HEAVY DUTY HYBRID VEHICLE RESEARCH, DEVELOPMENT, AND DEMONSTRATION ACT

SEPTEMBER 28, 2010.—Ordered to be printed

Mr. BINGAMAN, from the Committee on Energy and Natural
Resources, submitted the following

R E P O R T

[To accompany S. 679]

The Committee on Energy and Natural Resources, to which was referred the bill (S. 679) to establish a research, development, demonstration, and commercial application program to promote research of appropriate technologies for heavy duty plug-in hybrid vehicles, and for other purposes, having considered the same, reports favorably thereon without amendment and recommends that the bill do pass.

PURPOSE

The purpose of S. 679 is to establish a competitive research, development, demonstration, and commercial application program to advance heavy-duty hybrid vehicle technologies.

BACKGROUND AND NEED

The Department of Energy's Vehicle Technologies Program conducts research and development in a number of areas for both light- and heavy-duty applications. The Department's programs generally focus on individual technologies that could be applied by manufacturers; and are sometimes structured as commercial-partner initiatives such as FreedomCAR for light-duty vehicles and the 21st Century Truck Partnership for heavy-duty vehicles. These programs have aided in the development of a number of promising technologies that could reduce the fuel consumption of the transportation sector.

Hybrid technologies can offer a range of economic and environmental benefits. These technologies have gained significant deploy-

ment in the light-duty vehicle market, but are often much more expensive to incorporate into heavier vehicle fleets. Accordingly, additional legislation is needed to provide for specific research and development to advance the commercial deployment of hybrid technologies in the heavy-duty segment.

LEGISLATIVE HISTORY

S. 679 was introduced by Senator Collins on March 24, 2009. The Committee on Energy and Natural Resources' Subcommittee on Energy held a hearing on the bill on June 15, 2010. The Committee on Energy and Natural Resources considered the bill and ordered it favorably reported without amendment on August 5, 2010.

COMMITTEE RECOMMENDATION

The Committee on Energy and Natural Resources, in an open business session on August 5, 2010, by a voice vote of a quorum present, recommends that the Senate pass S. 679.

SECTION-BY-SECTION ANALYSIS

Section 1 provides a short title.

Section 2 (a) defines terms used in the legislation.

Subsection (b) directs the Secretary to establish a program to provide grants to carry out projects to advance research and demonstrate technologies for advanced heavy duty hybrid vehicles.

Subsection (c) requires the Secretary to issue application requirements and to establish criteria for making grant awards. The Secretary must give priority to applicants who are best able to advance the current state of technology and achieve the greatest reductions in fuel consumption and emissions. Three to seven grants are to be awarded, with each grant limited to no more than \$3 million per recipient per year.

Subsection (d) defines two phases of research by award recipients. In phase one, each recipient has one year to build or retrofit one or more advanced heavy duty hybrid vehicles. Recipients are required to collect and analyze data on the performance of key vehicle components; the estimated costs of producing, operating, and maintaining the vehicle; the emissions of the vehicle; and on overall vehicle performance according to guidelines established by the Secretary.

If, at the conclusion of phase one, it is clear that a grant recipient will be unable to complete the requirements of phase two, the Secretary has the discretion to waive the requirement for phase two research and terminate the grant to that recipient.

In phase two, recipients are required to demonstrate the advanced manufacturing processes of heavy duty hybrid vehicles by producing or retrofitting 50 such vehicles within two years. Recipients must report on the major technological obstacles they encounter in developing and producing the vehicles and on the projected costs of each vehicle.

Subsection (e) directs the Secretary to conduct a study of alternative power train designs for use in advanced heavy duty hybrid vehicles. The study would analyze these different designs under conditions in which they are typically used, including the average number of miles driven, the time spent with the engine at idle,

horsepower requirements, the length of time the maximum power is required, and other factors the Secretary determines to be appropriate.

Subsection (f) requires the Secretary to report to Congress within 60 days on the findings of the reports submitted by grant recipients.

Subsection (g) requires the Secretary to coordinate the research conducted under this program with other research conducted by the Department.

Subsection (h) applies the cost sharing provisions of section 988 of the Energy Policy Act of 2005 (42 U.S.C. 16352) to the program.

Subsection (i) directs the Secretary to establish a pilot program through DOE's National Laboratories and Technology Centers to research and test the effects that plug-in hybrid vehicles, including heavy-duty plug-in hybrid trucks, will have on the domestic electric power grid.

Subsection (j) authorizes appropriations of \$16 million per year for fiscal years 2010 through 2012, of which \$15 million per year must be used for the awards distributed through the program established by subsection (b).

Section 3 amends the United States Energy Storage Competitiveness Act of 2007 (enacted as section 641(g)(1) of the Energy Independence and Security Act of 2007 (42 U.S.C. 17231(g)(1)) to include vehicles with a gross weight over 16,000 pounds in the Secretary's priorities for advanced energy storage.

COST AND BUDGETARY CONSIDERATIONS

The following estimate of costs of this measure has been provided by the Congressional Budget Office:

S. 679—Heavy Duty Hybrid Vehicle Research, Development, and Demonstration Act of 2009

Summary: S. 679 would establish a grant program within the Department of Energy (DOE) to advance technologies related to heavy duty hybrid vehicles. Heavy duty hybrid vehicles are powered, in part, by a rechargeable energy system and weigh between 14,000 and 33,000 pounds. S. 679 would authorize the appropriation of \$16 million in each of fiscal years 2011 and 2012 for research related to the design, production, and usage of such vehicles and a pilot program to examine the widespread use of the electric grid by plug-in hybrid vehicles. CBO estimates that implementing the bill would cost \$32 million over the 2011–2015 period. Enacting S. 679 would not affect direct spending or revenues; therefore, pay-as-you-go procedures do not apply.

S. 679 contains no intergovernmental or private sector mandates as defined in the Unfunded Mandates Reform Act (UMRA) and would impose no costs on state, local, or tribal governments.

Estimated cost to the Federal Government: For this estimate, CBO assumes that S. 679 will be enacted near the beginning of fiscal year 2011 and that the authorized amounts will be appropriated each year. Estimated outlays are based on historical spending patterns for similar DOE programs. The estimated budgetary impact of S. 679 is shown in the following table. The costs of this legislation fall within budget function 270 (energy).

	By fiscal year, in millions of dollars—					
	2011	2012	2013	2014	2015	2011–2015
CHANGES IN SPENDING SUBJECT TO APPROPRIATION						
Authorization Level 1	16	16	0	0	0	32
Estimated Outlays	9	14	7	2	0	32

Pay-as-you-go considerations: None.

Intergovernmental and private-sector impact: S. 679 contains no intergovernmental or private-sector mandates as defined in UMRA and would impose no costs on state, local, or tribal governments.

Estimate prepared by: Federal Costs: Martin von Gnechten; Impact on State, Local, and Tribal Governments: Ryan Miller; Impact on the Private Sector: Amy Petz.

Estimate approved by: Theresa Gullo, Deputy Assistant Director for Budget Analysis.

REGULATORY IMPACT EVALUATION

In compliance with paragraph 11(b) of rule XXVI of the Standing Rules of the Senate, the Committee makes the following evaluation of the regulatory impact which would be incurred in carrying out S. 679.

The bill is not a regulatory measure in the sense of imposing Government-established standards or significant economic responsibilities on private individuals and businesses.

No personal information would be collected in administering the program. Therefore, there would be no impact on personal privacy.

Little, if any, additional paperwork would result from the enactment of S. 679, as ordered reported.

CONGRESSIONALLY DIRECTED SPENDING

S. 679, as ordered reported, does not contain any congressionally directed spending items, limited tax benefits, or limited tariff benefits as defined in rule XLIV of the Standing Rules of the Senate.

EXECUTIVE COMMUNICATIONS

The testimony provided by the Department of Energy at the June 15, 2010, Subcommittee Committee on Energy hearing on S. 679 follows:

STATEMENT OF STEVEN G. CHALK, CHIEF OPERATING OFFICER AND ACTING DEPUTY ASSISTANT SECRETARY FOR RENEWABLE ENERGY, OFFICE OF ENERGY EFFICIENCY AND RENEWABLE ENERGY, DEPARTMENT OF ENERGY

Madam Chairman, Ranking Member Risch, and Members of the Subcommittee, thank you for the opportunity to appear before you today to discuss proposed clean energy legislation.

The Department and the Subcommittee share common goals of strengthening our economy, enhancing our national security, and protecting our environment. As part of the Recovery Act, the Office of Energy Efficiency and Renewable Energy (EERE), oversees a total of \$16.8 billion in investments. To date, EERE has obligated 96 percent,

or \$16.07 billion, of its Recovery Act funds. The funds are putting America to work laying the foundation for our clean energy future. The Department also appreciates the authorities you have provided in recent years in the Energy Policy Act of 2005 (EPAAct) (P.L. 109–58) and the Energy Independence and Security Act of 2007 (EISA) (P.L. 110–140). This year, the Committee has proposed further investment and we thank you for all your hard work in reporting the American Clean Energy Leadership Act (S. 1462).

Today, I am pleased to offer the Department’s perspective on five pending pieces of legislation related to energy efficiency and renewable energy. Note that many of the authorities outlined in the bills would simply reinforce existing authorities, and may not be necessary for the Department to carry out the activities in question. I will discuss them in the order listed in the hearing invitation letter I received from the Subcommittee. These include the 10 Million Solar Roofs Act of 2010 (S. 3460), the Supply Star Act of 2010 (S. 3396), the Improving Energy Efficiency and Renewable Energy Use By Federal Agencies Act of 2010 (S. 3251), the Heavy Duty Hybrid Vehicle Research, Development, and Demonstration Act (S. 679), the Gas Turbine Efficiency Act of 2009 (S. 2900).

S. 3460—10 MILLION SOLAR ROOFS ACT OF 2010

We thank the subcommittee and the sponsor of this legislation for your strong leadership on solar technologies over the years. The Department’s goals for solar electric technologies are to be cost competitive in their respective markets by 2015 and to reach a high penetration of solar installations. The Department is investing \$232 million in 2010 to support solar research across the development pipeline, from basic photovoltaic (PV) cell technologies to manufacturing scale-up to total system development. Within the \$232 million, DOE is investing up to \$50 million in concentrated solar power technology development and deployment related activities and \$23 million to understand how solar technologies can be better integrated within existing electricity generation and transmission systems. In solar hot water heating, DOE is investing approximately an additional \$6.5 million in 2010.

The proposed legislation incorporates several significant features. We believe that rebates, loan programs, and performance based incentives are all effective means of stimulating demand. Allowing states to choose between these incentives will enable the Act to expand existing state programs that have been effective in promoting solar installations. In addition, the states’ matching funds requirements will leverage available federal appropriations and increase the resulting deployment of solar technologies, both of which are high priorities for the Department.

To maximize the effectiveness of the proposed legislation, we would recommend two changes. First, while we support the state match requirement, we propose that the

cost share be set at 50 percent to increase the potential leverage of federal funds. Second, the Secretary should be given the ability to reduce this as necessary to increase the overall effectiveness of the program. We also believe the program could be designed in a creative way such as working with municipalities to promote photovoltaic installations through innovative local programs.

We note that by our estimates, the \$250 million authorized for FY 2012 would yield roughly 100,000 rooftop solar systems, and may not be sufficient to put us on a trajectory to meet the goal of 10 million solar roofs. With these changes, the legislation could be an effective tool in increasing deployment of solar electricity technologies Nationwide. We note that existing authorities, such as the competitive portion of the state energy program, would allow DOE to undertake such a program already.

S. 3396—SUPPLY STAR ACT OF 2010

Supply chain energy efforts can make an important contribution to overall industrial efficiency and the competitive position of domestic suppliers. Analysis suggests that a large part of the carbon footprint for many consumer products can be attributed to the supply chain—from raw materials, transport, and packaging to the energy consumed in manufacturing processes—on the order of 40 to 60 percent.¹

The Supply Star legislation seeks to build upon existing best practices in the industrial community by establishing a voluntary recognition program that supports and promotes products and companies with highly energy- and resource-efficient supply chains.

DOE and the Environmental Protection Agency (EPA) both have existing initiatives that address supply chain efficiency, such as Save Energy Now[®] at DOE and the Smart Way Transport[™] program at EPA. The legislation should coordinate with and leverage these programs as a structure through which Supply Star activities could be conducted. For example, through its national Save Energy Now[®] initiative, DOE encourages manufacturing companies to engage their supply chains in energy and carbon management. Specifically, DOE develops processes and resources to assist companies in promoting energy management to their industrial suppliers and customers. Save Energy Now[®] LEADER Companies make a voluntary commitment to reduce their energy intensity by 25 percent in 10 years. Many of these companies are interested in improving the efficiency of their supply chains as well.

The Supply Star bill also builds upon Superior Energy Performance (SEP), a voluntary certification program working to provide industrial facilities with a roadmap for achieving continual improvement in energy efficiency while maintaining competitiveness. A central element of

¹Source: *Climate Change and Supply Chain Management*, McKinsey Quarterly, McKinsey & Company, July 2008.

SEP is implementation of the forthcoming International Organization for Standardization (ISO) 50001 energy management standard, with additional requirements to achieve and document energy intensity improvements. DOE is working through SEP to bring ISO 50001 to the U.S. Upon its expected publication in 2011 this American National Standards Institute-accredited program will provide companies with a framework for fostering energy-efficiency at the plant level and a consistent methodology for measuring and validating energy efficiency and intensity improvements. This new framework will be an important tool to integrate into supply chain efforts.

S. 3251—IMPROVING ENERGY EFFICIENCY AND RENEWABLE ENERGY USE BY FEDERAL AGENCIES ACT OF 2010

On October 5, President Obama signed Executive Order 13514 requiring Federal agencies to set GHG emission reduction targets, increase energy efficiency, reduce fleet petroleum use, conserve water, reduce waste and promote environmentally-responsible produce purchases by federal agencies. With this action, the President directed agencies to demonstrate the Federal government's commitment, over and above what is already being done, to reducing emissions and saving money.

As a whole, the Federal government has made significant progress in meeting the energy requirements of EISA 2007 and EPAct 2005. Further progress on these efforts would be bolstered by S. 3251. The Department is particularly supportive of provisions clarifying the definition of allowable "renewable" energy sources, and authorizing the creation of a revolving fund for Federal facility energy efficiency and renewable energy projects.

The Department looks forward to working with the Subcommittee on legislation that would provide agencies with the flexibility to purchase renewable energy for appropriate time periods, that do not exceed asset life, create appropriate risk sharing between project developers and taxpayers, and that recognize the importance of fiscal responsibility and Congressional Budget Office scoring of contracts. This authority would provide opportunities for more on-site renewable power at Federal agencies and would provide strong support for growing our domestic clean energy economy.

The Department's recommended definition of renewable energy follows the definition in section 203 of EPAct 2005, with an additional recommendation to allow for both electric energy and thermal energy from renewable sources. It is very important to allow thermal energy to count as renewable energy, particularly because renewable thermal energy sources such as ground source heat pumps are often the lowest-cost option for displacing purchased energy and are already widely deployed. This approach contrasts with the current definition which is limited only to "renewable electricity," a definition that reduces incentives

for this valuable and cost-effective form of renewable power.

The Department fully supports the creation of a revolving loan fund based on best practices and subject to appropriate interest rates for Federal facility energy efficiency and renewable energy projects. There is considerable experience and success at the state and local level with using revolving loan funds to assist innovative projects to improve energy efficiency. In addition, there is Federal experience with a similar concept within the General Services Administration (GSA) that funds agency relocations, and agencies reimburse the fund at slightly above costs to gradually increase the amount of funds available for lending.

Federal agencies are already responding to the requirements of EISA Section 432 to survey their facilities for potential energy efficiency and renewable energy upgrades, as well as to complete energy audits and to report on measures taken. The Department recommends that the renewable energy facility surveys called for in S. 3251 Section 5 should be included as a modification of EISA Section 432.

DOE's Federal Energy Management Program is already at work implementing provisions similar to the Federal energy management and data collection standard called for in S. 3251 Section 7. As required under EISA Section 432, DOE will publish overarching guidance for implementation of all Section 432 requirements in 2010. The Department is also developing a web-based tracking system for facility-level energy data and identified or implemented energy conservation measures per EISA. Tasking the GSA to deploy a similar publicly-available resource with facility-level energy data would create redundancy as the Department's compliance tracking system will be deployed for use by all agencies in July 2010.

S. 679—HEAVY DUTY HYBRID VEHICLE RESEARCH,
DEVELOPMENT, AND DEMONSTRATION ACT

The program authorized by S. 679 would complement several of the Department's current activities focused on increasing vehicle energy efficiency. One of those programs is the SuperTruck Program, in which DOE is seeking to improve the freight hauling efficiency of Class 8 trucks by 50 percent. Other complementary efforts underway include: (1) the development of hybrid school bus technology; (2) research, development, and demonstration of medium-duty utility bucket trucks and passenger shuttles using a plug-in hybrid electric system; and (3) other medium and heavy duty truck deployment activities supported by our Clean Cities program. S. 679 has the potential to increase the fuel economy attainable by vehicles in this sector.

There are several technical definitions and reporting requirements about which we would like to seek clarification, and the Department looks forward to working with the subcommittee on those provisions.

S. 2900—GAS TURBINE EFFICIENCY ACT OF 2009

The Gas Turbine Efficiency Act would establish a research, development, and technology demonstration program to improve the efficiency of gas turbines used in combined cycle and simple cycle power generation systems.

The Department believes that industry has economic incentives to invest in research, development and demonstration to increase the efficiency of gas turbines. To the extent that the private sector underinvests in basic research, DOE has sufficient authority and existing programs to improve high temperature materials applicable to a range of energy technologies.

The bill is similar to an existing successful program within DOE. The Advanced Turbine Systems Program, a research, development and demonstration collaborative between the Department's Offices of Energy Efficiency and Renewable Energy and Fossil Energy, successfully developed and deployed advanced turbine material and coating leading to today's turbine efficiencies.

The legislation outlines activities DOE already performs. For example, through its Industries of the Future (cross-cutting) investments, DOE's Industrial Technology Program (ITP) aids the development of advanced manufacturing processes for the expanded use of lightweight materials such as titanium. Those breakthroughs help to drive production cost down and market impact up. In other efforts, ITP promoted advanced alloys of steel to support many of the new clean energy products being developed today. Nanocoating technologies are still another group of innovations developed with the assistance of ITP that now extend the life of tooling systems and provide wear resistance to reduce the cost of manufacture and extend the useful life of products. All of these efforts support the overarching objective of reducing the energy intensity of Industry to help advance the Administration's energy security and environmental performance goals.

The Department is committed to continuing research of high temperature materials which will help industry develop more efficient energy technologies. Meanwhile, the private sector has economic incentive to invest in the development and demonstration of efficient gas turbines. Therefore, private sector work on later stages of efficient natural gas turbine development and demonstration will likely be conducted without the need for additional funding authorizations beyond that already in place.

In conclusion, the Department of Energy thanks the Subcommittee for the opportunity to comment on these proposed initiatives. We look forward to working with Congress to develop strong, effective clean energy policy to ensure U.S. leadership on these global issues and in the clean energy economy.

CHANGES IN EXISTING LAW

In compliance with paragraph 12 of rule XXVI of the Standing Rules of the Senate, changes in existing law made by the bill S. 679, as ordered reported, are shown as follows (existing law proposed to be omitted is enclosed in black brackets, new matter is printed in italic, existing law in which no change is proposed is shown in roman):

UNITED STATES ENERGY STORAGE COMPETITIVENESS ACT OF 2007

(Section 641 of the Energy Independence and Security Act of 2007; 42 U.S.C 17231)

* * * * *

SEC. 641. ENERGY STORAGE COMPETITIVENESS.

(a) **SHORT TITLE.**—This section may be cited as the “United States Energy Storage Competitiveness Act of 2007”.

* * * * *

(g) **APPLIED RESEARCH PROGRAM.**—

(1) **IN GENERAL.**—The Secretary shall conduct an applied research program on energy storage systems to support electric drive vehicles, *vehicles with a gross weight over 16,000 pounds* stationary applications, and electricity transmission and distribution technologies, including—

- (A) ultracapacitors;
- (B) flywheels;
- (C) batteries and battery systems (including flow batteries);
- (D) compressed air energy systems;
- (E) power conditioning electronics;
- (F) manufacturing technologies for energy storage systems;
- (G) thermal management systems; and
- (H) hydrogen as an energy storage medium.

* * * * *
