PURPOSE AND SUMMARY

The purpose of H.R. 4581 is to require the Secretary of Homeland Security to develop best practices for utilizing advanced passenger information (API) and passenger name record (PNR) data for counterterrorism screening and vetting operations. This bill directs the Secretary of Homeland Security to develop best practices for utilizing API and PNR data for counterterrorism screening and vetting purposes. It also directs the Secretary to make the best practices available to foreign partners and provide assistance to those countries in implementing the best practices.

BACKGROUND AND NEED FOR LEGISLATION

API, or biographic information about a traveler, and PNR, or data about a traveler's reservation and itinerary, are valuable tools used for screening and vetting potential criminals and terrorists. The Department of Homeland Security (DHS), especially U.S. Customs and Border Protection (CBP) and the Transportation Security Administration (TSA), utilize these data sets to confirm the identities and travel patterns of travelers before they are able to enter the U.S.

In April 2016, the European Union (EU) adopted a new directive requiring its member States to utilize PNR data for the prevention, detection, investigation, and prosecution of terrorist offenses and serious crime. While this is a positive step by our European allies, many EU countries lack the knowledge, expertise, or capability to implement this directive by the May 2018 deadline. Therefore, H.R. 4581 directs DHS to leverage its expertise and experience utilizing API and PNR data by developing best practices and making them available to Visa Waiver Program (VWP) countries-many of which are in the EU. This will not only strengthen the security and capabilities of our foreign partners, but will also have a major impact on the security of the homeland.
