New England River Basins Commission
HB3505.A3B47 1973

This paper presents a preliminary analysis of the population of the states, counties and congressional districts within selected regions of the U.S. coastal zone. The main body of the report is comprised of summary tables which contain population figures based on the 1970 census¹, congressional representation, and comparative population and representation percentages for the U.S., NAR, NERBC, and New England. An appendix is included which provides more detailed information for each state.

This analysis is based on the coastal state definition given in section 304c of the Coastal Zone Management Act of 1972 (PL 92-583):
". . . a state of the United States in, or bordering on, the Atlantic, Pacific, or Arctic Ocean, the Gulf of Mexico, Long Island Sound, or one or more of the Great Lakes."

Similarly, counties and congressional districts that front on these waters were considered "coastal counties" and "coastal congressional districts" for purposes of this report. In large metropolitan areas (e.g., New York City, Los Angeles, Chicago) where the economy is greatly affected by coastal activities, all congressional districts were considered.

United States Coastal Zone (see Table 1)

An examination of Table 1 shows that of the 50 states, the 30 having coastal frontage as defined contain about 168 million persons or 82.3% of the total U.S. population of approximately 204 million. These 30 coastal states provide a U.S. congressional delegation of 60 senators and 359 representatives, 82.5% of the House of Representatives. Almost half (44.4%) of the coastal states' population are in coastal counties; these 74.5 million persons also constitute 36.5% of the total U.S. population. Similarly over half (51.7%) of the coastal states' population are within 186 House districts, these coastal representatives comprise 42.8% of the House.

There are 23 states bordering on the oceans (i.e. excluding the Great Lake coastal states). These states are inhabited by 112 million persons comprising 54.9% of the total U.S. population and 66.7% of the persons within the coastal states. These "shelf" states have a congress-

¹

U.S. Department of Commerce, Bureau of the Census. Number of Inhabitants: U.S. Summary. Dec., 1971.

sional delegation of 46 U.S. senators and 240 representatives. Similarly there are 55 million persons living in counties with continental shelves comprising 27% of the total U.S. population, 49.2% of the "shelf" state population and 32.8% of the coastal state population.

New England Coastal Zone (see Table 2)

Table 2 indicates that the 12 million New Englanders comprise 5.8% of the Nation's population and 96.2% of them come from coastal states (Vermont is the only inland state of the six). Over 6 million New Englanders (53.2%) live in coastal counties and over 7 million (60.4%) live in coastal congressional districts. Of New England's 25 congressmen, 24 come from coastal states and 15 from coastal congressional districts.

NERBC States Coastal Zone (see Table 3)

The various breakdowns for the NERBC States (New England plus the entire State of New York) are summarized in Table 3. Of the 30 million persons (14.7% of the Nation) who live in the region, 29 million (98.5%) come from coastal states. 20 million (67.3%) are inhabitants of coastal counties (over 17.5 million excluding the Great Lake coastal counties) and about 22 million (73.5%) live in coastal congressional districts (over 18 million excluding the Great Lake districts). Of the 64 congressmen from NERBC states, 47 represent coastal districts (39 excluding the Great Lakes). The large increase from the New England figure reflects the New York metropolitan area population center.

NAR States Coastal Zone (see Table 4)

Table 4 summarizes the results for the NAR region which consists of all or parts of the States of: Connecticut, Delaware, Maine, Maryland, Massachusetts, New Hampshire, New Jersey, New York, Pennsylvania, Rhode Island, Vermont, Virginia, and West Virginia. Although some of the states are not totally within the NAR region, for this analysis the NAR region includes all the above states in their entirety. Over 60 million

persons (29.4% of the Nation) inhabit these states and about 57 million of them (96.3%) live in coastal states, Vermont and West Virginia being inland. When the Great Lakes are excluded the figure drops to almost 46 million due to the exclusion of Pennsylvania which has only a small percentage of its area and population near Lake Erie. Almost 27 million (44.6%) of NAR's inhabitants come from coastal counties (about 24 million excluding the Great Lakes) and approximately 30 million (49.8%) of NAR's population lives in coastal congressional districts (over 25.5 million excluding the Great Lakes). 126 congressmen represent the states in the NAR region; of these 121 are from coastal states (96 excluding Pennsylvania). 63 of the congressmen actually are elected by coastal districts (54 excluding the Great Lake districts of Pennsylvania and New York).

Coastal Zone Statistics (see Table 5)

Included for convenience is this summary table which combines the major results of the previous four tables.

UNITED STATES COASTAL ZONE

Table 1:

State	Total Population in the State	Population in Coastal Counties (% of State) ¹	Population in Coastal Congressional Districts (% of State) ²	# Coastal Congressional Districts	Total # Congressional Districts
