approval of the Secretary, would be able to employ management staff as determined appropriate. The Administrator would be able to compensate such managers up to the highest rate of basic pay for the Senior Executive Service. Any such manager would be required to have demonstrated, by their education and experience (either in the public or private sectors) superior expertise in the review, negotiation, and administration of health care contracts, the design of health care benefit plans, actuarial sciences, compliance and health plan contracts, consumer education and decision-making.

Subsection (d) would require the Secretary to establish an Office of Beneficiary Assistance within CMC to make Medicare eligibility determinations, enroll beneficiaries into Medicare, provide Medicare benefit and appeals information, and carry out any other activities relating to Medicare beneficiaries under title XVIII. Within the Office of Beneficiary Assistance, a Beneficiary Ombudsman would be established who is appointed by the Secretary. The Ombudsman would be required to receive complaints, grievances, and requests for information submitted by a Medicare beneficiary regarding any aspect of the Medicare program; to provide assistance with the complaints, grievances and requests including assisting beneficiaries with appeals; and with problems arising from disenrolling from a MedicareAdvantage plan or a prescription drug plan. The Ombudsman would be required to submit annual reports to Congress, the Secretary, and the Medicare Competitive Policy Advisory Board describing the activities of the Ombudsman's office and including any recommendations for improvement in the administration of title XVIII. The Ombudsman would also be required to coordinate with state medical ombudsmen programs, and with state- and community-based consumer organizations to provide information about the Medicare program and to conduct education outreach regarding resolution or avoidance of disputes and problems under the Medicare program.

Subsection (e) would establish the Medicare Competitive Policy Advisory Board (the Board) within the CMC to advise, consult with, and make recommendations to the Administrator regarding the administration and payment policies of parts C and D. The Board would be required to report to Congress and to the Administrator of CMC such

reports as the Board determines appropriate and may contain recommendations that the Board considers appropriate regarding legislative or administrative changes to improve the administration of parts C and D including: stability and solvency of the program, increasing competition, improving the quality of benefits, incorporating disease management, improving competition and access to plans in rural areas, and improving beneficiary information and education for the entire Medicare program. The reports would be required to be published in the Federal Register. The reports would be submitted directly to Congress and no officer or agency of the government would be allowed to require the Board to submit a report for approval, comments, or review prior to submission to Congress. Not later than 90 days after a report is submitted to the Administrator, the Administrator would be required to submit to Congress and the President an analysis of the recommendations made by the Board. The analysis would be required to be published in the Federal Register. The Administrator of CMC is required to provide information and assistance to the Board as is requested to carry out its functions.

The Board would be made up of 7 members serving three-year terms, with three members appointed by the President, two appointed by the Speaker of the House of Representatives, and two appointed by the President pro tempore of the Senate. Board members may be reappointed but may not serve for more than 8 years. The Board shall elect the Chair to serve for three years. The Board is required to meet at least three times a year and at the call of the Chair. The Board is required to have an executive director who, with the approval of the Board, may appoint staff as appropriate.

Subsection (f) would authorize an appropriation of such sums as are necessary from the Federal Hospital Insurance Trust Fund and from the Federal Supplementary Medical Insurance Trust Fund (including the Prescription Drug Account) to carry out section 1808.

The provision would also require that the Secretary provide 1–800–Medicare as a means by which individuals seeking information about or assistance with Medicare can receive assistance. The Secretary would be required to route calls to the appropriate entity to provide the assistance or information. The 1–800–Medicare number would be included in the Medicare handbook in place of the listing of phone numbers of individual contractors.

The Administrator of CMC would be added as Co-Secretary of the Board of Trustees of the Medicare Trust Funds. In addition, the pay level for the Administrator of CMS would be increased from level IV of the Executive Schedule to level III.

The CMC would be required to be established by the Secretary no later than March 1, 2004.

Conference Agreement

The conference agreement creates a new section 1808 of the Social Security Act establishing a center within the Centers for Medicare & Medicaid Services to administer Parts C and D of Medicare, provide notice and information to beneficiaries (as required under section 1804 of the Social Security Act), and other such duties as specified by the Secretary. The person heading the Center is required to report to the Administrator of CMS. The Secretary is required to ensure that the Center is carrying out these duties by no later than January 1, 2008.

The conference agreement permits the Secretary to employ management staff as he determines to be appropriate. If such staff are employed, the staff must have demonstrated superior expertise in at least one of the following areas: (1) the review, negotiation, and administration of health care contracts; (2) the design of health care benefit plans; (3) actuarial sciences; (4) consumer education and decision making; (5) any other area specified by the Secretary that requires specialized management or other expertise. The Secretary is required to establish the rate of pay taking into account expertise, experience, and performance. The pay rate cannot exceed the highest rate of basic pay for the Senior Executive Service under section 5382(b) of title 5, United States Code (currently ES–6). Such flexibility ensures those with private sector, real world experience managing benefit plans are hired and utilized to ensure the success of the new Medicare plans. This expertise will help mitigate against potential failure in coaxing integrated plans that promote coordinated care and modern health delivery into the Medicare program.

The conference agreement requires that an actuary within the office of the Chief Actuary of CMS have duties exclusively related to Parts C and D of Medicare and related provisions. The pay grade for the Administrator of CMS is increased to Executive Level III beginning January 1, 2004. The conferees strongly encourage the hiring of a separate actuary within the office of the actuary to assist the functions of the center. Because the analysis of the fee-for-service actuary can effect payment rates in private plan reimbursement, the two should be kept independent and answer directly to the Secretary.

In addition, the conference agreement changes statutory references from the Health Care Financing Administration to the Centers for Medicare & Medicaid Services.

Construction; Definition of Supplier (Section 901 of the Conference Agreement, Section 901 of the House Bill).

Present Law

Section 1861 of the Social Security Act contains definitions of services, institutions, and so forth under Medicare. Supplier is not explicitly defined.

House Bill

Nothing in this title would be construed as compromising or affecting existing legal remedies for addressing fraud or abuse, whether it be criminal prosecution, civil enforcement or administrative remedies (including the False Claims Act) or to prevent or impede HHS from its efforts to eliminate waste, fraud, or abuse in Medicare. The provision also would clarify that consolidation of the Medicare administrative contractors does not consolidate the Federal Hospital Insurance Trust Fund and the Federal Supplementary Medical Insurance Trust Fund. The provision would also clarify that the term ''supplier'' means a physician or other practitioner, a facility or other entity (other than a provider of services) furnishing items or services under Medicare. The provision would be effective upon enactment.

Senate Bill

No provision.

Conference Agreement

The conference agreement provides that nothing in this title shall be construed as compromising or affecting existing legal remedies for addressing fraud or abuse, whether it be criminal prosecution, civil enforcement or administrative remedies (including the False Claims Act) or to prevent or impede HHS from its efforts to eliminate waste, fraud, or abuse in Medicare. The conference agreement also clarifies that consolidating the Medicare administrative contractors does not consolidate the Federal Hospital Insurance Trust Fund and the Federal Supplementary Medical Insurance Trust Fund. The agreement also clarifies that the term ''supplier'' means a physician or other practitioner, a facility or other entity (other than a provider of services) furnishing items or services under Medicare. The provision is effective upon enactment.

Issuance of Regulations (Section 902 of the Conference Agreement, Section 902 of the House Bill, Section 501 of the Senate Bill).

Present Law

The Secretary is required to prescribe regulations that are necessary to administer the Medicare program. The Secretary must publish proposed regulations in the Federal Register, with at least 30 days to solicit public comment before issuing the final regulation except in the following circumstances: (1) the statute permits the regulation to be issued in interim final form or provides for a shorter public comment period; (2) the statutory deadline for implementing a provision is less than 150 days after the date of enactment of the statute containing the provision; (3) under the good cause exception contained in the rule-making provision of title 5 of the United States Code, notice and public comment procedures are deemed impracticable, unnecessary or contrary to the public interest. The Secretary must publish a list of all manual instructions, interpretative rules, statements of policy, and guidelines, which are promulgated to carry out Medicare law in the Federal Register no less frequently than every 3 months.

There is no explicit statutory instruction on logical outgrowth. The courts have repeatedly held that new matter in final regulations must be a ''logical outgrowth of the proposed rule'' and is an inherent aspect of notice and comment rulemaking.

House Bill

The provision would require the Secretary, in consultation with the Director of the Office of Management and Budget, to establish and publish a regular timeline for the publication of final regulations based on the previous publication of a proposed rule or an interim final regulation. The timeframe established would not be permitted to be longer than three years, except under extraordinary circumstances. If the Secretary were to vary the timeline he established, the provision would require him to publish a notice in the Federal Register with the new timeline and an explanation of the variation. In the case of interim final regulations, the provision would require that if the Secretary did not meet his established timeframe, then the interim final regulation would not be able to continue in effect unless the Secretary published a notice of continuation of the regulation that included an explanation of why the regular time line had not been complied with. This provision regarding timelines would be effective upon enactment.

The provision also would require that a measure in a final regulation that is not a logical outgrowth of the proposed regulation or interim final regulation would be treated as a proposed regulation. The measure would not be able to take effect until public comment occurred and the measure was published as a final regulation. This provision would apply to final regulations published on or after the date of enactment.

Senate Bill

The Secretary would be required to publish a final regulation within 12 months of the publication of an interim final regulation or the interim final regulation would no longer be effective. Subject to appropriate notice, the Secretary would be able to extend this deadline for up to 12 additional months. The Secretary would be required to publish a notice in the Federal Register 6 months after the date of enactment providing the status of each interim final regulation for which no final regulation has been published and providing the date by which the final regulation is planned to be published. This provision would be effective upon enactment.

Conference Agreement

The conference agreement requires the Secretary, in consultation with the Director of the Office of Management and Budget, to establish and publish a regular timeline for the publication of final regulations based on the previous publication of a proposed rule or an interim final regulation. The timeframe established is not be permitted to be longer than 3 years, except under extraordinary circumstances. If the Secretary varies the timeline he established, he is required to publish a notice in the Federal Register with the new timeline and an explanation of the variation. In the case of interim final regulations, if the Secretary does not meet his established timeframe, then the interim final regulation cannot continue in effect unless the Secretary publishes a notice of continuation of the regulation that includes an explanation of why the regular timeline was not complied with. This agreement regarding timelines is effective upon enactment.

The conference agreement also requires that a measure in a final regulation that is not a logical outgrowth of the proposed regulation or interim final regulation is to be treated as a proposed regulation. The measure could not take effect until public comment occurred and the measure is published as a final regulation. This agreement applies to final regulations published on or after enactment.

Compliance with Changes in Regulation and Policies. (Section 903 of the Conference Agreement, Section 903 of the House Bill, Sections 502 and 533 of the Senate Bill).

Present Law

No explicit statutory instruction. As a result of case law, there is a strong presumption against retroactive rulemaking. In *Bowen* v. *Georgetown University Hospital*, the Supreme Court ruled that there must be explicit statutory authority to engage in retroactive rulemaking.

House Bill

The provision would bar retroactive application of any substantive changes in regulation, manual instructions, interpretative rules, statements of policy, or guidelines unless the Secretary determines retroactive application is needed to comply with the statute or is in the public interest, effective upon enactment. No substantive change would go into effect until 30 days after the change is issued or published unless it would be needed to comply with statutory changes or was in the public interest. Compliance actions would be able to be taken for items and services furnished only on or after the effective date of the change, effective upon enactment. If a provider or supplier follows written guidance provided by the Secretary or a Medicare contractor when furnishing items or services or submitting a claim and the guidance is inaccurate, the provider or supplier would not be subject to penalty or repayment of overpayment (unless the inaccurate information was due to a clerical or technical operational error).

Senate Bill

Same provisions.

Conference Agreement

The conference agreement bars retroactive application of any substantive changes in regulation, manual instructions, interpretative rules, statements of policy, or guidelines unless the Secretary determines retroactive application is needed to comply with the statute or is in the public interest. No substantive change could go into effect until 30 days after the change is issued or published unless it is needed to comply with statutory changes or in the public interest. Compliance actions could be taken for items and services furnished only on or after the effective date of the change, effective upon enactment. If a provider or supplier follows written guidance provided by the Secretary or a Medicare contractor when furnishing items or services or submitting a claim and the guidance is inaccurate, the provider or supplier is not subject to penalty or interest (unless the inaccurate information was due to a clerical or technical operational error).

The conference agreement also makes clear that a provider or supplier is not subject to any penalty or interest on a repayment plan (including under section 1893 of the Social Security Act, relating to the Medicare Integrity Program, or otherwise) relating to the provision of such items or services or a claim if the provider or supplier reasonably relied on the guidance. The conference agreement applies to a sanction imposed with respect to guidance provided on or after July 24, 2003.

Reports and Studies Relating to Regulatory Reform. (Section 904 of the Conference Agreement, Section 904 of the House Bill, Section 503 of the Senate Bill).

Present Law

No provision.

House Bill

The GAO would be required to study the feasibility and appropriateness of the Secretary providing legally binding advisory opinions on appropriate interpretation and application of Medicare regulations. The report would be due to Congress 1 year after enactment.

The Secretary would be required to report to Congress every 2 years on the administration of Medicare and areas of inconsistency or conflict among various provisions under law and regulation. The report would include recommendations for legislation or administrative action that the Secretary determines appropriate to further reduce such inconsistency or conflicts. The first report would be due to Congress 2 years after enactment.

Senate Bill

Requires the Secretary to report to Congress in 2 years, and every 3 years thereafter, on the administration of Medicare and areas of inconsistency or conflict among various provisions under law and regulation and recommendations for legislation or administrative action that the Secretary determines appropriate to further reduce such inconsistency or conflicts.

Conference Agreement

The conference agreement requires the GAO to study the feasibility and appropriateness of the Secretary providing legally binding advisory opinions on appropriate interpretation and application of Medicare regulations. The report is due to Congress 1 year after enactment.

The Secretary is required to report to Congress in 2 years and every 3 years thereafter on the administration of Medicare and areas of inconsistency or conflict among various provisions under law and regulation. The report is to include recommendations for legislation or administrative action that the Secretary determines appropriate to further reduce such inconsistency or conflicts.

Increased Flexibility in Medicare Administration. (Section 911 of the Conference Agreement, Section 911 of the House Bill, Section 521 of the Senate Bill).

Present Law

The Secretary is authorized to enter into agreements with fiscal intermediaries nominated by different provider associations to make Medicare payments for health care services furnished by institutional providers. For Medicare Part B claims, the Secretary is authorized to enter into contracts only with health insurers (or carriers) to make Medicare payments to physicians, practitioners and other health care suppliers. Section 1834(a)(12) of the Act authorizes separate regional carriers for the payment of durable medical equipment (DME) claims. The Secretary is also authorized to contract for certain program safeguard activities under the Medicare Integrity Program (MIP).

Certain terms and conditions of the contracting agreements for fiscal intermediaries and carriers are specified in the Medicare statute. Medicare regulations coupled with long-standing agency practices have further limited the way that contracts for claims administration services can be established.

Certain functions and responsibilities of the fiscal intermediaries and carriers are specified in the statute as well. The Secretary may not require that carriers or intermediaries match data obtained in its other activities with Medicare data in order to identify beneficiaries who have other insurance coverage as part of the Medicare Secondary Payer (MSP) program. With the exception of prior authorization of DME claims, an entity may not perform activities (or receive related payments) under a claims processing contract to the extent that the activities are carried out pursuant to a MIP contract. Performance standards with respect to the timeliness of reviews, fair hearings, reconsiderations and exemption decisions are established as well.

A Medicare contract with an intermediary or carrier may require any of its employees certifying or making payments provide a surety bond to the United States in an amount established by the Secretary. Neither the contractor nor the contractor's employee who certifies the amount of Medicare payments is liable for erroneous payments in the absence of gross negligence or intent to defraud the United States. Neither the contractor nor the contractor's employee who disburses payments is liable for erroneous payments in the absence of gross negligence or intent to defraud the United States, if such payments are based upon a voucher signed by the certifying employee.

House Bill

This provision would add a new Section 1874A to the Social Security Act and would permit the Secretary to competitively contract with any eligible entity to serve as a Medicare contractor. The provision would eliminate the distinction between Part A contractors (fiscal intermediaries) and Part B contractors (carriers) and take the separate authorities for fiscal intermediaries and

carriers and merge them into a single authority for the new contractor. These new contractors would be called Medicare Administrative Contractors (MACs) and would assume all the functions of the current fiscal intermediaries and carriers: determining the amount of Medicare payments required to be made to providers and suppliers, making the payments, providing education and outreach to beneficiaries, providers and suppliers, communicating with providers and suppliers, and additional functions as are necessary.

The Secretary would be permitted to renew the MAC contracts annually for up to 5 years. All contracts would be required to be re-competed at least every 5 years using competitive processes. Federal Acquisition Regulations (FAR) would apply to these contracts except to the extent any provisions are inconsistent with a specific Medicare requirement, including incentive contracts. The contracts would be required to contain performance requirements that would be developed by the Secretary who could consult with beneficiary, provider, and supplier organizations, would be consistent with written statements of work and would be used for evaluating contractor performance. MAC would be required to furnish the Secretary such timely information as he may require and to maintain and provide access to records the Secretary finds necessary. The Secretary could require a surety bond from the MAC or certain officers or employees as the Secretary finds appropriate. The Secretary would be prohibited from requiring that the MAC match data from other activities for Medicare secondary payer purposes.

The provision would limit liability of certifying and disbursing officers and the Medicare Administrative Contractors except in cases of reckless disregard or the intent to defraud the United States. This limitation on liability would not limit liability under the False Claims Act. The provision also establishes circumstances where contractors and their employees would be indemnified, both in the contract and as the Secretary determines appropriate.

The provision would make numerous conforming amendments as the authorities for the fiscal intermediaries and carriers are stricken. After enactment of the bill, but before October 1, 2005, the Secretary would be permitted to enter into new fiscal intermediary agreements without regard to any of the provider nomination provisions.

The Secretary would be required to submit a report to Congress and the GAO by no later than October 1, 2004, that describes the plan for implementing these provisions. The GAO is required to evaluate the Secretary's plan and, within six months of receiving the plan, report on the evaluation to Congress and make any recommendations the Comptroller General believes appropriate. The Secretary is also required to report to Congress by October 1, 2008 on the status of implementing the contracting reform provisions including the number of contracts that have been competitively bid, the distribution of functions among contracts and contractors, a timeline for complete transition to full competition, and a detailed description of how the Secretary has modified oversight and management of Medicare contractors to adapt to full competition.

Competitive bidding for the MACs would be required to begin for annual contract periods that begin on or after October 1, 2005.

Senate Bill

Same provision, containing three main differences: First, contracts would be required to be recompeted every 6 years. Second, a MAC with a contract to perform local coverage determinations would be required to designate at least 1 different individual to serve as a medical director for each state for which local coverage determinations are made; use the medical director in making the local coverage determinations; and appoint a contractor advisory committee for each state for which local coverage determinations are made to participate in an advisory capacity in the development of the local determinations. Finally, competitive bidding for the MACs would be required to begin for annual contract periods that begin on or after October 1, 2011.

Conference Agreement

The conference agreement adds a new Section 1874A to the Social Security Act into which the Medicare contractor authority is consolidated. The conference agreement permits the Secretary to competitively contract with any eligible entity to serve as a Medicare Administrative Contractor (MAC). The conference agreement eliminates the distinction between Part A contractors (fiscal intermediaries) and Part B contractors (carriers) and takes the separate authorities for fiscal intermediaries and carriers and merges them into a single authority for the new contractor. All the functions of the current fiscal intermediaries and carriers are assumed by the new MACs: determining the amount of Medicare payments required to be made to providers and suppliers, making the payments, providing education and outreach to beneficiaries, providers and suppliers, communicating with providers and suppliers, and additional functions as are necessary.

The Secretary is permitted to renew the MAC contracts annually for up to 5 years. All contracts must be re-competed at least every 5 years using competitive processes. Federal Acquisition Regulations (FAR) apply to MAC contracts except to the extent any provisions are inconsistent with a specific Medicare requirement, including incentive contracts. (The conference agreement does not extend FAR provision to other contractors under title XVIII.) The Secretary is required to develop contract performance requirements to carry out the functions described in the provision and to develop standards for measuring the extent to which a contractor has met the requirements. The Secretary is required to consult with beneficiary and provider organizations, and organizations and agencies performing other Medicare functions. The Secretary is required to make the performance requirements and measurement standards available to the public and must include provider and beneficiary satisfaction levels as one of the requirements.

MAC performance requirements are required to be included in the contract and consistent with written statements of work and used for evaluating contractor performance. MACs are required to furnish the Secretary such timely information as he may require and to maintain and provide access to records the Secretary finds necessary. The Secretary may require a surety bond from the MAC or certain officers or employees as the Secretary finds appropriate. The Secretary is prohibited from requiring that the MAC match data from other activities for Medicare secondary payer purposes.

The conference agreement limits the liability of certifying and disbursing officers and the Medicare Administrative Contractors except in cases of reckless disregard or the intent to defraud the United States. The standard does not limit liability for conduct that constitutes a violation of the False Claims Act. The conference agreement also establishes circumstances where contractors and their employees are indemnified, both in the contract and as the Secretary determines appropriate.

The conference agreement makes numerous conforming amendments as the statutory authorities for the fiscal intermediaries and carriers are stricken. After enactment of the bill, but before October 1, 2005, the Secretary is authorized to enter into new fiscal intermediary agreements without regard to any of the provider nomination provisions under section 1816 of the Social Security Act and may enter into new carrier contracts. The Secretary is required to take such steps as are necessary to provide for an appropriate transition from the fiscal intermediary agreements and carrier contracts to the MAC contracts. In addition, the Secretary is explicitly authorized to continue Medicare Integrity Program fiscal intermediary agreements and carrier contracts from the enactment of this provision through October 1, 2011.

The Secretary is required to submit a legislative proposal providing technical and conforming amendments to this provision to the appropriate committees of Congress within 6 weeks of enactment. The Secretary is required to submit a report to Congress and the GAO by no later than October 1, 2004, that describes the plan for implementing these provisions. The GAO is required to evaluate the Secretary's plan and, within 6 months of receiving the plan, report on the evaluation to Congress and make any recommendations the Comptroller General believes appropriate. The Secretary is also required to report to Congress by October 1, 2008, on the status of implementing the contracting reform provisions including the number of contracts that have been competitively bid, the distribution of functions among contracts and contractors, a timeline for complete transition to full competition, and a detailed description of how the Secretary has modified oversight and management of Medicare contractors to adapt to full competition.

Competitive bidding for the MACs would be required to begin October 1, 2005 and all contracts should have been bid under the new structure by September 30, 2011.

Requirements for Information Security for Medicare Administrative Contractors (Section 912 of the Conference Agreement, Section 912 of the House Bill).

Present Law

No provision.

House Bill

Medicare administrative contractors (as well as fiscal intermediaries and carriers until the MACs are established) would be required to implement a contractor-wide information security program to provide information security for the operation and assets of the contractor for Medicare functions. The information security program would be required to meet certain requirements for information security programs imposed on Federal agencies under title 44 of the United States Code. Medicare administrative contractors would be required to undergo an annual independent evaluation of their information security programs. Existing contractors would be required to undergo the first independent evaluation within one year after the date of enactment and new contractors would be required to have such a program in place before beginning the claim determination and payment activities. The results of the independent evaluations would be submitted to the Secretary and the HHS Inspector General. The Inspector General of HHS

would be required to report to Congress annually on the results of the evaluations. The Secretary would be required to address the results of the evaluations in required management reports.

Senate Bill

No comparable provision.

Conference Agreement

The conference agreement requires Medicare administrative contractors (as well as fiscal intermediaries and carriers until the MACs are established) to implement a contractor-wide information security program to provide information security for the operation and assets of the contractor for Medicare functions. The information security program is required to meet certain requirements for information security programs imposed on Federal agencies under title 44 of the United States Code. Medicare administrative contractors are required to undergo an annual independent evaluation of their information security programs. Current fiscal intermediaries and carriers are required to undergo the first independent evaluation within one year after the date of enactment and new contractors would be required to have such a program in place before beginning the claim determination and payment activities. The MACs are required to submit the results of the independent evaluations to the Secretary and the HHS Inspector General. The Inspector General of HHS is required to report to Congress annually on the results of the evaluations. The Secretary is required to address the results of the evaluations in required management reports.

Provider Education and Technical Assistance. (Section 921 of the Conference Agreement, Section 921 of the House Bill, Sections 531 and 532 of the Senate Bill).

Present Law

(a) Coordination of Education Funding.

Present Law

Medicare's provider education activities are funded through the program management appropriation and through Education and Training component of the Medicare Integrity Program (MIP). Both claims processing contractors (fiscal intermediaries and carriers) and MIP contractors may undertake provider education activities.

House Bill

The provision would add Section 1889 to the Social Security Act, which would require the Secretary to coordinate educational activities through the Medicare contractors to maximize the effectiveness of education efforts for providers and suppliers and to report to Congress with a description and evaluation of the steps taken to coordinate provider education funding. The provision would be effective upon enactment. The Secretary would be required to report to Congress on the steps taken to coordinate the funding of provider education under the provision by October 1, 2004.

Senate Bill

The provision would require the Secretary to coordinate educational activities through the Medicare contractors to maximize the effectiveness of education efforts for providers and suppliers. The provision would be effective upon enactment.

Conference Agreement

The conference agreement adds section 1889 to the Social Security Act requiring the Secretary to coordinate educational activities through the Medicare contractors to maximize the effectiveness of education efforts for providers and suppliers and to report to Congress with a description and evaluation of the steps taken to coordinate provider education funding. The agreement is effective upon enactment. The Secretary is required to report to Congress on the steps taken to coordinate the funding of provider education under the provision by October 1, 2004.

(b) Incentives to Improve Contractor Performance.

Present Law

No specific statutory provision. Since FY1996, as part of the audit required by the Chief Financial Officers Act, an estimate of improper payments in Medicare fee-for-service has been established annually. As a recent initiative, CMS is implementing a comprehensive error rate-testing program to produce national, contractor specific, benefit category specific and provider specific paid claim error rates.

House Bill

The Secretary would be required to use specific claims payment error rates (or similar methodology) to provide incentives for contractors to implement effective education and outreach programs for providers and suppliers. The provision would require the Comptroller General to submit to Congress and the Secretary a study and to make recommendations on the adequacy of the Secretary's methodology by October 1, 2004. The Secretary would be required to report to Congress by October 1, 2004 regarding how he intends to use the methodology in assessing Medicare contractor performance.

Senate Bill

The provision would require the Secretary to use specific claims payment error rates (or similar methodology) to provide incentives for contractors to implement effective education and outreach programs for providers and suppliers by October 1, 2004. The Conferees agree that any such methodology shall include non-responses in the measurement of the error rate. The Comptroller General would be required to study the adequacy of the methodology and make recommendations to the Secretary. The Secretary would be required to report to Congress regarding how he intends to use the methodology in assessing Medicare contractor performance.

Conference Agreement

The conference agreement requires the Secretary to use specific claims payment error rates (or similar methodology) to provide incentives for contractors to implement effective education and outreach programs for providers and suppliers. The Comptroller General is required to submit to Congress and the Secretary a study the adequacy of the methodology and to make recommendations. The Secretary is required to report to Congress by October 1, 2004 regarding how he intends to use the methodology in assessing Medicare contractor performance.

(c) Provision of Access to and Prompt Responses from Medicare Administrative Contractors.

Present Law

No specific statutory provision. Statutory provisions generally instruct carriers to assist providers and others who furnish services in developing procedures relating to utilization practices and to serve as a channel of communication relating information on program administration. Fiscal intermediaries are generally instructed to (1) provide consultative services to institutions and other agencies to enable them to establish and maintain fiscal records necessary for program participation and payment and (2) serve as a center for any information as well as a channel for communication with providers.

House Bill

The Secretary would be required to develop a strategy for communicating with beneficiaries, providers and suppliers. Medicare contractors would be required to provide responses to written inquiries that are clear, concise and accurate within 45 business days of the receipt of the written inquiry. The Secretary would be required to ensure that Medicare contractors have a toll-free telephone number where beneficiaries, providers and suppliers may obtain information regarding billing, coding, claims, coverage, and other appropriate Medicare information. Medicare contractors would be required to maintain a system for identifying the person supplying information to beneficiaries, providers, and suppliers and to monitor the accuracy, consistency, and timeliness of the information provided. The Secretary would be required to establish and make public standards to monitor the accuracy, consistency, and timeliness of written and telephone responses of Medicare contractors as well as to evaluate the contractors against these standards. The provision would be effective October 1, 2004.

Senate Bill

Identical provision.

Conference Agreement

The conference agreement requires the Secretary to develop a strategy for communicating with beneficiaries, providers and suppliers, beginning October 1, 2004. Medicare contractors are required to provide responses to written inquiries that are clear, concise and accurate within 45 business days of the receipt of the written inquiry. The Secretary is required to ensure that Medicare contractors have a toll-free telephone number where beneficiaries, providers and suppliers may obtain information regarding billing, coding, claims, coverage, and other appropriate Medicare information. Medicare contractors would be required to maintain a system for identifying the person supplying information to beneficiaries, providers, and suppliers and to monitor the accuracy, consistency, and timeliness of the information provided. The Secretary is required to establish and make public standards to monitor the accuracy, consistency, and timeliness of written and telephone responses of Medicare contractors as well as to evaluate the contractors against these standards. The conference agreement authorizes to be appropriated such sums as are necessary to carry out this subsection.

(d) Improved Provider Education and Training.

Present Law

In FY 2003, approximately $122 million was budget by CMS for provider education and training.

House Bill

The provision would authorize $25 million to be appropriated from the Medicare Trust Funds for fiscal years 2005 and 2006, and such sums as necessary for succeeding fiscal years for Medicare contractors to increase education and training activities for providers and suppliers. Medicare contractors would be required to tailor education and training activities to meet the special needs of small providers or suppliers. The provision defines a small provider as an institution with fewer than 25 full-time equivalents (FTEs) and a small supplier as one with fewer than 10 FTEs.

Senate Bill

The provision would provide increased funding for the Medicare Integrity Program of $35 million beginning with FY2004 for increased provider and supplier education. Also would require Medicare contractors to take into consideration the special needs of small providers or suppliers when conducting education and training activities and permits provision of technical assistance beginning January 1, 2004.

Conference agreement

The conference agreement authorizes such sums as necessary to be appropriated for fiscal years beginning with FY 2005 to be used to increase education and training activities for providers and suppliers regarding billing, coding, and other appropriate items and may be used to improve the accuracy, consistency, and timeliness of contractor responses. Beginning October 1, 2004, Medicare contractors are required to tailor education and training activities to meet the special needs of small providers or suppliers. Technical assistance is permitted to be included in the education and training activities. The provision defines a small provider as an institution with fewer than 25 full-time equivalents (FTEs) and a small supplier as one with fewer than 10 FTEs.

(e) Requirement to Maintain Internet Sites.

Present Law

No statutory provision. CMS and the Medicare contractors currently maintain internet sites.

House Bill

The provision would require that the Secretary and the Medicare contractors maintain Internet sites to answer frequently asked questions and provide published materials of the contractors beginning October 1, 2004.

Senate Bill

No provision.

Conference agreement

Beginning October 1, 2004, the conference agreement requires the Secretary and the Medicare contractors to maintain Internet sites to answer frequently asked questions and provide published materials of the contractors.

(f) Additional Provider Education Provisions.

Present Law

No provision.

House Bill

The provision would bar Medicare contractors from using a record of attendance (or non-attendance) at educational activities to select or track providers or suppliers in conducting any type of audit or prepayment review. The provision would not require Medicare contractors to disclose information that would compromise law enforcement activities or reveal findings of law enforcement-related audits. This provision would be effective upon enactment.

Senate Bill

The provision would bar Medicare contractors from using a record of attendance (or non-attendance) at educational activities to select or track providers or suppliers in conducting any type of audit or prepayment review. The provision would not require Medicare contractors to disclose the screens used for identifying claims that will be subject to medical review or information that would compromise pending law enforcement activities or reveal findings of law enforcement-related audits. This provision would be effective upon enactment.

Conference agreement

The conference agreements bars Medicare contractors from using a record of attendance (or non-attendance) at educational activities to select or track providers or suppliers in conducting any type of audit or prepayment review. Nothing in section 1889 or 1893(g) shall be construed as providing for disclosure by a Medicare contractor of the screens used for identifying claims that will be subject to medical review or of information that would compromise pending law enforcement activities or reveal findings of law enforcement-related audits. The agreement is effective upon enactment.

Small Provider Technical Assistance Demonstration Program. (Section 922 of the Conference Agreement, Section 922 of the House Bill).

Present Law

No provision.

House Bill

The Secretary would be required to establish a demonstration program to provide technical assistance to small providers and suppliers, when they have requested the assistance, to improve compliance with Medicare requirements. If errors are found, the Secretary would be barred from recovering any overpayments barring evidence of fraud and if the problem that is the subject of the compliance review has been satisfactorily corrected within 30 days and the problem remains corrected. Providers participating would be expected to pay 25 percent of the cost of the technical assistance. A GAO study would be required not later than 2 years after the demonstration program begins. Appropriations would be authorized for $1 million for FY 2005 and $6 million for FY 2006 to carry out the demonstration.

Senate Bill

No provision.

Conference Agreement

The conference agreement requires the Secretary to establish a demonstration program to provide technical assistance to small providers and suppliers, when they have requested the assistance, in order to improve compliance with Medicare requirements. Technical assistance includes direct and in-person examination of billing systems and internal controls to determine program compliance and to suggest more efficient or effective means of achieving compliance. Providers participating are expected to pay 25 percent of the cost of the technical assistance. Appropriations of such sums as may be necessary to carry out this demonstration program are authorized from amounts not otherwise appropriated in the Treasury. The GAO is required to evaluate the demonstration no later than 2 years after it begins and submit a report to the Congress and the Secretary. The GAO is required to include in the report recommendations regarding the continuation or extension of the demonstration.

Medicare Provider Ombudsman; Medicare Beneficiary Ombudsman. (Section 923 of the Conference Agreement, Section 923 of the House Bill, Sections 301 and 534 of the Senate Bill).

Present Law

No provision.

House Bill

A Medicare Provider Ombudsman would be required to be appointed by the Secretary and located within the Department of Health and Human Services. The Provider Ombudsman would be required to provide confidential assistance to providers and suppliers regarding complaints, grievances, requests for information, and resolution of unclear or conflicting guidance about Medicare. The Ombudsman would submit recommendations to the Secretary regarding improving the administration of Medicare, addressing recurring patterns of confusion under Medicare, and ways to provide for an appropriate and consistent response in cases of self-identified overpayments by providers and suppliers. Such sums, as necessary, would be authorized and be appropriated for FY 2004 and subsequent years.

A Medicare Beneficiary Ombudsman would be required to be appointed by the Secretary and located within HHS. The Secretary would be required to appoint both ombudsmen not later than one year from the date of enactment. The Beneficiary Ombudsman would be required to have expertise and experience in health care, education of, and assistance to Medicare beneficiaries. The Beneficiary Ombudsman would be required to receive complaints, grievances, and requests for information submitted by Medicare beneficiaries. The Beneficiary Ombudsman would also be required to assist beneficiaries in collecting relevant information to seek an appeal of a decision or determination made by the Secretary, a Medicare contractor, or a Medicare+Choice organization and assisting a beneficiary with any problems arising from disenrolling in a Medicare+Choice plan and with presenting income information for purposes relating to the prescription drug benefit. The Beneficiary Ombudsman would be required to work with state Health Insurance Counseling Programs, to the extent possible.

Such sums as are necessary are authorized to be appropriated for FY 2004 and each succeeding fiscal year to carry out the ombudsmen provisions.

This provision would also require the use of 1–800–MEDICARE for all individuals seeking information about, or assistance with Medicare. Rather than listing individual telephone numbers for Medicare contractors in the Medicare handbook, only 1–800–MEDICARE would be shown. The Comptroller General would be required to study the accuracy and consistency of information provided by the 1–800–MEDICARE line and to assess whether the information sufficiently answers the questions of beneficiaries. The report on the study would be required to be submitted to Congress not later than one year after enactment.

Senate Bill

Same provisions.

Conference Agreement

The conference agreement creates a new section 1810 establishing a Medicare Beneficiary Ombudsman. The Secretary is required to appoint an Ombudsman with expertise and experience in the fields of health care and education of (and assistance to) Medicare beneficiaries not later than 1 year after the date of enactment. The Ombudsman will receive complaints, grievances, and requests for information from Medicare beneficiaries, and provide assistance in these matters and matters relating to appeals decisions made by Medicare contractors, Medicare+Choice organizations or the Secretary, as well as assistance to beneficiaries with any problems disenrolling from a Medicare+Choice plan. In addition, the Ombudsman will assist beneficiaries in presenting information relating to the income-related premium adjustment. The Beneficiary Ombudsman is required to work with State Health Insurance Counseling Programs, to the extent possible. The Ombudsman is prohibited from advocating for any

increases in payment or new coverage of services, but may identify issues and problems in payment or coverage policies.

Appropriations are authorized to be appropriated in such sums as are necessary for FY 2004 and each succeeding fiscal year to carry out the Beneficiary Ombudsman provision.

The conference agreement also requires making 1–800–MEDICARE available to all individuals seeking information about, or assistance with, Medicare. Rather than listing individual telephone numbers for Medicare contractors in the Medicare handbook, only 1–800–MEDICARE would be shown. The Comptroller General is required to study the accuracy and consistency of information provided on the 1–800–MEDICARE line and to assess whether the information sufficiently answers the questions of beneficiaries. The report on the study is due to Congress not later than one year after enactment.

It is the intent of the Conferees that Medicare beneficiaries have access to prescription drugs for the treatment of mental illness and neurological diseases resulting in severe epileptic episodes under the new provisions of Part D. To fulfill this purpose the Administrator of the Center for Medicare Choices shall take the appropriate steps before the first open enrollment period to ensure that Medicare beneficiaries have clinically appropriated access to pharmaceutical treatments for mental illness, including but not limited to schizophrenia, bipolar disorder, depression, anxiety disorder, dementia, and attention deficit disorder/attention deficit hyperactivity disorder and neurological illnesses resulting in epileptic episodes.

The conferees anticipate that disabled individuals will enroll in one of the many private sector prescription drug plans or MA–PD plans. Competition will necessitate plans offering the full complement of medicines, including atypical antipsychotics, to treat the severely mentally ill. If a plan chooses not to offer or restrict access to a particular medication to treat the mentally ill, the disabled will have the freedom to choose a plan that has appropriate access to the medicine needed. The Conferees believe this is critical as the severely mentally ill are a unique population with unique prescription drug needs as individual responses to mental health medications are different.

Beneficiary Outreach Demonstration Program. (Section 924 of the Conference Agreement, Section 924 of the House Bill, Section 535 of the Senate Bill).

Present Law

No provision.

House Bill

The Secretary would be required to conduct a 3-year demonstration program where Medicare specialists would provide assistance to beneficiaries in at least 6 local Social Security offices (2 would be located in rural areas) that have a high volume of visits by Medicare beneficiaries. The Secretary would be required to evaluate the results of the demonstration regarding the feasibility and cost-effectiveness of permanently outstationing Medicare specialists at local Social Security offices and report to Congress. The provision would be effective upon enactment.

Senate Bill

Same provision

Conference Agreement

The conference agreement requires the Secretary to conduct a 3-year demonstration program where Medicare specialists would provide assistance to beneficiaries in at least 6 local Social Security offices (2 would be located in rural areas) that have a high volume of visits by Medicare beneficiaries. The Secretary is required to evaluate the results of the demonstration regarding the feasibility and cost-effectiveness of permanently outstationing Medicare specialists at local Social Security offices and report to Congress. The agreement is effective upon enactment.

Inclusion of Additional Information in Notices to Beneficiaries About Skilled Nursing Facility Benefits. (Section 925 of the Conference Agreement, Section 925 of the House Bill, Section 551 of the Senate Bill).

Present Law

Although the statute requires that beneficiaries receive a statement listing the items and services for which payment has been made, there is no explicit statutory instruction that requires the notice to include information about the number of days of coverage remaining in either the hospital or skilled nursing facility (SNF) benefit or the spell of illness.

House Bill

The Secretary would be required to provide information about the number of days of coverage remaining under the SNF benefit and the spell of illness involved in the explanation of Medicare benefits. The provision would be effective for notices provided during calendar quarters beginning more than 6 months after the date of enactment.

Senate Bill

Same provision.

Conference Agreement

The conference agreement requires the Secretary to provide information about the number of days of coverage remaining under the SNF benefit and the spell of illness involved in the explanation of Medicare benefits. The agreement applies to notices provided during calendar quarters beginning more than 6 months after the date of enactment.

Information on Medicare-Certified Skilled Nursing Facilities in Hospital Discharge Plans. (Section 926 of the Conference Agreement, Section 926 of the House Bill, Section 552 of the Senate Bill).

Present Law

The hospital discharge planning process requires evaluation of a patient's likely need for post-hospital services including hospice and home care.

House Bill

The Secretary would be required to make information publicly available regarding whether SNFs are participating in the Medicare program. Hospital discharge planning would be required to evaluate a patient's need for SNF care.

The provision would apply to discharge plans made on or after the date specified by the Secretary, but not later than six months after the Secretary provides information regarding SNFs that participate in the Medicare program.

Senate Bill

Same provision.

Conference Agreement

The conference agreement requires the Secretary to make information publicly available regarding whether SNFs are participating in the Medicare program. Hospital discharge planning is required to evaluate a patient's need for SNF care.

The agreement applies to discharge plans made on or after the date specified by the Secretary, but not later than six months after the Secretary provides information regarding SNFs that participate in the Medicare program.

Transfer of Responsibility for Medicare Appeals. (Section 931 of the Conference Agreement, Section 931 of the House Bill, Sections 511 and 519 of the Senate Bill).

Present Law

Denials of claims for Medicare payment may be appealed by beneficiaries (or providers who are representing the beneficiary) or in certain circumstances, providers or suppliers directly. The third level of appeal is to an administrative law judge (ALJ). The ALJs that hear Medicare cases are employed by the Social Security Administration—a legacy from the inception of the Medicare program when Medicare was part of Social Security. BIPA section 522 requires that appeals of local coverage determinations be heard by ALJs of the Social Security Administration (SSA). As a result, if the ALJ function were moved from SSA to HHS, these local coverage determination appeals would still need to be heard by SSA ALJs.

House Bill

The Secretary and the Commissioner of the Social Security Administration (SSA) would be required to develop a plan to transfer the functions of the administrative law judges (ALJs) who are responsible for hearing Medicare cases from SSA to HHS. This plan would be due to Congress not later than October 1, 2004. A GAO evaluation of the plan would be due within 6 months of the plan's submission. ALJ functions would be transferred no earlier than July 1, 2005 and no later than October 1, 2005.

The Secretary would be required to place the ALJs in an administrative office that is organizationally and functionally separate from the Centers for Medicare & Medicaid Services and the ALJs would be required to report to, and be under the general supervision of the Secretary. No other official within the Department would be permitted to supervise the ALJs. The Secretary would be required to provide for appropriate geographic distribution of ALJs, would have the authority to hire ALJs and support staff, and would be required to enter into arrangements with the Commissioner, as appropriate, to share office space, support staff and other resources with appropriate reimbursement.

Authorizes to be appropriated such sums as are necessary for FY2005 and each subsequent fiscal year to increase the number of ALJs, improve education and training of ALJs and to increase the staff of the Departmental Appeals Board (the final level of appeal).

Senate Bill

The Secretary and Commissioner of Social Security would be required to develop and transmit to Congress and the Comptroller General a plan for transferring the functions of administrative law judges (ALJs) responsible for hearing cases under Medicare from the Social Security Administration to HHS no later than April 1, 2004. The plan would be required to include information on: workload; cost projections and financing; transition timetable; regulations; development of a case tracking system; feasibility of precedential authority; feasibility of electronic appeals filings and teleconference; steps needed to assure independence of ALJs, including assuring that they are in an office that is operationally and functionally separate from the Centers for Medicare & Medicaid Services and the Center for Medicare Choices; geographic distribution of ALJs;

steps for hiring ALJs; performance standards of ALJs; sharing resources with Social Security regarding ALJs; training; and recommendations for further Congressional action. The GAO would be required to evaluate the Secretary's and Commissioner's plan and report to Congress on the result of the evaluation within 6 months of the receiving the plan. The Secretary would be prohibited from implementing the plan developed until no earlier than 6 month after the GAO report.

The statutory language that requires SSA ALJs be used to hear appeals of local coverage determinations would be eliminated. The requirement that these appeals be heard by ALJs would be retained. The provision would be effective upon enactment.

Conference Agreement

The conference agreement requires the Secretary and the Commissioner of Social Security to develop a plan to transfer the administrative law judge function from SSA to HHS for Medicare appeals. Their plan is due to Congress and the Comptroller General not later than April 1, 2004. The plan is required to include information on: anticipated workload and staffing requirements; funding requirements; transition timetable; regulations; case tracking system; feasibility of developing a process to give Department Appeals Board decisions binding precedential authority; feasibility of filing appeals with ALJs electronically and conducting hearings using tele- or video-conferencing technologies; steps that should be taken to ensure the independence of ALJs; steps that should be taken to provide for an appropriate geographic distribution of ALJs throughout the United States; steps that should be taken to hire ALJs and support staff; appropriateness of establishing performance standards; steps that should be taken to carry out any needed shared resources with SSA; needed training; and any additional recommendations for further Congressional action.

A GAO evaluation of the plan is required within 6 months of the plan's submission. ALJ functions are required to be transferred no earlier than July 1, 2005 and no later than October 1, 2005.

The Secretary is required to place the ALJs in an administrative office that is organizationally and functionally separate from the Centers for Medicare & Medicaid Services and the ALJs would be required to report to, and be under the general supervision of the Secretary. No other official within the Department is permitted to supervise the ALJs. The Secretary is required to provide for appropriate geographic distribution of ALJs, would have the authority to hire ALJs and support staff, and is required to enter into arrangements with the Commissioner, as appropriate, to share office space, support staff and other resources with appropriate reimbursement.

In addition to any amounts otherwise appropriated, the agreement authorizes to be appropriated such sums as are necessary for FY 2005 and each subsequent fiscal year to increase the number of ALJs, improve education and training of ALJs, and to increase the staff of the Departmental Appeals Board (the final level of appeal).

The conference agreement strikes the statutory language that requires SSA ALJs be used to hear appeals of local coverage determinations. The requirement that these appeals be heard by ALJs is retained. This provision is effective upon enactment.

Process for Expedited Access to Review. (Section 932 of the Conference Agreement, Section 932 of the House Bill, Sections 512 and 513 of the Senate Bill).

Present Law

In general, administrative appeals must be exhausted prior to judicial review. The statute requires the automatic suspension of nurse aide training programs in skilled nursing facilities that have been subject to extended survey (that is, found to provide substandard care), have had serious sanctions imposed, or have waivers for required licensed nurse staffing.

House Bill

The Secretary would be required to establish a process where a provider, supplier, or a beneficiary may obtain expedited access to judicial review when a 3-member review panel (composed of ALJs, members of the Departmental Appeals Board, or qualified individuals from qualified independent contractors designated by the Secretary) determines, within 60 days of a complete written request, that it does not have the authority to decide the question of law or regulation and where material facts are not in dispute. The decision would not be subject to review by the Secretary. Interest would be assessed on any amount in controversy and would be awarded by the reviewing court in favor of the prevailing party. This expedited access to judicial review would also be permitted for cases where the Secretary does not enter into or renew provider agreements.

Expedited review would also be established for certain remedies imposed against SNFs. The remedies in the provision are termination of participation, denial of payments, and imposition of temporary management. The Secretary would be required to develop a process for reinstating approval of nurse aide training programs that have been terminated (before the end of the mandatory 2-year disapproval period) if the only reason for the termination was the assessment of a civil money penalty of $5,000 or more. The appropriation of such sums as needed for FY2005 and subsequent years would be authorized to reduce by 50% the average time for administrative determinations, to increase the number of ALJs and appellate staff at the DAB, and to educate these judges and their staffs on long-term care issues. This provision would be effective for appeals filed one or after October 1, 2004.

Senate Bill

The Secretary would be required to establish a process where a provider, supplier, or a beneficiary may obtain expedited access to judicial review when a review entity (up to 3 qualified reviewers drawn from the ALJs or Departmental Appeals Board) determines, within 60 days of a complete written request, that it does not have the authority to decide the question of law or regulation and where material facts are not in dispute. The decision would not be subject to review by the Secretary. Interest would be assessed on any amount in controversy and is awarded by the reviewing court in favor of the prevailing party. Expedited access to judicial review would be permitted for cases where the Secretary does not enter into or renew provider agreements. The provision would be effective for appeals filed on or after October 1, 2004.

The Secretary also would be required to develop and implement a process to expedite review for certain remedies imposed against skilled nursing facilities (SNFs): termination of participation, immediate denial of payments, immediate imposition of temporary management, and suspension of nurse aide training programs.

This provision would authorize the appropriation of such sums as needed for FY2004 and subsequent years to reduce by 50% the average time for administrative determinations, to increase the number of ALJs and appellate staff at the DAB, and to educate these judges and their staffs on long-term care issues.

The Comptroller General would be required to report to Congress on the access of Medicare beneficiaries and health care providers to judicial review of actions of the Secretary and HHS after February 29, 2000 (the date of the decision of *Shalala* v. *Illinois Council on Long Term Care, Inc.* (529 U.S. 1 (2000)). The report would be due not later than one year after enactment.

Conference Agreement

The conference agreement requires the Secretary to establish a process where a provider, supplier, or a beneficiary may obtain access to judicial review when a review entity (up to 3 qualified reviewers drawn from the ALJs or Departmental Appeals Board) determines, within 60 days of a complete written request, that it does not have the authority to decide the question of law or regulation and where material facts are not in dispute. The decision is subject to review by the Secretary. Interest is assessed on any amount in controversy and is awarded by the reviewing court in favor of the prevailing party. Expedited access to judicial review is permitted for cases where the Secretary does not enter into or renew provider agreements. The conference agreement is effective for appeals filed on or after October 1, 2004.

The agreement requires the Secretary to establish a process to expedite appeals of provider terminations and certain other remedies imposed on skilled nursing facilities, including denial of payment for new admissions and temporary management, if imposed on an immediate basis. Providers who are subject to the remedies of denial of payment or temporary management may only access the expedited process when these remedies are imposed on an immediate basis and where the facility has no opportunity to correct the deficiency. The agreement would also allow an expedited appeal where a finding of substandard quality of care has resulted in the disapproval of a skilled nursing facility's nurse aide training program. The agreement requires the Secretary to give priority to cases where termination has been imposed on a provider.

The agreement includes a provision allowing the Secretary to waive disapproval of a nurse aide training program, upon application by a nursing facility if the disapproval resulted from the imposition of a civil monetary penalty that was not related to quality of care provided to residents of the facility. Quality of care in such instances refers to direct, hands on care provided to residents of a facility. This agreement does not permit the Secretary to waive the CMP.

In addition to any amounts otherwise appropriated, the conference agreement authorizes the appropriation of such sums as needed for FY2004 and subsequent years in order to reduce by 50% the average time for administrative determinations, to increase the number of ALJs and appellate staff at the DAB, and to educate these judges and their staffs on long-term care issues.

Revisions to Medicare Appeals Process. (Section 933 of the Conference Agreement, Section 933 of the House Bill, Section 514 of the Senate Bill).

(a) Requiring Full and Early Presentation of Evidence

Present Law

No provision. New evidence can be presented at any stage of the appeals process.

House Bill

The provision would require providers and suppliers to present all evidence for an appeal at the reconsideration level that is conducted by a qualified independent contractor (QIC) unless good cause precluded the introduction of the evidence. The provision would be effective October 1, 2004.

Senate Bill

No provision.

Conference Agreement

The conference agreement requires providers and suppliers to present all evidence for an appeal at the reconsideration level that is conducted by a qualified independent contractor (QIC) unless good cause precluded the introduction of the evidence. The conference agreement provision is effective October 1, 2004.

(b) Use of Patients' Medical Records

Present Law

No provision.

House Bill

The provision would provide for the use of beneficiaries' medical records in appeals reconsiderations by qualified independent contractors (QICs). The provision would be effective upon enactment.

Senate Bill

Beneficiaries' medical records would be able to be used in appeals reconsiderations by qualified independent contractors. The provision would be effective upon enactment.

Conference Agreement

The conference agreement provides for the use of beneficiaries' medical records in appeals reconsiderations by QICs. The conference agreement is effective upon enactment.

(c) Notice Requirements for Medicare Appeals

Present Law

No statutory provision. Determinations and denials of appeals currently include the policy, regulatory, or statutory reason for the denial and information on how to appeal the denial. The Benefits Improvement and Protection Act (BIPA) of 2000, changed the appeals process and created a new independent review (the qualified independent contractors or QICs), which has not yet been implemented.

House Bill

The provision would require that when claims are denied the written notice of determination include the reasons for the determination, including whether a local medical review policy or a local coverage determination was used; the procedures for obtaining additional information concerning the determination including, when requested, the specific provision of the policy, manual, or regulation used in making the determination; and notification of the right to seek an appeal and instructions for appealing the determination.

In the case when a redetermination (the first level of appeal) is denied, the written notice would be required to include: the specific reasons for the redetermination; as appropriate, a summary of the clinical or scientific evidence used in making the redetermination; a description of the procedures for obtaining additional information concerning the redetermination. The notice would be required to be written in a manner calculated to be understood by a beneficiary. A beneficiary receiving such a notice would be permitted to request and receive information on the specific provision of the policy, manual, or regulation used in making the redetermination.

In the case when a reconsideration (the second level of appeal) is decided, the written notice would be required to be written in a manner calculated to be understood by the beneficiary and information regarding appeal rights and processes provided.

For appeals (to either the ALJ or Departmental Appeals Board (DAB)), the notice of the decision would be required to be in writing and written in a manner calculated to be understood by the beneficiary, to include the specific reasons for the determination, including to the extent appropriate a summary of the clinical or scientific evidence used in making the determination; the procedures for obtaining additional information regarding the decision; and notification of the right to appeal and how to initiate such an appeal. The provision also requires that the qualified independent contractor submit information that is needed for an appeal of a decision.

Senate Bill

The provision would require that when claims are denied, the written notice of the decision at every level of the appeal or with the initial determination would be required to be written in a manner to be understood by the beneficiary and include notification of the right to appeal the decision and instruction on how to initiate an appeal.

In addition, the determination would be required to include the reasons for the determination including, as appropriate, the provision of the policy, manual, or regulation that resulted in the denial if requested; and the procedures for obtaining additional information concerning the determination.

In the case when a redetermination (the first level of appeal) is denied, the written notice would be required to include: the reasons for the decision and, as appropriate, the provision of the policy, manual, or regulation that resulted in the denial if requested, and a summary of the clinical or scientific evidence used in making the redetermination; and a description of the procedures for obtaining additional information concerning the redetermination.

In the case when a reconsideration (the second level of appeal) is decided, the written notice would be required to include a detailed explanation of the decision as well as a discussion of the pertinent facts and applicable regulations applied in making the decision, to the extent appropriate; and in the case of a decision regarding whether an item or service is reasonable and necessary for the diagnosis or treatment of illness or injury, an explanation of the medical or scientific rationale for the decision.

For appeals (to either the ALJ or Departmental Appeals Board (DAB)), the notice of the decision would be required to include the specific reasons for the determination including, to the extent appropriate, a summary of the clinical or scientific evidence used in making the determination; and the procedures for obtaining additional information concerning the decision.

Conference Agreement

The conference agreement requires that when claims are denied in either the initial determination or in subsequent appeals, a written notice of the decision is required and to be written in a manner calculated to be understood by the beneficiary and to include notification of the right to appeal the decision and instruction on how to initiate an appeal.

In addition, the determination is required to include the reasons for the determination, including whether a local medical review policy or a local coverage determination was used; and the procedures for obtaining additional information concerning the determination including, when requested, the specific provision of the policy, manual, or regulation used in making the determination.

In the case when a redetermination (the first level of appeal) is denied, the written notice is required to include: the specific reasons for the redetermination; as appropriate, a summary of the clinical or scientific evidence used in making the redetermination; a description of the procedures for obtaining additional information concerning the redetermination. A beneficiary receiving such a notice is permitted to request and receive information on the specific provision of the policy, manual, or regulation used in making the redetermination.

In the case when a reconsideration (the second level of appeal) is decided, the written notice is required to be written in a manner calculated to be understood by the beneficiary and information regarding appeal rights and processes provided.

For appeals (to either the ALJ or Departmental Appeals Board (DAB)), the notice of the decision is required to be in writing and written in a manner calculated to be understood by the beneficiary, to include the specific reasons for the determination, including to the extent appropriate a summary of the clinical or scientific evidence used in making the determination; the procedures for obtaining additional information regarding the decision; and notification of the right to appeal and how to initiate such an appeal.

The conference agreement also requires that the qualified independent contractor submit information that is needed for an appeal of a decision. The conference agreement is effective upon enactment.

(d) Qualified Independent Contractors

Present Law

BIPA established a new and independent second level of appeal called the qualified independent contractors (QICs). BIPA called for at least 12 QICs. The QICs have not yet been implemented.

House Bill

The provision would clarify eligibility requirements for qualified independent contractors and their reviewer employees including medical and legal expertise, independence requirements, and the prohibition on compensation being linked to decisions rendered. The required number of qualified independent contractors would be reduced from not fewer than 12 to not fewer than 4. The provisions regarding the eligibility requirements of QICs and QIC reviews would be effective as if included in the enactment of BIPA.

Senate Bill

The provision would clarify eligibility requirements for qualified independent contractors and their reviewer employees including medical and legal expertise, independence requirements, and prohibitions on compensation being linked to decisions rendered. The required minimum number of qualified independent contractors would be reduced from 12 to 4.

In addition, the provision would delay the effective date of certain appeals provisions until December 1, 2004. Expedited determinations would be delayed until October 1, 2003. The provision would allow the transitional use of peer review organizations (now called quality improvement organizations by the Secretary) to conduct expedited determinations until the QICs are operating.

Conference Agreement

The conference agreement clarifies eligibility requirements for qualified independent contractors and their reviewer employees including medical and legal expertise, independence requirements, and the prohibition on compensation being linked to decisions rendered. The required number of qualified independent contractors is reduced from not fewer than 12 to not fewer than 4. The provisions regarding the eligibility requirements of QICs and QIC reviews are effective as if included in the enactment of BIPA.

Implementation of Certain BIPA Effective Dates

Present Law

The BIPA claims appeals provisions were effective October 1, 2002 but have not been implemented.

House Bill

No provision.

Senate Bill

The provision would delay the effective date of certain appeals provisions until December 1, 2004. Expedited determinations would be delayed until October 1, 2003. The provision would allow the transitional use of peer review organizations (now called quality improvement organizations by the Secretary) to conduct expedited determinations until the QICs are operating.

Conference Agreement

No provision.

Prepayment Review. (Section 934 of the Conference Agreement, Section 934 of the House Bill, Section 541 of the Senate Bill).

Present Law

No explicit statutory instruction. Under administrative authorities, CMS has instructed the contractors to use random prepayment reviews to develop contractor-wide and program-wide error rates. Non-random payment reviews are permitted in certain circumstances laid out in instructions to the contractors.

House Bill

Medicare contractors would be permitted to conduct random prepayment reviews only to develop a contractor-wide or program-wide error rate or such additional circumstances as the Secretary provides for in regulations that were developed in consultation with providers and suppliers. Random prepayment review would only be permitted in accordance with standard protocol developed by the Secretary. Nonrandom payment reviews would be permitted only when there was a likelihood of sustained or high level of payment error. The Secretary would be required to issue regulations regarding the termination and termination dates of non-random prepayment review. Variation in termination dates would be permitted depending upon the differences in the circumstances triggering prepayment review.

The Secretary would be required to issue the required regulations not later than one year after enactment. The provision regarding the use of standard protocols when conducting prepayment reviews would apply to random prepayment reviews conducted on or after the date specified by the Secretary (but not later than one year after enactment). The remaining provisions would be effective one year after enactment.

Senate Bill

The conduct of random prepayment review would be limited only to those done in accordance with a standard protocol developed by the Secretary. Non-random reviews would be prohibited unless a likelihood of sustained or high level of payment error (as defined by the Secretary) existed and the Secretary would be required to establish protocols for terminating the non-random reviews within one year of enactment. The Secretary would be required to publish implementing regulations and develop and publish protocols not later than one year after enactment. The provision would be effective for random reviews conducted on or after the date specified by the Secretary (but not later than one year after enactment).

Conference Agreement

The conference agreement permits Medicare contractors to conduct random prepayment reviews only to develop a contractor-wide or program-wide error rate or such additional circumstances as the Secretary provides for in regulations that are developed in consultation with providers and suppliers. Random prepayment reviews are only permitted in accordance with standard protocol developed by the Secretary. Nonrandom payment reviews are permitted only when there is a likelihood of sustained or high level of payment error. The Secretary is required to issue regulations regarding the termination and termination dates of non-random prepayment review. Variation in termination dates is permitted depending upon the differences in the circumstances triggering prepayment review.

The Secretary is required to issue the required regulations not later than 1 year after enactment. The provision regarding the use of standard protocols when conducting prepayment reviews applies to random prepayment reviews conducted on or after the date specified by the Secretary (but not later than 1 year after enactment). The remaining provisions are effective 1 year after enactment.

Recovery of Overpayments. (Section 935 of the Conference Agreement, Section 935 of the House Bill, Section 542 of the Senate Bill).

Present Law

No explicit statutory instruction. Under administrative authorities, CMS negotiates extended repayment plans with providers that need additional time to repay Medicare overpayments.

House Bill

In situations where repaying a Medicare overpayment within 30 days would be a hardship for a provider or supplier, the Secretary would be required to enter into an extended repayment plan of at least 6 months duration. The repayment plan would not be permitted to go beyond 3 years (or 5 years in the case of extreme hardship, as determined by the Secretary). Interest would be required to accrue on the balance through the repayment period. Hardship would be defined if, for providers that file cost reports, the aggregate amount of the overpayment exceeded 10 percent of the amount paid by Medicare to the provider for the time period covered by the most recently submitted cost report. In the case of a provider or supplier that is not required to file a cost report, hardship would be defined if the aggregate amount of the overpayment exceeded 10 percent of the amount paid under Medicare for the previous calendar year. The Secretary would be required to develop rules for the case of a provider or supplier that was not paid under Medicare during the previous year or for only a portion of the year. Any other repayment plans that a provider or supplier has with the Secretary, would not be taken into account by the Secretary in calculating hardship. If the Secretary has reason to suspect that the provider or supplier may file for bankruptcy or otherwise cease to do business or discontinue participation in Medicare or there is an indication of fraud or abuse, the Secretary would not be obligated to enter into an extended repayment plan with the provider or supplier. If a provider or supplier fails to make a payment according to the repayment plan, the Secretary would be permitted to immediately seek to offset or recover the total outstanding balance of the repayment plan, including interest.

The Secretary would be prohibited from recouping any overpayments until a reconsideration-level appeal (or a redetermination by the fiscal intermediary or carrier if the QICs are not yet in place) was decided, if a reconsideration was requested. Interest would be required to be paid to the provider if the appeal was successful (beginning from the time the overpayment is recouped) or that interest would be required to be paid to the Secretary if the appeal was unsuccessful (and if the overpayment was not paid to the Secretary).

Extrapolation would be limited to those circumstances where there is a sustained or high level of payment error, as defined by the Secretary in regulation, or documented educational intervention has failed to correct the payment error.

Medicare contractors would be permitted to request the periodic production of records or supporting documentation for a limited sample of submitted claims to ensure that the previous practice is not continuing in the case of a provider or supplier with prior overpayments.

The Secretary would be able to use consent settlements to settle projected overpayments under certain conditions. Specifically the Secretary would be required to communicate with the provider or supplier that medical record review has indicated an overpayment exists, the nature of the problems identified, the steps needed to address the problems, and afford the provider or supplier 45 days to furnish additional information regarding the medical records for the claims reviewed. If, after reviewing the additional information an overpayment continues to exist, the Secretary would be required to provide notice and an explanation of the determination and then may offer the provider two mechanisms to resolve the overpayment: either an opportunity for a statistically valid random sample or a consent settlement (without waiving any appeal rights).

The Secretary would be required to establish a process to provide notice to certain providers and suppliers in cases where billing codes were over-utilized by members of that class in certain areas, in consultation with organizations that represent the affected provider or supplier class.

If post-payment audits were conducted, the Medicare contractor would be required to provide the provider or supplier with written notice of the intent to conduct the audit. The contractor would further be required to give the provider or supplier a full and understandable explanation of the findings of the audit and permit the development of an appropriate corrective action plan, inform the provider or supplier of appeal rights and consent settlement options, and give the provider or supplier the opportunity to provide additional information to the contractor, unless notice or findings would compromise any law enforcement activities.

The Secretary would be required to establish a standard methodology for Medicare contractors to use in selecting a sample of claims for review in cases of abnormal billing patterns.

In general the provisions would be effective upon enactment. The limitation on extrapolation would apply to samples initiated after the date that is 1 year after the date of enactment. The Secretary would be required to establish the process for notice of overutilization of billing codes not later than 1 year after enactment. The Secretary would be required to establish a standard methodology for selecting sample claims for abnormal billing patterns not later than 1 year after enactment.

Senate Bill

This provision would add a new subsection (h) to 1874A that would require establishment of at least a 1 year repayment plan—but not longer than three years—when a provider requests a repayment plan, unless the Secretary believes the provider may declare bankruptcy. If a provider or supplier fails to make a scheduled payment, the Secretary could immediately offset or recover the outstanding balance. The Secretary would be required to develop standards for the recovery of overpayments not later than one year after enactment.

The Secretary would be barred from recouping any overpayments until a reconsideration-level appeal was decided (if one were requested). The paragraph provides that interest would be required to be paid to the provider if the appeal was successful (beginning from the time the overpayment is recouped) or that interest would be required to be paid to the Secretary if the appeal was unsuccessful (and if the overpayment was not paid to the Secretary).

The provision would also require that if post-payment audits were conducted, the Medicare contractor would be required to provide the provider or supplier with written notice of the intent to conduct the audit. The contractor would further be required to give the provider or supplier a full and understandable explanation of the findings of the audit and permit the development of an appropriate corrective action plan, inform the provider or supplier of appeal rights and consent settlement options, and give the provider or supplier the opportunity to provide additional information to the contractor, unless notice or findings would compromise any law enforcement activities.

The Secretary would be required to establish a process to provide notice to certain providers and suppliers in cases where billing codes were over-utilized by members of that class in certain areas, in consultation with organizations that represent the affected provider or supplier class. The process would be required not later than one year after enactment.

Not later than one year after enactment, the Secretary would be required to establish a standard methodology for Medicare contractors to use in selecting a sample of claims for review in cases of abnormal billing patterns.

The Secretary would be authorized to use a consent settlement process to settle projected overpayments under certain specified conditions.

The provisions affecting post-payment audits and consent settlements would be effective to audits initiated and consent settlements entered into after the date of enactment. Other provisions would be effective for action taken 1 year after enactment.

Conference Agreement

In situations where repaying a Medicare overpayment within 30 days would be a hardship for a provider or supplier, the conference agreement requires the Secretary to enter into an extended repayment plan of at least 6 months duration. The repayment plan is not permitted to go beyond 3 years (or 5 years in the case of extreme hardship, as determined by the Secretary). Interest is required to accrue on the balance through the repayment period. Hardship is defined if, for providers that file cost reports, the aggregate amount of the overpayment exceeded 10 percent of the amount paid by Medicare to the provider for the time period covered by the most recently submitted cost report. In the case of a provider or supplier that is not required to file a cost report, hardship is defined if the aggregate amount of the overpayment exceeded 10 percent of the amount paid under Medicare for the previous calendar year. The Secretary is required to develop rules for the case of a provider or supplier that was not paid under Medicare during the previous year or for only a portion of the year. Any other repayment plans that a provider or supplier has with the Secretary, are not taken into account by the Secretary in calculating hardship. If the Secretary has reason to suspect that the provider or supplier may file for bankruptcy or otherwise cease to do business or discontinue participation in Medicare or there is an indication of fraud or abuse, the Secretary is not obligated to enter into an extended repayment plan with the provider or supplier. If a provider or supplier fails to make a payment according to the repayment plan, the Secretary may immediately seek to offset or recover the total outstanding balance of the repayment plan, including interest.

The Secretary is prohibited from recouping any overpayments until a reconsideration-level appeal (or a redetermination by the fiscal intermediary or carrier if the QICs are not yet in place) was decided, if a reconsideration was requested. Interest is required to be paid to the provider if the appeal is successful (beginning from the time the overpayment is recouped) or interest is required to be paid to the Secretary if the appeal is unsuccessful (and if the overpayment was not paid to the Secretary).

Extrapolation is limited to those circumstances where there is a sustained or high level of payment error, as defined by the Secretary in regulation, or document educational intervention has failed to correct the payment error.

Medicare contractors are permitted to request the periodic production of records or supporting documentation for a limited sample of submitted claims to ensure that the previous practice is not continuing in the case of a provider or supplier with prior overpayments.

The Secretary is permitted to use consent settlements to settle projected overpayments under certain conditions. Specifically the Secretary is required to communicate with the provider or supplier that medical record review has indicated an overpayment exists, the nature of the problems identified, the steps needed to address the problems, and afford the provider or supplier 45 days to furnish additional information regarding the medical records for the claims reviewed. If, after reviewing the additional information an overpayment continues to exist, the Secretary is required to provide notice and an explanation of the determination and then may offer the provider two mechanisms to resolve the overpayment: either an opportunity for a statistically valid random sample or a consent settlement (without waiving any appeal rights).

The Secretary is required to establish a process to provide notice to certain providers and suppliers in cases where billing codes were over-utilized by members of that class in certain areas, in consultation with organizations that represent the affected provider or supplier class.

If post-payment audits are conducted, the Medicare contractor is required to provide the provider or supplier with written notice of the intent to conduct the audit. The contractor is further required to give the provider or supplier a full and understandable explanation of the findings of the audit and permit the development of an appropriate corrective action plan, inform the provider or supplier of appeal rights and consent settlement options, and give the provider or supplier the opportunity to provide additional information to the contractor, unless notice or findings would compromise any law enforcement activities.

The Secretary is required to establish a standard methodology for Medicare contractors to use in selecting a sample of claims for review in cases of abnormal billing patterns.

In general, the provisions are effective upon enactment. The limitation on extrapolation would apply to samples initiated after the date that is 1 year after the date of enactment. The Secretary is required to establish the process for notice of overutilization of billing codes not later than 1 year after enactment. The Secretary is required to establish a standard methodology for selecting sample claims for abnormal billing patterns not later than 1 year after enactment.

Provider Enrollment Process; Right of Appeal. (Section 936 of the Conference Agreement, Section 936 of the House Bill, Section 515 of the Senate Bill).

Present Law

No explicit statutory instruction. Under administrative authorities, CMS has established provider enrollment processes in instructions to the contractors.

House Bill

The Secretary would be required to establish in regulation a provider enrollment process with hearing rights in the case of a denial or non-renewal. The process would be required to include deadlines for actions on applications for enrollment and enrollment renewals. The Secretary would be required to monitor the performance of the Medicare contractors in meeting the deadlines he establishes. Before changing provider enrollment forms, the Secretary would be required to consult with providers and suppliers. The provision would also establish hearing rights in cases where the applications have been denied.

The enrollment process would be required to be established within 6 months of enactment. The consultation process on provider enrollment forms would be required for changes in the form beginning January 1, 2004. The provision of hearing rights would apply to denials that occur 1 year after enactment or an earlier date specified by the Secretary.

Senate Bill

Same provisions.

Conference Agreement

The conference agreement requires the Secretary to establish in regulation a provider enrollment process with hearing rights in the case of a denial or non-renewal. The process is required to include deadlines for actions on applications for enrollment and enrollment renewals. The Secretary is required to monitor the performance of the

Medicare contractors in meeting the deadlines he establishes. Before changing provider enrollment forms, the Secretary is required to consult with providers and suppliers. The conference agreement also establishes hearing rights in cases where the applications have been denied.

The enrollment process is required to be established within 6 months of enactment. The consultation process on provider enrollment forms is required for changes in the form beginning

January 1, 2004. The provision of hearing rights applies to denials that occur 1 year after enactment or an earlier date specified by the Secretary.

Process for Correction of Minor Errors and Omissions without Pursuing Appeals Process. (Section 937 of the Conference Agreement, Section 937 of the House Bill, Section 543 the Senate Bill).

Present Law

No explicit statutory instruction. Administratively, the Medicare contractors send a claim's denial when a claim has been submitted that lacks required information. Amendments to cost reports are not allowed once a cost report is settled.

House Bill

This provision would require the Secretary to establish a process so providers and suppliers could correct minor errors in claims that were submitted for payment. The provision would also require the Secretary to permit hospitals to correct wage data errors that affect geographic reclassification even if the cost report has been settled. For FY 2004 alone, resubmittal of the application for geographic reclassification would be permitted. The provision would be effective upon enactment.

Senate Bill

This provision would require the Secretary to establish a process so providers and suppliers could correct minor errors in claims that were submitted for payment. The provision would require that the process be developed not later than 1 year after enactment.

Conference Agreement

The conference agreement requires the Secretary to establish a process so providers and suppliers could correct minor errors in claims that were submitted for payment within 1 year after enactment.

Prior Determination Process for Certain Items and Services; Advance Beneficiary Notices. (Section 938 of the Conference Agreement, Section 938 of the House Bill, Section 535(b) of the Senate Bill).

Present Law

Medicare law prohibits payment for items and services that are not medically reasonable and necessary for the diagnosis or treatment of an illness or an injury. Under certain circumstances, however, Medicare will pay for noncovered services that have been provided if both the beneficiary and the provider of the services did not know and could not have reasonably been expected to know that Medicare payment would not be made for these services.

A provider may be held liable for providing uncovered services, if, for example, specific requirements are published by the Medicare contractor or the provider has received a denial or reduction of payment on the same or similar service. In cases where the provider believes that the service may not be covered as reasonable and necessary, an acceptable advance notice of Medicare's possible denial of payment must be given to the patient if the provider does not want to accept financial responsibility for the service. The notice must be given in writing, in advance of providing the service; include the patient's name, date and description of service as well as reasons why the service would not be covered; and must be signed and dated by the patient to indicate that the beneficiary will assume financial liability for the service if Medicare payment is denied or reduced.

House Bill

The Secretary would be required to establish a process through regulation where physicians and beneficiaries can establish whether Medicare covers certain categories of items and services before such services are provided. An eligible requestor would be a physician, but only in case of items and services for which the physician is paid directly and a Medicare beneficiary who receives an advance beneficiary notice from a physician would receive direct payment for that service. The provisions would establish (1) that such prior determinations would be binding on the Medicare contractor, absent fraud or misrepresentation of facts; (2) the right to redetermination in the case of a denial; (3) the applicability of existing deadlines with respect to those redeterminations; (4) that contractors' advance determinations (and redeterminations) are not subject to further administrative or judicial review; and (5) an individual retains all rights to usual administrative or judicial review after receiving the service or receiving a determination that a service would not be covered. These provisions would not affect a Medicare beneficiary's right not to seek an advance determination. The prior determination process would be established in time to address such requests that are filed by 18 months of enactment. The Secretary would be required to collect data on the advance determinations and to establish a beneficiary outreach and education program. GAO is required to report on the use of the advance beneficiary notice and prior determination process within 18 months of its implementation.

Senate Bill

The Secretary would be required to establish a demonstration project to test the administrative feasibility of providing a process for beneficiaries and providers to request and receive a determination as to whether the item or service is covered under Medicare by reasons of Medical necessity, before the item or service involved is furnished to the beneficiary.

Conference Agreement

The conference agreement requires the Secretary to establish a prior determination process through regulation where physicians and beneficiaries can determine whether Medicare covers certain physician services before such services are provided. An eligible requestor is a physician, but only in case of services for which the physician is paid directly, or a Medicare beneficiary, who receives an advance beneficiary notice from a physician who would receive direct payment for that service. The provision establishes (1) that such prior determinations would be binding on the Medicare contractor, absent fraud or misrepresentation of facts; (2) the right to redetermination in the case of a denial; (3) the applicability of existing deadlines with respect to those redeterminations; (4) that contractors' advance determinations (and redeterminations) are not subject to further administrative or judicial review; and (5) an individual retains all rights to usual administrative or judicial review after receiving the service or receiving a determination that a service would not be covered. These provisions do not affect a Medicare beneficiary's right not to seek an advance determination. The prior determination process is required to be established in time to address such requests that are filed by 18 months after enactment and it sunsets 5 years later. For purposes of calculating the physician fee schedule sustainable growth rate, this provision is not to be considered to be a change in law or regulation. The Secretary is required to collect data on the advance beneficiary notices and to establish a beneficiary outreach and education program. GAO is required to report on the use of the advance beneficiary notices within 18 months of the implementation of the prior determination process. The GAO is also required to report on the use of the prior determination process within 36 months of the implementation of the prior determination process.

Appeals by Providers When There is No Other Party Available. (Section 939 of the Conference Agreement, Section 516 of the Senate Bill).

Present Law

Section 1870 of the Social Security Act provides for the recovery of overpayments and the settlement of claims for benefits on behalf of a deceased beneficiary

House Bill

No provision.

Senate Bill

In the case where a beneficiary dies before assigning appeal rights, a provider or supplier would be permitted to appeal a payment denial by a Medicare contractor. The provision would be effective for items and services furnished on or after enactment.

Conference Agreement

In the case where a beneficiary dies before assigning appeal rights, the conference agreement permits a provider or supplier to appeal a payment denial by a Medicare contractor. The provision is effective for items and services furnished on or after enactment.

Revisions to Appeals Timeframes and Amounts. (Section 940 of the Conference Agreement, Section 518 of the Senate Bill).

Present Law

BIPA revised the timeframes for Medicare appeals. For the first level of appeal, the ''redetermination'' level, the timeframe for decisions was reduced from 90 days for a part A appeal and 45 days for a part B appeal to 30 days; for the second level, the ''reconsideration'' level, the timeframe was reduced from 120 days for a part B appeal to 30 days (this is a new level of appeal for part A appeals); for the third level, appeals before administrative law judges, the timeframe was reduced from no time limit to 90 days; and the fourth level, appeals before the Department Appeals Board, the timeframe was reduced from no time limit to 90 days. BIPA also provided that a beneficiary could ''escalate'' his or her appeal to the next level if the appeal was not decided in a timely fashion.

To appeal a claim, the beneficiary must have an ''amount in controversy'' of $100 or more. Judicial review is available only for amounts in controversy of $1,000 or more. Claims are permitted to be aggregated in order to reach the amount in controversy if certain conditions are met.

House Bill

No provision.

Senate Bill

This provision would add 30 days to the timeframe for deciding an appeal at each of

the four levels of appeal. No provision regarding the indexing of amounts in controversy.

Conference Agreement

The conference agreement adds 30 days to the timeframe for deciding an appeal at the redetermination and reconsideration levels of appeal (that is, the first two levels of appeal). The conference agreement also indexes the amount in controversy for appeals to the CPI–U, rounded to the nearest multiple of $10 beginning in 2005.

Mediation Process for Local Coverage Determinations (Section 940A of the Conference Agreement, Section 517 of the Senate Bill).

Present Law

Only beneficiaries have standing to appeal local coverage decisions by Medicare contractors. Mediation is not currently used in Medicare to resolve disputes.

House Bill

No provision.

Senate Bill

The parties that have standing to appeal local coverage decisions would be expanded to include providers or suppliers adversely affected by the determination. The Secretary would be required to establish a process whereby a provider or supplier may request a local coverage determination under certain circumstances. A provider or supplier could seek a local coverage determination if the Secretary determined that: (A) there have been at least five reversals by an ALJ of redeterminations made by a Medicare contractor in at least two different cases; (B) that each reversal involved substantially similar material facts; (C) each reversal involved the same medical necessity issue; and (D) at least 50% of the total claims submitted by the provider within the past year involving the requisite facts and medical necessity issue have been denied and then reversed by an ALJ. Such sums as necessary to carry out the provisions above would be authorized to be appropriated. Also the provision would require the Secretary to study and report to Congress on the feasibility and advisability of requiring Medicare contractors to track the subject and status of claims denials that are appealed and final determinations.

The expansion in standing would be effective for any review or request of any local coverage determination filed on or after October 1, 2003 and for any local coverage determination made on or after October 1, 2003. The requirement to establish a process for a provider or supplier to request a local coverage determination would be effective for requests filed on or after the date of enactment. The report would be due to Congress not later than one year after the date of enactment.

Conference Agreement

The conference agreement requires the Secretary to establish a mediation process using a physician trained in mediation and employed by CMS. This process is to be used to mediate disputes between groups representing providers, physicians, and suppliers and the medical director for the Medicare contractor in any area that the relevant CMS regional administrator determines that there is a systematic pattern and a large volume of complaints from such groups regarding decisions of the medical director or there is a complaint from the co-chair of the advisory committee for that contractor. The Secretary is required to include in the contract with Medicare Administrative Contractors the performance duties expected of a medical director including professional relations. The provision is effective upon enactment.

Policy Development Regarding Evaluation and Management (E&M) Documentation Guidelines. (Section 941 of the Conference Agreement, Section 941 of the House Bill, Section 553 of the Senate Bill).

Present Law

No provision.

House Bill

The Secretary would not be permitted to implement any new documentation guidelines for, or clinical examples of, evaluation and management (E&M) physician services unless the Secretary: (1) developed the guidelines in collaboration with practicing physicians (both generalists and specialists) and provided for an assessment of the proposed guidelines by the physician community; (2) established a plan containing specific goals, including a schedule, for improving the use of the guidelines; (3) conducted pilot projects to test modifications to the guidelines; (4) finds the guidelines have met established objectives; and (5) established and implemented an education program on the use of the guidelines with appropriate outreach. The Secretary would make changes to existing E&M guidelines to reduce paperwork burdens on physicians. The provision establishes objectives for modifications of the E&M guidelines: (1) identification of clinically relevant documentation needed to code accurately and assess coding levels accurately; (2) decrease the level of non-clinically pertinent and burdensome documentation time and content in the medical record; (3) increase accuracy of reviewers; and (4) education of physicians and reviewers.

The pilot projects would be required to be conducted on a voluntary basis in consultation with practicing physicians (both generalists and specialists) and be of sufficient length to educate physicians and contractors on E&M guidelines. A range of different projects would be established and include at least one project: using a physician peer review method, using an alternative method based on face-to-face encounter time with the patient, in a rural area, outside a rural area, and where physicians bill under physician services in a teaching setting and nonteaching setting. The projects would examine the effect of modified E&M guidelines on different types of physician practices in terms of the cost of compliance. Data collected under these projects would not be the basis for overpayment demands or post-payment audits. This protection would apply to claims filed as part of the project, would last the duration of the project and would last for as long as the provider participated in the project. Each pilot conducted would examine the effect of the new E&M documentation guidelines on different types of physician practices (including those with fewer than 10 full-time equivalent employees) and the costs of physician compliance including education implementation, auditing, and monitoring. The Secretary would be required to submit periodic reports to Congress on these pilot projects.

The provision would require a study of an alternative system for documenting physician claims. Specifically the Secretary would be required to study developing a simpler system for documenting claims for evaluation and management services and to consider systems other than current coding and documentation requirements. The Secretary would be required to consult with practicing physicians in designing and carrying out the study. This study would be due to Congress no later than October 1, 2005. MedPAC would be required to analyze the results of the study and report to Congress. The Secretary would also be required to study the appropriateness of coding in cases of extended office visits in which no diagnosis is made and report to Congress no later than October 1, 2005. The Secretary would be required to include in the report recommendations on how to code appropriately for these visits in a manner that takes into account the amount of time the physician spent with the patient.

Senate Bill

The Secretary would be required to ensure, before making changes in documentation guidelines for, or clinical examples of, or codes to report E&M physician services, that the process used in developing the guidelines, examples, or codes was widely consultative among physicians, reflects a broad consensus among specialties, and would allow verification of reported and furnished services.

Conference Agreement

The conference agreement does not permit the Secretary to implement any new or modified documentation guidelines (including clinical examples) for evaluation and management (E&M) physician services unless the Secretary has: (1) developed the guidelines in collaboration with practicing physicians (both generalists and specialists) and provided for an assessment of the proposed guidelines by the physician community; (2) established a plan containing specific goals, including a schedule, for improving the use of the guidelines; (3) conducted pilot projects to test modifications to the guidelines; (4) found the guidelines have met established objectives; and (5) established and implemented an education program on the use of the guidelines with appropriate outreach. The conference agreement requires the Secretary to make changes to existing E&M guidelines to reduce paperwork burdens on physicians. The conference agreement establishes objectives for modifications of the E&M guidelines: (1) identification of clinically relevant documentation needed to code accurately and assess coding levels accurately; (2) decrease the level of non-clinically pertinent and burdensome documentation time and content in the medical record; (3) increase accuracy of reviewers; and (4) education of physicians and reviewers.

The pilot projects are required to be conducted on a voluntary basis in consultation with practicing physicians (both generalists and specialists) and are of sufficient length (but, in no case longer than 1 year) to educate physicians and contractors on E&M guidelines. A range of different projects would be established and include at least one project that: (1) uses a physician peer review method (that is not used by a Medicare contractor) that evaluates medical record information for claims submitted by physicians identified as statistical outliers relative to codes used for billing purposes for these services; (2) uses an alternative method based on face-to-face encounter time with the patient; (3) is conducted for services furnished in a rural area and one for services furnished outside a rural area; and (4) is conducted in a setting where physicians bill under physician services in a teaching setting and one in a nonteaching setting. The projects would examine the effect of modified E&M guidelines on different types of physician practices in terms of the cost of compliance. Each pilot conducted is required to examine the effect of the new E&M documentation guidelines on different types of physician practices (including those with fewer than 10 full-time

equivalent employees) and the costs of physician compliance including education implementation, auditing, and monitoring. The provision requires the Secretary to submit a report to Congress on these pilot projects within 6 months of completion of the pilots.

A study of an alternative system for documenting physician claims is also required. Specifically, the Secretary is required to study developing a simpler system for documenting claims for evaluation and management services and to consider systems other than current coding and documentation requirements. The Secretary is required to consult with practicing physicians in designing and carrying out the study. This study is due to Congress no later than October 1, 2005. MedPAC would be required to analyze the results of the study and report to Congress. The Secretary is also required to study the appropriateness of coding in cases of extended office visits in which no diagnosis is made and report to Congress no later than October 1, 2005. The Secretary is required to include in the report recommendations on how to code appropriately for these visits in a manner that takes into account the amount of time the physician spent with the patient.

Improvement in Oversight of Technology and Coverage. (Section 942 of the Conference Agreement, Section 942 of the House bill, Section 554 of the Senate Bill).

(a) Council for Technology and Innovation

Present Law

No provision.

House Bill

The Secretary would be required to establish a Council for Technology and Innovation within the Centers for Medicare & Medicaid Services (CMS). The council would be composed of senior CMS staff and clinicians with a chairperson designated by the Secretary who reports to the CMS administrator. The Chairperson would serve as the Executive Coordinator for Technology and Innovation would be the single point of contact for outside groups and entities regarding Medicare coverage, coding, and payment processes. The Council would coordinate Medicare's coverage, coding, and payment processes as well as information exchange with other entities with respect to new technologies and procedures, including drug therapies.

Senate Bill

The provision would require the Secretary to establish a Council for Technology and Innovation composed of senior CMS staff and clinicians to coordinate coverage, coding, and payment processes under Title XVIII and the exchange of information on new technologies between CMS and other entities that make similar decisions.

Conference Agreement

The conference agreement requires the Secretary establish a Council for Technology and Innovation within the Centers for Medicare & Medicaid Services (CMS). The council is to be composed of senior CMS staff and clinicians with a chairperson designated by the Secretary who reports to the CMS administrator. The Chairperson will serve as the Executive Coordinator for Technology and Innovation and will be the single point of contact for outside groups and entities regarding Medicare coverage, coding, and payment processes. The Council is required to coordinate Medicare's coverage, coding, and payment processes as well as information exchange with other entities with respect to new technologies and procedures, including drug therapies.

(b) Methods for Determining Payment Basis for New Lab Tests

Present Law

Outpatient clinical diagnostic laboratory tests are paid on the basis of area wide fee schedules. The law establishes a cap on the payment amounts, which is currently set at 74 percent of the median for all fee schedules for that test. The cap is set at 100 percent of the median for tests performed after January 1, 2001 that the Secretary determines are new tests for which no limitation amount has previously been established.

House Bill

The Secretary would be required to establish procedures (by regulation) for determining the basis for and amount of payments for new clinical diagnostic laboratory tests. New laboratory tests would be defined as those assigned a new, or substantially revised Health Care Procedure Coding System (HCPCS) code on or after January 1, 2005. The Secretary, as part of this procedure, would be required to (1) provide a list (on an Internet site or other appropriate venue) of tests for which payments are being established in that year; (2) publish a notice of a meeting in the Federal Register on the day the list becomes available; (3) hold the public meeting no earlier than 30 days after the notice to receive public comments and recommendations; (4) take into account the comments, recommendations and accompanying data in both proposed and final payment determinations. The Secretary would set forth the criteria for making these determinations; make public the available data considered in making such determinations; and could convene other public meetings as necessary. Effective for codes assigned on or after January 1, 2005.

Senate Bill

No provision.

Conference agreement

The conference agreement requires the Secretary to establish procedures (by regulation) for determining the basis for and amount of payments for new clinical diagnostic laboratory tests. New laboratory tests are defined as those assigned a new, or substantially revised Health Care Procedure Coding System (HCPCS) code on or after January 1, 2005. The Secretary, as part of this procedure, is required to (1) provide a list (on an Internet site or other appropriate venue) of tests for which payments are being established in that year; (2) publish a notice of a meeting in the Federal Register on the day the list becomes available; (3) hold the public meeting no earlier than 30 days after the notice to receive public comments and recommendations; (4) take into account the comments, recommendations and accompanying data in both proposed and final payment determinations. The Secretary sets forth the criteria for making these determinations, which include whether a test should be established through gap-filling or cross-walking to an existing code. In these cases, carriers and CMS cannot substitute an alternative service for a gap filled amount, the Secretary shall make public the available data considered in making such determinations; and convenes other public meetings as necessary. The provision is effective for codes assigned on or after January 1, 2005.

(c) GAO Study on Improvements in External Data Collection for Use in the Medicare Inpatient Payment System.

Present Law

No provision.

House Bill

The GAO would be required to study which external data can be collected in a shorter time frame by CMS to use in calculating payments for inpatient hospital services. The GAO could evaluate feasibility and appropriateness of using quarterly samples or special surveys and would include an analysis of whether other executive agencies are best suited to collect this information. The report would be due to Congress no later than October 1, 2004.

Senate Bill

No provision.

Conference Agreement

The conference agreement requires the GAO to study which external data can be collected in a shorter time frame by CMS to use in calculating payments for inpatient hospital services. The GAO may evaluate feasibility and appropriateness of using quarterly samples or special surveys and is required to include an analysis of whether other executive agencies are best suited to collect this information. The report is due to Congress no later than October 1, 2004.

(d) Process for Adoption of ICD Codes as Data Standard

Present Law

The Secretary is required to rely on the recommendations from the National Committee on Vital and Health Statistics (NCVHS) before adopting health information standards and codes. The current standard for procedure codes is the International Classification of Diseases, 9th Revision, clinical modification (ICD–9–CM is the basis of the Medicare inpatient hospital PPS payment system). The NCVHS made a recommendation on November 5th to the Secretary about adopting the latest revision, the ICD–10–PCS (Procedure Coding System) or ICD–10–CM as a coding standard.

House Bill

The Secretary would be permitted to adopt the ICD–10–PCS and the ICD–10–CM within 1–year of enactment without receiving a recommendation from the National Committee on Vital and Health Statistics (NCVHS).

Senate Bill

No provision.

Conference Agreement

No provision. Because the NCVHS made a recommendation to the Secretary, Conferees believed the House provision was no longer necessary.

Conferees urge the Secretary, however, to accept the recommendation of the NCVHS and issue a notice of proposed rule making to initiate the regulatory process for the concurrent adoption of ICD–10–CM and ICD–10–PCS. ICD–10 would replace the 23-year-old ICD–9–CM coding classification system, which has highly limited reporting capabilities for today's needs and growth capacity for future needs, making it an unacceptable coding classification system for both inpatient and outpatient diagnosis. ICD–10 would be able to keep pace with advances in modern medicine, thus ensuring accurate reimbursement rates for emerging technologies and patient access to the highest quality care.

Since 1997, NCVHS has closely examined this issue and received testimonies and letters from more than 80 public- and private-sector groups representing the full range of interests in the health care community. NCVHS and other parties have commissioned numerous studies, all of which NCVHS also has carefully considered. The Committee finds that the recommendation made by NCVHS is based on sound evidence and is, in the words of NCVHS, ''in the best interests

of the country as a whole.'' Conferees encourage the Secretary to implement the recommendation as quickly as possible.

Treatment of Hospitals for Certain Services Under Medicare Secondary Payor (MSP) Provisions. (Section 943 of the Conference Agreement, Section 943 of the House Bill).

Present Law

In certain instances when a beneficiary has other insurance coverage, Medicare becomes the secondary insurance. Medicare Secondary Payer is the Medicare program's coordination of benefits with other insurers. Section 1862(b)(6) of the Social Security Act requires an entity furnishing a Part B service to obtain information from the beneficiary on whether other insurance coverage is available.

House Bill

The Secretary would not require a hospital or a critical access hospital to ask questions or obtain information relating to the Medicare secondary payer provisions in the case of reference laboratory services if the same requirements are not imposed upon those provided by an independent laboratory. Reference laboratory services would be those clinical laboratory diagnostic tests and interpretations of same that are furnished without a face-to-face encounter between the beneficiary and the hospital where the hospital submits a claim for the services.

Senate Bill

No provision.

Conference Agreement

The conference agreement prohibits the Secretary from requiring a hospital or a critical access hospital to ask questions or obtain information relating to the Medicare secondary payer provisions in the case of reference laboratory services if the same requirements are not imposed upon those provided by an independent laboratory. Reference laboratory services are those clinical laboratory diagnostic tests and interpretations of same that are furnished without a face-to-face encounter between the beneficiary and the hospital where the hospital submits a claim for the services.

EMTALA Improvements. (Section 944 of the Conference Agreement, Section 944 of the House Bill).

Present Law

Medicare requires participating hospitals that operate an emergency room to provide necessary screening and stabilization services to any patient who comes to an emergency room requesting examination or treatment in order to determine whether an emergency medical situation exists.

Hospitals that are found to be in violation of Emergency Medical Treatment and Active Labor Act (EMTALA) requirements may face civil monetary penalties and termination of their provider agreement. Prior to imposing a civil monetary penalty, the Secretary is required to request a peer review organization (PRO—currently called quality improvement organizations or QIOs) to assess whether the involved beneficiary had an emergency condition, which had not been stabilized and provide a report on its findings. Except in the case where a delay would jeopardize the health or safety, the Secretary provides 60-day period for the requested PRO review.

House Bill

Emergency room services provided to screen and stabilize a Medicare beneficiary furnished after January 1, 2004, would be evaluated for Medicare's ''reasonable and necessary'' requirement on the basis of the information available to the treating physician or practitioner at the time the services were ordered; this would include the patient's presenting symptoms or complaint and not the patient's principal diagnosis. The Secretary would not be able to consider the frequency with which the item or service was provided to the patient before or after the time of admission or visit. The Secretary would be required to establish a procedure to notify hospitals and physicians when an EMTALA investigation is closed.

Except in the case where a delay would jeopardize the health and safety of individuals, the Secretary would be required to request a PRO review before making a compliance determination that would terminate a hospital's Medicare participation because of EMTALA violations and provide a period of 5 business days for such review. The PRO would be required to provide a copy of the report on its findings to the hospital or physician, consistent with existing confidentiality requirements. This provision would apply to terminations initiated on or after enactment

Senate Bill

No provision.

Conference Agreement

The conference agreement requires emergency room services provided to screen and stabilize a Medicare beneficiary furnished after January 1, 2004, to be evaluated for Medicare's ''reasonable and necessary'' requirement on the basis of the information available to the treating physician or practitioner at the time the services were ordered; this includes the patient's presenting symptoms or complaint and not the patient's principal diagnosis. The Secretary is prohibited from considering the frequency with which the item or service was provided to the patient before or after the time of admission or visit.

The Secretary is required to establish a procedure to notify hospitals and physicians when an EMTALA investigation is closed.

Except in the case where a delay would jeopardize the health and safety of individuals, the Secretary is required to request a PRO review before making a compliance determination that would terminate a hospital's Medicare participation because of EMTALA violations and provide a period of 5 business days for such review. The PRO is required to provide a copy of the report on its findings to the hospital or physician, consistent with existing confidentiality requirements. This provision applies to terminations initiated on or after enactment.

Emergency Medical Treatment and Active Labor Act (EMTALA) Technical Advisory Group. (Section 945 of the Conference Agreement, Section 945 of the House Bill).

Present Law

No provision.

House Bill

The Secretary would be required to establish a 19–member technical advisory group under specified requirements to review issues related to EMTALA. The advisory group would be comprised of: the CMS Administrator; the HHS Inspector General; 4 hospital representatives who have EMTALA experience, (2 of whom have not experienced EMTALA violations) 7 practicing physicians with specified experience; 2 patient representatives; 2 regional CMS staff involved in EMTALA investigations; 1 representative from a State survey organization and 1 from peer review organization. The Secretary would select qualified individuals who are nominated by organizations representing providers and patients.

The advisory group would review EMTALA regulations; provide advice and recommendations to the Secretary; solicit public comments from interested parties; and disseminate information on the application of the EMTALA regulations. The advisory group would be required to (1) elect a member to as chairperson; (2) schedule its first meeting at the direction of the Secretary and meet at least twice a year subsequently; and (3) terminate 30 months after the date of its first meeting. The Secretary would be required to establish the advisory group regardless of any limitation that may apply to the number of advisory committees that may be established within HHS.

Senate Bill

No provision.

Conference Agreement

The conference agreement requires the Secretary to establish a 19–member technical advisory group under specified requirements to review issues related to EMTALA. The advisory group would be comprised of: the CMS Administrator; the HHS Inspector General; 4 hospital representatives who have EMTALA experience (2 of whom have not experienced EMTALA violations); 7 practicing physicians with specified experience; 2 patient representatives; 2 regional CMS staff involved in EMTALA investigations; 1 representative from a State survey organization and 1 from peer review organization. The Secretary is required to select qualified individuals who are nominated by organizations representing providers and patients.

The advisory group will review EMTALA regulations; provide advice and recommendations to the Secretary; solicit public comments from interested parties; and disseminate information on the application of the EMTALA regulations. The advisory group is required to: (1) elect a member to as chairperson; (2) schedule its first meeting at the direction of the Secretary and meet at least twice a year subsequently; and (3) terminate 30 months after the date of its first meeting. The Secretary is required to establish the advisory group regardless of any limitation that may apply to the number of advisory committees that may be established within HHS.

Authorizing Use of Arrangements to Provide Core Hospice Services in Certain Circumstances. (Section 946 of the Conference Agreement, Section 946 of the House Bill, Section 406 of the Senate Bill).

Present Law

A hospice is a public agency or private organization that is primarily engaged in providing and making available certain care to a terminally ill Medicare beneficiary under a written plan.

House Bill

A hospice would be permitted to (1) enter into arrangements with another hospice program to provide care in extraordinary, exigent or other non-routine circumstances, such as unanticipated high patient loads, staffing shortages due to illness, or temporary travel by a patient outside the hospice's service area; and (2) bill and be paid for the hospice care provided under these arrangements. The provision would be effective for hospice care provided on or after the date of enactment.

Senate Bill

Same provision.

Conference Agreement

The conference agreement permits a hospice to: (1) enter into arrangements with another hospice program to provide care in extraordinary, exigent or other non-routine circumstances, such as unanticipated high patient loads, staffing shortages due to illness, or temporary travel by a patient outside the hospice's service area; and (2) bill and be paid for the hospice care provided under these arrangements. The provision is effective for hospice care provided on or after the date of enactment.

Application of OSHA Bloodborne Pathogens Standard to Certain Hospitals. (Section 947 of the Conference Agreement, Section 947 of the House Bill).

Present Law

Section 1866 establishes certain conditions of participation that providers must meet in order to participate in Medicare.

House Bill

Public hospitals that are not otherwise subject to the Occupational Safety and Health Act of 1970 would be required to comply with the Bloodborne Pathogens standard under section 1910.1030 of title 29 of the Code of Federal Regulations. A hospital that fails to comply with the requirement would be subject to a civil monetary penalty, but would not be terminated from participating in Medicare. The provision would apply to hospitals as of July 1, 2004.

Senate Bill

No provision.

Conference Agreement

The conference agreement requires that public hospitals, not otherwise subject to the Occupational Safety and Health Act of 1970, comply with the Bloodborne Pathogens standard under section 1910.1030 of title 29 of the Code of Federal Regulations. A hospital that fails to comply with the requirement will be subject to a civil monetary penalty, but cannot be terminated from participating in Medicare. The provision applies to hospitals as of July 1, 2004.

BIPA-Related Technical Amendments and Corrections. (Section 948 of the Conference Agreement, Section 948 of the House Bill).

Present Law

BIPA established an advisory process for national coverage determinations where panels of experts formed by advisory committees could forward their recommendations directly to the Secretary without prior approval of the advisory committee or the Executive Committee.

House Bill

The statutory reference in BIPA would be changed from the Social Security Act to the Public Health Service Act. Other BIPA references would be changed from ''policy'' to ''determinations.'' The provision is effective as if included in the enactment of BIPA.

Senate Bill

No provision.

Conference Agreement

The conference agreement changes the statutory reference in BIPA from the Social Security Act to the Public Health Service Act. Other BIPA references would be changed from ''policy'' to ''determinations.'' The provision is effective as if included in the enactment of BIPA.

Conforming Authority to Waive a Program Exclusion. (Section 949 of the Conference Agreement, Section 949 of the House Bill, Section 544 of the Senate Bill).

Present Law

The Secretary is required to exclude individuals and entities from participation in federal health programs that are (1) convicted of a criminal offense related to health care delivery under Medicare or under state health programs; (2) convicted of a criminal offense related to patient abuse or neglect under federal or state law; (3) convicted of a felony relating to fraud, theft, or financial misconduct relating to a health care program finance or operated by the federal, state or local government; or (4) convicted of a felony related to a controlled substance.

House Bill

The administrator of a federal health program would be permitted to waive certain 5-year exclusions if the exclusion of a sole community physician or source of specialized services in a community would impose a hardship. The mandatory exclusions that could be waived would be those related to convictions associated with program-related crimes; health care fraud and controlled substance. The provision would be effective upon enactment.

Senate Bill

Same provision.

Conference Agreement

The conference agreement permits the administrator of a federal health program to waive certain 5-year exclusions if the exclusion of a sole community physician or source of specialized services in a community will impose a hardship. The mandatory exclusions that can be waived are those related to convictions associated with program-related crimes; health care fraud and controlled substance. The provision is effective upon enactment.

Treatment of Certain Dental Claims. (Section 950 of the Conference Agreement, Section 950 of the House Bill, Section 555 of the Senate Bill).

Present Law

The Medicare benefit does not include most dental services. Some insurers may require a claim denial from Medicare before accepting the dental claim for payment review, even if the service is not covered by Medicare.

House Bill

A group health plan providing supplemental or secondary coverage to Medicare beneficiaries would not be able to require dentists to obtain a claim denial from Medicare for noncovered dental services before paying the claim. The provision would be effective 60 days after enactment.

Senate Bill

Same provision.

Conference Agreement

The conference agreement provides that a group health plan providing supplemental or secondary coverage to Medicare beneficiaries cannot require dentists to obtain a claim denial from Medicare for dental services that are not covered by Medicare before paying the claim. The provision is effective 60 days after enactment.

Furnishing Hospitals with Information to Compute DSH Formula. (Section 951 of the Conference Agreement, Section 951 of the House Bill).

Present Law

Disproportionate share hospital (DSH) payments under Medicare are calculated using a formula that includes the number of patient days for patients eligible for Medicaid.

House Bill

The provision would require the Secretary to provide information that hospitals need to calculate the number of Medicaid patient days used in the Medicare DSH payment formula, not later than 1 year after enactment.

Senate Bill

No provision.

Conference Agreement

The conference agreement requires the Secretary to arrange for the provision of information that hospitals need to calculate the Medicare DSH payment formula not later than 1 year after enactment.

Revisions to Reassignment Provisions (Section 952 of the Conference Agreement, Section 952 of the House Bill, Section 434 of the Senate Bill).

Present Law

In general, Medicare Part B payments may be made only to a Medicare beneficiary or to physician or other person who provided the service. Section 1842(b)(6) of the Social Security Act establishes the Medicare reassignment prohibitions and does not permit physicians to reassign their Medicare payments to entities with which they have a relationship on an independent contractor basis. In order for an independent contractor to reassign Medicare benefits, the services must be performed on the premises of the entity to which the benefits will be reassigned.

House Bill

Medicare payment for Part B services would be permitted to be made to an entity, as defined by the Secretary, that has a contractual arrangement with the physician or other person who provided the service for the entity to bill for the service and the contractual arrangement meets program integrity and other safeguards specified by the Secretary.

The provision would be effective for payments made on or after one year after the date of enactment.

Senate Bill

Same provision, but would include a conforming amendment.

Conference Agreement

This provision amends the Social Security Act to allow physicians and non-physician practitioners to reassign payment for Medicare-covered services, regardless of where the arrangement (including but not limited to a hospital, clinic, medical group, a physician practice management organization, or a staffing company) so long as there is a contractual arrangement between the physician and the entity under which the entity submits the bill for such service. As a result, the Secretary could enroll these entities in the Medicare program. The Secretary may also provide for other enrollment qualifications to assure program integrity, including joint and several liability.

This provision will streamline Medicare enrollment while also enhancing HHS' program integrity efforts. By permitting entities that retain independent contractors to enroll with the Medicare program and thereby directly bill the Medicare program, HHS will be able to monitor the claims submitted by the entities that retain independent contractors as well as those entities that employ physicians. The Committee supports appropriate program integrity efforts (e.g. joint and several liability) for any entities billing the Medicare program including entities with employees as well as independent contractors. Further, the Committee believes that physicians' and non-physician practitioners' should be entitled to unrestrictive access to billings submitted on their behalf by the entity with which they have contracted. The Committee intends

that the Secretary will implement this provision via program instructions to the Medicare contractors. The changes made by this provision shall apply to Medicare payments made on or after date of enactment.

The provision is effective upon enactment.

Other Provisions. (Section 953 of the Conference Agreement, Section 953 of the House Bill).

Present Law

No provisions.

House Bill

GAO Report on Physician Compensation. No later than six months from enactment, GAO would be required to report to Congress on the appropriateness of the updates in the conversion factor including the appropriateness of the sustainable growth rate (SGR) formula for 2002 and subsequently. The report would examine the stability and the predictability of the updates and rate as well as the alternatives for use of the SGR in the updates. No later than 12 months from enactment, GAO would be required to report to Congress on all aspects of physician compensation for Medicare services. The report would review the alternatives for the physician fee schedule.

Annual Publication of List of National Coverage Determinations. The Secretary would be required to publish an annual list of nation coverage determinations made under Medicare in the previous year. Included would be information on how to get more information about the determinations. The list would be published to the public in an appropriate annual publication.

GAO Report on Flexibility in Applying Home Health Conditions of Participation to Patients Who Are Not Medicare Beneficiaries. The GAO would be required to report to Congress on the implications if the Medicare conditions of participation for home health agencies were applied flexibly with respect to groups or types of patients who are not Medicare beneficiaries. The report would include an analysis of the potential impact of this flexibility on clinical operations and the recipients of such services and an analysis of methods for monitoring the quality of care provided to these recipients. The report would be due no later than six months after enactment.

OIG Report on Notices Relating to Use of Hospital Lifetime Reserve Days. The Inspector General of HHS would be required to report to Congress on the extent to which hospitals provide notice to Medicare beneficiaries, in accordance with applicable requirements, before they use the 60 lifetime reserve days under the hospital benefit. The report would also include the appropriateness and feasibility of hospitals providing a notice to beneficiaries before they exhaust the lifetime reserve days. The report would be due no later than one year after enactment.

Senate Bill

No provision.

Conference Agreement

GAO Report on Physician Compensation. The conference agreement requires that, no later than six months from enactment, the GAO report to Congress on the appropriateness of the updates in the conversion factor including the appropriateness of the sustainable growth rate (SGR) formula for 2002 and subsequent years. The report will examine the stability and the predictability of the updates and rate as well as the alternatives for use of the SGR in the updates. No later than 12 months from enactment, GAO is required to report to Congress on all aspects of physician compensation for Medicare services. The report is required to review the alternatives for the physician fee schedule.

Annual Publication of List of National Coverage Determinations. The conference agreement requires the Secretary publish an annual list of national coverage determinations made under Medicare in the previous year. Information on how to get more information about the determinations is required to be included in the publication. The list and the information are required to be published in an appropriate annual publication that is publicly available.

GAO Report on Flexibility in Applying Home Health Conditions of Participation to Patients Who Are Not Medicare Beneficiaries. The conference agreement requires the GAO to report to Congress on the implications if the Medicare conditions of participation for home health agencies were applied flexibly with respect to groups or types of patients who are not Medicare beneficiaries. The report is required to include an analysis of the potential impact of this flexibility on clinical operations and the recipients of such services and an analysis of methods for monitoring the quality of care provided to these recipients. The report is due no later than six months after enactment.

OIG Report on Notices Relating to Use of Hospital Lifetime Reserve Days. The conference agreement requires the Inspector General of HHS to report to Congress on the extent to which hospitals provide notice to Medicare beneficiaries, in accordance with applicable requirements, before they use the 60 lifetime reserve days under the hospital benefit. The report is required to include the appropriateness and feasibility of hospitals providing a notice to beneficiaries before they exhaust the lifetime reserve days. The report is due no later than one year after enactment.

Streamlining and Simplification of Medicare Regulations (Section 504 of the Senate Bill).

Present Law

No provision.

House Bill

No provision.

Senate Bill

The Secretary would be required to analyze Medicare regulations for the purposes of determining how to streamline the regulations and reduce the number of words in the regulations by two-thirds by October 1, 2004. If the Secretary determines that the two-thirds reduction is infeasible, he would be required to inform Congress in writing by July 1, 2004 of the reasons and then establish a feasible reduction to be achieved by January 1, 2005. The provision would be effective upon enactment.

Conference Agreement

No provision.

Elimination of the Requirement for De Novo Review by the Departmental Appeals Board (Section 520 of the Senate Bill).

Present Law

BIPA section 521 requires that the Departmental Appeals Board (DAB), the fourth level of appeal, review appeals cases *de novo*. Prior to BIPA, the DAB reviewed appeals based on the record established during the previous three levels of appeal.

House Bill

No provision.

Senate Bill

The DAB would be required to review a decision and render a decision or remand the appeal to the ALJ within the 90–day period. The provision would be effective upon enactment.

Conference Agreement

No provision.

TITLE X—MEDICAID AND MISCELLANEOUS PROVISIONS

Subtitle A—Medicaid Provisions

Medicaid Disproportionate Share (DSH) Hospital Payments—Temporary Increase. (Section 1001(a) of the Conference Agreement, Section 1001 of the House Bill, and Section 601 of the Senate Bill)

Present Law

Hospitals that serve a large number of uninsured patients and Medicaid enrollees receive additional Medicaid disproportionate share hospital (DSH) payments. As established in the BBA 1997, the federal share of Medicaid DSH payments is capped at specified amounts for each state for FY1998 through FY2002. For most states, those specified amounts declined over the 5-year period. A state's allotment for FY2003 and for later years is equal to its allotment for the previous year increased by the percentage change in the consumer price index for urban consumers (CPI–U) for the previous year. In addition, each state's DSH payment for FY2003 and subsequent years is limited to no more than 12% of total spending for medical assistance in each state for that year.

BIPA provided states with a temporary reprieve from the declining allotments by establishing a special rule for the calculation of DSH allotments for 2 years, raising allotments for FY2001 and for FY2002. The provision also clarified that the FY2003 allotments were to be calculated as specified under BBA 1997, using the lower, pre-BIPA levels for FY2002 in those calculations.

DSH payments to each inpatient general hospital are limited to some percentage of the costs of providing inpatient and outpatient services to Medicaid and uninsured patients at that hospital, less payments received from or on behalf of Medicaid and uninsured patients. These costs are considered to be unreimbursed costs. DSH payments to private hospitals may be no greater than 100% of unreimbursed costs. Public hospitals, for the two state fiscal years beginning after September 2002, cannot receive DSH payments that exceed 175% of unreimbursed costs. Thereafter, those hospitals would be limited to DSH payments of no more than 100% of unreimbursed costs.

House Bill

The provision would establish a temporary increase in DSH allotments for FY2004 and for certain subsequent fiscal years. Allotments for FY2004 would be set at 120% of FY2003 allotments as under BIPA and would not be subject to the ceiling capping states' allotments at 12% of medical assistance payments. Allotments for subsequent years would be equal to the allotments for FY2004 unless the Secretary determines that the allotments as would have been calculated prior to the enactment of this bill would equal or exceed the FY2004 amounts. For such fiscal years, allotments would be equal to allotments for the prior fiscal year increased by the percentage change in the consumer price index for all urban consumers for the previous fiscal year. The provision would be effective upon enactment.

Senate Bill

The special DSH rule established by BIPA that raised DSH allotments, subject to the current law limit of 12% of spending for medical assistance, would be extended for FY2004 and FY2005. Allotments for FY2004 would be

calculated to be equal to FY2004 allotments (as established by BBA 1997) increased by the product of 0.50; and the difference between: (a) FY2002 allotments (as established by BIPA 2000) increased by the percentage change in the CPI–U for each of fiscal years 2002 and 2003, and (b) FY2004 allotments (as established by BBA 1997). Allotments FY2005 would be calculated to be equal to FY2005 allotments (as established by BBA 1997) increased by the product of 0.50; and the difference between: (a) FY2002 allotments (as established by the BIPA 2000) increased by the percentage change in the CPI–U for each of fiscal years, 2002, 2003, and 2004, and (b) FY2005 allotments (as established by BBA 1997). For FY2006 and thereafter, DSH allotments would be calculated based on the previous years' amount (as established by BBA 1997 and subject to the current law limit of 12% of spending for medical assistance) increased by the percentage change in the CPI–U for the previous fiscal year. All allotments would remain subject to the current law limit of 12% of medical assistance spending.

A separate calculation of the DSH allotment for the District of Columbia for FY2004 would be specified. The DSH allotment for the District of Columbia for FY2004 would be raised, subject to the current law limit of 12% of spending for medical assistance, by multiplying $49 million by the percentage change in the CPI–U for each of FY2000, FY2001, FY2002, and FY2003. The provision would be effective upon enactment.

Conference Agreement

The conference agreement will establish a temporary increase in DSH allotments for FY2004 and for certain subsequent fiscal years. Allotments for FY2004 are to be set at 116% of FY2003 allotments as under BIPA and will not be subject to the ceiling capping states' allotments at 12% of medical assistance payments. Allotments for subsequent years will be equal to the allotments for FY2004 unless the Secretary determines that the allotments as would have been calculated prior to the enactment of this bill would equal or no longer exceed the FY2004 amounts. For such fiscal years, allotments will be equal to allotments for the prior fiscal year increased by the percentage change in the consumer price index for all urban consumers for the previous fiscal year. The provision is effective upon enactment.

Increase in the Floor for Treatment as an Extremely Low DSH States Under the Medicaid Program for Fiscal Years 2004 and 2005. (Section 1001(b) of the Conference Agreement, Section 602 of the Senate Bill)

Present Law

Extremely low DSH states are those states whose FY1999 federal and state DSH expenditures (as reported to CMS on August 31, 2000) are greater than zero but less than 1% of the state's total medical assistance expenditures during that fiscal year. DSH allotments for the extremely low DSH states for FY2001 would be equal to 1% of the state's total amount of expenditures under their plan for such assistance during that fiscal year. For subsequent fiscal years, the allotments for extremely low DSH states would be equal to their allotment for the previous year, increased by the percentage change in the CPI–U for the previous year, subject to a ceiling of 12% of that state's total medical assistance payments in that year.

House Bill

No provision.

Senate Bill

Allotments for certain extremely low DSH states for FY2004 and FY2005 would be increased. For states with DSH expenditures for FY2000 (as reported to CMS as of August 31, 2003) that are greater than zero but less than 3% of the state's total medical assistance expenditures during that fiscal year, the provision would raise the DSH allotments for FY2004 to 3% of the state's total amount of expenditures for such assistance during that fiscal year. States with DSH expenditures for FY2001 (as reported to CMS as of August 31, 2004) that are greater than zero but less than 3% of the state's total medical assistance expenditures during that fiscal year would have the DSH allotments for FY2005 equal to such state's DSH allotment for FY2004 increased by the percentage change in the CPI–U for FY2004.

A special DSH allotment adjustment for certain states would be specified for FY2004 and FY2005. For Tennessee, if its state-wide Section 1115 waiver is revoked or terminated during FY2004 and/or FY2005, the Secretary of HHS would permit the state to submit an amendment to its state plan that would describe the methodology to be used by the state to identify and make payments for disproportionate share hospitals (including children's hospitals, and institutions for mental diseases, or other mental health facilities—other than state-owned institutions or facilities), based on the proportion of patients served by such hospitals that are low-income patients with special needs. The state would be required to provide data for the computation of an appropriate DSH allotment that does not result in greater expenditures under this title than would have been made if such waiver had not been revoked or terminated. The provision would be effective upon enactment.

Conference Agreement

The conference agreement will raise the temporary floor for extremely low DSH states as defined under current law for fiscal years 2004 through 2008 by 16% above current amounts.

Increased Reporting Requirements to Ensure the Appropriateness of Payment Adjustments to Disproportionate Share Hospitals Under the Medicaid Program. (Section 1001(c) of the Conference Agreement, Section 603 of the Senate Bill)

Present Law

BBA 1997 required each state to submit to the Secretary an annual report describing the disproportionate share payments made to each disproportionate share hospital (DSH) and the methodology used by the state for prioritizing payments to such hospitals.

House Bill

No provision.

Senate Bill

As a condition of receiving federal Medicaid payments for FY2004 and each fiscal year thereafter, the provision would require each state to submit to the Secretary an annual report (for the previous fiscal year) identifying each disproportionate share hospital that received a payment, the amount such hospital received, as well as other information the Secretary determines necessary to ensure the appropriateness of the DSH payments for the previous fiscal year. The provision would be effective upon enactment.

Conference Agreement

As a condition of receiving federal Medicaid payments for FY2004 and each fiscal year thereafter, the conference agreement will require each state to submit to the Secretary an annual report (for the previous fiscal year) identifying each disproportionate share hospital that received a payment, the amount such hospital received, as well as other information the Secretary determines necessary to ensure the appropriateness of the DSH payments for the previous fiscal year. In addition, the conference agreement will require states to submit annually to the Secretary an independent certified audit verifying: the extent to which hospitals receiving DSH payments have reduced their uncompensated care costs to reflect DSH payments received; the states' compliance with the hospital-specific payment ceilings; the methodology used to calculate those ceilings; and the documentation maintained by the states regarding claimed costs, expenditures and payments under this section. The conference agreement will be effective upon enactment.

Clarification of Inclusion of Inpatient Drug Prices Charged to Certain Public Hospitals in the Best Price Exemptions for the Medicaid Drug Rebate Program. (Section 1002 of the Conference Agreement, Section 1002 of the House Bill, and Section 604 of the Senate Bill)

Present Law

Medicaid drug rebates are calculated based on the difference between the average manufacturer's price (AMP) and the manufacturer's "best price." In determining the "best price" for a drug sold by a manufacturer, certain discounted prices and fee schedules are disregarded. The special discounted prices for outpatient drugs negotiated by the Office of Pharmacy Affairs (of HHS) with drug manufacturers on behalf of certain clinics and safety net providers are one example of prices excluded from Medicaid's "best price" determination. Because of this exclusion from Medicaid's "best price" definition, the discounts available to safety net providers have no bearing on the calculation of drug rebates under the Medicaid program, allowing those providers to negotiate better rates with manufacturers, since Medicaid rebates will not change with the size of their negotiated discounts. Discounted prices for inpatient drugs for many safety net providers, however, are not disregarded in the Medicaid "best price" determination.

House Bill

The provision would modify the definition of "best price" for the purpose of calculating Medicaid drug rebates, to also disregard the discounted inpatient drug prices charged to certain public safety net hospitals. Those hospitals would also be subject to the same auditing and record keeping requirements as other providers with similar exemptions from Medicaid's "best price" determination. The provision would be effective upon enactment.

Senate Bill

The provision would modify the definition of "best price" for the purpose of calculating Medicaid drug rebates, to also exclude the discounted inpatient drug prices charged to certain public safety net hospitals. Those hospitals would also be subject to the same auditing and record keeping requirements as other providers with similar exemptions from Medicaid's "best price" determination. The provision would be effective October 1, 2003.

Conference Agreement

The conference agreement will modify the definition of "best price" for the purpose of calculating Medicaid drug rebates, to also exclude the discounted inpatient drug prices charged to certain public safety net hospitals. Those hospitals will also be subject to

the same auditing and record keeping requirements as other providers with similar exemptions from Medicaid's ''best price'' determination. The provision will be effective upon enactment.

Assistance for States for Legal Immigrants

Present Law

''Qualified aliens'' who entered the United States after the enactment of the Personal Responsibility and Work Opportunity Reconciliation Act of 1996 (PRWORA, August 22, 1996) are not eligible to receive federally funded benefits under Medicaid or SCHIP for 5 years. Qualified aliens who entered the United States prior to the enactment of PRWORA are eligible for federally funded Medicaid coverage as a state option, as are qualified aliens arriving after August 22, 1996 who have been present in the United States for more than 5 years.

A person who executed an affidavit of support for an alien under Senate Section 213A of the Immigration and Nationality Act (INA) is liable to reimburse the federal or state government for the public benefits received by the sponsored alien until the alien naturalizes or has accumulated 40 quarters of work. Senate Section 213A was enacted as a part of PRWORA on August 22, 1996.

House Bill

No provision.

Senate Bill

The provision would lift the 5–year ban and would allow states the option to provide medical assistance to certain lawfully residing individuals under Medicaid (including under a waiver authorized by the Secretary) or SCHIP for any of fiscal years 2005 through 2007. Those eligible would include lawfully residing women during pregnancy and the 60–day period after delivery, and children otherwise eligible for Medicaid or SCHIP as defined by the state plan. States opting to provide coverage to such lawfully residing individuals under SCHIP must also provide coverage to such individuals under Medicaid. If services are provided under the Medicaid program, the alien's sponsor would not be liable to reimburse the federal or state government for the cost of such services. The provision would be effective upon enactment.

Conference Agreement

No provision.

GAO Study Regarding Impact of Assets Test for Low-income Beneficiaries. (Section 607 of the Senate Bill)

Present Law

No provision.

House Bill

No provision.

Senate Bill

The provision would require the General Accounting Office (GAO) to conduct a study to determine the extent to which drug utilization and access to covered drugs differs between: (1) individuals who qualify for the transitional assistance prescription drug card program or for the premiums and cost sharing subsidies available to certain low-income beneficiaries (including qualified Medicare beneficiaries, specified low-income Medicare beneficiaries or qualifying individual under Senate Section 1860(D)), and (2) individuals who do not qualify for the transitional assistance prescription drug card program or for the premiums and cost sharing subsidies available to certain low-income beneficiaries solely as a result of the application of an assets test to the income eligibility requirements of such individuals. The GAO would be required to submit to Congress the final report (including recommendations for legislation) no later than September 30, 2007. The provision would be effective upon enactment.

Conference Agreement

No provision.

Clarification Regarding Non-Regulation of Transfers

Present Law

No specific provision

House bill

No provision

Senate bill

No provision

Conference Agreement

The final conference agreement permits the Secretary, in limited instances, to allow a publicly-owned regional medical center to utilize the disproportionate share hospital allotment of another State. This provision will apply through December 31, 2005.

Urban Health Provider Adjustment. (Section 625 of the Senate Bill)

Present Law

There are two other types of ceilings on DSH payments, in addition to the state-wide allotments. The ''hospital-specific'' ceiling limits payments to hospitals to some percentage of the each hospital's costs of providing inpatient and outpatient services to Medicaid and uninsured patients, less payments received from or on behalf of Medicaid and uninsured patients (''unreimbursed costs''). DSH payments to public hospitals are limited to 100% of these unreimbursed costs except in fiscal years 2003 and 2004 when the percentage of unreimbursed costs that can be covered by DSH rises to 175%. The hospital-specific ceiling for private hospitals is 100% of unreimbursed costs and for certain public hospitals in the state of California is 175% permanently.

House Bill

No provision.

Senate Bill

DSH payments made to hospitals that are owned and operated by the state of Indiana and located in Marion County would be made without regard to the state's DSH allotment limitation so long as those payment amounts, fit FY2004 and each fiscal year thereafter do not exceed 175% of the ''unreimbursed costs'' of furnishing hospital services.

Conference Agreement

No provision.

100% FMAP for Medical Assistance Provided to a Native Hawaiian Through a Federally-Qualified Health Center or a Native Hawaiian Health Care System Under the Medicaid Program. (Section 632 of the Senate Bill)

Present Law

The Medicaid program is jointly financed by the states and the federal government. The federal government share is based on each state's federal medical assistance percentage (FMAP). The FMAP for a state is calculated using a formula reflecting the state per capita income relative to the average U.S. per capita income. The formula is designed to give a higher FMAP to states with a per capita income below the U.S. average. No state can have an FMAP of less than 50% or more than 83%. Certain services including family planning are paid at an alternative FMAP rate, as are administrative expenses. In addition, the law provides that services provided through an Indian Health Service facility operated by the Indian Health Service or an Indian tribe or tribal organization have an FMAP of 100%.

The Jobs and Growth Tax Relief Reconciliation Act of 2003 (JEGTRRA, P.L. 108–026) altered the statutory calculation of the FMAPs by providing a hold harmless for declines from the prior year for each state FMAP, and a temporary increase of 2.95 percentage points for the last 2 quarters of fiscal year 2003 and the first three quarters of fiscal year 2004. The calculated statutory FMAPs for Hawaii would be 58.77% for fiscal year 2003 and 58.90% for fiscal year 2004. The JEGTRRA changes result in an FMAP of 61.75% for the last 2 quarters of fiscal year 2003, and 61.85% for the first three quarters of fiscal year 2004. The FMAP for services provided to a Native Hawaiian is the same as for services provided to other Medicaid beneficiaries in Hawaii.

House Bill

No provision.

Senate Bill

For services provided to a Native Hawaiian by a federally qualified health center or a Native Hawaiian health care system, the FMAP would be 100%. Services qualifying for the 100% FMAP would include those provided by referral, and under contract or other arrangement between a health care provider and the federally qualified health center or Native Hawaiian health care system. The provision would be effective for medical assistance provided on or after the date of enactment.

Conference Agreement

No provision.

Extension of Moratorium. (Section 633 of the Senate Bill)

Present Law

Medicaid payment for services provided by an institution for mental disease (IMD) may be made only for beneficiaries who are under age 21 or over 65. IMD means a hospital, nursing facility, or other institution of more than 16 beds, that is primarily engaged in providing diagnosis, treatment, or care of persons with mental diseases, including medical attention, nursing care, and related services. For two facilities in Michigan—Kent Community Hospital Complex and Saginaw Community Hospital—previous legislation has imposed a moratorium on determination of the facilities as IMDs through December 31, 2002.

House Bill

No provision.

Senate Bill

The moratorium on the determination of Saginaw Community Hospital as an IMD would be permanently extended. The provision would be effective as if included in the Balanced Budget Act of 1997.

Conference Agreement

The moratorium on the determination of Saginaw Community Hospital as an IMD would be extended for 2 years. The provision would be effective as if included in the Balanced Budget Act of 1997.

Subtitle B—Miscellaneous Provisions

Employer Flexibility. (Section 1011 of the Conference Agreement, and Section 631 of the Senate Bill)

Present Law

No provision.

House Bill

No provision.

Senate Bill

The provision would amend the Age Discrimination in Employment Act of 1967 to

allow an employee benefit plan that provides medical benefits to be offered to retirees who are not eligible for Medicare benefits or benefits provided under a State plan without offering medical benefits, or the same medical benefits, to Medicare-eligible retirees or retirees eligible for benefits under a State plan. Under the provision, an employee benefit plan that distinguishes between those retirees and other retirees would not violate the ADEA. The provision would be effective upon enactment.

Conference Agreement

No provision. However, the conferees reviewed the ADEA and its legislative history and believe the legislative history clearly articulates the intent of Congress that employers should not be prevented from providing voluntary benefits to retirees only until they become eligible to participate in the Medicare program.

Federal Reimbursement of Emergency Health Services Furnished to Undocumented Aliens

Present Law

The Balanced Budget Act of 1997 (BBA97) provided $25 million in funding for state emergency health services furnished to undocumented aliens for each of FY1998 through 2001. Funds were distributed among the 12 states with the highest number of undocumented aliens. In a fiscal year, each state's portion of the total funds available was based on its share of total undocumented aliens in all of the eligible states. The share of undocumented aliens in each state were based on the estimates provided by the Statistics Division of the Immigration and Naturalization Service (INS).

House Bill

No provision.

Senate Bill

For each of fiscal years 2005 through 2008 the provision would appropriate for allotment among states $250 million in funds for emergency health services furnished to undocumented aliens. Each such fiscal year the Secretary would distribute $167 million of $250 million among all states. Each state would receive an amount equal to the product of the total amount available in each fiscal year, and the proportion of the state's share of undocumented aliens to the total count of undocumented aliens residing in all states as determined by the Statistics Division of the Immigration and Naturalization Service, as of January 2003, based on the decennial census.

For each of fiscal years 2005 through 2008, the Secretary would distribute $83 million of $250 million among the 6 states with the highest number of undocumented alien apprehensions for such fiscal year. Each such state would receive an amount that bears the same ratio to the total amount available for allotments to such states (in each fiscal year) as the ratio of the number of undocumented alien apprehensions in the state (in each fiscal year) to the total number of undocumented alien apprehensions for all such states (in each fiscal year) based on the four most recent quarterly apprehensions rates for undocumented aliens as reported by the Immigration and Naturalization Service.

From the state allotments described above, the Secretary would pay directly to local governments, hospitals, or other providers located in the state (including providers of services rendered through an Indian Health Service facility) for costs incurred in providing emergency health care services furnished to undocumented aliens during that fiscal year (even if the care is furnished to aliens who have been allowed to enter for the sole purpose of receiving emergency health care services). No later than September 1, 2004, the Secretary would be required to establish a process, that includes measures to protect against fraud and abuse, under which entities would apply for reimbursement from the state's allotments for claims associated with emergency health care services furnished to undocumented aliens. Advanced payments would be made quarterly based on the applicants projected expenditures. The Secretary would also be required to set up a process to allow for prior period adjustments resulting from underpayment or over payment to an entity in a prior quarter. Funds shall remain available until they are expended. The provision would be effective upon enactment.

Conference Agreement

For each of fiscal years 2005 through 2008 the Conference agreement appropriates for allotment among eligible providers in the 50 states and the District of Columbia $250 million in additional federal funding for emergency health services furnished to undocumented aliens. For each such fiscal year, the Secretary must distribute $167 million of $250 million among eligible providers in all states. Each state's share of this amount will be based on its proportion of total number of undocumented aliens in all states as determined by the Statistics Division of the Immigration and Naturalization Service, as of January 2003, based on the decennial census.

For each of fiscal years 2005 through 2008, the Secretary must distribute $83 million of $250 million among eligible providers in the six states with the highest number of undocumented alien apprehensions for such fiscal year. Each state's share of this amount is equal to the product of the total amount available for allotments to such states (in each fiscal year), and the proportion of the number of undocumented alien apprehensions in the state (in each fiscal year) to the total number of undocumented alien apprehensions for all such states (in the preceding fiscal year) based on apprehensions rates for undocumented aliens as reported by the Immigration and Naturalization Service in the four consecutive-quarter period ending before the beginning of the fiscal year for which such information is available.

From the $250 million in state allotments described above, the Secretary will pay directly to eligible providers located in the state (including hospitals, physicians, or providers of ambulance services, and Indian Health Service facilities) for unreimbursed costs incurred by providing emergency health care services during that fiscal year to: (1) Undocumented aliens; (2) aliens who have been paroled in the United States at a port of entry for the purpose of receiving eligible services; and (3) Mexican citizens permitted to enter the United States for not more than 72 hours under the authority of a specified identification card. In establishing a payment methodology, the Secretary may establish different methodologies for different types of eligible providers, may calculate payments to hospitals based on hospital-specific cost-to-charge ratios, and shall make quarterly payments to eligible providers. Hospitals may elect to receive payment for hospital and all physician services in which case they may pass on payments for physician services directly to physicians without charging hospital administrative fees. If the amount of funds allotted to a state is insufficient to ensure that each eligible provider receives the amount described above then the Secretary is required to reduce the amount of payment to eligible providers to ensure that each eligible provider is paid.

No later than September 1, 2004, the Secretary must establish a process that includes measures to protect against fraud and abuse to ensure that inappropriate, excessive or fraudulent payments are not made from allotments. Advance payments may be made quarterly based on the applicants projected expenditures. The Secretary is also required to set up a process to allow for prior period adjustments resulting from under payments or over-payments. Funds will remain available until they are expended. The provision will be effective upon enactment.

Commission on Systematic Interoperability. (Section 1013 of the Conference Agreement)

Pediatric Palliative Care Demonstration

Medicare is designed for aged and disabled individuals (typically people over 65 years of age). It was not designed with children in mind.

The conferees are aware of potential barriers in the current system for children with life-threatening illnesses. First, in order to qualify for hospice, a doctor must certify that a child has 6–months to live. Determining how long a child has to live is often difficult. Second, the current system does not allow a patient to receive curative and palliative care simultaneously. This means that children can either receive treatment for their disease or they can receive palliative care.

HHS should conduct a demonstration project in up to 6 geographically diverse sites to determine whether palliative care for children may be improved under circumstances where such barriers are reduced or eliminated. Such demonstration shall take place over at least a three year period.

The Secretary, in conducting such demonstration project, should take into account the recommendations of the Institute of Medicine in its report: ''When Children Die: Improving Palliative and End-of-Life Care for Children and their Families.''

In particular, the Secretary should consider including as part of the demonstration:

1. Waivers to Elect Hospice Care and Receive Curative Treatment.
2. Care coordination from diagnosis to end of life.
3. Features to ensure that parents have information about existing pediatric hospice and palliative care programs to make decisions about the care of their child.
4. Bereavement counseling for the family and reimbursement to provider.

The conferees believe that it is important that the Secretary have flexibility when conducting such demonstration to provide additional benefits so long as they are consistent with the recommendations contained in the IOM Report and they are provided in budget neutral manner. The conferees also believe that the Secretary should provide reports to Congress, as appropriate, that include an evaluation of the short- and long-term costs and benefits of palliative care under traditional Medicare and the demonstration projects, determine the quality and duration of palliative care under the demonstration project, and evaluate whether there is an offset of savings by providing pediatric palliative care, and the projected cost of implementing the demonstrations on a national basis.

Present Law

No provision.

House Bill

No provision.

Senate Provision

No provision.

Conference Agreement

The conference agreement instructs the Secretary to establish a Commission on Systemic Interoperability to develop a comprehensive strategy for the adoption and implementation of health care information technology standards. In developing its strategy, the Commission must consider the costs and benefits of the standards, the current demand on industry resources to implement these and other electronic standards (including the HIPAA administrative simplification standards), and the most cost-effective and efficient means for industry to implement the standards. The Commission must not interfere with any ongoing process of developing or adopting standards, nor shall it replicate activities related to such standards or to the HHS National Health Information Infrastructure initiative. Not later than October 31, 2005, the Commission must submit a report to the Secretary and the Congress describing its strategy.

The Commission shall be composed of 11 members. The President shall appoint three members, including a Chairperson; the Senate Majority Leader, the Senate Minority Leader, the Speaker, and the House Minority Leader shall each appoint two members. Commission membership must include nationally recognized experts in health finance and economics, health plans and integrated delivery systems, health care reimbursement, health care technology and information systems, and other related fields, as well as physicians, pharmacists, and other health care providers, who provide a mix of professionals, broad geographic representation, and a balance between urban and rural representation. Each member shall be appointed for the life of the Commission.

Commission members shall be paid for each day (including travel days) of service at a rate not exceeding the rate of basic pay for level IV of the Executive Schedule. Each member shall also receive travel expenses and a per diem. Federal employees who serve on the Commission may not receive any financial compensation.

A majority of Commission members shall constitute a quorum but a lesser number may hold hearings. The Commission Chairperson must appoint a Director, to be paid at a rate not exceeding the rate of basic pay for level IV of the Executive Schedule. With the Commission's approval, the Director may appoint additional staff, as well as temporary experts and consultants. Employees of federal agencies may also be detailed to the Commission to assist in carrying out its duties.

The Commission may, as appropriate, hold hearings, take testimony, and receive evidence. Any Commission member or agent may, if so authorized by the Commission, take any action which the Commission is authorized to take. The Commission may obtain official information from a federal agency and may accept, use and dispose of gifts, bequests, or devises of services or property, both real and personal. Gifts, bequests, or devices or money and proceeds from sales of other property received as gifts, bequests, or devices shall be deposited in the Treasury and available for disbursement upon order of the Commission. The Commission may use the U.S. mail under the same conditions as other federal agencies and may enter into contracts as may be necessary to conduct its work. Upon the Commission's request, the Administrator of General Services must provide administrative support services to the Commission on a reimbursable basis.

The Commission shall terminate 30 days after submitting its report to the Secretary and the Congress. The conference report authorizes to be appropriated such sums as may be necessary to carry out this Section.

Research on Outcomes of Health Care Items and Services. (Section 1014 of the Conference Agreement)

Present Law

The Agency for Healthcare Research and Quality (AHRQ) is an agency within the Department of Health and Human Services. AHRQ's mission is to support, conduct, and disseminate research that improves access to care and the outcomes, quality, cost, and utilization of health care services. The research agenda is designed to be responsive to the needs of its customers, including patients, clinicians, institutions, plans, purchasers, and federal, state and local governments. The research conducted by AHRQ is used to inform medical practice, educate consumer understanding of health care, and expand policymakers' ability to monitor and evaluate the impact of system changes on outcomes, quality, access, cost, and use of health care, and to devise policies to improve system performance.

House Bill

No provision.

Senate Bill

No provision.

Conference Agreement

The conference agreement authorizes and appropriates $50 million for fiscal year 2004 for the Secretary through the Agency for Healthcare Research and Quality to conduct research to address the scientific information needs and priorities identified by the Medicare, Medicaid, and State Children Health Insurance Programs. The information needs and priorities will relate to the clinical effectiveness and appropriateness of specified health services and treatments, and the health outcomes associated with such services and treatments. The needs and priorities also will address strategies for improving the efficiency and effectiveness of those health care programs. The Secretary is required to establish a process for developing research priorities. Not later than 6 months after the date of enactment, the Secretary must establish an initial list of priorities. The Secretary must complete the evaluation and synthesis of the scientific evidence related to that initial list within 18 months after development of such a list and disseminate the research findings to the public, prescription drug plans, and other plans. Not later than 18 months after the date of enactment, the Secretary is required to identify voluntary options that could be undertaken by public and private entities to improve information sharing regarding outcomes and quality of care, adopt innovative quality improvement strategies, develop management tools to improve oversight by state officials, support federal and state initiatives to improve the quality, safety, and efficiency of services, and provide a basis for estimating the fiscal and coverage impact of federal or state policy changes of the Medicare, Medicaid, and State Children's Health Insurance Programs. The Administrator for the Center for Medicare and Medicaid Services may not use data from the research conducted to withhold coverage of a prescription drug, to mandate a national standard, or require a specific approach to quality measurement and reporting.

Health Care that Works for All American-Citizens Health Care Working Group. (Section 1015 of the Conference Agreement, and Section 620 of the Senate Bill)

Present Law

No provision.

House Bill

No provision.

Senate Bill

The bill would authorize $3 million for each of the fiscal years 2005 and 2006 for the Secretary of HHS, acting through the Agency for Healthcare Research and Quality, to establish a group that would be called the ''Citizens' Health Care Working Group.'' The 25 members of the group would come from health care stakeholders and would be appointed by Congressional leaders. Working Group member appointments could not be made from elected officials. Appointments would be for a 2–year period. Once all the members of the Working Group have been appointed, Congressional leaders would appoint a chairperson from among the members. The Working Group would be responsible for holding hearings and producing public reports regarding expanding coverage options, the cost of health care, innovative state and community strategies to expand coverage or reduce costs, and the role of evidence-based medicine and technology in improving quality and lowering costs. The first hearing would be required to be held within 90 days after the chairperson was appointed and additional hearings would be permitted. Within 90 days of completing hearings, the Working Group would be required to prepare a report that discusses numerous health care issues including health care and related services used by individuals throughout their lifetimes, the cost of health care services, sources of coverage and payment, and reasons for uninsurance and underinsurance.

In addition to hearings, the Working Group would be required to hold community meetings throughout the United States in sufficient number to reflect geographic differences, diverse populations, and a balance among urban and rural populations. The Working Group would be required to prepare an interim set of recommendations on health care coverage and ways to improve and strengthen the health care system based on the information and preferences expressed at the community meetings within 180 days after the conclusion of the community meetings. There would be a 90–day public comment period on the recommendations. Not later than 120 days after the end of the public comment period, the Working Group would be required to submit to Congress and the President a final set of recommendations. Not later than 45 days after receiving the final recommendations, the President would be required to submit a report to Congress with additional views and comments on the recommendations and recommendations for legislation and administrative actions. Each congressional committee of jurisdiction would be required to hold at least one hearing on the report and the final recommendations.

The Working Group would be staffed by an Executive Director appointed by the chairperson, up to 20 Federal Government employees on detail, and could procure temporary or intermittent services of individuals. The Working Group would be required to report to Congress annually a detailed description of the expenditures of the Working Group used to carry out its duties. The Working

Group would terminate when the report with the final recommendations is submitted to Congress, but not later than two years after the date on which Working Group members were appointed. The provision would be effective upon enactment.

Conference Agreement

The conference agreement authorizes $3 million for each of the fiscal years 2005 and 2006 for the Secretary of HHS, acting through the Agency for Healthcare Research and Quality, to establish a group called the ''Citizens'' Health Care Working Group.'' The working group will be composed of 15 members; one member will be the Secretary and the other 14 members will be appointed by the Comptroller General. Appointments will include certain consumers of heath services, and individuals with expertise in the health care industry. Appointment will not include elected officials. The duration of appointments will be for the life of the Working Group. Not later than 15 days after which all appointments have been made, the Comptroller General will designate a chairperson from the members. The Working Group will be responsible for holding hearings and producing public reports regarding expanding coverage options, the cost of health care, innovative state and community strategies to expand coverage or reduce costs, and the role of evidence-based medicine and technology in improving quality and lowering costs. The first hearing must be held within 90 days after designation of the chairperson, and additional hearings would be permitted as long as such hearings do not delay the Working Group's other activities. Within 90 days of completing hearings, the Working Group will prepare a report that discusses numerous health care issues including health care and related services used by individuals throughout their lifetimes, the cost of health care services, sources of coverage and payment, and reasons for uninsurance and underinsurance.

In addition to hearings, the Working Group will hold community meetings throughout the United States in sufficient number to reflect geographic differences, diverse populations, and a balance among urban and rural populations. The Working Group will prepare an interim set of recommendations on health care coverage, and ways to improve and strengthen the health care system based on the information and preferences expressed at the community meetings within 180 days after the conclusion of such meetings. There will be a 90–day public comment period on the recommendations.

Not later than 120 days after the end of the public comment period, the Working Group will submit to Congress and the President a final set of recommendations. Not later than 45 days after receiving the final recommendations, the President will submit a report to Congress with additional views and comments on the recommendations, and recommendations for legislative and administrative actions. Each congressional committee of jurisdiction will hold at least one hearing on the report and the final recommendations.

The Working Group will be staffed by an Executive Director appointed by the chairperson, up to 20 Federal Government employees on detail, and could procure temporary or intermittent services of individuals. The Working Group will report annually to Congress a detailed description of the expenditures used by the Working Group to carry out its duties. The Working Group will terminate within 2 years after the date on which all members of the Working Group were appointed.

Establishment of Consumer Ombudsman Account. (Section 606 of the Senate Bill)

Present Law

The Omnibus Budget Reconciliation Act of 1990 established State Health Insurance Counseling Assistance grants to states to provide education and information to Medicare beneficiaries. Funding has been subject to annual appropriations.

House Bill

No provision.

Senate Bill

A Consumer Ombudsman Account would be established in the Medicare Trust Fund and $1 for every Medicare beneficiary would be appropriated to the account from the Trust Fund beginning with fiscal year 2005. The account would be used to make grants to State Health Insurance Counseling Programs. The provision would be effective upon enactment.

Conference Agreement

No provision.

Health Care Infrastructure Improvement. (Section 1016 of the Conference agreement and Section 608 of the Senate Bill)

Present Law

No provision.

House Bill

No provision.

Senate Bill

A loan program would be established to improve the cancer-related health care infrastructure in certain geographic areas of the United States. Examples of potentially eligible projects would include the construction, renovation, or other capital improvement of any hospital, medical research facility or other medical facility or the purchase of any equipment to be used in a hospital, research facility or other medical research facility. In order to receive assistance, the project applicant would be required to: (1) be engaged in research in the causes, prevention, and treatment of cancer; (2) be designated as a cancer center for the National Cancer Institute (NCI) or be designated by the state as the sole official comprehensive cancer effort for the state; and (3) be located in a state that on the date of enactment of this title has a population of less than 3 million individuals. $49 million in budget authority would be authorized for July 1, 2004 through FY2008 to carry out the loan program, $2 million of which may be used each year for administration of the program by the Secretary. Not later than 4 years after enactment, the Secretary would be required to submit to Congress a report summarizing the financial performance of the projects that have received assistance under this program, including recommendations on the future operation of the program. The provision would be effective upon enactment.

Conference Agreement

A loan program would be established to improve the cancer-related health care hospital infrastructure in the United States. Examples of potentially eligible projects would include the construction, renovation, or other capital improvement of any hospital. In order to receive assistance, the project applicant would be required to: (1) be engaged in research in the causes, prevention, and treatment of cancer; (2) be designated as a cancer center for the National Cancer Institute (NCI) or be designated by the state as the sole official comprehensive cancer effort for the state. $200 million in budget authority would be authorized for July 1, 2004 through FY2008 to carry out the loan program, $2 million of which may be used each year for administration of the program by the Secretary. Not later than 4 years after enactment, the Secretary would be required to submit to Congress a report summarizing the financial performance of the projects that have received assistance under this program, including recommendations on the future operation of the program. The provision would be effective upon enactment.

Capital Infrastructure Revolving Loan Program. (Section 609 of the Senate Bill)

Present Law

The Public Health Services Act establishes a fund in the Treasury from which the Secretary of HHS can make loans or loan guarantees in the amounts that have been specified in appropriations Acts from time to time. Under the Medicare Rural Hospital Flexibility Program established as part of Title XVIII, the Secretary may award grants to rural hospitals to cover the implementation costs associated with data systems needed to meet the BBA 97 requirements.

House Bill

No provision.

Senate Bill

The Secretary would be able to make loans to any rural entity to acquire land, renovate buildings, and purchase major moveable equipment or other appropriate projects. A rural entity would include rural health clinics, a medical facility with less than 50 beds in a county that is not part of a metropolitan statistical area or is in a rural census tract of such area, a hospital that is a rural referral center or a sole community hospital. An entity that has been geographically reclassified for the purposes of Medicare reimbursement would not be precluded from being considered a rural provider. Loan guarantees and interest subsidies of up to 3% of the net effective interest rate would be authorized. The total of the government's exposure with respect to this program would not exceed $50 million per year. The total of the principal amount of all loans directly made or guaranteed in any year may not exceed $250 million per year. In addition, rural providers could apply to receive $50,000 planning grants to help assess capital and infrastructure needs. The grants awarded in any year would not exceed $2.5 million. The program would expire after September 30, 2008. The provision would be effective upon enactment.

Conference Agreement

No provision.

Increase in Appropriation to the Health Care Fraud and Abuse Control Account. (Section 611 of the Senate Bill)

Present Law

The Health Insurance Portability and Accountability Act of 1996 (HIPAA, PL.104–91) established the Health Care Fraud and Abuse Control (HCFAC) Program which is administered by the HHS Office of Inspector General and the Department of Justice. Funds for the HCFAC program are appropriated from the Federal Hospital Insurance Trust Fund. HIPAA provided for annual increases of 15% in HCFAC funding through 2003, after which the appropriation for HCFAC and the amount earmarked for HHS–OIG remains the same. In FY2003 the available appropriation for HCFAC was $240,558,320 of which $150 million to $160 million was available to the HHS–OIG.

House Bill

No provision.

Senate Bill

Additional appropriations to HCFAC would be authorized. In FY2004, the increase would

be $10 million over the FY2003 appropriation limit; in FY2005 the increase would be $15 million over the FY2003 limit; in FY2006 the increase would be $25 million above the FY2003 limit. Subsequent years appropriations would be at the 2003 limit. The HHS–OIG earmarked appropriations would increase as well: to $170 million in FY2004, $175 million in FY2005, $185 million in FY2006. In subsequent years, it would be not more than $150 million and not more than $160 million. The provision would be effective upon enactment.

Conference Agreement

No provision.

Increase in Civil Penalties Under the False Claims Act. (Section 612 of the Senate Bill)

Present Law

The False Claims Act imposes a liability on those who knowingly present or cause to be presented a false or fraudulent claim for payment by the government. In certain instances, the person may be liable for a civil penalty of not less than $5,000 and not more than $10,000, plus treble damages.

House Bill

No provision.

Senate Bill

For violations occurring on or after January 1, 2004, the minimum amount of the civil penalty would be increased from $5,000 to $7,500 and the maximum amount would increase from $10,000 to $15,000. The provision would be effective for violations occurring on or after January 1, 2004.

Conference Agreement

No provision.

Increase in Civil Monetary Penalties under the Social Security Act. (Section 613 of the Senate Bill)

Present Law

The Office of the Inspector General (OIG) has the authority to impose civil monetary penalties (CMPs) on any person (including an organization or other entity, but not a beneficiary) who knowingly presents, or causes to be presented, to a state or federal government employee or agent certain false or improper claims for medical or other items or services. CMPs may also be imposed for other fraudulent activities such as inflating charges for services, providing services when not a properly licensed physician, billing for medically unnecessary services, falsely certifying that an individual meets the requirements for home health services, and offering or soliciting remuneration to influence the provision of medical services. Depending upon the violation, Section 1128A of the SSA authorizes the imposition of CMPs up to $10,000 for each item or service involved, up to $15,000 for individuals who provide false or misleading information in certain instances, and up to $50,000 per act in other instances as well as treble damages.

House Bill

No provision.

Senate Bill

The amount of penalties would be increased for violations that occur on or after January 1, 2004. In instances where penalties are limited to $10,000 would be increased to $12,500; those penalties that are limited to $15,000 would be increased to $18,750; and those that are limited to $50,000 would be increased to $62,500. The provision would be effective for violations occurring on or after January 1, 2004.

Conference Agreement

No provision.

Extension of Customs User Fees. (Section 614 of the Senate Bill)

Present Law

The U.S. Customs Service, the federal government's oldest revenue collecting agency is responsible for regulating the movement of persons, carriers, merchandise, and commodities between the United States and other countries. Its authority to impose user fees for certain services lapsed on September 30, 2003, but was subsequently restored.

House Bill

No provision.

Senate Bill

The authority to impose user fees would be extended until September 30, 2013.

Conference Agreement

No provision.

Provision of Information on Advance Directives. (Section 616 of the Senate Bill)

Present Law

Information about advance directives is required to be given to patients in hospitals, skilled nursing facilities, and served by home health agencies. The Secretary is required to provide Medicare beneficiaries annual information about Medicare benefits, limitations on payment, and a description of the limited benefits for long-term care. This information is provided to Medicare beneficiaries in the Medicare & You handbook that is mailed annually to all beneficiaries.

House Bill

No provision.

Senate Bill

The Secretary would be required to provide information on advance directives in the Medicare & You handbook. The information would be required to be presented in a separate Senate section on advance directives and would include specific information about living wills and durable power of attorney for health care. The Secretary would further be required to note the inclusion of this information in the introductory letter that accompanies the handbook. The provision would be effective upon enactment.

Conference Agreement

No provision.

Sense of the Senate Regarding Implementation of the Prescription Drug and Medicare Improvement Act of 2003. (Section 617 of the Senate Bill)

Present Law

No provision.

House Bill

No provision.

Senate Bill

The provision expresses a sense of the Senate that the Committee on Finance should hold at least four hearings to monitor implementation of the Prescription Drug and Medicare Improvement Act of 2003. The first hearing should be held within 60 days after enactment of the Act, the remaining hearings should be held May 2004, October 2004, and May 2005. The provision would be effective upon enactment.

Conference Agreement

No provision.

Extension of Municipal Health Service Demonstration Projects. (Section 618 of the Senate Bill)

Present Law

Under the Consolidated Omnibus Budget Reconciliation Act of 1985, as amended, the Municipal Health Service Demonstration projects will expire on December 31, 2004. The municipal health services demonstration program is a multi-site demonstration intended to improve access to primary care services in underserved urban areas and to reduce the cost of health care. BBA 1997 authorized the Secretary to extend the project through December 31, 2000, but only with respect to persons who had received at least one service for the period of January 1, 1996–August 7, 1997 (the enactment date of BBA 97). Sites who wanted the demonstration project extended were required to submit plans for the orderly transition of participants to a non-demonstration health care delivery system. Subsequent legislation extended the project through December 31, 2004.

House Bill

No provision.

Senate Bill

This provision would extend these demonstration projects to December 31, 2009, for individuals who reside in the city in which the project is operated. The provision would be effective upon enactment.

Conference Agreement

No provision.

Study on Making Prescription Pharmaceutical Information Accessible for Blind and Visually Impaired Individuals. (Section 619 of the Senate Bill)

Present Law

No provision.

House Bill

No provision.

Senate Bill

The Secretary would be required to study how to make prescription drug information, including drug labels and usage instructions, accessible to blind and visually impaired individuals. The study would be required to include a review of existing and emerging technologies. A report would be required within 18 months of enactment and would include recommendations for implementing usable formats and an estimate of the associated costs. The provision would be effective upon enactment.

Conference Agreement

No provision.

GAO Study of Pharmaceutical Price Controls and Patient Protections in the G–7 Countries. (Section 621/Duplicative Provision 634 of the Senate Bill)

Present Law

No provision.

House Bill

No provision.

Senate Bill

The GAO would be required to study price controls on pharmaceuticals in France, Germany, Italy, Japan, the United Kingdom, and Canada to review the impact they have on consumers, including American consumers, and on innovation in medicine. The provision would be effective upon enactment.

Conference Agreement

No provision.

Safety Net Organizations and Patient Advisory Commission. (Section 624/Duplicative Provision 635 of the Senate Bill)

Present Law

No provision.

House Bill

No provision.

Senate Bill

The provision would establish the Safety Net Organizations and Patient Advisory

Commission that would conduct an ongoing review of the health care safety net programs including Medicaid, the State Children's Health Insurance Program (SCHIP), Maternal and Child Health Services Block Grant Programs, Federally qualified health center (FQHC) programs, rural health clinic (RHC) programs, disproportionate share hospital (DSH) payment programs, and the Emergency Medical Treatment and Active Labor Act (EMTALA). The Commission would review a variety of issues and data related to the safety net programs.

The Commission would be required to submit annual reports to the appropriate committees of Congress on the health care needs of the uninsured and the financial and infrastructure stability of the Nation's core health care safety net. The first report would be due June, 2005. Additional reports could be made if requested by the chairpersons or ranking minority members of appropriate committees of Congress or if the Commission deems such additional reviews and reports appropriate.

The Commission would have 13 members appointed by the Comptroller General of the United States in consultation with the appropriate committees of Congress. Members would be drawn from health professionals, employers, third-party payers, researchers, recipients of care from core health care safety net and individuals who provide and manage the delivery of care by the core health care safety net. The term of the members would be 3 years, although the initial appointments would be on a staggered basis. The Comptroller General would be required to establish a system for public disclosure of financial and other potential conflicts of interest by members of the Commission. The Commission could hire an executive director and other personnel without regard to the provisions of Title V of the United States Code. The Comptroller General would be required to appoint the initial members of the Commission by June 1, 2004.

Conference Agreement

No provision.

Committee on Drug Compounding. (Section 626 of the Senate Bill)

Present Law

No provision.

House Bill

No provision.

Senate Bill

The Secretary would be required to establish a committee on drug compounding within the Food and Drug Administration to ensure that patients are receiving necessary, safe, and accurate dosages of compounded drugs. The members of the committee would be appointed by the Secretary and would include representatives from the National Association of Boards of Pharmacy; pharmacy groups; physician groups; consumer and patient advocate groups; the United States Pharmacopoeia; and other individuals determined appropriate by the Secretary. The Committee would be required to submit a report with recommendations of the Committee to improve and protect patient safety within 1 year of enactment. The Committee would terminate 1 year after enactment.

Conference Agreement

No provision.

Sense of the Senate Concerning the Structure of Medicare Reform and the Prescription Drug Benefit. (Section 627 of the Senate Bill)

Present Law

No provision.

House Bill

No provision.

Senate Bill

The provision provides a sense of the Senate that Medicare reform legislation should achieve certain principles.

Conference Agreement

No provision.

Sense of the Senate Regarding the Establishment of a Nationwide Permanent Lifestyle Modification Program for Medicare Beneficiaries. (Section 628 of the Senate Bill)

Present Law

No provision.

House Bill

No provision.

Senate Bill

The provision provides a sense of the Senate that coronary disease is expensive, the Medicare Lifestyle Modification Program has been operating in 12 states as a demonstration program, and such program of behavior modification should be conducted on a national basis for those beneficiaries who elect to participate. The provision would be effective upon enactment.

Conference Agreement

No provision.

TITLE XI—ACCESS TO AFFORDABLE PHARMACEUTICALS

Current Law

Section 804 of the Federal Food, Drug, and Cosmetic Act—Importation of Covered Products—was established under the medicine Equity and Drug Safety Act of 2000 (P.L. 106–387). This section of current law has not been implemented.

House Bill

Section 1121(a) of H.R. 1 would replace the existing Section 804 entirely. The House bill directs the Secretary to establish, upon certification of safety and cost savings, a program that would allow for the importation of drugs from Canada by pharmacists, wholesalers, and individuals. The House bill incorporates new safety measures such as: (1) the use of tamper-resistant and counterfeit-proof packaging; (2) a new requirement that drugs must contain a statement informing the consumer that the drug has left the country; (3) any drug may only be shipped back to the country by the first Canadian recipient; (4) new authority to the Secretary of HHS to limit importation to certain ports of entry; (5) the importer would be required to keep detailed records and to conduct drug testing; and (6) a manufacturer must provide the importer with approved labeling of the drug. This provision applies to prescription drugs as subject to section 503(b) of the Federal Food, Drug, and Cosmetic Act other than a controlled substance, a biological product, an infused drug, an intravenously injected drug, a drug that is inhaled during surgery, or a parenteral drug that the Secretary determines poses a threat to the public health.

Senate Bill

Section 801(a) of S. 1 would replace the existing Section 804 entirely. The Senate bill directs the Secretary to establish, upon certification of safety and cost savings, a program that would allow for the importation of drugs from Canada by pharmacists, wholesalers, and individuals. The Senate bill incorporates new safety provisions as well as provides new authority to the Secretary of HHS to suspend the program if public safety is compromised. Specifically, between 12 and 18 months after the regulations are implemented, if the Secretary certifies to Congress that, based on substantial evidence, the benefits of the implementation of the importation program do not outweigh any detriment, drug imports under this section would cease 30 days after the certification is submitted. However, the certification may not be submitted unless, after a public hearing, the Secretary finds it is more likely than not that implementation will result in an increased risk to the public health. This provision applies to prescription drugs as subject to section 503(b) of the Federal Food, Drug, and Cosmetic Act other than a controlled substance, a biological product, an infused drug, an intravenously injected drug, or a drug that is inhaled during surgery that the Secretary determines poses a threat to the public health.

Conference Agreement

The Conference agreement, virtually identical to Section 801(a) of S. 1, gives the Secretary, upon certification of safety and cost savings, authority to create a system for the importation of drugs from Canada by pharmacists, wholesalers, and individuals.

The agreement directs the Secretary of HHS, in consultation with appropriate government agencies, to conduct a comprehensive study that identifies current problems with the implementation of existing law as well as examines a range of issues associated with the importation of drugs. In conducting the study, the Secretary shall take into account the distinctions between—

Drugs that are biological products with licenses under section 351 of the Public Health Service Act; and

Drugs with approved applications under subsection (b) or (j) of section 505 of the Federal Food, Drug, and Cosmetic Act.

The details of the study shall include the following:

Identification of the limitations, including limitations in resources and, if applicable, in current law authorities that may inhibit the Secretary's ability to certify the safety of pharmaceutical products imported into the US.

Assessment of the pharmaceutical distribution chain and the need for, and feasibility of, modifications, in order to assure the safety of products that may be imported into the US.

Analysis of whether anti-counterfeiting technologies could improve the safety of products in the domestic market as well as those products that could be imported from foreign nations. This analysis shall identify the types of technologies, if available, and assess the limitations of these technologies to the distribution chain.

Estimate of costs borne by entities within the pharmaceutical distribution chain to utilize any new technologies identified in paragraph (3).

Assess the scope, volume, and safety of unapproved drugs, including controlled substances, entering the United States via mail shipment. This assessment should include the percentage of drugs commercially available in other countries that conform in all respects to FDA requirements, and the limitations of visual inspection, sampling, and other testing methods to determine its quality.

The extent to which foreign health agencies are willing and/or able to ensure the safety of drugs being exported from their country into the United States, including drugs that are transshipped through their countries.

Assessment of the potential short and long-term impacts on drug prices and prices

for consumers and other system costs associated with importation of pharmaceuticals from Canada and other countries into the U.S.

Assessment of the impact on the research and development of drugs—and the associated impact on consumers and patients—if importation were permitted.

Estimation of agency resources, including additional field personnel, needed to adequately inspect the current amount of pharmaceutical products entering into the country. This estimate shall detail the number of field personnel needed in order to appropriately secure all ports of entry on a daily basis.

Identification of liability protections, if any, that should be in place, if importation is permitted, for entities within the pharmaceutical distribution chain.

Identify the ways in which importation could violate United States and international intellectual property rights and describe the additional legal protections and agency resources that would be needed to assure the effective enforcement of these rights.

The Conference agreement directs the Secretary to submit a report providing the findings of the study under this section to the appropriate committees of Congress no later than 12 months after the date of enactment of this Act.

Report on Trade in Pharmaceuticals

The Conference agreement directs the Secretary of Commerce, in consultation with the International Trade Commission, the Secretary of Health and Human Services and the United States Trade Representative, to conduct a study and report on drug pricing practices of countries that are members of the Organization for Economic Cooperation and Development and whether those practices utilize nontariff barriers with respect to trade in pharmaceuticals. The study shall include an analysis of the use of price controls, reference pricing, and other actions that affect the market access of United States pharmaceutical products.

The study shall include the following:

Identification of the countries that use price controls or other such practices with respect to pharmaceutical trade.

Assessment of the price controls and other such practices used by the countries identified.

Estimate of additional costs to U.S. consumers because of such price controls and other such practices, and the extent to which additional costs would be reduced for U.S. consumers if price controls and other such practices are reduced or eliminated.

Estimate of the impact such price controls, intellectual property laws, and other such measures have on fair pricing, innovation, generic competition, and research and development in the United States and each country identified.

Not later than 9 months after the date of enactment of this Act, the report shall be submitted to the Committees on Finance, the Judiciary, and Health, Education, Labor, and Pensions of the Senate, and the Committees on Ways and Means, the Judiciary, and Energy and Commerce of the House of Representatives.

In addition, the United States Trade Representative, the Secretary of Commerce, and the Secretary of Health and Human Services shall analyze whether bilateral or multilateral trade or other negotiations present an opportunity to address these price controls and other such practices and shall develop a strategy to address such issues in appropriate negotiations. In so doing, these agencies shall bear in mind the negotiating objective set forth in the Bipartisan Trade Promotion Authority Act of 2002 to achieve the elimination of government measures such as price controls and reference pricing which deny full market access for United States products. In so doing, the agencies shall provide periodic and timely briefings for the Committees of the House and Senate listed above, with an interim briefing no later than 90 days after enactment to address negotiations to establish a U.S.-Australia Free Trade Agreement and, as appropriate, other current negotiations.

Provisions Related to Hatch-Waxman Law

AMENDMENTS AND SUPPLEMENTS

In including this provision, Congress does not intend this provision to alter current U.S. Food and Drug Administration's (''FDA'') practice regarding acceptance of supplements to approved new drug applications (''NDAs''), or amendments and supplements to pending and approved abbreviated new drug applications (''ANDAs''). Instead, Congress intends this provision to reflect the FDA's current practice regarding those changes and variations to both innovator and generic drugs that may be approved under amendments and supplements to previously filed NDAs and ANDAs, and expects the Agency to maintain its current policy in designating ''listed drugs.'' The conferees intend that FDA continue to use its existing scientific discretion to determine whether different polymorphs present safety, effectiveness, or bioavailability differences and therefore should be considered the same or different active ingredients.

The single 30–month stay provisions are a centerpiece of this legislation, allowing lower-priced generic products to enter the market more quickly. As a result, this provision must not be construed as requiring an ANDA applicant to file a new application where, before its enactment, the applicant would have been allowed to file an amendment or supplement to an existing application. Such a construction would run directly contrary to Congress' intent.

DECLARATORY JUDGMENTS

The conferees expect that courts will find jurisdiction, where appropriate, to prevent an improper effort to delay infringement litigation between generic drug manufacturers and pioneer drug companies. The conferees expect courts to apply the ''reasonable apprehension'' test in a manner that provides generic drug manufacturers appropriate access to declaratory judgment relief to the extent required by Article III.

Through the modifications in this Act, the conferees do not intend for the courts to modify their application of the requirements under Article III that a declaratory judgment plaintiff must, to the extent required by the Constitution, demonstrate a ''reasonable apprehension'' of suit to establish jurisdiction. See, e.g., *Fina Oil and Chemical Co.* v. *Ewen, 123 F.3d 1466, 1471* (Fed. Cir. 1997). The conferees expect the courts to examine as part of their analysis the particular policies served by the Hatch-Waxman Act.

In determining whether a reasonable apprehension of suit exists where an ANDA has been filed with a paragraph IV certification and the patentee has not brought an infringement suit within the 45 days, the conferees expect courts to examine these specific factors as part of the totality of the circumstances. See, e.g., *Vanguard Research, Inc.* v. *Peat, Inc., 304 F.3d 1249, 1254* (Fed. Cir. 2002). In any given case, the conferees expect a court may or may not find a reasonable apprehension of suit where these two specific factors are present.

Counterclaims

Section 1101 of the Conference agreement prohibits the recovery of damages resulting from a successful counterclaim in a paragraph IV patent suit by an ANDA applicant seeking removal of a patent listed in the Orange Book. It is not the intent of Congress to prohibit the recovery by a counterclaimant in a paragraph IV suit of anti-trust or any other damages as a result of the improper listing of a patent in the Orange Book. The language found in this section simply means that in the absence of any other cause of action, a ruling in favor of the counterclaimant resulting in the removal of the patent does not entitle the counterclaimant to recover damages.

TITLE XII.—HEALTH SAVINGS INCENTIVES

Health Savings Accounts and Health Savings Security Accounts (sec. 1202 of the House bill and new sec. 223 of the Code)

Present Law

OVERVIEW

Present law contains a number of provisions dealing with the Federal tax treatment of health expenses and health insurance coverage.

EMPLOYER-PROVIDED HEALTH COVERAGE

In general, employer contributions to an accident or health plan are excludable from an employee's gross income (and wages for employment tax purposes).[1] This exclusion generally applies to coverage provided to employees (including former employees) and their spouses, dependents, and survivors. Benefits paid under employer-provided accident or health plans are also generally excludable from income to the extent they are reimbursements for medical care.[2] If certain requirements are satisfied, employer-provided accident or health coverage offered under a cafeteria plan is also excludable from an employee's gross income and wages.[3] Present law provides for two general employer-provided arrangements that can be used to pay for or reimburse medical expenses of employees on a tax-favored basis: flexible spending arrangements (''FSAs'') and health reimbursement arrangements (''HRAs''). While these arrangements provide similar tax benefits (i.e., the amounts paid under the arrangements for medical care are excludable from gross income and wages for employment tax purposes), they are subject to different rules. A main distinguishing feature between the two arrangements is that while FSAs are generally part of a cafeteria plan and contributions to FSAs are made on a salary reduction basis, HRAs cannot be part of a cafeteria plan and contributions cannot be made on a salary-reduction basis.[4]

Amounts paid or accrued by an employer within a taxable year for a sickness, accident, hospitalization, medical expense, or

[1] Secs. 106, 3121(a)(2), and 3306(b)(2). All ''section,'' ''sec.,'' and ''Code'' references are to the Internal Revenue Code of 1986, as amended.

[2] Sec. 105. In the case of a self-insured medical reimbursement arrangement, the exclusion applies to highly compensated employees only if certain nondiscrimination rules are satisfied. Sec. 105(h). Medical care is defined as under section 213(d) and generally includes amounts paid for qualified long-term care insurance and services.

[3] Secs. 125, 3121(a)(5)(G), and 3306(b)(5)(G). Long-term care insurance and services may not be provided through a cafeteria plan.

[4] Notice 2002–45, 2002–28 I.R.B. 93 (July 15, 2002); Rev. Rul. 2002–41, 2002–28 I.R.B. 75 (July 15, 2002).

similar health plan for its employees are generally deductible as ordinary and necessary business expenses.[5]

SELF-EMPLOYED INDIVIDUALS

The exclusion for employer-provided health coverage does not apply to self-employed individuals. However, under present law, self-employed individuals (i.e., sole proprietors or partners in a partnership)[6] are entitled to deduct 100 percent of the amount paid for health insurance for themselves and their spouse and dependents.[7]

ITEMIZED DEDUCTION FOR MEDICAL EXPENSES

Under present law, individuals who itemize deductions may deduct amounts paid during the taxable year (to the extent not reimbursed by insurance or otherwise) for medical care of the taxpayer, the taxpayer's spouse, and dependents, to the extent that the total of such expenses exceeds 7.5 percent of the taxpayer's adjusted gross income.[8]

ARCHER MEDICAL SAVINGS ACCOUNTS

In general

In general, an Archer medical savings account (''MSA'') is a tax-exempt trust or custodial account created exclusively for the benefit of the account holder that is subject to rules similar to those applicable to individual retirement arrangements.[9]

Within limits, contributions to an Archer MSA are deductible in determining adjusted gross income if made by an eligible individual and are excludable from gross income and wages for employment tax purposes if made by the employer of an eligible individual. Earnings on amounts in an Archer MSA are not includible in gross income in the year earned (i.e., inside buildup is not taxable). Distributions from an Archer MSA for qualified medical expenses are not includible in gross income. Distributions not used for qualified medical expenses are includible in gross income and subject to an additional 15–percent tax unless the distribution is made after death, disability, or the individual attains the age of Medicare eligibility (i.e., age 65).

Qualified medical expenses are generally defined as under section 213(d), except that qualified medical expenses do not include expenses for health insurance other than long-term care insurance, premiums for health coverage during any period of continuation coverage required by Federal law, and premiums for health care coverage while an individual is receiving unemployment compensation under Federal or State law. For purposes of determining the itemized deduction for medical expenses, distributions from an Archer MSA for qualified medical expenses are not treated as expenses paid for medical care under section 213.

ELIGIBLE INDIVIDUALS

Archer MSAs are available only to employees of a small employer who are covered under an employer-sponsored high deductible health plan and to self-employed individuals covered under a high deductible health plan.[10] An employer is a small employer if it employed, on average, no more than 50 employees on business days during either of the two preceding calendar years. An individual is not eligible for an Archer MSA if he or she is covered under any other health plan that is not a high deductible health plan (other than a plan providing certain limited types of coverage). Individuals entitled to benefits under Medicare are not eligible individuals. Eligible individuals do not include individuals who may be claimed as a dependent on another person's tax return.

TREATMENT OF CONTRIBUTIONS

Individual contributions to an Archer MSA are deductible (within limits) in determining adjusted gross income (i.e., ''above-the-line''). In addition, employer contributions are excludable from gross income and wages for employment tax purposes (within the same limits), except that this exclusion does not apply to contributions made through a cafeteria plan. In the case of an employee, contributions can be made to an Archer MSA either by the individual or by the individual's employer, but not by both.

The maximum annual contribution that can be made to an Archer MSA for a year is 65 percent of the annual deductible under the high deductible health plan in the case of self-only coverage and 75 percent of the annual deductible in the case of family coverage.

If an employer provides a high deductible health plan coupled with Archer MSAs for employees and makes employer contributions to the Archer MSAs, the employer must make available a comparable contribution on behalf of all employees with comparable coverage during the same period. Contributions are considered comparable if they are either of the same amount or the same percentage of the deductible under the high deductible health plan. If employer contributions do not satisfy the comparability rule during a period, then the employer is subject to an excise tax equal to 35 percent of the aggregate amount contributed by the employer to Archer MSAs of the employer for that period.

DEFINITION OF HIGH DEDUCTIBLE HEALTH PLAN

A high deductible health plan is a health plan with an annual deductible of at least $1,700 and no more than $2,500 in the case of self-only coverage and at least $3,350 and no more than $5,050 in the case of family coverage. In addition, the maximum out-of-pocket expenses with respect to allowed costs must be no more than $3,350 in the case of self-only coverage and no more than $6,150 in the case of family coverage.[11] Out-of-pocket expenses include deductibles, co-payments, and other amounts (other than premiums) that the individual must pay for covered benefits under the plan. A plan does not fail to qualify as a high deductible health plan merely because it does not have a deductible for preventive care as required under State law. A plan does not qualify as a high deductible health plan if substantially all of the coverage under the plan is certain permitted insurance or is coverage (whether provided through insurance or otherwise) for accidents, disability, dental care, vision care, or long-term care.

TREATMENT OF DEATH OF ACCOUNT HOLDER

Upon death, any balance remaining in the decedent's Archer MSA is includible in his or her gross estate. If the account holder's surviving spouse is the named beneficiary of the Archer MSA, then, after the death of the account holder, the Archer MSA becomes the Archer MSA of the surviving spouse and the amount of the Archer MSA balance may be deducted in computing the decedent's taxable estate, pursuant to the estate tax marital deduction.[12] If, upon the account holder's death, the Archer MSA passes to a named beneficiary other than the decedent's surviving spouse, the Archer MSA ceases to be an Archer MSA as of the date of the decedent's death, and the beneficiary is required to include the fair market value of the Archer MSA assets as of the date of death in gross income for the taxable year that includes the date of death. The amount includible in gross income is reduced by the amount in the Archer MSA used, within one year after death, to pay qualified medical expenses incurred prior to the death. If there is no named beneficiary for the decedent's Archer MSA, the Archer MSA ceases to be an Archer MSA as of the date of death, and the fair market value of the assets in the Archer MSA as of such date is includible in the decedent's gross income for the year of the death.

LIMIT ON NUMBER OF MSAS; TERMINATION OF MSA AVAILABILITY

The number of taxpayers benefiting annually from an Archer MSA contribution is limited to a threshold level (generally 750,000 taxpayers). The number of Archer MSAs established has not exceeded the threshold level.

After 2003, no new contributions can be made to Archer MSAs except by or on behalf of individuals who previously had Archer MSA contributions and employees who are employed by a participating employer.

House Bill

In general

The House bill creates health savings accounts (''HSAs'') and health savings security accounts (''HSSAs''), which provide tax-favored treatment for current medical expenses as well as the ability to save on a tax-favored basis for future medical expenses. In general, HSAs and HSSAs are tax-exempt trusts or custodial accounts created exclusively to pay for the qualified medical expenses of the account holder and his or her spouse and dependents that are subject to rules similar to those applicable to individual retirement arrangements.[13] Unless otherwise provided, the following description applies to both HSAs and HSSAs (jointly referred to as ''health accounts'').

Within limits, contributions to health accounts are deductible if made by an eligible individual and are excludable from gross income and wages for employment tax purposes if made by the employer of an eligible individual. In the case of HSSAs only, family members may make nondeductible contributions on behalf of an eligible individual. Distributions from health accounts for qualified medical expenses are not includible in gross income. Distributions that are not for qualified medical expenses are includible in gross income and subject to an additional 15 percent tax. The additional 15 percent tax does not apply after death, disability, or the individual attains the age of Medicare eligibility (i.e., age 65).

[5] Sec. 162.

[6] Self-employed individuals include more than two-percent shareholders of S. corporations who are treated as partners for purposes of fringe benefit rules pursuant to section 1372.

[7] Sec. 162(1).

[8] Sec. 213. The adjusted gross income percentage is 10 percent for purposes of the alternative minimum tax. Sec. 56(b)(1)(B).

[9] Sec. 220.

[10] Self-employed individuals include more than two-percent sharholders of S corporations who are treated as partners for purposes of fringe benefit rules pursuant to section 1372.

[11] The deductible and out-of-pocket expenses dollar amounts are for 2003. These amounts are indexed for inflation in 450 increments.

[12] Sec. 2056.

[13] As under Archer MSAs, the House bill provision provides that the present-law requirement applicable to insurance companies that certain policy acquisition expenses must be capitalized and amortized (sec. 848) does not apply in the case of any contract that is a health account.

Eligible individuals

HSAS

Eligible individuals for HSAs are individuals who are covered by a high deductible health plan and no other health plan that is not a high deductible health plan. Individuals entitled to benefits under Medicare are not eligible to make contributions to an HSA. Eligible individuals do not include individuals who may be claimed as a dependent on another person's tax return.

An individual with other coverage in addition to a high deductible health plan is still eligible for an HSA if such other coverage is certain permitted insurance or permitted coverage. Permitted insurance is: (1) insurance if substantially all of the coverage provided under such insurance relates to (a) liabilities incurred under worker's compensation law, (b) tort liabilities, (c) liabilities relating to ownership or use of property (e.g., auto insurance), or (d) such other similar liabilities as the Secretary may prescribe by regulations; (2) insurance for a specified disease or illness; and (3) insurance that provides a fixed payment for hospitalization. Permitted coverage is coverage (whether provided through insurance or otherwise) for accidents, disability, dental care, vision care, or long-term care.

A high deductible health plan is a health plan that in the case of self-only coverage has an annual deductible between $1,000 and $2,500 and in the case of family coverage has an annual deductible between $2,000 and $5,050 (for 2003).[14] The maximum out-of-pocket expenses must be no more than $3,350 in the case of self-only coverage and no more than $6,150 in the case of family coverage. The annual deductible maximum and minimum and out-of-pocket expense amounts are indexed for inflation. A plan is not a high deductible health plan if substantially all of the coverage is for permitted coverage or coverage that may be provided by permitted insurance, as described above.

HSSAS

Individuals eligible for HSSAs are individuals who (1) are covered under a health plan meeting minimum deductible requirements and no other health plan that does not meet the minimum deductible requirements, or (2) are uninsured. Individuals entitled to benefits under Medicare are not eligible to make contributions to an HSSA. Eligible individuals do not include individuals who may be claimed as a dependent on another person's tax return.

An individual with other coverage in addition to a plan meeting the minimum deductible requirements is still eligible for an HSSA if such other coverage is for permitted coverage or coverage that may be provided by permitted insurance, as described above. In addition, an individual is treated as uninsured if his or her only coverage is permitted coverage or coverage that may be provided by permitted insurance.

A plan meets the minimum deductible requirements if the plan is a health plan with an annual deductible of at least $500 in the case of self-only coverage and at least $1,000 in the case of family coverage. These dollar amounts are indexed for inflation. There are no maximum deductible requirements and no limits on out-of-pocket expenses. A plan is not a minimum deductible plan if substantially all of the coverage is for permitted coverage or coverage that may be provided by permitted insurance, as described above.

TAX TREATMENT OF AND LIMITS ON CONTRIBUTIONS

Contributions to a health account made by an eligible individual are deductible (within limits) in determining adjusted gross income (i.e., ''above-the-line''). In addition, employer contributions to a health account (including salary reduction contributions made through a cafeteria plan) are excludable from gross income and wages for employment tax purposes to the extent the contribution would be deductible if made by the employee (e.g., in the case of an HSSA, subject to the adjusted gross income limits).[15] Nondeductible contributions may be made to an HSSA by a family member of an eligible individual. In the case of an employee, contributions to a health account may be made by both the individual (and family members in the case of an HSSA) and the individual's employer. All contributions are aggregated for purposes of the maximum annual contribution limit.

The maximum aggregate annual contribution that can be made to an HSA is 100 percent of the annual deductible under the high deductible plan.[16]

The maximum aggregate annual contribution that can be made to an HSSA is (1) $2,000 for (a) persons with self-only coverage and (b) uninsured individuals with no dependents[17] who do not file a joint return, and (2) $4,000 for (a) individuals with family coverage and (b) uninsured individuals with dependents or who file a joint return. In the case of individuals age 55 and older, the $2,000 and $4,000 HSSA annual contribution limits are increased by $500 in 2004, $600 in 2005, $700 in 2006, $800 in 2007, $900 in 2008, and $1,000 in 2009 and thereafter.

The maximum allowable contribution to an HSSA is phased out for taxpayers with adjusted gross income[18] above certain levels. In the case of individuals with self-only coverage (other than individuals filing a joint return), the phase-out range is $75,000 to $85,000. For individuals with family coverage and individuals filing a joint return, the phase-out range is $150,000 to $170,000. The adjusted gross income limits apply to HSSA contributions from all sources (e.g., both individual and employer contributions).

The maximum annual contribution limits for the health accounts are coordinated so that contributions to one type of health account reduce the annual contribution limit for the other type of health account.[19]

An excise tax applies to contributions in excess of the maximum contribution amount for the health account. The excise tax is generally equal to six percent of the cumulative amount of excess contributions that are not distributed from the health account to the contributor.[20]

Amounts can be rolled over into a health account from an Archer MSA or a health FSA on a tax-free basis. Amounts can be rolled over into an HSA from another HSA or HSSA and into an HSSA from another HSSA on a tax-free basis. Rollovers from an HSA into an HSSA are not permitted. Amounts transferred from another health account or Archer MSA are not taken into account under the annual contribution limits.

If an employer makes contributions to employees' health accounts, the employer must make available comparable contributions on behalf of all employees with comparable coverage during the same period. Contributions are considered comparable if they are either of the same amount or the same percentage of the deductible under the plan. The comparability rule is applied separately to part-time employees (i.e., employees who are customarily employed for fewer than 30 hours per week). The comparability rule does not apply to amounts transferred from an employee's health account, health FSA, or Archer MSA or to contributions made through a cafeteria plan.

If employer contributions do not satisfy the comparability rule during a period, then the employer is subject to an excise tax equal to 35 percent of the aggregate amount contributed by the employer to health accounts of the employer for that period. The excise tax is designed as a proxy for the denial of the deduction for employer contributions. In the case of a failure to comply with the comparability rule which is due to reasonable cause and not to willful neglect, the Secretary may waive part or all of the tax imposed to the extent that the payment of the tax would be excessive relative to the failure involved. For purposes of the comparability rule, employers under common control are aggregated.

TAXATION OF DISTRIBUTIONS

Distributions from a health account for qualified medical expenses of the individual and his or her spouse or dependents generally are excludable from gross income. In general, amounts in a health account can be used for qualified medical expenses even if the individual is not currently eligible for contributions to the health account.[21]

Qualified medical expenses generally are defined as under section 213(d) and include expenses for diagnosis, cure, mitigation, treatment, or prevention of disease, including prescription drugs, transportation primarily for and essential to such care, and qualified long-term care expenses. Qualified medical expenses do not include expenses for insurance other than for (1) long-term care insurance, (2) premiums for health coverage during any period of continuation coverage required by Federal law, and (3) premiums for health care coverage while an individual is receiving unemployment compensation under Federal or State law. In the case of HSSAs, qualified medical expenses also include (1) health insurance meeting the minimum deductible requirements if no portion

[14] Special rules apply for determining whether a health plan that is a preferred provider organization plan meets the requirements of a high deductible plan.

[15] Employer contributions to a health account are excludable from wages for employment tax purposes if, at the time of payment, it is reasonable to believe that the employee will be able to exclude such payment from income (e.g., a reasonable basiss to believe that the employee's income is within the applicabale adjusted gross income limits for an HSSA).

[16] The annual contribution limit for a health account is the sum of the limits determined separately for each month, based on the individual's status and health plan coverage as of the first day of the month.

[17] Written declarations releasing a claim to a dependency exemption under section 152(e)(2) are disregarded in determining whether an individual has dependents.

[18] Adjusted gross income is defined generally as under the rules relating to individual retirement arrangements (''IRAs''), and is computed after the deduction for contributions to IRAs and before the deductions provided by the provision.

[19] The contribution limits are also coordinated with contributions to Archer MSAs.

[20] Ordering rules apply to determine the nature of any distributed excess contributions (e.g., nondeductible family contributions in the case of an HSSA or employer contributions).

[21] However, in any year for which a contribution is made to an HSA, withdrawals from the HSA maintained by that individual generally are excludable from income only if the individual for whom the expenses were incurred was covered under a high deductible plan for the month in which the expenses were incurred. The rule does not apply for continuation coverage or coverage while the individual is receiving unemployment compensation even if for an individual who is not an eligible individual.

of the cost of the insurance is paid by the employer or former employer of the individual or the individual's spouse,[22] and (2) health insurance for individuals who are older than age 65 (including Medicare expenses). For purposes of determining the itemized deduction for medical expenses, distributions from a health account for qualified medical expenses are not treated as expenses paid for medical care under section 213.

Distributions from a health account that are not for qualified medical expenses are includible in gross income (except to the extent that the distribution is attributable to a return of nondeductible family contributions in the case of an HSSA).[23] Distributions includible in gross income are also subject to an additional 15-percent tax unless made after death, disability, or the individual attains the age of Medicare eligibility (i.e., age 65).

TAX TREATMENT OF HSAS AND HSSAS AFTER DEATH

Upon death, any balance remaining in the decedent's health account is includible in his or her gross estate.

If the health account holder's surviving spouse is the named beneficiary of the health account, then, after the death of the health account holder, the health account becomes the health account of the surviving spouse and the amount of the health account balance may be deducted in computing the decedent's taxable estate, pursuant to the estate tax marital deduction.[24] The surviving spouse is not required to include any amount in gross income as a result of the death; the general rules applicable to the health account apply to the surviving spouse's health account (e.g., the surviving spouse is subject to income tax only on distributions from the health account for nonqualified expenses). The surviving spouse can exclude from gross income amounts withdrawn from the health account for expenses incurred by the decedent prior to death, to the extent they otherwise are qualified medical expenses.

If, upon death, the health account passes to a named beneficiary other than the decedent's surviving spouse, the health account ceases to be a health account as of the date of the decedent's death, and the beneficiary is required to include the fair market value of health account assets as of the date of death in gross income for the taxable year that includes the date of death. The amount includible in income is reduced by the amount in the health account used, within one year after death, to pay qualified medical expenses incurred by the decedent prior to the death. As is the case with other health account distributions, whether the expenses are qualified medical expenses is determined as of the time the expenses were incurred. In computing taxable income, the beneficiary may claim a deduction for that portion of the Federal estate tax on the decedent's estate that was attributable to the amount of the health account balance.[25]

If there is no named beneficiary of the decedent's health account, the health account ceases to be a health account as of the date of death, and the fair market value of the assets in the health account as of such date is includible in the decedent's gross income for the year of the death.

This rule applies in all cases in which there is no named beneficiary, even if the surviving spouse ultimately obtains the right to the health account assets (e.g., if the surviving spouse is the sole beneficiary of the decedent's estate).

REPORTING REQUIREMENTS

Employer contributions are required to be reported on the employee's Form W–2. Trustees of health accounts may be required to report to the Secretary of the Treasury amounts with respect to contributions, distributions, and other matters as determined appropriate by the Secretary. In addition, providers of health insurance are required to report information as may be prescribed by the Secretary.

Effective date.—The House bill provision is effective for taxable years beginning after December 31, 2003.

Senate Amendment

No provision.

Conference Agreement

The conference agreement does not include the House bill provision relating to HSSAs. The conference agreement includes the HSA provision from the House bill, with the following modifications.[26]

The conference agreement modifies the definition of a high deductible health plan applicable to HSAs by removing the limitation on the maximum amount of the deductible and increasing the limit on out-of-pocket expenses. Under the conference agreement, a high deductible health plan is a health plan that has a deductible that is at least $1,000 for self-only coverage or $2,000 for family coverage[27] and that has an out-of-pocket expense limit that is no more than $5,000 in the case of self-only coverage and $10,000 in the case of family coverage.[28] As under present law, out-of-pocket expenses include deductibles, co-payments, and other amounts (other than premiums) that the individual must pay for covered benefits under the plan.

Under the conference agreement, the maximum aggregate annual contribution[29] that can be made to an HSA is the lesser of (1) 100 percent of the annual deductible under the high deductible health plan, or (2) the maximum deductible permitted under an Archer MSA high deductible health plan under present law, as adjusted for inflation. For 2004, the amount of the maximum high deductible is estimated to be $2,600 in the case of self-only coverage and $5,150 in the case of family coverage.

Under the conference agreement, contributions made by or on behalf of an eligible individual are deductible by the individual. Thus, for example, contributions made by an eligible individual's family members are deductible by the eligible individual to the extent the contributions would be deductible if made by the individual.[30] As under the House bill, all contributions by or on behalf of an eligible individual are aggregated for purposes of the maximum annual contribution limit. Contributions to Archer MSAs reduce the annual contribution limit for HSAs.

The conference agreement increases the annual contribution limits for individuals who have attained age 55 by the end of the taxable year. In the case of policyholders and covered spouses who are age 55 or older, the HSA annual contribution limit is greater than the otherwise applicable limit by $500 in 2004, $600 in 2005, $700 in 2006, $800 in 2007, $900 in 2008, and $1,000 in 2009 and thereafter.[31] As under the House bill, contributions, including catch-up contributions, cannot be made once an individual is eligible for Medicare. Under the conference agreement, qualified medical expenses are expanded to include health insurance premiums for individuals eligible for Medicare, other than premiums for Medigap policies. Qualified health insurance premiums include, for example, Medicare Part A and Part B premiums, Medicare HMO premiums, and the employee share of premiums for employer- sponsored health insurance including employer-sponsored retiree health insurance.

Except as otherwise provide by the Secretary, preventative care is defined as under section 1871 of the Social Security Act. It is intended that the Secretary of the Treasury will amend the definition of preventative care if the definition used under the Social Security Act is inconsistent with the purposes of the provision. Under the conference agreement, the additional tax on nonqualified distributions is reduced to 10 percent (rather than 15 percent as in the House bill).

Under the conference agreement, amounts can be rolled over into an HSA from another HSA or from an Archer MSA. The conference agreement also clarifies information reporting requirements in the House bill.

Effective date.—The provision is effective for taxable years beginning after December 31, 2003.

Disposition of Unused Health Benefits in Flexible Spending Arrangements (sec. 1203 of the House bill and sec. 125 of the Code)

Present Law

A flexible spending arrangement (''FSA'') is defined under the Code as a benefit program which provides employees with coverage under which specified incurred expenses may be reimbursed and the maximum amount of reimbursement which is reasonably available to a participant for such coverage is less than 500 percent of the value of such coverage.[32] A health FSA is an FSA that provides for reimbursement of medical expenses.[33] Health FSAs are typically part of a cafeteria plan and may be funded through salary reduction.[34] Health FSAs are commonly used, for example, to reimburse employees for medical expenses not covered by

[22] Amounts paid by the employer include salary reduction contributions.

[23] Ordering rules apply to determine the extent to which distributions are attributable to nondeductible contributions.

[24] Sec. 2056.

[25] The deduction is calculated in accordance with the present-law rules relating to income in respect of a decedent set forth in section 691(c).

[26] The rules for HSAs generally follow those of Archer MSAs unless otherwise provided.

[27] The $1,000 limit is indexed for inflation. The family coverage limit will always be twice the individual limit (as indexed for inflation).

[28] In the case of the plan using a network of providers, the plan does not fail to be a high deductible health plan (if it would otherwise meet the requirements of a high deductible health plan) solely because the out of-pocket expense limit for services provised outside of the network exceeds the $5,000 and $10,000 out-of-pocket expense limits. In addition, such plan's deductible for out-of-network services is not taken into account in determining the annual contribution limit (i.e., the deductible for services within the network is used for such purpose).

[29] The maximum annual contribution limit is calculated as the sum of limits determined for each month based on the individual's health plan coverage on the first day of the month.

[30] Under present law, contributions made on behalf of another individual are generally treated as gifts. The present-law gift tax rules apply to contributions made on behalf of another individual.

[31] As in determining the general annual contribution limit, the increase in the annual contribution limit for individuals who have attained age 55 is also determined on a monthly basis.

[32] Sec. 106(c).

[33] FSAs may also be used to provide certain other nontaxable benefits, such as dependent care.

[34] Long-term care insurance cannot be offered through a cafeteria plan. Sec. 125(f).

insurance. There is no special exclusion for benefits provided under an FSA. Thus, health benefits provided under an FSA are excludable from income only if they qualify for exclusion under sections 105 or 106.

FSAs that are part of a cafeteria plan must comply with the rules applicable to cafeteria plans generally. One of these rules is that a cafeteria plan may not offer deferred compensation except through a qualified cash or deferred arrangement.[35] Under proposed Treasury regulations, a cafeteria plan is considered to permit the deferral of compensation if it includes a health FSA which reimburses participants for medical expenses incurred beyond the end of the plan year.[36] Thus, amounts in an employee's health account that are not used for medical expenses incurred before the end of a plan year must be forfeited. This rule is often referred to as the ''use it or lose it'' rule.

House Bill

The House bill allows up to $500 of unused health benefits in an employee's health FSA to be carried forward to the employee's health account for the next plan year of the health FSA or transferred to an HSA or HSSA maintained for the benefit of the employee.[37] Amounts transferred to an HSA or HSSA are treated as employer contributions for purposes of the HSA and HSSA rules. Under the House bill, if an individual is not eligible to contribute to an HSA or HSSA for the taxable year, the individual may transfer up to $500 of unused health benefits in the employee's health FSA to a tax-qualified retirement plan, a tax-sheltered annuity (section 403(b)), an individual retirement arrangement (''IRA''), or an eligible deferred compensation plan of a State or local government (section 457). An employee's unused health benefit is the excess of the maximum amount of reimbursement allowable to the employee over the actual amount of reimbursement made during the year. Amounts transferred are subject to the rules and limits on contributions that would otherwise apply to contributions to the transferee plan.

Effective date.—The House bill provision applies to taxable years beginning after December 31, 2003.

Senate Amendment

No provision.

Conference Agreement

The conference agreement does not include the House bill provision.

Exclusion from Gross Income of Certain Federal Subsidies for Prescription Drug Plans (new sec. 139A of the Code)

Present Law

Gross income includes all income from whatever source derived unless a specific exclusion applies.[38]

House Bill

No provision.

Senate Amendment

No provision.

Conference Agreement

The conference agreement provides that gross income does not include any special subsidy payment received under section 1860D–22 of the Social Security Act. The exclusion applies for purposes of both the regular tax and the alternative minimum tax (including the adjustment for adjusted current earnings).

The exclusion is not taken into account in determining whether a deduction is allowable with respect to costs taken into account in determining the subsidy payment. Accordingly, a taxpayer could claim a deduction for prescription drug expenses incurred even though the taxpayer also received an excludible subsidy related to the same expenses.

Effective date.—The provision is effective for taxable years ending after the date of enactment.

[35] Sec. 401(k).

[36] Prop. Treas. Reg. sec. 1.125–2 Q&A–5(a).

[37] Section 2 of the bill provides the eligibility rules for contributions to an HSA or HSSA.

[38] Sec. 61.

Exception to Information Reporting Requirements for Certain Health Arrangements (sec. 1204 of the House bill and sec. 6041 of the Code)

Present Law

Any person in a trade or business who, in the course of that trade or business, makes specified payments to another person totaling $600 or more in a year, must provide an information report to the IRS (as well as a copy to the recipient) on the payments.[39] Reporting is required to be done on Form 1099. In general, these information reports remind taxpayers of amounts of income that should be reflected on their tax returns and assist the IRS in verifying that taxpayers have correctly reported these amounts.

Treasury regulations specify that fees for professional services, including the services of physicians, must be reported.[40] Treasury regulations also provide a general exception from these information reporting requirements for payments made to corporations, except that this exception is inapplicable if the corporation is ''engaged in providing medical and health care services.''[41] Earlier this year, the IRS issued a revenue ruling describing whether employer-provided expense reimbursements made through debit or credit cards or other electronic media are excludible from gross income.[42] The ruling states that ''payments made to medical service providers through the use of debit, credit, and stored value cards are reportable by the employer on Form 1099–MISC under section 6041.''[43]

House Bill

The House bill provides an exception from the generally applicable information reporting provisions for payments for medical care made under either: (1) a flexible spending arrangement,[44] or (2) a health reimbursement arrangement that is treated as employer-provided coverage.

Effective date.—The House bill provision applies to payments made after December 31, 2002.

Senate Amendment

No provision.

Conference Agreement

The conference agreement follows the House bill.

TAX COMPLEXITY ANALYSIS

Section 4022(b) of the Internal Revenue Service Reform and Restructuring Act of 1998 (the ''IRS Reform Act'') requires the Joint Committee on Taxation (in consultation with the Internal Revenue Service and the Department of the Treasury) to provide a tax complexity analysis. The complexity analysis is required for all legislation reported by the Senate Committee on Finance, the House Committee on Ways and Means, or any committee of conference if the legislation includes a provision that directly or indirectly amends the Internal Revenue Code (the ''Code'') and has widespread applicability to individuals or small businesses.

[39] Sec. 6041.

[40] Treas. Reg. sec. 1.6041–1(d)(2).

[41] Treas. Reg. sec. 1.6041–3(p)(1). These regulations also provide an eception from these information reporting requirements if the payment is made to a hospital that is tax-exempt or that is owned and operated by a government entity.

[42] Rev. Rul. 2003–43, 2003–21 I.R.B. 935 (May 27, 2003).

[43] *Id.*

[44] This term is defined in sec. 106(c)(2).

The staff of the Joint Committee on Taxation has determined that a complexity analysis is not required under section 4022(b) of the IRS Reform Act because the bill contains no provisions that amend the Code and that have ''widespread applicability'' to individuals or small businesses

CONFERENCE REPORT ON H.R. 1904, HEALTHY FORESTS RESTORATION ACT OF 2003

Mr. GOODLATTE (during debate on the Inslee motion to instruct conferees on H.R. 1) submitted the following conference report and statement on the bill (H.R. 1904) to improve the capacity of the Secretary of Agriculture and the Secretary of the Interior to plan and conduct hazardous fuels reduction projects on National Forest System lands and Bureau of Land Management lands aimed at protecting communities, watersheds, and certain other at-risk lands from catastrophic wildfire, to enhance efforts to protect watersheds and address threats to forest and rangeland health, including catastrophic wildfire, across the landscape, and for other purposes:

CONFERENCE REPORT (H. REPT. 108–386)

The committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H.R. 1904), to improve the capacity of the Secretary of Agriculture and the Secretary of the Interior to plan and conduct hazardous fuels reduction projects on National Forest System lands and Bureau of Land Management lands aimed at protecting communities, watersheds, and certain other at-risk lands from catastrophic wildfire, to enhance efforts to protect watersheds and address threats to forest and rangeland health, including catastrophic wildfire, across the landscape, and for other purposes, having met, after full and free conference, have agreed to recommend and do recommend to their respective Houses as follows:

That the House recede from its disagreement to the amendment of the Senate to the text of the bill and agree to the same with an amendment as follows:

In lieu of the matter proposed to be inserted by the Senate amendment, insert the following:

SECTION 1. SHORT TITLE; TABLE OF CONTENTS.

(a) SHORT TITLE.—This Act may be cited as the ''Healthy Forests Restoration Act of 2003''.

(b) TABLE OF CONTENTS.—The table of contents of this Act is as follows:

Sec. 1. Short title; table of contents.
Sec. 2. Purposes.
Sec. 3. Definitions.

TITLE I—HAZARDOUS FUEL REDUCTION ON FEDERAL LAND

Sec. 101. Definitions.
Sec. 102. Authorized hazardous fuel reduction projects.
Sec. 103. Prioritization.
Sec. 104. Environmental analysis.
Sec. 105. Special administrative review process.
Sec. 106. Judicial review in United States district courts.
Sec. 107. Effect of title.
Sec. 108. Authorization of appropriations.

TITLE II—BIOMASS

Sec. 201. Improved biomass use research program.
Sec. 202. Rural revitalization through forestry.
Sec. 203. Biomass commercial utilization grant program.

TITLE III—WATERSHED FORESTRY ASSISTANCE

Sec. 301. Findings and purposes.
Sec. 302. Watershed forestry assistance program.
Sec. 303. Tribal watershed forestry assistance.

TITLE IV—INSECT INFESTATIONS AND RELATED DISEASES

Sec. 401. Findings and purpose.
Sec. 402. Definitions.
Sec. 403. Accelerated information gathering regarding forest-damaging insects.
Sec. 404. Applied silvicultural assessments.
Sec. 405. Relation to other laws.
Sec. 406. Authorization of appropriations.

TITLE V—HEALTHY FORESTS RESERVE PROGRAM

Sec. 501. Establishment of healthy forests reserve program.
Sec. 502. Eligibility and enrollment of lands in program.
Sec. 503. Restoration plans.
Sec. 504. Financial assistance.
Sec. 505. Technical assistance.
Sec. 506. Protections and measures
Sec. 507. Involvement by other agencies and organizations.
Sec. 508. Authorization of appropriations.

TITLE VI—MISCELLANEOUS

Sec. 601. Forest stands inventory and monitoring program to improve detection of and response to environmental threats.

SEC. 2. PURPOSES.

The purposes of this Act are—

(1) to reduce wildfire risk to communities, municipal water supplies, and other at-risk Federal land through a collaborative process of planning, prioritizing, and implementing hazardous fuel reduction projects;

(2) to authorize grant programs to improve the commercial value of forest biomass (that otherwise contributes to the risk of catastrophic fire or insect or disease infestation) for producing electric energy, useful heat, transportation fuel, and petroleum-based product substitutes, and for other commercial purposes;

(3) to enhance efforts to protect watersheds and address threats to forest and rangeland health, including catastrophic wildfire, across the landscape;

(4) to promote systematic gathering of information to address the impact of insect and disease infestations and other damaging agents on forest and rangeland health;

(5) to improve the capacity to detect insect and disease infestations at an early stage, particularly with respect to hardwood forests; and

(6) to protect, restore, and enhance forest ecosystem components—

(A) to promote the recovery of threatened and endangered species;

(B) to improve biological diversity; and

(C) to enhance productivity and carbon sequestration.

SEC. 3. DEFINITIONS.

In this Act:

(1) FEDERAL LAND.—The term ''Federal land'' means—

(A) land of the National Forest System (as defined in section 11(a) of the Forest and Rangeland Renewable Resources Planning Act of 1974 (16 U.S.C 1609(a))) administered by the Secretary of Agriculture, acting through the Chief of the Forest Service; and

(B) public lands (as defined in section 103 of the Federal Land Policy and Management Act of 1976 (43 U.S.C 1702)), the surface of which is administered by the Secretary of the Interior, acting through the Director of the Bureau of Land Management.

(2) INDIAN TRIBE.—The term ''Indian tribe'' has the meaning given the term in section 4 of the Indian Self-Determination and Education Assistance Act (25 U.S.C. 450b).

TITLE I—HAZARDOUS FUEL REDUCTION ON FEDERAL LAND

SEC. 101. DEFINITIONS.

In this title:

(1) AT-RISK COMMUNITY.—The term ''at-risk community'' means an area—

(A) that is comprised of—

(i) an interface community as defined in the notice entitled ''Wildland Urban Interface Communities Within the Vicinity of Federal Lands That Are at High Risk From Wildfire'' issued by the Secretary of Agriculture and the Secretary of the Interior in accordance with title IV of the Department of the Interior and Related Agencies Appropriations Act, 2001 (114 Stat. 1009) (66 Fed. Reg. 753, January 4, 2001); or

(ii) a group of homes and other structures with basic infrastructure and services (such as utilities and collectively maintained transportation routes) within or adjacent to Federal land;

(B) in which conditions are conducive to a large-scale wildland fire disturbance event; and

(C) for which a significant threat to human life or property exists as a result of a wildland fire disturbance event.

(2) AUTHORIZED HAZARDOUS FUEL REDUCTION PROJECT.—The term ''authorized hazardous fuel reduction project'' means the measures and methods described in the definition of ''appropriate tools'' contained in the glossary of the Implementation Plan, on Federal land described in section 102(a) and conducted under sections 103 and 104.

(3) COMMUNITY WILDFIRE PROTECTION PLAN.—The term ''community wildfire protection plan'' means a plan for an at-risk community that—

(A) is developed within the context of the collaborative agreements and the guidance established by the Wildland Fire Leadership Council and agreed to by the applicable local government, local fire department, and State agency responsible for forest management, in consultation with interested parties and the Federal land management agencies managing land in the vicinity of the at-risk community;

(B) identifies and prioritizes areas for hazardous fuel reduction treatments and recommends the types and methods of treatment on Federal and non-Federal land that will protect 1 or more at-risk communities and essential infrastructure; and

(C) recommends measures to reduce structural ignitability throughout the at-risk community.

(4) CONDITION CLASS 2.—The term ''condition class 2'', with respect to an area of Federal land, means the condition class description developed by the Forest Service Rocky Mountain Research Station in the general technical report entitled ''Development of Coarse-Scale Spatial Data for Wildland Fire and Fuel Management'' (RMRS–87), dated April 2000 (including any subsequent revision to the report), under which—

(A) fire regimes on the land have been moderately altered from historical ranges;

(B) there exists a moderate risk of losing key ecosystem components from fire;

(C) fire frequencies have increased or decreased from historical frequencies by 1 or more return intervals, resulting in moderate changes to—

(i) the size, frequency, intensity, or severity of fires; or

(ii) landscape patterns; and

(D) vegetation attributes have been moderately altered from the historical range of the attributes.

(5) CONDITION CLASS 3.—The term ''condition class 3'', with respect to an area of Federal land, means the condition class description developed by the Rocky Mountain Research Station in the general technical report referred to in paragraph (4) (including any subsequent revision to the report), under which—

(A) fire regimes on land have been significantly altered from historical ranges;

(B) there exists a high risk of losing key ecosystem components from fire;

(C) fire frequencies have departed from historical frequencies by multiple return intervals, resulting in dramatic changes to—

(i) the size, frequency, intensity, or severity of fires; or

(ii) landscape patterns; and

(D) vegetation attributes have been significantly altered from the historical range of the attributes.

(6) DAY.—The term ''day'' means—

(A) a calendar day; or

(B) if a deadline imposed by this title would expire on a nonbusiness day, the end of the next business day.

(7) DECISION DOCUMENT.—The term ''decision document'' means—

(A) a decision notice (as that term is used in the Forest Service Handbook);

(B) a decision record (as that term is used in the Bureau of Land Management Handbook); and

(C) a record of decision (as that term is used in applicable regulations of the Council on Environmental Quality).

(8) FIRE REGIME I.—The term ''fire regime I'' means an area—

(A) in which historically there have been low-severity fires with a frequency of 0 through 35 years; and

(B) that is located primarily in low elevation forests of pine, oak, or pinyon juniper.

(9) FIRE REGIME II.—The term ''fire regime II'' means an area—

(A) in which historically there are stand replacement severity fires with a frequency of 0 through 35 years; and

(B) that is located primarily in low- to mid-elevation rangeland, grassland, or shrubland.

(10) FIRE REGIME III.—The term ''fire regime III'' means an area—

(A) in which historically there are mixed severity fires with a frequency of 35 through 100 years; and

(B) that is located primarily in forests of mixed conifer, dry Douglas fir, or wet Ponderosa pine.

(11) IMPLEMENTATION PLAN.—The term ''Implementation Plan'' means the Implementation Plan for the Comprehensive Strategy for a Collaborative Approach for Reducing Wildland Fire Risks to Communities and the Environment, dated May 2002, developed pursuant to the conference report to accompany the Department of

the Interior and Related Agencies Appropriations Act, 2001 (House Report 106–64) (and subsequent revisions).

(12) MUNICIPAL WATER SUPPLY SYSTEM.—The term ''municipal water supply system'' means the reservoirs, canals, ditches, flumes, laterals, pipes, pipelines, and other surface facilities and systems constructed or installed for the collection, impoundment, storage, transportation, or distribution of drinking water.

(13) RESOURCE MANAGEMENT PLAN.—The term ''resource management plan'' means—

(A) a land and resource management plan prepared for 1 or more units of land of the National Forest System described in section 3(1)(A) under section 6 of the Forest and Rangeland Renewable Resources Planning Act of 1974 (16 U.S.C. 1604); or

(B) a land use plan prepared for 1 or more units of the public land described in section 3(1)(B) under section 202 of the Federal Land Policy and Management Act of 1976 (43 U.S.C. 1712).

(14) SECRETARY.—The term ''Secretary'' means—

(A) the Secretary of Agriculture, with respect to land of the National Forest System described in section 3(1)(A); and

(B) the Secretary of the Interior, with respect to public lands described in section 3(1)(B).

(15) THREATENED AND ENDANGERED SPECIES HABITAT.—The term ''threatened and endangered species habitat'' means Federal land identified in—

(A) a determination that a species is an endangered species or a threatened species under the Endangered Species Act of 1973 (16 U.S.C. 1531 et seq.);

(B) a designation of critical habitat of the species under that Act; or

(C) a recovery plan prepared for the species under that Act.

(16) WILDLAND-URBAN INTERFACE.—The term ''wildland-urban interface'' means—

(A) an area within or adjacent to an at-risk community that is identified in recommendations to the Secretary in a community wildfire protection plan; or

(B) in the case of any area for which a community wildfire protection plan is not in effect—

(i) an area extending 1/2-mile from the boundary of an at-risk community;

(ii) an area within 1½ miles of the boundary of an at-risk community, including any land that—

(I) has a sustained steep slope that creates the potential for wildfire behavior endangering the at-risk community;

(II) has a geographic feature that aids in creating an effective fire break, such as a road or ridge top; or

(III) is in condition class 3, as documented by the Secretary in the project-specific environmental analysis; and

(iii) an area that is adjacent to an evacuation route for an at-risk community that the Secretary determines, in cooperation with the at-risk community, requires hazardous fuel reduction to provide safer evacuation from the at-risk community.

SEC. 102. AUTHORIZED HAZARDOUS FUEL REDUCTION PROJECTS.

(a) AUTHORIZED PROJECTS.—As soon as practicable after the date of enactment of this Act, the Secretary shall implement authorized hazardous fuel reduction projects, consistent with the Implementation Plan, on—

(1) Federal land in wildland-urban interface areas;

(2) condition class 3 Federal land, in such proximity to a municipal water supply system or a stream feeding such a system within a municipal watershed that a significant risk exists that a fire disturbance event would have adverse effects on the water quality of the municipal water supply or the maintenance of the system, including a risk to water quality posed by erosion following such a fire disturbance event;

(3) condition class 2 Federal land located within fire regime I, fire regime II, or fire regime III, in such proximity to a municipal water supply system or a stream feeding such a system within a municipal watershed that a significant risk exists that a fire disturbance event would have adverse effects on the water quality of the municipal water supply or the maintenance of the system, including a risk to water quality posed by erosion following such a fire disturbance event;

(4) Federal land on which windthrow or blowdown, ice storm damage, the existence of an epidemic of disease or insects, or the presence of such an epidemic on immediately adjacent land and the imminent risk it will spread, poses a significant threat to an ecosystem component, or forest or rangeland resource, on the Federal land or adjacent non-Federal land; and

(5) Federal land not covered by paragraphs (1) through (4) that contains threatened and endangered species habitat, if—

(A) natural fire regimes on that land are identified as being important for, or wildfire is identified as a threat to, an endangered species, a threatened species, or habitat of an endangered species or threatened species in a species recovery plan prepared under section 4 of the Endangered Species Act of 1973 (16 U.S.C. 1533), or a notice published in the Federal Register determining a species to be an endangered species or a threatened species or designating critical habitat;

(B) the authorized hazardous fuel reduction project will provide enhanced protection from catastrophic wildfire for the endangered species, threatened species, or habitat of the endangered species or threatened species; and

(C) the Secretary complies with any applicable guidelines specified in any management or recovery plan described in subparagraph (A).

(b) RELATION TO AGENCY PLANS.—An authorized hazardous fuel reduction project shall be conducted consistent with the resource management plan and other relevant administrative policies or decisions applicable to the Federal land covered by the project.

(c) ACREAGE LIMITATION.—Not more than a total of 20,000,000 acres of Federal land may be treated under authorized hazardous fuel reduction projects.

(d) EXCLUSION OF CERTAIN FEDERAL LAND.—The Secretary may not conduct an authorized hazardous fuel reduction project that would occur on—

(1) a component of the National Wilderness Preservation System;

(2) Federal land on which the removal of vegetation is prohibited or restricted by Act of Congress or Presidential proclamation (including the applicable implementation plan); or

(3) a Wilderness Study Area.

(e) OLD GROWTH STANDS.—

(1) DEFINITIONS.—In this subsection and subsection (f):

(A) APPLICABLE PERIOD.—The term ''applicable period'' means—

(i) the 2-year period beginning on the date of enactment of this Act; or

(ii) in the case of a resource management plan that the Secretary is in the process of revising as of the date of enactment of this Act, the 3-year period beginning on the date of enactment of this Act.

(B) COVERED PROJECT.—The term ''covered project'' means an authorized hazardous fuel reduction project carried out on land described in paragraph (1), (2), (3), or (5) of subsection (a).

(C) MANAGEMENT DIRECTION.—The term ''management direction'' means definitions, designations, standards, guidelines, goals, or objectives established for an old growth stand under a resource management plan developed in accordance with applicable law, including section 6(g)(3)(B) of the Forest and Rangeland Renewable Resources Planning Act of 1974 (16 U.S.C. 1604(g)(3)(B)).

(D) OLD GROWTH STAND.—The term ''old growth stand'' has the meaning given the term under management direction used pursuant to paragraphs (3) and (4), based on the structure and composition characteristic of the forest type, and in accordance with applicable law, including section 6(g)(3)(B) of the Forest and Rangeland Renewable Resources Planning Act of 1974 (16 U.S.C. 1604(g)(3)(B)).

(2) PROJECT REQUIREMENTS.—In carrying out a covered project, the Secretary shall fully maintain, or contribute toward the restoration of, the structure and composition of old growth stands according to the pre-fire suppression old growth conditions characteristic of the forest type, taking into account the contribution of the stand to landscape fire adaptation and watershed health, and retaining the large trees contributing to old growth structure.

(3) NEWER MANAGEMENT DIRECTION.—

(A) IN GENERAL.—If the management direction for an old growth stand was established on or after December 15, 1993, the Secretary shall meet the requirements of paragraph (2) in carrying out a covered project by implementing the management direction.

(B) AMENDMENTS OR REVISIONS.—Any amendment or revision to management direction for which final administrative approval is granted after the date of enactment of this Act shall be consistent with paragraph (2) for the purpose of carrying out covered projects.

(4) OLDER MANAGEMENT DIRECTION.—

(A) IN GENERAL.—If the management direction for an old growth stand was established before December 15, 1993, the Secretary shall meet the requirements of paragraph (2) in carrying out a covered project during the applicable period by implementing the management direction.

(B) REVIEW REQUIRED.—Subject to subparagraph (C), during the applicable period for management direction referred to in subparagraph (A), the Secretary shall—

(i) review the management direction for affected covered projects, taking into account any relevant scientific information made available since the adoption of the management direction; and

(ii) amend the management direction for affected covered projects to be consistent with paragraph (2), if necessary to reflect relevant scientific information the Secretary did not consider in formulating the management direction.

(C) REVIEW NOT COMPLETED.—If the Secretary does not complete the review of the management direction in accordance with subparagraph (B) before the end of the applicable period, the Secretary shall not carry out any portion of affected covered projects in stands that are identified as old growth stands (based on substantial supporting evidence) by any person during scoping, within the period—

(i) beginning at the close of the applicable period for the management direction governing the affected covered projects; and

(ii) ending on the earlier of—

(I) the date the Secretary completes the action required by subparagraph (B) for the management direction applicable to the affected covered projects; or

(II) the date on which the acreage limitation specified in subsection (c) (as that limitation may be adjusted by a subsequent Act of Congress) is reached.

(5) LIMITATION TO COVERED PROJECTS.—Nothing in this subsection requires the Secretary to revise or otherwise amend a resource management plan to make the project requirements of

paragraph (2) apply to an activity other than a covered project.

(f) LARGE TREE RETENTION.—

(1) IN GENERAL.—Except in old growth stands where the management direction is consistent with subsection (e)(2), the Secretary shall carry out a covered project in a manner that—

(A) focuses largely on small diameter trees, thinning, strategic fuel breaks, and prescribed fire to modify fire behavior, as measured by the projected reduction of uncharacteristically severe wildfire effects for the forest type (such as adverse soil impacts, tree mortality or other impacts); and

(B) maximizes the retention of large trees, as appropriate for the forest type, to the extent that the trees promote fire-resilient stands.

(2) WILDFIRE RISK.—Nothing in this subsection prevents achievement of the purposes described in section 2(1).

(g) MONITORING AND ASSESSING FOREST AND RANGELAND HEALTH.—

(1) IN GENERAL.—For each Forest Service administrative region and each Bureau of Land Management State Office, the Secretary shall—

(A) monitor the results of a representative sample of the projects authorized under this title for each management unit; and

(B) not later than 5 years after the date of enactment of this Act, and each 5 years thereafter, issue a report that includes—

(i) an evaluation of the progress towards project goals; and

(ii) recommendations for modifications to the projects and management treatments.

(2) CONSISTENCY OF PROJECTS WITH RECOMMENDATIONS.—An authorized hazardous fuel reduction project approved following the issuance of a monitoring report shall, to the maximum extent practicable, be consistent with any applicable recommendations in the report.

(3) SIMILAR VEGETATION TYPES.—The results of a monitoring report shall be made available for use (if appropriate) in an authorized hazardous fuels reduction project conducted in a similar vegetation type on land under the jurisdiction of the Secretary.

(4) MONITORING AND ASSESSMENTS.—Monitoring and assessment shall include a description of the changes in condition class, using the Fire Regime Condition Class Guidebook or successor guidance, specifically comparing end results to—

(A) pretreatment conditions;

(B) historical fire regimes; and

(C) any applicable watershed or landscape goals or objectives in the resource management plan or other relevant direction.

(5) MULTIPARTY MONITORING.—

(A) IN GENERAL.—In an area where significant interest is expressed in multiparty monitoring, the Secretary shall establish a multiparty monitoring, evaluation, and accountability process in order to assess the positive or negative ecological and social effects of authorized hazardous fuel reduction projects and projects conducted pursuant to section 404.

(B) DIVERSE STAKEHOLDERS.—The Secretary shall include diverse stakeholders (including interested citizens and Indian tribes) in the process required under subparagraph (A).

(C) FUNDING.—Funds to carry out this paragraph may be derived from operations funds for projects described in subparagraph (A).

(6) COLLECTION OF MONITORING DATA.—The Secretary may collect monitoring data by entering into cooperative agreements or contracts with, or providing grants to, small or micro-businesses, cooperatives, nonprofit organizations, Youth Conservation Corps work crews, or related State, local, and other non-Federal conservation corps.

(7) TRACKING.—For each administrative unit, the Secretary shall track acres burned, by the degree of severity, by large wildfires (as defined by the Secretary).

(8) MONITORING AND MAINTENANCE OF TREATED AREAS.—The Secretary shall, to the maximum extent practicable, develop a process for monitoring the need for maintenance of treated areas, over time, in order to preserve the forest health benefits achieved.

SEC. 103. PRIORITIZATION.

(a) IN GENERAL.—In accordance with the Implementation Plan, the Secretary shall develop an annual program of work for Federal land that gives priority to authorized hazardous fuel reduction projects that provide for the protection of at-risk communities or watersheds or that implement community wildfire protection plans.

(b) COLLABORATION.—

(1) IN GENERAL.—The Secretary shall consider recommendations under subsection (a) that are made by at-risk communities that have developed community wildfire protection plans.

(2) EXEMPTION.—The Federal Advisory Committee Act (5 U.S.C. App.) shall not apply to the planning process and recommendations concerning community wildfire protection plans.

(c) ADMINISTRATION.—

(1) IN GENERAL.—Federal agency involvement in developing a community wildfire protection plan, or a recommendation made in a community wildfire protection plan, shall not be considered a Federal agency action under the National Environmental Policy Act of 1969 (42 U.S.C. 4321 et seq.).

(2) COMPLIANCE.—In implementing authorized hazardous fuel reduction projects on Federal land, the Secretary shall, in accordance with section 104, comply with the National Environmental Policy Act of 1969 (42 U.S.C. 4321 et seq.).

(d) FUNDING ALLOCATION.—

(1) FEDERAL LAND.—

(A) IN GENERAL.—Subject to subparagraph (B), the Secretary shall use not less than 50 percent of the funds allocated for authorized hazardous fuel reduction projects in the wildland-urban interface.

(B) APPLICABILITY AND ALLOCATION.—The funding allocation in subparagraph (A) shall apply at the national level. The Secretary may allocate the proportion of funds differently than is required under subparagraph (A) within individual management units as appropriate, in particular to conduct authorized hazardous fuel reduction projects on land described in section 102(a)(4).

(C) WILDLAND-URBAN INTERFACE.—In the case of an authorized hazardous fuel reduction project for which a decision notice is issued during the 1-year period beginning on the date of enactment of this Act, the Secretary shall use existing definitions of the term ''wildland-urban interface'' rather than the definition of that term provided under section 101.

(2) NON-FEDERAL LAND.—

(A) IN GENERAL.—In providing financial assistance under any provision of law for hazardous fuel reduction projects on non-Federal land, the Secretary shall consider recommendations made by at-risk communities that have developed community wildfire protection plans.

(B) PRIORITY.—In allocating funding under this paragraph, the Secretary should, to the maximum extent practicable, give priority to communities that have adopted a community wildfire protection plan or have taken proactive measures to encourage willing property owners to reduce fire risk on private property.

SEC. 104. ENVIRONMENTAL ANALYSIS.

(a) AUTHORIZED HAZARDOUS FUEL REDUCTION PROJECTS.—Except as otherwise provided in this title, the Secretary shall conduct authorized hazardous fuel reduction projects in accordance with—

(1) the National Environmental Policy Act of 1969 (42 U.S.C. 4331 et seq.); and

(2) other applicable laws.

(b) ENVIRONMENTAL ASSESSMENT OR ENVIRONMENTAL IMPACT STATEMENT.—The Secretary shall prepare an environmental assessment or an environmental impact statement pursuant to section 102(2) of the National Environmental Policy Act of 1969 (42 U.S.C. 4332(2)) for each authorized hazardous fuel reduction project.

(c) CONSIDERATION OF ALTERNATIVES.—

(1) IN GENERAL.—Except as provided in subsection (d), in the environmental assessment or environmental impact statement prepared under subsection (b), the Secretary shall study, develop, and describe—

(A) the proposed agency action;

(B) the alternative of no action; and

(C) an additional action alternative, if the additional alternative—

(i) is proposed during scoping or the collaborative process under subsection (f); and

(ii) meets the purpose and need of the project, in accordance with regulations promulgated by the Council on Environmental Quality.

(2) MULTIPLE ADDITIONAL ALTERNATIVES.—If more than 1 additional alternative is proposed under paragraph (1)(C), the Secretary shall—

(A) select which additional alternative to consider, which is a choice that is in the sole discretion of the Secretary; and

(B) provide a written record describing the reasons for the selection.

(d) ALTERNATIVE ANALYSIS PROCESS FOR PROJECTS IN WILDLAND-URBAN INTERFACE.—

(1) PROPOSED AGENCY ACTION AND 1 ACTION ALTERNATIVE.—For an authorized hazardous fuel reduction project that is proposed to be conducted in the wildland-urban interface, the Secretary is not required to study, develop, or describe more than the proposed agency action and 1 action alternative in the environmental assessment or environmental impact statement prepared pursuant to section 102(2) of the National Environmental Policy Act of 1969 (42 U.S.C. 4332(2)).

(2) PROPOSED AGENCY ACTION.—Notwithstanding paragraph (1), but subject to paragraph (3), if an authorized hazardous fuel reduction project proposed to be conducted in the wildland-urban interface is located no further than 1½ miles from the boundary of an at-risk community, the Secretary is not required to study, develop, or describe any alternative to the proposed agency action in the environmental assessment or environmental impact statement prepared pursuant to section 102(2) of the National Environmental Policy Act of 1969 (42 U.S.C. 4332(2)).

(3) PROPOSED AGENCY ACTION AND COMMUNITY WILDFIRE PROTECTION PLAN ALTERNATIVE.—In the case of an authorized hazardous fuel reduction project described in paragraph (2), if the at-risk community has adopted a community wildfire protection plan and the proposed agency action does not implement the recommendations in the plan regarding the general location and basic method of treatments, the Secretary shall evaluate the recommendations in the plan as an alternative to the proposed agency action in the environmental assessment or environmental impact statement prepared pursuant to section 102(2) of the National Environmental Policy Act of 1969 (42 U.S.C. 4332(2)).

(e) PUBLIC NOTICE AND MEETING.—

(1) PUBLIC NOTICE.—The Secretary shall provide notice of each authorized hazardous fuel reduction project in accordance with applicable regulations and administrative guidelines.

(2) PUBLIC MEETING.—During the preparation stage of each authorized hazardous fuel reduction project, the Secretary shall—

(A) conduct a public meeting at an appropriate location proximate to the administrative

unit of the Federal land on which the authorized hazardous fuel reduction project will be conducted; and

(B) provide advance notice of the location, date, and time of the meeting.

(f) PUBLIC COLLABORATION.—In order to encourage meaningful public participation during preparation of authorized hazardous fuel reduction projects, the Secretary shall facilitate collaboration among State and local governments and Indian tribes, and participation of interested persons, during the preparation of each authorized fuel reduction project in a manner consistent with the Implementation Plan.

(g) ENVIRONMENTAL ANALYSIS AND PUBLIC COMMENT.—In accordance with section 102(2) of the National Environmental Policy Act of 1969 (42 U.S.C. 4332(2)) and the applicable regulations and administrative guidelines, the Secretary shall provide an opportunity for public comment during the preparation of any environmental assessment or environmental impact statement for an authorized hazardous fuel reduction project.

(h) DECISION DOCUMENT.—The Secretary shall sign a decision document for authorized hazardous fuel reduction projects and provide notice of the final agency actions.

SEC. 105. SPECIAL ADMINISTRATIVE REVIEW PROCESS.

(a) INTERIM FINAL REGULATIONS.—

(1) IN GENERAL.—Not later than 30 days after the date of the enactment of this Act, the Secretary of Agriculture shall promulgate interim final regulations to establish a predecisional administrative review process for the period described in paragraph (2) that will serve as the sole means by which a person can seek administrative review regarding an authorized hazardous fuel reduction project on Forest Service land.

(2) PERIOD.—The predecisional administrative review process required under paragraph (1) shall occur during the period—

(A) beginning after the completion of the environmental assessment or environmental impact statement; and

(B) ending not later than the date of the issuance of the final decision approving the project.

(3) ELIGIBILITY.—To be eligible to participate in the administrative review process for an authorized hazardous fuel reduction project under paragraph (1), a person shall submit to the Secretary, during scoping or the public comment period for the draft environmental analysis for the project, specific written comments that relate to the proposed action.

(4) EFFECTIVE DATE.—The interim final regulations promulgated under paragraph (1) shall take effect on the date of promulgation of the regulations.

(b) FINAL REGULATIONS.—The Secretary shall promulgate final regulations to establish the process described in subsection (a)(1) after the interim final regulations have been published and reasonable time has been provided for public comment.

(c) ADMINISTRATIVE REVIEW.—

(1) IN GENERAL.—A person may bring a civil action challenging an authorized hazardous fuel reduction project in a Federal district court only if the person has challenged the authorized hazardous fuel reduction project by exhausting—

(A) the administrative review process established by the Secretary of Agriculture under this section; or

(B) the administrative hearings and appeals procedures established by the Department of the Interior.

(2) ISSUES.—An issue may be considered in the judicial review of an action under section 106 only if the issue was raised in an administrative review process described in paragraph (1).

(3) EXCEPTION.—

(A) IN GENERAL.—An exception to the requirement of exhausting the administrative review process before seeking judicial review shall be available if a Federal court finds that the futility or inadequacy exception applies to a specific plaintiff or claim.

(B) INFORMATION.—If an agency fails or is unable to make information timely available during the administrative review process, a court should evaluate whether the administrative review process was inadequate for claims or issues to which the information is material.

SEC. 106. JUDICIAL REVIEW IN UNITED STATES DISTRICT COURTS.

(a) VENUE.—Notwithstanding section 1391 of title 28, United States Code, or other applicable law, an authorized hazardous fuels reduction project conducted under this title shall be subject to judicial review only in the United States district court for a district in which the Federal land to be treated under the authorized hazardous fuels reduction project is located.

(b) EXPEDITIOUS COMPLETION OF JUDICIAL REVIEW.—In the judicial review of an action challenging an authorized hazardous fuel reduction project under subsection (a), Congress encourages a court of competent jurisdiction to expedite, to the maximum extent practicable, the proceedings in the action with the goal of rendering a final determination on jurisdiction, and (if jurisdiction exists) a final determination on the merits, as soon as practicable after the date on which a complaint or appeal is filed to initiate the action.

(c) INJUNCTIONS.—

(1) IN GENERAL.—Subject to paragraph (2), the length of any preliminary injunctive relief and stays pending appeal covering an authorized hazardous fuel reduction project carried out under this title shall not exceed 60 days.

(2) RENEWAL.—

(A) IN GENERAL.—A court of competent jurisdiction may issue 1 or more renewals of any preliminary injunction, or stay pending appeal, granted under paragraph (1).

(B) UPDATES.—In each renewal of an injunction in an action, the parties to the action shall present the court with updated information on the status of the authorized hazardous fuel reduction project.

(3) BALANCING OF SHORT- AND LONG-TERM EFFECTS.—As part of its weighing the equities while considering any request for an injunction that applies to an agency action under an authorized hazardous fuel reduction project, the court reviewing the project shall balance the impact to the ecosystem likely affected by the project of—

(A) the short- and long-term effects of undertaking the agency action; against

(B) the short- and long-term effects of not undertaking the agency action.

SEC. 107. EFFECT OF TITLE.

(a) OTHER AUTHORITY.—Nothing in this title affects, or otherwise biases, the use by the Secretary of other statutory or administrative authority (including categorical exclusions adopted to implement the National Environmental Policy Act of 1969 (42 U.S.C. 4321 et seq.)) to conduct a hazardous fuel reduction project on Federal land (including Federal land identified in section 102(d)) that is not conducted using the process authorized by section 104.

(b) NATIONAL FOREST SYSTEM.—For projects and activities of the National Forest System other than authorized hazardous fuel reduction projects, nothing in this title affects, or otherwise biases, the notice, comment, and appeal procedures for projects and activities of the National Forest System contained in part 215 of title 36, Code of Federal Regulations, or the consideration or disposition of any legal action brought with respect to the procedures.

SEC. 108. AUTHORIZATION OF APPROPRIATIONS.

There is authorized to be appropriated $760,000,000 for each fiscal year to carry out—

(1) activities authorized by this title; and

(2) other hazardous fuel reduction activities of the Secretary, including making grants to States, local governments, Indian tribes, and other eligible recipients for activities authorized by law.

TITLE II—BIOMASS

SEC. 201. IMPROVED BIOMASS USE RESEARCH PROGRAM.

(a) USES OF GRANTS, CONTRACTS, AND ASSISTANCE.—Section 307(d) of the Biomass Research and Development Act of 2000 (7 U.S.C. 7624 note; Public Law 106–224) is amended—

(1) in paragraph (3), by striking ''or'' at the end;

(2) in paragraph (4), by striking the period at the end and inserting ''; or''; and

(3) by adding at the end the following:

''(5) research to integrate silviculture, harvesting, product development, processing information, and economic evaluation to provide the science, technology, and tools to forest managers and community developers for use in evaluating forest treatment and production alternatives, including—

''(A) to develop tools that would enable land managers, locally or in a several-State region, to estimate—

''(i) the cost to deliver varying quantities of wood to a particular location; and

''(ii) the amount that could be paid for stumpage if delivered wood was used for a specific mix of products;

''(B) to conduct research focused on developing appropriate thinning systems and equipment designs that are—

''(i) capable of being used on land without significant adverse effects on the land;

''(ii) capable of handling large and varied landscapes;

''(iii) adaptable to handling a wide variety of tree sizes;

''(iv) inexpensive; and

''(v) adaptable to various terrains; and

''(C) to develop, test, and employ in the training of forestry managers and community developers curricula materials and training programs on matters described in subparagraphs (A) and (B).''.

(b) FUNDING.—Section 310(b) of the Biomass Research and Development Act of 2000 (7 U.S.C. 7624 note; Public Law 106–224) is amended by striking ''$49,000,000'' and inserting ''$54,000,000''.

SEC. 202. RURAL REVITALIZATION THROUGH FORESTRY.

Section 2371 of the Food, Agriculture, Conservation, and Trade Act of 1990 (7 U.S.C. 6601) is amended by adding at the end the following:

''(d) RURAL REVITALIZATION TECHNOLOGIES.—

''(1) IN GENERAL.—The Secretary of Agriculture, acting through the Chief of the Forest Service, in consultation with the State and Private Forestry Technology Marketing Unit at the Forest Products Laboratory, and in collaboration with eligible institutions, may carry out a program—

''(A) to accelerate adoption of technologies using biomass and small-diameter materials;

''(B) to create community-based enterprises through marketing activities and demonstration projects; and

''(C) to establish small-scale business enterprises to make use of biomass and small-diameter materials.

''(2) AUTHORIZATION OF APPROPRIATIONS.—There is authorized to be appropriated to carry out this subsection $5,000,000 for each of fiscal years 2004 through 2008.''.

SEC. 203. BIOMASS COMMERCIAL UTILIZATION GRANT PROGRAM.

(a) IN GENERAL.—In addition to any other authority of the Secretary of Agriculture to make

grants to a person that owns or operates a facility that uses biomass as a raw material to produce electric energy, sensible heat, transportation fuel, or substitutes for petroleum-based products, the Secretary may make grants to a person that owns or operates a facility that uses biomass for wood-based products or other commercial purposes to offset the costs incurred to purchase biomass.

(b) AUTHORIZATION OF APPROPRIATIONS.—There is authorized to be appropriated to carry out this section $5,000,000 for each of fiscal years 2004 through 2008.

TITLE III—WATERSHED FORESTRY ASSISTANCE

SEC. 301. FINDINGS AND PURPOSES.

(a) FINDINGS.—Congress finds that—

(1) there has been a dramatic shift in public attitudes and perceptions about forest management, particularly in the understanding and practice of sustainable forest management;

(2) it is commonly recognized that the proper stewardship of forest land is essential to sustaining and restoring the health of watersheds;

(3) forests can provide essential ecological services in filtering pollutants, buffering important rivers and estuaries, and minimizing flooding, which makes forest restoration worthy of special focus; and

(4) strengthened education, technical assistance, and financial assistance for nonindustrial private forest landowners and communities, relating to the protection of watershed health, is needed to realize the expectations of the general public.

(b) PURPOSES.—The purposes of this title are—

(1) to improve landowner and public understanding of the connection between forest management and watershed health;

(2) to encourage landowners to maintain tree cover on property and to use tree plantings and vegetative treatments as creative solutions to watershed problems associated with varying land uses;

(3) to enhance and complement forest management and buffer use for watersheds, with an emphasis on community watersheds;

(4) to establish new partnerships and collaborative watershed approaches to forest management, stewardship, and conservation;

(5) to provide technical and financial assistance to States to deliver a coordinated program that enhances State forestry best-management practices programs, and conserves and improves forested land and potentially forested land, through technical, financial, and educational assistance to qualifying individuals and entities; and

(6) to maximize the proper management and conservation of wetland forests and to assist in the restoration of those forests.

SEC. 302. WATERSHED FORESTRY ASSISTANCE PROGRAM.

The Cooperative Forestry Assistance Act of 1978 is amended by inserting after section 5 (16 U.S.C. 2103a) the following:

"SEC. 6. WATERSHED FORESTRY ASSISTANCE PROGRAM.

''(a) DEFINITION OF NONINDUSTRIAL PRIVATE FOREST LAND.—In this section, the term 'nonindustrial private forest land' means rural land, as determined by the Secretary, that—

''(1) has existing tree cover or that is suitable for growing trees; and

''(2) is owned by any nonindustrial private individual, group, association, corporation, or other private legal entity, that has definitive decisionmaking authority over the land.

''(b) GENERAL AUTHORITY AND PURPOSE.—The Secretary, acting through the Chief of the Forest Service and (where appropriate) through the Cooperative State Research, Education, and Extension Service, may provide technical, financial, and related assistance to State foresters, equivalent State officials, or Cooperative Extension officials at land grant colleges and universities and 1890 institutions for the purpose of expanding State forest stewardship capacities and activities through State forestry best-management practices and other means at the State level to address watershed issues on non-Federal forested land and potentially forested land.

''(c) TECHNICAL ASSISTANCE TO PROTECT WATER QUALITY.—

''(1) IN GENERAL.—The Secretary, in cooperation with State foresters or equivalent State officials, shall engage interested members of the public, including nonprofit organizations and local watershed councils, to develop a program of technical assistance to protect water quality described in paragraph (2).

''(2) PURPOSE OF PROGRAM.—The program under this subsection shall be designed—

''(A) to build and strengthen watershed partnerships that focus on forested landscapes at the State, regional, and local levels;

''(B) to provide State forestry best-management practices and water quality technical assistance directly to owners of nonindustrial private forest land;

''(C) to provide technical guidance to land managers and policymakers for water quality protection through forest management;

''(D) to complement State and local efforts to protect water quality and provide enhanced opportunities for consultation and cooperation among Federal and State agencies charged with responsibility for water and watershed management; and

''(E) to provide enhanced forest resource data and support for improved implementation and monitoring of State forestry best-management practices.

''(3) IMPLEMENTATION.—In the case of a participating State, the program of technical assistance shall be implemented by State foresters or equivalent State officials.

''(d) WATERSHED FORESTRY COST-SHARE PROGRAM.—

''(1) IN GENERAL.—The Secretary shall establish a watershed forestry cost-share program—

''(A) which shall be—

''(i) administered by the Forest Service; and

''(ii) implemented by State foresters or equivalent State officials in participating States; and

''(B) under which funds or other support provided to participating States shall be made available for State forestry best-management practices programs and watershed forestry projects.

''(2) WATERSHED FORESTRY PROJECTS.—The State forester, an equivalent State official of a participating State, or a Cooperative Extension official at a land grant college or university or 1890 institution, in coordination with the State Forest Stewardship Coordinating Committee established under section 19(b) (or an equivalent committee) for that State, shall make awards to communities, nonprofit groups, and owners of nonindustrial private forest land under the program for watershed forestry projects described in paragraph (3).

''(3) PROJECT ELEMENTS AND OBJECTIVES.—A watershed forestry project shall accomplish critical forest stewardship, watershed protection, and restoration needs within a State by demonstrating the value of trees and forests to watershed health and condition through—

''(A) the use of trees as solutions to water quality problems in urban and rural areas;

''(B) community-based planning, involvement, and action through State, local, and nonprofit partnerships;

''(C) application of and dissemination of monitoring information on forestry best-management practices relating to watershed forestry;

''(D) watershed-scale forest management activities and conservation planning; and

''(E)(i) the restoration of wetland (as defined by the States) and stream-side forests; and

''(ii) the establishment of riparian vegetative buffers.

''(4) COST-SHARING.—

''(A) FEDERAL SHARE.—

''(i) FUNDS UNDER THIS SUBSECTION.—Funds provided under this subsection for a watershed forestry project may not exceed 75 percent of the cost of the project.

''(ii) OTHER FEDERAL FUNDS.—The percentage of the cost of a project described in clause (i) that is not covered by funds made available under this subsection may be paid using other Federal funding sources, except that the total Federal share of the costs of the project may not exceed 90 percent.

''(B) FORM.—The non-Federal share of the costs of a project may be provided in the form of cash, services, or other in-kind contributions.

''(5) PRIORITIZATION.—The State Forest Stewardship Coordinating Committee for a State, or equivalent State committee, shall prioritize watersheds in that State to target watershed forestry projects funded under this subsection.

''(6) WATERSHED FORESTER.—Financial and technical assistance shall be made available to the State Forester or equivalent State official to create a State watershed or best-management practice forester position to—

''(A) lead statewide programs; and

''(B) coordinate watershed-level projects.

''(e) DISTRIBUTION.—

''(1) IN GENERAL.—Of the funds made available for a fiscal year under subsection (g), the Secretary shall use—

''(A) at least 75 percent of the funds to carry out the cost-share program under subsection (d); and

''(B) the remainder of the funds to deliver technical assistance, education, and planning, at the local level, through the State Forester or equivalent State official.

''(2) SPECIAL CONSIDERATIONS.—Distribution of funds by the Secretary among States under paragraph (1) shall be made only after giving appropriate consideration to—

''(A) the acres of agricultural land, nonindustrial private forest land, and highly erodible land in each State;

''(B) the miles of riparian buffer needed;

''(C) the miles of impaired stream segments and other impaired water bodies where forestry practices can be used to restore or protect water resources;

''(D) the number of owners of nonindustrial private forest land in each State; and

''(E) water quality cost savings that can be achieved through forest watershed management.

''(f) WILLING OWNERS.—

''(1) IN GENERAL.—Participation of an owner of nonindustrial private forest land in the watershed forestry assistance program under this section is voluntary.

''(2) WRITTEN CONSENT.—The watershed forestry assistance program shall not be carried out on nonindustrial private forest land without the written consent of the owner of, or entity having definitive decisionmaking over, the nonindustrial private forest land.

''(g) AUTHORIZATION OF APPROPRIATIONS.—There is authorized to be appropriated to carry out this section $15,000,000 for each of fiscal years 2004 through 2008.''.

SEC. 303. TRIBAL WATERSHED FORESTRY ASSISTANCE.

(a) IN GENERAL.—The Secretary of Agriculture (referred to in this section as the ''Secretary''), acting through the Chief of the Forest Service, shall provide technical, financial, and related assistance to Indian tribes for the purpose of expanding tribal stewardship capacities and activities through tribal forestry best-management practices and other means at the tribal level to

address watershed issues on land under the jurisdiction of or administered by the Indian tribes.

(b) TECHNICAL ASSISTANCE TO PROTECT WATER QUALITY.—

(1) IN GENERAL.—The Secretary, in cooperation with Indian tribes, shall develop a program to provide technical assistance to protect water quality, as described in paragraph (2).

(2) PURPOSE OF PROGRAM.—The program under this subsection shall be designed—

(A) to build and strengthen watershed partnerships that focus on forested landscapes at the State, regional, tribal, and local levels;

(B) to provide tribal forestry best-management practices and water quality technical assistance directly to Indian tribes;

(C) to provide technical guidance to tribal land managers and policy makers for water quality protection through forest management;

(D) to complement tribal efforts to protect water quality and provide enhanced opportunities for consultation and cooperation among Federal agencies and tribal entities charged with responsibility for water and watershed management; and

(E) to provide enhanced forest resource data and support for improved implementation and monitoring of tribal forestry best-management practices.

(c) WATERSHED FORESTRY PROGRAM.—

(1) IN GENERAL.—The Secretary shall establish a watershed forestry program in cooperation with Indian tribes.

(2) PROGRAMS AND PROJECTS.—Funds or other support provided under the program shall be made available for tribal forestry best-management practices programs and watershed forestry projects.

(3) ANNUAL AWARDS.—The Secretary shall annually make awards to Indian tribes to carry out this subsection.

(4) PROJECT ELEMENTS AND OBJECTIVES.—A watershed forestry project shall accomplish critical forest stewardship, watershed protection, and restoration needs within land under the jurisdiction of or administered by an Indian tribe by demonstrating the value of trees and forests to watershed health and condition through—

(A) the use of trees as solutions to water quality problems;

(B) application of and dissemination of monitoring information on forestry best-management practices relating to watershed forestry;

(C) watershed-scale forest management activities and conservation planning;

(D) the restoration of wetland and stream-side forests and the establishment of riparian vegetative buffers; and

(E) tribal-based planning, involvement, and action through State, tribal, local, and nonprofit partnerships.

(5) PRIORITIZATION.—An Indian tribe that participates in the program under this subsection shall prioritize watersheds in land under the jurisdiction of or administered by the Indian tribe to target watershed forestry projects funded under this subsection.

(6) WATERSHED FORESTER.—The Secretary may provide to Indian tribes under this section financial and technical assistance to establish a position of tribal forester to lead tribal programs and coordinate small watershed-level projects.

(d) DISTRIBUTION.—The Secretary shall devote—

(1) at least 75 percent of the funds made available for a fiscal year under subsection (e) to the program under subsection (c); and

(2) the remainder of the funds to deliver technical assistance, education, and planning in the field to Indian tribes.

(e) AUTHORIZATION OF APPROPRIATIONS.—There is authorized to be appropriated to carry out this section $2,500,000 for each of fiscal years 2004 through 2008.

TITLE IV—INSECT INFESTATIONS AND RELATED DISEASES

SEC. 401. FINDINGS AND PURPOSE.

(a) FINDINGS.—Congress finds that—

(1) high levels of tree mortality resulting from insect infestation (including the interaction between insects and diseases) may result in—

(A) increased fire risk;

(B) loss of old trees and old growth;

(C) loss of threatened and endangered species;

(D) loss of species diversity;

(E) degraded watershed conditions;

(F) increased potential for damage from other agents of disturbance, including exotic, invasive species; and

(G) decreased timber values;

(2)(A) forest-damaging insects destroy hundreds of thousands of acres of trees each year;

(B) in the West, more than 21,000,000 acres are at high risk of forest-damaging insect infestation, and in the South, more than 57,000,000 acres are at risk across all land ownerships; and

(C) severe drought conditions in many areas of the South and West will increase the risk of forest-damaging insect infestations;

(3) the hemlock woolly adelgid is—

(A) destroying streamside forests throughout the mid-Atlantic and Appalachian regions;

(B) threatening water quality and sensitive aquatic species; and

(C) posing a potential threat to valuable commercial timber land in northern New England;

(4)(A) the emerald ash borer is a nonnative, invasive pest that has quickly become a major threat to hardwood forests because an emerald ash borer infestation is almost always fatal to affected trees; and

(B) the emerald ash borer pest threatens to destroy more than 692,000,000 ash trees in forests in Michigan and Ohio alone, and between 5 and 10 percent of urban street trees in the Upper Midwest;

(5)(A) epidemic populations of Southern pine beetles are ravaging forests in Alabama, Arkansas, Florida, Georgia, Kentucky, Mississippi, North Carolina, South Carolina, Tennessee, and Virginia; and

(B) in 2001, Florida and Kentucky experienced 146 percent and 111 percent increases, respectively, in Southern pine beetle populations;

(6) those epidemic outbreaks of Southern pine beetles have forced private landowners to harvest dead and dying trees, in rural areas and increasingly urbanized settings;

(7) according to the Forest Service, recent outbreaks of the red oak borer in Arkansas and Missouri have been unprecedented, with more than 1,000,000 acres infested at population levels never seen before;

(8) much of the damage from the red oak borer has taken place in national forests, and the Federal response has been inadequate to protect forest ecosystems and other ecological and economic resources;

(9)(A) previous silvicultural assessments, while useful and informative, have been limited in scale and scope of application; and

(B) there have not been sufficient resources available to adequately test a full array of individual and combined applied silvicultural assessments;

(10) only through the full funding, development, and assessment of potential applied silvicultural assessments over specific time frames across an array of environmental and climatic conditions can the most innovative and cost effective management applications be determined that will help reduce the susceptibility of forest ecosystems to attack by forest pests;

(11)(A) often, there are significant interactions between insects and diseases;

(B) many diseases (such as white pine blister rust, beech bark disease, and many other diseases) can weaken trees and forest stands and predispose trees and forest stands to insect attack; and

(C) certain diseases are spread using insects as vectors (including Dutch elm disease and pine pitch canker); and

(12) funding and implementation of an initiative to combat forest pest infestations and associated diseases should not come at the expense of supporting other programs and initiatives of the Secretary.

(b) PURPOSES.—The purposes of this title are—

(1) to require the Secretary to develop an accelerated basic and applied assessment program to combat infestations by forest-damaging insects and associated diseases;

(2) to enlist the assistance of colleges and universities (including forestry schools, land grant colleges and universities, and 1890 Institutions), State agencies, and private landowners to carry out the program; and

(3) to carry out applied silvicultural assessments.

SEC. 402. DEFINITIONS.

In this title:

(1) APPLIED SILVICULTURAL ASSESSMENT.—

(A) IN GENERAL.—The term ''applied silvicultural assessment'' means any vegetative or other treatment carried out for information gathering and research purposes.

(B) INCLUSIONS.—The term ''applied silvicultural assessment'' includes timber harvesting, thinning, prescribed burning, pruning, and any combination of those activities.

(2) 1890 INSTITUTION.—

(A) IN GENERAL.—The term ''1890 Institution'' means a college or university that is eligible to receive funds under the Act of August 30, 1890 (7 U.S.C. 321 et seq.).

(B) INCLUSION.—The term ''1890 Institution'' includes Tuskegee University.

(3) FOREST-DAMAGING INSECT.—The term ''forest-damaging insect'' means—

(A) a Southern pine beetle;

(B) a mountain pine beetle;

(C) a spruce bark beetle;

(D) a gypsy moth;

(E) a hemlock woolly adelgid;

(F) an emerald ash borer;

(G) a red oak borer;

(H) a white oak borer; and

(I) such other insects as may be identified by the Secretary.

(4) SECRETARY.—The term ''Secretary'' means—

(A) the Secretary of Agriculture, acting through the Forest Service, with respect to National Forest System land; and

(B) the Secretary of the Interior, acting through appropriate offices of the United States Geological Survey, with respect to federally owned land administered by the Secretary of the Interior.

SEC. 403. ACCELERATED INFORMATION GATHERING REGARDING FOREST-DAMAGING INSECTS.

(a) INFORMATION GATHERING.—The Secretary, acting through the Forest Service and United States Geological Survey, as appropriate, shall establish an accelerated program—

(1) to plan, conduct, and promote comprehensive and systematic information gathering on forest-damaging insects and associated diseases, including an evaluation of—

(A) infestation prevention and suppression methods;

(B) effects of infestations and associated disease interactions on forest ecosystems;

(C) restoration of forest ecosystem efforts;

(D) utilization options regarding infested trees; and

(E) models to predict the occurrence, distribution, and impact of outbreaks of forest-damaging insects and associated diseases;

(2) to assist land managers in the development of treatments and strategies to improve forest health and reduce the susceptibility of forest ecosystems to severe infestations of forest-damaging insects and associated diseases on Federal land and State and private land; and

(3) to disseminate the results of the information gathering, treatments, and strategies.

(b) COOPERATION AND ASSISTANCE.—The Secretary shall—

(1) establish and carry out the program in cooperation with—

(A) scientists from colleges and universities (including forestry schools, land grant colleges and universities, and 1890 Institutions);

(B) Federal, State, and local agencies; and

(C) private and industrial landowners; and

(2) designate such colleges and universities to assist in carrying out the program.

SEC. 404. APPLIED SILVICULTURAL ASSESSMENTS.

(a) ASSESSMENT EFFORTS.—For information gathering and research purposes, the Secretary may conduct applied silvicultural assessments on Federal land that the Secretary determines is at risk of infestation by, or is infested with, forest-damaging insects.

(b) LIMITATIONS.—

(1) EXCLUSION OF CERTAIN AREAS.—Subsection (a) does not apply to—

(A) a component of the National Wilderness Preservation System;

(B) any Federal land on which, by Act of Congress or Presidential proclamation, the removal of vegetation is restricted or prohibited;

(C) a congressionally-designated wilderness study area; or

(D) an area in which activities under subsection (a) would be inconsistent with the applicable land and resource management plan.

(2) CERTAIN TREATMENT PROHIBITED.—Nothing in subsection (a) authorizes the application of insecticides in municipal watersheds or associated riparian areas.

(3) PEER REVIEW.—

(A) IN GENERAL.—Before being carried out, each applied silvicultural assessment under this title shall be peer reviewed by scientific experts selected by the Secretary, which shall include non-Federal experts.

(B) EXISTING PEER REVIEW PROCESSES.—The Secretary may use existing peer review processes to the extent the processes comply with subparagraph (A).

(c) PUBLIC NOTICE AND COMMENT.—

(1) PUBLIC NOTICE.—The Secretary shall provide notice of each applied silvicultural assessment proposed to be carried out under this section.

(2) PUBLIC COMMENT.—The Secretary shall provide an opportunity for public comment before carrying out an applied silviculture assessment under this section.

(d) CATEGORICAL EXCLUSION.—

(1) IN GENERAL.—Applied silvicultural assessment and research treatments carried out under this section on not more than 1,000 acres for an assessment or treatment may be categorically excluded from documentation in an environmental impact statement and environmental assessment under the National Environmental Policy Act of 1969 (42 U.S.C. 4321 et seq.).

(2) ADMINISTRATION.—Applied silvicultural assessments and research treatments categorically excluded under paragraph (1)—

(A) shall not be carried out in an area that is adjacent to another area that is categorically excluded under paragraph (1) that is being treated with similar methods; and

(B) shall be subject to the extraordinary circumstances procedures established by the Secretary pursuant to section 1508.4 of title 40, Code of Federal Regulations.

(3) MAXIMUM CATEGORICAL EXCLUSION.—The total number of acres categorically excluded under paragraph (1) shall not exceed 250,000 acres.

(4) NO ADDITIONAL FINDINGS REQUIRED.—In accordance with paragraph (1), the Secretary shall not be required to make any findings as to whether an applied silvicultural assessment project, either individually or cumulatively, has a significant effect on the environment.

SEC. 405. RELATION TO OTHER LAWS.

The authority provided to each Secretary under this title is supplemental to, and not in lieu of, any authority provided to the Secretaries under any other law.

SEC. 406. AUTHORIZATION OF APPROPRIATIONS.

There are authorized to be appropriated such sums as are necessary to carry out this title for each of fiscal years 2004 through 2008.

TITLE V—HEALTHY FORESTS RESERVE PROGRAM

SEC. 501. ESTABLISHMENT OF HEALTHY FORESTS RESERVE PROGRAM.

(a) ESTABLISHMENT.—The Secretary of Agriculture shall establish the healthy forests reserve program for the purpose of restoring and enhancing forest ecosystems—

(1) to promote the recovery of threatened and endangered species;

(2) to improve biodiversity; and

(3) to enhance carbon sequestration.

(b) COORDINATION.—The Secretary of Agriculture shall carry out the healthy forests reserve program in coordination with the Secretary of the Interior and the Secretary of Commerce.

SEC. 502. ELIGIBILITY AND ENROLLMENT OF LANDS IN PROGRAM.

(a) IN GENERAL.—The Secretary of Agriculture, in coordination with the Secretary of the Interior and the Secretary of Commerce, shall describe and define forest ecosystems that are eligible for enrollment in the healthy forests reserve program.

(b) ELIGIBILITY.—To be eligible for enrollment in the healthy forests reserve program, land shall be—

(1) private land the enrollment of which will restore, enhance, or otherwise measurably increase the likelihood of recovery of a species listed as endangered or threatened under section 4 of the Endangered Species Act of 1973 (16 U.S.C. 1533); and

(2) private land the enrollment of which will restore, enhance, or otherwise measurably improve the well-being of species that—

(A) are not listed as endangered or threatened under section 4 of the Endangered Species Act of 1973 (16 U.S.C. 1533); but

(B) are candidates for such listing, State-listed species, or special concern species.

(c) OTHER CONSIDERATIONS.—In enrolling land that satisfies the criteria under subsection (b), the Secretary of Agriculture shall give additional consideration to land the enrollment of which will—

(1) improve biological diversity; and

(2) increase carbon sequestration.

(d) ENROLLMENT BY WILLING OWNERS.—The Secretary of Agriculture shall enroll land in the healthy forests reserve program only with the consent of the owner of the land.

(e) MAXIMUM ENROLLMENT.—The total number of acres enrolled in the healthy forests reserve program shall not exceed 2,000,000 acres.

(f) METHODS OF ENROLLMENT.—

(1) IN GENERAL.—Land may be enrolled in the healthy forests reserve program in accordance with—

(A) a 10-year cost-share agreement;

(B) a 30-year easement; or

(C) an easement of not more than 99 years.

(2) PROPORTION.—The extent to which each enrollment method is used shall be based on the approximate proportion of owner interest expressed in that method in comparison to the other methods.

(g) ENROLLMENT PRIORITY.—

(1) SPECIES.—The Secretary of Agriculture shall give priority to the enrollment of land that provides the greatest conservation benefit to—

(A) primarily, species listed as endangered or threatened under section 4 of the Endangered Species Act of 1973 (16 U.S.C. 1533); and

(B) secondarily, species that—

(i) are not listed as endangered or threatened under section 4 of the Endangered Species Act of 1973 (16 U.S.C. 1533); but

(ii) are candidates for such listing, State-listed species, or special concern species.

(2) COST-EFFECTIVENESS.—The Secretary of Agriculture shall also consider the cost-effectiveness of each agreement or easement, and associated restoration plans, so as to maximize the environmental benefits per dollar expended.

SEC. 503. RESTORATION PLANS.

(a) IN GENERAL.—Land enrolled in the healthy forests reserve program shall be subject to a restoration plan, to be developed jointly by the landowner and the Secretary of Agriculture, in coordination with the Secretary of Interior.

(b) PRACTICES.—The restoration plan shall require such restoration practices as are necessary to restore and enhance habitat for—

(1) species listed as endangered or threatened under section 4 of the Endangered Species Act of 1973 (16 U.S.C. 1533); and

(2) animal or plant species before the species reach threatened or endangered status, such as candidate, State-listed species, and special concern species.

SEC. 504. FINANCIAL ASSISTANCE.

(a) EASEMENTS OF NOT MORE THAN 99 YEARS.—In the case of land enrolled in the healthy forests reserve program using an easement of not more than 99 years described in section 502(f)(1)(C), the Secretary of Agriculture shall pay the owner of the land an amount equal to not less than 75 percent, nor more than 100 percent, of (as determined by the Secretary)—

(1) the fair market value of the enrolled land during the period the land is subject to the easement, less the fair market value of the land encumbered by the easement; and

(2) the actual costs of the approved conservation practices or the average cost of approved practices carried out on the land during the period in which the land is subject to the easement.

(b) 30-YEAR EASEMENT.— In the case of land enrolled in the healthy forests reserve program using a 30-year easement, the Secretary of Agriculture shall pay the owner of the land an amount equal to not more than (as determined by the Secretary)—

(1) 75 percent of the fair market value of the land, less the fair market value of the land encumbered by the easement; and

(2) 75 percent of the actual costs of the approved conservation practices or 75 percent of the average cost of approved practices.

(c) 10-YEAR AGREEMENT.—In the case of land enrolled in the healthy forests reserve program using a 10-year cost-share agreement, the Secretary of Agriculture shall pay the owner of the land an amount equal to not more than (as determined by the Secretary)—

(1) 50 percent of the actual costs of the approved conservation practices; or

(2) 50 percent of the average cost of approved practices.

(d) ACCEPTANCE OF CONTRIBUTIONS.—The Secretary of Agriculture may accept and use contributions of non-Federal funds to make payments under this section.

SEC. 505. TECHNICAL ASSISTANCE.

(a) IN GENERAL.—The Secretary of Agriculture shall provide landowners with technical assistance to assist the owners in complying with the

terms of plans (as included in agreements or easements) under the healthy forests reserve program.

(b) TECHNICAL SERVICE PROVIDERS.—The Secretary of Agriculture may request the services of, and enter into cooperative agreements with, individuals or entities certified as technical service providers under section 1242 of the Food Security Act of 1985 (16 U.S.C. 3842), to assist the Secretary in providing technical assistance necessary to develop and implement the healthy forests reserve program.

SEC. 506. PROTECTIONS AND MEASURES

(a) PROTECTIONS.—In the case of a landowner that enrolls land in the program and whose conservation activities result in a net conservation benefit for listed, candidate, or other species, the Secretary of Agriculture shall make available to the landowner safe harbor or similar assurances and protection under—

(1) section 7(b)(4) of the Endangered Species Act of 1973 (16 U.S.C. 1536(b)(4)); or

(2) section 10(a)(1) of that Act (16 U.S.C. 1539(a)(1)).

(b) MEASURES.—If protection under subsection (a) requires the taking of measures that are in addition to the measures covered by the applicable restoration plan agreed to under section 503, the cost of the additional measures, as well as the cost of any permit, shall be considered part of the restoration plan for purposes of financial assistance under section 504.

SEC. 507. INVOLVEMENT BY OTHER AGENCIES AND ORGANIZATIONS.

In carrying out this title, the Secretary of Agriculture may consult with—

(1) nonindustrial private forest landowners;

(2) other Federal agencies;

(3) State fish and wildlife agencies;

(4) State forestry agencies;

(5) State environmental quality agencies;

(6) other State conservation agencies; and

(7) nonprofit conservation organizations.

SEC. 508. AUTHORIZATION OF APPROPRIATIONS.

There are authorized to be appropriated to carry out this title—

(1) $25,000,000 for fiscal year 2004; and

(2) such sums as are necessary for each of fiscal years 2005 through 2008.

TITLE VI—MISCELLANEOUS

SEC. 601. FOREST STANDS INVENTORY AND MONITORING PROGRAM TO IMPROVE DETECTION OF AND RESPONSE TO ENVIRONMENTAL THREATS.

(a) IN GENERAL.—The Secretary of Agriculture shall carry out a comprehensive program to inventory, monitor, characterize, assess, and identify forest stands (with emphasis on hardwood forest stands) and potential forest stands—

(1) in units of the National Forest System (other than those units created from the public domain); and

(2) on private forest land, with the consent of the owner of the land.

(b) ISSUES TO BE ADDRESSED.—In carrying out the program, the Secretary shall address issues including—

(1) early detection, identification, and assessment of environmental threats (including insect, disease, invasive species, fire, and weather-related risks and other episodic events);

(2) loss or degradation of forests;

(3) degradation of the quality forest stands caused by inadequate forest regeneration practices;

(4) quantification of carbon uptake rates; and

(5) management practices that focus on preventing further forest degradation.

(c) EARLY WARNING SYSTEM.—In carrying out the program, the Secretary shall develop a comprehensive early warning system for potential catastrophic environmental threats to forests to increase the likelihood that forest managers will be able to—

(1) isolate and treat a threat before the threat gets out of control; and

(2) prevent epidemics, such as the American chestnut blight in the first half of the twentieth century, that could be environmentally and economically devastating to forests.

(d) AUTHORIZATION OF APPROPRIATIONS.—There is authorized to be appropriated to carry out this section $5,000,000 for each of fiscal years 2004 through 2008.

That the House recede from its disagreement to the amendment of the Senate to the title of the bill, and agree to the same.

And the Senate agree to the same.

From the Committee on Agriculture, for consideration of the House bill and the Senate amendments, and modifications committee to conference:

BOB GOODLATTE,
JOHN BOEHNER,
WILLIAM L. JENKINS,
GIL GUTKNECHT,
ROBIN HAYES,
CHARLIE STENHOLM,
COLLIN C. PETERSON,
CAL DOOLEY,

From the Committee on Resources, for consideration of the House bill and the Senate amendments, and modifications committed to conference:

RICHARD POMBO,
SCOTT MCINNIS,
GREG WALDEN,
RICK RENZI,

From the Committee on the Judiciary, for consideration of sections 106 and 107 of the House bill, and sections 105, 106, 1115, and 1116 of the Senate amendment and modifications committed to conference:

F. JAMES SENSENBRENNER, Jr.,
LAMAR SMITH,
Managers on the Part of the House.

THAD COCHRAN,
MITCH MCCONNELL,
MICHAEL CRAPO,
PETE V. DOMENICI,
TOM DASCHLE,
Manager on the Part of the Senate.

JOINT EXPLANATORY STATEMENT OF THE COMMITTEE OF CONFERNCE

The Managers on the part of the House and the Senate at the conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H.R. 1904), An Act to improve the capacity of the Secretary of Agriculture and the Secretary of the Interior to conduct hazardous fuels reduction projects on National Forest System lands and Bureau of Land Management lands aimed at protecting communities, watersheds, and certain other at-risk lands from catastrophic wildfire, to enhance efforts to protect watersheds and address threats to forest and rangeland health, including catastrophic wildfire, across the landscape, and for other purposes, submit the following joint statement to the House and the Senate in explanation of the effect of the action agreed upon by the managers and recommended in the accompanying conference report:

The Senate amendments struck out all of the text of the House bill after the enacting clause and inserted a substitute text and a new title.

The House recedes from its disagreement to the amendment of the Senate with an amendment which is a substitute for the House bill and the Senate amendment. The House also recedes from its disagreement to the amendment of the Senate to the title of the bill. The differences between the House bill, the Senate amendment, and the substitute agreed to in conference are noted below, except for clerical corrections, conforming changes made necessary by agreements reached by the conferees, and minor drafting and clarifying changes.

SHORT TITLE: TABLE OF CONTENTS

(1) Short Title

The House bill cites that this Act may be cited as ''Healthy Forests Restoration Act of 2003'' and lists the table of contents. (Section 1)

The Senate amendment has an identical short title and differences in the table of contents that reflect the Senate amendment. (Section 1)

The Conference substitute adopted the House provision with an amendment to conform the table of contents to the conference agreement. (Section 1)

(2) Purpose

The House bill lists the purposes of this Act, including: to reduce the risks of damage to communities, municipal water supplies and federal lands from catastrophic wildfire; to authorize grant programs to improve the commercial value of forest biomass; to enhance efforts to protect watersheds and address threats to forest and rangeland health; to promote systematic information gathering to address the impacts of insect infestation on forest and rangeland health; to improve the capacity to detect insect and disease infestations at an early stage; and to benefit threatened and endangered species, improve biological diversity and enhance carbon sequestration. (Section 2)

The Senate amendment contains similar purposes with only technical and clarifying changes. (Section 2)

The Conference substitute adopts the Senate provision with an amendment that reflects changes made necessary by deletions from the bill. (Section 2)

TITLE I—HAZARDOUS FUEL REDUCTION ON FEDERAL LAND

(1) Definitions

The House bill defines terms necessary for implementation of the bill, including: interface community and intermix community; authorized hazardous fuel reduction project; condition class 2; condition class 3; day; decision document; Federal land; implementation plan; municipal water supply system; Secretary concerned; threatened and endangered species habitat. (Section 101)

The Senate amendment defines the same terms as the House bill with only technical differences, and defines additional terms, including: at-risk community; community wildfire protection plan; fire regime i, ii, and iii; Indian tribe; resource management plan; and Wildland-urban interface. (Sections 3, 101)

The Conference substitute [adopts the Senate provisions, with an amendment to modify the definition of wildland-urban interface. (Sections 3, 101)]

(2) Authorized Hazardous Fuel Reduction Projects

The House bill allows for authorized hazardous fuels reduction projects on federal lands that (1) are located in an interface or intermix community; (2) are located in proximity to such communities; (3) are condition class 3 or 2 and located in proximity to a municipal water supply (or a perennial stream, including rivers and other permanent natural flowing water sources feeding a municipal water supply); (4) are condition class 3 or 2 and have been identified as an area where windthrow, blowdown, the existence

or threat of disease or insect infestation poses a threat to forest or rangeland health, or (5) contain threatened and endangered species, if: the natural fire regimes are important for, or wildfire is a threat to threatened or endangered species or their habitat; the authorized hazardous fuel reduction project will enhance protection from catastrophic wildfire, and; the Secretary complies with applicable guidelines in any management or recovery plan. (Section 102(a))

The Senate amendment allows for authorized hazardous fuel reduction projects on federal lands that: (1) are in wildland-urban interface areas, (2) are condition class 3 and located in such proximity to a municipal water supply system or a stream feeding such a system within a municipal watershed that a significant risk exists that a fire disturbance event would have adverse effects on the water quality of the municipal water supply or the maintenance of the system, (3) are condition class 2 within fire regime I, fire regime II or fire regime III and otherwise the same as paragraph (2), (4) are identified as an area where windthrow, blowdown, ice storm damage, or the existence of insects or disease poses a significant threat to an ecosystem component, or forest or rangeland resource on federal land or adjacent non-federal land, or (5) contain threatened and endangered species habitat, if: the natural fire regimes are important for, or wildfire is a threat to threatened or endangered species or their habitat; the authorized hazardous fuel reduction project will enhance protection from catastrophic wildfire, and; the Secretary complies with applicable guidelines in any management or recovery plan. (Section 102(a))

The Conference substitute adopts the Senate provision with amendments modifying the definition of wildland-urban interface and that clarify the provision relating to insect and disease infestation. (Section 102(a))

(3) Agency Plans; Acreage Limitation; Exclusion of Certain Federal Land

The House bill requires projects to be planned and conducted in a manner consistent with land and resource management plans or an applicable land use plan; limits the acreage available for authorized hazardous fuels reduction projects to 20,000,000 acres; and prohibits authorized hazardous fuels reduction projects on the following federal lands: a component of the National Wilderness Preservation System, federal lands where the removal of vegetation is prohibited or restricted by a Congress or a presidential proclamation, or wilderness study areas. (Section 102(b), (c), and (d))

The Senate amendment contains similar provisions with only technical differences. (Section 102(b), (c), and (d)).

The Conference substitute adopts the Senate provisions. (Section 102(b), (c), and (d))

(4) Old Growth Stands and Large Tree Retention

The Senate amendment: (Section 102(e), (f))

Provides direction for projects that may occur within old growth stands;

Defines a covered project as all authorized hazardous fuel reduction projects except those in an area where windthrow, blowdown, ice storm damage, or the existence of insects or disease poses a significant threat to an ecosystem component (section 102(a)(4));

Identifies standards for old growth as the definitions, designations, standards, guidelines, goals, or objectives established for an old growth stand under a resource management plan, based on the structure and composition characteristic of the forest type, and in accordance with applicable law;

Requires the Secretary to fully maintain, or contribute toward the restoration of the structure and composition of structurally complex old growth stands according to the pre-fire suppression old growth conditions characteristic of the forest type, while considering the contribution of the stand to landscape fire adaptation and watershed health, and retaining the large trees contributing to old growth structure;

Provides that old growth standards that are 10 years old or less from the date of enactment of this Act shall be used by the Secretary in carrying out a covered project;

Requires that any amendment or revision to standards for which final administrative approval is granted after the date of enactment of this Act shall be consistent with the requirement described above;

Provides that old growth standards established before the 10-year period may be used for a 2-year period beginning on the date of enactment of this Act, or if in the process of revising a resource management plan, may be used for a 3-year period;

Provides that older standards shall be reviewed and revised, if necessary, to reflect relevant information not considered in formulating the resource management plan. If such review is not completed within the appropriate time period, no covered project shall occur in a stand that is identified as an old growth stand (based on substantial supporting evidence) by any person during scoping; and

Requires that covered projects outside of old growth stands focus largely on small diameter trees, thinning, strategic fuel breaks, and prescribed fire to modify fire behavior, as measured by the projected reduction of uncharacteristically severe wildfire effects; and, maximizes the retention of large trees, as appropriate for the forest type, to the extent that the large trees promote fire-resistant stands.

The House bill has no comparable provisions.

The Conference substitute adopts the Senate provisions with an amendment that makes technical and clarifying changes to the old growth provisions; and adds a clause to the large tree retention provision to clarify that such provision is not intended to prevent achieving the purpose in section 2(1). (Section 102(e), (f))

The Managers note that nothing in subsection 102(e) requires resource management plans to be amended.

(5) Prioritization for Communities

The House bill directs the Secretary to give priority to authorized hazardous fuel reduction projects that provide for the protection of communities and watersheds as provided for in the implementation plan. (Section 103)

The Senate amendment: (Section 103)

Directs the Secretary to develop an annual program of work that gives priority to authorized hazardous fuel reduction projects that provide for protection of at-risk communities or watersheds or that implement community wildfire protection plans;

Makes the Federal Advisory Committee Act and National Environmental Policy Act inapplicable to Federal involvement in the community wildfire protection plan planning and development process;

Directs that not less than 50 percent of the funds allocated for authorized hazardous fuel reduction projects shall be used in the wildland-urban interface. Such allocation shall apply at the national level. However, funds may be allocated differently within individual management units as appropriate, in particular to conduct authorized hazardous fuel reduction projects in areas with insects, disease, windthrow, blowdown or ice storm damage.

In providing financial assistance for authorized hazardous fuel reduction projects on non-federal land, the Secretary shall consider recommendations made by at-risk communities that have developed community wildfire protection plans.

The Conference substitute adopts the Senate provision with amendments directing the Secretary to: (1) use existing administrative authority to define wildland-urban interface for purposes of authorized hazardous fuel reduction projects for which a decision notice is issued within one year of date of enactment of this Act, and (2) give priority in allocating funding to communities that have adopted wildfire protection plans. (Section 103)

(6) Environmental Analysis

The House bill:

Requires the Secretary to prepare an environmental assessment (EA) or an environmental impact statement (EIS) for any authorized hazardous fuel reduction project; (104(a))

Gives the Secretary discretionary authority to limit the analysis ordinarily required under the National Environmental Policy Act ('NEPA') to the proposed agency action, meaning the agencies would not be required to analyze and describe a number of different alternatives to the preferred course; (104(b))

Requires the Secretary to provide notice of authorized hazardous fuel reduction projects and conduct a public meeting during the planning stage; (104(c))

Requires the Secretary to collaborate among governments and interested persons during the formulation of each authorized fuels reduction project; (104(d))

Requires the Secretary to allow public input in accordance with NEPA during the preparation of an EA or EIS or an authorized hazardous fuel reduction project; (104(e))

Requires the Secretary to sign a decision document for each authorized hazardous fuels reduction project and provide notice of that document; (104(f)) and

Requires the Secretary concerned to monitor the implementation of authorized hazardous fuels reduction projects. (104(g))

With respect to House bill sections 104 (a), (c), (d), (e), and (f), the Senate amendment contains essentially identical provisions, except for technical differences.

With respect to House bill section 104(b), the Senate amendment directs the Secretary to prepare an environmental assessment (EA) or an environmental impact statement (EIS) for any authorized hazardous fuel reduction project which describes the proposed action, a no action alternative, and an additional action alternative, if the additional alternative is proposed during scoping or the collaborative process and meets the purpose and need of the project. If more than 1 additional alternative is proposed, the Secretary shall select which additional alternative to consider and provide a written record describing the reasons for the selection. (Section 104(b))

With respect to House bill section 104(g), the Senate amendment:

Directs each Forest Service region and BLM State Office to monitor the results of authorized hazardous fuels reduction projects, and submit a report every 5 years that includes an evaluation of the progress

towards project goals and recommendations for modifications to the projects and management treatments. It requires monitoring and assessment from a representative sample of authorized hazardous fuel reduction projects for each management unit as to the effects on changes in condition class, fire regime, watershed or landscape goals or objectives in the resource management plan, and requires the Secretary to track acres burned the degree of severity; and develop a process for monitoring the need for maintenance of treated areas, over time, in order to preserve the forest health benefits achieved; and (Section 102(g))

Instructs the Secretary to establish a collaborative monitoring, evaluation, and accountability process in order to assess the positive or negative ecological and social effects of a representative sampling of projects implemented pursuant to title I and section 404 of the Senate amendment, and include diverse stakeholders, including interested citizens and Indian tribes, in the monitoring and evaluation process. (Section 1108)

With respect to Section 104(b) of the House bill and the Senate amendment, the Conference substitute adopts the Senate provision with an amendment that provides for special expedited environmental analysis processes for hazardous fuels reduction projects within the wildland-urban interface and within 1½ miles of at risk communities (Section 104(d)).

For projects described in section 104(d)(1) of the Conference substitute, the Managers expect the Secretary to concisely analyze the likely environmental outcomes if the proposed treatment is not implemented.

The Managers note that, under subsection 104(c)(2), if more than one additional alternative is proposed during scoping that meets the purpose and need, the Secretary has the discretion to select which additional alternative to consider, and must provide a written record describing the reasons for the selection. The Managers note that the written record could be part of, or separate from, the environmental assessment or environmental impact statement.

The Managers expect, in carrying out authorized fuel reduction projects under the expedited processes provided by the Act, the Secretary not to neglect obligations under the provisions of section 6(g)(3)(B) of the Forest and Rangeland Renewable Resources Planning Act of 1976 (16 U.S.C. 1604(g)(3)(B)).

With respect to Section 104(g) of the House bill, the Conference substitute: (1) strikes the Senate amendment provision (Section 1108) regarding collaborative monitoring; and (2) adopts the Senate amendment provision (Section 102(g)) regarding monitoring with an amendment that allows the Secretary to utilize multiparty monitoring with diverse stakeholders in areas where interest in multiparty monitoring exists. (Section 102(g))

(7) Administrative Review

The House bill:

Directs the Secretary of Agriculture to establish an administrative review process for the Forest Service within 90 days after the enactment of this Act that will serve as the sole means by which a person can seek administrative redress regarding an authorized hazardous fuels reduction project; (Section 105(a))

Limits the administrative process to be developed to persons who have submitted specific and substantive written comments during the preparation stage of the project; and (Section 105(b))

Clarifies that the Appeals Reform Act relating to USFS administrative appeals does not apply to an authorized hazardous fuels reduction project. (Section 105(c))

The Senate amendment:

Directs the Secretary of Agriculture to establish, within 30 days after the date of the enactment of this Act, interim final regulations to establish a pre-decisional administrative review process that will serve as the sole means by which a person can seek administrative review regarding an authorized hazardous fuel reduction project on National Forest System land; (Section 105(a))

Requires the Secretary to establish final regulations after a time period for public comment; (Section 105(b))

Provides that a person may only bring a civil action challenging an authorized hazardous fuel reduction project in a Federal district court if the issue was raised during the administrative process and the person has exhausted the administrative review process established by the Secretary, with exceptions for futility or inadequacy claims; and (Section 105(c))

Clarifies that, with respect to projects and activities of the National Forest System other than authorized hazardous fuel reduction projects, nothing affects, or otherwise biases, the notice, comment, and appeal procedures for projects and activities of the National Forest System contained in part 215 of title 36, Code of Federal Regulations (including related legal actions). (Section 107(b))

The Conference substitute adopts the Senate provisions with an amendment that incorporates the substantive content of House bill section 105(b) and adds clarifying changes to section 105(c) of the Senate amendment. (Section 105)

The Managers do not expect the provisions in section 105(c)(3)(B) of the Conference substitute to be applicable to information which has not been brought to the attention of the Secretary.

(8) Judicial Review

The House bill:

Establishes a time limit for filing a challenge to an authorized hazardous fuels reduction project to 15 days within notice of the final agency action; (Section 106(a))

Limits the duration of any preliminary injunction granted on an authorized project to 45 days subject to renewal, and requires Secretarial notification to Congress upon an injunction renewal; (106(b))

Encourages a court in which an action or an appeal is filed to render a final determination within 100 days of when the complaint or appeal is filed; (106(c))

With respect to all agency actions on Federal lands, directs a court, in considering a request for injunctive relief, to balance the impact to the ecosystem of the short-term and long-term effects of undertaking the agency action against the short-term and long-term effects of not undertaking the agency action, and to give deference to any agency finding that the balance of harm and the public interest in avoiding the short-term effects of the agency action is outweighed by the public interest in avoiding long-term harm to the ecosystem. (Section 107)

The Senate amendment:

Requires lawsuits challenging an authorized hazardous fuel reduction project to be filed only in the United States district court for the district in which the federal land to be treated is located; (Section 106(a))

Encourages the court to expedite the proceedings with the goal of rendering a final determination as soon as practicable; (Section 106(b))

Limits the length of any preliminary injunctive relief and stays pending appeal not to exceed 60 days, subject to renewal with a requirement that parties to the action shall present updated information on the status of the project; (Section 106(c)(1), (2))

Directs the court reviewing the project, as part of its weighing the equities while considering any request for an injunction, to balance the impact to the ecosystem likely affected by the project of the short- and long-term effects of undertaking the agency action against the short- and long-term effects of not undertaking the agency action. (Section 106(c)(3))

The Conference substitute adopts the Senate provision. (Section 106)

(9) Effect of Title; Rules of Construction

The House bill clarifies that nothing in this title:

shall be construed to affect or limit the use of other authorities by the Secretary concerned to plan or conduct a hazardous fuels reduction project on federal lands; and (Section 108(a))

shall be construed to prejudice the consideration or disposition of any legal action concerning the Roadless Area Conservation Rule. (Section 108(b))

The Senate amendment provides that nothing in this title affects, or otherwise biases, the use by the Secretary of other statutory or administrative authority (including categorical exclusions adopted to implement the National Environmental Policy Act of 1969 (42 U.S.C. 4321 et seq.)) to conduct a hazardous fuel reduction project on Federal land (including Federal land identified in section 102(d)) that is not conducted using the process authorized by section 104. (Section 107(a))

The Conference substitute adopts the Senate provision. (Section 107)

(10) Authorization of Appropriations

The Senate amendment authorizes $760 million annually for activities under this title and other hazardous fuel reduction activities of the Secretary. (Section 108)

The House bill has no comparable provision.

The Conference substitute adopts the Senate provision. (Section 108)

TITLE II—BIOMASS

(1) Findings; Definitions

The House bill contains Congressional findings that that show high risk of wildfires across many acres due to the accumulation of heavy fuel loads from insect infestations and disease, and defines the terms: Biomass, Person, Preferred Community, and Secretary Concerned. (Sections 201, 202)

The Senate amendment has comparable provisions with minor differences. (Sections 201, 202)

(2) Grants to Improve the Commercial Value of Forest Biomass; Reporting requirement

The House bill establishes biomass commercial use and value-added grant programs to benefit anyone who owns or operates a facility to produce energy from biomass, as well as a monitoring program for participants, while complying with existing endangered species protections; authorizes appropriations of $25,000,000 for fiscal years 2004 to 2008; and requires that the Secretary concerned submit a report of the grant programs no later than October 1, 2010. (Sections 203, 204)

The Senate amendment has a comparable amendment with minor differences. (Sections 203, 204)

With respect to sections 201 and 202 of the House bill and sections 203 and 204 of the

Senate amendment, the Conference substitute adopts an amendment that authorizes the Secretary to provide biomass purchase grants to owners and operators of biomass facilities that use such materials for production of wood-based products or other commercial purposes. (Section 203)

(3) Improved Biomass Use Research Program

The Senate amendment amends the Biomass Research and Development Act of 2000 by adding a silviculture component to the program. (Section 205)

The House has no provision on this subject.

The Conference substitute adopts the Senate provision. (Section 201)

(4) Rural Revitalization Through Forestry

The Senate amendment establishes a program to facilitate small business use of biomass and authorizes appropriations of $5,000,000 for fiscal years 2004 to 2008 to carry out the program. The program is established by amending the Food, Agriculture, Conservation, and Trade Act of 1990. (Section 206)

The House bill has no provision on this subject.

The Conference substitute adopts the Senate provision. (Section 202)

TITLE III—WATERSHED FORESTRY ASSISTANCE

(1) Findings and Purpose

The House bill contains Congressional findings that the proper stewardship of forest lands is essential to sustaining and restoring the health of watersheds. The purpose of this title is to improve watershed health by forest management practices, such as maintaining tree cover, buffer strips. (Section 301)

The Senate contains a comparable provision with minor changes. (Section 301)

(2) Watershed Forestry Assistance Program

The House bill establishes a program to assist State foresters in expanding stewardship capacities to address watershed issues on non-Federal lands through technical assistance and a cost-share program by amending the Cooperative Forestry Assistance Act. An authorization for appropriations of $15,000,000 for each of the fiscal years 2004 through 2008 is also included. (Section 302)

The Senate contains a comparable provision with minor changes and also defines the term Nonindustrial Private Forest Land. (Section 302)

The Conference substitute adopts the Senate provision. (Section 302)

(3) Tribal Watershed Forestry Assistance

The Senate amendment directs the Secretary of Agriculture to provide assistance to Indian tribes for expanding forestry projects and to address watershed issues on tribal lands and provides the same basic authorities for Indian tribes as are provided in Section 302. (Section 303)

The House bill has no comparable provision.

The Conference substitute adopts the Senate provision. (Section 303)

TITLE IV—INSECT INFESTATIONS

(1) Definitions, Findings, and Purpose

The House bill defines the terms Applied Silvicultural Assessment, Federal Lands, Secretary Concerned, 1890 Institutions. The bill also contains Congressional findings that insect infestations have many adverse effects on forest health, and states that the purpose of this title is to require the Secretary concerned to develop an assessment program to combat insect infestations, to enlist the assistance of educational institutions, and to carry out applied silvicultural assessments. (Section 401)

The Senate bill contains comparable provisions and also defines the term Forest Damaging Insect. (Sections 401, 402)

The Conference substitute adopts the Senate provision. (Sections 401, 402)

(2) Accelerated Information Gathering Regarding Forest Damaging Insects

The House bill establishes a program for information gathering on bark beetles, including Southern pine beetles, hemlock woolly adelgids, emerald ash borers, red oak borers, and white oak borers, to assist land managers in the development of treatments to improve forest health, and disseminate results in cooperation with scientists from university and forestry schools. (Section 402)

The Senate amendment contains a comparable provision with minor changes and expands program to include all forest-damaging insects and associated diseases. (Section 403)

The Conference substitute adopts the Senate provision. (Section 403)

(3) Applied Silvicultural Assessments

The House bill enables the Secretary concerned to conduct applied silvicultural assessments on federal lands that the Secretary determines in its sole discretion are at risk for infestation with certain named pests. It limits such assessment areas to 1,000 acres per assessment; applies an overall acreage limitation to 250,000 acres; requires the Secretary to provide notice of each applied silvicultural assessment proposed to be carried out; requires the Secretary to provide an opportunity for public input; creates a categorical exclusion from further analysis under NEPA which the environment. (Section 403)

The Senate amendment contains a comparable provision with minor technical differences, and expands to all forest-damaging insects and associated diseases. The Senate bill precludes categorical exclusions using similar methods from being carried out adjacent to one another and subjects them to the extraordinary circumstances procedures. (Section 404)

The Conference substitute adopts the Senate provision. (Section 404)

(4) Relation to Other Laws; Authorization of Appropriations

The House bill provides that authorities of the Secretary under this title are in addition to other authorities of the Secretary under other laws, and authorizes such sums as may be necessary to be appropriated between fiscal year 2004 and 2008. (Sections 404, 405)

The Senate amendment contains comparable provisions with only technical differences. (Sections 405, 406)

The Conference substitute adopts the Senate provisions. (Sections 405, 406)

TITLE V—HEALTHY FORESTS RESERVE PROGRAM

(1) Establishment of Program

The House bill directs the Secretary of Agriculture to establish a program with the purpose of protecting, restoring, and enhancing forest ecosystems to promote the recovery of endangered species, improve biodiversity, and enhance carbon sequestration. (Section 501)

The Senate amendment has a comparable provision. (Section 501)

The Conference substitute adopts the Senate provision. (Sections 501)

(2) Eligibility and Enrollment of Lands in Program

The House bill specifies lands eligible for enrollment and lists eligibility and enrollment requirements for program participants, including enrollment priorities for land with threatened and endangered species. (Section 502 (a), (b), (c), (f))

The Senate amendment has comparable provisions with minor differences. (Section 502 (a), (b), (c), (d), (g))

The Conference substitute adopts the Senate provisions. (Section 502 (a), (b), (c), (d), (g))

(3) Maximum Enrollment; Methods of Enrollment

The House bill establishes a maximum enrollment of 1,000,000 acres, and authorizes acres to be enrolled through a permanent easement with buyback option, a 30–year easement, or a 10–year agreement for enrolled lands under this program. (Section 502 (d) and (e))

The Senate amendment establishes a maximum enrollment of 2,000,000 acres, and authorizes acres to be enrolled through agreements of not more than 99 years with no buyback option, 30–year agreements; or 10–year cost share agreements. (Section 502 (e) and (f))

The Conference substitute adopts the Senate provision with respect to maximum enrollment (502(e) and the House provision with an amendment with respect to methods of enrollment to allow for 10–year cost share agreements, and 30–year and up to 99–year easements. (Section 502(f))

(4) Conservation Plans

The House bill requires lands enrolled shall be subject to a conservation plan developed by USDA and the US Fish and Wildlife Service; requires a description of the permissible land-use activities; authorizes applicable State agencies and nonprofit conservation organizations to provide technical or financial assistance in development of the plans; and requires that the plan maximize the environmental benefits per dollar expended. (Section 503)

The Senate amendment has comparable provisions. (Sections 502(g)(2), 503, 507)

The Conference substitute adopts the Senate provision. (Sections 502(g)(2), 503, 507)

(5) Financial Assistance

The House bill specifies maximum amounts of financial assistance for each method of enrollment of acres into the Healthy Forest Reserve. (Section 504)

The Senate amendment contains similar language (Section 504).

The Conference substitute adopts the Senate provision with an amendment reflecting the changes made in the methods of enrollment. (Section 504)

(6) Technical Assistance

The House bill directs the Forest Service and U.S. Fish and Wildlife service to provide participants with technical assistance. (Section 505)

The Senate amendment has a comparable provision and also adds that the Secretary may enter into cooperative agreements with third parties certified as technical service providers. (Section 505)

The Conference substitute adopts the Senate provision. (Section 505)

(7) Safe Harbor

The House bill instructs the Secretary of Interior to provide safe harbor to landowners who enroll land in this program when enrollment results in a net conservation benefit for listed species. (Section 506)

The Senate amendment has a comparable provision and also provides that the cost of any additional measures taken besides those covered in the restoration plan will be considered part of the restoration plan for financial purposes. (Section 506)

The Conference substitute adopts the Senate provision. (Section 506)

(8) Authorization of Appropriations

The House bill authorizes to be appropriated $15,000,000 for each of the fiscal years 2004 through 2008. (Section 507)

The Senate amendment authorizes to be appropriated $25,000,000 for fiscal year 2004 and such sums necessary for each of the fiscal years 2005–2008. (Section 508)

The Conference substitute adopts the Senate provision. (Section 508)

TITLE VI—MISCELLANEOUS PROVISIONS

(1) Inventory and Monitoring Program

The House bill instructs the Secretary of Agriculture to carry out a program to monitor forest stands on National Forest System lands and private lands; lists issues to be addressed; establishes an early warning system; and authorizes $5,000,000 for each of the fiscal years 2004 through 2008 for such activities. (Section 601)

The Senate amendment has a comparable provision that also lists specific means and offices for carrying out the program, and authorizes such sums as are necessary to carry out this section without fiscal year limitation. (Section 1101)

The Conference substitute adopts the House provision. (Title VI)

The managers expect the Secretary to consult and collaborate with the National Aeronautics and Space Administration, Stennis Space Center in carrying out this title.

(2) Public Land Corps

The Senate amendment creates a public land corps to carry out rehabilitation projects enlisting the help of disadvantaged young people. The amendment authorizes to be appropriated $15,000,000 for each of the fiscal years 2004 through 2008. (Title VI)

The House bill contains no comparable provision.

The Conference substitute strikes the Senate provision.

(3) Rural Community Forestry Enterprise Program

The Senate amendment establishes a program to assist in the economic revitalization of rural forest research-dependent communities. The amendment authorizes to be appropriated $15,000,000 for each of the fiscal years 2004 through 2008. (Title VII)

The House bill contains no comparable provision.

The Conference substitute strikes the Senate provision.

(4) Firefighters Medical Monitoring Act

The Senate amendment provides that the National Institute for Occupational Safety and Health shall monitor the long-term medical health of those firefighters who fought fires in any area declared a disaster area by the Federal Government. The amendment authorizes to be appropriated such sums as may be necessary in each of the fiscal years 2004 through 2008 to carry out this title. (Title VIII)

The House bill contains no comparable provision.

The Conference substitute strikes the Senate provision.

(5) Disaster Air Quality Monitoring Act

The Senate amendment instructs the Environmental Protection Agency to provide each of its regional offices a mobile air pollution monitoring network to monitor the emissions of hazardous air pollutants in disaster areas and publish the findings. The amendment authorizes to be appropriated $8,000,000 to carry out this title. (Title IX)

The House bill contains no comparable provision.

The Conference substitute strikes the Senate provision.

(6) Highlands Region Conservation

The Senate amendment recognizes the importance of the water, forest, agricultural, wildlife, recreational and cultural resources of the Highlands, and the national significance of the Highlands region to the United States. The amendment authorizes the Secretary of Interior to work in partnership with the Secretary of Agriculture to provide financial assistance to the Highlands States to preserve and protect high priority conservation lands in the Highlands region, and continues the ongoing Forest Service programs in the Highlands region to assist the Highlands States, local units of government and private forest and farm landowners in the conservation of lands and natural resources in the Highlands region. (Title X)

The House bill contains no comparable provision.

The Conference substitute strikes the Senate provision.

(7) Emergency Treatment and Reduction of Nonnative Invasive Plants

The Senate amendment establishes a program for emergency treatment and reduction of nonnative invasive plants to provide to State and local governments and agencies, conservation districts, tribal governments, and willing private landowners grants for use in carrying out hazardous fuel reduction projects to address threats of catastrophic fires that have been determined by the Secretaries to pose a serious threat, including work to eradicate Salt Cedar and Russian Olive trees and other brush along the Bosque lands on the Rio Grande River in the State of New Mexico. (Section 1102)

The House bill contains no comparable provision.

The Conference substitute strikes the Senate provision.

(8) USDA National Agroforestry Center

The Senate amendment amends section 1243 of the Food, Agriculture, Conservation, and Trade Act of 1990 to establish a National Agroforestry Center. (Section 1103)

The House bill contains no comparable provision.

The Conference substitute strikes the Senate provision.

(9) Upland Hardwoods Research Center

The Senate amendment directs the Secretary to establish an upland hardwood research center. (Section 1104)

The House bill contains no comparable provision.

The Conference substitute strikes the Senate provision.

(10) Emergency Fuel Reduction Grants

The Senate amendment instructs the Secretary of Agriculture to establish an emergency fuel reduction grant program under which the Secretary shall provide grants to State and local agencies to carry out hazardous fuel reduction projects addressing threats of catastrophic fire that pose a serious threat to human life, as determined by the Forest Service. (Section 1105)

The House bill contains no comparable provision.

The Conference substitute strikes the Senate provision.

(11) Eastern Nevada Landscape Coalition

The Senate amendment authorizes the Secretary of Agriculture and the Secretary of the Interior to make grants to the Eastern Nevada Landscape Coalition for the study and restoration of rangeland and other lands in Nevada's Great Basin in order to help assure the reduction of hazardous fuels and for related purposes. (Section 1106)

The House bill contains no comparable provision.

The Conference substitute strikes the Senate provision.

(12) Sense of Congress Regarding Enhanced Community Fire Protection

The Senate amendment states that it is the sense of Congress to reaffirm the importance of enhanced community fire protection program, as described in section 10A of the Cooperative Forestry Assistance Act of 1978 (16 U.S.C. 2106c) (as added by section 8003(b) of the Farm Security and Rural Investment Act of 2002 (Public Law 107 09171; 116 Stat. 473)). (Section 1107)

The House bill contains no comparable provision.

The Conference substitute strikes the Senate provision.

(13) Best-Value Contracting

The Senate amendment allows the Secretaries to use best value contracting criteria in awarding contracts and agreements. Best-value contracting criteria includes the ability of the contractor to meet the ecological goals of the projects; the use of equipment that will minimize or eliminate impacts on soils; and benefits to local communities such as ensuring that the byproducts are processed locally. (Section 1109)

The House bill contains no comparable provision.

The Conference substitute strikes the Senate provision.

(14) Suburban and Community Forestry and Open Space Program; Forest Legacy Program

The Senate amendment establishes within the Forest Service a program to be known as the ''Suburban and Community Forestry and Open Space Program'' (Section 1110)

The House bill contains no comparable provision.

The Conference substitute strikes the Senate provision.

(15) Wildland Firefighter Safety

The Senate amendment directs the Secretaries to ensure that any Federal contract or agreement entered into with a private entity for wildland firefighting services requires the entity to provide firefighter training that is consistent with qualification standards management direction established by the National Wildfire Coordinating Group. (Section 1111)

The House bill contains no comparable provision.

The Conference substitute strikes the Senate provision.

(16) Green Mountain National Forest Boundary Adjustment

The Senate amendment states the boundaries of the Green Mountain National Forest are modified to include all parcels of land depicted on the forest maps entitled ''Green Mountain Expansion Area Map I'' and ''Green Mountain Expansion Area Map II'', each dated February 20, 2002, which shall be on file and available for public inspection in the Office of the Chief of the Forest Service, Washington, District of Columbia. (Section 1112)

The House bill contains no comparable provision.

The Conference substitute strikes the Senate provision.

(17) Puerto Rico Karst Conservation

The Senate amendment authorizes and supports conservation efforts to acquire,

manage, and protect the tropical forest areas of the Karst Region, with particular emphasis on water quality and the protection of the aquifers that are vital to the health and wellbeing of the citizens of the Commonwealth; and promotes cooperation among the Commonwealth, Federal agencies, corporations, organizations, and individuals in those conservation efforts. (Section 1113)

The House bill contains no comparable provision.

The Conference substitute strikes the Senate provision.

(18) Effective Date of Section 10806 of Farm Security and Rural Investment Act

The Senate amendment states Section 10806(b)(1) of the Farm Security and Rural Investment Act of 2002 (21 U.S.C. 321d; 116 Stat. 526), is deemed to have first become effective 15 days after the date of the enactment of this Act. (Section 1114)

The House bill contains no comparable provision.

The Conference substitute strikes the Senate provision.

(19) Enforcement of Animal Fighting Prohibitions Under the Animal Welfare Act

The Senate amendment amends Section 26 of the Animal Welfare Act. (Section 1115)

The House bill contains no comparable provision.

The Conference substitute strikes the Senate provision.

(20) Changes in Fines for Violation of Public Land Regulations During a Fire Ban

The Senate amendment contains provisions to modify the penalties for violations of fire bans. (Section 1116)

The House bill contains no comparable provision.

The Conference substitute strikes the Senate provision.

From the Committee on Agriculture, for consideration of the House bill and the Senate amendments, and modifications committed to conference:

BOB GOODLATTE,
JOHN BOEHNER,
WILLIAM L. JENKINS,
GIL GUTKNECHT,
ROBIN HAYES,
CHARLIE STENHOLM,
COLLIN C. PETERSON,
CAL DOOLEY,

From the Committee on Resources, for consideration of the House bill and the Senate amendments, and modifications committed to conference:

RICHARD POMBO,
SCOTT MCINNIS,
GREG WALDEN,
RICK RENZI,

From the Committee on the Judiciary, for consideration of sections 106 and 107 of the House bill, and sections 105, 106, 1115, and 1116 of the Senate amendment and modifications committed to conference:

F. JAMES SENSENBRENNER, Jr.
LAMAR SMITH,
Managers on the Part of the House.

THAD COCHRAN,
MITCH MCCONNELL,
MICHAEL CRAPO,
PETE V. DOMENICI,
TOM DASCHLE,
Managers on the Part of the Senate.

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted to:

Mr. BISHOP of New York (at the request of Ms. PELOSI) for November 19th on account of illness.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

(The following Members (at the request of Mr. HASTINGS of Florida) to revise and extend their remarks and include extraneous material:)

Mr. DEFAZIO, for 5 minutes, today.

Mr. BROWN of Ohio, for 5 minutes, today.

Ms. NORTON, for 5 minutes, today.

Mr. EMANUEL, for 5 minutes, today.

Ms. WOOLSEY, for 5 minutes, today.

Mr. SCHIFF, for 5 minutes, today.

Mr. HINCHEY, for 5 minutes, today.

Mr. DAVIS of Illinois, for 5 minutes, today.

Mr. PALLONE, for 5 minutes, today.

Mr. HOYER, for 5 minutes, today.

Ms. JACKSON-LEE of Texas, for 5 minutes, today.

(The following Members (at the request of Mr. BURTON of Indiana) to revise and extend their remarks and include extraneous material:)

Mrs. JO ANN DAVIS of Virginia, for 5 minutes, today.

Mr. SHUSTER, for 5 minutes, today.

Mr. LINCOLN DIAZ-BALART of Florida, for 5 minutes, today.

Mr. GUTKNECHT, for 5 minutes, today and November 21.

Mr. SMITH of New Jersey, for 5 minutes, today.

Ms. ROS-LEHTINEN, for 5 minutes, today.

Mr. MARIO DIAZ-BALART of Florida, for 5 minutes, today.

Mr. ROHRABACHER, for 5 minutes, today.

ADJOURNMENT

Mr. THOMAS. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 1 o'clock and 18 minutes a.m.), the House adjourned until today, Friday, November 21, 2003, at 9 a.m.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 8 of rule XII, executive communications were taken from the Speaker's table and referred as follows:

5512. A letter from the Director, Regulations Policy and Management Staff, Food and Drug Administration, Department of Health and Human Services, transmitting the Department's final rule — Medical Devices; Cardiovascular Devices; Reclassification of the Arrhythmia Detector and Alarm [Docket Nos. 1994N-0418 and 1996P-0276] received November 17, 2003, pursuant to 5 U.S.C. 801(a)(1)(A); to the Committee on Energy and Commerce.

5513. A letter from the Director, Regulations Policy and Management Staff, Food and Drug Administration, Department of Health and Human Services, transmitting the Department's final rule — Medical Devices; Immunology and Microbiology Devices; Classification of the West Nile Virus IgM Capture Elisa Assay [Docket No. 2003P-0450] received November 17, 2003, pursuant to 5 U.S.C. 801(a)(1)(A); to the Committee on Energy and Commerce.

5514. A letter from the Regulations Coordinator, Centers for Disease Control and Prevention, Department of Health and Human Services, transmitting the Department's final rule — Possession, Use, and Transfer of Select Agents and Toxins — received October 31, 2003, pursuant to 5 U.S.C. 801(a)(1)(A); to the Committee on Energy and Commerce.

5515. A letter from the Deputy Assistant Administrator, Office of Diversion Control, DEA, Department of Justice, transmitting the Department's final rule — Sale by Federal Departments or Agencies of Chemicals Which Could Be Used in the Illicit Manufacture of Controlled Substances [Docket No. DEA-176F] (RIN: 117-AA47) received November 17, 2003, pursuant to 5 U.S.C. 801(a)(1)(A); to the Committee on Energy and Commerce.

5516. A letter from the Attorney-Advisor, National Highway Traffic Safety Administration, Department of Transportation, transmitting the Department's final rule — Federal Motor Vehicle Safety Standards; Occupant Crash Protection [Docket No. NHTSA 03-16476, Notice 1] (RIN: 2127-A182) received November 17, 2003, pursuant to 5 U.S.C. 801(a)(1)(A); to the Committee on Energy and Commerce.

5517. A letter from the Sr. Legal Advisor to the Chief, Media Bureau, Federal Communication Commission, transmitting the Commission's final rule — Implementation of Section 304 of the Telecommunications Act of 1996 [CS Docket No. 97-80]; Commercial Availibility of Navigation Devices; Compatibility Between Cable Systems and Consumer Electronic Equipment [PP Docket No. 00-67] received November 17, 2003, pursuant to 5 U.S.C. 801(a)(1)(A); to the Committee on Energy and Commerce.

5518. A letter from the Special Assistant to the Bureau Chief, Media Bureau, Federal Communication Commission, transmitting the Commission's final rule — Amendment of Section 73.202(b), Table of Allotments, FM Broadcast Stations. (Archer City, Texas) [MB DOcket No. 03-116] received October 28, 2003, pursuant to 5 U.S.C. 801(a)(1)(A); to the Committee on Energy and Commerce.

5519. A letter from the Senior Legal Advisor to the Chief, Media Bureau, Federal Communication Commission, transmitting the Commission's final rule — Amendment of Section 73.202(b) Table of Allotments, FM Broadcast Stations. (Ehrenberg, Arizona) [MB Docket No. 03-174 RM-10754] received October 31, 2003, pursuant to 5 U.S.C. 801(a)(1)(A); to the Committee on Energy and Commerce.

5520. A letter from the Senior Legal Advisor, International Bureau, Federal Communication Commission, transmitting the Commission's final rule — Flexibility for Delivery of Communication by Mobile Satellite Service Providers in the 2 GHz Band, the L-Band, and the 1.6/2.4 GHz Bands [IB Docket No. 01-185] received November 17, 2003, pursuant to 5 U.S.C. 801(a)(1)(A); to the Committee on Energy and Commerce.

5521. A letter from the Chief, Policy and Rules Division, Federal Communications Commission, transmitting the Commission's final rule — Amendment of Parts 2,25 of the Commission's Rules to Permit Operation of NGSO FSS Sysytems Co-Frequency with

GSO and Terrestrial Systems in Ku-Band [ET Docket No. 98-206] received October 28, 2003, pursuant to 5 U.S.C. 801(a)(1)(A); to the Committee on Energy and Commerce.

5522. A letter from the Attorney Advisor, Wireless Telecommunications Bureau, Federal Communications Commission, transmitting the Commission's final rule — Amendment of Parts 2 and 87 of the Commission's Rules to Accomodate Advanced Digital Communications in the 117.975-137 MHz Band and to Implement Flight Information Services in the 136-137 MHz Band [WT Docket No. 00-77 RM Nos. 9376, 9462] received November 17, 2003, pursuant to 5 U.S.C. 801(a)(1)(A); to the Committee on Energy and Commerce.

5523. A letter from the Legal Advisor, Media Bureau, Federal Communications Commission, transmitting the Commission's final rule — Implementation of LPTV Digital Data Services Pilot Project — received October 24, 2003, pursuant to 5 U.S.C. 801(a)(1)(A); to the Committee on Energy and Commerce.

5524. A letter from the Bureau Chief, CGB, Federal Communications Commission, transmitting the Commisison's final rule — Provision of Improved Telecommunications Relay Services and Speech-to-Speech Services for Individuals with Hearing and Speech Disbilities [CC Docket No. 98-67]; Petition for Clarification of WorldCom, Inc. — received October 24, 2003, pursuant to 5 U.S.C. 801(a)(1)(A); to the Committee on Energy and Commerce.

5525. A letter from the Senior Legal Advisor to the Chief, Media Bureau, Federal Communications Commission, transmitting the Commission's final rule — Amendment of Section 73.202(b), Table of Allotments, FM Broadcast Stations. (Payson and Camp Verde, Arizona) [MB Docket No. 03-160 RM-10706] received October 24, 2003, pursuant to 5 U.S.C. 801(a)(1)(A); to the Committee on Energy and Commerce.

5526. A letter from the Senior Legal Advisor to the Chief, Media Bureau, Federal Communications Commission, transmitting the Commission's final rule — Amendment of Section 73.622(b), Table of Allotments, Digital Television Broadcast Stations. (Butte, Montana) [MB Docket No. 03-118 RM-10585] received October 24, 2003, pursuant to 5 U.S.C. 801(a)(1)(A); to the Committee on Energy and Commerce.

5527. A letter from the Senior Legal Advisor to the Chief, Media Bureau, Federal Communications Commission, transmitting the Commission's final rule — Amendment sof Section 73.622(b), Table of Allotments, Digital Television Broadcast Stations. (Fayetteville, Arkansas) [MM Docket No. 01-55 RM-10034] received October 24, 2003, pursuant to 5 U.S.C. 801(a)(1)(A); to the Committee on Energy and Commerce.

5528. A letter from the Senior Legal Advisor to the Chief, Media Bureau, Federal Communications Commission, transmitting the Commission's final rule — Amendment of Section 73.606(b), Table of Allotments, Television Broadcast Stations. (Bay City, Michigan) [MM Docket No. 01-84 RM-10067] received October 24, 2003, pursuant to 5 U.S.C. 801(a)(1)(A); to the Committee on Energy and Commerce.

5529. A letter from the Senior Legal Advisor to the Chief, Media Bureau, Federal Communications Commission, transmitting the Commission's final rule — Amendment of Section 73.202(b) FM Table of Allotments, FM Braodcast Stations. (Harrison, Michigan) [MB Docket No. 03-176 RM-10720] received October 24, 2003, pursuant to 5 U.S.C. 801(a)(1)(A); to the Committee on Energy and Commerce.

5530. A letter from the Senior Legal Advisor, International Bureau, Federal Communications Commission, transmitting the Commission's final rule — Amendment of Parts 2 and 25 of the Commission's Rules to Permit Operation of NGSO FSS Systems Co-Frequency with GSO and Terrestrial Systems in the Ku-Band Frequency Range [ET Docket No. 98-206] received November 17, 2003, pursuant to 5 U.S.C. 801(a)(1)(A); to the Committee on Energy and Commerce.

5531. A letter from the Senior Legal Advisor to the Chief, Media Bureau, Federal Communications Commission, transmitting the Commission's final rule — Amendment of the Commission's Rues for Implementation of its Cable Operations And Licensing System (COALS) to Allow for Electronic Filing of Licensing Applications, Forms, Registrations and Notifications in the Multichannel Video and Cable Television Service and the Cable Television Relay Service [CS Docket No. 00-78] received November 17, 2003, pursuant to 5 U.S.C. 801(a)(1)(A); to the Committee on Energy and Commerce.

5532. A letter from the Legal Advisor, Media Bureau, Federal Communications Commission, transmitting the Commission's final rule — Review of the Commission's Rules and Policies Affecting the Conversion to Digital Television [MM Docket No. 00-39] received November 17, 2003, pursuant to 5 U.S.C. 801(a)(1)(A); to the Committee on Energy and Commerce.

5533. A letter from the Assistant Chief, WCB, TAPD, Federal Communications Commission, transmitting the Commission's final rule — Federal-State Joint Board on Universal Service [CC Docket No. 96-45] received November 17, 2003, pursuant to 5 U.S.C. 801(a)(1)(A); to the Committee on Energy and Commerce.

5534. A letter from the Senior Legal Advisor, International Bureau, Federal Communications Commission, transmitting the Commission's final rule — Partial Band Licensing and Loading Standards for Earth Stations in the FSS That Share Spectrum With Terrestrial Services [IB Docket No. 00-203; RM-9649], Blanket Licensing for Small Aperture Terminals in the C-Band [SAT-PDR-19990910-00091], Routine Licensing of 3.7 Meter Transmit and Receive Stations at C-Band, and Deployment of Geostationary-Orbit FSS Earth Stations in the Shared Portion of the Ka-Band, pursuant to 5 U.S.C. 801(a)(1)(A); to the Committee on Energy and Commerce.

5535. A letter from the Senior Legal Advisor, International Bureau, Federal Communications Commission, transmitting the Commission's final rule — Amendment of the Commission's Rules to Establish Rules and Policies Pertaining to a Mobile Satellite Service in the 1610-1626.5/2483.5-2500 MHz Frequency Band [CC Docket No. 92-166] received November 17, 2003, pursuant to 5 U.S.C. 801(a)(1)(A); to the Committee on Energy and Commerce.

5536. A letter from the Senior Legal Advisor, International Bureau, Federal Communications Commission, transmitting the Commission's final rule — Review of the Spectrum Sharing Plan Amoung Non-Geostationary Satellite Orbit Mobile Satellite Service Systems in the 1.6/2.4 GHz Bands [IB Docket No. 02-364] received November 17, 2003, pursuant to 5 U.S.C. 801(a)(1)(A); to the Committee on Energy and Commerce.

5537. A letter from the Senior Legal Advisor, International Bureau, Federal Communications Commission, transmitting the Commission's final rule — The International Bureau Revises and Reissues the Commission's List of Foreign Telecommuncations Carriers that Are Presumed to Possess Market Power in Foreign Telecommunications Markets — received November 17, 2003, pursuant to 5 U.S.C. 801(a)(1)(A); to the Committee on Energy and Commerce.

5538. A letter from the Associate Bureau Chief, WTB, Federal Communications Commission, transmitting the Commission's final rule — Reallocation and Service Rules for the 698-746 MHz Spectrum Band (Television Channels 52-59) [GN Docket No. 01-74; FCC 02-185] received November 17, 2003, pursuant to 5 U.S.C. 801(a)(1)(A); to the Committee on Energy and Commerce.

5539. A letter from the Attorney Advisor, Federal Communications Commission, transmitting the Commission's final rule — Implementation of Sections 309(j) and 337 of the Communications Act of 1934 as Amended [WT Docket No. 99-87] received November 13, 2003, pursuant to 5 U.S.C. 801(a)(1)(A); to the Committee on Energy and Commerce.

5540. A letter from the Senior Legal Advisor, International Bureau, Federal Communications Commission, transmitting the Commission's final rule — Enforcement of Other Nations' Prohibitions Against the Uncompleted Call Signaling Configuration of International Call-back Service [IB Docket No. 02-18]; Petition for Rulemaking of the Telecommunications Resellers Association To Eliminate Comity-Based Enforcement of Other Nations' Prohibitions Against the Uncompleted Call Signaling Configurations of International Call-back Service [RM-9249] received November 17, 2003, pursuant to 5 U.S.C. 801(a)(1)(A); to the Committee on Energy and Commerce.

5541. A letter from the Senior Legal Advisor to the Chief, Media Bureau, Federal Communications Commissision, transmitting the Commission's final rule — Amendment of Section 73.202(b), Table of Allotments, FM Broadcast Stations. (Glen Falls, Indian Lake, Malta and Queensbury, New York) [MB DOcket No. 03-105 RM-10671] received October 28, 2003, pursuant to 5 U.S.C. 801(a)(1)(A); to the Committee on Energy and Commerce.

5542. A letter from the Director, Office of Congressional Affairs, Nuclear Regulatory Commission, transmitting the Commission's final rule — Assesment of Access Authorization Fees (RIN: 3150-AH30) received November 5, 2003, pursuant to 5 U.S.C. 801(a)(1)(A); to the Committee on Energy and Commerce.

5543. A letter from the transmitting the Commission's final rule — Amdt. of Part 2 of the Commission's Rules to Allocate Spectrum Below 3 GHz for Mobile and Fixed Services to Support the Introduction of New Advanced Wireless Services [ET Dkt No.00-258]; The Establishment of Policies and Service Rules for the Mobile-Satellite Service in the 2 GHz Band [IB Dkt. No.99-81]; Amdt. of the Table of Frequency Allocations to Designate the 2500-2520/2670-2690 MHz Frequency Bands for the Mobile-Satellite Service [RM-9911]; Petition for Rule Making of the Wireless Information Networks Forum Concerning the Unlicensed Personal Communications Service [RM-9498]; Petition for Rule Making of to the Committee on Energy and Commerce.

5544. A letter from the Director, International Cooperations, Department of Defense, transmitting a copy of Transmittal No. 20-03 which informs of an intent to sign Amendment Number One to the Project Arrangement between the United States and Canada concerning Distributed Mision Training Technologies, pursuant to 22 U.S.C. 2767(f); to the Committee on International Relations.

5545. A letter from the Assistant Secretary for Legislative Affairs, Department of State, transmitting certification of a proposed license for the export of major defense equipment and defense articles to Australia (Transmittal No. DDTC 104-03), pursuant to 22 U.S.C. 2776(c); to the Committee on International Relations.

5546. A letter from the Assistant Secretary for Legislative Affairs, Department of State, transmitting certification of a proposed license for the export of major defense equipment and defense articles to the Republic of Korea (Transmittal No. DDTC 118-03), pursuant to 22 U.S.C. 2776(c); to the Committee on International Relations.

5547. A letter from the Assistant Secretary for Legislative Affairs, Department of State, transmitting certification of a proposed license for the export of major defense equipment and defense articles to Belgium (Transmittal No. DDTC 103-03), pursuant to 22 U.S.C. 2776(c); to the Committee on International Relations.

5548. A letter from the Assistant Legal Adviser for Treaty Affairs, Department of State, transmitting copies of international agreements, other than treaties, entered into by the United States, pursuant to 1 U.S.C. 112b(a); to the Committee on International Relations.

5549. A letter from the Regulations Coordinator, Department of Health and Human Services, transmitting the Department's ''Major'' final rule — Medicare Program; Part A Premium for 2004 for the Uninsured Aged and for Certain Disabled Individuals Who Have Exhausted Other Entitlement [CMS-8018-N] (RIN: 0938-AM33) received November 20, 2003, pursuant to 5 U.S.C. 801(a)(1)(A); to the Committee on Ways and Means.

5550. A letter from the Regulations Coordinator, Department of Health and Human Services, transmitting the Department's ''Major'' final rule — Medicare Program; Inpatient Hospital Deductible and Hospital and Extended Care Services Coinsurance Amounts for 2004 [CMS-8016-N] (RIN: 0938-AM31) received November 20, 2003, pursuant to 5 U.S.C. 801(a)(1)(A); to the Committee on Ways and Means.

5551. A letter from the Acting Chief, Publications and Regulations Branch, Internal Revenue Service, transmitting the Service's final rule — Losses Claimed and Income to be Reported from Lease In/Lease Out Transactions — received October 28, 2003, pursuant to 5 U.S.C. 801(a)(1)(A); to the Committee on Ways and Means.

5552. A letter from the Acting Chief, Publications and Regulations Branch, Internal Revenue Service, transmitting the Service's final rule — Examination of returns and claims for refund, credit, or abatement; determination of correct tax liability (Rev. Proc. 2003-75) received October 24, 2003, pursuant to 5 U.S.C. 801(a)(1)(A); to the Committee on Ways and Means.

5553. A letter from the Acting Chief, Publications and Regulations Branch, Internal Revenue Service, transmitting the Service's final rule — Business Purpose (Rev. Rul. 2003-110) received October 24, 2003, pursuant to 5 U.S.C. 801(a)(1)(A); to the Committee on Ways and Means.

5554. A letter from the Acting Chief, Publications and Regulations Branch, Internal Revenue Service, transmitting the Service's final rule — Reimbursements and other expense allowance arrangements (Rev. Rul. 2003-106) received October 24, 2003, pursuant to 5 U.S.C. 801(a)(1)(A); to the Committee on Ways and Means.

5555. A letter from the Acting Chief, Publications and Regulations Branch, Internal Revenue Service, transmitting the Service's final rule — Amount of Credit (Rev. Rul. 2003-112) received October 24, 2003, pursuant to 5 U.S.C. 801(a)(1)(A); to the Committee on Ways and Means.

5556. A letter from the Acting Chief, Publications and Regulations Branch, Internal Revenue Service, transmitting the Service's final rule — Ruling and determination letters (Rev. Proc. 2003-81) received October 24, 2003, pursuant to 5 U.S.C. 801(a)(1)(A); to the Committee on Ways and Means.

[Submitted November 21 (legislative day of November 20), 2003]

Mr. THOMAS: Committee of Conference. Conference report on H.R. 1. A bill to amend title XVIII of the Social Security Act to provide for a voluntary program for prescription drug coverage under the Medicare Program, to modernize the Medicare Program, and for other purposes (Rept. 108–391). Ordered to be printed.

PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XII, public bills and resolutions were introduced and severally referred, as follows:

By Mr. SMITH of Michigan (for himself and Ms. BALDWIN):

H.R. 3540. A bill to extend for an additional year the period for which chapter 12 of title 11 of the United States Code is reenacted; to the Committee on the Judiciary.

By Mr. LANTOS:

H.R. 3541. A bill to provide authority to prevent human rights violations by controlling certain exports, and for other purposes; to the Committee on International Relations.

By Ms. BALDWIN (for herself, Mr. SMITH of Michigan, and Mr. HOLDEN):

H.R. 3542. A bill to extend for 6 months the period for which chapter 12 of title 11 of the United States Code is reenacted; to the Committee on the Judiciary.

By Mr. CAPUANO (for himself, Mr. MEEHAN, Mr. FRANK of Massachusetts, Mr. SESSIONS, Mr. WYNN, and Mr. LYNCH):

H.R. 3543. A bill to limit liability under the Comprehensive Environmental Response, Compensation, and Liability Act of 1980 for service station dealers with respect to the release or threatened release of recycled oil; to the Committee on Energy and Commerce, and in addition to the Committee on Transportation and Infrastructure, for a period to be subsequently determined by the Speaker, in each case for consideration of such provisions as fall within the jurisdiction of the committee concerned.

By Mr. CASE:

H.R. 3544. A bill to direct the Secretary of the Interior to study the suitability and feasibility of designating certain lands along the southern coast of Maui, Hawaii, as a unit of the National Park System; to the Committee on Resources.

By Mr. FARR:

H.R. 3545. A bill to establish a program of research and other activities to provide for the recovery of the southern sea otter; to the Committee on Resources.

By Ms. DEGETTE (for herself, Ms. DELAURO, Mr. HINCHEY, Mr. STARK, and Mr. ENGLISH):

H.R. 3546. A bill to amend the Federal Meat Inspection Act and the Poultry Products Inspection Act to improve the safety of meat and poultry products by enhancing the ability of the Secretary of Agriculture to retrieve the history, use, and location of a meat or poultry product through a recordkeeping and audit system or registered identification, and for other purposes; to the Committee on Agriculture.

By Ms. DEGETTE (for herself, Ms. DELAURO, Mr. HINCHEY, Mr. STARK, and Mr. WAXMAN):

H.R. 3547. A bill to amend the Federal Meat Inspection Act, the Poultry Products Inspection Act, and the Federal Food, Drug, and Cosmetic Act to provide for improved public health and food safety through enhanced enforcement, and for other purposes; to the Committee on Agriculture, and in addition to the Committee on Energy and Commerce, for a period to be subsequently determined by the Speaker, in each case for consideration of such provisions as fall within the jurisdiction of the committee concerned.

By Mr. DICKS (for himself and Mr. INSLEE):

H.R. 3548. A bill to amend title 5, United States Code, to exclude civilian personnel at naval shipyards from the national security personnel system; to the Committee on Government Reform.

By Mr. HILL (for himself, Mr. SANDLIN, Mr. LAMPSON, Mr. MCINTYRE, Mr. ETHERIDGE, Mr. HOYER, Mr. TANNER, Mr. WU, and Ms. PELOSI):

H.R. 3549. A bill to amend titles XVIII and XIX of the Social Security Act to improve payments to providers of services and physicians furnishing services to Medicare and Medicaid beneficiaries, and for other purposes; to the Committee on Ways and Means, and in addition to the Committee on Energy and Commerce, for a period to be subsequently determined by the Speaker, in each case for consideration of such provisions as fall within the jurisdiction of the committee concerned.

By Mr. YOUNG of Alaska (for himself, Mr. OBERSTAR, Mr. PETRI, Mr. LIPINSKI, Mr. BOEHLERT, Mr. RAHALL, Mr. COBLE, Mr. DEFAZIO, Mr. DUNCAN, Mr. COSTELLO, Mr. GILCHREST, Ms. NORTON, Mr. MICA, Mr. NADLER, Mr. HOEKSTRA, Mr. MENENDEZ, Mr. QUINN, Ms. CORRINE BROWN of Florida, Mr. EHLERS, Mr. FILNER, Mr. BACHUS, Ms. EDDIE BERNICE JOHNSON of Texas, Mr. LATOURETTE, Mr. TAYLOR of Mississippi, Mrs. KELLY, Ms. MILLENDER-MCDONALD, Mr. BAKER, Mr. CUMMINGS, Mr. NEY, Mr. BLUMENAUER, Mr. LOBIONDO, Mrs. TAUSCHER, Mr. MORAN of Kansas, Mr. PASCRELL, Mr. GARY G. MILLER of California, Mr. BOSWELL, Mr. BEREUTER, Mr. HOLDEN, Mr. ISAKSON, Mr. LAMPSON, Mr. HAYES, Mr. BAIRD, Mr. SIMMONS, Ms. BERKLEY, Mrs. CAPITO, Mr. HONDA, Mr. BROWN of South Carolina, Mr. LARSEN of Washington, Mr. JOHNSON of Illinois, Mr. CAPUANO, Mr. REHBERG, Mr. WEINER, Mr. PLATTS, Ms. CARSON of Indiana, Mr. GRAVES, Mr. HOEFFEL, Mr. KENNEDY of Minnesota, Mr. THOMPSON of California, Mr. SHUSTER, Mr. BISHOP of New York, Mr. BOOZMAN, Mr. MICHAUD, Mr. CHOCOLA, Mr. DAVIS of Tennessee, Mr. BEAUPREZ, Mr. BURGESS, Mr. BURNS, Mr. PEARCE, Mr. GERLACH, Mr. MARIO DIAZ-BALART of Florida, Mr. PORTER, Mr. MATHESON, and Mr. CARSON of Oklahoma):

H.R. 3550. A bill to authorize funds for Federal-aid highways, highway safety programs, and transit programs, and for other purposes; to the Committee on Transportation and Infrastructure.

By Mr. EHLERS:

H.R. 3551. A bill to authorize appropriations to the Department of Transportation for surface transportation research and development, and for other purposes; to the Committee on Science, and in addition to the Committee on Transportation and Infrastructure, for a period to be subsequently determined by the Speaker, in each case for consideration of such provisions as fall within the jurisdiction of the committee concerned.

By Mr. KING of New York:

H.R. 3552. A bill to amend the Foreign Intelligence Surveillance Act of 1978 to cover individuals, other than United States persons, who engage in international terrorism without affiliation with an international terrorist group; to the Committee on the Judiciary, and in addition to the Committee on Intelligence (Permanent Select), for a period to be subsequently determined by the Speaker, in each case for consideration of such provisions as fall within the jurisdiction of the committee concerned.

By Mr. LAHOOD (for himself, Mr. HASTERT, Mr. RUSH, Mr. JACKSON of Illinois, Mr. LIPINSKI, Mr. GUTIERREZ, Mr. EMANUEL, Mr. HYDE, Mr. DAVIS of Illinois, Mr. CRANE, Ms. SCHAKOWSKY, Mr. KIRK, Mr. WELLER, Mr. COSTELLO, Mrs. BIGGERT, Mr. JOHNSON of Illinois, Mr. MANZULLO, Mr. EVANS, Mr. SHIMKUS, Mr. ISSA, Mr. UPTON, Mr. RAHALL, Mr. WAXMAN, and Ms. SLAUGHTER):

H.R. 3553. A bill to establish the Abraham Lincoln National Heritage Area, and for other purposes; to the Committee on Resources.

By Mr. MCDERMOTT (for himself, Mr. WU, Mr. DEFAZIO, Mr. INSLEE, Ms. KILPATRICK, and Mr. LARSEN of Washington):

H.R. 3554. A bill to amend the Temporary Extended Unemployment Compensation Act and the Federal-State Extended Unemployment Compensation Act to temporarily allow States to disregard the look-back requirement of these Acts for purposes of determining unemployment insurance eligibility; to the Committee on Ways and Means.

By Mr. MORAN of Virginia:

H.R. 3555. A bill to amend the Clean Air Act to prohibit stationary sources located in ozone nonattainment areas from purchasing nitrogen oxide emission credits under the Environmental Protection Agency's nitrogen oxide trading program without the consent of the State in which such source is located, and for other purposes; to the Committee on Energy and Commerce.

By Mr. NADLER (for himself, Mr. RANGEL, Mr. MCNULTY, Mr. HOUGHTON, Mrs. MCCARTHY of New York, Mr. CROWLEY, Mr. ENGEL, Mr. BOEHLERT, Mr. SERRANO, Mr. OWENS, Mr. WEINER, Mr. HINCHEY, Mrs. MALONEY, Ms. SLAUGHTER, and Mrs. LOWEY):

H.R. 3556. A bill to provide for income tax treatment relating to certain losses arising from, and grants made as a result of, the September 11, 2001, terrorist attacks on New York City; to the Committee on Ways and Means.

By Ms. PELOSI (for herself, Mr. COX, Mr. BAIRD, Mr. DOOLEY of California, Mr. LANTOS, Ms. LOFGREN, and Ms. WOOLSEY):

H.R. 3557. A bill to designate the United States courthouse located at 95 Seventh Street in San Francisco, California, as the "James R. Browning United States Courthouse"; to the Committee on Transportation and Infrastructure.

By Mr. PITTS (for himself and Mr. MARKEY):

H.R. 3558. A bill to amend the Communications Act of 1934 to protect the privacy rights of subscribers to wireless communications services; to the Committee on Energy and Commerce.

By Mr. PLATTS:

H.R. 3559. A bill to amend title 10, United States Code, to allow faculty members at Department of Defense service academies and schools of professional military education to secure copyrights for certain scholarly works that they produce as part of their official duties in order to submit such works for publication, and for other purposes; to the Committee on the Judiciary, and in addition to the Committees on Transportation and Infrastructure, and Armed Services, for a period to be subsequently determined by the Speaker, in each case for consideration of such provisions as fall within the jurisdiction of the committee concerned.

By Ms. SCHAKOWSKY (for herself, Mr. CONYERS, Ms. MCCOLLUM, Mr. TOWNS, Mr. ACEVEDO-VILÁ, Ms. LEE, Mrs. CHRISTENSEN, Mr. EMANUEL, Mr. LIPINSKI, Mr. PALLONE, Ms. MILLENDER-MCDONALD, Mrs. JONES of Ohio, and Mr. CUMMINGS):

H.R. 3560. A bill to amend the temporary assistance to needy families program under part A of title IV of the Social Security Act to provide grants for transitional jobs programs, and for other purposes; to the Committee on Ways and Means, and in addition to the Committee on Education and the Workforce, for a period to be subsequently determined by the Speaker, in each case for consideration of such provisions as fall within the jurisdiction of the committee concerned.

By Mr. SHAW:

H.R. 3561. A bill to amend the Internal Revenue Code of 1986 to provide a shorter recovery period for the depreciation of certain improvements to retail space; to the Committee on Ways and Means.

By Mr. SHUSTER:

H.R. 3562. A bill to amend the Internal Revenue Code of 1986 to allow businesses a credit for security devices, assessments, and other security-related expenses; to the Committee on Ways and Means.

By Mr. STEARNS (for himself and Mr. UPTON):

H.R. 3563. A bill to coordinate cargo theft crime data collection and to amend title 18, United States Code, to make improvements relating to cargo theft prevention, and for other purposes; to the Committee on the Judiciary, and in addition to the Committee on Transportation and Infrastructure, for a period to be subsequently determined by the Speaker, in each case for consideration of such provisions as fall within the jurisdiction of the committee concerned.

By Mr. STRICKLAND:

H.R. 3564. A bill to remove United States fair trade laws from the World Trade Organization dispute settlement system process; to the Committee on Ways and Means.

By Mr. STUPAK:

H.R. 3565. A bill to provide that a grantee may not receive the full amount of a block grant under the Local Law Enforcement Block Grant program unless that grantee adopts a health standard establishing a legal presumption that heart, lung, and respiratory disease are occupational diseases for public safety officers and to provide that such diseases are presumed to be sustained in the performance of duty, and for other purposes; to the Committee on the Judiciary, and in addition to the Committee on Government Reform, for a period to be subsequently determined by the Speaker, in each case for consideration of such provisions as fall within the jurisdiction of the committee concerned.

By Mr. WALDEN of Oregon:

H.R. 3566. A bill to amend the Cooperative Forestry Assistance Act of 1978 to establish a program using geospatial and information management technologies to inventory, monitor, characterize, assess, and identify forest stands and potential forest stands, and for other purposes; to the Committee on Agriculture, and in addition to the Committee on Resources, for a period to be subsequently determined by the Speaker, in each case for consideration of such provisions as fall within the jurisdiction of the committee concerned.

By Mr. WU:

H.R. 3567. A bill to require the General Accounting Office to conduct an investigation of the high price of college textbooks; to the Committee on Education and the Workforce.

By Mr. WELDON of Pennsylvania (for himself, Ms. HARMAN, Mr. KIRK, Mr. BERMAN, Mr. SOUDER, Mr. CARDOZA, Mr. WILSON of South Carolina, Mr. MEEK of Florida, Mr. NUNES, Mr. LAHOOD, Mr. JONES of North Carolina, Mr. CASE, Mr. DEUTSCH, and Mr. SHAW):

H. Con. Res. 332. Concurrent resolution expressing the deep concern of Congress regarding the failure of the Islamic Republic of Iran to adhere to its obligations under a safeguards agreement with the International Atomic Energy Agency and the engagement by Iran in activities that appear to be designed to develop nuclear weapons; to the Committee on International Relations.

By Ms. MILLENDER-MCDONALD (for herself and Mr. TOM DAVIS of Virginia):

H. Con. Res. 333. Concurrent resolution expressing support and appreciation for the longstanding alliance between the United States and the Republic of Korea, and for other purposes; to the Committee on International Relations.

By Mr. GEORGE MILLER of California (for himself, Ms. WOOLSEY, and Mr. MEEKS of New York):

H. Con. Res. 334. Concurrent resolution expressing the sense of Congress that ''Kids Love a Mystery Month'' should be established; to the Committee on Government Reform.

By Mrs. TAUSCHER (for herself, Mr. GEORGE MILLER of California, Mr. TAYLOR of Mississippi, Mr. COOPER, Ms. PELOSI, Mr. SKELTON, Mr. MORAN of Virginia, Mr. MCGOVERN, Mr. DAVIS of Tennessee, Mr. UDALL of New Mexico, Mr. VAN HOLLEN, Ms. LEE, Mr. RYAN of Ohio, Ms. WATSON, Mr. EVANS, Mr. KILDEE, Mr. TOWNS, Mr. KENNEDY of Rhode Island, Mr. MEEHAN, Mr. RANGEL, Mr. INSLEE, Mr. ISRAEL, Mr. BLUMENAUER, Mr. MCDERMOTT, Ms. ESHOO, Mr. LANTOS, Ms. DELAURO, Ms. NORTON, Mr. LARSEN of Washington, Ms. LOFGREN, Mrs. MALONEY, Mr. BELL, Mr. LYNCH, Mr. GRIJALVA, Mr. CASE, Mr. CARDOZA, Mr. MATHESON, Ms. WOOLSEY, Ms. MCCARTHY of Missouri, Mr. FROST, Mr. BROWN of Ohio, Mr. FARR, Mr. HONDA, Mrs. CAPPS, Ms. MCCOLLUM, Mr. DELAHUNT, Ms. SOLIS, Ms. JACKSON-LEE of Texas, and Mr. SERRANO):

H. Con. Res. 335. Concurrent resolution recognizing the sacrifices made by members of the regular and reserve components of the Armed Forces, expressing concern about their safety and security, and urging the Secretary of Defense to take immediate steps to ensure that the reserve components are provided with the same equipment as the regular component; to the Committee on Armed Services.

By Mrs. JONES of Ohio (for herself, Ms. PRYCE of Ohio, Mr. DINGELL, Mr. TIBERI, Mr. TURNER of Ohio, Mr. OXLEY, Mr. GILLMOR, Mr. STRICKLAND, Ms. KAPTUR, Mr. KUCINICH, Mr. BROWN of Ohio, Mr. LATOURETTE, Mr. RYAN of Ohio, Mr. NEY, Mr. KILDEE, Mr. UPTON, Mrs. MILLER of Michigan, Mr. PORTMAN, Mr. LEVIN, Ms. KILPATRICK, Mr. CONYERS, Mr. MCCOTTER, Mr. HOBSON, and Mr. FORD):

H. Res. 460. A resolution congratulating The Ohio State University and the University of Michigan on the 100th football game between the two teams and recognizing their rivalry as the greatest sports rivalry in history; to the Committee on Education and the Workforce.

By Mr. WEXLER (for himself, Mr. GRIJALVA, Mr. TOWNS, Mr. HASTINGS of Florida, Ms. MCCOLLUM, Mr. CROWLEY, Mr. DEUTSCH, Mr. SERRANO, Mr. HINCHEY, Ms. WOOLSEY, Mr. MCDERMOTT, Mr. WAXMAN, Ms. MILLENDER-MCDONALD, Mr. MARKEY, Mr. CLAY, and Ms. NORTON):

H. Res. 461. A resolution expressing the sense of the House of Representatives with respect to the American Association of Retired Persons and the Republican Medicare prescription drug bill; to the Committee on Energy and Commerce, and in addition to the Committee on Ways and Means, for a period to be subsequently determined by the Speaker, in each case for consideration of such provisions as fall within the jurisdiction of the committee concerned.

EXTENSIONS OF REMARKS

INTRODUCING THE LABOR RECRUITER ACCOUNTABILITY ACT OF 2003

HON. GEORGE MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 19, 2003

Mr. GEORGE MILLER of California. Mr. Speaker, I rise today to introduce the ''Labor Recruiter Accountability Act of 2003.''

As has been well documented in the press, the abuse of recruited workers has become a very serious problem in many areas of our nation. Labor contractors lure workers to the U.S. by promising them a better life with decent wages and good jobs in exchange for thousands of dollars in fees. Instead, tens of thousands of workers arrive in the U.S. only to find that they were cruelly deceived. If they are paid at all, they earn unlivable wages for menial jobs to which they never agreed, with no insurance or health care. And in addition to earning little, they are bound deeply in debt to the recruiter for bringing them to their new home.

This is not employment opportunity: it is indentured servitude. It is modern slavery. Hard as it may seem to believe, this form of indentured servitude is the disturbing reality for thousands of workers, and it should not be occurring in the United States in 2003.

Today, I am introducing the ''Labor Recruiter Accountability Act of 2003'' to fight this cruel practice by providing for tighter accountability for foreign labor contractors and employers.

The ''Labor Recruiter Accountability Act of 2003'' holds recruiters and employers responsible for the promises they make to prospective employees, and discourages employers from using disreputable recruiters. The bill requires employers and foreign labor contractors to inform workers of the terms and conditions of their employment at the time they are recruited. It makes employers jointly liable for violations committed by recruiters in their employ. It imposes fines on employers and recruiters who do not live up to their promises and authorizes the Secretary of Labor to take additional legal action to enforce those commitments. Employers and recruiters are prohibited from requiring or requesting recruitment fees from workers and are required to pay the costs, including subsistence costs, of transporting the worker.

The bill discourages disreputable labor contractors by requiring the Secretary of Labor to maintain a public list of labor contractors who have been involved in violations of the Act and by providing additional penalties if employers use a contractor listed by the Secretary as having been involved in previous violations of this Act and that contractor contributes to a violation for which the employer may be liable. The remedies provided under the ''Labor Recruiter Accountability Act'' are not exclusive, but are in addition to any other remedies workers may have under law or contract.

Is it too much to ask that people who live on American soil, making products for American consumption, be treated like American workers? Even the most basic respect for human rights demands that we act now to protect these workers.

I am pleased that over 30 of our colleagues have joined me as original cosponsors of this bill. I am hopeful that all of our colleagues, on both sides of the aisle, will add their support to this critical legislation to end this kind of despicable exploitation of workers in the United States once and for all. This legislation is also supported by the AFL–CIO, the National Council of La Raza, and the Farmworker Justice Fund. Mr. Speaker, I urge Members of the House to join me and co-sponsor the ''Labor Recruiter Accountability Act of 2003.''

RECOGNIZING THE 5TH ANNIVERSARY OF THE INTERNATIONAL RELIGIOUS FREEDOM ACT OF 1998

HON. STENY H. HOYER

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 19, 2003

Mr. HOYER. Mr. Speaker, I am pleased to rise in support of H. Res. 423, recognizing the 5th anniversary of the International Religious Freedom Act of 1998, legislation that established the Office of International Religious Freedom within the Department of State.

This office is most often associated with its Annual Report on International Religious Freedom, which describes the status of religious freedom in each foreign country, government policies violating religious belief and practices, and U.S. policies to promote religious freedom around the world.

This document serves as an important tool for both Congress and the administration in making policy decisions regarding our relations with, and support for, countries around the world.

But in addition to the report, and frankly just as importantly, the Office develops strategies to promote religious freedom, both to attack the root causes of persecution and as a means of promoting other fundamental U.S. interests, such as protecting other core human rights, and encouraging the development of mature democracies.

The importance of this work cannot be overstated—the promotion of religious freedom is intimately connected to the promotion of other fundamental human and civil rights, as well as to the growth of democracy.

A government that acknowledges and protects freedom of religion and conscience is one that understands the inherent and inviolable dignity of the human person, and is more likely to protect, the other rights fundamental to human dignity, such as freedom from arbitrary arrest or seizure, or freedom from torture and murder.

But our interest in promoting religious freedom runs deeper than our support for democracy and stability—it is, simply put, our most important core value, the very reason the 13 colonies were established. American support for religious freedom abroad certainly predates passage of this legislation in 1998. I am particularly proud of the role I played during my tenure as the Chairman and Ranking Member of the Helsinki Commission to raise awareness of religious persecution in Eastern Europe and the former Soviet Republics, and the work of the Commission to promote the protection of religious minorities in the Eastern Bloc and elsewhere around the world.

Religious freedom is the first of the freedoms enumerated in the Bill of Rights—a reflection of the founders' belief that freedom of religion and conscience is the cornerstone of liberty.

As Thomas Jefferson wrote in 1803, ''It behooves every man who values liberty of conscience for himself, to resist invasions of it in the case of others; or their case may, by change of circumstances, become his own.''

I was an active supporter of the original legislation, I am proud of the work done by the office since its creation, and am pleased to help commemorate this important anniversary.

PAYING TRIBUTE TO CHERYL CHITTENDEN

HON. SCOTT McINNIS

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 19, 2003

Mr. McINNIS. Mr. Speaker, it is my honor to rise and pay tribute to a remarkable woman from my district. Cheryl Chittenden has dedicated her life to ending domestic violence and assisting victims of domestic abuse. For her service, Cheryl was recently recognized as Advocate of the Year and it is my honor to rise and pay tribute to her contributions before this body of Congress today.

Cheryl has been battling the terrors of domestic violence for fifteen years. In 1985, she became the Director of the Latimer House Domestic Violence Shelter. During that time, Cheryl acted as chairperson of the Domestic Violence Task Force, and was one of the founders of the Sexual Assault Nurse Examiner program.

Currently, Cheryl is a Victim Advocate in Mesa, Colorado. Each day, she goes beyond the call of duty for the betterment of domestic violence victims. Cheryl takes each victim's case to heart and treats him or her as though they were family. The Mesa community is truly

a better place as the result of Cheryl's contributions.

Mr. Speaker, it is my honor to rise and pay tribute to Cheryl Chittenden before this body of Congress and this nation. Cheryl has dedicated her life to helping others while maintaining her devotion as a loving wife and caring mother. I am honored to join all of those Cheryl has helped in thanking her for her service.

CONFERENCE REPORT ON H.R. 6, ENERGY POLICY ACT OF 2003

SPEECH OF

HON. MARK UDALL

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 18, 2003

Mr. UDALL of Colorado. Mr. Speaker, I cannot support this legislation.

We all know that this country is overly dependent on a single energy source—fossil fuels—to the detriment of our environment, our national security, and our economy. To lessen this dependence and to protect our environment, we must pass a bill that helps us balance our energy portfolio and increase the contributions of alternative energy sources to our energy mix.

Unfortunately, this bill doesn't provide that balance. And for the most part it not only falls short of meeting the challenges of our time, in many ways it can be described as an energy policy for the nineteenth century.

Of course just as no bill is perfect, even this bill is not totally bad.

For example, I am pleased that legislation I've initiated is being considered as part of this bill.

The bill includes the Federal Laboratory Educational Partners Act of 2003, legislation I introduced with my colleague Rep. BEAUPREZ that would permit the National Renewable Energy Laboratory and other Department of Energy laboratories to use revenue from their inventions to support science education activities in their communities.

The bill includes the Distributed Power Hybrid Energy Act, a bill I introduced to direct the Secretary of Energy to develop and implement a strategy for research, development, and demonstration of distributed power hybrid energy systems. It makes sense to focus our R&D priorities on distributed power hybrid systems that can both help improve power reliability and affordability and bring more efficiency and cleaner energy resources into the mix.

The bill includes my High Performance Schools Act, which would enable our school districts to build school buildings that take advantage of advanced energy conservation technologies, daylighting, and renewable energy to help the environment and help our children learn. As included in the conference report, my bill would be expanded to help state and local governments improve not only energy efficiency in schools, but also in public buildings in general.

I am also pleased that this bill includes the Clean School Buses Act, a bill that Chairman BOEHLERT and I drafted that authorizes grants to help school districts replace aging diesel vehicles with clean, alternative fuel buses.

But despite these bright spots, most of the bill is bad policy—bad for the environment, bad for the taxpayers, and bad for the country.

Like its predecessor in the last Congress, this bill puts all its eggs in one basket, the wrong basket. For every step the bill takes to move us away from our carbon-based economy, it takes two in the opposite direction.

The bill fails to take any steps whatsoever to require that the nation reduce its dependence on oil or improve the fuel economy of our cars, trucks, and SUVs. In fact, the bill makes it more difficult to update fuel economy standards by adding new requirements for redundant studies to the National Highway Traffic Safety Administration's CAFE standards-setting process.

By contrast, just today we learned that China is preparing to impose minimum fuel economy standards on new cars for the first time—rules that will be significantly more stringent than those in this country. This is great news for the world—but what an embarrassing proof that we won't even do as much for our own national security and the environment.

That contrast speaks volumes about this bill's priorities, which are the priorities of this Administration.

This bill not only does nothing to decrease our dependence on oil—it also does almost nothing to control demand. But increasing production while ignoring demand is a recipe for disaster.

The Administration boasts that this bill is a balanced approach because it would promote the development of renewable energy and energy efficiency technologies. But aside from a few provisions on electrical appliances and heating systems, the bill does little to promote energy conservation. And although there are some tax incentives for renewable fuels, they pale in comparison to the lavish tax breaks the bills gives the oil and gas industry.

And for all we hear from the Administration about the hydrogen provisions, the bill doesn't go far enough. It's all well and good to authorize billions of dollars to deploy hydrogen fuel cell vehicles, but the bill includes no production or deployment requirements or even goals to ensure that a meaningful number of hydrogen vehicles will be delivered to consumers.

As co-chair of the Renewable Energy and Energy Efficiency Caucus in the House, I define a balanced bill as one that gives more than a passing nod to the development of alternative sources of energy. The Senate version of this bill included sensible provisions to require large utilities to get modest amounts of their power from renewable sources. Although 13 states have already passed their own versions of such a Renewable Portfolio Standard, and although the energy bill conferees just yesterday voted to include the RPS in the conference report, the Republicans stripped it out late last night. If this were really about jobs, as the Republicans claim, they would have retained the RPS provision—which experts say could create millions of new jobs in this country.

I won't even get into some of the other egregious provisions, such as the incentives in the bill for new nuclear and coal development, and the repeal of the Public Utility Holding Company Act, the main law to protect consumers from market manipulation, fraud, and abuse in the electricity sector.

Nor will I complain in detail about process—the fact that Democrats were shut out of conference proceedings, that we don't even know the cost of this 1100-page bill that we were able to review in its entirety only last night, that Republican conferees have essentially been buying votes over the last week to ensure the bill's passage.

An example of this vote-buying is the bill's language to allow polluted areas to have more time to reduce smog pollution but without having to implement stronger air pollution controls, placing a significant burden on states and communities down-wind of these urban areas.

There are other provisions related to public health that should never have been included in this bill. The bill eliminates protections for underground drinking water supplies from potential damages caused by hydraulic fracturing. The bill also provides a special liability waiver for MTBE producer who face lawsuits from states and localities for polluting their water supplies, thereby shifting cleanup costs to taxpayers.

Bad for the country, the bill is particularly bad for the West.

Many of its provisions will directly and immediately affect Colorado and other western States. We have important resources of oil and gas, as well as great potential for solar energy and wind energy. I support energy development in appropriate places and in ways that balances that development with other uses and such other vital resources as water and the people, fish, and wildlife that depend on it. Unfortunately, here again this bill does not reflect the needed balance.

Instead, it combines big subsidies for energy development with lessening of the procedural and substantive requirement that have been established to protect our lands, water, and environment.

Overall, the oil and gas title of the bill is intended to stimulate increased production from both the Outer Continental Shelf and onshore lands. It combines a series of royalty reductions, so companies will pay the public less for the oil, gas, and other energy resources developed on publicly-owned lands.

It also would completely exempt oil and gas construction activities—including roads, drill pads, pipeline corridors, refineries, and other facilities—from the stormwater drainage requirements of the Clean Water Act.

It also has provisions designed to speed up establishing rights-of-way and corridors for oil and gas pipelines and electric transmission lines. Under section 350, within 2 years the federal agencies are to designate new corridors for oil and gas pipelines and electricity transmission and facilities on Federal land in the eleven contiguous Western States of Arizona, California, Colorado, Idaho, Montana, Nevada, New Mexico, Oregon, Utah, Washington, and Wyoming. And it provides for a pilot project to speed up the processing of federal permits related to oil and gas development in several parts of the BLM lands. This includes the Glenwood Springs Resource Area in Colorado as well as areas in Montana, New Mexico, Utah, and Wyoming.

Nothing in the bill would increase the resources available to BLM or the other federal land managing agencies to carry out their other responsibilities in connection with management of the affected lands. As a result, this bill has the potential to essentially repeal multiple-use management and to make energy development the dominant use on the public lands.

Similarly, the bill includes a requirement for a study and report on opportunities to develop renewable energy on the public lands and National Forests as well as lands managed by the energy and defense departments—including units of the National Wilderness Preservation System and wilderness study areas, National Monuments, National Conservation Areas, and other environmentally-sensitive areas. At best, this is a prescription for controversy. At worst, it threatens to open the door for incompatible development on lands that should be left as they are.

These are big steps backward. So is the provision that would allow geothermal-energy leases to be in effect converted into claims under the Mining Law of 1872.

In conclusion, Mr. Speaker, we need a well-designed policy to meet the challenges of our time, not a policy that will diminish our energy security. With the Middle East—the world's main oil-producing region—in turmoil, we must question the predictability of future foreign oil supplies. Fully 30 percent of the world's oil supply comes from the volatile and politically unstable Persian Gulf region. Yet with only 3 percent of the world's known oil reserves, we are not in a position to solve our energy vulnerability by drilling at home.

This bill does nothing to tackle this fundamental problem. I only wish my colleagues in the House could understand that a vision of a clean energy future is not radical science fiction but is instead based on science and technology that exists today.

In much the same way that America set about unlocking the secrets of the atom with the "Manhattan Project" or placing a man on the moon with the Apollo program, we can surely put more public investment behind new energy sources that will free us from our dependence on oil.

This bill would continue our addiction to finite and politically unstable energy resources, while undermining public health, the environment, and ultimately our national security itself. It should be rejected.

SUPPORT OF THE CONFERENCE AGREEMENT ON THE DEFENSE AUTHORIZATION ACT (H.R. 1588)

SPEECH OF

HON. BETTY McCOLLUM

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, November 7, 2003

Ms. McCOLLUM. Mr. Speaker, I rise today in support of the Conference Agreement on the Defense Authorization Act (H.R. 1588), and in support of our armed forces and the service men and women who defend our great country, and their families.

Unlike the Iraq War Supplemental, which I opposed, the FY04 Defense Authorization bill is not a "blank check" for the Administration. Rather, this bill was carefully drafted to address many of our military's most pressing needs. This legislation provides a substantial pay raise for service members, boosts military special pay and extends enlisted and reenlistment bonuses. Additionally, this legislation extends the military's TRICARE health coverage to National Guard and Reservists and their families if such service members have been called to active duty. We need to assure our military that as we continue to support their readiness capabilities, we remember the personal well being of the men and women in uniform as well as their families.

The FY04 Defense Authorization bill also addresses the disabled veterans tax, or "concurrent receipt", by ensuring a significant number of disabled veterans will no longer be subjected to this unjust tax. As a cosponsor of H.R. 303, the Retired Pay and Restoration Act, I would have preferred the Defense Authorization bill include full concurrent receipt for all disabled veterans. However, this compromise is an important step forward and will allow the House to continue working toward the full elimination of the disabled veterans tax.

While I am supporting passage of this authorization, there are several provisions of this legislation that I oppose. The first regards civil service protections for civilian employees at the Department of Defense (DOD). H.R. 1588 gives the DOD broad authority to strip almost 700,000 civilian employees of fundamental rights relating to due process, appeal and collective bargaining rights. This means the DOD will be able to fire employees with no notice and no opportunity to respond, prevent discrimination actions from being heard by the Equal Employment Opportunity Commission, strip employees of their right to join a union and repeal the laws preventing nepotism. Civil service employees at DOD have defended our nation bravely and made enormous sacrifices to support the military effort in Iraq. DOD should not be given unlimited authority to trample on their basic rights.

H.R. 1588 also unnecessarily weakens long-standing environmental protections at our military facilities by lowering the accountability standard DOD must follow when recovering imperiled species under the Endangered Species Act. The new standard fails to ensure the DOD's conservation plans are actually effective in assisting the recovery of imperiled species. H.R. 1588 also creates a far less protective definition of 'harassment' of marine life by military activities under the Marine Mammal Protection Act. This new definition allows DOD to avoid ensuring its activities are conducted in a manner to minimize harm to marine life such as whales, dolphins, and sea lions.

Although I fully appreciate the importance of military training and readiness, the DOD has not made the case that exemptions to important and long-standing environmental laws are necessary or that training is greatly impaired because of those laws. Furthermore, the President already has the authority to waive environmental laws if he deems it a matter of national security, and not once has a waiver requested by the President been turned down. Until our national security is at stake, no government agency—including the DOD—should be above laws that preserve our air and water and sustain America's wildlife.

This measure also authorizes $9.1 billion for the unproven and untested National Missile Defense system. This costly program fails to address the rising threat of a chemical or biological weapons attack by terrorists and will divert precious resources away from the very real human investments needed to keep our military, intelligence agencies and domestic security agencies strong. I have voted time again to remove funding for the National Missile Defense system, but the Republican Majority defeated each attempt. It is a mistake to fund this unproven program while our citizens at home are without the appropriate resources they need to respond to a terrorist attack on American soil.

I have met with National Guard members, Reservists and regular military personnel who have chosen to put their lives on the line to protect our freedoms. They have sacrificed a tremendous amount, even when their service means putting their family's financial solvency at risk. We owe them our support and our gratitude.

As I stated above, this is not a "blank check" for the President. Rather, this legislation will go a long way toward helping our troops in their time of need.

TRIBUTE TO COLONEL MICHAEL VACCA

HON. GARY G. MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 19, 2003

Mr. MILLER of California. Mr. Speaker, I rise to pay tribute today to one of our Nation's finest young men who demonstrated exceptional courage and concern for our troops. Colonel Michael Vacca of the United States Marine Corps is to be commended for his actions, and I applaud him for his dedication to the American spirit.

On the morning of August 26, 2003, one of the many brave soldiers from my district, Private First Class Daniel Humphreys, was injured while riding in a two-vehicle convoy heading north to Baghdad. When an Improvised Explosive Device hit the rear vehicle of this mission, the vehicle's tires were blown out, the engine and steering systems were destroyed, and Private First Class Humphreys was severely wounded along with other Marines. Private First Class Humphreys and his fellow Marines were taken to hospitals in Germany and Iraq for treatment, and Colonel Michael Vacca showed a tremendous amount of support for his Corpsmen that extended beyond the call of duty.

Not only did Colonel Vacca make regular visits to the hospital, he also notified the wounded soldiers' loved ones and kept them informed of their progress. When a soldier was unable to send word home, Colonel Michael Vacca did so with hope, enthusiasm and pride.

The men and women of our armed forces have been away from their families and friends defending democracy and freedom. Colonel Michael Vacca has not only put his

life on the line for his country, he has also brought the spirit of his fellow Marines back home to their families.

Mr. Speaker, Colonel Michael Vacca is a true American hero, and this Congress should celebrate his outstanding service and loyalty to the Marine Corps and the United States of America.

CLEAN WATER ACT ROLLBACKS

HON. HILDA L. SOLIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 19, 2003

Ms. SOLIS. Mr. Speaker, I rise today to bring attention to efforts by the Environmental Protection Agency (EPA) to rollback the Clean Water Act.

Several days ago, in the Los Angeles Times and other newspapers, an internal EPA memo was quoted saying that the EPA is preparing a rule that would eliminate Clean Water Act protections for, "Streams that flow for less than six months a year . . ." State and federal officials have estimated that up to 20 million acres of wetlands would be lost.

This preliminary rule would devastate the Southwest where many streams flow only seasonally or after rain or snowmelts. In Los Angeles County, our rivers are often only a trickle, since our community gets an average of 15 inches of rainfall a year. And we are not alone.

Interior Secretary Gale Norton notes that, "The American West is facing a serious crisis. In the long run, we will not have enough water to meet the fast-growing needs of city residents, farmers, ranchers, Native Americans, and wildlife. The demand is increasing; the supply is not." Unfortunately, the EPA must have not gotten that memo because if our limited water supply is jeopardized, no one's needs will be met.

I encourage the Bush Administration to throw this rule draft away and start fresh with guidelines that will protect our water supplies so that our families are not left out to dry.

CONDEMNING THE RISE OF HIGH-TECH ANTI-SEMITISM

HON. JON C. PORTER

OF NEVADA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 19, 2003

Mr. PORTER. Mr. Speaker, I rise today to bring to the attention of the House an issue that this House bravely stood against earlier this year, the rise of anti-Semitism. While we understand the danger of anti-Semitism, I rise today to remind the House of the possible consequences of anti-Semitism in the developing world.

Last month the House unanimously passed House Resolution 409, condemning the anti-Semitic remarks of the former Prime Minister of Malaysia, Doctor Mahathir Mohamad. This House joined international condemnation of the hate-speech and stereotypes contained in Doctor Mahathir's speech. It seemed inconceivable that a man of such education and leadership could sink to so low a level.

Little noticed amid the well-earned condemnation of Dr. Mahathir's comments was the rest of his speech. It surprised many to see that the remainder of the speech was a call for advanced technical research, social and political modernization, and the development of first-rate communications in the Islamic world. These things are the very things that our country has been urging as a means of integrating these countries into the international community. How can Dr. Mahathir share the means and yet call for such a different end?

Since the end of the Second World War, anti-Semitism has not been seen as a disease that modern countries are susceptible to. Many have forgotten how scientifically advanced Hitler's Germany was, and how increases in knowledge were used to increase the murdering power of hate. Despite our hopes to the contrary, science proved to be values free, and the minds that could improve the lot of all mankind were put to the work of killing as many defenseless people as possible.

For 50 years after the end of the war, we kept close watch on the spread of technology, and trained scientists on how not to become a tool for evil. Science has brought the world closer together than ever, and technology has allowed the flowering of commerce and the arts. Yet the lesson remains, that this is because we make it so, not because of any moral value in technology itself.

While our Nation prides itself on the great advances being made in developing countries, and the ease with which technophobia around the world is dispelled, we cannot rest comfortably. Every invention, every improvement, can be used for evil when held by men with hate-filled minds. The periodic table and computer code do not contain hidden lessons on rooting out anti-Semitism and murder. New ministries and parliaments can be elected as fairly, and corrupted as easily, as the Reichstag that brought Hitler to power.

This Nation, and every nation of goodwill, must not be satisfied with spreading democracy and development. Without a commitment to fighting anti-Semitism, bringing murderers to justice, refusing to collaborate with evil, and speaking out for the truth, true peace and freedom in the Islamic world, and the rest of this planet, cannot be obtained.

TRIBUTE TO DR. EDWARD ROZEK

HON. MARILYN N. MUSGRAVE

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 19, 2003

Mrs. MUSGRAVE. Mr. Speaker, I rise today to honor a great American, Dr. Edward Rozek, for his years of dedicated service to the cause of freedom and democracy as a soldier, scholar, author, and college professor.

Edward Rozek was 18 years old when Adolf Hitler conquered Poland. He decided to join the Allied forces in the west and escaped through Slovakia to Hungary, where he was captured by the Nazis and spent several months in a slave labor camp.

Upon escaping from the Nazi camp, Rozek made his way to England, where he joined the First Polish Armored Division. He became a tank officer in the Armored Division's Reconnaissance Regiment and fought from Normandy through Belgium. Achieving the rank of Major, Rozek was wounded four times and received four Purple Hearts, three Crosses of Valor, as well as numerous other decorations.

In 1948 Dr. Rozek arrived in the United States without family, money, or profession. He was admitted to Harvard after earning money to pay tuition by working on a dairy farm and then at a gasoline station. In 7 years, he earned a Bachelor of Arts, Magna cum Laude and Phi Beta Kappa, Master of Arts, and his Doctorate of Philosophy.

After leaving Harvard, Dr. Rozek became a Professor of Comparative Governments at the University of Colorado. He was Director of Slavic Studies for 25 years and Deputy Editor for one of the most prestigious publications on Eastern Europe in the world, Journal of Central European Affairs. His best-known book is Allied Wartime Diplomacy, for which he received the National Foundation Book Award. The students at the University of Colorado selected him as Professor of the Year and Distinguished Faculty Member.

During the 1980 Presidential campaign, Rozek was a member of Ronald Reagan's Advisory Council on Defense and Foreign Policy and is currently a member of the Reagan Associates. He is an honorary member of Solidarity, and received Knighthood in the Venerable Order of St. John from Queen Elizabeth.

Presently, Dr. Rozek holds the Endowed Garnsey-Rozek Professorship in Economic and Political Freedom at the University of Northern Colorado. He will retire at the end of this year. Dr. Rozek is married to Elizabeth and has two sons and four grandchildren.

On behalf of the countless number of students, citizens, and legislators he has touched, I want to thank Dr. Rozek for his years of dedicated service to liberty through classical liberal education. As the famous philosopher Sidney Hook said of Dr. Rozek in the dedication to his book, Academic Freedom and Academic Anarchy, Ed is truly an "embattled fighter for free men, free society, and a free university against fascism, communism, and totalitarian liberalism."

May God bless Dr. Edward Rozek and his epic legacy of service to free people everywhere.

EXPRESSING APPRECIATION TO THE ROMAN CATHOLIC CHURCH FOR ITS SUPPORT OF STRONG ANTI-DRUG POLICIES

HON. MARK E. SOUDER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 19, 2003

Mr. SOUDER. Mr. Speaker, I rise to express my deep thanks and appreciation to Pope John Paul II and the Roman Catholic Church for their unwavering support of a strong and balanced anti-drug strategy. Last month, at a European Union conference held in Dublin, Ireland, the Holy See submitted a statement

outlining the Catholic Church's approach to drug policy. As chairman of the Government Reform Committee's Subcommittee on Criminal Justice, Drug Policy and Human Resources, I have long supported a vigorous but multipronged approach to reducing the scourge of drug abuse, emphasizing tough law enforcement, effective prevention, and treatment that works. I am submitting the Holy See's statement for the RECORD, as I believe it provides an eloquent and timely defense of those policies.

As the Vatican's statement makes clear, the problem of drug abuse is deeply rooted in the spiritual crisis that has gripped much of modern society. We live in a culture that often finds itself incapable of educating our young people in the values that give them an alternative to drugs. "One of the most important factors leading to drug abuse," warns the statement, "is the lack of clear motivation, the absence of values, the conviction that life is not worth living." We must ensure that our children are raised with the knowledge both of their own self-worth and of their responsibility to work for a better world. That knowledge is the best bulwark against drug abuse and other self-destructive behavior, and prevention efforts in our schools and communities must be grounded in such an approach.

But we must also make sure that we don't send the wrong message to young people by suggesting that governments tolerate the use of drugs. I strongly agree with the Catholic Church in its rejection of drug legalization. Legalizing the use of even the so called "lighter" drugs will only lead to the greater use of stronger drugs. Nor can we afford to condone drug abuse in a misguided attempt at "harm reduction." As the Vatican's statement notes, "The State should not assist its more vulnerable citizens to alienate themselves from society and ruin their lives."

Mr. Speaker, the problem of drug abuse is one of the most difficult facing lawmakers and parents today. It is deeply rooted, and will require a great and continuing effort to keep it under control. But we must not give up—there is simply too much at stake. I thank the Catholic Church for its ongoing support of that effort.

INTERVENTION OF THE DELEGATION OF THE HOLY SEE AT THE MINISTERIAL CONFERENCE ON "NEW CHALLENGES FOR DRUG POLICY IN EUROPE"

(Dublin, October 16–17, 2003)

MR. CHAIRMAN: The Holy See is pleased to participate in this Ministerial Conference sponsored by the Pompidou Group, for it sees this as a fitting and encouraging opportunity to discuss and analyze the strategies in the fight against the threat represented by drug abuse, as the Conference theme aptly suggests.

The data provided by the European Observatory for Drugs and Drug Addiction in the 2002 Annual Report on the Evolution of the Drug Phenomenon in the European Union and Norway continue to raise alarms and indicate that the situation, instead of improving, is growing worse.

Great concern is caused both by the constant increase in the use of synthetic drugs and by the ever decreasing age at which drug abuse is observed.

Pope John Paul II, already in 1984, noted that "among the threats facing young people and all of society today, drug abuse is one of the greatest, since it is a danger that is as insidious as it is invisible, and one that is not yet properly recognized according to the extent of its seriousness".

If politics is at the service of the human person and society, it must not fail to go to the root of problems. This means grappling with the anxiety, that is, the existential crisis or apprehensions, that in a consumerist and materialistic society finds rich soil for shattering the inner equilibrium in subjects who are particularly weak, fragile and sensitive. There is no doubt that the phenomenon of drug abuse is connected with a crisis of civilization and with great dejection. One of the most important factors leading to drug abuse is the lack of clear motivation, the absence of values, the conviction that life is not worth living.

Among the political measures to be adopted in the fight against this phenomenon, my Delegation would point out in the first place those aimed at combating illicit trafficking in drugs, controlled by powerful criminal organizations. This takes place in the larger context of arms trade, terrorism and trafficking in human beings. Such criminal activity goes beyond national borders and therefore requires a concerted policy of international cooperation.

Faced with the many suggestions and decisions made in different national contexts for the purpose of resolving the problem, the Holy See does not agree with the proposal to legalize the circulation and distribution of drugs, not even so-called light drugs. We must not fail to take into account the risk of moving from the use of light drugs to the use of those with more destructive effects. The State should not assist its more vulnerable citizens to alienate themselves from society and ruin their lives.

Rather, the Holy See encourages above all the promotion of preventive information and education, and the possibility of the proper treatment and reintegration into society of those who unfortunately fall prey to drug addiction.

More resources should be destined to the application of preventive and educational measures in the family, in schools, in sports clubs and in society in general. There is a need for placing renewed emphasis on the human values of love and life, the only values capable of giving meaning to human existence.

As far as treatment and reintegration into society are concerned, my Delegation places great importance on the work of assistance and recovery communities. This is a matter of helping drug addicts, in the midst of their inner suffering and their state of anxiety, to rediscover dignity, to take control of their lives once more and to reintegrate themselves into their families and into society.

An integrated system of services offered by local agencies, institutions and educational groups (family, school, community) should increase the ability to bring effective aid to the lives of young people who, once they are freed from drug addiction, will be able to avoid a relapse. Only the desire to be reborn and the ability to heal will ensure that "recovered" young people can return to a normal life after having passed through the frightening tunnel of drug addiction.

An adequate policy in this regard must also address the ethical questions involved, seeking to place the problem in a wider anthropological, ethical, social, political and economic context. Means and resources need to be set-aside for this purpose.

Mr Chairman, allow me to conclude by reaffirming the willingness of the Holy See and the Catholic Church—with their extensive networks of institutions and structures devoted to the education, assistance and rehabilitation of drug addicts—to work with European institutions in seeking together paths and means for a policy in the fight against drug abuse and addiction that will not only resist the criminal and subversive phenomenon but will also take into consideration the moral issue of drug addiction and of a society that promotes a culture of solidarity for life.

Thank you, Mr. Chairman.

PAYING TRIBUTE TO GREAT SAND DUNES' OUTDOOR EDUCATION PROGRAM

HON. SCOTT McINNIS

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 19, 2003

Mr. MCINNIS. Mr. Speaker, I would like to take a moment to honor the Great Sand Dunes National Park in Colorado for its award-winning Outdoor Education Program. Recently, the Colorado Alliance for Environmental Education awarded the Great Sand Dunes with the Governmental Environmental Education Award for Excellence for 2003. The Outdoor Education Program is an excellent source of information and entertainment for all who enjoy nature and have an interest in wildlife. I would like to join my colleagues here today in recognizing the tremendous service provided to the Colorado community by the Great Sand Dunes Outdoor Education Program.

The Great Sand Dunes have offered education programs for almost twenty years. Staff members and volunteers enthusiastically provide research and expertise for service-learning projects, field trips, outreach events and workshops that encourage environmental awareness in the community. The educational program works in conjunction with the U.S. Fish and Wildlife Service, the U.S. Forest Service and the Nature Conservancy, in order to provide students and instructors with the latest and most accurate information.

Mr. Speaker, the Great Sand Dunes Outdoor Education Program is an exciting and instructional educational tool for the Colorado community. This program has shown extraordinary dedication to teaching adults and children about the environment and conservation. It is my great honor today to recognize the devotion and commitment of those involved with the program. Congratulations on a well deserved award.

CONFERENCE REPORT ON H.R. 2754, ENERGY AND WATER DEVELOPMENT APPROPRIATION ACT, 2004

SPEECH OF

HON. MARK UDALL

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 18, 2003

Mr. UDALL of Colorado. Mr. Speaker, I rise in support of this bill. But I do have reservations about a number of provisions included in it.

As co-chair of the Renewable Energy and Energy Efficiency Caucus in the House, I have worked for years to increase—or at a minimum, hold steady—funding for DOE's renewable energy and energy efficiency research and development programs. So I am disappointed that for yet another year, the bill shortchanges these important clean energy programs.

Given our finite supply of fossil fuels and increasing global demand, investing in clean energy is more important than ever. DOE's renewable energy programs are vital to our Nation's interests, helping provide strategies and tools to address the environmental challenges we will face in the coming decades. By reducing air pollution and other environmental impacts from energy production and use, they also constitute the single largest and most effective federal pollution prevention program.

Investments in sustainable energy technologies meet multiple other public policy objectives. Far from decreasing, U.S. dependence on imported oil has increased to record levels over the past 25 years. These programs are helping to reduce our reliance on oil imports, thereby strengthening our national security, and also creating hundreds of new domestic businesses, supporting thousands of American jobs, and opening new international markets for American goods and services.

While these technologies have become increasingly cost-competitive, the pace of their penetration into the market will be determined largely by government support for future research and development as well as by assistance in catalyzing public-private partnerships, leading to full commercialization.

For our investment in these technologies to pay off, our efforts must be sustained over the long term. This bill does not do that. This bill is fully $75 million less than last year's bill in the area of research energy research. Much of this reduction is used to fund a new Office of Electricity Transmission and Distribution. Cuts to renewable energy accounts are also used to boost hydrogen programs fully $38 million above last year's levels. Although I'm certainly supportive of both the electricity and hydrogen programs, I believe they should be additive to take advantage of the synergies they present with the other important and established programs at DOE. Instead, the bill cuts biomass/biofuels by $14.4 million, solar energy by $9.4 million, and geothermal by $3.8 million.

I believe that the reductions in funding levels for the core renewable energy programs are ill-advised at a time when the need for a secure, domestic energy supply is so crucial. Clean energy technologies have a critically important role to play in promoting public health and enhancing the energy security of the nation by promoting fuel diversity, harnessing safe and abundant domestic resources, and expanding the use of small-scale, dispersed technologies.

Overall, the bill provides necessary funding for some important Army Corps of Engineers projects and for DOE's Office of Science and non-proliferation programs. It also includes critical funding for defense environmental management programs—in particular, funding for Rocky Flats, the former weapons production site in Colorado. Funding in this bill keeps Rocky Flats on track for finishing cleanup and closure by the end of 2006.

So on balance, Mr. Speaker, I believe this bill contains more good than bad. Although I am not satisfied with the levels of funding in this bill for DOE's clean energy programs, I will continue to work to increase funding for these programs in years to come.

RECOGNIZING THE SACRIFICE OF OUR VETERANS

HON. BETTY McCOLLUM

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 19, 2003

Ms. MCCOLLUM. Mr. Speaker, earlier this month our Nation took the time to honor and recognize the tremendous sacrifice our veterans have given to protecting our freedom and safeguarding democracy for us all. During this special time, it is important we remember all our veterans and thank them for their service.

Today, however, I would like to specifically recognize our Korean War Veterans and their service to the United States.

The Korean War resonates deeply with many Minnesota families. Through the duration of the conflict, close to 95,000 Minnesotans served their country with honor and courage, with 749 paying the ultimate sacrifice. Countless others lost their lives training for service in Korea. One hundred seventy remain missing. They were our fathers, mothers, brothers and sisters. Their service was integral in ensuring that the long arm of communism would stretch no farther than the 39th parallel and their sacrifices enabled countless numbers of Americans and Koreans to raise their families and live their lives in freedom.

As we reflect on their service, it is important to remember that the armistice ending military action in Korea signaled an end to the fighting, but not the war. Today, 37,000 U.S. military personnel remain in South Korea to supplement the 650,000-strong South Korean armed forces. These men and women serve to protect America's economic and political interests in the region, while ensuring our national security by providing a counter-balance to North Korea. The dangers our U.S. soldiers in South Korea face are very real and the merits of their courage is tested everyday.

In Minnesota, the Korean War veterans remain very active. They visit hospitals, are active in their local VFW and American Legion and participate in parades. Many take time to visit schools in their area, talking to students about the Korean War and answering questions about military service. Recently, a large group ascended on Washington, D.C. to participate in Veterans Day events and to mark the 50th anniversary of the end of the Korean War. In D.C., they participated in the wreath-laying ceremony at Arlington Cemetery and took a tour of the U.S. Capitol, among other things. I am inspired by their continued patriotism and commitment to their families, the United States, and each other.

As a former Minnesota State Legislator, I had the distinct privilege to help enable the creation of a memorial to Minnesota's Korean War veterans, that stands today at the Minnesota State Capitol. Near this grand memorial is a time capsule, to be opened 100 years after its burial. In it lie a U.S. flag, pictures and other memorabilia commemorating our war veterans and the important news of our day. The capsule also holds a letter to future generations of Americans. The letter asks those who read it to never forget the events of the past, and expresses hope that when the capsule is opened, our nation and the world will be at peace. I, like all Americans, share the optimism that when this letter is next read, the hope of its authors has become reality.

I ask all Americans to never forget those of the ‘‘forgotten'' war in Korea. At a minimum, Congress should grant the Korean War Veterans Association a Federal Charter, allowing the Association to expand its mission and further its charitable and benevolent causes. Specifically, it will afford the Korean War Veterans Association the same status as other major veterans organizations and would allow it to participate as part of select committees with other Congressional chartered veterans and military groups. While they seek no recognition for what they have done, it is important their story is told and the debt of their service is remembered.

Thank you to all our Korean War Veterans. Your commitment to our country is greatly appreciated.

TRIBUTE TO THE CITY OF LA HABRA HEIGHTS, CALIFORNIA

HON. GARY G. MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 19, 2003

Mr. GARY G. MILLER of California. Mr. Speaker, I rise to pay tribute today to the City of La Habra Heights, California, as their community celebrates 25 years of cityhood this year.

Since incorporating on December 4, 1978, La Habra Heights has succeeded in maintaining a quality environment for its residents by providing excellent municipal services and keeping a strong community spirit alive. The citizens of La Habra Heights continually demonstrate their enthusiasm for their City by actively participating in local government and future city planning. It is indeed my honor to represent the residents of this beautiful city, who have contributed much of their time towards the betterment of their community.

Mr. Speaker, on this very special year for the City of La Habra Heights, please join me in commemorating their twenty-fifth anniversary.

THE PASSING OF REGINALD ARTHUR STONE

HON. HILDA L. SOLIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 19, 2003

Ms. SOLIS. Mr. Speaker, I rise to pay tribute to Mr. Reginald Arthur Stone who passed away on November 12th at the age of 67. Mr. Stone was a loving husband to his wife Judy,

the father of two and the grandfather of five. In addition to being a community leader, Mr. Stone was known as a person who could create compromise out of chaos.

Reginald "Reg" Stone was the longtime chairman of the Main San Gabriel Basin Water Master Board of Directors, where he was a key figure in negotiations that led to a $250 million cleanup agreement with industrial companies that polluted the area's groundwater. Because of his gentle, yet determined efforts, thousands of homes will have cleaner water and the health of working families will be improved.

In addition to serving on the Main San Gabriel Basin Water Master Board of Directors, he worked for 43 years at Suburban Water Systems. Starting off as a meter reader, Mr. Stone rose to senior Vice President at the time of his death. More importantly than his title, however, is that he is remembered as a person who was liked and appreciated by all and was able to bring even the most adversarial people together with the belief that you should start to negotiate from common ground.

Reg Stone will be missed by all who knew him and our prayers are with his family during this time of mourning.

HONORING DON LAUGHLIN, FOUNDER OF LAUGHLIN, NEVADA

HON. JON C. PORTER

OF NEVADA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 19, 2003

Mr. PORTER. Mr. Speaker, I rise today to honor the founder and namesake of one of the fastest growing, most dynamic communities in my district, Don Laughlin. On Friday the community of Laughlin will join together to celebrate the unveiling of a statue of Don that will greet visitors to the many gaming, entertainment, and recreational opportunities in the city along the Colorado River he created just a few decades ago. Don is a visionary leader, and I urge the House to join with the thousands of residents, and millions of visitors to Laughlin who celebrate his permanent contribution to the landscape and culture of Nevada and our country.

TRIBUTE TO CONAGRA FOODS—LONGMONT FACILITY

HON. MARILYN N. MUSGRAVE

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 19, 2003

Mrs. MUSGRAVE. Mr. Speaker, I rise today to recognize the outstanding achievement of ConAgra Foods—Longmont Facility in Longmont, Colorado in the field of occupational safety and health. I also commend Ms. Stephanie Sparks, the Complex Safety & Health Manager for this facility, and her team for their continued excellence.

Recently, the Occupational Safety and Health Administration (OSHA) awarded this facility with the agency's approval as a Merit participant in the Voluntary Protection Program (VPP). This exceptional facility joins fewer than 850 worksites under Federal jurisdiction that have received this prestigious award.

To achieve important recognition, ConAgra has demonstrated an exemplary record of workplace safety and health, achieving injury and illness rates well below the industry average.

ConAgra continually exceeds industry performance records and sets extremely high standards for their competition. I am very proud to represent such a commendable Colorado facility. Congratulations to ConAgra for another job well done.

THE IMPACT OF LEFT-WING SPECIAL INTEREST GROUPS ON THE JUDICIAL NOMINATION PROCESS

HON. MARK E. SOUDER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 19, 2003

Mr. SOUDER. Mr. Speaker, yesterday I introduced into the RECORD several memos written by Democratic Congressional staff illustrating how deeply politicized the process of appointing new judges to the Federal bench has become. Today I am introducing two more such memos—which were reported by the Wall Street Journal last week—which further reveal the damage that a handful of liberal special interest groups are inflicting on that process.

The memos show how much influence is being wielded by left-wing fringe groups like the so-called People for the American Way and the Alliance for Justice, and extreme pro-abortion groups like the National Abortion Rights Action League (NARAL). These groups apparently were called on to dig up dirt on President Bush's judicial nominees, and were allowed to dictate which nominees to oppose and when to schedule them. One nominee was only supported because another liberal special interest group, the trial lawyers' lobby, wanted to remove him from the trial bench to the appellate bench. Taken together, these memos show the unhealthy influence these groups are having on the federal judiciary—a judiciary that is supposed to serve all the American people, and not just a few special interests.

MEMORANDUM

JUNE 4, 2002.

To: Senator Kennedy.

Subject: Meeting with Groups on Judges—Wednesday, 11:50 a.m.

As you know, the meeting with the groups to discuss the strategy on judicial nominations is scheduled for tomorrow at 11:50. Both Senator Schumer and Senator Durbin will be able to attend. The six principals who will attend are: (1) Wade Henderson, (2) Ralph Neas, (3) Leslie Proll of the NAACP LDF, (4) Nancy Zirkin, (5) Nan Aron, and (6) Kate Michelman. It turns out that neither Marcia nor Judy can make it tomorrow—Marcia has a board meeting and Judy, a family emergency.

We expect that the agenda will include a discussion of: (1) delaying a hearing for Dennis Shedd, a nominee to the Fourth Circuit, who Sen. Leahy would like to schedule on June 27th; (2) which circuit court nominees should be scheduled prior to adjournment; and, (3) our next big fight.

SCHEDULE

At present, there is only one noncontroversial circuit court nominee (with a complete file and blue slips) who has not already been scheduled for a hearing. This nominee is John Rogers (6th Circuit), who Senator Leahy will likely schedule for a hearing on June 13th. In addition, there have been two recent nominees to the 2nd Circuit and to the Ninth Circuit, whose records are now being researched, and who may prove to be noncontroversial.

Senator Leahy would then like to schedule Dennis Shedd on June 27th, Judge Priscilla Owen after the July 4th recess, and Miguel Estrada in September.

The groups should be encouraged to propose some specific nominees who can be moved forward before adjournment. Clearly, there are few nominees who are noncontroversial, but the groups should be pushed on whether they would agree on a hearing for some controversial nominees such as Steele, Tymkovich, or Michael McConnell (for whom Leahy has already promised a hearing), on the theory that these nominees are less problematic than others.

SHEDD

Senator Leahy has told the groups that he would like to have a hearing on Dennis Shedd this month. Senator Hollings is supportive of Dennis Shedd's nomination and is, reportedly, pressuring Senator Leahy to move forward on a hearing. The groups have strong concerns about Shedd. He is quite bad on civil rights and federalism issues, and he has hundreds of unpublished opinions that have not yet been reviewed. The groups are opposed to having a hearing on him this month in part because they do not believe that they will be able to do an adequate review of his extensive record by June 27th, particularly given that they are gearing up to oppose Judge Owen.

We believe that you should hear the groups' concerns regarding Shedd, but that you should strongly encourage the groups to work with South Carolina groups and individuals to apply pressure on Senator Hollings. We know that some of the groups, including LCCR and the NAACP will meet with Sen. Hollings on Thursday regarding Shedd, but more pressure will likely need to be applied because Sen. Hollings is quite committed to moving Shedd this month.

Recommendation: Encourage groups to work with South Carolina groups to influence Sen. Hollings.

OUR NEXT BIG FIGHT

The current thinking from Senator Leahy is that Judge Owen will be our next big fight, after July 4th recess. We agree that she is the right choice—she has a bad record on labor, personal injury, and choice issues, and a broad range of national and local Texas groups are ready to oppose her. The groups seem to be in agreement with the decision to move Owen in July.

Recommendation: Move Owen in July.

MEMORANDUM

To: Senator Durbin.

From:

Date: June 5, 2002.

Re: Meeting with Civil Rights Leaders to Discuss Judicial Nominations Strategy Thursday, June 6, 5:30 p.m., Russell 317.

Senator Kennedy has invited you and Senator Schumer to attend a meeting with civil

rights leaders to discuss their priorities as the Judiciary Committee considers judicial nominees in the coming months. This meeting was originally scheduled for late Wednesday morning.

This meeting is intended to follow-up your meetings in Senator Kennedy's office last fall. The guest list will be the same: Kate Michelman (NARAL), Nan Aron (Alliance for Justice), Wade Henderson (Leadership Conference on Civil Rights), Ralph Ncas (People For the American Way), Nancy Zirkin (American Association of University Women), Marcia Greenberger (National Women's Law Center), and Judy Lichtman (National Partnership).

The meeting is likely to touch upon the following topics:

—Their floor strategy for opposing D. Brooks Smith, who was voted out of Committee 12–7.

—Their concerns with Dennis Shedd, a controversial 4th Circuit nominee from South Carolina—Under pressure from Senator HOLLINGS—who apparently is backing SHEDD because the trial lawyers want him off the district court bench—Chairman Leahy is planning to hold a hearing in late June. The groups would like more time to read through SHEDD's many unpublished opinions, which were only recently provided to the Committee, and to request court transcripts. Based on a preliminary review, this nominee poses a number of problems: he has narrowly interpreted Congress's power under the 14th Amendment (in one instance, he was unanimously reversed by the Supreme Court); he has a long track record of dismissing civil rights claims; he once revoked indigent status for a litigant who used her mother's computer and fax machine to file pleadings; and he has made insensitive comments about the Confederate flag.

—The Judiciary Committee's schedule for the summer and fall. In spite of the White House's intransigence, the Committee continues to schedule hearings at a rapid pace—every two weeks through the end of the session. Bruce Cohen has outlined the following schedule:

June: Rogers (6th Circuit-KY); Shedd (4th Circuit-SC)

July: Owen (5th Circuit-TX); Raagi (2d Circuit-NY)

Sept: Estrada (DC Circuit); possibly Bybee (9th Circuit-NV) (backed by Reid)

Oct: McConnell (10th Circuit-UT)

Leahy has effectively promised that OWEN, ESTRADA, and MCCONNELL would get hearings this year. Like SHEDD, these three will generate significant opposition and controversy. The groups feel that OWEN is vulnerable to defeat, but ESTRADA and MCCONNELL will be hard to vote down in Committee.

—The White House's unwillingness to compromise. On NPR this week, White House Counsel Alberto Gonzalez said:

I'm not sure this [judges] is an area where there should be a great deal of compromise on principle. Regrettably, . . . we may have to be patient and wait to see what happens in the November election. And that may be viewed as a sort of crass political assessment but that is in fact true. One way to get this thing moving is to take back the Senate so that we can at least get our judges onto the full Senate floor.

At the moment, a number of Democrats—Edwards, Graham, Nelson (FL), Levin, Stabenow—are in stalled negotiations with the White House over judges.

HONORING SAMUEL FISHER FOR HIS HEROIC SERVICE IN WORLD WAR II

HON. JON C. PORTER
OF NEVADA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, November 19, 2003

Mr. PORTER. Mr. Speaker, I rise today to honor my constituent, Samuel Fisher, for his heroic service in World War II. As a rifleman with Company B, 49th Armored Infantry Battalion, Eighth Armored Division he helped participate in the final drive of the American and Allied armies that drove the Nazis from France and ended Hitler's rule over Germany. He, and the other brave soldiers of the 49th Armored Infantry, were instrumental in capturing the Ruhr Valley, the center of the German armament industry. By capturing the Ruhr, they deprived the Nazis of the weapons they had used for so long to bring oppression and death across Europe. I am proud to represent Samuel Fisher, and so many other American heroes from the Second World War, and urge this House to join me in thanking Samuel Fisher and all World War II veterans for saving our country, and the world, from fascism.

PAYING TRIBUTE TO NANCY RATZLAFF

HON. SCOTT McINNIS
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, November 19, 2003

Mr. MCINNIS. Mr. Speaker, it is with great pride that I rise today to pay tribute to a talented artist from Craig, Colorado. Nancy Ratzlaff uses her creative gift to inspire people to think outside the box. Her enthusiasm spirals through the community as she passes her knowledge of art to her students. I would like to join my colleagues here today in recognizing Nancy's tremendous service to the Craig community.

At sixty-one years old, Nancy Ratzlaff has been painting for more than 4 decades. She is both a commissioned artist and a teacher of her trade. Three years ago, Nancy suffered a heart attack that caused her to lose her leg and spend 5 months in the hospital. However, despite cumbersome crutches and an artificial leg, she continues to find time to teach painting at Craig's Colorado Northwest Community College. Nancy encourages her students to learn from each other and let art open them up to new challenges. She maintains that everyone has a creative drive inside because anyone who can dream can create.

Mr. Speaker, Nancy Ratzlaff is a dedicated individual who uses her talent to enrich the lives of members of her Craig community. Nancy has demonstrated a love for art that resonates in her compassionate and selfless service to her town. Nancy's enthusiasm and commitment certainly deserve the recognition of this body of Congress.

PERSONAL EXPLANATION

HON. JOHNNY ISAKSON
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, November 19, 2003

Mr. ISAKSON. Mr. Speaker, I was unavoidably detained yesterday and missed the votes. Had I been present I would have voted as follows: Rollcall number 620—"yes"; rollcall number 621—"yes"; rollcall number 622—"yes"; and rollcall number 623—"yes."

AMERICANS PUSH FOR RENEWED FIGHT AGAINST DRUNK DRIVING

HON. NITA M. LOWEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, November 19, 2003

Mrs. LOWEY. Mr. Speaker, Congress has made good progress over the past 20 years in combating drunk driving, culminating when we passed legislation creating a national .08 blood alcohol content level in 2000. I am pleased that New York recently passed .08, which will save 500–600 lives in the U.S. annually when it is adopted by all states. All but a handful of states have .08 laws on the books—a testament to the effectiveness of the sanction.

Despite this progress, a disturbing complacency about drunk driving seems to have settled upon the nation. In 2002, alcohol-related fatalities rose for the third year in a row, and now account for well over 40 percent of all traffic fatalities. Last year, drunk driving took nearly 18,000 lives. Public policy experts are now beginning to grasp the full economic costs of drunk driving. When one factors health care costs, lost work time, collision repairs, and insurance, the price tag exceeds $200 million annually.

Almost 6 years ago, a constituent, Burton Greene, was killed by a repeat offender with a .18 blood alcohol content. Mr. Greene's death inspired me to introduce legislation requiring tougher penalties for repeat offenders and high-BAC drivers.

About one-third of all drunk drivers are repeat offenders. Unfortunately, the lack of a national minimum standard for punishing repeat offenders and high-BAC drivers has created an easily exploitable, unwieldy patchwork of laws that varies from state to state. My legislation would require states to pass laws that employ a comprehensive approach to fighting drunk driving, including license restrictions, effective vehicle sanctions, treatment programs, ignition interlocks, fines, and imprisonment. This comprehensive system of penalties builds on the recommendations of numerous studies, as well as measures proven to be effective on the state and local level.

I am proud that Good Housekeeping magazine, which has always tackled the leading issues of the day, has become a partner in the effort to combat drunk driving. An article about Brigid Kelly, a young woman killed by an impaired driver with a suspended license, appeared in the July 2003 issue of the magazine. Brigid's senseless death, which has

brought untold grief to her family and friends, is a wake up call to the nation and a powerful reminder of the stakes in the battle against drunk driving.

I was also touched by the response to the article. Over 6,000 readers took the time to write Good Housekeeping in support of national minimum standards for punishing repeat offenders. This outpouring leaves no doubt about where Americans stand on tougher penalties for chronic drunk drivers.

More than 40 people die daily from drunk driving. We should do all we can to prevent such tragedies. I encourage my colleagues to listen to the voices of Good Housekeeping's readers and support swift passage of the Burton Greene bill.

CONFERENCE REPORT ON H.R. 6, ENERGY POLICY ACT OF 2003

SPEECH OF

HON. TAMMY BALDWIN

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 18, 2003

Ms. BALDWIN. Mr. Speaker, yesterday, this House considered H.R. 6, the Energy Policy Act of 2003. Our country has been waiting almost three years for a sound and comprehensive energy bill, and I am sad to say that they will still be waiting if H.R. 6 is signed into law.

It was my hope that rolling blackouts in California three years ago, the terrorist attacks on September 11 two years ago, and the massive blackouts in the northeast this past August would have provided Congress with the will and fortitude to pass a truly comprehensive energy bill. This bill should have presented a clear vision of what our energy policies should be well into the 21st century; provided us with the tools and resources to reduce our dependence on foreign oil and improve the security of our nation; and made investments in alternative and renewable fuels to provide better answers to our energy needs than simply encouraging more drilling and more pollution. It is crystal clear that H.R. 6 fails on all these counts.

The Republican leadership crafted this 1,700-page bill in secret and sold out to special interests. For months, Republican leaders presided over meetings in which they were supposed to be laying the foundation for the nation's long-term energy priorities. Instead, they chose to negotiate the bill alone, refusing even to tell their Democratic colleagues where or when important sessions were being held. I believe that cowering under the cloak of darkness and cutting backroom deals are not the ways a bill of this magnitude should be debated, discussed, and crafted.

The Energy Policy Act makes a number of changes to our nation's electricity system. The blackouts that wreaked havoc across parts of the Midwest and Northeast four months ago prompted legislators to include much-needed electricity reliability standards in the final bill. I believe this is a good first step in improving the transmission and distribution of the electricity that powers our homes and businesses. Despite this sound provision, H.R. 6 is wrong to repeal the Public Utility Holding Company Act (PUHCA). PUHCA was designed to oversee mergers and prevent power companies from investing in unrelated businesses. PUHCA has been the linchpin in protecting investors and consumers from market fraud and abuse by utilities. By repealing PUHCA and not replacing it with a better alternative, the risk of future Enron-type abuses increases exponentially and our constituents will be the victims.

I am pleased H.R. 6 does not include language that would allow drilling in the Arctic National Wildlife Refuge (ANWR) or allow for an inventory of oil reserves in our nation's Outer Continental Shelf—but, any benefits of this bill provides our environment stop there. The bill expedites the approval of permits for drilling and mining on federal lands. H.R. 6 also exempts oil and gas drilling activities from some of the major tenants of the Clean Water Act, such as exempting the industry from certain requirements when they inject diesel fuel and other harmful chemicals underground when drilling.

The most egregious provision of this bill grants the producers of MTBE, a gasoline additive that pollutes underground drinking water, a liability waiver. While the bill phases out the use of MTBE over the next decade, it makes taxpayers pick up the bill for cleaning up the mess. More incredulously, the bill provides the producers of MTBE $2 billion in subsidies to help them convert MTBE into other types of chemicals. I believe this is simply unacceptable. Polluters should be made to clean up and pay for their messes, not the American taxpayer.

Altogether, the energy proposal includes $23 billion in tax giveaways over 10 years and calls for tens of billions of dollars in additional spending. The Republican leadership rejected Senate provisions that would have partially paid for these costs, despite a deficit in the federal budget that could top $500 billion this year. Two-thirds of the tax breaks would go to the oil, natural gas and coal industries, helping to perpetuate the country's dependence on fossil fuels. Less than a quarter of the tax breaks would promote the use and development of renewable-energy sources, and less than a tenth would reward energy efficiency or conservation.

It makes no sense to lavish billions of dollars in subsidies to companies that consistently earn large profits every year. The bill does encourage the use of some alternative fuels such as ethanol—which I strongly support—and $2.5 billion to boost development of hydrogen-powered vehicles. However, the money allocated for renewable and alternative fuel development is a mere pittance of what is given to producers of traditional sources of energy.

This bill is equally bad for what it does not contain: the legislation does almost nothing to reduce the nation's dependence on foreign gas and oil and nothing to reduce global warming. For example, this bill does not increase the fuel efficiency standards for cars and trucks. The bill may even wind up lowering the current 27.5 miles per gallon average since it discourages tougher standards. It also scraps a Senate plan that would have required electric utilities to generate more of their power from renewable sources like wind and solar energy by 2015. Finally, outside of a few provisions on electrical appliances and heating systems, the bill does not significantly encourage energy conservation.

Instead of creating and carrying out a vision in this bill, lawmakers have put together a jigsaw puzzle with hundreds of unrelated pieces crammed together. A few initiatives are worthwhile, but most look more like a laundry list of special-interest subsidies. Together, they do not add up to a policy that I believe will come close to meeting our future energy needs. While it took three years to finish this energy bill, it is my fear that Congress will spend the next several decades fixing the problems this bill could eventually create.

IN REMEMBRANCE OF LILLIAN KESSLER

HON. FORTNEY PETE STARK

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 19, 2003

Mr. STARK. Mr. Speaker, I rise to pay tribute to my longtime friend Lillian Kessler. It is with sadness that I announce Lillian's recent passing. She resided in my 13th congressional district and I was pleased and proud to have her support and friendship for many years.

As a truly committed political and community activist, Lillian spent years volunteering in the community and working tirelessly to elect individuals to public office. She was proud to call herself a Democrat for more than 50 years. Lillian and her husband Mike were the first two people to encourage me to seek my present office in Congress.

Lillian was an active member in the Hayward Demos Democratic Club. Her fellow club members describe her as "a tower of strength for their club, the Democratic Party and progressives everywhere. She was a quintessential activist, organizing precinct walking, phone banks, fundraisers, all the necessary jobs to run and win grassroots campaigns."

I shall remember with fondness and admiration Lillian's passion, strength and perseverance to make a difference. She believed that just one progressive idea or action, no matter how small, could strengthen each and every community for the better.

Lillian will be sorely missed by me and all who knew her. My thoughts and condolences are with her husband Mike and her children, Civia and Stuart.

CONFERENCE REPORT ON H.R. 6, ENERGY POLICY ACT OF 2003

SPEECH OF

HON. CAROLYN B. MALONEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 18, 2003

Mrs. MALONEY. Mr. Speaker, I rise today in opposition to this conference report. H.R. 6 contains several harmful provisions including exempting the producers of MTBE from product liability claims and repealing the Public Utility Holding Company Act, which limits

mergers between utilities companies. Additionally, the conference report does not prioritize the use of renewable resources by large utilities to generate power. H.R. 6 rolls back important safeguards in the Clean Water Act and the Safe Drinking Water Act which are critical in keeping the nation's waterways safe for people and wildlife. The country needs an energy policy that reduces pollution, protects consumers, and reduces the burden on the nation's electricity grid. This bill fails to meet those standards. I regret that we were not given the opportunity to vote on legislation that would reduce our dependence on foreign sources of oil.

PERSONAL EXPLANATION

HON. STEVE KING

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 19, 2003

Mr. KING of Iowa. Mr. Speaker, I was absent during rollcall votes 620, 621, 622 and 623. Had I been present, I would have voted "aye" on 620, 621, 622 and 623.

PAYING TRIBUTE TO MARILYN A. HALL—

HON. SCOTT McINNIS

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 19, 2003

Mr. MCINNIS. Mr. Speaker, it is with great pride that I rise today to pay tribute to a remarkable woman from my district. Marilyn Hall of Cortez, Colorado is a dedicated public servant who has devoted many years to promoting safety and order in her community. Marilyn has a friendly soul and touches the heart of everyone she meets. I would like to join with my colleagues here today in recognizing Marilyn's tremendous service to the Cortez community.

Marilyn served the Cortez Police Department for 29 years. She began as a dispatcher and then moved to records before retiring. Marilyn was excellent at her job and was instrumental making the system of city and county record keeping significantly more efficient. In her retirement, Marilyn is an active community member who is a vigorous advocate for Mothers Against Drunk Drivers. In addition to volunteer work, Marilyn will spend her retirement with her many loving family members and friends.

Mr. Speaker, Marilyn Hall has shown incredible dedication in her service to the Cortez community. Marilyn's friendly assistance to others is a shining example of what it means to be a good citizen. It is my great honor today to recognize her excellent work ethic and selflessness before this body of Congress. Thanks Marilyn, you will be missed.

H.R. 2205: NATIONAL MUSEUM OF AFRICAN AMERICAN HISTORY AND CULTURE ACT

HON. GREGORY W. MEEKS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 19, 2003

Mr. MEEKS of New York. Mr. Speaker, I rise to express my unparalleled support for this bill. However, I do not feel that this bill is complete in its entirety. Provisions concerning a feasibility study for a future sister museum facility at the site of the African Burial Ground in New York City, which were present in the Lewis/Watts bipartisan piece of legislation in the last session, are not included in this current bill. The erection of the African Burial Ground International Memorial Museum and Research Center in lower Manhattan is a goal that I intend to work feverishly on with my New York colleagues and others. Such a facility would pay homage to those souls who were brought to this country to help build it, while under enslavement. Such a facility would join the Statue of Liberty, Ellis Island, the Museum of the American Indian, the World Trade Center site, and other great New York City landmarks as a national and international symbol that tells America's full story of freedom, the quest for freedom, and the openness of our society. Most important, the study of African culture through the results of DNA testing on the African Burial Grounds will help to further educate and enlighten our citizens to a culture that is central to the building of this proud nation.

As the Lewis/Watts bill reflected in a Finding, the Secretary of the Smithsonian declared in 1998 that the African Burial Ground site provided the "perfect" opportunity to dissect the institution of slavery in this country—urban, rural, northern, and southern—including the aspects of the international trade. The Burial Grounds in New York are home to the remains of 20,000 enslaved Africans. These men and women were first generation African Americans, who had to endure inhumane conditions aboard slave ships, before they were forced into labor.

I attended the ceremonies of October 3rd and 4th at the African Burial Ground commemorating the reinterment of some 430 sets of remains that had been under study at Howard University for the last decade. Thousands of people were also in attendance for this event, signaling a clear indication of the powerful feelings of respect that lies with our citizens for an African sanctum in lower Manhattan.

I feel that, ultimately, the new national museum should follow the model of the National Museum of the American Indian, with facilities at both Washington and New York City. The facility in New York, in combination with the magnificent facility to be created here in Washington, would have an overall national and international impact of breathtaking scope and scale. As evident during the ceremonies, an African Burial Ground museum facility would also play a significant role in the revitalization of lower Manhattan in this post-9/11 world, with the hopes that it will become a major national and international visitor's mecca that would join with other New York sites in bringing millions of people, and with them, an economic boom to the entire area.

I whole-heartedly believe that the African Burial Ground is a true national treasure. It is unique in this nation and all the world as an archaeological site, and a site of unparalleled significance, symbolism, and power. A site and museum facility of this magnitude of importance must be part of any national museum, and it must be part of New York's African Burial Grounds.

I would like to thank John Lewis for his long fight to make the dream of a National Museum of African American History and Culture a reality. I would also like to thank my distinguished colleagues from Kansas and Connecticut, Senators BROWNBACK and DODD, for leading these efforts in the Senate.

MOTION TO GO TO CONFERENCE, OBEY MOTION TO INSTRUCT

HON. ROBERT T. MATSUI

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 19, 2003

Mr. MATSUI. Mr. Speaker, yesterday's CONGRESSIONAL RECORD reflects my vote as "yea" on rollcall Vote 624, Representative OBEY's motion to instruct conferees on the Agriculture, Rural Development, Food and Drug Administration, and Related Agencies Appropriations Act of 2004. I would like to state for the RECORD that my vote should have been "nay."

I have long opposed the reimportation of prescription drugs because it creates a significant safety risk for consumers. A recent examination of several mail facilities by FDA and U.S. Customs reinforces these concerns. After six days in four cities, these examinations found drugs being reimported that have never been approved by the FDA, without labeling or instructions for safe use, and even some that the FDA has withdrawn from the U.S. market for safety reasons. In addition, expanding the importation of prescription drugs increases the likelihood that seniors will receive counterfeit drugs, a potentially very serious health hazard.

Finally, liberalizing the importation of prescription drugs does not address the underlying problem of high prescription drug costs. There are other legislative remedies that can decrease prescription drug costs without undermining consumer safety. For these reasons, I oppose the Obey motion to instruct conferees on the Agriculture, Rural Development, Food and Drug Administration, and Related Agencies Appropriations Act, 2004.

RECOGNIZING THE PUBLIC SERVICE OF DON MOCK

HON. MARK UDALL

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 19, 2003

Mr. UDALL of Colorado. Mr. Speaker, I rise today to honor Don Mock for his exemplary public service as a member of the Boulder City Council from 1996 through 2003. I would

like to thank him on behalf of all Boulder's citizens for the depth and diversity of contributions he has made to ensure that our city remains a very special place to live.

Raised in Florida, Don received his BS and MS in Physics from the University of Florida, and his PhD in Atmospheric Sciences from the University of Washington. He has worked as a Research Assistant in the Department of Atmospheric Sciences at the University of Washington and as a Support Scientist for the Physical Oceanography Group of the NASA/Caltech Jet Propulsion Laboratory. In 1989, Don moved to Colorado to work as Systems Manager for the Cooperative Institute for Research in Environmental Sciences at the University of Colorado in Boulder. Since 1991 he has been a Systems Manager and later a Director of Computing and Network Services at the Climate Diagnostics Center of the National Oceanographic and Atmospheric Administration's Environmental Research Laboratories.

In 1996, Don was appointed to the Boulder City Council and elected a year later to another term. On the Council, he quickly earned the respect of his colleagues for his intelligence, sound judgment, and moderate approach to a wide range of issues. He provided thoughtful and skilled leadership in the areas of budget policy, taxes, transportation, affordable housing, school overcrowding and the environment. Don was actively engaged in resolving the status of the 9th and Canyon hotel site and was a strong proponent of the comprehensive rezoning project to address commercial growth issues.

He has served successfully in such diverse organizations as the Denver Regional Council of Governments, the Bureau of Conference Services and Cultural Affairs, the Boulder Community Celebrations, and the Dairy Center for the Arts. An important part of his focus on Council has been sensible growth management, sustainable use of resources, and a strong, stable economy.

Prior to his appointment to Council, Don was chair of the City's Parks and Recreation Advisory Board and served four years as a cochair of the Whittier Neighborhood Association, as well as two years on the Steering Committee for the Pine Street/Whittier Traffic Mitigation Project. In 1995, he was especially effective in working with the Citizens for Parks and Recreation to successfully pass the Parks Ballot Issue which led to new acquisitions of park land in the city of Boulder. Over the years, Don has been unswerving in his commitment to policies that serve the environment, the education and health of people, and principles of integrity and fairness.

I ask my colleagues to join with me in expressing our gratitude to Councilman Mock for his years of public service and his contributions to the people of Boulder, Colorado. I wish him continued success in all his future endeavors.

PERSONAL EXPLANATION

HON. BETTY McCOLLUM

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 19, 2003

Ms. MCCOLLUM. Mr. Speaker, due to a scheduling conflict, I was unable to vote on rollcall votes 620 to 623. Had I been present, I would have voted the following:

On rollcall vote 620, S.J. Res. 22—Recognizing the Agricultural Research Service of the Department of Agriculture for 50 years of outstanding service, I would have voted "aye".

On rollcall vote 621, S.J. Res. 18—Commending the Inspectors General for their efforts to prevent and detect waste, fraud, abuse, and mismanagement, and to promote economy, efficiency, and effectiveness in the Federal Government during the past 25 years, I would have voted "aye".

On rollcall vote 622, H. Con. Res. 299—Honoring Mr. Sargent Shriver for his dedication and service to the United States of America, I would have voted "aye".

On rollcall vote 623, on hour of meeting, I would have voted "aye".

"FOR THOSE WHO HAVE FALLEN"—A NATIONAL TRIBUTE SONG

HON. MARK GREEN

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 19, 2003

Mr. GREEN of Wisconsin. Mr. Speaker, today before this house I would like to recognize "For Those Who Have Fallen," a national tribute song written by Tonia Barnes (Arpke) of Clyman, Wisconsin. At a time when our brave men and women in uniform are fighting to protect freedom and democracy in the Middle East, it is important for citizens across the country to support their efforts, and remember America's fallen heroes who have secured peace in battles past. This song is an eloquent tribute to all those who sacrificed for our nation, and it is with great honor that I submit the following lyrics for the RECORD.

Working in an office or on the beat
Looking from a window, from a city street
The heart of a stranger giving his all
Doing what he can when he got the call.

America hold your head up high
The Eagle is still the pride of the sky
She shed many tears today
And spread her wings as if to say.

For those who have fallen
I will never forget
The sacrifice you've given
When the face of God you met
For those who have fallen
I will never forget.

Searching through all the rubble
Knowing that lives are on the line
Hands that never get tired
Paws, though bloody, never whine.

A strong shoulder to lean on
An ear listening to the horrible tale
America will keep on living
And our pride will always prevail.

For those who have fallen
I will never forget
The sacrifice you've given
When the face of God you met
For those who have fallen
I will never forget.

For those who have fallen
I will never forget
The sacrifice you've given
When the face of God you met
For those who have fallen
I will never forget.

For those who have fallen
I will never forget
The sacrifice you've given
When the face of God you met
For those who have fallen
I will never forget.

For those who have fallen
I will never forget.

THE TRANSPORTATION EQUITY ACT: LEGACY FOR USERS

HON. JAMES L. OBERSTAR

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 19, 2003

Mr. OBERSTAR. Mr. Speaker, for most of the 20th Century, the primary focus of surface transportation policy was constructing a safe, efficient highway system, the Interstate and Defense Highway System, to connect our cities, farms, and defense bases. We invested more than $114 billion in constructing the 42,800–mile Interstate system and that investment has paid phenomenal returns in mobility, productivity, and economic growth. It is an unparalleled success: 1 percent of highway miles carry 24 percent of traffic. Today, the vision of that system is complete.

As the Interstate era came to a close, a new vision of transportation began to emerge—shifting from a focus on moving vehicles to providing transportation choices. The early framing of this vision was embodied in Congress' passage of the Intermodal Surface Transportation Efficiency Act (ISTEA) in 1991. The "highway bill" became more than that as we focused new efforts (and funding) on transit, congestion mitigation, intelligent transportation systems, and transportation alternatives such as pedestrian and bike paths. The landmark achievement of ISTEA was its vision for transportation policy: moving beyond where highways now lead us, to where it is people want to go and how we can give them choices to get there.

In 1998, Congress built upon ISTEA by ensuring that we would begin to make the necessary infrastructure investment to achieve this vision. With passage of the Transportation Equity Act for the 21st Century (TEA 21), we authorized $218 billion for our highway, transit, and highway and motor carrier safety programs—the highest surface transportation funding levels in U.S. history and 44 percent more than ISTEA. However, we knew too well that increased "authorization levels" meant nothing if they did not become a reality. We unlocked the Highway Trust Fund and codified a principle: the highway user fees collected from the traveling public will be invested in our surface transportation infrastructure each and every year. That is the landmark achievement of TEA 21 and, over its life, we invested $214 billion in our Nation's surface transportation infrastructure—$100 million more in that 6-year period than in the 40 years of building the Interstate.

On the first anniversary of TEA 21, I joined our Committee Leadership (then-Chairman SHUSTER, Chairman PETRI, and Subcommittee Ranking Member RAHALL), then-Senator

Chafee, Senator VOINOVICH, and Secretary of Transportation Rodney Slater and said: "Although the legacy of the surface transportation system of the 21st Century is far off, we have begun the journey of writing that legacy here and now. ISTEA and TEA 21 have set the framework for the beginning of the new century. Nevertheless, we must continue to develop innovative solutions if we are to overcome our Nation's many transportation problems."

The journey of writing that legacy continues here today. The "Transportation Equity Act: A Legacy for Users" bill builds upon the vision of ISTEA, maintains the guaranteed funding principle of TEA 21, and outlines its own landmark achievement: providing the investment levels necessary to maintain and begin to improve our Nation's highway and transit infrastructure. The bill provides a 72 percent increase in funding over TEA 21. We increase investment in highway and highway and motor carrier safety programs from $177 billion under TEA 21 to $306 billion under this bill. Similarly, for transit, we almost double the investment over 6 years: growing from $36.2 billion guaranteed under TEA 21 to $69.2 billion under the introduced bill.

Although these funding levels are significant increases over current levels, it is important to note that they are not our numbers, they are the Department of Transportation's own estimates of the Federal investment necessary to maintain and begin to improve our Nation's surface transportation system. These funding levels recognize what the Texas Transportation Institute has repeatedly told us: congestion is beginning to cripple our largest cities, the primary engines of our Nation's economic growth. In 75 large metropolitan areas alone, the cost of congestion is $69.5 billion—including 3.5 billion hours of delay and 5.7 billion gallons of excess fuel consumption. The average annual delay for every person in these cities has climbed to 26 hours. While these statistics are startling, the average American family does not need them recited—they are stuck in traffic on their way home from work, picking up the kids at daycare, or running the endless errands that seem a part of today's society, and they lose what precious little time they have together.

More importantly, our Nation's highways, bridges, and transit systems are not as safe as they need to be and the highway death toll is unacceptably high. Over the past 25 years, 1.2 million have died on our roads. Last year, 42,815 people died and 2.9 million more were injured on our highways. Highway fatalities remain the leading cause of death of our youth (people ages 4 to 33). In addition to the personal tragedy of each of these deaths and many of the injuries, the economic cost of these accidents is more than $230 billion per year.

Considering the congestion and highway safety impacts of insufficient investment in transportation alone, our economy is losing $300 billion per year because we are not investing the necessary resources to maintain and improve our Nation's transportation systems. We cannot afford to continue to short-change our Nation's transportation systems. To effectively reduce congestion, to increase mobility, to truly improve highway safety, and to achieve continuing long-term increases in productivity and economic growth, we must invest in our Nation's transportation future. And we must do it now. That is why we join together today to introduce this bill to authorize $375 billion over 6 years.

The bill increases the minimum guarantee rate of return from 90.5 percent in FY2003 to 95 percent in FY2009. The bill also provides significant increases for the core highway programs. The National Highway System increases from $27.4 billion under TEA 21 to $39 billion under this bill. In addition, after a portion of the minimum guarantee funds are distributed to the core highway programs, NHS funding increases to $49.3 billion over the next 6 years. Similarly, the Bridge program grows from $19.3 billion under TEA 21 to $34.3 billion with the redistributed minimum guarantee funds. Finally, the CMAQ program almost doubles—growing from $7.9 billion to $13.9 over the next 6 years.

Moreover, the bill provides similar increases for transit. Guaranteed transit funding increases 92 percent to $69.2 billion. The core transit formula programs increase to $34 billion and the transit capital program (new starts, rail modernization, and bus capital invesment) increases to almost $30 billion over the 6 years of the bill.

Beyond building upon the success of ISTEA and TEA 21, as I said at the TEA 21 anniversary, we must continue to develop innovative solutions if we are to overcome our Nation's many transportation problems. Let me touch on a couple of new programs included in the bill that propose new and different way to address transportation issues.

As I have traveled the country over the last several years to review the condition of our Nation's infrastructure, I have noted that, despite the significant funding increases of TEA 21, current levels of surface transportation investment are insufficient to fund critical high-cost transportation infrastructure facilities that address critical economic and transportation needs. These projects, whether it is Alameda Corridor East or Chicago's CREATE, have national and regional benefits, including facilitating international trade, relieving congestion, and improving transportation safety by significantly improving freight and passenger movement in critical transportation bottlenecks. The bill creates a $17.6 billion Projects of National and Regional Significance program to enable the Secretary of Transportation to competitively select such projects of national significance (project cost of more than $500 million).

I also want to touch on a much smaller, but equally important, new program: Safe Routes to School. Several years ago, I began working with two communities, Marin County, California and Arlington, Massachusetts, to develop a program to enable and encourage children to walk or bike to school. These two pilot projects have been incredible successes. With this experience in hand, the bill creates a new $1.5 billion Safe Routes to School formula program to enable and encourage children to walk or bike to school; to make bicycling and walking to school a safer and more appealing transportation alternative, thereby encouraging a healthy and active lifestyle from an early age; and to improve safety and reduce traffic, wasted fuel, and air pollution in school neighborhoods.

Finally, the Committee's proposal will provide badly needed economic stimulus. The Federal Highway Administration reports that every $1 billion of federal funds invested in highway infrastructure creates 47,500 jobs and $6.2 billion in economic activity. When enacted, the Committee's introduced bill will create and sustain up to 3.6 million family-wage construction jobs, including 1.7 million new jobs.

Moreover, a recent study found that the Committee's bipartisan proposal to invest $375 billion in surface transportation over the next 6 years would add $290 billion more to the Nation's Gross Domestic Product than the administration's proposal to invest only $247 billion. The Committee's proposal would also lead to an additional $129 billion of household disposable income and. an additional $98 billion in consumer spending—millions of new, good-paying jobs, billions of dollars of new consumer spending: now that's the way to get the economy growing again.

I join with Chairman YOUNG, Subcommittee Chairman PETRI, and Subcommittee Ranking Member LIPINSKI, and the Members of the Committee on Transportation and Infrastructure, in introducing this bipartisan bill today. We will continue to work together on the journey of writing the legacy of our surface transportation future.

TRIBUTE TO PAUL SCANNELL

HON. ANNA G. ESHOO

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 19, 2003

Ms. ESHOO. Mr. Speaker, I rise today to honor a distinguished Californian, Paul Scannell, as he retires from his service as Assistant County Manager of the County of San Mateo, California.

Paul Scannell has served as Assistant County Manager since 1982. During that time he has represented the County in complex and sensitive negotiations with other governmental agencies, companies, and persons doing business with the County. He's also worked in cooperation with County department managers to recommend County programs and activities, and managed the County team responsible for public financing issues. He has served on a wide variety of committees, as well as advising and staffing the Charter Review Committee. He has also acted as the County Manager in the Manager's absence.

Paul Scannell prepared for his career by earning a Bachelor's degree in Economics from the University of San Francisco and a Master's of Public Administration from Golden Gate University. He also pursued graduate studies in Economics at the University of California, Berkeley. He held positions of increasing importance with the City and County of San Francisco between 1964 and 1982, including serving as Deputy Director of the Clean Water Program, Assistant to the Chief Administrative Officer and as Senior Departmental Personnel Officer at San Francisco General Hospital.

I had the honor to work with Paul Scannell for ten years as a Member of the Board of Supervisors, and I saw and experienced firsthand

his professionalism, his integrity and his extraordinary knowledge of County government.

Mr. Speaker, I ask my colleagues to join me in honoring Paul Scannell for his superb service to our community and our country and wish him every blessing in the years ahead. He has established the gold standard for public service and we are grateful to him for it.

PAYING TRIBUTE TO BOB GERLER

HON. SCOTT McINNIS

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 19, 2003

Mr. MCINNIS. Mr. Speaker, it is with great pride that I rise today to pay tribute to an extraordinary public servant from Otero County, Colorado. Bob Gerler is a compassionate mental health advocate who has dedicated his life to improving the quality of care at Southeast Mental Health Services. I would like to join my colleagues here today in recognizing Bob's contributions to Otero County.

In recognition of his 24 years of service, Bob has been named the Colorado Behavioral Healthcare Council's 2003 Outstanding Board Member of the Year. Over time, Bob has been instrumental in implementing numerous programs for the betterment of patient's lives. His dedication, integrity and intelligence have truly made Bob a tremendous asset to the board.

In addition to his service to Southeast Mental Health Services, Bob has also served as a County Commissioner, a member of the South Sink Water Company Board of Directors, and chairman of Otero Junior College Council.

Mr. Speaker, Bob Gerler is a dedicated community leader who willingly devotes his time to improving the lives of those in need. Bob has been a reliable and innovative administrator over the course of his many years of public service and I am honored to pay tribute to him for his many contributions to the Colorado community. Congratulations on a well deserved award Bob.

TRIBUTE TO SPENSER HAVLICK

HON. MARK UDALL

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 19, 2003

Mr. UDALL of Colorado. Mr. Speaker, I rise today to pay tribute to Spenser Havlick, who this month is retiring from membership on the Boulder, CO, City Council. Elected to the council in 1982, Spense has had 21 years of distinguished public service.

Born in Oak Park, IL and raised in Green Bay, WI, he received his B.A. Degree from Beloit College, his M.A. from the University of Colorado in limnology and his Ph.D. in environmental planning and water resource management from the University of Michigan.

He became the Assistant Dean and Director of the College of Environmental Design at the University of Colorado in Boulder in 1975. His research and teaching focused on natural hazard mitigation, the citizen's role in the planning process, and the impact of urbanization on the environment. He has written on ecology and design and is preparing another book on transportation management and traffic calming.

He has taught at the University of Michigan and Murdoch University in Western Australia, consulted for the U.S. Environmental Protection Agency, the U.S. Army Corps of Engineers, the National Science Foundation and the U.S. Information Agency.

With this outstanding academic background, Spense has been a champion of the values that embody the spirit of Boulder. His commitment to defending these values made him a distinctive member of the council.

A passionate environmentalist, Spense had a two-decade struggle with transportation problems and worked diligently to promote public transportation, rail service between Denver and Boulder, bicycle paths, city open space and pedestrian walkways.

In his role as professor of environmental design at the University of Colorado, Spense encouraged his students to adopt Boulder's environmental values. He urged students to give up their cars, get more exercise and walk, or use alternative transportation.

A top vote getter in all his elections, Spense promoted a strategy to find more affordable housing, worked on growth management, led the effort for the largest purchase of open space in the history of Boulder and worked to streamline the city's budget in tough economic times.

Spense's civic commitment is demonstrated through his service on the City Council Environmental and Transportation Committees, as an Eco-cycle block leader, and as a Commissioner for the Boulder Urban Renewal Authority.

The City Council of Boulder, CO, has been fortunate to have had Spenser Havlick as a member for the past 21 years. On behalf of Boulder's residents, I wish him well as he continues to pursue his commitment to a better community and State.

PERSONAL EXPLANATION

HON. MIKE McINTYRE

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 19, 2003

Mr. MCINTYRE. Mr. Speaker, on Thursday, November 6, 2003, I was unavoidably absent for rollcall vote 612, final passage of H.R. 1829, the Federal Prison Industries Competition in Contracting Act. Had I been present I would have voted "yes" on rollcall vote 612.

HONORING JEROME HOLTZMAN

HON. HENRY J. HYDE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 19, 2003

Mr. HYDE. Mr. Speaker, I rise today to recognize Jerome Holtzman, who on November 20 will receive the prestigious Chicago Athletic Association Ring Lardner Award. Jerome Holtzman has forgotten more about baseball than most will ever know and he is well deserving of the award. Chicago Sun-Times sports columnist Ron Rapoport honored Mr. Holtzman in his column on November 11—a column I am pleased to share with my colleagues:

FOR HIS SCOOPS AND SAVES, HOLTZMAN AWARDED HONOR

The major exhibit in Jerome Holtzman's baseball legacy always will be his invention of the save rule, but my favorite story about him is the time he scooped the judge.

Charlie Finley was suing baseball commissioner Bowie Kuhn, and Holtzman, who had covered every day of the trial for the Sun-Times, got the word that Finley had lost. Holtzman rushed the story into the last edition of the paper, which so infuriated people at the Tribune, they rousted the judge out of bed after midnight to demand some information.

''But I haven't even written the decision yet,'' the judge protested.

Holtzman, who receives the Chicago Athletic Association's Ring Lardner Award on November 20, and I tried to figure out Monday how many baseball games he has covered in his life. The best we could come up with was about 200 a year for 28 years and maybe 100 a year for the decade after that. So how many is that—7,000 or 8,000? A lot, anyway.

''We never had any days off,'' said Holtzman, who joined the old Chicago Times as a copy boy in 1943, before it merged with the Sun. ''Maybe if I didn't go to the All-Star Game, I'd have a two- or three-day break, but otherwise it was every game from spring training to the World Series.''

Holtzman was more than just a sportswriter, though. He became our trade's historian, with his classic book ''No Cheering in the Press Box'' and his beautifully bound reprints of sports books, such as ''Eight Men Out, The Boys of Summer and Babe.''

When Holtzman invented the save rule, he received a bonus of $100 or $200 from The Sporting News. The best closers soon became rich men because their performances came with numbers attached. Or as former Expos relief ace Jeff Reardon once said, ''Jerome Holtzman is a friend of mine.''

Mine, too.

The Lardner Awards dinner will be a star-studded affair, with David Halberstam presenting an award to Bob Costas, Ira Berkow giving Holtzman his plaque and Bill Jauss honoring former Chicago Daily News sports editor John Carmichael.

HIV/AIDS EPIDEMIC IN DALLAS-FORT WORTH AREA

HON. EDDIE BERNICE JOHNSON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 19, 2003

Ms. EDDIE BERNICE JOHNSON of Texas. Mr. Speaker, I rise today to address the steady meteoric rise of the deadly epidemic of HIV/AIDS in the Dallas-Fort Worth area. The HIV/AIDS epidemic is proving to be one of the most devastating social conditions of our time.

In my home state of Texas, the numbers have been steadily rising since 1998 at a rate of about 7 percent per year. In fact, according to the Texas Department of Health, Dallas County reported the highest number of new HIV positive individuals in Texas, that's just

ahead of Harris County (which includes Houston) which reported 1,212 new HIV cases.

So far in 2003, Dallas County has reported 609 new HIV cases and 355 new AIDS cases. Moreover, so much work needs to be done to inform the public about this disease's disproportionate impact on African Americans.

Dallas County Health and Human Services chief epidemiologist announced that there were 1,271 new HIV cases and 548 new AIDS cases reported in 2002. African Americans, comprise 20 percent of the Dallas County population, but 41 percent of the new HIV cases and 46 percent of the new AIDS cases in 2003.

As reported by the Centers for Disease Control and Prevention (CDC), although African Americans make up only about 12 percent on the U.S. population, cumulatively they have accounted for half of the new HIV infections reported in the United States in 2001.

African Americans have accounted for more than 320,000, or 38 percent, of the more than 833,000 estimated AIDS cases diagnosed since the beginning of the epidemic. In addition to experiencing historically higher rates of HIV infection, African Americans continue to face challenges in accessing health care, prevention services, and treatment. Race and ethnicity are not, themselves, risk factors for HIV infection. However, African Americans are more likely to face challenges associated with risk for HIV infection, including poverty, denial and discrimination, partners at risk, substance abuse, and sexually transmitted disease connection.

Globally more than 16 million people have died of AIDS and more than 16,000 people become newly infected each day.

It is imperative for us to take immediate steps to address these alarming statistics. As a former nurse and Chair of the Congressional Black Caucus, I supported funding increases for the Minority AIDS Initiative and the Housing Opportunities for Persons, which is the only federal housing program that provides comprehensive, community-based HIV-specific housing programs.

I have always supported the four main lines of action created by an International Partnership against AIDS: encouraging visible and sustained political support; helping to develop nationally negotiated joint plans of action; increasing financial resources; and strengthening national and regional technical capacity.

We must make an ongoing commitment toward working diligently to find a cure for this very fatal epidemic. We must strongly encourage more widespread support for those who are living with this horrifying disease.

CONFERENCE REPORT ON H.R. 6, ENERGY POLICY ACT OF 2003

SPEECH OF

HON. JOHN CONYERS, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 18, 2003

Mr. CONYERS. Mr. Speaker, for the first time in history Congress has voted to protect known polluters from legal liability. H.R. 6, the "Energy Policy Act of 2003", not only implements a restructured energy system that would harm consumers and provide unaffordable subsidies to energy companies, but Title XV of the bill, the Ethanol and Motor Fuels title, would particularly immunize the producers of a toxic contaminant from liability for its effects on those people who have been harmed by it. These provisions were unilaterally inserted into the conference report without the benefit of a single committee hearing or markup.

MTBE (methyl tertiary butyl ether) has been classified by the EPA as a possible human carcinogen and can render water undrinkable in concentrations as low as two parts per billion. Due to the synthetic chemical properties of MTBE, when it leaks into water, it moves and dissolves through water rapidly, resists natural degradation, and causes water to take on the taste and smell of turpentine. According to the General Accounting Office, MTBE, a chemical which has been shown to cause liver damage, kidney damage, and even cancer in humans, has now been detected in the groundwater and drinking water in every state in the nation.

The Ethanol and Motor Fuels title in H.R. 6 contains an outright and retroactive liability waiver for MTBE producers that knowingly polluted the tap water of millions of Americans. Specifically, the title would:

Protect responsible parties from liability—The title would give MTBE producers a special liability waiver from strict product liability suits. Because these strict product liability suits have been the only effective measure of holding MTBE producers accountable for polluting public water supplies, denying water districts and city and county governments the right to bring defective product lawsuits against the MTBE polluters would effectively end their accountability.

Shift cleanup costs to taxpayers—The MTBE provisions in the bill would shift the burden of paying for the cleanup of the polluted water to the water consumers. An estimated $29 billion in clean up costs will fall squarely on states, cities, and their citizens. MTBE manufacturers and gasoline companies will not have to pay for the contamination of the water supplies that they caused, nor will they have to pay to acquire new water sources for hundreds of thousands of customers.

Nullify pending litigation against MTBE producers, leaving hundreds of thousands of people without recourse—There are currently 130 communities and water suppliers across the nation that have litigation pending to reclaim damages for MTBE pollution of public drinking water sources. Because this bill is retroactive, taking effect for lawsuits pending on September 5, 2003, all of these lawsuits would be nullified.

The MTBE provisions contained in the Energy Policy Act of 2003 benefit the wrongdoers and have a number of harmful consequences for the victims of drinking water contamination. Any policy that has the effect of leaving hundreds of thousands of victims without any recourse against their wrongdoers is bad policy.

NATIONAL DIABETES MONTH

HON. DOUG OSE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 19, 2003

Mr. OSE. Mr. Speaker, as a member of the Diabetes Caucus, I rise today in honor of National Diabetes Month. Diabetes is a growing concern in this country as each year increasing numbers of Americans are being diagnosed with the disease. The disease does not discriminate; children, adults and senior citizens alike are realizing the devastating impact of diabetes and its tragic effects have touched the lives of Americans across the country.

Diabetes itself is debilitating, but it can also lead to heart, kidney, nervous system or dental diseases, as well as blindness, high blood pressure, complications during pregnancy, strokes, and even death. Today, 17 million people live with diabetes and approximately 1 million new cases are diagnosed each year in people over the age of 20. It is the sixth leading cause of death in the United States, with 19 percent of Americans over the age of 25 losing their lives to diabetes each year. The statistic that 1 million children have been diagnosed with juvenile diabetes is particularly unnerving.

In my home state of California, every half-hour a life is lost due to causes directly or indirectly linked to diabetes. Currently, there are two million Californians who have been diagnosed with diabetes, putting California's average above the national rate. That number is expected to double by the year 2020.

Organizations such as the Juvenile Research Fund are vital to research efforts to find a cure for diabetes. In addition to conducting its own research, JDRF provides valuable outreach programs in schools and the community to educate the public on diabetes related issues.

This past June, the Sacramento chapter of JDRF sent two of my constituents, Juleah Cordi and Gianna Gallo, to the Children's Congress. At this conference, children afflicted with diabetes spoke with Members of Congress to raise awareness of this debilitating disease. As a congressional co-chair of this event, I would like to thank Juleah, Gianna and other Children's Congress participants for their help in bringing attention to this issue.

The cost of diabetes is rising, both in terms of the cost to treat the disease and the number of American lives lost resulting from complications relating to the disease. We must support the National Institute of Health's funding for diabetes research so that organizations like JDRF may continue to provide preventative education and help curb the spread of the disease. Education is a key component in preventative efforts, by encouraging individuals to make life-style changes that will reduce their risk of getting diabetes.

Mr. Speaker, we have made great strides over the years in diabetes research and outreach education. I applaud the many organizations that have contributed to this effort and I urge my colleagues to join me in honoring National Diabetes Month. Let's help give those Americans living with diabetes hope that one day soon, we will find a cure to diabetes.

PAYING TRIBUTE TO RICHARD WREN

HON. SCOTT McINNIS

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 19, 2003

Mr. MCINNIS. Mr. Speaker, it is with great pride that I pay tribute today to Police Captain Richard Wren of La Junta, Colorado. Recently, Richard was honored by the La Junta City Council for two decades of honorable service. Richard has dedicated his life to serving and protecting the citizens of Colorado and it is my honor to call his many contributions to the attention of this body of Congress here today.

Richard was born in Denver, Colorado and moved to La Junta to attend Otero Junior College in 1980. Upon graduation, Richard attended the Law Enforcement Academy in Trinidad and in 1983 he became a patrolman for the La Junta Police Department. He rose quickly through the ranks to achieve his status as Captain.

Richard has achieved a great deal in his tenure with the La Junta Police Department. Richard is an expert in canine police work. During his career, he established the La Junta canine program and attended two national competitions for the United States Police Canine Association. In 2002, Richard furthered his law enforcement education by attending the National Federal Bureau of Investigation's Academy in Quantico, Virginia. In addition, Richard is an expert in firearms and patrol procedures, and he holds teaching certificates in both of those disciplines.

Mr. Speaker, it is my honor to rise and pay tribute to Captain Richard Wren before this body of Congress and this nation. Richard has managed to balance his tireless dedication to the citizens of La Junta, while gladly serving as a loving father and husband as well. The Citizens of La Junta Colorado are safer as the result of Richard's tireless dedication to their well-being and it is my honor to join them in thanking him for his service.

H.R. 1588, DEFENSE AUTHORIZATION CONFERENCE REPORT

HON. MARK UDALL

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 19, 2003

Mr. UDALL of Colorado. Mr. Speaker, when this House voted on H.R. 1588 in May, I voted against it. I didn't think the bill as it stood then was one I could endorse. The conference report that we are considering today is marginally better. Although I still have strong reservations, I will support the conference report.

We are 2 years into our war on terrorism and still engaged in military action in Iraq. There is no doubt that we must continue to focus on defending our homeland against terrorism, we must support our military personnel, and we must give our military the training, equipment, and weapons it needs to beat terrorism around the world.

That's why I'm in favor of provisions in the bill that support those men and women who have put their lives on the line in Afghanistan and Iraq. The bill provides an average 4.15 percent pay raise for service members, boosts military special pay and extends bonuses, and funds programs to improve living and working facilities on military installations.

I am pleased that the report includes provisions recognizing the importance of non-citizen soldiers and the many sacrifices and contributions they have made. The report eases the naturalization process for these soldiers and their families, reducing to one year the length of service requirement for naturalization during peacetime; allowing soldiers to apply and take oaths for citizenship overseas; and granting permanent resident status to the surviving family of U.S. citizen soldiers who are granted posthumous citizenship as a result of death incurred in combat.

I'm also pleased that this bill will allow approximately one-third of eligible disabled military retirees to receive both their retirement and disability benefits. I would have preferred that the bill extend this "concurrent receipt" to all disabled retirees, but this is a great improvement on the bill the House considered earlier this year—which included no such provisions. I am also pleased that the bill extends the military's TRICARE health coverage to National Guard and reservists and their families if servicemembers have been called to active duty. These are all necessary and important provisions that I support.

I do have a number of serious reservations about the bill.

I don't believe it addresses 21st century threats as well as it could. With the exception of the Crusader artillery system, the Administration and Congress have continued every major weapons system inherited from previous administrations. So although the bill brings overall defense spending to levels 13 percent higher than the average Cold War levels, it doesn't present a coherent vision of how to realign our defense priorities.

The bill still includes provisions that would exempt the Department of Defense from compliance with some requirements under the Endangered Species Act (ESA) and the Marine Mammal Protection Act (MMPA). There is broad-based support for existing environmental laws—as there should be—and these laws already allow case-by-case flexibility to protect national security. The Pentagon has never sought to take advantage of this flexibility, so it strains belief that these laws are undermining our national security. Indeed, the General Accounting Office has found that training readiness remains high at military installations notwithstanding our environmental laws. I am not persuaded that the changes to these acts proposed by the military are justified.

The bill still includes worrisome provisions to overhaul DOD's personnel system. Although they are improved from the bill the House considered earlier this year, these provisions would still strip DOD's civilian employees of worker rights relating to due process, appeals, and collective bargaining.

Most disturbingly, the bill still includes provisions on nuclear weapons development. This bill provides funding to study the feasibility of developing nuclear earth-penetrating weapons and authorizes previously prohibited research on low-yield nuclear weapons. Low-yield nuclear weapons have an explosive yield of five kilotons or less—"only" a third of the explosive yield of the bomb dropped on Hiroshima. Our obligations under the Treaty on the Non-Proliferation of Nuclear Weapons (NPT) require the United States to work towards nuclear disarmament, rather than further increase the size and diversity of our arsenal. By continuing the development of new U.S. nuclear weapons at the same time that we are trying to convince other nations to forego obtaining such weapons, we undermine our credibility in the fight to stop nuclear proliferation.

Mr. Speaker, I am very disappointed that this conference report rolls back civil service protections, environmental protections, and our work in the area of nuclear nonproliferation. But some of these provisions were improved in conference, and the addition of concurrent receipt provisions for our nation's veterans is critical. In view of these changes to the bill, added to my belief in the importance of supporting our men and women in uniform, I will support the conference report today.

TRIBUTE TO SAGINAW VALLEY STATE UNIVERSITY, SAGINAW, MICHIGAN

HON. DAVE CAMP

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 19, 2003

Mr. CAMP. Mr. Speaker, I rise today to pay tribute to the Saginaw Valley State University in celebration of its 40th Anniversary.

Founded in 1963, Saginaw Valley State University has quickly become one of the fastest-growing universities in Michigan. The university's humble beginnings as a community college in the late 1950s have encouraged the rapid growth and expansion of the university as demonstrated by their recent additions. From holding early classes in the basement of Delta College, to its current situation on a 782-acre campus, Saginaw Valley State University has become an unrivaled success story in mid-Michigan.

I am honored today to recognize Saginaw Valley State University for its many accomplishments, and to thank the many staff, faculty, students, and families who have endeavored to support Saginaw Valley State University.

VETERANS MEMORIAL AT THE KOOTENAI COUNTY ADMINISTRATION BUILDING

HON. C.L. "BUTCH" OTTER

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 19, 2003

Mr. OTTER. Mr. Speaker, I rise today to bring to the attention of the House the creation of a Veterans Memorial at the Kootenai County Administration Building in Coeur d'Alene, Idaho. Former commissioner Ron Rankin has spearheaded the effort to pay tribute to Kootenai County's brave veterans with memorials honoring their sacrifice.

The first phase of the Veterans Memorial, dedicated on Veterans Day 1998, is a striking seven-by-five-foot, 8,000-pound black granite monument naming Kootenai County veterans killed in action from the Spanish American War through the Vietnam War. Their names are etched in large gold letters followed by their branch of service, and the war in which they served. "In God We Trust" is etched above all the names in three-inch gold letters. The monument is strategically placed at the main entrance of the new administration building to remind visitors of the heroes who gave their lives for our freedom.

On Memorial Day 1999, the county dedicated 13 unique murals for the outside of the new courthouse. The 39-by-42-inch granite plaques depict historically significant military events in the 20th century. They are reproductions of photographs and paintings that were laser-etched in color on polished granite slabs. The first two were completed at a cost of $2,000 each while the remaining 11 will have been added at a cost of $3,000 each. The scenes include: Pearl Harbor, the Bataan Death March, the Battle of Midway, the flag raising on Iwo Jima, Army rangers climbing a 100-foot Normandy cliff on "D" Day, troops assaulting the beach at Normandy, gun ships off the coast of Vietnam, and "Dust Off' helicopters retrieving the wounded in Vietnam. When the entire project is completed, there will be pamphlets in the foyer of the new administration building describing each scene in detail. The foyer already includes interesting information, photos and paintings of our heroic armed forces from battle scenes of 20th century wars.

A Purple Heart Honor Roll now is in place in the courthouse foyer, and a wall of gold-framed certificates of veterans who were awarded medals of valor will complete the project. The display was dedicated at a ceremony on November 10, 2003. The event's keynote speaker was Idaho Supreme Court Justice Daniel Eismann, who earned two Purple Hearts and three Air Medals during the Vietnam War. I would like to submit the speech Justice Eismann delivered at the dedication for the RECORD.

HALL OF HEROES DEDICATION—KOOTENAI COUNTY

(Hon. Daniel T. Eismann, Nov. 10, 2003)

I first want to commend the citizens of Kootenai County for this impressive memorial to those who have served in the United States military. As a veteran, I thank you. I also commend Ron Rankin, who was the driving force behind this growing monument.

The words ''Keeping America Free'' on the murals outside summarize the primary mission of the United States military. The freedom we enjoy today did not come cheaply. It was purchased during the Revolutionary War with the blood of American soldiers; for over two hundred years it has been guarded and defended both here and abroad by the blood of American soldiers; and it will be preserved in the future by the blood of American soldiers. In the words of Daniel Webster, ''God grants liberty only to those who love it, and are always ready to guard it and defend it.''

It is because of our God-given freedom that we are the most prosperous and powerful nation on earth. It is the desire for that freedom that causes many from other countries to flock to our borders. It is envy of that freedom, and the prosperity and power it produces, that causes others to hate and want to destroy us.

With oceans to our east and west and good neighbors to our north and south, we have for many years felt secure in our freedom. We may even have taken it for granted. No nation on earth could be powerful enough to invade us. The tragic events of September 11, 2001, however, shattered that security. Although the enemies of freedom cannot take ours by force, they showed that they will try to destroy it by fear. Those tragic events confirmed that to preserve our freedom here, we will sometimes have to root out evil and tyranny in other parts of the world. We cannot be truly free unless people around the world are free. The enemies of freedom will always desire to extinguish the beacons of liberty shining around the world, and ours shines the brightest. The tragic events of September 11th also rekindled a deep appreciation and respect for those who have donned the uniform of the United States military.

We are here today to honor some of those who have helped to preserve our freedom. We have come together to dedicate the Hall of Heroes, to honor those from Kootenai County who have been awarded a medal for heroism while serving in our nation's military. By honoring them, we are not in any way minimizing the sacrifice and contribution of all others who have served in uniform. Any of you who saw the movie ''We Were Soldiers'' may remember the helicopter pilot in the movie whose nickname was ''Too Tall.'' The real ''Too Tall'' is a friend of mine named Ed Freeman who lives in Boise. The movie does not do justice to what Ed actually did during that battle.

On November 14, 1965, after LZ X–Ray had been closed to helicopters because of intense enemy fire, Ed flew fourteen missions into and out of that landing zone delivering ammunition, water, and medical supplies to the troops on the ground and evacuating 30 seriously wounded soldiers. For his actions, Ed was awarded the Congressional Medal of Honor, our nation's highest award for heroism. Ed's Medal of Honor was certainly well-deserved, but he could not have made the impact he did without the help of others. He could not have delivered the much-needed ammunition, water, and medical supplies to the men on the ground unless others had worked to have those items waiting at his base to be loaded on his helicopter. Few if any of the seriously wounded soldiers that he rescued would have survived had it not been for the medical personnel who were waiting to care for them.

The military is a team, with every person doing his or her part. Those of us who served in combat would not have lasted long without others who kept us supplied with needed materiel—weapons, munitions; equipment, fuel, medical supplies, and food—or who equipped and directed the planes, artillery, and ships that rained bombs, missiles, and shells on the enemy. Thus, by honoring those who have been awarded medals for heroism we are in no way forgetting or diminishing the contribution made by all who have faithfully served our nation as members of its armed forces.

Because we are honoring those whose names will be in the Hall of Heroes, it seems fitting to ask, ''What is a hero?'' The first time someone called me a hero, my reaction was, ''I am no hero. I just did my duty.'' As I have thought about it, however, maybe that is part of what a hero is. It is someone who puts duty above self—someone who exhibits selfless dedication to a noble cause.

Another characteristic of a hero is courage. But, what is courage? British author C.K. Chesterton aptly described courage as follows:

''Courage is almost a contradiction in terms. It means a strong desire to live taking the form of a readiness to die. 'He that will lose his life, the same shall save it,' is not a piece of mysticism for saints and heroes. It might be printed in . . . a drill book. The paradox is the whole principle of courage. . . . A soldier surrounded by enemies, if he is to cut his way out, needs to combine a strong desire for living with a strange carelessness about dying. He must not merely cling to life, for then he will be a coward, and will not escape. He must not merely wait for death, for then he will be a suicide, and will not escape. He must seek his life in a spirit of furious indifference to it; he must desire life like water and yet drink death like wine.

In combat, you have no future. You have no past. You have only the present. To survive, you must consider yourself already dead, and then fight with all that is in you to stay alive, and to keep alive those who are fighting alongside you.

I first learned this truism not long after I started flying as a crew chief on a Huey gunship. As a crew chief, my job was to maintain the helicopter and to be a door gunner when we were flying. One afternoon, as we were returning from a mission, I moved from my normal position literally two seconds before a 51-caliber round tore through my helicopter. Had I not moved, it would have hit me right in the Adam's apple, and would have taken my head off. There was no reason for me to have moved, other than the intervention of God.

I pondered that event for a little while. Before then, being killed in combat had been an abstract possibility. I now realized that as long as I was flying in gunships, being killed was a distinct probability. Perhaps what was most disconcerting was that the bullet came without any warning. It was like a bolt out of the blue. We were not even in a place where we were expecting enemy fire. I realized that on any given day, I could be killed by one bullet coming without warning out of nowhere. I concluded that I could either worry about dying and get ulcers, or simply choose not to worry about it. I chose the latter course. From that day on, I simply considered myself already dead. Those who have accepted their death need not fear it.

Certainly, those who willingly risk their lives in combat while fighting for our country are heroes. The people we are honoring today, however, did more than merely risk their lives. The military does not award medals for valor simply for risking one's life. That is expected in combat. I was on a Huey gunship during most of my two years in Vietnam. Our job was to find the enemy and engage them. We did not have any high-tech equipment to help us locate the enemy. Our most sophisticated electronics were our two-way radios. To find the enemy, we simply tried to be an attractive target so that they would shoot at us. We would fly as low as we could, sometimes only a few feet above the ground, over or near places where the enemy may be hiding, trying to draw their fire. Once the enemy opened fire, we would know where they were and could take them on. Having the enemy shoot at us was simply part of our job; it was all in a day's work. That is the same for anyone who serves in combat.

Those we are honoring today did not merely risk their lives in combat. They went far

above and beyond the call of duty, putting then lives at extraordinary risk. They may have done so to rescue wounded or trapped comrades, or to accomplish the mission. Firefights are decided, battles are won, and victory is gained because of soldiers like these—who put themselves at extraordinary risk to save others, to accomplish the mission, and to defeat the enemies of freedom.

One of God's blessings upon this nation has been that throughout her history, in times of great trials, ordinary people have come forward and done extraordinary deeds. Today, we are honoring some of those people. On behalf of my fellow Americans, I thank them and I salute them.

TRIBUTE TO A GOOD FRIEND AND LOYAL PUBLIC SERVANT, JAMES J. MANCINI

HON. JIM SAXTON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 19, 2003

Mr. SAXTON. Mr. Speaker, it is with a heavy heart that I rise today to pay tribute to one of my greatest friends and one of Ocean County's finest, Ocean County Freeholder and Long Beach Township Mayor James J. Mancini.

Upon hearing of his passing, I was deeply saddened, given the tremendous impact he had on my life and those he served in Ocean County. To say that Jim will be missed is an understatement; he touched the lives of so many around him and spent every day of his life helping others.

A champion for seniors and veterans, Mayor Mancini's dedication to his community and his genuine interest in reaching out to others was unparalleled. As one of Ocean County's best advocates for seniors, his commitment to providing retirees with quality health care was unwavering. Every chance he had, Jim worked to make life better for every senior who lived in Ocean County.

Additionally, as a Veteran of World War II, Mayor Mancini made it his top priority to work on behalf of our local veterans. In fact, as a result of his efforts, services to tens of thousands of veterans were increased and improved.

Many of us from south Jersey remember the two "nor'easter" storms in the early 1990's that severely damaged the beaches of Long Beach Island. As a result of the threat to property and lives, Mayor Mancini made it his mission to guarantee these beaches would be rebuilt.

After ten years of work—including securing 3 million federal dollars, 8 years of study and design, and overcoming hurdles that prevented new beach replenishment projects from starting—just yesterday we found out that Jim's long-sought after funding to begin replenishing Long Beach Island's beaches came to fruition. This funding was included in the House-passed final version of the 2004 Energy and Water Appropriations Bill.

How ironic. After more than a decade, the project was approved by the House of Representatives on the same day as Mayor Mancini's passing. Without his persistence, it likely would not have happened.

Beginning from his election as Mayor of Long Beach Township in 1964 to his serving as a State Assemblyman in the 1970s to his becoming an Ocean County Freeholder in the 1980's, Mayor Mancini lived his life to serve and help others, and his legacy will live on for many years to come.

Throughout my life, I have met few people as compassionate and as selfless as Jim Mancini; it was an honor and privilege to be his friend. I extend my deepest sympathies to Madeline Mancini and the rest of their family, and know we will remember this caring friend, wonderful father and grandfather, admired leader, and dedicated public servant for the rest of our lives.

PAYING TRIBUTE TO DON SCHNEIDER

HON. SCOTT McINNIS

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 19, 2003

Mr. MCINNIS. Mr. Speaker, it is with great pride that I pay tribute to Retired Lieutenant Colonel Don Schneider from Grand Junction, Colorado. Don has dedicated his life to the betterment of his family, country and community, and I am proud to call his contributions to the attention of this body of Congress here today.

Don moved to Colorado Springs, Colorado in 1959. Between 1959 and 1964, he accomplished a great deal. He attended the Air Force Academy, completed Airborne Jump School, Officer Training School, and earned a degree from the University of Denver, eventually working with Martin-Marietta on the Titan II missile program. In addition, Don met and married his wife Judy and had three wonderful children during this period.

After his training, Don was transferred to Tennessee, where he served as a navigator and instructor at Stewart Air Force Base. While stationed in Tennessee, Don acquired 2000 hours of flying time on deployments worldwide. Between 1970 and 1971, Don flew 180 combat missions in the Vietnam conflict. In a time of war, Don's patriotism and valor shone through, proving him a true hero. At war's end, Don's honorable service had earned him numerous decorations, including the Distinguished Flying Cross and the Meritorious Service Medal.

Following the war, Don was stationed in Myrtle Beach, where he was a pilot, safety officer, and instructor who trained a number of National Guard units, including the Colorado Air Squadron stationed at Colorado's Buckley Air Force Base. Don completed his service to the United States Air Force in 1985. After entering the private sector for some time, Don and his family moved to Grand Junction in 1998. In Grand Junction, Don has continued his service to his country. He currently serves as the President of the Western Colorado Chapter of Military Officers, and is an active member of the Order of the Dandelions, the Red River Valley Fighter Pilots Association and the Aircraft Owners and Pilots Association.

Mr. Speaker, I am proud to pay tribute to Don Schneider's courageous service before this body of Congress and this nation. His selfless desire to protect the freedom of all Americans is a reflection of his unwavering love for our country and his continued service to his community is further illustration of a lifetime of devotion to our nation. Thank you, Don, for your service.

CONFERENCE REPORT ON H.R. 6, ENERGY POLICY ACT OF 2003

SPEECH OF

HON. W.J. (BILLY) TAUZIN

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 18, 2003

Mr. TAUZIN. I rise to elaborate on the colloquy I had with Mr. Norwood during consideration of the conference report for H.R. 6 regarding section 1242 (relating to participant funding). Section 1242 ("Voluntary transmission pricing plans") adds a new section 219 to the Federal Power Act. Under this section, any transmission provider ("TP"), regardless of whether the TP is a member of an RTO or ISO, is eligible to submit a transmission pricing plan to the FERC. In the case of a participant funding ("PF") plan, the Federal Energy Regulatory Commission ("FERC") must approve the plan if it meets the requirements of the section, regardless of whether a TP is in an RTO or ISO, because the native load customers of the TP should not be penalized by being compelled to pay for unneeded generator interconnection transmission upgrades.

The provision requires the FERC to approve a PF plan if the plan is just and reasonable and meets other requirements relating to cost responsibility and allocation. The rates referenced means rates as they affect the TP's shareholders and native load customers. The rate must not be so low as to be confiscatory of the TP-shareholder's property. At the same time, the rate must not unjustly shift costs to the TP's native load customers. The just and reasonable requirement here operates in the context of a clear policy choice by Congress in favor of PF where an application meets the other requirements of this section. The requirements of (b)(2)(B) constitute a limitation or channelling of the FERC's discretion within the bounds of the just and reasonable standard, which the courts have held does not require a specific formula, method, or single numeric result in any given case. In determining the zone of reasonableness, the FERC is required to comply with the policy of allowing PF as provided in (b)(2)(B).

PF ensures just and reasonable rates in three ways. First, the TP fully recovers (in charges assessed to all transmission customers) the costs of any monetary credits it must grant to the party requesting the upgrade. Second, PF protects consumers from bearing costs for facilities they do not need, by ensuring that the party causing the upgrade costs is assigned those costs. Third, rates are kept at reasonable levels by ensuring that generation and transmission are sited in an economically efficient manner.

Subsection (b)(2)(B) provides that the upgrade costs are "assigned in a fair manner."

The costs "assigned" or "paid" here means the costs initially allocated at the time of the upgrade. If a cost is assigned to the TP, the TP rolls that cost into its embedded cost rate base and recovers the entire cost in a transmission charge assessed to all its own transmission customers. If a cost is assigned to, or paid by, the requesting party, the requesting party makes a lump-sum payment at the outset, financed by whatever means the requester arranges. Subsequently, the requesting party pays the same embedded cost transmission charge assessed to and paid by any transmission customer—this charge is not considered a "payment" in this context.

Subsection (b)(2)(B)(i) means that if, at the time of the request, the native load customers had no need for the upgrade, they do not have to pay for it. The phrase "such transmission service related expansion or new generator interconnection" refers to the specific upgrade requested. Thus, if the TP would not have built the same upgrade at the same time to serve its own customers, such customers should not have to pay for it. The phrase "would not have required" means that, at the time the upgrade is requested, the native load customers would not have needed the upgrade to reliably meet their load. Projected or hypothetical future "needs" or other "benefits" in no way qualify as upgrades required by these customers for the purposes of this provision.

Going forward, the requester would be charged the same embedded cost transmission service charge as any other transmission customer—a charge that includes the cost of any monetary credit (as it is used) or any other item in the embedded cost ratebase. This point is made clear in subsection (b)(2)(B)(iii)(I), which provides that a monetary credit would be "against the transmission charges that the funding entity or its assignee is otherwise assessed [by the TP]."

Clause (ii) is a clarification of precisely what costs are assigned in the up-front allocation of the upgrade costs. Clause (ii)(I) references the requirement that the requesting party "pay for" the "assigned" cost of the upgrade as set forth in clause (i). This language means that the requesting party makes a lump sum payment at the time of the upgrade for the costs of constructing the upgrade and any costs associated with completing the upgrade. Clause (ii)(II) makes clear that the requester is not also assigned, as part of this initial, lump-sum payment, certain future costs, resulting from the upgrade, that are later' included in the TP's embedded cost rate base. The initial cost of the "physical" upgrade is not directly or immediately included in the embedded cost because the upgrade itself is paid for (assigned to) up front by the requesting party. The term "embedded cost" is a term of art typically defined as funds already expended for investment in plant and operating expenses, as shown on the utility's books.

The physical upgrade does not immediately qualify as a cost of "plant" because the TP has not been assigned the cost in the initial upgrade—such cost is paid for in the initial cost assignment by the requester, not by the TP. The "cost of the requested upgrade" does, however, enter the TP's embedded cost basis in the form of any monetary credit given to the requester as compensation for the requester's initial payment. Because this credit is a credit against the transmission charge assessed to the requester, it is revenue foregone by the TP that must be recovered in the TP's rolled-in transmission rate. This cost is included in the TP's embedded cost charge to all transmission customers each billing period in the form of the cost of the monetary credit. Every transmission customer's rate (including the requester's) includes the cost of such credit. The difference for the requester is that he gets a credit against the same embedded cost transmission rate as charged to all transmission customers. Clause (ii)(II) means that, in the initial cost assignment, the requester does not also pay up front for the future rolled-in cost of the monetary credit. In the initial cost assignment, the requester pays only once for the transmission upgrade—and, under a PF plan using the monetary credit approach of (iii)(1), he gets full compensation for that lump sum payment in the form of the monetary credit over a 30 year period. In this lump-sum, up-front cost allocation, the requester does not have to pay for the upgrade twice by paying in advance for the monetary credit cost of the upgrade. For clarity, subclause (II) is expressed as a formula. The "difference" between the embedded cost including the upgrade and the embedded cost absent the upgrade equals the total cost of credits associated with the upgrade. Subclause (ii), in other words, means that the requester does not, in the up-front cost allocation, need to pay for both the cost of building the upgrade and the future cost of the credits needed to compensate it for that payment.

Subsequent to the initial cost allocation, the requester, like any other transmission customer, is assessed a standard transmission service charge for accessing the transmission system. It is against this service charge that any monetary credit under (iii)(I) is applied. Nothing in the provision prevents the TP from rolling the cost of the monetary credit into the embedded cost transmission charge for the use of the system—a charge that all transmission customers must pay as they take service. Clause (ii)(II) does not say or imply that the requester should not have to pay a transmission charge for the use of the system. Such a misreading would result in an unjust and unreasonable confiscation of utility-shareholder property, as well as an absurd departure from the FERC policy requiring all transmission customers to pay an access charge derived from the embedded cost of the system, including the cost of any credits given as the requester is assessed transmission charges. In other words, the provision is not intended to give the requester a double credit or double compensation (i.e., a discounted transmission rate on top of a credit or other compensation).

Conversely, the fact that the requester is assessed this charge (including the portion of the charge attributable to the cost of the monetary credit) in no way means that the requester is having to "pay twice" for the upgrade, because the transmission service charge is entirely separate from the cost allocation provided for in clause (ii). The requester pays for the upgrade in advance, and in exchange receives the credit or rights. By contrast, the requester is assessed a transmission charge in exchange for accessing the transmission system. Thus, this is not so-called "and" pricing.

Clause (iii) provides that the requester over time shall receive a form of compensation for its up-front, lump-sum payment. This compensation may be in the form of a monetary credit of equal value, or financial or physical transmission rights, or another form of compensation proposed by the TP. Under (iii)(I), the requirement that the crediting period be "not more than 30 years" means that, so long as the crediting period proposed in the plan is 30 years or less, the FERC has no discretion to require that the crediting period be different from the proposed period.

The term "full compensation" in clause (iii) generally means that the requester gets appropriate compensation in exchange for making the up-front payment for the upgrade. In the case of a monetary credit under (iii)(I), this compensation is specifically identified as being "equal" to the cost of the participant funded facilities (spread over 30 years). In the case of the "financial or physical rights" option under (iii)(II), the compensation need not be quantified in terms of an amount equal to the cost of the upgrade. For example, in the case of a market using locational marginal pricing ("LMP"), such amount need not (and cannot) be calculated in advance. Nevertheless, such property rights resulting from the expansion are of great benefit to the requester as a hedge against paying potential congestion charges in the future. Thus, they are appropriate compensation. Subclause (III) gives the TP the option of proposing a different form of compensation. It does not give FERC discretion to require a different form of compensation when the TP proposes a monetary credit under subclause (I) or appropriate rights under subclause (II).

To ensure that native load consumers are protected from paying for facilities they do not need, I urge my colleagues in the House and Senate to vote for the conference report.

HONORING OUR FALLEN HEROES STAFF SGT. LINCOLN HOLLINSAID, CAPT. RYAN BEAUPRE AND PVT. SHAWN PAHNKE

HON. JERRY WELLER

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 19, 2003

Mr. WELLER. Mr. Speaker, I rise today to commend the heroic actions of three service members from the 11th Congressional District of Illinois who gave the ultimate sacrifice of their life to the defense of our Nation. Army Staff Sgt. Lincoln Hollinsaid of Malden, Marine Capt. Ryan Beaupre of St. Anne and Army Pvt. Shawn Pahnke of Manhattan each served proudly and bravely.

Today, I am introducing legislation to honor their sacrifice by naming each of their hometown post offices in their name and I urge my colleagues to support these bills.

The Malden, Illinois post office would be named after Army Staff Sgt. Lincoln Hollinsaid, age 27. Staff Sgt. Hollinsaid was an engineer

with the U.S. Army Third Infantry Division. He was killed April 7, 2003 while operating a crane to help clear a path allowing U.S. Army forces to penetrate the grounds of the Bagdad Airport and capture this key facility. Lincoln loved fishing, four-wheeling in his truck and was also a self taught guitar player.

The St. Anne, Illinois post office would be named after Marine Capt. Ryan Beaupre, age 30. Capt. Beaupre was a helicopter pilot with the U.S. First Marine Expeditionary Force. He was killed March 20, 2003 while piloting a CH–46 Sea Knight helicopter in Kuwait, nine miles from the border with Iraq. Ryan enjoyed competing in cross-country and track. He was also a volunteer at "Home-Sweet-Home" mission, a homeless shelter and transitional housing program.

The Manhattan, Illinois post office would be named after Army Pvt. Shawn Pahnke, age 25. Pvt. Pahnke was a main battle tank crewman with the U.S. Army First Armored Division's First Brigade. He was killed June 16, 2003 while patrolling Baghdad in a Humvee. Shawn enjoyed playing baseball. He was also a husband and a father of a new born son.

Naming the Malden, St. Anne and Manhattan post offices after these brave soldiers is a fitting tribute to remember each of their lives, their service and the sacrifices of their families and their communities.

When we lose a soldier, it is a terrible loss for their families and for our Nation. Hardships are also felt by every family of those who are abroad who not only miss their loved ones, but may be having a difficult time making ends meet. The members of the armed forces are giving greatly to defend and protect our Nation, and we owe them an enormous debt of gratitude.

America's soldiers serve our country with honor. I hope that you will join me in honoring these soldiers who gave so much to our country.

On a personal note, my heart and prayers go out to all those who have sacrificed for this ongoing war on terror, and I urge my colleagues to support these fitting bills.

PERSONAL EXPLANATION

HON. CHARLES A. GONZALEZ

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 19, 2003

Mr. GONZALEZ. Mr. Speaker, on rollcall Nos. 620, 621, 622, 623, had I been present, I would have voted "yea."

CONFERENCE REPORT ON H.R. 6, ENERGY POLICY ACT OF 2003

SPEECH OF

HON. BOB ETHERIDGE

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 18, 2003

Mr. ETHERIDGE. Mr. Speaker, I rise today to vote against the conference report to H.R. 6, the Energy Policy Act of 2003.

It is a sad day in America for today Congress has passed up an historic opportunity to craft an energy policy for the 21st century. The legislation we are voting on could have been an honest, bipartisan effort to halt America's growing dependence on fossil fuels for energy. It could have been focused on new technologies, energy efficiency, renewable energy, and the research and development that could produce the breakthroughs that would power the world of tomorrow. Instead, this bill is stuck in the past. Modeled after the energy plan developed by Vice President CHENEY's secret energy committee, H.R. 6 reflects the philosophy that there is no energy problem that cannot be solved with another oil well.

I have no objection with supporting some new or additional oil and gas exploration or production because, until we develop the energy alternatives of the future, we must continue to meet our oil and gas needs. However, it must be done responsibly. Sacrificing environmental protection for petroleum production is not responsible. Exposing our great natural treasures, especially the North Carolina coastline, to exploitation and possible degradation is not responsible. And placing the vast majority of economic incentives that H.R. 6 offers toward more fossil fuel production, instead of energy efficiency and research into new technologies, is not responsible.

H.R. 6 provides $23.5 billion in tax breaks over the next 10 years, the majority of that for oil and gas production. That's billions in tax breaks for energy companies paid for by our children and grandchildren. I could support some tax incentives for new sources of energy, but this Administration's economic record has already created a more than $400 billion budget deficit. I cannot support more debt for future generations to pay off. The Senate version of the energy bill offered ways to pay for these tax breaks, but the Republican leadership struck them. Why are the Republicans so opposed to fiscal responsibility?

Not all of the bill's provisions are bad. I am pleased with the provisions on ethanol. They will provide new markets for corn growers and help reduce harmful emissions. The ban on the fuel additive methyl tertiary butyl ether (MTBE) will also help ethanol users while keeping more MTBE from seeping into the Nation's water supply. But H.R. 6 provides liability protection for MTBE manufacturers. So when somebody gets sick because their products got into the water supply, these companies cannot be held accountable. That's just plain wrong.

Like the Vice President's energy plan, this bill was developed by Republican leaders behind closed doors without concern for the needs of consumers. Republicans are demanding that this House vote on a 1000+ page bill after having less than a day to review it. How many of our constituents would sign a 1000 page contract after having barely a day to read it? None. That's why organizations like the Carolina Utility Customers Association—composed of North Carolina companies like Bayer Corporation, GlaxoSmithKline, Lorillard Tobacco, and R.J. Reynolds Tobacco—oppose H.R. 6. To quote their letter, "While H.R. 6 contains positive aspects, the fact remains that many questions need to be asked and adequately answered before this bill is passed. It is simply unwise to hastily pass a bill without fully understanding its impact."

Unfortunately, the Republican congressional leadership wasted an opportunity to develop a prudent energy policy. I must oppose H.R. 6.

PAYING TRIBUTE TO JAMES FUNK

HON. SCOTT McINNIS

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 19, 2003

Mr. McINNIS. Mr. Speaker, it is with a solemn heart that I take this opportunity to pay tribute to the life of James Funk who recently passed away at the age of 85. Jim was a pillar of the Hayden, Colorado community, and as his family mourns their loss, I think it is appropriate that we remember Jim's life and celebrate his contributions to our nation today.

Jim, a native Coloradan, grew up in various towns in the mountains of the West. He lived in Steamboat Springs, Hayden, and McCoy. Following high school, Jim answered his country's call to duty and served in the United States Army for four years. In 1947, Jim married Avis Hooker, his wife of 56 years.

Throughout his life, Jim was active in numerous community groups, including the Farm Bureau, the Upper Yampa River Water Conservancy Board, the Hayden School Board, and the Routt County Planning Commission. He was a member and former Commander of the Hayden American Legion Post and a member of the Hayden Congregational Church. In addition, Jim was instrumental in organizing the West Routt Fire Protection District. Despite his busy schedule, Jim managed to be a loving father, husband and friend.

Mr. Speaker, James Funk's dedication and selflessness certainly deserve the recognition of this body of Congress. It is my privilege to pay tribute to him for his contributions to the community of Hayden and our nation. I would like to extend my thoughts and deepest sympathies to Jim's family and friends during this difficult time of bereavement.

CONFERENCE REPORT ON H.R. 6, ENERGY POLICY ACT OF 2003

SPEECH OF

HON. DAVE CAMP

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 18, 2003

Mr. CAMP. Mr. Speaker, I rise in support of H.R. 6.

We have pushed for and promised a new national energy policy for a decade, and it is time we deliver on that promise; a promise that tells our families they won't be left out in the cold due to skyrocketing home-heating bills, a promise that tells the American worker that an unstable and unaffordable energy supply won't force employers to reduce benefits or eliminate jobs, and a promise that tells our children that they will be able to live and grow in a clean, healthy environment.

It is on that last point, encouraging the development of environmentally friendly energy, that I rise today. Transportation accounts for more than 75 percent of total oil consumption

in the United States. Accelerating the use of fuel-efficient technologies and cleaner burning fuels by the auto industry will have a profound impact on safeguarding our health and our environment.

The high costs of new technologies, however, have stalled progress in the past. And, as California's experiment with electric engines quotas proved, top-down, government-driven reforms do not work. We cannot expect results if the expectations and demands of consumers are not met. This energy bill puts consumers in the driver's seat for developing technology, and will create a sustainable effort to improve fuel efficiency and reduce pollution.

By providing tax credits directly to consumers, this bill will help offset the thousands of dollars added to the ticket price of a hybrid or alternative fuel vehicle. Without these incentives, up to $3,400 for the purchase of a hybrid vehicle and up to $8,000 for a fuel cell vehicle, we will not change the status quo.

The energy bill compromise is not only fair and balanced; it is a major step forward for our country. By providing a more stable, affordable supply of energy, it will protect and create hundreds of thousands of jobs, save families money, and reduce pollution.

PERSONAL EXPLANATION

HON. MAC COLLINS
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, November 19, 2003

Mr. COLLINS. Mr. Speaker, I was not present for rollcall vote 634, the Captive Wildlife Safety Act (H.R. 1006); rollcall vote 635, Expressing the sense of Congress regarding the importance of motorsports (H. Con. Res. 320); rollcall vote 636, National Museum of African-American History and Culture Act (H.R. 3491); rollcall 637, Berkley Motion to Instruct Conferees; rollcall 638, Mutual Fund Integrity and Fee Transparency Act (H.R. 2420); rollcall 640, Honoring the victims of the Cambodian genocide (H. Con. Res. 83); rollcall 641, Honoring the Seeds of Peace (H. Con. Res. 288); rollcall 642, Commending Afghan Women (H. Res. 393); rollcall 643, Recognizing the Fifth Anniversary of the signing of the International Religious Freedom Act (H. Res. 423); and rollcall 644, Fairness to Contact Lens Consumer Act (H.R. 3140).

Had I been present, I would have voted "yea" for rollcall votes 634, 635, 636, 638, 640, 641, 642, 643, and 644. I would also vote "nay" for rollcall vote 637.

UNITED KINGDOM FREE TRADE AGREEMENT RESOLUTION

HON. MARK E. SOUDER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, November 19, 2003

Mr. SOUDER. Mr. Speaker, I rise today to introduce a resolution expressing the sense of Congress that the President of the United States should enter into a free trade agreement (FTA) with the United Kingdom of Great Britain and Northern Ireland.

The United States and the United Kingdom share one of the closest and most unique cultural, economic, strategic relationships of any two countries in history. Our nations are based on the rule of law. We share a common history, language, and love of freedom and liberty. Our military alliance liberated Europe from Adolf Hitler and removed Saddam Hussein from power in Iraq. The entrepreneurial spirit of Americans and Britons is evident in the economic power our countries have exerted for over two hundred years.

I believe that it is no accident that two of the most freedom-loving countries on earth have also been the most economically successful countries. The independence and liberties Americans and Britons enjoy politically have transferred themselves to an economic freedom to invent, innovate, and trade.

Unfortunately, that freedom to trade is often hindered by barriers and tariffs. Some barriers give unfair advantage to goods through artificially lower prices. Other barriers try to protect domestic industries, sometimes delaying much needed innovation.

Countries that open their domestic markets, remove barriers to foreign direct investment, and promote free enterprise improve the lives of their citizens. The US and the UK should encourage open markets because limiting the availability of goods or increasing the final price paid by consumers can directly inhibit consumer freedom and reduce consumer welfare.

As the largest economy in the world, the United States should lead the movement for free trade because free trade boosts our economy. An International Trade Commission report estimates that the elimination of tariffs between the United States and the United Kingdom would result in an 11 percent to 16 percent increase in American exports to the United Kingdom.

The economic relationship between the US and UK is one of the largest trading relationships in the world. Direct foreign investment flowing between our countries totals nearly $400 billion—the largest such relationship in the world. British investment in the United States helps to sustain over 1 million American jobs.

In my home state of Indiana, there are 141 British companies doing business, including Rolls Royce and Smith Industries. These companies provide 36,000 Hoosiers with jobs. Furthermore, major Indiana companies such as Eli Lilly, Great Lakes Chemical, Biomet, and Lincoln National Corporation have substantial interests in Great Britain.

In the past few years the United States negotiated or is negotiating FTAs with a number of countries. Yet, the United Kingdom is not one of those countries. Given the depth of our relationship and that exports could increase 11 percent to 16 percent, it seems natural for Americans to push for this FTA. Increasing trade will help workers in Indiana and throughout the United States.

Furthermore, as the European Union continues to tighten its control over member states, the days when the United Kingdom is free to set its own trade policy and negotiate its own trade agreements may be numbered. A proposed EU constitution will potentially put more power in the hands of bureaucrats in Brussels rather than London.

Also, given the recent anti-American sentiment running through much of continental Europe, it is highly probable that those in control of the EU will use the organization to stymie US economic interests. The United States must take this opportunity to protect its trade with Great Britain and to help Great Britain protect its right to trade with whomever it wants, however it wants.

In an amendment offered by Senator MITCH MCCONNELL of Kentucky to its Fiscal Year 2004 budget resolution, the United States Senate expressed its support for an FTA with the United Kingdom (S. Con. Res. 23). It is time the House of Representatives expresses its support too.

PAYING TRIBUTE TO EDGAR STOPHER

HON. SCOTT McINNIS
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, November 19, 2003

Mr. MCINNIS. Mr. Speaker, it is with a solemn heart that I take this opportunity to pay tribute to the life of Edgar Stopher who passed away recently at the age of 93. Edgar was a pillar of our Colorado community, and as his family mourns their loss, I think it is appropriate that we remember his life and celebrate his contributions to our nation today.

Edgar was born in Loveland, Colorado in 1909. After his graduation from high school in 1929, Edgar continued his education at the University of Colorado, where he earned a bachelors degree in 1932. During World War II, Edgar answered his country's call to duty and served in the United States Air Force. By war's end Edgar had achieved the rank of Major and was awarded numerous decorations.

Following the War, Edgar moved to Estes Park, where he became the General Manager of the Stanley Hotel. In 1970, he joined the Sheraton Corporation as General Manager of the French Lick Springs Hotel in Indiana. Edgar's position with the Sheraton ultimately led to his relocation to Steamboat Springs, where he became the manager of the Sheraton Hotel there. He retired from that position in 1985.

Edgar was active in volunteer work in every Colorado community in which he lived. He was a member of the Chamber of Commerce, President of the Board of Education and also gave his time to the Masonic Lodge.

Mr. Speaker, Edgar Stopher's dedication and selflessness certainly deserve the recognition of this body of Congress. It is my privilege to pay tribute to him for his contributions to the State of Colorado and our nation. I would like to extend my thoughts and deepest sympathies to Edgar's family and friends during this difficult time.

TEXAS TROOPS IN IRAQ

HON. GENE GREEN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, November 19, 2003

Mr. GREEN of Texas. Mr. Speaker, I rise today to pay tribute to the brave men and

women of our Armed Forces and especially to honor those who have bravely fought and given their lives in Iraq.

Texans have a long history of serving in our military, and the same holds true today in Iraq.

There have been more men and women from Texas who have given their lives in Iraq, than from any other State other than California.

Since the U.S. launched its first airstrike in Iraq, 273 Americans have been killed in hostile action; 158 of those deaths coming after the President declared major combat to be over on March 1.

As of Friday, the Defense Department knew of 34 Texans who had been killed serving their country in Iraq.

Our hearts go out to the family members of these individuals who have made the ultimate sacrifice for their country:

Sgt. Edward Anguiano, 24, of Los Fresnos, was killed in action on March 23;

Chief Warrant Officer Andrew Arnold, 30, of Spring, was killed in action on March 22;

Spc. Richard Arriaga, 20, of Ganado, was killed in an action on September 18;

Sgt. Michael Barrera, 26, of Von Ormy, was killed in action on October 28;

Staff Sgt. Gary Collins, 32, of Hardin, was killed in action on November 8;

Capt. Eric Das, 30, of Amarillo, was killed in action on April 7;

Pvt. Ruben Estrella-Soto, 18, of El Paso, was killed in action on March 23;

Master Sgt. George Fernandez, 36, of El Paso, was killed in action on April 2;

Pvt. Robert Frantz, 19, of San Antonio, was killed in action on June 17;

Spc. Rodrigo Gonzalez-Garza, 26, of Texas, was killed in action on February 25;

Pfc. Analaura Esparza-Gutierrez, 21, of Houston, was killed in action on October 1;

Chief Warrant Officer Second Class Scott Jamar, 32, of Granbury, was killed in action on April 2;

Staff Sgt. Phillip Jordan, 42, of Brazoria, was killed in action on March 23;

Cpl. Brian Kennedy, 25, of Houston, was killed in action on March 21;

Spc. James Kiehl, 22, of Comfort, was killed in action on March 23;

Chief Warrant Officer Johnny Mata, 35, of Amarillo, was killed in action on March 23;

Cpl. Jesus Medellin, 21, of Fort Worth, was killed in action on April 7;

Sgt. Daniel Methvin, 22, of Belton, was killed in action on July 26;

Pfc. Anthony Miller, 19, of San Antonio, was killed in action on April 7;

Sgt. Keelan Moss, 23, of Houston, was killed in action on November 2;

Spc. Joseph Norquist, 26, of San Antonio, was killed in action on October 9;

Staff Sgt. Hector Perez, 40, of Corpus Christi, was killed in action on July 24;

Second Lt. Jonathan Rozier, 25, of Katy, was killed in action on July 19;

Cpl. Tomas Sotelo, Jr., 20, of Houston, was killed in action on June 27;

Spc. James Wright, 27, of Morgan, was killed in action on September 18;

Pfc. Stephen Wyatt, 19, of Kilgore, was killed in action on October 13;

Pfc. Chad Bales, 20, of Coahoma, died on April 3.

Spc. Zeferino Colunga, 20, of Bellville, died on August 6.

1st Sgt. Joe Garza, 43, of Robstown, died on April 28.

Spc. John Johnson, 24, of Houston, died on October 22.

Spc. Christian Schulz, 20, of Colleyville, died on July 11.

Spc. Joseph Suell, 24, of Lufkin, died on June 16.

Sgt. Melissa Valles, 26, of Eagle Pass, died on July 9.

Sgt. Henry Ybarra, 32, of Austin, died on September 11.

These men and women gave their lives defending their country and fighting to liberate a country that has never experienced freedom.

Our thoughts and prayers go out to the family and friends of these individuals.

They served their country bravely, and they will forever be remembered as heroes.

INTRODUCTION OF THE WILSON-TOWNS HEPATITIS C EPIDEMIC CONTROL AND PREVENTION ACT

HON. EDOLPHUS TOWNS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 19, 2003

Mr. TOWNS. Mr. Speaker, I rise today to urge my colleagues to join me in support of the Wilson-Towns Hepatitis C Epidemic Control and Prevention Act, which I have introduced today with Representative WILSON of New Mexico.

The virus which causes Hepatitis C was first identified in 1989. Currently, about 4 million people in the United States are believed to have the Hepatitis C virus. However, exact figures are not available because of the stealthy nature of this virus. Often called the "silent epidemic," people infected with the Hepatitis C virus can be virtually symptom-free for decades before realizing that life-threatening damage has occurred. Unfortunately, to date, there is no vaccine to prevent this disease.

When this virus first appeared, it was believed that only intravenous drug users were at risk. However, today we know that this disease is no respecter of persons. People from all walks of life have become victims of this virus. Our young people are particularly at risk because tattoos and body piercings have become the fastest growing mode of transmission for Hepatitis C. Many young people are unwittingly putting themselves at risk for contracting this disease. We must provide them with information which will enable them to make informed decisions about this risk.

Mr. Speaker, this bipartisan effort, which is modeled after a bill introduced on the Senate side by Senators KAY BAILEY HUTCHISON of Texas and EDWARD KENNEDY of Massachusetts, will direct the Secretary of Health and Human Services to establish, promote and support a comprehensive prevention, research and medical management referral program for persons suffering from the Hepatitis C virus. If passed, this bill will represent the first federal effort to provide a strategic approach to combat this disease.

Mr. Speaker, this disease has affected almost 2 percent of the population of this country. We must take concrete action now before many more are needlessly subjected to this virus. Let us not miss this opportunity to avert this potential public health threat. I urge my colleagues to support this bill.

CONGRATULATIONS, DR. ANDREW BELSER

HON. BILL SHUSTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 19, 2003

Mr. SHUSTER. Mr. Speaker, I rise today to congratulate Dr. Andrew Belser of Juniata College on receiving the prestigious Pennsylvania Professor of the Year award and to thank him for the dedication and guidance with which he has provided his students.

Since 1981, the United States Professors of the Year program has rewarded outstanding professors for their invaluable work. It is the only national program to recognize college and university professors for their teaching skills, and thus, this award is a testament to Dr. Belser's commitment to his students and the dedication to teaching upon which he prides himself.

Since 1997, Dr. Belser has inspired and directed Juniata College students to study and perform to the best of their abilities. He teaches the importance of maintaining tremendous discipline, technique and skill while making theater, which is a valuable lesson that will influence and guide these students in every endeavor. An experience in the arts, such as the one that Dr. Belser provides, contributes greatly to one's personal growth as well as the growth of the community.

Dr. Belser commands a very influential and central role in the construction of the Regional Performing Arts Center, the new theater complex at Juniata College. He has used his expertise not only to teach and enliven his students, but to entertain and educate the surrounding community as well. Dr. Belser's dedication and loyalty to the arts is uncommon in the technologically focused world we live in today, but without such invigorating mentors people would lose the rich culture that influences every action and inspires every thought.

I congratulate Dr. Andrew Belser on this great honor and hope that he continues to spread his wisdom and passion for many years to come.

PERSONAL EXPLANATION

HON. LUIS V. GUTIERREZ

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 19, 2003

Mr. GUTIERREZ. Mr. Speaker, I was also unavoidably absent from this Chamber on June 3, 2003. I would like the RECORD to show that, had I been present, I would have voted "yea" on rollcall vote 232. On June 9, 2003, I was absent from this chamber and I would like the RECORD to show that, had I been present, I would have voted "yea" on rollcall votes 249, 250, and 251. I was also absent from this Chamber on June 11, 16 and 19, 2003, and would like the RECORD to show that, had I been present, I would have voted "nay" on rollcall vote 257 and "yea " on rollcall votes 258, 259, 260, 261, 276, 277, 278, and 294.

On June 24, 2003, I was also absent from this Chamber and would like the RECORD to

show that, had I been present, I would have voted "nay" on rollcall vote 305.

PERSONAL EXPLANATION

HON. SOLOMON P. ORTIZ

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 19, 2003

Mr. ORTIZ. Mr. Speaker, due to inclement weather and travel delays from my district, I was unable to vote during the following rollcall votes. Had I been present, I would have voted as indicated below.

Rollcall No. 624: "yes"; rollcall No. 625: "yes"; rollcall No. 626: "yes"; rollcall No. 627 "yes."

PAYING TRIBUTE TO SAM MAYNES

HON. SCOTT McINNIS

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 19, 2003

Mr. MCINNIS. Mr. Speaker, it is my honor to rise and pay tribute to my friend Sam Maynes. Sam has dedicated his life to advocating for the empowerment of those less fortunate. He is a tremendous attorney, husband, father, and friend. As Sams's 70th birthday approaches, I would like to call attention to his many contributions to the Colorado community.

Sam is the senior partner of the Durango law firm of Maynes, Bradford, Shipps and Sheftel. Formed in 1961, Sam's firm is general counsel for the Ute Indian Tribe, and special counsel for the Ute Mountain Tribe. Sam is also one of the foremost experts in water law in the United States. He is general counsel for the Southwestern Water Conservation District in Colorado and was instrumental in working to reach a compromise to make the Animas La Plata water project possible. As an attorney, Sam redefines the phrase 'zealous advocacy.' He is renowned for fighting ferociously for what he believes in. Sam is a man of conviction, and principle, when his morals dictate a position for one of his clients; he is willing to go to the ends of the earth to assure that justice prevails.

Sam's ferocious advocacy has earned him many accolades. He is the recipient of the United States Bureau of Reclamation Citizen Award, the Wayne N. Aspinall Water Leader of the Year Award, the Distinguished Achievement Award from the University of Colorado Law School, and the Citizen of the Year Award from the Durango Area Chamber Resort Association. In addition, Sam was named an Honorary Order of the Coif by the University of Colorado School of Law. Sam's many recognitions are a testament to his talent, conviction and integrity. The State of Colorado is truly a better place as the result of Sam's contributions.

The year since Sam's last birthday has been a trying one. Last winter, Sam lost his wonderful wife Jacqueline to multiple sclerosis. Jacqueline was Sam's "angel" and the mother of his four tremendous children. However, even after her death, Sam approaches each day with the knowledge that Jacqueline is there with him as he fights for those who need his help. Despite these tribulations, Sam still displays a playful zest for life each day. Those who visit Sam in his office are often treated to a piece of Sam's famous homemade apricot brandy pound cake while they are amused by Sam's charm, humor and contentment. Sam is truly a magnificent person.

Mr. Speaker, it is my privilege to come before Congress to pay tribute to a man who has dedicated his life to the "under dog." Sam's life is the embodiment of all that makes this country great and I consider it an honor to be his friend. Happy Birthday, Sam.

NATIONAL MUSEUM OF AFRICAN AMERICAN HISTORY AND CULTURE ACT

SPEECH OF

HON. JACK KINGSTON

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 18, 2003

Mr. KINGSTON. Mr. Speaker, I rise in support of this bill and encourage all of my colleagues to support this long overdue museum.

I would like to thank Chairman NEY, Mr. LARSON, Chairman LATOURETTE, Ms. HOLMES-NORTON for their diligence in improving this bill and bringing it before us today. It has been a pleasure working with each of you and your staffs.

I would especially like to thank my colleague from Georgia, Mr. LEWIS, for his tireless efforts over the years to ensure that a National Museum of African American History and Culture will be added soon to our Smithsonian Institution. This project would not be as close as we are today without him, and I am proud to be a part of it.

Mr. LEWIS, thank you for your steadfast commitment and leadership on this issue and for allowing me to work with you on it.

Mr. Speaker, the time has come for a dedicated, national museum to celebrate African American culture, experience, and history.

The history and culture of African Americans is our history and culture. When we learn that history—the good and the bad, the tragic and the inspiring—we learn about ourselves. By understanding our common past we can begin to envision a brighter future.

Bringing this museum into our national memory at the Smithsonian Institution is the right thing to do. And bringing this museum to a prominent and fitting home in our Nation's Capital is also the right thing to do.

There are many issues surrounding this museum which I believe have been fairly addressed by this bill. We have tried to closely follow the model recently adopted for the Native American Museum currently under construction. Issues regarding museum governance and cost sharing, for example, follow this model.

We ensure this is a true partnership with the private sector and the public at-large by capping Federal contributions at 50 percent.

We ensure the historical integrity of the project by fully integrating this museum into the Smithsonian system.

We ensure the project fits into our Nation's Capital by preserving the consultative role of the National Capital Planning Commission.

The one point that has been made many times throughout this process was that a specific site for this museum should be decided now. The Presidential Commission, authorized by the Congress, recommended five sites within the District of Columbia, four of which are included as options in this bill. Each of these sites has significant benefits as well as drawbacks. I strongly believe that is critical to the timely success of this project that a final, achievable and suitable site is agreed upon as soon as possible.

To that end, all the members who have worked so hard on this bill agreed to drop consideration of a site on the Capitol grounds which would have likely resulted in many years of further delay with no promise that the site could ever be made compatible with Capitol security and overall development plans.

This bill and this museum can serve a valuable purpose in furthering our national dialogue on race. I know that it is the intention of everyone associated with this bill to see this project move forward in a spirit reconciliation and not recrimination. I know we all believe this effort is about seeking the truth of our common history without malice. I am confident we all share the view that this museum must be a place to bring all Americans closer together and that it not be allowed to become a taxpayer subsidized headquarters for angry activists or the domain of politically correct historical revisionists. I hope that all of us here today, and those of us who will be here in the future, will remain committed to this museum in the spirit of truth, reconciliation, and respect with which we take this action here today.

Mr. Speaker, expanding our national treasure, the Smithsonian Institution, to include the National Museum of African American History and Culture is a tremendous opportunity to remember our past while looking forward our common future. I encourage all my colleagues to vote in favor of this bill.

URGING THE PRESIDENT TO PRESENT THE PRESIDENTIAL MEDAL OF FREEDOM TO HIS HOLINESS, POPE JOHN PAUL II

SPEECH OF

HON. BART STUPAK

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 18, 2003

Mr. STUPAK. Mr. Speaker, I rise to honor His Holiness Pope John Paul II as Roman Catholics throughout the world celebrate his Silver Jubilee anniversary this year.

The resolution before us, H. Con. Res. 313, recognizes the Pope for his enduring and historic contributions to human dignity and peace and urges President Bush to present him with the Presidential Medal of Freedom.

I can think of no more fitting a tribute to Pope John Paul II, our first ever non-Italian pope, in honoring his 25th year as Bishop of Rome and Supreme Pastor of the Catholic Church. His service began on October 22, 1978.

As the spiritual leader of more than one billion Catholic Christians worldwide, including 66 million in the United States alone, the resolution memorializes the gratitude of many. During his tenure he has visited more than 125 countries and traveled more than 750,000 miles making unprecedented contributions to the freedom of the world community.

The Holy Father's remarkable work has been globally reaching—from his diplomatic leadership toward the peaceful liberation of his Polish homeland and demise of the Soviet empire, to his promotion of human rights in rogue nations, to his efforts to heal historic divisions between the Catholic Church and other worldwide religions.

Mr. Speaker, whether you are Catholic or not, no one can deny the significant impact Pope John Paul II has made on world peace and freedom. His efforts have improved the lives of Christians and non-Christians alike.

I urge my colleagues to support this special resolution for the honored accomplishments of His Holiness Pope John Paul II—a positive inspiration to Catholics and all humankind.

ESTABLISHING NATIONAL AVIATION HERITAGE AREA

SPEECH OF

HON. DONNA M. CHRISTENSEN

OF THE VIRGIN ISLANDS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 18, 2003

Mrs. CHRISTENSEN. Mr. Speaker, I rise in support of H.R. 280, legislation to create the National Aviation Heritage Area and urge my colleagues to support its passage. H.R. 280 includes as one of its sections, my bill, H.R. 1594, to provide for a suitability and feasibility study of establishing a St. Croix National Heritage Area in the United States Virgin Islands.

The island of St. Croix has a long, distinguished, and varied history, including being the site where Christopher Columbus first stepped onto what is now American soil. There is significant interest in preserving and enhancing the natural, historical and cultural resources of the island on a cooperative basis and such a study would provide guidance on how we can best achieve those purposes.

National Heritage areas are places where natural, cultural, historical and recreational resources combine to form a nationally distinctive landscape arising from patterns of human activity shaped by geography.

While each island can make a good case for designation, the island of St. Croix with its two historic towns—Christiansted built in 1734 and Frederiksted built in 1752—is richly blessed with all of the attributes that would justify this designation.

The town's historic architecture matured over a 100-year period. The town of Christiansted is one of the finest examples of Danish architectural designs in this hemisphere. Its history can be traced back some 4,000 years to 2500 BC.

In 1493 Columbus arrived at what is now the Salt River National Historic Park and Ecological Preserve, making it the only site under the American flag where his men went ashore, as well as the first recorded hostile encounter between Europeans and Native Americans.

Frederiksted has the distinction of having been the first jurisdiction to have raised its flag in salute of the new republic of the United States of America, and indeed the first designed flag was done by a resident of that island.

Among the many strong ties of great national significance between St. Croix and the United States, perhaps the most significant one is that this island was the boyhood home of Alexander Hamilton, and where he began to develop the skills employed as the first Secretary of the Treasury of this country.

I want to thank Full Committee Chairman POMBO, Ranking Member RAHALL as well as Subcommittee Chairman RADANOVICH for their support is getting H.R. 1594 and H.R. 280 to the floor of the House today.

My colleagues, H.R. 1549 is a good bill, which could serve as a catalyst for reinvigorating the lagging tourism sector on St. Croix. I urge its adoption.

INCREASING THE WAIVER REQUIREMENT FOR CERTAIN LOCAL MATCHING REQUIREMENTS TO AMERICAN SAMOA, GUAM, THE VIRGIN ISLANDS, OR THE COMMONWEALTH OF THE NORTHERN MARIANA ISLANDS

SPEECH OF

HON. DONNA M. CHRISTENSEN

OF THE VIRGIN ISLANDS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 18, 2003

Mrs. CHRISTENSEN. Mr. Speaker, I rise in support of H.R. 1189, to increase the waiver requirement for certain local matching requirements for grants to American Samoa, Guam, the Virgin Islands or the Commonwealth of the Northern Mariana Islands. I want to commend my colleagues ENI FALEOMAVAEGA and MADELEINE BORDALLO for introducing the bill, which would increase the matching waiver requirement for the first time in twenty years.

Last year the Resources Committee unanimously passed a similar bill jointly sponsored by our former colleague from Guam Robert Underwood, ENI FALEOMAVAEGA and myself and I'm pleased that we are once again taking this action.

Mr. Speaker, as I indicated, it has been nearly twenty years since this law has been revisited. While territorial economies have improved each government, particularly my own, the government of the U.S. Virgin Islands continues to be challenged with rising unemployment, decreased government revenues, and attracting new capital for diversification. H.R. 1189 will help broaden U.S. territories' access to Federal grants by increasing the amount Federal agencies shall waive to $500,000.

The bill also seeks to end the inconsistent manner in which 48 U.S.C. section 1469(a) is applied by clarifying that the matching waiver applies to all federal agencies and departments making grants to the U.S. territories, not just the Department of Interior (DOI). The bill also requires DOI to provide a report to Congress on the effect of the updated waiver requirement.

It is my hope also Mr. Speaker, that Federal agencies will apply the waiver not just to grants awarded to the territorial governments, but also to non-profit organizations and other eligible non-governmental entities in the territories. Non-profit organizations in the territories fulfill a significant role in our communities. Groups such as Lutheran Social Services, the St. Croix Community Foundation and the V.I. Resource Center help meet the needs of the homeless, the disadvantaged, and those whose lives are buffeted by tough economic times. Their work is often supported by federal grants. Without such Federal assistance, the non-profit organizations in the territories would struggle to meet their missions and most would not be able to maintain the current level of assistance to our communities.

In conclusion, Mr. Speaker, I want to thank Chairman POMBO and Ranking Member RAHALL for their willingness to support and shepherd this bill through the legislative process. I also want to particularly thank our former colleague Bob Underwood, who for most of his tenure in the House, made increasing the matching waiver for the territories one of his highest priorities. I urge my colleagues to support passage of this bill.

A TRIBUTE TO A.C. LYLES

HON. NICK SMITH

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 19, 2003

Mr. SMITH of Michigan. Mr. Speaker, recently I had the privilege of visiting with a great American by the name of A.C. Lyles, who has befriended many celebrities over the years. Throughout the decades that he has worked at Paramount Pictures, A.C. Lyles has become loved by studio staff, by stars, and by Presidents. He has made countless contributions to the motion picture industry and become a legendary producer, writer and partners in numerous theatrical features and television shows.

A.C. Lyles was born May 17, 1918 in Jacksonville, Florida. Even as a young boy, he dreamed of Hollywood. Following his high school graduation, A.C. was hired by Paramount to work in the mail room. It was not long before he was promoted to a director of publicity at the tender age of 19, and eventually became a producer in 1954. Among the variety of successful features and television shows that he produced over the years, A.C. was perhaps best known for the western movies that became a Paramount trademark.

As the Hollywood liaison to Presidents, A.C. brought the culture of art to the White House. During the administration of his close friend, Ronald Reagan, and throughout the Bush Administration, he brought celebrities to entertain at presidential functions. He also served on the Presidential Board of Advisors on Private Sector Initiatives and regularly attended meetings at the White House and on Capitol Hill.

A.C. has been recognized countless times over the years for his work at Paramount. These awards include the famed Golden Spurs award, the George Washington Award of the Freedoms Foundation, and a star on the Hollywood Walk of Fame. On behalf of the United States Congress, and his good friends

the Hon. DAVID DREIER and the Hon. MARY BONO, I am pleased to recognize his extraordinary career once again in admiration of his unyielding dedication and unparalleled achievement.

SENATE—*Friday, November 21, 2003*

The Senate met at 9:30 a.m. and was called to order by the PRESIDENT pro tempore [Mr. STEVENS].

PRAYER

The Chaplain, Dr. Barry C. Black, offered the following prayer:

Let us pray.

Creator of all life, Who satisfies the longings of our souls, thank You for Your faithfulness, which is as enduring as the Heavens. Your peace radiates in our hearts on wings of faith, hope, and love.

Bless our Senators. Strengthen them for today's challenges. Energize them so that they are more than a match for these momentous times. May they soar on eagle's wings. May they run and not be weary. May they walk and not faint. When they are lost, provide them with direction. Show them duties left undone. Remind them of promises yet to keep, and reveal to them tasks unattended.

Enrich us all with Your loving presence. We pray this in Your hallowed Name. Amen.

PLEDGE OF ALLEGIANCE

The PRESIDENT pro tempore led the Pledge of Allegiance, as follows:

I pledge allegiance to the Flag of the United States of America, and to the Republic for which it stands, one nation under God, indivisible, with liberty and justice for all.

RECOGNITION OF THE MAJORITY LEADER

The PRESIDENT pro tempore. The majority leader is recognized.

SCHEDULE

Mr. FRIST. Mr. President, this morning the Senate will resume consideration of the Energy conference report. There will be 60 minutes of debate prior to the vote on the motion to invoke cloture. Therefore, the first vote of today's session is expected to occur shortly after 10:30.

At this point, I ask unanimous consent that the live quorum that is required under rule XXII be waived.

The PRESIDENT pro tempore. Is there objection?

Without objection, it is so ordered.

Mr. FRIST. Mr. President, I urge my colleagues this morning to vote for cloture. I will say more just before the vote. But I do encourage Members to weigh very carefully the vote that will be taken in about an hour.

This bill is a balanced approach to ensuring this country's energy security through this national energy policy.

If cloture is invoked, we will work with Members to establish a time certain for the vote on passage of this conference report.

In addition, throughout the afternoon we will attempt to clear any additional conference reports that may arise from the House.

I will update everyone on the schedule later today as we watch the progress on the remaining legislative items.

MODIFICATION OF AMENDMENT NO. 2208

Mr. FRIST. Mr. President, I ask unanimous consent that notwithstanding passage of H.J. Res. 78, the previously agreed to amendment No. 2208 be modified with changes that are at the desk.

Mr. REID. Mr. President, we have no objection.

The PRESIDENT pro tempore. Without objection, it is so ordered.

The amendment (No. 2208), as modified, is as follows:

On page 2, line 7, strike ''23'' and insert ''24''

On page 2, line 1, strike ''23'' and insert ''24''

RECOGNITION OF THE ACTING MINORITY LEADER

The PRESIDENT pro tempore. The Senator from Nevada is recognized.

Mr. REID. Mr. President, while the majority leader is on the Senate floor, before we begin the final hour of debate on this important issue, I think the last 2 days have been some of the finest hours of the Senate this year. The debate has been constructive on both sides. I think it has been issue-oriented. I have been very impressed with the manner in which the debate has proceeded. The two managers of the bill are, of course, both experienced, and I am confident that the debate for the next hour will be just as constructive.

We have our time lined up. Everyone is here to make their speeches.

I look forward to a vigorous debate and a vote in about an hour.

RESERVATION OF LEADER TIME

The PRESIDENT pro tempore. Under the previous order, leadership time is reserved.

ENERGY POLICY ACT OF 2003—CONFERENCE REPORT

The PRESIDENT pro tempore. Under the previous order, the Senate will resume consideration of the conference report to accompany H.R. 6, which the clerk will report.

The legislative clerk read as follows:

Conference report to accompany H.R. 6, an act to enhance energy conservation and research and development, to provide for security and diversity and the energy for the American people, and for other purposes.

The PRESIDENT pro tempore. Under the previous order, there will now be 60 minutes equally divided between the chairman and ranking member of the Energy Committee, and the final 10 minutes will be divided with the first 5 minutes under the control of Senator BINGAMAN and the final 5 minutes under the control of the Senator from New Mexico, Mr. DOMENICI.

Who yields time?

The Senator from Idaho.

Mr. CRAIG. Mr. President, we are in the final hour of debate on probably one of the most important policy issues to come before this Senate in a good number of years. The Senator from Nevada has talked about the quality of the debate and the detail of the debate. Certainly, that is true.

I yield to the chairman of the committee, Senator DOMENICI.

The PRESIDENT pro tempore. Will the Senator yield to the Senator from New Mexico?

Mr. CRAIG. I am happy to yield to the chairman of the Energy and Natural Resources Committee.

Mr. DOMENICI. Mr. President, I want to make sure that we understand the timing. I asked Senator CRAIG if he would come to the Senate floor so I could give him some time. I wonder if 5 minutes would be enough.

I yield 5 minutes to the Senator.

The PRESIDENT pro tempore. The Senator from Idaho is recognized for 5 minutes.

Mr. DOMENICI. I thank the Chair.

Mr. CRAIG. Mr. President, what we are attempting to do for the American people is allow them, their country, and the energy sector of our economy to get back into the business of producing energy. We may well be faced with some of the highest natural gas prices that any consumer will have paid in the United States this winter. If we have a cold winter, it will be time for those who are paying exorbitant energy bills to ask a fundamental question: Why? Why is the public policy of this country driving up our energy bills? Why is not there a public policy that begins to put this country back into the business of producing energy?

Our historic wealth, in large part, has been based on an abundance of high-quality, low-cost energy in all kinds of forms.

The Energy Policy Act of 2003 continues that most important economic legacy for this country—to assure that we continue our traditional energy sources but with new technologies and cleaner approaches; that we invest money in new technologies so that the next generation of Americans can have the same abundance of energy that I have had and that my father had before me.

It would be an absolute tragedy if in the fine ticking of all of the issues within this very large bill someone collectively decides to vote against it because, if they do, they ought to go home and try to explain why in February or March of this year their constituents are continuing to pay ever increasingly higher rates, or why there was a blackout in the Northeast this year, or why the brownouts in California a few years ago, and why gas prices at the pump are at an average historic high.

There are sound answers to all of those questions. But, more importantly, the Energy Policy Act of 2003 begins to address resolution of those questions, bringing those prices down overall and creating a greater abundance.

We have also stepped out in a variety of new areas, including new nuclear technologies, new fuels approaches, and new hydrogen technology which our President was very daring to talk about—a new surface transportation fuel future, hydrogen. We have set about the technology and the planning and the design for all of those types of new approaches.

I say to the Senator from Alaska, his State is one of the largest energy producers of all of our States.

This bill clearly gives companies the ability to come in and invest and bring literally trillions of cubic feet of gas to the lower 48 that will offer help in bringing down those high prices.

We created the incentives. We have allowed them to invest in the marketplace and to get a good return on their investment.

This is a truly comprehensive bill. There is no question that we have spent literally the last 5 years in attempting to design an Energy bill that will fill all of the needs of this country, and to restructure and refine the existing energy sector of our country especially in the electrical area.

This has a new electrical title much different from the one before. Compromises were made. I stood in the Senate a year ago and offered an amendment to take the electrical title out because of its controversy and its impact on the Pacific Northwest. Today we have changed that. Today we have said all areas of the country can grow and develop and we will work to build an interconnectivity between those regions of the country that will, hopefully, disallow the kind of problems we had in the Northeast this summer and certainly begin to address the inability of California to produce its energy needs.

All of those issues are bound up in this bill. Yet some of our colleagues have picked a very small piece of this bill, less than one-half of 1 percent of the total impact of this bill, and have said that is the problem, that is the destructive character of the bill. That is why some Members oppose it.

This is a very good piece of work. It brings our country back into energy production. I urge my colleagues to vote for cloture and allow the Senate to move toward final passage for this critical piece of public policy.

The PRESIDENT pro tempore. The Senator from New Mexico.

Mr. BINGAMAN. Mr. President, I yield 4 minutes to the Senator from Vermont.

The PRESIDENT pro tempore. The Senator from Vermont is recognized for 4 minutes.

Mr. JEFFORDS. Mr. President, America needs an energy policy, but not this one. This bill fails to provide a realistic, sustainable energy plan for America's future. Observers have called this Energy bill ''three parts corporate welfare and one part cynical politics.'' They call it a complete waste of energy and say it fails to address the fuel and power needs of the average American. They are absolutely right.

The bill includes environmental rollbacks. It threatens public health. It weakens consumer protections against electricity market manipulation. It gives out billions of dollars in subsidies to fossil fuel and nuclear industries. The rollback of three of our most fundamental environmental laws—the Clean Air Act, the Drinking Water Act, and the Clean Water Act—is terrible environmental policy.

This bill allows more smog pollution. This bill exempts all oil and gas construction activities from the Clean Water Act. The Senate's renewable portfolio standard requiring utilities to generate 10 percent of their power from renewable sources by 2020 was struck from the bill.

What we needed was a bill to decrease our energy dependence on foreign oil, but this bill will not conserve a drop of oil. We need to protect our consumers, our public lands, and our public health. Instead, this bill weakens protections. We need to give a boost to the renewable energy sector, but instead the bill is a kickback to the fossil fuel industry.

We now need to do the right thing and oppose cloture. We need to spend more time developing the right energy policy for America.

I reserve the remainder of my time.

The PRESIDENT pro tempore. Who yields time?

Mr. DOMENICI. I yield 3 minutes to the Senator from Wyoming.

The PRESIDENT pro tempore. The Senator is recognized for 3 minutes.

Mr. THOMAS. Mr. President, I am excited about the opportunity we have today to finally, after a number of years, come forward with a broad, encompassing policy for energy.

We ought to give a little thought to where we will be in the future as individuals, as families, think about the energy we use, the energy we need, where it will come from. Our demands go up, yet we do not really have a policy.

Nothing is more important to the economy than having accessible energy and jobs. This bill creates a great number of jobs. It is a policy on conservation. It includes the types of equipment we use. It includes renewables, with a good many dollars spent for renewables. We talk of alternative fuels. We talk of hydrogen. We talk about domestic production.

It does not roll back the economy despite what is being said on the floor. It does conserve. We have conservation methods included. What is most important in terms of the environment is a good deal of research for coal development so we can have energy from our largest fossil fuel, coal, and do it in a way that is clean for the air. We will hear that it amounts to politics regarding MTBE, which is a very small aspect of this.

We need to have an energy policy for our country. We must have an energy policy. Now is our opportunity to have an energy policy. Certainly we ought to at least be able to vote to have an up-or-down vote on this issue.

The PRESIDENT pro tempore. Who yields time?

Mr. BINGAMAN. Mr. President, I suggest the absence of a quorum and the time be charged equally.

Ms. LANDRIEU. Reserving the right to object, I would like to speak on the bill.

The PRESIDENT pro tempore. Does the Senator withhold his suggestion of a quorum?

Mr. BINGAMAN. I withhold my request.

Ms. LANDRIEU. I will speak for the bill.

Mr. CRAIG. I yield 5 minutes to the Senator from Louisiana.

The PRESIDENT pro tempore. The Senator from Louisiana is recognized for 5 minutes.

Ms. LANDRIEU. Mr. President, as a member of the energy committee who has worked very hard with both the distinguished Senators from New Mexico, Mr. BINGAMAN and Mr. DOMENICI, as well as the former chair from Alaska, Senator MURKOWSKI, trying to fashion a bill that balances the great interests of every region of this country, I am proud to come to the Senate and urge my colleagues to vote for this Energy bill.

There are provisions that should be in this bill that are not. There are

many aspects of this bill that I would have written differently myself. However, the fact is, as any member on the Energy and Natural Resources Committee can state, we have had hours and hours, maybe hundreds of hours, of hearings on how we create a more reliable electricity structure in this Nation, how we try to use our great natural resources in a better fashion to help create the energy this country needs to be more independent and more economically competitive.

I come from the State of Louisiana, which is a net exporter of energy. We do a lot of energy production in Louisiana, not just in oil and gas but cogeneration. We have municipal as well as private companies, public companies, municipal generators of electricity. We drill for a lot of oil and gas. We are not a mining State in that sense, like the West, but we mine our resources and we do a much better job than we did 10 years ago and a heck of a lot better job than 20 or 30 years ago. Why? Because the United States has some of the toughest, most stringent environmental laws in the world when we take our coal out of the ground or when we drill off our shore. The Shell Oil company told me last year if they put all the oil they spilled off the coast of Louisiana in a container, it would not fill up the bottom fourth of a barrel.

There are people in the Senate who think we cannot mine our resources in a way that protects our environment. Do we have a perfect system? No. Is it one of the best in the world? Absolutely. So this Senator and this Democrat is for using our natural resources in a way that helps meet the energy demands of this Nation.

This country consumes more energy per capita than any nation in the world. As far as I am concerned, we have an obligation to produce it. Some Members think we can consume, consume, consume and not produce anything. One of the most extraordinary aspects about this bill is streamlining of regulations, trying to untie people's lands so we can appropriately extract natural resources, clean our coal, have good technology off our shores, and use that money to invest in our environment.

People say the Senator from Louisiana is on the floor because Louisiana gets money out of this bill. The State gets some help. We deserve some help because for 50 years we have sent over $140 billion of this Nation's treasury off the shores of Louisiana. That is not pocket change.

We have saved the redwood forests, and we have funded the whole land and water conservation funding for the Nation. Now we have an opportunity to take a portion of that money and save the wetlands of America. It is not Louisiana's wetlands. This is the largest delta in the continental United States, and it is in crisis. It is washing away. The chairman from New Mexico came to see it. He does not need to read a book or anything about it; he has seen it.

So, yes, we have some resources, a tiny percentage of the money that comes out of the great natural resources of the Gulf of Mexico, not to give this Senator any special project, because I sure do not have any special sweet deal. The deal I have cut for my State, which the Senator knows, is to save these wetlands, where migratory birds for the whole Nation go, and fisheries off the coast of the Gulf of Mexico, from the east coast to the west coast.

So there are lots of good things in this bill. I know we have problems with MTBE. I know we have problems. I am very disappointed in the hydrogen section that would have helped us move to hydrogen cars. I am very disappointed. The ranking member fought very hard for renewable portfolio standards, and I am disappointed that his language was stripped out.

But I can tell you, the chairman from New Mexico has fought like a tiger to get a balanced bill. The fact is, we are not divided Democrat against Republican; we are divided regionally.

Mr. President, I ask unanimous consent for 1 more minute.

The PRESIDENT pro tempore. Is there objection?

Without objection, it is so ordered.

Ms. LANDRIEU. Mr. President, I know people have come down here and complained about standard market design. I realize the Senators from the Northeast are concerned about the language that has been put in this bill. But I will tell you, the reason the language has been put in the bill like this is that there are Southerners who are generating a lot of electricity. Why? Because we are drilling, and we are producing, and we are building plants in the South. And I will be darned if our ratepayers have to pick up the tab to ship that electricity to the Northeast. They need to be doing a better job of building plants and laying down pipelines.

I have more pipelines in Louisiana per capita than any State in the Union. If you took an x-ray of the country, you would be shocked. Like a little skeleton, you could see the pipelines under Louisiana. We cannot build any more. And do not believe we are taking the gas from those pipelines. We are sending it all over the country. We are happy to. But we cannot pay for all of it. We have to share the costs in an appropriate way.

So I say to my Democratic colleagues, when they say there is nothing in the bill for Democrats, may I please remind them there is no drilling—30 more seconds—there is no drilling in this bill in ANWR.

Mr. MCCAIN. Regular order, Mr. President.

The PRESIDENT pro tempore. Does the Senator yield 30 seconds?

Mr. DOMENICI. Yes. I say to the Senator, we are not using your time.

Ms. LANDRIEU. I thank the Senator from New Mexico.

There is no drilling, in this bill, in ANWR, which I know the President fought very hard for and this Senator thought might be reasonable, but the majority wasn't there.

The PRESIDENT pro tempore. The Senator's time has expired.

Ms. LANDRIEU. Thank you. I urge Democrats and Republicans to support cloture on this bill.

The PRESIDENT pro tempore. The Senator's time has expired.

The Senator from New Mexico.

Mr. DOMENICI. Mr. President, I yield myself 30 seconds.

The PRESIDENT pro tempore. The Senator is recognized.

Mr. DOMENICI. Mr. President, I say to the distinguished Senator from Louisiana, I am very pleased I got to know you in the past year and a half. I do not think we would have had a chance to meet each other but for the energy crisis. I visited your State. And everything you have said today, and on the floor time after time, about what is going to happen in your State because of what is happening to the water line is true. We can kill this bill and kill that. You know how long you have been waiting for it.

Ms. LANDRIEU. Fifty years.

Mr. DOMENICI. And you are going to wait 60 more because there is nobody going to pass another bill like this with these kinds of things in it for a long time. Why do I know that? Because I have been through it. And every time we just about get there, somebody has some objection, and we have a big hole, it all falls in, and nothing gets done.

The PRESIDENT pro tempore. The Senator's time has expired.

Mr. DOMENICI. I say to the Senator, thank you for your effort. I appreciate it.

The PRESIDENT pro tempore. Who yields time?

The Senator from New Mexico.

Mr. BINGAMAN. Mr. President, I yield the Senator from Arizona 6 minutes.

The PRESIDENT pro tempore. The Senator from Arizona.

Mr. MCCAIN. Mr. President, I had an opportunity earlier this week to speak about this bill, but I think so much is objectionable in this legislation that I am compelled to expend a little more energy on it.

I have listened to my colleagues' statements, and I have yet to hear any plausible, substantiated argument in support of ethanol. Even my colleagues from corn-producing States who have indicated they support this bill have not been able to identify one benefit

ethanol provides the American taxpayers, who pay dearly for it—including the taxpayers in those corn-producing States.

Ethanol is a product that would not exist if Congress did not create an artificial market for it. No one would be willing to buy it. Yet thanks to agricultural subsidies and ethanol producer subsidies, it is now a very big business—tens of billions of dollars that have enriched a handful of corporate interests, primarily one big corporation, Archer Daniels Midland.

Ethanol does nothing to reduce fuel consumption, nothing to increase our energy independence, nothing to improve air quality. Let me repeat: Ethanol does nothing to reduce fuel consumption, nothing to increase our energy independence, nothing to improve air quality.

As far as reducing fuel consumption is concerned, it requires 70 percent more energy to produce a gallon of ethanol than it provides when combusted. There is actually a net energy loss from the use of ethanol. There is nothing about ethanol that will increase our energy independence. More energy is used in the production of ethanol, and it has reduced the amount of gasoline consumed in the United States by 1 percent.

Ethanol does not improve air quality. In fact, doubling the amount of ethanol, as required by this bill, will most certainly degrade air quality. A National Academy of Sciences report in 2000 found that oxygenates, meaning ethanol and MTBE, can lead to higher nitrous oxide emissions, which contribute to higher ozone levels in some areas.

That means in large cities, such as Phoenix, AZ, air quality degradation could be increased under this legislation. The residents of my State already suffer due to the impact of a lingering brown cloud. I dread the effects of this bill—doubling our national use of ethanol—on my town and communities across this Nation.

The American public has to pay a lot of money not only in taxes but at the pump for all these negative impacts on the national economy, the country's energy supply, the environment, and public health. The total cost of ethanol to the consumer is about $3 per gallon, and the highway trust fund is deprived of over $1 billion per year to the ethanol producers.

Plain and simple, the ethanol program is highway robbery perpetrated on the American public by Congress. I maintain you cannot claim to be a fiscal conservative and support the profligate spending and corporate welfare in this bill.

Mr. President, I will talk just for a minute about another problem I had with this bill, the way it was developed. A secretive, exclusive process has led to a 1,200-page monstrosity that is chock full of special interest giveaways and exemptions from environmental and other laws that, frankly, cannot withstand the light of scrutiny.

I mentioned one such provision earlier. It is a glaring example of corporate favors. Section 637 carves out a very special deal for a consortium of energy companies, predominantly foreign owned, called Louisiana Energy Services, which would allow it to construct a uranium enrichment plant in a small town in New Mexico at taxpayers' expense—to the tune of $500 million to $1 billion. This is not your ordinary pork project; it is in a class almost by itself.

Louisiana Energy Services has had some serious difficulties getting a license from the Nuclear Regulatory Commission, and for good reason. One major British partner of this group was fired by the Department of Energy from a $7 billion cleanup contract due to safety and financial failures. Even more disturbing, the major French partner, Urenco, has been associated with leaks of uranium enrichment technology to Iran, Iraq, North Korea, and Pakistan. One high-level U.S. nuclear security administrator stated:

> [T]o have this company operate in the U.S. after it was the source of sensitive technology reaching foreign powers does raise serious concerns.

There is significant reason to believe the NRC would not issue a license to this group of companies. And communities in other States did not want the LES facility in their backyard.

This bill gives LES a helping hand in New Mexico. The criteria for NRC licensing and the time period for review have been modified to make it easier and quicker for LES to get a license. Opportunities for challenges on environmental or other grounds would be severely restricted. And if you are wondering how sweet it could possibly get for this company, the uranium waste from the plant would be reclassified as low-level radioactive waste and the cost of disposal would be borne by the Department of Energy—the taxpayers of America.

Furthermore, there isn't any disposal method or site currently available. This provision, which was inserted in conference at the eleventh hour, is the epitome of corporate welfare. Allowing foreign companies with questionable reputations to circumvent longstanding environmental and nuclear regulations is simply wrong.

Let me quote from a few of the many editorials opposing this bill. I have never seen anything quite like this level of agreement in newspapers representing all regions of the country. In fact, I have yet to see a single editorial in favor of this, although I am sure there is one.

The Philadelphia Inquirer:

> . . . what most Americans were looking for was an energy bill that protected their interests. . . . Instead they got this unbalanced, shameful mess.

The PRESIDING OFFICER. The Senator's time has expired.

Mr. BINGAMAN. I yield the Senator an additional 30 seconds.

Mr. McCAIN. From the Chicago Tribune:

> Neither the contents nor the process for cobbling it together suggest this is the type of energy legislation this country needs.

The Denver Post:

> . . . the most pernicious pork got added in conference committee. Congress should start over next year.

Mr. President, let's put this up against the backdrop of a $500 billion deficit we are facing this year, with 12 percent growth of the Government. Don't call yourself a fiscal conservative and vote for this bill.

The PRESIDING OFFICER (Mr. CHAFEE). Who yields time?

Mr. CRAIG. How much time remains on each side?

The PRESIDING OFFICER. Fourteen minutes to the Senator from Idaho, and 20½ minutes for the junior Senator from New Mexico.

Mr. CRAIG. Do you want to go to another speaker?

Mr. BINGAMAN. I yield 4 minutes to the Senator from Washington, Ms. CANTWELL.

Ms. CANTWELL. Mr. President, I know we have had a healthy debate on this issue and in a few minutes we will probably have one of the closest votes this body has seen in a while. But I want to make one point clear this morning. This vote is about whose side you are on: Whether you are on the side of ratepayers and consumers in making sure we have a national energy policy that works or whether you are going to give in to the special interests who are at this very moment trying to put last-minute deals on the table, ripening other bills with projects that will convince Members to switch over at the last minute instead of standing up for the public.

When the Vice President started this effort, he said, "We are going to have a national energy policy," quoting from his report that a lot of people took pride in, thinking that somehow this administration was going to play a leadership role in an energy policy for the 21st century.

In that report, the Vice President said:

> It envisions a comprehensive long-term strategy that uses leading edge technology to produce an integrated energy, environmental, and economic policy to achieve a 21st century quality of life, enhanced by renewable energy and a clean environment. We must modernize conservation, modernize our infrastructure, increase energy supply, including renewables, accelerate the protection and improvement of our environment, and increase greater energy security.

That is what the Vice President's goal and objectives were. Unfortunately, this bill cannot defy gravity. It

is so weighted down with special interest pork subsidies and things that Americans are going to be shocked to see that this bill needs to fail.

We have all heard about the subsidies in the wrong place, $23 billion in incentives, mostly going to the fossil fuel industry. We have heard about the exemptions for Texas. Here it is that we are trying to come up with an electricity title that somehow makes everybody else more responsible and accountable with electricity, but we are going to exempt Texas.

Also, the overturning of various environmental laws—why is it that every other business in America, whether a high-tech firm or a farmer, has to comply with environmental laws, but somehow we are going to let new construction of oil, gas, and coal out of the mandates of the Clean Air Act, the Clean Water Act, the Safe Drinking Water Act, and some of our rules on public lands?

As I said yesterday, one of the biggest tragedies of this bill is the missed opportunity for jobs. We could have gotten language in this bill that would have provided for a natural gas pipeline out of Alaska that would have benefited many in this country as far as job creation is concerned. It would have benefited many of us in the Northwest in getting off our overreliance on hydro energy.

We missed an opportunity in planning for the hydrogen economy; 750,000 jobs could have been created in the next 10 years by having a vision. Not just one line in a State of the Union speech about a hydrogen car, but instead a plan with specifics and incentives so the United States could be a world leader in the hydrogen fuel economy. That is not what is in this bill.

I woke up this morning to read in the Seattle Post-Intelligencer online an article that was entitled ''The Energy Bill, It Would Be A Hoot, If It Wasn't So Sad.''

In that article it says :

Vice President Dick Cheney, whose secretive energy task force crafted much of the energy bill in consultation with industry executives, is coming to our Washington next month for a GOP fundraiser.

I would advise the Vice President not to come and talk about his energy policy in the Northwest.

Curiously, the Senate yesterday debated the energy bill and its subsidies in a virtual media blackout.

The PRESIDING OFFICER. The Senator has used 4 minutes.

Ms. CANTWELL. I ask for an additional 30 seconds.

Mr. BINGAMAN. We yield the Senator an additional 30 seconds.

Ms. CANTWELL. This bill hasn't gotten the attention it deserves. But one thing is clear: Members are going to be held accountable for whose side they are on. The energy policy of this administration has fleeced Northwest ratepayers from essential dollars and now this bill promulgates that policy further by giving in to special interests. This bill should fail.

The PRESIDING OFFICER. The minority leader.

Mr. DASCHLE. Mr. President, I will use my leader time so as not to take away from the time allotted to those who still wish to speak.

America needs a comprehensive national energy plan that increases our energy independence, that creates jobs, that lowers energy prices for consumers, and that is environmentally and fiscally responsible.

We have been trying in the Senate for 3 years to pass such a plan.

Regrettably, this is not that plan.

This plan will move America forward in some ways. But it falls far short of a comprehensive approach to America's energy needs. In fact, it does not even attempt to address some of our most pressing problems. And it is extremely generous to a variety of special interests.

I am greatly disappointed by the number of opportunities we are missing here.

This bill fails to significantly reduce America's growing dependence on foreign oil.

Today, our Nation imports 60 percent of our oil, much of it from some of the most volatile and dangerous areas on Earth. Over the next 10 years, the United States is expected to consumer roughly 1.5 trillion gallons of gasoline.

The Republicans in the House and Senate who wrote this conference report actually rejected measures that would have reduced our dependence on foreign oil.

They rejected efforts to mandate oil savings.

The authors of this conference report also rejected a common-sense plan to address America's projected natural gas shortage.

They killed tax incentives needed for construction of a pipeline to bring natural gas from Alaska to the lower 48 States.

The provision, which was contained in the Senate passed bill, was dropped in conference. And, when Senator BINGAMAN offered a motion in conference to restore it—in the one meeting of Conferees to discuss substantive issues—that motion was defeated on a straight party line vote, with the seven Republican Senate conferees voting against it.

The Alaska Natural Gas Pipeline would have been the largest construction project ever in this country. It would have brought down 35 trillion cubic feet of known natural gas reserves on the North Slope of Alaska. Right now, we are paying to pump that gas back into the ground because there is no way to get it to the American consumers who need it.

The pipeline would also have created 400,000 good jobs and used an estimated 5 million tons of U.S. steel. It would have reduced our dependence on foreign oil by bringing Alaska gas directly to the Midwest.

This conference report also fails to address the problems that led to the catastrophic energy crisis California experienced, and the blackout that left nearly one-third of the country without electricity this past summer.

In addition, this bill actually repeals existing consumer protections—and does nothing to prevent a repeat of the Enron schemes that cost consumers hundreds of millions of dollars. In fact, this bill could make such schemes more likely by tying the hands of regulators.

This bill fails to include a renewable portfolio standard that would diversify America's sources of electricity. The Senate-passed energy bill includes a requirement that 10 percent of America's electricity come from renewable sources, such as wind and solar. This would increase our energy security and create new jobs and opportunities in America's rural communities.

The people who wrote this bill ignored 53 Senators who said this provision should be in the final bill.

Last year, and again this year, the Senate passed energy bills that reflected the growing scientific and bipartisan consensus that the threat of global climate change is real and, unless we act, will have devastating consequences for our children and grandchildren.

This bill simply ignores that fact.

Many important provisions that the Senate passed with strong bipartisan support are nowhere to be found in this bill.

But there are many provisions that are in this conference report that were not even debated in either the House or the Senate. They were simply added in a back room.

One of the most egregious is the retroactive liability protections for MTBE manufacturers.

Forty-three states have problems with contaminated groundwater as a result of MTBE.

The National Conference of Mayors estimates clean-up costs at $29 billion. This bill dumps those costs on local taxpayers, by granting immunity from liability to the polluters.

In fact, this bill provides retroactive liability protection to MTBE producers dating back to September 5 of this year.

It is no coincidence that this is one day before the State of New Hampshire filed its lawsuit against companies responsible for the contamination of groundwater by MTBE.

The authors of this conference report know that provisions like this could not survive open debate. That is why they chose to write this bill in secret.

This process began in secrecy—with Vice President CHENEY's energy task force. And it ended in secrecy.

Democrats in Congress were shut out. The American people were shut out. That is not the way to debate a matter that is so critical to our Nation's security.

Even with these obstacles, we were able to make some important improvements over the bill we were originally given.

Against great odds, we succeeded in protecting the Arctic National Wildlife Refuge from oil drilling.

We increased efficiency standards for appliances and machinery, and increased investments in research and development of new energy-saving technologies.

This bill also makes an historic commitment to expanding the use of renewable energy sources by nearly tripling the use of ethanol.

This is important to the people of South Dakota and many other farm States. And it is important to our national energy security.

A year and a half ago, President Bush came to South Dakota. We visited an ethanol plant in Wentworth. The President said: ''[ethanol is] important for the agricultural sector of our economy, it's an important part of making sure we become less reliant on foreign sources of energy.''

I agree. I've been fighting for ethanol and other renewable fuels for over 20 years.

Nearly tripling America's use of ethanol will create 214,000 new jobs and produce $5.3 billion in new investments in America.

It will significantly reduce greenhouse gas emissions. And it will save $4 billion in imported oil each year.

Ethanol comes from American farmers and producers, passes through American refiners, and fuels American energy needs. No soldier will have to fight overseas to protect them. And no international cartel can turn off the spigot on us.

I understand and respect my colleagues who oppose this bill. There is much in this conference report that is objectionable.

Despite secrecy, the partisanship and the shortcomings in this bill, I will vote to invoke cloture—reluctantly—because America needs to improve its energy situation, and I think this proposal takes a few small steps forward.

However, the people who wrote this bill must understand that a vote for this bill is not a vote of support for their radical energy agenda that some of it includes.

We can—indeed must—revisit the shortcomings in this bill. We must reexamine the MTBE liability waiver, the effects of this legislation on environmental laws and consumer protections.

I intend to press these issues in the next session of this Congress and for as long as it takes to get it right.

So I will vote for this bill. But I tell my colleagues—especially those who were involved in its drafting—that this bill could have been much better, and the American people deserve better from us in the future.

I yield the floor.

The PRESIDING OFFICER. The Senator from Idaho is recognized.

Mr. CRAIG. Mr. President, I commend to my colleagues the 9th Report on Carcinogens 2000, as it relates to MTBE. This report is a product of the U.S. Department of Health and Human Services, Public Health Service, which says that it is not carcinogenic. It is a true ground water pollutant, but there is no indication of a carcinogenic effect.

Mr. DOMENICI. How much time remains on each side?

The PRESIDING OFFICER. There are 14 minutes for the Senator from New Mexico, and 15½ minutes for the other side.

Mr. BINGAMAN. Mr. President, I yield 4 minutes to the Senator from New York, Mr. SCHUMER.

Mr. SCHUMER. Mr. President, I rise in strong opposition to this legislation, and I have fervent hopes that we will not invoke cloture.

Mr. President, this bill is bad for what is in it and bad for what is not in it. I don't know which is worse. It is bad for what is in it because there are so many provisions that don't make much sense that are done to help one State or another but don't really add up to a national policy.

It is particularly bad for what is in it because the MTBE provision is one of the worst provisions that has come down the legislative pike in decades. To tell homeowners who have lost their homes that they cannot take a shower, cannot drink the water and, through no fault of their own, they are out of luck, that their life savings which they invested in their little homes is gone—even though the MTBE producers knew the stuff was bad and didn't inform anybody—is an outrage.

Some say the Government authorized MTBE. Then let the Government help the homeowners if you don't want to have the oil companies, the MTBE producers, be sued. But don't leave tens of thousands today, and hundreds of thousands within a few years, of homeowners high and dry. I am not a big fan of lawsuits all the time, as my colleagues know. But if there were ever a case where lawsuits were justified, it is in this case. To cut them off, and to cut them off retroactively, is dastardly.

In addition, there is no energy policy in this bill. We have had the triple storm: we have had 9/11; we have had Enron, we have had the blackout. And we do virtually nothing to deal with the aftermath of all three of those.

There is no conservation in the bill. There is no real dealing with the Enron excesses. When it comes to the blackout, we take a baby step that utilities okayed but not what we have to do. Great nations have failed when faced with a crisis and they refused to grapple with it. That is what is happening here.

This bill, whether it passes or fails, will be deeply regretted 5 years from now for what it does and what it does not do.

Mr. President, when pork is used to grease a policy along, well, that is not good. But when pork is used as a substitute for policy, that can be disastrous. I argue that in this case that is what has happened. I had wished that we had a real energy policy in this bill.

My colleagues are all people of good faith. Both Senators from New Mexico, the Senator from Iowa, and the Senator from Montana have all tried their best. Unfortunately, at a time when America demands a thoughtful and far-reaching energy policy, this proposal, instead, delivers little bags of goodies to some individuals, not others, and says that is a substitute for policy.

I hope the bill is defeated.

The PRESIDING OFFICER. The Senator's time has expired.

The Senator from Iowa.

Mr. GRASSLEY. Mr. President, I yield myself 4 minutes out of the time allotted to Senator DOMENICI.

Unlike my colleague and supporter of ethanol, Senator DASCHLE—and he is a big supporter of ethanol—I am not reluctant to vote for cloture because if we don't get cloture on this bill, we will never have the opportunity to get renewable fuels and the environmental impact of those renewable fuels and what it does for American agriculture. This is the best thing for renewable fuels and ethanol that we have had before this Congress in 25 years.

This is an opportunity for people to decide: Are they for the farmers or are they against the farmers? This bill, for the most part, is very good for the green growing regions of the Midwest. The choice is easy. This bill contains those production incentives for ethanol, biodiesel, and other renewable energy sources—the best ever for Senators from other energy-producing regions, such as the gulf States, the Southwest, the Rocky Mountains, and the Appalachians. The bill moves the ball forward for energy production.

The Finance Committee has a history in the area of energy-related tax policy. Almost one decade ago, my committee put its imprint on a comprehensive energy-related tax policy. The bill the committee produced strikes a very good balance between conventional energy, alternative renewable energies, and conservation.

I thank Senator BAUCUS for working with me and every member of this committee on its priorities. I also thank the Democratic staff for its hard work in helping us put together a bipartisan bill that may now be destroyed because of a Democratic filibuster.

First and foremost, we have an expansion of production credit for wind energy. Back in 1992, I was the first to offer this proposal. Now we have an important expansion of this production credit to cover, in addition to wind, biomass, geothermal, and solar energy. As the President has wisely said, as a matter of national security, we need to reduce our dependence on foreign oil. That means all domestic energy sources—green or otherwise—are fair game.

Along those lines, we have a new tax credit for biodiesel fuel that is included in this bill. The conference report contains several provisions that enhance tax incentives for ethanol production because it is a clean-burning fuel that will continue to be a key element in our transportation fuel needs.

We also remove in this bill the prejudice against ethanol for highway trust fund purposes by providing a tax credit for ethanol production. When we complete our work on the highway bill next year, ethanol fuels will pay the full gas tax into the highway trust fund.

This bill also provides an effective small producer tax credit.

With this bill, ethanol will be treated as all other energy incentives. It will be derived from the general fund. Ultimately, all communities, rural and urban, will get more highway money if this bill passes. If you care about highway money for your local roads, you should vote for cloture.

There are a number of other good provisions in this bill that benefit agriculture, clean coal, and new technologies for gas production. The bill, in other words, is balanced with new energy conservation measures, as well as alternative renewable fuels.

We have an opportunity—almost the last opportunity—to do what it takes to get this bill passed. We are responding to national priorities. There is no going back to the House for another chance.

I ask all Senators to think long and hard about what this vote today represents. This is an historical moment. It is as if we are on the last steps of a trail to the top of a big mountain that we have climbed. We can either take the next few steps and enjoy the view or we can jump off the side of the mountain. There is no going back down the trail.

For Senators from my part of the world, the grain growing regions of the Midwest, the choice is easy. This bill contains production incentives for ethanol, biodiesel and other renewable energy sources. We are for farmers they are against farmers. For Senators from other energy-producing regions, like the Gulf States, the Southwest, the Rocky Mountains, and the Appalachians, this bill moves the ball forward on energy production.

The Finance Committee has a distinct history in the area of energy-related tax policy. Almost one decade ago, this committee put its imprint on comprehensive energy-related tax policy. Then, as now, the bill the committee produced strikes a balance between conventional energy sources, alternative energy, and conservation.

I would like to thank Senator BAUCUS for working with me and every member of this committee on their priorities. I would also like to thank the Finance Committee Democratic staff for the hard work they have put in to get us here.

First and foremost, we have an extension and expansion of the production credit for wind energy. Back in 1992, I was the first to offer this proposal to the Senate. Now, we have an important expansion of this production credit to cover biomass, geothermal wells and solar energy.

As the President has wisely said, as a matter of national security, we need to reduce our dependence on foreign oil. That means all domestic energy sources, green and otherwise, are fair game. Along those lines, we have a new tax credit for bio diesel fuels that will be included in this bill.

The conference report contains several provisions that enhance the tax incentives for ethanol production. Ethanol is a clean burning fuel that will continue to be a key element in our transportation fuels policy.

We remove the prejudice against ethanol for highway trust fund purposes by providing a tax credit for ethanol production. When we complete our work on the highway bill next year, ethanol fuels will pay the full gas tax into the highway trust fund. We are most of the way there. This bill also provides an effective small producer tax credit. With this bill, ethanol will be treated as all other energy incentives. It will be derived from the general fund.Ultimately, all communities, rural and urban, will get more highway money if this bill passes. If you care about highway money for your local roads, you should vote for cloture.

There are a number of other very good proposals in the conference report. They benefit agriculture, clean coal, and new technologies for gas production. The bill is balanced with new energy conservation measures as well.

So, to sum up, we have an opportunity to do what we should do. We are responding to a national priority, energy security, in a balanced and comprehensive way. Let there be no mistake about it, Mr. President. A vote against cloture is a vote to stop this bill. There is no going back to the House for another chance. There is no going back to conference with the House with the leverage the energy-producing States had on this bill. As the lead negotiator on the Senate side for the tax provisions, let me tell you it was not easy. The Ways and Means Committee likes oil—they don't like clean-burning ethanol. It was a difficult conference. We will not get this chance again.

So, for my friends on both sides of the aisle, especially those from the Midwest, this is the time to show your cards. You can show whether you are with farmers or with other interests.

As I said, at the start, we are on the last steps of the trail to the mountain top. There is no looking back now. A vote for cloture completes the journey.

The PRESIDING OFFICER. The Senator's time has expired.

Mr. GRASSLEY. We either pass this bill or the good provisions in it for ethanol are lost forever.

The PRESIDING OFFICER. Who yields time?

Mr. BINGAMAN. Mr. President, I yield 5 minutes to the Senator from Illinois, Mr. DURBIN.

The PRESIDING OFFICER. The Senator from Illinois.

Mr. DURBIN. I thank the ranking member for yielding. I spoke on 2 successive days on this bill, and I feel strongly about it. I spent 20 years in Congress supporting ethanol and I believe in it. I think it is important to help our farm economy, reduce pollution, and reduce our dependence on foreign oil. There is no doubt this bill would greatly expand ethanol across America. That is a good thing. It is something I support.

I cannot support this bill. I cannot support this bill because, frankly, it is fundamentally unfair and unjust and it is unbecoming of the Senate to offer this to America as an energy policy.

When it comes to energy, this bill is a full-scale retreat. This bill fails to include any provisions whatsoever to deal with fuel efficiency and fuel economy of the cars and trucks we drive. How can we in good conscience stand before the American people and say this is an Energy bill for our future and not address the No. 1 consumption of energy, oil imported from overseas—the cars and trucks that we drive? Why? Because the special interest groups that oppose fuel efficiency and fuel economy won the battle. They won the argument. The American people were the losers.

There is another aspect to this bill which troubles me. This bill is a full-scale retreat when it comes to environmental protection for America. Think about this for a moment. Every major environmental group in America opposes this Energy bill. What has brought them all together? The fact that in the course of negotiating this bill, those few people sat in that secret room, gave away the Clean Air Act, the Clean Water Act, access to America's public lands, and the natural heritage which we helped to leave to our children. That is what is at stake. To walk away from basic environmental protection in the name of promoting energy is a bad deal for America's future.

To think for a moment that we have reached a point in time where China—this new developing Nation, China—has more and better fuel efficiency standards than the United States of America should be a supreme embarrassment to everyone in this Chamber.

This bill is a gusher of giveaways. We are going to build a nuclear reactor. We are going to start building coal mines in some States. We are going to build all sorts of shopping centers. It goes on and on. I am no babe in the woods. I have served in Congress and on the Appropriations Committee long enough to tell you I have an appetite for pork like every Member of the Senate and the House, but I have to agree with the Senator from New York. If giveaways turn out to be a substitute for energy policy, then we have defrauded the American public. We need to have leadership on this issue, and we do not.

The single worst part of this bill, as far as I am concerned, the most shameless aspect of this bill is found in section 1502. It is the most egregious giveaway I have ever seen in my time on Capitol Hill because in a dark room, the people who wrote this conference report said to the major oil companies and some major chemical companies that they would protect them from liability for the very product which they sold, which has contaminated water supplies across America.

Think about that for a moment. They have said that for families and individuals whose health and homes have been damaged by MTBE as a contaminant, they are going to close the courthouse doors. They are going to lock the doors and say to those families: You are going to have to bear these losses and these medical bills on your own. That is shameless. To think it is included in here should be enough for every Senator to vote against this bill.

To add insult to this injury, there is a $2 billion Federal subsidy for the MTBE producers and industry, not just protecting them in court for their wrongdoing but giving them a lavish Federal subsidy.

What does it come down to? Who are the big winners in this bill? It is obvious: Big oil companies, big energy companies, high rollers on K Street, and the muscle men on Capitol Hill.

Who are the big losers in this bill? Families with kids who have asthma, who will find more air pollution, which will mean that their kids have to stay home from school; families with water supplies contaminated by MTBE, which make their homes uninhabitable and they have no recourse to go to court to hold these oil companies accountable.

Basically, the biggest loser in this bill is Americans who expected more from this Congress, who expected leadership and vision and instead have a very sorry work product which should be defeated.

The PRESIDING OFFICER. The Senator's time has expired. Who yields time?

Mr. BINGAMAN. Mr. President, how much time remains on the two sides?

The PRESIDING OFFICER. The junior Senator from New Mexico has 6½ minutes. The senior Senator from New Mexico has 9 minutes 45 seconds.

Mr. BINGAMAN. I suggest the absence of a quorum and ask that the time be equally divided.

The PRESIDING OFFICER. Without objection, it is so ordered. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. BINGAMAN. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BINGAMAN. Mr. President, we have come to the point of deciding whether to vote to send this bill to the President for his signature or to effectively set this conference report aside, regroup, and pursue another strategy.

Those of us who are about to vote against cloture do so not because we are against having an Energy bill but because we are against having this Energy bill. A view has been stated over the last few days that this particular conference report, even with its problematic provisions and its excess spending, is the only option available if we wish to deal with energy problems in this Congress.

It is argued that if we do not pass this bill today, then energy is dead as an issue for this Congress. In my view, that is not a logical conclusion to reach. We are not at the end of this Congress. We are reaching the midpoint in this Congress. There is nothing magical about having to pass energy legislation in odd-numbered years.

The Energy Policy Act of 1992, which was the last fairly comprehensive bill passed through this Congress, was put to final passage a few weeks before the Presidential election in that year.

There is a broad consensus in the Senate for enacting forward-looking energy legislation. We know this is true. Three and a half months ago, we passed an Energy bill by a margin of 84 to 14. That bill would have made 35 trillion cubic feet of Alaskan natural gas available to the country, which this conference report would not. That bill would have saved twice as much energy as this conference report is projected to save. That bill gave a real boost to renewable energy in the production of electricity. It took a modest first step toward dealing with the reality of global warming. It did not undercut the National Environmental Policy Act. It did not roll back the Clean Air Act. It did not exempt anyone from the Clean Water Act. It was $10 billion lighter on the tax side than this legislation before us. It was another $3 billion lighter on the direct spending portion of the bill. It did not unfairly shift all of the costs of building new electric transmission to consumers who do not get the full benefit of that transmission. It did not contain embarrassing tax giveaways such as a proposal to build a mall for a Hooters restaurant. It was a reasonably good bill.

I have served on the Committee on Energy and Natural Resources for 19 years. That is longer than any Member of my party in the Senate. I did not get on that committee to filibuster Energy bills. I went on the committee to pass good energy legislation.

The reason so many of us believe we should not proceed to pass this Energy bill is that many of the provisions that caused the earlier bill I referred to to pass with 84 votes 3½ months ago have been deleted in conference and an array of irrelevant and objectionable provisions have been added. It is almost as if a calculation had been made that as long as we stuck ethanol provisions into the bill and kept provisions out that would open the Arctic National Wildlife Refuge to drilling, then there would be 60 votes for passage of the bill and no one would look too much at the other details and no one would be concerned about the other effects of the legislation.

Well, we are about to test that proposition. I hope it turns out to be wrong. If it turns out to be a miscalculation and cloture cannot be invoked on this bill this morning, then our job on energy will not be done in this Congress. In fact, this may be an opportunity to get things back on a better and a more bipartisan track.

Both sides have made their share of mistakes in assembling massive Energy bills in this Congress and in the last Congress. Yesterday, Senator NICKLES criticized the process Democrats used in the last Congress to move an Energy bill directly to the floor, and many of those criticisms were valid. Throughout this Congress and at each stage, we Democrats have tried to make a constructive contribution to the bill, even in spite of the flawed process that has seemed excessively partisan and closed to us and to the public, but now we are faced with a choice of voting for or against the bill in its totality. Those who oppose cloture, both Democrats and Republicans, choose to do so because in its totality the conference report will not lead us to an energy future that is secure, clean, affordable, and fiscally responsible.

If this conference report is rejected, I for one will continue to push for the enactment of a good, comprehensive energy policy. It may be that having tried twice to do so with thousand-page bills and failed, Congress should look at smaller legislation.

I hope this conference report is rejected and, once the dust settles, we can find a way to move forward with forward-looking legislation.

I yield the floor.

The PRESIDING OFFICER. Who yields time?

The Senator from New Mexico.

Mr. DOMENICI. How much time do I have remaining?

The PRESIDING OFFICER. Nine minutes.

Mr. DOMENICI. I yield 1 minute to Senator BURNS.

The PRESIDING OFFICER. The Senator from Montana.

Mr. BURNS. Mr. President, I thank my good friend from New Mexico for yielding.

I want to say one thing, and that is that the general premise of this bill is in the right direction. The emphasis is on renewables and things we can do that are good for the environment and still produce energy. All this other chaff and dust that has been kicked up around it that gives opponents such a move in the right direction can be dealt with later, but the general premise of the bill is good because a balance is there in the areas in which most of us really believe.

Let us not take our eye off the ball. Let us move it on down the field under a premise of developing a policy and a way to not only deal with the environment but also produce energy.

I tell my colleagues, we can deal with those things that are objectionable at a later time, but we must move in this kind of a direction.

I yield the floor.

The PRESIDING OFFICER. The Senator from New Mexico.

Mr. DOMENICI. Has Senator Burn's minute expired?

The PRESIDING OFFICER. Yes.

Mr. DOMENICI. Mr. President, first of all, there are a lot of people to thank for getting us where we are. We are a long way from where we started. I want to thank them. In particular, on the Democratic side I thank the distinguished Senator from Louisiana—from the very beginning; thank you very much for all your help and all the others who put a lot of work into this.

I regret very much the statements that this bill was done in privacy and secrecy, in some way different in terms of a conference than most conferences around here. But I would like to tell the Senate, energy is a big hole in the Congress. Energy policy is a big hole, and we keep dropping problems in it but we never solve them.

Everyone talks about conservation and renewables, but we happen to be talking about those and production. As soon as you start talking about production, somebody produces and they are certainly not nonprofit corporations. So as soon as you say ''produce and we'll give you an incentive,'' you are ''giving money to big companies.'' You are giving it to companies who will do the job and wouldn't otherwise do it.

I want to repeat, for everybody, the history. Last year we could not write a bill in committee. Think of that. My good friend, Senator BINGAMAN, talks about how poorly we conducted ourselves. They couldn't write a bill in committee. So we wrote it on the Senate floor. Do you all remember that? We were down here, humiliated that we had to write an Energy bill on the Senate floor because we couldn't write it in committee.

Then what happened? We went to conference with the House. And, boy, if it was ever a storybook conference, it was wide open. And it took month after month, and guess what happened, Senator BURNS—zero. Nothing was done. So there is another one, the big hole sucked it up. But we did it right. We had a conference. We had it open.

This Senator decided that to do it that way would yield nothing. For the first time I decided that we should write the bill differently and we should circulate it differently. Most of this bill was put on the Internet. In fact, that is the first time in history that a conference report was on the Internet. Anybody who wanted to read this bill had weeks and weeks to read all but the last 15 percent. It was on the Internet. It was delivered to every single office. If you didn't read it, that is not my fault. Then for the last part we gave the opposition 48 hours' notice on the Internet to everybody.

Do you know, this bill was more discussed by the press, piece by piece, than any conference report in the history of America? You will never find a conference report that is reported piecemeal in the media of America.

So where was the clandestine bill? Everybody knew about it. The problem is, just as before, the Democrats didn't like it. Yet they offered amendments. For not knowing anything about it, the distinguished Democrat leader offered 21 amendments, or at least he had them ready. We discussed them. The fact they didn't win them, does that mean the bill is no good? What would you expect when you go to conference? I heard somebody say we should have passed the 15 or 20 percent mandates for renewables. Yes, we should have. We did in our committee. But what do you know about it, the House said no. Not only ''no,'' but ''absolutely no.'' So what do we do, throw the bill out? Of course not.

We have the most powerful renewable provisions in history.

I want to tell everybody the true facts. We have worked harder for the farmers of America than anybody in history. The farmers who are looking to see who is for the farmers, once and for all, you can look to the Republicans, not the Democrats; for the Democrats are leading a parade to kill the most important provision ever thought up for the farmers. The Republicans are here, trying to get it done. Senator GRASSLEY stood in a corner with his arms out, put on the armor and said, ''It will be this way or we don't have a bill.'' We got it. And guess what. We are just about to throw it away.

If I were the farmers of America, I would ask: Who threw it away? And they are going to all know, the people who killed this bill threw it away. And guess what. Over the last 3 or 4 days, an array of people who build wind energy and solar energy in America walked up to our office. Incidentally, Senator GRASSLEY, before they opened their mouth about the bill, they thanked you because they said all significant wind energy will stop if this bill is not adopted. They didn't say ''tone down; we will come down at half mast.'' They say it stops, because wind energy is predicated upon the credits in this bill, the most significant credits in history; solar energy, the most significant credits in history. Renewables will go faster and farther with this bill than they ever have.

But I don't believe you can leave here today having voted, especially if you vote to kill this bill, and walk out and tell people: Oh, don't worry, we will take care of the farmers next week. Next week is not going to come because I am aware of what it is. You will not get this ethanol bill through the House again. So it is gone and there are some people walking around liking that. Some people have a smile on their face. But I tell you there is no way to get this ethanol bill through the House. I can't imagine another format where Senator GRASSLEY can do what he did and we get this issue out of conference and here.

Then we have all the other things in this bill that we thought were interesting and good for America. They are all falling by the wayside because, for the first time, people have brought an issue called MTBE to the floor and talked about it. The United States House said we ought to hold harmless the product called MTBE—just the product, not people who spill it, not people who cheat with it, not people who, instead of putting it in cars pour it on somebody's lawn—we didn't protect those. We just said the product is OKed by the Environmental Protection Agency, approved by the U.S. Government, and whether I liked it or not, the House said let's hold them harmless for the product itself.

Frankly, I am just beginning to read some stories about the lawsuits on MTBE. In fact, if we had another day at it, I would give you some that would shock you as to what is going on in the United States with these MTBE lawsuits. I can tell you there is one in one State—we got a message on it. Somebody is walking around trying to drum up the lawsuits. It happens to be the

chairperson of the bar association of the State. She went to one city that wrote us a letter and said: We told her we are not interested. As far as we know there is no problem in our city with MTBE. Go someplace else and look for your lawsuits. Precisely what I said yesterday—precisely.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. DOMENICI. In addition, if you like blackouts, then you vote to kill this bill because this bill provides a clear, absolute remedy for blackouts.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. DOMENICI. I thank the Chair. I think the majority leader is here. I yield at this time.

The PRESIDING OFFICER. The majority leader is recognized.

Mr. FRIST. Mr. Leader, on leader time I just have very brief closing comments.

I thank the chairman and the ranking member. They have done a superb job.

Several issues have come up. I want to make it clear that this vote is the vote on the Energy bill and on the energy provisions. People have envisioned that there will be other votes, other opportunities; that if this bill has not passed, we can address some of these issues later in some other form.

First, some have made a procedural argument that if cloture is not invoked this morning, we can simply recommit the bill to conference and strip out a provision or two provisions and then bring it back to the Senate.

Everybody needs to understand that is not an option. The other body, the House, has already approved the conference report and therefore the conference committee has been dissolved. It has been dissolved. There is no motion to recommit available. So this is the vote. If you are for a comprehensive Energy bill, you need to vote for cloture. This is the vote.

Second, there has been some speculation, people have mentioned on the floor, if we do not pass this conference report we will pull out this provision or that provision and enact them separately. I wanted to dispel that idea as well. We are not going to pull apart pieces of this conference report and pass them separately. We are not going to do it. We are either going to pass this Energy bill now or the individual provisions that many Senators favor are not going to become law. It is as simple as that. I just use the example of ethanol because, as everybody knows, I joined the Democratic leader in offering the ethanol amendment on the Senate floor earlier this summer.

I have to say it very clearly that this Energy conference report is the vehicle for ethanol. We are not going to enact that as a stand-alone. We are not going to attach ethanol to another vehicle. To the Senators who favor this strong ethanol provision that we have in this conference report—this is the vote. You vote for cloture if you want to see it actually enacted into law. It is important for people to understand.

In closing, this is a good bill. It is a balanced bill. It will make America more secure. It will make America more energy independent, and, as we all have talked about, it will create jobs. We should pass it now. We should send it to the President. The first step right now with this vote is to invoke cloture.

I yield the floor.

CLOTURE MOTION

The PRESIDING OFFICER. By unanimous consent, pursuant to rule XXII, the Chair lays before the Senate the pending cloture motion, which the clerk will report.

The legislative clerk read as follows:

CLOTURE MOTION

We the undersigned Senators, in accordance with the provisions of Rule XXII of the Standing Rules of the Senate, do hereby move to bring to a close debate to the conference report H.R. 6, the energy policy bill to enhance energy conservation and research and development, to provide for security and diversity in the energy supply for the American people, and for other purposes.

Bill Frist, Pete Domenici, John Cornyn, Mike Crapo, Larry Craig, Ben Nighthorse Campbell, Michael B. Enzi, Mike DeWine, Christopher Bond, Robert F. Bennett, Trent Lott, Pat Roberts, Jim Bunning, Mitch McConnell, Richard G. Lugar, Norm Coleman, Conrad Burns.

The PRESIDING OFFICER. By unanimous consent, the quorum call is waived.

The question is, Is it the sense of the Senate that debate on the conference report to accompany H.R. 6 shall be brought to a close?

The yeas and nays are required. The clerk will call the roll.

The assistant legislative clerk called the roll.

Mr. REID. I announce that the Senator from North Carolina (Mr. EDWARDS), the Senator from South Carolina (Mr. HOLLINGS), and the Senator from Massachusetts (Mr. KERRY) are necessarily absent.

I further announce that, if present and voting, the Senator from Massachusetts (Mr. KERRY) would vote ''nay.''

The yeas and nays resulted—yeas 57, nays 40, as follows:

[Rollcall Vote No. 456 Leg.]

YEAS—57

Alexander	Coleman	Fitzgerald
Allard	Conrad	Graham (SC)
Allen	Cornyn	Grassley
Baucus	Craig	Hagel
Bennett	Crapo	Harkin
Bond	Daschle	Hatch
Breaux	Dayton	Hutchison
Brownback	DeWine	Inhofe
Bunning	Dole	Johnson
Burns	Domenici	Kyl
Campbell	Dorgan	Landrieu
Chambliss	Ensign	Lincoln
Cochran	Enzi	Lott
Lugar	Pryor	Specter
McConnell	Roberts	Stevens
Miller	Santorum	Talent
Murkowski	Sessions	Thomas
Nelson (NE)	Shelby	Voinovich
Nickles	Smith	Warner

NAYS—40

Akaka	Feingold	Mikulski
Bayh	Feinstein	Murray
Biden	Frist	Nelson (FL)
Bingaman	Graham (FL)	Reed
Boxer	Gregg	Reid
Byrd	Inouye	Rockefeller
Cantwell	Jeffords	Sarbanes
Carper	Kennedy	Schumer
Chafee	Kohl	Snowe
Clinton	Lautenberg	Stabenow
Collins	Leahy	Sununu
Corzine	Levin	Wyden
Dodd	Lieberman	
Durbin	McCain	

NOT VOTING—3

Edwards	Hollings	Kerry

The PRESIDING OFFICER (Mr. ENZI). On this vote, the yeas are 57, the nays are 40. Three-fifths of the Senators duly chosen and sworn not having voted in the affirmative, the motion is rejected.

Mr. FRIST. Mr. President, I enter a motion to reconsider the vote by which cloture was not invoked.

The PRESIDING OFFICER. The motion is entered.

Mr. FRIST. Mr. President, the vote, prior to switching my vote for procedural reasons, was 58 to 39; thus, two votes short for invoking cloture. As I said just prior to the vote, America needs a comprehensive national energy policy, and we need it now. Congress has been debating this energy issue for a long time, for nearly 3 years. It is now time for us to stop talking and to deliver to the American people.

I truly believe the bill before us, that the chairman and the other members on the Energy Committee have worked so hard to produce, is a fair bill. It is a balanced bill. It addresses everything from future blackouts to the whole discussion on development of a wide range of reliable energy resources. Now is the time for us to act.

I am very disappointed that we are, at this point, two votes short; that we are facing another filibuster on a very important policy for the American people. I do want to let colleagues know that this will not be the last vote that we have on this bill. We are going to keep voting until we pass it so we get it to the President's desk. We will have at least one more vote before we leave the early part of next week on stopping this filibuster. I don't know when that vote will be, but we will have at least one more vote. I hope we will respond at that time by giving the American people the energy security, the economic security, and the job security that they deserve.

INTELLIGENCE AUTHORIZATION ACT FOR FISCAL YEAR 2004—CONFERENCE REPORT

Mr. FRIST. Mr. President, I now move to proceed to the consideration of

H.R. 2417, the Intelligence authorization conference report. Before the Chair puts the question, this conference report has been cleared on both sides, and I hope that we can finish action on it very quickly.

The PRESIDING OFFICER. The question is on agreeing to the motion to proceed.

The Senator from Nevada.

Mr. REID. Mr. President, in response to the leader's statement, we also believe in energy independence and the security of the Nation.

The PRESIDING OFFICER. It is not a debatable motion.

Mr. REID. Fine. I will withhold.

The PRESIDING OFFICER. The question is on agreeing to the motion to proceed.

The motion was agreed to.

The PRESIDING OFFICER. The report will be stated.

The legislative clerk read as follows:

The Committee of Conference on the disagreeing votes of the two Houses on the amendment of the Senate to the bill (H.R. 2417) to authorize appropriations for fiscal year 2004 for intelligence and intelligence-related activities of the United States Government, the Community Management Account, and the Central Intelligence Agency Retirement and Disability System, and for other purposes, having met, have agreed that the House recede from its disagreement to the amendment of the Senate, and agree to the same with an amendment and the Senate agree to the same, signed by a majority of the conferees on the part of both Houses.

The Senate proceeded to consider the conference report.

(The conference report is printed in the House proceedings of the RECORD of November 19, 2003.)

Mr. FRIST. Mr. President, I am happy to yield to the distinguished assistant Democratic leader for a question.

ENERGY POLICY ACT

Mr. REID. Mr. President, I say through the Chair to my colleagues, we also believe in energy independence. We also believe in the security of this Nation. This was a bipartisan vote that just took place. I think we would all be well advised, this late in the session, to recognize that we should take this bill back to the committee, conference, if necessary, but I suspect it would be better off going back to committee and coming up with a different piece of legislation. People over here want badly to have a bill. The 58 votes we have are firm votes. It would not be advisable to have a vote, say, on Monday or Sunday. Cloture is not going to be invoked.

But let's assume it were for purposes of this argument. Then we have the situation where there are hours following that debate, and I just think we should recognize where we are. The reality is, it is late in the session. We need to go to some other matters. With this vote, we did the Senate a favor, as everyone knows. There are points of order, rule XXVIII. This bill was going nowhere. We just did it quickly rather than prolong it. It doesn't help the Senate to prolong the inevitable. The inevitable is this bill is history. It is not going to go anyplace.

We really did the Senate a favor. Cloture was not invoked. There are points of order against this bill, as we all know. There would be bipartisan votes on those matters. I think we should go on to something else. This was a very good debate. I think we should look back at this as something that is good for the Senate in the sense that the tone was good, and look forward to the very important issues we have facing us, difficult issues. We have the omnibus bill. We have the important Medicare bill. I hope that we would not prolong things on this much longer because this bill, in its present form, is just not going anyplace.

The PRESIDING OFFICER. The majority leader.

Mr. FRIST. Again, to clarify for our colleagues, two votes short, as I implied in my statement. This policy is too important to the American people for us to desert. So we are going to come back. We are going to come back with another opportunity, after I talk to the Democratic leadership. And we will do that at the appropriate time.

For the information of our colleagues, we will be going to other issues—right now, the Intelligence authorization conference report. It is likely today we will be doing Healthy Forests shortly. We have a lot of business today. Medicare will be addressed shortly. The two Houses will be addressing that today.

It may well be that we will begin to address issues such as Medicare later today and continue debate on energy today and look at both issues over the course of tomorrow.

Again, in the intervening time, we will be addressing issues such as Intelligence, Healthy Forests, and other conference reports as they come to the floor.

The PRESIDING OFFICER. The Democratic leader is recognized.

Mr. DASCHLE. Mr. President, I, too, wish to have an opportunity to comment briefly on the vote we have just taken.

Mr. President, for Senators like me, who support enactment of a comprehensive energy bill, the Senate's failure this morning to break this filibuster was as unnecessary as it is unfortunate.

It is a classic example of insisting on provisions that were simply too much for the traffic to bear.

The Senate's lead negotiator, Senator DOMENICI, was, I believe, prepared to work in good faith with his House counterparts to craft a comprehensive energy bill that could attract broad bipartisan support in this body.

Regrettably, his best intentions were undercut by the cynical manipulations of the House Republican leadership during the conference proceedings, which cut Senator BINGAMAN out of the conference process and produced a product that was a far cry from the bipartisan energy bill that passed the Senate in July.

I am convinced that a true conference would have produced a much more balanced energy bill than that before us today.

Make no mistake, however, the overriding reason for the failure of this bill today was not what I consider to be its disturbing lack of balance between production and conservation or between promotion of fossil fuels and renewable energy sources. It was the House Republican leadership's insistence on inclusion of retroactive liability protections for MTBE shielding MTBE producers from legal exposure.

The provision was not contained in either the House or Senate-passed energy bills. In an effort to aid a major special interest, the House Republicans wrote the provision so that it would specifically invalidate the State of New Hampshire's lawsuit against the MTBE industry.

So it is no surprise that New Hampshire's two Republican Senators chose to filibuster this bill.

The drive to placate a narrow special interest not only came at the expense of the public, it trumped the Republican Party's own legislative strategy.

I personally—on numerous occasions—warned Chairman DOMENICI, Chairman TAUZIN, and others responsible for the closely held Republican energy bill conference deliberations that inclusion of this provision threatened enactment of this legislation.

This scenario has, unfortunately, come to pass, ironically because the inclusion of MTBE liability waiver was the straw that broke the camel's back for many Republicans.

While the drumbeat of recriminations about who bears responsibility for this setback had begun even before the vote, the question I am concerned about is what we can do to enact a comprehensive energy bill quickly.

My first preference would be to adopt something close to the bipartisan energy bill that passed the Senate by overwhelming bipartisan votes in the current and past Congresses under the leadership of both parties. But experience tells us that won't happen.

While I fully appreciate that the current bill without MTBE liability relief would still be objectionable to many Senators, there should be no doubt that if this provision was not included, the bill would pass the Senate today and be enacted into law.

Therefore, Mr. President, I call on the White House, and the House and Senate Republican leadership, to join with me to immediately strip out the offending safe harbor language now in the bill.

Further, as a demonstration of good will, I propose that safe harbor language be eliminated for ethanol as well as MTBE.

Once these changes are made, the comprehensive energy bill could be brought back to the Senate and the House, either as a new conference report or as part of the Omnibus Appropriations bill now being readied for final passage in both Chambers.

This simple action would have this energy bill, as imperfect as it is, ready for the President's signature yet this session.

I yield the floor.

Mr. INOUYE. Mr. President, after much deliberation, I have decided to oppose the conference report to H.R. 6, the Energy Policy Act.

The conference report before us today is a serious departure from the comprehensive and balanced approach to energy policy passed by the U.S. Senate earlier this year by an overwhelming bipartisan vote of 84 to 14. The Senate bill carefully weighed many competing interests and struck a fair and even-handed balance that would have strengthened our national security, safeguarded consumers, and protected the environment.

The conference report has tipped the studied balance of the Senate bill drastically in favor of short-term business interests. Regrettably, I am not surprised by the sweeping changes made to the Senate bill because the conference report was prepared by the Republican leadership behind closed doors, without the participation of their Democratic counterparts. Under these circumstances, one cannot be surprised that balance was lost, and a flawed conference report emerged.

Upon review of the bill, I was initially pleased to note its positive aspects. My completed review of the conference report, however, revealed that these few beneficial provisions were far outweighed by the many items injurious to the American people as a whole. The conference report erodes the careful web of environmental protections that safeguard the public health and our natural resources. It promotes a static energy industry by failing both to encourage the development of alternate fuel sources and energy efficient technologies, and does nothing to police the energy industry to prevent a recurrence of the Enron debacle. For example, the conference report does not include the broad, effective prohibitions against price gouging schemes used by Enron and other energy trading firms, included in the Senate version of the Energy bill.

As science has helped to illuminate the negative impacts of environmental pollutants on public health, Congress has responded by enacting a series of statutory protections designed to safeguard the American people by restricting the levels of pollutants that enter our environment. The conference report substantially undermines these protections.

For example, the report would exempt three major metropolitan areas from meeting the Clean Air Act's ozone-smog standard. While industry in these areas may enjoy a respite as a result of the conference report, people with asthma and other respiratory diseases will not. Moreover, it should be noted that this particular provision appeared for the first time in the conference report, and was never debated by the Senate or the House. Without such debate, my colleagues and I are unable to judge whether there are any mitigating factors that might justify a rollback of the Clean Air Act in these three cases.

Of direct concern to my home state of Hawaii is the treatment of methyl tertiary butyl ether, MTBE, and producers of this common gasoline additive. As a fuel additive, MTBE helps gasoline to burn more cleanly, but outside of our gas tanks, MTBE is a proven cancer causing agent that has contaminated groundwater supplies across the country. In Hawaii alone, there are approximately 500 known contamination sites, and in a state completely dependent on its isolated groundwater, this is an alarming statistic. Under this conference report, the State and its counties would have no legal recourse against the producers of MTBE for the expensive process of environmental cleanup, including the remediation and clean up of contaminated soil, water supplies and wells.

The conference report also exempts all construction activities at oil and gas drilling sites from coverage under the Clean Water Act. It goes further and completely removes hydraulic fracturing—an underground oil and gas recovery method from coverage under the Safe Drinking Water Act. Domestic oil and gas production contributes significantly to the short-term security of our national energy infrastructure, but I do not believe that our security interests outweigh our health interests. Nor do I believe that conventional fuel sources can ever provide a long-term solution to our energy security.

As a further blow to ongoing efforts to reduce our nation's dependence on conventional fuels, the Republican conferees dropped Senate-passed provisions that would have encouraged further research, development, and demonstrations of hydrogen fuel resources, for which Hawaii is rapidly developing a keen expertise. The measure also eliminated the broadly-supported goals for introduction of hydrogen fuel cell vehicles.

I support strong renewable portfolio standards, RPS, that provide incentives for producing renewable energy in this country. These measures—such as RPS for electricity, requirements for measures to reduce dependence on foreign oil, climate change policy, and technology—have been dropped from the conference report.

The conference report further dilutes efforts to reduce our dependence on fossil fuels by weakening Corporate Average Fuel Efficiency, CAFÉ standards. I believe that strong CAFÉ standards drive the development and implementation of fuel efficient technologies for use in cars and trucks, and history has proven the strength of this approach. With the volatility of international fossil fuel sources, and the decline of our worldwide stock of this resource, strong CAFÉ standards are more important than ever. By introducing a variety of new and difficult criteria for the administrative development of CAFÉ standards, it will prove difficult or impossible for any President to strengthen the current set of standards before being halted by industry lawsuits.

As a Senator from an island state, I am also concerned about provisions that seek to weaken the laws that protect our coastlines such as the Coastal Zone Management Act, CZMA. For example, the conference report shortens the time within which states can appeal state consistency review determinations made by the Secretary of Commerce, thus limiting the rights of states under the CZMA.

The conference report also jeopardizes federal conservation lands by allowing the Secretary of Energy to determine the siting of transmission lines through certain national forests and national monuments—even over the objections of the Federal agency charged with maintaining and preserving these natural treasures.

Mr. President, I must also express my serious concern with regard to the provisions of H.R. 6 as they relate to the development of energy resources on Indian lands and the impact of these provisions on the United States trust responsibility for Indian lands and resources. To allow this bill to be passed without amendment, would, in my view, alter the bedrock principles upon which relations between the United States and the Indian nations are founded.

The United States trust responsibility is perhaps the most fundamental principle of Federal Indian law. It was first enunciated in 1832 by United States Supreme Court Chief Justice Marshall. It is the polestar which has guided the course of dealings between the Indian tribes and the United States over the last two centuries.

The United States trust responsibility for Indian lands and resources is derived from treaties and agreements between the Indian nations and the United States, statutes, executive orders, court rulings, and regulations. The Congress has legislated on this basis. The Federal courts have ruled on that basis, and the Executive branch

has premised policy on this basis and promulgated regulations based upon this fundamental principle of Federal-Indian law.

The Federal Government's trust responsibility for Indian lands and resources is based on the fact that the United States holds legal title to lands that are held in trust for Indian tribal governments. As the principal agent of the United States as trustee for Indian lands and resources, under current law, the Secretary of the Interior must authorize and approve any activities affecting Indian lands and trust assets.

However, recently the United States Supreme Court ruled in the United States v. Navajo Nation case that tribal governments may not hold the Secretary of the Interior accountable for mismanaging trust assets except if there is a specific authorization contained in a Federal statute. As a result of this ruling, tribal governments are looking to the Congress to protect longstanding principles of established trust law and to clarify with certainty the meaning of the trust responsibility after the Court's pronouncement in the Navajo Nation case.

The Indian provisions of H.R. 6 unfortunately fail to provide a means for tribal governments to call upon the United States, as trustee for Indian lands and resources, to assist them in remedying any damages incurred to tribal lands, nor do they establish express statutory standards for the administration of the U.S. trust responsibility.

The bill requires that any tribe attempting to avail itself of the powers to regulate and develop its own energy resources must waive its rights to seek any recourse against the Secretary of the Interior. This requirement signals a dramatic departure from existing law, and tribal governments across the country have expressed serious concern that this bill will erode the United States' trust responsibility, especially in the aftermath of the Supreme Court's ruling in the Navajo Nation case.

As tribal governments seek to further their rights to self-determination in new areas, such as the leases, agreements, and rights-of-way affecting tribal lands that are addressed in this bill, there must also be an evolution of the duties that the trustee for Indian lands and resources—the United States—undertakes on behalf of tribes desiring to develop energy resources.

My view is that there is a well-founded and long-established partnership between Indian tribal governments and their trustee—and that it is this relationship which assures that if there is any harm or damage done to tribal lands and resources caused by other parties, the tribes will have the full force of the United States government to assist them in securing redress for such harm.

With this end in mind, I respectfully suggested that those standards applicable under the Indian Self-Determination Act be incorporated into this bill, such as the annual trust asset evaluation that is authorized in that act to be conducted by the Secretary of the Interior as a condition of the Secretary's approval of a tribal government's right to enter into leases, business agreements, and rights-of-way without the Secretary's approval.

Unfortunately, this language was not adopted, and instead the bill provides that the Secretary will have the discretion to determine the manner in which trust resources will be managed, and what, if any, ongoing oversight there will be as tribal governments move into an arena that is associated with serious financial and environmental risks.

In addition, in the wake of the Supreme Court's ruling in the Navajo Nation case, the absence of expressly-stated statutory standards for the administration of the government's trust responsibilities as they relate to the development of energy resources on Indian lands is, I believe, a further derogation of the trust relationship that cannot be overstated.

In another section of the bill, state and tribal governments are effectively excluded from the process by which conditions for the operation of hydropower projects are established, and as a result, the protection of fish and wildlife resources is left up to those for whom the financial incentives to reduce costs at the expense of the survival of fish and wildlife resources are great.

There are many in Indian country who share these concerns, and would perhaps express them more strongly than I have been able to do. We do not have a record of which we can be proud when it comes to our dealings with the first citizens of this land, and I fear that this measure will not mark a new, more constructive direction in Federal-Indian relations.

Mr. President, two men involved in the process of bringing this conference report to the floor for a vote—Senator PETE DOMENICI and Senator TED STEVENS—are very dear to me and I have the honor of working with them on a daily basis. I hope they will understand that, as much as I would like to support them and their interests, I must oppose this conference report.

ETHANOL SUBSIDY

Mr. BAUCUS. Mr. President, for several years now I have worked with the highway community to hold the Highway Trust Fund harmless with respect to the ethanol subsidy. While it is good agriculture and energy policy to encourage alternative fuels, it should not be the Highway Trust Fund, and therefore the Nation's transportation system, that bears the burden of the ethanol subsidy.

A few years ago I introduced a bill that transferred revenue from the general fund to the Trust Fund so it could be the general fund that would bear the responsibility rather than the Trust Fund.

This Congress, Senator GRASSLEY and I introduced a bill, S. 1548, that replaced the ethanol exemption with a credit and that transferred the 2.5 cents, currently retained by the general fund to the Highway Trust Fund. Although other provisions in S. 1548 are now contained in the energy bill conference agreement, including the new ethanol credit, the provisions most important to me did not make it in.

I appreciate your commitment and that of Speaker HASTERT and Ways and Means Chairman THOMAS to ensure that the provisions in S. 1548, regarding the Highway Trust Fund will be enacted no later than February 29, 2004 which is the day that the TEA 21 extension expires.

In fact, Speaker HASTERT sent out a press release today that confirms his commitment to enacting these important provisions from S. 1548.

I thank Senator FRIST for working with me to ensure that the Highway Trust Fund will receive all the taxes due to it and that our Nation's transportation program will thrive.

Mr. FRIST. Mr. President, I extend my gratitude to Senator BAUCUS for working together with the Vice President, the Speaker of the House and myself to reach a compromise on the ethanol issue in the energy bill conference agreement. We understand this is a very important issue to him and to the country and his efforts on this matter have been crucial to developing a strong energy policy.

As per the agreement, I would like to reiterate our commitment regarding the portions of the ethanol issue which are not currently in the conference agreement. In the next highway bill, we will make certain that the 2.5 cents that currently goes into the General Fund, as well as the proceeds from repealing the 5.2 cents from the ethanol tax exemption, are credited to the Highway Trust Fund. Moreover, it would be my desire to hold the Highway Trust Fund harmless with respect to this late date of enactment.

Once again, I thank Mr. BAUCUS for working closely with us to resolve this very important issue. We look forward to enacting these provisions.

Mr. COCHRAN. Mr. President, there are several provisions in this conference report that amend the Commodity Exchange Act, which is administered by the Commodity Futures Trading Commission.

I appreciate the Energy Committee's consultation with the Agriculture Committee with respect to the amendments to the Commodity Exchange Act.

The most important change to the act is to the CFTC's antifraud authority in section 4b, which is found in section 33 of the conference report. Section 4b is the CFTC's main antifraud weapon. In November, 2000, the U.S. Court of Appeals for the Seventh Circuit ruled in *Commodity Trend Service, Inc.*, v. *CFTC*, 233 F.3d 981, 992 (7th Cir. 2000) that the CFTC could only use section 4b in intermediated transactions, thus prompting this clarification. We are amending section 4b to provide the CFTC with clear antifraud authority over non-intermediated futures transactions. Newly revised subsection 4b(a)(2) prohibits fraud in transactions with another person that are within the CFTC's jurisdiction. This new language will make it clear that the CFTC has the authority to bring antifraud actions in off-exchange principal-to-principal futures transactions, including retail foreign currency transactions and exempt commodity transactions in energy and metals. In addition, the new section 4b also clarifies that this fraud authority applies to transactions conducted on derivatives transaction execution facilities as well. The amendments to section 4b(a) of the CEA regarding transactions currently prohibited under subparagraph (iv) are not intended to affect in any way the CFTC's historic ability to prosecute cases of indirect bucketing of orders executed on designated contract markets. *See, e.g.*, *Reddy* v. *CFTC*, 191 F.3d 109 (2nd Cir. 1999); *In re DeFrancesco, et al.*, CFTC Docket No. 02–09 (CFTC May 22, 2003) (Order Making Findings and Imposing Remedial Sanctions as to Respondent Brian Thornton).

The next important changes, or clarifications, come in section 9 of the Commodity Exchange Act that deals with CFTC's false reporting authority. These clarifications are also found in section 332 of the conference report.

In the last 12 months the CFTC has received approximately $100 million in settlements from energy trading firms accused of filing knowingly inaccurate reports. Despite these successes, the amendment to section 9(a)(2) has been included in the legislation in response to a recent U.S. Federal District Court decision in the criminal case of *U.S.* v. *Valencia*, No. H–03–024 (S.D. Tex.). In this case, the U.S. attorney brought a criminal case against an energy trader for filing false reports regarding fictitious natural gas transactions in an attempt to manipulate natural gas price indexes. The Court, recognizing that the U.S. attorney had to show intent for knowingly inaccurate reports, dismissed some of the false reporting counts because there arguably was no intent requirement for false or misleading reports. The CFTC consistently has maintained that an intent to file a false report is necessary for there to be a violation of section 9(a)(2). Accordingly, to address the concerns of the Court in Valencia, section 9(a)(2) will be revised by inserting the word knowingly in front of both false and misleading so it is clear that the CFTC and the U.S. attorneys must show intent.

The legislation also includes an amendment clarifying Congress' intent that section 9 provides a civil enforcement remedy to the CFTC, in addition to criminal prohibitions. This amendment merely clarifies and confirms the CFTC's longstanding use of section 9, as the CFTC has brought over 60 enforcement actions charging violations of its provisions, including but not limited to false reporting charges under subsection (a)(2).

These amendments will permit the CFTC and U.S. Attorneys to continue to bring false reporting cases in the energy arena for acts or omissions that occurred prior to enactment. The bill expressly provides that these amendments simply restate, without substantive change, existing burden of proof provisions and existing CFTC civil enforcement authority, and do not alter any existing burden of proof or grant any new statutory authority.

The last amendment I will mention is a set of savings clauses for the Natural Gas Act and the Federal Power Act. These savings clauses are intended to help clarify the dividing line between the jurisdiction of the CFTC and the Federal Energy Regulatory Commission. The two savings clauses, which are virtually identical, can be found in section 332 and section 1281 of the conference report.

The savings clauses have two purposes. The first purpose is to make it clear that nothing in the Natural Gas Act or the Federal Power Act affects the exclusive jurisdiction of the CFTC with respect to accounts, agreements and transactions involving commodity futures and options. The CFTC, not FERC, has exclusive jurisdiction over commodity futures and options. This exclusive jurisdiction extends to futures and options on natural gas, electricity and other energy commodities, regardless of whether the futures or options contract goes to delivery, is cash settled or offset in some other fashion.

The second purpose of the savings clauses is to clarify that FERC should follow the existing Commodity Exchange Act statutory scheme for requesting futures and options trading data from futures exchanges through the CFTC. Section 8 of the Act recognizes the highly sensitive nature of futures and options trading data and specifically restricts its public disclosure except in very limited circumstances. The regulatory scheme of the act ensures the confidentiality of futures and options trading data and is one of the reasons that investors have such confidence in the U.S. futures markets. FERC can and should be able to obtain futures and options trading data by directing its request to the CFTC not to a futures exchange such as the New York Mercantile Exchange. The CFTC has a long history of sharing futures and options trading data with other Federal and State regulators that agree to abide by the public disclosure restrictions found in section 8. The savings clauses assure that requests for futures and options trading data will be processed in the same way and be subject to the same protections.

I believe the clarifications to the Commodity Exchange Act included in the conference report will only strengthen what is already a strong and sensible regulatory program administered by the Commodity Futures Trading Commission, and I support passage of the conference report to accompany H.R. 6, the Energy Policy Act.

Mr. CAMPBELL. Mr. President, I rise today in strong support of the energy bill conference report and urge its quick passage. I am deeply troubled by the misinformation being cast about by opponents of this bill on the Senate floor and in the press. I would like to take just a moment and distinguish some of the fact from fiction.

First, opponents of the bill have been criticizing the energy bill's electricity provisions. They have made sensationalistic allegations about Enron and the August blackout, among others, and conclude that this bill does nothing to improve our Nation's electricity grid. If opponents of this bill were to take the time to read the bill they have been so fervently criticizing, they would have reached far different conclusions.

Opponents have been desperately trying to color a good piece of legislation with known bad guys. I don't know how many times I have heard Enron thrown around, but never have those folks mentioned that this bill includes significant market transparency, consumer protection, and improved enforcement provisions. The fact: this bill improves matters.

Second, critics have criticized this bill for shielding MTBE producers from product liability lawsuits. Many of those Senators represent States that have sued MTBE producers for contaminating groundwater. On one hand, I appreciate why they object to that provision. My State of Colorado too is searching for ways to meet funding shortfalls, and groundwater out West is always a premium. However, MTBE isn't in groundwater because someone put it there. MTBE is in groundwater because the underground storage tanks made to hold gasoline with MTBE leaked.

Another fact: Congress mandated MTBE's use, requiring the oxygenate be added to gasoline to meet Clean Air Act requirements.

My friends on the other side should focus on fairness, and not just the deep pockets their trial lawyer friends are

after. Fairness is the special interest opponents of the bill are so adamant on vilifying.

Opponents of the energy bill conference report have made outlandish claims that this bill does nothing for renewable energy. Again, such statements beg the question; have they bothered to read the bill? The fact of the matter is that this bill includes significant financial incentives for wind, biomass, and solar energy, and has the full support of the Solar Energy Industries Association. Further, the bill requires that 7.5 percent of electricity purchased by the Federal Government come from renewable energy.

Opponents have criticized the Indian energy title of the bill as offensive to the environment. They claim that if Indians opt-in to the voluntary provisions, then those tribes can skirt NEPA. Without touching the prejudicial nature of that statement—the assumption that Indians would violate the environment—I seriously doubt that opponents know why NEPA might apply at all. Under current law, if a tribe wanted to build an energy production facility on their own land with their own money, NEPA would not apply. NEPA only applies on Federal land or when there is some Federal action. Although some critics may like to think otherwise, Indian land is treated as their own land. In the example above, there is no Federal action.

However, if the Nation's most disenfranchised and poverty stricken group seeks third-party funding to develop their own resources, then the Secretary of Interior must review the proposed project. This paternalistic Secretarial review, a historical construct in the law, is tantamount to Federal action triggering NEPA. Indians believe that their lands should be treated like other private land under the law.

Opponents of this bill are playing a cruel joke on Indians. On one hand, they argue that Indians should be free to exercise their right to self-determination. Yet, on the other hand they tell the poorest of the poor that they must do so without any third-party financing. It seems that opponents of this bill believe that, for Indians, self-determination may only be exercised through posing for tourist photos and making handcrafts.

The Indian Energy title in the bill under discussion provides Indians with a completely voluntary tool that could help them to develop their own resources. This title could be a significant empowerment vehicle providing much needed jobs and economic development.

Last, my friends on the other side have made several statements criticizing this bill's process. In part, I have to agree with them. Similar to the failed energy bill of the democratically controlled 107th Congress that never benefited from being drafted in the Energy and Natural Resources Committee, the current energy bill has reached the floor in an imperfect way.

However, the fact of the matter is that the energy bill of the 108th Congress is a far reaching piece of legislation that is good for the country, good for my State of Colorado, which still relies heavily on the agricultural industries, and good for workers. It is important to note that all manner of farm groups support this bill, including the American Farm Bureau, the American Corn Growers, the National Farmers Union, and the National Cattleman's Beef Association. Furthermore, this bill is supported by a host of labor organizations; the Brotherhood of Locomotive Engineers, the United Mine Workers, and the United Transportation Union, to name just a few.

Mr. President, the comprehensive energy bill before the Senate is a critical piece of legislation for the country. Its writers had the unenviable task to ask the questions that most in the Nation are never required to consider—where does our energy come from, and how can we meet future demand? This bill provides important answers and plans for the future. I urge its passage.

Mr. NELSON of Florida. Mr. President, I rise to oppose the energy bill. I wanted to support this bill, but the many environmentally questionable provisions and the large price tag prevent me from doing so.

This bill is not an energy policy bill. It is a special interest bill. We are at war in two countries, and we receive more than 50 percent of our oil from sources beyond our shores. But this bill does not provide a way for us to break free from the security threat that poses. It lacks clear vision for how this country moves away from our dependence on foreign oil and dirty fuel and towards new, cleaner sources of energy.

There are no oil saving provisions or climate change provisions. I do support the incentives for nuclear energy, wind energy, solar energy and other renewable energy sources. I also support the provisions for tax credits for the sale of hybrid and alternative fuel vehicles. The repeal of the Public Utility Holding Company Act and reform of the Public Utility Regulatory Act's mandatory purchase obligation are positive changes. But I can't get past the MTBE liability waiver, the coastal zone management changes, and the huge tax credits for the oil and gas industry. Half of the tax benefits—approximately $11.9 billion of the $22.9 billion—in tax provisions will go to the oil and gas industries, some $72 billion in authorized spending, a 50 percent increase over the price tag going into conference. And this price tag is not offset anywhere in this budget.

With regard to MTBE, my State of Florida has more MTBE spills than any other State in the country—more than 20,000—and those communities in Florida may be held responsible for the cleanup of those sites if the liability waiver in this bill passes. And the ratepayer in these communities, instead of the producers of MTBE, will have to pay the price for the cleanup.

In fact, a lawsuit filed by Escambia County Utilities Authority would be nullified by this bill. And at least 11 other water systems serving 629,000 people will be prevented from seeking redress from the refiners of MTBE who caused the contamination.

My staff talked to the Executive Director of the Escambia County Utilities Authority, Steve Sorrell, and he told my staff that if Escambia's suit cannot go forward the County will be on the hook for an expensive cleanup and the ratepayer will have to pay the price. So if this energy bill passes, the main cause of action in Escambia County FL's suit will be taken away and the ratepayers, the citizens of Escambia County, not the producers or oil refiners, who knew this substance was a health and environmental hazard when it was introduced, will pay the price.

Some have said that we shouldn't hold the producers responsible for the contamination, they just produced the MTBE. They didn't know it was a health risk or environmental hazard.

But the successful lawsuits have uncovered that the refiners did know it was a health and environmental risk and why not let the courts decide whether they are at fault instead of the U.S. Congress. In a document dated April 3, 1984 an MTBE producer employee said:

> We have ethical and environmental concerns that are not too well defined at this point; e.g., 1. possible leakage of [storage] tanks into underground water systems of a gasoline component that is soluble in water to a much greater extent [than other chemicals], 2. potential necessity of treating water bottoms as a ''hazardous waste,'' [and] 3. delivery of a fuel to our customers that potentially provides poorer fuel economy . . .

Another memo by an energy company engineer in 1984 is even more egregious.

This memo says:

> Based on higher mobility and taste/odor characteristics of MTBE, Exxon's experiences with contaminations in Maryland and our knowledge of Shell's experience with MTBE contamination incidents is estimated to increase three times following the widespread introduction of MTBE into Exxon gasoline . . .

Later the memo notes:

> Any increase in potential groundwater contamination will also increase risk exposure to major incidents.

These memos were written more than 5 years before the Clean Air Act amendments passed that ushered in the widespread use of MTBE in gasoline. These documents were uncovered in lawsuits in California in which manufacturers and distributors of MTBE,

the very entities immunized from product liability suits in this bill, were found guilty of irresponsibly manufacturing and distributing a product they knew would contaminate water. The jury found by ''clear and convincing evidence'' that these companies acted with ''malice'' by failing to warn customers of the almost certain environmental dangers of MTBE water contamination.

The coastal provisions of this bill are also troubling. Under section 321, of the Oil and Gas title, the Secretary of the Interior will be given broad new authority to grant leases, easements or right-of-ways on the Outer Continental Shelf in moratorium areas. Interestingly, this provision left the Senate prohibiting these oil and gas activities in the moratorium areas, but came back allowing those projects to go forward in moratorium areas—without input from the Department of Commerce as required under the Outer Continental Shelf Lands Act. Section 325 restricts the appeals process for coastal states appealing an oil or gas exploration or development plan to the Department of Commerce. The timeline put in place by this provision is even shorter than that requested by the Bush administration. Section 330 circumvents the Coastal Zone Management Act and deems the Federal Energy Regulatory Commission record the record for a Coastal Zone Management Act appeal—limiting a State's input into the process. For these reasons, I cannot support the bill.

Mr. ENZI. Mr. President, there is an old adage we have heard many times that says that the journey of a thousand miles begins with a single step. Today we are taking another one of those steps in a long journey that will hopefully lead to an increase in our energy independence, more reliable sources of energy, and more stable prices that are not so subject to fluctuations in the energy market.

The bill we have before us is something that will truly affect every American, no matter their age, where they work, where they live, or what activities they pursue in life. One of the many things that bonds us as Americans is our love of so many things that makes us consumers of energy. No matter who you are, you are a strong and vital part of that market.

If you drive a car, you won't get very far without a full tank of gas.

If you use a computer, you have to tie it to some source of electricity to get the power you need to access the Internet or the information stored on your hard drive.

If you live in a mobile home, or in a cabin in the woods and cook your food over an open fire, you are still an energy consumer who is using a resource to make your dinner.

Every lifestyle has its own energy needs and we have been incredibly blessed to have had access to an abundance of energy for many, many years.

In fact, we had such relatively easy access to energy we started to take it for granted. That led to calls for conservation and more wise use of our resources when energy costs first started to rise. That was the start of our journey to create an energy policy—one that has seen us through these past years. Unfortunately, it has taken quite a long time to agree on an update to our policy, one that takes into consideration the changes we have seen in our society and in the availability of energy both here and abroad.

Our dependence on foreign sources of energy continues to be a national concern, one that had me and many others calling for the creation of a national energy policy, which we have done since 1973 when OPEC and the Saudi Arabians first pulled the plug on our supply of crude oil.

The irony was the fact that we had an abundance of oil here in the United States at the time. In fact, we still have a huge supply of oil in the country today, but that oil has not been made available for exploration. Because we hadn't taken the steps to develop it, we allowed a foreign government to disrupt and control part of our daily lives. We became vulnerable to their manipulations and it took us months to recover. In some ways, we are continuing to recover from those days of the long gas lines, high prices and short supplies that we saw in the 1970s.

Things were bad enough back then when we didn't have an energy policy. Still, they could have been much worse. I shudder to think what might have happened if we'd had a situation like 9/11 occur at the heart of that crisis. If the terrorists had struck when we were economically crippled and energy supplies were low, what effect could they have had on our national security?

That kind of scenario is exactly the kind of thing that a national energy policy like the one we are taking up today is supposed to avoid.

It has taken us quite a while to get where we are, but we finally have something before us that will provide us with a plan, a blueprint for the future that will also address our needs in the present. It is time now for us to take it off the planning board and put it into action. After all, 30 years ought to be enough time to put the basics of a plan together, and that is how long we have had since the energy crisis of the 1970s to work out a plan like this. Now we have before us the beginning of what will be a long and continuing effort to stabilize our energy markets and protect our national security.

This bill isn't perfect, but it is a good start. It is more than a beginning, but it is not the final answer. It is a temporary remedy that will start producing results immediately while it lets us continue working on a more permanent solution. In other words, it is a chance to grab the brass ring and get another ride on the energy merry-go-round, while providing for the ride we are currently on.

I am pleased that this bill includes a number of important provisions that support and promote clean coal development. Coal is an important product of Wyoming, and one of the most important ways we can reduce our dependence on foreign energy is to find ways to diversify our energy supplies and better utilize our Nation's abundant coal supplies—especially clean burning coal like what we mine in Wyoming.

In addition to our coal supplies, in recent years our new energy development has focused on the increased use of natural gas. I support natural gas development and I hope that our gas industry continues to grow and flourish. IO am also keenly aware of the fact that there isn't enough natural gas or infrastructure available to supply all of the world's energy needs so we are going to have to continue relying on coal for some of our energy uses.

That does not mean we have to continue doing business as usual and continue to push our aging coal-fired power plants well beyond their originally designed lifetimes. We have the technology and the ability to design and build cleaner and more efficient power plants that utilize new clean coal technology, but we won't be able to do that if we cripple our economy and prohibit new development.

This won't surprise anyone, but none of us are going to be enthusiastic about everything in this bill. Again, it is not a perfect bill, but it is a good start on a policy. It does not have everything I want in it, but it does have more than enough to make it worth our support. There is a provision that would have greatly helped Wyoming get the more than $400 million that it is owed by the Federal Government through the Abandoned Mine Lands Trust Fund, but that provision was not included in this bill. We have received assurances from the Finance and Energy Committees that they would take up this matter early next year, and we are grateful for their commitments. However, I would have preferred that the provision had been included in this bill and we didn't have to take up any of the committee's time next year. Still, again, on balance, and taking the whole bill into consideration, it is a good bill and it deserves our support.

I know I am not the only one who feels that one provision or another could have been added or left out and it would have made for a better bill. Like me, almost every State can point at something that they wish could have been included but was not. It is a reason to be disappointed, but it's not a

reason to ignore the task at hand, which is to continue the process and develop a national energy policy.

There are just too many positive things that the bill would do for the country in the long and short term. To begin with, the bill would create nearly 1 million jobs and implement mandatory electricity reliability standards that we believe may prevent future massive blackouts as was experienced in August by the Northeast.

It would encourage the Federal Government to increase energy efficiency in Federal installations.

It would increase assistance for lower income families by raising the base authorization of LIHEAP to $3.4 billion. The bill also includes incentives to increase solar, wind, geothermal and other biomass technologies.

It encourages modernizing and streamlining our Nation's hydropower laws.

It provides incentives for responsible oil and gas development and royalty relief for marginal wells. In other words, it helps keep wells that are slow, but long-term energy suppliers going so we don't always have to rely on short-term, get-rich-quick wells for all of our energy needs.

It provides incentives to encourage consumers to purchase more hybrid and alternative fuel vehicles and authorizes two new programs that would improve the efficiency and quality of our Nation's fleet of school buses.

There are a number of other provisions included in this bill that will contribute to our Nation's energy security and I hope my colleagues will take the time to look at what is in this bill for what it really is: A desperately needed and all-important first step toward a policy that will increase our energy independence, ensure we have a more reliable supply of energy available, and a more stable energy market for consumers to purchase from with prices that are not so subject to as much fluctuation and change.

Mr. BURNS. Mr. President, I would like to commend the chairman of the Energy Committee for his leadership on this challenging bill both on the Senate floor and through the conference. This is the first comprehensive energy legislation this country has seen in more than a decade, and it is a huge step forward for America. This energy bill is about looking forward to our future, and creating the energy and the jobs that will keep this country best in the world.

This is a large and complicated bill. It addresses everything from energy efficiency and conservation, to research and development for new technologies, and policies to encourage a wide variety of energy sources nationwide. People will always find something to criticize in a sweeping piece of legislation, but we need to focus on the huge accomplishments this bill will achieve.

We will advance cutting-edge technologies such as hydrogen fuel cells and improve clean technologies already in place like nuclear power, hydropower, wind, and solar energy. At the same time we will shore up our own domestic production of the resources we use most, including clean coal, oil, and natural gas. We will begin to use 5 billion gallons of ethanol and biodiesel annually as a result of this bill, and that is a very good thing for farmers and consumers across America. Real reforms in the electricity title will result in more reliable service and more investment in the backbone of our electricity infrastructure.

I would especially like to acknowledge Senator DOMENICI's wise counsel in regard to an amendment I had intended to propose to enhance the economic growth of western States. My amendment would have provided for the study and creation of National Interest Electric Transmission Corridors by the Secretary of Energy, based on national security and energy policy grounds. Pursuant to those designations, the permitting and siting of needed electric transmission lines would be provided for. While most of this additional capacity would probably be achieved by broadening existing rights-of-way, there would no doubt be some need for additional rights of way. Upon the advice of the chairman and his assurance that he would pursue these concepts, I declined to offer that amendment on the Senate floor.

I am very encouraged that the chairman has been successful in having the concept of National Interest Electric Transmission Corridors included in the bill, for any area experiencing electric energy transmission constraints or congestion. Transmission capacity in these western States is one of the significant issues regarding their future economic expansion. Furthermore, if we could unlock the tremendous coal, wind and other resources of these States through mine-mouth electric generation and provide for the transmission of that electricity to load centers it would take significant pressure off our increasing reliance on natural gas as a power source. This is one of the keys to a balanced energy portfolio and lessened reliance on foreign energy sources.

My home State of Montana can make a significant contribution to our Nation's energy independence, provided we can develop the needed transmission infrastructure to move electricity to market if we generate it from our coal and wind resources. This is very important for both the generating States and the end-user markets and is simply good national energy policy and good national security policy.

This energy bill isn't perfect, but it helps us transition into tomorrow's economy without sacrificing our quality of life today. It is a good balance, and a good compromise between the countless demands that have been made by those with opposing viewpoints. No one can win every battle, but without this energy legislation the entire country loses. I am disappointed there are Members in this body who would rather complain about this bill than enact it. We shouldn't let partisanship get in the way of progress, and this bill is progress. No one got all they wanted, but every State in the Union will benefit, and every American will be better off if we ensure this country's energy security by passing this legislation.

Mr. HATCH. Mr. President, I rise today to express my strong support for H.R. 6, the Energy Policy Act. It has been a long, long time since we could claim to have a national energy policy, and I am very proud to say that we are about to deliver an energy plan to the American people that is comprehensive and forward looking. It is a balanced bill that promotes greater energy independence and cleaner air.

It is no simple task to construct complex legislation of such a broad scope. A good deal of the credit for the fact that we have a conference report today goes to the heroic leadership of Chairman DOMENICI and Chairman GRASSLEY, and the respective Democratic ranking members Senator BINGAMAN and Senator BAUCUS. I congratulate our colleagues for their leadership.

And when it comes to leadership, we all know that it was President George W. Bush who first put us on the path to a national energy plan. One of the President's earliest acts was to establish the National Energy Policy Development Group, which produced the National Energy Policy Report, an early template for the legislation we have before us today.

We don't have to convince the American people that we need this energy bill. They already know. They are the ones who paid more than $2 per gallon to fill their cars this summer. They are the ones who sat in blackouts for days. And, they are the ones who have watched their natural gas bills go through the roof.

I am pleased to report to the American people that the Energy Policy Act addresses each of those problems—and more.

My State of Utah is an energy resource State. Utah has long helped to fuel our Nation's growth, whether it be by supplying the uranium that fueled our early nuclear industry, the oil and natural gas for our vehicles and homes, or the clean coal which powers our coal-fired electricity plants. Utah has also been a leader in producing renewable electricity with our large hydropower facilities and our significant geothermal plants. Thanks to environmental protections, labor laws, and health and safety regulations, our Nation is cleaner and stronger than ever

before. And I am glad these protections are in place. However, the many layers of these rules and regulations do make energy production more expensive. In Utah, where we have many millions of acres of beautiful public lands, we have the extra difficulty of developing energy while trying to preserve significant portions of scenic areas. In my State we want all the protections our laws provide, but we recognize the need for assistance from the Federal Government to keep this activity going in this country. And in doing so, this legislation leaves almost no stone unturned.

The act will help us to leap forward in creating more efficient buildings and homes in this Nation, and it starts at home by addressing congressional and other Federal buildings. The act takes large strides forward in promoting the use of renewable energy in the United States. The bill also covers solar energy, wind energy, hydro power, and geothermal energy, the latter being particularly important in my State of Utah.

I am pleased that the Energy Policy Act includes important provisions to increase the reliability of our electricity system.

We have seen what happens when we lack a reliable affordable electricity supply; our modern society comes to a near standstill. Reliable electricity is one of the most important services we can provide our Nation. Most of the electricity produced in the United States comes from coal-fired power plants. The newer coal plants which are prevalent in the West are very clean and very efficient. This legislation promotes the most advanced technologies in this industry which will lead to further improvements in the reliability of our electricity system and in the quality of our air. The bill also provides programs to improve electricity service to our Native Americans.

Importantly, the Energy Policy Act addresses our need for a more reliable fossil fuel supply. This includes home heating oil, natural gas, and our other basic transportation fuels, petroleum and gasoline.

The transportation sector in the U.S. accounts for nearly two-thirds of all oil consumption, and we are almost entirely dependent on petroleum for our transportation needs. Is it any wonder, that 50 percent of our urban smog is caused by mobile sources? If we want to clean our air and address our Nation's energy dependency, we must focus on the transportation sector. And we must focus first on those technologies and alternative fuels that are already available and abundant domestically.

To that end, 14 cosponsors and I introduced S. 505, the Clean Efficient Automobiles Resulting from Advanced Car Technologies Act of 2003, or the CLEAR Act. The CLEAR Act is the most comprehensive and effective plan we have seen in this country to accelerate the transformation of the automotive marketplace toward the widespread use of fuel cell vehicles. And it would do so without any new Federal mandates. Rather, it would offer powerful market incentives to promote the advances in technology, in our infrastructure, and in the alternative fuels that are necessary if fuel cells are to ever reach the mass market. As a result our Nation benefits from cleaner air and greater energy independence.

I am very pleased to report that a large portion of the CLEAR Act was included in the Energy Policy Act. And for that I give my heartfelt thanks to Finance Committee Chairman GRASSLEY and Senator BAUCUS.

First, the bill offers CLEAR Act credits to consumers who purchase alternative fuel and advanced technology vehicles, such as hybrid-electric vehicles. These credits would lower the price gap between these cleaner and more efficient vehicles and conventionally-fueled vehicles of the same type. This is a direct attack on our Nation's huge appetite for petroleum as a transportation fuel, and I am confident that the CLEAR Act credits will accelerate our shift toward a more efficient and cleaner transportation future.

When I introduced the CLEAR Act, it contained a significant tax credit for the installation costs of retail and residential refueling stations. I was disappointed that this provision was weakened in conference and replaced with a provision that extends and expands an existing tax deduction for infrastructure. However, I am pleased that an infrastructure incentive did survive in the Energy Policy Act.

As originally introduced, the CLEAR Act also provided a very important tax credit of 50 cents per gasoline-gallon equivalent for the purchase of alternative fuel at retail. This would have brought the price of these cleaner fuels much closer in line with conventional automotive fuels and contributed significantly to the diversity of our fuel supply.

This was a very important component of the CLEAR Act that did not survive the conference process. It was important because of the combination of this incentive, the infrastructure incentive, and the alternative fuel vehicle credit working together was meant to have a larger effect on the market than could have been accomplished by providing these incentives alone at different times. For instance, the fuel credit would have combined with the vehicle credit for an added incentive to consumers to buy cleaner cars. The fuel credit also would have combined with the infrastructure credit for a very powerful incentive to install new fueling stations. The presence of more fueling stations also opens the way for the purchase of more clean vehicles, and so on. Because all three incentives are not in the final bill, we will not achieve the synergy that would otherwise have been possible, and the potential benefits of the CLEAR Act may not be fully realized.

In spite of this disappointment, I am very pleased that such a large portion of the CLEAR Act was included in the energy bill. I can see the day when alternative vehicle fuels, fuel cells, and other advanced car technologies will be common. And considering the environmental and security costs associated with our petroleum-based transportation system, that day cannot come too soon.

As I have outlined in my statement, the Energy Policy Act will go a long way to bringing our nation into the future. It will increase our energy security and clean our air. I urge my colleagues to support these goals and throw their support behind it.

Mr. CONRAD. Mr. President, I come to the floor today to support the energy bill conference report.

I have long believed we need a comprehensive national energy policy. The reality is that our economy depends on affordable energy. We often take it for granted, but just imagine how different our daily lives would be if we did not have plentiful, affordable oil, natural gas, and electricity. We depend on energy in almost everything we do in our lives, from turning on the light in the morning, to driving our cars to work, to cooking our dinner, to watching TV at the end of the day.

And energy is absolutely critical to the functioning of our economy. Our manufacturing sector uses vast amounts of energy to produce the whole range of products we take for granted in stores all across the country. Our services sector—and particularly our high tech sector—rely on electricity. Our agriculture economy uses enormous energy inputs for planting, harvesting and processing its bountiful production. And without energy, we could not transport these goods and services to consumers.

It is virtually impossible to understate the importance of energy to our daily lives and to our economy. Yet our energy policy is seriously lacking.

As the blackout in the northeast demonstrated last summer, our national electricity infrastructure is decades old and dangerously overloaded. Quite simply, we have under-invested in making sure that the national electricity grid can keep up with demand for electricity. Since 1992, demand for electricity has been growing at 2–3 percent per year while transmission capacity has been growing at only .7 percent per year. At the same time, deregulation of the electricity industry has led to a hodgepodge of control over transmission capacity, without clear rules and responsibility for maintaining the reliability of the system. We

need new rules to improve the reliability of the grid and new incentives to increase transmission capacity if we're to avoid future meltdowns.

And, we remain overly dependent on foreign oil. Oil imports now account for nearly 60 percent of consumption, and the projection is for that percentage to continue increasing inexorably. That puts our economy at risk, because it is vulnerable to price spikes caused by OPEC or supply disruptions in foreign trouble spots. And it creates national security challenges. We currently rely on the vast oil reserves in the Middle East to meet our import demands, and that makes ensuring the free flow of oil from that unstable, undemocratic part of the world a vital national security interest. So we need an energy policy that will reduce our reliance on imported oil.

For these reasons, I have long believed we need to update our national energy policy. The bill we have before us begins to address these challenges. It will improve the reliability of our electric grid. It provides positive incentives for renewable energy. And it promotes conservation.

Let me be clear, though. This is not a perfect bill. It does not go nearly as far as I would like in addressing the issues I have outlined and other critical elements of a comprehensive national energy policy. It contains several provisions that I do not think should be in an energy bill. But on balance, it is a positive step for North Dakota and the national economy, and it will mean additional jobs in my State.

Let me first talk about the provisions I support that will help ensure our national energy security and benefit North Dakota.

First, the bill strongly promotes the use of ethanol and other bio-fuels. The bill will require 5 billion gallons of ethanol by 2012. And it will create a biodiesel tax credit of $1 per gallon for feedstocks such as canola and 50 cents a gallon for recycled feedstock such as restaurant grease. These are clean and renewable fuels, and these provisions are good for the environment, good for our energy independence, and good for North Dakota farmers.

Second, I am very pleased that the bill contains a provision I fought for to extend the production tax credit for wind for 3 years. North Dakota has the highest potential for wind energy of any State in the Nation. This provision will spur the production of wind energy facilities and equipment in North Dakota. That is good for electricity consumers, good for the environment, good for wind energy equipment manufacturing workers, and good for farmers and others who will benefit from having wind turbines on their land.

Third, the bill contains a 15 percent investment tax credit to support the development of clean coal technology that will benefit North Dakota's lignite coal industry. We have a thriving lignite coal industry in North Dakota, with seven lignite plants that use 30 million tons of lignite each year. And jobs in the lignite industry are among the highest paying jobs in my State.

Fourth, the bill contains incentives for adding pollution control equipment on older coal plants and incentives for building new, more environmentally friendly coal plants. This could be a big help in getting a new lignite plant in western North Dakota while maintaining our pristine environment, something I have been working on for years.

Fifth, the bill contains modest steps to promote energy conservation, including a tax credit of up to $2000 to encourage people to better insulate their homes, and provisions to encourage the purchase and use of more energy efficient appliances.

Sixth, there are provisions to encourage small producers of oil and gas. Many people do not think of North Dakota as an oil and State, but we have significant reserves that can be tapped to help reduce our dependence on foreign oil and address the shortage of domestic natural gas production. The bill includes a tax credit for marginal wells, provisions to speed up permitting on Federal lands, and a section to encourage a particularly important process for natural gas extraction.

Seventh, the bill includes a set of provisions to improve the reliability of the national electric transmission grid, reducing the chances of a massive failure like the one that affected the northeast last summer.

Eighth, the electricity title also ensures that small cooperatives will not be subject to burdensome FERC jurisdiction and contains native load protections for co-operatives, which are a major source of electricity in North Dakota. These provisions ensure that North Dakota rural electric co-ops can continue to provide low-cost power to their consumers.

Finally, the bill expands and extends assistance to low income families in meeting their home heating needs. The Low Income Home Energy Assistance Program, LIHEAP, has provided valuable assistance to thousands of North Dakota families in paying their winter heating bills.

Because of all these important provisions, a number of North Dakota groups support the bill. These include the North Dakota Farmers Union, the North Dakota Farm Bureau, the North Dakota Rural Electric Cooperative Association, the Lignite Energy Council, and the Greater North Dakota Association.

As I said earlier, however, this bill is far from perfect. There are a number of areas where it could and should have been much better.

For example, the conference report does not contain a Renewable Portfolio Standard. The bill that passed the Senate required that 10 percent of electricity be produced from renewable energy sources by 2020. This modest RPS would have helped to clean up our environment and spurred wind energy development. I supported this provision and wish it had been included in the conference report.

More generally, the conference report falls short on promoting the use of renewable fuels and emphasizing conservation. If we are ever to overcome our dependence on foreign oil imports, we will need to be more aggressive on these fronts. The conference report could and should have done more in this area.

I am also disappointed that the bill does not contain tradeable tax credits to encourage cooperatives and municipal utilities to further invest in renewable energy sources. Tradeable credits would have leveled the playing field for these electricity suppliers as we build wind farms and other renewable energy facilities. The conference report could and should have included this provision.

And I do not believe the conference report goes nearly far enough in creating new incentives for expanding transmission capacity to reduce the risk of blackouts. I had hoped the conference report would contain provisions to eliminate the transmission bottleneck that is preventing my state from expanding lignite and wind energy plants to export more electricity to regional markets. Here again, the conference report could and should have done more.

Finally, the bill contains a number of unnecessary provisions that I do not support. The liability waiver for the dangerous fuel additive known as MTBE—or methyl tertiary butyl ether—is troubling. Clean Air Act changes that will allow certain cities to postpone compliance with reductions in ozone damaging pollutants have nothing to do with promoting sound energy policy and should not be in the bill.

I believe we have more work to do to produce a truly comprehensive energy policy that addresses our energy, economic and national security challenges. In particular, I will continue to push for an expansion of transmission capacity to protect against the failure of our electricity grid and allow North Dakota to increase its exports of electricity. It is my hope that we will be able to work on these issues in a bipartisan manner.

Despite its shortcomings, on balance the bill before us takes positive steps to address our Nation's energy needs. It will encourage domestic energy production, promote renewable fuels, and modestly encourage conservation to help reduce our reliance on foreign oil. It will help to reduce the likelihood of major transmission breakdowns.

And it will provide significant benefits to my State of North Dakota. Energy is the second largest sector of the North Dakota economy, and it will benefit very directly from a number of provisions in the bill. And agriculture, the largest sector of the North Dakota economy, will also see important benefits from the various renewable fuel incentives.

For those reasons, I support the conference report.

Mrs. LINCOLN. Mr. President, I rise today to announce my support for the Energy Policy Act of 2003. I want to thank Chairmen GRASSLEY and DOMENICI and Senators BAUCUS and BINGAMAN for working with me to include renewable energy and energy efficiency provisions important to my home State of Arkansas. While some may say this bill is not perfect, it is a step toward reducing our dependence on foreign oil and increasing the use of renewable resources in this country.

Nine months ago, I stood before this body and spoke on the dangers of continued reliance on foreign sources of energy. Today, I am pleased to stand here in support of a bill that includes several provisions I believe will take our country's energy policy in the right direction. I know this bill is not perfect, and I am disappointed that some of my colleagues who have been leaders on this issue for many, many years were excluded from the drafting of this bill.

But I am pleased that those who did draft this bill made an effort to address energy concerns in every sector of this industry. In Arkansas, we have investor owned utilities and co-operatives. This bill will help both of these providers serve their customers in a more efficient and reliable manner. And while this bill may not go as far as some would like in the direction of renewable energy, there are many provisions in this package which will help the United States begin the long process of eliminating our dependence on foreign oil. I believe the renewable fuel standard, requiring our government to purchase at least 5 percent of its energy from renewable sources, represents a positive step toward this goal. I personally fought to include provisions that will encourage greater use of renewable resources, increased production of efficient appliances, and greater investment in delivering fuels to rural America.

In Arkansas, we recognize the importance of renewable fuels in helping the United States to become more energy-independent. That's why I am excited about the provisions in this bill that will encourage greater use of a valuable new alternative fuel, biodiesel. Biodiesel, which can be made from just about any agricultural oil, including oils from soybeans, cottonseed, or rice, is completely renewable, contains no petroleum, and can be easily blended with petroleum diesel. It can be added directly into the gas tank of a compression-ignition, diesel engine vehicle with no major modifications. Biodiesel is completely biodegradable and non-toxic, contains no sulfur, and it is the first and only alternative fuel to meet EPA's Tier I and II health effects testing standards. Biodiesel also stands ready to help us reach the EPA's new rule to reduce the sulfur content of highway diesel fuel by over 95 percent. These tax credits are necessary as biodiesel is not yet cost-competitive with petroleum diesel.

This legislation will provide tax incentives for the production of biodiesel from agricultural oils, recycled oils, and animal fats and will ensure that biodiesel becomes a central component of this Nation's automobile fuel market. This legislation is identical to language authored by myself and Senator GRASSLEY included in the last Congress's Energy Bill. It is intended to be a starting point for our debate and discussion as we draft an energy bill for consideration in this Congress.

This legislation will provide a partial exemption from the diesel excise tax for diesel blended with biodiesel. Specifically, the bill provides a one-cent reduction for every percent of biodiesel from virgin agricultural oils blended with diesel up to 20 percent.

The legislation will also provide a half-cent reduction for every percent of biodiesel from recycled agricultural oils or animal fats. With today's depressed market for farm commodities, biodiesel will serve as a ready new market for surplus farm products. Investment now in the biodiesel industry will level the playing field and create new opportunities in rural America. This bill also contains a provision I fought for that will provide a tax credit for production of fuels from animal and agricultural waste.

Thanks to new technological developments, we can now produce significant quantities of alternative fuels from agricultural and animal wastes in an environmentally-friendly manner. The production incentives included in this bill will assure implementation and commercialization of this new generation of technology. I am also pleased this bill includes language to encourage additional collection and productive use of methane gas generated by garbage decomposing in America's landfills. Landfill gas is a renewable fuel that can be used directly as an energy source for heating, as a clean burning vehicle fuel, and as a hydrogen source for fuel cells. Furthermore, it can power generators to produce electricity. There are compelling environmental reasons to encourage these projects.

Even the large landfills that are required under the Clean Air Act to collect their gas and control non-methane organic compounds often find it more cost-effective to simply flare or otherwise waste the gas rather than use the methane to produce electricity. Some smaller landfills are not required to collect the gas, and may continue to emit it for decades under the Clean Air Act. Thus, landfill gas projects will not only reduce local and regional air pollution while yielding a renewable source of energy, they will also reduce the country's yearly emissions of greenhouse gases by a very substantial amount at a relatively small cost. I also worked to include a provision that will encourage new waste-to-energy facilities to produce electricity directly from the combustion of our trash. Arkansas stands with other environmentally conscious States in understanding that waste-to-energy technology saves valuable land and significantly reduces the amount of greenhouse gases that would have been released into our atmosphere without its operation. The volume of waste generated in this country could be reduced by greater than 90 percent by utilizing waste-to-energy facilities, and EPA has confirmed that more than 33 million tons of greenhouse gases can be avoided annually by the combustion of municipal solid waste. Municipal solid waste is a sustainable source of clean, renewable energy and I am proud to see this measure enacted into law.

Another provision I am extremely proud of is one that will provide a tax credit for the production of super energy-efficient clothes washers and refrigerators if those appliances exceed new Federal energy efficiency standards. Conservation and efficiency are the most effective and immediate ways to limit our energy consumption and reduce pollution. I am confident this provision will spur manufacturers to develop super-efficient appliances that will be affordable for consumers.

Another provision of which I am particularly proud relates to the clean-up of Southwest Experimental Fast Oxide Reactor, a decommissioned nuclear reactor near the community of Strickler, Arkansas, in the northwest corner of my State. The site is contaminated with residual radiation, liquid sodium, lead, asbestos, mercury, PCBs, and other environmental contaminants and explosive chemicals. I have been fighting to rehabilitate this site since I came to the Senate, and now we know that persistence pays off.

SEFOR was built by the Southwest Atomic Energy Associates, a consortium of investor-owned electric utilities, and the U.S. Atomic Energy Commission for testing liquid metal fast breeder reactor fuel. SEFOR began operations in 1969 and was permanently shut down in 1972. After the reactor's useful life, the ownership of the site was transferred to the University of Arkansas. The Federal Government helped create these contaminants, and therefore should pay to help clean

them up. This is great news for northwest Arkansas, because this site has threatened public health and the environment in one of our state's most beautiful areas for too long. I thank the conferees for retaining my provision related to cleaning up this site.

The final provision I would like to praise relates to improving our country's natural gas infrastructure. I am proud that this bill contains provisions to make it easier for natural gas companies to deliver clean-burning natural gas to this Nation's rural homes, by decreasing the depreciation time for natural gas pipelines.

America's demand for energy is expected to grow by 32 percent during the next 20 years and consumer demand for natural gas will grow at almost twice that rate, due to its economic, environmental, and operational benefits. That level of natural gas use is almost 60 percent greater than the highest recorded level. To satisfy this projected demand, we must substantially expand our existing gas infrastructure and this provision will do that. These are provisions in this bill that I am very proud of, but there are also provisions in this bill that I am not proud of. I am very disappointed by the way in which the issue of MTBE liability is handled in this bill. I am also disappointed by the lack of a renewable portfolio standard in this bill and I will continue to work to see that a RPS is enacted in coming years.

Our current global situation shows us just how important it is that we takes steps to reduce our dependence on foreign oil. I hope that this bill is taken for what it is: not a comprehensive solution, but a certain step in the right direction. Much more work needs to be done if we ever expect this country to lose its dependence on fossil fuel and foreign sources of energy and I urge my colleagues to continue to work hard until we achieve this goal.

Mr. BIDEN. Mr. President, for our national security, for our economic future, for the health of our environment, our country needs an effective, comprehensive national energy policy. We must free ourselves from dependence on foreign sources of energy. We must leave behind costly, inefficient energy practices and invest in cutting-edge technologies that will keep our economy the most productive in the world. And we must protect and heal the natural environment that we will leave to our children and grandchildren.

The legislation before us fails to meet those needs. When I, and 83 other Senators, voted for the Energy Policy Act on July 31, it was very a different piece of legislation. Unfortunately, the bill has been drastically changed since then. Without sufficient discussion and input from our side of the aisle, unacceptable parts were added to this legislation and crucial parts were taken away. We have been left with a bloated symbol of lost opportunity. I cannot support it.

This is not a trivial matter. This bill would set our energy policy for the next 10 years; we must get it right. Consider how things have changed since we last enacted an energy policy in 1992 and what new challenges we will face in the next 10 years.

Cracks in our energy policy, both in infrastructure and regulation, have become evident in the last few years. They have been most clearly shown during the Enron scandal and the August blackout in the Northeast and Midwest. These were clear signals of serious problems in the current system. Sixty million people were affected by the blackout, and it cost New York City alone $1 billion. This should have been a call to action, but it was not. This bill fails to address the weaknesses in our electrical grid that were exposed over the summer.

The Federal Energy Regulation Commission is prohibited in this bill, until 2007, from reforming the national power grid through mandating Regional Transmission Organizations, which would be necessary to ensure that further blackouts don't occur. This legislation also requires those who want to construct a Regional Transmission Organization to foot the full bill themselves, basically guaranteeing that it won't happen. I have received complaints from the Public Service Commission in Delaware on this very provision.

As our colleagues from the West Coast have reminded us so forcefully, Enron-style energy market manipulation was a major force in undermining the energy system in that part of the country. But this bill does not close the loopholes, with cute names like ''Fatboy'' and ''Get Shorty,'' that allowed Enron to inflate their profits, and that directly caused some of the disruptive and costly power shortages.

The bill also rescinds the Public Utility Holding Company Act without providing an adequate replacement. PUHCA has for decades protected energy customers from energy corporations, like Enron, who might undertake predatory actions or make risky acquisitions or mergers. The repeal of this legislation leaves consumers holding the bag if a power company loses money on a non-energy investment. They could just put it on their customers' electric bills.

Not only does this bill not address the problems of the past, it doesn't plan at all for the future. Our reliance on oil and gas today is inescapable, but the need to move toward something better is undeniable. We will invest billions of taxpayer dollars in this bill for a resource that can't possibly sustain us. Our dependence on oil ties us to internal politics of unstable countries around the world. It condemns us to unsustainable levels of pollution. It should not be a very radical idea to suggest that we need to shift the type of energy that we use in this country. We consume almost 25 percent of the world's daily production of oil, though we hold only 3 percent of the world's oil reserves. This is a deficit that we will pay for with lack of control over our own economy and security. We are bound to the price fixing of Middle East suppliers and unrest in South America and the states of the former Soviet Union, and we will continue to be unless we invest in alternate sources of energy and curb the rate at which we consume.

Unfortunately, this bill takes no major steps toward these goals. In fact, the conference refused to include renewable portfolio standards, supported by 52 Senators, which would have required utilities to generate 10 percent of their electricity from renewable energy sources by 2020.

To deal with our dependence on fossil fuels, we must address both supply and demand. But this bill fails to provide us with a sensible energy conservation program. It doesn't address the need to improve fuel efficiency in our cars and trucks. In that regard, we can now count China among the countries with more foresight than this legislation provides on the issue of automobile efficiency. And this bill simply dropped a measure, accepted 99 to 1 by the Senate, that would have instructed the President to reduce our daily oil consumption by a little more than 5 percent by 2013.

Instead of a forward-looking policy on energy, this bill has been turned into a vehicle to undermine our Nation's environmental laws to the benefit of fossil fuel producers. The bill spends $1.8 billion in taxpayer dollars for the purchase of conventional coal-burning technologies, which reduces future demand for ''clean-coal.'' At the same time, subsidies to promote the cleanest coal technologies have been cut by 20 percent.

It rolls back provisions of the Clean Air Act, by allowing communities to bypass compliance deadlines on ozone attainment standards if they can prove that some of the pollution drifts into their area from upwind locations. Unfortunately, almost all communities with poor air quality can meet this test. The result is a significant weakening of the Clean Air Act and a slap in the face to cities, like Wilmington, DE, who have met clean air standards despite dealing with upwind pollution.

This is not only an environmental problem. Currently, 130 million Americans are living in areas that don't comply with the air quality standards, and non-compliance has been linked to an increased occurrence of respiratory problems. A group of health organizations including Physicians for Social Responsibility and the American Lung

Association have estimated that this rollback would cause more than 385,000 asthma attacks and nearly 5,000 hospital admissions per year.

The Clean Water Act has likewise been weakened. Oil and gas drilling sites are exempted in this bill from run-off compliance, and hydraulic fracturing, an oil and gas recovery technique, has been completely removed from regulation under the Safe Drinking Water Act.

These are two major changes, but there are other assaults on the environment. For instance, royalties charged to oil and gas recovery units on public land were reduced; offshore oil drilling in the Outer Continental Shelf was authorized; and, a Senate-approved provision, authorizing research on global climate change, was eliminated. This bill prefers ignorance to understanding when it comes to the most important environmental issues that our planet faces today.

And, in perhaps the most transparent concession to special interests, this bill not only waives liability, retroactively to September 5, for those who have produced the toxic substance, MTBE, that is polluting our ground water supply, but it grants its manufacturers $2 billion in transition funds and doesn't ban the additive until 2014, a provision which can be easily waived by the President or any Governor. This leaves those affected communities with a $29 billion clean up tab.

But, that is not the only tab that this bill leaves with the American people. It leaves us to pay $25 billion, mostly in pork, almost half in backward-looking tax breaks to fossil fuel producers. That is simply too much to be spent on a bad idea. This is not a roadmap, a vision on the horizon, to guide us for the next decade.

This bill fails to give us the comprehensive energy policy our Nation needs in this new century. It does nothing to free us from our dangerous dependence on fossil fuels. It does not set a clear course toward cleaner, more efficient technologies. And it fails to protect our environment. In too many ways it has sacrificed the long-term interests that we all share for short-sighted special interests. We can, we must do better.

Mr. KOHL. Mr. President I regret having to vote against this energy package. The country needs a coherent energy policy to help us tackle the challenges that come with economic growth. Our constituents need to know that when they wake up in the morning, the lights will be on and the energy to power our days will be available.

Our economy needs plentiful, affordable, reliable energy as we struggle to climb out of a devastating period of slow growth and job loss. Unfortunately, this bill does more to meet the needs of special interests than the needs of a growing economy.

We need an energy bill that leads to lower prices, a clean environment, and consumer protection. The bill before us today is a missed opportunity to further any of those goals. It has come up short in its effort to lower natural gas prices for Wisconsin consumers. Natural gas prices have been a roller coaster for the people from my State, and we need a large long term supply to come on line. The North Slope of Alaska was the answer, but this bill has done little to make that supply a reality.

Another problem plaguing consumers in Wisconsin is spikes in gas prices brought on by our overdependence on boutique fuels. Most recently, in southeastern Wisconsin, a fire at a refinery resulted in consumers paying $2 a gallon for gasoline because we could not bring in gasoline from other regions without violating the Clean Air Act. The bill before us could have limited the different blends of gasoline in use around the country, so that if one area had a supply disruption, fuel could be imported from another region. I worked with members of the Wisconsin delegation to include language to solve this problem in the future, but that was not retained in the conference Committee negotiations. Wisconsinites will continue to be held hostage to local refineries during supply disruptions.

I supported provisions in the Senate energy bill that would have created a renewable fuels portfolio standard or RPS. The RPS was going to be an aggressive target that would have created a significant market for renewable energy technologies. While the bill does contain tax provisions to encourage the use of renewable energy, the RPS was a new and exciting effort to wean us of our addiction to fossil fuels. The RPS was dropped in conference, even though it had received several strong votes in the Senate. Many States are creating their own RPS, but a national requirement would have set the renewable energy industry on a path to mainstream success. Instead, we are left with small changes at the margins which will not significantly affect our energy production mix.

High electricity prices over the last few years have made it clear that consumers need better protection from unscrupulous companies. Again the Senate bill contained provisions that would protected consumers from the kind of price gouging schemes created by Enron. My colleagues worked hard to make sure the Federal Energy Regulatory Commission had the teeth and the oversight capability to protect consumers in a world without the Public Utility Holding Company Act. Again the conference turned their back on the Senate provision and embraced House language that defends industry at the expense of State and Federal regulators.

The Congress has squandered another opportunity to craft a far reaching and progressive energy policy for this country. Instead we have chosen to pander to special interests and create a particularly unsavory piece of legislative sausage. The bill before has been laden with three time the tax breaks the President requested, and more than $100 billion in spending. We can do better than this. We should do better than this, which is why I oppose the bill and support the filibuster. Congress owes it to the American people to come back next year and put together a bill that meets the needs of everyone, consumers and industry alike, instead of playing favorites and leaving the taxpayers with the bill.

Mrs. MURRAY. Mr. President, I want to take time to comment on the Energy bill before us today.

It is disappointing that such a massive bill could do so little to promote our energy independence, national security, economy, or environment. It does nothing to protect our rate-payers from the type of energy crisis we faced in the Pacific Northwest and California. Those who claim otherwise are simply masking the real mission of this bill which is a taxpayer giveaway to the big energy companies.

A 1,200-page bill has much to comment on, but I will not take time to detail every concern I have. I want to discuss the electricity title, the lack of a true energy policy, and threats to our environment.

First let me discuss the electricity title of the bill. For those of us from the Pacific Northwest this title was of the utmost concern.

For over 2 years the Pacific Northwest has been struggling against the Federal Energy Regulatory Commission's, FERC, effort to deregulate the transmission system through its promotion of regional transmission organizations, RTOs, and standard market design, SMD, rules.

Two simple points: First, FERC had proposed a solution in search of a problem that doesn't exist in the Pacific Northwest. Second, the one-size-fits-all approach being promoted by FERC would neither work nor be cost-effective in our unique hydropower based system.

With those concerns in mind I have been working with many of my colleagues in the Pacific Northwest and Southeast, who have similar regional concerns, to keep FERC from moving forward with these plans. I am pleased that the bipartisan group has been successful in delaying until 2007 FERC's ability to move forward with SMD.

While the bill delays SMD implementation, it does not permanently stop FERC from ultimately pursuing this power grab, and does nothing to stop RTO development.

In fact, the bill is an outright endorsement of the RTO plan, going so

far as to provide incentives to utilities for joining such transmission organizations.

FERC has not demonstrated that such a system in the Pacific Northwest will be an economic benefit to the region and, to date, the majority of Washington State utilities remain opposed to the RTOs. Even with the SMD delay provision, this bill is a threat to the electricity system of the Northwest, and I cannot add my voice to this bill's support of RTOs.

Also of great concern in the electricity title is the bill's failure to deal with market manipulation. The Pacific Northwest and California are still feeling the direct effects of the 2000–2001 energy crisis that we now know was caused, in large measure, by energy companies manipulating prices.

Given the lessons we have learned over the past 3 years, one would have hoped that this Energy bill would aggressively attack these known methods of market manipulation. But that is not the case. This bill only bans one type of manipulation and ignores all the other methodologies we know were used.

By remaining virtually silent on market manipulation, this bill is giving a nod to energy companies to once again employ Fat Boy, Get Shorty, and other infamous price-gouging schemes.

This bill is an open invitation for companies to once again seek to fatten shareholders' wallets at the expense of ratepayers. This is more true now that the bill repeals the Public Utility Company Holding Act, PUHCA, without implementing any countervailing laws to protect against abuse in the industry.

In total, this bill promotes schemes that are counter to Washington's ratepayers and fails to protect them against the manipulative practices that have already raised their rates.

The bill also lacks a comprehensive energy policy.

During the past 3 years of debate on energy I have acknowledged we should recognize the current importance of oil, gas, and coal in our energy production today. But to ensure America's energy security for the future, it must strongly promote energy efficiency, conservation, clean, and renewable energy sources, and should diversify our energy sources.

But rather than aggressively promoting renewable energy and conservation, this bill maintains the status quo. This bill directs billions of taxpayer dollars to traditional energy producers who already have healthy market shares and hardly need Government support.

Of the roughly $23 billion in tax credits in this bill, only $4.9 billion, or 20 percent, would go towards renewable energy or conservation.

I support the production tax credits for wind, solar, geothermal, and biomass renewable energy in this bill, but unfortunately public power is left out of the equation.

Many Washington residents are served by publicly owned utilities and cooperatives and they should receive the same incentives to invest in renewable energy as this bill gives to the for-profit utilities.

Earlier drafts of the tax title included a tradable tax credit for public power investment in renewables. I know that Senate Finance committee members fought for this provision, but unfortunately the President and House objected to the provision.

With so much of Washington and the Pacific Northwest served by public power utilities, it will be much harder to get these type of investments made.

We hear constantly that we need to decrease our reliance on oil from the Middle East and yet this bill does nothing substantive to increase automobile efficiency standards. The United States is the most technologically advanced country in the world. There is no reason we cannot build and produce more fuel-efficient cars.

Without addressing fuel efficiency standards, it is hard to praise this bill for promoting energy efficiency or national security.

In the end, this bill does nothing more than preserve the status quo of energy production in the United States. We are not more secure, we are not more independent, and we have not truly diversified our production sources. All we have done is promote the traditional energy sources of oil, coal, and gas at the expense of our national security and environment.

This bill does serious harm to our environment and our health by effectively turning back the clock on decades-old environmental protections.

First, the bill includes a provision that would amend the Clean Air Act to allow more delays for adhering to the EPA's smog regulations. This provision is not just illogical, it is dangerous.

Second, the bill's provisions for our coastal regions present a threat to an area my State wants protected.

For Washingtonians, the coastal areas are some of the most pristine and cherished natural areas in the State. Under this bill, these areas, along with coastal areas in many other States, would be placed in serious jeopardy.

The bill would grant new authority to the Department of the Interior to authorize energy development projects on the Outer Continental Shelf, OCS, including the transport and storage of oil and gas. At the same time, it would undermine the rights of States to manage their coasts. Under the Coastal Zone Management Act, CZMA, States were given the right to have a say in Federal projects that impacted their coastal regions. This bill would severely compromise these rights.

Third, the bill has alarming environmental implications for drilling and construction projects. It would allow an expedited application process for drilling on Federal lands by requiring the Department of the Interior to automatically approve applications once they have met certain standards, regardless of any outstanding environmental concerns.

It also exempts companies from adhering to the Clean Water Act's runoff regulations for construction and drilling sites. Without adherence to these guidelines, the risk of ground water contamination increases dramatically.

Fourth, I am concerned about a measure to provide legal immunity to chemical companies that produce the gasoline additive MTBE. The toxic substance is known to have caused ground water contamination, and this bill shifts costs for cleanup to taxpayers.

Lastly, this bill contains huge amounts of subsidies for the oil and coal industries. Nearly half of this bill's incentives are given to the oil and coal industries, two of the most environmentally destructive fossil fuels that have contributed to global warming. This is not just irresponsible; it is wrong.

We must actively work to reduce our dependence on foreign oil, but subsidizing the industries and rolling back environmental protections is not a logical methodology.

In contrast, the bill provides less than one-quarter of its incentives to industries that produce renewable energy. The facts are clear. Renewables are simply not the top priority of this piece of legislation.

These are some of the many reasons I cannot support this piece of energy legislation. Not only does it put consumers at risk by repealing necessary protections, but it seriously puts at risk our own health and the health of our environment with the special interest giveaways to the oil, gas, and coal industries.

Finally, let me address the claims about job creation in this bill. For Washington State, a more aggressive promotion of renewable energy could have been a boost to local companies involved in this area of generation, but this bill did not provide that direction.

Proponents have argued that the bill encourages the construction of a natural gas pipeline from Alaska, which would create jobs in Washington State. Unfortunately, the bill does not provide the guarantees needed for what could have been an important project. To construct the pipeline, its builders say they would need some protection against gas prices falling below a certain level. But, this bill provides no mechanism for risk mitigation, so according to its own builders, the pipeline will not be built.

The negative aspects of this bill are overwhelming. It fails to adequately address the real problems that we all face. It threatens the environmental

progress we have made in the past and the progress we hope to make in the future. Without measures that substantively promote responsible energy use, increased conservation, energy independence, consumer protection, and environmental safeguards, this bill is simply unacceptable.

I cannot support legislation that puts us all in danger, and that is exactly what this bill does. The people of Washington State deserve better, and the people of America deserve better.

Mr. LEVIN. Mr. President, it is difficult to oppose a bill that has a number of provisions that I not only support, but worked to have included in the bill. However, the process and the product are deeply flawed and I cannot support it.

There are many objectionable provisions that were added to this bill that were not in either the House or Senate versions of this legislation; for instance the retroactive MTBE liability waiver, underground storage tank provisions that would require taxpayers, rather than polluters, to pay $2 billion to clean up leaking underground storage tanks containing gasoline and other toxic chemicals, even at sites where viable responsible parties are identifiable, and the numerable State-specific projects that will cost billions of dollars and were, again, not considered by the House or the Senate.

The Senate passed a comprehensive and balanced Energy bill in July. Then, after weeks of closed-door meetings with virtually no input from Democratic conferees, the Republicans put forward this ‘‘take it or leave it’’ Energy bill that is drastically different than the bill that the Senate passed. We have no opportunity to amend this bill, or choose among its good and bad provisions. It is all or nothing.

There are simply too many provisions on the negative side of the ledger. The massive power failure of August 2003, on top of the massive price manipulation perpetrated by Enron and others, provided additional proof, proof that shouldn't have been needed, that the United States' deregulated energy markets are not functioning well. This bill doesn't help that problem. It may make it worse.

The Conference report would repeal the Public Utility Holding Company Act of 1934, PUHCA, longstanding consumer and investor protection legislation governing energy industry structure and consolidation, 1 year after enactment of this bill. Unfortunately, the bill fails to provide adequate protections to prevent industry market manipulation and consumer abuses. Governor Granholm of Michigan has said that replacing PUHCA with ‘‘weaker anti-fraud and market manipulation rules’’ could weaken the States' ability to protect consumers. Further, while the enactment of this legislation's mandatory reliability provisions would be an improvement over the current voluntary system of standards, the bill fails to ensure that regional transmission organizations will have the authority to enforce those standards in order to prevent, or respond effectively to, another blackout. Uncertainty in the power industry threatens our economy and security and creates the loss of investor confidence in U.S. energy markets. If necessary, we should adopt a stand-alone bill that sets mandatory reliability standards, requires utilities to join regional transmission organizations and establishes consistent rules for the enforcement of standards nationwide than pass an Energy bill filled with so many harmful provisions.

In addition, two provisions in this conference report would significantly impede the ability of Federal and State agencies to investigate and prosecute fraud and price manipulation in energy markets. These provisions would make it easier to manipulate energy markets without detection.

Section 1281 of the electricity title states: ‘‘Any request for information to a designated contract market, registered derivatives transaction execution facility, board of trade, exchange, or market involving accounts, agreements, contracts, or transactions in commodities (including natural gas, electricity and other energy commodities) within the exclusive jurisdiction of the Commodity Futures Trading Commission shall be directed to the Commodity Futures Trading Commission.’’ Section 332(c) of the oil and gas title contains similar language specifically applicable to investigations by the Federal Energy Regulatory Commission, FERC.

If adopted, this would curtail all State and Federal authority, other than CFTC, to investigate wrongdoing in CFTC-regulated markets. This would impede FERC, Department of Justice, and State investigations of fraud and manipulation in these markets. It would turn the CFTC into an impediment for all other Federal and State investigations into matters within CFTC-regulated markets, which would be an unprecedented intrusion into the enforcement of State and Federal consumer protection laws. Had this approach been in effect in recent years, FERC would not have been able to investigate manipulation of the energy markets, including the fraud and manipulation perpetrated by Enron through EnronOnline.

Section 1282 of the electricity title would impose a higher criminal standard, ‘‘knowingly and willfully,’’ for filing false information and for improper round trip trading than exists under current law. The new round trip trading provision is inconsistent with current law and the Cantwell amendment, which prohibited market manipulation in electricity markets, and which recently passed the Senate.

For example, section 4c of the Commodity Exchange Act states it is ‘‘unlawful for any person to enter into . . . a transaction . . . involving the purchase or sale of any commodity for future delivery’’ if the transaction ‘‘is, of the character of, or is commonly known to the trade as a ‘wash sale' or . . . is a fictitious sale.’’ There is no requirement that the violation be ‘‘willful.’’

Manipulation is difficult to prove even under current law. By raising the burden of proof, this provision will make it nearly impossible to prove illegal round trip trading or wash sales. Rather than weakening the laws preventing fraud and manipulation in energy markets, the Congress should be strengthening these prohibitions.

There are other provisions that would affect FERC's ability to ensure markets are transparent and fair.

The ‘‘Enron loophole’’ was attached during the conference on an omnibus appropriation bill in 2000, and was a factor underlying the massive manipulation of the energy markets in 2000 and 2001. The provisions in this bill, attached under hurried circumstances would widen the loophole and increase the chances of more manipulation and dysfunctional markets. This is the wrong response to the current crisis of confidence and integrity in our energy markets.

I am also disappointed that the conference report on this bill directs the Department of Energy, DOE, to ‘‘as expeditiously as practicable, acquire petroleum in amounts sufficient to fill the Strategic Petroleum Reserve to the [1 billion] barrel capacity,’’ but does not include any direction to DOE to fill the SPR in a manner that minimizes the cost to the taxpayer or maximizes the overall supply of oil in the United States. That second direction is critical—otherwise the filling of the SPR could lead to continuing high gas prices.

The Levin-Collins amendment, which was adopted unanimously by the Senate last month, directed DOE to develop procedures to fill the SPR in a manner that minimizes the cost to the taxpayer and maximizes the overall supply of oil in the United States. The Levin-Collins amendment expressed the sense of the Senate that the DOE's current procedures for filling the SPR are too costly for the taxpayers and have not improved our overall energy security.

DOE's internal documents state that filling the SPR without regard to the price and supply of oil in the global markets exacerbates price problems in those markets. By increasing demand for oil at a time when oil is in scarce supply, the SPR program pushes the price of oil up even further. Moreover, when near-term prices are higher than future prices, oil companies will meet the additional demand for crude oil by

removing oil from their own inventories rather than purchasing high-priced oil on the spot market. Thus, under these price conditions, which have generally prevailed over the past year and a half, adding oil to the SPR will lead to a corresponding decrease in private sector inventories. Since market prices are so closely tied to inventory levels, filling the SPR under these market conditions both depletes private sector inventories and pushes up prices for America's consumers.

Furthermore, according to the Department of Energy's own analyses, taking costs into consideration—as the DOE did prior to early 2002—can save taxpayers several hundreds of millions of dollars over the span of a few years. Acquiring more oil when prices are low will increase revenues to the Treasury from the sale of high-priced royalty oil that is not needed to fill the SPR. Secondly, allowing oil companies to defer deliveries to the SPR when prices are high in return for the delivery of additional barrels of oil at a later date—as DOE did prior to early 2002—enables the DOE to increase the amount of oil in the SPR without any additional costs.

In summary, the unqualified direction in the bill to DOE to fill the Strategic Petroleum Reserve to 1 billion barrels is likely to increase the cost of crude oil and crude oil products, such as gasoline, home heating oil, and diesel and jet fuel, to American consumers and businesses, as well as to the taxpayer, with uncertain benefits to our national security.

Also, while I support the provision in this legislation that would increase the use of ethanol to 5 billion gallons by 2012 and 3.1 billion gallons by 2005, it needs to be reasonable in a way that ensures the continued viability of the Highway Trust Fund.

Twice the Senate passed legislation that included a Volumetric Ethanol Excise Tax Credit, VTEEC, that would address the shortfall in revenue to the Highway Trust Fund that was caused by the ethanol tax exemption. In addition to taxing ethanol, the VTEEC, as passed by the Senate, would maintain the credit for ethanol production by paying for it from the general treasury, create a biodiesel credit and ensure that all taxes charged on ethanol go to the highway trust fund.

Unfortunately, the arrangement worked out by House and Senate Republicans gives ethanol blenders the new option to receive a 5.2 cent tax credit after paying the federal gas tax or they could continue receiving the current ethanol exemption of 5.2 cents. Since most blenders likely would continue to choose to receive the exemption up front rather than wait for a tax credit, the highway trust fund would still lose billions of dollars per year. Efforts by Senator BAUCUS to address this problem were approved by the Senate conferees, but was refused by the House. While I support increased ethanol production, it is imperative that increased ethanol production does not diminish the Highway Trust Fund.

Additionally, I am troubled that this legislation exempts producers of MTBE from liability. MTBE, an oxygenate that can and should be replaced by ethanol, is a potentially harmful product and its producers should not be exempt from liability. In Michigan, it has been estimated that MTBE has contaminated ground water around over 700 leaking underground storage tank sites. Further, as many as 22 water supply wells have been deemed unusable due to MTBE contamination. Because of this MTBE liability waiver, the State of Michigan may have to pay over $200 million to clean up those sites. Governor Granholm has strongly protested that we need to hold manufacturers accountable for the damage that MTBE does to public health and the environment, not guard them from liability which then allows them to pass the cleanup costs on to the States.

As I stated earlier, this bill has a number of provisions that I support and that I worked to have included in it. These include tax credits for advanced technology vehicles and joint research and development between the Government and the private sector to promote the expanded use of advanced vehicle technologies. But in the end, the good provisions must be weighed against the large number of bad provisions, and there are too many objectionable provisions for me to support this bill.

The Senate has worked to create a national energy policy for years. In just a few weeks, without bipartisan negotiation, this piece of legislation was created. We should work to complete a long-term, comprehensive energy plan that provides consumers with affordable and reliable energy, increases domestic energy supplies in a responsible manner, invests in energy efficiency and renewable energy sources and protects the environment and public health.

Mr. LIEBERMAN. Mr. President, I rise in the strong opposition to the bill before us, the conference Energy Policy Act of 2003. The bill before us is a pork-laden, budget-busting, fossil-fuel promoting vestige of the past, developed largely in secret by a handful of GOP Members. This legislation is a mere shadow of what it was and could be.

This could have been a proud moment for this Congress and for the Nation. Rather than caving to special interests and wallowing in pork barrel politics, we could have risen to the challenge and met our obligation to help prevent such crises as the Enron energy scandal and the blackout of 2003 from reoccurring. We could have acted to promote our economic prosperity, strengthen our national security, and protect the health and welfare of all Americans through bold, balanced legislation. We could have finally tackled global warming—the greatest environmental challenge of our time. We could have considered a real jobs bill, based on opening new markets and spurring new technologies. We could have set American energy policy on a better, brigther course.

Instead, we are stuck with this—a sewer of an Energy bill. The bill that has emerged from the closed door, Republican-only conference, and which we consider today is a legislative disaster. Sadly, it bears little resemblance to the balanced, bipartisan legislation that passed the Senate last July. The Senate bill, which originally passed this body in the 107th Congress, strengthened our national security, safeguarded consumers, and protected the environment, and was developed in open, meaningful, bipartisan fashion.

Before I move to the substance of the conference bill, I must offer a few harsh words with the process of GOP majority employed to produce it. In all my time in the Senate, I have never witnesses a more unfair and unstatesmanlike spectacle. With the exception of the tax provisions of this bill, in which Senator GRASSLEY seized every possibility to involve his Democratic colleagues, this is a thoroughly partisan product.

Here is the way the conference went: One conference meeting at which Democratic conferences offered opening statements only: complete shut out of Democratic conferences from negotiations over the substance of the bill: a few staff-level meetings for show after policy decisions had already been made and reflected in GOP-only developed text; special-interest lobbyists exerting extraordinary influence over the bill; release of a more than 1,000-page document only 48 hours before the scheduled meeting to adopt it—40 percent or more of which was new text. It is inconceivable to me that legislation of this import was developed this way. Quite simply, this process afforded no real opportunity for Democrats to influence the final product and no opportunity for the American public—whom this body is charged to represent—to view and comment on the final product. I second the comments of many of my Democratic colleagues that we will never be subject to a conference like this again.

In dissecting the pork-laden bill that emerged from the smoke-filled back rooms of the conference committee, let me first highlight one provision of extraordinary importance to the State of Connecticut. Connecticut has worked for decades to ensure that the construction and operation of natural gas pipelines and electric cables across our national treasure, the Long Island Sound, fully comply with State and Federal environmental and energy

laws. The bill before us contains a provision to permanently activate the Cross Sound Cable—a provision that did not appear in either the House or the Senate bill and as to which no one received advance notice. The Cross Sound Cable had been temporarily activated by Federal order in emergency response to the summer's massive blackout, but had been prevented from permanent activation by the State of Connecticut until it complies with State laws. So much for States rights and environmental and consumer protection. Shameful.

That is only the tip of the iceberg. Let me review the most egregious offenses buried in this bill.

First, subsidies and giveaways to industries and special interests. My good friend, Senator MCCAIN, has labeled this bill the porkiest of the porkbarrel, budget-busting bills. CBO estimates that the bill will cost more than $30 billion in industry tax incentives and direct spending. Taxpayers for Common Sense has estimated that it will cost in excess of $90 billion. This stunning price tag includes millions of dollars in direct incentive payments to mature energy industries, including payments to undertake equipment upgrades they would have to do anyway. The bill authorizes $1.1 billion for a nuclear reactor in Idaho to demonstrate uneconomic hydrogen production technologies. It has loan guarantees to build coal plants in several States, provided as last-minute sweeteners to secure Senatorial support for the bill. The bill contains interesting new ''green bonds'' for five projects throughout the country, by which projects would get financial benefits for ''green'' construction of primarily shopping centers. One project, in Shreveport, LA includes a new Hooters restaurant. Is this groundbreaking energy legislation? How can we approve legislation gushing money this way given the mushrooming budget deficit? Our neediest citizens will surely pay the cost.

Second, inadequate consumer protections. The bill does not adequately protect consumers against utility mergers and electricity market manipulation. For example, broad, effective prohibitions against price gouging schemes used by Enron and other energy trading firms, which passed the Senate 57 to 40 earlier this month, are excluded from the bill. The legislation repeals the requirements of the Public Utility Holding Company Act, PUHCA, without putting adequate consumer protections in place.

Third, electric transmission line and natural gas pipeline and construction. The bill allows the Secretary of Energy to determine the siting of transmission lines through Federal lands, including national forests and national monuments, except those in the National Park System, over the objection of the responsible Federal agency. The bill overrides State energy and environmental legal authorities to give the Federal Government power to site and construct transmission lines and natural gas pipelines.

Fourth, MTBE liability protection. In a provision added in conference to benefit companies primarily based in Louisiana and Texas, the bill provides retroactive and prospective liability protection for producers of methyl tertiary-butyl ether, MTBE, cutting off the rights of injured Americans across the country and imposing a huge financial burden for cleanup on our States and local communities. Simply unbelievable.

Fifth, environmental protection rollbacks and giveaways. The icing on the cake for this bad bill is the significant environmental protections it strips away for the benefit of energy producers. The bill also contains new provisions to make our air much dirtier. The conference bill would exempt metropolitan areas from meeting the Clean Air Act's ozone-smog standard. This issue was never considered by the Senate or the House and was inserted into the conference report during ''conference committee'' meetings. A new report from Clean the Air reveals that the ill-conceived Energy bill would have severe public health consequences around the country, especially for children. Delays in implementing the Clean Air Act could lead to nearly 5000 hospitalizations due to respiratory illness and more than 380,000 asthma attacks and 570,000 missed school days each year. The bill exempts all construction activities at oil and gas drilling sites from coverage under the Clean Water Act and removes hydraulic fracturing, an underground oil and gas recovery method, from coverage under the Safe Drinking Water Act. The conference bill expedites energy exploration and development at the expense of current National Environmental Policy Act, NEPA, requirements. Environmental review is waived for all types of energy development projects and facilities on Indian land.

I want to be fair. The conference bill does contain provisions that make limited progress—baby steps only—toward achieving energy goals. And the bill recognizes the political reality that the Senate has spoken forcefully to the fact that it will not permit the Bush administration to drill in another of our Nation's treasures, the Arctic National Wildlife Refuge. You can search the bill to find requirements for renewable fuels, (increase in sales of renewable fuels, including ethanol, from 2 billion gallons to 5 billion gallons by 2012); Federal energy efficiency standards for energy use and appliances; increase in Federal Government purchase of renewable energy, 7.5 percent of electricity from sources such as wind, solar, geothermal, and biomass; funding for energy research and development, including related to hydrogen fuels; and limited tax incentives for alternative vehicles, renewable energy sources, and energy efficiency. That is why some of my colleagues claim this bill articulates an energy program for the 21st century. Hogwash. These weak provisions do not even register on the scale against the predominant special interest, fossilized provisions of the conference bill.

What is this bill missing? Frankly, the list is staggering. I have time to highlight five key areas:

First, renewable portfolio standards. Our Senate-passed bill required utilities to generate 10 percent of their electricity from renewable energy facilities by 2020. Such a provision would spur new technology development and work to wean the country off foreign oil dependence and the drilling-first-and-only mindset that has predominated American energy policy for generations. In addition, the majority touts this bill as a great jobs creation bill; according to studies of the Tellus Institute and Union for Concerned Scientists, the renewable industry would create new, sophisticated job opportunities for hundreds of thousands of Americans.

Second, climate change. Greenhouse gas emissions from the burning of fossil fuels threaten not only our environment, but also our economy and our public health. Should we continue unabated our current rate of polluting, we threaten to disrupt the delicate ecological balance on which our livelihoods and lives depend. This bill is so short-sighted that it contains no provisions of any kind to address climate change.

Third, fuel economy improvements. No credible Energy bill can lack means to improve fuel economy for automobiles and trucks. This is key to reducing our dependence on foreign oil because the transportation sector is the single largest user of petroleum.

Fourth, oil savings provision and specific hydrogen standards. Amendments agreed to by the Senate last summer contained provisions with specific deadlines—real teeth—to reduce our dependence on foreign oil and to move us to the hydrogen fuel program of the future. Neither appears in this bill.

Fifth, Alaska natural gas pipeline. I strongly support the construction of this pipeline, which will bring millions of gallons of natural gas to the lower 48 States and create almost half of the new jobs, 400,000, touted under this bill. The conference bill, however, fails to provide the necessary incentives to enable construction of the Alaska natural gas pipeline, which would prevent the U.S. from becoming more dependent on natural gas imports.

This abominable bill must not be made law. Any Senator serious about

advancing America's energy and environmental policies and curtailing Government waste is compelled to vote against the Energy bill before us. We can and must do better. Americans deserve a real Energy bill, one that we can be proud of. This is not it. Let us reject this legislation and return to the drawing board, recommitting ourselves to producing a balanced, innovative, and responsible energy policy for the 21st century.

Ms. SNOWE. Mr. President, as I rise to speak to the issue of the conference report to H.R. 6, the Energy Policy Act of 2003, I want to first recognize the efforts of Energy Committee Chairman DOMENICI and Finance Committee Chairman GRASSLEY for the extraordinary time and effort they have devoted to developing a national energy policy for a 21st century America. Theirs was an arduous task in addressing not only political differences with the bill but also regional ones as well. So I thank them for their work.

This has certainly been a long road. Congress has been debating and voting on a number of energy issues over the past two Congresses, one when under Democratic control and one under Republican leadership. There have been a myriad of issues to consider as we have attempted to shape appropriate policy, and to help increase the public's awareness of the benefits to our health and national security in shifting from foreign fossil fuel imports toward renewable, efficient, and alternative energy sources and manufacturing technologies. Yes, it has been a long, hard road but this conference report simply does not put us on the right road to accomplish these goals for the good of the Nation. We have yet to find that new direction, but we must keep seeking it.

As Theodore Roosevelt once said, ''Conservation is a great moral issue, for it involves the patriotic duty of ensuring the safety and continuance of the nation.'' The conferees had the opportunity to raise the bar for the Nation's future domestic energy systems through new energy policies, through the creation of tax incentives for available and developing technologies, and most of all for incentivizing the entrepreneurial spirit of the American people. But, this goal, in my opinion, has not been reached in the Energy conference report before us.

Since we started to develop new strategies for the Nation's energy policy for the 21st century, we have had to undergo a fundamental reassessment of our energy infrastructure in the aftermath of the horrific events of 9/11 and the ongoing turmoil in the Middle East. We realize now more than ever that we must reduce our vulnerabilities to terrorism with more secure, localized, and reliably distributed energy delivery systems rather than relying solely on our current centralized infrastructure of pipelines, refineries, powerplants, patchwork of electricity grids, and oil tankers berthed in our harbors. The United States simply cannot afford to continue to spend at least $57 billion a year buying oil from the Middle East and continue its upward trend of fossil fuel usage.

The entire world—particularly the developing and fast-growing nations of China, India, and Brazil—desperately needs access to clean, low-cost, energy-efficient and renewable resources. The key is to make the best alternate energy systems that are competitive with today's nonrenewable sources of energy so that they can be developed and used both at home and sold abroad.

Since 2000, I have been proud to have been a member of the Finance Committee where I worked to develop responsible tax incentives to increase the efficiencies of the electricity we produce, the vehicles we drive, the appliances we use, the homes in which we live, and, in turn, enhance the competitiveness of our domestic manufacturers. Our task is to incentivize, through the Tax Code, our U.S. manufacturers to develop and employ the most promising and cost-effective technologies to the U.S. and global marketplace with all due speed.

Unfortunately, the conference report increases oil and gas tax credits to $11.9 billion while conservation and energy efficiency incentives were decreased to $1.5 billion. An equitable balance has not been achieved nor is it a step forward.

We need to expand the mix of the country's energy sources with the realization that power from nuclear and fossil fuels will continue to be a large part of the energy basket in the next decades—but, at the same time, we must encourage safer, cleaner and decentralized sources as well. The conference report before us simply does not progress far enough in this direction, instead maintaining more of a ''business as usual'' approach to the Nation's energy future.

One of my greatest disappointments is the absence of provisions from the Feinstein-Snowe SUV loophole legislation that would have phased-in changes in CAFÉ standards requirements in four, attainable stages that would have brought the standards for SUVs in line with passenger cars within the next 8 years. Closing this loophole alone would save our nation approximately 1 million barrels of oil, or fully 10 percent of the oil our vehicles consume on a daily basis.

Right now, all our vehicles combined consume 40 percent of our oil, while coughing up 20 percent of U.S. carbon dioxide emissions—the major greenhouse gas linked to global climate change. To put this in perspective, the amount of carbon dioxide emissions just from U.S. vehicles alone is the equivalent of the fourth highest carbon dioxide emitting country in the world. Given these stunning numbers, I cannot fathom why we continue to allow SUVs to spew three times more pollution into the air than our passenger cars.

Like Senator FEINSTEIN and I, other nations have realized the value of these changes. Even China—a developing country—has great concerns about its increased reliance on foreign oil, so much so that Chinese officials say they have to save energy—and how are they prepared to accomplish this? By implementing more stringent CAFÉ standards for new vehicles—including those manufactured in the United States—in their country than we currently have in the United States or in this conference report. How ironic that China is more progressive than the United States in their attempts to save energy and decrease dependency in oil imports at the same time that the United States overall fuel economy has actually fallen to its lowest level since 1980.

According to a November 18 New York Times article, vehicles made by Western automakers that do not meet the standards the Chinese Government has drafted may have to be modified to get better gas mileage before the first phase of the new rules becomes effective in July of 2005. I ask unanimous consent to print the November 18 article in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

CHINA SET TO ACT ON FUEL ECONOMY; TOUGHER STANDARDS THAN IN U.S.

(By Keith Bradsher)

GUANGZHOU, CHINA, Nov. 17—The Chinese government is preparing to impose minimum fuel economy standards on new cars for the first time, and the rules will be significantly more stringent than those in the United States, according to Chinese experts involved in drafting them.

The new standards are intended both to save energy and to force automakers to introduce the latest hybrid engines and other technology in China, in hopes of easing the nation's swiftly rising dependence on oil imports from volatile countries in the Middle East.

They are the latest and most ambitious in a series of steps to regulate China's rapidly growing auto industry, after moves earlier this year to require that air bags be provided for both front-seat occupants in most new vehicles and that new family vehicles sold in major cities meet air pollution standards nearly as strict as those in Western Europe and the United States.

Some popular vehicles now built in China by Western automakers, including the Chevrolet Blazer, do not measure up to the standards the government has drafted, and may have to be modified to get better gas mileage before the first phase of the new rules becomes effective in July 2005.

The Chinese initiative comes at a time when Congress is close to completing work on a major energy bill that would make no significant changes in America's fuel economy rules for vehicles. The Chinese standards, in general, call for new cars, vans and

sport utility vehicles to get as much as two miles a gallon of fuel more in 2005 than the average required in the United States, and about five miles more in 2008.

This country's economy is booming, and a growing upper class in big cities like this one is rapidly buying all the accouterments of a prosperous Western life, including cars. As China burns more fossil fuels, both in factories and in a rapidly growing fleet of motor vehicles, its contribution to global warming is also rising faster than any other country's.

But Zhang Jianwei, the vice president and top technical official of the Chinese agency that writes vehicle standards, said in a telephone interview on Monday that energy security was the paramount concern in drafting the new automotive fuel economy rules, and that global warming has received little attention.

''China has become an important importer of oil so it has to have regulations to save energy,'' said Mr. Zhang, who is also deputy secretary of the 39-member interagency committee that approved the rules at a meeting this month.

China was a net oil exporter until a decade ago, but its output has not kept up with soaring demand. It now depends on imports of oil for one-third of its needs, mainly from Saudi Arabia and Angola. Before the war, Iraq was also an important supplier. By comparison, the United States now imports about 55 percent of the oil it uses.

The International Energy Agency predicts that by 2030, the volume of China's oil imports will equal American imports now. Chinese strategists have expressed growing worry about depending on a lifeline of oil tankers stretching across the Indian Ocean, through the Strait of Malacca, a waterway plagued by piracy, and across the South China Sea, protected mainly by the United States Navy.

Various Chinese government agencies still have three months to review the legal language in the fuel economy rules, giving automakers some time to lobby against them; as yet, there has been no mention of the approval of the new rules in the government-controlled Chinese media.

But Mr. Zhang said that the rules in draft form were the product of a very strong consensus among government agencies and that ''the technical content won't be changed.''

Two executives at Volkswagen, the largest foreign automaker in China, said that representatives of their company and of domestic Chinese automakers attended what they described as the final interagency meeting to approve the rules. Under pressure from the government, these auto industry representatives agreed to the new rules despite misgivings, the executives said. ''They had no choice but to agree,'' one of the Volkswagen executives added.

The executive said that Volkswagen's vehicles would meet the first phase of the standards in 2005, while declining to comment on compliance with the second, more rigorous phase, which is to take effect in July 2008.

The new standards are based on a vehicle's weight—lighter vehicles must go the farthest on a gallon—and on the type of transmission, with manual-shift cars required to go farther than those with less efficient automatic transmissions.

In a major departure from American practice, all new sport utility vehicles and minivans in China would be required to meet the same standards as automatic-shift cars of the same weight. In the United States, standards for sport utilities and minivans are much lower than for cars.

The Chinese rules do not cover pickups or commercial trucks. According to General Motors market research, there is little demand for pickup trucks in China except from businesses, because the affluent urban consumer who can afford a new vehicle regards pickup trucks as unsophisticated and too reminiscent of the horse-drawn carts still used in some rural areas.

Typically, heavy vehicles are much harder on fuel than light ones, but the new Chinese standards permit the heavy vehicles to get only slightly worse gas mileage. As a result, they provide an incentive for manufacturers to offer smaller, lighter vehicles, which will be easier to design.

The new standards would require all small cars sold in China to achieve slightly better gas mileage than the average new small car sold in the United States now gets, according to calculations by An Feng, a consultant who advised the government on the rules. But officials in Beijing would require much better minimum gas mileage for minivans and, especially, S.U.V.'s than the average vehicle of either type now gets in the United States.

American regulations call for each automaker to produce a fleet of passenger cars with an average fuel economy of 27.5 miles a gallon under a combination of city and highway driving with no traffic; window-sticker values for gas mileage, which include the effects of traffic, are about 15 percent lower. Light trucks, including vans, S.U.V.'s and pickups, are allowed an average of 20.7 miles a gallon without traffic.

But the Bush administration has raised the comparable American standard to 22.2 miles a gallon for the 2007 model year and is now completing a review of whether to raise limits further for 2008. The administration is also considering adopting different standards for different weight classes of light trucks.

Over all, average fuel economy in the United States has been eroding since the late 1980's as automakers shifted production from cars to light trucks. It fell in the 2002 model year to the lowest level since 1980. Automakers in Europe have accepted European Union demands to increase fuel economy under different rules that could prove at least as stringent as China's minimums.

The Chinese standards would require the greatest increases for full-size S.U.V.'s like the Ford Expedition, which would have to go as much as 29 percent farther on a gallon of fuel in 2008 than they do now in the United States, Mr. An calculated. Sport utility sales in China have more than doubled so far this year, but are still a much smaller part of the overall market than they are in the United States.

Because the American standards are fleet averages while the Chinese standards are minimums for each vehicle, the effect of the Chinese rules could be considerably more stringent. A manufacturer can sell vehicles in the United States that are far below average in fuel efficiency if it has others in its product line that offset it by being above average. But under the Chinese rules, the fuel-inefficient models—especially new ones introduced after the standards take effect—would be subject to fines no matter how well their siblings do, Mr. Zhang said, and the maker would not be allowed to expand production of the gas-guzzling models. In Garrison Keillor's phrase, China plans to require that every vehicle be above average.

Mr. An said that at the final meetings on the new rules, the only outspoken objections had come from a representative of the Beijing Automotive Industry Holding Company, which makes Jeeps in a joint venture with DaimlerChrysler.

According to people who have seen the new standards, many Jeep models sold in China do not now comply with them; neither do the Chevrolet Blazer sport utilities built by a General Motors joint venture in Shenyang. Some of Volkswagen's car models also fall slightly short, these people said. By contrast, Honda's cars, built at a sprawling factory complex here in Guangzhou, the commercial hub of southern China, would comply easily because they use advanced engine technology, these people said.

Trevor Hale, a DaimlerChrysler spokesman, declined to comment in detail. ''DaimlerChrysler complies with local regulations where it does business,'' Mr. Hale said in an e-mail response to an inquiry. ''It continues working to improve fuel economy in the vehicles it develops, builds and sells around the world.''

Bernd Leissner, the president of Volkswagen Asia Pacific, said that his company's cars would comply because ''it's just a question of how to adapt the engine—it's something that could be done quickly.''

The fastest way to improve fuel efficiency is to switch from gasoline to diesel engines, as Volkswagen is starting to do in China. The latest diesel engines are much cleaner then those of a decade ago, but are still more polluting than gasoline engines of similar power.

A spokeswoman for General Motors, which is beginning to introduce Cadillac luxury cars in China, said she did not have enough information about the newly drafted rules to comment on them, but that her company's vehicles were comparable in fuel economy to those of rival manufacturers in the same market segments. Executives of G.M. were preparing for an event in Beijing on Tuesday and Wednesday when the company plans to showcase examples of its work on gasoline-saving fuel-cell and hybrid engines for cars.

In the United States, G.M. has argued that tighter fuel economy rules are unnecessary because technological improvements will someday improve efficiency anyway. G.M. and other automakers have also contended in the United States that higher gasoline taxes would represent a better policy than higher gas mileage standards, because it would give drivers an economic incentive to choose more efficient vehicles and to drive fewer miles.

China is still considering its policy on fuel taxes, but has not acted so far, because higher fuel taxes would impose higher costs on many sections of society, Mr. Zhang said.

Another company that could run into trouble over the Chinese mileage standards is Toyota, which on Nov. 6 began selling a locally produced version of its full-sized Land Cruiser sport utility vehicle in China. A spokesman said on Monday that Toyota had not yet heard about the new Chinese fuel economy regulations, which has been prepared with a level of secrecy typical of many Chinese regulatory actions.

Japan is also phasing in new fuel efficiency standards based on vehicle weight that allow heavier vehicles only slightly worse gas mileage than lighter ones. American automakers have complained that the Japanese rules discriminate against them because Japanese automakers tend to produce slightly lighter cars anyway.

China has more than 100 automakers, as Detroit did a century ago, but the bulk of its output comes from a small number of joint ventures with multinational companies. Total production has more than doubled in

the last three years, to about 3.8 million cars and light trucks in 2002, nearly as many as Germany. The United States builds about 12 million a year, Japan about 10 million.

The cars that Chinese automakers produce on their own tend to very small and lightweight, but the engines are built on older technology, and may not have an easy time complying with the new fuel economy standards.

The government has been encouraging the industry to consolidate, and the new rules may hasten that process by forcing investment in engine designs that small companies may not be able to afford on their own.

Ms. SNOWE. Mr. President, just consider for a moment how much the world has changed technologically over the past 25 years. We have seen the advent of the home computer and the information age. Computers are now running our automobiles, and global positioning system devices are guiding drivers to their destinations. Are we to believe that technology couldn't have also helped those drivers burn less fuel in getting there? Are we going to say that, while even a developing country like China is transforming, America doesn't have the wherewithal to make SUVs that get better fuel economy?

We should keep in mind that China is expected to pass the United States in the next 10 years as the largest emitter of manmade carbon dioxide, the major greenhouse gas that the vast majority of international scientists believe is causing global climate change. And, it is interesting to note that there is not one mention of climate change in the entire conference report. Not one reference in a report of over 1,000 pages that is supposed to shape the Nation's energy policy for the 21st century.

Last year's Energy bill—which I remind my colleagues is the bill the Senate actually passed this year—had at least three different titles addressing climate change, including research on abrupt climate change. Also, the administration's National Energy Policy of May, 2001, stated, ''Energy-related activities are the primary sources of U.S. man-made greenhouse gas emissions representing about 85 percent of the U.S. man-made total carbon-equivalent emissions in 1998.''

Other grave concerns I have involve provisions in the report that will threaten coastal and marine environments and lead to further degradation of our oceans. As Chair of the Subcommittee on Oceans, Fisheries, and Coast Guard, I am troubled by the ramifications of these provisions, as I strongly believe that any changes to U.S. marine policy should only be developed with contributions and oversight of the subcommittee.

For example, under section 321 of title III, the bill grants sole authority for all energy-related projects in the Outer Continental Shelf to the Secretary of the Interior. Currently, protecting these ecosystems is the responsibility of the Department of Commerce. This section does not suggest that the Department of the Interior should even consult with Commerce.

Two other sections in this bill would limit the ability of the Secretary of Commerce and coastal States to guide, plan, and regulate activities that affect coastal and ocean resources and that occur in offshore areas— a right they currently have under the Coastal Zone Management Act.

Further, section 325 would shorten the timeframes for submitting information and appealing the permitting decisions for offshore activities that are inconsistent with States' coastal management plans—regardless of the quality or quantity of information received. Another section, section 330 would limit all appeals or reviews of offshore energy action to the Federal Energy Regulatory Commission record. I believe that the Secretary of Commerce should have the discretion to develop a record that is relevant to issues on appeal.

These provisions are inconsistent with the administration's proposed rule amending the appeals processes, and they conflict with the goals and purposes of the Coastal Zone Management Act reauthorization bill, S. 241, I introduced last January. Moreover, the U.S. Commission on Ocean Policy, established and appointed by President Bush pursuant to the Oceans Act of 2000, is poised to present its recommendations to Congress on offshore energy and other ocean-related issues.

All of these provisions have serious consequences for marine environmental health, and they should not be hastily adopted without the thoughtful input of the Commerce Committee, the administration, and the U.S. Commission on Ocean Policy.

Moving from our oceans to our air, there are other disturbing provisions in the conference report that have been raised by many of my colleagues. For instance, the report contains a provision delaying clean air protections for millions of Americans, leading to thousands of additional asthma attacks—and that is of particular concern to me as my State of Maine leads the Nation in per capita cases of asthma.

Also, I am disappointed that the conference report contains no renewable portfolio standard, or RPS, to raise the amount of renewable energy as a source of electricity nationwide by increasing the percentage of electricity produced from wind, solar, geothermal, incremental hydropower, and clean biomass that produces electricity from burning forest waste.

The conference report does not ban MTBE that is polluting our ground water for another decade rather than the 4 years in the Senate bill, while at the same time virtually dismissing pending lawsuits states already have filed against MTBE producers for cleanup. State officials in Maine do not approve of extending the ban on MTBE or the fact that the heavy financial burden of cleanup will shift to the communities and water users because MTBE producers receive a safe harbor from lawsuits in the report.

For hydropower, the conference report provisions give the last say for hydropower permits to industry and does not give equal weight to the agencies/stakeholders process that has worked so well in Maine for reaching consensus on hydropower decisions, especially for dam removals.

On electricity reliability, the report holds up FERC's ability to go forward with its standard market design for regional transmission organizations—or RTOs except on a voluntary basis, until 2007. A voluntary only program, however, does not spur the capital needed right now for increased electricity transmission in New England, for instance. I hope my colleagues are aware that the New England RTO kept the great majority of New England's electricity grid working and the lights on during the blackout of August of 2003. Actually, the only component of the electricity title that effectively addresses the basic causes of the 2003 blackout is the establishment of electric reliability organizations that would enforce reliability standards through improved communication standards and would be overseen by FERC.

Regarding consumer protections, the conference report repeals PUHCA, the Public Utility Holding Company Act, that currently protects consumers from higher electricity prices. However, the conference report contains little language that ensures that consumers are shielded from higher bills resulting from, for instance, large electricity and gas convergence mergers. Public Power, co-ops and municipalities, who represent 25 percent of the industry, are especially vulnerable to the lack of adequate consumer protections in the report.

Also, the conferees stripped the tradable tax credits for Public Power that I and others had included in the Senate Finance Committee amendment. These tradable tax credits would have allowed Public Power to invest in renewable energy and assist them in decreasing their CO_2 emissions by moving away from burning as much coal as they currently do.

On fiscal policy, I do not believe the conference report shows fiscal restraint or uses taxpayer dollars wisely. The fiscal year 2004 budget resolution calls for approximately $15.5 billion to be spent on tax incentives, and the Senate Finance Committee stayed within this budget blueprint. The conference report contains $24 billion in tax incentives plus another $5.4 billion in spending and with no offsets.

One of my concerns is that important tax incentives that appeared in the Senate and House Energy bills over the

past 2 years have not been included in the conference. Where they have been included, they are so pared back that I question whether the various industries will take advantage of the smaller energy efficiency tax incentives provided, particularly for the construction, lighting, and heating, ventilation and air-conditioning, or HVAC, for commercial buildings.

Gone are provisions for tax incentives to promote the use of more efficient air-conditioners, even though 70 percent of the energy demand in peak periods is for air-conditioners, and that was a significant factor in last August's major blackout in the Northeast. The lack of these provisions that could be instrumental in the short term for energy savings simply does not move the Nation's energy policy forward into this century.

The knowledge of alternative and renewable sources has been known for over a century as the simple principle of fuel cells —combining hydrogen and oxygen to produce electricity and pure water—and the photovoltaic principle behind the solar power of the sun, were both discussed in 1839—164 years ago. We should ask ourselves why, instead of our daily diet of approximately 19 million barrels of oil a day, we are not also choosing to bolster even more the development of these sources of renewable energy for our consumption and to grow our economy.

Imagine automobiles driven by fuel cells—our U.S. auto manufacturers and the Federal Government are beginning to invest in fuel cells. Imagine businesses and homes having their own free-standing and reliable fuel cells—one of the cleanest means of generating electricity—that Senator LIEBERMAN and I have promoted. Fuel cells can provide electricity instead of our current vast, centralized fossil fuel systems that make our air dirtier and less healthy, causing us to spend millions more on health care each year. We need to be more serious about promoting these technologies.

I do not believe that the Energy conference report before us sets the Nation on the right course for the future and well being of the Nation, and I will, regretfully, vote against the conference report with the hope that Congress can continue working toward a more meaningful, secure, and balanced energy-efficient future for the Nation.

Mr. DORGAN. Mr. President, I rise to support the Energy conference report. While I have some serious concerns about the way this bill was created, I believe our country will be better off with this bill than without it. On balance, it will advance our interests.

This bill takes important, major steps toward developing renewable and limitless sources of energy such as ethanol, wind, and biodiesel. It puts us on the road to the development of a new hydrogen fuel cell economy, which is essential if we are to lessen our dependence on foreign oil. And it contains important conservation measures by improving efficient standards on appliances and other devices we use in our daily lives. If we are serious about security our energy future, I believe we must implement these measures without delay.

Additionally, this bill enhances our ability to develop more traditional sources of energy, while protecting our environment. It contains strong provisions to promote clean coal technology so that we can more effectively use our coal resources without degrading our environment. The bill also funds a pipeline to access over 30 million cubic feet of natural gas in Alaska and bring it to the lower 48 States. And it provides additional incentives for the discovery and recovery of oil and natural gas.

There is much in this bill that is positive, and I intend to vote for it. Having said that, I know this bill is far from perfect. But in some important matters, it is a step in the right direction.

The bill omits a renewable portfolio standard, RPS, that would have required utilities to produce 10 percent of their electricity from renewable sources. That is a serious omission. A majority of the Senate conferees voted to add this amendment to the conference measure and it passed. Unfortunately, the House stripped this amendment out without even debating it. I want to make it clear that I have not given up on this issue. I want to inform those who blocked this provision—get ready. I am going to keep fighting until we get an RPS standards enacted into law.

Unfortunately, this bill also provides liability protection for the producers of the fuel additive, MTBE. This is a major mistake. Insulating the big oil companies, while making the mom and pop gas stations of America liable for the costs of cleaning up these contaminated sites is simply wrong and bad policy.

I also want to address concerns that the bill waives a number of other important environmental provisions. For years, the administration has complained that the process of siting and permitting new energy projects is cumbersome and in the name of efficiency needs to be modified. This measure does that. But let me caution the administration for a moment. While Congress has provided discretion to the appropriate agencies in an effort to streamline the process, these agencies will be held accountable if they violate the spirit and trust we have given them. I expect these agencies to make informed decisions based on public input, sound science, and common sense.

Additionally, as a member and former chairman of the Commerce Committee's Consumer Affairs Subcommittee, let me address the issue of consumer protection. This bill repeals the Public Utility Holding Company Act and does not, in my opinion, go far enough to protect consumers from price gouging. Congress will be watching very closely to ensure that the agencies responsible for preventing market consolidation and market manipulation are doing their job. I believe we must keep pushing to get better protections for consumers. The experience on the west coast in recent years is a painful reminder that corporate power, if left unchecked, can cause serious injury to our consumers.

These deficiencies in the Energy bill could have been avoided had the majority party included Democratic conferees in a meaningful dialogue. Instead, Democrats were frozen out of the Energy conference. It was a flawed and arrogant process that prevented the American people from getting the best of what both political parties had to offer in the development of a national energy policy.

However, does the lack of involvement lessen the need for us to take steps to reduce our dependence on foreign oil? Does it lessen our need to promote energy efficiency and energy conservation? Does it lessen our need to promote the use of renewable energy and renewable fuels and vehicles? I believe the answer to all of these questions is no.

I will vote for the conference report, because on balance, this bill is a net plus for America. But my vote is in no way an endorsement of the manner in which the majority conducted this conference. In the future, before conferees are appointed, we will insist on a commitment that both political parties be represented in the deliberations of the conference.

These concerns aside, we must remember that energy is vital to our economy and our way of life. We count on a reliable energy supply for our everyday needs—heat, light, electricity, and all of the things that keep our society productive. Our economy would be devastated if we lost access to that supply, and were left without alternatives.

If, God forbid, terrorists would shut off the supply of oil to our country tomorrow, our economy would be flat on its back. We now import 55 percent of the oil we use, much of it from troubled parts of the world. That holds our economy hostage to this growing dependence on imported oil, in particular to the Middle East.

We need a new energy future that contains strong provisions dealing with conservation, aggressive approaches to renewable and limitless sources of energy, and embraces a new hydrogen fuel cell future which can allow us to break our dependence on foreign oil.

If a meaningful energy policy is analogous to a novel, then this bill is just

a first chapter. It is not as comprehensive, as wise, or as bold as the American people have a right to expect. Let me reiterate, this is not a be-all-end-all comprehensive Energy bill, no matter who tells you it is. I am prepared to continue to modify, amend, and reform this measure as many times and as long as it takes in order to ensure it does what it is supposed to do: create a fair and balanced national energy policy, one that works to advance our country's interest.

In closing, we are left with two choices: one, do nothing and pray we don't have further blackouts, further price spikes, or God forbid, a terrorist strike on our supply of foreign oil; or two, enact the proposed energy legislation and use it as the first brick in the foundation of crafting a comprehensive energy policy that will reduce our dependence on foreign oil and strengthen our energy diversity and security.

Given these two choices, I choose action over inaction and urge my colleagues to do the same.

The PRESIDING OFFICER. The Senator from Kansas is recognized.

Mr. ROBERTS. Mr. President, it is my understanding that the pending business before the Senate is the Intelligence conference report; is that correct?

The PRESIDING OFFICER. The Senator is correct.

Mr. ROBERTS. Mr. President, I rise today to urge Senate passage of the conference report for the Fiscal Year 2004 Intelligence Authorization Act.

On November 20 the conference report was approved by the House of Representatives. In order to quickly provide the Intelligence Community the authorities it requires in order to pay, house, and equip its personnel for our most sensitive and critical national security work, this legislation should be sent to the President without delay. The horrible terrorist attacks in Turkey underscore the urgency of our task.

This conference report is good legislation with important management and budget authorities. I will review just a few of them for you.

In the conference report, the Senate receded to a number of significant House provisions of interest. The most significant of these is a provision that will consolidate and organize existing intelligence-related functions in the Department of the Treasury by creating a new Office of Intelligence and Analysis. This administration-supported provision also creates a new Assistant Secretary position.

Senate managers also accepted a House provision intended to foster better information-sharing among Federal, State and local government officials. The bombings in Turkey illustrate that terrorists remain capable of striking at the heart of peaceful societies. We must be prepared to meet this continuing threat.

The conference report retains a Senate provision on Central Intelligence Agency Compensation Reform, with a House amendment to ensure that Congress will have an opportunity to assess the impact of such reform before it becomes permanent.

The conference report provides important new personal services contracting authority to the Director of the Federal Bureau of Investigations. This authority is intended to permit the Director to exercise greater hiring flexibility as was recommended post-9/11 in order to bring aboard certain categories of critically-needed skills more quickly.

Turning to the budget, when we began to review the President's fiscal year 2004 request I became very concerned at the recent growth in intelligence funding. I am still concerned.

There is clearly not enough money in future years to fully fund the intelligence programs in this year's budget request. That is the sad reality of this budget. The intelligence community is stretched thin, with far more requirements than available funds. Too many projects and activities have been started that cannot be accommodated in the top line. It does not matter what caused this problem. The problem exists. Unless the President directs a dramatic and sustained increase to the intelligence budget next year, we will have to make the hard choices ourselves.

A significant issue that must be addressed by the executive branch is the manner in which cost estimates for the procurement of major intelligence community systems are conducted. The magnitude and consistency in the cost growth on recent acquisitions indicates a systemic intelligence community bias to underestimate the cost of major systems.

This ''perceived affordability'' creates difficulties in the out years as the National Foreign Intelligence Program becomes burdened with content that is more costly than the budgeted funding. This underestimation of future costs has resulted in significant re-shuffling of NFIP funds to meet emerging shortfalls.

In an attempt to correct this problem, the conference report contains a provision which would mandate a fundamentally more sound approach to cost estimates for major systems. The business-as-usual approach must end.

There is another area I wish to mention in general terms concerning the analytical capabilities of the intelligence community. All recent after-action reports or studies of intelligence failures point to the inability of analysts to process ever-growing quantities of information. In an effort to correct this problem, the conferees agreed to move funds to programs at the Defense Intelligence Agency, the National Security Agency, and the CIA to improve the community's analytic capabilities.

My key objectives in formulating the conference report were to ensure our Nation's continuing effort to prosecute the war on terrorism and to ensure that the ''longer view'' about intelligence community requirements is taken into account. I believe that this conference report meets both objectives.

We met those objectives because we had bipartisan cooperation when and where it counted. I wish to thank the distinguished vice chairman, Senator ROCKEFELLER, as well as the distinguished House chairman, Representative GOSS, and his ranking member, Representative HARMAN, for their assistance in making the conference report possible. The staff of both intelligence Committees must also be commended for their diligent work on this important legislation.

There is no opposition on our side of the aisle. We have worked very hard with the House to come up with a good compromise. This bill is vitally needed on behalf of national security. A similar bill passed the Senate several weeks ago by unanimous consent.

I yield to my distinguished colleague, the vice chairman, Senator ROCKEFELLER.

The PRESIDING OFFICER. The Senator from West Virginia is recognized.

Mr. ROCKEFELLER. Mr. President, I agree with the chairman of the committee, the Senator from Kansas. There is no objection on this side. It has been cleared. There is no objection on our side. I presume the bill will be voted through.

Mr. President, I am pleased to join the distinguished chairman of the Select Committee on Intelligence in recommending passage of the conference report on H.R. 2417, the Intelligence Authorization Act for Fiscal Year 2004.

The bill authorizes appropriations for the Central Intelligence Agency, the Defense Intelligence Agency, the National Security Agency, and the intelligence components of the F.B.I. and other U.S. government agencies. It also contains a number of important provisions intended to lay the foundation for process and organizational changes in the intelligence community.

The classified nature of U.S. intelligence activities prevents us from disclosing publicly the details of our budgetary recommendations. As I described to the Senate when our bill was considered in July, 10 years ago I joined a majority of Senate colleagues in voting to express the sense of Congress that the aggregate amount requested, authorized, and spent for intelligence should be disclosed to the public in an appropriate manner. The House opposed the provision. I continue to believe that we should find a means, consistent with national security, of sharing with the American taxpayer information about the total

amount, although not the details, of our intelligence spending. In holding the intelligence community accountable for performance, and the Congress and the President accountable for the resources they provide to the Intelligence Community, citizens should know the Nation's overall investment in intelligence.

The bill includes a number of provisions intended to promote innovations in information sharing, human intelligence, and counterintelligence, among other things. Many of these initiatives represent initial steps rather than solutions, but they are necessary to raise the level of awareness in Congress and the executive branch regarding a variety of urgent and complex challenges and to lay the foundation for reforms the committee will be considering next year.

Section 351 of the bill requires a report on the threat posed by espionage in an era when secrets are stored on powerful, classified U.S. computer networks rather than on paper. A single spy today can remove more information on a disk than spies of yesteryear could remove with a truck. We have already suffered losses, for example, in the Ames, Regan, and Hanssen cases, where sloppy computer security permitted traitors to exploit large quantities of highly classified information. Unfortunately, these cases provide a warning that appears to have gone largely unheeded. We still do not have a cohesive set of policies and procedures to protect our classified networks from cleared insiders who seek to betray their country. Our reliance on classified information systems for warfighting and intelligence is growing daily, yet hundreds of thousands of individuals have virtually unrestricted access to these critical networks.

All but a few Government personnel are honest and patriotic Americans, but the sad fact is that there has not been a day since WWII when we have not had spies within our Government. There have been over 80 espionage convictions in the last 25 years. They include personnel from the Army, Navy, Air Force, Marine Corps, NSA, CIA, FBI, State Department, the National Reconnaissance Office and the Office of the Secretary of Defense. It is a very real and continuing problem and there will undoubtedly be more espionage arrests in the months and years ahead. Espionage is an unfortunate fact of life, and we simply cannot afford to operate classified systems in which thousands of individuals enjoy the ability to download or upload classified information at will.

Other countries are seeking to exploit this situation to collect defense secrets, and no doubt contemplate blinding our Government and troops in time of war. We would never permit such broad access to weapons in an armory, yet these classified systems are of much greater strategic significance than M–16 rifles, tanks, or 500 pound gravity bombs. We simply must develop the policies and capabilities necessary to control input and output devices on these systems and monitor their use.

Section 352 of the bill calls for a review of our cumbersome, outmoded, and many would say ineffective personnel security system. It is a fact that almost every spy has held high-level security clearances. It is also a fact that few, if any of these individuals were identified through routine security clearance updates.

Most people who become spies join the government with no intention of betraying their country. Research by the Defense Department shows that most spies are people who develop grievances as their careers progress, at times having developed money and alcohol problems as well, and then turn to espionage as a way of feeding their egos and their bank accounts.

Yet, we give a young, single Navy recruit seeking an intelligence assignment the same scrutiny as a 30-year intelligence operative with financial troubles who routinely travels to countries of concern. Further, even when derogatory information surfaces, sometimes even very disturbing information which raises serious espionage issues, the government rarely revokes the clearances we rely on so heavily and which cost so much.

In the information age, we cannot wait 5 to10 years to identify employee problems that may be related to espionage. Too much damage can be done too quickly. We need fresh thinking and recommendations that will provide more effective security for the large sums of money the taxpayer is investing.

Section 354 of our bill calls for a review of classified information sharing policies within the Federal Government. This is an issue closely related to the foregoing provisions regarding inadequate security policies. ATM machines, for example, are a wonderfully convenient and effective means of providing access to banking resources—but they could not exist without magnetic cards, personal identification numbers, cameras and locks. Similarly, improved security is not a barrier to more flexible information sharing, it is a fundamental ingredient. The Joint Inquiry report on the 9/11 attacks highlighted information sharing as a critical shortcoming that prevented the interception of several hijackers. To help accelerate reform, the Joint Inquiry requested an administration report by this past June 30 on progress to reduce barriers among intelligence and law enforcement agencies engaged in counterterrorism. Unfortunately, no report has been submitted.

We have the technology for improved information sharing, and significant progress is being made. A Terrorist Threat Integration Center has been established, and new guidelines regarding sharing of grand jury information have been promulgated. These are very important steps forward. But to truly break down the barriers to information sharing, rather than relying on workarounds, we need revised policies on sharing classified information which recognize and exploit the opportunities provided by modern information technology. This is especially important as we look to bridging the gap between the Intelligence Community and organizations charged with Homeland Security.

Section 355 of the bill identifies a problem that would probably stun most taxpayers. Simply stated, notwithstanding the many billions of dollars invested in complex intelligence systems, ranging from satellites, to aircraft, to ships, and land-based collection platforms, there is no capability in the executive branch to independently and comprehensively model the performance of these systems. Consequently, new multi-billion-dollar systems are procured without the ability to rigorously evaluate potential tradeoffs with other systems.

Questions such as these should be asked: Given projected satellite, aircraft and UAV constellations, what is the marginal value of adding spacebased radar satellites? Are there alternative investments that can better satisfy intelligence requirements? Don't senior policymakers need the ability to systematically examine the interactions of these many systems to identify trade-offs that can be achieved?

Currently, most of the analysis of proposed collection systems is performed by the agencies seeking to justify their programs, or by senior policy officials who struggle to apply common sense and spread-sheet level analysis to systems that often have overlapping capabilities. There is no reason that a rigorous, independent and comprehensive capability cannot be developed to support the programmatic reviews of the DCI and the Defense Department. This is but one example, though an important one, of the ways in which we believe the intelligence community can improve its strategic planning and decisionmaking processes.

Section 356 of the bill raises an issue of profound strategic significance for the United States, namely the growing reliance of our country on hardware and software produced overseas. Although specific cases are classified, this is clearly a growing problem.

After 1973, when the risks inherent in America's reliance on foreign oil became clear, many positive steps were taken to ameliorate our national vulnerabilities. Those steps included establishment of a strategic petroleum reserve, establishment of the Central Command, and research into alternative fuels. Unlike our dependence on

foreign oil, however, our rapidly growing dependence on foreign hardware and software creates numerous opportunities for espionage and information operations that are extremely difficult to detect. Ironically, the countries identified by the FBI as most actively engaged in economic espionage against the United States are leading producers of the hardware and software we all use on a daily basis.

The plain truth is that even the Defense Department does not know where most of the hardware and software it uses originates. Moreover, the Government does not have the right to examine source code unless voluntarily supplied. Further, at the present time, there are limited capabilities for analyzing source code that is made available. This situation requires serious attention by senior policymakers, including Congress, and the report required by section 356 should help to prompt a long overdue discussion of these issues.

In concluding my remarks, I would like to look beyond our current bill to the issues the Intelligence Committee must contend with next year. Other committees share responsibility for reviewing the funding and systems needed by the intelligence community, but our committee is uniquely positioned to evaluate the intelligence community's performance—both its successes and failures—and to identify the changes required to meet the challenges of the future.

In my view, money alone is not sufficient to enable the intelligence community to reach its full potential. The current structure of the intelligence community is fundamentally unchanged from its establishment in 1947. Serious change is long overdue. I strongly believe that new structures and authorities, coupled with able and aggressive leadership, are required to dramatically improve our intelligence community's efficiency and effectiveness.

In many respects, the organizational issues confronting the intelligence community are analogous to those confronting the Defense Department prior to the Goldwater-Nichols Act. The fundamental problem confronting the Department of Defense prior to Goldwater-Nichols was excessive military service control over military operations, policies and budgets. In response, Congress strengthened the weak integrating mechanisms in DoD, specifically the Chairman of the Joint Chiefs and the Commanders of the Combatant Commands. The difference in military performance before Goldwater-Nichols—e.g., Desert 1, Lebanon, and Grenada—and after—Panama, Haiti, and Iraq—is stark and clear. In fact, I am convinced that the Goldwater-Nichols Act did more to enhance U.S. national security than any weapons system ever procured by the Department of Defense.

Although the Goldwater-Nichols reorganization is not a precise template for restructuring the intelligence community, the problems are fundamentally similar: towering vertical structures—NSA, CIA, DIA, NRO, NIMA, the service intelligence components—and relatively weak integrating mechanisms—the DCI and his Community Management Staff. Any reorganization proposal needs to address this fundamental problem of inadequate integration and coordination. In that regard, I would suggest that the intelligence community's lack of responsiveness to the DCI's declaration of war on al-Qaida prior to 9/11 was in part a result of the DCI's weak community management authorities and inability to move the system. I am convinced that a strengthened DCI could more effectively manage the intelligence community, leading to performance improvements comparable to those achieved by the military in the wake of the Goldwater-Nichols Act.

A conservative, incremental approach would involve the creation of a permanent cadre to staff the DCI much as the Secretary of Defense has an OSD staff. This simple change, coupled with aggressive business process reengineering and ''year of execution budget authority'' for the DCI over NFIP programs, would significantly strengthen the DCI's ability to manage the intelligence community and respond to new threats and opportunities.

A more aggressive and far-reaching plan would have to address the fundamental changes that have occurred since the current structure was established by the National Security Act of 1947. Specifically, it would recognize that the once useful distinction between home and abroad has become not only irrelevant, but dysfunctional. This is not to suggest any need to reduce the protections afforded U.S. persons under the Constitution, merely that globalization and the development of cyberspace, combined with the rise of apocalyptic terrorists groups empowered by lethal new technologies, require a different, more agile structure that is not impeded by outmoded geographic distinctions. In that regard, we should find ways to more effectively coordinate foreign and domestic intelligence.

Achievement of any substantial reorganization will require meticulous research by the congressional oversight committees, a substantial hearing record, and sustained interest by the administration. At the end of the day, incremental steps will be better than none, and a more aggressive reorganization require a consensus not only on the Intelligence Authorization Committees, but with the Armed Services Committees as well. As challenging as these issues are, we simply cannot fulfill our duty to the American people unless we confront these crucial issues when Congress returns next year.

In conclusion, the important steps we have taken with this measure, to include full funding of the administration's requests for intelligence activities, are the result of lengthy deliberations on matters as complex as they are vital. It is gratifying to see the work that has been done in both Chambers come together today in a bill we can send to the President. It is a useful first step, but only a first step, towards the development of an intelligence community better able to adapt to the rapidly evolving threats confronting our great nation.

Finally, I would like to thank the chairman and the Committee staff for their arduous work on this bill. I look forward to making great strides together next year.

I urge support for this measure.

OFFICE OF INTELLIGENCE AND ANALYSIS

Mr. SHELBY. Mr. President, I rise in my capacity as the chairman of the Committee on Banking, Housing and Urban Affairs regarding the Conference Report to accompany H.R. 2417, the Intelligence Authorization Act of 2004. Section 105 of the act will create a new Office of Intelligence and Analysis within the Department of the Treasury. The Office is to be headed by a newly authorized Assistant Secretary for Intelligence and Analysis appointed by the President and confirmed by the Senate. It will enhance the Department's access to intelligence community information and permit a reorganization and upgrading of the scope and capacities of Treasury's intelligence functions in light of the Nation's counterterrorist and economic sanctions programs. This section was drafted with bipartisan participation and close coordination with the Department of the Treasury.

The particular terms governing the new office are important to me as chairman of the Committee on Banking, Housing, and Urban Affairs over legislative and oversight matters relating, inter alia, to the Nation's economic sanctions laws and the Bank Secrecy Act, and, more generally, because of the importance of carefully delineating the limitations on any part of the U.S. intelligence community that lie within the structure of an executive department of the Government. I have a letter signed by the ranking member of the Banking Committee, Senator PAUL S. SARBANES, and myself addressed to Secretary of the Treasury John W. Snow, as well as Secretary Snow's response. This letter reflects the agreement of Treasury about the organization, structure and role of the new Office and Assistant Secretary position created and important related organizational matters concerning the Financial Crimes Enforcement Network and the Office of Foreign Assets Control.

I request unanimous consent that the two letters be included in the RECORD. They provide, I believe, a good statement of congressional intent with regard to the establishment of the new Office and the new Assistant Secretary position. At this time I would yield the floor to the ranking member of the committee on Banking, Housing and Urban Affairs, Senator SARBANES.

Mr. SARBANES. I thank the Senator. I simply want to note my agreement with the chairman and with his request to include the two letters in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

U.S. SENATE, COMMITTEE ON BANKING, HOUSING, AND URBAN AFFAIRS,
Washington, DC, November 20, 2003.

Hon. JOHN W. SNOWE,
Secretary of the Treasury, Department of the Treasury, Washington, DC.

DEAR SECRETARY SNOWE: A proposed amendment to section 105 of the Intelligence Authorization Act of 2004, H.R. 2417, would create a new Office of Intelligence and Analysis within the Department of the Treasury, The Office would be headed by a newly-authorized Assistant Secretary for Intelligence and Analysis appointed by the President and confirmed by the Senate. The Office would enhance the Department's access to Intelligence Community information and permit a reorganization and upgrading of the scope and capacities of Treasury's intelligence functions in light of the nation's counterterrorist and economic sanctions programs.

We are writing to you to confirm formally, before consideration of the amendment proceeds, your and our mutual understanding of the role of the proposed new Office and Assistant Secretary within the Department of the Treasury. Such confirmation is necessary because of the authority of the Senate Committee on Banking, Housing, and Urban Affairs over legislative and oversight matters relating, inter alia, to the Nation's economic sanctions laws and the Bank Secrecy Act, and, more generally, to the Nation's financial system. In that context, the Committee is necessarily concerned with the careful delineation of the functions, and limitations, of any part of the U.S. Intelligence Community that lies within the structure of the Department of the Treasury.

Based on discussions between members of our staffs and the Assistant Secretary of the Treasury (Legislative Affairs), we understand that:

1. The new Office is to be responsible for the receipt, collation, analysis, and dissemination of all foreign intelligence and foreign counterintelligence information relevant to the operations and responsibilities of the Treasury Department, and to have such other directly related duties and authorities as the Secretary of the Treasury may assign to it. The new Office will replace and absorb the duties and personnel of Treasury's present Office of Intelligence Support (''OIS'') and will carry on OIS' work in the provision of information for use of the Department's senior policy makers.

2. The Assistant Secretary for Intelligence and Analysis will report to an Under Secretary of the Treasury (Enforcement) as required by the statute. The Assistant Secretary for Intelligence and Analysis will at no time supervise any organization other than the new Office or assume any other policy or supervisory duties not directly related to that Office.

3. The Secretary will seek prompt designation of a new appointee for the vacant position of Under Secretary, and ensure the chain of command will be organized and implemented as outlined above.

4. Our mutual understanding is that Treasury plans to have an official appointed to a vacant Assistant Secretary position. The official appointed to that position will supervise the Office of Foreign Assets Control (''OFAC'') and the Financial Crimes Enforcement Network (''FinCEN'') as well as other functions, but he or she will at no time supervise the Office of Intelligence and Analysis. This Assistant Secretary also will report to the Under Secretary referred to in paragraphs 2. and 3., above.

5. The general responsibilities of OFAC and FinCEN will not be changed in the course of creating the new Office and these new positions. However, it is anticipated that the new Office will coordinate and oversee all work involving intelligence analysts who work in OFAC and FinCEN (or in other parts of the Treasury) primarily with classified information, in the interest of creating the more robust analytic capability at Treasury that was the articulated reason for the authorization of this new Office. One of the primary tasks of the new Office will be to examine and analyze classified information, in conjunction with the relevant unclassified information already available to OFAC and FinCEN, so that the resultant product can be of use to OFAC and FinCEN as well as to other agencies, under applicable legal rules. Thus, the new Office will have access to all relevant information held by FinCEN and OFAC for national security and anti-terrorism purposes.

The expertise of the Department of the Treasury is necessary and integral to our Nation's security and to success in the war on terrorism. We expect within the next year to highlight your efforts in this area in one of the series of Terror Finance hearings to be held by the Committee, and we look forward to hearing at that time about the innovative approaches to counter-terrorism efforts that the proposed revitalization of Treasury's capacity for financial intelligence analysis can produce.

Sincerely,

RICHARD C. SHELBY,
Chairman, Committee on Banking, Housing and Urban Affairs.
PAUL S. SARBANES,
Ranking Member, Committee on Banking, Housing and Urban Affairs.

DEPARTMENT OF THE TREASURY,
Washington, DC, November 21, 2003.

Hon. RICHARD SHELBY,
Chairman, Committee on Banking, Housing and Urban Development, U.S. Senate, Washington, DC.

DEAR CHAIRMAN SHELBY: Thank you for your letter concerning creation, in section 105 of the Intelligence Authorization Act of 2004, of the proposed Office of Intelligence and Analysis, to be headed by a new Assistant Secretary for Intelligence and Analysis, within the Department of the Treasury. I have reviewed your letter and it correctly states the commitments made to you on behalf about the role of the proposed new Office and new Assistant Secretary within the Department of the Treasury.

I appreciate your input and look forward to working with you, Senator Sarbanes, and your House colleagues to make sure the Treasury Department meets the Congress' expectations. An identical letter has also been sent to Senator Sarbanes.

If there is anything that I can do to be of assistance to you, please do not hesitate to contact me.

Sincerely,

JOHN W. SNOW.

Mr. ROBERTS. Mr. President, I ask that the Chair put the question to the body.

The PRESIDING OFFICER. Is there further debate?

If not, the question is on agreeing to the conference report.

The conference report was agreed to.

MORNING BUSINESS

Mr. ROBERTS. Mr. President, I ask unanimous consent that there now be a period for morning business, with Senators permitted to speak therein for up to 10 minutes each.

The PRESIDING OFFICER. Without objection, it is so ordered.

Who seeks recognition?

Mr. CHAMBLISS. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. REED. I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

ENERGY POLICY ACT

Mr. REED. Mr. President, we have just concluded a cloture vote which will give us the opportunity to look more carefully at the Energy bill that is before the Senate. I believe such a careful and thorough review of the bill is entirely warranted. Indeed, it is not just my opinion but the opinion of countless numbers of Americans and also countless numbers of opinion leaders throughout the country.

These are a sample of some of the editorials that have appeared with respect to the Energy bill. The Washington Post calls the bill ''depleted energy.'' The New York Times says ''a shortage of energy''. The Atlanta Journal-Constitution directs: ''Put backroom energy bill out of the country's misery.'' The Houston Chronicle: ''Fix the flaws—this proposed energy bill is half a loaf, half baked.''

The American people deserve good national energy policy, created through an open and democratic process. Sadly, the legislation before the Senate is not such a policy nor has it been achieved through an open and transparent and collaborative process. The Energy bill was crafted behind

closed doors by members of one political party who chose to involve industry but not elected Senators and Congress men and women. It looks as if the industry got the bill they wanted.

We have been told "take it or leave it." I hope we can leave this bill behind. I hope this cloture vote signifies such a development.

If we leave it behind, one of the salient aspects of the Energy bill presented to Members is that it does not leave any lobbyist behind. In fact, to borrow a statement from my colleague from Arizona, this bill, indeed, leaves no lobbyist behind.

There is an Archer Daniels Midland ethanol provision adding $8.5 billion to gas prices over each of the next 5 years while cutting $2 billion a year from the highway trust fund. It seems to me to be implausible, indeed irrational, that we would enhance an industry while at the same time depriving our local cities and towns and States of the money they need to maintain the roads and bridges of America.

According to the Denver Post, there is $180 million to pay for development projects in Shreveport, LA, including the city's first ever Hooters restaurant. I am not sure how that will help our energy policy.

Let's not forget the $2 billion that taxpayers bear to clean up the mess left by MTBE producers.

As the Wall Street Journal wrote:

> We'll say this for the energy bill that is about to come to a final vote in Congress: It's certainly comprehensive. It may not have all that much to do with energy anymore, but it does give something to every last elected Representative.

This bill utterly fails to establish an energy policy for the 21st century. It does nothing to address our country's dependence on foreign oil, an issue I will discuss at length in a few minutes.

In addition, it contains so many provisions that will hurt consumers and damage the environment that it is impossible to list them all. Here are just a few:

The bill doubles the use of ethanol in gasoline, which will drive up gasoline prices and deny valuable revenue to fix our roads.

The bill fails to make the reforms necessary to modernize our electricity grid and enhance reliability by providing a standard set of rules for our electricity markets. These rules would have provided greater efficiencies, greater reliability, and reasonably priced electricity that our homes and businesses need.

The bill increases air pollution by delaying rules to control mercury and ozone pollution, putting millions of Americans at risk for health problems.

The bill increases water pollution by exempting oil and gas exploration and production activities from the Clean Water Act storm water program.

The bill allows drilling on our coastlines by diminishing States' rights to review offshore oil development projects and other proposed Federal activities to determine if the projects are consistent with the State coastal management plans.

The bill threatens our national security by failing to reduce the Nation's dependence on foreign oil and providing billions of dollars in subsidies to build new nuclear powerplants. And the list goes on and on and on.

The American public deserves an economically sound Energy bill that will strengthen our economy and create good-paying jobs for Americans. But that is not this Energy bill before us.

This Energy bill is business as usual. It is a special interest grab bag cloaked in the rhetoric that it would create jobs and spur the economy. The cost of the entire bill is estimated to exceed $100 billion, more than $120,000 for each job that the authors claim the bill will create. With the tax breaks alone costing American taxpayers over $25 billion, this bill adds to the deficit and further reduces spending for vital programs, such as education, health care, and water infrastructure.

The American public also deserve an environmentally friendly Energy bill that will protect our air and water and reduce greenhouse gases. But that is not this Energy bill.

This Energy bill will endanger the public's health by allowing the energy industry to increase the pollution it emits into the air and water and limiting environmental review of energy projects.

One of the most egregious giveaways to corporations, at the expense of the environment and public health, is the product liability protection for MTBE. MTBE is known to cause serious damage to water quality nationwide. This immunity provision—which is retroactive to September 5, 2003, before virtually all the recent lawsuits involving MTBE—would shift $29 billion in cleanup costs from polluting corporations to taxpayers and water customers.

My State of Rhode Island and our residents are all too familiar with the dangers of MTBE. After MTBE leaked from an underground storage tank at a gas station and found its way into the water system of the Pascoag Utility District in Burrillville, RI, in the summer of 2001, more than 1,200 families were forced to use bottled water for drinking, cooking, and food preparation for several months. Subsequent tests showed MTBE at such high levels that the State department of health recommended residents reduce shower and bath times and ventilate bathrooms with exhaust or window fans. Fortunately, Pascoag's lawsuit against ExxonMobil to pay for the cleanup was filed before the September 5, 2003, cutoff date, but many similar suits filed on behalf of residents in New Hampshire and other States will be thrown out by this bill. That, to me, is a tragedy.

The American people deserve a meaningful Energy bill that will ensure our national security by ending our dependence on foreign oil, diversifying our energy resources, and increasing our Nation's energy efficiency. But that is not this Energy bill.

This Energy bill perpetuates the failed policies of the past 30 years, focusing almost exclusively on squeezing what little domestic energy production is available and offering generous incentives to the oil and gas industry while giving little attention to developing alternative sources of energy and reducing consumption. We have to face the facts: We cannot drill our way to energy independence.

Furthermore, the bill creates new security threats by reversing a long-standing ban on the reprocessing of spent fuel from commercial nuclear reactors. It promotes, through the Department of Energy's advanced fuel cycle initiative, joint nuclear research efforts with nonweapon states, undermining efforts to curtail new weapons systems. The proliferation of nuclear weapons is one of the most challenging and difficult and serious problems we face, and we are now involving ourselves with states that do not have nuclear weapons, but we are doing so in a way that we could inadvertently and unintentionally give them insights that are advantages. This is poor proliferation policy as well as, I believe, poor energy policy.

Our Nation needs a comprehensive Energy bill, but we must reorder our priorities if we want to achieve greater energy independence. Yesterday's solutions will not meet today's urgent need for energy security. Increased efficiency in our homes, our cars, and our industries, renewable energy resources, and new technologies will secure our energy independence.

We are on a collision course that threatens our economic and national security. Worldwide oil consumption is projected to grow by 60 percent over the next two decades. For developing countries, the growth is expected to be much higher, possibly as much as 115 percent. China and India will be major contributors to these increases in demand and will require imports to meet their needs.

Chinese economic expansion is rapidly changing the oil demand map throughout the world. The International Energy Agency estimates that Chinese demand for oil next year will rise to 5.7 million barrels per day. This would account for about a third of global demand growth. Growing global demand will raise prices for U.S. consumers as countries race for the world's remaining oil supply.

Two-thirds of the world's proven crude oil reserves are in the Middle East. While experts disagree about when global oil production is likely to peak, they agree that when it does, the

vast majority of remaining untapped reserves will be left in the Middle East and imports to feed our growing global demand for oil will come from the Persian Gulf.

What is the result of this increasing global demand? Many countries, including our allies and trading partners, will compete with us for finite oil supplies as their and our economies rely more heavily on imports. This will inevitably stress the delicate balance that exists among national interests in the world and give the Middle East a disproportionate leverage in the international arena.

America's dependence on imported oil is a major constraint on our foreign policy. A substantial portion of our Nation's military budget is spent in the Middle East for the defense of oil. Our policy toward the Middle East will not change as long as our economy remains dependent on oil from the region. The United States has less than 5 percent of the world's population but consumes 26 percent of the world's oil. Oil imports contribute to our trade deficit and heighten our economy's vulnerability to oil price spikes. According to the Rocky Mountain Institute, 53 percent of the U.S. oil supply is imported and one-fourth is from the 11 countries of the OPEC cartel.

Net oil imports cost the United States $109 billion in the year 2000—29 percent of the then-record trade deficit. Retail oil products cost Americans more than one-quarter trillion dollars per year. As long as the U.S. economy is dependent on oil, we remain vulnerable to major oil disruptions anywhere in the world and to domestic price spikes. According to the Department of Energy, every million barrels of oil per day taken out of production increases world oil prices by $3 to $5 per barrel. The Organization of Economic Cooperation and Development estimates that an increase of $10 per barrel would cut U.S. economic growth by .2 percent and boost consumer prices by .4 percent. A .2 percent drop in growth would cost the economy $22 billion.

Our economy is extremely vulnerable to variability in oil prices, and we are doing nothing in this legislation to give ourselves a hedge against those variable oil prices.

To achieve energy security, we must wean our economy off its heavy reliance on oil. The immediate priority must be to head off growth in demand. Efficiency is the cheapest energy source. Let me say that again. Efficiency is the cheapest energy source—not drilling in Alaska or the gulf or any place else.

In 2000, America used 40 percent less energy and 49 percent less oil to produce each dollar of GDP than in 1975. Why? Because after the 1973 oil embargo, we were shocked into taking steps to improve our efficiency. We raised gas mileage standards. We provided support incentives for energy improvements and efficiencies throughout our society. This savings we have been able to develop since 1975 has been five times our domestic output of oil in that period.

So we essentially saved five times more oil than we produced in the period. We need to use energy in a way that saves money. It is much cheaper to conserve energy and increase efficiency than build a nuclear powerplant. It is much cheaper and much less deadly to conserve energy and increase efficiency than to send troops to protect oil interests in the Middle East, as we have done since the first Persian Gulf war. While our soldiers in Iraq are fighting for many reasons, we cannot divorce what is happening in the Middle East from our dependence on oil. This bill may create a few jobs, but will it save lives? Will it prevent future military conflicts undertaken to feed America's addiction to oil? I don't think so. I think a bill like this should do precisely that.

The Energy conference report that we are considering is too heavily weighted towards production with minimal emphasis on increasing energy efficiency. According to the American Council for an Energy-Efficient Economy, the conservation savings in the bill will amount to only about 3 months of U.S. energy consumption between now and the year 2020. That fact bears repeating. Over the next 17 years, this bill conserves only 3 months worth of energy or 1.5 percent of energy use. The bill could have and should have saved at least four times as much energy through conservation.

This bill could have taken meaningful steps to secure our energy future, but the drafters of the bill chose not to. The energy conference could have reduced our dependence on foreign oil by increasing CAFE standards, but they did not. In model year 2002, the average fuel economy for cars and light trucks was 20.4 miles per gallon, a 22-year low. Yet if performance and weight had stayed constant since 1981, the average fuel economy would have improved 33 percent, enough to displace the amount of oil we import from the Persian Gulf 2.5 times over. To displace Persian Gulf imports would only take a 3.35 mile-per-gallon increase in the 2000 light vehicle fleet. We are risking our soldiers in the Persian Gulf, but we are unwilling to raise mileage standards in the United States. If we don't do that, I fear we will be at risk again and again and again—our troops, our economy, and our society.

According to the Rocky Mountain Institute, since 1975, the U.S. has doubled the economic activity wrung from each barrel of oil. Overall energy savings, worth about $365 billion in 2000 alone, are effectively the Nation's biggest and fastest growing major energy source, equivalent to three times our total oil imports or 12 times our Persian Gulf imports. Let me say that again. We have the greatest resource available to us. It is not oil under the ground or under the sea. It is energy efficiency. Yet this bill refuses to tap that great resource.

During 1977 to 1985, gross domestic product rose 27 percent. Oil use fell 17 percent. Net oil imports fell 42 percent, and imports from the Persian Gulf fell 87 percent. When we were forced by the embargo in 1973 to take steps to improve efficiency, the results were palpable, dramatic, and beneficial. The key to the huge 1977–85 oil savings was better mileage for our automobiles. Unfortunately, light vehicle efficiency stagnated through the 1990s. And we refused to do the obvious and increase those standards.

Taking steps to reinvigorate the CAFE program is the best way to produce dramatic savings in oil consumption, those savings that we witnessed in the 1970s and 1980s. That is why I am an original cosponsor of S. 794, which would increase fuel economy standards for passenger vehicles to 40 miles per gallon by 2015 and for pickup trucks by 27.4 miles per gallon. This would save 1.8 million barrels of oil a day by 2015, and 3.1 million barrels a day by 2020. This is the Energy bill we need, not the one we are considering.

Indeed, this approach, a technological approach, is most suited to our greatest advantages. We are the Nation of technological innovation. We are the Nation that first ventured into space dramatically and went to the moon. I cannot believe that if we give them the simple mission of raising gas mileage standards, that our automobile industry cannot do so and do so promptly without losing jobs, without losing market share.

While we fail to take action to increase fuel economy standards and provide $100,000 tax loopholes for SUVs, China, already a growing economic power, recognizes the need to reduce its oil demands from the Middle East. In contrast to this bill, China is preparing fuel efficiency rules that will be significantly more stringent than those in the United States. The Chinese standards call for new cars, vans, and sport utility vehicles to get as much as 2 miles a gallon of fuel more in 2005 than the average required in the United States and about 5 miles more in 2008.

Let me guarantee you, our automobile manufacturers will be trying desperately to sell in that market, and we will be producing cars that go into that market. Yet they will turn to us and say: It is impossible to do that here in the United States.

The Chinese are more sensitive to the global imbalance in supply and demand for petroleum products than we are. They are taking action—and we can't—

because they recognize the economic implications and the national security implications.

The Energy bill before us could have reduced our dependence on foreign oil and strengthened national security by including a renewable portfolio standard for America's electricity industry. A strong renewable portfolio standard would diversify our fuel supply, clean our air, and better protect our consumers from electricity price shocks.

According to the Energy Information Agency, gradually requiring utilities to produce 20 percent of electricity from renewable resources such as solar and wind is both affordable and feasible. In addition, it would create jobs by spurring $80 billion in new capital investment. Again, this is the Energy bill we need, not the one we are considering.

For over 30 years, through four different Presidencies, Americans have been promised that our Government would end the national security threat caused by our dependence on foreign oil. But energy security means more than drilling in new places for oil and natural gas. It starts with using less energy far more efficiently. It means obtaining energy from sources that are less vulnerable to terrorism or world politics. Unfortunately, it appears that the American people will continue to wait for a meaningful energy policy that promotes national security and reduces our dependency on foreign oil.

We faced an important vote today. I believe we made the right vote. We have given ourselves more time to improve this bill, to develop legislation that will meet our economic, our environmental, and our national security needs, to serve the American people in a way which will make them more secure and more prosperous. I hope we use this intervening time not simply to return to this legislation but to vigorously reform legislation so that we can present the American people a bill that will serve their needs and not the needs of special interests.

I yield the floor and suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. DASCHLE. Mr. President, I ask unanimous consent the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. THOMAS). Without objection, it is so ordered.

HONORING TWO SOUTH DAKOTA SOLDIERS KILLED OVER THE WEEKEND IN IRAQ

Mr. DASCHLE. Mr. President, yesterday was a national day of mourning in Italy. Tens of thousands of people lined a procession route and gathered at a basilica in Rome to pay their final respects to 19 Italian soldiers killed last week in a truck bombing in Nasiriyah, Iraq. The soldiers' deaths mark Italy's worst military loss since World War II.

The American people share Italy's sorrow over their enormous loss.

There is also a profound sense of sorrow this week in South Dakota, Mr. President. Two of the 17 American soldiers killed last Saturday, when those 2 Army Black Hawk helicopters collided in the sky over the northern Iraqi city of Mosul, were from our State.

South Dakota lost as many soldiers in that instant as we had lost in the entire Iraq war so far.

We mourn our lost sons: Army CWO Scott Saboe; and Army PFC Sheldon Hawk Eagle.

We also mourn the 15 soldiers lost with them, and all the 424 U.S. servicemembers who have given their lives, so far, in this war, as well as the sons and daughters of our allies who have been lost in this war.

CWO Scott Saboe was 33 years old, a career soldier with 14 years of military service.

He leaves behind his wife, Franceska, and their 6-year-old son, Dustin, who live in Alabama.

His father, Arlo Saboe, with whom I just spoke, is a decorated Vietnam war veteran who lost his wife and brother in the last 2 years. His sister, Ann Remington, is stationed at Walter Reed Army Medical Center near Washington.

Willow Lake, where Scott Saboe grew up, is a small town. Only about 300 people live there. On Sunday, more than half of them stopped by Arlo Saboe's house to pay their condolences.

Before Iraq, Scott Saboe had flown helicopters over the demilitarized zone in Korea. As his father told a reporter for the Sioux Falls Argus Leader, "He was willing to go anywhere."

He reportedly was scheduled to return to the United States in 2 weeks for training.

Today, at Willow Lake High School, where he played center on the football team, the flag has been lowered to half-staff.

Bill Stobbs, a former teacher and football coach who now is the school's principal, told the Argus Leader:

> He died doing what he loved, and he was a dedicated soldier. That's all there is to it.

Darin Michalski, a childhood friend, said:

> Most of us can go through our whole lives and don't really accomplish anything, and some of us only live to be 33, and we're heroes.

PFC Sheldon Hawk Eagle was just 21.

He lived in Eagle Butte, on the Cheyenne River Sioux reservation, and was an enrolled member of the Cheyenne River Sioux tribe—one of about 90 members of the tribe deployed to Iraq.

He was a descendant of the legendary Lakota warrior leader, Crazy Horse. His Lakota name was Wanbi Ohitika, "Brave Eagle".

Like Scott Saboe, Sheldon Hawk Eagle grew up in a family that viewed military service as a citizen's duty. His grandfather, father and uncle all served.

Friends and family members describe him as a hard-working, quiet young man. One of his former teachers remembers his "nice smile."

His parents died when he was a young boy. He was raised by his aunt and uncle, Harvey and Fern Hawk Eagle.

His only surviving sibling, his sister, Frankie Allyn Hawk Eagle, lives in Grand Forks, ND. He enlisted in Grand Forks, in June 2002, to be close to her.

He was deployed to Iraq in March and reportedly had hoped to be home this coming February.

Emmanuel Red Bear, a spiritual leader who teaches Lakota language and culture at Eagle Butte High School, remembered Hawk Eagle to a reporter as an aggressive, but fair, football player who was a model of sportsmanship on and off the field.

Said Red Bear of Hawk Eagle:

> He was a role model, in his quiet way. The younger kids looked up to him. . . . He really was a modern-day warrior.

Tribal Chairman Harold Frazier said simply:

> He's our hero. He defended our country and protected our freedom.

News of Scott Saboe's and Sheldon Hawk Eagle's deaths reached their hometowns on Sunday. Many people first heard the news first at church services.

It had been some time since South Dakota had lost anyone in Iraq.

On May 9, CWO Hans Gukeisen, of Lead, was killed when the Black Hawk helicopter he was copiloting got caught in a power line and went down in the Tigris River.

On June 18, PFC Michael Deuel of Nemo, was killed while on guard duty at a propane distribution center in Baghdad.

The crash of the two Black Hawks last Saturday was the deadliest single incident since the United States invaded Iraq. The military is investigating whether enemy ground fire may have caused the crash.

All 17 of the victims were from the Army's 101st Airborne Division—the famed "Screaming Eagles"—the same unit that parachuted into Normandy on D-Day.

Like people in every state, South Dakotans sometimes focus on our superficial differences: East River versus West River, Native American versus the sons and daughters of pioneers and immigrants. Today, we are one State, united in sadness over the deaths of our soldiers, and pride over the noble lives they lived.

I yield the floor. I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. FRIST. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

OBESITY

Mr. FRIST. Mr. President, I rise for a few moments to speak to a once silent, now highly visible epidemic that plagues every neighborhood in this country. It is an epidemic that plagues our schools. It is an epidemic that plagues our school grounds. It is an epidemic that plagues youth in our playgrounds and it plagues older people in the workplace. It is a plague that in many ways is a new problem—a problem that is only really 15, 20, maybe 30 years old—but it is a problem and a plague that is growing. It is one that specifically hurts children, and, indeed, once it attacks our children, it can destroy in many ways their future quality of life and their future life in terms of longevity. This epidemic, this plague, is childhood obesity.

Just this summer, the Food and Drug Administration announced it will require food labels to list trans fatty acids. Most people do not know what trans fatty acids are; people do not know exactly what they do. But they do things which make in many ways food taste better. They make foods last longer. They give flavor to foods. They increase shelf life. The problem is that these trans fats contribute to heart disease. Heart disease is the No. 1 killer in the United States of America today.

For 20 years, before coming to the Senate, I spent my life in medicine and ended up gravitating to this field of heart disease. It wasn't as big of a problem in the late 1970s or early 1980s, but it was there. What bothers me most is that it is skyrocketing today, and it is increasing faster among adolescents—children—than it is among anyone else.

It is interesting. If my colleagues are listening to me, the likelihood is one out of every two of you is going to die of heart disease—not just my colleagues but on average around the country. That is how common heart disease is in terms of mortality.

Various food companies really deserve praise for their plans to reduce the level of trans fats in their most popular products. These are important advances in public health, and I applaud our food manufacturers for stepping up and taking this leadership position.

Ultimately, however, the responsibility for this growing, skyrocketing epidemic rests with all of us—individual consumers, American consumers—you and me—and all of us because ultimately we make that decision for ourselves in terms of our shopping, in terms of how we conduct our lifestyle, how much exercise we get, and what we eat.

But the point is that we have an epidemic. It is hurting specifically children. Children are really condemned to a lower quality of life because of this epidemic. But the good news is that there is something we can do about it; we can reverse these trends.

Sixty percent of Americans today are overweight. More than one out of two are overweight. By itself, obesity might be considered just another choice we have in life, that we just choose, that is what we do, and, if it hurts us, that is just the way it goes. It is more than just another choice. It really does come down to what we do, which may not be a choice in part because there may be even a genetic component to it. We don't know for sure. But researchers in England believe they have discovered a gene which they are calling an obesity gene that some way predisposes some to overeat. It is a choice in terms of lifestyle: People choose to take the metro or the subway rather than walk. We know our children in schools today are exercising a lot less. We know that our kids today are spending a lot more time in front of the television or at the computer and are less likely to be exercising.

Whether by choice or by some combination of genes and environment, we know obesity is now a major public health threat in the United States of America. Obesity contributes directly to heart disease but also to diabetes. Diabetes is reaching epidemic proportions in our children today. It directly contributes to other illnesses, including cancer and stroke.

There are 300,000 deaths a year that can be directly attributed to fat. The epidemic is spreading in faster and faster proportions with our children. The percentage of kids age 6 to 19 who are overweight has quadrupled since the early 1960s. It is not a static problem; it is getting worse.

Pick any city in the country. Look at New York City's public school children, nearly half are overweight; one in four is obese. The problem is particularly acute among African-American and Hispanic children, especially Hispanic boys. More Hispanic boys than Hispanic girls are obese. In my own State of Tennessee, the statistics are even worse.

Nationwide, type 2 diabetes, the kind of diabetes that is associated with obesity, is skyrocketing. At the Centers for Disease Control and Prevention, estimates are that one in three Americans born in the year 2000 will develop diabetes in their lifetime. One in three Americans born today will develop diabetes in their lifetime. This is attributed to obesity. It is attributed to being overweight. Among African-American and Hispanic children that number is not just one in three Americans, but it is one in two Americans in those populations that will develop diabetes in their lifetime.

People say diabetes is bad and that should be reversed. But it is even worse than saying it is just diabetes because diabetes itself is the leading cause of kidney failure, which is renal failure. Diabetes is the leading cause of heart disease. Diabetes is a leading cause of blindness as well as amputations. It all starts as a child, who, in this growing epidemic, is led to be obese.

As adults, we know how hard it is to battle the fat or the battle of the bulge. We all struggle with that in our environment of fast food and transportation. It is very easy to find excuses not to exercise four times a week for 30 minutes. But imagine struggling with obesity when you are just 10 years of age, where this is reaching those epidemic proportions. Teachers say they see the physical toll on their students every day. Kids are out of breath walking up the school stairs. Kids are not able to participate fully in sports. Kids are not able to participate when they do field trips and go outside, activities we associate with playing and vigorous childhood activity. Kick-ball, jumping rope, and climbing trees for many children today, unlike in the past, have become grueling exercises that, indeed, they try to avoid. They say they will not participate because they are embarrassed to participate.

Mr. President, 25 percent of our Nation's children say they do not participate in any vigorous activity today. That is one out of four children. Obesity is not only robbing them of those everyday pastimes, it is also robbing them of their childhood years. Obesity is associated with the early onset of puberty among girls.

According to a study from the University of North Carolina, 48 percent of African-American girls begin puberty by age 8; over a quarter by age 7.

Yes, we are in the midst of a national health crisis. It is harming our children in ways that we can observe, but the crisis also occurs in ways we cannot observe. It threatens their future. It also condemns their future in many ways to the lower threshold of having other adult diseases if they start as a child being obese. They carry that with them for the rest of their life.

It affects what we call their morbidity, the relationship to other disease patterns. It affects their longevity in terms of length of life.

There is a lot we can do. We cannot just talk about it. The Surgeon General, Dr. Richard Carmona—for whom I have tremendous respect—is so alarmed, this month he urged the American Academy of Pediatrics to step up the fight against childhood obesity. In the Washington Post yesterday, Rob Stein wrote an article ''Obesity on FDA's Plate'' and he pointed out the Food and Drug Administration has launched an initiative to determine how and in what way it can play a role in helping to fight obesity, which, as the article points out, has reached epidemic proportions in this country.

In that article from yesterday, FDA Commissioner Mark McClellan—again, a physician for whom I have great respect and with whom I have worked in many capacities before; he is doing a great job at the FDA—said:

The issue of obesity challenges us in every aspect of our efforts to protect and advance the public health, and that is why it needs to be front and center of our public health agenda.

The good news to all this is that there is action in government that obesity is both treatable and preventable, which means there are things we can do to reverse the epidemic. We can reverse the trends. We must reverse the trends. It is now time to put our minds to it in this body.

I am gratified by the action of the HELP Committee which unanimously approved recently the IMPACT Act, the Improved Nutrition and Physical Activity Act. I urge my colleagues to look at this piece of legislation. I urge my colleagues to support this legislation. I hope we can bring it to the Senate floor in the near future.

Very briefly, this act takes a multifaceted approach. It emphasizes youth education to jump-start healthy habits. We know if they begin in their early years, they are carried through life. It funds demonstration projects to find innovative ways to improve health, eating, and exercise and includes vigorous evaluations so we can learn what works best in reversing this epidemic. It does not attempt in any way to control what individual Americans eat or drink. It does not outlaw so-called bad foods. It does not try to replicate the $1 billion diet industry that we know exists. It does not try to replicate the fitness industry, which is actually doing a wonderful job around the country.

It does have a modest pricetag reflecting on the appropriate role of the Federal Government to set this platform to combat this epidemic.

There is no single solution to the growing epidemic of obesity. I believe we must increase awareness of it first and then implement programs we know will have an impact; look at the medical consequences. That is why I come to the Senate floor to share the medical consequences that are totally avoidable if we act, if we educate, and if we adopt practices that we know will work.

We do know the consequences of obesity today. We can and should keep our kids safe by keeping them fit. I look forward to working with my colleagues on this very important issue. It is a new problem, a growing problem, a problem we are obliged to reverse.

Mr. REID. Mr. President, I wish I listened to the speech before I had lunch.

On a serious note, Senator DURBIN is here and he will start talking about the Medicare bill that will soon be taken up in the Senate. I think the leader would agree that people should come now and start talking about this most important piece of legislation.

Senator DURBIN is in the Chamber to talk about it. I think we should invite all Senators because the time later could be a little more constrictive.

I also say, on a serious note, about the speech the distinguished majority leader just gave, one of the reasons the leader has such high respect on both sides of the aisle is we know of his background. It is not often we have someone of his medical talents come to this body. In fact, no one has ever had the same background. He uses it in such a dignified way, in his charitable work when we are on break, doing things for the less fortunate in Africa and other places. And here, it is always good for us to know that when we do deal with health issues, he is here.

So I speak for the entire Senate when I say this presentation he just delivered on obesity is something we should all pay attention to because I know this is not a speech that someone prepared for him; this is something he spoke to with his knowledge as one the finest physicians in America.

The PRESIDING OFFICER. The majority leader.

Mr. FRIST. Mr. President, I appreciate the comments, through the Chair, from the assistant Democratic leader. One of the great things about these issues is we do have the opportunity here to work together on both sides of the aisle on issues which affect people broadly. I very much appreciate his comments in that regard.

I do also add the point, and reinforce the statement the Senator made, that over the course of the afternoon we would like to shortly—and, hopefully, a little bit after 2 or after the appropriate comments are made on Medicare—go to Healthy Forests. We are waiting on some final agreements, but hopefully we can address that today.

But what I really want to say is, this is exactly the way to handle it. I encourage people right now to come and make their statements and make their points and have the debate on Medicare. The bill is out. The bill has been filed. People have access to that bill. I think everybody should take that opportunity, this afternoon, through tomorrow, and through the weekend, to come to the floor to begin talking about that very important issue.

We want to make the very best use of time today, tomorrow, and Sunday, in all likelihood, and Monday, on that issue as well as others. It may be confusing to people. We will be going back and forth because we have a lot of business to do. So we will be on Medicare, and then we will take up Healthy Forests, and then I encourage people to come back and begin Medicare.

I yield the floor.

The PRESIDING OFFICER (Mr. COLEMAN). The Senator from Illinois.

Mr. DURBIN. Thank you, Mr. President.

I join my friend and colleague from Nevada, Senator REID, in saying to Senator FRIST, thank you for your leadership. We disagree on issues from time to time, but we agree on some, too. You have been an exceptionally good leader on the Republican side. I have said this to you privately, and I want to make it a matter of public record: I think you have been eminently fair to the minority in this Senate. And that is, I am sure, not an easy task. There are certainly forces at work in your party, as there are in our party, calling for a different outcome.

But I applaud you for your fairness in allowing the minority on this side of the aisle an opportunity to debate, offer amendments, to express our points of view, and bring an issue to a vote. I do not think a member of any legislature—national or State—could ask for anything more. I think you have worked long and hard to make that a hallmark of your leadership.

As a member of the minority, let me say to the Republican leader, thank you for your service to this institution. You have been a great asset to our Nation and to this body.

MEDICARE AND PRESCRIPTION DRUGS FOR SENIORS

Mr. DURBIN. Mr. President, let me, if I may, address another issue which is about to come before us. If you follow boxing and have watched any big championship fights, you may know that it comes at the end of the evening. During the course of the day and afternoon and the early evening hours, there are preliminary fights, and they are interesting, but they are young boxers who are untested. But the excitement builds and the attention of the audience builds for the prize fight, the heavyweight championship fight, always the last thing on the card.

Much the same occurs in Washington, DC. We have a lot of preliminary fights that lead up to the championship. You are here witnessing on the floor of the Senate today, and in the closing days of this session, the heavyweight fights.

We just finished one. That was the Energy bill. This was a controversial issue of some 1,400 pages that had been debated for years. It came to the Senate floor and just a short time ago was basically stopped. A filibuster prevailed by a bipartisan rollcall with, I believe, six Republican Senators and a number of Democratic Senators. The Energy bill was stopped. It was a heavyweight fight because those supporting the bill include the biggest energy interests in America, the big oil companies.

Certainly the President and the Vice President and the Republican Party, which controls the House and the Senate, were, by and large, anxious to pass

this bill, and we had a confrontation on the floor and my position prevailed on that. It came as somewhat of a shock to people who follow this Senate. It is not very often that the favored side in one of these debates loses. And just a short time ago they did, by two votes. They needed 60 votes to stop the debate and move the issue to a vote, and the motion to stop that debate did not prevail; it only received 58 votes.

Well, the windows are open now, and there is anxious negotiation and a lot of effort underway to try to find two more votes. And I would imagine, in the closing days of the session, we may see this issue surface again. I could express myself in saying I hope it does not, but it makes no difference what I hope. I am in the minority here, and the majority will decide whether they have the votes to bring it to closure.

That is one of the heavyweight fights. But there are two more coming, two more that will affect virtually every family in America.

One is an omnibus appropriations bill, with five major appropriations bills lumped into one, that is now in conference, a conference on which I serve; and debate is underway. The debate is behind closed doors, and I, frankly, do not know what is happening there. But before we can leave, we need to pass that bill. It could include a myriad of issues, issues as far-flung as stem cell research in medicine, issues as diverse as education, transportation. All of these issues could come before us in that large bill. That is another heavyweight fight.

But the one I come to address today is one that has received a lot of attention across America for a long time, and it is likely to receive even more attention in the closing days of the session, both in the House and in the Senate.

The issue is the issue of prescription drugs, particularly for seniors. I do not know of a single Member of the Senate who has not expressed support for finding some way to help seniors pay for prescription drugs.

We all know what has happened here. We have more and more and better and better prescription drugs available across America, and a lot of people have learned—in my family and yours, too—that if you take the appropriate medication, with the advice of a good physician, your life can be healthier and you can be stronger and more independent.

So people try to find the right drugs to keep them healthy and to move along with the happiness of life, trying to avoid going in for hospitalization or surgery. Prescription drugs are an important part of that.

But, sadly, prescription drugs for seniors in America are not covered by Medicare. So unless you are in a hospital receiving those drugs, you have to pay for them. For a lot of seniors, it is too expensive. There are people living on fixed incomes under Social Security or relatively small pensions. They have a few assets left on Earth, maybe a home they saved up for all their lives and a car, and they are trying to figure out how to pay several hundred dollars per month for prescription drugs they need, and they can't afford it. So, many do not take the drugs, some take half of what they need, and many find themselves in a terrible, perilous personal position.

We have come forward and said: We should change Medicare. If Medicare covers your illness when you go into a hospital, why wouldn't Medicare cover the drug that would keep you from going into the hospital? That makes eminent sense not just from a human point of view but from an economic point of view. It is money well spent to keep people healthy and to pay for prescription drugs.

So we had this debate, and it went on for years, and we talked about how to do it, and we did not get much done. But we did finally pass a bill out of the Senate, a bill which I supported. It was not the greatest bill. In fact, there were some aspects of it I thought were pretty bad.

Then it went into a conference between the House and the Senate, and they started working out differences. Then something unusual occurred. Someone in the House of Representatives decided that this debate was not about prescription drug benefits for seniors; no; they said this debate is really about the future of Medicare, the whole program.

It isn't about adding a benefit for seniors to pay for prescription drugs but how we are going to change Medicare in the future. Republican leaders in the House said the best way to change Medicare is to change it as a government insurance program and instead let private insurance companies, HMOs, offer Medicare coverage in the future.

My experience as a Senator from Illinois and as a Congressman is that HMOs can break your heart. They cost a lot of money. They deny care, they limit your choice in terms of doctors and hospitals, and, frankly, when the going gets rough and they are not making enough money, they cut and run. Is that what we want to hold out as the future of Medicare? I don't think so. But a lot of people do.

The Republican majority in the House certainly believes that, and that is what they have pushed now in this so-called prescription drug bill. It is no longer a bill about just paying for the prescriptions. It is now a bill about changing the face and future of Medicare. That, to me, makes a substantial difference in our mission and what we need to do.

The bill, as it is currently written, is not a bill which I can support. I guess the biggest disappointment I have is the fact that we started off with such a valid goal and such a lofty purpose. We were going to help our mothers and fathers and grandmothers and grandfathers pay for their prescription drugs. Now we have gone far afield. There are many who want to change Medicare.

Let me ask you: If you stepped back in the course of legislation and wanted to determine whether or not it was good for consumers and families in America, isn't it fair to say that one of the first questions you would ask is: Where does the money go? Who ends up profiting from this bill, and who ends up losing as a result?

Clearly, you want to turn first to the pharmaceutical industry, the people who sell drugs in America. I will readily concede this is one of the most important industries in America. We lead the world in breakthrough drugs and pharmaceuticals. I want to make certain that these drug companies in my State and others are profitable; that with their profits they can fund research to find new drugs. I want to make certain that those drugs are available to Americans. That is something on which everybody agrees. But sadly, what we find in this bill is that the pharmaceutical industry is cheering the loudest for the bill to pay for prescription drugs. That leads us to ask some serious and important questions.

First, let me show you how profitable drug companies are in America today. Take a look at the profitability of Fortune 500 drug companies versus the profitability for all Fortune 500 companies in the year 2002. The red bars indicate the profitability of the drug companies, the drug industry median, and the yellow bar is all other Fortune 500 companies. You can see profits as a percent of revenue in the first illustration, 17-percent profit for the drug industry; 3.1 percent for the rest of the Fortune 500 companies. You can see profits as a percent of assets, 14 percent. Then when it comes to profits as a percent of equity, 27.6 percent for the pharmaceutical companies; 10.2 percent for the rest of the Fortune 500. So it is very clear that we are talking about a profitable industry.

Here is another illustration of the same point. This is an indication from Fortune magazine of the most profitable industries in America, with 2002 profits as a percentage of revenues. No. 1 on the list is pharmaceutical companies. Pharmaceutical companies are extremely profitable in America today. We understand that. We ought to keep it in mind as we discuss how we are going to pay for prescription drugs for seniors.

Then I would like to show you what some of the people who are the CEOs of managed care companies earn. Here we have a chart that shows the chairman

of Aetna, John Rowe, his compensation, exclusive of stock options, $8.9 million; Anthem, Larry Glasscock, president and CEO, $6.8 million; CIGNA, Edward Hanway, chairman and CEO, $5.9 million—this is exclusive of stock options which are usually considerably more—Coventry, Allen Wise, president and CEO, $21.6 million annual compensation; Health Net, senior vice president, $6 million; Humana, president and CEO, $1.6 million—that is pretty small in comparison—then Oxford, Norman Payson, former chairman and CEO, made $76 million; PacifiCare—you may have seen the ads that show the whale flopping in the water—Mr. Howard Phanstiel is not a flop when it comes to his salary, $3 million; Sierra Health, Dr. Marlon, chairman and CEO, $4.7 million; UnitedHealth, Channing Wheeler, chairman and CEO, $9.5 million; WellPoint, Leonard Schaeffer, chairman and CEO, $21.7 million.

The total compensation for these 11 executives at these managed care companies is $166.3 million. Their average compensation, $15 million.

We are struggling to figure out how people who make $200 or $300 or maybe $500 a month can survive. And we are dealing with two industries that are extremely profitable. The obvious question we should ask is: What is fair? What is fair compensation to the pharmaceutical companies and managed care companies, but what is fair to the seniors in America? Therein lies the problem.

This morning's Washington Post, on page A4 in the first section, I think, is written an article that every Senator should read, and those who follow this debate on prescription drugs.

It is entitled ''Drugmakers Protect Their Turf.'' It says: ''Medicare Bill Represents Success for Pharmaceutical Lobby.'' Let me read a little bit from this article:

No industry in negotiations over the $400 billion Medicare prescription drug bill headed to the House floor today outpaced the pharmaceutical lobby in securing a favorable program design and defeating proposals most likely to cut into its profits, according to analysts in and out of the industry.

If the legislation passes as Republican leaders predict, it will generate millions of new customers who currently lack drug coverage. At the same time, drug manufacturing lobbyists overcame efforts to legalize the importation of lower-cost medicines from Canada and Europe and instead inserted language that explicitly prohibits the federal government from negotiating prices on behalf of Medicare recipients.

The pharmaceutical lobby has become the biggest player in Washington, DC. When I got here, it was the tobacco lobby. I know it because I fought them—beat them a couple times, too—over the course of my career. They had more money than friends, and they went out to buy a few friends, and they did.

Listen to what the pharmaceutical companies have done:

After objecting for years to proposals to add prescription drug coverage to Medicare, the pharmaceutical lobby recently shifted position and poured enormous resources into shaping this legislation. Since the 2000 election cycle, the pharmaceutical industry has contributed $60 million in political donations and spent $37.7 million in lobbying in the first 6 months of this year.

Thirty-seven million dollars on Capitol Hill? You will meet these fine men and women in their beautiful suits and well-shined shoes in the lobbies right outside this Chamber. The article goes on to say:

The lobbying continued in earnest this week with a television and print advertising campaign urging passage of this bill. In one series of witty commercials sponsored by the industry-backed Alliance to Improve Medicare, elderly citizens look into the camera and demand: ''When ya gonna get it done?''

I think I may have a copy of that ad somewhere around here. You have seen it. The fellow is pointing to Congress saying, ''When ya gonna get it done.'' That is paid for by the pharmaceutical companies. So if we are talking about helping seniors pay for prescription drugs and the pharmaceutical companies can't wait to see this legislation passed, what does that tell you? It tells you they are not going to have to cut their prices. It tells you they are going to make more money. It tells you that ultimately we are not producing a bill which helps consumers and families and senior Americans. We are creating a profit opportunity for pharmaceutical companies that already lead the Nation in profitability.

The pharmaceutical lobby is so strong in this town that they have been able to deceive the American people into believing that this prescription drug package is somehow going to cause some sacrifice on the part of pharmaceutical companies. It will not.

They are the big winners in this, just as the big oil companies and energy companies would have been the big winners in the last bill. This is the heavyweight fight, the match you can expect to see in the closing hours of this session.

Let me tell you, in closing, what the Washington Post says this morning:

Perhaps the most striking political victory for the pharmaceutical industry was the decision to reject provisions that would have allowed Americans to legally import drugs from Canada and Europe, where medications retail for as much as 75 percent less than in the United States. Polls show that an overwhelming majority of Americans support that change, and the House approved a measure 243–186. But the Bush administration and the pharmaceutical lobby said the move was dangerous and would cut into future research and development. The provision was dropped from the bill's final version.

So why would people want to import drugs? I think we know the answer. They are cheaper. The same drug made in the United States by an American company, based on research paid for by the Federal Government many times—that same drug for sale in Canada is a fraction of the price. Why? Why is it cheaper in Canada or in Europe, if it comes from the same American drug company? Because we are not importing drugs from Canada or Europe; we are importing leadership.

The Canadian Government, and governments around the world, have decided to stand up to the pharmaceutical companies and tell them there is a limit to how much money they can charge for their drugs. Our Government is unwilling to do that. This bill will not do that. Instead, what seniors have been forced to do—and families, I might add—is to pay high pharmaceutical drug bills, and some are going to Canada trying to keep up with the costs. This bill closes that border for the reimportation of drugs from Canada—meaning that America's senior citizens will continue paying the highest drug prices in the world.

This is all in the name of a prescription drug benefit for those seniors. So it is natural that pharmaceutical companies are spending millions of dollars trying to urge Congress to pass this bill as quickly as possible. The ads that they run—some are directly from their own front organizations, but others come through organizations such as AARP. I know about AARP because once you reach age 50 in America, they start filling your mailbox with solicitations for membership. I have been rejecting those for many years. I don't plan on being a retired person soon. However, the voters will have the last word on that decision.

Here is their full-page ad calling for Congress to pass the proposed prescription drug Medicare bill. Honestly, I think if you looked under the lid, you would find that AARP money to pay for this ad comes through the pharmaceutical companies that cannot wait to see this bill passed. It means more money for them. They want to cut off the sources of drugs coming in from Canada and Europe so they can really charge seniors the highest prices in America.

Let me give you an illustration of what competition can mean when it comes to drug prices. If you said to people: Do you want price controls from the Federal Government, they would say: No, no, no, that is too much Government.

But if you say: Would you want your Government to bargain for the best prices for people who need prescription drugs, most people would say: Why, sure. And why wouldn't they? You could say to them: Do you realize we do that now?

The Veterans Administration does that today; it bargains with drug companies so veterans get cheaper drugs, and the Veterans Administration pays less. The Indian Health Service does it, and some community health centers do it. States also do it through the Medicaid programs. They bargain with

them successfully. A lot of people are not covered in those groups—veterans health care, Indian Health Service, or Medicaid. They are left totally unprotected, with no bargaining power.

Look at this chart. These are some fairly common drugs. Xalatan is an eyedrop. If you buy this at the Federal supply schedule price, it is $41 for the prescription. If you go to the drugstore to buy it, it is $101. So we manage, through the Federal Government, to bargain with the drug companies and bring prices down for some people.

Celebrex, for arthritis, is $108 on the Federal Supply Schedule. That is what we pay because we bargain down the price. If your grandmother goes into the drugstore to have that filled, she will pay $173—$65 more.

Lipitor, a very valuable and important drug, is $215, based on what we have negotiated and bargained. If you pay the full price at the drugstore, which many American seniors do, it is $446.

Plavix, for stroke, is $257. It is $593 at the drugstore.

The point I am making is this: This bill is designed so that the Federal Government is prohibited from bargaining and negotiating for lower prices for seniors across America. That is why the pharmaceutical companies are so wild to pass it. That is why they want to see this enacted as soon as possible. It closes down competition. You can no longer go over the border to buy drugs in Canada or Europe, and you cannot find the Federal Government standing up for you and bargaining for seniors to bring down costs.

That is why the pharmaceutical companies are salivating. They cannot wait. They want to see this thing passed because, frankly, it means less competition. So who pays the highest prices for prescription drugs in America today? The people who can afford it the least—senior citizens on fixed incomes.

Even with the prescription drug benefit in this bill, there is no cost containment, no effort to keep the prices under control. So no matter how much money you put into this prescription drug benefit, it is going to go bankrupt because prescription drugs go up in cost 10 to 15 percent a year, and they will continue to. That inflation is going to destroy this program, and it is going to destroy seniors, because this Congress and this President refuse to confront the pharmaceutical companies.

In Canada, their government stands up for their people and says to American drug companies: We are not going to let you gouge or take advantage of our people when it comes to prescription drugs. Our Government refuses to do that. As a result, we find ourselves in this predicament. AARP and others are pleading for a prescription drug benefit that, frankly, has no cost containment built into it.

I came to the floor during this debate and urged colleagues to give to the Medicare Program the ability to bargain, which is what we give to the Veterans Administration and other Federal agencies, to let Medicare go to the drug companies and bargain for the best price for Medicare recipients across America. I was summarily defeated. The pharmaceutical lobby prevailed. I think that answered the basic question as to whether this bill truly will lead to lower drug prices across America. It will not. It will help some seniors pay for drugs, but the cost of drug prices will continue to skyrocket, and the competition from Canada and Europe will disappear. It specifically prohibits the Federal Government from negotiating on behalf of Medicare recipients.

This bill rewards pharmaceutical companies and HMOs—insurance companies. The pharmaceutical companies are going to gain, the Medicare purchasing pool is divided to prevent large group purchasing discounts, and the House language on reimportation was rejected.

There is another element. One of the ways to cut the cost of drugs is to encourage the use of generics. Once a drug has been discovered, it is the exclusive right of the drug company to sell it under a patent. During that period of time, nobody else can make that drug and sell it. When the patent expires, everybody can make the same drug and they do it under a generic name.

You may remember Claritin, with all the ads on television that showed the happy faces skipping through the field of wildflowers saying, ''I don't sneeze anymore.'' It went off patent and it is now available over the counter. So they came in with Clarinex—I think that is the name.

So once you see the generic drugs come in, the prices go down for consumers, and they get the benefit of what was a pretty expensive drug for a long time.

We tried in the Senate to make sure there were more generic drugs for sale because it is a good way to keep everybody healthy at a lower cost. It turns out that the pharmaceutical companies didn't care for that at all. They want people to pay for the more expensive drugs under patent. So they ended up weakening the language we had, which would have allowed generics to come to the market more quickly so seniors could take advantage of it. Also, this would weaken the ability of States to negotiate with drug manufacturers.

Some States are way ahead of the Federal Government. Oregon is one, and my State of Illinois has a plan. The ability of each State to bargain for the people living in that State is also restricted by this bill because all drugs are paid for through Medicare—something else the pharmaceutical companies wanted. They don't want to have to bargain with anybody. They want to charge top dollar. They don't want any voice from consumers or Government to reduce their profitability, which is already at record-breaking levels. They have been successful. They cannot wait for this bill to pass because they are already profitable, and this bill will enhance their profits even more.

Under this bill, seniors will receive a benefit that will cover less than 20 percent of the projected drug costs for seniors over the next 10 years.

A break-even point of $810 is what you have to put in, in payments and copayments, before you get anything back, which means about 40 percent of seniors will either lose money or gain very little under this prescription drug plan.

There is also a hole in this plan. It is complicated, but I will try to explain it, and it has been changing, even this week.

The coverage on this plan, once you make your monthly premium cost and once you pay your copayment—and then understand that you have to pay 25 percent of the cost of the drug itself—the coverage goes up to a certain point and then it stops. If you are still paying for drugs at that point, you have to go to your pocket to pay out. Then when you reach the higher level, it kicks back in again. So there is a period where you are, frankly, not covered.

If you have expensive pharmaceutical costs, you buy into the program, you make your copayment, and you are paying a percentage for each prescription you take, at a certain level the Federal help stops. Then if you keep paying out of pocket without Federal assistance, it kicks in again for catastrophic coverage. Let me try to describe where it is today.

The reports in the news have been, frankly, misleading. They have been reporting the catastrophic cap in the Medicare prescription drug bill is $3,600. It is not true. It is $5,100. So the gap between $2,250 and $5,100 is $2,850, the total out-of-pocket expenses for which seniors will be responsible is $3,600.

We have a situation where at $2,250 worth of costs, the seniors are on their own. It turns out, according to the Congressional Budget Office, 30 percent of seniors spend between $2,000 and $5,000 per year on prescriptions. That is 12.6 million people. It basically means even though prescription drug coverage and this complicated scheme I just described has been offered, there is an exposure where seniors will have to pay out of pocket, which will be a surprise to many of them, particularly when they are facing astronomical costs.

I had some examples made to give you some idea of what seniors might face in my State and others. One involves Mrs. Jones who has arthritis and

takes Celebrex, which costs about $86 a month. Her husband has high blood pressure and takes Norvasc, which costs $152 per month. Under this plan, Mrs. Jones would pay at least $865. If her premium is more than $35 a month, she would pay more. There is no set premium in this bill. Mr. Jones will pay at least $1,064, for a combined cost of $1,929. This benefit will only cover a third of the drug costs of Mr. and Mrs. Jones.

There are other elements we ought to look at here. If you want to get the most help from this bill, you have to be in the lowest income categories. That is fair. I think that is the right thing to do. The people struggling to get by should get the first helping hand from our Government. They decide they are going to look at certain income levels as to whether or not you benefit from this prescription drug. Then they have an asset test which, as I understand it, is $6,000. That means if you have assets of $6,000 or more, you don't get the most help.

Some of these seniors, I know, have the old family car that may still be worth $6,000, and they would be disqualified when, frankly, they have almost no income and very few other assets on Earth.

The asset test is extremely low. Six million poor seniors will be made worse off by this bill. They previously paid nothing for drugs. They will now have to pay copays that increase annually.

Three million fewer low-income senior citizens will receive enhanced benefits than under the original Senate bill because of the strict assets test. Let me give an example.

If a senior has an income of $12,000 a year but owns a $6,100 savings bond, burial plot, insurance policy, or car worth $6,000 or more, they will not have access to low-income assistance. They will have to pay the full premium, deductible and donut, or the period where the Federal program does not apply.

That means if they have high drug costs, they could pay more than $5,000 a year for their medications simply because they own a burial plot and an insurance policy. That is what the bill says. That, frankly, is something about which we ought to be concerned.

We have to understand that when it comes to this prescription drug situation, most seniors are going to be stunned by it. I might add something else that is interesting. The decision was made by the Administration and the Republican leaders in Congress that this prescription drug plan would not go into effect until after the next election, a very interesting political move.

If this is really supposed to help seniors across America, wouldn't you think this President and this Congress would want to put it in place and activate it before the election?

The reason they won't is because it is extraordinarily complicated, it is unfair to many seniors, and it includes provisions that, frankly, seniors won't be happy with at all. So they want to put it off until after the next election, and that is what they have done.

One of the other concerns I have is the role of AARP in this whole conversation. AARP is an interesting organization. Most of us over the age of 50 receive a lot of solicitations. A lot of seniors 50 and older across America have joined. If you look at AARP, it is more than a feel-good operation to try to help seniors pay for trips overseas and maybe give them a few discounts.

It turns out it is a major earner of insurance money. Here is a chart which shows the insurance royalties at AARP over the last several years—insurance royalties which, frankly, indicate $111 million in 1999 up to $123 million in 2002. The same thing goes for the investments they have made. We can see that AARP makes a lot of money from the insurance business.

One of the companies they sell insurance with is UnitedHealth Group. It turns out, coincidentally, that UnitedHealth Group could be one of the biggest beneficiaries of the bill that is going to come before us. So AARP comes to this debate not with clean hands.

AARP is fronting for an insurance company that has the potential for dramatic profitability from this bill. So when AARP announces they are for this bill, they ought to be very honest with the seniors about what that means.

AARP receives millions of dollars from the sale of health insurance policies. AARP's insurance-related revenues made up a quarter of their operating revenues last year and one-third of their operating revenue in 2001.

They receive royalties from AARP insurance policies marketed to their members by UnitedHealth Group, MetLife, and others.

More than 3 million AARP members have health-related insurance policies from UnitedHealth Group. Last year, UnitedHealth Group earned $3.7 billion in premium revenues from their offerings to AARP members.

The royalties AARP earned as a result of lending their name to insurance products, as I mentioned, went up to $123 million in 2002. They received so-called access fees from insurance companies of over $10 million. They received something called a quality control fee of almost $1 million from insurers.

AARP also earns investment income on premiums received for members until the premiums are forwarded to UnitedHealth Group and MetLife. In 2002, AARP earned $26.7 million in such investment income.

There is a total of $161.7 million in revenue from insurance just in 2002.

According to Advertising Age magazine, AARP and UnitedHealth Group hired a direct marketing agency in May to conduct a marketing campaign for their insurance product that could cost $100 million.

UnitedHealth Group stands to gain significant portions of the new Medicare Advantage market that would be created by this bill, given that it is currently participating in a Medicare PPO demonstration project in eight States.

AARP can make a lucrative business even more lucrative by continuing its partnership with UnitedHealth Group. Let's take a look at AARP's advertising.

Last year, AARP earned $76 million on advertising. Their magazine, formerly called Modern Maturity, and now called AARP, The Magazine, has the largest circulation of any magazine in the United States, going to 21.5 million households.

The latest issue has three full-page ads for brand-name drugs, and another for a Pfizer glaucoma kit. It contains four ads for AARP's various kinds of insurance.

Combine that with the four ads for insurance in the November AARP Bulletin, and that is a lot of insurance advertising. The September/October AARP magazine and the October bulletin have a combined 14 ads for insurance.

There is a direct linkage between AARP and the insurance industry and another industry that stands to profit from this so-called Medicare prescription drug bill. It is interesting, too, that when the members of AARP were recently asked in a nationwide poll what they thought of this prescription drug bill that is pending before Congress, the results were amazing. A poll that was released 2 days ago showed that 66 percent of AARP members were somewhat or very unfavorable to the level of prescription drug coverage which I have just described in this bill. Eighty percent of AARP members do not believe this bill does enough to encourage employers to maintain current retiree coverage. Sixty-eight percent of AARP's membership were somewhat or very unfavorable to the following statement: This provision is designed to increase the number of seniors receiving their Medicare coverage through private health plans like HMOs and PPOs by significantly increasing Government subsidies for these plans.

So I would just ask this: If AARP is spending all of this money on behalf of their membership to promote a proposal which two-thirds or more of the members of AARP at this point oppose, what is driving this? I think it goes back to the earlier explanation. AARP is not acting as an advocate for seniors. AARP is acting like an insurance company. AARP has forgotten their

mission. They have decided they have a new responsibility: They have to generate money from insurance companies.

Frankly, it is a sad situation because for many years AARP was respected across America for being a nonpartisan voice for seniors. Sadly, at this point in time they are not. As a result, there are very few who are standing up to speak for seniors and what they need.

When I take a look at this bill and what it does, it worries me that what started off as a prescription drug bill to help seniors has become so complicated that it is almost impossible to explain. It has gaps in coverage that will leave seniors without any help when they need it the most and instead is trying to dramatically privatize Medicare as we know it.

There are forces in Congress, primarily on the Republican side of the aisle, who want to privatize both Medicare and Social Security. That has been their goal. As a party, they never supported Medicare. Only a handful of Republicans voted for its creation. Over the years, they have made it clear where they stand. There was a time when former Speaker Gingrich and his assistant Richard Armey, who was a Congressman from Texas, said their goal was for Medicare to ''wither on the vine.'' That does not sound like a group that really is supportive of the program. Instead, it sounds like a group that will look for every opportunity to make sure that Medicare is not as good as it should be.

So ultimately what they are proposing is this: They are going to move Medicare from the program we know today, a Government-run program with low overhead and low administrative costs that serves all Americans universally, to a new model which will bring in HMO insurance companies to cover senior citizens.

Naturally, they are afraid the free market will not work. So they put in generous subsidies to these HMOs so that they will lure away seniors out of Medicare. Here is how this will work: An insurance company wants to insure the healthiest people it can find. Insurance companies do not go out and look for sick people. Insurance companies try, if they can, to exclude from coverage anybody who is going to be expensive. Understandable. If they reduce their risk and exposure, they increase their profitability. So these HMO companies, which are being designed to lure away seniors from Medicare, are going to not only achieve this by looking for the healthiest seniors, they get an added boost from our Republican friends, our free market advocates who argue that they need a subsidy on top of the—billions of dollars in subsidies to these HMOs.

What is wrong with this picture? If one believes in the free market, why in the world would they subsidize an HMO company: so they could take the healthy people out of Medicare? That is exactly what they want to do. What will happen to Medicare then? There will be fewer people in Medicare because these Government-subsidized HMOs will be creaming off and cherry-picking the healthiest people and those left in Medicare are going to be poorer and sicker.

The net result of that is obvious. At the end of any given year, there is going to be a more expensive per-claimant Medicare cost. There will be sicker people left in Medicare.

Those who are opposed to Medicare and behind this idea believe that will drive down the popularity of Medicare. They will be able to stand on the Senate floor and the House floor and say: See, we showed you; Medicare just is not going to work; look how expensive it is for every senior under Medicare.

So they will have achieved their dream and goal by reducing the coverage of Medicare and convincing Congress not to stand behind it.

That is the goal of those who took what was a prescription drug bill, as complicated as it is, and turned it into a bill to privatize Medicare. That is what we have coming before us in the next few hours, in the next few days.

I think, frankly, that when one looks at the HMOs across America, they find that they are doing pretty well. They are pretty profitable, just like these pharmaceutical companies. The average compensation of a chief executive of the 11 largest insurance companies currently serving Medicare was more than $15 million—average compensation, $15 million. The former chairman of Oxford Health Plan—and I mentioned it earlier—was paid $76 million in 2002. According to Weiss Ratings, an insurance rating agency, profits for 519 health insurance companies they evaluated jumped 77 percent from 2001 to 2002.

UnitedHealth Group reported a 35 percent increase. That is the group that is joined at the hip with AARP, and both of them are widely applauding this new idea to move seniors out of Medicare into these HMOs, to privatize Medicare and raise the premiums seniors would have to pay under Medicare. So when we look at this alliance, we can understand why we have now come to the heavyweight division of the prize fights at the close of the congressional session. That is exactly what we are facing.

We have a situation where two of the largest lobbies in this town, two of the biggest special interest groups, two of the best financed industries in America, pharmaceutical companies and HMO insurance companies, are anxious to see us pass a bill which means more profitability for them. Sadly, it will be at the expense of the same people we were really trying to help in the first place.

When it is all said and done, the seniors will not get a helping hand. Drug costs are going to go up. The program they are proposing is so complicated, it is impossible to explain, so it is understandable, and ultimately Medicare as we know it, a program which has served America well for over 40 years, is going to be phased out and privatized and HMOs will take over.

Some people believe—and I believe they think it passionately—that the free market is the answer to everything. I would say to them, take a look at what the free market is doing to health insurance in America today. The free market is at work. The free market is in the process of doing what we expect it to do, increasing profitability. Ask anybody in America about health insurance costs or ask any group why they are going on strike in America. Nine times out of 10 they will say it is because of health insurance coverage: The company we worked for will not pay for the coverage; there is less coverage, and, frankly, we had to go on strike.

It is the No. 1 reason for work stoppages and strikes across America. It is the biggest problem in my State when it comes to business complaints. Health insurance companies are using the free market exactly as they are supposed to. They are reducing their exposure and risk, and they are increasing the cost to the people who need help. As a result, we are finding fewer Americans with worse coverage, and those who have it have worse coverage every single year.

The Republicans believe that that is what we should do to Medicare: We ought to let the same HMO companies that are fleecing businesses and families across America get their grimy hands on Medicare recipients. Let them, with a Government subsidy, lure away the healthiest Medicare recipients and leave the sickest behind. Now, that is good for the companies. It is not good for Medicare, it is not good for seniors, and I believe it is not good for America.

We are in a situation where we have an important decision to make. Some people have said to me: How can you possibly go back to your State and explain that you voted against a prescription drug benefit for seniors? Well, I think those people do not understand the seniors I represent and most seniors across America. These are people wise with years. These are people who have heard a lot of political promises. These are folks who are skeptical when politicians say: I am going to give you the Sun and the Moon. They ask hard questions.

When the seniors across America ask hard questions about this prescription drug benefit, they are going to be sorely disappointed. Two-thirds of seniors already say what they have heard is not enough. They do not want any part

of it. That tells me that they are tuned in and following this debate. They want something that is basic, universal, and fair, something that does not come to them at the cost of things they value such as Medicare and Social Security.

Unfortunately, this program, which has been designed behind closed doors and is now being unveiled one corner at a time, is not going to meet the needs of seniors across America.

In the next few days, I am sure you will hear from my colleagues who are going to come and will explain in detail why this is a bad idea. I think we started off with the right goal, to help seniors pay for prescription drugs. Today, with this bill, we will have failed in meeting that goal. That is why I oppose it.

I yield the floor and suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. BYRD. Mr. President, I ask unanimous consent the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BYRD. Mr. President, I am under the impression that there will be a session of the Senate either tomorrow or on Monday or on Tuesday or on any number of those days. I am also under the impression that the Senate is rapidly, hopefully, approaching a sine die date for adjournment.

Being confronted with those expectations, I want to make a speech about Thanksgiving. I don't want it to appear in today's RECORD, necessarily, but I would ask for it to appear in the RECORD of the last day's session prior to Thanksgiving, whatever day that is.

I make such a unanimous consent request, that my speech not appear in today's RECORD but that it appear in the RECORD of the last day of the session prior to Thanksgiving.

The PRESIDING OFFICER. Without objection, it is so ordered.

(The remarks of Mr. BYRD are printed in a future edition of the RECORD.)

Mr. BYRD. Mr. President, I yield the floor. I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. COCHRAN. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. BURNS). Without objection, it is so ordered.

HEALTHY FORESTS RESTORATION ACT OF 2003—CONFERENCE REPORT

Mr. COCHRAN. Mr. President, I ask unanimous consent that the Senate now proceed to the consideration of the conference report to H.R. 1904, the Healthy Forests Restoration Act.

The PRESIDING OFFICER. Without objection, the report will be stated.

The legislative clerk read as follows:

The committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H.R. 1904) to improve the capacity of the Secretary of Agriculture and the Secretary of the Interior to plan and conduct hazardous fuels reduction projects on National Forest System lands and Bureau of Land Management lands aimed at protecting communities, watersheds, and certain other at-risk lands from catastrophic wildfire, to enhance efforts to protect watersheds and address threats to forest and rangeland health, including catastrophic wildfire, across the landscape, and for other purposes, having met, have agreed that the House recede from its disagreement to the amendment of the Senate to the text of the bill and agree to the same with an amendment, and the Senate agree to the same; that the House recede from its disagreement to the amendment of the Senate to the title of the bill and agree to the same, signed by a majority of the conferees on the part of both Houses.

There being no objection, the Senate proceeded to consider the conference report.

(The conference report is printed in the House proceedings of November 20, 2003.)

Mr. COCHRAN. Mr. President, I am pleased to present to the Senate the conference report on the Healthy Forests Restoration Act.

Senators may remember that this bill was passed by the Senate on October 30 by a vote of 80 to 14. It embodied a bipartisan agreement to improve forest health on both public and private lands. It provides Federal land managers the tools to implement scientifically supported management practices on Federal forests, in consultation with local communities. It also establishes new conservation programs to improve water quality and regenerate declining forests on private lands. The legislation will reduce the amount of time and expense required to conduct hazardous fuel projects.

The conference report retains provisions adopted by the Senate that will protect old growth forests. It improves the processes for administrative and judicial review of hazardous fuel projects. But it will continue to require rigorous but expedited environmental analysis of such projects.

The conference report specifically encourages collaboration between Federal agencies and local communities to treat hazardous fuels that threaten communities and their sensitive watersheds. It provides for expedited environmental analysis of hazardous fuel reduction projects adjacent to communities that are at risk to catastrophic wildfire. It requires spending at least 50 percent of Federal hazardous fuels reduction funds to protect communities.

It requires courts considering legal actions to stop a hazardous fuel reduction project to balance the environmental effects of undertaking the project against those of not carrying it out. And in carrying out hazardous fuel reduction projects in areas that may contain old growth forests, it requires Federal agencies to protect or restore these forests.

In other areas, it requires agencies to maintain older trees consistent with the objective of restoring fire resilient stands. It authorizes $720 million annually for hazardous fuels reduction activities. It provides grants for removal of hazardous fuels and other biomass to encourage their utilization for energy and other products. It provides for assistance to private land owners to protect and restore healthy watershed conditions.

It authorizes research projects designed to evaluate ways to treat forests to reduce their susceptibility to insects, diseases and fire. It also authorizes agreements and easements with private landowners to protect and enhance habitats for endangered and threatened species. And it encourages more effective monitoring and early warning programs for insect and disease outbreaks.

This conference report would not be possible without the active involvement of Senators on both sides of the aisle who worked hard together to develop this bill. I especially appreciate the able assistance of the distinguished Senator from Idaho, Mr. CRAPO, who chairs the Forestry Subcommittee of the Senate Agriculture Committee; the Energy Committee chairman, the distinguished Senator from New Mexico, Mr. DOMENICI, and his Forestry Subcommittee chair from Idaho, Mr. CRAIG, were also very helpful in guiding this legislation along its path passage.

The Agriculture Committee also had assistance of Senator LINCOLN of Arkansas and active involvement on her part in developing the bill, and we also had the benefit of suggestions and assistance from Senators WYDEN and FEINSTEIN who came to me early and asked to be a part of the effort to develop this bill. They were involved along with many others whose contributions were necessary to make the approval of this bill possible.

The Agriculture Committee also benefited from the assignment of an employee of the Forest Service, Doug MacCleery, who assisted our staff in the development of this legislation. We appreciate his assistance. And our committee staff did a superb job under the able direction of the Agriculture Committee staff director, Hunt Shipman.

Let's not forget, it was President Bush, the President of the United States, who recommended in the first place that Congress act on a healthy forest initiative. It was at his suggestion and his urgings that we pushed and pushed until we finally achieved

success, with the adoption today by the other body of the conference report, on this bill. I must also mention the able assistance of his Secretary of Agriculture, Ann Veneman, who provided valuable insight and assistance all along the way.

I urge the Senate approve this conference report.

The PRESIDING OFFICER. The Senator from Idaho.

Mr. CRAPO. Mr. President, this is truly a historic day. As the Presiding Officer knows, we have worked literally for a decade or more to try to find a path forward in the area of finding a solution to the problems we face in our national forests.

In recent years, we have seen an average of 4 million acres a year burn. We have seen devastating wildfires this year that have destroyed not only tremendous amounts of property and environment in our forests, but have also taken lives. We have seen insect infestations that have jeopardized the future of one of the most incredible environmental resources we have in America, our forests.

All of it has occurred while we have been battling in the courts, trying to find a path forward simply to allow our forest managers the ability to implement their forest management decisions, to deal with insect infestation, to deal with the threat of catastrophic wildfire, and to help preserve the great legacy we have in America, in our forests.

I stand today to thank those in our Senate conference who have worked with us to build and strengthen the bipartisan solution that has brought us to this point.

Sitting here beside me is the Senator from Mississippi, THAD COCHRAN, chairman of the Agriculture Committee. Without Senator COCHRAN's able leadership, without his patience and his wisdom in guiding us through this process, we would not be here today. I want to personally thank him. I thank him, as well, on behalf of a grateful Nation for the skill and the patience he has given us to help bring this bill forward.

Also, I thank Senator LARRY CRAIG, my colleague from Idaho, who has worked on this issue tirelessly for the better part of the last decade to try to help bring America to an understanding of the need for reform, and for helping us work through a bipartisan solution in the Senate. Senator CRAIG deserves great praise and commendation for his untiring work to help give us the possibility of being here today—just a short time away from successfully passing in both the House and the Senate this Healthy Forests legislation.

Also, Senator DOMENICI, chairman of the Energy Committee, has worked tirelessly on this issue and he deserves to be thanked for his tremendous efforts. Not many people follow it this closely, but there is forestry jurisdiction in both the Energy Committee and the Agriculture Committee. Senator COCHRAN chairs the Agriculture Committee, and Senator DOMENICI the Energy Committee. By coincidence, both of the Idaho Senators chair the respective subcommittees on forestry. Senator CRAIG chairs the subcommittee on forestry in the Energy Committee, and I chair the forestry subcommittee on the Agriculture Committee. Together, on the Republican side, we have developed a strong team to work in the Senate.

I also thank Senator BLANCHE LINCOLN, from Arkansas, for stepping forward as the ranking member on the forestry subcommittee and working with me to develop the senate bill that set the mark for improving this legislation and moving it through the Senate. We then expanded that bipartisan base and worked with Senators FEINSTEIN from California, WYDEN from Oregon, and others, including additional Republicans and Democrats, all of whom came together to bring a bipartisan solution to the Chamber.

It was not easy. There were many who wanted to use this issue to further their political efforts, to either cause further strife and conflict on the issue surrounding our forests or to simply promote some agenda that was not consistent with our efforts to move forward on a bipartisan basis to protect and preserve our forests.

We fought many battles over the last 2 or 3 months, and they were the resulting, concluding battles in a crescendo that has been developing over the last decade. When we were done, we needed to work with the House of Representatives. There was concern at that point. There was actually another filibuster to stop us from even going into conference with the House because there was concern that the bill would be changed too much in ways that would not allow us to find a common consensus-based path forward.

Yet we have gone on together, again, in that bipartisan fashion that we developed in the Senate to work in a bicameral fashion and bipartisan fashion with the House to come together with this legislation that is now before us.

As many of us said as we developed this legislation, it is not necessarily what any of us would have written had we had complete control over the issue. But it is the result of what can happen if we work across party lines, across the lines of the rotunda between the House and Senate, and across regional lines in our Nation, to try to make sure that we get past the politics, the partisanship, past the personal attacks, and focus on the principles that will allow us to move forward and develop positive legislation such as that.

I am confident this legislation will pass the Senate today. I am confident that when it goes to the President's desk, he will sign it. The United States will have taken a very big step forward in terms of preserving one of the great environmental legacies we have—our forests; we will have taken a step to protect and preserve our rural areas in America; we will have done much to protect our great firefighters, many of whom gave their lives this year, and in previous years, in trying to protect our forests and our communities; we will have put statutory protection in place for old-growth forests in our Nation; we will have worked to develop small-diameter timber and other uses of those parts of our forests that need thinning; we will have taken steps to make sure that rural communities such as Elk City, ID—literally at the end of the road—do not face the potential devastation a wildfire could cause not only to their economy but to their safety and the community at large; we will have protected the wildland urban interface, where so many of the people who now live in urban areas find their homes and lives and property threatened by the danger of uncontrolled wildfire.

All of these things will be brought together because we were successful today and, over the past few years, in bringing together the kind of politics that America wants, the kind of politics that is good and beneficial, that helps us to cross the divisions and eliminate those conflicts that so often bring us to a stalemate or a stall on the floor of the Senate or on the floor of the House.

Mr. President, again, I thank all Senators and all of the House Members who have done so much to look past their own individual concerns and to work together for the collective good of the whole as we built this strong bipartisan solution to a critical issue facing our Nation.

With that, I yield the floor.

Mr. DASCHLE. Mr. President, I am pleased to support the conference report on the Healthy Forest initiative.

The question of how we effectively and efficiently deal with the threat of wildfire is a complex one, and I have been committed to finding a solution that will provide the Forest Service with additional tools, can win approval in the Senate, and can become law. This bipartisan compromise meets that test.

As I toured the Black Hills National Forest this August, it was clear that the Forest Service needs additional tools to address the increasing fire risk to South Dakota communities. There are currently over 460,000 acres of the Black Hills National Forest that are in moderate to high fire risk. And, it is increasing. The Forest Service estimates that over 550,000 acres will fall into this category in the next 10 years if we do nothing to address it.

It is clear that we must find a way to allow Forest Service personnel to

spend less time in the office planning, and more time in the forest actually clearing high fuel loads.

This legislation takes major steps to do just that. The legislation provides communities more flexibility in defining what should be considered priority areas as well as incentives to work near communities. It clarifies how much detail is needed for environmental analysis of fuel reduction projects. The conference report adopts the Senate-passed streamlined appeals process, expediting decisions for fuel-reduction projects while ensuring that the public has an opportunity to be heard early in the developmental stages forest restoration projects. And, it includes Senate-passed language encouraging speedy disposition of any projects that are challenged in court without giving undue deference to any party.

While the legislation is not exactly how I would have written it, I think it is the best shot we have to get something meaningful enacted into law this year. I am please the House has passed this legislation and encourage my colleagues to pass it, and hope the President will quickly sign it into law.

Mr. BAUCUS. Mr. President, I rise to urge my colleagues to support the Healthy Forests Restoration Act of 2003. This bill is extremely important to the west and to my constituents as we look for ways to reduce the risk of large and dangerous wildfires that threaten our homes and communities. You just have to look at the devastating fire season Montana went through this past summer to understand why we feel so strongly about this issue.

I have said that a healthy forests bill must first allow Federal agencies and communities to address dangerous fuel loadings on a local level, quickly and efficiently. Second, it must support small, independent mills and put local people to work in the forests and the mills. Third, it must promote and protect citizen involvement and be fair to the principals underlying the federal judicial system. And finally, it must protect special and sensitive places.

We have achieved that with this legislation.

My one disappointment is that the conference committee stripped out the Rural Community Forestry Enterprise Program. I worked together with Senators CRAPO and LEAHY to include this program in the Senate bill, first in the Agriculture Committee and then as part of the Senate-passed bill.

The Rural Community Forestry Enterprise Program would bring much needed support for building and maintaining a thriving forest industry in rural communities.

Just as this industry is important to maintaining the economic vitality of these small and often remote communities, it is vital to meeting the objectives of this legislation. We cannot afford to lose more mills and highly skilled forest industry workers in Montana. We cannot accomplish needed hazardous fuel reduction work without them.

I would like to share with you concerns I heard today about the removal of the Community Enterprise Program from a friend, Jim Hurst, the owner and operator of a small family-owned mill called Owens and Hurst, in Eureka, Montana.

He said:

Small mill owners like myself and Ron Buentemeier, the General Manager of F.H. Stoltze Land and Lumber Company in Columbia Falls, told you we needed this type of help to make the Small Business Set-Aside program more responsive to the needs of small, independent and mostly family-owned mills across Montana. You responded with the Community Enterprise program.

This is an important program and should be put back into the Healthy Forests Bill. Independents have been under long-time family ownership and because of that my family and the other families who own mills know that we each have one heck of a responsibility to our communities. This Community Enterprise program would help the independents who have been impacted the hardest by reduced federal timber supply. They have shown their mettle and have been courageous. We need to keep fighting for small mill owners, operators and the rural communities who depend on these small mills for their livelihood.

While I will continue to work with my colleagues on both sides of the aisle to ensure a thriving forest industry in our rural communities, it is imperative to pass this legislation now. I believe we do have a serious problem with the buildup of hazardous forest fuels and that we need to do a better job of addressing it now.

The legislation has the elements necessary to allow local citizens and leaders to make wise decisions that address this problem efficiently and effectively and I urge my colleagues to support it. I would like to thank several Senators for their hard work on this bill, including Senators WYDEN, FEINSTEIN, CRAPO, LINCOLN and COCHRAN. Without their dedicated efforts and leadership that I was very pleased to support, we would not be the close to passing this bill today.

Ms. MURKOWSKI. Mr. President: I rise today in strong support of the conference report for the Healthy Forest Restoration Act of 2003.

I especially thank my colleagues—Senator COCHRAN, Senator DOMENICI, Senator CRAPO, Senator CRAIG, Senator LINCOLN, Senator WYDEN, and Senator FEINSTEIN for the leadership they demonstrated in addressing this national crisis that affects all Americans, particularly those who live in the urban-wildland interface.

The conference report is a major step forward toward preventing the severe wildland forest and rangeland fires that have become an annual event. What is more important is that the human tragedy associated with wildfires the heartbreak of losing one's home and possessions, the economic losses, and the dangers that wildfires pose to our devoted wildland firefighters will be reduced through the sound forest management practices provided for in this legislation.

The 2002 and 2003 fire seasons have been some of the worst on record nationally. Forest fires continue to create extensive problems for many Americans, predominantly for those living and working in the West. In 2002, Alaska alone experienced fires that burned more than one million acres.

These catastrophic wildfires caused great damage to our forested lands; many were already vulnerable as a result of unaddressed insect and disease damage.

Deteriorating forest and rangeland health now affects more than 190 million acres of public land, an area twice the size of California.

In my home State of Alaska, the damage caused by the spruce bark beetle, especially on the Kenai Peninsula has been devastating. Over 5 million acres of trees in south central and interior Alaska have been lost to insects over the last 10 years.

I am particularly enthusiastic that this legislation authorizes and expedites fuel reduction treatment on Federal land on which the existence of disease or insect infestation has occurred, such as those on the Kenai Peninsula. Federal land managers will now be able to manage these dead and dying tree stands.

The key to long-term forest management on the Kenai Peninsula is to manage the forested landscape for a variety of species compositions, structures and age classes; not simply unmanaged stands. The legislation before us will do just that, and will prevent a reoccurrence of the type of spruce bark beetle mortality we have experienced in Alaska.

I firmly believe that this conference report is a comprehensive plan focused on giving Federal land managers and their partners the tools they need to respond to a national forest health crisis. The legislation directs the timely implementation of scientifically supported management activities to protect the health and vibrancy of Federal forest ecosystems as well as the communities and private lands that surround them.

Under this legislation, the Secretaries of the Interior and Agriculture will conduct authorized hazardous fuel reduction projects in accordance with the National Environmental Policy Act with a critical, streamlined process.

Additionally, for those authorized fuel reduction projects proposed to be conducted in the wildland-urban interface, the Secretaries will be able to expedite such projects without the need

to analyze and describe more than the proposed agency action and one alternative action. In other words, we can now get the work on the ground done quickly.

Still, the Secretaries must continue to provide for public comment during the preparation of any environmental assessment or EIS for these authorized hazardous fuel reduction projects. The public process is not undermined in this legislation.

I also support the proposed new administrative review process associated with these authorized fuel reduction projects. Too often we have become mired in administrative appeal gridlock in this country at the expense of communities at risk to wildland fire. We saw such devastation recently in the State of California.

This legislation will establish a fair and balanced predecisional review process. Specific, written comments must be submitted during the scoping or public comment period.

Additionally, civil actions may be brought in Federal district court only if the person has exhausted his/her administrative review process. The legislation will foreclose venue-shopping.

It encourages the courts to weigh the environmental consequences of management inaction when the potential devastation from fires could occur. This provision is important public policy and demonstrates to the American people that the risk of catastrophic wildfire must be known, understood and respected in our judicial system and acted upon quickly.

I am also excited about title 2 of the legislation which will encourage the production of energy from biomass. Developing energy from biomass could provide a tremendous boost to the local economy on the Kenai Peninsula while reducing the dangerous wildland fire risks that exists there. That is a win-win solution. The biomass provision is innovative, environmentally sound and a good approach in achieving healthy forests.

The bipartisan legislation before us is good for the nation and good for Alaska. I will enthusiastically support its passage today.

Mrs. BOXER. Mr. President, southern California has recently experienced the devastating impacts of wildfire first-hand. More than 750,000 acres burned, and 24 people died. We have seen how important it is to take the appropriate steps to protect our vulnerable communities from the threat of wildfire, and that is why I am supporting this bill.

The bill before us invests in preventing wildfires, rather than just trying to fight them after the fact. Each year, $760 million is authorized for wildfire prevention projects, such as tree and brush removal, thinning, and prescribed burning. In total, the bill would allow treatment of 20 million acres. Priority is given to projects that protect communities and watersheds, and at least 50 percent of the funds must be used near at-risk communities. The other 50 percent will be spent on projects near municipal water supply systems and on lands infested with disease or insects. This is a good start at preventing fires.

I do, however, have to mention my deep disappointment with the House Republican conferees for removing my amendment to help firefighters who battle the biggest fires. I am almost speechless that the House Republicans would turn their backs on our brave firefighters.

My amendment, which passed the Senate 94 to 3, would have required long-term health monitoring of firefighters who fought fires in a Federal disaster area. These firefighters are exposed to several toxins known to be harmful to long-term health, including fine particulates, carbon monoxide, sulfur, formaldehyde, mercury, heavy metals, and benzene. This amendment was important to the firefighters in my State and was supported by the International Association of Firefighters.

I pledge to the firefighters, this is not over. I will be back to continue fighting on behalf of all firefighters who are put at risk in Federal disasters.

I am also disappointed that the conferees dropped another amendment of mine, which was included in the Senate-passed bill. My amendment required the EPA to provide each of its regional offices a mobile air pollution monitoring network, so that in the event of a catastrophe, toxic emissions could be monitored and the public could know the health risks.

Despite the fact that the conferees dropped my two amendments, I believe this bill will help protect communities from the threat of wildfires, which is why I am supporting it.

Mrs. FEINSTEIN. Mr. President, today's vote to pass the Healthy Forests legislation is a major bipartisan victory. This is not just because it is the first major forest bill in 27 years.

Much more significantly, we have nourished the middle ground in the forest debate that is so often lost in the partisan rhetoric.

We actually can create good rural jobs, protect our communities, and restore our forest environment at the same time.

Let me repeat this: we can create rural jobs, protect our communities, and take action to restore the health of our forests at the same time.

Ever since I cosponsored the Herger-Feinstein Quincy Library Group Act 5 years ago, I have been working to bring together the rural, forest-dependent communities—rather than unnecessarily dividing them.

This bill goes a long way to that end throughout the West and the Nation.

There are many people who deserve credit for this bill, but there are a few Senators in particular to whom I want to give special thanks. Senators PETE DOMENICI and LARRY CRAIG were the best bipartisan allies I could ever ask for in terms of how they approached this issue.

Even though they are in the majority, Senators DOMENICI and CRAIG realized that a forestry bill needed a bipartisan coalition. They worked in good faith with me and Senator WYDEN from start to finish, and I am deeply grateful for it.

I also want to thank Senator COCHRAN, the chairman of the conference on this bill, for his leadership throughout the process. Senator COCHRAN ably and skillfully represented the Senate position in the negotiations. I particularly want to emphasize that his staff conducted the conference in a fine and fair manner throughout, and it's a credit to his leadership.

There are many others Senators who played critical roles in this process, including Senators CRAPO, KYL, LINCOLN, MCCAIN, BAUCUS, and BINGAMAN.

I finally want to thank Senator WYDEN, the ranking member on the Forestry Subcommittee of the Energy Committee. He is as good a ranking member and as good a leader on forestry as the Democrats could ever have.

I also want to say that I second his views on the meaning of the different parts of the bill in his statement today. As the two principal Democratic negotiators of this bill, he and I are in complete accord as to the meaning of its contents.

This legislation H.R 1904, approved by a House-Senate conference committee today is very similar to a bill passed by the Senate last month, with priority given toward removing dead and dying trees and dangerously thick underbrush in areas nearest communities as well as targeting areas where insects have devastated forests. This is especially important in California, where hundreds of thousands of trees have been killed by the bark beetle, creating tinderbox conditions.

While the recent wildfires in Southern California have been contained, these deadly fires consumed a total of 738,158 acres, killed 23 people, and destroyed approximately 3,626 residences and 1,184 other structures. Clearly, we must do everything we can to avert such a catastrophe in the future. The National Forest Service estimates that 57 million acres of Federal land are at the highest risk of catastrophic fire, including 8.5 million in California, so it is critical that we protect our forests and nearby communities.

More than 57 million acres of Federal land at the highest risk of catastrophic fire, including 8.5 million in California. In the past 5 years alone, wildfires have raged through over 27 million acres, including nearly 3 million acres in California. It is critical that Congress acts

to protect our forests and nearby communities.

The House-Senate agreement both speeds up the process for reducing hazardous fuels and provides the first legal protection for old growth in our nation's history.

Let me describe what the legislation would do.

Critically, it would establish an expedited process so the Forest Service and the Department of the Interior can get to work on brush-clearing projects to minimize the risk of catastrophic wildfire.

Up to 20 million acres of lands near communities, municipal watersheds and other high-risk areas can be treated. This includes lands that have suffered from serious wind damage or insect epidemics, such as the bark beetle.

We made an important change to the bill's language in section 102(a)(4) in the conference report. In the Senate-passed bill, the insect and disease exception was related to infestations, whereas in the conference bill, the exception has been clarified to apply only where there is a presence of an epidemic of insects or disease. By its own terms, an insect or disease-related event of ''epidemic'' proportions is different from ''endemic'' insects and disease, which are present in a naturally functioning forest ecosystem.

Under the final bill, only epidemics are given special treatment. This is an important distinction.

A total of $760 million annually for hazardous fuel reduction is authorized by the legislation, a $340 million increase over current funding.

At least 50 percent of the funds would be used for fuels reduction near communities.

The legislation also requires that large, fire-resilient, old-growth trees be protected from logging immediately.

It mandates that forest plans that are more than 10 years old and most in need of updating must be updated with old growth protection consistent with the national standard within 2 to 3 years.

Without this provision in the amendment, we would likely have to wait a decade or more to see improved old-growth protection. And even then there would be no guarantee that this protection—against the threat of both logging and catastrophic fire—would be very strong.

In California, the amendment to the Sierra Nevada Framework that is currently in progress will have to comply with the new national standard for old-growth protection.

Let me explain how the agreement improves and shortens the administrative review process and makes it more collaborative and less confrontational. It is critical that the Forest Service can spend the scarce dollars in the federal budget in doing vital work on the ground, rather than being mired in endless paperwork.

The legislation fully preserves multiple opportunities for meaningful public involvement. People can attend a public meeting on every project, and they can submit comments during both the preparation of the environmental impact statement and during the administrative review process. I guarantee you the public will have a meaningful say in these projects.

The legislation changes the environmental review process so the Forest Service still considers the effects of the proposed project in detail, but can focus its analysis on the project proposal, one reasonable alternative that meets the project's goals and the alternative of not doing the project, instead of the 5–9 alternatives now often required.

In the highest priority areas within 1½ miles of communities, the Forest Service need only study the proposed action and not alternatives. There is no relaxation from current law, however, in how closely the Forest Service must study the environmental effects of the project it is proposing to undertake.

The legislation replaces the current Forest Service administrative appeals with an administrative review process that will occur after the Forest Service finishes its environmental review of a project, but before it reaches its decision. This new approach is similar to a process adopted by the Clinton administration in 2000 for review of forest plans and amendments to those plans. The process will be speedier and less confrontational than the current administrative appeal process.

Next I want to turn to judicial review. I want to emphasize that cases will be heard more quickly under the legislation and abuses of the process will be checked, but nothing alters citizens' opportunity for fair and thorough court review.

Parties can sue in Federal court only on issues raised in the administrative review process. This is a commonsense provision that allows agencies the opportunity to correct their own mistakes before everything gets litigated.

Lawsuits must be filed in the same jurisdiction as the proposed project.

Courts are encouraged to resolve the case as soon as possible.

Preliminary injunctions are limited to 60 days, although they can be extended if appropriate. This provision sends a signal to courts not to delay important brush-clearing projects indefinitely unless there really is a good reason to do so.

The court must weigh the environmental benefit of doing a given project against its environmental risks as it reviews the case.

In closing, I want to say that my colleagues and I have been trying to come to an agreement on a forest bill for several years. We finally broke through the deadlock.

I am deeply pleased that we are enacting this legislation to give the residents of southern California and elsewhere a better chance against the fires that will come next time.

SECTION 105(C)(3)(B)

Mrs. FEINSTEIN. I have a question for the Senator from Oregon as to the meaning of one specific provision of the conference report on the Healthy Forests Restoration Act of 2003. This provision is section 105(c)(3)(B), which sets forth an exception to the general requirement that parties must participate in the administrative review process before raising claims in Federal court. I don't understand the conference report and statement of the managers as doing anything to change the parties' preexisting obligations as to environmental review except as explicitly provided in the statute. Do you agree, as the ranking member on the Subcommittee on Public Lands and Forests of the Senate Committee on Energy and Natural Resources?

Mr. WYDEN. I have the same understanding of this matter as the Senator from California.

Mr. LEAHY. Mr. President, I will oppose the conference report on H.R. 1904, the so-called Healthy Forests Act. While I have several substantive concerns about this legislation, let me first speak about the process by which this legislation has come before the Senate.

As my colleagues know, there has been a significant and growing concern about the way the other side is operating conference committees. In fact this conference was delayed several weeks because the minority has continually been excluded from conferences.

However, in good faith, I, along with interested Members and their staffs, worked out an agreement on the first six titles of the bill. Coincidentally, there were only six titles in the House version of the bill. An agreement was reached on those first six titles, and while I still had serious concerns about the substance of the agreement, I did not object to the process moving forward. I did so because I was given commitments that we would work out an agreement between the House and Senate on the remaining three titles that were passed by the Senate.

But what happened next is absolutely astounding. One half hour before the conference committee was scheduled to meet, I was informed that the conference would only consider the first six titles of the bill, and that the remaining titles that were passed by the Senate were ''off the table.''

Yet another backroom deal was cut by the other side to exclude the minority from any real conference proceedings.

These were highly important provisions that were passed by the Senate. Of particular importance to me was the Rural Community Forestry Enterprise

Program, which I authored with Senators CRAPO and BAUCUS. In my State of Vermont we have a good deal of small-diameter trees for which we need help finding markets. This program would build on the existing expertise of the Forest Service by providing technical assistance, cooperative marketing and new product development to small timber-dependent communities. Whether it is producing furniture, pallets, or other creative new markets, this program would help small forest-dependent communities expand economically.

Back room deals summarily excluded this, and several other important initiatives in the Senate-passed bill, from consideration in the conference committee. That is why I declined to sign this conference report.

I will not vote for this conference report because this bill before us remains a well-camouflaged attempt to limit the right of the American people to know and to question what their Government is doing on the public's lands.

The bill before us is really a solution looking for a problem. So let's take a closer look at the ''solution'' on the table.

First, the bill would make it much more difficult for the public to have any oversight or say in what happens on public lands, undermining decades of progress in public inclusion. In this new and vague pre-decisional protest process, this bill expects the public to have intimate knowledge of aspects of the project early on, including aspects that the Forest Service might not have disclosed in its initial proposal.

The bill gives the Forest Service a real incentive to hide the ball or to withhold certain information about a project that might make it objectionable, such as endangered species habitat data, watershed analysis, or road-building information. If concerns are not raised about this possibly undisclosed information in the vaguely outlined ''predecisional'' process, the Forest Service can argue to the courts that no claims can be brought on these issues in the future when the agency, either through intent or negligence, withholds important information from the public.

Essentially, this provision penalizes citizens and rewards agency staff when the agency does not do its job in terms of basic investigation and information sharing regarding a project. This bill makes other significant changes to judicial review. It will force judges to reconsider preliminary injunctions every 60 days, whether or not circumstances warrant it.

In many ways, this provision could backfire on my colleagues' goal of expediting judicial review. It will force judges to engage in otherwise unnecessary proceedings, slowing their consideration of the very cases that proponents of H.R. 1904 want to fast track. Moreover, taking the courts' time to engage in this process will also divert scarce judicial resources away from other pending cases. It is also likely to encourage more lawsuits. Requiring that injunctions be renewed every 60 days, whether needed or not, gives lawyers another bite at the apple, something they often find hard to resist.

Instead of telling the courts when and how to conduct their business, we should instead be working to find a workable and effective approach to reducing wildfire risks.

This bill does not achieve that, but, with these provisions that minimize the public's input, it instead poses a real risk to the checks and balances that the American people and their independent judiciary now have on Government decisions affecting the public lands owned by the American people.

Sadly, this bill plays a bait-and-switch trick on communities threatened by wildfires. It is not fair to roll back environmental laws, public oversight, or judicial review under the guise of reacting toe devastating wildfires. It will do nothing to help or to prevent the kid of devastation that southern California recently faced. It is a special interest grab-bag shrouded behind a smokescreen.

We should be offering real help and real answers, instead of allowing fear to be used as a pretext for taking the public's voice out of decisions affecting the public's lands and for ceding more power to special interests.

Mr. COCHRAN. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. COCHRAN. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. COCHRAN. I understand we can proceed to adopt the conference report on a voice vote since there is no objection to that. First, I am happy to yield to the assistant majority leader.

Mr. MCCONNELL. Mr. President, I will not object. I simply came to the floor to congratulate the distinguished Senator from Mississippi and the Senator from Idaho for an extraordinary job on a very difficult subject on which they have worked for years. I commend them both so much for this very important piece of legislation.

The PRESIDING OFFICER. If there is no further debate, the question is on agreeing to the conference report.

The conference report was agreed to.

Mr. COCHRAN. Mr. President, I move to reconsider the vote.

Mr. CRAPO. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. COCHRAN. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. BAUCUS. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

MEDICARE PRESCRIPTION BENEFITS

Mr. BAUCUS. Mr. President, I would like to speak a few minutes about the upcoming Medicare conference report that will be before this body—I don't know when—maybe Sunday, Monday, Tuesday. Before I do so, I would like to thank and compliment many people who helped bring this legislation to this point. For many years, many of us in Congress have urged the passage of prescription drug benefits legislation for seniors. We have been close to passage many times in the last several years.

I remember last year, for example, about this time when Congress was close to adjournment. I called a meeting together in my office for one last chance—Senator KENNEDY, Senator SNOWE, myself, Senator HATCH, and other Senators who were vitally concerned about passing prescription drug legislation. We worked mightily. We worked very hard. At the very end, the talks collapsed. It didn't work, largely for political, partisan reasons, I might add, and we were not able to get a bill passed.

Here we are again. We are at the brink. We are on the verge. We are very close to getting prescription drug legislation passed. This time I very much hope that all of us—as Senators and House Members—put partisan differences aside and suspend judgment. That is, we should look at the legislation, look at the facts, and not listen to the rhetoric from various groups, to see what really makes sense.

There are a number of people I wish to thank at this time—the chairman of the committee, Senator CHUCK GRASSLEY, who has worked very hard; Senator BREAUX, also a member of the committee; Senator OLYMPIA SNOWE, a member of the committee.

In addition, Congressman BILL THOMAS, chairman of the Ways and Means Committee, has worked extremely diligently. The Speaker of the House, the majority leader of the House, TOM DELAY; the majority leader of the Senate, BILL FRIST—there are many people who have worked very hard. I thank them very much for their efforts and for their work.

One person I also wish to thank is Senator TED KENNEDY. Senator KENNEDY worked very hard to help us pass prescription drug legislation in the

Senate not too many weeks ago. He worked very hard. He worked with me. He worked with the minority leader. He worked with the majority leader. He worked with various Members of the Senate who were critical to passage of the bill.

I thank Senator KENNEDY for his yeoman's work to help pass prescription drug benefits legislation in the Senate. He also worked very hard to help get a conference report put together. He spent a good deal of time with the conferees, with myself, with the Senator from South Dakota, Mr. DASCHLE, the Senator from Tennessee, Mr. FRIST, and many other people trying to help get prescription drug legislation passed. I regret at this point that he and I have a different view of this bill. He believes there are certain flaws in this bill. I think this is a good bill and should be passed. Nevertheless, Senators should know that Senator TED KENNEDY has done a great job in helping move this legislation to the point it is today. Without his efforts, this bill would be flawed in many areas. He helped make this, in my judgment, quite a good bill.

Why should we pass prescription drug benefits legislation? I suppose the main reason is that times have changed so dramatically. In 1965, when Medicare was enacted—and it was enacted by a large vote margin—prescription drugs were not necessary. Most senior citizens were more concerned with doctors, office calls, and hospital visits for their medical concerns, rather than prescription drugs.

Look what has happened in the last 38 years since the Medicare Act passed. Prescription drugs and generic drugs are so vitally important today. They replace procedures. They help prevent the onset of disease. Often times, the medications people take tend to prevent, forestall, and delay all kinds of maladies. They are really important, much more important today and getting more important every day.

In addition, prescription drugs are becoming more expensive—much more expensive—and it is putting seniors in a bind. Many low-income seniors are in a real bind.

I worked at a pharmacy during one of my work days at home. I have worked at many different jobs in Montana. I show up at 8 o'clock in the morning with a sack lunch. I have worked in sawmills, I have waited tables. One day I was working in a pharmacy in Montana. I saw senior citizens walk up to the pharmacist in a quiet voice and ask how perhaps they could change their medication or what prescription should they cut back on because they couldn't afford to pay for them all.

Seniors couldn't afford to pay it. It was stunning, and it was sad. It was a revelation to me. You hear about it, but when you see it, it has a real effect. It happens. Many low-income seniors are having a very difficult time trying to make ends meet. Sometimes it is a tradeoff between buying prescription drugs, buying food, and paying the rent. It happens way too frequently, and it is just not right for our country, the United States of America, to let this happen.

This legislation does a good job in remedying this situation. First of all, it is $400 billion of prescription drug benefits for seniors spread out over 10 years—$400 billion. That is a lot of money, but we have a lot of seniors who have great needs.

Under this legislation, seniors will find they will not have to pay all the cost of the drug but, rather, 25 percent, and the rest will be picked up by Medicare, the Federal Government, through the mechanism that is designed in this bill. They will only pay a quarter. But if you are a low-income senior, you are in a much better position under this legislation.

One-third of United States seniors are classified as low-income. A full one-third are low-income. Under this bill, low-income citizens will find that 90 percent of their benefits are covered—90 percent. That means low-income people can get the prescription drugs they need and will not have to walk up to that pharmacist and, in a hushed, quiet tone, ask what tradeoff, what drugs that person should cut back on because he or she cannot afford them.

If you are a low-income senior—and one-third of Americans are low-income. In my State, that is about 46,000 seniors who will be affected; there are about 46,000 seniors in the State of Montana who are low-income, out of about 140,000 seniors statewide. The general rule for all seniors is 75 percent of your prescription drug costs; if you are low-income, 90 percent of your prescription drugs will be paid for.

This is good legislation. We are here at a time when people in our country are asking us, Should we help our seniors or should we not?

Let me mention a couple additional reasons why I support this bill.

First of all, it helps rural America. Mr. President, there is an extra $25 billion in this bill for rural health care. The $400 billion I mentioned earlier all goes to benefits for seniors, either directly or indirectly. But $25 billion extra goes for providers and $25 billion is for rural America.

Why is that so important? It is so important because of the cost and the strain of the practice of medicine in rural America. We run the risk of not having good, adequate health care in rural parts of our country. We have all talked to many doctors and nurses who practice in rural parts of our country. They talk about the hours. They want to serve their patients. Believe me, they want to serve their patients, but after a while there comes a time when they are just worn out.

In rural parts of America, there are often pathologists—or pulmonologists or other specialists—who have to be on call all the time or on call every second or third day. Why? Because there are fewer of them in rural America than in urban America. The costs, believe it or not, are also very high in rural America—in many cases higher than in cities. There are the transportation costs, the cost of distances, the travel costs, for patients, doctors, and suppliers.

Our State of Montana is a low-income State, unfortunately. Our per capita income in Montana is low, but we are in the middle of all the States when it comes to cost of living. We are about the bottom when it comes to family income, but we are in the middle when it comes to costs. It is because we are a rural State, and this is true for rural parts of all States.

This bill finally helps address the unlevel playing field that has existed between urban and rural America. Now rural America, finally after many years, gets its fair share.

When I first came to the Senate years ago, I realized just how hard it was for rural America to get a square deal, particularly in health care. It was stunning. Every year since I have been here, I have been working to try to get rural America a square deal compared with urban America. I was part of an organization—and I still am—called the Rural Medicare Caucus. In fact, I chaired it for a few years. Every year I am here, I have—as I know my good friend from Montana, the Presiding Officer has—worked to help to make sure that rural parts of the country are getting a fair deal. This is not rhetoric. This is real. After all of these years, finally rural America gets a fair deal.

I also support this legislation and strongly advocate for its passage because it makes sure that senior citizens, wherever they live in our country, get a universal Medicare prescription drug benefit. Now, this certainly is true in the first years after this legislation is effective, but it is also true in the future. It is also true when preferred provider organization plans are designed to come into effect. It is also true in the year 2010 when in six regions of the country, there may be demonstration projects selected to test a new system called premium support.

In all respects, all seniors in all parts of the country, in all years, will have access to the same prescription drug benefit as any other senior, in any other part of the country, in any other year. This bill does not undermine traditional Medicare fee-for-service. The drug benefit is universal and nationwide in all respects. The bill does not undermine traditional Medicare—that is, Part A and B—during the years in which it is in effect. In a few moments I will return to this and will explain in greater detail.

This bill also very much helps address an issue that is on the minds of a lot of Senators—retiree coverage. When the bill was debated in the Senate, the prediction was that companies, States, municipalities, and nonprofit organizations might drop their retiree coverage because the bill, when passed, would provide government drug benefits to seniors. The thinking was why should companies not just go ahead and drop their retiree coverage.

Well, when the Senate took up this legislation, the CBO, which is the organization we rely upon for estimates, said that the drop rate might be about 37 percent. Since then, they have revised their numbers and they have come up with other figures. In short, if one compares apples with apples, the conference report that will soon be before this body results in a retiree droppage rate that is about 50 percent less than the bill that passed this body by a vote of 76 to 21. Maybe it is 45 percent. Stop and think about that for a moment.

For Senators who voted for the Senate bill, they can be comforted and relieved that retiree droppage rate is estimated by CBO to be about half of what it was in the Senate bill.

Let's focus a little bit on the retiree provisions. Essentially, companies receive about $88 billion under this bill for their retiree benefits. The net effect is that it will discourage companies from dropping—not encourage droppage. We all are very concerned that companies across America are beginning to cut back, and have cut back, on the number of retirees who have health care benefits or on the nature of the benefits. It is happening in America. It is happening in America as the world becomes even more competitive with global competition and as companies strive to cut down on their costs to increase their profit margins. One of the ways they can do so is cut back on employee and retiree benefits. This is happening. We know it is happening.

This legislation tends to discourage companies from cutting back. It tends to help companies keep coverage. It discourages dropping retiree coverage—it does not accelerate it. Again, it is because of the additional dollars that are going to companies. The companies still get the tax deduction for their health benefit plans. That is unchanged. In addition, under this legislation, the payments to the companies for retiree coverage are tax free. One could even say perhaps there is a little double-dipping because the assistance is tax free. This is a tremendous additional financial benefit to companies, to nonprofits, to cities, and other plans to encourage them to keep their coverage. It is a bonus. It is an incentive. This is another reason passage of this legislation is important—because it helps companies keep their retiree health plans. As a result, employers will tend less to drop retiree coverage. They will probably tend to maintain and increase it.

There is also a myth about this bill that is there is a coverage gap on prescription drug coverage that will leave seniors out in the cold. Well, the truth about this so-called donut hole gap is the majority of seniors will never reach the spending level where they would not have coverage. Even more important, seniors who are low-income get full coverage in the benefit gap.

Of course, we wish we had more money to give a complete benefit to everyone without any donut hole, but we do not have an infinite number of dollars. We only have $400 billion. It sounds like a lot, and it is a lot, but if we are going to give a universal drug benefit to seniors that is honest, that makes sense, that does something, not over the top but that makes sense for all seniors, it would cost a lot more than $400 billion. We have limited ourselves to $400 billion, and at $400 billion there are going to be some people who will not get quite the same benefit as other people, but they will all get the benefit.

I might add that if we looked at each State, the number of seniors who have coverage for prescription drugs varies. In some States it is very high. In some States it is low. Compare that with the passage of this bill, every State gets about 96.6 percent. That is virtually 100-percent coverage. That is a big improvement.

Let's take the State of Delaware, for example. I know the Senators from Delaware know their State a lot better than I. Today, about 27 percent of seniors in Delaware have no drug coverage. Only 3.4 percent will be without coverage once this bill is enacted. Let me restate this positively; 27 percent of seniors in Delaware today do not have drug coverage. When this bill passes, virtually every Delawarean will have drug coverage.

The same is true of the State of California. Now about 21 percent of California's seniors and disabled live without prescription drug benefits. This bill will reduce this number to 5 percent. Again, most seniors, in California and in every other State, would benefit as a consequence of this legislation.

I would like to address some concerns others have raised regarding this bill. The concerns are that this legislation undermines traditional fee-for-service Medicare—that this is the beginning of undermining Medicare, the camel's nose under the tent. This is the charge.

What are the facts? The bottom line: Fee-for-service Medicare, traditional fee-for-service Medicare as we know it today, is held harmless under this bill. This is the bottom line. So if you are a senior in the United States of America you can decide that you want to keep traditional Medicare and that you do not want to join a private plan—any of the plans that may or may not exist in the future. That is, it is voluntary. A senior can either join or not join. It depends on what he or she wants to do. It is an honest choice because fee-for-service traditional Medicare remain what it is today. It is held harmless. That is, the deductible doesn't change, the copay doesn't change, the benefits don't change. What exists today is what exists under this legislation. I hope Senators listen to that. I hope staffs of Senators listen to that. I hope the others who are listening, who are concerned about the bill, listen to that.

Let me explain this in greater detail. The bill finally provides a prescription drug benefit for senior citizens. We have had this opportunity many times in the past. We now have the chance to seize this opportunity. The bill also makes some changes in the general Medicare structure in terms of setting up some health care plans in the future, assuming the plans actually take shape, form, and come into existence. They don't exist today. I am referring to regional PPOs; that is, regional preferred provider organizations. They don't exist today. There are other managed care companies called HMOs in many cities. They exist in the cities primarily because they can cherry-pick counties. They can pick the counties in which they want to provide service, and if they do not want to pick one county because it is less profitable, they do not have to. If they want to serve another county because it is more profitable for them, they do. This is the way HMOs operate today. This is the system today.

This legislation says, beginning in the year 2006, our country will be divided up into various regions. Insurance companies will be allowed to offer Medicare services, including drugs, in any of the regions. The question remains, What about traditional fee-for-service? What happens to traditional fee-for-service in an area where a company sets up a plan? What if one wants to remain in traditional Medicare? The answer is, fee-for-service is held harmless. There is no change in fee-for-service.

If regional PPOs serve a region, it has to serve the entire region. It can't choose this part of this State and that part of that State. It has to serve the entire region—people in the cities, people in the rural parts of that region. Everybody has to get the same deal.

The senior living in one of these regions has a choice. The senior can stay in traditional fee-for-service Medicare or can join the plan. But fee-for-service Medicare is held harmless. There is no change to traditional Medicare.

Obviously, this does not undermine traditional Medicare as we know it. This bill builds up and strengthens Medicare. There are additional dollars here for hospitals, for doctors, for providers who will provide traditional

Medicare. So this bill does not in any way undermine traditional fee for service. In fact, Medicare is held harmless under this legislation.

Some people say: That's OK, Max, we understand that, but what we are really concerned about is the so-called premium support demonstration areas. Their argument is, in those areas, traditional fee-for-service is undermined. Private plans will pull away seniors, and it will be unfair to seniors who remain in Medicare. It is the beginning of the demise of traditional fee-for-service Medicare, they argue.

That is not true. It is nonsense. Look at the facts. Look at what is in the legislation.

Let me just remind Senators that this legislation is now available for Senators to look at. Thank goodness, because when they look at it, they are going to see what is and is not included. I just ask Senators to trust me long enough to suspend judgment on it so they can go look at the legislation and make up their own minds. That is what the Senators are supposed to do—make up their own minds. I am urging Senators to suspend judgment for a little while, listen to what I am saying, because I think when they do look at the legislation, they will see that what I am saying is true. But you do not have to take it on my account. Just please do not make up your minds until you read what is actually in the legislation. You will see, even in the supposed premium support demos, and there might be up to six cities in the country, that fee-for-service Medicare is held harmless. There is no change in fee-for-service in any respect, deductibles and on—except for one. That one possible change is the Part B premium.

However, this legislation ensures that seniors who happen to live in one of the six demonstration areas can keep the same fee-for-service Medicare. If it happens that your Part B premium goes up as a result of the demonstration—it may or may not go up—but if it does, the legislation says there can be no more than a 5 percent increase on your Part B premium. This is the only possible way a senior citizen could be adversely affected in these demonstration projects.

Another point regarding these demonstrations. I have heard various figures that the demos are going to affect 10 million fee-for-service beneficiaries. We have all heard the 10 million figure. It is what some Senators suggest.

It is not true; it is untrue.

How many seniors might possibly be affected? Let's get an unbiased, objective opinion.

We asked the CBO, the Congressional Budget Office: Mr. CBO, what is the answer? How many seniors may potentially be in an area where they would be faced with a choice, stay in fee-for-service Medicare or join one of these premium support organizations? How many could be adversely affected? The answer is not 10 million. CBO says: We think it is between 670,000 and 1 million. 10 million is the figure of scare rhetoric. The actual facts are 670,000 to 1 million.

There are many other instances where there is a lot of rhetoric floating around. But if you look at the facts, if you read the legislation that is now available, you will find it is really good legislation and all these worries and exaggerated claims about the bill are just not true.

I have a couple of additional points regarding premium support. It is a time-limited demonstration. It exists only for 6 years, starting in 2010. It would take an act of Congress to change it, an act to expand it. It cannot be extended or expanded by the Secretary or anybody else.

Fact No. 2, the demonstration will only affect limited areas of the country—up to six areas of the country only.

Fact No. 3, low-income beneficiaries are totally protected in any of these areas where premium support might occur.

Facts No. 4 and No. 5. There is no requirement for beneficiaries to enroll in the private plans. None. There is no inducement to enroll in any of these plans unless the plan happens to be a lot better than traditional fee-for-service Medicare which this bill strengthens.

How does this bill undermine traditional fee-for-service Medicare? How?

The fact is, it doesn't.

I will close by saying this is a good bill. It provides prescription drug benefits for seniors. Seniors need and deserve this help. It provides $400 billion of help. We are not going to have this opportunity again. It is true that this bill is not perfect. But I think on the whole it is a very good. This bill is much closer to the Senate bill than it is to the House bill. It is about one-quarter away from the Senate bill. It is about three-quarters away from the House bill. Seventy-six Senators voted for the Senate bill. I think that the 76 Senators who voted for the Senate bill will find that in many respects, this bill is better than the Senate bill they supported. Additionally, when my colleagues look at the facts of this bill, they are going to find that this is pretty good legislation. It is something we should pass.

I hope people will look at the actual language and look at the facts and will support this bill.

The PRESIDING OFFICER (Mr. Cornyn). The Senator from Idaho.

Mr. CRAIG. Mr. President, I will be brief. My colleague from Oregon and I wish to mention only briefly the health bill which was passed.

MORNING BUSINESS

Mr. CRAIG. Mr. President, the leadership asked that I ask unanimous consent that there now be a period of morning business, with Senators permitted to speak for up to 10 minutes each.

The PRESIDING OFFICER. Without objection, it is so ordered.

THE HEALTHY FORESTS BILL

Mr. CRAIG. Mr. President, my colleague from Oregon is on the Senate floor. We thought for a few moments we would talk about something that just passed the Senate which we think is landmark forestry legislation. It has come in several forms over the last year and a half. But we here in the Senate call it Healthy Forests. The President calls it Healthy Forests.

The House and Senate have worked together over the last year to try to resolve an issue that the American public has seen in the form of devastating wildfires across our public land and forests for the last several years. Of course, we watched the tragedy of San Bernadino in southern California and the greater Los Angeles area just in the last month and a half that was truly devastating not only to 3,700 homes and human life but hundreds of thousands of acres of wildlife habitat and watershed.

Clearly, as chairman of the Forestry Subcommittee of the Energy and Natural Resources Committee, Senator WYDEN and I have been working for the last several years to resolve this issue. My colleague from Oregon is the ranking member of that Forestry Subcommittee. We have known that the team effort in a bipartisan way to resolve this issue would produce a resolution. The answer is that it has.

The Senate and the House just passed a conference report that has our fingerprints all over it. Frankly, we are mighty proud of it. It moves us in the right direction of active management of these dead and dying, bug-infested, and drought-impacted forested areas that are creating phenomenal fuel loads that the American public has seen played out in wildfires across our western public land and forests for the last good number of years. It is a clear step in the right direction. It is a cautious step. We certainly do not take away the right of appeal, but we limit it.

We don't want an effort on the part of the Forest Service to do what we asked them to do to be tied up in the courts endlessly in many instances as it has been over the last several years. We also want them to be selective. We targeted most of our efforts in what we call the wildland- urban interface which will impact most of those forested areas where there is a substantial human presence in the form of homes and, obviously, communities.

At the same time, we also recognize that the problem exists elsewhere across our forested landscape. We allow that treatment of those areas with caution.

We have designated old growth definitions for protection. We have also limited it in the next decade to 20 million acres. For those critics who would suggest that this is a ''ticket to log,'' that is purely political rhetoric to solve a political constituency problem that they have because they can't justify anymore the phenomenal loss of wildlife and watershed and habitat that we have seen over the last 4 or 5 years.

It is a cautious approach. It is certainly going to be limited in character. Why? Because we want to prove to the American people that there is a way to manage our forests in a right and reasonable fashion; that it does not do what we did historically 40 years ago—logged by clear-cut or logged with substantial problems of erosion and watershed degradation and all of that.

This is a new day. We want to treat our forests differently. But we also understand that if we don't do something, our forestry experts have told us that we could see devastating wildfires for decades to come that will destroy the watershed, the wildlife habitat, and release huge amounts of carbon into the atmosphere; and, oh, yes, by the way, destroy a very valuable resource in the form of timber that might in some areas be allowed for logging or for reasonable approaches of commercial value of the thinning and cleaning.

All of that said, we have worked hard to produce a bill. My colleague from Oregon is on the Senate floor. I will yield to him for any comments he would want to make. We have other colleagues here who I think are going to address the issue of prescription drugs and Medicare reform.

But today is an important day in the Senate in the area of forestry and forest and public land management. I am proud of the work we have done.

I yield the floor.

The PRESIDING OFFICER. The Senator from Oregon.

Mr. WYDEN. Mr. President, before he leaves the floor, I want to commend Senator CRAIG. He and I have been working with Senator FEINSTEIN in particular on this legislation in the Energy and Natural Resources Committee. We have really been a triumvirate with respect to this issue.

I am so pleased to have a chance to be on the Senate floor today to speak on this conference report. This is the first forest management bill to pass both Houses in the U.S. Congress in 27 years. The fact is, the forestry legislation that is now on its way to the President of the United States will protect our communities. It will offer the first legal protection for old-growth trees, and it will create jobs.

As the distinguished Senator from Idaho, Mr. CRAIG, just noted, this legislation came together because at every stage of the process Senators said we want to get beyond the old rhetoric. We want to get beyond the polarization that has dominated this issue in the past, and we want to, in particular, take meaningful action to protect our communities.

That is what this legislation has been all about. The fires in the West, as the Senator from Idaho has known through his field hearings and other such sectors, have literally be infernos. We just felt it was critical to take steps to ensure that the rural West wouldn't be sacrificed.

I am proud today to rise in support of the conference report on H.R. 1904. This conference report is based upon the Senate-based wildfire bill compromise brokered by Senators FEINSTEIN, CRAIG, COCHRAN, DOMENICI and myself passed by the Senate on October 30. With the good faith efforts of Representatives POMBO, GOODLATTE, and my friend and colleague from Oregon, Representative WALDEN, this conference report has made only minor changes to the Senate approved version. This legislation will get us back on track restoring forests, protecting the environment, and putting people back to work in rural communities.

This conference report is the first forest management bill to pass both houses of the United States Congress in 27 years. The last time Congress was able to send a forest management bill to the President of the United States, the President was Gerald Ford and it was the Nation's bicentennial. The bill was the National Forest Management Act of 1976.

The world has changed a lot in the last 27 years. Forest management and forest-related economies have changed dramatically. Americans have grown more interested in protecting the environment while using natural resources to support rural communities like those in my home state of Oregon. The conference report we passed today reflects some of those changes: it contains the first ever statutory recognition and meaningful protection of old growth forests and large trees, while streamlining a National Environmental Policy Act process that has seemed to favor paperwork over forest health.

This conference report will streamline restorative forestry in forests at risk of unnaturally catastrophic fires resulting from 100 years of fire suppression. It provides the authorities and guidelines for the Forest Service and Bureau of Land Management to treat unhealthy forests while preserving public input and protecting old growth it's a truly balanced approach to forest health.

There were times when I was not sure this day would come. After the Senate passed our version of H.R. 1904 on October 30, 2003, there was doubt and disagreement on how to proceed with the House of Representatives. As a solution to the gridlock threatening the final passage of wildfire legislation, Senator FEINSTEIN and I proposed informal meetings. The staffs of the two Houses reached the agreement on Title I, the forest health title, through these informal meetings that allowed for a formal conference on all the rest of the Titles. That conference was held Thursday, November 20. I lost a couple of provisions for Oregon that I cared deeply about. But, I am overall pleased that the forest health provisions worked out so diligently by both Houses were preserved intact.

The Senate said there were four features that were particularly important to us to maintain in the legislation.

First, we said we have to have the funding to do the job right. We are not going to get this work done without funding to get this work done on the ground. I am very pleased with the conference report in that it keeps that funding intact. I am very pleased that the conference report will authorize $760 million annually for the projects, a $340 million increase over current funding. It also ensures that we spend the money in the right place. That is in the area known as the wildland/urban interface. The Senate took one approach, the House had other ideas. With some very minor tweaking, this, too, was preserved in terms of the work done by the Senate.

On the old-growth part of the legislation, I am especially pleased because all Americans value these unique treasures, our very large old-growth trees. Professor Jerry Franklin of the University of Washington is considered the leading authority on this subject. He says our provisions with respect to old growth are a major step forward. I am particularly pleased and honored to have Dr. Franklin's comments on this. He is the authority, as Chairman CRAIG knows, on this subject. For those who have followed the environmental aspects of the forestry legislation, let the word go out that Professor Jerry Franklin from the University of Washington, one of the most distinguished scholars in this field—not just now but at any time—believes this is a significant step forward in terms of environmental protection.

We were able to protect the public involvement aspect of forestry policy. Citizens all across this country—whether in Senator DODD's part of the world in Connecticut or any other part of the country—feel passionately about their natural resources and want to be involved in the debate over this process. As Senator CRAIG has noted, we have streamlined the process but we have preserved every single opportunity for the public to comment. Every opportunity that exists today, for the public to comment on forestry

legislation, has been preserved in this bipartisan compromise.

Finally, the Senate conferees did very well at defending the Senate compromise. The Senate kept the number one issue the environmental community was concerned about off the table and preserved the Senate compromise position on judicial process. In negotiating this bill, I did not accept the notion that any special deference beyond the deference that is ordinarily due should be given to any agency determinations under the Act, except where explicitly provided in the statute's text. In fact, the conference report expressly rejected the House bill's language giving special deference to agency determinations.

This section, section 106 of Title I, limits venue for these hazardous fuels reduction cases exclusively to the district court for the district in which the federal land to be treated is located. It also encourages expedited review of jurisdictional and substantive issues leading to resolution of cases as soon as practicable. In addition, this section limits the duration of any injunctions and stays pending appeal to 60 days and provides an opportunity to renew an injunction and stay pending appeal. It also requires the parties to the action to present updated information regarding the status of the authorized hazardous fuel reduction project in connection with such injunction and stay renewals. This last provision is intended to provide an incentive and opportunity for the parties to the complaint to work together to resolve their differences or explain to the judge why that is not possible over time.

This section also directs the courts to balance the impact to the ecosystem likely affected by the project of the short- and long-term effects of undertaking the agency action, against the short- and long-term effects of not undertaking the agency action. There can be environmental risks associated with both management action and inaction. America is acutely aware that the past few fire seasons have been among the worst in modern history in terms of effects on natural resources, people and private property. Air pollution problems are rising and wildland fires have forced thousands to evacuate. In 2002 in one state alone, Colorado, 77,000 residents were evacuated for periods of a few days to several weeks. Seventeen thousand people in Oregon's Illinois Valley were on half-hour evacuation notice the same year. In 2002, millions of dollars of property damage included the destruction of over 2300 homes and other buildings. It is becoming increasingly evident that while one cannot uncut a tree, similarly one cannot unburn a forest. In hazardous fuel reduction projects it is important to focus on the removal of the right vegetation to modify fire behavior—primarily surface and ladder fuels.

At the same time, there can also be adverse environmental consequences of hazardous fuel reduction projects, including but not limited to loss of wildlife habitat, increased sedimentation in streams, soil compaction, and fragmenting of unroaded areas. As documented by the General Accounting Office, poorly designed vegetation treatments in the past have contributed to increased fire risk by removing the large and fire resistant trees, while leaving highly flammable smaller trees behind.

This Act is intended to foster prompt and sound decision making rather than perfectly executed procedures and documentation. Environmental analyses should concentrate on issues that are essential to the proposed projects rather than on amassing needless detail. Section 106 is intended to reinforce Congress's desire that the totality of circumstances be assessed by the courts to assure that public interest in the environmental health of our forests will be served.

Let me be more specific about a few of the other provisions of this legislation. The Senate also prevailed in keeping the Senate funding requirements and levels, preserving the Senate NEPA language on at-risk lands outside the wildland urban interface; preserving the Senate old growth and large tree protections, and preserving the Senate administrative appeals process.

The legislation changes the environmental review process so the Forest Service still considers the effects of the proposed project in detail, but can focus its analysis on the project proposal, one reasonable alternative that meets the project's goals and the alternative of not doing the project, instead of the 5–9 alternatives now often required. In the highest priority areas within one mile and a half of communities, the Forest Service need only study the proposed action and no alternatives. There is no relaxation from current law in any areas, however, in how closely the Forest Service must study the environmental effects of the project it is proposing to undertake.

The changes that were made to the Senate compromise on H.R. 1904 include more relief and respect for rural forested communities. This conference report allows a single action alternative to be analyzed under the National Environmental Policy Act inside the wildland urban interface defined as 1.5 miles from the community boundary. Within the area identified for protection as the wildland urban interface under a community fire plan, the agency is not required to analyze the ''no action'' alternative under NEPA, but is required to analyze two action alternatives. This conference report also limits the treatment of diseased forests to those with epidemics, whereas the Senate compromise allowed the treatment of forests with only an infestation of bugs.

This conference report preserves all current opportunities for public input and appeal, while streamlining the appeals process and eliminating some of its worst abuses. Not one current opportunity for public comment would be lost under the compromise. The compromise will require the Forest Service to rewrite their appeals process using the pre-decisional appeals and comment process that has been used by the Bureau of Land Management since 1984. It works by encouraging the public to engage in a collaborative process with the agency to improve projects before final decisions have been rendered upon them by the agency. This model places a premium on constructive public input and collaboration, and less emphasis on the litigation and confrontation of the post-decisional appeals process currently used by the Forest Service. The compromise is designed to move from the current model of confrontation, litigation and delay to one which places a premium on constructive, good faith public input. Whereas in the past, parties could ''sandbag'' the appeals process by not raising salient points in hopes of later derailing the entire proposed action in the courts, parties would not be allowed to litigate on issues they had failed to raise in the comment or appeal period unless those issues or critical information concerning them arose after the close of the appeals process—as a result of the revised agency decision.

This conference report provides the first-ever statutory recognition and meaningful protection of old growth forests. Never before has Congress recognized by statute the importance of maintaining old growth stands. Under the compromise, the Forest Service must protect these trees by preventing the agency from logging the most fire-resilient trees under the guise of fuels reduction under these new authorities.

The issue of old growth continues to be the subject of considerable scientific inquiry and debate. What is not subject to debate is the special character and ecological value of old growth. Clearly, it is the intent of Congress that in interpreting the provisions of section 102(e), federal agencies affirmatively recognize the special importance of old growth forests while maintaining the deference they are due unless their determinations are arbitrary, capricious or an abuse of discretion.

This legislation is designed to address past mismanagement of federal forests, and to protect old-growth so that we don't repeat the mistakes of the past. The majority of old-growth stands are healthy, and don't require management. In some old-growth stands in the drier parts of the west, where natural fire regimes have been disrupted by a century of fire suppression, silviculture with a minimum of

disturbance can be appropriate that will restore natural forest structure and fire regimes.

Where old growth stands are healthy, as they are throughout much of the forest on the west side of the Cascade Ridge in Oregon, the compromise requires that they be ''fully maintained.'' Section 102(e) of the conference addresses the treatment by the Forest Service and Bureau of Land Management of old growth stands that may occur on authorized hazardous fuels treatment projects. Since recently issued resource management plans of the two agencies are supposed to provide guidance on the treatment of old growth Section 102(e) directs the agencies to rely on the old growth definitions contained in resource management plans that were established in the ten-year period prior to the enactment of the legislation.

Older plans must be reviewed, and if necessary, revised and updated, to take into account relevant information that was not considered in developing the existing definitions or other direction relating to old growth. Any revision or update must meet the requirements of subsection 102(e)(2), which requires the Secretary, in carrying out authorized hazardous fuels treatment projects, to fully maintain, or contribute toward the restoration of, the structure and composition of structurally complex old growth stands according to the pre-fire suppression old growth conditions characteristic of the forest type, taking into account the contribution of the stand to landscape fire adaptation and watershed health, and retaining the large trees contributing to old growth structure. Nothing in the bill is intended to prohibit or restrict establishing other standards for old growth stands where purposes other than hazardous fuel management are being pursued under other authorities.

The intent of section 102(e)(4) is to avoid disrupting resource management plan revisions that are already underway. Comprehensive revision of older resource management plans may be preferable to separate amendments or updates for old growth standards, and the bill allows additional time for operating under older plans where revisions are in progress.

In negotiating this bill, I did not agree to the imposition of any more restrictive standards than the ''substantial supporting evidence'' explicitly set forth in the statute for members of the public's identification of old growth stands during scoping in subsection 102(e)(4)(C).

The compromise makes it less likely that old growth will be harvested under current law by mandating the retention of large trees and focusing the hazardous fuels reduction projects authorized by this bill on thinning small diameter trees.

In moving this legislation, it was my intent to see that the right work get done in the right way in the right place using the right tools. In other words, to see that the risk of catastrophic fire is reduced through legitimate hazardous fuel reduction activities.

These activities are referenced in Section 101(2) of the bill and are spelled out in detail in the Implementation Plan for the Comprehensive Strategy for a Collaborative Approach for Reducing Wildland Fire Risk to Communities and the Environment, dated May 2002. That document lists the following tools as being appropriate for hazardous fuel reduction: prescribed fire, wildland fire use, and various mechanical methods such as crushing, tractor and hand piling, thinning, and pruning.

In other words, this bill does not authorize a new wave of large tree commercial timber sales. It must be noted that the bill emphasizes the avoidance of the cutting of large trees in Section 102(f), where it specifically states that protects must focus largely on small diameter trees, thinning, strategic fuelbreaks and prescribed fire to modify fire behavior and that projects maximize the retention of large trees.

Section 104(f) requires the agencies to focus on small diameter trees, thinning, fuel breaks and prescribed fire to modify unnaturally severe fire effects, and to maximize the retention of large trees. Large trees are important ecological components of most forest systems. In particular, they are often more fire and insect resistant than smaller diameter trees, and therefore, with rare exceptions do not contribute to hazardous fuels overloads. They are also considered to be critical ecological legacies because they are essential to the desired future structure and composition of forests. However, large trees are now often underrepresented components of many forest types. In those forest types, forest health will not be restored without a diversity of age classes and types, including large trees.

Section 102(f) deals with federal agency treatment of large trees in authorized hazardous fuels treatment projects outside of the areas identified under section 102(e) and requires the Forest Service and Bureau of Land management to maximize the retention of large trees, as appropriate for the forest type, to the extent that the trees promote fire-resilient stands. From an ecological standpoint, and in regards to modifying future fire behavior, large trees are the very last ones that should be removed, if at all.

This is an appropriate limitation in that the last trees that need to be removed from an ecological sense, as well as to modify fire behavior, are the large trees. The clear intent of this legislation is to focus primarily on surface fuels such as brush and dead and down woody material and ladder fuels consisting of small diameter trees and saplings.

This direction is very important to me and I intend on remaining vigilant and responsive to concerns where projects veer from this important direction.

This conference report restores balance to healthy forests legislation by authorizing $760 million annually for these projects. This is a $340 million authorized increase over the currently appropriated level of $420 million for hazardous fuel reduction projects. The conference report maintains the requirement that at least 50 percent of funds spent on restorative projects to be spent to safeguard communities which face the greatest risks from fire.

This conference report also includes improved monitoring language that will help Congress track the successes and failures of this legislation. Section 104(g) requires the Secretaries to monitor and assess the results of authorized projects and to report on the progress of projects towards forest health objectives. This evaluation and reporting will help guide the agencies in future hazardous fuels reduction treatments in existing project areas and in other project areas with similar vegetation types.

The Senate intends that treatments authorized under this Act be directed to restoration of fire-adapted ecosystems as well as hazard reduction. The threat of uncharacteristically severe fires and insect and disease outbreaks decreases when the structure and composition of fire-adapted ecosystems are restored to historic conditions. Thus, section 104(g)(4) directs agencies to evaluate, among other things, whether authorized projects result in conditions that are closer to the relevant historical structure, composition and fire regime.

The Senate recognizes that fire ecologists have learned that fire is a landscape process and that treatments are most effective when conducted in accordance with landscape- or watershed-scale analyses. Section 104(g)(4) requires the agencies to evaluate project results in light of any existing landscape—or watershed—scale direction in resource management plans or other applicable guidance or requirements. Managers should also evaluate and use available relevant scientific studies or findings.

Section 104(g) also requires the Secretaries, in areas where significant interest is expressed, to establish a multiparty monitoring and evaluation process in order to assess the environmental and social effects of authorized hazardous fuel reduction projects and projects implemented pursuant to section 404 of this Act. Many forest-dependent communities support multiparty monitoring, which simply means that communities and individuals may participate with the Federal agencies in monitoring the projects. The Managers recognize the importance of multiparty monitoring as a

way to rebuild trust between rural communities and the agencies.

In conclusion, we have a lot of work to do. We will have others raise questions about the ramifications of this legislation as it relates to the National Environmental Policy Act and other concerns. We want to get this done and implemented properly. As Chairman CRAIG and I have seen in the subcommittee on forestry, we know, for example, it will be tough to get all the funds that are going to be necessary to do these projects on the ground. Our bipartisan coalition is committed to doing that. Then we can turn our coalition to looking at other areas where we can find common ground and move forward in the natural resources area.

A lot of people never thought we would get to this day. Look at the editorials that have been written, some of the interest groups with respect to this legislation, and some of the attacks made on Members. I recall some of those to which Senator FEINSTEIN was subjected. She showed the courage to make it clear she would hang in there and work to get this legislation enacted.

We had a lot of Members of the Senate on both side of the aisle say they would put the public interests first, they would concentrate on protecting communities. That is what has brought us to this day.

I want to thank the following Senate staff for all their hard work on this important legislation: Lance Kotschwar and West Higginbothom of the Senate Agriculture Committee staff, Frank Gladics and Kira Finkler of the Senate Energy and Natural Resources staff, Calli Daly of Senator CRAIG's staff, John Watts of Senator FEINSTEIN's staff and Sarah Bittleman and Josh Kardon of my own staff. Josh Penry and Doug Crandall, staff from the House Resources Committee, did yeomen's work to get this bill to conference. These folks, and many others, put in countless and numerous evenings and weekends into this bill and they deserve our appreciation for their hard work and dedication.

This legislation will now go to the President's desk for his signature. I look forward to that happening. Just this week it snowed in Oregon—the fire season has passed for another year but it will come again next year as sure as the spring follows the winter. With this bill in place as law I am hopeful that we will be a bit better prepared.

I yield the floor.

The PRESIDING OFFICER. The Senator from Connecticut.

Mr. DODD. Mr. President, are we in morning business?

The PRESIDING OFFICER. That is correct.

MEDICARE

Mr. DODD. Mr. President, I will take a few minutes and comment on the upcoming debate on Medicare. Let me begin by expressing my appreciation and my respect for those who have worked on this issue for a great deal of time. I have nothing but the highest admiration for my colleagues, Senator BAUCUS, Senator GRASSLEY, Senator BREAUX, Senator KENNEDY, and others who have spent a great deal of time over the last number of months trying to put together a proposal to provide Americans with a comprehensive prescription drug benefit while not undermining the core program of Medicare which has served millions of Americans so well for the past 38 years. Whatever other views I may have on this proposal, it does not diminish my respect for the efforts they have made to put this bill together. I begin on that note.

Let me state the obvious. I don't know of many other programs that have enjoyed as widespread and as deep and profound a degree of support in our Nation's history as the Medicare Program. I cannot think of another program which has done as much for as many people as Medicare has over the past 38 years. When you look back at the statistics of the poor in America prior to 1965, without exception, the poorest group of Americans were older Americans, our senior citizens. That was, of course, because they had left the labor force and to what extent they had any coverage at all, it was usually lost upon their retirement. As happens when people age, health problems often emerge, people become sicker and require more help. America could only watch as parents and grandparents got sicker and poorer and faced great difficulty making ends meet.

Through a very extensive and elaborate and lengthy debate, our predecessor Congress, both in this body and in the House of Representatives, under the leadership of Lyndon Baines Johnson, in 1964, giants in this body, crafted the Medicare Program. In fact, President Johnson went to Missouri, to the home of Harry Truman, who had been such a great advocate of universal health care, to sign that historic piece of legislation into law. There have been a lot of other things we have done over the years, such as Title I of elementary and secondary education, that might come close—certainly Social Security—I suspect if we had to pick two programs this Government has fashioned in the 20th century that have meant as much to such a critical part of our society, one would certainly have to identify Social Security and Medicare.

It is with that background that I rise this afternoon to express my deep concern and worry over what we may be doing in the next few hours in a rather hasty manner. That does not mean to suggest that the conferees and others who have worked a long time on this have acted in haste; although I disagree with their product, I respect the amount of time and effort they have put into this. The Presiding Officer and this Senator are the only two Members present at this moment, and our ability to go through this and to understand what is about to happen in the coming days is rather limited.

Sometime tomorrow, Sunday, or Monday, but certainly no later than that, we will be asked to vote up or down on a conference report that does something all Members have wanted to do for years—provide a prescription drug benefit for older Americans under the Medicare program. Knowing, as we all do, that had we been writing the Medicare bill in the year 2003 for the very first time, or several years ago, we would never have considered a Medicare proposal without the inclusion of a prescription drug benefit. But those who wrote the bill in 1964 were not confronted with the terribly high cost of prescribed medicines. At that time, there simply were not that many pharmaceutical products out there, so prescription drugs were not as major a factor as they are today. The idea of providing basic healthcare services was what originally drove Congress to enact the Medicare Program.

Obviously, the world has changed. So the need for a prescription drug benefit today, given the tremendous costs our elderly face every single day across this country, where they literally, without any exception at all, are forced to make choices about whether or not to take the drugs they have been prescribed, to have a meal, or to pare back on their prescriptions so as to spread them out over a longer period of time so they will not have to go back in and pay for the drugs which they cannot afford, in which case they are not getting the full benefit of the prescriptions because they are self-medicating themselves, and in many cases can do far more harm than not taking a drug at all, as any good doctor can tell you—that is the reality today fro millions of our senior citizens.

It is my belief that if we were solely dealing with the prescription drug benefit piece of this package, it would pass 98 to 2, maybe 100 to 0. There is no doubt in my mind that would be the case. If that were the only issue before the Senate, that would clearly be the outcome. Although I would quickly tell you there are parts of this prescription drug benefit that could be drawn far more wisely and far more fairly in many ways, I could not argue over the fact that a $400 billion appropriation over the next 10 years offered a good start.

But also just as quickly I would say to my colleagues, if we were dealing with the portion of this package dealing with the structural reform of Medicare, and they were standing alone just as I suggested a moment ago if the prescription drug benefit package were standing alone, the parts of this package instituting structural changes to

Medicare would not get 10 votes. I don't know of many people who would support a Medicare package that had the sections this bill does that would so dramatically alter Medicare. The only reason it is getting any consideration at all is that we have lured people into this on the prescription drug benefit aspects of this conference agreement.

So if you set that aside for a minute and begin to look at the structural side of this, and understand how many years it originally took to put together the Medicare program, what a difference it has made in people's lives—when you consider the tremendous salvation this has been to people—and then recognize the direction in which we are about to go if this conference agreement is adopted—and I suspect it may be—then it will not take long, in my view, when you will find what we saw only a few years ago, with the Congress coming back in to reverse itself in 2006 or shortly thereafter when the provisions of this bill go into place.

The more you look at the structural side of this particular proposal, then the more people are going to be concerned about what they are doing. So I applaud those who have worked on the prescription drug side of this bill. But I have great concerns about what this conference report would do to the foundation of Medicare.

In June of this year, when S. 1 was before this Senate, I based my support for that measure on the belief that it offered a strong, though not complete, first step towards ensuring prescription drug coverage for America's seniors and strengthening the overall structure of the Medicare Program.

This conference report, I say with deep regret, can now be accurately characterized, in my view, as a misguided step down the wrong path. The agreement before us today will lead us down the path towards greater privatization of Medicare, towards a greater burden on our States trying to meet the needs of their own low-income senior citizens, and towards an overall weakening of the Medicare Program.

A very simple way to describe this, as we look at the great success the Medicare program has enjoyed over the past 38 years, is to remember that this is a universal program. This program says to everybody who reaches a certain age, regardless of how healthy you are, or how wealthy you are, or how poor you are, or how sick you are, you can qualify and be a part of this Medicare Program. We are about to do something now that is going to say to those who are wealthier and healthier, you can move off into private plans, in which case the only ones who will be left within traditional Medicare are those who are less wealthy and those who are most sick.

Now, you do not have to have a Ph.D. in mathematics to understand what the outcome will be if this conference report is adopted. If Medicare becomes a program of poor, sicker people because wealthier, healthier people have left, as I believe they will under this bill, then you have just forced either a reduction of benefits or increased costs for those under traditional Medicare—those who can least afford it.

There is no other outcome you can draw from that which we are about to do. That is the eventual outcome. It fundamentally changes and alters the basic concept that was part of the plan passed in 1965—its universality.

The underlying concept of wealthy, healthy people joining with poorer, sicker people—being together—has been the cornerstone of this tremendously successful program. When you begin to pick off those who are wealthier and healthier, for all the obvious reasons, into private plans, the sicker and poorer people will be left with either Medicare benefits getting cut or premium costs going up. That is the sadly predictable outcome of this legislation, Mr. President.

Medicare is first and foremost a program to protect our Nation's seniors from the often insurmountable costs associated with securing quality health care services. Prior to its inception in 1965, as I mentioned, many seniors—the overwhelming majority, in fact—faced abject poverty as a result of skyrocketing health care costs. The creation of the Medicare Program provided a critical safety net for those seniors and allowed them to retain both their access to quality health care, as well as their financial security.

Earlier this year, and prior to the Senate's consideration of the underlying legislation, I had the opportunity to convene a series of forums in my home State of Connecticut on health care issues in an attempt to frame the scope of this debate for them. At those forums, I heard from my constituents on many matters regarding health care. I heard from seniors who literally could not afford to fill prescriptions—and I know my colleagues have heard the same stories—called for by their doctors. I heard from elderly Medicare beneficiaries forced to choose between purchasing groceries or filling their prescriptions. I heard from seniors who were forced to skip dosages of their medicines in an attempt to stretch their limited supplies of these needed medicines. I heard from Medicare beneficiaries requiring more than 10 prescribed medicines a day unable to afford even half of those prescriptions.

Clearly, what I heard from hundreds of my own constituents is their grave concern over the present lack of a prescription drug benefit under the Medicare Program.

When Medicare was first enacted, few could have envisioned the tremendous costs associated with prescription medicines. However, it is the great need for prescription drug coverage under Medicare that was firmly behind my initial support for S. 1. Sadly, however, the conference report before us simply does not go anywhere near far enough to provide sufficient coverage for prescription medicines for the great majority of Medicare beneficiaries. That said, we cannot turn our backs on what this bill would do for Medicare beneficiaries with severely limited incomes. This bill says, if you make under $13,470, representing 150 percent of the federal poverty level, then you will get real help under this bill. But if you make anything more than $13,470, which is what two-thirds of our seniors citizens do, then you are going to be offered little in the way of help under ths bill. That is why it is my belief the prescription drug benefit aspect of this bill should be greatly strengthened.

But I believe for most seniors that it is terribly unrealistic to suggest that someone making more than $13,470 can somehow manage to afford the cost of their prescription medicines, particularly if they have costs that would push their spending into the bill's gap in coverage, or donut hole, as it is often described. But, nonetheless, that is the direction we are going with this conference agreement.

The emerging bill contains a gap, as I mentioned, of more than $2,800, twice the size, by the way, contained in the Senate-passed legislation. Under this conference agreement, Medicare beneficiaries with costs within this so-called donut hole will be forced to pay for the full cost of their prescribed medicines as well as the monthly premium of an estimated $35—and I stress the word "estimated"; I will get to that in a minute—and receive absolutely no financial assistance whatsoever.

Only 4 percent of seniors in the country make over $80,000 a year. Two-thirds of seniors make somewhere above $13,470. The idea that somehow people are going to have enough money, as a senior, trying to pay a home mortgage or pay whatever obligations they have, not to mention food and other things, and also be able to pick up as much as $2,800 a year for prescription drugs, is, I think, terribly unrealistic.

This bill would require Medicare to move dangerously toward privatization, which is what I want to get back to, because it is the side of this bill calling for structural change to the Medicare program that causes me the greatest concern and greatest worry, and undermines this incredibly fine program. I can't tell you how disappointed I am in the AARP for endorsing this conference agreement. I truly wish that AARP's affiliates across the country had been heard on this issue before their national leadership decided that they would support this bill and disregard the 38 years of

history when it comes to Medicare and the millions of people who have greatly benefitted from its coverage.

As one who has witnessed firsthand the tumult and confusion created by Medicare+Choice organizations entering and then quickly withdrawing from communities in my home State of Connecticut, I can say assuredly to my colleagues here today that this would establish a dangerous precedent that may very well lead to the devolution of the Medicare Program as we know it.

Also of great concern to me is the effect this legislation will have on employers that have already provided their retirees with prescription drug coverage. In my State of Connecticut, more than 225,000 Medicare beneficiaries, fully one-third of my State's senior citizens, receive coverage for their prescribed medicines from their former employers. Under this bill, about 40,000 of those elderly will lose this coverage as a result of employers dropping their prescription drug plans.

I don't know the numbers in every other State, but if 40,000 of my 225,000 beneficiaries presently with prescription drug plans from their former employers are going to be dropped from their prescription drug programs, how many in other States are going to be? Where do the States of other Senators fall in this category?

I additionally have another 74,000 people in my State—and I represent a small State with a little more than 3.5 million people—who qualify for both Medicare and Medicaid. These beneficiaries—and there are 6.4 million of them across the country that are eligible for both Medicare and Medicaid—will face increased prescription drug costs under the underlying bill. There will be a significant cost increase for those people who fall within both Medicare and Medicaid if this conference report is adopted. So even before we start talking about what will happen in the year 2010 and down the road under this bill, Mr. President, we are going to witness significant numbers of people lose their present coverage or be forced to withstand both higher costs and diminished benefits.

Also very troubling to this Senator in the underlying conference agreement is its unqualified support for private for-profit insurers at the expense of traditional fee-for-service programs. Particularly disturbing are the provisions securing $12 billion to be solely reserved for these private insurers in order to entice them to enter the Medicare market. Twelve billion dollars is going to the private companies, just so they can compete against the traditional Medicare program. They are calling this competition. Back in the Roman Empire, they had a competition like that. You would go to the forum and on one side were the lions. Under this bill is a similar situation, private insurers will get $12 billion to compete, but Medicare will not get anything. Under this bill, we are going to cap Medicare spending and then say: Go out and compete against enriched private plans.

I was born at night, Mr. President, but not last night. I know and most other people know, without a great deal more knowledge about this, that if you provide $12 billion, as this bill does, to private companies to go out and compete against a company that doesn't get that kind of help, do you know who is going to win that competition? I wonder. I wonder what the outcome will be there. Yet that is what this bill does. Twelve billion dollars reserved for private insurers in order to entice them to enter the Medicare market. The inclusion of this provision truly represents a solution in need of a problem, Mr. President. Traditional Medicare already serves 89 percent of all Medicare beneficiaries and the addition of $12 billion to entice private plan participation is wholly unwarranted and unnecessary.

In fact, this bill will also prohibit the Medicare program from going out and forming a consortium to drive down the cost of prescription drugs. Under this bill, you are violating the law if you go out and do that. While we are going to provide $12 billion instead to others to allow them to compete with Medicare, we will not allow Medicare itself to go out and lobby or negotiate to lower the costs of prescription medicines. The traditional Medicare Program is a proven success and would be better served if this valuable funding of $12 billion were directed toward further strengthening its foundation.

Lastly, the conference agreement before us today establishes the dangerous precedent of instituting so-called cost containment measures that could directly lead to severe cuts in what Medicare covers and just as severe increases in the costs Medicare beneficiaries will be forced to bear. Very specifically, the conference report calls on the Congress and the administration to address Medicare's costs when general revenue spending on Medicare reaches 45 percent of the program's total cost.

Can anyone cite for me any other Federal agency where that kind of provision has been imposed? There is not one—not one. Yet this bill goes out and places this kind of a restraint on Medicare, and on no other part of our Government do we do it, only on Medicare. It is my belief that the adoption of this purely arbitrary cap, which you will find nowhere else, will lead to almost certain erosion of critical programs, scope of coverage, and affordability.

Today, nearly 40 years after Medicare's inception, we find ourselves at a crossroads. I can truly say that I am somewhat stunned that we are about to make a decision on a program that has worked so well for so long within a matter of hours here, without any of us fully understanding—at least most don't seem to understand—the implications of what we are about to do. How could you take a program that has worked so well for so many people and, in the waning days of a session, with just a few hours remaining, get up and ask the Congress to do what we are about to do here? I don't understand how we could allow this to happen. We are on the cusp of fundamentally altering a program that has worked so well for this nation's elderly and most frail citizens.

Again, Mr. President, we find ourselves at a crossroads. The opportunity is before us to move Medicare toward the future without threatening its proven availability to provide for the health and well-being of our Nation's senior citizens. Sadly, however, this conference agreement before us represents an opportunity lost, an opportunity not only to add comprehensive coverage for prescribed medicines under the Medicare Program, which would have been a great success story, but also an opportunity to strengthen the Medicare Program for future generations.

So it is with great sadness that I find myself, only months after originally supporting the underlying legislation when it was first considered by the Senate earlier this year, now having to oppose this conference agreement in its current form. Under the guise of providing needed prescription drug coverage under the Medicare Program, this conference agreement falls far short of addressing this need for the great majority of our Nation's nearly 41 million Medicare beneficiaries.

Forty-one million Americans take note. Over the weekend, in the next 72 hours, a program that has served you for 40 years, serving more than 40 million people presently, is going to be fundamentally altered unless this body, and only this body, stands up and says: Stop. Go back. Let's rethink this before we go out and make the kind of changes that are being proposed in this legislation.

While there have been numerous articles and commentaries written about this plan over the last number of days, people trying to attract attention, numerous editorial comments that I have found tremendously compelling, I come back to the basic point that this is dangerous policy. I put my colleagues on notice; I tell you this will happen.

In the Senate passed bill, which, again, I supported, in order to receive prescription drug coverage, there had to be two drug-only providers available. However, this conference agreement calls for only one of these plans and an HMO. This is a fundamental change. Let me describe what this can mean in the clearest terms I have seen written about this.

Under the conference report, we have now learned that the Medicare guaranteed fallback is only triggered if a senior does not have a choice of two private plans, one of which can be an HMO. Again, that was not in the Senate bill and it is in the conference report before us.

In order to receive prescription drug coverage under this bill you have two choices: One, you can choose traditional Medicare and receive no prescription drug coverage. Two, you can choose to keep traditional Medicare and purchase a drug-only plan. The problem is that there is no limit on the monthly premiums these drug-only plans can charge. When you hear about the $35 cost of premiums for these plans, you must remember that this is only an estimate. If there is only one provider of the drug-only plan in your area—and that is all there has to be under this bill the monthly premium could be $100 or more. Nothing in this bill caps what the premium should be on a monthly basis for the drug coverage. That is what the offer is under this bill.

In other words, it will be permissible for only one insurer to offer the new Medicare drug benefit and charge whatever premium they desire, as long as there is also an HMO option in the area. This type of arrangement strategically avoids the protection of a traditional Medicare fallback benefit from being made available to seniors. As a result, seniors in these regions, many of which will be rural areas, will be financially forced into HMOs just to obtain an affordable drug benefit. In the meantime, they will lose their choice of doctors.

Does this sound familiar? Earlier this year, President Bush and his administration made clear that he wanted to reform Medicare by providing a prescription drug benefit, but only to those seniors who were willing to go into a private insurance plan and HMOs. This compromise has been designed to help achieve that goal.

So that it is further understood, it is important to note that the Senate required that there be at least two private stand-alone options for Medicare beneficiaries. This would have ensured that there would at least be competition for premiums for the new stand-alone drug benefit. Some have argued that the competition between the drug-only plan and an HMO or PPO will force down the premium of the drug-only plan. The fact is, drug-only plans cannot compete on an even playing field with PPOs or HMOs. This is because HMOs and PPOs are provided additional subsidies under this bill and, by definition, offer a wide variety of services that give these plans a competitive advantage over the stand-alone drug plans. Any losses on the drug side can be offset by gains on the medical side, in a sense.

This is yet another example of how all financial incentives are designed to advantage the private HMOs and PPOs over traditional Medicare. People need to understand the fundamental changes in this bill that will greatly alter the very structure of the Medicare program.

I have taken a lot of time this afternoon, Mr. President, and I apologize to my colleagues. But I feel very strongly about this critically important issue. Last week in this body we had a filibuster that went on for 4 days because people were upset over the nomination of 4 judges. I contend that perhaps there ought to be a filibuster on this legislation as nearly 41 million Medicare beneficiaries are going to be adversely affected if this legislation is adopted by this body.

Here we are toady, Mr. President, down to the waning few hours of the session, and we are about to consider fundamentally altering and setting back Medicare for years to come. When the roll is called on this, I will vote no. I will seek other options between now and then to see if there is a way to delay consideration of this until we have more time to examine more fully the implications of this bill. Under the guise of providing needed prescription drug coverage under Medicare, the conference agreement before us today offers far too little coverage for the great majority of Medicare beneficiaries, while at the same time institutes structural reforms to the underlying Medicare program that will significantly weaken its ability to provide for the health and well being of our nation's senior citizens. It should be soundly rejected. I thank my colleagues and I yield the floor.

The PRESIDING OFFICER (Mrs. DOLE). The Senator from Iowa is recognized.

Mr. GRASSLEY. Madam President, I didn't interrupt the Senator from Connecticut, so I hope my colleagues will let me give my remarks in rebuttal unhindered by any other obstacles.

It is about time that we pass a prescription drug bill for Medicare. It is about time that we strengthen and improve Medicare, as we have been telling the voters for three elections.

In the 2000 election, it was an issue. It was an issue on the floor of the Senate last summer. It didn't pass last summer because the other party in this body wanted an issue for the election coming up last fall. The leader of the other party took it away from his own chairman of the committee, so there could not be a bipartisan bill put together.

In the Senate, nothing gets done that is not done in a bipartisan way. Maybe a lot of people don't like that about the Senate, but it has been that way for 214 years, and our country has functioned well. This is the only body in our political system where minority interests are protected. We are going to have broad, bipartisan support for this bill, and we are going to pass it because when Republicans won the last election, we won it because there were a lot of things buried in this body by the leadership of the other party because they wanted issues for that election and because they thought they would increase their strength in this body and get more of what they wanted this year than last year.

But they miscalculated. The people of this country put the Republicans in charge of this body. But they didn't put the Republicans in charge of this body to do things just in a partisan way because we in the majority party know that nothing gets done here that doesn't have some bipartisanship with it.

As chairman of the committee of jurisdiction over Medicare, taxes, international trade, and a lot of other social programs, I have the privilege of having a good working relationship with the former chairman of this committee, now the ranking Democrat, Senator BAUCUS. We started out on Medicare prescription drugs, like we did on some other issues this year, to put together a bipartisan approach so that we could deliver on the promises of the last several elections—not just the last election, but the last several elections. Both political parties have been saying that we are going to strengthen and improve Medicare, and one of those strengthenings and improvements is going to be a universal and comprehensive and voluntary prescription drug program.

We are about to deliver on it, and people on the other side don't like it because they had an opportunity and they lost that opportunity because they wanted to do something in a partisan way. Previous speakers on the other side have raised this point about the AARP backing this plan. They are saying they are caving in to political pressure.

It seems as though, as far as the other side is concerned, the only time the AARP is political, in the eyes of the Democratic Party, is when AARP agrees with the Republican Party.

Senator BAUCUS and I have been working together, and we will bring to the Senate, after the House passes it tonight, a bipartisan, bicameral compromise out of conference, which will deliver on the promises of the last three elections. We are even going to deliver on the promise of the Democratic Party, where they were going to provide prescription drugs for seniors. The only thing I can think is that they regret it. They had an opportunity a year ago, when they were in the majority and when our President wanted to work with them, to do it, and they didn't take advantage of it.

I want to speak about this product that we have before us. It was just yesterday, after 4 months of conferencing,

that the conferees agreed to a bipartisan breakthrough on a conference report that will make comprehensive prescription drug coverage a reality for our 40 million Medicare beneficiaries, both seniors and disabled. After 4 months of hard work, the conferees approved a sweeping package of new prescription drug benefits and other program improvements that makes good on our commitment to our seniors.

I am urging all my colleagues to support it. Since 1965, seniors have had health insurance without prescription drugs. By reaching agreement yesterday, the conferees came one step closer to changing that. The Senate can make history by improving this compromise report.

This important breakthrough came because of the tireless work of our committee members, both Democrats and Republicans, over the last 5 years. Senators FRIST and BREAUX led the way on prescription drugs before any of us were listening. Senators SNOWE, HATCH, and JEFFORDS, along with Senator BREAUX and this Senator, carried the torch as members of the Finance Committee, but also because we wanted to do things in a bipartisan way. We even called that a ''tripartisan way'' because Senator JEFFORDS lists himself not as a Republican or Democrat but as an Independent. That is an effort we have exceeded in the bill, but it was an effort that somewhat blazed the trail to where we are today, and I am glad to have been a part of it.

Finally, this breakthrough came because of the President's unyielding commitment to getting something done for seniors once and for all. Last December 10, I had an opportunity to meet with the President, as he knew I was going to be the new chairman of the Senate Finance Committee after the Republicans had won control of the Senate. We, in fact, had that meeting, anticipating all this time we had to work to get ready, a long time before Congress even convened. At that meeting, the President said two things that I remember. I did not take notes, but I remember very well that he was willing to commit political capital to this effort and that he was willing to put money in his budget for that effort.

The President delivered on both of those statements because his budget put $400 billion in over 10 years for this bill. That is exactly what we in the Senate wanted. We approved that last March. By June, the Senate Finance Committee had reported out a strong bipartisan bill by a vote of 15 to 6, building upon the agreement with the President and the agreement of the Senate for $400 billion for the budget.

The Senate, as you know, passed S. 1 on strong bipartisan grounds in June. The other body passed a similar bill, H.R. 1, that same night. I believe the committee report is measurably better than either S. 1 or the House bill, H.R. 1. It contains improvements, refinements, and changes that are better for seniors and better for the doctors and the hospitals that serve them.

We have come a very long way in getting to this point, and I am proud of where we have ended up. I will do everything I can to ensure successful passage of this conference report over the next few days.

Of course, the conference report can't and won't be all things to all people. Like any compromise, no one is left perfectly happy. That probably means that the conference committee came out just about at the right place. I urge all my colleagues to go beyond the perfect and to focus on the good that the conference agreement accomplishes.

The greatest good at the heart of this conference report is a comprehensive prescription drug benefit that will give immediate assistance starting next year and continuing as a permanent part of Medicare to every senior. Not only is it comprehensive, it is universal, and if nobody wants to participate in it, they don't have to. It is voluntary as well.

The conference report provides affordable comprehensive prescription drug coverage on a voluntary basis to every senior in America. The coverage is stable, it is predictable, and it is secure. Most importantly, the value of the coverage does not vary based on where you live and whether you have decided to join a private health plan. For Iowans and others in rural America who have been left behind by most Medicare private health plans, this is an important accomplishment that I insisted on way back as early as January of this year. I haven't budged on that commitment and that protection is in this conference agreement.

Overall, the conference agreement relies on the best of the private sector to deliver drug coverage, supported by the best of the public sector to secure consumer protection and important patient rights. This combination of public and private resources is what stabilizes the benefit and helps keep costs down.

Keeping costs down is essential not just for seniors but for the program as a whole. Throughout this bill, we have targeted our resources very carefully, giving additional help to the poorest of our seniors. Consistent with the policy of targeted policymaking, we have worked hard to keep existing sources of prescription drug coverage, such as employer-sponsored benefits, and to do it in a viable way.

This conference agreement goes great distances to keep employers in the game providing drug coverage, as they do now, to their retirees under those plans that were promised to people after retiring from their employment.

We all worried very much when we passed this bill in June that, as CBO scored our Senate bill, it might cause 37 percent of the corporations to drop their employees on the Government plan. The House bill had a 32-percent drop rate, according to the Congressional Budget Office. As a result of the conference activity and what we have done to shore up existing retiree plans, that percentage is now much less than 20 percent due to the substantial investment made by conferees to ensure that employers can continue offering the good coverage they have for a long period of time.

The conference report includes additional subsidies. It also includes regulatory flexibility that will do much more to help, rather than threaten, employer-sponsored coverage for those who currently receive it.

Still, we all must acknowledge that decisions about scaling back coverage or dropping it altogether are bound to be made regardless of whether we pass this conference report. But I am confident that the balanced policies before us are a very good deal for employers and their retirees.

I want to make it very clear to people listening who might be worrying about corporation retirees losing their health coverage because of something we are doing here, we are doing our darndest to supplement these plans and to give regulatory flexibility so these plans are not dropped. But Congress cannot pass a law that says corporation X, Y, or Z, some day, if they decide they want to dump them, might be dumped. That could be happening in some corporation in America today. This law is not even on the books. That happened in my State earlier this year and last year and the year before, not because Congress was talking but just because that was the policy of that corporation. It is something they felt they couldn't afford any longer, and they did it.

That could happen even after we pass this legislation, but where would we be if we didn't pass this legislation? The 35 percent of the seniors today who have no coverage whatsoever, and probably never have had it in retirement, will still not have drug coverage. Also, the corporations that dump their plans might not have anything either. By passing this legislation, even considering all the resources—about 20 percent of this legislation contains resources for these corporations to keep their plans—if they would drop them, at least these people have something on which to fall back.

I would think that is a better situation than the uncertainty of, Is my corporation going to dump me or are they not going to dump me?

If they are dumped, then they have zilch, unless they want to buy an expensive Medigap policy or something like that. So we are trying to have a safety net for all seniors, and we are trying to do it in a way that is very

helpful. So I want to make that very clear. We cannot force corporations—never could and never will be able to—to say they have to provide health care coverage and prescription drug coverage for their retirees. But we do have a plan that is very good for people who do not have prescription drugs or people who might have prescription drugs today but tomorrow might not have it. This is a safety net and a darn good safety net.

Beyond just prescription drugs, the conference report is a milestone accomplishment for improving traditional Medicare, especially in rural America. The conference report includes the best rural improvement in the Medicare equity package that Congress has ever passed. The rural health care safety net is coming apart in rural areas. It is difficult to recruit doctors to rural areas because of low reimbursement. The conference report begins to mend that safety net.

As many in this Chamber know, hospitals, home health agencies, and ambulance companies in rural America lose money on every Medicare patient they see. Rural physicians are penalized by bureaucratic formulas that reduce payments below those of their urban counterparts for the same service. The conference report takes historic steps toward correcting geographic disparities that penalize rural health care providers. Providers in rural States such as Iowa practice some of the lowest cost, highest quality medicine in America. This is widely understood by researchers, academics, and citizens of those States, but not by Medicare.

Medicare instead rewards providers in high-cost, inefficient States with bigger payments that have the perverse effect of incentivizing overutilization of services and poor quality. This is very noted in my State.

The Des Moines Register has been very clear in informing the people of my State that Iowa is 50th in reimbursement in Medicare on a per beneficiary basis over a year, 50th of the 50 States, but yet under indices we are fifth or sixth in quality of care.

Over at the other end, there is Louisiana, No. 1 in reimbursement, about $7,000 per beneficiary per year compared to about $3,400 for Iowa, the lowest of the 50 States. More money to be spent on Medicare for seniors' medical care does not guarantee quality of care because Louisiana is listed 50th in quality of care. So we want to make sure that where one is getting high-quality delivery of health care, there is reimbursement that takes that into consideration. So the conference report begins to reverse that trend.

It also includes long overdue pilot programs that will test the concept of paying for performance and making bonus payments for high-quality health care. This benefits taxpayers and, most of all, patients.

Beyond prescription drugs and beyond rural health care, the conference report goes at great length to give better benefits and more choices—the right to choose is very basic in this bill—available to our seniors. It specifically authorizes preferred provider organizations—we call them PPOs—to participate in Medicare, something the current law does not fully allow. The idea is that these kinds of lightly managed care plans more closely resemble the kinds of plans that we in the Federal Government have and close to 50 percent of working Americans have. Baby boomers then, when they go into retirement, will be able to compare fee-for-service 1965 model Medicare with these new PPOs. I think they are going to find new PPOs closer to what they had in the workplace than traditional Medicare, but they have the right to choose. We think they ought to have that right, too, because traditional Medicare has not kept up with changes in the practice of medicine like the private health plans employees have in the workplace.

PPOs have the advantage of offering the same benefits of traditional Medicare, including prescription drugs, but they do that on an integrated, coordinated basis. So this creates new opportunities for chronic disease management and access to innovative new therapies. Unlike Medicare+Choice, we set up a regional system where plans will bid in a way that does not allow them to choose the most profitable cities and towns. They cannot do cherry-picking. Systems like this work well for Federal employees such as the postmaster in my hometown of New Hartford, IA. He has a choice of several plans. We want to give that same choice to his parents, who today have only Medicare and nothing else.

Are PPOs right for everyone? It is the right to choose that is important about this bill. Let the seniors decide. Our bill sets up a playing field for PPOs to compete for beneficiaries. We believe PPOs can be competitive and offer a stronger, more enhanced benefit than traditional Medicare. But let me be clear, no senior has to choose PPOs. My policy has been to let seniors keep what they have, if they like it, with no change. All seniors, regardless of whether they choose a PPO, can still get prescription drugs. They do not have to choose that, but they can choose that as an add-on to traditional Medicare if they want.

So I hope I have protected all of my colleagues, and maybe my colleagues do not need any protection, insisting on the voluntariness of this and the right to choose. I think it is pretty essential for people who are older, who do not want change in their life, not to have to make a change in their life.

I fear maybe, as the Senator from Iowa, that somebody is going to come up to me someday and say: GRASSLEY, just leave my Medicare alone.

They do not follow Congress closely, but they read here and there and they get nervous: What Senator is taking away their Medicare? I can say to Mary Smith in Columbus Junction, IA: You do not have to worry about anything. If you are satisfied with the Medicare you have, you can keep it. If you want to join a prescription drug program to add to it, you can do that, but you do not have to worry about Medicare. If you like it the way it has been all your life, we are leaving it alone.

I think that sounds like protection for Senator GRASSLEY, but I am concerned about the cynicism my seniors have about Government, maybe because they do not study it as much as we do or understand it as much as we do. I want to reduce that cynicism, but I want them to have confidence in their Medicare as well. I think this right to choose gives them that confidence.

The conference report also includes other important policies that I believe make a much stronger, better bill. First, we make wealthier people pay a slightly higher premium. Why should someone who makes $80,000 a year or more pay exactly the same price for coverage as someone who makes $30,000 a year? The conference report makes wealthy seniors pay slightly more, and this is a very important and rational step toward stabilizing Medicare's growth.

The conference report also injects new and transparent accountancy rules into Medicare, making the trustees show in a comprehensive way what all of Medicare's assets and liabilities truly are. There are also expedited procedures for committee consideration of legislation that addresses any future Medicare funding crisis without changing the Senate rules.

Finally, and in my view most importantly, the conference agreement authorizes health savings accounts. I have been a long-time supporter of medical savings accounts. Now they are going to be called health savings accounts. Such tax-favored accounts encourage responsible utilization of health care services. They offer low-cost insurance to farmers and other self-employed people. For too long, medical savings accounts have languished under regulatory inflexibility. The provisions in the conference report go to great length to make medical savings accounts a stronger, more accessible option for more Americans, and I think that is very appropriate because it adds to the right to choose.

We are in a unique moment in our history as far as health insurance legislation is concerned. We have a limited opportunity to deliver on our promises to get this done once and for all.

Let me remind everyone, there is $400 billion sitting in front of America's seniors. If we let partisan disagreement prevent us from snatching it up for them, shame on us because, what do

you think the chances are next March of this Senate adopting a budget with $400 billion set aside for Medicare? I think the chances of that happening are not very good.

Let's not allow the perfect to be the enemy of the good. I urge my colleagues to continue in the bipartisan tradition of the Finance Committee and deliver a balanced bipartisan product that does right by our seniors.

I yield the floor. I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Ms. COLLINS. Madam President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mrs. DOLE). Without objection, it is so ordered.

VISION 100—CENTURY OF AVIATION REAUTHORIZATION ACT—CONFERENCE REPORT

Ms. COLLINS. Madam President, I ask unanimous consent that the Senate now proceed to the conference report to accompany H.R. 2115, the FAA authorization bill.

The PRESIDING OFFICER. Without objection, it is so ordered. The clerk will report.

The legislative clerk read as follows:

The Committee of Conference on the disagreeing votes of the two Houses on the amendment of the Senate to the bill (H.R. 2115), to amend title 49, United States Code, to reauthorize programs for the Federal Aviation Administration, and for other purposes, having met, have agreed that the House recede from its disagreement to the amendment of the Senate, and agree to the same with an amendment, signed by a majority of the conferees on the part of both Houses.

The PRESIDING OFFICER. The Senate will proceed to the consideration of the conference report.

(The conference report is printed in the House proceedings of the RECORD of July 25, 2003.)

Ms. COLLINS. Madam President, I ask that the conference report be agreed to, the motion to reconsider be laid upon the table, and any statements relating to the conference report be printed in the RECORD.

Mr. REID. Reserving the right to object, I would like to extend the appreciation of the entire Senate, especially on this side, to those who worked to allow us to be at this point: Senators LAUTENBERG, DORGAN, and ROCKEFELLER, and the ranking member of the committee, Senator HOLLINGS, and the cooperation of Senator LOTT, and others. This is a very important piece of legislation for the State of Nevada but also for the entire country. I underscore the very good work of the individuals I mentioned.

This is not perfect, but it goes a long way to protecting working men and women who make it possible for everyone to fly safely in America today.

Madam President, I ask unanimous consent that copies of a letter from Marion C. Blakey, the Administrator of the Federal Aviation Administration, be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

DEPT. OF TRANSPORTATION,
FEDERAL AVIATION ADMINISTRATION,
Washington, DC., November 21, 2003.

Hon. ERNEST HOLLINGS,
Russell Senate Office Building,
Washington, DC.

DEAR SENATOR HOLLINGS: I have received your November 13, 2003 letter regarding the issue of contracting out functions performed by Federal Aviation Administration (FAA) employees. Your letter requested clarification on the status of ''contracting out'' of FAA functions related to flight services and the certification or maintenance of air traffic control equipment used in the national airspace system. I understand that you are not advocating that the FAA in-source any functions currently performed by contractors or cease work and analysis already underway. As you know, several months ago the FAA initiated a competitive sourcing process with respect to the FAA's Automated Flight Service Stations (AFSS). Under the FAA's current schedule, the final source selection decision with respect to the AFSS competition will occur early in fiscal year 2005.

During this fiscal year we have no plans to initiate additional competitive sourcing studies, nor will we displace FAA employees by entering into binding contracts to convert to private entities any existing FAA position directly related to our air traffic control system.

I look forward to working with the Committee on the important challenges facing the Federal Aviation Administration. The Conference Report contains many provisions which will provide us with important tools to enhance aviation safety, security, and capacity. Thank you for your efforts on this important piece of legislation.

Sincerely,

MARION C. BLAKEY,
Administrator.

DEPT. OF TRANSPORTATION,
FEDERAL AVIATION ADMINISTRATION,
Washington, DC, November 21, 2003.

Hon. JOHN MCCAIN,
Chairman, Committee on Commerce, Science and Transportation, Russell Senate Office Building, Washington, DC.

DEAR MR. CHAIRMAN: I have received your November 13, 2003 letter regarding the issue of contracting out functions performed by Federal Aviation Administration (FAA) employees. Your letter requested clarification on the status of ''contracting out'' of FAA functions related to flight services and the certification or maintenance of air traffic control equipment used in the national airspace system. I understand that you are not advocating that the FAA in-source any functions currently performed by contractors or cease work and analysis already underway. As you know, several months ago the FAA initiated a competitive sourcing process with respect to the FAA's Automated Flight Service Stations (AFSS). Under the FAA's current schedule, the final source selection decision with respect to the AFSS competition will occur early in fiscal year 2005.

During this fiscal year we have no plans to initiate additional competitive sourcing studies, nor will we displace FAA employees by entering into binding contracts to convert to private entities any existing FAA position directly related to our air traffic control system.

I look forward to working with the Committee on the important challenges facing the Federal Aviation Administration. The Conference Report contains many provisions which will provide us with important tools to enhance aviation safety, security, and capacity. Thank you for our efforts on this important piece of legislation.

Sincerely,

MARION C. BLAKEY,
Administrator.

Mr. MCCAIN. Mr. President, I am pleased that the Senate is about to vote on the Conference Report to H.R. 2115, the FAA reauthorization bill. This legislation is critical to our Nation's air transportation system, providing necessary funding for aviation safety and security for fiscal years 2004 to 2007.

Civil aviation generates more than $900 billion in GDP every year, and we all know that it has faced very difficult economic times. Since September 11, 2001, Congress has passed a number of bipartisan aviation bills to aid the industry and, more importantly, to assure that the air traveling public could continue to rely on this vital transportation mode. Among the many bills enacted, we established the Transportation Security Administration (TSA) to oversee aviation security; we provided grants and loans to help the airline industry through their difficult economic times; and we extended terrorism insurance to the aviation industry. Without these important measures, the aviation industry would be in far worse condition.

The Conference Report pending before us is as important to the health of our aviation system as any of the other bills I just mentioned. This multi-year FAA authorization legislation is needed by airports, so that airport construction projects don't come to a halt and cause layoffs in the construction sector. It is needed by aviation manufacturers and by the airline industry. Above all, it is needed by our air travelers, who rely on a safe and security air transportation system.

The Conference Report on H.R. 2115 authorizes over $60 billion in aviation spending over the next four years to improve our Nation's aviation system. It includes: $14.2 billion for security, safety and capacity projects for the Airport Improvement Program (AIP)—over 50 percent of this funding is likely to be spent on safety projects. In fiscal year 2004 alone, this funding will create approximately 162,000 direct and indirect jobs. However, the AIP funding ONLY becomes available if this Conference Report is signed into law—the passage of the transportation appropriations bill is NOT sufficient to make the funds available; $13.3 billion to modernize the air traffic control system; $31 billion to operate the FAA's

air traffic control system and to support the FAA's safety programs; $1.6 billion for aviation research and development; $2 billion for airport security projects, and, $500 million for the Essential Air Service program. The majority of this funding will come from the Aviation Trust Fund, which is supported by taxes paid by the users of the system.

Although this Conference Report provides a great boost for the modernization of the aviation system and for increasing capacity and efficiency, there are also numerous provisions in the Conference Report that will improve aviation safety and security.

In support of improving safety, the Conference Report strengthens FAA enforcement against the users of fraudulent aircraft parts; increases penalties that the FAA may impose for safety violations—fines have not been adjusted since 1947, and as such, are sometimes simply treated as the cost of doing business by the entity being fined; and requires the FAA to update and improve its airline safety oversight program.

In support of improved aviation security, the Conference Report includes $500 million per year to finance security capital improvements at airports—including the installation of explosive detection systems. After September 11, almost $500 million per year in AIP funds were diverted to security projects from safety and capacity projects. Although this may have been justifiable immediately after September 11, in the long run, a continuation of such diversion could be detrimental to the aviation system; extends the Secretary of Transportation's authority to provide War Risk insurance to airlines against terrorism; expands the armed pilot program to include cargo pilots; requires the TSA to improve the security at foreign repair stations that conduct work on U.S. aircraft; authorizes compensation to general aviation entities for losses resulting from security mandates; and provides for certification and better security training for flight attendants.

In order to improve air transportation service, especially to smaller and rural communities, the Conference Report contains a number of provisions. The report reauthorizes the Essential Air Service (EAS) at current funding levels; establishes a number of EAS pilot programs to give communities flexibility in how they receive EAS service; makes permanent the Small Community Air Development program; establishes a National Commission on Small Community Air Service to make recommendations on how to improve air service to such communities; and includes a Sense of Congress that airlines should provide the lowest possible fare for all active duty members of the Armed Forces.

Further, for large airports in Western States and smaller airports in the East, it frees up more takeoff and landing slots at Reagan National Airport.

The Conference Report addresses numerous environmental issues. It streamlines environmental review of projects to increase airport capacity and improve aviation safety and security; authorizes grants to airports to permit them to purchase or retrofit low emission vehicles at airports; and authorizes projects that improve air quality and give airports emission credits for undertaking such projects.

I want to recognize all the hard work that Senator LOTT, as Chairman of the Aviation Subcommittee, has put into the bill this year. Last winter, many in the aviation community predicted that Congress would not enact an aviation reauthorization bill this year. Senator LOTT would not even consider such a scenario and kept us on a schedule where the Conference Report was actually completed before the August recess. This was only possible, as always, due to the work and cooperation on this bill from the ranking Democratic members of the Commerce Committee and its Aviation Subcommittee, Senators HOLLINGS and ROCKEFELLER.

I also wish to thank Senator DORGAN for his work in brokering the compromise that allowed us to move forward with this Conference Report today. And I want to thank the administration, especially Secretary Mineta and FAA Administrator Blakey, in working long and hard with us to get a final compromise on the issue of privatization.

I urge my colleagues to support final passage of the Conference Report and send it to the President.

Mr. HOLLINGS. Mr. President, I rise today to express my support for passage of H.R. 2115, Vision 100—Century of Aviation Reauthorization Act. I am pleased that we have finally reached agreement on this important legislation and can now move forward on enacting this bill into law. This comprehensive reauthorization bill will provide $60 billion in funding for FAA operations, including some $14.2 billion for airport grants that will create an estimated 600,000 jobs and support for key aviation projects in communities across the country.

Achieving consensus on the conference report has not been easy, and while I think all of us should be encouraged by the results of these efforts, we should take this opportunity to fully consider and appreciate the critical role that compromise has played in achieving this positive result. Colleagues on both sides of the aisle have expressed their concerns about the process by which the FAA Conference Report was deliberated and produced. FAA reauthorization bills have always been moved out of Congress with little controversy, but after passing a bill on the Senate floor with unanimous support and cooperating on developing the bulk on the FAA Reauthorization bill, Democrats were cut out of the process. This was an unacceptable development that violated the spirit of this body, and ultimately it led to the creation of flawed legislation.

For three months after it was filed, there was a lack of will in Congress to pass the FAA Conference Report in the form that the Republican leadership demanded. As a result, FAA projects went unauthorized after the fiscal year ended, and in an effort to end the stalemate they had created the House Leadership was forced to recommit the legislation on October 28, 2003. At this time, they stripped out the most troubling provision in the bill—language that allowed for the immediate privatization of 69 of FAA's air traffic control (ATC) towers and the entire ATC system in 2007. However, the Senate remained unsatisfied with the bill's lack of protection for the Nation's ATC system after it was recommitted, and we voted against cloture 45-43 on November 17, 2003.

Prior to the vote, I worked with Senators MCCAIN, ROCKEFELLER, and LOTT to seek commitment from the Bush administration to impose a 1-year moratorium on the contracting out or privatization of any ATC functions so that the Senate Commerce Committee can properly conduct its oversight responsibilities of this matter. The Committee plans to hold hearings on this subject next year, and we will also request detailed analyses from the Government Accounting Office and the Department of Transportation Inspector General (DOT IG) in an effort to determine how to best enhance safety, the steps that should be taken to keep pace with future growth, and the best way for the Federal Government to get there.

Today, we have received the proper commitment from the Bush administration to proceed in this manner. Under the arrangement, the FAA has agreed not to proceed with the privatization or outsourcing of any FAA air traffic separation and control functions in fiscal year 2004. The written agreement includes a prohibition on contracting out the maintenance and certification of the systems and equipment in the air traffic control system in the National Airspace System. In addition, the Administration has committed to maintaining the existing Federal relationship with the Nation's Flight Service Stations, with the understanding that they will be allowed to continue on-going evaluations of how best to revamp the entire program. The DOT IG's office has estimated that consolidation of the FSSs, combined with a new computer system, could provide a better arrangement and save $500 million over 7 years.

With this understanding in place, I am pleased that we can now move forward with broad support for a multi-

year reauthorization of FAA programs. Indeed, H.R. 2115 has many good provisions in it that will go a long way towards improving and enhancing our aviation system as we move into the 21st Century. I would like to add that conservative estimates by the FAA show that the formula funding in this legislation will provide more than $112 million and at least 5,325 jobs in my home State of South Carolina over the next 4 years. I look forward to passing the bill.

Finally, I want to thank Chairman MCCAIN, Senator LOTT, the Aviation Subcommittee Chairman, and Ranking Member ROCKFELLER for all of their hard work over the last several days and for the long months that they put in prior to that. We came together with a common purpose—to pass this Conference Report—and with bipartisan cooperation have developed comprehensive legislation that provides the American people the proper level of safety, security and financial support.

Mr. ROCKEFELLER. Mr. President, I am pleased to finally be able to support the adoption of the Federal Aviation Administration conference report.

The process that allowed us to get to this point has been unlike any other that I have ever experienced in my 19 years in the Senate, but we have secured a commitment from the administration that they will not move forward with contracting out any air traffic control functions, which has prevented the Senate from passing this report. I am pleased that my colleagues have confirmed this commitment.

Over the last year, I have worked closely with Senators MCCAIN, HOLLINGS, and LOTT on developing this important legislation. I thank them for all of their efforts on getting this bill done. It has not gone as easy as any of us would have liked, but the debate on privatization is important as it is fundamentally a debate on safety and security. Senator LAUTENBERG should be commended for his unrelenting commitment to making sure the United States has the safest and most secure air traffic control system in the world.

We have secured an agreement on this issue that all parties can accept, but it does not mean that this debate is over. I know my colleagues have committed to holding hearings on this issue, and we will be closely monitoring the administration's actions in this area.

The reauthorization of the FAA is a vitally important piece of legislation. It would be the first genuine economic stimulus bill that the Senate has passed this year.

No question exists that since the tragedy of September 11, aviation in this country has been permanently changed. Over the last 2 years, we have seen a decrease in the demand for air travel, hundreds of thousands of aerospace and aviation employees have lost their jobs and the economic pain has rippled through the economy. We cannot have a sustained economic recovery in this country until we have a healthy and vibrant aviation industry.

This bill provides the foundation for the resurgence of an essential sector of our economy.

I cannot emphasize the importance of a vibrant and strong aviation industry. It is fundamental to our nation's long-term economic growth. It is also vital to the economic future of countless small and local communities that are linked to the rest of the nation and world through aviation.

Just as the aviation industry is a catalyst of growth for the national economy, airports are a catalyst of growth for their local communities. In my State of West Virginia, aviation represents $3.4 billion of the state's gross domestic product and directly and indirectly employs over 51,000 people.

Aviation also links our Nation's small and rural citizens and communities to the national and world marketplace. My home State of West Virginia has been able to attract firms from Asia and Europe because of reliable access to their West Virginia investments.

Without access to an integrated air transportation network, small communities can not attract the investment necessary to grow or allow home grown businesses to expands. A modern and adequately funded aviation network is fundamental to making sure that all Americans can participate in the global economy. This bill makes sure the United States will continue to have the best aviation system in the world.

This legislation builds upon our commitment to improving the aviation infrastructure of the nation that started with the landmark Aviation Investment and Reform Act for the 21st Century. I believe that this legislation meets the challenges facing the FAA and the aviation industry in the years ahead.

This $60 billion bill focuses on improving our Nation's aviation safety and air service development, and aeronautical research. While my distinguished colleagues have provided an excellent overview of the bill, I would like to highlight some areas for the bill that I believe are particularly important.

No higher goal exists than the safety and security of the Nation's airports and airspace. Over the past 24 months, we have worked every day to improve security in our airports and on our airplanes. However, until this bill, we had fallen short on providing funding to make sure our Nation's airports have the resources available to make the required improvements.

Airports estimate that they have $3 billion in unmet security infrastructure needs. Airports have been forced to tap their expansion and development funds to pay for security. It makes no sense to raid funds for safety improvements for security improvements. The security of our Nation is a Federal responsibility and the Federal Government must pay for it.

One of the most important provisions in this bill is the establishment of a $500 million fund to assist airports with capital security costs. This new fund is intended to stop the diversion of airport development funds meant for safety and capacity enhancements. We will be able to pay for new security requirements while simultaneously improving safety and expanding capacity.

Even in these difficult budgetary times, we were able to modestly increase the Airport Improvement Program funding, which will provide the economy a real stimulus through direct and indirect job creation. Airport development is economic development as airports are economic development for their local communities. It is estimated that U.S. Airports are responsible for nearly $507 billion each year in total economic activity nationwide. Investment in airport infrastructure is a real economic stimulus that creates both immediate jobs and long-term economic development.

In order to facilitate airport development, I am pleased that this bill includes much of the text of the legislation that Senator HUTCHINSON and I worked on last Congress to streamline and expedite the airport development process. This country needs to expand its airport infrastructure. Without a substantial increase in this area, aviation delays would increase resulting in billions of dollars of costs to the economy.

Finally, we have authorized a significant increase in aeronautical and aviation research in order to preserve America's leadership in these industries.

Today, we also meet the challenge of making sure our small and rural communities have access to the nation's air transportation network. I continue to be very concerned that air carriers are abandoning small and rural markets. We cannot let these communities go without adequate and affordable air service—their future depends upon it.

I am enormously pleased that the bill extends and expands the Small Community Air Service Development Program, which I fought for in AIR 21. In West Virginia, Charleston used funding from this program to attract new service to Houston, which has been a hugh success. Parkersburg was recently awarded a grant and already working on implementing its initiatives to improve air service to new hubs. This program has proven an innovative and flexible tool for communities to address air service needs.

Many of our most isolated and vulnerable communities whose only service is through the Essential Air Service

Program have indicated that they would like to develop innovative and flexible programs similar to those communities who received Small Community Air Service Development grants to improve the quality of their air service.

It is for this reason that I, along with Senator LOTT, developed the Small Community and Rural Air Service Revitalization Act of 2003. The FAA conference report incorporates the basic provisions of this legislation. The FAA Bill reauthorizes the Essential Air Service, EAS, program and creates a series of new innovative pilot programs for EAS communities to participate in to stimulate passenger demand for air service in their communities.

By providing communities the ability to design their own air service proposals, a community has the ability to develop a plan that meets its locally determined needs, improves air service choices, and gives the community a greater stake in the EAS program.

Small and rural communities are the first to bear the brunt of bad economic times and the last to see the benefits of good times. The general economic downturn and the dire straits of the aviation industry have placed exceptional burdens on air service to our most isolated communities. The Federal Government must provide additional resources and tools for small communities to help themselves attract adequate air service. The Federal Government must make sure that our most vulnerable towns and cities are linked to the rest of nation. This legislation authorizes the tools and resources necessary to attract air service, related economic development, and most importantly expand their connections to the national and global economy.

This bill meets the challenges facing our aviation system—increasing security, expanding airport safety and capacity, and making sure our smallest communities have access to the network. We can all be proud of this bill.

Again, I thank Senator MCCAIN, Senator LOTT, and Senator HOLLINGS for all their hard work to improve aviation in this country.

Mr. ROCKEFELLER. I have a question for the subcommittee chairman about section 808 of the conference report concerning international air cargo shipped through Alaska.

Mr. LOTT. I am happy to answer the Senator's question. This provision was adopted in the Senate after being offered by the Senator from Alaska.

Mr. ROCKEFELLER. I thank the Chairman. Is it the Chairman's understanding that section 808 only addresses international cargo and does not address the carriage of cargo which first originates in Alaska?

Mr. LOTT. That is correct. Section 808 will allow carriers to interline cargo in Alaska so long as the cargo has an ultimate origin and/or destination outside of the United States. It does not allow foreign carriers to carry or transfer cargo with an ultimate origin and destination both in the United States.

Mr. STEVENS. I thank my colleagues for explaining that this important provision allows carriers to interline cargo in Alaska, with an ultimate origin and/or destination outside of the United States, but does not allow foreign carriers to carry or transfer cargo with an ultimate origin and destination both in the United States.

Mr. BURNS. Mr. President, I come to the floor today in support of the conference report accompanying H.R. 2115, which reauthorizes the Federal Aviation Administration (FAA).

Vision 100—Century of Aviation Reauthorization Act would provide just under $60 billion over the next 4 years for FAA activities. These are much needed funding improvements because we find ourselves in one of the greatest transition periods as a country, and as proponents of the aviation industry, in the history of our nation. With the slow recovery of the industry and the economy since the attacks of 9/11 it is important we pass this legislation immediately.

As a member of the conference, my colleagues and I addressed several important issues and challenges. One of the most important achievements is the progress made in funding the Airport Improvement Program, which is funded at $3.4 billion in 2004 and increases $100 million each year ending at $3.7 billion in 2007. This is a necessary increase, as we need to constantly improve our Nations' airport infrastructure especially in rural and underserved areas.

Mr. President, as you know, several provisions in or absent from the bill have bogged down its passage. As a member of the conference, even I do not support all provisions in this bill, but I understand the importance of the bill as a whole and the potential pitfalls our infrastructure will take if not enacted.

I do not intend to discuss the entire report, but there are several critical provisions I would like to briefly address which greatly affect my State of Montana and my constituents.

The first provision is intended to make additional slots available to improve access to the Nation's Capital for cities located beyond the 1,250 mile service perimeter at Ronald Reagan Washington National Airport, DCA. I am particularly concerned that small and midsized communities in the west, especially in Montana and neighboring states, continue to have far fewer service options to reach DCA than communities located in any other area of the country. This is due to the fact that the most important hub airport serving the northern tier and intermountain region, Salt Lake City, is located outside the DCA perimeter.

Network benefits are critical to improving this situation, and it is very important that the Department of Transportation consider and award these limited opportunities to western hubs that connect the largest number of cities to the national transportation network. Salt Lake City is a prime example. That airport serves as a primary transportation hub for the intermountain west. I was very disappointed that Salt Lake City received only a single flight from the prior AIR–21 allocation, while other hubs servicing the southwest region received two, or even three daily flights. Increased service at Salt Lake City should be a priority, because of the many critically underserved communities in the northern tier and intermountain west that will receive significant network benefits from additional flights at that hub.

The second issue is the Essential Air Service Program, EAS. As you know, the EAS program provides subsidies to carriers for providing service between small communities and hub airports and is, no pun intended, essential to my state. This report authorizes approximately $500 million for EAS, and I am extremely supportive of that level.

Unfortunately, the conference report also contains a provision, which directs the DOT to establish a pilot program for up to 10 EAS communities located within 100 miles of a large hub, and those communities will be required to pay 10 percent match of the EAS subsidy. While this provision does not affect my Montana EAS communities, I am still extremely unsupportive of this provision. If any Montana communities were asked to pay this match, there is no way they could come up with the funds. I want this body to know I will fight expansion of this pilot program in future authorizations. While we need to work on possible alternatives to EAS, we cannot ask small communities across the Nation to fork out funds they do not have for a service they deserve and need.

Finally, this report contains language based on two amendments I offered on the Senate floor during debate earlier this year. The first asks for a report from the Secretary of Transportation on any actions that should be taken with respect to recommendations made by the National Commission to Ensure Consumer Information and Choice in the Airline Industry. The second amendment authorizes compensation to General aviation businesses for losses incurred after the attacks of 9/11. General aviation is an extremely important piece of this country's aviation backbone and we need to keep their perspective in mind whenever any aviation legislation is addressed whether it deals with security or overall aviation policy.

In summation, we have crafted a fair and necessary piece of legislation that

needs immediate passage. I ask my colleagues to support final passage of this critical piece of legislation that will aide all aviation sectors across this Nation.

Mr. JEFFORDS. Mr. President, I have serious concerns about several provisions found in the FAA reauthorization conference report. Before the Senate passed S. 824, the FAA reauthorization bill, we expressly prohibited additional privatization of air traffic controllers. We also eliminated a proposed cost-sharing requirement for local communities that participate in the essential air service program. This requirement would have placed an insurmountable burden on many remote communities struggling to maintain commercial air service. While I understand that Administrator Blakey today has promised our Senate colleagues to forestall privatization until the next fiscal year, I am concerned that the window is nevertheless open for eventual privatization and would not support such a result.

I remain concerned about the provisions in this bill affecting the National Environmental Policy Act, NEPA. As I discussed in my statement of November 17, 2003, the legal obligations of Federal agencies to evaluate aviation projects under Federal environmental laws have not been repealed by the language in this bill, nor should they be. If better coordination is the intent of this legislation, there is ample authority contained in the existing NEPA statute and regulations for coordination among Federal agencies in performing required environmental reviews of these projects. The confusing statutory directions contained in this bill are both unnecessary and counterproductive if the desired result is efficient project completion.

I am disappointed that this conference report contains these provisions, and I will work to ensure that the FAA scrutinizes the potential consequences of privatization of air traffic controllers if that issue arises next year. In addition, as the ranking member of the Environment and Public Works Committee, I will continue to conduct oversight pertaining to the implementation of environmental laws for these and other Federal projects.

Mr. THOMAS. Mr. President, as the Senate considers the final conference report to the FAA reauthorization bill, I would like to take a moment to thank Chairman MCCAIN and subcommittee Chairman TRENT LOTT, for their assistance regarding a provision that is very important to my home State.

For years, I have been working with the FAA and the Jackson Hole Airport to reduce the noise that is produced by older private jets. As some of my colleagues know, the Jackson Hole Airport is the only commercial airport that is located in a national park. Since 1983, the Jackson Hole Airport has operated under a ''land use agreement'' with the Secretary of the Interior. This agreement requires the airport to implement technological advances to reduce aircraft noise.

However, the FAA has prevented the airport from instituting a Stage 2 restriction on older ''noisy'' private jets even though the Air Noise Capacity Act of 1990 includes a provision that allows folks to enforce pre-existing noise control measures. Currently, only a small portion, 2.6 percent, of the airport's operations are conducted by older noisy jet aircraft. However, these old noisy jets have a disproportionately high noise impact on Grand Teton National Park and the National Elk Refuge. Because the FAA has failed to recognize the grandfathered status of the Jackson airport, I offered an amendment to the Senate version of the FAA reauthorization bill.

On June 12 the Senate unanimously agreed to my amendment. I am thankful for Senator MCCAIN's and House Chairman DON YOUNG's understanding regarding the need to protect Grand Teton National Park and the National Elk Refuge from the high levels of noise that older private jets produce. The provision is supported by the Jackson Airport Board, Grand Teton National Park, the Town of Jackson, Teton County, and U.S. Department of the Interior.

Mr. President, the Jackson Hole Airport is a commercial service airport located on Federal land within Grand Teton National Park. It operates under a long-term lease agreement with the Department of the Interior. That agreement contains noise control measures, including cumulative and single event noise limits, and requirements for an airport-adopted noise control plan.

Section 825 of the conference report authorizes a commercial service airport that does not own the airport land and is a party to a long-term lease with a Federal agency, such as the Department of the Interior, to restrict or prohibit Stage 2 aircraft weighing less than 75,000 pounds, to help meet the noise control plan contained in its lease.

It is my understanding that the conferees did not intend to limit application of section 825 to only those noise control measures that are expressly referred to as ''plans,'' but intended the term to refer to the range of noise control requirements and standards imposed by these Federal lease agreements.

Mr. MCCAIN. The Senator from Wyoming is correct. The conferees intended ''plan'' to refer to the range of requirements and standards contained in a Federal lease, which together constitute its plan to limit airport-generated noise. Section 523 of the Senate bill, introduced by the Senator from Wyoming, would have given similar authority to the Jackson Hole Airport Board. The conference substitute will permit the Jackson Hole Airport, and others if subject to similar Federal lease requirements, to adopt these measures.

Mrs. MURRAY. Mr. President, I rise in strong support of the Vision 100–Century of Aviation Reauthorization Act. This bill authorizes critical aviation infrastructure and operations spending for the fiscal years 2004 through 2007. The bill also makes important legislative adjustments for our aviation security program at the Transportation Security Administration.

I represent a State with tens of thousands of aviation workers. I appreciate fully the essential contribution that our Nation's aviation industry makes to our national economic prosperity. As the former chairman and now ranking member of the Transportation Appropriations Subcommittee, I spend a considerable amount of my time seeing to it that the needs of our national aviation enterprise are adequately funded.

As my colleagues are aware, consideration of this FAA authorization bill has been delayed for an extraordinary period of time over the issues surrounding the Bush administration's stated desire to privatize certain aspects of our Nation's air traffic control system.

At one time, this legislation included language that specifically authorized the FAA Administrator to privatize the controller workforce at scores of air traffic control towers, including the air traffic control tower at Boeing Field in Seattle. Senators who are not familiar with the geography of the greater Seattle area may not be aware that Boeing Field sits right between Seattle-Tacoma International Airport and downtown Seattle. It is extraordinarily close to our port, our central business district, our major sporting venues—Safeco Field and the Seahawks Stadium. It is also a major installation for the Boeing Company and a busy general aviation airport.

In the wake of the events of September 11, 2001, I cannot support a proposal to contract out the air traffic control function to the lowest bidder in the heart of this critically important corridor.

Immediately after September 11, this Congress passed legislation to take the air passenger screening function out of the hands of private bidders and place it in the hands of a federalized screening force. For the life of me, I do not understand why the Bush administration wants to take the exact opposite approach when it comes to the highly skilled personnel that actually control the movement of our aircraft.

The administration has also cited an interest in privatizing other aspects of

our Nation's national air traffic control enterprise, including the employees at our Nation's flight service stations and the technicians that maintain our Nation's air traffic control equipment.

These privatization ideas have not been adequately explained or adequately justified to the Congress or to the public. It has not been determined that such contracting out activities would actually improve upon the exemplary safety record that we currently enjoy with our air traffic control system. I, along with many of my colleagues, have deep-seated doubts about the safety ramifications, the security ramifications and whether there will be any real financial benefit to the taxpayer as a result of such a privatization scheme. It was for these reasons that I and 42 of my Senate colleagues, both Democrats and Republicans, were required to vote against bringing debate on this bill to a close on November 17, and why I joined 55 of my colleagues in support of a measure to explicitly exclude privatization of our air traffic control towers during the initial debate on the Senate bill. At that time, we did not have what I considered to be adequate assurances from the FAA that they would not be launching into these privatization schemes in the very near future.

I am pleased that we have now overcome this hurdle and the administration has given us assurances that they will not engage in any competition studies or outsourcing activities for air traffic controllers or for maintenance and technician personnel during fiscal year 2004. This will give the Congress some time to review the administration's plans in detail, which I intend to do during next year's appropriations' hearings process. Also, with the written assurance now in hand that no outsourcing activities related to our air traffic control system will take place in 2004, we can, if need be, work on putting sufficient safeguards in the 2005 Transportation Appropriations Act if we feel that the administration is heading in the wrong direction when it comes to protecting safety and security.

It is for these reasons that I am relieved by the administration's new letter on this topic which I understand has already been put into the RECORD. I am glad that we have overcome this hurdle.

This bill will provide investments in critical infrastructure and operations at our Nation's airports. Furthermore, it will allocate needed funding to continue our efforts to improve the security of aviation system.

For these reasons, I support this important conference report today.

The PRESIDING OFFICER. Without objection, the request of the Senator from Maine is so ordered.

The conference report was agreed to.

Ms. COLLINS. Madam President, I see the Senator from North Dakota. If the Senator has a very brief comment to make, I yield to him.

Mr. DORGAN. Madam President, I appreciate the courtesy of the Senator from Maine. Let me say with respect to the unanimous consent she just offered to pass the FAA conference report, I would like to say that Senator LAUTENBERG has led the fight in this Chamber to try to prevent the privatization during this coming fiscal year of those who work for the FAA. That fight required us to go through one cloture vote and the majority did not invoke cloture. As a result, the FAA conference report was not passed.

Since that time, I and Senators LAUTENBERG, HOLLINGS, LOTT, ROCKEFELLER and others have engaged in discussions with the administration. I want to point out that the letter just printed in the RECORD by unanimous consent is from Marion Blakey. She says:

> During this fiscal year we have no plans to initiate additional competitive sourcing studies, nor will we displace FAA employees by entering into binding contracts to convert to private entities any existing FAA position directly related to our air traffic control system.

I point out that the reason we were able to move this conference report tonight was because the administration has agreed they will not, during this fiscal year, privatize those positions in the FAA. That is a very important position, one that my colleague, Senator LAUTENBERG, from New Jersey, fought very hard for. We have achieved that commitment from the administration.

For that reason, we were able to move that FAA reauthorization. Let me say how pleased I am because it is so important to virtually every region of this country. The investment in the Airport Improvement Program and the other things that provide strength to the FAA system is very important to our country.

Let me thank my colleague from Maine. I wanted to explain the circumstances that have led to this point and especially say I have been pleased to work with Senator LOTT, in many contacts over recent days, to try to accomplish this and again say that my colleague from New Jersey, Senator LAUTENBERG, deserves a pat on the back for forcing this result.

I yield the floor.

The PRESIDING OFFICER. The Senator from Maine.

NATIONAL WOMEN'S HISTORY MUSEUM ACT OF 2003

Ms. COLLINS. Madam President, I ask unanimous consent the Senate now proceed to consideration of Calendar No. 404, S. 1741, a bill to provide a site for the National Women's History Museum in the District of Columbia.

The PRESIDING OFFICER. The clerk will report the bill by title.

The assistant legislative clerk read as follows:

> A bill (S. 1741) to provide a site for the National Women's History Museum in the District of Columbia.

There being no objection, the Senate proceeded to consider the bill.

Ms. COLLINS. Madam President, I ask unanimous consent the bill be read the third time and passed, the motion to reconsider be laid upon the table, and any statements related to the bill be printed in the RECORD.

The PRESIDING OFFICER. Without objection, it is so ordered.

The bill (S. 1741) was read the third time and passed, as follows:

S. 1741

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. SHORT TITLE.

This Act may be cited as the ''National Women's History Museum Act of 2003''.

SEC. 2. FINDINGS.

Congress finds that—

(1) the National Women's History Museum, Inc., is a nonprofit, nonpartisan, educational institution incorporated in the District of Columbia;

(2) the National Women's History Museum was established—

(A) to research and present the historic contributions that women have made to all aspects of human endeavor; and

(B) to explore and present in a fair and balanced way the contributions that women have made to the Nation in their various roles in family and society;

(3) the National Women's History Museum will collect and disseminate information concerning women, including through the establishment of a national reference center for the collection and preservation of documents, publications, and research relating to women;

(4) the National Women's History Museum will foster educational programs relating to the history and contribution to society by women, including promotion of imaginative educational approaches to enhance understanding and appreciation of historic contributions by women;

(5) the National Women's History Museum will publicly display temporary and permanent exhibits that illustrate, interpret, and demonstrate the contributions of women;

(6) the National Women's History Museum requires a museum site near the National Mall to accomplish the objectives and fulfill the ongoing educational mission of the museum;

(7) the 3-story glass enclosed structure known as the ''Pavilion Annex'' is a retail shopping mall built next to the Old Post Office in 1992 by private developers using no Federal funds on public land in the Federal Triangle south of Pennsylvania Avenue, N.W.;

(8) the Pavilion Annex came into the possession of the General Services Administration following bankruptcy and default by the private developer of the Old Post Office Pavilion;

(9) the Pavilion Annex has been vacant for 10 years and is in a state of disrepair;

(10) the Pavilion Annex is located near an area that has been identified as an ideal location for museums and memorials in the

Memorials and Museums Master Plan developed by the National Capital Planning Commission;

(11) the National Women's History Museum will provide a vibrant, cultural activity in a building currently controlled by the General Services Administration but unused by any Federal agency or activity;

(12) the General Accounting Office has determined that vacant or underutilized properties present significant potential risks to Federal agencies, including—

(A) lost dollars because of the difficulty of maintaining the properties; and

(B) lost opportunities because the properties could be put to more cost-beneficial uses, exchanged for other needed property, or sold to generate revenue for the Government;

(13) the National Women's History Museum will use Government property for which there is no Government use as of the date of enactment of this Act, in order to—

(A) promote utilization, economy, and efficiency of Government-owned assets; and

(B) create an income producing activity;

(14) the National Women's History Museum will attract an estimated 1,500,000 visitors annually to the District of Columbia; and

(15) the National Women's History Museum will promote economic activity in the District of Columbia by—

(A) creating jobs;

(B) increasing visitor spending on hotels, meals, and transportation; and

(C) generating tax revenue for the District of Columbia.

SEC. 3. DEFINITIONS.

In this Act:

(1) ADMINISTRATOR.—The term ''Administrator'' means the Administrator of General Services.

(2) MUSEUM SPONSOR.—The term ''Museum Sponsor'' means the National Women's History Museum, Inc., a nonprofit organization incorporated in the District of Columbia.

(3) PAVILION ANNEX.—The term ''Pavilion Annex'' means the building (and immediate surroundings, including any land unoccupied as of the date of enactment of this Act) in Washington, District of Columbia that is—

(A) known as the ''Pavilion Annex'';

(B) adjacent to the Old Post Office Building;

(C) located on Pennsylvania Avenue, N.W., to the east of 11th Street N.W.; and

(D) located on land bounded on 3 sides by the Internal Revenue Service buildings.

SEC. 4. OCCUPANCY AGREEMENT.

(a) IN GENERAL.—Notwithstanding any other provision of law, the Administrator shall enter into an occupancy agreement to make the Pavilion Annex available to the Museum Sponsor for use as a National Women's History Museum in accordance with this section.

(b) APPRAISAL.—

(1) IN GENERAL.—Not later than 90 days after the date of enactment of this Act, a fair market value for the purpose of determining rent shall be determined by not more than 3 appraisers, operating under a common set of instructions, of whom—

(A) 1 shall be retained by the Administrator;

(B) 1 shall be retained by the Museum Sponsor; and

(C) 1 shall be selected by the first 2 appraisers only if—

(i) the first 2 appraisals are irreconcilable; and

(ii) the difference in value between the first 2 appraisals is greater than 10 percent.

(2) DIFFERENCE OF NOT MORE THAN 10 PERCENT.—If the 2 appraisals differ by not more than 10 percent, the fair market value shall be the average of the 2 appraisals.

(3) IRRECONCILABLE APPRAISALS.—If a third appraiser is selected—

(A) the fee of the third appraiser shall be paid in equal shares by the Administrator and the Museum Sponsor; and

(B) the fair market value determined by the third appraiser shall bind both parties.

(c) TERM OF OCCUPANCY AGREEMENT.—

(1) IN GENERAL.—The term of the occupancy agreement shall be at least 99 years, or any lesser term agreed to by the Museum Sponsor.

(2) FIRST PAYMENT.—The first payment shall be due on the date that is 5 years after the date of execution of the occupancy agreement.

(d) PRIVATE FUNDS.—The terms and conditions of the occupancy agreement shall facilitate raising of private funds for the modification, development, maintenance, security, information, janitorial, and other services that are necessary to assure the preservation and operation of the museum.

(e) SHARED FACILITIES.—The occupancy agreement may include reasonable terms and conditions pertaining to shared facilities to permit continued operations and enable development of adjacent buildings.

(f) RENOVATION AND MODIFICATION.—

(1) IN GENERAL.—The renovation and modification of the Pavilion Annex—

(A) shall be carried out by the Museum Sponsor, in consultation with the Administrator; and

(B) shall—

(i) be commenced as soon as practicable but not later than 5 years after the date of execution of the occupancy agreement;

(ii) sever the walkway to the Old Post Office Building; and

(iii) enhance and improve the Pavilion Annex consistent with the needs of the National Women's History Museum and the adjacent structures.

(2) EXPENSE CREDIT.—Any expenses incurred by the Museum Sponsor under this subsection shall be credited against the payment under subsection (c)(2).

(g) REPORT.—If the Administrator is unable to fully execute an occupancy agreement within 120 days of the date of enactment of this Act, not later than 150 days after the date of enactment of this Act, the Administrator shall submit to the Committee on Governmental Affairs in the Senate and the Committee on Government Reform in the House of Representatives a report summarizing the issues that remain unresolved.

SEC. 5. EFFECT ON OTHER LAW.

Nothing in this Act limits the authority of the National Capital Planning Commission.

Ms. COLLINS. Madam President, I now ask unanimous consent to engage in a colloquy with the Senator from Alaska, and I yield to the Senator from Alaska for that purpose.

The PRESIDING OFFICER. Without objection, it is so ordered.

Ms. MURKOWSKI. Madam President, I appreciate the opportunity to speak today and engage in this colloquy with the Senator from Maine. I thank the Presiding Officer for the opportunity to speak about opening a National Women's History Museum near the National Mall.

Currently, the National Women's History Museum is without a home. It is accessible online, but Americans need a physical location for the National Women's History Museum so a history from every State can be collected, viewed, and analyzed.

Recognizing the Senator from Maine and this Senator from Alaska have a connection, both of us coming from Northern States, both of us coming from States with populations that are relatively small, both States have a history that demonstrates a history of pioneering women. Alaska and Maine have historically afforded opportunities that might not be available to women in other States.

Throughout Alaska's and Maine's history, women have had perhaps more opportunities because our populations are isolated, and you are forced to be a little more self-reliant.

Women of Alaska and Maine, as their male counterparts, are ingrained with the ability to make do with what we have. I ask the Senator from Maine if she would agree with some of my statements?

Ms. COLLINS. Madam President, I certainly do agree with the distinguished Senator from Alaska. Both of us have had the opportunity to serve in public office. Both of us come from States that are small in population but large in the impact that women have had on our Nation's history. We are from States with rich histories of accomplishments by women of all backgrounds and cultures.

For example, the legendary Senator Margaret Chase Smith was the first woman in history to serve in both the U.S. House and the Senate.

Pauline Elizabeth Hopkins, who has been called the dean of African-American Women Writers, and who has been considered one of the most prolific black female writers in the beginning of the 1900s, was born in Portland, ME.

Mary Gabriel, of the Passamaquoddy Tribe, was a famous Native-American basket weaver, largely credited with reviving the art in the State of Maine.

Brenda Commander is the first woman to be elected as chief of Maine's Maliseet Indian Tribe.

Is the Senator from Alaska aware of similar accomplishments by Alaskan women?

Ms. MURKOWSKI. We have a history, as I have said, of pioneering women, women who perhaps have done the unexpected, who have reached out into areas that we would not anticipate, at a time we would not anticipate, women such as Kate Carmack, who is especially important in Alaska's history. Kate was an Athabascan woman who married an American trader. She is actually credited with discovering the first gold in Bonanza Creek, which started the Alaska gold rush in 1896.

As the story is told, when Kate first discovered the gold, it was frozen in the mud. Kate and her husband did not have the grub stake, if you will. They did not have the cash necessary to do

the digout that winter. So they literally were sitting on the largest gold discovery in history. Kate's resourcefulness as a skin sower and her skill as an outdoorsman earned enough cash for the family to pull together that grub stake to hit ''pay dirt'' when the ground thawed the next spring.

When we think of women like Kate Carmack in Alaska, who braved some pretty tough, some pretty difficult conditions, I ask the Senator from Maine if she has any similar stories from her State?

Ms. COLLINS. I certainly do. That is a wonderful story of a truly courageous woman.

We have many women such as that throughout Maine's history. Josephine Peary was one such woman. She was married to the great explorer, Robert E. Peary, who was the first to reach the North Pole, not that far from Alaska. They lived together on Eagle Island in Casco Bay, ME. Josephine began exploring when she accompanied her husband to Greenland on a journey sponsored by the Academy of Natural Sciences that would last for a year and a half. That travel, in 1892, made Josephine the first woman in history to be a member of an Arctic exploration team.

I understand that women in Alaska also have been pioneers in expanding opportunities for women to work outside of the home. I wonder if the Senator from Alaska might expand on that.

Ms. MURKOWSKI. We have a lot of firsts that, again, when we look at Alaska's history and recognize we did not become a State until 1959, it is a very recent history, but yet women's involvement in some very important firsts have gone back so many years prior to statehood it really gets your attention.

Historically, Alaskan women were employed in jobs that women in other areas of the country could only dream about. In 1915, Anchorage employed its first female principal in the Anchorage School District, our largest community now, 3 years before World War I and 5 years before women's suffrage was ratified.

A year later, 1916, and still 4 years before national women's suffrage passed, Lena Morrow Lewis is believed to be the first woman to campaign for Alaska's territorial seat in the U.S. Congress. She did not win, but she was certainly followed by other pioneering women in the workforce.

Marvel Crosson was the first female licensed pilot in Alaska in 1927. Mildred Herman became the first woman admitted to the Alaska Bar Association in 1934. And Barbara Washburn was the first woman to climb Mount McKinley, the tallest mountain in North America.

This is all long before Alaska became a State. Other opportunities for women, as we flip through the history books, become very apparent. A woman by the name of Nell Scott became the first woman to serve in the Alaska State legislature in 1937. This was a year before the National Fair Labor Standards Act of 1938 was passed, which established a minimum wage.

Blanche McSmith was the first Black woman to serve in the Alaska State legislature. Sadie Neakok was the first Native Alaskan woman to serve as a magistrate in Alaska in 1960, during the same time period when the struggle for civil rights was raging in the South. Blanche and Sadie began serving in Alaska in very prominent roles 4 years before the Civil Rights Act was passed.

Could the Senator from Maine describe for me some of the pioneering women in her State.

Ms. COLLINS. I would love to share that information with the Senator from Alaska. It is just fascinating to hear the many firsts that women from her State have established.

The Senator from Alaska obviously has a great deal of pride in the history of women in her State.

In Maine, too, we have women who have played influential roles throughout history, but especially in the field of literature.

I am sure all of my colleagues know well the story of Harriet Beecher. She wrote ''Uncle Tom's Cabin'' in 1850 while pregnant with her seventh child. She began writing the book while residing in Brunswick, ME. Her deep religious faith and dedication to bringing to light the problems with slavery encouraged ''Hattie'' to write with such passion that she quickly finished and continued to write an average of a book a year to support her family.

Another famous Mainer, Martha Ballard, also made important contributions. She lived in Hallowell, ME, and was a midwife and a healer. She faithfully maintained a diary from 1785 to 1812, and her meticulous records have provided us with a rare glimpse into the daily life in Maine in the late 1700s and the early 1800s. Her contributions and life were only recently highlighted when Laurel Ulrich documented her work in a Pulitzer Prize winning book ''The Midwife's Tale.''

America's first female novelist, Sally Sayward Barrell, also known as Madam Wood, was born in York, ME, in the southern tip of our State. She wrote five gothic novels, first under the signature of ''A Lady of Massachusetts,'' and then, later, under the signature of ''A Lady of Maine'' when Maine was granted statehood in 1820.

Another pioneering woman was Dorothea Dix. She was born in Hampden, ME, in 1802, and is considered a groundbreaking reformer in the area of treatment for individuals suffering from mental illness. She traveled the Nation advocating for a more compassionate, holistic approach to the treatment of those suffering from mental illness. She was truly ahead of her time. She also successfully lobbied Congress to establish the first and only national Federal mental health facility which would become a world premiere mental health and research center.

I ask my colleague to further expand on how Alaska has supported women and their accomplishments.

Ms. MURKOWSKI. Well, as the Senator has noted, her home State of Maine and Alaska both have a very rich history of groundbreaking women, women who have been pioneers, women who have reached out. I think our States have demonstrated the very supportive nature of moving women forward in their prosperity.

In Alaska, as a for instance, since we are talking about ''for instances and firsts,'' the very first bill ever passed by the Territory of Alaska was the Shoup women's suffrage bill in 1913.

That was our first bill as it related to women's rights. Seven years before women's suffrage was ratified in the rest of the country and 46 years before Alaska became a State, our territorial legislature's first bill was related to women's rights.

I ask the Senator from Maine, in terms of your role model throughout your political career, who would you cite as that role model, that individual?

Ms. COLLINS. I would reply to my friend and colleague from Alaska that my role model and inspiration was the great Senator Margaret Chase Smith. She served as Senator from Maine the entire time I was growing up. She served in the Senate from 1949 to 1972. I realize how fortunate I was to have as a role model this courageous, smart, and brave woman who did so much and set so many firsts for America. I have often thought that the path for my colleague OLYMPIA SNOWE and myself to the Senate was paved by the remarkable Senator Margaret Chase Smith.

I remember well my very first meeting with Senator Smith. I was a senior in high school. I was in Washington for a special program, and she spent nearly 2 hours talking with me. She talked about national defense, her service on the Armed Services Committee and, most of all, about her decision to speak out against the excesses of Joseph McCarthy. That was an extraordinarily brave thing to do, but it was typical of Senator Smith, who had a courageous and independent spirit.

She was the first to do so many things. She was the first Republican Senator elected to the Senate. I would note that when I was elected to the Senate, Maine became the first State to send two Republican women to the Senate to serve at the same time. She was the first woman to serve in both the House and the Senate. She was the first woman to be backed by a major

political party in a Presidential election. Long after it became commonplace for women to serve in the highest ranks of our Government, Senator Smith will always be acknowledged and remembered and honored in Maine for her dignity and her courage.

Although I didn't realize it at the time, when I look back at her meeting with me, I realize that that was the first step in a journey that led me to run for her seat 25 years later. I am so proud to hold the seat once held by the legendary Senator Margaret Chase Smith.

Women such as those the Senator from Alaska has spoken of and whom I have talked about today are the reason we are so proud to sponsor a bill that, at no cost to the taxpayers, directs that the Old Post Office Annex be made available to house the National Women's History Museum. We need a place for our country to honor the contributions of women, particularly for young girls who are coming to Washington to be able to go to this museum and learn about some of the remarkable women who have changed American history, about whom the Senator from Alaska and I have talked today. Women's history needs a place in our capital and in our collective American history.

I ask my colleague from Alaska if she would agree with that sentiment. She has been such a leader in getting this bill through.

Ms. MURKOWSKI. I couldn't agree more with the Senator from Maine. Just in the discussion we have had this evening about some of the women from my State and their pioneering enterprises and hearing the stories about the women of Maine, I would love to be able to go somewhere and spend the time to do more research, to find out more about these pioneering women, not only in Alaska and Maine but all of the States in between. By having the women's history museum here in Washington, DC, we will be able to do that.

Women have played such a crucial role in the development of my State, as you have heard, and certainly in the development of yours. By encouraging women's history of all of our respective States, we can see and celebrate this common history from as far apart as Maine to the east and Alaska in the west.

Those frontier women, women of independent spirit, demonstrated self-reliance, themes that embody all American women and the American spirit. I, too, am most proud to be a cosponsor of this bill and thank the Senator from Maine for her leadership in moving this forward so that we do have a place to house these great collections.

Ms. COLLINS. Madam President, I thank the Senator from Alaska for participating in this discussion tonight. She certainly continues that proud tradition in Alaska of women who have made a real difference. I am honored to serve with her. She does an extraordinary job. I also think we would be remiss in not recognizing the contributions of our Presiding Officer today, the Senator from North Carolina, Mrs. DOLE, who also has established so many firsts in American history. I know that she, too, will be prominently featured in this museum once it comes about.

I think we can take great pride in being here tonight and knowing we have passed this legislation unanimously.

I yield the floor and suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. LAUTENBERG. Madam President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Ms. MURKOWSKI.) Without objection, it is so ordered.

AIR TRAFFIC CONTROL

Mr. LAUTENBERG. Madam President, tonight we got some good news. I want to just say a few words about the FAA bill because we have resolved the issue on air traffic control. The good news is that tonight we scored a victory, a victory for safety and a victory for homeland security.

As many of my colleagues know, I held up the FAA traffic control bill in order to get some assurance that the safety and security of the flying public would not be jeopardized by the privatization of the air traffic control system. I am pleased to announce that we have now received an assurance from the administration regarding fiscal year 2004. Until the end of this fiscal year, the administration has agreed not to privatize any components of our air traffic control system. The controllers are protected, the technicians are protected, the flight service station controllers—all of those units that make up the air traffic control system—are protected. We have a letter stating the administration's assurance.

Some of my colleagues have asked why I was doing this: Why do you feel so strongly about it? I put it in personal terms. I told them: Because I don't want my grandchildren or your grandchildren or the grandchildren of our constituents put in danger by a risky privatization scheme. That is what was at stake here.

I extend my thanks to many of my colleagues for their support in this fight, specifically our Commerce Committee ranking member, Senator HOLLINGS, and the subcommittee ranking member, Senator ROCKEFELLER, Senator DORGAN, and the leader and assistant leader of our caucus, Senators DASCHLE and REID. They always stayed strong and said ''safety first.''

Senator LOTT has been an honest broker throughout this process. He kept the discussions alive.

It was a tough fight. But at the heart of this fight was the reality that it was a bipartisan decision. In June of this year, 11 Republicans voted to prevent privatization, to stand up for safety. I know we often get pressured to vote with our caucus or vote with our party's President, but sometimes you just have to stand up for your constituents' safety, and that is what my Republican friends did here.

Within days of returning to the Senate earlier this year, I learned that the administration intended, through this A–76 process, to privatize air traffic control. In my previous 18 years, I had an active interest in aviation and the air traffic control system. But the moment I learned of the administration's actions, I knew I would spend much of this year fighting to prevent that action from taking place. We won a Senate vote to prevent privatization. We fought off the terrible first conference report. We fought the pending conference report until we received the assurances that we got tonight.

But the fight is not over, and I will continue to push for a permanent prohibition. In the words of California's current Governor, I'll be back. We are going to fight this again, and we will keep fighting it until it goes away for good.

I am reminded, 700 million people fly in our skies every year, roughly 2 million a day. Our system is going to be pushed to the limits of capacity in these next couple of weeks in what will be the busiest travel day of the year. I hope travelers will rest assured knowing that control of the skies will be in the hands of professionals, the Government employees who make up the air traffic control system.

This is the greatest air traffic control system in the world, most safe, most efficient. There are 15,000 Federal air traffic controllers and thousands of professional systems specialists and flight service station controllers. These are the men and women who keep our skies safe and secure.

But there are some obvious lessons we need to heed, those of September 11, when the air traffic control system worked flawlessly to bring home safely some 5,000 airplanes in just a couple of hours. These are the lessons from other countries that have tried this. They were left with just what could be expected: Less safety, more delays, and more cost in the end.

There are lessons from the space program.

I look forward to examining these issues during the policy debate to which our chairman is committed. I hope there can be an adequate discussion for the American people so they can learn how, after next year, the

White House proposes to put their safety and security at risk—if they do, all for the benefit of the profit motive.

I would like to mention one other item in this bill that is of particular importance to the State of New Jersey. Our great State has a proud history of aviation with a number of public use airports. Certainly the occupant of the chair understands since aviation in Alaska is the lifeblood of that beautiful State. Our great State has a proud history with a number of public use airports, and now some of these airports are disappearing, giving way to urban sprawl and development. To help stem this problem, a key provision in this bill establishes a pilot program which offers additional tools to States to enable them to preserve these public use airports. I am hopeful this program will be used to keep these important facilities for general aviation, corporate, and agricultural uses, and the medevac and firefighting uses which depend on sufficient airport facilities to continue to operate.

I commend the chairman of the Commerce Committee, Chairman MCCAIN, for working with me on this provision.

I yield the floor and suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. FRIST. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. ENSIGN). Without objection, it is so ordered.

OFFICE OF COMPLIANCE MEETING CANCELLATION

Mr. STEVENS. Mr. President, I ask unanimous consent that the attached statement from the Office of Compliance be printed in the RECORD today pursuant to section 303(b) of the Congressional Accountability Act of 1995 (2 U.S.C. 1383(b)).

There being no objection, the material was ordered to be printed in the RECORD, as follows:

U.S. CONGRESS,
OFFICE OF COMPLIANCE,
Washington, DC, November 20, 2003.

Hon. TED STEVENS,
Speaker of the House, House of Representatives, Washington, DC.

DEAR MR. PRESIDENT: A Notice of Proposed Rulemaking (NPR) for amendments to the Procedural Rules of the Office of Compliance was published in the Congressional Record dated September 4, 2003. Subsequent to the publication of this notice, this office announced a hearing for public comment on the proposed amendments in the Congressional Record on October 15, 2003.

The Board of Directors of the Office of Compliance cancels the hearing regarding the proposed amendments to the Procedural Rules of the Office of Compliance which had been scheduled for December 2, 2003, at 10 a.m. in room SD–342 of the Dirksen Senate Office Building.

We request that this notice of cancellation be published in the Congressional Record. Any inquiries regarding this notice should be addressed to the Office of Compliance at our address below, or by telephone at 202–724–9250, TTY 202–426–1665.

Sincerely,

SUSAN S. ROBFOGEL,
Chair.

TRIBUTE TO CPL RODNEY ‘‘JIMMY’’ ESTES II

Mr. MCCONNELL. Mr. President, I rise today to pay tribute to a brave young man who just returned from a tour of duty in Iraq. Rodney ‘‘Jimmy’’ Estes II is from my hometown of Louisville, KY. A few months ago, Jimmy was dressed in fatigues fighting the war on terror in the Iraqi desert. But today, you can find him wearing red and white and playing football for the University of Louisville Cardinals—my favorite team.

Jimmy Estes, a 1998 graduate of St. Xavier High School, turned down a football scholarship to Georgetown College to follow in his grandfather's footsteps—to serve in the U.S. Marine Corps. The day after graduation, he left Kentucky for boot camp at Parris Island. And on January 7, 2003, Jimmy was called to active duty.

As a member of the Alpha Company, 8th Tank Battalion, Jimmy was on the front lines in An Nasiriyah, Iraq. During his time in the country, he experienced some of the war's most intense fighting. In his tank, he worked as the loader and operated the 240-millimeter gun on top of the vehicle. Jimmy and his comrades are unsung heroes in one of our troops' finest hours. They were the lead tank in the rescue mission of PVT Jessica Lynch.

To pass the hours in Iraq, Jimmy played football with his fellow soldiers, reminding him of his lifelong dream—to play football for the University of Louisville Cardinals. Following his tour of duty, which ended this past May, Jimmy returned home and enrolled at U of L. Determined to play football, Jimmy spent his summer preparing to try out for one of four walk-on positions. And just like on the battlefield, Jimmy succeeded. Not only is he a wide receiver on his university's football team, he also continues to serve his Nation as a Marine reservist.

Jimmy's bravery, humility, and determination should be commended. On behalf of this grateful Nation, I ask my colleagues to join me in thanking Corporal Estes for his dedicated service. As a proud U of L alum and most importantly, a football fan, I wish Jimmy and his teammates a winning season. Go Cards!

I ask unanimous consent that the article, ‘‘For Jimmy Estes, that was war; this is football’’ from my hometown paper, The Courier-Journal, be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

[From the Louisville Courier-Journal, Oct. 10, 2003]

FOR JIMMY ESTES, THAT WAS WAR; THIS IS FOOTBALL

(By Pat Forde)

The war wasn't so bad until bedtime.

Jimmy Estes spent the dusty desert days in the company of his M1A1 Abrams tank crew or with the other members of Alpha Company, 8th Tank Battalion. On the dull days the Marines opened care packages or talked about family, sports and what they'd give for cold water and hot showers. On the deadly days they went out and killed Iraqis because it was their job, and when the battles around An Nasiriyah were done, the soldiers rehashed them in detached terms.

But at the end of the day, when Cpl. Rodney J. Estes II would lie down and stare up at the inky Arabian night, he was alone with the whole thing. It was just him and the horror: the dead women and children, the dogs tugging at corpses, the Iraqis he personally shot in combat, the bullets they shot at him that pinged off the tank's armor.

It was just him and the heroism: Estes and his mates rode the lead tank on the famous Jessica Lynch rescue mission, laying down fire and securing the perimeter before Army Rangers and Navy SEALs went into Saddam Hussein General Hospital to retrieve America's most famous POW.

He took all of it to bed with him.

‘‘Those were some lonely nights,’’ Estes said.

It was during those lonely nights that he made a vow: ‘‘If I get out of here and make it home alive, I'm going to do it.’’

Go to college. And play football. For his hometown team, the University of Louisville.

Today Jimmy Estes is alive and well and a 23-year-old walk-on wide receiver for the Cardinals.

He saw enough death in the desert to learn that dreams can come with an expiration date—probably not one of your choosing. A young man who had drifted along without plan or purpose since graduating from St. Xavier High School in 1998 had an epiphany in Iraq.

‘‘Absolutely, it changed me,’’ said Estes, who hadn't played organized football in six years. ‘‘I kind of piddled around at jobs here and there, not anything I'd call a career. If I hadn't gotten deployed, to be honest, I don't know where I'd be right now.

‘‘I don't take things for granted like I used to. I realize how lucky I am. I realize life can end.’’

Now his life is just restarting. He is a justice administration major in the classroom, with designs on becoming a football coach. On the field he is a humble freshman who hasn't even dressed out for a game.

Yet there is no bigger hero in the U of L football program.

Said offensive lineman Will Rabatin, Estes' friend since grade school: ‘‘I'm proud to know him.’’

No more proud than Estes is to have this long-shot college football experience. Think of all the coddled athletes out there, complaining that a full ride isn't enough. Then listen to Estes, who's been through more than those guys can ever imagine and now cherishes the chance to pay his way through college and play on the scout team.

‘‘He's just a great kid to have around,’’ said offensive coordinator and wide receivers

coach Paul Petrino. ''Every day when we start out doing ball drills, he has a lot of enthusiasm, a lot of fire. You can tell he loves being here.''

''I look forward to going out there every day,'' Estes said. ''I really appreciate the opportunity. It's just so great to be a part of it.''

In the weeks before the invasion of Iraq, the Marines played touch football in Kuwait all the time. Tankers against tank maintenance. In combat boots. In the desert.

Talk about your sandlot games.

For Estes, this was a continuation of his life long love of sports. When he played flag football in grade school, all the kids on the sidelines were squirting each other with water bottles, oblivious to the game. Jimmy was running the sidelines, keeping pace with the action and imploring his coaches to put him in.

When he was 6 he persuaded his father, Rodney, a retired Louisville police officer, to get him out of school early for the first two days of the NCAA basketball tournament. Jimmy sat in front of the television from noon until midnight each day, transfixed.

At age 7 he was reading Sports Illustrated cover to cover.

Later on he played at St. Martha for Rabatin's father, once catching the winning touchdown pass in the Toy Bowl. Then it was on to St. X, where he played little his final year after a disagreement with the coaches.

''He just didn't have a positive experience,'' his father said. ''Part of that was his fault.''

Estes' only football option was a partial scholarship to Georgetown College. He turned it down to follow in his grandfather's footsteps—into the Marine Corps and into a tank.

''That broke my heart when he didn't take that scholarship to Georgetown,'' Rodney Estes said. ''You know how you envision going down there on Saturdays to watch your son and walk around campus?''

Instead, a day after graduation from St. X, Estes was off to Parris Island for boot camp as a Marine reservist. Higher education—and football—flickered out of sight.

In 1999 he had talked to UofL assistant Greg Nord and then-coach John L. Smith about walking on, but he never followed through. He worked a job here and a job there and performed his duties with the reserves. Life was standing still.

''He kind of had his head up his—in other words,'' said Lance Cpl. Nick Rassano, a 2000 Trinity graduate who was in the same tank in the Middle East with Estes.

Then last Jan. 7, the phone rang at Ruby Tuesday, where Estes was bartending. The order was expected but still jarring: Report for active duty.

He told his family the news at dinner that night. Two days later he was gone—but not without some prescient final words from his father.

''Remember,'' Rodney Estes told his oldest son, ''the way you handle yourself out there probably says a lot about how you'll handle the rest of your life.''

First stop was Camp Lejeune, N.C. Then he was on a ship 30 days to Kuwait, for a month of preparation, some touch football and the last decent meals for a long time.

Finally, after a month in Kuwait, Estes and the rest of the American military force invaded Iraq.

''I was a policeman 25 years, and I'm not the kind of guy who gets overly worried,'' Rodney Estes said. ''But I tell you, that night he left I thought, 'This could be the last night I ever see him.' When your own kid goes off, that puts you through some changes.

''I'd wake up in the middle of the night and watch CNN. I watched so much TV I was about to drive myself crazy.''

Over in Iraq, the A–8 Marines were pushing hard toward An Nasiriyah and what ultimately would be some of the most intense fighting of the war. The first day of combat was the worst, as Estes watched a rocket-propelled grenade blow up an American vehicle and kill several soldiers.

He said they arrived in the area to find the streets flooded with sewage that stalled half of Alpha Company's 14 tanks—including his, christened the ''Think Tank'' because of the crew's propensity for making maintenance errors.

When the tanks bogged down, the Iraqis lit up. They were firing on foot, from orange-and-white taxis and from SUVs.

Estes was the loader in his tank but also was charged with manning the 240-millimeter gun on top of the vehicle. With the upper half of his body in view, he exchanged fire with the enemy.

Welcome to the terror and exhilaration of warfare, Cpl. Estes.

''It was a heck of an adrenaline rush,'' he said. ''I was scared, excited, all those things. I think of it like going into a big game, only times 100. Obviously, the stakes are much higher.

''You get a sick feeling in the pit of your stomach. I didn't freeze or tense up, but I definitely had butterflies.''

Asked if he personally shot anyone, Estes looked down briefly and answered yes. There was no bravado in his voice.

''The first time you see somebody get hit with a round is a crazy feeling,'' he said. ''It's a sick feeling. But when you sign up to be a Marine, that's something you obviously know can be part of the job.

''I can't sit here and describe the feelings you get. I can tell you what I saw, but in no way does it simulate what it was like.''

There is no simulation. Just late-night assimilation—alone, lying on your back and staring at the sky in a strange and dangerous land.

One day the Think Tank crewmen got the call to be part of a hush-hush mission. They were to be the lead among three tanks escorting a group of Special Ops forces into town. It had the potential to be dangerous. Estes' tank commander had him clear out space inside the tank, in case they needed it to transport bodies.

They originally were told that the target was a Saddam look-alike. They had no idea that they were going to play a part in the most dramatic—and later controversial—event in the war.

In the early hours of April 1, their tank led a group of other vehicles carrying Special Operation Unit Task Force 20 into Nasiriyah, storming into position around the hospital. Night-vision goggles on, Estes laid down suppression fire with the 240-mm gun for a few minutes and set up a perimeter before the Rangers and SEALs went in.

Lynch was rushed out and loaded onto a helicopter, though most involved in the rescue still didn't know the particulars of what happened. Estes' tank remained in position for hours afterward.

At one point he was told to hand some Special Ops soldiers a tank shovel. They used it to dig up a shallow grave outside the hospital, locating the bodies of several Americans from Lynch's 507th Maintenance Company.

It wasn't until days later that the Think Tank crew was able to piece together the story and realize that their mission was the rescue dominating news coverage at home.

''We didn't realize how big a deal it was until we saw it on the cover of Newsweek,'' Rassano said.

To Estes the mission was important for one other reason: He never again discharged his weapon. A series of moves to other cities resulted in nothing more noteworthy than a couple of utterly uneventful weeks guarding a bridge.

With the action centralizing on Baghdad, there wasn't much to do other than reading the Sports Illustrateds and eating the beef jerky sent from home. Finally, Alpha Company pulled out and returned to Kuwait on May 5.

The war was over for Cpl. Estes. It was time to act on his vow.

During the interminable 38-day voyage back to America, Estes e-mailed his father and told him his plans: He was going to enroll at U of L and walk on to the football team. Rodney Estes was thrilled.

Jimmy returned to Kentucky on July 2, and he and the rest of his battalion were feted at Fort Knox. He obviously was thrilled to see his family—his father, mother, stepmother, stepsister and two half-siblings.

Especially his 11-year-old half-sister, Jennifer Estes. He thought of her often when he saw children her age caught in the calamity of war.

''He's crazy about her,'' Jimmy's dad said. ''He's not exactly a sensitive kid by any stretch of the imagination, but I think some of the things he saw over there affected him.''

To help put the war behind, Estes plunged into his future plans. After about a week of acclimation, he began working out six days a week toward his goal of becoming a Cardinal.

A depressing and debilitating diet of MREs—the scarcely edible Meals Ready to Eat—had killed his appetite. By the end of the war Estes could eat barely half an MRE a day, and he lost a significant amount of weight and muscle mass.

But that could be overcome with work, and he was driven. His first couple of calls to U of L graduate assistant Sam Adams, in charge of the walk-on program, went unreturned. Finally, Adams called back.

He said that Estes couldn't walk on until classes started, but in the meantime the coaches wanted to look at some videotape of him. He had nothing significant to show since his days on the St. X junior varsity. Nevertheless, Adams told him to report for a one-day group tryout.

Estes arrived in excellent physical condition, performed well in the fitness tests and was one of four walk-ons chosen for the team. After U of L upset Kentucky to open the season Aug. 31, he reported for his first practice as a Louisville Cardinal.

''It was awesome that first day, just putting on the equipment again,'' he said. ''I was looking around saying, 'I'm playing with a Division I football program. Four months ago I was shooting at Iraqis running around with AK–47s.' ''

Today life is easy. The 18-hour days don't pile up for weeks on end. The food is edible. There are no tank repairs, no missions, no imminent danger.

The load so many student-athletes find so difficult is like vacation to Jimmy Estes.

''All you've got to do is go to class and play football,'' Rassano said. ''That's got to be the easiest thing he's done all year. After going through there, everything's easier.

''The whole experience kind of straightened him out. I'm real proud of Jimmy.''

A good many Cardinals have no idea what Estes was going through while they were in spring practice. But a few have seen the USMC tattoo on the 5-foot-11, 200-pound receiver's left shoulder and inquired, and a few others have heard a story or two about the walk-on soldier.

He doesn't hide his history, but he doesn't broadcast it, either. He's not looking for hero status in the locker room.

''The coaches can't give me any special treatment, and I don't want it,'' he said. ''I'd always heard stories of people coming back (from a war) and thinking the world owed them something, or they were messed up mentally. I didn't want that. I just wanted to make that experience a positive.''

U of L will play Army tomorrow. Estes has been where none of the celebrated West Pointers has gone yet: into combat for his country.

He is a Cardinal worthy of a salute from the Cadets.

Yet he wasn't even supposed to be at the stadium. Instead, he was scheduled for real military work: a reunion with Alpha Company at Fort Knox for their first weekend of reservist training since the war.

But at practice yesterday head coach Bobby Petrino informed Estes that he will be dressing out and joining the squad if he can get a furlough from Marine drills.

Estes plans to wear two uniforms tomorrow; he'll be in Papa John's Cardinal Stadium in the afternoon after meeting up with his mates in the morning. He's looking forward to seeing the men with whom he shared a life-altering experience—and telling them about his college football career.

''I don't think a whole lot of them really believed me,'' he said with a smile.

But it's true. A desert dream that materialized on lonely nights under an inky Arabian sky has come true.

MILITARY SNIPER WEAPON REGULATION ACT

Mr. LEVIN. Mr. President, in the November 3, 2003 edition of Air Safety Week a connection was drawn between airline safety and gun safety. And, while some people may think there is no connection between airline safety and gun safety, the connection is serious. Attention has been paid to potential vulnerabilities of commercial aircraft to terrorists armed with shoulder-fired missiles. A more pedestrian but an equally deadly potential threat looms from terrorists armed with .50 caliber sniper rifles.

The .50 caliber sniper rifle is among the most powerful weapons legally available. These weapons are not only powerful, but they're accurate. According to the House Government Reform staff report, the most common .50 caliber weapon can accurately hit targets a mile away and can inflict damage to targets more than four miles away. The thumb-size bullets, which come in armor-piercing and incendiary variants, can easily punch through aircraft fuselages, fuel tanks, and engines.

These weapons pose a serious threat to planes both in the air and on the ground. According to a recent Violence Policy Center report, aircraft landing are particularly vulnerable, as illustrated by the testimony of Ronnie G. Barrett, President of Barrett Firearms Manufacturing. As an expert witness during a 1999 criminal trial, Barrett was asked about the relative difficulty of hitting a stationary target and a moving target, such as a motorcycle or an airplane. He was asked about shooting at an airplane ''coming in to land . . . descending over 120 miles an hour.'' He testified: ''If it is coming directly at you, it is almost as easy. Just like bird hunting. But yes, it is more difficult if it is horizontally, or moving from left to right . . . '' In other words, according to Barrett, shooting at a moving object coming directly at one is ''almost as easy'' as a stationary target, an answer that is consistent with detailed instructions given in a variety of U.S. Army manuals about engaging aircraft with small arms.

Despite these facts, long-range .50 caliber weapons are less regulated than handguns. Buyers must simply be 18 years old and submit to a Federal background check. In addition, there is no Federal minimum age requirement for possessing a .50 caliber weapon and no regulation on second-hand sales.

I believe the easy availability and the increased popularity of the .50 caliber sniper rifle poses a danger to airline safety, as well as homeland security. That's why last year I cosponsored Senator FEINSTEIN's Military Sniper Weapon Regulation Act. This bill would change the way .50 caliber guns are regulated by placing them under the requirements of the National Firearms Act. This would subject these weapons to the same registration and background check requirements as other weapons of war, such as machine guns. This is a necessary step to protecting the safety of airline travelers.

The .50 caliber sniper rifle is among the most powerful and least regulated firearms legally available. Tighter regulation is needed. I urge my colleagues to support Senator FEINSTEIN's bill.

LOCAL LAW ENFORCEMENT ACT OF 2003

Mr. SMITH. Mr. President, I rise today to speak about the need for hate crimes legislation. On May 1, 2003, Senator KENNEDY and I introduced the Local Law Enforcement Enhancement Act, a bill that would add new categories to current hate crimes law, sending a signal that violence of any kind is unacceptable in our society.

In San Antonio, TX, on October 26, 2003, Allen Everton, age 74, was beaten to within inches of his life. His assailant believed that Everton was gay, and while hitting the elderly man with a baseball bat, called him a ''freaking faggot.'' Mr. Everton died 11 days later of natural causes, but I can only imagine how scarred he must have felt after being the victim of a senseless attack.

I believe that Government's first duty is to defend its citizens, to defend them against the harms that come out of hate. The Local Law Enforcement Enhancement Act is a symbol that can become substance. I believe that by passing this legislation and changing current law, we can change hearts and minds as well.

HONORING OUR ARMED FORCES

Mr. GRASSLEY. Mr. President, I rise today in honor of a fellow Iowan and a true American hero PVT Kurt R. Frosheiser. Private Frosheiser was killed while serving our country in Operation Iraqi Freedom on November 8, 2003, when his humvee was struck by an improvised explosive device in Baghdad. Private Frosheiser was only 22 years old at the time of his death.

I ask my colleagues in the Senate, my fellow Iowans, and all Americans to join me today in paying tribute to Private Frosheiser for his bravery and for his dedication to the cause of freedom. Private Frosheiser had a deep desire to serve his country, and we are all indebted to him for his service and for his sacrifice.

In an interview with the Des Moines Register, Private Frosheiser's mother, Jeanie Hudson, said the following about her son: ''He loved this land and its principles. He loved Iowa. It's an honor to give my son to preserve our way of life.''

Throughout our history, we have found extraordinary men and women who are willing to give their lives to defend our country and families willing sacrifice those who they love most to the cause of freedom. It is with great sadness, but also great pride, that I honor one such patriot today on the floor of the Senate, PVT Kurt Frosheiser.

Today we honor a fallen patriot, but we must also remember to pay tribute to the loved ones whose grief we share. My deepest sympathy goes out to the members of Private Frosheiser's family, to his friends, and to all those who have been touched by his untimely passing. May his mother, Jeanie, his father, Chris, his step-father, Daniel, his sister, Erin, and his twin brother, Joel, be comforted with the knowledge that they are in the thoughts and prayers of many Americans, and that they have the eternal gratitude of an entire nation.

Kurt Frosheiser did not die in vain. He died defending the country he loved. May he always be remembered as a true American hero.

SGT ROSS A. PENNANEN

Mr. INHOFE. Mr. President, I rise to pay homage to Sergeant Ross Pennanen, who, in the words of his father, ''gave the ultimate sacrifice for his country—his life.'' Sergeant Pennanen, or ''Penn'', as his friends called him, was a dedicated defender of

America who learned the value of serving his country from his father's example in the United States Air Force. For his service and his sacrifice, I am proud to honor him on the Senate floor today.

Sergeant Pennanen was assigned to C Battery, 2nd Battalion, 5th Field Artillery Regiment, III Corps Artillery at Fort Sill, OK. A native Oklahoman whose mother and father live in Ada and Midwest City, respectively, Sergeant Pennanen grew up in McLoud and joined the Army 2 years ago at the age of 34 in hopes of improving himself and emulating his father. He was himself a good father who spent a lot of time with his 7-year-old son, Gage.

Sergeant Pennanen died tragically on November 2 when a CH–47 Chinook helicopter in which he was riding crashed in Fallujah, Iraq. He was a good soldier: he received the Army Commendation Medal two days before his death. Despite questions about his age, Sergeant Pennanen proved a ''gung-ho'' example for his fellow soldiers. According to his stepmother, ''He didn't keep up with them. He set the pace out in front of them.''

On behalf of the U.S. Senate, I ask that we pay tribute to Sergeant Pennanen and the men and women like him, who know the true meaning of service and sacrifice. These men and women have tasted freedom, and wish to ensure that freedom for those who have never experienced it. I honor the memory of our sons and daughters who have died for this noble cause.

We could not have asked for a better soldier or diplomat of humanity than Sergeant Ross Pennanen. I am proud of him, and proud of the commitment he showed to winning the freedom of those he did not know. My prayers are with his family for the loss of such a special man.

PVT JASON M. WARD

Mr. INHOFE. Mr. President, I rise today to honor the memory of a courageous young Oklahoman who died while defending his Nation. Private Jason M. Ward grew up in the great State of Oklahoma, and was a 1997 graduate of Broken Arrow High School.

Private Ward joined the military in April 2002, although he had been seriously considering military service for years. He married his high school sweetheart after graduating, and when Jason and Jordan welcomed their first son shortly thereafter, the duties of fatherhood took priority. After having another son 4 years later, Jason and Jordan began discussing Jason's longtime military aspirations and decided that it would be a good time for him to pursue a lifelong career in the military.

Private Ward was a member of the 1st Armored Division, stationed at Fort Riley, KS. His unit was sent to the Middle East in March to protect the freedom of this fellow Americans, and he was highly involved in the outstanding and courageous work of that unit. Unfortunately, Private Ward fell ill, and was scheduled to return to the U.S. for treatment when he unexpectedly passed away. His sudden death has left his young family with questions that none of us can answer, but we can tell them with confidence that Private Ward was serving his Nation with honor until this tragedy took his life.

Private Ward was only 25 years old when he died. I hope his friends and family know that he died a true hero, worthy of the respect and gratitude of every American because of his contribution to defending his country. His loved ones will miss him dearly, and our thoughts and prayers are with them today. And though we are all grieved by the loss of this man, we will never cease to be proud of him—Oklahoma's son and America's hero—Private Jason M. Ward.

SPEC DUSTIN K. MCGAUGH

Mr. INHOFE. Mr. President, I stand today to honor the memory of a brave young American who gave his life defending the Nation. He felt a call to serve his country, to be part of something bigger than himself, and ultimately, paid the highest price.

SPEC Dustin K. McGaugh, of Tulsa, OK was a firing specialist assigned to the Army's 17th Field Artillery Brigade stationed in Fort Sill, OK. His mother, Marina Yancy lives in Tulsa, OK, where he graduated from Nathan Hale High School in 2001.

On September 30 in Balad, Iraq, he died tragically from a non-hostile gunshot wound. He gave his life for the freedom of millions of Americans, and also for the peace and prosperity of the Iraqi people crippled by a totalitarian regime.

Specialist McGaugh had a heart for the less fortunate. According to his fellow soldiers, he would leave the safety of his Jeep and give candy to the Iraqi children. Imagine an American soldier who truly cared for the least among us, and performed simple acts of kindness to his fellow humans. Imagine an American soldier who represented America with a noble heart, and reminded us all of the freedoms we take for granted. Specialist McGaugh was that soldier.

His compassion is a microcosm of the American spirit, the spirit that drives us to fight oppression around the world. The Iraqi people are an oppressed people, and Specialist McGaugh showed us how our inherent humanity can overcome even the broadest of differences. He refused to sit idly and watch the tyranny in Iraq take place any longer. It is for the sake of these broken, defeated people that Specialist McGaugh risked his life on a daily basis. It is for these people that he gave his life in the end. He was a true American hero.

His twin sister Windy said that her ''kid brother'' became her hero. Specialist McGaugh should not only be his sister's hero, but the Nation's hero as well. He set a high example of what it means to be an American and what it means to be human. It is for men like Specialist McGaugh that I am proud to be a part of this great country. He was a special soldier, but more importantly, a special man.

BUDGET SCOREKEEPING REPORT

Mr. NICKLES. Mr. President, I hereby submit to the Senate the budget scorekeeping report prepared by the Congressional Budget Office under section 308(b) and in aid of section 311 of the Congressional Budget Act of 1974, as amended. This report meets the requirements for Senate scorekeeping of section 5 of S. Con. Res. 32, the First Concurrent Resolution on the Budget for 1986.

This report shows the effects of congressional action on the 2004 budget through November 19, 2003. The estimates of budget authority, outlays, and revenues are consistent with the technical and economic assumptions of the 2004 Concurrent Resolution on the Budget, H. Con. Res. 95, as adjusted.

The estimates show that current level spending is below the budget resolution by $7.0 billion in budget authority and by $11.1 billion in outlays in 2004. Current level for revenues is $57 million below the budget resolution in 2004.

Since my last report, dated November 11, 2003, the Congress has cleared for the President's signature the following acts that changed budget authority, outlays, or revenues for 2004: the National Defense Authorization Act for 2004, H.R. 1588; the Military Construction Appropriations Act, 2004, H.R. 2559; the Energy and Water Development Appropriations Act, 2004, H.R. 2754; and, the District of Columbia Military Retirement Equity Act of 2003, H.R. 3054.

I ask unanimous consent that the budget scorekeeping report be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

U.S. CONGRESS,
CONGRESSIONAL BUDGET OFFICE,
Washington, DC, November 20, 2003.

Hon. DON NICKLES,
Chairman, Committee on the Budget,
U.S. Senate, Washington, DC.

DEAR MR. CHAIRMAN: The enclosed tables show the effects of Congressional action on the 2004 budget and are current through November 19, 2003. This report is submitted under section 308(b) and in aid of section 311 of the Congressional Budget Act, as amended.

The estimates of budget authority, outlays, and revenues are consistent with the technical and economic assumptions of H. Con. Res. 95, the Concurrent Resolution on the Budget for Fiscal Year 2004, as adjusted.

Since my last letter dated November 10, 2003, the Congress has cleared for the President's signature the following acts that

changed budget authority, outlays, or revenues for 2004: The National Defense Authorization Act for Fiscal Year 2004 (H.R. 1588); the Military Construction Appropriations Act, 2004 (H.R. 2559); the Energy and Water Development Appropriations Act, 2004 (H.R. 2754); and the District of Columbia Military Retirement Equity Act of 2003 (H.R. 3054).

The effects of these actions are detailed on Table 2.

Sincerely,

DOUGLAS HOLTZ-EAKIN
Director.

TABLE 1.—SENATE CURRENT-LEVEL REPORT FOR SPENDING AND REVENUES FOR FISCAL YEAR 2004, AS OF NOVEMBER 19, 2003

[In billions of dollars]

	Budget resolution	Current level [1]	Current level over/ under (−) resolution
On-Budget:			
Budget Authority	1,873.5	1,866.4	−7.0
Outlays	1,897.0	1,885.9	−11.1
Revenues	1,331.0	1,330.9	−0.1
Off-Budget:			
Social Security Outlays	380.4	380.4	0
Social Security Revenues	557.8	557.8	0

[1] Current level is the estimated effect on revenue and spending of all legislation that the Congress has enacted or sent to the President for his approval. In addition, full-year funding estimates under current law are included for entitlement and mandatory programs requiring annual appropriations even if the appropriations have not been made.

Current Level Over Budget Resolution	n.a.	n.a.	n.a.
Current Level Under Budget Resolution	7,051	11,102	57

[1] Per section 502 of H. Con. Res. 95, the concurrent Resolution on the Budget for Fiscal Year 2004, provisions designated as emergency requirements are exempt from enforcement of the budget resolution. As a result, the current level excludes the following items: outlays of $262 million from funds provided in the Emergency Supplemental Appropriations for Disaster Relief Act of 2003 (P.L. 108–69); outlays of $456 million from funds provided in the Legislative Branch Appropriations Act, 2004 (P.L. 108–83); budget authority of $400 million and outlays of $67 million provided in the Interior Appropriations Act, 2004 (P.L. 108–108); and budget authority of $83,992 million and outlays of $35,970 million provided in the Emergency Supplemental Appropriations Act for Defense and for the Reconstruction of Iraq and Afghanistan, 2004 (P.L. 108–106).

[2] Excludes administrative expenses of the Social Security Administration, which are off-budget.

TERRORIST APPREHENSION ACT

Mr. LEVIN. Mr. President, earlier this week, an article in the Washington Post highlighted concerns about limits on the Federal Bureau of Investigation's ability to pursue terrorists who try to buy guns. After September 11, 2001, the FBI launched an initiative to notify Federal law enforcement officials and other national security officials when suspects on the FBI's terrorist watch list attempt to purchase a firearm. However, according to the Washington Post article, an interpretation of current law by the Attorney General has precluded Federal agents from obtaining any details about gun

purchase transactions unless the purchaser is identified by the National Instant Criminal Background Check System as a prohibited buyer.

The Post article cited situations in which law enforcement officials have not been able to pursue known terrorists armed with a firearm. According to the Washington Post, as many as 21 suspects on the FBI's terrorist watch list have attempted to buy guns since the spring of 2003. According to Justice Department officials cited in the Post article, the rules established by the Attorney General prevent Federal officials from sharing information with investigators about legal gun buyers, even if these gun buyers are suspected terrorists.

Law enforcement officials told the Post that the FBI frequently does not know the whereabouts of suspected terrorists on its watch lists. In such cases, learning where a suspected terrorist bought a firearm and what address they provided could be extremely helpful to counterterrorism investigators.

To assist the FBI in monitoring and apprehending suspected terrorists, Senator LAUTENBERG introduced the Terrorist Apprehension Act. This bill would require NICS to alert the FBI, Department of Homeland Security, and local law enforcement officials anytime an individual on a terrorist watch list attempts to buy a firearm.

I believe this is common sense homeland security legislation, and I hope the Congress will enact it quicky.

S. 1896, THE TAX RELIEF EXTENSION ACT, AND H.R. 1664, THE ARMED FORCES TAX FAIRNESS ACT

Mr. WYDEN. Mr. President, consistent with my policy of publishing in the RECORD a statement whenever I place a hold on legislation, I am announcing my intention to object to any unanimous consent request on S. 1896, the Tax Relief Extension Act, and to H.R. 1664, the Armed Forces Tax Fairness Act. I am doing so because these bills are the only relevant amendable legislation expected to be taken up in the Senate before the end of the current session and, therefore, they provide the only opportunity to extend unemployment benefits before they expire at the end of the year.

Oregon currently has the highest unemployment rate in the Nation with an unemployment rate of 8 percent. Extension of unemployment benefits is critical for many Oregonians who are in jeopardy of running out of benefits if they are not extended before the end of the year. In order to ensure unemployed workers in Oregon and many other states will not be left without benefits, I am objecting to unanimous consent on S. 1896 or H.R. 1664, unless extension of unemployment benefits and reform of a lookback rule that affects Oregon and other high unemployment states is included as part of the legislation.

REPEALING THE MEDICARE PHYSICIAN FEE CUT

Mr. GRAHAM of South Carolina. Mr. President, I express my support for repealing the Medicare physician fee cut. The issue of reimbursements for physicians who treat Medicare patients has been an ongoing battle. Currently, these reimbursements are inadequate and inefficiently paid through a bureaucratic system. Some physicians have been even been forced to refuse Medicare recipients due to these inappropriate reimbursement levels. With so many Medicare recipients who need medical services in South Carolina, the situation with low reimbursements poses a challenge to both physicians and patients.

I have supported updating and increasing the reimbursements physicians receive under the Medicare program. The schedule of fee cuts for these reimbursements has been temporarily suspended due to the actions of Congress. I supported legislation to repeal physician fee cuts for both fiscal year 2002 and 2003. However, in October 2003, the Centers for Medicare and Medicaid Services, CMS, reported that the physician fee cut for 2004 would be 4.5 percent. This necessitates a further repeal to ensure this fee cut does not move forward.

While annual repeals of the physician fee cuts are vital, I also support a substantive change to the reimbursement calculations so physicians are not held in limbo each year regarding their fee updates. I am hopeful that Congress will address this issue in a comprehensive manner.

Since I support legislative action to make sure this cut is repealed and to ensure future repeals are dealt with effectively, I am exceedingly concerned that the most current repeal in the Medicare physician fee cut is contained within the mammoth Medicare prescription drug bill. This blocks me voting solely on the merit of the repeal.

I have many reasons a to why I plan to oppose the Medicare prescription drug bill conference report. None of my reasons are concerns with the Medicare physician fee cut repeal. Rather, my opposition stems from the lack of real cost containment of the program, exclusion of true Medicare reform, the weakening of the premium support issue, the treatment of ''dual eligibles'' coverage, and other issues related to oncology drugs, durable medical equipment, DME, and local pharmacies.

It frustrates me that this latest repeal is in a bill with literally dozens of other Medicare provisions in a $400 billion dollar bill. While I cannot support the Medicare prescription drug bill, I will continue to support the repeal of next year's Medicare physician fee cut and addressing the ongoing issue of fee cuts in a comprehensive manner. I am hopeful that our leadership will give us a vehicle for a straight up or down vote on this issue.

A TRIBUTE TO RALPH BUNCHE

Mr. SARBANES. Mr. President, it is difficult to know exactly how to pay tribute to Ralph J. Bunche for his extraordinary contributions to scholarship, diplomacy, civil rights, social justice and international cooperation and development. The Senate has approved H. Con. Res 71, ''Recognizing the importance of Ralph Bunche as one of the great leaders of the United States . . . The year-long centennial commemoration of his birth, which is now well underway, involves many more professional societies, educational institutions and public-policy organizations than it is possible to list; among them are the American Political Science Association, the Association of Black American Ambassadors, the American Library Association, the Council on Foreign Relations, Facing History and Ourselves, national foundation, the NAACP, the National Urban League, the New York Public Library, numerous United Nations Associations and dozens of colleges and universities in this country and abroad. At UCLA, Ralph Bunche's alma mater, the African American Studies center has been renamed in his honor. I am especially pleased to note that the American Academy of Diplomacy has chosen to honor Ralph Bunche by sponsoring the two-year Philip Merrill Fellowship for the two-year M.A. program at the Paul H. Nitze School of Advanced International Studies of Johns Hopkins University.

Among his many accomplishments, Ralph Bunche received the first doctoral degree in government and international relations ever awarded by Harvard University, thereby earning the title ''Dr. Bunche.'' But Benjamin Rivlin, who is Co-Chair of the Ralph Bunche Centenary Committee, has told us that he was specifically instructed to ''cut out this doctor business'' when as a young soldier he was assigned to work for Ralph Bunche in the OSS sixty years ago.

The vast array of tributes now being paid to Ralph Bunche reflects just how extraordinary a person he was. Born in Detroit and orphaned at eleven, he went to live with his grandmother, Lucy Johnson, in what is today the Watts neighborhood of Los Angeles.

By all accounts, Lucy Johnson was as extraordinary as her illustrious grandson. Writing in the Reader's Digest many years after her death, Dr. Bunche called her ''My Most Unforgettable Character . . . Caucasian 'on the outside' and 'all black fervor inside.' '' One of his teachers said of her, ''I have

never forgotten the emanation of power from that tiny figure.'' Ms. Johnson's remark to the principal of Jefferson High School, where Dr. Johnson was valedictorian of his class and a varsity athlete, is especially memorable. In a disastrously misguided effort at flattery, the principal is reported to have said, ''We never thought of Ralph as a Negro,'' to which Ms. Johnson replied: ''Why haven't you thought of him as a Negro? He is a Negro and he is proud of it. So am I.''

From his grandmother Ralph Bunche learned the fundamental lessons of self-respect and respect for others. He also took from her a passion for education. It was she who insisted that he go to UCLA, where he majored in international relations and was valedictorian of the Class of 1927. Upon his graduation from UCLA, Bunche received a fellowship for graduate study in political science at Harvard. Shortly after enrolling he received what was to be his grandmother's last letter. Writing just a week before her death, she asked, ''Will you finish at Harvard this year?''

Ralph Bunche did indeed receive his Master's degree at the end of that year, but he did much more. In the small African American community at Harvard at that time he made lifelong friendships with, among others, the future Judge William Hastie and the future cabinet member Robert Weaver. He completed his Ph.D. in 1934, receiving the government department's annual award for the best dissertation. And while working toward his degree he also taught at Howard University—America's ''black Athens'' —where he helped organize the political science department at a time when, according to Kenneth Clark, the distinguished psychologist who was a student at the time, ''the seeds of a legal and constitutional attack on racial segregation were being sown in the intellectual soil of Howard University.''

Although bent on an academic career, Ralph Bunche postponed research in South Africa to work closely with Gunnar Myrdal on Myrdal's historic and highly influential study of race in this country, ''An American Dilemma.'' With the outbreak of World War II he was brought into the newly-established OSS for his expertise on Africa, and in 1944 he moved on to the State Department. The following year he served as an advisor to the American delegation at the San Francisco Conference, where the Charter establishing the United Nations was signed, and in 1946 he joined the U.N. Secretariat, where he remained until shortly before his death. As Brian Urquhart, who first went to work for Ralph Bunche in the U.N. Secretariat in 1954, later observed, ''Public service had called him, and he responded with all of his ability and strength.''

Ralph Bunche went on to become the U.N. Undersecretary-General, but he is probably best remembered as the recipient of the 1950 Nobel Peace Prize, which he was awarded for negotiating the armistice that ended military hostilities between the new State of Israel and its enemies. He was not only the first African American to receive the prize, he was also the first person of color; as an American, he joined the distinguished community of U.S. laureates that included Presidents Theodore Roosevelt and Woodrow Wilson, Jane Adams and Nicholas Murray Butler.

In his own view, however, the Nobel Prize was not at all his most significant accomplishment, and his initial reaction upon being informed of the award was to decline it: ''Peacemaking at the U.N. was not done for prizes,'' he explained. He agreed to accept only when the argument was put to him that it would be good for the United Nations. Rather, Ralph Bunche gave a quarter-century of dedicated service to the United Nations, working day in and day out to build and secure harmonious relations among free and prosperous nations.

Ralph Bunche touched the life of everyone who knew him. He is remembered as ''brilliant,'' with ''an uncanny ability to produce stupendous amounts of work over long sustained periods of application;'' as someone who ''play(ed) to win, but always played fair;'' as ''a man of extraordinary kindness and compassion (who) never turned his back on those in trouble;'' as a person. Kenneth Clark has paid him an eloquent and enduring tribute as ''above all the model of a human being who by his total personality demonstrated that disciplined human intelligence and courage were most effective instruments in the struggle for social justice.''

CBO SUMMARY OF S. 1522

Ms. COLLINS. I ask unanimous consent that the following CBO summary of the cost estimate regarding S. 1522 be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

CONGRESSIONAL BUDGET OFFICE COST ESTIMATE

S. 1522—GAO Human Capital Reform Act of 2003

Summary: S. 1522 would authorize the General Accounting Office (GAO) to modify its personnel and workforce practices to allow greater flexibility in determining pay increases, pay retention rules, and other compensation matters. The bill also would permanently extend GAO's authority to offer separation (buyout) payments and early retirement to employees who voluntarily leave GAO. Finally, S. 1522 would rename GAO as the Government Accountability Office.

CBO estimates that enacting S. 1522 would increase direct spending for retirement annuities and related health benefits by about $1 million in fiscal year 2004, by $19 million over the 2004–2008 period, and by $40 million over the 2004–2013 period. Several provisions of S. 1522 could affect GAO employee compensation costs, but the net budgetary effect of such provisions would depend on how GAO exercises its new authorities and on whether future agency appropriations are adjusted to reflect any savings or costs. Finally, we expect that any additional discretionary costs associated with changing the agency's name would not be significant.

S. 1522 contains no intergovernmental or private-sector mandates as defined in the Unfunded Mandate Reform Act (UMRA) and would not affect the budgets of state, local, or tribal governments.

Estimated costs to the Federal Government: The estimated impact of S. 1522 on direct spending is shown in the following table. The costs of this legislation fall within budget function 800 (general government).

	By fiscal year, in millions of dollars—									
	2004	2005	2006	2007	2008	2009	2010	2011	2012	2013
CHANGES IN DIRECT SPENDING										
Estimated budget authority	1	3	5	5	5	5	4	4	4	4
Estimated outlays	1	3	5	5	5	5	4	4	4	4

Basis of estimate

Direct spending

S. 1522 would give GAO permanent authority to offer retirement to employees who voluntarily leave the agency early. GAO's existing buyout authority, which will expire on December 31, 2003, allows the agency to offer certain employees a lump sum payment of up to $25,000 to voluntarily leave the agency. In addition, certain qualified employees who leave (whether they collect a separation payment or not) are entitled to receive immediate retirement annuities earlier than they would have otherwise. CBO estimates that extending this authority would increase direct spending by $1 million in 2004, by $19 million over the 2004–2008 period, and by $40 million over the 2004–2013 period.

Based on information provided by GAO about use of its early retirement authority over the past several years, CBO estimates that each year about 35 agency employees would begin receiving retirement benefits three years earlier than they would have under current law. Inducing some employees to retire early results in higher-than-expected benefits from the Civil Service Retirement and Disability Fund (CSRDF). CBO estimates that the additional retirement benefits would increase direct spending by $1 million in 2004, by $16 million over the 2004–2008 period, and by $32 million over the 2004–2013 period.

Extending GAO's buyout and early retirement authority also would increase direct spending for federal retiree health benefits. Many employees who retire early would continue to be eligible for coverage under the

Federal Employees' Health Benefits (FEHB) program. The government's share of the premium for retirees is classified as mandatory spending. Because many of those accepting the buyouts under the bill would have retired later under current law, mandatory spending on FEHB premiums would increase. CBO estimates these additional benefits would increase direct spending by less than $500,000 in 2004, by $3 million over the 2004–2008 period, and by $8 million over the 2004–2013 period.

Spending subject to appropriation

The authorities provided by S. 1522 would allow GAO to create a performance-based employee compensation system to govern basic pay adjustments, pay retention for employees affected by reductions in force, relocation reimbursements, and annual leave accruals beginning in fiscal year 2006. (Under existing law, GAO is required to follow personnel management policies determined by the Office of Personnel Management.) Implementing the new authorities that would be provided by S. 1522 could affect GAO's total costs of providing employee compensation, but CBO cannot predict any cost or saving associated with these new authorities, or the net effect of all such changes on the Federal budget. Ultimately, the net budgetary effect of the proposed authorities would depend on the features of the compensation system adopted by GAO and on how the agency applies that new system to individual employees. Moreover, any resulting savings or costs would only be realized if the agency's annual appropriations are adjusted accordingly.

Providing GAO with the option of providing voluntary separation payments could also increase GAO's costs, but CBO estimates that any new costs would average less than $500,000 annually over the 2004–2013 period. Section 2 of the bill would allow GAO to offer certain employees payments of up to $25,000 to voluntarily leave the agency. The bill also requires that GAO make a deposit amounting to 45 percent of each buyout recipient's basic salary toward the CSRDF. Unlike an increase in retirement benefits, these two payments would be from the agency's discretionary budget and are thus subject to appropriation. Since GAO's current buyout authority was first authorized in October 2000, no one at the agency has received a buyout payment. As such, CBO expects that relatively few employees would receive a buyout payment over the next 10 years and that the cost of any buyout payments and required deposits toward the CSRDF would be negligible in any given year.

Intergovernmental and private-sector impact: S. 1522 contains no intergovernmental or private-sector mandates as defined in UMRA and would not affect the budgets of State, local, or tribal governments.

Estimate prepared by: Federal Costs: Ellen Hays, Geoffrey Gerhardt, and Deborah Reis. Impact on State, Local, and Tribal Governments: Sarah Puro. Impact on the Private Sector: Paige Piper/Bach.

Estimate approved by: Peter H. Fontaine, Deputy Assistant Director for Budget Analysis.

GROUP OF EIGHT

Mr. LIEBERMAN. Mr. President, I rise today to discuss a matter of great importance related to Russia's continued participation in the Group of Eight, or G–8. Senator MCCAIN and I submitted today a resolution calling on the President of the United States and the Secretary of State to work with our partners in the G–8 to condition Russia's continued involvement on its meetings the basic norms and standards of a democratic government.

The G–8 is a gathering of the world's wealthiest industrial democracies. It is important that we do not lose sight of this world. It is well and good that all of the G–8 members are wealthy industrialized nations, but the real thing that binds us, the real thing that makes it a club worth joining is the fact that all of the participants are democracies. It is for this reason that China is not a member.

When President Clinton discussed Russia's joining the G–8 back in 1997 when Russia participated in the summit in Denver, he attributed Russia's participation to ''President Yeltsin's leadership and to the commitment of the Russian people to democracy and reform.''

But the actions of President Yeltsin's successor, President Putin, over the past 3 years raise serious concerns about Russia's continued commitment to democracy. This drift away from democratic practices cannot and should not be ignored. The list of offending actions is long and disturbing. Since 2000, President Putin has seized control of national television networks and otherwise limited the freedom of expression to the point that the group ''Reporters without Borders'' ranks Russia 121st out of 139 countries in its worldwide press freedom index. The recent arrest of Mikhail Khodorkovsky set off alarm bells because of its blatant political motives, despite claims otherwise. President Putim's government has attempted to control the activities of nongovernmental organizations, religious organizations, and other pluralistic elements of Russian society in an attempt to mute criticism of the government. Russian troops in Chechnya have been allowed to suppress the rights of Russian citizens with impunity, including in the conduct of recent elections that fell far short of minimal international standards of freedom and fairness. And the list could go on.

Continued membership in the G–8 is very important to Russia and to President Putin personally. We should use this leverage to get Russia back on the democratic track. Allowing Russia to continue its involvement in the G–8 and to host the 2006 G–8 Summit while continuing to undermine democracy makes mockery of the very principles that bind the G–8 countries together. We need to take steps not to ensure that Russia lives up to the commitments it made when it joined this club of industrialized democracies. To do otherwise would be to shirk our responsibilities as a leader of the democratic world. I urge my fellow Senators to support this resolution.

NATIONAL RETIREMENT PLANNING WEEK

Mr. AKAKA. Mr. President, I rise today to illuminate the merits of National Retirement Planning Week, which is currently underway. National Retirement Planning Week is organized by a coalition of financial industry and advocacy organizations to raise the awareness of the importance of retirement planning. I applaud the coalition for its efforts to increase public awareness of this critical topic.

The need to adequately prepare for retirement has significantly increased due to the growth in life expectancy and reduction in employer-provided retirement health benefits. In addition, increasing debt burdens confronting many families will make a comfortable retirement more difficult to achieve.

Americans are living longer. According to the U.S. National Center for Health Statistics, in 1950, an individual 65 years of age was expected to live an additional 13.9 years. This grew to 17.9 years by 2000. These additional years, many or most in retirement, will require Americans to have saved and invested additional financial resources to help meet their living expenses in retirement. Furthermore, the fastest growing segment of the population is made up of those 85 years and older, according to the Bureau of Labor Statistics.

While Americans have been living longer, employers have been reducing the health benefits provided to retirees. According to the Kaiser Family Foundation and Health Research and Education Trust, 38 percent of all large firms offer retirement benefits in 2003. This is a significant reduction from the 66 percent that offered retiree coverage in 1988. As employers continue to stop providing coverage and as health care costs continue to increase, proper planning is imperative for individuals to pay for healthcare expenses that may not be covered by Medicare.

In addition, another important component of preparing for retirement is to effectively manage and pay down debt. According to the Federal Reserve, consumer borrowing through auto loans, credit cards, and other debt increased by $15.1 billion in September, which brings the total consumer debt to $1.97 trillion. Substantial consumer debt will likely result in individuals having to work additional years beyond their preferred retirement age in order to pay off their credit cards and other consumer debts.

Obtaining home equity loans and refinancing mortgages to take cash out of homes may make it harder for working Americans to retire at the age and with quality of life they desire. Thirty-two percent of all mortgage refinancings in the third quarter of this year involved cash-outs of additional money beyond the existing loan balance, according to Freddie Mac. Although this is significantly lower than

the record 93 percent in 1989, the additional debt brought on by these refinancings can significantly extend the time and cost of paying off a mortgage.

There is a greater need for larger nest eggs and better debt management. Unfortunately, defined benefit pension plans have become much less common and are not available for most working Americans to help meet these increasing costs. According to the Congressional Research Service, 72 percent of pension plan assets were held by defined benefit plans in 1975. Unfortunately, by 1998, this percentage fell to 48 percent. Changes in the contributions to pension plans and benefit payments between 1975 and 1998 also reflect the significant shift towards defined contribution retirement plans. Defined contribution plans require that employees be much more involved in their preparation for retirement. Employees must be aware of their alternatives in participating in their employer's plan. The matching contributions made by employers can provide employees with an immediate return on their investment. Employees must fully understand the importance of planning for retirement and the significance of participating in tax-advantaged employer plans and investment options that can be used, such as Individual Retirement Accounts, IRAs, to ensure that they will have sufficient resources for retirement. In addition, defined contribution plans require employees to manage their investments and make important asset allocation decisions. If employees do not have a sufficient level of financial literacy they will not be able to adequately manage their retirement portfolio.

Despite the need to ensure that employees have adequate resources for retirement, fewer employers are sponsoring plans and fewer employees are participating in employer-sponsored plans. According to a Congressional Research Service analysis of the Census Bureau's Current Population survey, the number of 25-to 64-year old, full-time employees in the private sector whose employer sponsored a retirement plan fell from 45.1 million in 2001 to 42.8 million in 2002. The survey also indicated that, among this population, participation in an employer sponsored retirement plan fell from 55.8 percent in 2001 to 53.5 percent in 2002. More employers must sponsor retirement plans and more employees need to participate in them. Working Americans will be in a better position to retire on their terms by starting to prepare for retirement early and utilizing investment vehicles that have preferential tax treatment such as 401(k) plans and Individual Retirement Accounts. A long-term time horizon allows investors to reap greater benefit from the compounding of their returns.

An important component of retirement security is financial and economic literacy, which should be at higher levels in our country. We must do more throughout the lives of individuals to ensure that they are financially and economically literate and can make informed financial decisions and participate effectively in the modern economy. Without a sufficient understanding of economics and personal finance, individuals will not be able to appropriately manage their finances, evaluate their credit opportunities, and successfully invest for their long-term financial goals.

Starting with our youth, it is necessary to fund the Excellence in Economic Education, EEE, Act, which provides resources for teacher training, evaluations, research, and other activities in K–12 education. There is no better time to instill in individuals the knowledge and skills that they need to make good decisions throughout their lives than during their years in elementary and secondary education.

I have also introduced S. 1800, the College LIFE, or Literacy in Finance and Economics Act, to address needs in this area for the college population. We must give students access to the tools that they need to make sound economic and financial decisions once they are on campus. Without an understanding of finance and economics, college students are not able to effectively evaluate credit alternatives, manage their debt, and prepare for long-term financial goals, such as saving for a home or retirement. I am working with my colleagues on both sides of the aisle to come up with a package based on S. 1800 that can be included in the Higher Education Act.

I also appreciate the work done by my colleague from New Jersey, Senator CORZINE, in developing and introducing S. 386, the Education for Retirement Security Act of 2003. The legislation authorizes grants for financial education programs targeted towards mid-life and older Americans to increase financial and retirement knowledge and reduce their vulnerability to financial abuse and fraud. I am a cosponsor of this legislation which will help Americans prepare for retirement.

I look forward to continuing to work with my colleagues to improve economic and financial literacy. I also want to express my appreciation for the significant efforts made by Senators SARBANES, ENZI, CORZINE, ALLEN, STABENOW, and FITZGERALD to improve economic and financial literacy. Our efforts need to continue so that individuals will be able to make informed decisions and be able to pursue their long-term financial goals, particularly into their golden years of retirement.

NATIONAL ADOPTION MONTH

Mr. JOHNSON. Mr. President. As we approach this holiday season of Thanksgiving, I want to draw attention to National Adoption Month as we celebrate it this month.

I am joining my colleagues on the Congressional Coalition for Adoption this month to increase awareness and knowledge of the obstacles that children in foster care face while waiting to be adopted and to encourage more families to consider adopting.

Currently, there are 580,000 children in the foster care system in America, 126,000 of whom are waiting to be adopted. Yet, only 20 to 25 percent of foster children waiting for adoption will ever find an adoptive family before aging out of government care. The foster care system has been extremely important in rescuing abused and neglected children. However, the foster care system was designed to be a temporary situation, but it is increasingly becoming a permanent guardian for many children. This is particularly true for children who are not adopted in their early years or who find themselves in foster care at an older age. Of the 126,000 children waiting to be adopted approximately half are 9 years of age or older.

Every year an average of 100 children in South Dakota, and 25,000 children nationally, age out of the foster care system at the age of 18, often with very little if any support system in pace. These children often face the challenges of homelessness, college noncompletion, unemployment, and a lack of health care. Transitional living and mentoring program can alleviate some of these concerns but programs face the strains of staff shortages and underfunding. I must commend the South Dakota Coalition for Children for working to secure Medicaid coverage for children that age out of the foster care system until they reach the age of 22. This eliminates one serious concern many former foster care youths face with they are no longer in Government care, but it does not replace the support of a loving family.

On November 22, 2003, courts across the country joined State agencies, children in foster care and hopeful parents to finalize adoptions and demonstrate the large number of children waiting for safe, stable, permanent homes.

As we approach the Thanksgiving holiday and gather with our families, we should not forget those children still waiting for a loving, permanent family to be thankful for.

ADDITIONAL STATEMENTS

HONORING ARVILLA ''BILLIE'' CAMPBELL ON HER 100TH BIRTHDAY

• Mr. CRAPO. Mr. President, I honor Arvilla ''Billie'' Campbell of Meridian, ID, who is approaching her 100th birthday on January 21, 2004. Arvilla's impressive longevity is matched by her

positive contributions to home and country. I am sure that her six children, 19 grandchildren, and 48 great-grandchildren join me in paying tribute to this great women.

Arvilla was born and raised in Preston, ID, where she attended high school at the Preston Academy. In 1923, she married Elgin Campbell, and the couple had six children together. Her children report that Arvilla set a great foundation for each of their lives through the principles she taught. Arvilla recognized the important of a strong work ethic, telling her children that you only get what you work for. Arvilla herself was a hard worker, doing all she could during the Great Depression to ensure that her family had what they needed. She was known to comment that though the family may have been broke, they were never poor. Arvilla taught her children to have pride in their appearance and made sure they had impeccable decorum and proper speech at all times. Arvilla was also active in the Church of Jesus Christ of Latter Day Saints, and she taught many children over the occurs of many years of service.

Arvilla also taught love of country, a fact reflected in the lives of her children. Remarkably, all six of her children have served or are affiliated with the Armed Forces. She encouraged them to serve in the military because she believes freedom is a privilege that deserves effort and sacrifice. All four of Arvilla's sons have served in combat. E. Stewart Campbell served in the Navy, starting in World War II through the Vietnam War, attaining the rank of lieutenant colonel. Garth K. Campbell served in the Pacific Theatre of World War II as a petty officer in the Navy. Bruce E. Campbell served in the Korean War as a corporal in the Army. Doug Campbell served in both the Korean and Vietnam wars as an Army platoon sergeant. Helen Campbell Harden, one of the Arvilla's daughters, is married to John Harden, an Army warrant officer in the Army. Ruth Campbell Rivers, another daughter, is also closely connected to the military: her husband Gerald is a lance corporal in the Marine Corps. America has benefited from the efforts of each of these individuals, and Arvilla is to be commended for her children's unselfish service to the United States.

I wish Arvilla a Happy Birthday. She has been a great teacher, example, and citizen of Idaho. I wish her health and happiness on this exciting day, and join with family and friends in honoring her contribution to Idaho.●

GENE BOYT

● Mr. INHOFE. Mr. President, I stand today to pay tribute to a great American and a great Oklahoman. Gene Boyt was a member of our Nation's ''Greatest Generation'' and served his country during World War II in the United States Army. He died at the age of eighty-six in Chickasha, OK.

After being assigned to the Philippines as a lieutenant in the Engineering Corps, he was taken captive by the Japanese on April 9, 1942. As a prisoner, he was forced to march 90 miles in 6 days in what has become known as the Bataan Death March. The prisoners marched without food or water, and many were executed or died along the way from exhaustion and dehydration. After surviving the grueling journey, Lieutenant Boyt spent 3½ years in Japanese prisons.

Gene Boyt knew what persecution meant. He knew what it meant to stand up for the cause of freedom, for the honor and integrity of the United States. Gene Boyt knew what it meant to defend this country from enemies determined to destroy it. He knew what it meant to suffer for what he believed.

I stand today proud to be an American because men like Gene Boyt lived and died protecting that right. He was awarded the Purple Heart, the Bronze Star, three Presidential Citations, the Philippines's Presidential Citation Medal, and the Oklahoma Medal of Valor. He deserves to be honored once again today on the Senate floor.

Today I stand in tribute to one of Oklahoma's favorite sons, a great American hero and devoted family man. Gene Boyt sacrificed everything for his country, and I am sure that his family is proud of this great man, and the legacy he left behind. The thoughts and prayers of a grateful Nation are with them during this difficult time.●

(At the request of Mr. DASCHLE, the following statement was ordered to be printed in the RECORD.)

HONORING MILITARY RESERVISTS AND THEIR SMALL BUSINESS EMPLOYERS DURING NATIONAL EMPLOYER SUPPORT OF THE GUARD AND RESERVE WEEK

● Mr. KERRY. Mr. President, as this is National Employer Support of the Guard and Reserve Week, it seems an appropriate time to speak on the honorable Americans serving in our National Guard and Reserve.

To fight our wars and to meet our military responsibilities, the United States supplements its regular, standing military with a capable band of citizen soldiers, reservists who serve nobly and continue to make the ultimate sacrifice for this country. At present, there are about 165,000 national guardsmen and reservists on active duty—more than half of the 300,000 called to active duty since September 11. They serve admirably around the world, performing critical wartime functions in Iraq, Afghanistan, and elsewhere. This country does not go into battle without members of the National Guard and Reserve, and we should be grateful for their service.

Instead of gratitude, members of the Guard and Reserve find the Bush administration's military agenda leaving them behind. In addition, earlier this year, the Republican majority in the U.S. House of Representatives sought to cut reservist pay by 40 percent for normal peacetime training requirements. The Republican majority in the U.S. Senate blocked efforts to extend health care benefits to Guard and Reserve members. Just this month, the Republican majority in Congress voted against legislation by Senator DURBIN that would have provided supplemental income for Federal employees who are called up to active duty. These efforts are wrong and demonstrate the misplaced priorities of the Republican Party.

To make matters worse, the Bush administration recently announced that it would require thousands of National Guard and Army Reserve troops to extend their tours of duty up for an additional six months. This extension will cause significant economic difficulties for the reservists, their families, their employers, and our national economy.

Beyond the hardship of leaving their families, their homes and their regular employment, more than one-third of military reservists and National Guard members face a pay cut when they're called for active duty. Many of these reservists have families who depend upon that paycheck and can least afford a substantial reduction in pay.

The United States Chamber of Commerce estimates that 70 percent of military reservists called to active duty work in small- or medium-size companies. The continued activation of military reservists to serve in Iraq and the broader war on terrorism has imposed a tremendous burden on many of our country's small businesses. Too many of these businesses, when their employees are asked to leave their jobs and serve the Nation, are unable to continue operating successfully—resulting in severe financial difficulty and even bankruptcy. Large businesses have the resources to provide supplemental income to reservist employees called up for active duty and to replace them with a temporary employee. However, many small businesses are unable to provide this assistance or temporarily cover the reservist's duties.

The Federal Government has an obligation to help small businesses weather the loss of an employee to a call-up and a duty to protect small business employees and their families from suffering a pay cut to serve our Nation. It is imperative that we help families of reservists maintain their standard of living while their loved one protects our country abroad.

That is why I have proposed creating a Small Business Military Reservist Tax Credit, which does two things.

First, it provides an immediate Federal income tax credit to any small business to help with the cost of temporarily replacing a reservist employee that has been called up to active duty. Second, it provides a tax credit to small businesses that pay any difference in salary for an employee who is called up. This tax credit is worth up to $12,000 to any small business and up to $20,000 for small manufacturers.

It is common knowledge that small businesses continue to be our most effective tool at creating new jobs and spurring economic growth nationwide. Small businesses employ over 50 percent of the Nation's work force. Across the country, small businesses are currently creating 75 percent of new jobs. Furthermore, many of these small businesses provide quality goods and services that are a vital link in the supply chain for national defense. Many of these small companies need immediate help to keep their business going while their employees encounter tremendous personal sacrifice in service of our country.

This assistance will immediately help struggling entrepreneurs keep their small businesses running during the loss of an employee to temporary military service. It will also help the families of military reservists cope with the financial burden of their absence. In this way we ensure that we preserve our great tradition of citizen soldiers at such a critical time in the Nation's history.

In his speech designating this week National Employer Support of the Guard and Reserve Week, President Bush recognized several large businesses for their support of the Guard and Reserve. I, too, commend these big corporations for their support of our reservists and guardsmen, but the President has again showed that he doesn't understand the plight of our military reservists and their smaller employers. The fact is big businesses, like those the President recently honored, aren't going out of business if one of their reservist employees is called up. Small businesses may.

My legislation provides a real solution—helping small businesses maintain productivity and helping make up the difference for reservists who face pay cuts when they're deployed—not just a pat on the back that this week provides. I urge the President and all of my colleagues to support my proposal.●

HONORING NOR-LEA GENERAL HOSPITAL

● Mr. DOMENICI. Mr. President, today I recognize the outstanding achievement of a hospital in my home State of New Mexico. Nor-Lea General Hospital, which is located in Lovington, New Mexico, was recently honored as one of the Nation's ''Top 100'' Hospitals by Solucient Corporation, a healthcare information company, in their 10th National Benchmarks for Success study. Nor-Lea was recognized because they have demonstrated superior clinical, operational, and financial performance in overall service.

I am proud to recognize Nor-Lea Hospital for its strong commitment to help the community. Too often we hear about hospitals that are struggling; hospitals asserting they can not save money and improve patient services and thus are not able to meet the needs of their communities.

Nor-Lea represents the exception. They represent the value of management, not only to save money, but also to improve efficiency. Nor-Lea is demonstrating what kind of performance is possible when this is done and they are setting new targets for performance improvement across the industry.

Nor-Lea General Hospital is a 25-bed Medicare-certified facility. Medicare, Medicaid, private insurance and private pay are accepted for services rendered. Nor-Lea General Hospital offers comprehensive outpatient services, which include a state-of-the-art laboratory facility with national lab affiliations, radiology services, MRI, bone densitometry, fluoroscopy, x-ray, ultrasound, and respiratory services. The hospital also has a newly enlarged emergency room which is open 24 hours a day, 7 days a week. Each month about 385 individuals utilize this emergency room.

Nor-Lea was recognized as a top performing ''Small Community Hospital'' because of their higher survival rate and because they spend less money, release patients from the hospital faster, and have fewer employees. In short, Nor-Lea treats more of the sickest patients, while maintaining high customer service and preserving profits in a difficult marketplace.

Congratulations, Nor-Lea General Hospital. I hope that your success will be a catalyst for continuous hospital performance improvement.●

HONORING LINDA BARKER

● Mr. JOHNSON. Mr. President, today I wish to publicly commend Linda Barker, a resident of Sioux Falls, SD, on her selection as the recipient of the Sioux Falls Development Foundation's annual Spirit of Sioux Falls Award.

The Spirit of Sioux Falls Award is given annually in memory of the eight people who were killed when then South Dakota Gov. George Mickelson's plane crashed in 1993. This year, the recipient was Linda Barker, a member of the community who has shown leadership and commitment to the economic development in Sioux Falls. Dan Scott, President of the Sioux Falls Development Foundation, said that Linda, who is currently a member of the Board of Directors for the Development Foundation, was chosen because she ''has been an incredibly valuable member of the Board of Directors. Not just because she has attended the meetings, but because she has been in our office on a weekly basis offering any kind of help the staff needed.''

During her service with the South Dakota Development Foundation, she was instrumental in a number of ways. In addition to her work with the Forward Sioux Falls program, her leadership helped the Development Foundation acquire enough land to serve as development parks for the next fifteen years. According to Mr. Scott, they are now well prepared to handle the needs in the development park arena for the future. She was also instrumental in serving as chairman of the membership committee—essentially revitalizing and reenergizing their membership effort, raising the number from 350 to 400 members.

Linda's involvement in the Sioux Falls area comes from her love of the community. In her thirteen years as part owner of Business Aviation Services in Sioux Falls, she was instrumental in helping the company more than quadruple its business, increasing sales from $4 million to $18 million annually. The company has also added 100 employees and it now owns or manages 48 aircraft, compared with six in 1990, when Linda joined the ownership team. Dale Froehlich, president and chief executive officer of Business Aviation, said Linda's success is ''because of her unwillingness to give up, even in the dreariest of situations.'' It is this type of hard work and dedication that led Linda to her success and her subsequent recognition with the Spirit of Sioux Falls Award.

This prestigious award is a reflection of her extraordinary leadership, skill and commitment to South Dakota. I am pleased that her success is being publicly recognized, and I am confident that her achievements will serve as an exemplary model for talented South Dakotans throughout our state. People of all ages need to think more about how we, as individual citizens, can work together at the local level to ensure the health and vitality of our towns and neighborhoods. Citizens such as Linda Barker are examples to all of us. She is an extraordinary individual who richly deserves this distinguished recognition. I strongly commend her hard work and dedication, and I am very pleased that her efforts are being publicly honored and celebrated.

It is with great honor that I share her impressive accomplishments with my colleagues.●

IN REMEMBRANCE OF THE REVEREND DR. AVERY ALDRIDGE

● Mr. LEVIN. Madam President, I want to call my colleagues' attention to the loss of one of the most influential civic and religious leaders in Flint, MI, Dr.

Avery Aldridge, who passed away at the age of 78 on November 1, 2003. He is greatly mourned by his wife and family, his church community, and people in my home State of Michigan who knew and loved him as a man of great faith, devoted to his family, and a voice for justice and equality in the African American community.

Dr. Aldridge was born in Widener, AR on February 9, 1925, the fourth of nine children. He completed his secondary education in Memphis, TN, and from there was inducted in the Army in 1943. He served as a Sergeant during World War II, defending the cause of freedom for his country until his honorable discharge in 1946. He then settled in Flint, MI where he married Mildred Light and had two children, Karen and Derrick. Dr. Aldridge and his wife were dedicated members of Antioch Baptist Church where he served as General Superintendent of the Sunday School and was later ordained into the ministry.

In December, 1956, Dr. Aldridge founded Foss Avenue Missionary Baptist Church with his wife, Mildred, and two others. The church has grown through the years to a congregation of two thousand families, with 50 auxiliaries and committees, an elementary and secondary school, a credit union, an activity center and a free clothing center. Dr. Aldridge also led Foss Avenue to initiate a small business center to train youth for employment, provide food baskets to those in need, organize a prison ministry and annually provide Thanksgiving Day dinner to all incarcerated in the Genessee County Jail. Dr. Aldridge's vision and leadership also supported four missionaries to Africa, and led to the founding of Concerned Pastors for Social Action (CPSA), the CPSA Courier, a weekly community and religious publication, and Faith Access to Community Economic Development (FACED), a community development organization.

Dr. Aldridge was a lifelong learner and furthered his education at Moody Bible Institute in Chicago and the University of Michigan-Flint. He believed strongly in the value of education and supported black colleges across the country, as well as scholarships for local youth. Because of his work, he was awarded several honorary degrees through the years.

Dr. Avery was committed to serving the needs of people and improving the quality of community life. He rose to prominence in Flint during the civil rights movement of the 1960s, and was a calming influence in the city during tensions in the wake of the Detroit riots in 1967. He became known as ''The Rights Activist,'' serving on local, State, and national commissions, including the Flint Human Relations Commission, the Flint Housing Commission, the Michigan AIDS Policy Commission, and the National Holiday for Martin Luther King, Jr. Commission.

I know my colleagues join me in paying tribute to the life and ministry of Reverend Dr. Avery Aldridge who will be missed by the many people whose lives he touched. I hope his family takes comfort in knowing that his legacy will stand as an inspiration for generations to come.●

PRINCIPAL OF THE YEAR FINALIST

● Mr. CORZINE. Mr. President, it is my distinct honor and pleasure to recognize Richard Roberto of John F. Kennedy High School in Paterson, NJ as one of six finalists for the National High School Principal of the Year.

The impact that Mr. Roberto has made on the students and faculty at John F. Kennedy High School cannot be overstated. His leadership has produced remarkable results for students—indeed, test scores are higher at John F. Kennedy, in part, I am sure, because he created an extended year program for juniors and established freshman houses to personalize the learning environment. He also administered the expansion of eight career academies. These academies provide small learning communities in which students can explore diverse interests. As you can see, students have thrived under Mr. Roberto because of his efforts to develop opportunities for their success.

Not only has his work affected students, but his staff development program, which includes a focus on core curriculum content, has fostered collaboration among all the teachers at John F. Kennedy High School. Through newsletters, needs assessments, teachers surveys, and collaborative groups Mr. Roberto has instituted whole school reform that concentrates on the needs of all members of his faculty.

I congratulate Mr. Roberto on his success in building a school environment that facilitates communication and creates a learning environment enabling student success. His dedication, innovation, and leadership are qualities that every principal in our Nation should have. It is with great admiration that I acknowledge Mr. Roberto as a 2003 Principal of the Year finalist.●

MESSAGES FROM THE PRESIDENT

Messages from the President of the United States were communicated to the Senate by Mr. Thomas, one of his secretaries.

EXECUTIVE MESSAGES REFERRED

As in executive session the Presiding Office laid before the Senate messages from the President of the United States submitting sundry nominations which were referred to the appropriate committees.

(The nominations received today are printed at the end of the Senate proceedings.)

MESSAGES FROM THE HOUSE

At 10:57 a.m., a message from the House of Representatives, delivered by Ms. Niland, one its reading clerks, announced that the House has passed the following bills, without amendment:

S. 189. An act to authorize appropriations for nanoscience, nanoengineering, and nanotechnology research, and for other purposes; and

S. 1895. An act to temporarily extend the programs under the Small Business Act and the Small Business Investment Act of 1958 through March 15, 2004, and for other purposes.

The message also announced that the House has passed the following bill, with an amendment:

S. 686. An act to provide assistance for poison prevention and to stabilize the funding of regional poison control centers.

The message further announced that the House passed the following bills in which it requests the concurrence of the Senate:

H.R. 253. An act to amend the National Flood Insurance Act of 1968 to reduce losses to properties for which repetitive flood insurance claim payments have been made; and

H.R. 3521. An act to amend the Internal Revenue Code of 1986 to extend certain expiring provisions, and for other purposes.

The message also announced that the House agree to the amendments of the Senate to the bill (H.R. 1828) to halt Syrian support for terrorism, end its occupation of Lebanon, and stop its development of weapons of mass destruction, and by so doing hold Syria accountable for the serious international security problems it has caused in the Middle East, and for other purposes.

The message further announced that the House agree to the amendments of the Senate to the resolution (H. Con. Res. 209) commending the signing of the United States-Adriatic Charter, a charter of partnership among the United States, Albania, Croatia, and Macedonia.

ENROLLED BILLS SIGNED

The message also announced that the Speaker has signed the following enrolled bills:

S. 117. An act to authorize the Secretary of Agriculture to sell or exchange certain land in the State of Florida, and for other purposes;

S. 286. An act to revise and extend the Birth Defects Prevention Act of 1998;

S. 650. An act to amend the Federal Food, Drug, and Cosmetic Act to authorize the Food and Drug Administration to require certain research into drugs used in pediatric patients;

S. 1685. An act to extend and expand the basic pilot program for employment eligibility verification, and for other purposes.

S. 1720. An act to provide for Federal court proceedings in Plano, Texas;

S. 1824. An act to amend the Foreign Assistance Act of 1961 to reauthorize the Overseas Private Investment Corporation, and for other purposes; and

H.R. 3182. An act to reauthorize the adoption incentive payments program under part E of title IV of the Social Security Act, and for other purposes.

The enrolled bills were signed subsequently by the President pro tempore (Mr. STEVENS).

At 12:12 p.m., a message from the House of Representatives, delivered by Mr. Hays, one of its reading clerks, announced that the House has passed the following bill in which it requests the concurrence of the Senate:

H.R. 135. An act to establish the ''Twenty-First Century Water Commission'' to study and develop recommendations for a comprehensive water strategy to address future water needs.

At 3:17 p.m., a message from the House of Representatives, delivered by Ms. Niland, one of its reading clerks, announced that the House agree to the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H.R. 1904) to improve the capacity of the Secretary of Agriculture and the Secretary of the Interior plan and conduct hazardous fuels reduction projects on National Forest System lands and Bureau of Land Management lands aimed at protecting communities, watersheds, and certain other at-risk lands from catastrophic wildfire, to enhance efforts to protect watersheds and address threats to forest and rangeland health, including catastrophic wildfire, across the landscape, and for other purposes.

At 5:20 p.m., a message from the House of Representatives, delivered by Ms. Niland, one of its reading clerks, announced that the House has passed the following bills, without amendment:

S. 1152. An act to reauthorize the United States Fire Administration, and for other purposes.

S. 1156. An act to amend title 38, United States Code, to improve and enhance provision of health care for veterans, to authorize major construction projects and other facilities matters for the Department of Veterans Affairs, to enhance and improve authorities relating to the administration of personnel of the Department of Veterans Affairs, and for other purposes.

At 9:43 p.m., a message from the House of Representatives, delivered by Ms. Niland, one of its reading clerks, announced that the House has passed the following joint resolution, in which it requests the concurrence of the Senate:

H.J. Res. 79. Joint resolution making further continuing appropriations for the fiscal year 2004, and for other purposes.

MEASURES PLACED ON THE CALENDAR

The following bill was read the second time, and placed on the calendar:

H.R. 1274. An act to direct the Administrator of General Services to convey to Fresno County, California, the existing Federal courthouse in that county.

ENROLLED BILLS PRESENTED

The Secretary of the Senate reported that on today, November 21, 2003, she had presented to the President of the United States the following enrolled bills:

S. 117. An act to authorize the Secretary of Agriculture to sell or exchange certain land in the State of Florida, and for other purposes;

S. 286. An act to revise and extend the Birth Defects Prevention Act of 1998;

S. 650. An act to amend the Federal Food, Drug, and Cosmetic Act to authorize the Food and Drug Administration to require certain research into drugs used in pediatric patients;

S. 1685. An act to extend and expand the basic pilot program for employment eligibility verification, and for other purposes.

S. 1720. An act to provide for Federal court proceedings in Plano, Texas;

S. 1824. An act to amend the Foreign Assistance Act of 1961 to reauthorize the Overseas Private Investment Corporation, and for other purposes; and

REPORTS OF COMMITTEES

The following reports of committees were submitted:

By Mr. BENNETT, from the Committee on Joint Economic Committee:

Special Report entitled ''The 2003 Joint Economic Report'' (Rept. No. 108–206).

By Ms. COLLINS, from the Committee on Governmental Affairs, with amendments:

S. 1522. A bill to provide new human capital flexibility with respect to the GAO, and for other purposes.

EXECUTIVE REPORTS OF COMMITTEES

The following executive reports of committees were submitted:

By Mr. WARNER for the Committee on Armed Services.

Air Force nomination of Maj. Gen. William Welser III.

Air Force nominations beginning Colonel Paul F. Capasso and ending Colonel Robert M. Worley II, which nominations were received by the Senate and appeared in the Congressional Record on January 9, 2003.

Air Force nomination of Col. Stephen L. Lanning.

Air Force nomination of Brigadier General Robin E. Scott.

Army nomination of Maj. Gen. Larry J. Dodgen.

Army nomination of Maj. Gen. John M. Curran.

Army nomination of Brig. Gen. Keith M. Huber.

Army nomination of Brig. Gen. Dennis E. Hardy.

Army nominations beginning Brig. Gen. James R. Sholar and ending Col. Henry J. Ostermann, which nominations were received by the Senate and appeared in the Congressional Record on August 1, 2003.

Navy nomination of Rear Adm. Walter B. Massenburg.

Navy nominations beginning Rear Adm. (1h) Robert E. Cowley III and ending Rear Adm. (1h) Steven W. Maas, which nominations were received by the Senate and appeared in the Congressional Record on March 19, 2003.

Navy nomination of Capt. Brian G. Brannman.

Navy nomination of Capt. Raymond K. Alexander.

Navy nominations beginning Rear Adm. (1h) Donald K. Bullard and ending Rear Adm. (1h) John J. Waickwicz, which nominations were received by the Senate and appeared in the Congressional Record on October 16, 2003.

Mr. WARNER. Mr. President, for the Committee on Armed Services I report favorably the following nomination lists which were printed in the RECORDS on the dates indicated, and ask unanimous consent, to save the expense of reprinting on the Executive Calendar that these nominations lie at the Secretary's desk for the information of Senators.

The PRESIDING OFFICER. Without objection, it is so ordered.

Air Force nomination of Gary H. Sharp.

Air Force nomination of Jeffrey N. Leknes.

Air Force nomination of Samuel B. Echaure.

Air Force nominations beginning Thomas E. Jahn and ending Rodney D. Lewis, which nominations were received by the Senate and appeared in the Congressional Record on October 23, 2003.

Air Force nominations beginning Samuel C. Fields and ending Kevin C. Zeeck, which nominations were received by the Senate and appeared in the Congressional Record on October 23, 2003.

Air Force nomination of Robert G. Cates III.

Air Force nomination of Mary J. Quinn.

WITHDRAWALS

Executive message transmitted by the President to the Senate on November 21, 2003, withdrawing from further Senate consideration the following nominations:

April H. Foley, of New York, to be a Member of the Board of Directors of the Export-Import Bank of the United States for a term expiring January 20, 2007, which was sent to the Senate on April 10, 2003.

April H. Foley, of New York, to be a Member of the Board of Directors of the Export-Import Bank of the United States for a term expiring January 20, 2007, which was sent to the Senate on May 14, 2003.

DISCHARGED NOMINATIONS

The Senate Committee on Health, Education, Labor, and Pensions was discharged from further consideration of the following nominations and the nominations were:

James McBride, of New York, to be a Member of the National Council on the Arts for a term expiring September 3, 2008.

David Eisner, of Maryland, to be Chief Executive Officer of the Corporation for National and Community Service.

Read Van de Water, of North Carolina, to be a Member of the National Mediation Board for a term expiring July 1, 2006.

Raymond Simon, of Arkansas, to be Assistant Secretary for Elementary and Secondary Education, Department of Education.

Jose Antonio Aponte, of Colorado, to be a Member of the National Commission on Libraries and Information Science for a term expiring July 19, 2007.

Sandra Frances Ashworth, of Idaho, to be a Member of the National Commission on Libraries and Information Science for a term expiring July 19, 2004.

Edward Louis Bertorelli, of Massachusetts, to be a Member of the National Commission on Libraries and Information Science for a term expiring July 19, 2005.

Carol L. Diehl, of Wisconsin, to be a Member of the National Commission on Libraries and Information Science for a term expiring July 19, 2005.

Allison Druin, of Maryland, to be a Member of the National Commission on Libraries and Information Science for a term expiring July 19, 2006.

Beth Fitzsimmons, of Michigan, to be a Member of the National Commission on Libraries and Information Science for a term expiring July 19, 2006.

Patricia M. Hines, of South Carolina, to be a Member of the National Commission on Libraries and Information Science for a term expiring July 19, 2005.

Colleen Ellen Huebner, of Washington, to be a Member of the National Commission on Libraries and Information Science for a term expiring July 19, 2007.

Stephen M. Kennedy, of New Hampshire, to be a Member of the National Commission on Libraries and Information Science for a term expiring July 19, 2007.

Bridget L. Lamont, of Illinois, to be a Member of the National Commission on Libraries and Information Science for a term expiring July 19, 2008.

Mary H. Perdue, of Maryland, to be a Member of the National Commission on Libraries and Information Science for a term expiring July 19, 2008.

Herman Lavon Totten, of Texas, to be a Member of the National Commission on Libraries and Information Science for a term expiring July 19, 2008.

Public Health Service nomination beginning with Vincent A. Berkley and ending with James Syms.

Drew R. McCoy, of Massachusetts, to be a Member of the Board of Trustees of the James Madison Memorial Fellowship Foundation for a term of six years.

Carol Kinsley, of Massachusetts, to be a Member of the Board of Directors of the Corporation for National and Community Service for a term expiring October 6, 2006.

Susan K. Sclafani, of the District of Columbia, to be Assistant Secretary for Vocational and Adult Education, Department of Education.

Laurie Susan Fulton, of Virginia, to be a Member of the Board of Directors of the United States Institute of Peace for a term expiring January 19, 2007.

Steven J. Law, of the District of Columbia, to be Deputy Secretary of Labor.

J. Robinson West, of the District of Columbia, to be a Member of the Board of Directors of the United States Institute of Peace for a term expiring January 19, 2007.

INTRODUCTION OF BILLS AND JOINT RESOLUTIONS

The following bills and joint resolutions were introduced, read the first and second times by unanimous consent, and referred as indicated:

By Mr. JEFFORDS (for himself, Ms. SNOWE, and Mr. HATCH):

S. 1912. A bill to amend the Internal Revenue Code of 1986 to expand pension coverage and savings opportunities and to provide other pension reforms; to the Committee on Finance.

By Mr. MCCAIN (for himself and Mr. FEINGOLD):

S. 1913. A bill to amend the Internal Revenue Code of 1986 to reform the system of public financing for Presidential elections, and for other purposes; to the Committee on Finance.

By Ms. STABENOW (for herself and Mr. LEVIN):

S. 1914. A bill to prohibit the closure or realignment of inpatient services at the Aleda E. Lutz Department of Veterans Affairs Medical Center in Saginaw, Michigan, as proposed under the Capital Asset Realignment for Enhanced Services initiative; to the Committee on Veterans' Affairs.

By Mr. LIEBERMAN:

S. 1915. A bill to ensure that the Government fully accounts for both its explicit liabilities and implicit commitments and adopts fiscal and economic policies that enable it to finance and manage these liabilities and commitments, to honor commitments to the Baby Boom and subsequent generations with regard to social insurance programs, and to provide for the national defense, homeland security, and other critical governmental responsibilities; to the Committee on the Budget and the Committee on Governmental Affairs, jointly, pursuant to the order of August 4, 1977, with instructions that if one Committee reports, the other Committee have thirty days to report or be discharged.

By Ms. LANDRIEU:

S. 1916. A bill to amend title 10, United States Code, to increase the minimum Survivor Benefit Plan basic annuity for surviving spouses age 62 and older, to provide for a one-year open season under that plan, and for other purposes; to the Committee on Armed Services.

By Mrs. HUTCHISON:

S. 1917. A bill to amend the Internal Revenue Code of 1986 to permit the issuance of tax-exempt bonds for certain air and water pollution control facilities, and to provide that the volume cap for private activity bonds shall not apply to bonds for facilities for the furnishing of water, sewage facilities, and air or water pollution control facilities; to the Committee on Finance.

By Mr. SANTORUM (for himself and Mrs. FEINSTEIN):

S. 1918. A bill to amend the Internal Revenue Code of 1986 to provide that qualified homeowner downpayment assistance is a charitable purpose; to the Committee on Finance.

By Mr. ALLEN:

S. 1919. A bill to designate a portion of the United States courthouse located at 2100 Jamieson Avenue, in Alexandria, Virginia, as the ''Justin W. Williams United States Attorney's Building''; to the Committee on Environment and Public Works.

By Mr. GRASSLEY (for himself and Mr. LEAHY):

S. 1920. A bill to extend for 6 months the period for which chapter 12 of title 11 of the United States Code is reenacted; to the Committee on the Judiciary.

By Mr. GRASSLEY (for himself and Mr. SESSIONS):

S. 1921. A bill to amend chapter 3 of title 28, United States Code, to provide for 11 circuit judges on the United States Court of Appeals for the District of Columbia Circuit; to the Committee on the Judiciary.

By Mr. SMITH (for himself and Mr. BREAUX):

S. 1922. A bill to amend the Internal Revenue Code of 1986 to comply with the World Trade Organization rulings on the FSC/ETI benefit in a manner that preserves manufacturing jobs and production activities in the United States, and for other purposes; to the Committee on Finance.

By Mr. LEAHY:

S. 1923. A bill to reauthorize and amend the National Film Preservation Act of 1996; to the Committee on the Judiciary.

By Mr. JEFFORDS:

S. 1924. A bill to provide for the coverage of milk production under the H-2A nonimmigrant worker program; to the Committee on the Judiciary.

By Mr. KENNEDY (for himself, Mr. SCHUMER, Mr. DODD, Mr. HARKIN, Ms. MIKULSKI, Mrs. MURRAY, Mr. EDWARDS, Mrs. CLINTON, Mr. INOUYE, Mr. LEAHY, Mr. LEVIN, Mr. KERRY, Mr. BIDEN, Mr. ROCKEFELLER, Mr. LIEBERMAN, Mr. AKAKA, Mrs. BOXER, Mr. FEINGOLD, Mr. DURBIN, Mr. BAYH, Mr. CORZINE, Mr. DAYTON, and Mr. LAUTENBERG):

S. 1925. By Mr. GREGG (for himself and Mr. KENNEDY):

S. 1929. A bill to amend the Employee Retirement Income Security Act of 1974 and the Public Health Service Act to extend the mental health benefits parity provisions for an additional year; considered and passed.

By Mr. BROWNBACK (for himself, Mr. ENSIGN, Mr. ENZI, Mr. HAGEL, Mr. INHOFE, Mr. NICKLES, Mr. SANTORUM, and Mr. SESSIONS):

S. 1930. A bill to provide that the approved application under the Federal Food, Drug, and Cosmetic Act for the drug commonly known as RU–486 is deemed to have been

withdrawn, to provide for the review by the Comptroller General of the United States of the process by which the Food and Drug Administration approved such drug, and for other purposes; to the Committee on Health, Education, Labor, and Pensions.

SUBMISSION OF CONCURRENT AND SENATE RESOLUTIONS

The following concurrent resolutions and Senate resolutions were read, and referred (or acted upon), as indicated:

By Mr. COLEMAN (for himself, Mr. CORZINE, Mr. VOINOVICH, and Mr. LAUTENBERG):

S. Res. 271. A resolution urging the President of the United States diplomatic corps to dissuade member states of the United Nations from supporting resolutions that unfairly castigate Israel and to promote within the United Nations General Assembly more balanced and constructive approaches to resolving conflict in the Middle East; to the Committee on Foreign Relations.

By Ms. SNOWE (for herself, Mrs. MURRAY, Mr. WARNER, Mr. BREAUX, Mr. CRAPO, Mr. CONRAD, Mr. DASCHLE, Mr. EDWARDS, Mr. KENNEDY, Mr. JOHNSON, and Mr. GRASSLEY):

S. Res. 272. A resolution designating the week beginning November 16, 2003, as American Education Week; considered and agreed to.

By Mr. DASCHLE (for Mr. KERRY):

S. Con. Res. 84. A concurrent resolution recognizing the sacrifices made by members of the regular and reserve components of the Armed Forces, expressing concern about their safety and security, and urging the Secretary of Defense to take immediate steps to ensure that the reserve components are provided with the same equipment as regular components; to the Committee on Armed Services.

By Mr. McCAIN (for himself and Mr. LIEBERMAN):

S. Con. Res. 85. A concurrent resolution expressing the sense of Congress that the continued participation of the Russian Federation in the Group of 8 nations should be conditioned on the Russian Government voluntarily accepting and adhering to the norms and standards of democracy; to the Committee on Foreign Relations.

ADDITIONAL COSPONSORS

S. 665

At the request of Mr. GRASSLEY, the name of the Senator from Alaska (Ms. MURKOWSKI) was added as a cosponsor of S. 665, a bill to amend the Internal Revenue Code of 1986 to provide tax relief for farmers and fisherman, and for other purposes.

S. 1136

At the request of Mr. SPECTER, the name of the Senator from Georgia (Mr. MILLER) was added as a cosponsor of S. 1136, a bill to restate, clarify, and revise the Soldiers' and Sailors' Civil Relief Act of 1940.

S. 1245

At the request of Ms. COLLINS, the name of the Senator from Rhode Island (Mr. REED) was added as a cosponsor of S. 1245, a bill to provide for homeland security grant coordination and simplification, and for other purposes.

S. 1431

At the request of Mr. LAUTENBERG, the name of the Senator from Massachusetts (Mr. KERRY) was added as a cosponsor of S. 1431, a bill to reauthorize the assault weapons ban, and for other purposes.

S. 1549

At the request of Mr. JOHNSON, his name was added as a cosponsor of S. 1549, a bill to amend the Richard B. Russell National School Lunch Act to phase out reduced price lunches and breakfasts by phasing in an increase in the income eligibility guidelines for free lunches and breakfasts.

S. 1586

At the request of Mr. DAYTON, his name was withdrawn as a cosponsor of S. 1586, a bill to authorize appropriate action if the negotiations with the People's Republic of China regarding China's undervalued currency and currency manipulations are not successful.

S. 1700

At the request of Mr. LEAHY, the name of the Senator from New Mexico (Mr. BINGAMAN) was added as a cosponsor of S. 1700, a bill to eliminate the substantial backlog of DNA samples collected from crime scenes and convicted offenders, to improve and expand the DNA testing capacity of Federal, State, and local crime laboratories, to increase research and development of new DNA testing technologies, to develop new training programs regarding the collection and use of DNA evidence, to provide post-conviction testing of DNA evidence to exonerate the innocent, to improve the performance of counsel in State capital cases, and for other purposes.

S. 1755

At the request of Mr. LEAHY, the name of the Senator from Washington (Ms. CANTWELL) was added as a cosponsor of S. 1755, a bill to amend the Richard B. Russell National School Lunch Act to provide grants to support farm-to-cafeteria projects.

S. 1792

At the request of Mr. DOMENICI, the name of the Senator from Mississippi (Mr. COCHRAN) was added as a cosponsor of S. 1792, a bill to amend the Internal Revenue Code of 1986 to provide the same capital gains treatment for art and collectibles as for other investment property and to provide that a deduction equal to fair market value shall be allowed for charitable contributions of literary, musical, artistic, or scholarly compositions created by the donor.

S. 1825

At the request of Mr. DEWINE, the name of the Senator from California (Mrs. FEINSTEIN) was added as a cosponsor of S. 1825, a bill to amend title 18, United States Code, to provide penalties for the sale and use of unauthorized mobile infrared transmitters.

S. 1853

At the request of Mr. KENNEDY, the name of the Senator from South Dakota (Mr. JOHNSON) was added as a cosponsor of S. 1853, a bill to provide extended unemployment benefits to displaced workers.

S. 1858

At the request of Mr. COCHRAN, the names of the Senator from Kansas (Mr. ROBERTS), the Senator from Georgia (Mr. MILLER) and the Senator from Michigan (Ms. STABENOW) were added as cosponsors of S. 1858, a bill to authorize the Secretary of Agriculture to conduct a loan repayment program to encourage the provision of veterinary services in shortage and emergency situations.

S. 1879

At the request of Ms. MIKULSKI, the name of the Senator from New Hampshire (Mr. GREGG) was added as a cosponsor of S. 1879, a bill to amend the Public Health Service Act to revise and extend provisions relating to mammography quality standards.

S. 1907

At the request of Mr. DASCHLE, the name of the Senator from North Dakota (Mr. DORGAN) was added as a cosponsor of S. 1907, a bill to promote rural safety and improve rural law enforcement.

S. CON. RES. 77

At the request of Mr. SESSIONS, the names of the Senator from Utah (Mr. HATCH), the Senator from Iowa (Mr. GRASSLEY), the Senator from Kentucky (Mr. BUNNING), the Senator from Oklahoma (Mr. INHOFE) and the Senator from Georgia (Mr. CHAMBLISS) were added as cosponsors of S. Con. Res. 77, a concurrent resolution expressing the sense of Congress supporting vigorous enforcement of the Federal obscenity laws.

S. CON. RES. 81

At the request of Mrs. FEINSTEIN, the name of the Senator from Ohio (Mr. VOINOVICH) was added as a cosponsor of S. Con. Res. 81, a concurrent resolution expressing the deep concern of Congress regarding the failure of the Islamic Republic of Iran to adhere to its obligations under a safeguards agreement with the International Atomic Energy Agency and the engagement by Iran in activities that appear to be designed to develop nuclear weapons.

S. CON. RES. 83

At the request of Mr. BIDEN, the name of the Senator from Connecticut (Mr. LIEBERMAN) was added as a cosponsor of S. Con. Res. 83, a concurrent resolution promoting the establishment of a democracy caucus within the United Nations.

S. RES. 120

At the request of Mr. JEFFORDS, the name of the Senator from Vermont (Mr. LEAHY) was added as a cosponsor of S. Res. 120, a resolution commemorating the 25th anniversary of Vietnam Veterans of America.

S. RES. 253

At the request of Mr. CAMPBELL, the name of the Senator from Massachusetts (Mr. KERRY) was added as a cosponsor of S. Res. 253, a resolution to recognize the evolution and importance of motorsports.

STATEMENTS ON INTRODUCED BILLS AND JOINT RESOLUTIONS

By Mr. JEFFORDS (for himself, Ms. SNOWE, and Mr. HATCH):

S. 1912. A bill to amend the Internal Revenue Code of 1986 to expand pension coverage and savings opportunities and to provide other pension reforms; to the Committee on Finance.

Mr. JEFFORDS. Mr. President, today, together with Senators HATCH and SNOWE, I am introducing, the Retirement Account Portability and Improvement Act of 2003. This legislation improves the portability of retirement savings by eliminating unnecessary complexities and barriers in the retirement savings system, and helps preserve retirement savings by giving American workers tools that will help them consolidate their retirement savings into one easily managed account.

In brief, this bill will make a number of improvements in the retirement savings system to help families preserve retirement assets. It will, for example, enhance the portability of retirement savings by expanding rollover options in traditional IRAs, Roth IRAs, and SIMPLE Plans. The bill also clarifies that when employees are permitted to make after-tax contributions to retirement plans, those after-tax amounts may be rolled over into other retirement plans eligible to receive such rollovers. This clarification will make it easier for workers to move all elements of their 401(k) of 403(b) savings when they change jobs and move between private sector and the tax-exempt sector.

In addition, the bill builds on defined contribution plan reforms enacted in 2001 by requiring a shortened vesting schedule for employer non-elective contributions, such as profit-sharing contributions, to defined contribution plans. As a result, employer contributions will become employee property more quickly, helping workers to build more meaningful retirement benefits. This new vesting schedule corresponds to rules for 401(k) matching contributions enacted in 2001.

Another provision in the bill would end an unfair tax penalty faced by nonspouse beneficiaries. Today, when an employee dies, the benefits in that employee's retirement account are paid out to a non-spouse beneficiary in one payment. The beneficiary must pay tax on the entire amount, and is often forced into a higher tax bracket as a result of the payment. A provision in this bill would allow non-spouse beneficiaries—siblings, children, domestic partners, parents—to roll over the money from the plan to an IRA. This will prevent an immediate tax bite to grieving beneficiaries and allow them to withdraw the money from their IRA over five years or over their own life expectancy.

The bill also helps preserve retirement savings by allowing plans to designate default IRAs or annuity contracts to which employee rollovers may be directed. Employers should be more willing to establish default IRA and annuity rollover options as a result, making it easier for employees to keep savings in the retirement system when they change jobs.

For workers who leave a job without claiming their retirement benefits, the bill improves on the automatic rollover provisions enacted in 2001, by allowing certain small distributions from retirement plans to be sent to the Pension Benefit Guaranty Corporation (PBGC), ensuring that participants are ultimately reunited with their earned benefits. The bill also expands the scope of the PBGC's successful Missing Participants program that matches workers with lost pension benefits.

Employees of state and local governments, including teachers, will benefit from a number of this bill's technical corrections that will facilitate the purchase of service credits in public pension programs, allowing state and local employees to more easily attain a full pension in the jurisdiction where they conclude their career. The bill also contains provisions that would clarify eligibility rights of certain state and local employees who participate in a Section 457 deferred compensation plan.

Congress must take every opportunity to encourage American workers not only to save for retirement, but also to preserve those hard-earned retirement savings. These portability improvements offer one set of tools for making it easier to navigate the retirement savings system and reach retirement with an adequate nest egg. There are many pressing and complex retirement issues that demand attention, but I am hopeful that this legislation, narrowly focused on portability, can be considered quickly and on its own merits.

I ask unanimous consent that the text of the bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 1912

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. SHORT TITLE; AMENDMENT OF 1986 CODE; TABLE OF CONTENTS.

(a) SHORT TITLE.—This Act may be cited as the ''Retirement Acount Portability Act of 2003''.

(b) AMENDMENT OF 1986 CODE.—Except as otherwise expressly provided, whenever in this Act an amendment or repeal is expressed in terms of an amendment to, or repeal of, a section or other provision, the reference shall be considered to be made to a section or other provision of the Internal Revenue Code of 1986.

(c) TABLE OF CONTENTS.—The table of contents of this Act is as follows:

Sec. 1. Short title; amendment of 1986 Code; table of contents.

TITLE I—BUILDING AND PRESERVING RETIREMENT ASSETS AND ENHANCING PORTABILITY

Sec. 101. Allow rollovers by nonspouse beneficiaries of certain retirement plan distributions.
Sec. 102. Facilitation under fiduciary rules of certain rollovers and annuity distributions.
Sec. 103. Faster vesting of employer nonelective contributions.
Sec. 104. Allow rollover of after-tax amounts in annuity contracts.

TITLE II—EXPANDING RETIREMENT PLAN COVERAGE TO EMPLOYEES OF SMALL BUSINESSES

Sec. 201. Elimination of higher penalty on certain Simple distributions.
Sec. 202. Simple plan portability.

TITLE III—EXPANDING RETIREMENT SAVINGS FOR TAX-EXEMPT ORGANIZATION AND GOVERNMENT EMPLOYEES

Sec. 301. Clarifications regarding purchase of permissive service credit.
Sec. 302. Eligibility for participation in retirement plans.

TITLE IV—SIMPLIFICATION AND EQUITY

Sec. 401. Allow direct rollovers from retirement plans to Roth IRAs.
Sec. 402. Transfers to the PBGC.

TITLE I—BUILDING AND PRESERVING RETIREMENT ASSETS AND ENHANCING PORTABILITY

SEC. 101. ALLOW ROLLOVERS BY NONSPOUSE BENEFICIARIES OF CERTAIN RETIREMENT PLAN DISTRIBUTIONS.

(a) IN GENERAL.—

(1) QUALIFIED PLANS.—Section 402(c) (relating to rollovers from exempt trusts) is amended by adding at the end the following new paragraph:

''(11) DISTRIBUTIONS TO INHERITED INDIVIDUAL RETIREMENT PLAN OF NONSPOUSE BENEFICIARY.—

''(A) IN GENERAL.—If, with respect to any portion of a distribution from an eligible retirement plan of a deceased employee, a direct trustee-to-trustee transfer is made to an individual retirement plan described in clause (i) or (ii) of paragraph (8)(B) established for the purposes of receiving the distribution on behalf of an individual who is a designated beneficiary (as defined by section 401(a)(9)(E)) of the employee and who is not the surviving spouse of the employee—

''(i) the transfer shall be treated as an eligible rollover distribution for purposes of this subsection,

''(ii) the individual retirement plan shall be treated as an inherited individual retirement account or individual retirement annuity (within the meaning of section 408(d)(3)(C)) for purposes of this title, and

''(iii) section 401(a)(9)(B) (other than clause (iv) thereof) shall apply to such plan.

''(B) CERTAIN TRUSTS TREATED AS BENEFICIARIES.—For purposes of this paragraph, to the extent provided in rules prescribed by the Secretary, a trust maintained for the benefit of one or more designated beneficiaries shall be treated in the same manner as a trust designated beneficiary.''.

(2) SECTION 403(a) PLANS.—Subparagraph (B) of section 403(a)(4) (relating to rollover amounts) is amended by inserting ''and (11)'' after ''(7)''.

(3) SECTION 403(b) PLANS.—Subparagraph (B) of section 403(b)(8) (relating to rollover amounts) is amended by striking ''and (9)'' and inserting '', (9), and (11)''.

(4) SECTION 457 PLANS.—Subparagraph (B) of section 457(e)(16) (relating to rollover amounts) is amended by striking ''and (9)'' and inserting '', (9), and (11)''.

(b) EFFECTIVE DATE.—The amendments made by this section shall apply to distributions after December 31, 2003.

SEC. 102. FACILITATION UNDER FIDUCIARY RULES OF CERTAIN ROLLOVERS AND ANNUITY DISTRIBUTIONS.

(a) IN GENERAL.—Section 404(c) of the Employee Retirement Income Security Act of 1974 (29 U.S.C. 1104(c)) is amended by adding at the end the following new paragraph:

''(4)(A) In the case of a pension plan which makes a transfer under section 401(a)(31)(A) of the Internal Revenue Code of 1986 to an individual retirement plan (as defined in section 7701(a)(37) of such Code) in connection with a participant or beneficiary or makes a distribution to a participant or beneficiary of an annuity contract described in subparagraph (B), the participant or beneficiary shall, for purposes of paragraph (1), be treated as exercising control over the transfer or distribution if—

''(i) the participant or beneficiary elected such transfer or distribution, and

''(ii) in connection with such election, the participant or beneficiary was given an opportunity to elect any other individual retirement plan (in the case of a transfer) or any other annuity contract described in subparagraph (B) (in the case of a distribution).

''(B) An annuity contract is described in this subparagraph if it provides, either on an immediate or deferred basis, a series of substantially equal periodic payments (not less frequently than annually) for the life of the participant or beneficiary or the joint lives of the participant or beneficiary and such individual's designated beneficiary. Annuity payments shall not fail to be treated as part of a series of substantially equal periodic payments because the amount of the periodic payments may vary in accordance with investment experience, reallocations among investment options, actuarial gains or losses, cost of living indices, or similar fluctuating criteria. The availability of a commutation benefit, a minimum period of payments certain, or a minimum amount to be paid in any event shall not affect the treatment of an annuity contract as an annuity contract described in this subparagraph.

''(C) Under regulations prescribed by the Secretary, this paragraph shall apply without regard to whether the particular individual retirement plan receiving the transfer or the particular annuity contract being distributed is specifically identified by the pension plan as available to the participant or beneficiary.

''(D) Notwithstanding the preceding provisions of this paragraph, paragraph (1)(B) shall not apply with respect to liability under section 406 in connection with the specific identification of any individual retirement plan or annuity contract as being available to the participant or beneficiary.''.

(b) EFFECTIVE DATE AND RELATED RULES.—

(1) EFFECTIVE DATE.—The amendment made by this section shall take effect on the date of the enactment of this Act.

(2) ISSUANCE OF FINAL REGULATIONS.—Final regulations under section 404(c)(4) of the Employee Retirement Income Security Act of 1974 (added by this section) shall be issued no later than 1 year after the date of the enactment of this Act.

SEC. 103. FASTER VESTING OF EMPLOYER NONELECTIVE CONTRIBUTIONS.

(a) AMENDMENTS TO THE INTERNAL REVENUE CODE OF 1986.—

(1) IN GENERAL.—Paragraph (2) of section 411(a) (relating to employer contributions) is amended to read as follows:

''(2) EMPLOYER CONTRIBUTIONS.—

''(A) DEFINED BENEFIT PLANS.—

''(i) IN GENERAL.—In the case of a defined benefit plan, a plan satisfies the requirements of this paragraph if it satisfies the requirements of clause (ii) or (iii).

''(ii) 5-YEAR VESTING.—A plan satisfies the requirements of this clause if an employee who has completed at least 5 years of service has a nonforfeitable right to 100 percent of the employee's accrued benefit derived from employer contributions.

''(iii) 3 TO 7 YEAR VESTING.—A plan satisfies the requirements of this clause if an employee has a nonforfeitable right to a percentage of the employee's accrued benefit derived from employer contributions determined under the following table:

''Years of service:	The nonforfeitable percentage is:
3	20
4	40
5	60
6	80
7 or more	100.

''(B) DEFINED CONTRIBUTION PLANS.—

''(i) IN GENERAL.—In the case of a defined contribution plan, a plan satisfies the requirements of this paragraph if it satisfies the requirements of clause (ii) or (iii).

''(ii) 3-YEAR VESTING.—A plan satisfies the requirements of this clause if an employee who has completed at least 3 years of service has a nonforfeitable right to 100 percent of the employee's accrued benefit derived from employer contributions.

''(iii) 2 TO 6 YEAR VESTING.—A plan satisfies the requirements of this clause if an employee has a nonforfeitable right to a percentage of the employee's accrued benefit derived from employer contributions determined under the following table:

''Years of service:	The nonforfeitable percentage is:
2	20
3	40
4	60
5	80
6	100.''.

(2) CONFORMING AMENDMENT.—Section 411(a) (relating to general rule for minimum vesting standards) is amended by striking paragraph (12).

(b) AMENDMENTS TO THE EMPLOYEE RETIREMENT INCOME SECURITY ACT OF 1974.—

(1) IN GENERAL.—Paragraph (2) of section 203(a) of the Employee Retirement Income Security Act of 1974 (29 U.S.C. 1053(a)(2)) is amended to read as follows:

''(2)(A)(i) In the case of a defined benefit plan, a plan satisfies the requirements of this paragraph if it satisfies the requirements of clause (ii) or (iii).

''(ii) A plan satisfies the requirements of this clause if an employee who has completed at least 5 years of service has a nonforfeitable right to 100 percent of the employee's accrued benefit derived from employer contributions.

''(iii) A plan satisfies the requirements of this clause if an employee has a nonforfeitable right to a percentage of the employee's accrued benefit derived from employer contributions determined under the following table:

''Years of service:	The nonforfeitable percentage is:
3	20
4	40
5	60
6	80
7 or more	100.

''(B)(i) In the case of an individual account plan, a plan satisfies the requirements of this paragraph if it satisfies the requirements of clause (ii) or (iii).

''(ii) A plan satisfies the requirements of this clause if an employee who has completed at least 3 years of service has a nonforfeitable right to 100 percent of the employee's accrued benefit derived from employer contributions.

''(iii) A plan satisfies the requirements of this clause if an employee has a nonforfeitable right to a percentage of the employee's accrued benefit derived from employer contributions determined under the following table:

''Years of service:	The nonforfeitable percentage is:
2	20
3	40
4	60
5	80
6	100.''.

(2) CONFORMING AMENDMENT.—Section 203(a) of such Act is amended by striking paragraph (4).

(c) EFFECTIVE DATES.—

(1) IN GENERAL.—Except as provided in paragraph (2), the amendments made by this section shall apply to contributions for plan years beginning after December 31, 2003.

(2) COLLECTIVE BARGAINING AGREEMENTS.—In the case of a plan maintained pursuant to one or more collective bargaining agreements between employee representatives and one or more employers ratified before the date of the enactment of this Act, the amendments made by this section shall not apply to contributions on behalf of employees covered by any such agreement for plan years beginning before the earlier of—

(A) the later of—

(i) the date on which the last of such collective bargaining agreements terminates (determined without regard to any extension thereof on or after such date of the enactment); or

(ii) January 1, 2004; or

(B) January 1, 2006.

(3) SERVICE REQUIRED.—With respect to any plan, the amendments made by this section shall not apply to any employee before the date that such employee has 1 hour of service under such plan in any plan year to which the amendments made by this section apply.

SEC. 104. ALLOW ROLLOVER OF AFTER-TAX AMOUNTS IN ANNUITY CONTRACTS.

(a) IN GENERAL.—Subparagraph (A) of section 402(c)(2) (maximum amount which may be rolled over) is amended by striking ''and which'' and inserting ''or to an annuity contract described in section 403(b) and such plan or contract''.

(b) EFFECTIVE DATE.—The amendment made by subsection (a) shall apply to taxable years beginning after December 31, 2003.

TITLE II—EXPANDING RETIREMENT PLAN COVERAGE TO EMPLOYEES OF SMALL BUSINESSES

SEC. 201. ELIMINATION OF HIGHER PENALTY ON CERTAIN SIMPLE DISTRIBUTIONS.

(a) IN GENERAL.—Subsection (t) of section 72 (relating to 10-percent additional tax on

early distributions from qualified retirement plans) is amended by striking paragraph (6) and redesignating paragraphs (7), (8), and (9) as paragraphs (6), (7), and (8), respectively.

(b) CONFORMING AMENDMENTS.—

(1) Section 72(t)(2)(E) is amended by striking ''paragraph (7)'' and inserting ''paragraph (6)''.

(2) Section 72(t)(2)(F) is amended by striking ''paragraph (8)'' and inserting ''paragraph (7)''.

(3) Section 408(d)(3)(G) is amended by striking ''applies'' and inserting ''applied on the day before the date of the enactment of the Retirement Account Portability Act of 2003)''.

(4) Section 457(a)(2) is amended by striking ''section 72(t)(9)'' and inserting ''section 72(t)(8)''.

(c) EFFECTIVE DATE.—The amendments made by this section shall apply to years beginning after December 31, 2003.

SEC. 202. SIMPLE PLAN PORTABILITY.

(a) REPEAL OF LIMITATION.—Paragraph (3) of section 408(d) (relating to rollover contributions), as amended by this Act, is amended by striking subparagraph (G) and redesignating subparagraph (H) as subparagraph (G).

(b) Section 402(c)(8)(B) is amended by adding at the end the following new sentence: ''Individual retirement accounts and individual retirement annuities described in clauses (i) and (ii) shall be treated as eligible retirement plans without regard to whether they are part of a simplified employee pension (within the meaning of section 408(k)) or a simplified retirement account (within the meaning of section 408(p)).''.

(c) EFFECTIVE DATE.—The amendment made by this section shall apply to years beginning after December 31, 2003.

TITLE III—EXPANDING RETIREMENT SAVINGS FOR TAX-EXEMPT ORGANIZATION AND GOVERNMENT EMPLOYEES

SEC. 301. CLARIFICATIONS REGARDING PURCHASE OF PERMISSIVE SERVICE CREDIT.

(a) IN GENERAL.—Subparagraph (A) of section 457(e)(17) (relating to trustee-to-trustee transfers to purchase permissive service credit), and subparagraph (A) of section 403(b)(13) (relating to trustee-to-trustee transfers to purchase permissive service credit), are both amended by striking ''section 415(n)(3)(A)'' and inserting ''section 415(n)(3) (without regard to subparagraphs (B) and (C) thereof)''.

(b) DISTRIBUTION REQUIREMENTS.—Section 457(e)(17) and section 403(b)(13) are both amended by adding at the end the following sentence: ''Amounts transferred under this paragraph shall be distributed solely in accordance with section 401(a) as applicable to such defined benefit plan.''.

(c) SERVICE CREDIT.—Clause (ii) of section 415(n)(3)(A) is amended to read as follows:

''(ii) which relates to benefits with respect to which such –participant is not otherwise entitled, and''.

(d) EFFECTIVE DATE.—The amendments made by this section shall take effect as if included in the amendments made by section 647 of the Economic Growth and Tax Relief Reconciliation Act of 2001.

SEC. 302. ELIGIBILITY FOR PARTICIPATION IN RETIREMENT PLANS.

An individual shall not be precluded from participating in an eligible deferred compensation plan by reason of having received a distribution under section 457(e)(9) of the Internal Revenue Code of 1986, as in effect prior to the enactment of the Small Business Job Protection Act of 1996.

TITLE IV—SIMPLIFICATION AND EQUITY

SEC. 401. ALLOW DIRECT ROLLOVERS FROM RETIREMENT PLANS TO ROTH IRAS.

(a) IN GENERAL.—Subsection (e) of section 408A (defining qualified rollover contribution) is amended to read as follows:

''(e) QUALIFIED ROLLOVER CONTRIBUTION.—For purposes of this section, the term 'qualified rollover contribution' means a rollover contribution—

''(1) to a Roth IRA from another such account,

''(2) from an eligible retirement plan, but only if—

''(A) in the case of an individual retirement plan, such rollover contribution meets the requirements of section 408(d)(3), and

''(B) in the case of any eligible retirement plan (as defined in section 402(c)(8)(B) other than clauses (i) and (ii) thereof), such rollover contribution meets the requirements of section 402(c), 403(b)(8), or 457(e)(16), as applicable.

For purposes of section 408(d)(3)(B), there shall be disregarded any qualified rollover contribution from an individual retirement plan (other than a Roth IRA) to a Roth IRA.''.

(b) CONFORMING AMENDMENTS.—

(1) Section 408A(c)(3)(B) is amended—

(A) in the text by striking ''individual retirement plan'' and inserting ''an eligible retirement plan (as defined by section 402(c)(8)(B))'', and

(B) in the heading by striking ''IRA'' and inserting ''ELIGIBLE RETIREMENT PLAN''.

(2) Section 408A(d)(3) is amended—

(A) in subparagraph (A) by striking ''section 408(d)(3)'' inserting ''sections 402(c), 403(b)(8), 408(d)(3), and 457(e)(16)'',

(B) in subparagraph (B) by striking ''individual retirement plan'' and inserting ''eligible retirement plan (as defined by section 402(c)(8)(B))'',

(C) in subparagraph (D) by striking ''or 6047'' after ''408(i)'',

(D) in subparagraph (D) by striking ''or both'' and inserting ''persons subject to section 6047(d)(1), or all of the foregoing persons'', and

(E) in the heading by striking ''IRA'' and inserting ''ELIGIBLE RETIREMENT PLAN''.

(c) EFFECTIVE DATE.—The amendments made by this section shall apply to distributions after December 31, 2003.

SEC. 402. TRANSFERS TO THE PBGC.

(a) MANDATORY DISTRIBUTIONS TO PBGC.—Clause (i) of section 401(a)(31)(B) (relating to general rule for certain mandatory distributions) is amended by inserting ''to the Pension Benefit Guaranty Corporation in accordance with section 4050(e) of the Employee Retirement Income Security Act of 1974 or'' after ''such transfer''.

(b) TAX TREATMENT OF DISTRIBUTIONS.—Subparagraph (B) of section 401(a)(31) is amended by adding at the end the following new clause:

''(iii) INCOME TAX TREATMENT OF TRANSFERS TO PBGC.—For purposes of determining the income tax treatment relating to transfers to the Pension Benefit Guaranty Corporation under clause (i)—

''(I) the transfer of amounts to the Pension Benefit Guaranty Corporation pursuant to clause (i) shall be treated as a transfer to an individual retirement plan under such clause, and

''(II) the distribution of such amounts from the Pension Benefit Guaranty Corporation shall be treated as a distribution from an individual retirement plan.''.

(c) MISSING PARTICIPANTS AND BENEFICIARIES.—

(1) IN GENERAL.—Section 4050 of the Employee Retirement Income Security Act of 1974 (29 U.S.C. 1350) is amended by redesignating subsection (c) as subsection (f) and by inserting after subsection (b) the following new subsections:

''(c) MULTIEMPLOYER PLANS.—The corporation shall prescribe rules similar to the rules in subsection (a) for multiemployer plans covered by this title that terminate under section 4041A.

''(d) PLANS NOT OTHERWISE SUBJECT TO TITLE.—

''(1) TRANSFER TO CORPORATION.—The plan administrator of a plan described in paragraph (4) may elect to transfer the benefits of a missing participant or beneficiary to the corporation upon termination of the plan.

''(2) INFORMATION TO THE CORPORATION.—To the extent provided in regulations, the plan administrator of a plan described in paragraph (4) shall, upon termination of the plan, provide the corporation information with respect to benefits of a missing participant or beneficiary if the plan transfers such benefits—

''(A) to the corporation, or

''(B) to an entity other than the corporation or a plan described in paragraph (4)(B)(ii).

''(3) PAYMENT BY THE CORPORATION.—If benefits of a missing participant or beneficiary were transferred to the corporation under paragraph (1), the corporation shall, upon location of the participant or beneficiary, pay to the participant or beneficiary the amount transferred (or the appropriate survivor benefit) either—

''(A) in a single sum (plus interest), or

''(B) in such other form as is specified in regulations of the corporation.

''(4) PLANS DESCRIBED.—A plan is described in this paragraph if—

''(A) the plan is a pension plan (within the meaning of section 3(2))—

''(i) to which the provisions of this section do not apply (without regard to this subsection), and

''(ii) which is not a plan described in paragraphs (2) through (11) of section 4021(b), and

''(B) at the time the assets are to be distributed upon termination, the plan—

''(i) has one or more missing participants or beneficiaries, and

''(ii) has not provided for the transfer of assets to pay the benefits of all missing participants and beneficiaries to another pension plan (within the meaning of section 3(2)).

''(5) CERTAIN PROVISIONS NOT TO APPLY.—Subsections (a)(1) and (a)(3) shall not apply to a plan described in paragraph (4).

''(e) INVOLUNTARY CASHOUTS.—

''(1) PAYMENT BY THE CORPORATION.—If benefits under a plan described in paragraph (2) were transferred to the corporation under section 401(a)(31)(B) of the Internal Revenue Code of 1986, the corporation shall, upon application filed by the participant or beneficiary with the corporation in such form and manner as may be prescribed in regulations of the corporation, pay to the participant or beneficiary the amount transferred (or the appropriate survivor benefit) either—

''(A) in a single sum (plus interest), or

''(B) in such other form as is specified in regulations of the corporation.

''(2) INFORMATION TO THE CORPORATION.—To the extent provided in regulations, the plan administrator of a plan described in paragraph (3) shall, upon transferred to the corporation under section 401(a)(31)(B) of such Code, provide the corporation information with respect to benefits of the participant or beneficiary so transferred.

"(3) PLANS DESCRIBED.—A plan is described in this paragraph if the plan is a pension plan (within the meaning of section 3(2))—

"(A) which provides for mandatory distributions under section 401(a)(31)(B) of the Internal Revenue Code of 1986, and

"(B) which is not a plan described in paragraphs (2) through (11) of section 4021(b).

"(4) CERTAIN PROVISIONS NOT TO APPLY.—Subsections (a)(1) and (a)(3) shall not apply to a plan described in paragraph (2).".

(2) CONFORMING AMENDMENTS.—Section 206(f) of such Act (29 U.S.C. 1056(f)) is amended—

(A) by striking "title IV" and inserting "section 4050"; and

(B) by striking "the plan shall provide that,".

(d) EFFECTIVE DATE.—

(1) INTERNAL REVENUE CODE OF 1986 PROVISIONS.—The amendments made by subsections (a) and (b) shall take effect as if included in the amendments made by section 657 of the Economic Growth and Tax Relief Reconciliation Act of 2001.

(2) EMPLOYEE RETIREMENT INCOME SECURITY ACT OF 1974 PROVISIONS.—The amendments made by subsection (c) shall apply to distributions made after final regulations implementing subsections (c), (d), and (e) of section 4050 of the Employee Retirement Income Security Act of 1974 (as added by subsection (c)), respectively, are prescribed.

(3) REGULATIONS.—The Pension Benefit Guaranty Corporation shall issue regulations necessary to carry out the amendments made by subsection (c) not later than December 31, 2004.

By Mr. MCCAIN (for himself and Mr. FEINGOLD):

S. 1913. A bill to amend the Internal Revenue Code of 1986 to reform the system of public financing for Presidential elections, and for other purposes; to the Committee on Finance.

Mr. MCCAIN. Mr. President, along with Senator RUSS FEINGOLD, I am proud today to introduce the Presidential Funding Act of 2003. This legislation will improve and reform the presidential public financing system. With major presidential candidates opting out of public financing for their 2004 primary campaigns, reform of the system of financing presidential nominations is needed more than ever.

The presidential public financing system has been in place for three decades and has achieved broad public acceptance. From 1976 to 2000, every major party presidential nominee has accepted public financing for the general election and, nearly all of the nominees have also accepted it for their primary elections. A total of 46 Democrats and 29 Republicans have accepted public financing for the presidential primaries during this period.

Since its creation, the presidential financing system has worked non-ideologically, with victories for three Republicans and two Democrats. It has also provided for competitive elections. In the five races that have been run under the system involving an incumbent president, challengers have won in three of those elections. This system of voluntary spending limits in exchange for public funding has been a non-partisan success.

Last year's enactment of a ban on soft money addressed what had become a basic problem for the effectiveness and credibility of the presidential system. For the system to continue serving the nation effectively, its remaining problems now must be solved. This legislation will repair and revitalize the presidential campaign finance system in the following ways.

First, our legislation increases the overall spending limit for the presidential primaries and provide more public matching funds for presidential primary candidates.

The overall spending limit in the primaries for publicly financed candidates has failed to keep pace with reality. This was demonstrated when in 2000, public financing and spending limits for the primaries were rejected and a record $100 million in private contributions was spent to gain the Republican party's nomination—more than twice the amount that the publicly financed candidates were allowed to spend. During the 2004 presidential primary period, it is expected that Republicans will raise and spend as much as $200 million.

Our legislation increases the individual contribution limit from $1,000 to $2,000. Therefore, it will be easier over time for other candidates to reject public financing and raise private money in excess of the overall primary spending limit, thereby worsening the competitive disadvantage of publicly-financed candidates.

In addition, the "front-loading" of presidential primaries has created a much shorter nominating period—now likely to end by early March—and a longer actual general election period than existed when the presidential financing system was created in 1974. As a result, a potential "gap" exists in funds available for a publicly financed nominee to spend between gaining the party nomination in March and the party's summer nominating convention, when the nominee receives public funds for the general election. This creates a further competitive disadvantage.

To address these problems, our legislation increases the overall spending limit for the presidential primaries to $75 million from the $45 million limit in effect for the 2004 presidential election. This would equal the $75 million spending limit in effect for the general election, which applies to a much shorter period than the primaries.

The amount of public matching funds for individual contributions in the primaries is also increased from the current one-to-one match to a four-to-one match for up to $250 of each individual contribution. This would greatly increase the value of smaller contributions in the presidential nominating process, as was intended by the presidential financing system. It would decrease the reliance on larger contributions, provide more public funds to meet the higher spending limit, and improve the ability of publicly financed candidates to run competitive elections.

When the $1000 individual contribution limit was doubled last year, increasing the potential role of private contributions in the presidential financing system, no similar adjustment was made to increase the role of public matching funds. A new four-to-one multiple match for up to $250 of each individual contribution would accomplish that goal.

In addition, the threshold for qualifying for matching public funds in the primary has not changed since the system was established. Our legislation increases the qualifying threshold should be increased by more than doubling the threshold to require candidates to raise $15,000 in each of 20 states in amounts of no more than $250 per individual donor. Although the existing threshold has worked well during the history of the current system, a higher qualifying amount is appropriate for the future, especially since candidates would now be eligible to receive greater amounts of matching funds.

Second, our legislation requires a candidate to opt in or out of the public financing system for the entire presidential election, including both the primary and general election.

The purpose of the presidential public financing system is to allow candidates to run competitive races for the presidency without becoming dependent on or obligated to campaign donors. That purpose is undermined when a candidate opts out of the system to raise and spend large amounts of private money for a primary or general election race. Such candidates should not be able to reject public financing and then get the system's benefits when it suits their tactical advantage. A candidate should have to opt in or out of the system for the whole election.

Third, our legislation repeals the state-by-state primary spending limits and allows publicly financed primary candidates to receive their public matching funds before January 1st of the presidential election year.

The State-by-State primary spending limits have not worked. The limits have proven to be ineffective and have served to unjustifiably micromanage presidential campaigns.

Under current law, primary candidates can begin to raise private contributions eligible to be matched beginning on January 1 of the year before a presidential election year. They are not eligible, however, to receive any of the matching public funds until January 1 of the presidential election year. With the current "front-loaded" primary system, and with the nomination

likely to be decided in the early months of a presidential election year, primary candidates need to be able to spend more funds at an earlier period than before. As a result, under our legislation, presidential primary candidates will be eligible to start receiving matching public funds on July 1 of the year before a presidential election year.

Fourth, our legislation provides additional public funds in the presidential general election for a publicly financed candidate facing a privately financed candidate who has substantially outspent the combined primary and general election spending limits.

As more wealthy individuals decide to spend their personal wealth to run for public office, the potential grows for an individual to spend an enormous amount of personal wealth to seek the presidency. There already have been candidates for the U.S. Senate and in mayoral races, for example, who have spent as much in personal wealth on their races as each major party presidential nominee received in public funds in 2000 to run their general election campaign.

In addition, with the increased individual contribution limit, a presidential candidate could decide to forgo public funding and raise and spend private contributions far in excess of the spending limits for publicly financed candidates.

To address this potential problem, our legislation makes a publicly financed major party nominee eligible to receive an additional $75 million for the general election race, when a privately financed general election candidate has spent more than 50 percent above the total primary and general election spending limit for the publicly financed candidate.

In other words, once a presidential general election candidate has spent more than a total of $225 million to seek the presidency, a publicly financed major party nominee, subject to a spending limit of $75 million for the primaries and $75 million for the general election, would receive an additional $75 million for the general election race.

Fifth, our legislation increases the funds available to finance the presidential public financing system.

Currently, the public financing system is funded by a voluntary $3 check-off available to taxpayers on their tax forms on an annual basis. This mechanism will not raise sufficient resources in the long term to finance the costs of a revised presidential system.

The $3 tax check-off is increased to $6 and indexed for inflation to help ensure there are sufficient funds available for future presidential elections. In addition, the Federal Election Commission (FEC) is authorized to conduct a public education campaign to explain to citizens why the check-off exists and how it works, including the fact that it does not increase the tax liability of taxpayers.

The current presidential public financing law creates a priority system that allocates available public funds from the check-off to the nomination conventions, the presidential general election and the presidential primaries in that order. This order of priority does not make sense.

Our legislation revises the order of priority for use of public funds to make funding of the general election candidates the first priority, funding of the primary election candidates the second priority, and funding of the nomination conventions the third priority.

Furthermore, a U.S. Department of the Treasury ruling prohibits taking into account the tax check-off revenues that will be received in April of the presidential election year in determining at the start of each presidential election year the total amount of funds available to be given to eligible candidates from the fund. This has had the effect of artificially lowering the amount of funds available and creating temporary shortfalls for primary candidates during the opening months of the presidential election year at the time when they need the funds the most.

Our legislation revises the law to require the U.S. Department of the Treasury (as it used to do) to estimate at the end of the year prior to a presidential election year the amount of check-off funds that will be received in the presidential election year and to take these funds into account in determining the total amount of funds available under the presidential system.

Finally, our legislation implements the soft money ban to ensure that the parties and federal officeholders and candidates do not raise or spend soft money in connection with the presidential nominating conventions.

Despite the passage of the new campaign finance law and its ban on soft money, federal officeholders and national party officials have continued to raise soft money to finance the national nomination conventions on the fictional premise that such funds are not in connection with a ''federal election'' but rather are for municipal or civic purposes.

The reality is that a presidential nominating convention is defined as a ''federal election'' election under the campaign finance law. Furthermore, federal officeholders and candidates and national party officials who raise soft money for the conventions are subject to precisely the same kind of problems of corruption and the appearance of corruption that the new law prevents by banning soft money.

To reaffirm that the soft money ban applies to the presidential nominating conventions, our legislation explicitly prohibits the national parties and federal officeholders and candidates from raising and spending soft money to pay for the presidential nominating conventions, including for a host committee, civic committee or municipality.

The highly expensive, front-loaded, nationalized, primary system requires that we more than ever fix the presidential public funding system. We must continue to promote competition in order to give voters choices. Our legislation not only saves the existing system but improves it as well. It not only shores up the financial foundations of the system but it would also bring more donors into the system, making financial participation more democratic. It would give our citizens a stake in their government. It is our hope that with the enactment of this legislation, candidates will no longer take small donors for granted and finally hear their voices. In return, all of our citizens will feel reconnected to the presidential financing process that at times, has left them behind.

Mr. FEINGOLD. Mr. President, it is pleasure to join my friend and colleague Senator MCCAIN in introducing a bill to repair and strengthen the presidential public financing system. The Presidential Funding Act of 2003 will ensure that this system that has served our country so well for over a generation will continue to fulfill its promise in the 21st century.

The presidential public financing system was put into place in the wake of the Watergate scandals as part of the Federal Election Campaign Act of 1974. It was held to be constitutional by the Supreme Court in Buckley v. Valeo. Every major party nominee for President since 1976 has participated in the system for the general election. The system, of course, is voluntary, as the Supreme Court required. In the last election, then-Governor George W. Bush opted out of the system for the presidential primaries, but elected to take the taxpayer funded grant in the general election. He appears ready to make the same choice in this election, and so far two of the Democratic presidential candidates have decided not to seek federal matching funds in the primaries. Before 2000, almost all serious candidates for President had participated in the system.

It is unfortunate that the matching funds system for the primaries is becoming less viable. The system reduces the fundraising pressures on candidates and levels the playing field between candidates. It allows candidates to run viable campaigns without becoming overly dependent on private donors. The system has worked well in the past, and its advantages for candidates and for the country make it worth repairing so that it can work in the future. If we don't repair it, the pressures

on candidates to opt out because their opponents are opting out will increase until the system collapse from disuse.

At the outset, I want to emphasize that this bill is not designed to have any impact on the ongoing presidential race. It will take effect only after the 2004 elections. Therefore, there is no partisan purpose here. Once again, Senator MCCAIN and I are working together to try to improve the campaign finance system, regardless of any partisan impact that these reforms might have. Second, we do not expect Congress to take action on this bill during an election year. Instead, our hope is that by introducing a bill now we can begin a conversation with our colleagues and with the public that will allow us to take quick action beginning in 2005 so that a new system can be in place for the 2008 election.

The bill makes changes to both the primary and general election system to address the weaknesses and problems that have been identified by both participants in the system and experts on the presidential election financing process. First and most important, it eliminates the state-by-state spending limits in the current law and substantially increases the overall spending limit from the current limit of approximately $45 million to $75 million. This should make the system more viable for serious candidates facing opponents who are capable of raising significant sums outside the system. The bill also makes available significantly more public money for participating candidates by increasing the match of small contributions from 1:1 to 4:1. Thus, significantly more public money will be available to those candidates who choose to participate in the system.

One very important provision of this bill ties the primary and general election systems together and requires candidates to make a single decision on whether to participate. Candidates who opt out of the primary system and decide to rely solely on private money cannot return to the system for the general election. And candidates must commit to participate in the system in the general election if they want to receive federal matching funds in the primaries. The bill also increases the spending limits for participating candidates in the primaries who face a non-participating opponent if that opponent raises more than 33 percent more than the spending limit. This provides some protection against being far outspent by a non-participating opponent.

The bill also sets the general election spending limit at $75 million, indexed for inflation, which is about what it is projected to be in 2008. And if a general election candidate does not participate in the system and spends more than 33 percent more than the combined primary and general election spending limits, a participating candidate will receive a grant equal to twice the general election spending limit.

This bill also addresses what some have called the ''gap'' between the primary and general election seasons. Presumptive presidential nominees have emerged earlier in the election year over the life of the public financing system. This had led to some nominees being essentially out of money between the time that they nail down the nomination and the convention where they are formally nominated and become eligible for the general election grant. For a few cycles, soft money raised by the parties filled in that gap, but the Bipartisan Campaign Reform Act of 2002 thankfully has now closed that loophole. This bill doubles the amount of hard money that parties can spend in coordination with their candidates, allowing them to fill the gap once the party has a presumptive nominee.

Fixing the presidential public financing system will obviously cost money, but our best calculations at the present time indicate that the changes to the system in this bill can be paid for by doubling the income tax check-off on an individual return from $3 to just $6. The total cost of the changes to the system is projected to be around $175 million over the four-year election cycle. Of course, these projections may change as we get more data from the 2004 elections. But even a somewhat larger cost would be a very small investment to make to protect the health of our democracy and integrity of our presidential elections. The American people do not want to see a return to the pre-Watergate days of unlimited spending on presidential elections and candidates entirely beholden to private donors. We must act now to preserve the crown jewel of the Watergate reforms and assure the fairness of our elections and the confidence of our citizens in the process.

By Ms. STABENOW (for herself and Mr. LEVIN):

S. 1914. A bill to prohibit the closure or realignment of inpatient services at the Aleda E. Lutz Department of Veterans Affairs Medical Center in Saginaw, Michigan, as proposed under the Capital Asset Realignment for Enhanced Services initiatives; to the Committee on Veterans' Affairs.

Ms. STABENOW. Mr. President, I rise today to introduce legislation that would prevent the closure of the Saginaw Veterans Administration Medical Center in Saginaw, MI.

As of August 2003, there were almost one million veterans in lower Michigan and Northwestern Ohio. These one million veterans are served by four V.A. Medical Centers—Saginaw, Detroit, Ann Arbor and Battle Creek—and 12 Community Based Outpatient Clinics (CBOCs), all located in lower Michigan or Toledo, OH.

Regrettably, the Department of Veterans Affairs' Capitol Asset Realignment for Enhanced Services (CARES) Commission is recommending closing all acute care beds at the Aleda E. Lutz Department of Veterans Affairs Medical Center in Saginaw, MI. The geographic range for the acute services in Saginaw is vast. The facility essentially covers half of Michigan's Lower Peninsula. Therefore, closing these inpatient beds in Saginaw would have a devastating impact on veterans who live in Central and Northern Michigan.

If the Saginaw facility were to close, a veteran who lived in Mackinaw City would have to drive 281 miles to the Detroit facility or 272 miles to the Ann Arbor facility for medical care. Under ideal conditions these trips would take six hours instead of the current two hour trip that it would take to reach the existing Saginaw facility. Asking a veteran to go from Mackinaw City to Detroit is like asking a veteran to go from southeast Michigan to Buffalo, New York to get acute care.

How can we ask veterans, many of whom are sick and frail, to travel six hours to get necessary inpatient services? Going through a major illness is tough enough for our veterans. The closing of this hospital would add insult to injury.

This bill seeks to stop this closure and ensure that the thousands of veterans who live in central and northern Michigan have access to the medical services they deserve. I urge my colleagues to support this bill.

Mr. President, I ask unanimous consent that the text of the bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 1914

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. PROHIBITION ON CLOSURE OR REALIGNMENT OF INPATIENT SERVICES AT ALEDA E. LUTZ DEPARTMENT OF VETERANS AFFAIRS MEDICAL CENTER IN SAGINAW, MICHIGAN.

The Secretary of Veterans Affairs shall not carry out the closure or realignment of inpatient services at the Aleda E. Lutz Department of Veterans Affairs Medical Center in Saginaw, Michigan, as proposed under the Capital Asset Realignment for Enhanced Services (CARES) initiative.

By Mrs. HUTCHISON:

S. 1917. A bill to amend the Internal Revenue Code of 1986 to permit the issuance of tax-exempt bonds for certain air and water pollution control facilities, and to provide that the volume cap for private activity bonds shall not apply to bonds for facilities for the furnishing of water, sewage facilities, and air or water pollution control facilities; to the Committee on Finance.

Mrs. HUTCHISON. Mr. President, I am proud to offer the Clean Air and

Water Investment and Infrastructure Act.

Texas, like many States, faces increasingly difficult challenges in improving air and water quality.

The Clean Air Act requires the Environmental Protection Agency to set air quality standards and establishes deadlines for State and local governments to achieve those levels. Today, more than 90 communities across the country are out of compliance with the Clean Air Act. These so-called ''non-attainment'' areas are threated with regulatory sanctions, such as loss of federal highway funding, if they do not meet mandated ozone levels by 2007.

Texas has four non-attainment areas: Beaumont-Port Arthur, Dallas-Fort Worth, El Paso and Houston. The Houston area alone needs an estimated $4.1 billion annually in order to meet Federal air quality standards.

These communities will not achieve compliance without assistance. Too many industrial plants need to install expensive equipment. If these environmental investments do not become more affordable, communities will either suffer sanctions or force industrial facilities to close and move offshore, causing substantial economic hardship.

Texas and many areas of the country, especially in the Southwest and West, also face critical water and wastewater problems. Investments in sources of clean water must be made or we will face shortages in the coming decades. However, necessary water infrastructure improvements are extremely expensive. According to the Texas State water plan, the cost of water supply acquisition projects, water and wastewater treatment, and other infrastructure projects in Texas through 2050 will be more than $100 billion.

Currently, air and water pollution control facilities cannot be financed by tax-exempt bonds. Even if they could, they would be limited by a cap which sets the total amount of tax-exempt private activity bonds issued by a state. Given the demands of other projects, such as housing, relatively few of the air and water pollution projects would have an opportunity to access this financing option.

In order to help us meet the challenges, I am introducing the Clear Air and Water Investment and Infrastructure Act. My bill will allow federal tax-exempt bonds to be used by private firms for air and water pollution control projects. Given the importance of these critical projects, these bonds also would be issued outside the constraints of the private-activity bond caps. The Texas Water Development Board estimates this could save 30 percent in financing costs for water projects.

For example, this bill would allow tax-exempt debt to be used to finance private systems along the Gulf Coast that desalinate seawater and brackish groundwater, and to install air pollution facilities on electric utility plants. States and communities would have an important new tool for addressing air and water pollution control needs.

Pollution control is a problem for all of us. It is to everyone's benefit to develop ways to promote public and private partnerships which can finance projects to improve air and water quality. I hope my colleagues will support this effort.

I ask unanimous consent that the text of the bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 1917

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. SHORT TITLE.

This Act may be cited as the ''Clean Air and Water Investment and Infrastructure Act''.

SEC. 2. TAX-EXEMPT BONDS FOR AIR AND WATER POLLUTION CONTROL FACILITIES.

(a) IN GENERAL.—Subsection (a) of section 142 of the Internal Revenue Code of 1986 (defining exempt facility bond) is amended by striking ''or'' at the end of paragraph (12), by striking the period at the end of paragraph (13) and inserting '', or'', and by adding at the end the following new paragraph:

''(14) air or water pollution control facilities.''.

(b) AIR OR WATER POLLUTION CONTROL FACILITIES.—Section 142 of the Internal Revenue Code of 1986 (relating to exempt facility bond) is amended by adding at the end the following new subsection:

''(l) POLLUTION CONTROL FACILITIES ACQUIRED BY REGIONAL POLLUTION CONTROL AUTHORITIES.—

''(1) IN GENERAL.—For purposes of paragraph (14) of subsection (a), a bond shall be treated as described in such paragraph if it is part of an issue substantially all of the proceeds of which are used by a qualified regional pollution control authority to acquire existing air or water pollution control facilities which the authority itself will operate in order to maintain or improve the control of pollutants.

''(2) RESTRICTIONS.—Paragraph (1) shall apply only if—

''(A) the amount paid, directly or indirectly, for a facility does not exceed the fair market value of the facility,

''(B) the fees or charges imposed, directly or indirectly, on the seller for any use of the facility after the sale of such facility are not less than the amounts that would be charged if the facility were financed with obligations the interest on which is not exempt from tax, and

''(C) no person other than the qualified regional pollution control authority is considered after the sale as the owner of the facility for the purposes of Federal income taxes.

''(3) QUALIFIED REGIONAL POLLUTION CONTROL AUTHORITY.—For purposes of this subsection, the term 'qualified regional pollution control authority' means an authority which—

''(A) is a political subdivision created by State law to control air or water pollution,

''(B) has within its jurisdictional boundaries all or part of at least 2 counties (or equivalent political subdivisions), and

''(C) operates air or water pollution control facilities.''.

(c) EFFECTIVE DATE.—The amendments made by this section shall apply to bonds issued after the date of the enactment of this Act.

SEC. 3. EXEMPTION FROM VOLUME CAP FOR FACILITIES FURNISHING WATER, SEWAGE FACILITIES, AND AIR OR WATER POLLUTION CONTROL FACILITIES.

(a) IN GENERAL.—Paragraph (3) of section 146(g) of the Internal Revenue Code of 1986 (relating to exception for certain bonds) is amended—

(1) by inserting ''(4), (5),'' after ''(2),'',

(2) by striking ''or (13)'' and inserting ''(13), or (14)'',

(3) by inserting ''facilities for the furnishing of water, sewage facilities,'' after ''wharves,'',

(4) by striking ''and'' before ''qualified'', and

(5) by inserting '', and air or water pollution control facilities'' after ''educational facilities''.

(b) EFFECTIVE DATE.—The amendments made by this section shall apply to bonds issued after the date of the enactment of this Act.

By Mr. SANTORUM (for himself and Mrs. FEINSTEIN):

S. 1918. A bill to amend the Internal Revenue Code of 1986 to provide that qualified homeowner downpayment assistance is a charitable purpose; to the Committee on Finance.

Mr. SANTORUM. Mr. President, I am please to introduce today, along with my colleague from California, Senator FEINSTEIN, legislation that will further one of the most important public policy goals we have as a Nation—the goal of homeownership. Homeownership is a significant part of the American dream. It has been called the backbone of our economy. It is widely considered the primary means by which American families create middle-class wealth and build financial security.

Homeownership is all those things and more. It is the cornerstone of healthy communities across our Nation. It is good for families, good for our schools, good for our neighborhoods. Equity in homes is the leading source for collateral for small business start-up borrowing, and home equity loans are the leading provider of funds for a college education. Some experts even say home owners are more likely to vote.

Despite the many benefits, there are still too many Americans for whom the American dream of homeownership is unreachable. There are too many American families who pay rent month after month, never accumulating equity, never experiencing the joy of raising their children in a home they own, and look forward to passing along to future generations. That is especially true among Americans from minority populations. Though nationwide nearly 70 percent of Americans own their own home, homeownership rates among African-Americans and Hispanics is less than 50 percent.

There are any number of obstacles to homeownership, but there is one problem that is widely considered the single biggest obstacle: the lack of funds for a down payment. Again, this is disproportionately true among minority families, which frequently have less accumulated wealth that can be used for a down payment.

President Bush has proposed creating the American Dream Down Payment Fund, which would provide down payment assistance to 40,000 families every year. I support that effort, and I applaud President Bush for proposing this bold new initiative. The President has set a goal of increasing the number of minority homeowners by at least 5.5 million by the end of this decade, which the Department of Housing and Urban Development estimates would create $256 billion in economic activity. I believe that is an important goal for us as a Nation.

I also believe that as we work to find ways for the Federal Government to increase homeownership, we need to encourage the private sector to do the same. There are a number of non-profit organizations in our country doing just that by providing a gift of down payment assistance to potential homeowners. These gifts of down payment assistance go to families and individuals who have the income to afford a mortgage, but who would otherwise be prevented from buying a home because they lack funds for a down payment. Last year non-profit organizations provided gifts of down payment assistance to over 85,000 home buyers—and the number will likely be much higher this year. One organization alone has helped over 160,000 individuals and families become homeowners, by providing a gift of funds for a down payment. And all without collecting a single dime of government funding.

That is why I am so pleased to be introducing this legislation today. I want to be sure the private sector can continue playing such a vital role in increasing homeownership by providing down payment assistance. Although many charities holding tax exemptions under section 501(c)(3) of the Internal Revenue Code provide down payment assistance, IRS regulations do not clearly address down payment assistance programs.

Our legislation will clarify that, under certain circumstances, the provision of down payment assistance to American families for use in purchasing low or moderate price homes constitutes charitable activity. Rather than developing our own standard for eligible home purchases, we have relied on the National Housing Act rule for FHA-insured loans. Our provision applies to purchases of a principal residence if the amount of the mortgage is less than the maximum mortgage amount eligible for FHA insurance in the geographic area in which the home is located. That will ensure that a charitable down payment assistance program is not used to support the purchase of rental properties or expensive homes.

Our legislation also includes one other provision designed to protect the Treasury. Home sellers often contribute to charitable down payment assistance providers in connection with the sale of a home. Those contributions are used to replenish the pool to make available gift assistance for other home buyers. Although the contributions are being made to a charity, they are not charitable in nature; they are expenses of selling a home. The legislation clarifies that a party to a home sale transaction may not claim a charitable contribution deduction for a contribution to a down payment assistance provider made in connection with the sale.

Although IRS regulations do not clearly address down payment assistance programs, our legislation merely codifies current practice. As a result, I do not anticipate that the legislation will result in a significant change in tax revenues.

Non-profit providers of down payment assistance help tens of thousands of Americans every year become homeowners. These organizations are changing lives, changing families, changing our communities—and they are doing it all without a single dime of taxpayer funds. I am pleased my colleague from California, Senator FEINSTEIN, has joined me in introducing this legislation. I ask all of my colleagues to join us in this important effort.

Mrs. FEINSTEIN. Mr. President, I am pleased to join with the distinguished Senator from Pennsylvania, Senator SANTORUM, to introduce legislation that will promote the American dream of homeownership.

Our legislation will specify that providing homeownership down payment assistance to American families constitutes a charitable activity under the regulations of the Internal Revenue Service.

As the cornerstone of middle-class wealth in our nation, we should be doing everything possible to promote broad investment in owner-occupied housing. Today, we have that chance.

It should not be a surprise that homeownership among low to moderate income families is lower than for those with higher incomes. The single biggest obstacle to achieving this dream is the lack of a downpayment.

Across America there are organizations that assist low to moderate income families with that first important step toward homeownership. In California, one of these groups, the Nehemiah Corporation, helps literally thousands of families each year by providing down payments.

While the Federal Government provides tax incentives for increased homeownership, we should make it easier for the private sector to provide their own brand of incentives. Importantly, this legislation will do several things to ensure that the private sector continues to have the tools it needs to provide this important assistance.

One, our legislation will specify that homeownership down payment assistance to American families constitutes a charitable activity.

Currently, Internal Revenue Service regulations do not clearly address the special circumstances of those organizations that provide downpayment assistance to families.

Two, our bill is structured to ensure that a charitable down payment assistance program is not used to support the purchase of rental properties or expensive homes.

Three, our legislation is designed so that the taxpayers do not pick-up the tab. Since, home sellers often contribute to charitable down payment assistance providers in connection with the sale of a home, those contributions are not charitable in nature; they are an expense related to selling a home.

This legislation clarifies that a party to a home sale transaction may not claim a charitable contribution deduction for a contribution to a down payment assistance organization made in connection with the sale.

And, although Internal Revenue Service regulations do not specifically address down payment assistance programs, our legislation merely codifies current practice.

This legislation will ensure the continued growth of this essential segment of the financial services market at no cost to the taxpayers.

And, as my friend from Pennsylvania has said, equity in homes is the leading source for collateral for small business start-up borrowing.

At a time when the economy still fails to produce jobs, the expansion of small business and the employment they provide is essential to the health of our economy.

It is a win-win situation in the truest sense of the term and I urge my colleagues to support it.

By Mr. SMITH (for himself and Mr. BREAUX):

S. 1922. A bill to amend the Internal Revenue Code of 1986 to comply with the World Trade Organization rulings on the FSC/ETI benefit in a manner that preserves manufacturing jobs and production activities in the United States, and for other purposes; to the Committee on Finance.

Mr. SMITH. Mr. President, I rise today to introduce The American Manufacturing Jobs Bill of 2003—which will provide a tax rate cut for all manufacturers who employ American workers. I am pleased to be joined in this effort by Senator JOHN BREAUX. On October 1, 2003, the Senate Finance Committee

approved on a bipartisan basis S. 1673, the centerpiece of which resolves the FSC/ETI issue by replacing the export tax benefit with a reduction in the tax burden on domestic manufacturing companies.

I applaud S. 1673, a balanced piece of legislation crafted by Chairman CHARLES GRASSLEY, R–IA, and ranking member Senator MAX BAUCUS, D–MT. I am, however, concerned that the domestic manufacturing benefit in S. 1673 is not applied equally to all U.S. manufacturers. This bill includes a provision—a ''haircut''—that provides less of a benefit to companies that also manufacture abroad.

For example, a company that has 55 percent of its manufacturing in the United States and 45 percent abroad will calculate its benefit under the bill and then reduce that benefit by a fraction—the numerator of which is the gross receipts from domestic manufacturing over the same derived from worldwide manufacturing.

This company thus suffers twice. First, the domestic manufacturing benefit in S. 1673 is less valuable than the benefit currently provided under FSC/ETI. Second, this company's manufacturing benefit is further reduced by the ''haircut'' merely because it also has overseas manufacturing operations in order to be closer to their markets.

The ''haircut'' is a discriminatory measure that hurts both foreign-owned and U.S.-owned companies alike. It is structured so that the more a company manufactures abroad, the less of a manufacturing rate cut it gets. The ''haircut'' makes the United States a less competitive location for current and future investment because multinational companies will believe they are being ''cheated'' and discriminated against.

At a time when American manufacturing jobs are leaving our country in record numbers, Congress should support all companies that employ Americans. U.S. companies with global operations employ more than 23 million Americans—9 million of which are in manufacturing jobs—this is tantamount to three out of every five manufacturing jobs in this country. Foreign-owned companies with U.S. operations employ more than 2 million manufacturing workers in the United States. It is these many of millions of manufacturing workers who will suffer if the ''haircut'' remains and companies are therefore discouraged to invest in the United States.

Moreover, the ''haircut'' is inconsistent with historic tax and trade policies to encourage U.S. companies to open up facilities outside the United States. In fact, there is an entire department—the Department of Commerce—set up to assist U.S. companies going global and then to promote and facilitate those same companies' efforts once they have established themselves in-country. I am also concerned that the ''haircut'' invites mirror legislation in other countries and may invite another WTO challenge to this legislation.

I believe we have a duty to encourage the retention and creation of manufacturing jobs in the United States. We must not treat U.S. jobs created by multinational companies as ''less worthy'' than U.S. jobs created by strictly domestic manufacturers. Congress should be in the business of rewarding all well-paid, manufacturing jobs that are created in the United States, not just those created by domestic manufacturers. I believe that by eliminating the ''haircut'' and providing a tax rate cut for all manufacturers who employ American workers, we can help to revitalize the U.S. manufacturing sector. I ask unanimous consent that the full text of this important legislation be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 1922

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. SHORT TITLE; AMENDMENT OF 1986 CODE.

(a) SHORT TITLE.—This Act may be cited as the ''American Manufacturing Jobs Act of 2003''.

(b) AMENDMENT OF 1986 CODE.—Except as otherwise expressly provided, whenever in this Act an amendment or repeal is expressed in terms of an amendment to, or repeal of, a section or other provision, the reference shall be considered to be made to a section or other provision of the Internal Revenue Code of 1986.

SEC. 2. REPEAL OF EXCLUSION FOR EXTRATERRITORIAL INCOME.

(a) IN GENERAL.—Section 114 is hereby repealed.

(b) CONFORMING AMENDMENTS.—

(1)(A) Subpart E of part III of subchapter N of chapter 1 (relating to qualifying foreign trade income) is hereby repealed.

(B) The table of subparts for such part III is amended by striking the item relating to subpart E.

(2) The table of sections for part III of subchapter B of chapter 1 is amended by striking the item relating to section 114.

(3) The second sentence of section 56(g)(4)(B)(i) is amended by striking ''or under section 114''.

(4) Section 275(a) is amended—

(A) by inserting ''or'' at the end of paragraph (4)(A), by striking ''or'' at the end of paragraph (4)(B) and inserting a period, and by striking subparagraph (C), and

(B) by striking the last sentence.

(5) Paragraph (3) of section 864(e) is amended—

(A) by striking:

''(3) TAX-EXEMPT ASSETS NOT TAKEN INTO ACCOUNT.—

''(A) IN GENERAL.—For purposes of''; and inserting:

''(3) TAX-EXEMPT ASSETS NOT TAKEN INTO ACCOUNT.—For purposes of'', and

(B) by striking subparagraph (B).

(6) Section 903 is amended by striking ''114, 164(a),'' and inserting ''164(a)''.

(7) Section 999(c)(1) is amended by striking ''941(a)(5),''.

(c) EFFECTIVE DATE.—

(1) IN GENERAL.—The amendments made by this section shall apply to transactions occurring after the date of the enactment of this Act.

(2) BINDING CONTRACTS.—The amendments made by this section shall not apply to any transaction in the ordinary course of a trade or business which occurs pursuant to a binding contract—

(A) which is between the taxpayer and a person who is not a related person (as defined in section 943(b)(3) of such Code, as in effect on the day before the date of the enactment of this Act), and

(B) which is in effect on September 17, 2003, and at all times thereafter.

(d) REVOCATION OF SECTION 943(e) ELECTIONS.—

(1) IN GENERAL.—In the case of a corporation that elected to be treated as a domestic corporation under section 943(e) of the Internal Revenue Code of 1986 (as in effect on the day before the date of the enactment of this Act)—

(A) the corporation may, during the 1-year period beginning on the date of the enactment of this Act, revoke such election, effective as of such date of enactment, and

(B) if the corporation does revoke such election—

(i) such corporation shall be treated as a domestic corporation transferring (as of such date of enactment) all of its property to a foreign corporation in connection with an exchange described in section 354 of such Code, and

(ii) no gain or loss shall be recognized on such transfer.

(2) EXCEPTION.—Subparagraph (B)(ii) of paragraph (1) shall not apply to gain on any asset held by the revoking corporation if—

(A) the basis of such asset is determined in whole or in part by reference to the basis of such asset in the hands of the person from whom the revoking corporation acquired such asset,

(B) the asset was acquired by transfer (not as a result of the election under section 943(e) of such Code) occurring on or after the 1st day on which its election under section 943(e) of such Code was effective, and

(C) a principal purpose of the acquisition was the reduction or avoidance of tax (other than a reduction in tax under section 114 of such Code, as in effect on the day before the date of the enactment of this Act).

(e) GENERAL TRANSITION.—

(1) IN GENERAL.—In the case of a taxable year ending after the date of the enactment of this Act and beginning before January 1, 2007, for purposes of chapter 1 of such Code, a current FSC/ETI beneficiary shall be allowed a deduction equal to the transition amount determined under this subsection with respect to such beneficiary for such year.

(2) CURRENT FSC/ETI BENEFICIARY.—The term ''current FSC/ETI beneficiary'' means any corporation which entered into one or more transactions during its taxable year beginning in calendar year 2002 with respect to which FSC/ETI benefits were allowable.

(3) TRANSITION AMOUNT.—For purposes of this subsection—

(A) IN GENERAL.—The transition amount applicable to any current FSC/ETI beneficiary for any taxable year is the phaseout percentage of the base period amount.

(B) PHASEOUT PERCENTAGE.—

(i) IN GENERAL.—In the case of a taxpayer using the calendar year as its taxable year, the phaseout percentage shall be determined under the following table:

Years:	The phaseout percentage is:
2004	80
2005	80
2006	60.

(ii) SPECIAL RULE FOR 2003.—The phaseout percentage for 2003 shall be the amount that bears the same ratio to 100 percent as the number of days after the date of the enactment of this Act bears to 365.

(iii) SPECIAL RULE FOR FISCAL YEAR TAXPAYERS.—In the case of a taxpayer not using the calendar year as its taxable year, the phaseout percentage is the weighted average of the phaseout percentages determined under the preceding provisions of this paragraph with respect to calendar years any portion of which is included in the taxpayer's taxable year. The weighted average shall be determined on the basis of the respective portions of the taxable year in each calendar year.

''(C) SHORT TAXABLE YEAR.—The Secretary shall prescribe guidance for the computation of the transition amount in the case of a short taxable year.

(4) BASE PERIOD AMOUNT.—For purposes of this subsection, the base period amount is the FSC/ETI benefit for the taxpayer's taxable year beginning in calendar year 2002.

(5) FSC/ETI BENEFIT.—For purposes of this subsection, the term ''FSC/ETI benefit'' means—

(A) amounts excludable from gross income under section 114 of such Code, and

(B) the exempt foreign trade income of related foreign sales corporations from property acquired from the taxpayer (determined without regard to section 923(a)(5) of such Code (relating to special rule for military property), as in effect on the day before the date of the enactment of the FSC Repeal and Extraterritorial Income Exclusion Act of 2000).

In determining the FSC/ETI benefit there shall be excluded any amount attributable to a transaction with respect to which the taxpayer is the lessor unless the leased property was manufactured or produced in whole or in significant part by the taxpayer.

(6) SPECIAL RULE FOR AGRICULTURAL AND HORTICULTURAL COOPERATIVES.—Determinations under this subsection with respect to an organization described in section 943(g)(1) of such Code, as in effect on the day before the date of the enactment of this Act, shall be made at the cooperative level and the purposes of this subsection shall be carried out in a manner similar to section 199(h)(2) of such Code, as added by this Act. Such determinations shall be in accordance with such requirements and procedures as the Secretary may prescribe.

(7) CERTAIN RULES TO APPLY.—Rules similar to the rules of section 41(f) of such Code shall apply for purposes of this subsection.

(8) COORDINATION WITH BINDING CONTRACT RULE.—The deduction determined under paragraph (1) for any taxable year shall be reduced by the phaseout percentage of any FSC/ETI benefit realized for the taxable year by reason of subsection (c)(2) or section 5(c)(1)(B) of the FSC Repeal and Extraterritorial Income Exclusion Act of 2000, except that for purposes of this paragraph the phaseout percentage for 2003 shall be treated as being equal to 100 percent.

(9) SPECIAL RULE FOR TAXABLE YEAR WHICH INCLUDES DATE OF ENACTMENT.—In the case of a taxable year which includes the date of the enactment of this Act, the deduction allowed under this subsection to any current FSC/ETI beneficiary shall in no event exceed—

(A) 100 percent of such beneficiary's base period amount for calendar year 2003, reduced by

(B) the FSC/ETI benefit of such beneficiary with respect to transactions occurring during the portion of the taxable year ending on the date of the enactment of this Act.

SEC. 3. DEDUCTION RELATING TO INCOME ATTRIBUTABLE TO UNITED STATES PRODUCTION ACTIVITIES.

(a) IN GENERAL.—Part VI of subchapter B of chapter 1 (relating to itemized deductions for individuals and corporations) is amended by adding at the end the following new section:

''SEC. 199. INCOME ATTRIBUTABLE TO DOMESTIC PRODUCTION ACTIVITIES.

''(a) ALLOWANCE OF DEDUCTION.—

''(1) IN GENERAL.—There shall be allowed as a deduction an amount equal to 9 percent of the qualified production activities income of the taxpayer for the taxable year.

''(2) PHASEIN.—In the case of taxable years beginning in 2003, 2004, 2005, 2006, 2007, or 2008, paragraph (1) shall be applied by substituting for the percentage contained therein the transition percentage determined under the following table:

''Taxable years beginning in:	The transition percentage is:
2003 or 2004	1
2005	2
2006	3
2007 or 2008	6.

''(b) DEDUCTION LIMITED TO WAGES PAID.—

''(1) IN GENERAL.—The amount of the deduction allowable under subsection (a) for any taxable year shall not exceed 50 percent of the W-2 wages of the employer for the taxable year.

''(2) W-2 WAGES.—For purposes of paragraph (1), the term 'W-2 wages' means the sum of the aggregate amounts the taxpayer is required to include on statements under paragraphs (3) and (8) of section 6051(a) with respect to employment of employees of the taxpayer during the taxpayer's taxable year.

''(3) SPECIAL RULES.—

''(A) PASS-THRU ENTITIES.—In the case of an S corporation, partnership, estate or trust, or other pass-thru entity, the limitation under this subsection shall apply at the entity level.

''(B) ACQUISITIONS AND DISPOSITIONS.—The Secretary shall provide for the application of this subsection in cases where the taxpayer acquires, or disposes of, the major portion of a trade or business or the major portion of a separate unit of a trade or business during the taxable year.

''(c) QUALIFIED PRODUCTION ACTIVITIES INCOME.—For purposes of this section, the term 'qualified production activities income' means an amount equal to the portion of the modified taxable income of the taxpayer which is attributable to domestic production activities.

''(d) DETERMINATION OF INCOME ATTRIBUTABLE TO DOMESTIC PRODUCTION ACTIVITIES.—For purposes of this section—

''(1) IN GENERAL.—The portion of the modified taxable income which is attributable to domestic production activities is so much of the modified taxable income for the taxable year as does not exceed—

''(A) the taxpayer's domestic production gross receipts for such taxable year, reduced by

''(B) the sum of—

''(i) the costs of goods sold that are allocable to such receipts,

''(ii) other deductions, expenses, or losses directly allocable to such receipts, and

''(iii) a proper share of other deductions, expenses, and losses that are not directly allocable to such receipts or another class of income.

''(2) ALLOCATION METHOD.—The Secretary shall prescribe rules for the proper allocation of items of income, deduction, expense, and loss for purposes of determining income attributable to domestic production activities.

''(3) SPECIAL RULES FOR DETERMINING COSTS.—

''(A) IN GENERAL.—For purposes of determining costs under clause (i) of paragraph (1)(B), any item or service brought into the United States shall be treated as acquired by purchase, and its cost shall be treated as not less than its fair market value immediately after it entered the United States. A similar rule shall apply in determining the adjusted basis of leased or rented property where the lease or rental gives rise to domestic production gross receipts.

''(B) EXPORTS FOR FURTHER MANUFACTURE.—In the case of any property described in subparagraph (A) that had been exported by the taxpayer for further manufacture, the increase in cost or adjusted basis under subparagraph (A) shall not exceed the difference between the value of the property when exported and the value of the property when brought back into the United States after the further manufacture.

''(4) MODIFIED TAXABLE INCOME.—The term 'modified taxable income' means taxable income computed without regard to the deduction allowable under this section.

''(e) DOMESTIC PRODUCTION GROSS RECEIPTS.—For purposes of this section—

''(1) IN GENERAL.—The term 'domestic production gross receipts' means the gross receipts of the taxpayer which are derived from—

''(A) any sale, exchange, or other disposition of, or

''(B) any lease, rental, or license of,

qualifying production property which was manufactured, produced, grown, or extracted in whole or in significant part by the taxpayer within the United States.

''(2) SPECIAL RULES FOR CERTAIN PROPERTY.—In the case of any qualifying production property described in subsection (f)(1)(C)—

''(A) such property shall be treated for purposes of paragraph (1) as produced in significant part by the taxpayer within the United States if more than 50 percent of the aggregate development and production costs are incurred by the taxpayer within the United States, and

''(B) if a taxpayer acquires such property before such property begins to generate substantial gross receipts, any development or production costs incurred before the acquisition shall be treated as incurred by the taxpayer for purposes of subparagraph (A) and paragraph (1).

''(f) QUALIFYING PRODUCTION PROPERTY.—For purposes of this section—

''(1) IN GENERAL.—Except as otherwise provided in this paragraph, the term 'qualifying production property' means—

''(A) any tangible personal property,

''(B) any computer software, and

''(C) any property described in section 168(f) (3) or (4), including any underlying copyright or trademark.

''(2) EXCLUSIONS FROM QUALIFYING PRODUCTION PROPERTY.—The term 'qualifying production property' shall not include—

''(A) consumable property that is sold, leased, or licensed by the taxpayer as an integral part of the provision of services,

''(B) oil or gas,

''(C) electricity,

''(D) water supplied by pipeline to the consumer,

''(E) utility services, or

''(F) any film, tape, recording, book, magazine, newspaper, or similar property the market for which is primarily topical or otherwise essentially transitory in nature.

''(g) DEFINITIONS AND SPECIAL RULES.—

''(1) APPLICATION OF SECTION TO PASS-THRU ENTITIES.—In the case of an S corporation, partnership, estate or trust, or other pass-thru entity—

''(A) subject to the provisions of paragraph (2) and subsection (b)(3)(A), this section shall be applied at the shareholder, partner, or similar level, and

''(B) the Secretary shall prescribe rules for the application of this section, including rules relating to—

''(i) restrictions on the allocation of the deduction to taxpayers at the partner or similar level, and

''(ii) additional reporting requirements.

''(2) EXCLUSION FOR PATRONS OF AGRICULTURAL AND HORTICULTURAL COOPERATIVES.—

''(A) IN GENERAL.—If any amount described in paragraph (1) or (3) of section 1385(a)—

''(i) is received by a person from an organization to which part I of subchapter T applies which is engaged in the marketing of agricultural or horticultural products, and

''(ii) is allocable to the portion of the qualified production activities income of the organization which is deductible under subsection (a) and designated as such by the organization in a written notice mailed to its patrons during the payment period described in section 1382(d),

then such person shall be allowed an exclusion from gross income with respect to such amount. The taxable income of the organization shall not be reduced under section 1382 by the portion of any such amount with respect to which an exclusion is allowable to a person by reason of this paragraph.

''(B) SPECIAL RULES.—For purposes of applying subparagraph (A), in determining the qualified production activities income of the organization under this section—

''(i) there shall not be taken into account in computing the organization's modified taxable income any deduction allowable under subsection (b) or (c) of section 1382 (relating to patronage dividends, per-unit retain allocations, and nonpatronage distributions), and

''(ii) the organization shall be treated as having manufactured, produced, grown, or extracted in whole or significant part any qualifying production property marketed by the organization which its patrons have so manufactured, produced, grown, or extracted.

''(3) SPECIAL RULE FOR AFFILIATED GROUPS.—

''(A) IN GENERAL.—All members of an expanded affiliated group shall be treated as a single corporation for purposes of this section.

''(B) EXPANDED AFFILIATED GROUP.—The term 'expanded affiliated group' means an affiliated group as defined in section 1504(a), determined—

''(i) by substituting '50 percent' for '80 percent' each place it appears, and

''(ii) without regard to paragraphs (2) and (4) of section 1504(b).

''(4) COORDINATION WITH MINIMUM TAX.—The deduction under this section shall be allowed for purposes of the tax imposed by section 55; except that for purposes of section 55, alternative minimum taxable income shall be taken into account in determining the deduction under this section.

''(5) ORDERING RULE.—The amount of any other deduction allowable under this chapter shall be determined as if this section had not been enacted.

''(6) TRADE OR BUSINESS REQUIREMENT.—This section shall be applied by only taking into account items which are attributable to the actual conduct of a trade or business.

''(7) POSSESSIONS, ETC.—

''(A) IN GENERAL.—For purposes of subsections (d) and (e), the term 'United States' includes the Commonwealth of Puerto Rico, Guam, American Samoa, the Commonwealth of the Northern Mariana Islands, and the Virgin Islands of the United States.

''(B) SPECIAL RULES FOR APPLYING WAGE LIMITATION.—For purposes of applying the limitation under subsection (b) for any taxable year—

''(i) the determination of W–2 wages of a taxpayer shall be made without regard to any exclusion under section 3401(a)(8) for remuneration paid for services performed in a jurisdiction described in subparagraph (A), and

''(ii) in determining the amount of any credit allowable under section 30A or 936 for the taxable year, there shall not be taken into account any wages which are taken into account in applying such limitation.

''(8) COORDINATION WITH TRANSITION RULES.—For purposes of this section—

''(A) domestic production gross receipts shall not include gross receipts from any transaction if the binding contract transition relief of section 2(c)(2) of the American Manufacturing Jobs Act of 2003 applies to such transaction, and

''(B) any deduction allowed under section 2(e) of such Act shall be disregarded in determining the portion of the taxable income which is attributable to domestic production gross receipts.''.

(b) MINIMUM TAX.—Section 56(g)(4)(C) (relating to disallowance of items not deductible in computing earnings and profits) is amended by adding at the end the following new clause:

''(v) DEDUCTION FOR DOMESTIC PRODUCTION.—Clause (i) shall not apply to any amount allowable as a deduction under section 199.''.

(c) CLERICAL AMENDMENT.—The table of sections for part VI of subchapter B of chapter 1 is amended by adding at the end the following new item:

''Sec. 199. Income attributable to domestic production activities.''.

(d) EFFECTIVE DATE.—

(1) IN GENERAL.—The amendments made by this section shall apply to taxable years ending after the date of the enactment of this Act.

(2) APPLICATION OF SECTION 15.—Section 15 of the Internal Revenue Code of 1986 shall apply to the amendments made by this section as if they were changes in a rate of tax.

By Mr. LEAHY:

S. 1923. A bill to reauthorize and amend the National Film Preservation Act of 1996; to the Committee on the Judiciary.

Mr. LEAHY. Mr. President, I call attention today to a part of American heritage that is literally disintegrating faster than can be saved. Motion pictures are an important part of our American experience and provide an extraordinary record of our history, our dreams, and our aspirations. The National Film Preservation Board and the National Film Preservation Foundation were created by Congress under the auspices of the Library of Congress, to help save America's film heritage. Today, I am introducing the ''National Film Preservation Act of 2003,'' which will reauthorize and extend the ''National Film Preservation Act of 1996.''

We first acted in 1988 in order to recognize both the educational, cultural, and historical importance of our film heritage, and its inherently fragile nature. The ''National Film Preservation Act of 2003'' will allow the Library of Congress to continue its important work in preserving America's fading treasures, as well as providing grants that will help libraries, museums, and archives preserve films, and make those works available for study and research. These continued efforts are more critical today than ever before. Fewer than 20 percent of the features of the 1920s exist in complete form and less than 10 percent of the features of the 1910s have survived into the new millennium.
