PURPOSE AND SUMMARY

H.R. 7208 reauthorizes Traumatic Brain Injuries (TBI) programs at the Department of Health and Human Services (HHS). The programs reauthorized in this bill allocate resources for TBI prevention, improving access to TBI rehabilitation, and TBI patient advocacy systems. The bill reauthorizes the program for five fiscal years from 2025 through 2029.

BACKGROUND AND NEED FOR LEGISLATION

In 2020 to 2021, there were approximately 214,110 TBI-related hospitalizations and 69,473 deaths. People aged 75 years and older

had the highest numbers and rates of TBI-related hospitalizations and deaths.¹ The TBI Act was originally signed into law in 1996 and provides resources to states to help support individuals diagnosed and living with a TBI through three agencies at HHS. The Centers for Disease Control and Prevention (CDC) is responsible for conducting public information, education, and prevention activities for determining the incidence and prevalence of TBI in the United States. The National Institutes of Health (NIH) is responsible for conducting research on prevention, diagnosis, and treatment of TBI. The Administration for Community Living (ACL) is responsible for two grants programs to states to improve access to service delivery and support for the Protection and Advocacy System in each state. Recent data suggests that over 1.5 million Americans annually survive a traumatic brain injury.² TBIs usually occur when an outside force causes severe damage to the brain, this can impact a person's life in many ways, putting patients at increased risk for depression, falls, and permanent cognitive decline.³
