Vol. 45 No. 98
Pages 32655-33588

federal register

Book 1 of 3 Books
Monday, May 19, 1980

Highlights

32655 **Color television receiver imports** Presidential Proclamation

33063 **Hazardous Waste and Consolidated Permit Regulations** EPA issues rules and proposed amendments (10 documents) (Parts II through XI of this issue)

32671 **Cuban Nationals** Treasury/Foreign Assets Control Office amends regulations prohibiting transactions in connection with transportation of certain Cuban nationals to the United States; effective 5–15–80

32657 **Aliens** Justice/INS amends regulations to include reference to new Alien Registration Receipt Card, Form I–551; effective 6–18–80

32710 **Civil Rights** Justice proposes age discrimination regulations regarding programs receiving Federal financial assistance; comments by 6–18–80

32778 **Health Professions** HHS/PHS updates income levels used to define "low income family" for purposes of repayment of educational loans

32751 **Grant Programs—Minority Business** Commerce/MBDA seeks applicants to operate one project for a 12-month period beginning 7–1–80; apply by 6–5–80

CONTINUED INSIDE

FEDERAL REGISTER Published daily, Monday through Friday, (not published on Saturdays, Sundays, or on official holidays), by the Office of the Federal Register, National Archives and Records Service, General Services Administration, Washington, D.C. 20408, under the Federal Register Act (49 Stat. 500, as amended; 44 U.S.C. Ch. 15) and the regulations of the Administrative Committee of the Federal Register (1 CFR Ch. I). Distribution is made only by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

The **Federal Register** provides a uniform system for making available to the public regulations and legal notices issued by Federal agencies. These include Presidential proclamations and Executive Orders and Federal agency documents having general applicability and legal effect, documents required to be published by Act of Congress and other Federal agency documents of public interest. Documents are on file for public inspection in the Office of the Federal Register the day before they are published, unless earlier filing is requested by the issuing agency.

The **Federal Register** will be furnished by mail to subscribers, free of postage, for $75.00 per year, or $45.00 for six months, payable in advance. The charge for individual copies is $1.00 for each issue, or $1.00 for each group of pages as actually bound. Remit check or money order, made payable to the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

There are no restrictions on the republication of material appearing in the **Federal Register.**

Questions and requests for specific information may be directed to the telephone numbers listed under INFORMATION AND ASSISTANCE in the READER AIDS section of this issue.

Highlights

32755 **Petroleum** DOE/ERA issues first supplemental buy/sell list for allocation period of April through September, 1980

33823 **Hazardous Materials Transportation** DOT/MTB lists applications for renewal of exemptions; comments by 6–3–80

33821 **Hazardous Materials Transportation** DOT/MTB gives notice of receipt and lists applications for exemptions; comments by 6–18–80

32715 **Coal Mining** Interior/GS delineates functions and responsibilities for operations on Federal lands, comment by 7–3–80

32783 **Continental Shelf** Inter/GS announces receipt of proposed development and production plan for oil, gas, and sulphur

32687 **Flood Insurance** FEMA sets forth description of State Assistance Program for National Flood Insurance Program, effective 5–19–80

32671 **Vessels** DOD/NAVY exempts certain vessels from regulations for preventing collisions at sea; effective 4–15–80

32699 **Fisheries** Commerce/NOAA extends emergency regulations implementing Atlantic Groundfish Fishery Management Plan, effective 5–21–80 through 7–4–80

32705 **Bicycles** CPSC proposes amendments to safety requirements to provide rim reflectivity alternative; comments by 7–18–80

Privacy Act Documents

32670 Justice

32829 **Sunshine Act Meetings**

Presidential Documents

Title 3—

The President

Proclamation 4759 of May 15, 1980

Modification of the Implementation of the Orderly Marketing Agreement and the Temporary Quantitative Limitation on the Importation Into the United States of Color Television Receivers and Certain Subassemblies Thereof

By the President of the United States of America

A Proclamation

On January 26, 1979, by Proclamation 4634, I proclaimed pursuant to the Constitution and the statutes of the United States, including section 203 of the Trade Act of 1974 (19 U.S.C. 2253) (the Trade Act), certain temporary quantitative limitations on the importation into the United States of color television receivers and certain subassemblies thereof, provided for in items 923.74 through 923.83, inclusive, of the Tariff Schedules of the United States (TSUS) (19 U.S.C. 1202).

Exports to the United States of color television receiver subassemblies, provided for in item 923.78, and subject to Proclamation 4634, fell considerably below the restraint level established by that Proclamation for the first restraint period. The existing carryover provision would allow an increase in the quantity to be entered during the second restraint period of only 29,700 units of such subassemblies. In the interest of equity, this Proclamation will increase the allowable carryover by 5,300 units to 35,000 units. The total number of such subassemblies exported to the United States and entered during the fifteen months covered by Proclamation 4634 will remain less than the number originally contemplated by that Proclamation.

NOW, THEREFORE, I, JIMMY CARTER, President of the United States of America, in order to assure equitable treatment under Proclamation 4634 and acting under the authority vested in me by the Constitution and the statutes of the United States, including section 203 of the Trade Act (19 U.S.C. 2253), and in accordance with Article XIX of the General Agreement on Tariffs and Trade (GATT) (61 Stat. (pt. 5) A58; 8 U.S.T. (pt. 2) 1786) do proclaim that Subpart A, part 2 of the Appendix to the TSUS is modified as set forth in the Annex to this proclamation.

IN WITNESS WHEREOF, I have hereunto set my hand this fifteenth day of May, in the year of our Lord nineteen hundred and eighty, and of the Independence of the United States of America the two hundred and fourth.

Jimmy Carter

ANNEX

Headnote 5(e) of subpart A, part 2, of the Appendix to the Tariff Schedules of the United States (19 U.S.C. 1202) is modified to read as follows:

"(e) *Carryover.*—If the restraint level for any item has not been filled for a restraint period, upon appropriate request, the shortfall may be entered under the same item during the following restraint period provided that the amount of shortfall so entered in the next restraint period for (a) item 923.74 does not exceed 11 percent of the restraint level for the restraint period during which the shortfall occurred, (b) item 923.78 does not exceed 35,000 units, and (c) item 923.81 does not exceed 10 percent of the restraint level for the restraint period in which the shortfall occurred."

Rules and Regulations

Federal Register
Vol. 45, No. 98
Monday, May 19, 1980

This section of the FEDERAL REGISTER contains regulatory documents having general applicability and legal effect, most of which are keyed to and codified in the Code of Federal Regulations, which is published under 50 titles pursuant to 44 U.S.C. 1510.
The Code of Federal Regulations is sold by the Superintendent of Documents. Prices of new books are listed in the first FEDERAL REGISTER issue of each month.

DEPARTMENT OF JUSTICE

Immigration and Naturalization Service

8 CFR Parts 101, 103, 204, 211, 223, 223a, 231, 245, 246, 247, 249, 251, 264, and 299

Amendments to Various Sections To Include Reference to Form I-551, Alien Registration Receipt Card

AGENCY: Immigration and Naturalization Service, Justice.

ACTION: Final rule.

SUMMARY: This document amends several sections of the regulations of the Immigration and Naturalization Service to include reference to the new Alien Registration Receipt Card, Form I-551. The amendments are necessary because the Service now issues Form I-551 as the alien registration document to aliens entitled to evidence of alien registration. The amendments are intended to update the Service's regulations.

EFFECTIVE DATE: June 18, 1980.

FOR FURTHER INFORMATION CONTACT: Stanley J. Kieszkiel, Acting Instructions Officer, Immigration and Naturalization Service, 425 Eye Street, N.W., Washington, DC 20536. Telephone: (202) 633-3048.

SUPPLEMENTARY INFORMATION: In order to include reference to the Alien Registration Receipt Card now issued on Form I-551, the following amendments are hereby prescribed to Chapter I of Title 8 of the Code of Federal Regulations:

PART 101—PRESUMPTION OF LAWFUL ADMISSION

§ 101.3 [Amended]

1. § 101.3 is amended by changing "Form I-151 to read "Form I-551", wherever it appears.

* * * * *

PART 103—POWERS AND DUTIES OF SERVICE OFFICERS; AVAILABILITY OF SERVICE RECORD

§ 103.1 [Amended]

2. § 103.1, paragraph (o)(1), last sentence is amended by changing "Forms I-151" to read "Forms I-551."

* * * * *

§ 103.2 [Amended]

3. § 103.2, paragraph (b)(1), 14th sentence is amended by substituting "I-151 or I-551" for "I-151".

* * * * *

PART 204—PETITION TO CLASSIFY ALIEN AS IMMEDIATE RELATIVE OF A U.S. CITIZEN OR AS A PREFERENCE IMMIGRANT

§ 204.2 [Amended]

4. § 204.2, paragraph (b) is amended by changing "Form I-151" to read "Form I-151 or I-551."

* * * * *

PART 211—DOCUMENTARY REQUIREMENTS: IMMIGRANTS; WAIVERS

§ 211.1 [Amended]

5. § 211.1, paragraph (c) is amended by changing "Form I-151" to read "Form I-151 or I-551."

* * * * *

§ 211.3 [Amended]

6. § 211.3 is amended to change "Form I-151" to read "Form I-151 or I-551" wherever it appears in the title and text thereof.

* * * * *

§ 211.5 [Amended]

7. § 211.5, paragraph (a), first sentence is amended to change "Form I-151" to read "Form I-151 or I-551." Paragraph (b), second sentence is amended to change "Form I-151" to read "Form I-151 or I-551." Paragraph (d), first sentence is amended to change "Form I-151" to read "Form I-151 or I-551."

* * * * *

PART 223—REENTRY PERMITS

§ 223.1 [Amended]

8. § 223.1 is amending by changing "Form I-151" to read "Form I-151 or I-551" wherever it appears.

* * * * *

PART 223a—REFUGEE TRAVEL DOCUMENTS

§ 223a.4 [Amended]

9. § 223a.4 is amended by changing "Form I-151" to read "Form I-151 or I-551" wherever it appears.

* * * * *

PART 231—ARRIVAL-DEPARTURE MANIFESTS AND LISTS; SUPPORTING DOCUMENTS

§ 231.2 [Amended]

10. § 231.2, paragraph (a), 6th sentence is amended by changing "Form I-151" to read "Form I-151 or I-551."

* * * * *

PART 245—ADJUSTMENT OF STATUS TO THAT OF PERSONS ADMITTED FOR PERMANENT RESIDENCE

§ 245.2 [Amended]

11. § 245.2, paragraph (c) is amended by changing "Form I-151" to read "Form I-151 or I-551" wherever it appears. Paragraph (e), last sentence is amended to change "Form I-151" to read "Form I-551."

* * * * *

PART 246—RESCISSION OF ADJUSTMENT OF STATUS

§ 246.9 [Amended]

12. § 246.9 is amended by changing "Form I-151" to read "Form I-151 or I-551" wherever it appears in the title and text thereof.

* * * * *

PART 247—ADJUSTMENT OF STATUS OF CERTAIN RESIDENT ALIENS

§ 247.14 [Amended]

13. § 247.14 is amended by changing "Form I-151" to read "Form I-151 or I-551".

* * * * *

PART 249-CREATION OF RECORDS OF LAWFUL ADMISSION FOR PERMANENT RESIDENCE

§ 249.2 [Amended]

14. § 249.2, 10th sentence is amended by changing "Form I-151" to read "Form I-551".

* * * * *

PART 251—ARRIVAL MANIFESTS AND LISTS; SUPPORTING DOCUMENTS

§ 251.1 [Amended]

15. § 251.1, paragraph (c) is amended by changing "Form I–151" to read "Form I–151 or I–551." Paragraph (d), first sentence is amended by changing "Form I–151" to read "Form I–151 or I–551."

* * * * *

PART 264—REGISTRATION AND FINGERPRINTING OF ALIENS IN THE UNITED STATES

§ 264.1 [Amended]

16. § 264.1 paragraph (a) is amended by deleting "I–174 Application for Crewman's Landing Permit—Crewman arriving by vessel."

* * * * *

17. § 264.1 paragraph (b) is amended by adding "I–551 Alien Registration Receipt Card—Lawful permanent resident of the United States." in the proper form number sequence.

* * * * *

18. § 264.1 paragraph (c) revised to read as follows:

§ 264.1 Registration and Fingerprinting.

* * * * *

(c) *Replacement of registration.* Any alien whose evidence of registration has been lost, mutilated, or destroyed, shall immediately apply for new evidence of registration. Application for replacement of Form I–185, Nonresident Alien Canadian Border Crossing Card, shall be made on Form I–175. Application for replacement of Form I–186, Nonresident Alien Mexican Border Crossing Card, shall be made on Form I–190. Application for replacement of Form I–94, Arrival-Departure Record, or Form I–95, Crewman's Landing Permit, shall be made on Form I–102, except that a new form I–94 may be issued in lieu of one lost, mutilated, or destroyed without application therefor, when the alien is an applicant for extension of his temporary stay or change of nonimmigrant classification. Application by an alien lawfully admitted for permanent residence for Form I–551, Alien Registration Receipt Card, in lieu of one lost, mutilated, or destroyed, or who requests issuance of such card in a name which has been changed after registration by order of any court of competent jurisdiction or by marriage, shall be made on Form I–90 accompanied by the fee required by 103.7(b) of this chapter, two color photographs, regardless of the applicant's age, unless the requirement for such photographs has been waived by the district director in his discretion because of hardship to an applicant who is confined due to age or physical infirmity, and when issuance of Form I–551 is desired in a changed name, by appropriate documentary evidence of such change. Any Form I–151 or I–551 in the applicant's possession must also be submitted with the application. An application on Form I–90, with two color photographs but without fee, is required for issuance of Form I–551 in the case of a lawful permanent resident who surrenders evidence of registration on other than Form I–151 or I–551; who establishes that such form was never received by him; who is the holder of a Form I–151 or I–551 which is incorrect or in poor condition because of improper lamination and surrenders such form, or in the case of an alien who has attained the age of 14 and is seeking to be registered and fingerprinted pursuant to section 262(b) of the Act and who surrenders evidence of registration previously issued to him; or who is an alien commuter taking up actual permanent residence in the United States. No application or fee is required if Form I–151 or I–551 has been returned to the issuing office, by postal authorities, and is in the applicant's file. An application by an alien within the United States for replacement of evidence of registration shall be submitted to the Service office having jurisdiction over the applicant's place of residence in the United States. Prior to the issuance of Form I–551, all applicants, regardless of age, shall appear at the appropriate Immigration office for interview; placement of fingerprint, and, signature on Form I–89 unless these requirements are waived at the discretion of the district director because of confinement of age, physical infirmity, illiteracy or other compelling reasons. An alien lawfully admitted for permanent residence who is outside the United States shall submit his application for a new Form I–551 in person to the Service officer stationed outside the United States having jurisdiction over the place where the applicant is temporarily sojourning or, if physically present in the area of jurisdiction of an American consular officer where no Service officer is regularly stationed, to such consular officer. An application filed abroad will be forwarded with completed Form I–89 to the district director having jurisdiction over the alien's place of residence in the United States and, if the application is approved, Form I–551 will be transmitted to the Service officer stationed outside the United States or the American Consular Officer for delivery to the applicant. An alien who files application Form I–90 may be required to appear in person before an Immigration officer prior to adjudication of the application and be interrogated under oath concerning his eligibility for issuance of Form I–551 as evidence of his registration. In addition, the applicant may also be required to present a completed fingerprint card (Form FD–258). If the applicant is outside the United States, such interrogation may be conducted by an Immigration officer or a consular officer. The decision on an application for replacement of evidence of registration shall be made by the district director having jurisdiction over the alien's place of residence in the United States. No appeal shall lie from the decision of the district director denying the application.

* * * * *

PART 299—IMMIGRATION FORMS

§ 299.1 [Amended]

19. § 299.1 is amended by deleting "I–174 (3–1–65) Application for Crewman's Landing Permit." and by adding, "I–551 (Jan. 77) Alien Registration Receipt Card" in numerical sequence.

* * * * *

Authority: Secs. 103, 221, 261–265 (8 U.S.C. 1103, 1201, 1301–1305).

These amendments are published pursuant to section 552 of Title 5 of the United States Code (80 Stat. 383), as amended by Pub. L. 93–502 (88 Stat. 1561), and the authority contained in section 103 of the Immigration and Nationality Act (8 U.S.C. 1103), 28 CFR 0.105(b), and 8 CFR 2.1. Compliance with the provisions of section 553 of Title 5 of the United States Code as to notice of proposed rule making and delayed effective date is unnecessary in this instance because the amendments contained in this order are editorial in nature, and up-date Service practice and procedure regarding the new Alien Registration Receipt Card in current use.

Effective date: These amendments become effective on June 18, 1980.

Dated: May 14, 1980.

David Crosland,

Acting Commissioner of Immigration and Naturalization.

[FR Doc. 80–15295 Filed 5–16–80; 8:45 am]

BILLING CODE 4410–10–M

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

[Airworthiness Docket No. 67-SW-68, Amdt. 39-3770]

Airworthiness Directives; Bell Model 47 Series Helicopters

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: This amendment adopts a new airworthiness directive (AD) that supplements, in part, AD 70-10-8, Amdt. 39-983, as amended by Amdt. 39-1063 and Amdt. 39-2642, by reducing the retirement time from 600 to 300 hours for tail rotor blades, P/N 47-642-102, installed on Bell Model 47 helicopters, and OH-13/TH-13T series helicopters including modified versions equipped with Lycoming (Avco) engines. In addition, the AD would require installation of the improved tail rotor blades, P/N 47-462-117, on these same helicopters on or before February 28, 1981. The AD is needed to preclude inflight failure of the tail rotor blades, P/N 47-642-102, with resulting loss of helicopter control. The AD also requires destruction of the tail rotor blades, P/N 47-642-102, whenever they are removed from the affected helicopters to prevent a return to service on another Model 47 helicopter that would not be affected by the proposed AD.

DATES: Effective June 9, 1980.

Compliance required as prescribed in the AD.

ADDRESSES: A copy of the bulletins and instructions may be obtained from the Regional Counsel, Attention: Docket No. 67-SW-68, Southwest Region, Federal Aviation Administration, P.O. Box 1689, Fort Worth, Texas 76101. Bell service information may be obtained from Product Support Department, Bell Helicopter Textron, P.O. Box 482, Fort Worth, Texas 76101.

FOR FURTHER INFORMATION CONTACT:

J. H. Major, Airframe Section, Engineering and Manufacturing Branch, ASW-212, Federal Aviation Administration, P.O. Box 1689, Fort Worth, Texas, telephone number (817) 624-4911, extension 516.

SUPPLEMENTARY INFORMATION: A proposal to amend Part 39 of the Federal Aviation Regulations to include an airworthiness directive (AD) requiring further mandatory action for all Bell Model 47, H-13, and TH-13T series helicopters, except those equipped with Franklin Engine Co. (Aircooled Motors) engines was published in 45 FR 9945 February 14, 1980. Comments were received and considered as noted herein. The adopted rule reduces the blade, P/N 47-642-102, retirement time from 600 to 300 hours, requires destruction of the blades when removed from service in compliance with the AD and after the blades have attained 300 hours' total time in service, and requires installation of the improved tail rotor blade, P/N 47-642-117, prior to further flight after February 28, 1981, on the affected Bell Model 47, H-13, OH-13, and TH-13T series helicopters. The agency has not changed Amdt. 39-983 as amended by Amdt. 39-1063 and 39-2642, AD 70-10-8, but acknowledges the 300-hour retirement time of blade, P/N 47-642-102, in the new AD will supplant or supersede the 600-hour retirement time specified in AD 70-10-8, paragraphs i, j, and k, for all Bell Model 47 series helicopters except those equipped with Franklin (or Aircooled Motors) engines. The inspections and checks in AD 70-10-8 are still required for all Model 47's and H-13 series helicopters.

The proposal was prompted by the service history of tail rotor blade, P/N 47-642-102, fatigue failures. Since January 1976, ten additional reports have been received by the agency indicating an inflight failure of tail rotor blade, P/N 47-642-102, on six Model 47G-2, a 47G-2A-1, 47J-2, 47D, and 47G-3 helicopters. These particular helicopters were all equipped with Lycoming (Avco) engines.

As a result of inflight blade failures, Bell Helicopter Textron issued Alert Service Bulletin Nos. 47-79-3 and 47-79-4, and OSN 47-79-2 specifying removal of the tail rotor blade, P/N 47-642-102, installation of the improved tail rotor blade, P/N 47-642-117, and also specifying a reduction in retirement time from 600 to 300 hours for blades, P/N 47-642-102, installed on all Model 47 series helicopters regardless of the engine used. It was noted in Service Bulletin No. 47-79-4 that effective January 1, 1981, blade P/N 47-642-102 will not be available from any Bell Helicopter Textron authorized supply outlet.

Interested persons have been afforded the opportunity to participate in the making of the amendment. Twelve responses were received before the closing date for comments in which all objected to requiring installation of the improved tail rotor blades on or before June 30, 1980, since Bell could not fulfill the anticipated demand. In the light of Bell-furnished information and comments received, the AD requires installation of the improved tail rotor blades on or before February 28, 1981. One comment requested clarification that modified versions of the U.S. Army H-13 series helicopter comply with the AD. The proposal applied to H-13 series helicopters; however, the AD contains an additional clarifying paragraph (f) that the AD applies to modified versions of the military H-13 series helicopters.

Five of the responses implied or stated that AD 70-10-8 was sufficient to maintain airworthiness of the Model 47's and stated that they had many, many hours of satisfactory service without any tail rotor blade failures. The FAA has reports of 10 inflight fatigue failures since January 1976 and must conclude the AD is not effective for certain Model 47 series helicopters.

One response recommended the 600-hour life be allowed for restricted operations. Many of the noted blade failures have occurred on restricted helicopters and restricted operations are generally more severe than general operations.

A letter from the NTSB, received after the closing date for comments, recommended immediate adoption of an AD requiring installation of the improved tail rotor blades on all models for which it is approved, and requiring installation of the improved tail rotor blades as soon as possible on all other Model 47's including those equipped with Franklin engines. A letter from an operator was also received after the closing date commending the FAA for not requiring installation of the improved tail rotor blades on Model 47 helicopters equipped with Franklin engines. The operator cited a long history of satisfactory service with these types of Bell Model 47 helicopters. FAA records of Model 47 accidents concerning blade fatigue failures indicate that Franklin engine-powered Model 47 helicopters are not susceptible to tail rotor blade fatigue problems.

Several letters noted a hardship would occur for Model 47 operators and their customers if the 300-hour life were adopted due to a possible short supply of blade, P/N 47-642-102. The FAA does not believe a bonafide short supply will exist, since Bell advised the FAA that 78 blade sets were in stock with about 325 sets on order for delivery before January 1, 1981. It is acknowledged that effective January 1, 1981, blade P/N 47-642-102 will not be available from any Bell Helicopter Textron authorized supply outlet.

Operators, Bell, and the FAA are concerned about proper distribution of the available blade supply. Bell will honor orders for tail rotor blades provided a bonafide helicopter by model and serial number, and possibly

registration number, is furnished with the order. Thus, Bell will recognize orders for Model 47 series helicopters with valid airworthiness certificates. This approach is being used to preclude a large purchase of the blades by other than owners/operators of the Model 47 series helicopters.

The FAA appreciates receiving the aforementioned comments. The 300-hour blade life must be retained for all categories of operation in the light of the service experience associated with AD 70–10–8. Paragraph (f) was added to clarify that modified versions of H–13 series helicopters were included. A note was added to emphasize that the inspections and checks of AD 70–10–8 have not been canceled or superseded by this new AD. In the light of information received, the mandatory "retrofit" date for incorporation of the improved tail rotor blade has been changed from July 30, 1980, to February 28, 1981, to prevent undue hardship because of parts shortages for Model 47 operators and their customers. Operators are encouraged to install the improved tail rotor blades as soon as possible because of their durability and possible lower operating cost.

Adoption of this Amendment

Accordingly, pursuant to the authority delegated to me by the Administrator, § 39.13 of Part 39 of the Federal Aviation Regulations (14 CFR 39.13) is amended by adding the following new airworthiness directive:

Bell: Applies to all Model 47 series helicopters and military Model H–13, OH–13, and TH13T series helicopters certificated in all categories that are equipped with tail rotor blades, P/N 47–642–102, except for those helicopters equipped with Franklin (or Aircooled Motors) engines. (Airworthiness Docket No. 67–SW–68.)

Compliance required as indicated.

To prevent possible failure of tail rotor blades, P/N 47–642–102, due to fatigue cracks, accomplish the following:

(a) Blades with 250 or more hours' time in service on the effective date of this AD must be removed from service within the next 50 hours' time in service and must be destroyed.

(b) Blades with less than 250 hours' time in service on the effective date of this AD must be removed from service prior to or on attaining 300 hours' time in service and must be destroyed on attaining 300 hours' total time in service.

(c) Prior to further flight after February 28, 1981, install improved tail rotor blades, P/N 47–642–117, unless already accomplished, in accordance with Bell Helicopter Textron Service Instruction No. 428 (47G–2A, G–2A–1, G–3, G–3B, G–3B–1, G–3B–2, G–4, G–4A, G–5, J–2, and J–2A) or No. 438 (47G and 47G–2), as appropriate, or data approved by the Chief, Engineering and Manufacturing Branch, FAA, Southwest Region.

(d) The helicopters may be flown in accordance with FAR 21.197 to a base where compliance with this AD can be performed.

(e) Equivalent means of compliance with paragraph (c) may be approved by the Chief, Engineering and Manufacturing Branch, FAA, Southwest Region.

(f) This AD applies to modified versions of the military H–13, OH–13, and TH–13T series helicopter models. Examples of such modified versions are the Continental Copters or Tomcat helicopters, OH–13H/Tomcat Mark 5 series and 6 series, or the Texas Helicopter OH–13/M74 series helicopters.

Note.—The inspections and checks specified in AD 70–10–8, Amdt. 39–983, as amended by Amdt. 39–1063 and Admt. 39–2642, have not been canceled or superseded by this AD and are still required.

(Bell Helicopter Textron OSN 47–79–2, Service Bulletin 47–76–2, Alert Service Bulletin Nos. 47–79–3 and 47–79–4 pertain to this subject.)

This amendment becomes effective June 9, 1980.

(Secs. 313(a), 601, and 603, Federal Aviation Act of 1958, as amended (49 U.S.C. 1354(a), 1421, and 1423); sec. 6(c), Department of Transportation Act (49 U.S.C. 1655(c)); 14 CFR 11.89)

Issued in Fort Worth, Tex., on May 2, 1980.

C. R. Melugin, Jr.,

Director, Southwest Region.

14 CFR Part 39

[Docket No. 78–WE–5–AD; Amdt. 39–3771]

Airworthiness Directives; Lockheed L–188 Airplanes

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: This amendment supersedes a currently effective airworthiness directive (AD) which requires repetitive inspections of the wing structure on Lockheed L–188 airplanes. This amendment requires additional repetitive inspections and extends the applicability of the inspections to include lower-time airplanes. This AD is needed to detect and repair fatigue cracks which if uncorrected could result in loss of strength capability of the wing.

DATES: Effective June 23 , 1980.

Compliance schedule—As prescribed in the body of the AD.

FOR FURTHER INFORMATION CONTACT: Jerry Presba, Executive Secretary, Airworthiness Directive Review Board, Federal Aviation Administration, Western Region, P.O. Box 92007, World Way Postal Center, Los Angeles, California 90009. Telephone: (213) 536–6351.

SUPPLEMENTARY INFORMATION: A proposal to amend Part 39 of the Federal Aviation Regulations to include an airworthiness directive superseding Amendment 39–3204 AD 78–09–06, providing for additional repetitive inspections of the wing structure on Lockheed L–188 airplanes was published in the **Federal Register** at 44 FR 7558. The proposal was prompted by reports of cracks in wing structure in adjacent areas not covered by the present AD and by an FAA determination that subject fatigue damage occurs at an exposure threshold lower than the 35,000 hours' time in service established by the superseded AD.

Interested persons have been afforded an opportunity to participate in the making of the amendment. No objections were received. Accordingly, the proposal is adopted without change.

Adoption of the Amendment

Accordingly, pursuant to the authority delegated to me by the Administrator, § 39.13 of Part 39 of the Federal Aviation Regulations (14 CFR 39.13) is amended, by adding the following new airworthiness directive:

Lockheed-California Company: Applies to all Model 188A and 188C series airplanes certificated in all categories.

To prevent loss of strength capability of the wing due to fatigue cracking accomplish the following; unless previously accomplished:

(a) Before accumulating 30,000 hours' time in service or within the next 100 hours' time in service on those airplanes with 30,000 or more hours' time in service, unless accomplished within last 400 hours:

(1) Inspect the wing front spar lower cap per paragraph (d) of this AD; and

(2) Reinspect per paragraph (d) prior to accumulating 500 hours' time in service since the last inspection required by paragraph (a)(1).

(b) Within 400 hours' time in service since inspection required in (a)(2) and thereafter at intervals not to exceed 2,000 hours' time in service, inspect per paragraph (e) of this AD.

(c) Inspections per paragraph (e) of this AD (including the 2,000 hour repetitive inspection) may be substituted for the inspections required by paragraph (a)(1) and (a)(2) of this AD.

(d) Inspect wing front spar lower cap per paragraph 1.D.(1) of Lockheed Alert Service Bulletin 88/SB-699B dated July 13, 1979, hereinafter referred to as Lockheed ASB 88/5B-699B.

(e) Inspect spar cap adjacent structure per paragraph 1.D.(2), 1.D.(3), 1.D.(4), 1.D.(5), 1.D.(6), 1.D.(7), and 1.D.(8) of Lockheed ASB 88/SB-699B.

(f) Repair any detected cracks prior to further flight per Lockheed ASB 88/SB-699B.

(g) Incorporation of the modifications/repairs defined by the drawings listed below terminates the inspection requirements of this AD for the listed paragraphs in ASB 88/SB-699B.

(1) Drawing numbers 842174 and 842181 for paragraphs 1.D.1, 1.D.3, 1.D.4 (spar cap only), 1.D.5 (spar cap at Station 203), 1.D.7 (spar cap at Stations 159 and 167).

(2) Drawing Numbers 842185 and 842186 for paragraphs 1.D.2 and 1.D.6.

(3) Drawing Number 842222 for paragraph 1.D.4 (spar web and cap at Station 203 only).

(4) Drawing Number 842217 for paragraph 1.D.4 (spar web at Station 216).

(5) Drawing Number 841738 (spar web at Station 160).

(h) Alternative inspections, modifications or other actions which provide an equivalent level of safety may be used when approved by the Chief, Aircraft Engineering Division, FAA Western Region.

This amendment supersedes Amendment 39-3204 (43 FR 19210) AD 78-09-06. This amendment becomes effective June 23, 1980.

(Secs. 313(a), 601, and 603, Federal Aviation Act of 1958, as amended (49 U.S.C. 1354(a), 1421, and 1423); sec. 6(c) Department of Transportation Act (49 U.S.C. 1655(c)); and 14 CFR 11.89)

Note.—The FAA has determined that this document involves a final regulation which is not considered to be significant under Executive Order 12044 as implemented by DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979). In addition, the expected impact is so minimal that this action does not warrant preparation of a regulatory evaluation.

Issued in Los Angeles, Calif., on May 5, 1980.

W. R. Frehse,

Acting Director, FAA Western Region.

[FR Doc. 80-15095 Filed 5-16-80; 8:45 am]

BILLING CODE 4910-13-M

---

14 CFR Part 71

[Airspace Docket No. 80-NE-12]

Alteration of VOR Federal Airway

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: This amendment alters the description of VOR Federal Airway V-93 between Chester, Mass., and Keene, N.H., by reducing the airway width to 7 miles wide for 12 miles northwest of Chester. This action provides additional controlled airspace for the new Standard Instrument Approach Procedure (SIAP) serving Runway 26 at Pittsfield Municipal Airport, Pittsfield, Mass.

EFFECTIVE DATE: May 15, 1980.

FOR FURTHER INFORMATION CONTACT: Lewis W. Still, Airspace Regulations Branch (AAT-230), Airspace and Air Traffic Rules Division, Air Traffic Service, Federal Aviation Administration, 800 Independence Avenue, SW., Washington, D.C. 20591; telephone: (202) 426-8525.

SUPPLEMENTARY INFORMATION: The purpose of this amendment to Subpart C of Part 71 of the Federal Aviation Regulations (14 CFR Part 71) is to alter the description of V-93 between Chester, Mass., and Keene, N.H., by reducing the airway width, in part, to 7 miles. The alteration will add protected airspace for the new SIAP serving Runway 26 at Pittsfield Municipal Airport, Pittsfield, Mass. This action will reduce controller workload by eliminating excessive coordination and increase flight safety. Subpart C of Part 71 was republished in the **Federal Register** on January 2, 1980 (45 FR 307). Since route width reduction is minor in nature in this instance and is necessary to provide the additional controlled airspace for the new approach procedures to become effective without undue delay, I find good cause, in the interest of flight safety, that notice and public procedure are impractical and this amendment may be adopted immediately.

Adoption of the Amendment

Accordingly, pursuant to the authority delegated to me by the Administrator, § 71.123 of Part 71 of the Federal Aviation Regulations (14 CFR Part 71) as republished (45 FR 307) is amended, effective May 15, 1980, as follows:

Under V-93—"Pawling, N.Y.; Chester, Mass.; Keene, N.H.;" is deleted and "Pawling, N.Y.; Chester, Mass., 12 miles wide (4 miles E. and 3 miles W. of centerline); Keene, N.H.;" is substituted therefor.

(Secs. 307(a) and 313(a), Federal Aviation Act of 1958 (49 U.S.C. 1348(a) and 1354(a)); sec. 6(c), Department of Transportation Act (49 U.S.C. 1655(c)); and 14 CFR 11.69.)

Note.—The FAA has determined that this document involves a regulation which is not significant under Executive Order 12044, as implemented by DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979). Since this regulatory action involves an established body of technical requirements for which frequent and routine amendments are necessary to keep them operationally current and promote safe flight operations, the anticipated impact is so minimal that this action does not warrant preparation of a regulatory evaluation.

Issued in Washington, D.C., on May 9, 1980.

B. Keith Potts,

Acting Chief, Airspace and Air Traffic Rules Division.

[FR Doc. 80-15086 Filed 5-16-80; 8:45 am]

BILLING CODE 4910-13-M

[Airspace Docket No. 79-GL-66]

Alteration of Control Zone

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: The nature of this federal action is to expend the existing control zone serving Flying Cloud Airport, Minneapolis, Minnesota, and to designate additional controlled airspace to encompass revisions to existing approach procedures.

EFFECTIVE DATE: July 10, 1980.

FOR FURTHER INFORMATION CONTACT: Doyle W. Hegland, Airspace and Procedures Branch, Air Traffic Division, AGL-530, FAA, Great Lakes Region, 2300 East Devon Avenue, Des Plaines, Illinois 60018, Telephone (312) 694-4500, Extension 456.

SUPPLEMENTARY INFORMATION: The intended effect of this action is to insure segregation of the aircraft using these approach procedures in instrument weather conditions and other aircraft operating under visual weather conditions. The expansion and slight alteration to the control zone boundary is mainly a redefinition of the boundary. The additional airspace required is an area approximately three miles by five miles to the west of the airport. The circumstance which created this action was the addition of a new Very High Frequency Omnidirectional Range (VOR) Runway 9 Right procedure serving this airport. A review of the terminal airspace requirements necessitates that the FAA add the additional airspace to insure that all procedures will be contained within controlled airspace. In addition, aeronautical maps and charts will reflect the defined areas which will enable other aircraft to circumnavigate the area in order to comply with applicable visual flight rule requirements.

Discussion of Comments

On page 13112 of the **Federal Register** dated February 28, 1980, the Federal Aviation Administration published a Notice of Proposed Rule Making which would amend § 71.171 of Part 71 of the Federal Aviation Regulations so as to alter the control zone at Minneapolis, Minnesota. Interested persons were invited to participate in this rulemaking proceeding by submitting written comments on the proposal to the FAA. No objections were received as a result of the Notice of Proposed Rulemaking.

Adoption of Amendment

Accordingly, pursuant to the authority delegated to me by the Administrator, Part 71 of the Federal Aviation Regulations (14 CFR Part 71) is amended, effective July 10, 1980, as follows:

In § 71.171 (45 FR 356) the following control zone is amended to read:

Minneapolis, Minn. (Flying Cloud)

Within a 5 statute mile radius of Flying Cloud Airport, Minneapolis, Minnesota (latitude 44°49'30" N; longitude 93°27'45" W); within 2.5 statute miles north of the Flying Cloud (FCM) VOR 292° radial, extending from the 5 mile radius zone to 7.5 statute miles west of the VOR; within 3 statute miles each side of the 276° radial of the FCM VOR extending from the 5 mile radius zone to 8.5 statute miles west of the VOR; and within 2.5 statute miles each side of the FCM VOR 179° radial extending from the 5 mile radius zone to 6.5 miles south of the VOR. This control zone is effective during the specific dates and times established in advance by a Notice to Airmen. The effective dates and times will thereafter be continuously published in the Airport/Facility Directory.

(Sec. 307(a), Federal Aviation Act of 1958 (49 U.S.C. 1348(a)); sec. 6(c), Department of Transportation Act (49 U.S.C. 1655(c)); and Sec. 11.61 of the Federal Aviation Regulations (14 CFR 11.61))

Note.—The Federal Aviation Administration has determined that this document involves a regulation which is not significant under Executive Order 12044, as implemented by Department of Transportation Regulatory Policies and Procedures (44 FR 11034; February 26, 1979). A copy of the final evaluation prepared for this document is contained in the docket. A copy of it may be obtained by writing to the Federal Aviation Administration, Attention: Rules Docket Clerk (AGL-7), Docket No. 79-GL-66, 2300 East Devon Avenue, Des Plaines, Illinois.

Issued in Des Plaines, Ill., on May 1, 1980.

Wm. S. Dalton,

Acting Director, Great Lakes Region.

[FR Doc. 80-15090 Filed 5-16-80; 8:45 am]

BILLING CODE 4910-13-M

---

14 CFR Part 71

[Airspace Docket No. 80-SO-12]

Alteration of Transition Area, Mocksville, N.C.

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: This rule redesignates an extension in the Mocksville, North Carolina, transition area. This action provides controlled airspace required to protect instrument flight operations at the Twin Lakes Airport.

EFFECTIVE DATE: June 5, 1980.

ADDRESS: Federal Aviation Administration, Chief, Air Traffic Division, P.O. Box 20636, Atlanta, Georgia 30320.

FOR FURTHER INFORMATION CONTACT: Harlen D. Phillips, Airspace and Procedures Branch, Federal Aviation Administration, P.O. Box 20636, Atlanta, Georgia, 30320; telephone: 404-763-7646.

SUPPLEMENTARY INFORMATION: In the Mocksville, North Carolina, Transition Area described in § 71.181 (45 FR 445), an extension was designated on the 278° bearing from the Davie RBN to provide controlled airspace for aircraft executing the NDB RWY 9 standard approach procedure at the Twin Lakes Airport. The final approach course in the procedure has been changed to the 275° bearing. It is necessary to redesignate the extension to provide the required controlled airspace to protect aircraft executing the procedure.

Since this amendment is minor in nature and creates no greater burden on the public, notice and public procedure hereon are unnecessary.

Adoption of the Amendment

Accordingly, Subpart G, § 71.181 (45 FR 445) of Part 71 of the Federal Aviation Regulations (14 CFR Part 71) is amended, effective 0901 G.m.t., June 5, 1980, as follows:

Mocksville, N.C.

"* * * 278° * * *" is deleted and "* * * 275° * * *" is substituted therefor.

(Sec. 307(a), Federal Aviation Act of 1958, as amended (49 U.S.C. 1348(a)) sec. 6(c), Department of Transportation Act (49 U.S.C. 1655(c)))

Note.—The Federal Aviation Administration has determined that this document involves a regulation which is not significant under Executive Order 12044, as implemented by DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979). Since this regulatory action involves an established body of technical requirements for which frequent and routine amendments are necessary to keep them operationally current and promote safe flight operations, the anticipated impact is no minimal that this action does not warrant preparation of a regulatory evaluation.

Issued in East Point, Ga., on April 30, 1980.

George R. LaCaille,

Acting Director, Southern Region.

[FR Doc. 80-15091 Filed 5-16-80; 8:45 am]

BILLING CODE 4910-13-M

14 CFR Part 71

[Airspace Docket No. 79-GL-68]

Designation of Federal Airways Area Low Routes, Controlled Airspace, and Reporting Points; Alteration of Transition Area

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final action.

SUMMARY: The nature of this federal action is to designate additional controlled airspace near Van Wert, Ohio to accommodate a new Non-Directional Radio Beacon (NDB) Runway 9 instrument approach procedure into the Van Wert Municipal Airport, Van Wert, Ohio established on the basis of a relocation of the radio beacon from five miles west of the airport to a site on the Airport.

EFFECTIVE DATE: July 10, 1980.

FOR FURTHER INFORMATION CONTACT: Doyle W. Hegland, Airspace and Procedures Branch, Air Traffic Division, AGL-530, FAA, Great Lakes Region, 2300 East Devon Avenue, Des Plaines, Illinois 60018, Telephone (312) 694-4500, Extension 456.

SUPPLEMENTARY INFORMATION: The intended effect of this action is to insure segregation of the aircraft using this approach procedure in instrument weather conditions and other aircraft operating under visual weather conditions. The floor of the controlled airspace will be lowered from 1200 feet above the surface to 700 feet above the surface for a distance of approximately three miles west of that now depicted. The development of the proposed procedure necessitates that the FAA alter the designated airspace to insure that the procedure will be contained within controlled airspace. The minimum descent altitudes for this procedure may be established below the floor of the 700 foot controlled airspace. In addition, aeronautical maps and charts will reflect the area of the instrument procedure which will enable other aircraft to circumnavigate the area in order to comply with applicable visual flight rule requirements.

Discussion of Comments

On page 13777 of the **Federal Register** dated March 3, 1980, the Federal Aviation Administration published a Notice of Proposed Rule Making which would amend Section 71.101 of Part 71 of the Federal Aviation Regulations so as to alter the transition area at Van Wert, Ohio. Interested persons were invited to participate in this rulemaking

proceeding by submitting written comments on the proposal to the FAA.

No objections were received as a result of the Notice of Proposed Rule Making.

Adoption of Amendment

Accordingly, pursuant to the authority delegated to me by the Administrator, Part 71 of the Federal Aviation Regulations (14 CFR Part 71) is amended, effective July 10, 1980, as follows:

In Section 71.181 (45 FR 445) the following transition area is amended to read:

Van Wert, Ohio

That airspace extending upward from 700 feet above the ground within a 5 miles radius of Van Wert Municipal Airport, Van Wert, Ohio (latitude 40°51'51" N., longitude 84°36'36" W.) within 3 miles either side of the 271° bearing from the airport extending from the five mile radius area to 8 miles west of the airport.

(Sec. 307(a), Federal Aviation Act of 1958 (49 U.S.C. 1348(a)); Sec. 6(c), Department of Transportation Act (49 U.S.C. 1655(c)); and Sec. 11.61 of the Federal Aviation Regulations (14 CFR 11.61))

The Federal Aviation Administration has determined that this document involves a regulation which is not significant under Executive Order 12044, as implemented by Department of Transportation Regulatory Policies and Procedures (44 FR 11034; February 26, 1979). A copy of the final evaluation prepared for this document is contained in the docket. A copy of it may be obtained by writing to the Federal Aviation Administration, Attention: Rules Docket Clerk (AGL-7), Docket No. 79-GL-68, 2300 East Devon Avenue, Des Plains, Illinois.

Issued in Des Plaines, Illinois, on May 5, 1980.

Wayne J. Barlow,

Director, Great Lakes Region.

14 CFR Part 71

[Airspace Docket No. 79-GL-63]

Designation of Federal Airways, Area Low Routes, Controlled Airspace, and Reporting Points; Alteration of Transition Area

AGENCY: Federal Aviation Administration, (FAA), DOT.

ACTION: Final rule.

SUMMARY: The nature of this federal action is to designate additional controlled airspace near Rochester, Minnesota to accommodate a revised Instrument Landing System (ILS) Runway 13 instrument approach procedure into the Rochester Municipal Airport, Rochester, Minnesota.

EFFECTIVE DATE: July 10, 1980.

FOR FURTHER INFORMATION CONTACT: Doyle W. Hegland, Airspace and Procedures Branch, Air Traffic Division, AGL-530, FAA, Great Lakes Region, 2300 East Devon Avenue, Des Plaines, Illinois 60018, Telephone (312) 694-4500, Extension 456.

SUPPLEMENTARY INFORMATION: The intended effect of this action is to insure segregation of the aircraft using this approach procedure in instrument weather conditions and other aircraft operating under visual weather conditions. The floor of the controlled airspace will be lowered from 1200 feet above the surface to 700 feet above the surface for a distance of approximately two miles beyond that now depicted. The development of the proposed procedure necessitates the FAA to alter the designated airspace to insure that the procedure will be contained within controlled airspace. In addition, aeronautical maps and charts will reflect the area of the instrument procedure which will enable other aircraft to circumnavigate the area in order to comply with applicable visual flight rule requirements.

Discussion of Comments

On page 13776 of the **Federal Register** dated March 3, 1980, the Federal Aviation Administration published a Notice of Proposed Rule Making which would amend Section 71.181 of Part 71 of the Federal Aviation regulations so as to alter the transition area at Rochester, Minnesota. Interested persons were invited to participate in this rulemaking proceeding by submitting written comments on the proposal to the FAA.

No objections were received as a result of the Notice of Proposed Rule Making.

Adoption of Amendment

Accordingly, pursuant to the authority delegated to me by the Administrator, Part 71 of the Federal Aviation Regulations (14 CFR Part 71) is amended, effective July 10, 1980, as follows:

In Section 71.181 (45 FR 445) the following transition area is amended to read:

Rochester, Minn.

That airspace extending upward from 700 feet above the surface within a 19½ mile radius of the Rochester Municipal Airport, Rochester, Minnesota (latitude 43°54'32" N, longitude 92°29'47" W); and within 4½ miles southwest and 9½ miles northeast of the Rochester ILS localizer southeast course, extending from the 19½ mile radius to 24 miles southeast of the airport; and within 5 miles each side of the Rochester ILS localizer northwest course, extending from the 19½ mile radius to 22½ miles northwest of the airport.

(Sec. 307(a), Federal Aviation Act of 1958 (49 U.S.C. 1348(a)); Sec. 6(c), Department of Transportation Act (49 U.S.C. 1655(c)); Sec. 11.61 of the Federal Aviation Regulations (14 CFR 11.61))

The Federal Aviation Administration has determined that this document involves a regulation which is not significant under Executive Order 12044, as implemented by Department of Transportation Regulatory Policies and Procedures (44 FR 11034; February 26, 1979). A copy of the final evaluation prepared for this document is contained in the docket. A copy of it may be obtained by writing to the Federal Aviation Administration, Attention: Rules Docket Clerk (AGL-7), Docket No. 79-GL-63, 2300 East Devon Avenue, Des Plaines, Illinois.

Issued in Des Plaines, Illinois, on May 5, 1980.

Designation of Federal Airways, Area Low Routes, Controlled Airspace, and Reporting Points; Alteration of Transition Area

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: The nature of this federal action is to designate additional controlled airspace near Albert Lea, Minnesota to accommodate a revised Very High Frequency Omnidirectional Range (VOR) Runway 16 instrument approach procedure into the Albert Lea Municipal Airport, Albert Lea, Minnesota.

EFFECTIVE DATE: July 10, 1980.

FOR FURTHER INFORMATION CONTACT: Doyle W. Hegland, Airspace and Procedures Branch, Air Traffic Division, AGL-530, FAA, Great Lakes Region, 2300 East Devon Avenue, Des Plaines, Illinois 60018, Telephone (312) 694-4500, Extension 456.

SUPPLEMENTARY INFORMATION: The intended effect of this action is to insure segregation of the aircraft using this approach procedure in instrument

weather conditions and other aircraft operating under visual weather conditions. The floor of the controlled airspace will be lowered from 1200 feet above the surface to 700 feet above the surface for a distance of approximately 3 miles beyond that now depicted. The development of the proposed procedure necessitates that the FAA alter the designated airspace to insure that the procedure will be contained within controlled airspace. The minimum descent altitudes for this procedure may be established below the floor of the 700 foot controlled airspace. In addition, aeronautical maps and charts will reflect the area of the instrument procedure which will enable other aircraft to circumnavigate the area in order to comply with applicable visual flight rule requirements.

Discussion of Comments

On page 13774 of the **Federal Register** dated March 3, 1980, the Federal Aviation Administration published a Notice of Proposed Rule Making which would amend Section 71.181 of Part 71 of the Federal Aviation Regulations so as to alter the transition area at Albert Lea, Minnesota. Interested persons were invited to participate in this rulemaking proceeding by submitting written comments on the proposal to the FAA.

No objections were received as a result of the Notice of Proposed Rule Making.

Adoption of Amendment

Accordingly, pursuant to the authority delegated to me by the Administrator, Part 71 of the Federal Aviation Regulations (14 CFR Part 71) is amended, effective July 10, 1980, as follows:

In Section 71.181 (45 F.R. 445) the following transition area is amended to read:

Albert Lea, Minn.

That airspace extending upward from 700 feet above the surface within an 8.5 mile radius of the Albert Lea, Airport, (latitude 43°40'52" N, longitude 93°22'04" W).

(Sec. 307(a), Federal Aviation Act of 1958 (49 U.S.C. 1348(a)); Sec. 6(c), Department of Transportation Act (49 U.S.C. 1655(c)); and Sec. 11.61 of the Federal Aviation Regulations (14 C.F.R. 11.61))

The Federal Aviation Administration has determined that this document involves a regulation which is not significant under Executive Order 12044, as implemented by Department of Transportation Regulatory Policies and Procedures (44 FR 11034; February 26, 1979). A copy of the final evaluation prepared for this document is contained in the docket. A copy of it may be obtained by writing to the Federal Aviation Administration, Attention: Rules Docket Clerk (AGL-7), Docket No. 80-GL-4, 2300 East Devon Avenue, Des Plaines, Illinois.

Issued in Des Plaines, Illinois, on May 5, 1980.

Wayne J. Barlow

BILLING CODE 4910-13-M

---

14 CFR Part 71

[Airspace Docket No. 80-AAL-2]

Designation of Federal Airways, Area Low Routes, Controlled Airspace, and Reporting Points; Alteration of Transition Area, Homer, Alaska

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: This amendment alters the transition area at Homer, Alaska, to provide additional protected airspace for aircraft conducting the LOC/DME Back Course instrument approach procedure and to provide additional controlled airspace to enable ATC to more efficiently control aircraft operations using radar control procedures from an en route radar facility which will be relocated from Fire Island to Kenai, Alaska. This action is made necessary because a review of the LOC/DME Back Course instrument approach procedure revealed that additional controlled airspace was needed to protect the final approach course to Runway 21, and the planned relocation of the Fire Island en route radar facility to Kenai.

EFFECTIVE DATE: 0901 GMT, July 10, 1980.

FOR FURTHER INFORMATION CONTACT: John Costello, Operations, Procedures, and Airspace Branch, Air Traffic Division, Federal Aviation Administration, Box 14, 701 C Street, Anchorage, Alaska 99513, telephone (907) 271-5902.

SUPPLEMENTARY INFORMATION: On April 7, 1980, a Notice of Proposed Rulemaking was published in the **Federal Register** (45 FR 23465) stating that the Federal Aviation Administration proposed to enlarge the 1,200-foot floor portion of the Homer, Alaska, transition area to provide protected airspace for aircraft conducting the LOC/DME Back Course instrument approach procedure and also to provide adequate controlled airspace for ATC to use radar control procedures from an en route radar facility to be relocated from Fire Island to Kenai. Interested persons were invited to participate in this rulemaking process by submitting written comments on the proposal to the FAA. Only one comment was received, which concurred with the proposal.

Adoption of the Amendment

Accordingly, pursuant to the authority delegated to me Subpart G, § 71.181 of Part 71 of the Federal Aviation Regulations (14 CFR Part 71) as republished (45 FR 445) is amended as follows:

Homer, Alaska

Delete all after "(latitude 59°39'08" N, longitude 151°27'22" W);" and substitute therefor "and that airspace extending upward from 1,200 feet above the surface within a 30-mile radius of the Homer VORTAC extending from the 027° radial clockwise to the 252° radial excluding the portion within Control 1218."

(This amendment is made under the authority of § 307(a) of the Federal Aviation Act of 1958, as amended (49 U.S.C. 1348(a)); § 6(c) of the Department of Transportation Act (49 U.S.C. 1655(c)); and 14 CFR 11.69)

Note.—The FAA has determined that this document involves a regulation which is not significant under Executive Order 12044, as implemented by DOT Regulatory Policies and Procedures (44 FR 1134, February 26, 1979). Since this regulatory action involves an established body of technical requirements for which frequent and routine amendments are necessary to keep them operationally current and promote safe flight operations, and anticipated impact is so minimal that this action does not warrant preparation of a regulatory evaluation.

Issued in Anchorage, Alaska, on May 7, 1980.

Robert L. Faith,

Director, Alaskan Region.

[Airspace Docket No. 80-GL-1]

Designation of Federal Airways, Area Low Routes, Controlled Airspace, and Reporting Points; Alteration of Transition Area

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: The nature of this federal action is to designate additional controlled airspace near Little Falls, Minnesota to accommodate a revised Non-Directional Radio Beacon (NDB) Runway 30 instrument approach procedure into the Little Falls Municipal Airport, Little Falls, Minnesota.

EFFECTIVE DATE: July 10, 1980.

FOR FURTHER INFORMATION CONTACT: Doyle W. Hegland, Airspace and Procedures Branch, Air Traffic Division, AGL–530, FAA, Great Lakes Region, 2300 East Devon Avenue, Des Plaines, Illinois 60018, Telephone (312) 694–4500, Extension 456.

SUPPLEMENTARY INFORMATION: The intended effect of this action is to insure segregation of the aircraft using this approach procedure in instrument weather conditions and other aircraft operating under visual weather conditions. The floor of the controlled airspace will be lowered from 1200 feet above the surface to 700 feet above the surface for a distance of approximately 1.5 miles beyond that now depicted. The development of the proposed procedure necessitates the FAA to alter the designated airspace to insure that the procedure will be contained within controlled airspace. The minimum descent altitudes for this procedure may be established below the floor of the 700 foot controlled airspace. In addition, aeronautical maps and charts will reflect the area of the instrument procedure which will enable other aircraft to circumnavigate the area in order to comply with applicable visual flight rule requirements.

Discussion of Comments

On page 13110 of the **Federal Register** dated February 28, 1980, the Federal Aviation Administration published a Notice of Proposed Rule Making which would amend Section 71.181 of Part 71 of the Federal Aviation Regulations so as to alter the transition area at Little Falls, Minnesota. Interested persons were invited to participate in this rulemaking proceeding by submitting written comments on the proposal to the FAA.

No objections were received as a result of the Notice of Proposed Rule Making.

Adoption of Amendment

Accordingly, pursuant to the authority delegated to me by the Administrator, Part 71 of the Federal Aviation Regulations (14 CFR Part 71) is amended, effective July 10, 1980, as follows:

In Section 71.181 (45 F.R. 445) the following transition area is amended to read:

Little Falls, Minn.

That airspace extending upward from 700 feet above the surface within a 6.5 mile radius of the Little Falls Municipal Airport, Little Falls, Minnesota (latitude 45°56'56" N; longitude 24°20'44" W); within 3.0 miles each side of the 140° bearing from the airport, extending from the 6.5 mile radius area out to 8.0 miles southeast of the airport, excluding that portion which overlies the Camp Ripley, Minnesota transition area.

(Sec. 307(a), Federal Aviation Act of 1958 (49 U.S.C. 1348(a)); Sec. 6(c), Department of Transportation Act (49 U.S.C. 1655(c)); Sec. 11.61 of the Federal Aviation Regulations (14 C.F.R. 11.61))

The Federal Aviation Administration has determined that this document involves a regulation which is not significant under Executive Order 12044, as implemented by Department of Transportation Regulatory Policies and Procedures (44 FR 11034; February 26, 1979). A copy of the final evaluation prepared for this document is contained in the docket. A copy of it may be obtained by writing to the Federal Aviation Administration, Attention: Rules Docket Clerk (AGL–7), Docket No. 80–GL–1, 2300 East Devon Avenue, Des Plaines, Illinois.

Issued in Des Plaines, Illinois, on May 5, 1980.

Wayne J. Barlow,

Director, Great Lakes Region.

[FR Doc. 80–15098 Filed 5–16–80; 8:45 am]

BILLING CODE 4910–13–M

---

14 CFR Part 71

[Airspace Docket No. 80–GL–3]

Designation of Federal Airways Area Low Routes, Controlled Airspace, and Reporting Points; Designation of Transition Area

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: The nature of this Federal action is to designate controlled airspace near Dodge Center, Minnesota to accommodate a new Very High Frequency Omnidirectional Range (VOR–A) instrument approach into Dodge County Municipal Airport, Dodge Center, Minnesota established on the basis of a request from the Dodge County Airport officials to provide that facility with instrument approach capability.

EFFECTIVE DATE: July 10, 1980.

FOR FURTHER INFORMATION CONTACT: Doyle W. Hegland, Airspace and Procedures Branch, Air Traffic Division, AGL–530, FAA, Great Lakes Region, 2300 East Devon Avenue, Des Plaines, Illinois 60013, Telephone (312) 694–4500, Extension 456.

SUPPLEMENTARY INFORMATION: The intended effect of this action is to insure segregation of the aircraft using this approach procedure in instrument weather conditions and other aircraft operating under visual conditions. The floor of the controlled airspace in this area will be lowered from 1200' above ground to 700' above ground. The development of the proposed instrument procedures necessitates that the FAA lower the floor of the controlled airspace to insure that the procedure will be contained within controlled airspace. The minimum descent altitude for this procedure may be established below the floor of the 700 foot controlled airspace. In addition, aeronautical maps and charts will reflect the area of the instrument procedure which will enable other aircraft to circumnavigate the area in order to comply with applicable visual flight rule requirements.

Discussion of Comments

On page 13775 of the **Federal Register** dated March 3, 1980, the Federal Aviation Administration published a Notice of Proposed Rule Making which would amend Section 71.181 of Part 71 of the Federal Aviation Regulations so as to designate a transition area at Dodge Center, Minnesota. Interested persons were invited to participate in this rulemaking proceeding by submitting written comments on the proposal to the FAA.

No objections were received as a result of the Notice of Proposed Rule Making.

Adoption of Amendment

Accordingly, pursuant to the authority delegated to me by the Administrator, Part 71 of the Federal Aviation Regulations (14 CFR Part 71) is amended, effective July 10, 1980, as follows:

In Section 71.181 (45 FR 445) the following transition area is amended to read:

Dodge Center, Minnesota

That airspace extending upward from 700 feet above the surface within a 6.5 mile radius of the Dodge County Municipal Airport, Dodge Center, Minnesota (Latitude 44°01'15" N; Longitude 92°50'00" W); excluding that portion which overlies the Rochester, Minnesota transition area.

(Sec. 307(a), Federal Aviation Act of 1958 (49 U.S.C. 1348(a)); Sec. 6(c), Department of Transportation Act (49 U.S.C. 1655(c)); Sec. 11.61 of the Federal Aviation Regulations (14 CFR 11.61).)

The Federal Aviation Administration has determined that this document involves a regulation which is not significant under Executive Order 12044, as implemented by Department of Transportation Regulatory Policies and Procedures (44 FR 11034; February 26, 1979). A copy of the final evaluation prepared for this document is contained

in the docket. A copy of it may be obtained by writing to the Federal Aviation Administration, Attention: Rules Docket Clerk (AGL-7), Docket No. 80-GL-3, 2300 East Devon Avenue, Des Plaines, Illinois.

Issued in Des Plaines, Illinois, on May 5, 1980.

Wayne J. Barlow,

Director, Great Lakes Region.

14 CFR Part 71

[Airspace Docket No. 80-WE-3]

Designation of Federal Airways, Area Low Routes, Controlled Airspace, and Reporting Points; Establishment of Transition Area

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: This amendment designates a transition area at St. Johns, Arizona. The transition area is necessary to provide controlled airspace for arrival/departure operations for the St. Johns Municipal Airport, St. Johns, Arizona.

EFFECTIVE DATE: July 10, 1980.

FOR FURTHER INFORMATION CONTACT: Mr. Thomas W. Binczak, Airspace and Procedures Branch, Air Traffic Division, Federal Aviation Administration, 15000 Aviation Boulevard, Lawndale, California 90261. Telephone: (213) 536-6182.

SUPPLEMENTARY INFORMATION:

History

On March 31, 1980, the FAA proposed to amend Part 71 of the Federal Aviation Regulations (14 CFR Part 71) to designate a transition area for St. Johns, Arizona (45 FR 20902). The FAA has established an instrument approach procedure (VOR/DME-A) for the St. Johns Municipal Airport. Designation of this transition area is to provide controlled airspace for increased aircraft operations in the St. Johns area. Interested persons were invited to participate in the rulemaking proceeding by submitting comments on the proposal to the FAA. No comments objecting to the proposal were received. This amendment is the same as that proposed in the notice. Section 71.181 was republished in the **Federal Register** on January 2, 1980 (45 FR 445).

The Rule

This amendment to Part 71 of the Federal Aviation Regulations (14 CFR Part 71) designates a transition area at St. Johns, Arizona. This transition area provides protection for IFR arrival/departure operations authorized in the St. Johns, Arizona area. This amendment increases air traffic safety and improves flow control procedures.

Adoption of the Amendment

Accordingly, pursuant to the authority delegated to me by the Administrator, § 71.181 of Part 71 of the Federal Aviation Regulations (14 CFR Part 71) as republished (45 FR 445) is amended, effective 0901 G.m.t., July 10, 1980, as follows:

Under § 71.181 add:

St. Johns, Arizona

That airspace extending upward from 700 feet above the surface within a 5-mile radius of St. Johns Municipal Airport (latitude 34°31'15" N., longitude 109°22'45" W.) and within 4 miles each side of the St. Johns VORTAC 294° radial extending from the 5-mile radius area to the VORTAC.

(Secs. 307(a) and 313(a), Federal Aviation Act of 1958 (49 U.S.C. 1348(a) and 1354(a)); Sec. 6(c), Department of Transportation Act (49 U.S.C. 1655(c)); and 14 CFR 11.69)

The FAA has determined that this document involves a regulation which is not significant under Executive Order 12044, as implemented by DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979). Since this regulatory action involves an established body of technical requirements for which frequent and routine amendments are necessary to keep them operationally current and promote safe flight operations, the anticipated impact is so minimal that this action does not warrant preparation of a regulatory evaluation.

Issued in Los Angeles, California on May 5, 1980.

W. R. Frehse,

Acting Director, Western Region.

14 CFR Part 71

[Airspace Docket No. 80-ASW-5]

Designation of Federal Airways, Area Low Routes, Controlled Airspace, and Reporting Points; Designation of Transition Area: Antlers, Oklahoma

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: The nature of the action being taken is to designate a transition area at Antlers, Okla. The intended effect of the action is to provide controlled airspace for aircraft executing a new instrument approach procedure to the Antlers Municipal Airport. The circumstance which created the need for the action is the proposed establishment of a nondirectional radio beacon (NDB) located on the airport.

EFFECTIVE DATE: July 10, 1980.

FOR FURTHER INFORMATION CONTACT: Kenneth L. Stephenson, Airspace and Procedures Branch (ASW-535), Air Traffic Division, Southwest Region, Federal Aviation Administration, P.O. Box 1689, Fort Worth, Texas 76101; telephone 817-624-4911, extension 302.

SUPPLEMENTARY INFORMATION:

History

On March 13, 1980, a notice of proposed rule making was published in the **Federal Register** (45 FR 16198) stating that the Federal Aviation Administration proposed to designate the Antlers, Oklahoma, transition area. Interested persons were invited to participate in this rule making proceeding by submitting written comments on the proposal to the Federal Aviation Administration. Comments were received without objections. Except for editorial changes this amendment is that proposed in the notice.

The Rule

This amendment to Subpart G of Part 71 of the Federal Aviation Regulations (14 CFR 71) designates the Antlers, Okla., transition area. This action provides controlled airspace from 700 feet above the ground for the protection of aircraft executing proposed instrument approach procedures to the Antlers Municipal Airport.

Adoption of the Amendment

Accordingly, pursuant to the authority delegated to me by the Administrator, Subpart G of Part 71 of the Federal Aviation Regulations (14 CFR Part 71) as republished (45 FR 445) is amended, effective 0901 GMT, July 10, 1980, as follows.

In Subpart G, 71.181 (45 FR 445), the following transition area is designated:

Antlers, Oklahoma

That airspace extending upward from 700 feet above the surface within a 6.5-mile radius of the Antlers Municipal Airport (latitude 34°11'34"N., longitude 95°38'59"W.) and within 3.5 miles each side of the 172° bearing of the NDB (latitude 34°11'30"N., longitude 95°39'06"W.), extending from the 6.5-mile radius area to 8.5 miles south of the NDB.

(Sec. 307(a), Federal Aviation Act of 1958 (49 U.S.C. 1348(a); and Sec. 6(c), Department of Transportation Act (49 U.S.C. 1655(c)))

Note.—The FAA has determined that this document involves a regulation which is not significant under Executive Order 12044, as implemented by DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979). Since this regulatory action involves an established body of technical requirements for which frequent and routine amendments are necessary to keep them operationally current and promote safe flight operations, the anticipated impact is so minimal that this action does not warrant preparation of a regulatory evaluation.

Issued in Fort Worth, Tex., on May 6, 1980.

F. E. Whitfield,

Acting Director, Southwest Region.

[FR Doc. 80-15106 Filed 5-16-80; 8:45 am]

BILLING CODE 4910-13-M

14 CFR Part 71

[Airspace Docket No. 79-ASW-60]

Designation of Federal Airways, Area Low Routes, Controlled Airspace, and Reporting Points; Alteration of Transition Area: Lafayette, Louisiana

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Correction to final rule.

SUMMARY: The nature of the action being taken is to correct a **Federal Register** publication that altered the transition area at Louisiana. The intended effect of the action is to provide controlled airspace for aircraft executing instrument approach procedures to the Lafayette Regional, Acadiana Regional, the Abbeville Municipal Airports. The circumstances which created the need for the action is that the airspace was not properly described as necessary for the protection of aircraft.

EFFECTIVE DATE: July 10, 1980.

FOR FURTHER INFORMATION CONTACT: Kenneth L. Stephenson, Airspace and Procedures Branch (ASW-535), Air Traffic Division, Southwest Region, Federal Aviation Administration, P.O. Box 1689, Fort Worth, Texas 76101; telephone 817-624-4911, extension 302.

SUPPLEMENTARY INFORMATION: Federal Register Document 80-10617 was published on April 10, 1980, (45 FR 24455), and altered the transition area at Lafayette, La. Inadvertently, in the description of the transition area, the extension to the Abbeville Municipal Airport was improperly described, and action is taken herein to correct the description. This correction is a minor matter upon which the public would have no particular desire to comment. Therefore, notice and public procedure are not necessary.

Adoption of the Amendment

Accordingly, pursuant to the authority delegated to me by the Administrator, Subpart G of Part 71 of the Federal Aviation Regulations (14 CFR Part 71) as republished (44 FR 442) is amended, effective 0901 GMT, July 10, 1980, as follows.

In Subpart G, 71.181 (45 FR 445), the Lafayette, La., transition area is amended by deleting the present description and substituting the following:

Lafayette, La.

That airspace extending upward from 700 feet above the surface within an 8.5-mile radius of the Lafayette Regional Airport (latitude 30°12'14"N., longitude 91°59'16"W.); within a 6.5-mile radius of the Abbeville Municipal Airport (latitude 29°58'30"N., longitude 92°05'00"W.) and within 2 miles north and 3 miles south of the 206° radial of the Lafayette VORTAC extending from the 6.5-mile radius to 9.5 miles northeast; within a 6.5-mile radius of the Acadiana Regional Airport (latitude 30°02'15"N., longitude 91°53'02"W.).

(Sec. 307(a), Federal Aviation Act of 1958 (49 U.S.C. 1348(a); and Sec. 6(c), Department of Transportation Act (49 U.S.C. 1655(c)).)

The FAA has determined that this document involves a regulation which is not significant under Executive Order 12044, as implemented by DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979). Since this regulatory action involves an established body of technical requirements for which frequent and routine amendments are necessary to keep them operationally current and promote safe flight operations, the anticipated impact is so minimal that this action does not warrant preparation of a regulatory evaluation.

Issued in Fort Worth, Tex., on May 8, 1980.

F. E. Whitfield,

Acting Director, Southwest Region.

14 CFR Part 71

[Airspace Docket No. 80-EA-5]

Designation of Federal Airways, Area Low Routes, Controlled Airspace, and Reporting Points; Alteration of Transition Areas for Quantico, Va., and Cambridge, Md., and Control Zone for Quantico, Va.

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: This rule alters the Control Zone of Quantico, Va., and Transition Areas for Quantico, Va., and Cambridge, Md., by changing the names of the Quantico Marine Corp. Air Station and the Cambridge Municipal Airport.

EFFECTIVE DATE: May 19, 1980.

FOR FURTHER INFORMATION CONTACT: Charles J. Bell, Airspace and Procedures Branch, AEA-530, Air Traffic Division, Federal Aviation Administration, Federal Building, J.F.K. International Airport, Jamaica, New York 11430, Telephone (212) 995-3391.

SUPPLEMENTARY INFORMATION: This rule is editorial and does not impose any additional burden on any person. In view of the foregoing, notice and public procedure hereon are unnecessary and the rule may be made effective in less than 30 days.

Adoption of the Amendment

Accordingly, pursuant to the authority delegated to me by the Administrator Subparts F & G of Part 71 of the Federal Aviation Regulations (14 CFR Part 71) are amended, effective upon publication in the **Federal Register**, as follows:

1. Amend § 71.171 of Part 71, Federal Aviation Regulations, by altering the description of the Quantico, Virginia control zone as follows:

In the text delete "of Quantico MCAS (Turner Field) Quantico, Virginia" and substitute therefor, "of Quantico MCAF (Turner Field) Quantico, Virginia;".

2. Amend § 71.181 of Part 71 of the Federal Aviation Regulations so as to amend the description of the Quantico, Virginia, 700-foot floor transition area as follows:

In the text delete "of Quantico MCAS (Turner Field) Quantico, Virginia;" and substitute therefor, "of Quantico, MCAF (Turner Field) Quantico, Virginia;".

3. Amend § 71.181 of Part 71 of the Federal Aviation Regulations so as to amend the description of the Cambridge, Maryland, 700-foot floor transition areas as follows:

In the text delete, "of Cambridge Municipal Airport, Cambridge, Maryland;" and substitute therefor, "of Cambridge-Dorchester Municipal Airport, Cambridge, Maryland;".

(Section 307(a), and 313(a), Federal Aviation Act of 1958 [49 U.S.C. 1348(a) and 1354(c)]; Sec. 6(c) of the Department of Transportation Act [49 U.S.C. 1655(c)]; and 14 CFR 11.69)

Issued in Jamaica, New York, on April 30, 1980.

Timothy L. Hartnett,

Acting Director, Eastern Region.

[FR Doc. 80-15232 Filed 5-16-80; 8:45 am]

BILLING CODE 4910-13-M

14 CFR Part 183

[Docket No. 20339; Amdt. No. 183-7]

Representatives of the Administrator; Authorization for the Designation of Acoustical Engineering Representatives

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: This amendment authorizes the use of designated acoustical engineering representatives. Those representatives will perform specified functions leading to FAA noise level approval for aircraft covered by noise certification rules. Those functions may be performed at any location whenever the designated representative determines the activity or data conforms to the requirements of the applicable regulations. Neither noise level certification nor approval of equivalencies to prescribed procedures and standards are within the scope of designated representatives' authority. This action meets the need to provide greater flexibility and efficiency in the noise certification process.

DATES: Effective date—May 19, 1980. Comments must be received by July 18, 1980.

ADDRESSES: Submit comments on the rule in duplicate to: Federal Aviation Administration, Office of the Chief Counsel, Attn.: Rules Docket (AGC-204), Room 916, Docket No. 20339, 800 Independence Avenue, SW., Washington, DC 20591. Or, deliver comments in duplicate to: FAA Rules Docket, Room 916, 800 Independence Avenue, SW., Washington, DC. Comments may be examined in the Rules Docket, Monday through Friday between 8:30 a.m. and 5:00 p.m.

FOR FURTHER INFORMATION CONTACT: Harvey H. Van Wyen, Technical Analysis Branch (AWS-110), Aircraft Engineering Division, Office of Airworthiness, Federal Aviation Administration, 800 Independence Avenue, SW., Washington, DC 20591; telephone (202) 426-8192.

SUPPLEMENTARY INFORMATION:

Request for Comments

Although this action is in the form of a final rule, which involves the management, procedures, and personnel of the FAA and, thus, need not be preceded by notice and public procedure, comments are invited on the rule. When the comment period ends, the FAA will use the comments received and any other available information to review the regulation. After the review, if changes are found to be appropriate, the FAA will consider adopting amendments to the regulations. Persons wishing to have receipt of their comments acknowledged must send with their comments a stamped, self-addressed post card on which the following statement is made: "Comments to Docket No. 20339." The post card will be date/stamped and returned to the commenter.

Discussion of the Amendment

This amendment to Part 183 of the Federal Aviation Regulations (FARs) expands the use of designated engineering representatives of the Administrator. Those representatives will perform authorized functions for noise level approvals for aircraft covered by FAA noise certification standards. The designated representatives are qualified, private persons. Authority is delegated to those individuals to perform specified functions concerning the conduct and evaluation of aircraft noise certification tests and test data conformity to applicable regulations, including methodologies and any equivalencies previously approved by the Director, Environment and Energy for that noise test series. Delegation of those functions is contemplated and authorized under section 314 of the Federal Aviation Act of 1958, as amended (49 U.S.C. 1355).

The Chief of the Aircraft Engineering Division, Office of Airworthiness with the approval of the Director, Environment and Energy (or their designees), may select representatives from qualified persons who apply for designation. Application for designation is made by a letter accompanied by a statement of qualifications to properly perform those prescribed functions. Minimum qualification for designated representatives include eight years of appropriate and progressively responsible professional engineering experience, one year of which must be in association with, and recognized by, the FAA. For purposes of meeting the experience requirement, applicants should identify their experience with aircraft noise flight testing; acoustical instrumentation and measurement; data correction and analysis; noise certification regulations, documentation, and guidance materials. The qualifications of each applicant will be carefully reviewed by the FAA. Designations will include conditions and limitations appropriate to the representative's training, experience, and knowledge.

Functions of designated representatives are restricted to those for which the representative is qualified and found necessary to determine conformity with the noise certification test requirements for aircraft covered by the noise standards. For transport category large airplanes and turbojet-powered airplanes, the applicable rules are prescribed under FAR Part 36, Subpart B, Appendixes A and B, and the test conditions prescribed in Appendix C. For propeller-driven small airplanes, the rules are under FAR Part 36, Subpart F; and Appendix F, Parts A, B, and C. Those functions may include witnessing and approving aircraft noise tests and approving measured noise data and noise analyses and results. The designated representative will determine conformity to the applicable regulations, including noise evaluation methodology and any equivalencies approved by the Director, Environment and Energy. Those determinations lead to, but are not themselves, findings or approvals of compliance with the noise level requirements. Thus, a representative may not (1) determine that a design change is not an "acoustical change"; (2) approve "equivalencies" to prescribed procedures or standards; or (3) certificate aircraft noise levels. The representative must make such reports as are required by the Administrator or the Administrator's designee.

As prescribed for other designated representatives under Part 183, the acoustical engineering representatives will be issued a "Certificate of Designation" specifying the kind of designation for which the representative is qualified. The certificate will also contain the conditions and limitations that apply to the exercise of the designation. Unless sooner terminated, the certificate is effective for one year after it is issued; it may be renewed for additional one-year intervals at the Administrator's discretion.

Under this amendment, Part 183 does not require aircraft manufacturers or other affected persons to use an acoustical engineering representative. In some cases, an applicant for noise certification or acoustical change approval may not have an employee who is qualified to be so designated. Or, the applicant may not wish to employ, or contract with, a qualified person to serve in that capacity. In those situations, qualified FAA personnel will continue to perform those functions.

Editorial Changes

This amendment to Part 183 includes the editorial changes necessary to reflect the reorganization of the FAA's Flight Standards Service, under the Associate Administrator for Aviation Standards, as the Office of Flight

Operations and the Office of Airworthiness. The title "Flight Standards" is retained, however, for FAA's regional and field organizations. Thus, under § 183.11, the Chief of the Aircraft Engineering Division (or the Chief's designee) may select Designated Engineering Representatives and the Chief of the Aircraft Manufacturing Division (or the Chief's designee) may select Designated Manufacturing Inspection Representatives. In addition, the words "the representative" are substituted for the word "he" in the various paragraphs under § 183.29, to clarify that the determination involved is made by the designated representative.

Cost Evaluation

This amendment will result in potential cost savings to applicants for noise level approvals. It permits the use of designated representatives to avoid costly delays in conducting and validating noise certification tests. Applicants will be better able to plan and expedite aircraft noise tests under Part 36 when conditions are more favorable to conducting those tests. In addition, it is expected that this amendment will lessen the demand for the use of FAA personnel, freeing them to perform their other duties with a resultant cost savings for the Federal Government.

As previously discussed, this amendment does not require the use of designated engineering representatives or the employment of, or contracting with, qualified personnel to perform the functions of those representatives. The election to use representatives is left entirely to the discretion of applicants. They may base their decisions on their particular circumstances. Thus, the expected impact of this amendment is so minimal that it does not warrant a full regulatory evaluation analysing the economic consequences of the regulation.

Effective Date

This amendment to the Federal Aviation Regulations involves matters relating to the agency's management, personnel, delegation of authority, and the process employed in fulfilling the FAA's statutory responsibilities. Accordingly, I find, under 5 U.S.C. 553, that notice and public procedure is unnecessary and that good cause exists for making it effective in less than 30 days after publication in the **Federal Register.**

By so doing, the benefits of the use of designated acoustical engineering representatives are made immediately available to those applicants for noise level approvals who elect to take advantage of the relief granted by the rule change. The FAA is currently implementing the necessary administrative matters to begin designating private individuals as acoustical engineering representatives as soon as practicable.

Adoption of the Amendment

Accordingly, Part 183 of the Federal Aviation Regulations (14 CFR Part 183) is amended, effective May 19, 1980, as follows:

1. By amending § 183.11 by amending paragraph (c) to read as follows:

§ 183.11 Selection.

* * * * *

(c)(1) The Chief of the Aircraft Engineering Division, or the Chief's designee, may select Designated Engineering Representatives from qualified persons who apply by a letter accompanied by a "Statement of Qualifications of Designated Engineering Representative."

(2) The Chief of the Aircraft Manufacturing Division, or the Chief's designee, may select Designated Manufacturing Inspection Representatives from qualified persons who apply by a letter accompanied by a "Statement of Qualifications of Designated Manufacturing Inspection Representative."

* * * * *

§ 183.29 [Amended]

2. By amending § 183.29 as follows:

a. By amending paragraphs (a) through (h) by deleting the word "he" wherever it appears and substituting for it the words "the representative."

b. By adding a new paragraph (i) to read as follows:

§ 183.29 Designated engineering representatives.

* * * * *

(i) An acoustical engineering representative may witness and approve aircraft noise certification tests and approve measured noise data and evaluated noise data analyses, within the limits prescribed by, and under the general supervision of, the Administrator, whenever the representative determines that the noise test, test data, and associated analyses are in conformity with the applicable regulations of this chapter. Those regulations include, where appropriate, the methodologies and any equivalencies previously approved by the Director, Environment and Energy, for that noise test series. No designated acoustical engineering representative may determine that a type design change is not an acoustical change, or approve equivalencies to prescribed noise procedures or standards.

(Secs. 313(a), 314, 601, 603, 608, and 609, Federal Aviation Act of 1958, as amended (49 U.S.C. 1354(a), 1355, 1421, 1428, and 1429); Sec. 6(c), Department of Transportation Act (49 U.S.C. 1655(c)))

Note.—The FAA has determined that this document involves a regulation which is not significant under Executive Order 12044, as implemented by DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979), and, as discussed in the preamble, the expected impact of this amendment is so minimal that it does not warrant a full regulatory evaluation.

Issued in Washington, DC, on May 14, 1980.

Langhorne Bond,

Administrator.

[FR Doc. 80-15231 Filed 5-16-80; 8:45 am]

BILLING CODE 4910-13-M

CIVIL AERONAUTICS BOARD

14 CFR Part 380

[SPR-170; Amdt. 10]

Public Charters

AGENCY: Civil Aeronautics Board.

ACTION: Interpretative amendment.

SUMMARY: The CAB is amending its Public Charter rules to make clear that after a major change in a charter package, a charter operator must make all refunds required to be included in the operator-participant contract. The change is at the Board's own initiative.

DATES: Adopted: May 13, 1980. Effective: May 13, 1980.

FOR FURTHER INFORMATION CONTACT: Mark Schwimmer, Office of the General Counsel, Civil Aeronautics Board, 1825 Connecticut Avenue, NW., Washington, D.C. 20428; 202-673-5442.

SUPPLEMENTARY INFORMATION: The Public Charter rule (14 CFR 380.32) requires a charter operator to describe, in the contract it offers to charter passengers, their rights to a refund in the event of a cancellation or major change in the charter program. The rule also states (14 CFR 380.33) that the operator must make all refunds *described in the contract* after a major change in a charter package. The Board intended that these rules would make the operator's duty to give refunds both a direct requirement of the rule and a contractual obligation.

It has come to the Board's attention, however, that these rules could be misconstrued. If the operator failed to put a refund obligation into the contract (which would be a violation of the rules), it might be argued, if a major

change occurred, that the participant had no refund right against the operator: none under the contract because mention of it was left out of the contract, and none under the rule because that only required the operator to make the refunds specified in the contract. To correct this unintended loophole, the rule (§ 380.33(e)) is being amended to make clear that a refusal to refund money will be a violation, by stating that an operator must make refunds "required to be described" in the contract.

The Board is also amending the notice requirement concerning refunds (§ 380.33(c)) to conform to this interpretation. The rule currently requires the operator to notify participants of any major change that occurs in a charter package, and of their rights to refunds. This amendment adds after the word "refunds" the words, "required to be described in the operator-participant contract." This will help to ensure that the participants know their rights, at the time when they must decide whether or not to accept or reject a change in the charter package.

This interpretation will take effect immediately. Since this is an interpretative and not a substantive rule, we find that notice and comment procedures are unnecessary and the rule may be made effective less than 30 days after publication.

Accordingly, in 14 CFR Part 380, *Public Charters*, paragraphs (c) and (e) of § 380.33 are amended to read as follows:

§ 380.33 Major changes in itinerary or price; refunds.

* * * * *

(c) The charter operator shall notify all participants of major changes, as required by the operator-participant contracts. This notification shall include the participants' rights to refunds required to be described in the operator-participant contract. The operator shall, if applicable, also notify the participants that the acceptance of a refund constitutes a waiver of their legal rights.

* * * * *

(e) The charter operator shall make all refunds required to be described in the operator-participant contract within the time limits set forth in paragraphs (k), (n), (r), and (s) of § 380.32, as applicable.

* * * * *

(Secs. 204, 401, 402, 411, 416 of the Federal Aviation Act of 1958, as amended, 72 Stat. 743, 92 Stat. 1710, 72 Stat. 757, 769, 92 Stat. 1731, 1732; 49 U.S.C. 1324, 1371, 1372, 1381, 1386)

By the Civil Aeronautics Board.

Phyllis T. Kaylor,

Secretary.

BILLING CODE 6320-01-M

DEPARTMENT OF JUSTICE

28 CFR Part 16

[AAG/A Order No. 48-80]

Production or Disclosure of Material or Information; Exemption of Records Systems Under the Privacy Act

AGENCY: Department of Justice.

ACTION: Final rule.

SUMMARY: On October 12, 1979, the Department of Justice published in the **Federal Register** a proposal (44 FR 58921) to exempt a new system, the United States National Central Bureau Criminal Investigative Records System, JUSTICE/DAG-007, from the provisions of subsections (c) (3) and (4), (d), (e) (1), (2) and (3), (e)(4) (G) and (H), (e) (5) and (8), (f), and (g) of the Privacy Act, 5 U.S.C. 552a. This exemption is proposed in those cases where a request for access to a case file is made prior to resolution of the case or during an ongoing investigation. It is needed to protect against compromise during the investigation and to protect the identity of confidential sources.

EFFECTIVE DATE: May 19, 1980.

ADDRESS: Administrative Counsel, Justice Management Division, Room 1214, Department of Justice, Washington, D.C. 20530.

FOR FURTHER INFORMATION CONTACT: William J. Snider, (202) 633-3452.

SUPPLEMENTARY INFORMATION: Upon further review after publishing the proposed rule, it was decided that the acronym INTERPOL would be deleted from the system name to avoid misrepresentation or confusion as to the role of the Department of Justice United States National Central Bureau (USNCB). The system was republished in the Notice Section of the **Federal Register** on March 3, 1980 (45 FR 13847) to effect this and other changes and to clarify the roie of the USNCB. No comments were received on the revised and republished system notice nor on the proposed regulations which were published in the Proposed Rules Section the same day. Nevertheless, one clarification has been made in the rule. The authority cite has been revised to include 5 U.S.C. 552a(k)(5).

Therefore, pursuant to the authority vested in the Attorney General by 5 U.S.C. 552a(j)(2), (k)(2), and (k)(5), and delegated to me by Attorney General Order No. 793-98, the proposed regulations amended as described above are adopted and are set forth below.

Dated: May 8, 1980.

Kevin D. Rooney,

Assistant Attorney General for Administration.

28 CFR is amended in Part 16 by adding § 16.71 (c) and (d) to read as follows:

§ 16.71 Exemption of the Office of the Deputy Attorney General Systems.

* * * * *

(c) The following system of records is exempt from 5 U.S.C. 552a(c) (3) and (4), (d), (e)(1), (2), and (3), (e)(4) (G) and (H), (e)(5) and (8), (f) and (g):

(1) The Criminal Investigative Records System (JUSTICE/DAG-007). This exemption applies only to the extent that information in this system is subject to exemption pursuant to 5 U.S.C. 552a(j)(2) and (k)(2), and (k)(5).

(d) Exemptions from the particular subsections are justified for the following reasons:

(1) From paragraph (c)(3) because the release of accounting disclosures would place the subject of an investigation on notice that he is under investigation and provide him with significant information concerning the nature of the investigation, thus resulting in a serious impediment to law enforcement.

(2) From paragraph (c)(4), (d), (e)(4) (G), and (H), (f) and (g) because these provisions concern individual access to records and such access might compromise ongoing investigations reveal investigatory techniques and confidential informants, and invade the privacy of private citizens who provide information in connection with a particular investigation.

(3) From paragraph (e)(1) because information received in the course of an international criminal investigation may involve a violation of state or local law, and it is beneficial to maintain this information to provide investigative leads to state and local law enforcement agencies.

(4) From paragraph (e)(2) because collecting information from the subject of criminal investigations would thwart the investigation by placing the subject on notice.

(5) From paragraph (e)(3) because supplying an individual with a statement of the intended use of the requested information could compromise the existence of a confidential investigation, and may inhibit cooperation.

(6) From paragraph (e)(5) because the vast majority of these records come

from local criminal justice agencies and it is administratively impossible to ensure that the reords comply with this provision. Submitting agencies are, however, urged on a continuing basis to ensure that their records are accurate and include all dispositions.

(7) From paragraph (e)(8) because the notice requirements of this provision could present a serious impediment to law enforcement by revealing investigative techniques, procedures, and the existence of confidential investigations.

DEPARTMENT OF THE TREASURY

Office of Foreign Assets Control

31 CFR Part 515

Cuban Assets Control Regulations; Transportation of Certain Cuban Nationals

AGENCY: Office of Foreign Assets Control, Department of the Treasury

ACTION: Final rule.

SUMMARY: The Office of Foreign Assets Control is amending the Cuban Assets Control Regulations. The purpose of the amendment is to add § 515.415, interpreting the applicability of the prohibitions of § 515.201 to transactions in connection with the transportation of certain Cuban nationals to the United States. The need for the amendment is to make it clear that all such transactions are prohibited by the regulations. The effect of the amendment is that interested members of the public will be on notice that such transactions are prohibited in the absence of a specific license issued by the Office of Foreign Assets Control.

EFFECTIVE DATE: May 15, 1980.

FOR FURTHER INFORMATION CONTACT: Dennis M. O'Connell, Chief Counsel, Office of Foreign Assets Control, Department of the Treasury, Washington, D.C. 20220, (202) 376-0236.

SUPPLEMENTARY INFORMATION: Since the Regulations involve a foreign affairs function, the provisions of the Administrative Procedure Act, 5 U.S.C. 553, requiring notice of proposed rule making, opportunity for public participation and delay in effective date are inapplicable.

The provisions of this interpretation only affect transactions in connection with transportation to the United States of Cuban nationals who do not hold an unexpired immigrant or non-immigrant visa or who are not returning residents of the United States. The interpretation does not affect ordinary tourist and family travel to Cuba under the general license in § 515.560.

31 CFR Part 515 is amended by the addition of § 515.415, as follows:

§ 515.415 Travel to Cuba; transportation of certain Cuban Nationals.

(a) The following transactions are prohibited by § 515.201 when in connection with the transportation of any Cuban national, except a Cuban national holding an unexpired immigrant or non-immigrant visa or a returning resident of the United States, from Cuba to the United States, unless otherwise licensed:

(1) Transactions incident to travel to, from, or within Cuba;

(2) The transportation to Cuba of a vessel or aircraft;

(3) The transportation into the United States of any vessel or aircraft which has been in Cuba since the effective date, regardless of registry;

(4) The provision of any services to a Cuban national, regardless of whether any consideration for such services is furnished by the Cuban national;

(5) The transportation or importation of baggage or other property of a Cuban national;

(6) The transfer of funds or other property to any person where such transfer involves the provision of services to a Cuban national or the transportation or importation of, or any transactions involving, property in which Cuba or any Cuban national has any interest, including baggage or other such property;

(7) Any other transaction such as payment of port fees and charges in Cuba and payment for fuel, meals, lodging; and

(8) The receipt or acceptance of any gratuity, grant, or support in the form of meals, lodging, fuel, payments of travel or maintenance expenses, or otherwise, in connection with travel to or from Cuba or travel or maintenance within Cuba.

(b) Transactions incident to the travel to the United States of Cuban nationals traveling without a visa issued by the Department of State are not authorized under the provisions of § 515.564.

(c) Transactions described in paragraph (a) of this section are not "transactions ordinarily incident to travel to and from Cuba" within the general license of § 515.560.

(Sec. 5, 40 Stat. 415, as amended, 50 U.S.C. App. 5; sec 620(a), 75 Stat. 445, 22 U.S.C. 2370(a); Proc. 3447, 27 FR 1085, 3 CFR, 1959-1963 Comp.; E.O. 9193, 7 FR 5205, 3 CFR, Comp. Supp., p. 1174; E.O. 9989, 13 FR 4891, 3 CFR, 1943-1948 Comp., p. 748)

Dated: May 15, 1980.

Stanley L. Sommerfield,

Director.

Approved:

Richard J. Davis,

Assistant Secretary.

BILLING CODE 4810-25-M

DEPARTMENT OF DEFENSE

Department of the Navy

32 CFR Part 706

Certifications and Exemptions Under the International Regulations for Preventing Collisions at Sea, 1972; Amendment

AGENCY: Department of the Navy, DOD.

ACTION: Final rule.

SUMMARY: The Department of the Navy is amending its certifications and exemptions under the International Regulations for Preventing Collisions at Sea, 1972 (72 COLREGS) to reflect that the Secretary of the Navy: (1) has determined that USS OHIO (SSBN-726), USS MICHIGAN (SSBN-727), and USS GEORGIA (SSBN-729) are vessels of the Navy which, due to their special construction and purpose, cannot comply fully with certain provisions of the 72 COLREGS without interfering with their special function as naval submarines; and (2) has authorized the use of exemptions allowed in 72 COLREGS' Rules 38(a), 38(b), and 38(g) by USS OHIO (SSBN-726), USS MICHIGAN (SSBN-727), and USS GEORGIA (SSBN-729). The intended effect of this rule is to warn mariners in waters where 72 COLREGS apply.

EFFECTIVE DATE: April 15, 1980.

FOR FURTHER INFORMATION CONTACT: Lieutenant Commander Charles Stanley PRENTACE, JAGC, USN, Admiralty Division, Office of the Judge Advocate General, Navy Department, 200 Stovall Street, Alexandria, Virginia 22332, Telephone number (202) 325-9744.

SUPPLEMENTARY INFORMATION: This amendment to Part 706 provides notice that the Secretary of the Navy has certified that USS OHIO (SSBN-726), USS MICHIGAN (SSBN-727), and USS GEORGIA (SSBN-729) are vessels of the Navy which, due to their special construction and purpose, cannot comply fully with 72 COLREGS: Rule 21(c) regarding the arc of visibility and location of the stern light; Annex I, section 2(a)(i) regarding the height of the masthead light; Annex I, section 2(k) regarding the height and relative

positions of the anchor lights; and Annex I, section 3(b) regarding the location of the sidelights. Full compliance with the above-mentioned 72 COLREGS provisions would interfere with the special function of the ship. The Secretary of the Navy has certified that the above-mentioned lights are located in closest possible compliance with the applicable 72 COLREGS requirements.

Notice is also provided to the effect that the Secretary of the Navy has authorized the use by SSBN–726 class vessels of certain exemptions permitted by 72 COLREGS, Rule 38. Specifically, the use of the exemptions has been authorized as allowed in Rule 38(a), pertaining to lights with ranges and intensities prescribed in Rule 22; Rule 38(b), pertaining to lights with color specifications prescribed in Annex I, section 7, and Rule 38(g), pertaining to sound signal-appliances required by Annex III.

The Secretary of the Navy has determined that USS OHIO (SSNB–726), USS MICHIGAN (SSBN–727), and USS GEORGIA (SSBN–729) are members of the SSBN–726 class, are in compliance with the 1960 Rules of the Road, and their keels were laid prior to July 15, 1977.

Moreover, it has been determined, in accordance with 32 CFR Parts 296 and 701, that publication of this amendment for public comment prior to adoption is impracticable, unnecessary, and contrary to the public interest since it is based on technical findings that the placement of lights on these ships in a manner different from that prescribed herein will adversely affect the ships' ability to perform their military function. Accordingly, 32 CFR Part 706 is amended as follows:

§ 706.2 [Amended]

1. Table One of § 706.2 is amended as follows to indicate certifications issued by the Secretary of the Navy:

Vessel	Number	Distance in meters of forward masthead light below minimum required height. § 2(a)(i), annex I
* * * * *		
U.S.S. Will Rogers	SSBN–659	* * *
U.S.S. Ohio	SSBN–726	3.70
U.S.S. Michigan	SSBN–727	3.70
U.S.S. Georgia	SSBN–729	3.70
* * * * *		

2. Table three of § 706.2 is amended as follows to indicate certification issued by the Secretary of the Navy:

Vessel	Number	Masthead light, arc of visibility; rule 21(a)	Sidelights, arc of visibility; rule 21(b)	Stern light, arc of visibility; rule 21(c)	Sidelights, distance inboard of ship's sides in meters; § 3(b), annex I	Stern light, distance forward of stern in meters; rule 21(c)	Forward anchor light, height above hull in metors; § 2(K), annex I	Anchor lights, relationship of aft light to forward light in meters; § 2(K), annex I
*	*	*	*	*	*	*	*	*
U.S.S. Will Rogers	SSBN–659	* * *	* * *	* * *	* * *	* * *	* * *	* * *
U.S.S. Ohio	SSBN–726	225°	112.5°	209°	5.3	9.0	3.8	4.0 below.
U.S.S. Michigan	SSBN–727	225°	112.5°	209°	5.3	9.0	3.8	4.0 below.
U.S.S. Georgia	SSBN–729	225°	112.5°	209°	5.3	9.0	3.8	4.0 below.
		*	*	*	*	*	*	

§ 706.3 [Amended]

3. Table One of § 706.3 is amended as follows to indicate exemptions authorized by the Secretary of the Navy:

Vessel or class	Lights with ranges in rule 22, 4 years; rule 38(a)	Lights with color specs in § 7, annex I, 4 years; rule 38(b)	Sound signal appliances in annex III, 9 years; rule 38(g)
* * * * *			
SSBN–640 Class	* * *	* * *	* * *
SSBN–726 Class	X	X	X
* * * * *			

(E.O. 11964 and 33 U.S.C. 1605)

Effective Date. The effective date of this Amendment will be April 15, 1980.

Dated: April 15, 1980.

Edward Hidalgo,

Secretary of the Navy.

[FR Doc. 80–15205 Filed 5–16–80; 8:45 am]

BILLING CODE 3810–71–M

DEPARTMENT OF TRANSPORTATION

Coast Guard

33 CFR Part 110

[CGD 79–119]

Reduction of Temporary Anchorage E, San Juan Harbor, P.R.

AGENCY: Coast Guard, DOT.

ACTION: Final rule.

SUMMARY: This rule reduces the size of Temporary Anchorage E, San Juan Harbor, Puerto Rico. The reduction is considered necessary due to the construction of mooring dolphins within the present anchorage area. Reducing the size of the Temporary Anchorage Area will ensure it is well removed from vessels utilizing the mooring dolphins.

EFFECTIVE DATE: This amendment is effective June 18, 1980.

FOR FURTHER INFORMATION CONTACT: Ensign Rhae A. Giacoma, Office of Marine Environment and Systems (G–WLE/TP11) Room 1611, U.S. Coast Guard Headquarters, 2100 Second St., S.W., Washington, D.C. 20593 (202) 426–1927.

SUPPLEMENTARY INFORMATION: On February 19, 1980, the Coast Guard published a proposed rule (45 FR 10812) concerning this amendment. Interested persons were given until April 1, 1980 to submit comments. No comments were received. The Coast Guard has determined that in accordance with the Department of Transportation's Regulatory Policies and Procedures (44 FR 11034), this amendment is nonsignificant.

DRAFTING INFORMATION: The principal persons involved in drafting this rule are Ensign Rhae A. Giacoma, Project

Manager, Office of Marine Environment and Systems and Lieutenant J. W. Salter, Project Attorney, Office of the Chief Counsel.

In consideration of the foregoing, Part 110 of Title 33 of the Code of Federal Regulations is amended by revising paragraph (a)(2) of § 110.240 to read as follows:

§ 110.240 San Juan Harbor, P.R.

(a) * * *

(2) *Temporary Anchorage E (general).* Beginning at a point which bears 262° T, 878 yards from Isla Grande Aero Beacon; thence along a line 75°47', 498 yards; thence along a line 134°49', 440 yards; thence along a line 224°49' to the northerly channel limit of Graving Dock Channel, and thence to the point of beginning.

* * * * *

(Sec. 7, 38 Stat. 1053, as amended (33 U.S.C. 471); sec 6(g)(1)(A), 80 Stat. 937 (49 U.S.C. 1655(g)(1)(A); 49 CFR 1.46(c)(1))

Dated: May 7, 1980.

W. E. Caldwell,

Rear Admiral, U.S. Coast Guard, Chief, Office of Marine Environment and Systems.

33 CFR Part 110

[CGD 79-170]

Establishment of Special Anchorage Area, Duluth-Superior Harbor, Duluth, Minn.

AGENCY: Coast Guard, DOT.

ACTION: Final rule.

SUMMARY: The Coast Guard, at the request of the Park Point community club, Duluth, Minnesota, is amending the Anchorage Regulations by establishing a Special Anchorage Area adjacent to Park Point in Duluth-Superior Harbor, Duluth, Minnesota (Superior Bay). This area will be for the use of the general public. It is needed because of the large increase of pleasure craft utilizing this area. Establishment of the Special Anchorage Area will eliminate the necessity for displaying anchor lights on vessels of 65 feet or less while anchored within the area.

EFFECTIVE DATE: This amendment is effective on June 18, 1980.

FOR FURTHER INFORMATION CONTACT: Ensign Rhae A. GIACOMA, Office of Marine Environment and Systems (G-WLE/TP11), Room 1611, U.S. Coast Guard Headquarters, 2100 Second St., S.W. Washington, D.C. 20593, (202) 426-1927.

SUPPLEMENTARY INFORMATION: On February 19, 1980, the Coast Guard published a proposed rule (45 FR 10813) concerning this amendment. Interested persons were given until April 1, 1980 to submit comments. No comments were received. The Coast Guard has determined that, in accordance with the Department of Transportation's "Regulatory Policies and Procedures" (44 FR 11034), this amendment is nonsignificant.

DRAFTING INFORMATION: The principal persons involved in drafting this rule are Ensign Rhae A. GIACOMA, Project Manager, Office of Marine Environment and Systems and Lieutenant J.W. SALTER, Project Attorney, Office of the Chief Counsel.

In consideration of the foregoing, Part 110 of Title 33 of the Code of Federal Regulations is amended by adding § 110.77a to read as follows:

§ 110.77a Duluth-Superior Harbor, Duluth, Minn.

The area adjacent to Park Point in Duluth-Superior Harbor within the following boundaries: beginning at latitude 46°45'19.3"N., longitude 92°04'43"W.; thence to latitude 46°45'11.7"N., longitude 92°05'01"W.; thence to latitude 46°44'21.2"N., longitude 92°04'15.7"W.; thence to latitude 46°44'29.4"N., longitude 92°03'57.5"W.; thence to the point of beginning.

(Sec.1, 28 Stat. 647, as amended, (33 U.S.C. 258); sec. 6(g)(1)(C) 80 Stat. 937, (49 U.S.C. 1655 (g)(1)(C)); 49 CFR 1.46 (c)(3)).

Dated May 7, 1980.

W. E. Caldwell,

Rear Admiral, U.S. Coast Guard, Chief, Office of Marine Environment and Systems.

33 CFR Part 110

[CGD 79-118]

Establishment of Special Anchorage Area, Manatee River, Bradenton, Fla.

AGENCY: Coast Guard, DOT.

ACTION: Final rule.

SUMMARY: This rule establishes a Special Anchorage Area on the Manatee River, Bradenton, Florida. With the establishment of this Special Anchorage Area, owners of small pleasure craft would be relieved of the requirement to carry and display anchor lights while at anchor. This area will provide space well removed from channels and fairways to accommodate anchoring of local and transit pleasure craft.

EFFECTIVE DATE: This amendment is effective on June 18, 1980.

FOR FURTHER INFORMATION CONTACT: Ensign Rhae A. Giacoma, Office of Marine Environment and Systems (G-WLE/TP11), Room 1611, U.S. Coast Guard Headquarters, 2100 Second St., SW., Washington, D.C. 20593 (202) 426-1927.

SUPPLEMENTARY INFORMATION: On February 19, 1980, the Coast Guard published a proposed rule (45 FR 10813) concerning this amendment. Interested persons were given until April 1, 1980 to submit comments. No comments were received. The Coast Guard has determined that, in accordance with the Department of Transportation's "Regulatory Policies and Procedures" (44 FR 11034), this amendment is nonsignificant.

DRAFTING INFORMATION: The principal persons involved in drafting this rule are Ensign Rhae A. Giacoma, Project Manager, Office of Marine Environment and Systems, and Lieutenant J. W. Salter, Project Attorney, Office of the Chief Counsel.

In consideration of the foregoing, Part 110 of Title 33 of the Code of Federal Regulations is amended by adding § 110.74a to read as follows:

§ 110.74a Manatee River, Bradenton, Florida.

The waters of the Manatee River enclosed by a line beginning at latitude 27°31'18.6" N. longitude 82°36'49.2" W.; thence westerly to latitude 27°31'21" N., longitude 82°37'7.2" W.; thence northwesterly to latitude 27°31'22.2" N., longitude 82°37'8.4" W.; thence northeasterly to latitude 27°31'25.8" N., longitude 82°37'00" W.; thence easterly to latitude 27°31'24" N., longitude 82°36'44.4" W.; thence to the point of beginning.

(Sec. 1, 30 Stat. 98 as amended, (33 U.S.C. 180); sec. 6(g)(1)(B), 80 Stat 937; (49 U.S.C. 1655(g)(1)(B)); 49 CFR 1.46(c)(2))

Dated: May 7, 1980.

W. E. Caldwell,

Rear Admiral, U.S. Coast Guard Chief, Office of Marine Environmental Systems.

BILLING CODE 4910-14-M

---

33 CFR Part 110

[CGD 79-169]

Establishment of Special Anchorage Area, Cedar Point, Sandusky, Ohio

AGENCY: Coast Guard, DOT.

ACTION: Final rule.

SUMMARY: This rule establishes a Special Anchorage Area in Sandusky Bay (Lake Erie) adjacent to Cedar Point, Sandusky, Ohio. Due to the increase of

pleasure craft utilizing the waters of Sandusky Bay, establishment of a Special Anchorage Area is warranted. The Special Anchorage would provide a safe area, protected from transiting vessels by a break wall, where small craft may anchor without having to display anchor lights.

EFFECTIVE DATE: This amendment is effective on June 18, 1980.

FOR FURTHER INFORMATION CONTACT: Ensign Rhae A. Giacoma, Office of Marine Environment and Systems (G-WLE/TP11), Room 1611, U.S. Coast Guard Headquarters, 2100 Second St., S.W., Washington, D.C. 20593 (202) 426-1927.

SUPPLEMENTARY INFORMATION: On February 19, 1980, the Coast Guard published a proposed rule (45 FR 10814) concerning this amendment. Interested persons were given until April 1, 1980 to submit comments. One comment was received in favor of the anchorage area. Additionally, the coordinates of the anchorage area as stated in the proposal differed by several seconds from the coordinates of the breakwall serving as one of the anchorage's boundaries. The final rule has been revised to rectify this discrepancy. The Coast Guard has determined that, in accordance with the Department of Transportation's "Regulatory Policies and Procedures" (44 FR 11034), this amendment is nonsignificant.

DRAFTING INFORMATION: The principal persons involved in drafting this rule are Ensign Rhae A. Giacoma, Project Manager, Office of Marine Environment and Systems, and Lieutenant J. W. Salter, Project attorney, Office of the Chief Counsel.

In consideration of the foregoing, Part 110 of Title 33 of the Code of Federal Regulations is amended by adding § 110.83a to read as follows:

§ 110.83a Cedar Point, Sandusky, Ohio.

The water area enclosed by the break wall beginning at latitude 41°28'13' "N., longitude 82°40'39"w; thence along the break wall to latitude 41°28'21"N., longitude 82°40'53"W.; thence along a straight line southwesterly to latitude 41°28'20"N., longitude 82°40'55"W.; thence along the break wall to latitude 41°28'33"N., longitude 82°40'58"W.; thence along the shoreline to the point of beginning.

(Sec. 1, 28 Stat. 647, as amended, (33 U.S.C. 258); sec. 6(g)(1)(C) 80 Stat. 937 (49 U.S.C. 1655 (g)(1)(C)); 49 CFR 1.46 (c) (3).)

Dated: May 7, 1980.

W. E. Caldwell,

Rear Admiral, U.S. Coast Guard, Chief, Office of Marine Environment and Systems.

BILLING CODE 4910-14-M

---

33 CFR Part 110

[CGD 79-098]

Enlargement of Special Anchorage Area, Niagara River, Youngstown, N.Y.

AGENCY: Coast Guard, DOT.

ACTION: Final rule.

SUMMARY: This rule expands and redefines the Special Anchorage Area in the Niagara River, Youngstown, New York. An increase in the number of vessels desiring to anchor in the area necessitates expansion of this anchorage. Expanding the anchorage will provide additional space in which vessels of not more than 65 feet in length may anchor without having to display anchor lights. Also, it is believed that a redefinition of the existing Special Anchorage Area by means of using latitude and longitude coordinates would clarify the location.

EFFECTIVE DATE: This amendment is effective on June 18, 1980.

FOR FURTHER INFORMATION CONTACT: Ensign Rhae A. Giacoma, Office of Marine Environment and Systems (G-WLE/TP11), Room 1611, U.S. Coast Guard Headquarters, 2100 Second St., S.W., Washington, D.C. 20593 (202) 426-1927.

SUPPLEMENTARY INFORMATION: On February 19, 1980, the Coast Guard published a proposed rule (45 FR 10810) concerning this amendment. Interested persons were given until April 1, 1980 to submit comments. No comments were received. The Coast Guard has determined that, in accordance with the Department of Transportation's "Regulatory Policies and Procedures" (44 FR 11034), this amendment is nonsignificant.

DRAFTING INFORMATION: The principal persons involved in drafting this rule are Ensign Rhae A. Giacoma, Project manager, Office of Marine Environment and Systems and Lieutenant J. W. Salter, Project Attorney, Office of the Chief Counsel.

In consideration of the foregoing, Part 110 of Title 33 of the Code of Federal Regulations is amended by revising § 110.85 to read as follows:

§ 110.85 Niagara River, Youngstown, NY.

(a) *Area 1.* Beginning at a point at the intersection of the south line of Swain Street extended with the east shoreline of the Niagara River at latitude 43°14'33"N., longitude 79°03'7.5"W.; thence westerly to a point at latitude 43°14'33"N., longitude 79°03'15"W.; thence northerly to a point at latitude 43°14'54.5" N., longitude 79°03'14" W.; thence southeasterly to a point at latitude 43°14'52.3"N., longitude 79°03'09"W.; thence southerly to a point at latitude 43°14'51.4"N., longitude 79°03'09"W.; thence easterly to a point at latitude 43°14'51.5"N., longitude 79°03'6.5"W.; thence along the shoreline to the point of beginning.

(b) *Area 2.* Beginning at a point at latitude 43°14'53.2"N., longitude 79°03'08"W.; thence northwesterly to a point at latitude 43°14'56"N., longitude 79°03'14"W.; thence northerly to a point at latitude 43°15'07"N., longitude 79°03'13"W.; thence northwesterly to a point at latitude 43°15'9.5"N., longitude 79°03'13.5"W.; thence southeasterly to a point at latitude 43°15'7.5"N., longitude 79°03'08"W.; thence southerly to the point of beginning.

(c) *Area 3.* Beginning at a point at latitude 43°15'7.9"N., longitude 79°03'03"W.; thence westerly to a point at latitude 43°15'7.9"N., longitude 79°03'04"W.; thence northwesterly to a point at latitude 43°15'11.8"N., longitude 79°03'14"W.; thence northerly to a point at latitude 43°15'14"N., longitude 79°03'14"W.; thence northwesterly to a point at latitude 43°15'22"N., longitude 79°03'21.5"W.; thence northeasterly to a point at latitude 43°15'25.5"N., longitude 79°03'13"W.; thence along the shoreline to the point of beginning.

(Sec 1. 28 Stat. 647 as amended, (33 U.S.C. 258), sec. 6(g)(1)(C), 80 Stat. 937 (49 U.S.C. 1655 (g)(1)(C)); 49 CFR 1.46 (c)(3).)

Dated: May 7, 1980.

W. E. Caldwell,

Rear Admiral, U.S. Coast Guard, Chief, Office of Marine, Environment and Systems.

BILLING CODE 4910-14-M

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 52

[FRL 1494-3]

Approval and Promulgation of Implementation Plans—Massachusetts; Receipt of Implementation Plan Revision: New Source Review Amendments

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice of receipt of submittal to satisfy condition of plan approval.

SUMMARY: This notice is to announce the receipt of State Implementation Plan (SIP) revision for Massachusetts. The revision was submitted on April 17, 1980 to satisfy a condition of EPA's recent approval of Massachusetts' Attainment Plan SIP revisions, which were required under Part D of the Clean Air Act. Massachusetts' submittal amends the new source review regulation by adding a provision to require that emissions from new or modified sources not interfere with reasonable further progress towards attainment of National Ambient Air Quality Standards (NAAQS).

ADDRESSES: Copies of the Massachusetts submittal are available for public inspection during normal business hours at the Environmental Protection Agency, Region I, Room 1903, JFK Federal Building, Boston, Massachusetts 02203; Public Information Reference Unit, Environmental Protection Agency, 401 M Street, S.W., Washington, DC 20460; and Massachusetts Department of Environmental Quality Engineering, Division of Air Quality Control, Room 320, 600 Washington Street, Boston, Massachusetts 02111.

FOR FURTHER INFORMATION CONTACT: Linda Murphy, Air Branch, EPA Region I, Room 1903, JFK Federal Building, Boston, Massachusetts 02203, (617) 223–5609.

SUPPLEMENTARY INFORMATION: EPA published a final rulemaking notice in the **Federal Register** on January 10, 1980 (45 FR 2036), conditionally approving Massachusetts' Attainment Plan SIP revisions submitted on May 3, 1979. These SIP revisions were found to be in substantial compliance with the requirements of Part D of the Clean Air Act, since they implement measures for controlling new sources of air pollution in non-attainment areas. However, one of the conditions for approval of the Attainment Plan was that by March 1, 1980, the state must submit a regulation governing construction and operation of major new and modified sources to satisfy Section 173(1)(A) of the Clean Air Act, which requires compliance with reasonable further progress towards attainment of the NAAQS as specified in the SIP.

Massachusetts has submitted a SIP revision amending the new source review regulation to include this provision. EPA is presently reviewing the state's submittal to determine compliance with Clean Air Act requirements, and intends to publish a final rulemaking notice in the **Federal Register** by June 15, 1980. The conditional approval of the SIP will be continued until EPA's final action is published in the **Federal Register.**

Dated: May 6, 1980.

William R. Adams, Jr.,

Regional Administrator, Region I.

40 CFR Part 408

[FRL 1495-7]

Effluent Guidelines and Standards; Canned and Preserved Seafood Processing Point Source Category; Suspension of Regulations

AGENCY: Environmental Protection Agency (EPA).

ACTION: Suspension of regulations.

SUMMARY: In response to a petition for suspension, the United States Environmental Protection Agency is today temporarily suspending the applicability of effluent guidelines regulations for Seafood processing facilities located in five areas of Alaska. Specifically, EPA has suspended the applicability of regulations for "non-remote" facilities located in Anchorage, Cordova, Juneau, Ketchikan and Petersburg pending detailed review of a petition for modification of these regulations. During the period of the suspension, these areas will be subject to the promulgated regulations for "remote areas."

EFFECTIVE DATE: May 19, 1980.

FOR FURTHER INFORMATION CONTACT: Calvin J. Dysinger, Effluent Guidelines Division, 401 M St., S.W., Room 932, WSME (WH–552), Washington, D.C. 20460, (202) 426–2707.

SUPPLEMENTARY INFORMATION:

Petition for Suspension and Preliminary Petition for Modification

A portion of the Alaskan seafood industry has submitted a petition to the Agency requesting that the applicability of effluent guidelines regulations based on the application of the "best practicable control technology currently available" (BPT) be suspended for the 1980 salmon processing season (May 15 through Oct. 15) for facilities located in the following cities originally classified as "non-remote" by EPA: Anchorage, Cordova, Juneau, Ketchikan and Petersburg. Processing plants in these cities have not installed the wastewater solids screening equipment required by the BPT regulations. The industry has submitted a preliminary petition for modification of these regulations, a detailed complete petition will be submitted by June 16, 1980.

Petitioners do not seek suspension of the regulations for Kodiak. Further, petitioners have agreed to comply with the regulations for remote Alaska processors during the suspension period. Therefore, the effect of granting the suspension petition is to designate grinding as BPT for the facilities in Anchorage, Cordova, Juneau, Ketchikan and Petersburg, rather than the current screening technology.

The petitioners rationale supporting the request for a one-season suspension is two-fold. First, the petitioners have submitted new information showing that they anticipate a record salmon catch for the 1980 season. The industry is concerned that the processing capacity of all facilities be available to handle the exceptionally large amount of fish. If the facilities in the above-mentioned areas were unable to operate due to non-compliance with regulations, the result would be an incomplete salmon harvest and a significant negative impact on the Alaskan economy.

Second, the petitioners argue that the cost of the BPT limitations in the affected cities in Alaska is out of proportion to the effluent reduction benefits. The screening and barging operations which would be used would not result in removal of any waste from the receiving water but would only affect its placement.

Response To Petition for Suspension

The Agency concurs with the petitioners that the applicability of the BPT regulations to facilities located in Anchorage, Cordova, Juneau, Ketchikan and Petersburg should be suspended for the 1980 salmon processing season. EPA reaches this conclusion on the basis of petitioners preliminary Petition for Modification and Petition for Suspension of the regulations. In particular, EPA is relying on the new information on the economic impact of the existing BPT regulations and the unique situation in the Alaska seafood industry. Under the existing BPT regulations in that industry, effluent reduction benefits are highly questionable; indeed, the result proposed by the industry may in effect result in the same degree of effluent reduction at much lower cost. Temporary suspension of the BPT requirements for these "nonremote" areas will provide time for the Agency to adequately consider all information relevant to the costs and effluent reduction benefits of these regulations, in addition to providing substantial economic relief to the Alaskan industry. Information currently available indicates that serious environmental

damage is not likely to result from the suspension of these regulations.

Therefore, the applicability of the BPT seafood processing regulations for Alaskan facilities is suspended as follows: In 40 CFR Part 408, §§ 408.40, 408.60, 408.90, 408.162, 408.165, 408.172, 408.175, 408.202, 408.205, 408.292, 408.295, 408.312, and 408.315 the phrase "* * * population or processing centers including but not limited to Anchorage, Cordova, Juneau, Ketchikan, Kodiak, and Petersburg * * *" does not apply to Anchorage, Cordova, Juneau, Ketchikan and Petersburg during the 1980 salmon processing season. The regulations applicable during this period are those promulgated for "remote" facilities, i.e., grinding of solids prior to discharge. The "non-remote" regulations above remain in effect for the city of Kodiak. This suspension is effective immediately. The suspension will be in effect untl October 15, 1980, by which time the Agency will respond to the complete petition for modification.

Effective Date

The suspension to 40 CFR Part 408 is effective immediately. Ordinarily, EPA would propose suspensions of this type for public comment and allow 30 days before making a final rule effective. However, because the 1980 salmon processing season is imminent, EPA has decided that good cause exists to promulgate this final rule without public comment and to make the rule immediately effective.

Schedule for Petition for Modification and Response

Petitioners have agreed to supplement the preliminary petition for modification with a complete petition by June 16, 1980. EPA will review the complete petition and make any requests for clarification or additional data by July 15, 1980. Any additional submissions in response to such requests shall be made by the petitioners no later than August 15, 1980. EPA's final response to the petition shall be completed by October 15, 1980.

EPA will provide an opportunity for public comment on this complete petition. The petition for suspension and supporting information received to date are contained in the Agency's Administrative record. These documents are available for public inspection at Room 932 East Tower, WSMW, 401 M St. SW., Washington, D.C.

Dated: May 13, 1980.

Douglas M. Costle,

Administrator.

Subpart D—Non-Remote Alaskan Crab Meat Processing Subcategory

§ 408.40 [Suspended]

1. In § 408.40, the applicability of the subpart to Anchorage, Cordova, Juneau, Ketchikan and Petersburg is suspended until October 15, 1980.

Subpart F—Non-Remote Alaskan Whole Crab and Crab Section Processing Subcategory

§ 408.60 [Suspended]

2. In § 408.60, the applicability of the subpart to Anchorage, Cordova, Juneau, Ketchikan and Petersburg is suspended until October 15, 1980.

Subpart I—Non-Remote Alaskan Shrimp Processing Subcategory

§ 408.90 [Suspended]

3. In § 408.90, the applicability of the subpart to Anchorage, Cordova, Juneau, Ketchikan and Petersburg is suspended until October 15, 1980.

Subpart P—Alaskan Hand-Butchered Salmon Processing Subcategory

§ 408.162(b)(1) [Suspended]

4. In § 408.162(b)(1), the applicability of the section to Anchorage, Cordova, Juneau, Ketchikan and Petersburg is suspended until October 15, 1980.

§ 408.165(a)(1) [Suspended]

5. In § 408.165(a)(1), the applicability of the section to Anchorage, Cordova, Juneau, Ketchikan and Petersburg is suspended until October 15, 1980.

Subpart Q—Alaskan Mechanized Salmon Processing Subcategory

§ 408.172(b)(1) [Suspended]

6. In § 408.172(b)(1), the applicability of the section to Anchorage, Cordova, Juneau, Ketchikan and Petersburg is suspended until October 15, 1980.

§ 408.175(a)(1) [Suspended]

7. In § 408.175(a)(1), the applicability of the section to Anchorage, Cordova, Juneau, Ketchikan and Petersburg is suspended until October 15, 1980.

Subpart T—Alaskan Bottom Fish Processing Subcategory

§ 408.202(b)(1) [Suspended]

8. In § 408.202(b)(1), the applicability of the section to Anchorage, Cordova, Juneau, Ketchikan and Petersburg is suspended until October 15, 1980.

§ 408.205(a)(1) [Suspended]

9. In § 408.205(a)(1), the applicability of the section to Anchorage, Cordova, Juneau, Ketchikan and Petersburg is suspended until October 15, 1980.

Subpart AC—Alaskan Scallops Processing Subcategory

§ 408.292(b)(1) [Suspended]

10. In § 408.292(b)(1), the applicability of the section to Anchorage, Cordova, Juneau, Ketchikan and Petersburg is suspended until October 15, 1980.

§ 408.295(a)(1) [Suspended]

11. In § 408.295(a)(1), the applicability of the section to Anchorage, Cordova, Juneau, Ketchikan and Petersburg is suspended until October 15, 1980.

Subpart AE—Alaskan Herring Fillet Processing Subcategory

§ 408.312(b)(1) [Suspended]

12. In § 408.312(b)(1), the applicability of the section to Anchorage, Cordova, Juneau, Ketchikan and Petersburg is suspended until October 15, 1980.

§ 408.315(a)(1) [Suspended]

13. In § 408.315(a)(1), the applicability of the section to Anchorage, Cordova, Juneau, Ketchikan and Petersburg is suspended until October 15, 1980.

[OPTS-62007; FRL 1494-5]

Storage and Disposal of Waste Material; Prohibition of Disposal of Tetrachlorodibenzo-P-Dioxin

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: On March 11, 1980, EPA published in the **Federal Register** at 44 FR 15592 an immediately effective proposed rule which prohibited the Vertac Chemical Company (Vertac) of Memphis, Tennessee, from disposing of certain wastes containing 2,3,7,8-Tetrachlorodibenzo-p-dioxin (TCDD) at its Jacksonville, Arkansas facility and required other persons intending to dispose of TCDD-containing wastes to notify the Agency sixty days in advance of such disposal. The Agency issued the rule under section 6(a) of the Toxic Substances Control Act (TSCA), 15 U.S.C. 2605(a), and declared it immediately effective under section 6(d) of TSCA.

EPA now promulgates as final the proposed rule with certain

modifications. The final rule allows Vertac to dispose of certain wastes which are generated on or after the effective date of the rule in accordance with certain criteria.

EPA also promulgates as final the provisions of the proposed rule which prohibit the disposal of TCDD-contaminated wastes located at Vertac's Jacksonville, Arkansas facility which were generated before the promulgation of this rule. The final rule also requires all persons who intend to dispose of any wastes resulting from the production of 2,4,5-TCP (2,4,5-Trichlorophenol) or its pesticide derivatives or from production of other substances on equipment which was previously used for production of 2,4,5-TCP or its pesticide derivatives to notify EPA of such intent at least sixty days before the disposal.

DATE: This final rule takes effect on the date it is signed by the Administrator of EPA (May 12, 1980).

FOR FURTHER INFORMATION CONTACT: Gordon R. Olson, Office of Pesticides and Toxic Substances (TS–794), Environmental Protection Agency, 401 M Street, SW., Washington, D.C. 20460, (202–755–1260).

SUPPLEMENTARY INFORMATION:

I. Background

A. Introduction

EPA issued an immediately effective proposed rule, published in the March 11, 1980 issue of the **Federal Register.** (45 FR 15592), which prohibited Vertac Chemical Corporation [1] from disposing of specific chemical wastes contaminated with 2,3,7,8-TCDD located at its Jacksonville, Arkansas facility. The rule also required any person to notify EPA at least sixty days before he intends to dispose of any TCDD containing wastes resulting from the production of 2,4,5-TCP or its pesticide derivatives, or substances produced on equipment which was previously used for production of 2,4,5-TCP or its pesticide derivatives.

EPA issued this rule under the authority of section 6(a) of the Toxic Substances Control Act (TSCA), 15 U.S.C. 2605(a), and declared it immediately effective under section 6(d) of TSCA. For a discussion of this immediately effective proposed rule and the legal authority under which it was issued, see the Supplementary Information section of the Preamble to the immediately effective rule published in the **Federal Register** of March 11, 1980 (45 FR 15593).

[1] The proposed rule refers to the company by its former name, Vertac, Inc.

If the Administrator declares a rule immediately effective section 6(d)(2)(B) requires the Administrator to commence a hearing within 5 days from the date of a request for it unless the Administrator and the person requesting the hearing agree upon a later date. The subsection also requires the Administrator to promulgate or revoke the proposed rule within 10 days of the conclusion of the hearing.

B. Informal Hearing

EPA originally established a sixty day comment period on this immediately effective proposed rule, after which it intended to hold an informal hearing pursuant to section 6(c) (2) and (3) and 40 CFR Part 750. On Friday, April 11, 1980, EPA received a written request from Vertac to commence an expedited hearing pursuant to section 6(d)(2)(B) of TSCA. On April 15, 1980, EPA informed Vertac and other interested persons who could be immediately identified that EPA was commencing a hearing in accordance with Vertac's request at 9:00 am, Wednesday, April 16, 1980, and the EPA would begin to receive testimony from interested persons. The hearing began as scheduled and was conducted in accordance with Procedures for Rulemaking under Section 6 of TSCA, 40 CFR Part 750, Subpart A, with certain abbreviated time requirements established for purposes of expediting the hearing. EPA conducted the April 16th session as a legislative hearing pursuant to 40 CFR, Section 750.7.

To ensure that interested parties were not denied the right to participate in the hearing, EPA scheduled an additional session of the legislative hearing on May 1, 1980, and issued a Notice of the expedited hearing and shortened comment period in the **Federal Register** of April 18, 1980 (45 FR 26386).

Vertac participated in the first session of the public hearing. Vertac later notified EPA that it would not be able to attend the May 1 session. Accordingly, EPA announced that it would hold open the hearing record to afford Vertac the opportunity to present additional testimony and to cross examine, if appropriate. No persons participated in this May 1 session.

On May 2, 1980, Vertac notified EPA notified EPA that it did not intend to present further testimony and did not wish to cross-examine witnesses. Accordingly, EPA formally concluded the public hearing on May 2, 1980. In addition to the testimony of Vertac, EPA has received written comments on the immediately effective proposed rule from four persons. A copy of the transcript of the hearing and these comments are contained in the public record for this rulemaking.

C. Vertac's Facility

Vertac purchased the Jacksonville, Arkansas facility from Hercules, Inc., which for many years had been manufacturing chemicals and had generated large amounts of chemical wastes in such a manner that a serious public health hazard developed over time. In response to this hazard the State of Arkansas issued an Administrative Order on June 15, 1979, requiring Vertac to clean up the waste materials at the Jacksonville facility.

A portion of the wastes located at the Jacksonville facility contain high concentrations of 2,3,7,8-TCDD produced as a byproduct of the manufacture of the pesticides 2,4,5-T (Trichlorophenoxyacetic Acid) and Silvex. The Jacksonville facility no longer manufactures these pesticides. In partial compliance with the Arkansas Administrative Order, Vertac placed these wastes into 85 gallon plastic-lined and 55 gallon unlined drums and relocated them to a storage area consisting of a diked concrete slab covered by a fixed metal roof. This method of storage protects the drums from corrosion caused by exposure to weather. Moreover, in accordance with the Arkansas order, Vertac now closely monitors the drums for possible leakage. Vertac now has approximately 2,745 drums of wastes contaminated with highly concentrated amounts of TCDD—up to 111 parts per million (ppm) based on sampling by EPA—stored in a manner that is relatively safe for the immediate future.

In addition, Vertac has in storage approximately 3,200 drums of TCDD-containing wastes resulting from production of 2,4-D[2,4-Dichlorophenoxyacetic Acid] since September 1979.[2] These wastes contain TCDD because the equipment used to produce 2,4-D had been used previously to produce 2,4,5-T, and the equipment remained contaminated with TCDD after production shifted from 2,4,5-T to 2,4-D.

EPA had received indications that Vertac was preparing to ship the TCDD waste to landfills. The Agency determined, however, that the landfill disposal alternative presents a considerable risk when compared to the

[2] The proposed rule only noted 700 durms of waste from 2,4-D production. At the April 16, 1980, hearing session, Vertac informed EPA that it had approximately 2,500 additional drums generated from such production [April 16, 1980, Hearing Transcript, page 111]. Further reference to the Transcript of the April 16, 1980, session will be cited [TR. page #].

relatively safe, easily monitorable condition at Jacksonville. In a landfill, the danger of leaking drums is always present, but the technical problems of monitoring, cleaning up or preventing additional movement of the contents are extremely complicated. Remedy may be impracticable in many cases. This sharply contrasts with the relatively simple remedial methods that Vertac could use at Jacksonville to contain the wastes and prevent injuries to public health.

EPA issued the immediately effective proposed rule to prohibit Vertac from disposing of both types of wastes on the grounds that the removal of these wastes from the Jacksonville facility for disposal presented unreasonable risks.

D. Vertac's Testimony

Vertac, the sole participant in the public hearing, testified principally about issues concerning the wastes from the production of 2,4-D,[3] and stated, in essence, that space for the storage of any additional 2,4-D wastes is so limited that the Jacksonville plant would close down if Vertac could not ship the wastes from the continuing production of 2,4-D off-site for disposal.[4]

Vertac said that the current rates of production of 2,4-D are generating approximately five hundred to seven hundred drums of wastes per month [T.R. 112].

Vertac testified that existing waste drums are stored at three sites on the facility. First, the 2,745 drums resulting from 2,4,5-T production are located on a specially constructed diked, roofed, concrete pad mandated by the State of Arkansas. Vertac testified verbally and by illustration that little open space remained on this pad [T.R. 39–55, passim].

Second, seven hundred drums containing 2,4-D wastes are now located in a warehouse that formerly stored formulated finished products [T.R. 108]. Vertac testified that the building contained no additional available storage space [T.R. 154].

Finally, the 2,500 additional 2,4-D drums are stored on a concrete loading platform behind the plant facility [T.R. 112]. Vertac testified that the drums are stacked tightly, leaving little room for inspection of and access to leaking drums [T.R. 146]. With the exception of a 20,000 gallon storage tank which Vertac characterized as defective, Vertac testified that it has no other available sites for storage.

Vertac also stated that there are no other concrete slab areas on the operating site. Much of the site consists of hillsides or open ground that drain into a creek. Vertac stated that, in fact, the concrete pad mandated by the Arkansas order was constructed because there are no other places to store the wastes [T.R. 162]. Vertac further testified that when it could not store additional wastes at Jacksonville, it would be forced to close the plant. The following testimony occurred between Messrs. Allan Gates, Vertac's Counsel, and Mr. Kenneth Howard, Technical Manager of the Jacksonville plant [T.R. 111–112]:

Mr. Gates: And is it rapidly approaching the point where the plant's just going to have to shut down, period, because it cannot accumulate any more waste safely and soundly?

Mr. Howard: There's only so much space that you can accumulate something like this and do it on a safe and monitor it type of basis.

We will have to shut the plant down.

Mr. Gates: Do you feel that the plant is close to that point right now?

Mr. Howard: We've been worried to death that we were close to that point a month ago.

Vertac testified that it had intended to find a method of disposal for all of the drums [T.R. 73], and that they retained in storage both the highly contaminated 2,4,5-T wastes and the 2,4-D wastes strictly because of regulatory concerns.

Vertac also presented testimony on the costs of storage and the degree of TCDD contamination of the 2,4-D wastes. Vertac estimated that the cost of storing the 2,4-D wastes in compliance with the rule would be approximately $150,000 annually [T.R. 164] (principally for purchasing replacement drums and employee costs), but indicated that additional costs may be incurred by the necessity to comply with regulations of the Occupational Safety and Health Administration [T.R. 47]. Vertac stated that these costs were significant [T.R. 169], but did not aver that the costs of storage themselves would lead to plant closure. Vertac expressed concern that the safety of workers inspecting for leaking drums might be jeopardized because the 2,500 drums on the loading platform are packed so tightly that it is difficult to reach leaking drums for repair purposes. Further, Vertac indicated there was a danger of exploding drums [T.R. 150–152].

Vertac also presented testimony that TCDD contamination in future 2,4-D process wastes was likely to be slight. The original TCDD contamination resulted from imperfect detoxification of the 2,4,5-T production equipment before it was transferred to 2,4-D production [T.R. 100]. Vertac testified that trace residues of 2,4,5-T remaining in the equipment are extracted during ongoing 2,4-D processing, thereby reducing the TCDD contamination. Vertac presented a calculation which demonstrated that, after ten process cycles, approximately 99.999+ percent of the original TCDD contamination can be removed from the process stream. This calculation assumed a 75 percent extraction efficiency, which Vertac claims is a conservative estimate [T.R. 99–103].

Vertac also indicated that the actual level of contamination of the 2,4-D wastes by TCDD deposits remaining in the production equipment depended on the quantity of TCDD residue which remained in the equipment after cessation of 2,4,5-T production. Vertac testified that it analyzed three "grab" samples taken on a "strictly random basis" from three of the 700 drums of wastes resulting from the initial production of 2,4-D on the contaminated equipment and found TCDD levels of approximately twenty parts per billion (ppb) [T.R. 107]. With regard to the 2,500 drums of 2,4-D wastes from subsequent production of 2,4-D on the same equipment, Vertac stated that they did not have any analytic results representative enough to "draw any lines" with regard to TCDD contamination between the 2,500 drums and the first 700 drums of 2,4-D wastes [T.R. 122].

II. Description of the Rule

This final rule prohibits Vertac Chemical Company (Vertac) from disposing of wastes containing TCDD produced before the date of the rule from its Jacksonville, Arkansas facility, unless such wastes are shown to contain no detectable TCDD using an EPA-approved methodology.

As provided in section 775.6(b), if the samples contain no detectable TCDD, then Vertac may dispose of the waste associated with the batch sampled and any other batches produced afterwards so long as the equipment did not, in the interim, return to production of 2,4,5-TCP or its pesticide derivatives.

The final rule, in contrast to the proposed rule, allows Vertac to dispose of wastes produced after the effective date of this rule on equipment which had produced 2,4,5-T at disposal sites which meet certain criteria. These criteria, contained in 40 CFR 761.41(b),

[3] Vertac also outlined for the record its general objections to the rule. EPA responded in general to those objections. [T.R. 11–29 passim].

[4] In its testimony, Vertac also requested that EPA consider the issues related to the 2,4-D wastes on a more expedited basis than the remaining issues [T.R. 34]. EPA agreed to consider the request [T.R. 137]. EPA has decided that, as a practical matter, proceeding on a bifurcated basis would increase the already substantial task of taking final Agency action of the entire proposed rule within ten days after concluding the public hearing.

minimize the migration of material placed in the landfill, provide for floodplain protection, lessen the potential for fire danger, limit erosion, and require leachate collection and treatment systems.

If Vertac provides testing data which confirms that the wastes generated from any production batch after the effective date of this rule contain no detectable TCDD, then, as provided by section 775.6(b), this rule no longer governs the disposal of the wastes. If, on the other hand, test results indicate the presence of TCDD, EPA will take action as is necessary to protect public health.

The rule also requires other persons to notify EPA of their intent to dispose of wastes from the production of 2,4,5–TCP or its pesticide derivatives or of wastes generated on equipment that had previously been used to produce 2,4,5–TCP or its pesticide derivatives. The rule requires that such notification be made 60 days in advance of disposal, providing the Agency with specific information which will allow EPA to determine the magnitude of risk on specific cases. As provided by section 775.6(b), if such wastes contain no detectable TCDD, then the notification requirement of section 775.4(b) shall not apply.

The rule lists the penalties for non-compliance and presents certain exclusions to the 60 day notification requirements.

III. Findings

EPA finds that the disposal of the approximately 2,745 drums of 2,4,5–T wastes located at Jacksonville, presents an unreasonable risk of injury to human health. EPA also finds that disposal of the TCDD contaminated wastes generated by production of 2,4–D at Jacksonville before the effective date of this final rule presents an unreasonable risk. The Agency, therefore, promulgates a final rule to continue in effect the restrictions on disposal of these wastes. EPA has determined that disposal of 2,4–D wastes at Jacksonville after the effective date of this final rule will not present an unreasonable risk if disposal occurs in accordance with the restrictions imposed in the rule.

Finally, EPA finds that the disposal by any person of any wastes from the production of 2,4,5–Trichlorophenol or its pesticide derivatives or from production of other substances on equipment that was previously used for production of 2,4,5–Trichlorophenol or its pesticide derivatives without notification to EPA at least sixty days in advance of such disposal presents an unreasonable risk.

In reaching these decisions, EPA applied the principles for determining unreasonable risk that are set forth in the statutory language and the legislative history of TSCA. Determining unreasonable risk involves an administrative judgement which is reached by balancing the probability that harm will occur and the magnitude and severity of that harm against the adverse effects on society of any proposed regulatory action. Thus, the showing of the existence of potential harm does not, itself, constitute a finding of unreasonable risk. If the economic or other adverse impact on society of regulating the harm outweighs the risk of harm which the regulation is designed to prevent, EPA would not find such risk unreasonable.

The rationale for these findings of unreasonable risk are discussed below. In the preamble to the immediately effective proposed rule, at 45 FR 15994–6, EPA set forth its tentative findings required by section 6(a) of TSCA. Based on the proposed findings, the testimony at the hearing, and the entire rulemaking record designated below, EPA hereby sets forth its final findings.

A. Toxicological Effects of TCDD on Human Health

EPA adopts as its final finding the statement on human toxicological effects contained in the preamble to the immediately effective proposed rule at 45 FR 15994–5. In the proposed finding EPA determined that exposure to TCDD can result in adverse effects to human beings. The Agency relied on laboratory animal studies showing that statistically significant fetotoxic, teratogenic, and carcinogenic effects occurred at extremely low dietary levels.

The Agency concluded that there is no level of exposure at which the Agency could be confident that these adverse effects would not occur. One of the comments received on the proposed rule objected to this conclusion in two major respects. First, the comment claimed that a laboratory animal study on which EPA principally relied does not support the Agency's conclusion that there was no level of exposure at which adverse carcinogenic effects would not occur. The comment stated that the study showed a carcinogenic response at 0.1 micrograms of TCDD/kg/day, but no carcinogenic response at the intermediate dose level of 0.01 micrograms/kg/day and that the lower dose level of 0.001 micrograms/kg/day did not cause any effects of toxicologic significance. Second, the comment stated that the reproductive effects study on which EPA relies showed no reproductive effects associated with exposure to the lower dose level of 0.001 micrograms/kg/day over the multiple generations of the study. Therefore, the comment claims, a no adverse effect level has been demonstrated for TCDD reproductive toxicity.

1. *Cancer effects.* The analysis of the cancer study suggested by this comment is fundamentally different from the Agency's cancer risk assessment policy. EPA does not accept the position that failure to detect cancer at lower doses in laboratory animal studies establishes a "no effect level" for cancer risk, but has adopted the no-threshold concept for cancer induction. According to this concept, any exposure to a carcinogen, however small, will confer some risk of cancer on the exposed population.

The Agency's assessment of the carcinogenic risk is founded on principles developed and followed by EPA as well as other federal regulatory agencies and research institutions charged with measuring the risks associated with toxic chemicals in the environment. The Agency analyzes carcinogenic risks in accordance with its "Interim Guideline for Carcinogen Risk Assessment" (Interim Guideline).[5] The policies described in the Interim Guideline are consistent with a recent report of the Interagency Regulatory Liaison Group (IRLG) entitled "Scientific Basis for Identification of Potential Carcinogens and Estimation of Risks" (IRLG Report).[6] The IRLG report reflects the consensus of scientists and policymakers of four major federal regulatory agencies, including EPA, which regulate carcinogenic substances as well as senior scientists from two federal agencies involved in cancer research.

Even the effects noted at the intermediate dose level of the study in question provide substantial evidence that TCDD is a human carcinogen. At the intermediate dose levels there did occur statistically significant incidences of hepatocellular neoplastic nodules, a type of tumor which has been demonstrated to have the capacity to progress in time into liver cancer.

According to the Interim Guideline, the best evidence that a chemical substance is a human carcinogen comes from a combination of epidemiological studies on humans and experimental animal data. Substantial evidence is

[5] U.S. Environmental Protection Agency. Interim Procedures and Guidelines for Health Risk and Economic Impact Assessments of Suspected Carcinogens. 41 F.R. 21402 (May 25, 1976).

[6] Work Group on Risk Assessment of the Interagency Regulatory Liaison Group (IRLG) 1979. Scientific Bases for Identification of Potential Carcinogens and Estimation of Risks. 44 F.R. 39858–39879 (July 6, 1979).

provided by animal tests which demonstrate that the substance induces in one or more animal species malignant tumors or benign tumors, which are generally recognized as precursors of malignant tumors. Suggestive evidence of a potential human cancer risk includes the induction in laboratory animals of non-life shortening benign tumors which are generally considered to progress to malignancy. According to the IRLG report, few, if any, benign tumor types are presently known to be incapable of progressing to malignancy.

2. Reproductive Effects. With respect to the reproductive effects study, the Dow chemical Company raises an issue that has been disputed in the Agency's proceedings under the Federal Insecticide, Fungicide and Rodenticide Act (FIFRA), 7 U.S.C. § 136, et seq., to cancel the uses of the pesticides 2,4,5-T and Silvex. The Agency has noted that despite consistent undisputed fetotoxic and teratogenic effects at higher doses, the existence of somewhat sporadic results at the lowest dose tested in the rodent reproductive effects study has given rise to different interpretations of whether a no adverse effect level can be determined in some rodent test systems. For the purpose of this rulemaking, EPA's approach is to adopt a conservative position that interprets the results as indicating that pregnant animals respond adversely to a TCDD exposure which is relatively close to the minimum level which the study is able to detect.[7]

However, notwithstanding any controversy that exists in the FIFRA proceeding, for the purposes of this rule under section 6 of TSCA, the Agency finds that it could not confidently state that a no adverse effect level has been found for reproductive effects.

B. Magnitude of Exposure of Human Beings to TCDD

EPA adopts for the final rule the findings on exposure to TCDD stated in the preamble to the immediately effective proposed rule at 45 FR 15595–96. No significant comments were submitted challenging EPA's basic determination that maintaining the drummed wastes in a monitorable situation at the Vertac facility presents a relatively known and correctable hazard and that disposing of the drums poses comparatively a substantially greater risk.

Vertac stated in its testimony the wastes corrode the drums rapidly causing a high rate of leakage. Vertac further indicated there is a risk of drums exploding on the concrete pad when exposed to the elements. No specific instances or results of exploding drums were cited by Vertac. EPA notes these problems but finds that primarily because of the ability to correct these problems the risks from maintaining the drums are less than the risks from landfilling. At Jacksonville, leaks can be stopped, workers can wear protective clothing, and the drums can be distributed in such a way to reduce the risks to workers that must monitor them. In landfills, the problems that occur from leakage are essentially uncorrectable.[8] The possibility of leaking drums is, in fact, precisely the reason why Vertac should keep the drums on site, as long as it is practicable to do so. On-site leaks are relatively easily corrected. If Vertac deposits these drums in landfills and they leak, the drums are not retrievable. Only very difficult and costly remedial procedures may be available.

Furthermore, EPA has evidence that TCDD has leaked from landfills in the past. EPA has assembled in the rulemaking record evidence which shows potentially great exposures that can result from landfill leaking of TCDD contaminated wastes. In fact, at Jacksonville there is significant evidence of groundwater, surface water, stream bed, and soil contamination from two landfills located on the site.

This rule recognizes, however, that all wastes cannot be kept on site at Vertac indefinitely, and allows the disposal of wastes generated on or after the effective date of the final rule.[9] In the case of these wastes currently being produced, in order to further minimize potential exposure, EPA finds that only the highest quality landfills should be used. In order to ensure that these landfills are of sufficient quality for disposal of a highly toxic waste like TCDD, the landfills must be approved on an individual basis by the Agency.[10] Until now the Agency has only approved landfills on an individual basis under the standards for landfilling of polychlorinated byphenyls under 40 CFR 761.41. These standards are the most stringent landfill requirements the Agency has approved to date in general rulemaking. Accordingly, the Agency adopts those standards for landfilling of Vertac's wastes until such time as their testing indicates no detectable quantities of TCDD in the wastes.

C. Effects of TCDD on the Environment

No testimony was presented at the hearing regarding the effects of TCDD on the environment. The findings contained in the proposed rule state that the Agency did not consider environmental effects, per se, since the human health effects of TCDD are so significant. EPA, therefore, adopts for this final rule the environmental effects finding in the proposed rule.

D. Economic Impacts [11]

1. *Future Wastes at Jacksonville.* EPA finds that if it does not permit Vertac to ship wastes generated from current and future production of 2,4-D, the Jacksonville plant will cease operating when Vertac no longer has space available to store wastes on site. Vertac has presented convincing testimony that it is close to that point now. Vertac's description of the Jacksonville site indicates little space is available on existing concrete slabs and that the remainder of the site is unsuitable for storing additional drums. In addition, the plant manager stated that Vertac is approaching the point at which the plant would close because safe storage of additional drums would not be feasible.

The Agency believes it is reasonable to presume that closing of the Jacksonville plant would result in job losses to the community and in local economic impacts of significance.

---

[7] A more complete discussion of the scientific issues associated with the reproductive effects study is found in "Respondents Prehearing Brief on the Risks Associated with the Registered Uses of 2,4,5-T and Silvex" submitted by U.S.E.P.A. in re: the Dow Chemical Company, et al., FIFRA Doc. No. 415, et al., pages 45–51. This portion of the brief is in the record in this proceeding. As noted in the proposed rule, in this rulemaking the Agency is relying on toxicological evidence presented in the EPA proceedings under FIFRA on the suspensions of certain uses of 2,4,5-T and Silvex. See 45 FR 15595. That evidence is sufficient to support the risk finding in this rulemaking, although in the FIFRA adjudiciary hearing the evidence will be subject to rebuttal on major issues.

[8] The technical details of the problems associated with landfill containment of wastes are described in the preamble to the proposed rule (45 FR 15595).

[9] In the case of Vertac EPA has determined, as explained below, that, if certain drums are not shipped for disposal, the Jacksonville facility will shut down.

[10] This would not include "interim status" facilities under section 3005(e) of the Resource Conservation and Recovery Act (RCRA), since those facilities are not approved by EPA on an individual basis.

[11] The Agency finds that this rule will not have significant effect on the national economy, small business, or technological innovation. The principle economic impacts affect the area in the vicinity of the Jacksonville facility. All other impacts resulting from the notice requirement are minimal. Furthermore, TCDD itself has no commercial uses. It is produced as an inevitable contaminant in the production of chemicals, particularly certain pesticides. This rule is only imposing disposal requirements and is not directly restricting production of any commercial chemicals and the impact of the cost of disposal upon the cost of production of the pesticides products is expected to be slight.

Significant loss of revenue to Vertac would also result.[12]

The final rule will require Vertac to dispose of its future wastes in landfills approved under specific criteria set forth in this rule. Since it is anticipated that there will be few landfills that will be able to comply with the criteria, the cost of disposal will be somewhat greater than the costs of disposal in landfills which may have otherwise been used. This additional cost may be approximately $2,500 per month. The rule, however, waives the special requirement if actual testing by the EPA approved method shows no detectable levels of TCDD in the wastes. EPA therefore expects that the additional costs of requiring disposal in approved landfills will be a short term effect and will be low compared to impacts of plant closure that could result if the Agency does not permit shipment of future waste production.

2. *Existing TCDD wastes in Jacksonville.* Based on Vertac's testimony, EPA finds the costs of maintaining the existing 2,4,5-T wastes and the 2,4-D wastes contaminated with TCDD are higher than the Agency found them to be in the proposed findings. Vertac has stated that it must replace a large number of corroded, leaking drums, which would, in total cost approximately $250,000 per year for both the existing 2,4,5-T and 2,4-D contaminated wastes. Vertac argued that these costs are significant and that the Agency should not force the company to incur them. Vertac, however, did not state that it would close its Jacksonville facility if it had to incur these costs. This contrasts with Vertac's claim that it would close the plant when space is no longer available for storage of future wastes. EPA asked Vertac at the April 16th hearing session how it would decide whether it could reasonably continue to incur the costs of retaining the drums [TR 169]. Vertac presented no testimony in response to these requests. In the absence of evidence to the contrary, EPA has determined that Vertac can reasonably bear the cost of maintaining the existing drums in place. Furthermore, the costs of storing wastes on site at Jacksonville appear minor compared to the costs of clean-up if the TCDD leaks from a landfill in which it is deposited. These clean-up costs could be extremely high, based on EPA experience. This rule presents a temporary solution to TCDD waste disposal. It is hoped that in a relatively brief period of time longer range solutions will be found. EPA is examining proper disposal methods to be implemented under the Resource Conservation and Recovery Act (RCRA); EPA is also considering methods of destroying TCDD wastes. Vertac, thus, is expected to bear the costs of maintaining these wastes for only a relatively short time.

3. *Notification Requirement for Other Facilities.* In the preamble to its proposed rule, the Agency found that the costs of the notification requirement will be minimal. Although comments have been filed in opposition to the notification requirement, no person has submitted any data to challenge this determination. Accordingly, EPA adopts the determination in the preamble to the proposed rule, that the costs of submitting notification to EPA sixty days before disposal of TCDD containing wastes are minimal.

E. Findings of Unreasonable Risk

1. *Future wastes at Jacksonville.* The Agency finds that disposal of Vertac's waste materials from future production of 2,4-D in chemical waste landfills in accordance with the conditions of this rule should not present an unreasonable risk, since the hazards from landfill disposal in this case are outweighed by the severe economic consequences that would result if the Jacksonville facility ceases operation. The economic consequences of prohibiting disposal represent an important consideration in EPA's decision to allow the disposal. The Agency, however, also considers the fact that it has reason to believe that the wastes from production of 2,4-D after the effective date of this rule do not contain any significant level of TCDD contamination.

In order to further assure protection of public health, the Agency has imposed additional conditions on the disposal. The rule's requirement that Vertac dispose of these wastes in landfills approved by EPA under standards for disposal of PCB's reduces to an extremely low level the likelihood of human exposure to whatever TCDD may be present in these 2,4-D wastes. As an additional safeguard, this rule requires Vertac to test its wastes for TCDD and to submit the results of these tests to the Agency.

If testing shows levels of TCDD in the 2,4-D wastes which merit serious concern, EPA may take action to modify its decision with respect to future 2,4-D wastes. If, on the other hand, testing shows that TCDD is not detectable, Vertac will be under no further obligation to use the landfills meeting the criteria of section 775.4(c)(2).

Furthermore, permitting Vertac to dispose of future 2,4-D waste production in accordance with the requirements imposed in this action confers public health benefits. Vertac will be able to alleviate worker exposures to the existing waste drums it must retain on site. Vertac has indicated that the drums on the loading platform are packed very tightly, making monitoring for leakage very difficult. If Vertac does not have to use the additional space on the loading platform to store wastes from current production, the existing stored wastes could be redistributed more evenly, permitting more effective monitoring.

2. *Existing wastes at Jacksonville.* EPA finds that the shipping of 2,4,5-T and the other TCDD contaminated wastes already existing at the Jacksonville facility presents an unreasonable risk, since the risks of disposal outweigh the costs of maintaining the wastes on site. This unreasonable risk finding is based on the statements contained in the unreasonable risk finding contained in the preamble to the proposed rule, 45 FR 15596, and comments submitted during the rulemaking proceeding.

a. *Risks of disposal of existing wastes.* The finding for the proposed rule noted the high levels of TCDD contamination contained in the 2,4,5-T drums and the possibility of exposure to TCDD if Vertac were to dispose of the drums. These risks were compared to the lower risks presented in the relatively secure, monitored environment at the Jacksonville facility, and to the possibility that methods may be found to destroy TCDD and make potential exposure to landfilled TCDD an unnecessary risk.

EPA found that the Agency did not have sufficient knowledge of the contents of the 2,4-D drums to permit shipment for disposal considering the high toxicity of TCDD and the risks of disposal. Although comments were submitted questioning the Agency's findings on the toxicity of TCDD and the magnitude of exposure, as explained above, the Agency finds no reason to modify the finding in the proposed rule as it applies to risks. The highly concentrated 2,4,5-T wastes clearly present a high risk. The Agency to this point is still uncertain of the TCDD levels in the 2,4-D wastes. No empirical data exist to show that TCDD is present below the limits of detection of the testing methodology approved by EPA.[13]

b. *Costs of the rule.* Vertac's testimony shows that the costs of

[12] Revenues from the Jacksonville plant were approximately $8 million in 1979.

[13] At the April 16, 1980, hearing session Vertac indicated it had shipped samples of its existing 2,4-D wastes for testing by the EPA approved methodology. If the test shows no detectable levels of TCDD in Vertac's wastes, they are exempt from the rule in accordance with § 775.6(b).

maintaining existing wastes at Jacksonville are higher than EPA had originally determined. Nevertheless, Vertac's testimony indicates that, although the company may consider the costs of maintenance to be a burden, the costs would be absorbed by the company at least for the near future. Further, the rule represents a temporary solution to a problem that EPA is working to resolve. It is expected that Vertac will not have to bear these costs for the long term.

3. *Wastes at other facilities.* EPA finds that permitting persons to dispose of TCDD containing wastes without prior notification to EPA presents an unreasonable risk. This finding, as stated in the preamble to the proposed rule, results from an Agency determination that the general risk of TCDD disposal outweighs the minimal economic impact of notifying EPA of the person's intention to dispose and small costs of holding wastes for sixty days while EPA evaluates the notification.

EPA has received comments that the Agency has not made findings of unreasonable risk with respect to the notification requirement and that the requirement is, therefore, not valid.[14] EPA disagrees. EPA has made a finding of unreasonable risk which states that the probability of harm from any TCDD disposal outweighs the minimal burden that a notification requirement and a sixty-day waiting period would impose.

In its findings on toxicity of TCDD and the magnitude of exposure to TCDD, the Agency has examined the likelihood of harm that may occur. The Agency is not required to show the factual certainty of harm before it regulates a chemical, particularly when it is dealing with disposal and regulatory action which will not result in removal from society of the benefits of a chemical. The application of the unreasonable risk standard varies depending upon the risk of harm and the impact on society of the regulation of that harm. The notification requirement imposes a very limited restriction that will not deprive the public of the benefits of the regulated chemical, nor does it impose a substantial regulatory burden. In fact, the notification requirement ensures that EPA will be informed of potential risks and will be able to protect the public against exposure to a highly toxic chemical.

F. *Public interest finding.* In promulgating a rule under section 6(a) of TSCA, the Administrator must find that it is in the public interest to use TSCA when action is possible under another statutory authority within the Administrator's jurisdiction. In the preamble of the proposed rule EPA found it could protect against the risk by bringing injunctive action against Vertac under section 7003 of the Resource Conservation and Recovery Act (RCRA), 42 U.S.C. 6973, but found it is in the pubic interest to promulgate a rule under TSCA. In making this finding in accordance with section 6(a), EPA considered (1) all relevant aspects of the risk; (2) a comparison of the estimated costs of complying with action taken under TSCA and actions under RCRA; and, (3) the relative efficiency of each act to protect against the risk of injury. The Agency adopts the finding in the proposed rule for the final rule for the same reasons stated in the preamble to the proposed rule. These reasons are summarized below.

In the proposed rule preamble EPA found no difference between the two acts with respect to the first two factors required to be considered under section 6(a), but decided to use TSCA because of the relative efficiency of using the immediately effective rulemaking authority of section 6(d) of TSCA.

The Dow Chemical Company commented on this. Dow concluded that EPA had abused its discretion in using TSCA instead of RCRA, primarily because the Agency has proceeded under section 7003 of RCRA in other cases involving improper storage or disposal of chemical wastes. Each of the cases cited by Dow involves an action against a single entity to seek clean up of hazardous waste sites and storage areas. This rule is directed at the disposal of all TCDD containing wastes. While the rule prohibits Vertac from disposing of certain wastes, the rule is comprehensive and requires that other persons intending to dispose of TCDD containing wastes notify the Agency sixty days in advance of such disposal. These other persons are not presently known to EPA except to the extent that they have come forward as a result of the issuance of the immediately effective proposed rule. Accordingly, while injunctive relief might be sought against Vertac pursuant to Section 7003 of RCRA, there is presently no effective way, other than rulemaking, to identify the other persons seeking to dispose of TCDD containing wastes while at the same time preventing them from disposing of the wastes until EPA learns the particular facts of the proposed disposal. Under these circumstances, EPA has not abused its discretion in conducting a rulemaking pursuant to Section 6(d) of TSCA.

Dow further criticizes the use of TSCA instead of RCRA on the basis that the Agency's regulations governing disposal of hazardous waste under RCRA have been subjected to rigorous public comment and that the policy choices governing disposal of wastes have already been made. This comment ignores the fact, however, that RCRA has made no specific finding regarding disposal of TCDD. The policy choices under RCRA apply to disposal of wide categories of wastes under general interim standards. Under the TSCA section 6 rule the policy choices apply specifically to TCDD wastes. However, the Agency's final permits issued under section 3005(c) of RCRA will supersede the TSCA rule.

IV. Other Issues

A. Relationship to RCRA

The notification requirement of the proposed rule does not apply to persons disposing of TCDD at facilities permitted for disposal under section 3005(c) of RCRA, 42 U.S.C. 6925(c), but does require notification to EPA before persons dispose of TCDD in facilities covered by interim status under section 3005(e) of RCRA.

Dow claims that this distinction violates RCRA and is contrary to sound public policy. Dow argues that RCRA does not allow more stringent requirements to be imposed upon an "interim status" facility than is imposed on a fully permitted facility and that the Agency is not authorized to discriminate against a facility on the basis of its "interim status." Dow also argues that such a distinction fosters duplication of effort by creating jurisdiction in two separate offices over identical material.

EPA disagrees. This rule is consistent with the requirements of RCRA. The rule rationally distinguishes between interim status facilities under section 3005(e) of RCRA and fully permitted facilities under section 3005(c) of RCRA. Before it issues a permit to a facility under section 3005(c), EPA will evaluate whether or not that facility complies with applicable standards. Under interim status provisions, in contrast, any person who submits an application is treated as having a permit, although EPA has not yet evaluated that particular facility. The public, therefore, has less assurance that a person operating an interim status facility will adequately dispose of wastes.

[14] One comment states that a sixty-day delay could cause an unreasonable risk in and of itself. No direct support is given for such a statement and EPA fails to see how a properly drummed and stored waste retained for sixty days could present an unreasonable risk.

B. Relationship to FIFRA "Use Permits"

Several persons have commented that EPA currently permits the use on rice and other crops of the pesticide 2,4,5-T containing approximately 100 ppb of TCDD. These persons state that EPA cannot justify restricting disposal of wastes containing a significantly lower level of TCDD.

EPA disagrees with this conclusion. The Agency instituted proceedings under the Federal Insecticide, Fungicide and Rodenticide Act (FIFRA), 7 U.S.C. 136, *et seq.*, to cancel all uses of 2,4,5-T and Silvex. The Agency issued emergency suspensions for some uses of 2,4,5-T and Silvex in March, 1979.[15] In December 1979, EPA issued its final determination concerning the rebuttable presumption against registration for all uses of 2,4,5-T that had not previously been suspended (44 FR 72316). EPA has determined under FIFRA that the potential oncogenic, fetotoxic and teratogenic risks associated with the non-suspended uses do not appear to be justified by offsetting economic, social or environmental benefits and that such uses therefore appear to cause unreasonable adverse effects on the environment. Action under the rule to restrict disposal is, therefore, consistent with Agency action under FIFRA.

C. Section 8(a) of TSCA

One commentor stated that Section 8(a) "was to be used to collect information that might later be used in 'unreasonable risk' determinations for regulation of chemical substances under section 6." EPA agrees. The comment then claims that "By proposing to impose reporting requirements under section 6(a) rather than section 8(a), EPA seeks to expand its authority under 6(a) beyond the scope intended by Congress."

EPA reemphasizes that it has found that the absence of notification of the intent to dispose of TCDD containing wastes constitutes an unreasonable risk. This final rule reduces those unreasonable risks by requiring persons to notify the Agency of the intended disposal. It is one method to regulate disposal of TCDD contaminated wastes under the authority of section 6(a)(6), which authorizes the Administrator to reduce unreasonable risks by "promulgating or otherwise regulating any manner or method of disposal . . .". It constitutes what EPA has determined is the least burdensome manner to reduce the unreasonable risk, and falls clearly within the authority of section 6(a).

D. Section 6(d) of TSCA

Two comments objected to the use of 6(d) with regard to the notification requirement in the rule on the grounds that "EPA points to no evidence or reason to believe that disposals by persons other than Vertac would present an imminent risk of serious or widespread harm." [16] These comments suggest that EPA must identify particular persons who are intending to dispose of TCDD contaminated wastes before the effective date of a final rule in order to declare the notification portion of the proposed rule immediately effective.

EPA does not interpret section 6(d) as requiring evidence of imminent injuries or actions leading to injuries, but rather evidence of *risks* of imminent injury or actions leading to injury. EPA believes that these comments fail to distinguish between evidence of risks of imminent injury and evidence of imminent injury.

The record for this rulemaking contains ample evidence that improper disposal of TCDD can cause serious and widespread injuries. EPA finds it reasonable to conclude that there is a risk that improper disposal of TCDD contaminated wastes will occur before the effective date of a final rule requiring prior notification of disposal. For example, in the absence of the restrictions contained in this rule, persons who wish to avoid the increased costs associated with proper disposition of TCDD may attempt to dispose of it before federal regulations impose responsible solutions.

The risk that improper disposal of TCDD contaminated wastes could occur before the effective date of a final rule balanced against the minimal economic impact of the proposed rule justify EPA's declaring the notification portion of the proposed rule immediately effective.

One comment also stated that section 6(d) should be used rarely because violations occur and penalties accrue on the date of publication without prior public comment. EPA believes that section 6(d) should be used when, as in this case, the Agency can properly justify its use, and notes that the expedited hearing procedures are designed to provide an affected person with speedy Agency consideration and rapid judicial review in order to mitigate any unreasonably harsh consequences of the immediately effective rule.

E. The Analytical Methodology for Testing TCDD

One comment argued that EPA should set a limit of detection to remove wastes from the notification requirement. The comment further stated that this limit should not be at the level of detection of a testing methodology.

EPA finds that its use of the GC/HRMS methodology in this rulemaking is reasonable and that a limit of detection is not required. The notification requirement is triggered if a person has wastes from the production of 2,4,5-Trichlorophenol or its pesticide derivatives or wastes resulting from process equipment formerly used to manufacture such chemicals. This is a simple, definite test which permits a person to know with a high degree of certainty that he is subject to the rule. If the person wishes an exclusion from notification, then he may at his option have his wastes tested. If, under EPA's approved methodology, which is the most sensitive test, the person finds no detectable levels of TCDD, the Agency has decided that it has enough assurance that what may be considered a TCDD-contaminated waste is not of present concern to the Agency. EPA will not set a definitive general regulatory limit of detection for TCDD, a chemical for which the Agency cannot be confident that a "no adverse effect level" has been found.

F. Vertac

Vertac commented that the notification provision of the rule suggests that EPA "does not intend to unilaterally restrict all parties from landfilling or otherwise disposing of TCDD contaminated wastes . . .". Vertac then concludes that because the regulation bars them from disposing of TCDD contaminated wastes, Vertac "is not treated equally."

EPA disagrees. First, EPA does not regard the notification requirement as implicitly condoning the disposal of TCDD contaminated wastes by other persons. EPA cannot at this time assess whether other intended disposals of TCDD present or will present unreasonable risks. EPA will examine any plans to dispose of such wastes. If, as in the case of Vertac, such intended disposals pose unreasonable risks, EPA will act as is necessary to adequately protect public health.

Vertac also suggests that this rulemaking prohibits Vertac from exploring alternate solutions for the disposal of the 2,4,5-T drums, and that therefore the rule is arbitrary.

This rule bars Vertac from disposing of the highly contaminated 2,4,5-T

[15] For a discussion of these suspensions see the March 15, 1979 **Federal Register** (44 FR 15874).

[16] Comment of the Chemical Manufacturers Association, Inc., May 5, 1980, at page 11.

wastes because such disposal at the present time presents an unreasonable risk. However, EPA does not intend by this prohibition to discourage Vertac or any other person from exploring methods for the final disposition of TCDD contaminated wastes. On the contrary, if Vertac or any other person identifies alternate solutions for final TCDD disposition which adequately protect public health, EPA will take appropriate action under this rule on notifications which include such plans.

VI. Rulemaking Record

EPA has established a public record for this final rulemaking (docket number OPTS-62007)* which along with a complete index is available for inspection in the OPTS reading room from 9:00 a.m. to 5:00 p.m., Monday through Friday, excluding holidays, at 401 M Street, S.W., Washington, D.C. 20460. This record contains the basic information considered by the Agency in this rulemaking.

In an effort to develop more orderly organization of this part the numbering for Subpart J has been changed. For the convenience of the reader the following redesignation table is being provided:

Proposed section:	Final rule section
775.1	775.1180
775.2	775.1183
775.3	775.1186
775.4	775.1190
775.5	775.1195
775.6	775.1197

Under Executive Order 12044, EPA is required to judge whether a regulation is "significant" and therefore subject to the procedural requirements of the Order or whether it may follow other specialized development procedures. EPA labels these other regulations "specialized." This regulation has been reviewed, and it has been determined that it is a specialized regulation not subject to the procedural requirements of Executive Order 12044.

Dated: May 12, 1980.

Douglas M. Costle,

Administrator.

Therefore, Chapter I of Title 40 of the Code of Federal Regulations is amended by adding a new Part 775 consisting at this time of Subpart J.

PART 775—STORAGE AND DISPOSAL OF WASTE MATERIAL

Subparts A–I—[Reserved]

Subpart J—Disposal of Waste Material Containing Tetrachlorodibenzo-p-dioxin (TCDD)

Sec.
775.180 Scope.
775.183 Definitions.
775.186 Prohibited Acts.
775.190 Required Acts.
775.195 Compliance.
775.197 Exclusions.

Authority: Sec. 6 Toxic Substances Control Act (TSCA). Pub. L. 94–469. 90 Stat. 2020 (15 U.S.C. 2605).

Subpart J—Disposal fo Waste Material Containing Tetrachlorodibenzo-p-dioxin (TCDD)

§ 775.180 Scope.

This subpart prohibits the removal for disposal of wastes containing TCDD presently located at the Vertac Chemical Co. facility at Jacksonville, Arkansas. In addition, this subpart requires persons who dispose of wastes containing TCDD to notify the Administrator sixty days before disposal.

§ 775.183 Definitions.

In addition to the definitions in section 3 of the toxic Substances Control Act (TSCA), 15 U.S.C. 2602, the following definitions shall apply to this subpart.

(a) "Assistant Administrator" means the EPA Assistant Administrator for Pesticides and Toxic Substances.

(b) "EPA" means the U.S. Environmental Protection Agency.

(c) "Dispose of chemical substances or mixtures for commercial purposes" means disposal by any person who disposes of chemical substances or mixtures for the purpose of obtaining commercial advantage, as well as disposal by any person incidental to his commercial activities.

(d) "Person" includes any individual, firm, company, corporation, joint venture, partnership, proprietorship, association, or any other business entity; any state or political subdivision thereof, any municipality, any interstate body, and any department, agency, or instrumentality of the federal government.

(e) "TCDD" means 2,3,7,8-Tetrachlorodibenzo-p-dioxin.

(f) "Waste material" or "waste" means any garbage, refuse, sludge from a waste treatment plant or water supply facility and other discarded material including solid, liquid, semi-solid, or contained gaseous material resulting from industrial, commercial, mining and agricultural operations.

(g) "Waste material containing TCDD" or "waste(s) containing TCDD" means any waste material or waste(s) resulting from manufacture or processing of 2,4,5-Trichlorophenol or its pesticide derivatives, or any waste(s) resulting from manufacturing processes using equipment that was at some time used in the manufacture of 2,4,5-Trichlorophenl or its pesticide derivatives.

§ 775.186 Prohibited acts.

(a) Vertac Chemical Co., of Memphis, Tennessee, shall not remove for disposal any of the wastes containing TCDD produced before May 12, 1980, currently located at its facility in Jacksonville, Arkansas.

(b) No person who disposes of chemical substances or mixtures for commercial purposes shall remove for purposes of disposal the wastes containing TCDD produced before May 12, 1980 currently located at the Vertac Chemical Co. facility in Jacksonville, Arkansas.

§ 775.190 Required acts.

(a) Vertac Chemical Co.: (1) Shall post a notice (or notices, as appropriate) at the principal access point to the storage area(s) at its Jacksonville facility stating that Tetrachlorodibenzo-p-dioxin contaminated waste materials are stored on site and that removal for disposal of such waste is prohibited without express permission from the Assistant Administrator.

(2) Shall dispose of all waste material containing TCDD produced at the Jacksonville facility after May 12, 1980, at facilities which comply with the requirements of § 761.41(b), until the required actions of § 775.190(a)(3) are completed. Vertac shall notify the Assistant Administrator at least one week prior to shipment in accordance with the requirements of § 775.190(b) (1) through (5). Such notification shall also include sufficient additional information to allow the Assistant Administrator to evaluate compliance with the requirements of § 761.41(b). (This additional information will only be required once for each facility receiving waste material containing TCDD).

(3) Shall test the wastes produced after May 12, 1980 at the Jacksonville facility, employing the TCDD detection methodology described in § 775.197(c) of this subpart and provide the Assistant Administrator with the results within two weeks of the date the analyses are completed. If the wastes contain no detectable TCDD then the requirement in § 775.190(b) will be withdrawn, and the exclusion in § 775.197(b) will be controlling. In the event that future production shifts to 2,4,5-Trichlorophenol or its pesticide derivatives separate notification under § 775.190(b) will be required before any wastes generated in such production can be disposed of.

(b) *Disposal Notification.* Any person who disposes of chemical substances or mixtures for commercial purposes who wishes to dispose of wastes containing TCDD shall notify the Assistant Administrator sixty (60) days prior to their intended disposal of such wastes. Notification shall be by certified letter to the Assistant Administrator with a copy to the EPA Regional Administrator for

the region in which the waste is currently stored. The notification shall include, at a minimum, the following information.

(1) The name of the firm involved and the address of both the corporate headquarters and the specific site for which notification of intent to dispose is being given.

(2) The name and telephone number of a person to whom EPA personnel can direct any questions for clarification or additional information.

(3) The concentration of TCDD in the waste materials and the method of detection, e.g., whether the amount is an estimate or is from laboratory data, and if the latter, the name of the laboratory and the methodology employed, including the level of detection achievable by the methodology.

(4) The total quantity of waste material and the number of containers involved.

(5) A brief description of the proposed disposal including the method of disposal, e.g., landfill, incineration, etc., the location of the disposal, and the name of any disposal firm(s) involved.

(6) A summary of the present status of the waste including the method of containment (drums, barrels, etc.), the presence or absence of

(i) An impermeable pad.

(ii) Curbing.

(iii) Dikes.

(iv) Roof structure.

(v) Accessibility to unauthorized persons.

In addition, firms are encouraged to include any other information that may be of use to the Agency in determining the feasibility of various alternative courses of action. The Assistant Administrator shall have the authority to prohibit the intended disposal, by notification of the concerned party(-ies) by registered mail, if the Assistant Administrator determines that the proposed disposal will present an unreasonable risk, or if there is insufficient information on which to base a finding that such an unreasonable risk is absent.

§ 775.195 Compliance.

(a) Section 15(1) of TSCA (15 U.S.C. 2614) makes it unlawful for any person to fail or refuse to comply with any rule promulgated or order issued under section 6. Section 15(3) (15 U.S.C. 2614) makes it unlawful for any person to fail or refuse to submit reports, notices or other information required by any rule promulgated under the Act. Thus, failure to comply with any aspect of this rule would be a violation as defined by section 15 (1) and (3).

(b) Section 16(a) of TSCA (15 U.S.C. 2615) provides that any person who violates any provision of section 15 shall be liable to the United States for a civil penalty of up to $25,000 per violation, with each day of violation constituting a separate violation. If a violation is knowing or willful, criminal penalties of up to one year in prison and $25,000 per day of violation may also be assessed. Under section 17 of TSCA (15 U.S.C. 2616), the Agency may take injunctive action to restrain persons from violating section 6 rules.

§ 775.197 Exclusions.

(a) This subpart does not apply to persons disposing of wastes containing TCDD at facilities permitted for disposal of TCDD under Section 3005(c) of the Resource Conservation and Recovery Act, 42 U.S.C. 6925(c).

(b) This subpart does not apply to persons who would otherwise be subject to this subpart if they show that their wastes contain no detectable levels of TCDD employing the TCDD detection methodology established by the EPA Dioxin Monitoring Program—capillary column gas chromatography interfaced with high resolution mass spectrometry (GC/HRMS).

(c) This subpart does not apply when the Assistant Administrator exercises his discretion and waives, in writing, the 60 day notice requirement for any person.

[FR Doc. 80-15312 Filed 5-16-80; 8:45 am]

BILLING CODE 6560-01-M

FEDERAL EMERGENCY MANAGEMENT AGENCY

Federal Insurance Administration

44 CFR Part 76

[Docket No. FEMA-FIA-76]

Implementation of State Assistance Program for the National Flood Insurance Program

AGENCY: Federal Insurance Administration, FEMA.

ACTION: Interim rule with request for comments.

SUMMARY: This interim rule sets forth a description of the State Assistance Program for the National Flood Insurance Program. The State Assistance Program is designed to promote an intergovernmental flood hazard mitigation partnership by providing States with the opportunity to strengthen their role in NFIP flood hazard mitigation activities. This interim rule defines the objectives and elements of the program, the funding approach, apportionment formula, application evaluation criteria, eligible applicants and administrative procedures.

DATE: Effective date, May 19, 1980.

COMMENT DATE: Comments received on or before July 18, 1980, will be considered before this rule is made final.

ADDRESS: Send comments in duplicate to Rules Docket Clerk, Office of General Counsel, Room 801, Federal Emergency Management Agency, Washington, D.C. 20472.

FOR FURTHER INFORMATION CONTACT: Mr. Richard W. Krimm, Federal Insurance Administration, Washington, D.C. 20410, (202) 755-5581.

SUPPLEMENTARY INFORMATION: FEMA has discussed the need for State financial assistance for flood hazard mitigation and National Flood Insurance Program activities with the States. The States will be the only eligible participants in the program. There is a need to implement this program as soon as possible. Therefore, FEMA has determined that sufficient good cause exists for making this rule effective immediately. Also, in view of the need to implement this program as soon as possible and since actual notice has been provided to all States, notice and public participation have been found unnecessary. Comments, however, are requested and will be considered before this rule is made final.

The Federal Emergency Management Agency (FEMA) was formed to focus the Federal hazard mitigation effort in one agency. A high priority within FEMA is flood hazard mitigation. The Federal Insurance Administration (FIA) has the responsibility within FEMA for identifying the Nation's flood plains and encouraging State and local governments to adopt flood hazard mitigation measures in order to reduce flood hazards, to prevent losses of life and property, and to reduce the spiralling costs associated with flood damage. Part of this responsibility involves promoting a working understanding of the objectives of the National Flood Insurance Program (NFIP) and the concepts and methods of flood hazard mitigation. To address this responsibility, FEMA provides general and technical assistance to communities intended to increase capabilities in implementing and administering flood hazard mitigation programs under the NFIP. To continue these efforts in the face of the increasing number of communities participating in the NFIP's Regular Program, intensified assistance demands must be met.

States are in a key position to support NFIP activities and to assist FEMA in

addressing intensified assistance demands. The National Flood Insurance Program's Rules and Regulations (44 CFR 59, et seq.) outline functions which States may undertake to increase State and local flood hazard mitigation capabilities. Section 60.25 groups these functions into three broad areas: development of a planning and legislative framework for local flood plain management; coordination of Federal, State and local aspects of the Program; and, provision of general and technical assistance to local officials.

FEMA recognizes that State capacity to deal effectively with these areas and to shape meaningful intergovernmental cooperation is essential to the ultimate success of the NFIP. In order to be responsive to the needs of these States and their local communities, the FIA has developed a State Assistance Program to encourage a Federal/State partnership to achieve the NFIP's ultimate objectives of reducing loss of life and property due to flooding.

FEMA has determined that an environmental impact statement is not needed for this program. A copy of the finding of no significant impact is available for inspection at the above address.

This rule is in consonance with the President's memorandum of November 16, 1979, and does not impose an unnecessary burden on the small business sector.

Accordingly, Subchapter B of Chapter 1 of Title 44, Code of Federal Regulations, is amended by adding a new Part 76 as follows:

PART 76—STATE ASSISTANCE PROGRAM FOR THE NATIONAL FLOOD INSURANCE PROGRAM

Sec.

76.1 Purpose.
76.2 Description of program.
76.3 Eligible applicants.
76.4 Administrative procedures.
76.5 General provisions for cooperative agreement.
76.6 Ineligible tasks.

Authority: The National Flood Insurance Act of 1968 and the Flood Disaster Protection Act 1973, 42 U.S.C. 4001 et seq.; Reorganization Plan No. 3 of 1978, 43 FR 41943; Executive Order 12127, effective April 1, 1979, 44 FR 19367.

§ 76.1 Purpose.

(a) The State Assistance Program is designed to promote an intergovernmental flood hazard mitigation partnership by providing States with opportunity to strengthen their role in NFIP flood hazard mitigation activities. The Program will provide individual States an opportunity to complement NFIP activities by developing, implementing, and evaluating approaches to accomplish NFIP objectives through State programs. It is intended that each State undertake activities consistent with its demonstrated capability in NFIP and flood hazard mitigation activities. The Program is designed to increase existing State capabilities as well as develop new ones. In turn, States will assist in increasing their communities' capabilities to develop, implement, and administer flood hazard mitigation measures.

(b) Adequate State participation in NFIP coordination and flood hazard mitigation activities is one of the best means available to ensure that the NFIP is effectively implemented at the local level. As more communities are converted to the Regular Program, greater demands are placed on States to assist their local communities in meeting NFIP requirements. Increased State involvement is necessary to help ensure the proper implementation and administration of NFIP flood plain management standards at the local level. Through the State Assistance Program, FEMA, in concert with individual States, will be able to provide quality community assistance.

§ 76.2 Description of program.

The State Assistance Program is designed for all States which submit acceptable applications regardless of their present level of involvement or degree of expertise in NFIP and flood hazard mitigation activities. It is structured to recognize the fact that States have individual needs and different levels of sophistication in dealing with the NFIP. Thus, the State Assistance Program allows each State the flexibility necessary to develop its application to accommodate the unique characteristics of the State and its communities, and allows each State to undertake an appropriate level of effort.

(a) *Program Elements.* The State Assistance Program has been designed around three Program Elements: *Assessment, General Assistance and Public Information,* and *Community Services;* each encompassing its own general objective. Each objective for the State's project (the "Project Objective") chosen by the State shall be derived from one of the three general objectives defined under the Program Elements. The State shall then choose tasks that meet its chosen Project Objectives. The Program Elements are structured in order of increased levels of capability needed to accomplish their tasks. *Assessment* tasks demand the least capability; *Community Services* tasks demand the most capability. The State shall choose objectives and tasks from the Program Elements that are consistent with its demonstrated capability and develop a project designed to provide a foundation upon which to progress towards Program Elements requiring higher capabilities. Accomplishing the objectives of the Program Elements requiring less capability is a prerequisite for choosing elements requiring higher capability. A State's project may contain a mix of tasks chosen from among the different elements, provided the State "qualifies" for each element. In delineating a project, States shall choose Project Objectives and corresponding tasks that are derived from the following Program Elements:

(1) *Assessment.* The general objective of the Assessment element is to provide a State with the opportunity to examine and evaluate current State and local NFIP and flood hazard mitigation activities. A plan designed to expand the State's role in NFIP coordination and flood hazard mitigation activities will result. Its implementation will become the basis for future State Assistance Program funding. Generally, this element is designed for States which have not developed a formal State-wide hazard mitigation program and have been minimally involved in NFIP activities.

(2) *General Assistance and Public Information.* The general objective of the General Assistance and Public Information element is to provide a State with the opportunity to develop a Statewide information base and coordination network. Under this element states will promote an increased understanding of the NFIP and its concepts and provisions, develop information dissemination and retrieval systems, and create approaches to maximize the coordinated use of Federal and State resources for flood hazard mitigation.

(3) *Community Services.* The general objective of the Community Services element is to provide States with an opportunity to work closely with local government officials in the mechanics of implementing and administering flood hazard mitigation programs. The tasks are designed for States which have already demonstrated a leadership role through strong State flood hazard mitigation laws, programs, and policies.

(b) *Funding Approach.* Each State will be provided a target funding figure which is based on an objective formula. Each State will then develop an application using the target figure to guide the scope of work. Both the scope of work and the funding figure provided

to FEMA will be subject to negotiation. To be funded, each application must provide for new or substantially expanded activities. The State Assistance Program is not intended to provide funds for on-going State activities in related areas of planning or technical assistance. Furthermore, any subcontracting must be justified as to how it meets the objectives of the Program.

(1) *Apportionment Formula.* The apportionment formula has been developed to guarantee a fair share of the Program's funds to each State interested in assistance. The formula weighs data for each State reflecting the magnitude of lives at risk to flood hazards, the extent of flood hazard within communities, development pressures, and historical flood damage.

(2) *Formula Factors.* The four factors used to derive a percentage of the total State Assistance Program's fiscal year funds for each State include: Population in Special Flood Hazard Areas; Number of Communities Participating in the Regular Program of the National Flood Insurance Program; Total Increase in Households from Census Bureau data; and, Flood Damages by National Flood Insurance Program Flood Insurance Claims. The first factor, Population in Special Flood Hazard Areas, reflects the magnitude of lives at risk from flooding in each State. The second factor, Number of Communities Participating in the Regular Program, relates to priorities established by FEMA Regional Offices for detailed flood hazard study purposes. Study priorities generally are based on the severity of flooding and damage potential in each community. The third factor, Total Increase in Households, indicates which States are experiencing increasing development pressures which may increase flood risks. The fourth factor, Flood Damage by National Flood Insurance Program Flood Insurance Claims, weighs the relative historical flood damage sustained by each State. All factors are weighted equally.

(c) *Application Evaluation Criteria.* All State applications will be evaluated as to how well they meet the following criteria:

(1) *Objectives expressed*—specific and clearly stated objectives which relate to the national objectives of the State Assistance Program;

(2) *Tasks defined*—clear and cogent definitions of the tasks to be undertaken;

(3) *Implementation*—description of how these tasks will be accomplished, the approaches used to achieve the objectives, and the results, products and benefits expected to be derived from each task;

(4) *Needs*—explanation and understanding of the needs to be addressed by the tasks;

(5) *Coordination*—explanation of a plan of coordination with FEMA programs and offices, other federal agencies and other state agencies and programs;

(6) *Capacity*—demonstration of an acceptable level of performance in dealing with the NFIP to undertake more sophisticated tasks covered in the *General Assistance and Public Information* and *Community Services* elements.

(7) *Sustainability*—demonstration of the extent to which a state will be able to integrate NFIP standards into the overall framework of state and community planning and development activities to achieve maximum sustainability.

(8) *Consistency*—with FEMA programs and policies, particularly the NFIP.

(9) *State Evaluation component*—definition of an evaluation system which includes:

(i) Clearly stated *objectives.*

(ii) *Tasks* to be undertaken.

(iii) *Performance indicators* (quantifiable expressions of the project objectives).

(iv) *Performance standards* (desired level of achievement for an indicator).

(v) *Data sources* (base from which information about performance indicators can be obtained).

(vi) *Narrative comments* addressing what other impacts the project had, problems encountered, the overall success of the project, etc.

(10) *Organizational Qualifications:* current and previous experience in related projects of comparable scope, preferably demonstrated knowledge in dealing with the NFIP.

(11) *Project Management and Workplan*—demonstration of an appropriate project management and work plan.

(d) *Federal Insurance Administrator's Discretionary Fund for Innovative Projects.* (1) *General.* Each State's application for the target amount of funding may contain a supplement proposing innovative tasks involving an additional level of effort than that proposed in the principal application and requesting an additional level of funding from the Administrator's Discretionary Fund. An innovative task may take any of several forms. It may be a product, process, an organizational arrangement or technique. Each innovative task should encompass a concept that is untried, unique, and/or advances the state of the art of flood hazard mitigation. Proposed tasks which have been undertaken before or are in use at the present may be considered for demonstration if the application identifies and addresses the question of the special nature or circumstances surrounding the proposed task which would warrant its consideration for funding under the Discretionary Fund.

(2) *Application Procedure.* Requests for funding of tasks from the Administrator's Discretionary Fund must be identified separately as a supplement to the principal application for the target amount of funding. The supplemental Discretionary Fund application will be evaluated separately from the principal application. All requests for discretionary funding of tasks will be presented to the Federal Insurance Administrator at one time so that priorities may be weighed and funds may best be distributed.

(3) *Review Criteria.* Each task proposed for funding from the Administrator's Discretionary Fund must be justified specifically as to how it meets the following criteria:

(i) The unique capabilities, related experience, facilities or techniques and the commitment which the applicant possesses and offers for achieving the objectives of the task.

(ii) The extent to which the identified problem is common to a substantial number of states and the proposed approach can be adopted and replicated in a number of other states.

(iii) The overall technical merit of the proposed tasks including the specific impacts of the innovation.

(iv) The availability of discretionary funds for innovative tasks in light of competing needs.

§ 76.3 Eligible applicants.

Each State, the District of Columbia, Puerto Rico, the Virgin Islands and Guam are eligible to participate in the State Assistance Program. The Governor of each State and representatives of the District of Columbia, Puerto Rico, the Virgin Islands and Guam have been requested by letter to designate a lead agency to coordinate projects under the State Assistance Program and to receive a Request for Application for the State Assistance Program. The designated lead agency will be considered the State Coordinating Agency for purposes of the National Flood Insurance Program.

§ 76.4 Administrative procedures.

(a) *Size of award.* The amount of each award will be determined by the objective apportionment formula set forth in 76.2(b) above. Each applicant should, therefore, submit an application

within the range of its target amount derived from the apportionment formula. The target amount will be provided to each applicant in the Request for Application letter.

(b) *Project period.* The project period typically will be twelve months.

(c) *Submission procedures.* Each applicant shall comply with the following submission procedures:

(1) *Issuance of Request for Application.* Each designated State agency will receive a Request for Application package from the State's respective Federal Emergency Management Agency Regional Director.

(2) *How to submit.* Each State shall submit the original application and three copies to its respective Federal Emergency Management Agency Regional Office.

(3) *Application package.* The application package for the State Assistance Program shall consist of the following:

(i) A letter of transmittal signed by the chief executive officer of the State or the designated State agency.

(ii) A copy of the Agreement Articles for Cooperative Agreement.

(iii) Standard Form 424, Federal Assistance, prescribed by OMB Circular No. A–102. (Non-construction, long-form.)

(iv) A detailed Program Narrative Statement developed according to the Special Instructions provided as part of the Request for Application package provided to the States.

(v) Budget information on OMB Form 80–R0186.

(vi) Standard Form 270 "Request for Advance or Reimbursement," as required by OMB Circular A–102 and FEMA General Provisions for Cooperative Agreements.

(vii) A copy of A–95 review comments or documentation of no comment and full review period.

(viii) A copy of Assurances as required by the FEMA General Provisions for Cooperative Agreement (provided to each State as part of the Request for Application package).

(d) *Reporting requirements.* (1) *Project Performance Reporting Requirements.* Each State shall submit a narrative evaluation of its level of achievement of project objectives. Each State shall report actual levels of performance standards achieved for project objectives against levels expressed by the State as desirable in its application. In addition, each State shall compare percentages of tasks accomplished against percentages projected for each month in the State's application. These narrative reports shall be submitted at intervals specified in the Agreement Articles for Cooperative Agreement.

(2) *Financial Reporting Requirements.* (i) Standard Form 270 "Request for Advance or Reimbursement" is the voucher form to be submitted for all bills for reimbursement.

(ii) Standard Form 272 "Federal Cash Transactions Report" must be submitted each reporting period.

(iii) Standard Form 269 "Financial Status Report" must be submitted each reporting period.

(iv) A narrative report projecting the percentage of cost expended per task by month must be submitted each reporting period.

(3) *Project Completion Reporting Requirements.* At the conclusion of the project the State must submit the following:

(i) Final Standard Forms 272 and 269.

(ii) A narrative report which included an analysis of the project's success in achieving the Project Objectives.

(e) *Agreement Articles for Cooperative Agreement under the State Assistance Program.* The Agreement Articles shall be the basic terms to which the State and FEMA agree. The Agreement Articles shall become part of the Cooperative Agreement.

§ 76.5 General provisions for cooperative agreement.

The legal funding instrument for the State Assistance Program for the National Flood Insurance Program shall be cooperative agreement. All States will be required to comply with FEMA General Provisions for Cooperative Agreement. The General Provisions for Cooperative Agreement shall be provided to the States as part of the Request for Application Package. The General Provisions shall become part of the Cooperative Agreement.

§ 76.6 Ineligible tasks.

The following is a list of tasks which are ineligible under most circumstances and serves as a general guide regarding ineligible tasks. This list of examples of ineligible tasks is merely illustrative and does not constitute a list of all ineligible tasks.

(a) *Public works, facilities and site or other improvement.* The general rule is that public works, facilities and site or other improvements are ineligible to be acquired, constructed, reconstructed, rehabilitated or installed.

(b) *Purchase of equipment.* The purchase of equipment is generally ineligible.

(c) *Analysis of NFIP or its products.* Tasks choices shall in no way analyze or recommend changes to the NFIP or its products. For example, proposed tasks shall not duplicate or potentially conflict with hydrologic and hydraulic engineering activities performed by the Federal Insurance Administration.

(d) *Flood Insurance Studies.* Flood Insurance Studies shall not be conducted under the State Assistance Program.

(e) Any task which is not within the general scope of the State Assistance Program's objectives.

Issued: May 13, 1980.

Gloria M. Jimenez,

Federal Insurance Administrator.

COMMUNITY SERVICES ADMINISTRATION

45 CFR Part 1061

Community Food and Nutrition Program

AGENCY: Community Services Administration.

ACTION: Notice of publication of final rule.

SUMMARY: The Community Services Administration gives notice that regulations concerning the Community Food and Nutrition Program (CFNP) will be published Tuesday, May 20, 1980 in Part IV of the **Federal Register.**

FOR FURTHER INFORMATION: Contact Harold L. Gore, Community Services Administration, 1200 19th Street, N.W., Washington, D.C. telephone: (202) 632–6694.

Thomas J. Mack,

Deputy General Counsel.

BILLING CODE 6315–01–M

DEPARTMENT OF TRANSPORTATION

Research and Special Programs Administration

49 CFR Parts 107 and 175

[Docket No. HM–166–E; Amdt. Nos. 107–7, 175–14]

Shipment of Hazardous Materials by Air; Miscellaneous Amendments

AGENCY: Materials Transportation Bureau (MTB), Research and Special Programs Administration, DOT.

ACTION: Final rule.

SUMMARY: The purpose of these amendments to the Department's Hazardous Materials Regulations is to incorporate the Federal Aviation

Administration's (FAA) change in the hazardous materials function from the various District Offices to the Office of Civil Aviation Security. This action is being taken to reflect the organizational changes of the hazardous materials function within the FAA.

EFFECTIVE DATE: July 1, 1980.

FOR FURTHER INFORMATION CONTACT: Darrell L. Raines, Office of Hazardous Materials Regulation, Materials Transportation Bureau, Research and Special Programs Administration, Washington, DC 20590, Phone 202–472–2726.

SUPPLEMENTARY INFORMATION: The Federal Aviation Administration's hazardous materials function is now assigned to the Office of Civil Aviation Security. Required training of security field personnel will be completed on or before July 1, 1980 in order to transfer the field hazardous materials function.

Since these amendments do not impose additional requirements, public notice has not been provided and this amendment is effective on July 1, 1980. The MTB has determined that the environmental and economic impact associated with these amendments is minimal.

In consideration of the foregoing, 49 CFR Parts 107 and 175 are amended as follows:

PART 107—HAZARDOUS MATERIALS PROGRAM PROCEDURES

Appendix A [Amended]

1. In Part 107, Appendix A, the introductory text and the first two paragraphs are revised to read:

Appendix A

LIST OF DEPARTMENT OF TRANSPORTATION OFFICIAL THROUGH WHOM APPLICATION FOR EXEMPTIONS SEEKING PRIORITY TREATMENT ON THE BASIS OF EXISTING EMERGENCIES MAY BE INITIATED BY TELEPHONE.

CERTIFICATE HOLDING AIRCRAFT OPERATORS

The Federal Aviation Administration Civil Aviation Security Office which serves the place where the flight(s) will originate or which is responsible for the operators overall aviation security program.

NONCERTIFICATE HOLDING AIRCRAFT OPERATORS (OPERATORS OPERATING UNDER FAR PART 91)

The Federal Aviation Administration Civil Aviation Security Office which serves the place where the flight(s) will originate. The nearest Civil Aviation Security Office may be located by calling the FAA Duty Officer. Day or Night, 202–426–3333.

* * * * *

Appendix B [Amended]

2. In Part 107, paragraphs 5, 7, and 8 of Appendix B are revised to read:

Appendix B

* * * * *

(5) If the aircraft is being operating by a holder of a certificate issued under Part 121 or Part 135 of Title 14, CFR, operations must be conducted in accordance with conditions and limitations specified in the certificate holder's operations specifications or operations manual accepted by the FAA. If the aircraft is being operated under Part 91 of Title 14, CFR, operations must be conducted in accordance with an operations plan accepted and acknowledged in writing by the Civil Aviation Security Office responsible for the operator's overall aviation security program.

* * * * *

(7) The aircraft and the loading arrangement to be used must be approved for safe carriage of the particular materials concerned by the FAA Civil Aviation Security Office responsible for the operator's overall aviation security program or the FAA Civil Aviation Security Office serving the place where the material is to be loaded.

(8) When Class A explosives are carried aboard a cargo aircraft under the provisions of Subchapter C, the aircraft operator shall take all possible action to insure that routes over heavily populated areas are avoided commensurate with considerations of flight safety. During the approach and landing phase, the aircraft operator shall request appropriate vectors when under radar control to avoid heavily populated areas.

PART 175—CARRIAGE BY AIRCRAFT

3. In § 175.10 paragraphs (a)(12)(ii) and (a)(12)(v) are revised to read:

§ 175.10 Exceptions.

(a) * * *

(12) * * *

(i) * * *

(ii) Each operator shall prepare and keep current a manual containing operational guidelines and handling procedures, for the use and guidance of flight, maintenance, and ground personnel concerned in the dispensing or expending of hazardous materials. The manual must be approved by the FAA Civil Aviation Security Office responsible for the operator's overall aviation security program or the FAA Civil Aviation Security Office in the region where the operator is located. Each operation must be conducted in accordance with the manual.

* * * * *

(v) When dynamite and blasting caps are carried for avalanche control flights, the explosives must be handled and, at all times, be under the control of the blaster who is licensed under a state or local authority identified in writing to the FAA Civil Aviation Security Office responsible for the operator's overall aviation security program or the FAA Civil Aviation Security Office in the region where the operator is located.

4. In § 175.45 the introductory text of paragraph (a) is revised to read:

§ 175.45 Reporting hazardous materials incidents.

(a) Each operator who transports hazardous materials shall report to the nearest FAA Civil Aviation Security Office by telephone at the earliest practicable moment after each incident that occurs during the course of transportation (including loading, unloading or temporary storage) in which as a direct result of any hazardous materials:

* * * * *

5. In § 175.320 paragraphs (b)(5), and (b)(7) are revised to read:

§ 175.320 Cargo-only aircraft; only means of transportation.

* * * * *

(b) * * *

(5) If the aircraft is being operated by a holder of a certificate issued under 14 CFR Part 121, Part 127 or Part 135, operations must be conducted in accordance with conditions and limitations specified in the certificate holder's operations specifications or operations manual accepted by the FAA. If the aircraft is being operated under 14 CFR Part 91, operations must be conducted in accordance with an operations plan accepted and acknowledged in writing by the Civil Aviation Security Office serving the operator's location or the place where the material is to be loaded.

* * * * *

(7) The aircraft and the loading arrangement to be used must be approved for safe carriage of the particular materials concerned by the FAA Civil Aviation Security Office responsible for the operator's overall aviation security program or the appropriate FAA Civil Aviation Security Office serving the place where the material is to be loaded.

* * * * *

(49 U.S.C. 1803, 1804, 1808; 49 CFR 1.53 and App. A to Part 1.)

Note.—The Materials Transportation Bureau has determined that this document will not result in a major economic impact under the terms of Executive Order 12044 and DOT Implementing procedures (44 FR 11034) nor require an environmental impact statement under the National Environmental Policy Act (49 U.S.C. 4321 et seq.). A regulatory evaluation is available for review in the Docket.

Issued in Washington, D.C. on May 8, 1980.

L. D. Santman,

Director, Materials Transportation Bureau.

[FR Doc. 80-15130 Filed 5-16-80; 8:45 am]

BILLING CODE 4910-60-M

---

49 CFR Parts 171, 173, 174, 177

[Docket No. HM-163-D; Amdt. Nos. 171-54; 173-138; 174-38; 177-49]

Hazardous Materials Regulations; Withdrawal of Certain Bureau of Explosives Delegations of Authority

AGENCY: Materials Transportation Bureau, Research and Special Programs Administration, DOT.

ACTION: Final rule.

SUMMARY: The purpose of these amendments to the Department's Hazardous Materials Regulations is to withdraw or cancel the remaining delegations of authority to the Bureau of Explosives (B of E) in Part 173 (except for § 173.34(d) and § 173.303(a)) of 49 CFR. However, the B of E will continue to play a role in the testing of explosives and other hazardous materials for MTB. This action is being taken to conform existing programs with the purposes of the Hazardous Materials Transportation Act.

EFFECTIVE DATE: May 19, 1980.

FOR FURTHER INFORMATION CONTACT: Darrell L. Raines, Office of Hazardous Materials Regulation, Materials Transportation Bureau, Research and Special Programs Administration, Washington, DC 20590, phone 202-472-2726.

SUPPLEMENTARY INFORMATION: On November 26, 1979, the Materials Transportation Bureau (MTB) published a Notice of Proposed Rulemaking, Docket HM-163D; Notice 79-15 (44 FR 67476) which proposed these amendments. The background and the basis for incorporating these amendments into the regulations were discussed in that notice. Interested persons were invited to give their views prior to the closing date of January 15, 1980.

The MTB received eight comments on Notice 79-15.

The main objections received were in reference to § 171.20 and § 173.86. The objections were (1) no time limitation on the approval response from the Associate Director for OE after an application for approval has been submitted, (2) no mention of an appellate review in the event that the Associate Director for OE denies an approval, and (3) the economic hardship and excessive time delay that would occur if the present authority now delegated to the Department of Defense and the Department of Energy was withdrawn.

In response to the first objection, the MTB has and will continue to rely on the expertise and recommendations of the B of E. Therefore, we do not visualize the need to incorporate a time period for the Associate Director for OE to respond to an approval request at this time. All applications received for approval will be processed as expeditiously as possible. If actual practice dictates the need for a time limit at a later date, the MTB will consider the issuance of a notice of proposed rulemaking for public comment.

In reference to the second objection, § 171.20 has been revised by adding paragraph (c) to allow any applicant to file an appeal with the Director, MTB in the same manner as provided in § 107.121 for an exemption.

The proposed changes in § 173.86 were not intended to disrupt or change the present authority delegated to the Department of Defense and the Department of Energy. Therefore, § 173.86(b) has been revised to require OE approval only on those items examined by the B of E.

Two paragraphs in Part 174 and three paragraphs in Part 177 have been revised and included in this rulemaking to coincide with similar changes made in Part 173. The changes proposed for § 173.34(d) and § 173.303(a) have been withdrawn from this rulemaking and will be republished in a separate notice of proposed rulemaking in the near future. In addition to § 173.34(d) and § 173.303(a) the MTB believes that the only remaining delegation of authority to the B of E in Parts 173, 174, 177 and 178 that has not been changed is § 177.821(e). The MTB will include these three proposed changes in the same notice.

Primary drafters of these amendments are Darrell L. Raines, Exemptions and Regulations Termination Branch, and George W. Tenley, Office of the Chief Counsel, Research and Special Programs Administration.

PART 171—GENERAL INFORMATION, REGULATIONS, AND DEFINITIONS

In consideration of the foregoing, 49 CFR Parts 171, 173, 174, and 177 are amended as follows:

1. Section 171.20 is added to read:

§ 171.20 Submission of Examination Reports.

(a) When it is required in this subchapter that the issuance of an approval by the Associate Director for OE be based on an examination by the Bureau of Explosives (or any other test facility recognized by MTB), it is the responsibility of the applicant to submit the results of the examination to the Associate Director for OE.

(b) Applications for approval submitted under paragraph (a) of this section, must be submitted to the Associate Director for Operations and Enforcement, Materials Transportation Bureau, Washington, D.C. 20590.

(c) Any applicant for an approval aggrieved by an action taken by the Associate Director for OE, under this subpart may file an appeal with the Director, MTB within 30 days of service of notification of a denial.

PART 173—SHIPPERS—GENERAL REQUIREMENTS FOR SHIPMENTS AND PACKAGINGS

2. In § 173.28 paragraph (h)(1) is deleted:

§ 173.28 Reuse of containers.

* * * * *

(h) * * *

(1) [Deleted]

* * * * *

3. In § 173.31 paragraph (d)(4) Table footnote [1] is revised to read:

§ 173.31 Qualification, maintenance, and use of tank cars.

* * * * *

(d) * * *

(4) * * *

[1] Tanks and safety relief devices in hydrocyanic acid service must be retested and inspected by a written procedure filed with and approved by the Associate Director for OE.

* * * * *

4. In § 173.32 paragraph (b)(3) is revised to read:

§ 173.32 Qualification, maintenance, and use of portable tanks.

* * * * *

(b) * * *

(3) Tanks having capacities of between 750 pounds and 1,000 pounds of water shall be considered as portable tank containers for the purposes of this part. In lieu of using safety relief valves on such containers they may be equipped with fusible plugs only when the container is filled by weight. Size, number, and location, as well as character and physical properties of fusible plugs shall be examined by the Bureau of Explosives and approved by the Associate Director for OE. These containers shall be marked "DOT Specification 51S."

* * * * *

5. In § 173.34 paragraphs (c)(3)(i), introductory text of paragraph (g)(4)(ii), the introductory text of paragraph (i),

paragraph (i)(4)(i), and the introductory text of paragraph (l) are revised to read:

§ 173.34 Qualification, maintenance and use of cylinders.

* * * * *

(c) * * *

(3) * * *

(i) Marked service pressure may be changed only upon application to the Associate Director for OE and receipt of written instructions as to the procedure to be followed. Such a change is not authorized for a cylinder which has failed to pass the prescribed periodic hydrostatic retest unless it is reheat treated and requalified in accordance with the requirements of this section.

* * * * *

(g) * * *

(4) * * *

(ii) The permanent expansion shall not be less than 3 percent nor more than 10 percent of the total expansion in the hydrostatic retest, in which case the flattening and physical tests are not required. For this alternative method the hydrostatic retest pressure may not exceed 115 percent of the minimum prescribed test pressure except with specific approval of the Associate Director for OE.

* * * * *

(i) *Repair by welding or brazing of DOT–4 series and DOT–8, welded or brazed cylinders.* Repairs on DOT–4 series and DOT–8 series welded or brazed cylinders are authorized to be made by welding or brazing. Such repairs must be made by a manufacturer of these types of DOT cylinders or by a repair facility approved by the Associate Director for OE and by a process similar to that used in its manufacture and under the following specific requirements:

* * * * *

(4) * * *

(i) Must be done by a manufacturer of these types of DOT cylinders or by a repair facility approved by the Associate Director for OE.

* * * * *

(l) *Rebuilding of DOT–4 series and DOT–8, welded or brazed cylinders.* Rebuilding of DOT–4 series and DOT–8 series, welded or brazed cylinders is authorized. Such rebuilding must be done by a manufacturer of these types of DOT cylinders or by a repair facility approved by the Associate Director for OE and by a process similar to that used in its original manufacture and under the following specific requirements:

* * * * *

6. In § 173.53 paragraphs (h), (h)(1), and (j) are revised to read:

§ 173.53 Definition of Class A explosives.

* * * * *

(h) *Type 8.* Any solid or liquid compound, mixture or device which is not specifically included in any of the above types, and which under special conditions may be so designated and examined by the Bureau of Explosives and approved by the Associate Director for OE. Example: Shape charges, commercial.

(1) A shaped charge, commercial, consists of a plastic, paper, or other suitable container comprising a charge of not to exceed 8 ounces of a high explosive containing no liquid explosive ingredient and with a hollowed-out portion (cavity) lined with a rigid material. Detonators or other initiating elements may not be assembled in the device unless examined by the Bureau of Explosives and approved by the Associate Director for OE.

* * * * *

(j) *Ammunition for cannon with projectiles.* Ammunition for cannon with explosive projectiles, gas projectiles, smoke projectiles, incendiary projectiles, illuminating projectiles, or shell is fixed ammunition assembled in a unit consisting of the cartridge case containing the propelling charge and primer, and the projectiles, or shell, fuzed or unfuzed. Detonating fuzes, tracer fuzes, explosive or ignition devices, or fuze parts with explosives contained therein may not be assembled in ammunition or included in the same outside package unless shipped by or for the Department of Defense (DOD) and in accordance with established practices and procedures specified by DOD.

* * * * *

7. In § 173.56 paragraphs (a), (c), and (d) are revised to read:

§ 173.56 Ammunition, projectiles, grenades, bombs, mines, gas mines, and torpedoes.

(a) Detonating fuzes, tracer fuzes, explosive or ignition devices, bouchons, or fuze parts with explosives contained therein, must not be assembled in explosive projectiles, grenades, explosive bombs, explosive mines, or explosive torpedoes, or included in the same outside package with them unless shipped by or for the Department of Defense (DOD) and in accordance with established practices and procedures specified by DOD.

* * * * *

(c) The following explosives may be shipped without being boxed when shipped by or for the Department of Defense (DOD) and in accordance with established practices and procedures specified by DOD:

(1) Explosive projectiles, explosive torpodoes, explosive mines, or explosive bombs, exceeding 90 pounds in weight, and explosive projectiles of not less than 4½ inches when palletized.

(2) Explosive projectiles less than 4½ inches when palletized.

(d) Gas projectiles, smoke projectiles, incendiary projectiles, illuminating projectiles, gas bombs, smoke bombs, incendiary bombs, gas grenades, smoke grenades, incendiary grenades, and gas mines, explosive, containing a bursting charge must be packed and properly secured in strong wooden boxes. Detonating fuzes, boosters or bursters, bouchons or ignition elements may not be assembled in these articles or included in the same package with them unless shipped by or for the Department of Defense (DOD) and in accordance with established practices and procedures specified by DOD.

* * * * *

8. In § 173.57 paragraph (a) is revised to read:

§ 173.57 Rocket ammunition.

(a) Rocket ammunition with explosive projectiles, gas projectiles, smoke projectiles, incendiary projectiles, or illuminating projectiles, must be well packed and properly secured in strong wooden, metal, preformed fiber glass resin impregnated container, or other packagings or approved military specifications which comply with § 173.7(a).

* * * * *

9. In § 173.65 the introductory text of paragraph (h) is revised to read:

§ 173.65 High explosives with no liquid explosive ingredient nor any chlorate.

* * * * *

(h) Shaped charges, commercial, having exposed lined conical cavities must have such cavities effectively filled. Those having conical cavities that are covered shall be paired together with the cavities facing each other and with one or more pairs in a fiber tube, or so arranged that the conical cavities of the shaped charges at the ends of the column face toward the center of the tube. The shaped charges in the fiber tubes must fit snugly with no excess space and the fiber tubes containing the shaped charges must be packed snugly with no excess space in the outside containers. Other methods of packaging for devices of which shaped charges are a component part may be employed when examined by the Bureau of Explosives and approved by the Associate Director for OE. Shaped charges, commercial, must be packed in specification containers as follows:

* * * * *

10. In § 173.79 paragraphs (a)(2) and (c) are revised to read:

§ 173.79 Jet thrust units (jato), class A explosives; rocket motors, class A explosives; igniters, jet thrust (jato), class A explosives; and igniters, rocket motor, class A explosives.

(a) * * *

(2) Wooden boxes, wooden crates, or other packagings of approved military specifications which comply with § 173.7(a)

* * * * *

(c) Jet thrust units Class A explosives or rocket motors, Class A explosives, may be packaged in the same outside packaging with their separately packaged igniters (or igniter components), Class A, B, or C explosives only when shipped by or for the Department of Defense (DOD) and in accordance with established practices and procedures specified by DOD.

* * * * *

11. In § 173.86 paragraph (b) is revised as follows:

§ 173.86 New explosives definitions; approval and notification.

* * * * *

(b) No person may offer a new explosive for transportation unless it has been examined by the Bureau of Explosives and classed and approved by the Associate Director for OE; or examined, classed, and approved by one of the following agencies.

(1) U.S. Deparment of Energy (DOE) for new explosives made by, or under the direction or supervision of DOE when tested in accordance with the Explosives Hazardous Classification procedures contained in DOT TB 700–2 (May 19, 1967), or

(2) U.S. Army Material Development and Readiness Command (DRCSF), Naval Sea Systems Command (NAVSEA 04H), or HQUSAF (IGD)/SEV/ for new explosives made by, or under the direction or supervision of the Department of Defense when tested in accordance with Explosives Hazard Classification procedures contained in DOD TB 700–2 (May 19, 1967), (NAVSEAINST 8020.8 AFTO 11A–1–47, DSAR 8220.1).

* * * * *

12. In § 173.88 paragraph (g) is revised to read:

§ 173.88 Definition of class B explosives.

* * * * *

(g) Explosives power devices, Class B, are devices designed to operate ejecting apparatus or other mechanisms by means of a propellant explosive, Class B, and differ from explosive power devices, Class C, in that they contain larger or more powerful propellants. The devices must not rupture on functioning and must be of a type examined by the Bureau of Explosives and approved by the Associate Director for OE, except as otherwise provided in § 173.51(a)(16) and § 173.86(a).

* * * * *

13. In § 173.92 paragraphs (a)(4) and (c) are revised to read:

§ 173.92 Jet thrust units (jato), class B explosives; rocket motors, class B explosives; igniters, jet thrust (jato), class B explosives; igniters, rocket motors, class B explosives; and starter cartridges, jet engine, class B explosives.

(a) * * *

(4) Wooden boxes, wooden crates, or other packagings of approved military specification which comply with § 173.7(a).

* * * * *

(c) Jet thrust units, Class B explosives, or rocket motors, Class B explosives, may be packaged in the same outside packaging with their separately packaged igniters (or igniter components), Class A, B, or C explosives, only when shipped by or for the Department of Defense (DOD) and in accordance with established practices and procedures specified by DOD.

* * * * *

14. In § 173.94 the introductory text of paragraph (a) and paragraph (b) are revised to read:

§ 173.94 Explosive power devices, class B.

(a) Explosive power devices, Class B may not be shipped with igniters assembled therein unless shipped by or for the Department of Defense (DOD) and in accordance with established practices and procedures specified by DOD. Explosive power devices, Class B, must be packed in outside containers complying with the following specifications:

* * * * *

(b) Explosive power devices, Class B packed in any other manner must be in containers of a type examined by the Bureau of Explosives and approved by the Associate Director for OE.

* * * * *

15. In § 173.95 paragraphs (a)(2), (b) and (c) are revised to read:

§ 173.95 Rocket engines (liquid), class B explosives.

(a) * * *

(2) Wooden boxes or metal packagings of approved military specification which comply with § 173.7(a).

(b) Rocket engines (liquid), Class B explosives, may not be shipped with igniters or initiators assembled therein unless shipped by or for the Department of Defense (DOD) and in accordance with established practices and procedures specified by DOD.

(c) Rocket engines (liquid), Class B explosives, may be packed in the same outside packaging with their separately packaged igniters, jet thurst, Class B explosives when shipped by or for the Department of Defense (DOD) and in accordance with established practices and procedures specified by DOD.

* * * * *

16. In § 173.100 paragraph (p), the sixth sentence of the introductory text paragraph (r), paragraphs (r)(11), and (u), the introductory text of paragraph (x), paragraphs (y) (aa) and (ee) are revised to read:

§ 173.100 Definition of class C explosives.

* * * * *

(p) Toy plastic or paper caps for toy pistols in sheets, strips, rolls, or individual caps, must not contain more than an average of twenty-five hundredths of a grain of explosive composition per cap and must be packed in inside packages constructed of cardboard not less than 0.013-inch in thickness, metal not less than 0.008-inch in thickness, noncombustible plastic not less than 0.015-inch in thickness, or a composite blister package consisting of cardboard not less than 0.013-inch in thickness and noncombustible plastic not less than 0.005-inch in thickness, which shall provide a complete enclosure and the mimimum dimensions of each side or end of such package shall be not less than ⅛-inch in height. The number of caps in these inside packages shall be limited so that not more than 10 grains of explosives composition shall be packed into one cubic inch of space and not exceeding 17.5 grains of the explosive composition of toy caps shall be packed in any inside container. These inner containers must be packed in outside containers as specified in § 173.109.

* * * * *

(r) * * *. Any new device, not enumerated in this paragraph, must be examined by the Bureau of Explosives and approved by the Associate Director for OE, before being offered for transportation as Common Fireworks. * * *.

* * * * *

(11) Novelties consisting of two or more devices enumerated in this paragraph when examined by the Bureau of Explosives and approved by the Associate Director for OE.

* * * * *

(u) Toy propellant devices and toy smoke devices consist of small paper or composition tubes or containers containing a small charge of slow burning propellant powder or smoke producing powder. These devices must be so designed that they will neither burst nor produce external flame on functioning.

Ignition elements, if attached, must be of a design examined by the Bureau of Explosives and approved by the Associate Director for OE.

* * * * *

(x) Cigarette loads, trick matches, and trick noise makers, explosive, must be of type examined by the Bureau of Explosives and approved by the Associate Director for OE and are described as follows:

* * * * *

(y) Smoke candles, smokepots, smoke grenades, smoke signals, signal flares, hand signal devices, and very signal cartridges are devices designed to produce visible effects for signal purposes. These devices must contain no bursting charges and no more than 200 grams of pyrotechnic composition each (see Note 1), exclusive of smoke composition (see Note 2), unless greater weight of composition is examined by the Bureau of Explosives and approved by the Associate Director for OE.

* * * * *

(aa) Explosive power devices, Class C, are devices designed to drive generators or mechanical apparatus by means of propellant explosives, Class B. The devices consist of a housing with a contained propellant charge and an electric igniter or squib. The devices must be of a type examined by the Bureau of Explosives and approved by the Associate Director for OE for this classification.

* * * * *

(ee) Starter cartridges, jet engine, Class C, consist of a metal, plastic, and/or rubber case, each containing a pressed cylindrical block of flammable solid material and having in the top of the case a small compartment that encloses an electric squib, small amount of black powder, and/or smokeless powder which constitute an igniter. The starter cartridge is used to activate a mechanical starter for jet engines and must be of a type examined by the Bureau of Explosives and approved by the Associate Director for OE, except as provided in § 173.51(a)(16) and § 173.86(a).

* * * * *

17. In § 173.102 paragraph (a)(2) is revised to read:

§ 173.102 Explosive cable cutters; explosive power devices, class C; explosive release devices, or starter cartridges, jet engine, class C explosives.

(a) * * *

(2) In addition to specification containers prescribed in this section, explosive cable cutters, explosive power devices, Class C, explosive release devices, or starter cartridges, jet engines, Class C may be shipped in strong wooden or metal boxes. Starter cartridges, jet engine, must have igniter wires short-circuited when packed for shipment.

* * * * *

18. In § 173.120 paragraph (c) is revised to read:

§ 173.120 Automobiles, motorcycles, tractors, or other self-propelled vehicles.

* * * * *

(c) *Truck bodies or trailers on flat cars.* Truck bodies or trailers with automatic heating or refrigerating equipment of the flammable liquid type may be shipped with fuel tanks filled and equipment operating or inoperative, when used for the transportation of other freight and loaded on flat cars as part of a joint rail highway movement, provided the equipment and fuel supply are of a type examined by the Bureau of Explosives and approved by the Associate Director for OE. The heating or refrigerating equipment is considered as carriers' equipment and is not subject to any other requirements of this subchapter.

* * * * *

19. In § 173.124 paragraphs (a)(1) and (a)(2) are revised to read:

§ 173.124 Ethylene oxide.

(a) * * *

(1) Specification 15A, 15B, 15C, or 16A (§§ 178.168, 178.169, 178.170, 178.185 of this subchapter) wooden boxes and Spec. 12B (§ 178.205 of this subchapter) fiberboard boxes with metal inside containers not over 12-ounce capacity each. Each inside container must have a minimum bursting strength of 180 psig as prepared for shipment and be provided with a safety vent having a minimum diameter of 0.1023 inch and closed with fusible metal having a yield temperature of 157 to 170°F. The safety vent opening shall be hot tinned before filling with fusible metal. Filling shall be such that the container will not be liquid full below 185°F. Each inside container must be completely insulated, except for top closure, with two coats of heat-retardant paint, of a type examined by the Bureau of Explosives and approved by the Associate Director for OE, applied over suitable primer and finished with suitable waterproof paint, or with other equally efficient insulation examined by the Bureau of Explosives and approved by the Associate Director for OE. Not more than 12 inside containers nor more than one layer of containers may be packed in one outside container.

(2) Cylinders as prescribed for any compressed gas, except acetylene, not exceeding 30 gallons nominal water capacity, which meet the following requirements: All cylinders must be seamless or steel welded. Cylinders must be equipped with safety devices of the fusible plug type with threaded straight bore orifice, with yield temperature of 157° to 170°F. having a minimum vent area of 0.0055 square inch per pound of water capacity of the container for containers not over 1-gallon capacity and 0.0012 square inch per pound of water capacity of the container for all containers over 1-gallon capacity. Each cylinder must be tested for leakage at a pressure of at least 15 psig with an inert gas before each refilling. Filling must be such that the container will not be liquid full at 185°F. Pressurizing valves must be provided for all containers over 1-gallon capacity. Eductor tubes must be provided for all containers over 5-gallon capacity. Cylinders having a water capacity in excess of 1 gallon must be insulated with at least three coats of heat-retardant paint, of a type examined by the Bureau of Explosives and approved by the Associate Director for OE, applied over suitable primer and finished with suitable waterproof paint; or with other equally efficient insulation examined by the Bureau of Explosives and approved by the Associate Director for OE.

* * * * *

20. In § 173.162 paragraph (h) is revised to read:

§ 173.162 Charcoal.

* * * * *

(h) Charcoal, screenings or ground, crushed, granulated or pulverized charcoal, in bags, when loaded in cars for shipment by rail must be so loaded that the bags are laid horizontally in the car, and so piled that there will be spaces for efficient air circulation. These spaces must be not less than 4 inches wide. If the bags are not compactly filled and closed so as to avoid free space within, transverse wooden strips must be laid between the bags and extending the full width of the car; these strips should be approximately 2 feet apart vertically and longitudinally. The bags must not be piled closer than 6 inches from the top of the car, and no more than 26,000 pounds of screenings, ground, granulated, crushed, or

pulverized charcoal, shall be loaded in a 36-foot, 6-inch car; 27,000 pounds in a 37-foot, 6-inch car; 28,000 pounds in a 38-foot, 6-inch car; 29,000 pounds in a 39-foot, 6-inch car; 36,000 pounds in a 40-foot, 6-inch car; and 40,000 pounds in a 50-foot, 6-inch car. A tight car must be used, and any loose material must be swept up and removed from the doorway of the car before completing the loading.

* * * * *

21. § 173.197a is revised to read:

§ 173.197a Smokeless powder for small arms.

Smokeless powder for small arms in quantities not exceeding 100 pounds net weight transported in one car or motor vehicle may be classed as a flammable solid when examined for this classification by the Bureau of Explosives and approved by the Associate Director for OE. Maximum quantity in any inside packaging must not exceed 8 pounds and inside packagings must be arranged and protected to prevent simultaneous ignition of the contents. The complete package must be a type examined by the Bureau of Explosives and approved by the Associate Director for OE. Each outside package must bear a flammable solid label.

22. In § 173.202 paragraph (a)(1) is revised to read:

§ 173.202 Sodium metal liquid alloy, potassium metal liquid alloy, and sodium potassium liquid alloy.

(a) * * *

(1) Specification 15A or 15B (§§ 178.168, 178.169 of this subchapter). Wooden boxes with inside metal containers of a type examined by the Bureau of Explosives and approved by the Associate Director for OE. Inside containers must be cushioned with incombustible cushioning material. Each container must have been tested hydrostatically to a pressure of not less than 60 pounds per square inch. Closing devices must be protected from injury. Not more than 300 pounds of sodium or potassium liquid alloy may be shipped in one outside container.

* * * * *

23. In § 173.218 paragraph (a)(1) is revised to read:

§ 173.218 Isopropyl percarbonate, unstabilized.

(a) * * *

(1) Specification 15A, 15B, 15C, 16A, or 19A (§§ 178.168, 178.169, 178.170, 178.185, 178.190 of this subchapter). Wooden boxes, with glass, metal, or earthenware inside containers of not over 2 gallons capacity each which must be maintained at a temperature below 0°F. Shipments are authorized for transportation by private or contract carrier by motor vehicle only.

24. In § 173.225 paragraph (a)(1) is revised to read:

§ 173.225 Phosphorus trisulfide; phosphorus sesquisulfide; phosphorus heptasulfide, and phosphorus pentasulfide.

(a) * * *

(1) Specification 15A or 15B (§§ 178.168, 178.169 of this subchapter). Wooden boxes with metal inside containers hermetically sealed (soldered) or watertight metal cans with screw-top closures.

* * * * *

25. In § 173.237 paragraph (a)(2) is deleted.

§ 173.237 Chlorine dioxide hydrate, frozen; chloric acid.

(a) * * *

(2) [Deleted]

26. In § 173.238 paragraph (a), is revised to read:

§ 173.238 Aircraft rocket engines (commercial) and/or aircraft rocket engine igniters (commercial).

(a) Aircraft rocket engines (commercial) and their igniters may be offered for transportation when of a type examined by the Bureau of Explosives and approved by the Associate Director for OE to be so described and classed, and when packaged as follows:

(1) Specification 15A, 15B, 15E or 16A (§§ 178.168, 178.169, 178.172, 178.185 of this subchapter). Wooden boxes. Igniters must be packaged in sealed metal containers examined by the Bureau of Explosives and approved by the Associate Director for OE and packed in wooden boxes as specified above when shipped separately from the aircraft rocket engines.

(2) Aircraft rocket engines (commercial), when examined by the Bureau of Explosives and approved by the Associate Director for OE may be packed in the same outside shipping container with their separately packaged igniters. Igniters must be packed in separate sealed metal containers in strong inside containers.

(3) Aircraft rocket engines (commercial) and/or their igniters, packed in any other manner than specified in paragraphs (a) (1) and (2) of this section, must be in containers of a type examined by the Bureau of Explosives and approved by the Associate Director for OE.

* * * * *

27. In § 173.245 paragraph (a)(25) is revised to read:

§ 173.245 Corrosive liquids not specifically provided for.

(a) * * *

(25) Specification 12A or 12B (§§ 178.210, 178.205 of this subchapter). Fiberboard boxes with inside aluminum containers. Aluminum containers must be examined by the Bureau of Explosives and approved by the Associate Director for OE.

* * * * *

28. In § 173.252 paragraph (g)(1) is revised to read:

§ 173.252 Bromine.

* * * * *

(g) * * *

(1) Specification 5K or 5M (§§ 178.88, 178.90 of this subchapter). Specification 5K nickel drums of not over 10 gallons capacity each and containing not more than 225 pounds net weight of bromine or Specification 5M monel drums of not over 25 gallons capacity each and containing not more than 600 pounds net weight of bromine. Drums must be of metal at least 14-gauge United States standard throughout and must have chime reinforcement adequate for their protection. All openings must be in one head and closing parts (plug, cap, flange, etc.) must be of the same metal as the drum. One opening not over 2.3 inches in diameter and one opening not over ¾-inch standard pipe size are permitted. Each drum must be completely emptied and dried before reuse and must be equipped with gaskets of a material examined by the Bureau of Explosives and approved by the Associate Director for OE.

* * * * *

29. In § 173.256 paragraph (a)(3) is revised to read:

§ 173.256 Compounds, cleaning, liquid.

(a) * * *

(3) Specification 22B (§ 178.197 of this subchapter). Plywood drums equipped with molded liner of a type and material examined by the Bureau of Explosives and approved by the Associate Director for OE.

* * * * *

30. In § 173.260 paragraph (g) is revised to read:

§ 173.260 Electric storage batteries, wet.

* * * * *

(g) Electric storage batteries, containing electrolyte or corrosive battery fluid in a coil from which it is injected into the battery cells by a gas generator and initiator assembled with the battery, and which are nonspillable and leakproof, are excepted from Parts 170–189 of this title when examined by the Bureau of Explosives and approved by the Associate Director for OE.

31. In § 173.266 paragraph (f)(2) is revised to read:

§ 173.266 Hydrogen peroxide solution in water.

* * * * *

(f) * * *

(2) Specification MC 310 or MC 312 (§ 178.343 of this subchapter). Tank motor vehicles. Tanks shall be welded construction of aluminum complying with Aluminum Association Nos. 1060, 1260, 5254, or 5652, and having a minimum wall thickness of one-half inch. They must be built to a design working pressure of not less than 40 psig and shall be designed so that internal surfaces may be effectively cleaned and passivated. All openings in the tank shall be located on top of tank. All valves and safety devices shall be provided with overturn protection and dust covers. The tank metal identification plate required shall be marked "DOT MC 310–H_2O_2" or "DOT MC 312–AL–H_2O_2," as appropriate, and, in addition, the vehicle shall be clearly marked in letters not less than one inch high "FOR HYDROGEN PEROXIDE ONLY." Designs for venting and pressure relief devices must be examined by the Bureau of Explosives and approved by the Associate Director for OE.

32. In § 173.268 paragraph (f)(4) is revised to read:

§ 173.268 Nitric acid.

* * * * *

(f) * * *

(4) Cushioning for carboys must be incombustible mineral material, elastic wooden strips, natural cork blocks or rubber blocks. The use of hay, excelsior, loose ground cork, or similar materials, whether treated or untreated, is prohibited.

* * * * *

33. In § 173.269 paragraph (b) is revised to read:

§ § 173.269 Perchloric acid.

* * * * *

(b) Cushioning for carboys must be incombustible mineral material, elastic wooden strips, natural cork blocks or rubber blocks. The use of hay, excelsior, loose ground cork, or similar materials, whether treated or untreated, is prohibited.

* * * * *

34. In § 173.272 paragraph (i)(18) is revised to read:

§ 173.272 Sulfuric acid.

* * * * *

(i) * * *

(18) Specification 17F (§ 178.117 of this subchapter). Metal barrels or drums (single-trip only). Drums equipped with vented closures of an experimental type examined by the Bureau of Explosives and approved by the Associate Director for OE are also authorized for export shipments. Authorized for sulfuric acid of 77.5 percent to 98 percent concentrations with or without an inhibitor, provided such acid has a corrosive effect on steel no greater than 93.2 percent sulfuric acid, measured at 100°F.

* * * * *

35. In § 173.300 paragraph (b)(1) is revised to read:

§ 173.300 Definitions.

* * * * *

(b) * * *

(1) Either a mixture of 13 percent or less (by volume) with air forms a flammable mixture or the flammable range with air is wider than 12 percent regardless of the lower limit. These limits shall be determined at atmospheric temperature and pressure. The method of sampling and test procedure shall be acceptable to the Bureau of Explosives and approved by the Associate Director for OE.

* * * * *

36. In § 173.305 paragraph (c)(1) is revised to read:

§ 173.305 Charging of cylinders with a mixture of compressed gas and other material.

* * * * *

(c) * * *

(1) Specification 2P (§ 178.33 of this subchapter). Inside metal containers equipped with safety relief devices of a type examined by the Bureau of Explosives and approved by the Associate Director for OE, and packed in strong wooden or fiber boxes of such design as to protect valves from injury or accidental functioning under conditions incident to transportation. Pressure in the container may not exceed 85 psia at 70°F. Each completed metal container filled for shipment must be heated until content reaches a minimum temperature of 130°F., without evidence of leakage, distortion or other defect. Each outside shipping container must be plainly marked "INSIDE CONTAINERS COMPLY WITH PRESCRIBED SPECIFICATIONS."

* * * * *

37. In § 173.306 paragraph (d)(1) is revised to read:

§ 173.306 Limited quantities of compressed gases.

* * * * *

(d) * * *

(1) Truck bodies or trailers with automatic heating or refrigerating equipment of the gas burning type may be shipped with fuel tanks filled and equipment operating or inoperative, when used for the transportation of other freight and loaded on flat cars as part of a joint rail-highway movement, provided the equipment and fuel supply are of a type examined by the Bureau of Explosives and approved by the Associate Director for OE. The heating or refrigerating equipment is considered as carriers' equipment and is not subject to any other requirements of this subchapter.

* * * * *

38. In § 173.315 paragraph (i)(12) is revised to read:

§ 173.315 Compressed gases in cargo tanks and portable tank containers.

* * * * *

(i) * * *

(12) Subject to conditions of paragraph (a)(1) of this section for the methyl chloride and sulfur dioxide optional portable tanks, one or more fusible plugs examined by the Bureau of Explosives and approved by the Associate Director for OE may be used on these tanks in place of safety relief valves of the spring-loaded type. The fusible plug or plugs must be in accordance with CGA Pamphlet S–1.2, to prevent a pressure rise in the tank of more than 120 percent of the design pressure. If the tank is over 30 inches long, each end must have the total specified safety discharge area.

* * * * *

39. In § 173.332 paragraph (d) is revised to read:

§ 173.332 Hydrocyanic acid, liquid (prussic acid) and hydrocyanic acid, liquefied.

* * * * *

(d) Specification 105A500W or 105A600W (§§ 179.100 and 179.101 of this subchapter). Tank cars. Tank must be restenciled 105A300W and be equipped with safety valves of the type and size used on Spec. 105A300W (§§ 179.100 and 179.101 of this subchapter). Tank car tank must be equipped with approved dome fittings and safety devices, and with cork insulation at least 4 inches in thickness. Each tank car must be marked "HYDROCYANIC ACID" in accordance with the requirements of § 172.330 of this subchapter. Written procedures covering details of tank car appurtenances, dome fittings and safety devices, and marking, loading, handling, inspection, and testing practices shall be examined by the Bureau of Explosives and approved by the Associate Director for OE before any tank car is offered for transportation of hydrocyanic acid. The

maximum permitted filling density is 63 percent of the water capacity of the tank.

40. In § 173.333 paragraph (a)(2) is revised to read:

§ 173.333 Phosgene or diphosgene.

(a) * * *

(2) Specification 106A500X (§§ 179.300, 179.301 of this subchapter) tanks. Authorized only for phosgene. Tanks must not be equipped with safety devices of any type. Outage must be sufficient to prevent tanks from becoming liquid full at 130°F. (55°C.) Additional requirements are prescribed for rail shipments under § 174.200 of this subchapter, and for highway shipments under § 177.834(m) of this subchapter.

* * * * *

41. In § 173.336 paragraphs (a)(3) and (a)(4) are revised to read:

§ 173.336 Nitrogen dioxide, liquid; nitrogen peroxide, liquid; and nitrogen tetroxide, liquid.

(a) * * *

(3) Specification 106A500X or 110A500W (§§ 179.300, 179.301 of this subchapter) tanks. Each tank must be equipped with gas tight valve protection caps. Tanks must not be equipped with safety devices of any type. Outage must be sufficient to prevent tanks from becoming liquid full at 130°F. (55°C.). (See § 174.600 and 177.834(m) of this subchapter for special requirements for rail and highway shipments). Specification 110A500W tanks must be stainless steel.

(4) Specification 105A500W (§§ 179.100, 179.101 of this subchapter) tanks cars. Authorized for nitrogen tetroxide only. Tanks must be lagged with not less than a four-inch thickness of cork. All valves and fittings must be protected by a securely attached cover made of metal not subject to deterioration by the lading, and all valve openings, except the safety valve, must be fitted with screw plugs or caps to prevent leakage in the event of valve failure. Safety valve must be equipped with an approved stainless steel or platinum frangible disc. Each tank car must be marked "NITROGEN TETROXIDE" in accordance with the requirements of § 172.330 of this subchapter. Written procedures covering details of tank car appurtenances, dome fittings and safety devices, and marking, loading, handling, inspection and testing practices, must be examined by the Bureau of Explosives and approved by the Associate Director for OE before any tank car is offered for transportation of nitrogen tetroxide.

42. In § 173.366 paragraph (a)(3) is revised to read:

§ 173.366 Arsenic (arsenic trioxide) or arsenic acid (solid).

(a) * * *

(3) In addition to specification containers prescribed in this section, arsenic (arsenic trioxide) or arsenic acid (solid) may be shipped when packed in collapsible, rubber containers, not over 70 cubic feet capacity, of a type examined by the Bureau of Explosives and approved by the Associate Director for OE. Authorized for carload, truckload or freight container shipments only.

* * * * *

43. In § 173.370 paragraph (a)(13) is revised to read:

§ 173.370 Cyanides and cyanide mixtures, dry.

(a) * * *

(13) Bulk in strong, water-tight, metal portable containers or not over 70 cubic feet capacity each and approved by the Associate Director for OE.

* * * * *

44. In § 173.385 paragraph (b) and (c) are revised to read:

§ 173.385 Tear gas grenades, tear gas candles, or similar devices.

* * * * *

(b) These articles may not be assembled with or packed in the same compartment with mechanically or manually operated firing, igniting, bursting, or other functioning elements, unless of a type or design examined by the Bureau of Explosives and approved by the Associate Director for OE.

(c) No shipment of packages containing articles under this section may be made until samples thereof have been examined by the Bureau of Explosives, or examined under their supervision, and approved by the Associate Director for OE.

* * * * *

PART 174—CARRIAGE BY RAIL

45. In § 174.61 paragraph (b) is revised to read:

§ 174.61 Truck bodies, trailers or freight containers on flatcars.

* * * * *

(b) A truck body, trailer or freight container equipped with automatic heating or refrigerating equipment employing any fuel or article classed as a hazardous material may be loaded and transported on a flatcar if the equipment is of type examined by the Bureau of Explosives and approved by the Associate Director for OE. The truck body, trailer or freight container must be secured on the flatcar so that it cannot change position during transit.

46. In § 174.81 Note 5 of the table is revised to read:

§ 174.81 Segregation and separation requirements for hazardous materials in rail cars.

(a) * * *

Note 5.—Smokeless powder for small arms in quantities not exceeding 100 pounds net weight in one car shall be classed as a flammable solid for purposes of transportation when examined for this classification by the Bureau of Explosives and approved by the Associate Director for OE.

PART 177—CARRIAGE BY PUBLIC HIGHWAY

47. In § 177.821 paragraph (f) is revised to read:

§ 177.821 Hazardous materials forbidden or limited for transportation.

* * * * *

(f) Smokeless powder for small arms in quantities not exceeding 100 pounds net weight transported in one car or motor vehicle may be classed as a flammable solid when examined for this classification by the Bureau of Explosives and approved by the Associate Director for OE. Maximum quantity in any inside packaging must not exceed 8 pounds and inside packagings must be arranged and protected to prevent simultaneous ignition of the contents. The complete package must be a type examined by the Bureau of Explosives and approved by the Associate Director for OE. Each outside package must bear a flammable solid label.

48. In § 177.838 paragraph (g) is revised to read:

§ 177.838 Flammable solids and oxidizing materials.

* * * * *

(g) Smokeless powder for small arms in quantities not exceeding 100 pounds net weight transported in one car or motor vehicle may be classed as a flammable solid when examined for this classification by the Bureau of Explosives and approved by the Associate Director for OE. Maximum quantity in any inside packaging must not exceed 8 pounds and inside packagings must be arranged and protected to prevent simultaneous ignition of the contents. The complete package must be a type examined by the Bureau of Explosives and approved by the Associate Director for OE. Each outside packaging must bear a flammable solid label.

49. In § 177.848 Note 5 of the table is revised to read:

§ 177.848 Loading and storage chart of hazardous materials

(a) * * *

Note 5.—Smokeless powder for small arms in quantities not exceeding 100 pounds net weight in one motor vehicle shall be classed as a flammable solid for purposes of transportation when examined for this classification by the Bureau of Explosives and approved by the Associate Director for OE.

* * * * *

Note.—The Materials Transportation Bureau has determined that this final rule will not result in a major economic impact under the terms of Executive Order 12044 and DOT implementing procedures (44 FR 11034) nor require an environmental impact statement under the National Environmental Policy Act (49 U.S.C. 4321 et seq.). A regulatory evaluation is available in the docket.

Issued in Washington, D.C., on May 7, 1980.

AGENCY: Urban Mass Transportation Administration, DOT.

ACTION: Extension of Comment Period.

SUMMARY: In the **Federal Register** of April 17, 1980 (45 FR 26298), the Urban Mass Transportation Administration of the Department of Transportation published regulations concerning public hearings prior to changes in fares or substantial changes in service. Comments were requested on a revision in the final regulation concerning percentage changes affecting a "transit system" versus percentage changes affecting a "transit route". A new closing date for comments has been established and is set out below.

DATE: Comments on § 635.7 of the regulations must be received by June 20, 1980.

ADDRESS: Comments must be submitted to UMTA Docket No. 80-C, 400 7th Street, SW., Washington, D.C. 20590. All comments and suggestions received will be available for examination in room 9320 at the above address between 8:30 a.m. and 5:00 p.m., Monday through Friday. Receipt of comments will be acknowledged by UMTA if a self-addressed, stamped postcard is included with each comment.

FOR FURTHER INFORMATION CONTACT: Charlotte Adams, Office of Program Analysis, (202) 472-6997.

SUPPLEMENTARY INFORMATION: All comments received before the expiration of the comment period will be utilized to determine if further revisions to § 635.7 are necessary.

UMTA was specifically requested to extend the comment period until June 20, 1980 and has agreed to this request. UMTA was also requested to delay the effective date of the regulations from May 17, 1980 to June 30, 1980. The effective date will not be changed since UMTA has determined that insufficient justification for this change has been presented at this time.

Dated: May 14, 1980.

Lillian C. Liburdi,

Deputy Administrator.

[FR Doc. 80-15313 Filed 5-16-80; 8:45 am]

BILLING CODE 4910-57-M

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

50 CFR Part 651

Atlantic Groundfish Fishery; Emergency Regulations

AGENCY: National Oceanic and Atmospheric Administration (NOAA)/ Commerce.

ACTION: Extension of Emergency Regulations.

SUMMARY: Emergency amendments to the regulations implementing the Atlantic Groundfish Fishery Management Plan (FMP), and a request for public comment on the emergency regulations, were published in the **Federal Register** on April 4, 1980 (45 FR 22949). The action, which became effective on April 6, 1980, (1) changed the incidental catch allowance of yellowtail flounder for vessels using small mesh nets (cod-end mesh less than 5⅛ inches) to 1,000 pounds per fishing trip and (2) changed the incidental catch allowance of yellowtail flounder for vessels during a fishery closure to 1,000 pounds per fishing trip. These emergency regulations were in force for 45 days and are hereby extended for an additional 45 day period.

EFFECTIVE DATE: The emergency regulations are extended from 2400 hours May 21, 1980, through 0001 hours July 4, 1980.

FOR FURTHER INFORMATION CONTACT: Mr. Allen E. Peterson, Jr., Regional Director, Northeast Region, National Marine Fisheries Service, 14 Elm Street, Gloucester, Massachusetts 01930; Telephone: (617) 281-3600.

SUPPLEMENTARY INFORMATION: The Assistant Administrator for Fisheries has determined that the emergency situation described in the April 4 rulemaking still exists and therefore has determined that extending the emergency regulations for an additional 45 days is necessary. The changes in the incidental catch allowances will not substantially affect the total harvest level of yellowtail flounder from the Northwest Atlantic ocean during this fishing year (October 1, 1979–September 30, 1980).

Signed at Washington, D.C., this 13th day of May 1980.

(16 U.S.C. *et seq.*)

Robert K. Crowell,

Deputy Executive Director, National Marine Fisheries Service.

Proposed Rules

Federal Register
Vol. 45, No. 98
Monday, May 19, 1980

This section of the FEDERAL REGISTER contains notices to the public of the proposed issuance of rules and regulations. The purpose of these notices is to give interested persons an opportunity to participate in the rule making prior to the adoption of the final rules.

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Ch I

[Docket No. 20289; Petition Notice No. PR 80-8]

Petition for Rule Making of Air Transport Association of America

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Publication of petition for rule making; request for comments.

SUMMARY: By letter dated April 16, 1980, the Air Transport Association of America (ATA) petitioned the FAA to amend § 121.311(j) of the Federal Aviation Regulations (FAR) to allow an extension not to exceed March 6, 1982, of the compliance time for § 121.311(f) concerning flight attendant seats, provided the Part 121 certificate holder submits an acceptable schedule of compliance by July 7, 1980. This notice publishes the ATA petition for rule making in accordance with § 11.27 of this chapter.

DATES: Comments must be received on or before July 14, 1980.

ADDRESS: Send comments on the petition in duplicate to: Federal Aviation Administration, Office of the Chief Counsel, Attn: Rules Docket (AGC-204), Room 916, Docket No. 20289, 800 Independence Avenue SW., Washington, DC 20591.

FOR FURTHER INFORMATION CONTACT: Mr. Norman C. Miller, Regulatory Projects Branch, AVS-24, Safety Regulations Staff, Associate Administrator for Aviation Standards, Federal Aviation Administration, 800 Independence Avenue SW., Washington, D.C. 20591, Telephone (202) 755-8716.

SUPPLEMENTARY INFORMATION:

Comments Invited

Interested persons are invited to submit such written data, views, or arguments on the petition for rule making as they desire. Communications should identify the regulatory docket number or petition notice number and be submitted in duplicate to the address specified above. All communications received on or before the date specified above, will be considered by the Administrator before taking action on the petition for rule making. The petition, any comment received, and a copy of any final disposition are filed in the assigned regulatory docket and are available for examination in the Rules Docket. All comments submitted will be available, both before and after the closing date for comments, in the Rules Docket for examination by interested persons. A report summarizing each substantive public contact with FAA personnel concerned with this rule making will be filed in the docket.

Background Information

On February 4, 1980, the FAA promulgated Cabin Safety and Flight Attendant Amendments to the FAR. These amendments, in part, require Part 121 certificate holders operating transport category airplanes to meet new equipment requirements for seats, berths, safety belts, and harnesses (Amendment Nos. 25-51 and 121-155; 45 FR 7750; February 4, 1980). New § 121.311(f) requires that after March 6, 1980, no person may operate a transport category airplane unless each flight attendant seat in the passenger compartment used during takeoff and landing meets the airworthiness requirements of new § 25.785.

Under § 121.311(j), certificate holders may obtain from the Director of Flight Operations an extension of up to 1 year (to March 6, 1981) of the compliance date in § 121.311(e). To get an extension, certificate holders must: (1) show that due to circumstances beyond their control, they cannot comply by March 6, 1980; and (2) submit by March 6, 1980, a schedule of compliance acceptable to the Director of Flight Operations, indicating that compliance will be achieved at the earliest practicable date.

After the issuance of these amendments, numerous Part 121 operators advised the FAA that they were having difficulty in submitting a schedule of compliance with the equipment requirements contained in the rule since the information necessary to justify the extensions was not yet available from the appropriate equipment manufacturers and suppliers. Accordingly, on March 6, 1980, the FAA, pursuant to § 121.311(j), extended the compliance dates of § 121.311 to March 6, 1981, for operators who requested one by March 6, 1980, and showed that due to circumstances beyond their control they could not comply by the specified compliance dates. Each extension was contingent upon each operator submitting an acceptable schedule of compliance to the Director of Flight Operations by May 6, 1980. Although the date of submittal for compliance schedules has already been extended from March 6, 1980, to May 6, 1980, several operators have indicated that the information necessary for them to submit an acceptable schedule of compliance is still not available from the manufacturers. Thus, they stated that they could not meet the May 6, 1980, deadline.

On May 6, 1980, the FAA amended § 121.311(j)(2) to extend until July 7, 1980, the date by which a Part 121 certificate holder must submit an acceptable schedule of compliance to justify a request for extension of the compliance period for § 121.311(f) pursuant to the extension procedure in § 121.311(j). The amendment requires a certificate holder who wishes an extension of the compliance period for § 121.311(f) to submit a schedule of compliance acceptable to the Director of Flight Operations by July 7, 1980.

On April 16, 1980, the ATA submitted a petition for rulemaking, in accordance with Part 11 of this chapter, to amend § 121.311(j). This petition, excluding attachment "B", which is available for inspection in the rules docket, is published in its entirety as part of this notice.

The petitioner contends that all ATA member airlines have requested and received an extension of the compliance date for § 121.311(j) to March 6, 1981, but have been unable to provide an acceptable schedule of compliance due to uncertainties in the interpretation of the regulation and lack of information on hardware availability. The petitioner alleges that a meaningful schedule of compliance can be provided by July 7, 1980, however, in some cases, airlines will require additional time beyond the present extended deadline of March 6, 1981, due to their inability to develop the necessary design changes and obtain

the necessary hardware. This requested amendment would still require compliance at the earliest practicable date, but would allow up to an additional year (to March 6, 1982) for compliance in unusual circumstances.

This notice sets forth the contents of the petition as received by the FAA, and its publication to solicit public comments in accordance with FAA procedures governing the processing of petitions for rulemaking. Accordingly this notice does not propose a regulatory rule for adoption, represent an FAA position, or otherwise commit the agency on the merits of the petition. The FAA intends to consider the petition under the applicable procedures of Part 11 and to reach a conclusion on the merits of the proposal after it has had an opportunity to carefully evaluate it, the comments received and other relevant matters presented. If the FAA concludes that it should initiate public rulemaking procedures on the petition, appropriate rulemaking action, including an evaluation of the proposal, will be published.

Request for Additional Information

The FAA is aware that strict adherence to the present compliance periods specified in § 121.311 may not be possible due to circumstances beyond the control of individual operators. To assist the FAA in determining the extent to which logistic and operational factors may frustrate timely compliance with § 121.311, certificate holders, manufacturers, suppliers, and the general public are requested to provide additional information. The questions listed below are intended to elicit from all interested persons and organizations, the projected ramifications of an FAA decision to act on the ATA petition favorably or unfavorably. Accordingly, answers to the following questions will assist the FAA in determining whether there is a need to provide for additional extensions to the compliance schedule to account for unusual situations encountered by individual operators.

1. If you are a Part 121 certificate holder, from which suppliers and/or manufacturers have you ordered required retrofit kits, components, or both?

(a) What installation times do you project for each aircraft?

(b) What rate of installation do you project for your fleet of aircraft?

2. If you are a supplier or a manufacturer, what is your capability to provide retrofit kits, components, or both to satisfy this rule?

3. Will these modifications be accomplished during regularly scheduled maintenance? If so, during which phase of scheduled maintenance do you plan to install retrofit kits or perform modifications required for your fleet?

4. If the required modifications are performed during scheduled maintenance, how long will it take to modify all aircraft in your fleet without disrupting scheduled operations?

5. Which specific items requiring modifications or changes can be accomplished by March 6, 1981?

6. What additional costs will these requirements impose if you are required to comply by March 6, 1981? Describe them in detail.

7. What proportion of aircraft requiring modifications can be retrofitted within the present compliance period?

8. If the compliance period for § 121.311(f) is not extended beyond March 6, 1981, what consequences do you project for your operations? Please discuss both the economic and operational impacts.

9. How will an extension of the compliance periods contained in § 121.311(f) affect the individuals who must occupy the seats to which this rule applies?

The Petition

Accordingly, the Federal Aviation Administration publishes verbatim, excluding the tabular listing in Attachment A which was not legible enough for printing and attachment "B" [this information is contained in the public document], for public comment, the ATA's petition for rulemaking dated April 16, 1980.

Issued in Washington, D.C., on May 8, 1980.

Edward P. Faberman,

Acting Assistant Chief Counsel, Regulations and Enforcement Division.

Air Transport Association of America,
Washington, D.C., April 16, 1980.

Mr. Walter S. Luffsey,
Associate Administrator for Aviation Standards, Federal Aviation Administration, Washington, D.C. 205912.

Dear Mr. Luffsey: This is in regard to recently adopted Amdt. 25–51 and Amdt. 121–155 concerning cabin safety and flight attendants and in particular paragraph 121.311(j). In accordance with FAR 11.25 and on behalf of the ATA member airlines, it is respectfully requested that paragraph (j) be changed to read as follows:

"(j) A certificate holder may obtain an extension, not to exceed *March 6, 1982,* of the compliance date specified in paragraphs (e), (f), and (h) of this section from the Director, Office of Flight Operations, if the certificate holder:

(1) Shows that, due to circumstances beyond its control, it cannot comply by the specified compliance date; and

(2) Submits by *July 7, 1980 for paragraph (f) and by the specified compliance date for paragraphs (e) and (h),* a schedule of compliance acceptable to the Director, indicating that compliance will be achieved at the earliest practicable date."

The changes from the existing regulations are underlined.

Amdts. 25–51 and 121–155 were published in the **Federal Register** of February 4, 1980 effective March 6, 1980. The pertinent paragraphs in Amdt. 121–155 required, except as provided in paragraph 121.311(j):

121.311(e) By March 6, 1981, each seat at a flight deck station must be equipped with a combined safety belt and shoulder harness that meets the applicable requirements of 25.785 as adopted, in Amdt. 25–51.

121.311(f) After March 6, 1980, each flight attendant seat, except for passenger seats, occupied by flight attendants not required by section 121.391, must comply with the requirements of 25.785 as adopted in Amdt. 25–51.

121.311(h) Required by March 6, 1981 each occupant of a seat equipped with a combined safety belt and shoulder harness must have that belt/harness properly secured about the occupant during takeoff and landing and be able to properly perform assigned duties.

In paragraphs 121.311 (e) and (f) there were provisions for continued use of already approved safety belt and shoulder harness systems and that these systems need only be designed to the inertia load factors established under the certification basis of the airplane.

Paragraph 121.311(j) provided for an extension, not to exceed one year, for paragraphs 121.311 (e), (f) and (h) provided the certificate holder submitted an acceptable request and compliance schedule by the specified compliance date. In effect, this required an acceptable request for time extension to be submitted by March 6, 1981 for 121.311(e), March 6, 1980 for 121.311(f) and March 6, 1981 for 121.311(h).

It should be noted that this petition does not change the ultimate permitted time extension for paragraphs 121.311 (e) and (h). It does add an additional year for 121.311(f) but requires an acceptable compliance plan for that paragraph to be submitted by July 7, 1980.

The effect of Amdts. 25–51 and 121–155 was essentially to require immediate compliance with 121.311(f) by the March 6, 1980 effective date of the amendments or to request a time extension under 121.311(j) by that date. All of the ATA member airlines found it necessary to request a time extension for paragraph (f) under 121.311(j) and did so prior to March 6, 1980. These amendments were in need of interpretation and clarification in many respects and it was not until February 21, 1980 that FAA issued interpretive material. The airlines were unable to provide information concerning a schedule of compliance to accompany their petition for extension because of the many unknowns in regard to the regulation and their inability to obtain hardware delivery

information. In its telegraphic response to all airlines March 6, 1980 granting the time extension, FAA recognized this difficulty and requested that an acceptable schedule of compliance be submitted by May 6, 1980.

Prior and subsequent to the issuance of the required time extension, the airlines and the manufacturers have been making a diligent effort to come up with the required information. This has necessitated additional discussions with FAA as to intent and interpretation and diligent efforts by manufacturers and airlines alike to develop the necessary design changes and determine when the necessary hardware would be available. At an industry meeting of affected airlines and manufacturers on March 25, 1980 it became apparent that in many cases adequate information would not be available by May 6, 1980 to provide a meaningful schedule of compliance and, that in some cases, additional time would be required beyond the extended date of March 6, 1981 to comply with 121.311(f). It should be noted that many of the petitions for extension to March 6, 1981 indicated it was doubtful that the one year extension would be sufficient. This is particularly true for large fleet operators. Some smaller fleet operators are affected as well however since in some cases they will be required to redesign certain seat installations on their own. Most of the airlines are heavily dependent on the capabilities of the airframe or seat manufacturers who have many customers to satisfy.

In an effort to determine the magnitude of the problem we have surveyed our member airlines. The results of this survey are tabulated in Attachment A. The individual airline responses from which this tabulation was derived are shown in Attachment B. *It should be noted that the responses to this survey are based on the airlines interpretations of the regulations and the guidance material provided thus far by FAA. If these airline interpretations are not in accordance with FAA's views, the results of this tabulation could change significantly.*

On a total ATA member airline basis this tabulation shows:

1. 170 flight deck seats will require shoulder harness installation per 121.311(e).
2. 2867 flight attendant seat installations will require shoulder harness installation per 25.785(h).
3. 2812 flight attendant seats will require energy absorbing rest installation/modification per 25.785(h).
4. 490 passenger seats will need to be modified or replaced to meet flight attendant seat requirements.
5. 270 flight attendant seats may need to be moved.
6. 321 galley/stowage compartments/serving carts may require modification.
7. 586 safety belts/shoulder harnesses will require modification so that the occupant can perform assigned duties with the harness fastened. It should be noted that in cases where no shoulder harness is now installed, as indicated in items 1 and 2 above, this modification may be done in combination with the requirements in 1 and 2.

As indicated in this tabulation, except for a few cases, little information is available in regard to hardware delivery dates.

It should be noted from this tabulation that the primary problem is the flight attendant seat requirements of 121.311(f). On the other hand, there are many flight attendant seats which already meet the regulations, in whole or in part. There are relatively few flight deck seats which require shoulder harness installation under 121.311(e)(2) and most of those are in the older CV–580/FH–227/YS–11 airplanes which will require a major effort. Similarly, the requirements of 121.311(h) affects relatively few airlines and airplanes.

Not all airlines are affected identically, even for the same type/model airplanes. It is also obvious that not all airlines would require the full two years to comply with 121.311(f). It is not the intent of this petition to request a blanket time extension but merely allow an extension of up to two years if the airline can demonstrate to the satisfaction of FAA that the two year is required. As the required modifications will be accomplished progressively, the number of non-complying flight attendant seats will be progressively reduced.

In view of (1) the airlines inability to comply with the extremely short deadline in 121.311(f) of March 6, 1980, (2) the need for additional time beyond the present March 6, 1981 extended deadline in some cases and (3) the difficulty in obtaining adequate information to provide a meaningful compliance schedule by the date requested, it is believed that the granting of this petition is in the public interest. There would be no point in submitting a schedule of compliance by May 6, 1980 which would be based on inadequate information and would need to be subsequently revised. If, in spite of diligent efforts on the part of airlines, the extended compliance date of March 6, 1981 cannot be met then it would be necessary to take airplanes out of service.

In accordance with the requirements of FAR 11.25(c), we are attaching a summary of this petition as Attachment "C". Your expeditious processing of this petition would be appreciated.

Sincerely,

E. L. Thomas,

Vice President-Engineering.

Attachment A

Survey of ATA Member Airlines, Modifications Required for Compliance With Amendment 121–155

The attached tabular data is taken from the individual airline replies. Columns (1) through (8) represent the answers to the following numbered questions for each type/model airplane in that airlines' fleet:

(1) Number of airplanes.

(2) How many total flight deck seats will require shoulder harness installation per 121.311(e)(2).

(3) How many total flight attendant seats will require:

a. Shoulder harness installation

b. Energy absorbing rest installation.

(4) How many total passenger seats will need to be modified or replaced to meet flight attendant seat requirements.

(5) How many total flight attendant seats will require moving to comply with proximity, direct view or galley/stowage compartment/serving cart requirements.

(6) How many total galleys/stowage compartments/serving carts will require modification.

(7) How many total safety belt/shoulder harnesses will need to be modified because of the requirements of 121.311(h).

(8) Any information you have on firm delivery of parts.

Note.—Where a question mark (?) is shown in a column, this indicates the airline still has some questions regarding compliance as reflected in their individual responses.

When N/A is shown in Column (8), this indicates the airline was unable to provide any information. Where "yes" is shown that airline has limited information which is shown in its individual response. A dash (—) indicates the airline is of the opinion this airplane type/model is in compliance.

14 CFR Part 71

[Airspace Docket No. 80–NW–7]

Proposed Alteration of Transition Area

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of Proposed Rule Making.

SUMMARY: This notice proposes to alter the Newport, Oregon, transition area. This proposal is necessary to provide controlled airspace for aircraft executing the newly amended VOR/DME Runway 16 Standard Instrument Approach Procedure to Newport Municipal Airport, Newport, Oregon.

DATE: Comments must be received on or before June 30, 1980.

ADDRESS: Send comments on the proposal to:

Chief, Operations, Procedures and Airspace Branch, Federal Aviation Administration, Northwest Region, FAA Building, Boeing Field, Seattle, Washington 98108.

The official docket may be examined at the following location: Office of the Regional Counsel, Federal Aviation Administration, Northwest Region, FAA Building, Boeing Field, Seattle, Washington 98108.

FOR FURTHER INFORMATION CONTACT: Robert L. Brown, Airspace Specialist, Operations, Procedures and Airspace Branch, (ANW–534), Air Traffic Division, Federal Aviation Administration, Northwest Region, FAA Building, Boeing Field, Seattle, Washington 98108; telephone (206) 767–2610.

SUPPLEMENTARY INFORMATION: Subpart G § 71.181 (45 FR 445) of FAR 71

contains the description of transition areas designated to provide controlled airspace for the benefit of aircraft conducting Instrument Flight Rules (IFR) activity. Alteration of the Transition Area at Newport, Oregon, will necessitate an amendment to this subpart.

Comment Invited

Interested persons may participate in the proposed rule making by submitting such written data, views, or arguments as they may desire. Communications should identify the airspace docket number and be submitted to the Chief, Operations, Procedures and Airspace Branch, Federal Aviation Administration, Northwest Region, FAA Building, Boeing Field, Seattle, Washington 98108. All communications received on or before June 30, 1980, will be considered before action is taken on the proposed amendment. The proposal contained in this notice may be changed in light of the comments received. All comments received will be available, before and after the closing dates for comments, in the official docket for examination by interested persons.

Availability of NPRM

Any person may obtain a copy of this Notice of Proposed Rule Making by submitting a request to the Federal Aviation Administration, Chief, Operations, Procedures and Airspace Branch, ANW-530, Northwest Region, FAA Building, Boeing Field, Seattle, Washington 98108 or by calling (206) 767-2610. Communications must identify the notice number of this NPRM. Persons interested in being placed on a mailing list for future NPRMs should also request a copy of Advisory Circular No. 1102 which describes the application procedure.

The Proposal

The Federal Aviation Administration is considering an amendment to Subpart G of Part 71 of the Federal Aviation Regulations (14 CFR Part 71) to alter the 1,200-foot transition area. The proposal is necessary to provide controlled airspace for aircraft executing the revised VOR/DME Runway 16 Standard Instrument Approach Procedure for the Newport Municipal Airport. Subpart G of Part 71 was republished in the **Federal Register** on January 2, 1980 (45 FR 445).

The Proposed Amendment

Accordingly, pursuant to the authority delegated to me, the FAA proposes to amend § 71.181 of Part 71 of the Federal Aviation Regulations (14 CFR Part 71) as republished (45 FR 445) by adding the following:

Newport, Oreg.

add after "* * * extending from the VORTAC to 19 miles N." on line 10 with: "* * *, and that airspace within the area bounded by the arcs of 16 and 20 nautical mile radius circles centered on the Newport VORTAC extending clockwise from the VORTAC 335° radial to the VORTAC 355° radial; including additional airspace within the area bounded by the arcs of 11 and 17 nautical mile radius circles centered on the Newport VORTAC extending clockwise from the VORTAC 200° radial to the VORTAC 220° radial."

This amendment is proposed under the authority of section 307(a) of the Federal Aviation Act of 1958, as amended (47 U.S.C. 1348(a)); section 6(c) of the Department of Transportation Act (49 U.S.C. 1655(c)); and (14 CFR 11.65)

Note.—The FAA has determined that this document involves a proposed regulation which is not considered to be significant under the procedure and criteria prescribed by Executive Order 12044 and as implemented by Department of Transportation Regulatory Policies and Procedures (44 FR 11034; February 26, 1979). Since this regulatory action involves an established body of technical requirements for which frequent and routine amendments are necessary to keep them operationally current and promote safe flight operations, the anticipated impact is so minimal that this action does not warrant preparation of a regulatory evaluation, and a comment period of less than 45 days is appropriate.

Issued in Seattle, Wash., May 5, 1980.

E. O'Connor,

Acting Director.

14 CFR Part 71

[Airspace Docket No. 80-ASW-23]

Proposed Alteration of Transition Area: Hammond, La.

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of Proposed Rule Making.

SUMMARY: The nature of the action being taken is to propose alteration of the transition area at Hammond, La. The intended effect of the proposed action is to provide controlled airspace for aircraft executing a new instrument approach procedure to the Hammond Municipal Airport. The circumstance which created the need for the action is the proposed installation of an instrument landing system (ILS) to Runway 18.

DATES: Comments must be received on or before June 18, 1980.

ADDRESSES: Send comments on the proposal to:

Chief, Airspace and Procedures Branch, Air Traffic Division, Southwest Region, Federal Aviation Administration, P.O. Box 1689, Fort Worth, Texas 76101.

The official docket may be examined at the following location: Office of the Regional Counsel, Southwest Region, Federal Aviation Administration, 4400 Blue Mound Road, Fort Worth, Texas.

An informal docket may be examined at the Office of the Chief, Airspace and Procedures Branch, Air Traffic Division.

FOR FURTHER INFORMATION CONTACT: Kenneth L. Stephenson, Airspace and Procedures Branch, ASW-535, Air Traffic Division, Southwest Region, Federal Aviation Administration, P.O. Box 1689, Fort Worth, Texas 76101; telephone: (817) 624-4911, extension 302.

SUPPLEMENTARY INFORMATION: Subpart G § 71.181 (45 FR 445) of FAR Part 71 contains the description of transition areas designated to provide controlled airspace for the benefit of aircraft conducting IFR activity. Alteration of the transition area at Hammond, La., will necessitate an amendment to this subpart.

Comments Invited

Interested persons may submit such written data, views, or arguments as they may desire. Communications should be submitted in triplicate to Chief, Airspace and Procedures Branch, Air Traffic Division, Southwest Region, Federal Aviation Administration, P.O. Box 1689, Fort Worth, Texas 76101. All communications received on or before June 18, 1980, will be considered before action is taken on the proposed amendment. No public hearing is contemplated at this time, but arrangements for informal conferences with Federal Aviation Administration officials may be made by contacting the Chief, Airspace and Procedures Branch. Any data, views, or arguments presented during such conferences must also be submitted in writing in accordance with this notice in order to become part of the record for consideration. The proposal contained in this notice may be changed in the light of comments received. All comments submitted will be available, both before and after the closing date for comments, in the Rules Docket for examination by interested persons.

Availability of NPRM

Any person may obtain a copy of this notice of proposed rule making (NPRM) by submitting a request to the Chief, Airspace and Procedures Branch, Air Traffic Division, Southwest Region, Federal Aviation Administration, P.O. Box 1689, Fort Worth, Texas 76101, or by calling (817) 624–4911, extension 302. Communications must identify the notice number of this NPRM. Persons interested in being placed on a mailing list for future NPRMs should contact the office listed above.

The Proposal

The FAA is considering an amendment to Subpart G of Part 71 of the Federal Aviation regulations (14 CFR Part 71) to alter the transition area at Hammond, La. The FAA believes this action will enhance IFR operations at the Hammond Municipal Airport by providing controlled airspace for aircraft executing proposed instrument approach procedures using the proposed ILS. Subpart G of Part 71 was republished in the **Federal Register** on January 2, 1980 (45 FR 445).

The Proposed Amendment

Accordingly, pursuant to the authority delegated to me, the FAA proposes to amend 71.181 of Part 71 of the Federal Aviation Regulations (14 CFR Part 71) as republished (45 FR 445) by deleting the present description and substituting the following:

Hammond, La.

That airspace extending upward from 700 feet above the surface within a 6.5-mile radius of the Hammond Municipal Airport (latitude 30°31'19" N., longitude 90°24'57" W.).

(Sec. 307(a), Federal Aviation Act of 1958 (49 U.S.C. 1348(a)); and sec. 6(c), Department of Transportation Act (49 U.S.C. 1655(c)).)

Note.—The FAA has determined that this document involves a proposed regulation which is not significant under Executive Order 12044, as implemented by DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979). Since this regulatory action involves an established body of technical requirements for which frequent and routine amendments are necessary to keep them operationally current and promote safe flight operations, the anticipated impact is so minimal that this action does not warrant preparation of a regulatory evaluation and a comment period of less than 45 days is appropriate.

Issued in Fort Worth, Tex. on May 5, 1980.

F. E. Whitfield,

Acting Director, Southwest Region.

BILLING CODE 4910-13-M

14 CFR Part 71

[Airspace Docket No. 80-ASW-20]

Proposed Designation of Transition Area: Cameron, La.

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of Proposed Rule Making.

SUMMARY: The nature of the action being taken is to propose designation of a transition area at Cameron, La. The intended effect of the proposed action is to provide controlled airspace for helicopters executing a new instrument approach procedure to the ERA landing area near Cameron, La. The circumstance which created the need for the action is the proposed special instrument approach procedure to the ERA landing area for helicopters using the Lake Charles VORTAC.

DATES: Comments must be received on or before June 18, 1980.

ADDRESSES: Send comments on the proposal to:

Chief, Airspace and Procedures Branch, Air Traffic Division, Southwest Region, Federal Aviation Administration, P.O. Box 1689, Fort Worth, Texas 76101.

The official docket may be examined at the following location:

Office of the Regional Counsel, Southwest Region, Federal Aviation Administration, 4400 Blue Mound Road, Fort Worth, Texas.

An informal docket may be examined at the Office of the Chief, Airspace and Procedures Branch, Air Traffic Division.

FOR FURTHER INFORMATION CONTACT: Kenneth L. Stephenson, Airspace and Procedures Branch, ASW-535, Air Traffic Division, Southwest Region, Federal Aviation Administration, P.O. Box 1689, Fort Worth, Texas 76101; telephone: (817) 624–4911, extension 302.

SUPPLEMENTARY INFORMATION: Subpart G § 71.181 (45 FR 445) of FAR Part 71 contains the description of transition areas designated to provide controlled airspace for the benefit of aircraft conducting Instrument Flight Rules (IFR) activity. Designation of a transition area at Cameron, La., will necessitate an amendment to this subpart.

Comments Invited

Interested persons may submit such written data, views, or arguments as they may desire. Communications should be submitted in triplicate to Chief, Airspace and Procedures Branch, Air Traffic Division, Southwest Region, Federal Aviation Administration, P.O. Box 1689, Fort Worth, Texas 76101. All communications received on or before June 18, 1980, will be considered before action is taken on the proposed amendment. No public hearing is contemplated at this time, but arrangements for informal conferences with Federal Aviation Administration officials may be made by contacting the Chief, Airspace and Procedures Branch. Any data, views, or arguments presented during such conferences must also be submitted in writing in accordance with this notice in order to become part of the record for consideration. The proposal contained in this notice may be changed in the light of comments received. All comments submitted will be available, both before and after the closing date for comments, in the Rules Docket for examination by interested persons.

Availability of NPRM

Any person may obtain a copy of this notice of proposed rule making (NPRM) by submitting a request to the Chief, Airspace and Procedures Branch, Air Traffic Division, Southwest Region, Federal Aviation Administration, P.O. Box 1689, Fort Worth, Texas 76101, or by calling (817) 624–4911, extension 302. Communications must identify the notice number of this NPRM. Persons interested in being placed on a mailing list for future NPRMs should contact the office listed above.

The Proposal

The FAA is considering an amendment to Subpart G of Part 71 of the Federal Aviation Regulations (14 CFR Part 71) to designate a transition area at Cameron, La. The FAA believes this action will enhance IFR operations to the ERA landing area by providing controlled airspace for helicopters executing a proposed instrument approach procedure using the Lake Charles VORTAC. Subpart G of Part 71 was republished in the **Federal Register** on January 2, 1980 (45 FR 445).

The Proposed Amendment

Accordingly, pursuant to the authority delegated to me, the FAA proposes to amend § 71.181 of Part 71 of the Federal Aviation Regulations (14 CFR Part 71) as republished (45 FR 445) by adding the Cameron, La., transition area as follows:

Cameron, La.

That airspace extending upward from 700 feet above the surface within 2.5 miles each side of the 197° radial of the Lake Charles VORTAC extending 3.5 miles north and 2 miles south of latitude 29°46'31.4" N, longitude 93°14'03.4" W.

(Sec. 307(a), Federal Aviation Act of 1958 (49 U.S.C. 1348(a)); and sec. 6(c), Department of Transportation Act (49 U.S.C. 1655(c))

Note.—The FAA has determined that this document involves a proposed regulation which is not significant under Executive Order 12044, as implemented by DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979). Box 1689, Fort Worth, Texas 76101. All communications received on or before June 18, 1980, will be considered before action is taken on the proposed amendment. No public hearing is contemplated at this time, but arrangements for informal conferences with Federal Aviation Administration officials may be made by contacting the Chief, Airspace and Procedures Branch. Any data, views, or arguments presented during such conferences must also be submitted in writing in accordance with this notice in order to become part of the record for consideration. The proposal contained in this notice may be changed in the light of comments received. All comments submitted will be available, both before and after the closing date for comments, in the Rules Docket for examination by interested persons.

Availability of NPRM

Any person may obtain a copy of this notice of proposed rule making (NPRM) by submitting a request to the Chief, Airspace and Procedures Branch, Air Traffic Division, Southwest Region, Federal Aviation Administration, P.O. Box 1689, Fort Worth, Texas 76101, or by calling (817) 624-4911, extension 302. Communications must identify the notice number of this NPRM. Persons interested in being placed on a mailing list for future NPRMs should contact the office listed above.

The Proposal

The FAA is considering an amendment to Subpart G of Part 71 of the Federal Aviation Regulations (14 CFR Part 71) to designate a transition area at Pauls Valley, Okla. The FAA believes this action will enhance IFR operations at the Pauls Valley Municipal Airport by providing controlled airspace for aircraft executing proposed instrument approach procedures using the proposed NDB located on the airport. Subpart G of Part 71 was republished in the **Federal Register** on January 2, 1980 (45 FR 445).

The Proposed Amendment

Accordingly, pursuant to the authority delegated to me, the FAA proposes to amend § 71.181 of Part 71 of the Federal Aviation Regulations (14 CFR Part 71) as republished (45 FR 445) by adding the Pauls Valley, Okla., transition area as follows:

Pauls Valley, Okla.

That airspace extending upward from 700 feet above the surface within a 6.5-mile radius of the Pauls Valley Municipal Airport (latitude 34°42'45"N., longitude 97°13'30"W.) and within 3 miles each side of the 169° bearing from the NDB (latitude 34°42'55"N., longitude 97°13'44"W.) extending from the 6.5-mile radius area to 8.5 miles south of the NDB.

(Sec. 307(a), Federal Aviation Act of 1958 (49 U.S.C. 1348(a); and sec. 6(c), Department of Transportation Act (49 U.S.C. 1655(c)).)

Note.—The FAA has determined that this document involves a proposed regulation which is not significant under Executive Order 12044, as implemented by DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979). Since this regulatory action involves an established body of technical requirements for which frequent and routine amendments are necessary to keep them operationally current and promote safe flight operations, the anticipated impact is so minimal that this action does not warrant preparation of a regulatory evaluation and a comment period of less than 45 days is appropriate.

BILLING CODE 4910-13-M

CONSUMER PRODUCT SAFETY COMMISSION

16 CFR Part 1512

Proposed Amendments to Bicycle Safety Requirements: Retroreflective Rims

AGENCY: Consumer Product Safety Commission (CPSC).

ACTION: Proposed amendments.

SUMMARY: The Commission's bicycle safety regulation currently has side reflectivity requirements that may be satisfied by either spoke reflectors or retroreflective tires. The Commission has granted a petition that requested a

third alternative for side reflectivity, retroreflective rims. In this document, the Commission is proposing amendments that would provide the rim reflectivity alternative.

DATES: Comments on the proposed amendments are due by July 18, 1980. The amendments are proposed to become effective June 18, 1980.

ADDRESSES: Comments should be mailed (preferably with five copies) to the Office of the Secretary, Consumer Product Safety Commission, Washington, D.C. 20207. Received comments may be seen in the Office of the Secretary, Third Floor, 1111 18th Street, N.W., Washington, D.C. during normal working hours.

FOR FURTHER INFORMATION CONTACT: Terri Rogers, Office of Program Management, Consumer Product Safety Commission, Washington, D.C. 20207; telephone (301) 492–6754.

SUPPLEMENTARY INFORMATION:

Background

The Commission issued a bicycle safety regulation in July 1974, and amended it in November 1975 (16 CFR Part 1512). The regulation became effective on May 11,1976, except for certain provisions that became effective on November 13, 1976. In June 1977, a federal court of appeals upheld all but a few provisions of the regulation. *Forester v. Consumer Product Safety Commission*, 559 F.2d 774 (D.C. Cir. 1977).

The regulation requires bicycles to be recognizable and identifiable from the side, when illuminated by automobile headlamps. Either spoke-mounted reflectors or retroreflective tire sidewalls may be used, as long as they meet the specified performance criteria for side reflectivity. In addition, the regulation includes tests for assuring adherence and resistance to abrasion for retroreflective material used on tire sidewalls.

In a June 1978 petition, the Minnesota Mining and Manufacturing Company (3M) requested amendments to the side reflectivity requirements that would permit the use of retroreflective rims as a third option on bicycles equipped with non-caliper-rim brakes (brakes that do not function by gripping the sides of the wheel rim). The Commission granted 3M's petition in December 1978, and the staff began developing the proposed amendments.

The existing regulation requires that the retroreflective material on bicycle tires be as resistant to abrasion as the adjacent tire sidewall itself. Further, the retroreflectivity material must not be capable of being peeled or scraped away without removal of tire material. The proposed amendments would involve the application of retroreflective material to metal. Therefore, two new tests, one for abrasion and one for peeling, are needed to assure the durability of the retroreflective material on any rims that would be used to comply with the side reflectivity requirements. The proposed amendment would require retroreflective rims to meet these reflectivity requirements after the abrasion and peeling tests are performed.

Discussion

A list of the documents on which the proposed amendment is based appears below. All numbered citations in this discussion refer to the documents on that list. The documents are available in the Office of the Secretary.

A. Abrasion Test

The National Bureau of Standard (NBS) and the CPSC engineering staffs developed the abrasion test proposed below. It is designed to assure that retroreflective material on rims will not unduly lose its reflective properties when exposed to normal bicycle operating conditions.

Under contract to the Commission, NBS developed an abrasion test procedure (6) that is based on a General Services Administration (GSA) test method for measuring paint scrub resistance (30). NBS modified the scrub resistance procedure so that the test could be performed on a bicycle rim (7). The GSA procedure evaluates the scrub resistance of paint that is applied to specially-described pieces of metal, and cannot be used on rims without modification. At the same time, the post-abrasion retroreflectivity tests can be performed meaningfully only if the entire rim is abraded. Therefore, NBS modifided the scrub resistance procedure so that the test can be performed on a bicycle wheel rim. A test apparatus was devised in which a rotating brush abrades a revolving rim. Any apparatus can be used as long as four critical factors for the test are maintained: (1) the size and type of bristles on the bush; (2) the force with which the brush is applied to the rim; (3) the speeds of the rotating brush and revolving rim; and (4) the number of rim revolutions.

The petition granted by the Commission stemmed from 3M's development of a self-adhesive retroreflective tape that can be applied to metal bicycle rims. Similar 3M tape has been used on street signs, automobile license plates, and vehicle parking stickers for many years without significant degradation from weather and other deleterious factors. The 3M tape has also been road-tested on bicycle rims with similar results. The test and use data on the 3M tape are contained in an August 15, 1978 letter from 3M and in 3M's petition (3, 4).

At the present time, the 3M tape is the only retroreflective material that the Commission knows is suitable for application to bicycle rims. Therefore, it was used as a guide for establishing the proposed abrasion test specifications. The Commission believes it is reasonable to expect that other retroreflective tapes or coatings developed for this purpose will perform satisfactorily on a bicycle as long as they can meet the reflectivity requirements after being subjected to the proposed abrasion test.

To establish the appropriate specifications for the four critical factors, NBS and CPSC staff attempted to attain a degree of abuse similar to that which would be experienced during the paint scrub resistance test (7).

For example, the velocity of the bicycle wheel in the test proposed below approximates the velocity at which the metal pieces are stroked by the brush in the GSA test. Since the brush in the proposed bicycle rim test must be smaller than the brush specified in FTMS No. 141A so it fits the rim, the applied force has been reduced to maintain the appropriate pressure between the bristles and the reflective material. Finally, a rotational component of velocity was added to assure that abrasion will take place uniformly over the width of the reflective material.

Some degradation in the reflectivity of the 3M tape does occur when it is subjected to the proposed abrasion test. Since this tape exceeds the reflectivity requirements when new, and continues to meet them after being tested (8), an extra margin of safety exists. The Commission believes that the proposed test specifications will assure the satisfactory performance of any other retroreflective material that might be developed in the future for use on bicycle rims.

The details of how NBS and the Commission staff developed the abrasion test and selected the specifications proposed below are contained in a November 1, 1979 report from NBS, "Bicycle Wheel Rim Reflective Materials" (6), and a February 28, 1980 staff memorandum, "Peel and Abrasion Tests for Amendment to Bicycle Regulation Requirements for Side Reflectivity" (7).

B. Peel Test

According to the amendments proposed below, retroreflective material could be applied to bicycle rims as a coating, such as paint, or as a tape, such as 3M's. If a tape is used, it must not be too easy to peel off. A vandal or a curious child could totally deprive a rim of its reflectivity in seconds by peeling the tape off in one piece around the entire rim. To prevent this, the proposed amendments include a peel test for retroreflective tape.

The test requires, very simply, that the tape material break before it peels (7). This test, performed by grasping a piece of the tape between the fingers and pulling on it, is similar to a peel resistance test published by the American Society for Testing and Materials (ASTM)(28). Although the ASTM test measures pulling force, the purpose of the proposed test is to assure that the tape cannot be peeled off. Therefore, the test proposed below specifies no particular force but simply requires that the tape must break rather than peel away.

C. Economic Effects and the Injury Risk

Although exact costs of retroreflective rims on a per-bicycle basis would depend on actual volume of sales, it is likely that the cost to bicycle manufacturers would be competitive with the cost of a set of spoke reflectors (9). The Commission does not expect the retail price of bicyles to increase because of adoption of the proposal below.

Acceptance by bicycle manufacturers and consumers will determine the extent to which retroreflective rims replace other side reflectivity devices. Officals for firms manufacturing spoke reflectors have indicated to the Commission staff little concern regarding the proposed amendments due to bicycle manufacturers' and consumers' satisfaction with their product (9).

The Commission believes that the proposed amendments would impose no economic burden on manufacturers or consumers. Rather, they would provide a greater choice of acceptable methods of side reflectivity for bicycles. Regardless of the alternative selected, all bicycles would be required to meet specified reflectivity requirements. Therefore, riders will be protected as fully as they are now protected.

Conclusion

The Commission believes that permitting a third alternative for bicycles to comply with the side reflectivity requirements would benefit consumers and industry. New technologies for rim reflectivity might prove to be more effective than spoke and tire reflectivity and the costs to consumers and the industry might prove to be lower. However, even if no benefits are achieved, the proposed amendments assure that bicycle riders will be protected as well as they are now.

Accordingly, pursuant to provisions of the Federal Hazardous Substances Act (secs. 2(f)(1)(D), (q)(1)(A), (s); 3(e)(1); 10; 74 Stat. 1304–05, 83 Stat. 187–89; 15 U.S.C. 1261, 1262, 1269) and under authority vested in the Commission by the Consumer Product Safety Act (Pub. L. 92–573, sec. 30(a), 86 Stat. 1231; 15 U.S.C. 2079(a)), the Commission proposes to amend 16 CFR Part 1512 as follows:

§ 1512.16 Requirements for reflectors.

1. Section 1512.16(b) is amended to read as follows:

* * * * *

(b) *Side reflectors.* There shall be retroreflective tire sidewalls or, alternatively, reflectors mounted on the spokes of each wheel, or, for non-caliper-rim brake (those that do not function by gripping the sides of the wheel rim) bicycles, retroreflective wheel rims. The center of spoke-mounted reflectors shall be within 76 mm (3.0 in.) of the inside of the rim. Side reflective devices shall be visible on each side of the wheel.

§ 1512.16(i) [Added]

2. A new subsection 1512.16(i) is added as follows:

(i) *Retroreflective rims.* When retroreflective rims are used in lieu of spoke-mounted reflectors or retroreflective tire sidewalls, the reflecting material shall meet the following requirements:

(1) The retroreflective material is applied to the rim in the form of a self-adhesive tape, the following requirement must be met: Use a sharp knife, razor blade, or similar instrument to carefully release an end of the tape material sufficient to be grasped between the thumb and finger. Grasp the freed tape end and gradually pull in a direction 90° to the plane of the rim. The tape material must break before additional separation (peeling) from the rim is observed.

(3) After the retroreflective material is abraded in accordance with the abrasion test for retroreflective rims at § 1512.18(r), the rim must then be tested for performance in accordance with the retroreflective tire and rim test at § 1512.18(o), to assure the reflectance properties over the angles given in table 3.

§ 1512.18(o) [Amended]

3. Section 1512.18(o) is amended to read as follows:

(o) *Reflective tire and rim test.* (Ref. § 1512.16 (h) and (i)).

(1) *Apparatus.* Arrangements for the reflective intensity measurement shall be as shown in figure 3 of this Part 1512. A light projector (having a maximum effective lens diameter of $D/500$, where D is the distance from the source to the retroreflective surface being measured) capable of projecting light of uniform intensity shall be used to illuminate the sample. The light falling on the sample shall have a color temperature of 2856°K±10% (equivalent to a tungsten filament lamp operated at a color temperature of 2856°K±10% having approximately the relative energy distribution given in table 4 of this Part 1512). The light reflected from the test surface shall be measured with a photoelectric receiver, the response of which has been corrected for the spectral sensitivity of the average photopic human eye. The dimensions of the active area of the receiver shall be such that no point on the perimeter of the receiver is more than $d/100$ from its center (where d is the distance from the receiver to the retroreflective surface). Wheels used for the measurement of retroreflective tires or rims shall have all exposed metallic surfaces, including spokes, masked in flat black so that when measured these surfaces indicate no appreciable reflectance. The tire shall be mounted and fully inflated. Distances shall be measured from the plane of the wheel and the center of the hub. For the tests, the distance D between the projector and the center of the wheel and distance d between the center of the wheel and the receiver shall each be at least 15 m (50 ft).

(2) *Procedure*—(i) *Masking.* The reflecting strip to be tested shall be within two concentric circles, the larger of which is no more than 0.02 m (0.79 inc.) greater in radius than the smaller. While additional reflecting material is permitted outside such boundaries, such additional material shall not be counted in determining the average width of the reflecting strip and shall be masked off with opaque matte black tape in testing the reflecting material.

(ii) *Orientation.* Every position of the reflecting strip on the rim or the mounted and fully inflated tire to be tested shall be oriented so that the normal to this portion is within 40° of parallel to the axis of rotation of the wheel.

(iii) *Measurement.* Measure the distance d from the receiver to the center of the wheel and the minimum

distance r from the axis of rotation of the wheel to the unmasked portion of the reflective strip. Measure the illumination incident on the reflective strip at uniform intervals of no more than 45° around the wheel, with the receiver oriented in the direction of the incident radition. The average of such readings will be the mean illumination of the sample E. If any one of such readings differs by more than 10 percent from the mean illumination, then a more uniform source must be obtained. Measure the illumination of the receiver due to reflection from the retroreflective surface for each entrance angle and each observation angle given in table 3 of this Part 1512. The entrance angle and the observation angle shall be in the same plane. A negative entrance angle (figure 3 of this Part 1512) is specified when the entrance angle is small because the location of the receiver with respect to the direction of illumination becomes important for distinguishing between ordinary mirror-like reflection and retroreflection. The illumination incident on the test surface and the receiver shall be measured in the same units on a linear scale. Compute the ratio A for each combination of entrance angle and observation angle listed in table 3 as follows:

$$A=[(E_r/E_s)(d^2/r)]$$

Where:

A = Ratio in meters,

E_r = Illumination incident upon a plane perpendicular to the incident ray at the specimen position (see instructions above in this paragraph (o)(2)(iii) for averaging), measured in the same units as E_r,

d = The distance in meters from the receiver to the center of the wheel,

r = The minimum radius in meters of the boundary circles of the retroreflective strip.

The minimum value of A shall be that listed in table 3 of this Part 1512 for each combination of entrance angle and observation angle.

The plane containing the entrance angle and the plane containing the observation angle shall coincide. In table 3, a positive entrance angle corresponds to the case in which the line of sight to the receiver lies between the line of incidence and the optic axis of the reflector, and a negative entrance angle corresponds to the case in which the line of incidence lies between the line of sight of the receiver and optic axis of the reflector.

(iv) *Criteria.* The ration A as defined in § 1512.18(o)(2)(iii) shall not be less than:

$$A = [4(\cos^3\theta/1 + (\phi/0.225)^{3/2}]$$

where A is ratio in meters, θ is the entrance angle, and ϕ is the observation angle in degrees. The criterion applies only for entrance angles from 0° to 40° and observation angles from 0.2° to 1.5°, and performance is not specified beyond this range. The values of A in table 3 are obtained from the above formula by rounding up to two significant figures. Accept in cases in which the performance of the reflector is seriously questionable, a reflector with A at least the value given in table 3 at each of the six combinations of entrance and observation angles will be considered to satisfy this criteria.

§ 1512.18(r) [Added]

4. A new subsection 1512.18(r) is added as follows:

(r) Abrasion test for retroreflective rims (Ref. § 1512.16(i).)

(1) This test consists of a steel wire cup brush rotating at a constant velocity of 60 rpm that is applied at a force of 2N (0.451b) to the retroreflective material on one side of a bicycle wheel rim. The rim is rotated about the axle at a linear velocity of 0.23 m/sec (9 in/sec). The test is complete when the wheel has completed 1000 revolutions.

(2) *Apparatus.* Figure 8 of this Part 1512 illustrates the following test fixture arrangement that is suitable to perform this abrasion test:

(i) *Test fixture.* The test fixture contains a clamp to hold the axle of a bicycle wheel so that the wheel can rotate freely about the axle. The axis of rotation is capable of being inclined from the vertical to bring that portion of the side of the wheel rim containing the retroreflective material into a horizontal plane as it passes beneath the abrading brush. A drive mechanism to rotate the bicycle wheel contains a means to adjust the rotational velocity to obtain the specified linear velocity measured at a point on the wheel rim on the axis of the abrading brush.

(ii) *Abrader.* The abrader is a cup brush meeting the specification in paragraph 3(v) of this section. It is mounted in a chuck attached to a motor that rotates about a vertical axis at the specified rotational velocity. A means is provided to apply the rotating cup brush at the specified force against the retroreflective material on the bicycle wheel rim. The axis of the abrading brush is positioned on the mid point in the width of the retroreflective material. The force is produced by deadweights applied to a pan on the axis of the counterbalanced motor/brush assembly.

(3) *Specifications.* (i) The linear velocity of the reflective band on the bicycle wheel rim shall be 0.23 m/sec (9 in./sec) measured at a point on the axis of the abrading brush.

(ii) The rotational velocity of the abrading brush shall be 60 rpm.

(iii) The force normal to the plane of the retroreflective material at which the abrading brush is to be applied shall be 2 N (0.45 lb).

(iv) The bicycle wheel shall make 1,000 complete revolutions per test.

(v) The abrader shall be a cup brush having bristles that are 0.005 in. diameter low carbon steel wire; an outside diameter of 0.5 inch; a wire bristle length of 0.25 inch; and a cup diameter of 0.405 inch.[6]

(vi) The abrasion test shall be conducted at an ambient temperature of between 16°C (60°F) and 27°C (80°F).

(4) *Procedure.* (i) The retroreflective bicycle rim to be tested shall be an unused sample free from grit, grime and grease. Prior to beginning the test, remove, according to instructions supplied with the bicycle, any protective coating or material used to prevent damage in shipping.

(ii) Test the wheel in a suitable test fixture, according to the specifications in paragraph (r)(3).

(iii) Clamp the wheel by its axle in the test fixture and align the axis of rotation so that the portion of the reflective material below the axis of the abrading brush is horizontal.

(iv) Shape the cup brush by hand to the specified 0.5 in. diameter. Any stray wire bristles projecting more than 1/32 in. beyond the tip of the bulk of the bristles should be clipped off. Adjust the position of the brush so that its axis is centered over the mid-point in the width of the retroreflective material.

(v) Adjust the rotational velocity of the bicycle wheel to obtain a linear velocity of 0.23 m/sec (9 in./sec) measured at the mid-point in the width of the retroreflective material. Adjust the force to obtain a force normal to the surface under the brush of 2 N (0.45 lb).

(vi) Apply the abrading brush to the retroreflective material on the wheel rim, and continue the test for 1,000 complete revolutions of the bicycle wheel.

BILLING CODE 6355-01-C

6. The title of table 3 is amended to read:

Table 3.—*Minimum acceptable values for the quantity A defined in the retroreflective tire and rim test procedure.*

(Secs. 2(f)(1)(D), (q)(1)(A), (s), 3(e)(1), and 10(a), 74 Stat. 1304–05, 83 Stat. 187–89; 15 U.S.C. 1261, 1262)

Dated: May 13, 1980.

Sadye E. Dunn,

Secretary, Consumer Product Safety Commission.

List of Record

The proposed amendments to the bicycle regulation resulted from a petition filed by the Minnesota Mining and Manufacturing Company (3M). Documents related to that petition (HP 78–8) are available from the Office of the Secretary but are not listed below. The same is true of an earlier 3M petition on the same subject (HP–78–5) that 3M withdrew, and related documents (including some comments from members of the bicycle industry).

The following documents comprise the record of the proceeding to amend the side reflectivity requirements of the bicycle regulation:

1. Staff briefing package, including cover and briefing memos from Terri Rogers; April 7, 1980; 8 pages (Tabs are listed separately as documents 2–11).
2. Chronology of events; 1 page (Tab A to briefing package).
3. 3M petition (HP 78–8) with cover letter and attachments; June 30, 1978; 33 pages (Tab B).
4. Follow-up letter from 3M's attorney; August 15, 1978; 2 pages (Tab B).
5. Follow-up letter from 3M's attorney, with attachment; August 23, 1978; 2 pages (Tab B).
6. National Bureau of Standards (NBS) report, with attachments; November 1, 1978; 11 pages (Tab C).
7. Memo from John Preston and Gerd Lohmann, with attachments; February 28, 1980; 8 pages (Tab D).
8. Memo from Neil Zylich, with attached test results; February 14, 1980; 3 pages (Tab D).
9. Memo from Jacob Handelsman; December 28, 1979; 2 pages (Tab E).
10. Memo from David Thome; December 28, 1979; 1 page (Tab F).
11. Draft **Federal Register** notice; 17 pages (Tab G).
12. Memos from John McGahan and Nicholas Calvano of NBS; September 13, 1978; 2 pages.
13. Memo from Neil Zylich; February 7, 1980; 3 pages.
14. Memo from Gerd Lohmann, with attachment; January 23, 1980; 6 pages.
15. Engineering working papers; 5 pages.
16. Memo from Gerd Lohmann; January 30, 1980; 1 page.
17. Memo from John McGahan; May 7, 1979; 1 page.
18. Log of meeting between NBS and CPSC staff; April 25, 1979; 1 page.
19. Materials submitted by Donald Theissen of 3M's Safety Systems Division; 17 pages.
20. ANSI/ASTM standard on peel strength; 1978; 4 pages.
21. Letter from Donald Theissen of 3M; March 23, 1979; 1 page.
22. Letter from Donald Theissen of 3M; July 19, 1979; 1 page.
23. Notes of John Preston; March 29, 1979; 1 page.
24. Letter from 3M's attorney; March 15, 1979; 1 page.
25. Log of meeting between CPSC staff and 3M representatives; February 27, 1979; 2 pages.
26. ASTM standard on peel strength, with cover note; 1972; 5 pages.
27. Federal Test Method Standard 370 on reflectivity; March 1, 1977; 13 pages.
28. ASTM standard for scrub resistance; 1974; 4 pages.
29. Logs of telephone calls between Gerd Lohmann and GSA staff members; March 5–6, 1980; 2 pages.
30. Federal Test Method Standard 141a; 1965; 2 pages.
31. Cup brush specifications; 1971 (revised 1977); 1 page.
32. Working papers of Gerd Lohmann, February 1980; 19 pages.
33. Memo from Donald Theissen of 3M; March 14, 1979; 1 page.
34. Memo from Gerd Lohmann, with attachment; December 14, 1979; 6 pages.
35. Log of meeting between CPSC staff and 3M representatives; December 12, 1979; 1 page.
36. Log of telephone conversation between Gerd Lohmann and Neil Zylich; January 28, 1980; 1 page.
37. Notes of Gerd Lohmann; December 1979/January 1980; 17 pages.
38. Military and ASTM standards and related materials; 46 pages.

BILLING CODE 6355–01–M

DEPARTMENT OF JUSTICE

28 CFR Part 42

Nondiscrimination on the Basis of Age in Federally Assisted Programs; Implementation of the Age Discrimination Act of 1975

AGENCY: Department of Justice.

ACTION: Proposed rule.

SUMMARY: This proposed regulation implements the Age Discrimination Act of 1975, as amended, 42 U.S.C. 6101–6107, with regard to programs receiving Fedeal financial assistance from the Department of Justice.

The Act prohibits, subject to certain exceptions, discrimination on the basis of age in Federally assisted programs. The Act requires each Federal agency that extends financial assistance to issue an implementing regulation. Also, pursuant to the Act, the Secretary of Health, Education, and Welfare has issued a general regulation, 45 CFR Part 90, 44 FR 33708 (June 12, 1979), to guide Federal agencies regarding their implementation of the Act. This proposed regulation is based upon the HEW general regulation.

DATE: The Department of Justice invites comments on this proposal from the public and other Federal agencies. Comments should be received on or before June 18, 1980.

ADDRESS: Send comments to Assistant Attorney General, Civil Rights Division, Department of Justice, Washington, D.C. 20530.

FOR FURTHER INFORMATION CONTACT: Cizo Aloot (202–724–6799) or David Marblestone (202–633–3728), Civil Rights Division, Department of Justice, Washington, D.C. 20530.

SUPPLEMENTARY INFORMATION:

General

The Age Discrimination Act of 1975 covers such practices as the way in which recipients of Federal financial assistance provide benefits and services. The Act does not apply to employment practices, except in regard to certain programs funded under the Comprehensive Employment and Training Act.

Unlike the Age Discrimination in Employment Act of 1967, as amended, 29 U.S.C. 621–634, the basic coverage of which is limited to persons between the ages of 40 and 70, the Age Discrimination Act applies to any kind of age distinction. That is, the present Act applies to age-related practices affecting children, elderly persons or any other persons. Based on our work in connection with implementation of the Age Discrimination Act, including development of the present proposal, we are concerned that some applications of the Act may result in substantial problems in the administration of Federally funded programs. We have recommended to HEW and the Regulatory Council that Federal agencies examine further the effects of the Act upon particular types of assisted programs.

This proposed regulation applies to programs receiving financial assistance from the Department of Justice. The largest amount of such assistance is administered by the Law Enforcement Assistance Administration. Other parts of the Deparment that extend such assistance are the National Institute of Justice, the Bureau of Justice Statistics, the Federal Bureau of Investigation, the Bureau of Prisons, and the Drug Enforcement Administration.

Regarding the scope of coverage, this proposal (§ 42.601(b) and § 42.602(i)) states that the term "program or activity" refers, for example, to the entire operation of an assisted police department. The same concept of coverage is applicable under other nondiscrimination laws. See, e.g., the Department's regulation under the Crime Control Act, 28 CFR § 42.202(g).

Standards for Determining Age Discrimination

The Act sets forth a general prohibition against age discrimination in Federally assisted programs, but the prohibition is subject to three exceptions. The general regulation of the Secretary of Health, Education, and Welfare deals with the nature of the exceptions. The present proposal (§§ 42.611–42.613) follows the substance of the HEW general regulation. In addition, §§ 42.611–613 of the present proposal include a number of examples. The purpose of the examples is to illustrate the manner in which the Act may apply to programs assisted by the Department of Justice. We are especially interested in receiving comments on the examples and suggestions on ways to make the regulation more clear. In our final regulation, the examples may be set forth in an appendix.

The present examples deal with such recipients as police departments, court systems and corrections departments. Another major category of recipients, educational institutions, is not discussed. Guidance regarding such institutions will come primarily from the Department of Health and Human Services and the Department of Education.

Duties of Recipients

Pursuant to a requirement set forth in the HEW general regulation (45 CFR § 90.43(b)), proposed § 42.622 provides that any recipient with 15 or more full-time employees must prepare a written self-evaluation of its compliance with the regulation. This is not a continuing requirement; only one such self-evaluation is to be prepared by a recipient. In its self-evaluation, a recipient must identify and justify any age distinction—i.e., any rule or practice using age or an age-related term—that it uses in a covered program. If such a rule or practice is to be continued, the recipient must be able to show that one of the Act's exceptions applies.

Compliance Procedures

Section 42.631 of this proposal, which deals with the handling of complaints, is based upon the provisions of the HEW general regulation (45 CFR § 90.43(c)). Section 42.631(a) of this proposal states that a complaint may be filed by an "aggrieved" person. This limitation is not intended to prevent any person who has information regarding possible violation of this regulation from providing the information to the Department.

With regard to means of enforcement, the provisions of the present Act are similar to those of Title VI of the Civil Rights Act of 1964, 42 U.S.C. 2000d–1. The basic means of enforcement are (1) an administrative proceeding to terminate Federal financial assistance or (2) a lawsuit by the Department to enjoin discriminatory practices. In addition, the present Act expressly authorizes lawsuits by private parties who have exhausted their administrative remedies.

Under § 42.633(b)(2) of this proposal, a final decision terminating Office of Justice Assistance, Research, and Statistics grants to a recipient may be made by the Director of OJARS, rather than by the Attoney General. This provision is consistent with the responsibility of the Director under the nondiscrimination provision of the Crime Control Act.

Effective Date of Prohibitions

HEW has taken the position that the Act's prohibitions became effective on July 1, 1979. See § 304(a)(5) of the Act, as amended, 42 U.S.C. 6103(a)(5).

This proposed regulation will apply to any program that received or receives Federal financial assistance from the Department after July 1, 1979. It will apply to conduct occurring after that date.

Regulatory Analysis

Executive Order 12044 requires Federal agencies to prepare regulatory analyses for significant regulations that may have major economic consequences. Under § 3(a)(1) of the executive order, a regulatory analysis must be prepared for any regulation that will result in (1) an annual effect on the economy of at least $100 million or (2) a major increase in costs for individual industries or levels of government.

In connection with issuance of its general regulation, HEW considered the total cost of implementing the specific regulations of all Federal agencies and determined that no regulatory analysis was required for the general regulation. (See the discussion of this matter in the preface to the proposed specific regulation of HEW, 44 FR 55116 (Sept. 24, 1979).) The Department has determined that HEW's conclusion is applicable to the present proposal.

Certain costs for recipients—for example, the expense of defending lawsuits—do not depend upon provisions of the regulation, but result from specific provisions of the Act. Other costs, such as preparation of a self-evaluation or using the mediation process, pertain to requirements of the HEW general regulation. In any event, it does not appear that the economic effects of the present proposal will be "major" within the meaning of Executive Order 12044; and the Department does not plan to prepare a regulatory analysis for this proposed regulation. We invite comments on this matter, however.

The Department of Justice proposes to amend Part 42 of Title 28 of the Code of Federal Regulations by adding Subpart H as set forth below.

Dated: May 12, 1980.

Drew S. Days, III,

Assistant Attorney General, Civil Rights Division.

PART 42—NONDISCRIMINATION: EQUAL EMPLOYMENT OPPORTUNITY; POLICIES AND PROCEDURES

Subpart H—Nondiscrimination on the Basis of Age in Federally Assisted Programs—Implementation of the Age Discrimination Act of 1975.

Authority.—Section 304(a)(4) of the Age Discrimination Act of 1975, as amended, 42 U.S.C. 6103(a)(4); and the general regulation of the Department of Health, Education, and Welfare, 45 CFR Part 90, 44 FR 33768 (June 12, 1979).

General Provisions

§ 42.600 Purpose

(a) This subpart implements the Age Discrimination Act of 1975, as amended, 42 U.S.C. 6101–6107. Subject to certain exceptions, the Act prohibits discrimination on the basis of age in programs receiving Federal financial assistance.

(b) The Secretary of Health, Education, and Welfare has issued a general regulation (45 CFR Part 90) to guide other Federal agencies regarding implementation of the Act. This subpart is based upon the general regulation.

§ 42.601 Application.

(a) This subpart applies to each program that received or receives Federal financial assistance from the Department of Justice after July 1, 1979.

(b) The coverage or scope of this Act is like that of Title VI of the Civil Rights Act of 1964, 42 U.S.C. 2000d to d–6, and other similar statutes. For example, when a city's police department receives Federal financial assistance, the Act applies to operation of the entire department. The coverage of the Act is not limited to the particular aspect of the police department's operation for which the financial assistance is used.

(c) The Act pertains to such matters as the way in which recipients of Federal financial assistance provide benefits or services. The Act does not apply to employment practices, except in regard to certain programs assisted under the Comprehensive Employment and Training Act.

§ 42.602 Definitions.

As used in this subpart, the term:

(a) "Act" means the Age Discrimination Act of 1975, as amended, 42 U.S.C. 6101–6107.

(b) "Action" means any act, activity, policy, rule, standard, or method of administration; or the use of any policy, rule, standard, or method of administration.

(c) "Age distinction" means any action using age or an age-related term.

(d) "Age-related term" means a term that necessarily implies a particular age or range of ages (e.g., "youth," "junveile," "adult," "older persons," but not "student").

(e) "Department" means the Department of Justice.

(f) "Federal financial assistance" means any grant, entitlement, loan, cooperative agreement, contract (other than a procurement contract or a contract of insurance or guaranty), or any other arrangement by which the Department provides assistance in the form of:

(1) Funds;

(2) Services of Federal personnel, or

(3) Real or personal property or any interest in or use of such property, including:

(i) Transfers or leases of property for less than fair market value or for reduced consideration; and

(ii) Proceeds from a subsequent transfer or lease of property if the Federal share of its fair market value is not returned to the Federal Government.

(g) "FMCS" means the Federal Mediation and Conciliation Service.

(h) "OJARS" means the Office of Justice Assistance, Research, and Statistics. OJARS coordinates the work of the Law Enforcement Assistance Administration, the National Institute of Justice, and the Bureau of Justice Statistics.

(i) "Program or activity" means the operations of the agency, organizational unit of government or other entity receiving or substantially benefiting from Federal financial assistance; e.g., a police department or a department of corrections.

(j) "Recipient" means any State or political subdivision, any instrumentality of a State or political subdivision, any public or private agency, institution, organization, or other entity, or any person to which Federal financial assistance is extended, directly or through another recipient. "Recipient" includes any successor, assignee, or transferee, but does not include the ultimate beneficiary of the assistance.

(k) "Secretary" means the Secretary of Health, Education, and Welfare.

(l) "United States" means the fifty States, the District of Columbia, Puerto Rico, the Virgin Islands, American Samoa, Guam, Wake Island, the Trust Territory of the Pacific Islands, the Northern Marianas, and the territories and possessions of the United States.

Standards for Determining Age Discrimination

§ 42.610 General prohibition.

(a) Subject to the exceptions discussed in §§ 42.611–42.613, no person in the United States shall, on the basis of age, be excluded from participation in, be denied the benefits of, or be subjected to discrimination in any program to which this subpart applies. This prohibition applies to actions taken by a recipient, directly or through contractual or other arrangements, that have the purpose or effect of discriminating on the basis of age.

(b) This prohibition encompasses treatment of elderly persons, children and any other age group. Unless one of the exception applies, the recipient may use neither a minimum age limit nor a maximum age limit in connection with receipt of benefits or services or other participation in a program subject to this subpart.

§ 42.611 Exception—authorized by law.

(a) This subpart does not apply to an age distinction contained in a portion of a Federal or State statute or a local statute or ordinance adopted by an elected, general-purpose legislative body which portion (1) provides any benefits or assistance to persons on the basis of age, (2) establishes criteria for participation in age-related terms, or (3) describes intended beneficiaries or target groups in age-related terms.

(b) The exception set forth in § 42.611 (a) does not extend to regulations adopted, pursuant to a specific statutory provision or otherwise, by an administrative agency and does not extend to enactments of a special-purpose body (such as a school board). An age distinction contained in a regulation or in an enactment of a special-purpose body is prohibited by this subpart, unless another exception is applicable.

(c) The operation of § 42.611(a) may be illustrated by the following examples:

(1) Under a statutory or constitutional provision of a State, the qualifications for jury service include a minimum age limit. Such a limit is within the exception of § 42.611(a).

(2) A State statute concerning the jurisdiction of juvenile courts prescribes minimum and maximum age limits for persons subject to that jurisdiction. Such limits are within the exception of § 42.611(a). A different issue is presented, however, where the statute prescribes only a maximum age (e.g., 18) and the minimum applied in the state (e.g., 7) is based upon court decisions following the common law rule. In such a situation, the minimum is not within the exception of § 42.611(a), because it is not prescribed in a statute. The validity of such a minimum would depend upon the exception discussed in § 42.612.

(3) The Juvenile Justice and Delinquency Prevention Act of 1974, as amended, 42 U.S.C. 5635(a), prescribes the conditions for receipt of formula grants by the States. One condition is

that a State have a plan providing that juveniles shall not be confined in any institution in which they have regular contact with incarcerated adults. Action by a State to comply with that condition is within the exception of § 42.611(a).

§ 42.612 Exception—normal operation or statutory objective.

(a) A recipient may take an action that would otherwise be prohibited by § 42.610(a), if such action reasonably takes age into account as a factor necessary to the normal operation of or the achievement of any statutory objective of the program.

(b)(1) The nature of a program's "normal operation" is a question of fact, to be determined on the basis of such factors as the experience of the particular recipient and the experience of other similar recipients. This term refers to the operation of a program without significant changes that would impair its ability to meet its objectives.

(2) A "statutory objective" of a program is a purpose that is expressly stated in a Federal or State statute or a local statute or ordinance adopted by an elected, general-purpose body.

(c) The general regulation of the Secretary of Health, Education, and Welfare provides (45 CFR § 90.14) that this exception applies when the following test is met:

(1) Age is used as a measure or approximation of one or more other characteristics;

(2) The other characteristic must be measured or approximated in order to continue the normal operation of the program or to achieve any statutory objective of the program;

(3) The other characteristic can be reasonably measured or approximated by the use of age; and

(4) The other characteristic is impractical to measure directly on an individual basis.

(d) The question whether an age distinction comes within the exception of § 42.612(a) depends upon the particular facts—the nature and purpose of the program, the basis for and the nature and purpose of the age distinction, and the manner in which the age distinction is used. The following examples illustrate situations in which this exception might be available. These hypothetical situations are not intended, however, to provide definite answers regarding applicability of the exception.

(1) A State maintains several institutions in which juveniles found to be delinquent are placed. Pursuant to a State statute, a State agency has issued regulations eatablishing standards for admission to the various institutions. E.g., certain institutions are for persons aged 15 to 18; others are for persons aged 12 to 15. The question here is whether the age limits are necessary to the normal operation of the institutions. This would depend upon such factors as the nature of the institutions, the reasons for serparating the juveniles on the basis of age, and the gounds for selecting the particular age limits.

(2) A county jail has a rule regarding visits to inmates. A visitor who is under 18 must be accompanied by a person who is 18 or over. To show that such an administrative rule is within the exception for "normal operation," the recipient would have to establish that it is necessary in terms of such factors as maintaining order or security or protecting the visitors.

(3) A State prison has a separate facility that is limited to elderly (e.g., age 60 or over) inmates. To show that the special treatment of elderly inmates is necessary to "normal operation," the recipient would need to explain the basis for it, such factors as the special needs of older inmates.

(4) A private organization operates a project that involves counseling, academic work, job training and employment for juveniles who have commetted serious offenses. The project is limited to persons aged 14 to 17. The question in such a situation is whether the limits are necessary for the "normal operation" of the project or for achievement of an objective of a pertinent statute. Relevant factors include the purposes of the project, the nature of the job training, and the requisites for the employment related to the project.

(5) A police department's regulation concerning investigation of missing persons calls for special, additional steps when the individual who is missing is a young child or an elderly person. As is true in other situations that may involve the exception for "normal operation," the question turns upon the bases for the age distinctions. A practice of this type might be justified by showing the special needs of or risks to young children or elderly persons.

(6) A different kind of situation is presented when age is one of several factors that determine the manner in which a person is treated. E.g., in determining its recommendation to the court concerning release of an arrested person, a bail agency considers, as one factor, the peson's age; or, in performing its intake function, a police department or a juvenile agency considers the person's age. In such cases, persons are dealt with on an inividual basis. Still, because, age is considered, it may be a deciding factor in some cases. A recipient that follows such a practice must be able to bring it within the exception of § 42.612(a). This would depend upon the nature of the practice, the manner in which age is used, and the basis for considering age.

§ 42.613 Exception—reasonable factors other than age.

(a) A recipient may take an action, otherwise prohibited by § 42.610(a), that affects age groups differently, if such differentiation is based upon reasonable factors other than age.

(b) This exception does not apply to the use of an explicit age distinction, but to conduct that has the effect of differentiating among age groups. The general regulation of the Secretary provides (45 CFR § 90.15) that this exception applies when the factor (other than age) upon which the recipient's action is based bears a direct and substantial relationship to the normal operation of or achievement of a statutory objective of the program.

(c) The following examples illustrate application of this exception:

(1) A job-training project uses a physical-strength test in selecting participants. This test is failed more often by older persons than by younger persons. The job in question involves heavy lifting. Accordingly, the test comes within the exception of § 42.613(a), because physical strength bears a direct and substantial relationship to the purpose of the job training.

(2) A physical-strength test is used in regard to training for a job that does not require physical strength (e.g., clerical work). Such a test does not come within this exception, because physical strength does not have the necessary relation to the purpose of the training.

(3) A bail agency uses a point system to evaluate individuals. Age as such is not a factor, but certain of the factors that are used (e.g., holding a job; length of employment) affect age groups differently. The exception of § 42.613(a) would apply, so long as the factors bear the necessary relation to the function of the bail agency, that is, determining stability or ties to the community.

§ 42.614 Burden of proof regarding exceptions.

The general regulation of the Secretary provides (45 CFR § 90.16) that the burden of proving that an age distinction or other action falls within the exceptions described in § 42.612(a) and § 42.613(a) of this subpart is on the recipient. This allocation of the burden of proof applies in proceedings by the Department to enforce the Act.

Duties of Recipients

§ 42.620 General responsibility.

Regarding any program subject to this subpart, the recipient has primary responsibility to insure compliance with the Act and this subpart.

§ 42.621 Notice to subrecipients.

Any recipient that receives Federal financial assistance from the Department and extends such assistance to subrecipients shall give its subrecipients written notice of their obligations under this subpart.

§ 42.622 Self-evaluation.

(a) Any recipient (including any subrecipient) that has 15 or more full-time employees shall, on a one-time basis, prepare a written self-evaluation of its compliance with this subpart. A recipient shall complete its self-evaluation within 18 months of the effective date of this subpart or, in the case of a recipient that does not become subject to this subpart until after its effective date, within 18 months of becoming subject to this subpart.

(b) In its self-evaluation, a recipient shall, with respect to any program subject to this subpart, identify and justify any age distinction used by the recipient.

(c) When a self-evaluation indicates a violation of the Act or this subpart, the recipient shall take appropriate corrective action.

(d) There is no general requirement that such self-evaluations be sent to the Department. Each recipient shall, however, keep its self-evaluation for three years after its completion. During the three-year period, a recipient shall, upon request, make its self-evaluation available to the Department or to any person.

42.623 Compliance information.

(a) Upon request by the Department, a recipient shall make available to the Department information necessary to determine whether the recipient is complying with this subpart.

(b) Each recipient shall permit reasonable access by the Department to the recipient's facilities, books, records and other sources of information concerning the recipient's compliance with this subpart.

§ 42.624 Remedial and affirmative action.

(a) If the Department finds that, in violation of this subpart, a recipient has discriminated on the basis of age, the recipient shall take remedial action that the Department considers necessary to overcome the effects of the discrimination.

(b) Even in the absence of a finding of discrimination, a recipient, in administering a program, may take steps to overcome the effects of conditions that resulted in limited participation on the basis of age.

Compliance Procedures

§ 42.630 Compliance Reviews.

The Department may conduct pre-award or post-award compliance reviews of an applicant or a recipient to determine compliance with this subpart. When a compliance review indicates probable noncompliance, the Department shall inform the applicant or recipient and shall promptly begin enforcement as described in § 42.633.

§ 42.631 Complaints.

(a) *Receipt of complaints.* (1) Any aggrieved person, individually or as a member of a class, may file with the Department a written complaint alleging a violation of this subpart. A complaint may be filed by a representative of an aggrieved person. A complaint must be filed within 180 days of the date the complainant first knew of the alleged violation. However, this time limit may, for good cause shown, be extended by the Department.

(2) The Department shall promptly review each such complaint for sufficiency. A complaint will be deemed sufficient if it:

(i) Describes an action that may constitute a violation of this subpart, and

(ii) Contains information necessary for further processing (i.e., identifies the parties involved, states the date when the complainant first learned of the alleged violation, and is signed by the complainant).

(3) When a complaint is deemed sufficient, the Department shall refer it to the FMCS for mediation.

(4) When a complaint is deemed insufficient, the Department shall advise the complainant of the reasons for that determination. A complainant shall be freely permitted to add information necessary for further processing.

(b) *Representation of parties.* During each stage of the complaint process, the complainant and the recipient may be represented by an attorney or other representative.

(c) *Assistance from the Department.* Any complainant or recipient may request from the Department information or assistance regarding the complaint process.

(d) *Mediation.* (1) When a complaint is referred for mediation, the complainant and the recipient shall participate in the mediation process to the extent necessary either to reach an agreement or to enable the mediator to determine that no agreement can be reached. No determination that an agreement is not possible shall be made until the mediator has met at least once, jointly or separately, with each of the parties.

(2) If the complainant and the recipient reach an agreement, the mediator shall prepare a written agreement and have the complainant and recipient sign it. A copy of the statement shall be provided to the complainant, the recipient and the Department.

(3) If no agreement is reached within 60 days of the Department's receipt of a complaint or if, within that 60-day period, the mediator determines that no agreement can be reached, the mediator shall return the complaint to the Department.

(4) The mediator shall protect the confidentiality of information obtained during the mediation process. No mediator shall testify in any adjudicative proceeding, produce any document, or otherwise disclose any information obtained during the mediation process without prior approval of the Director of the FMCS.

(e) *Department investigations.* The Department shall promplty investigate any complaint that is unresolved after mediation or is reopened because of violation of a mediation agreement. An investigation should include a review of the pertinent actions or practices of the recipient, the circumstances under which the alleged discriminations occurred, and other relevant factors. During an investigation, the Department shall take appropriate steps to obtain informal resolution of the complaint.

(f) *Resolution of matters.* (1) Where, prior to any finding by the Department of probable noncompliance with this subpart, discussions between the Department and the parties result in settlement of a complaint, the Department shall prepare an agreement to be signed by the parties and an authorized official of the Department. A settlement shall not affect the operation of any other enforcement efforts of the Department, including compliance reviews or investigation of other complaints involving the recipient.

(2) If the Department determines that an investigation pursuant to § 42.631(e) indicates probable noncompliance with this subpart, the Department shall inform the recipient and shall promptly begin enforcement pursuant to § 42.633.

(3) If the Department determines that an investigation does not indicate probable noncompliance, the Department shall inform the recipient

and the complainant. The Department shall also inform the complainant of his or her right to bring a civil action as described in § 42.636.

§ 42.632 Prohibition against intimidation.

A recipient may not intimidate or retaliate against any person who attempts to assert a right secured by this subpart or who cooperates in any mediation, investigation, hearing, or other aspect of the Department's compliance procedure.

§ 42.633 Enforcement procedures.

(a) *Voluntary compliance.* When a compliance review or complaint investigation results in a finding of probable noncompliance with this subpart, the Department shall attempt to obtain voluntary compliance. An aggreement for voluntary compliance shall describe the corrective action to be taken and time limits for such action and shall be signed by the recipient and an authorized official of the Department.

(b) *Means of enforcement.*

(1) *General.* The Department may seek to enforce this subpart (i) by administrative proceedings that may lead to termination or refusal of Federal financial assistance to the particular program or (ii) by any other means authorized by law. Such other means include lawsuits by the Department to enjoin violations of this subpart. To the extent consistent with the Act, the Department, in enforcing this subpart, shall follow the procedures applicable to enforcement of Title VI of the Civil Rights Act of 1964.

(2) *Termination of Federal financial assistance.* With regard to envorcement of this subpart through the termination or refusal of Federal financial assistance, the Department shall follow the provisions of its Title VI regulation concerning notice, 28 CFR § 42.108(c); hearings, 28 CFR § 42.109; and decisions, 28 CFR § 42.110. However, with respect to programs receiving Federal financial assistance from a component of OJARS, the requirement of 28 CFR § 42.110(e) that a sanction be approved by the Attorney General shall not apply; that function may be performed by the Director of OJARS.

(3) *Other means of enforcement.* With regard to enforcement of this subpart through other means, the Department shall follow the procedures of 28 CFR § 42.108(d). In addition, at least 30 days before commencing a lawsuit or taking other saction pursuant to § 42.633(b)(1)(ii), the Department shall send an appropriate report to the committees of the House of Representatives and the Senate having legislative jurisdiction over the program involved.

(c) *Deferral.* When a proceeding for the termination or refusal of Federal financial assistance is initiated pursuant to § 42.633(b)(1)(i), the Department may defer granting new Federal financial assistance to the recipient.

(1) New Federal financial assistance includes any assistance for which, during the deferral period, the Department requires an application or approval, including renewal or continuation of existing activities or authorization of new activities. New Federal financial assistance does not include assistance approved prior to initiation of the administrative proceeding or increases in funding as a result of a change in the manner of computing formula awards.

(2) A deferral may not begin until the recipient has received a notice of opportunity for a hearing. A deferral may not continue for more than 60 days unless a hearing has begun within that time or the time for beginning the hearing has been extended by mutual consent of the recipient and the Department. A deferral may not continue for more than 30 days after the close of the hearing, unless the hearing results in a finding against the recipient.

§ 42.634 Alternative funding.

When assistance to a recipient is terminated or refused pursuant to § 42.633(b)(1)(i), the Department may disburse the withheld funds directly to an alternative recipient serving the same area (i.e., a public or non-profit private organization or agency, or State or political subdivision). Any such alternative recipient must demonstrate the ability to comply with the requirements of this subpart and to achieve the goals of the Federal statute authorizing the assistance.

§ 42.635 Judicial review.

A final decision of the Department in an administrative proceeding pursuant to § 42.633(b)(1)(i) is subject to judicial review as provided in § 306 of the Act, 42 U.S.C. 6105.

§ 42.636 Private lawsuits.

(a) Upon exhausting administrative remedies under the Act, a complainant may file a civil action to enjoin a violation of the Act with regard to a program. Administrative remedies are exhausted if:

(1) 180 days have elapsed since the complainant filed the complaint and the Department has made no finding with regard to the complaint; or

(2) The Department issues a finding, pursuant to § 42.631(f)(3), in favor of the recipient.

(b) Whenever administrative remedies are exhausted in accord with § 42.636(a), the Department shall promptly inform the complainant that:

(1) The complainant may bring a civil action in a United States district court for a district in which the recipient is located or transacts business;

(2) A complainant who prevails in such an action has the right to be awarded reasonable attorney's fees, if the complainant demands such an award in the complaint initiating the lawsuit;

(3) Before commencing the action, the complainant must give 30 days' notice by registered mail to the Secretary, the Attorney General, and the recipient;

(4) The notice must state the nature of the alleged violation, the relief requested, the court in which the action will be brought, and whether attorney's fees will be demanded; and

(5) The complainant may not bring an action if the same alleged violation by the recipient is the subject of a pending action in any court of the United States.

[FR Doc. 80-15329 Filed 5-16-80; 8:45 am]

BILLING CODE 4410-01-M

DEPARTMENT OF THE INTERIOR

Geological Survey

30 CFR Part 211

Coal Mining Operations

AGENCY: Geological Survey, Department of the Interior.

ACTION: Proposed rule.

SUMMARY: The rules in this Chapter delineate the functions and responsibilities of the Geological Survey (GS) for coal mining operations on Federal lands and govern coal mining operations for production, development, mineral resource recovery and protection, royalties, diligent development, and maximum economic recovery (MER) on Federal lands under the Mineral Leasing Act of 1920, as amended (MLA). The rules also recodify the regulations in 30 CFR Part 211 relating to the initial Federal Lands Program under the Surface Mining Control and Reclamation Act of 1977 (SMCRA).

DATE: Interested persons may submit written comments on the proposed rules on or before July 3, 1980.

ADDRESS: Comments should be addressed to Chief, Conservation Division, (M.S. 650) U.S. Geological

Survey, U.S. Department of the Interior, Reston, Virginia 22092. Comments will be available for public review at the above address from 7:45 to 4:15 p.m. on regular working days.

FOR FURTHER INFORMATION CONTACT: Mr. Andrew V. Bailey, Chief, Branch of Mining Operations, Conservation Division, U.S. Geological Survey, Reston, Virginia 22092, (703) 860–7506; FTS—928–7506.

SUPPLEMENTARY INFORMATION: On May 17, 1976, the Department adopted regulations (41 FR 20252) which govern operations for discovery, testing, development, mining, preparation, reclamation, and handling of coal under leases, licenses, and permits issued for federally owned coal. On August 22, 1978, the Department modified those regulations in the **Federal Register** (43 FR 37181) to implement the initial regulatory program of the SMCRA on Federal lands. On March 13, 1979, the Office of Surface Mining Reclamation and Enforcement (OSM) published its final permanent regulatory program regulations (44 FR 14902 to 15463) which include provisions for a permanent Federal Lands Program, 30 CFR Chapter VII, Subchapter D, which fully implements SMCRA on Federal lands. On December 31, 1979, these regulations were amended to postpone the implementation schedule for the permanent phase of the Federal Lands Program.

These proposed revisions of 30 CFR Part 211 (1) separate environmental and reclamation requirements and responsibilities of SMCRA for mining on Federal lands in 30 CFR Subchapter D from the requirements and responsibilities of the GS under the MLA, as amended, and proposed 30 CFR 211.1 through 211.80; (2) retain and clarify the mining responsibilities and requirements of the MLA, and the 30 CFR Part 211 regulations of May 17, 1976, for production, development, mineral resource recovery and protection, royalties, and exploration outside of an approved OSM permit area; (3) revise and clarify the existing regulations and requirements of the Federal Coal Leasing Amendments Act of 1976 (FCLAA) for maximum economic recovery (MER), diligent development, continued operations, and Logical Mining Units (LMU); and (4) recodify the regulations in 30 CFR Part 211 relating to the initial Federal Lands Program under SMCRA.

These proposed rules contain the responsibilities and requirements of the GS under the MLA, as amended, in §§ 211.2 through 211.80. The initial Federal Lands Program of OSM is recodified in §§ 211.81 through 211.99.

Relation to Federal Lands Program

On August 22, 1978, final regulations were published in the **Federal Register** (43 FR 37181) that revised 30 CFR Part 211 to comply with the requirements of Section 523 of SMCRA. The purpose of these revisions was to adopt for Federal lands the existing portions of the initial regulatory program issued by OSM in 30 CFR Part 700 et seq. As explained in the **Federal Register** (43 FR 37181), these revisions represented the initial phase of the Federal Lands Program which is required by section 523 of SMCRA and are intended to remain in effect until they are completely superseded by implementation of the permanent Federal Lands Program in a State.

On March 13, 1979, the Department published final rules implementing a permanent Federal Lands Program in 30 CFR Parts 740 through 745 (44 FR 15332 to 15341) as a part of the overall permanent regulatory program (44 FR 15312 to 15463) of OSM. These rules became effective on April 12, 1979. As originally adopted, the regulations required that after April 12, 1979, all persons submitting a mining plan for new mine or for the addition of new acreage to be mined at an existing operation shall obtain a permit pursuant to the requirements of 30 CFR Chapter VII, Subchapter D, prior to the commencement of surface coal mining and reclamation operations. Section 741.11 of the rules of March 13, 1979, sets forth a schedule for compliance with the permanent program on Federal lands which required that on or after October 12, 1979, existing or new operations will be required to comply with the performance standards in 30 CFR Subchapter K, and that, no later than 2 months after the effective date of a State program or a Federal program for a State, all operators could be required to file a complete permit application. Eight months after the effective date of a State program or Federal program, operators must have obtained a new permit to conduct mining and reclamation operations on Federal lands, except in certain circumstances as specified in 30 CFR 741.11(d).

In response to a petition from the State of Montana, the Department has recently revised the schedule contained in 30 CFR 470.11, as published on March 13, 1979. The amended schedule, published on December 31, 1979 (44 FR 77440–77447), postpones the implementation of the permanent Federal Lands Program until approval of a State program or implementation of a Federal program for a State. The new schedule applies to all surface coal mining operations on Federal lands and to all States. Once the Federal Lands Program is fully implemented in all of the States under the schedule in 30 CFR 741.11, the rules in §§ 211.81 through 211.99 relating to the initial regulatory program will become obsolete and will be revoked.

The Department proposes to recodify the applicable provisions of the initial regulatory program on Federal lands as §§ 211.81 through 211.99. Revisions are restricted to rearrangement, deletion, clarification, and recodification of the text, except in those instances explained below.

It is proposed to amend the regulations in six places to delete the phrase "permit, lease or license" or the phrase "leased, permitted or licensed lands" wherever they occur. The specific sections involved are:

Existing Section in Part 211	*New Section in 30 CFR Part 211.81–99*
1. Section 211.1(a)	Section 211.81(a)
2. Section 211.3(a)(3)(ii)	Section 211.83(a)(3)(ii)
3. & 4. Section 211.3(a)(3)(iv)	Section 211.83(a)(iv)
5. & 6. Section 211.10(a)(2)(i)	Section 211.886 (a) and (b)

The reason for these changes is that the terms "lease, license or permit" and "leased, licensed or permitted lands" are associated with the disposition of federally owned coal under the Mineral Leasing Act of 1920, as amended, and the Mineral Leasing Act for Acquired Lands of 1947. The terms do not reflect the fact that under Section 701(4) of the Surface Mining Control and Reclamation Act, private surface overlying federal owned coal and privately owned coal overlain by federally owned surface fall within the scope of the definition of "Federal Lands." This concept was discussed in the preamble to the final permanent program regulations of the Office of Surface Mining at 44 FR 14911 (March 13, 1979).[1] That explanation is

[1] The full text of that discussion is as follows: *Federal lands.* An effort has been made to make the Federal lands definition clearer and more concise than that in section 701(4) of the Act without changing its substance.

1. One commenter suggested deleting the phrase "including mineral interests" from the definition of "Federal lands." No rationale was given. OSM has rejected this comment since in conflicts with the statutory definition in section 701(4) of the Act, which specifically includes "mineral interest" under the definition of "Federal lands."

2. Other commenters recommended a change in the definition to exempt private lands overlying federally owned coal rights. Exemption of privately owned surface was suggested in order to clarify Congressional intent that the private surface be controlled by the owner. Congress considered and provided protection for surface owners in section 714 of the Act. An exemption for private surface would be a departure from the statutory definition. If private surface overlying Federal coal were

Footnotes continued on next page

adopted herein as a part of the explanation of these proposed changes. The Department is requesting interested parties to comment on the six amendments listed above.

However, public comments on the requirements of the initial regulatory program repeated in §§ 211.81 through 211.99 were fully considered at the time the initial program was proposed in the **Federal Register** (42 FR 60890) on November 29, 1977. Consequently, except for the sections listed above, further comments on the substantive provisions of the rules in Sections 211.81 through 211.99 are not being requested. These sections of Part 211 will become effective upon final publication of the rules in §§ 211.2 through 211.80.

Because of the legal responsibilities of OSM under the Federal Lands Program, the Department has assigned certain responsibilities regarding coal mining operations on Federal lands between OSM and GS. These proposed rules reflect that division of responsibilities under the MLA and SMCRA. The Department also determined that GS and OSM should coordinate certain responsibilities for coal mining operations on Federal lands. The proposed rules in this part, when read in conjunction with 30 CFR Subchapter D, reflect the coordination required by OSM and GS for approval of coal mining plans, inspections, and enforcement of performance standards on Federal lands under the initial and permanent OSM Federal Lands Program and the MLA.

Responsibilities Under the Mineral Leasing Act

The MLA has been amended numerous times, but mostly recently by Pub. L. 94–554 and Pub. L. 94–377, know otherwise as the FCLAA. For the purposes of this preamble, we refer to the MLA and its amendments as the MLA.

The GS is responsible for management of the coal resource and mining operations pursuant to the requirements of the MLA. The GS continues to exercise the Secretary's authority for managing mining operations for the MLA requirements concerning production, development, resource recovery and protection, MER, diligent development, continued operations, and royalties. These proposed rules delineate those responsibilities and requirements and clarify certain sections of the existing regulations.

All the basic requirements in these proposed rules for diligent development and MER are found in the existing regulations of 43 CFR Part 3400 of July 19, 1979, or 30 CFR Part 211 and the MLA. These proposed rules, in accordance with the MLA, require that no mining operating plan (mining plan) shall be approved which is not found to achieve the MER of the coal within the tract, and that consolidation of coal leases into an LMU may only be approved upon determing that MER of the coal deposit or deposits is achieved.

These proposed rules attempt to conform to the final rules of the Bureau of Land Management, 43 CFR Group 3400—on coal management, that were published in the **Federal Register** on July 19, 1979 (44 FR 42584 et seq.). Any differences will be resolved upon final publication of these rules. The public is invited to comment on any differences between the respective rules. These proposed rules attempt to conform to the policy determinations of the Secretary of the Interior made on June 1 and 2, 1979, especially for the determination of MER. The Department of the Interior (DOI) prepared a Final Environmental Statement on the Federal Coal Management Program in April 1979.

Transfer of Certain Responsibilities to Department of Energy

The Department of Energy Organization Act transferred from the DOI to the Department of Energy (DOE) the responsibilities for establishing regulations for diligence requirements on Federal coal leases. When the DOE issues regulations for diligence, it may be necessary to make further revisions in this part. These proposed rules indicate the responsibilities of the GS for implementation of DOE regulations applicable to coal leasing.

Exploration on Federal Lands

The GS will continue to administer all coal exploration activities on Federal lands outside of any permit area for a surface coal mining operation approved by the Regulatory Authority Under 30 CFR Chapter VII, Subchapter D. OSM will administer all coal exploration activities on Federal lands within an approved permit area for surface coal mining and reclamation operations. All applications for exploration on Federal lands outside of an approved permit area will be submitted to the Mining Supervisor who shall make any necessary consultations with OSM. No exploration may commence on Federal lands outside of an approved permit area without the approval of an exploration plan under the proposed rules of this Part.

Editorial Changes

The proposed rules repeated all unchanged sections of the regulations promulgated on and since May 17, 1976. Minor editorial changes were made throughout the proposed rules in order to clarify the existing regulations. The editorial changes are not intended to alter any substantial content of the existing regulations.

Pursuant to the Office of the Secretary's rules of 43 CFR Part 14, functions, responsibilities, and requirements for coal mining operations on Federal lands are referred to as "rules" rather than "regulations." References to the term "regulations" in the preamble apply to the historical use of that term in the previous revisions of 30 CFR Part 211.

Revised Sections 211.1 Through 211.80

The existing 30 CFR Part 211 regulations are proposed to be revised for GS requirements and responsibilities by making the following changes to §§ 211.1 through 211.80:

1. All of the analogous environmental and reclamation provisions of the 211's for coal mining operations on Federal lands, which are now addressed in the SMCRA and 30 CFR Subchapter D, would be deleted. These proposed deletions include most of the environmental performance standards in § 211.40, environmental requirements for mine plans in § 211.10, environmental definitions in § 211.2, public participation for environmental matters in § 211.5, and all other such references throughout this Part.

2. Several references to 30 CFR Chapter VII are made in the text of this part. This is necessary because certain sections of this part are incorporated in the procedures required by the permanent Federal Lands Program of the SMCRA. A § 211.10 plan (referred to synonymously as a "mining and operations plan" or "operation and reclamation plan") is required to be submitted by an operator for responsibilities of the operator under the MLA as a part of a mining plan. The term "mining plan" is defined at 30 CFR 740.5. Mining plans and modifications thereof would be submitted to the

---

Footnotes continued from last page
exempted from the Federal lands definition then, arguably, the lands would fall under a State program and the State would serve as the regulatory authority over the extraction of Federal coal. This would be an unauthorized result, particularly, when under section 714 of the Act the Federal Government would be leasing the coal under the Mineral Lands Leasing Act of 1920, as amended.

3. Another commenter suggested that the Section be revised to read "any land, including surface land or mineral interest," in order to make it clear that Federal surface overlying private coal is included in the definition of Federal lands. "Federal lands" are defined as "any lands * * * owned by the United States without regard to how the United States acquired ownership of the lands." Since OSM's interpretation of the definition is consistent with the comment, OSM believes it is unnecessary to adopt the suggested language.

Regional Director pursuant to 30 CFR Part 741. Section 211.1 includes paragraphs which state the Scope and Purpose of the initial Federal Lands Program of OSM which is fully recodified in §§ 211.81 through 211.99.

These proposed rules in §§ 211.2 through 211.80 attempt to conform completely to the final 30 CFR Chapter VII rules of OSM which became effective April 12, 1979. Any differences will be resolved upon final publication of these rules. The public is invited to comment on any differences or inconsistencies between these proposed rules and OSM's final rules.

3. Section 211.6 would be revised to clarify the responsibility of the GS for confidentiality of data under MLA, and to maintain a consistent approach to handling confidential data in accordance with the OSM rules.

4. Sections 211.11, 211.13, 211.20, 211.21, 211.30, 211.31, 211.32, 211.33, 211.35, 211.36, and 211.66 are proposed to be revised by eliminating the section numbers and incorporating the applicable text into other sections of Part 211. Sections 211.11, 211.30, 211.31, 211.32, 211.33, 211.35, and 211.36 would be incorporated into § 211.40, Performance Standards. Section 211.13 would be incorporated into proposed § 211.12 and § 211.20 would be incorporated into proposed § 211.62.

5. Sections 211.10, 211.12, 211.40, 211.63, 211.64, and 211.65 would be retained and revised to clarify the GS responsibilities under the MLA. Exploration plan requirements would be revised slightly to be consistent with terminology required under SMCRA. The purpose of the mining and operations plan in § 211.10 is to indicate how the operator proposes to comply with the MLA. These rules would require the operator to include a mining and operations plan as a separate part of the mine plan submitted to the Regulatory Authority under the permanent Federal Lands Program of SMCRA. The requirements in § 211.10 are not intended to duplicate information required under SMCRA. The public is invited to comment on the relationship of the mining and operations plan requirements to permit application requirements of OSM on Federal lands under 30 CFR 741.13.

Section 211.10 also proposes to require submission of mining plans for all private and Federal lands consolidated into an LMU prior to any mining on that LMU. Section 211.10 also proposes that approval of an LMU composed of consolidated lands would not relieve the operator of the requirements of the FCLAA. A mining plan would be required for an LMU composed of consolidated lands prior to taking any mining action on lands within the LMU and not later than 3 years from the date of the earliest Federal lease issued or readjusted after August 4, 1976, which lacks a mining plan.

Section 211.40 proposes to include performance standards for coal exploration and mining operations on Federal lands under MLA. These standards include MER, diligent development, and requirements for protection and recovery of the coal resource. Section 211.40 also proposes to include a standard for mining coal up to the lease boundary line. One purpose of this standard is to allow the Mining Supervisor to encourage the lessee to enter into backstripping agreements with adjacent leases to mine up to the boundary line, in the interest of conservation of natural resources; provided that all such agreements would be in compliance with existing State and Federal laws.

Section 211.40 also proposes to require that applications for extensions of the deadline for meeting diligent development in accordance with 43 CFR 3475.4 be submitted to the Mining Supervisor for review and recommendation of approval or denial to the Secretary.

6. Sections 211.62, 211.63, and 211.64 would be revised to clarify procedures and correct oversights for computation of royalty payments due on all coal mined, recovered from coal waste, and recovered by in situ methods. These rules propose to change the royalty payment requirement of § 211.63 from a quarterly submission to a monthly submission. These rules also propose to delegate to the GS the Secretary's authority under the MLA to act on applications for reduction of royalty and to establish a procedure for acting on such applications.

7. The existing responsibilities and requirements in §§ 211.70, 211.71, and 211.72 for inspections and enforcement under the MLA would be retained. The GS solicits comments on whether the Department should consider revising these sections to utilize the same procedures and administrative actions required by OSM for enforcement actions on Federal lands under the SMCRA. Section 211.72 is proposed to be revised to reflect GS responsibilities relating to enforcement of DOE regulations applicable to coal leasing under the Department of Energy Organization Act.

8. Section 211.80, LMU's, would be added. Regulations which define LMU's are found in 43 CFR Part 3400. Section 211.80 clarifies the existing regulations as to the GS's responsibilities for LMU's, specifies criteria for establishing LMU's, and indicates the operator's requirements and responsibilities.

Revised Sections 211.81 through 211.99

It is proposed that the provisions in 30 CFR Part 211, as amended on August 22, 1978, which relate to the initial Federal Lands Program under SMCRA be recodified in Title 30 CFR §§ 211.81 through 211.99. It is intended that the substantive requirements of the August 22, 1978, amendments remain unchanged except to add clarifying language where necessary. The proposed changes are as follows:

1. Section 211.3(a)(1) [new § 211.83(a)(1)] has been modified by deleting paragraphs (a)(1)(i) through (a)(1)(x) of § 211.3. These requirements would be incorporated into proposed rules 30 CFR 211.1 through 211.80. The last sentence of new § 211.83(a)(1) is modified to be consistent with proposed 30 CFR 211.1 through 211.80.

2. Section 211.10(a)(1)(i) is redesignated § 211.86(a) and is revised to clarify the division of functional responsibilities between GS and OSM as they relate to exploration operations. In accordance with the Under Secretary's decision of July 5, 1978, and the Memorandum of Understanding entered into on October 24, 1979, GS will retain responsibility for exploration operations on leased lands outside a permit area. OSM will have responsibility for exploration operations in the permit area or that area of land on which mining and reclamation operations are occurring or are expected to occur prior to the time a permit is approved pursuant to 30 CFR Part 741.

3. Sections 211.10(f) and (g) are deleted because the period covered by these provisions has expired.

4. A new § 211.81(c) would be added to clarify the period of applicability of the requirements of revised §§ 211.81 through 211.99.

5. Section 211.70 [new § 211.97] is retitled, Inspections, Enforcement, and Civil Penalties. This section would incorporate all of the provisions of §§ 211.70, 211.72, and 211.78.

6. Several provisions in the existing regulations relating to State/Federal Cooperative Agreements are to be deleted or modified as follows:

a. Section 211.10(e) is proposed to be recodified § 211.86(g), and the reference to § 211.75(c) is redesignated § 211.99(c). Additionally, it is proposed that the references to 30 CFR 211.10(c) in paragraphs (1) thorugh (6) be redesignated 30 CFR 211.86(d).

b. Section 211.75 is proposed to be renumbered § 211.99.

c. Sections 211.76 and 211.77 are proposed to be deleted and comparable provisions, if adopted, will be codified in 30 CFR Subchapter D.

Other Information

The DOI has determined that this document is not a significant rule and does not require a regulatory analysis under Executive Order 12044 and 43 CFR Part 14. Publication of this rulemaking has been determined by the Department not to be a major Federal action significantly affecting the quality of the human environment, and no detailed statement pursuant to Section 102(2)(C) of the National Environmental Policy Act of 1969 (42 U.S.C. Section 4332(2)(C) is required.

The proposed rules in §§ 211.1 through 211.80 contain no new major revisions that are not addressed in existing rules or the MLA. There are no new major recordkeeping or reporting requirements.

These proposed rules were drafted by a work group comprised of GS Mining Supervisors and staffs of the Regional Conservation Manager, Denver, and the Chief, Conservation Division. Preparation of the rules is under the responsibility of Andrew V. Bailey, Chief, Branch of Mining Operations, Conservation Division, U.S. Geological Survey, Reston, Virginia 22092.

Primary Authors

The primary authors of these proposed rules at the time of drafting were: Andrew Bailey, Chief, Branch of Mining Operations, and Thomas Leshendok, Geologist, Branch of Mining Operations, Conservation Division, U.S. Geological Survey, Reston, Virginia 22092, phone (703) 860–7506; Earl Cox, Mining Engineer, Office of the Conservation Manager, Conservation Division, U.S. Geological Survey, Central Region, Denver Federal Center, Lakewood, Colorado 80225; Paul Storrs, Area Mining Supervisor, Central Rocky Mountain Area, Conservation Division, U.S. Geological Survey, Denver, Colorado 80225; Albert Czarnowsky, Area Mining Supervisor, Southern Rocky Mountain Area, Conservation Division, U.S. Geological Survey, Albuquerque, New Mexico 87102; Jackson Moffitt, Area Mining Supervisor, Western Rocky Mountain Area, Conservation Division, U.S. Geological Survey, Salt Lake City, Utah 84138, as assisted by Chedville, L. Martin, Staff Attorney, Division of Surface Mining, Office of the Solicitor; John Carlson, Office of Surface Mining; and Ann Vance, Staff Attorney, Division of Energy and Resources, Office of the Solicitor.

It is proposed to revise Part 211, Chapter II, Title 30 of the Code of Federal Regulations as set forth below.

Dated: May 13, 1980.

Joan M. Davenport,

Assistant Secretary—Energy and Minerals.

Authority.—30 U.S.C. 181 et seq.; 30 U.S.C. 351–395; and 38 Stat. 741.

PART 211—COAL MINING OPERATING RULES

§ 211.1 Scope and purpose.

(a) *Scope.* (1) The regulations in §§ 211.1 through 211.80 of this part shall govern operations for the exploration, development, mining, preparation, and handling of coal under leases, exploration licenses, and licenses issued for federally owned coal, regardless of surface ownership, pursuant to the Mineral Leasing Act of 1920, as amended (MLA), the regulations in 43 CFR Group 3400, and the Alaska Coal Leasing Act of October 20, 1914, as amended (38 Stat. 741; 48 U.S.C. 432–445). Except as may otherwise be provided in 25 CFR Chapter I, these regulations do not apply to operations for the testing, development, mining, preparation, and handling of coal in Indian lands under leases and permits issued under the regulations in 25 CFR Parts 171, 172, 174, and 177.

(2) The regulations in §§ 211.81 through 211.99 constitute the initial regulatory program for Federal lands required by section 502 and section 523 of the Surface Mining Control and Reclamation Act of 1977 (SMCRA) (30 U.S.C. 1252 and 1273). These regulations apply to surface coal mining and reclamation operations on Federal lands, including but not limited to the discovery, testing, development, mining, preparation, and handling of coal. Except as may otherwise be provided in 25 CFR Chapter I and this subsection, these regulations do not apply to such operations on tribal or allotted Indian lands under leases and permits issued subject to 25 CFR Part 177. A mining plan for an operation to be conducted on both Federal and Indian lands shall be subject to concurrent review pursuant to the requirements of this part and 25 CFR Part 177.

(b) *Purpose.* (1) The purposes of the rules in §§ 211.2 through 211.80 of this part are to assure orderly and efficient development, mining, preparation, and handling operations; to assure production practices that prevent avoidable waste or loss of coal or other mineral resources; to avoid damage to coal-bearing or other mineral-bearing formations; to encourage maximum economic recovery (MER) and use of coal resources; to assure that operations meet requirements of diligent development and continuous operations; to protect the public health and safety; to ensure effective and reasonable regulation of surface and underground coal mining operations in accordance with the requirements of §§ 211.2 through 211.80 of this part; to require a proper record and accounting of all coal

produced; and to assure efficient and environmentally sound exploration operations outside an approved Office of Surface Mining Reclamation and Enforcement (OSM) permit area for surface mining and reclamation operations.

(2) The purposes of the rules in §§ 211.81 through 211.99 of this part are to ensure the protection of public health and safety and of environmental resources during and after surface coal mining and reclamation operations on Federal lands, and to ensure the completion of reclamation capable of restoring the land after mining to the same or higher uses which it would have supported prior to mining.

(c) *Exploration Licenses.* The rules govern operations for exploration on unleased Federal lands issued in accordance with regulations in 43 CFR Part 3410, Exploration Licenses.

(d) *Office of Surface Mining.* The responsibility for enforcement of the SMCRA (91 Stat. 445, 30 U.S.C. 1201 et seq.) and the environmental and reclamation rules for surface coal mining operations contained in this Chapter, including §§ 211.81 through 211.99, is vested in the OSM, Department of the Interior (DOI).

(e) *Worker Health and Safety.* The responsibility for enforcement of the Federal Coal Mine Health and Safety Act of 1969, as amended, (83 Stat. 742; 30 U.S.C. 801) and the coal mine health and safety rules contained in Chapter I of this title is vested in the Mine Safety and Health Administration (MSHA), Department of Labor.

(f) *Effective Date.* These rules are effective upon publication as final rulemaking, except that a plan under 30 CFR 211.10(c) is required pursuant to 30 CFR Part 741.

§ 211.2 Definitions.

(a) As used in §§ 211.2 through 211.80 of this part, the following terms shall have the following meanings:

Advance royalty means an advance payment authorized in lieu of continued operations.

Coal reserve base means the tons of coal in place contained in beds of (1) metallurgical or metallurgical-blend coal 12 inches or more; anthracite, semianthracite, bituminous, and subbituminous coal 28 inches or more thick; and lignite 60 inches or more thick to a depth of 500 feet below the lowest surface elevation; (2) metallurgical and metallurgical-blend coal 24 inches or more thick, anthracite, semianthracite, bituminous and subbituminous coal 48 inches or more thick; and lignite 84 or more inches thick occurring from 50 to 3,000 feet; and (3) any thinner bed of metallurgical, anthracite, semianthracite, bituminous, and subbituminous coal and lignite at any horizon above 3,000 feet which is presently being mined or for which there is evidence that it could be commercially mined at this time. Coal reserve base includes measured, indicated, and inferred categories as defined in General Mining Order No. 1.

Conservation Manager means a Conservation Manager, Conservation Division, Geological Survey (GS).

Daylighting is a term used to define the surface mining procedure for exposing an underground mined area to remove remaining coal.

Development means preparing a mine for production by drilling, excavating, sinking shafts, slopes, or driving drifts.

Director means the Director of the U.S. Geological Survey, DOI.

Division Chief means the Chief of the Conservation Division, GS.

Exploration license means a license issued by the authorized officer under 43 CFR Part 3410 to permit the licensee to explore for coal on unleased Federal lands.

Exploration plan means a detailed plan to identify the depth, thichness, extent, and quality of coal resources, and shows the location and type of exploration work to be conducted, environmental protection procedures, present and proposed roads, and reclamation and abandonment procedures to be followed upon completion of operations.

General Mining Order means a formal numbered order issued by the Mining Supervisor, with prior approval of the Division Chief, and published in the **Federal Register** after opportunity for public comment. The order implements rules in §§ 211.2 through 211.80 of this part.

Leased Lands, Leased Premises, or Leased Tract means lands embraced within a Federal coal lease and subject to the rules in this part.

Lessee means any person or persons, partnership, association, corporation, or municipality to whom a Federal coal lease is issued, or an assignee of such lease under an approved assignment.

License means a license to mine coal pursuant to the provisions of 43 CFR Part 3340.

Licensee means the holder of an exploration license or a license to mine.

Maximum economic recovery (MER) means, after safety factors are taken into account, the extraction of all portions of the coal deposit within a Federal lease that have a private incremental cost of recovery (including reclamation costs and opportunity costs) less than or equal to the market value of the coal.

Method of operation means the methods and manner by which activities are performed by the operator, as described in an exploration or mining plan.

Mine means an underground or surface excavation and the surface or underground support facilities that contribute directly or indirectly to mining, production, preparation, and handling of coal.

Minable reserve base means the tons of coal in place contained only in the area and thickness which is commerically minable with no deductions for coal to be left in pillars, fenders, property barriers, and other areas where mining is not permissible, such as (1) coal under land determined to be prime farmland, (2) coal under certain alluvial valley floors, (3) land classified as unsuitable for coal mining under OSM regulations, (4) land designated as containing historic, cultural, or archaeological sites protected under provisions of 36 CFR Part 800, (5) lands in the proximity of or containing the habitat of certain endangered species, and (6) lands with zoning restrictions.

Mining and operations plan means a detailed plan submitted under 30 CFR Part 211 as part of the mining plan showing that the proposed operation meets the requirements of the MLA for development, production, resource recovery and protection, diligence, and MER requirements pursuant to §§ 211.2 through 211.80 of this part.

Mining Supervisor means the Area Mining Supervisor, Conservation Division, GS, or District Mining Supervisor or other subordinates acting under his direction.

Notice of availability means formal notification by the Mining Supervisor to appropriate Federal, State, and local government agencies; to the surface and mineral owners; and to the public through posting in the appropriate county clerk's office of the availability for inspection of the proposed establishment of a Logical Mining Unit (LMU). The notice will adequately define the proposed action, will establish a specific time limit for public review and comments, and will provide for a public hearing at the request of anyone adversely affected by the proposed action.

Operator means lessee, licensee, or one conducting operations on a lease or exploration license under the authority of a lessee or licensee.

Preparation means the physical or chemical treatment to prepare coal for market or to remove noncoal waste and

other impurities in order to enhance the quality and therefore the value of the coal. Treatment includes crushing, sizing, drying, cleaning, mixing, or other processing.

Permanent abandonment for exploration operations means the completion of all activities conducted under an approved exploration plan, including plugging of all drill holes and reclamation of all disturbed surfaces.

Permanent abandonment for mining means the completion of all development, production, and mineral resource recovery and protection requirements conducted under an approved mining and operations plan.

Production means recovering coal or commercial byproducts from a mine using surface, underground, auger methods, or in situ gasification.

Recoverable reserves means the tons of coal that can be commercially mined under existing technology and economics. It does not include coal that will be left in pillars, fenders, property barriers, or other areas where mining is not permissible such as (1) coal under land determined to be prime farmland, (2) coal under certain alluvial valley floors, (3) land classified as unsuitable for coal mining under OSM regulations, (4) land designated as containing historic, cultural, or archaeological sites protected under provisions of 36 CFR Part 800, (5) lands in the proximity of or containing the habitat of certain endangered species, and (6) lands with zone restrictions. In these rules, the terms "reserves" and "recoverable reserves" are used interchangeably. Recoverable reserves include measured, indicated, and inferred categories as defined in General Mining Order No. 1.

Resource recovery and protection includes practices to efficiently recover the coal resources subject to these rules: to avoid waste or loss of coal or other mineral resources; to prevent damage or degradation to coal-bearing or other mineral-bearing formations; to encourage MER of the coal; and to ensure that all mineral resources are protected upon abandonment.

Secretary means the Secretary of the Interior.

Subsidence means a lowering of surface elevations over an underground mine caused by loss of support and subsequent caving of strata lying above the mine.

(b) The following shall have the meanings indicated in 43 CFR 3400.0–5:

Authorized officer
Continued operations
Commercial quantities
Diligent development
Exploration
Logical mining unit (LMU)
Maximum economic recovery (MER)
Mining plan

(c) The following definitions shall have the meanings indicated in 30 CFR 700.5 and 701.5:

Alluvial valley floors
Aquifer
Federal lands
Federal Lands Program
Groundwater
Office
Overburden
Permit
Permit area
Regional Director
Regulatory authority
Roads
Spoil
Surface coal mining and reclamation operations

§ 211.3 Responsibilities.

(a) The GS has the general responsibility to administer the MLA with respect to coal mining, production, and resource recovery operations on Federal leases and licenses and to supervise coal exploration opreations outside of an approved Federal permit area for surface coal mining and reclamation operations.

(b) Subject to the supervisory authority of the Secretary, the regulations in § 211.2 through 211.80 of this part shall be administered by the Director, through the Division Chief, the Conservation Manager, and the Mining Supervisor.

(c) The Mining Supervisor is empowered to oversee exploration, development, production, resource recovery and protection, diligent development, preparation, handling, and mineral abandonment operations subject to the provisions of this Part and, shall be responsible for:

(1) *Exploration plans.* Approve, disapprove, approve upon condition, or require modification of exploration plans for activities outside of an approved OSM permit area.

(2) *Mining plans.* Review mining plans or modifications thereof and give written concurrence on the development, production, resource recovery and protection, diligent development, continued operations, and royalty requirements of mining and operations plans prior to approval by the Secretary.

(3) *LMU applications.* Approve or disapprove LMU applications or modifications thereof; direct the establishment of an LMU in the interest of conservation; conduct public hearings as appropriate; recommend amendment to lease terms when determined necessary to assure consistency with LMU agreements; monitor and assure compliance with LMU requirements and regulations; and require reports and information for the establishment of the LMU.

(4) *Inspection of operations.* Examine as frequently as necessary, but at least quarterly, the lease, exploration license, or licensed lands where operations for the exploration, development, production, preparation, and handling of coal, resource recovery and protection, diligent development, and collection of royalties are conducted or are to be conducted; inspect such operations for the purpose of determining whether waste or degradation of mineral substances or damage to formations and deposits or nonmineral resources affected by the operations is being minimized; and determine whether all provisions of applicable laws, regulations, and orders, all terms and conditions of leases, exploration licenses, and licenses, and all requirements of approved exploration or mining and operation plans are being complied with.

(5) *Compliance.* Require operators to conduct operations subject to this part in compliance with all provisions of applicable laws, rules, and orders, all terms and conditions of leases, exploration licenses, or licenses, under the requirements of the MLA, and all requirements of approved exploration or mining and operation plans for requirements of production, development, resource recovery and protection, MER, diligent development, continued operations, and collection of royalties.

(6) *Reports and recommendations.* Make reports to the Division Chief, through the Conservation Manager, as to the general conditions of lands under lease, exploration license, or license, and the manner in which operations are being conducted and orders are being complied with; and submit information and recommendations for responsibilities of this part toward protection of the coal and the coal-bearing formations, other mineral resources, and the non-mineral resources.

Furnish copies of reports to the operator upon request and make them available for public inspection, subject to the requirements of confidentiality of data in this part, during normal business hours at the office of the Mining Supervisor.

(7) *Records of production; rentals and royalties.* Obtain and audit coal production and sales including establishment of coal values in absence of arms-length transactions; collect and

deposit rental and royalty payments; and maintain rental and royalty accounts.

(8) *Waiver, suspension, or reduction of rental or minimum royalty; reduction of royalties.* Act on applications for waiver, suspension, or reduction of rental or minimum royalty, and act on applications for reduction of royalties filed pursuant to 43 CFR 3473.3–2 and 30 CFR 211.63(i).

(9) *Suspension of operations and production.* Act on applications for suspension of operations or production, or both, filed pursuant to 43 CFR 3473.4, and terminate, when appropriate, suspensions which have been granted, provided that approval of a suspension of operations and production shall not preclude the OSM from requiring the operator to continue to comply with the reclamation requirements of 30 CFR Subchapter K and this part.

(10) *Cessation and abandonment.* Upon receipt of notice of proposed abandonment from the Regional Director or relinquishment of a lease or license, conduct an inspection to determine whether all rentals and royalties due the lessor have been paid and the development, production, mineral resource recovery and protection, abandonment, and royalty requirements of the lease or exploration license have been met.

(11) *Wells or prospect holes.* Prescribe or approve the methods for protecting coal-bearing formations from damage or contamination that might be incurred as a result of any wells or prospect holes drilled to, or through, the coal-bearing formations for any purpose under an approved exploration plan.

(12) *Trespass.* Report to the appropriate authorized officer with a copy to the Regional Director any trespass on unleased Federal lands that involves exploration activities or removal of coal, determine the quantity of coal removed, and determine the amount of trespass damages.

(13) *Extension of diligence.* Receive and act on applications by the operator for extension of diligence requirements and coordinate review of submission of applications with the authorized officer.

(14) *Water and air quality.* Inspect exploration operations to determine compliance with air and surface and ground-water management and pollution control measures required by the terms and conditions of applicable leases, exploration licenses, or licenses or approved exploration plans, and promptly notify appropriate representatives of other Federal and State agencies in the event of any noncompliance.

(15) *Implementation of regulations.* Issue General Mining Orders and other orders for enforcement, make determinations, and grant consents and approvals as necessary to implement or assure compliance with the rules in §§ 211.2 through 211.80 of this part. Any oral orders, approvals, or consents shall be promptly confirmed in writing.

(16) *Lease bonds.* (i) Determine whether the total amount of lease bond with respect to operations under this part is at all times adequate to satisify the estimated reclamation requirements of the exploration plan.

(ii) Determine whether the total amount of any bond furnished with respect to operations subject to §§ 211.2 through 211.80 of this part is at all times adequate to satisfy the requirements of the lease or license relating to development, production, mineral resource recovery and protection, and payments of rents and royalties; and notify the appropriate authorized officer in the event of any inadequacies.

(17) *Consultation.* Consult with the appropriate authorized officer prior to taking final action to approve an exploration plan outside an approved OSM permit area or modification thereto and to determine the amount of lease bond or modification thereto necessary to assure compliance with the exploration plan and 30 CFR Part 211. Any disagreements between the Mining Supervisor and the authorized officer arising in connection with any such final action or determination will be referred for resolution to higher authorities and, if necessary, to the Secretary of the DOI. Any such disagreements between the Mining Supervisor and the appropriate authorized officer of any Federal surface management agency not in the DOI will be referred for resolution to comparable higher authorities in each agency and, if necessary, to the respective Departments for final resolution.

§ 211.4 General obligations of the operator.

(a) The operator shall conduct exploration activities, reclamation, and abandonment of exploration operations pursuant to the performance standards set forth in this part and 30 CFR 815.15, the terms and conditions of the lease or exploration license, the requirements of the approved exploration plans, and orders issued by the Mining Supervisor.

(b) The operator shall conduct surface and underground coal mining operations involving development, production, resource recovery and protection, and preparation and handling of coal in accordance with the rules in §§ 211.2 through 211.80 of this part, terms and conditions of the leases or licenses, the approved mining and operation plan, and any orders issued by the Mining Supervisor.

(c) The operator shall prevent waste of coal and other mineral resources during exploration and production and shall adequately protect the coal deposit and other mineral resources upon abandonment.

(d) The operator shall promptly report to the Mining Supervisor, by telephone, any accidents threatening loss of coal resources or damage to the mine, the lands or other mineral resources, such as, but not limited to, bumps, squeezes, highwall caving, landslides, inundation of mine with water, and gas outbursts along with corrective action initiated. Within 30 days after such accident, the operator shall submit a detailed report of damage caused by such accident and of the corrective action taken.

(e) The operator shall submit the reports required by Part 200 of this Chapter, §§ 211.2 through 211.80 of this part, and any other reports required by the Mining Supervisor.

§ 211.5 Procedures and public participation.

(a) *Written findings.* All major decisions and determinations of any Mining Supervisor shall be in writing; shall set forth with reasonable detail the facts and the rationale upon which such decisions or determinations are based; and shall be available for public inspection during normal business hours at the offices of the Mining Supervisor.

(b) *Availability of LMU proposals.* Applications for the approval of an LMU or modification thereof submitted under § 211.80 of this part or a proposal by the Mining Supervisor to establish an LMU shall be available for public inspection in the office of the appropriate Mining Supervisor. To allow for such public inspection, a notice of the availability of any such proposed LMU or modification shall be prepared by the Mining Supervisor, promptly posted at his office, and mailed to the surface and coal owners, if other than the United States; to appropriate Federal and States agencies; and to the clerk or other appropriate officer in the county in which the proposed LMU is located for posting or publication in accordance with the procedures of that office.

A copy of such notice shall be published by the Mining Supervisor in a local newspaper of general circulation in the locality of the proposed operation at least once a week for 2 consecutive weeks.

No action with respect to approval of any such LMU or modification thereof shall be taken by the Mining Supervisor

for a period of 30 days after such posting and mailing.

(c) *Notice of proposed decision.* Prior to the final approval or establishment of any LMU, the Mining Supervisor shall publish his proposed decision in a newspaper of general circulation in the geographical area involved at least once each week for 2 consecutive weeks and shall not approve the application for at least 30 days after the first publication.

(d) *Public participation.* A public hearing shall be conducted upon the receipt of a written request to the appropriate Mining Supervisor of any person having an interest, which is or may be adversely affected by approval of the proposed LMU; provided that the written request is received within 30 days after the first publication of the notice of proposed decision in a newspaper of general circulation.

A complete transcript of any such public hearing, including any written comments submitted for the record, shall be kept and made available to the public during normal business hours at the office of the Mining Supervisor under whose auspices such meeting is conducted and shall be furnished at cost to any interested party. In making any decision or taking any action subject to such public hearing, the Mining Supervisor shall take into account all testimony submitted at such meeting, including any written comments submitted for the record.

§ 211.6 Confidentiality.

(a) Information on file with the GS relating to information obtained under this Part shall be open for public inspection and copying at reasonable times upon the written request of the applicant, pursuant to rules in 43 CFR Part 2, except that:

(1) Information such as geologic and geophysical data and maps pertaining to Federal coal reserves obtained from exploration licensees under §§ 211.2 through 211.80 of this part shall not be disclosed to the public until after the areas to which the information pertains have been leased by the Department, or until the Secretary or designee determines that release of the information to the public would not damage the competitive position of the holder of the exploration license, whichever comes first; and

(2) Information obtained from a lessee or operator under §§ 211.2 through 211.80 of this part which constitutes trade secrets and commercial or financial information which is privileged or confidential or other information which may be withheld under the Freedom of Information Act, 5 U.S.C. § 552(b), such as geological and geophysical data and maps, shall not be available for public inspection or made public or disclosed without the consent of the lessee or operator. Provided, however, that upon termination of a lease, whether by expiration of its terms or otherwise, such information may be made available to the public.

(b) Information requested to be kept confidential under this section shall be clearly identified by the licensee, lessee, or operator by marking each page of documents submitted with the words "CONFIDENTIAL INFORMATION" at the top of the page. All pages so marked shall be physically separated from other portions of the submitted materials. All information not marked "CONFIDENTIAL INFORMATION" will be available for public inspection.

§ 211.10 Exploration and mining and operations plans.

(a) *Exploration.* (1) Except for casual use, before conducting any exploration operations on leased or licensed lands outside of an approved OSM permit area, or under a coal exploration license, the operator shall submit an exploration plan to and obtain approval from the Mining Supervisor. Casual use, as used in this subsection, means activities which do not cause significant surface disturbance or damage to lands, resources, and improvements, such as activities which do not include use of heavy equipment or explosives, or vehicular movement off established roads and trails. The operator shall submit seven copies of such plans to the Mining Supervisor.

All such plans shall be identified by the name and address of lessee or licensee and the serial numbers of leases or licenses included in the plan, and shall show in detail the exploration, reclamation, and abandonment operations to be conducted. Exploration plans shall be consistent with and responsive to the requirements of the lease or license for the protection of mineral and nonmineral resources and for the reclamation of the surface of the lands affected by the operations. The exploration plans shall show that reclamation it an integral part of the proposed operations and will progress as contemporaneously as practicable with such operations, and shall provide sufficient information to substantiate the effectiveness of the proposed reclamation method.

(2) Exploration plans shall contain all of the following: (i) The name, address, and telephone number of the applicant;

(ii) The name, address, and telephone number of the representative of the applicant who will be present at and be responsible for conducting the exploration;

(iii) An exploration and reclamation operations plan, including: (A) A narrative description of the proposed exploration area, cross-referenced to the map required under paragraph (2)(V) of this section, including surface topography; geological, surface water, and other physical features; vegetative cover; the distribution and important habitats of fish, wildlife, and plants, including, but not limited to, any endangered or threatened species listed pursuant to the Endangered Species Act of 1973 (16 U.S.C. Sec. 1531 et seq.); districts, sites, buildings, structures, or objects listed on, or eligible for listing on, the National Register of Historic Places; and known cultural or archaelogical resources located within the proposed exploration area;

(B) A narrative description of the methods to be used to conduct coal exploration and reclamation, including, but not limited to, the types and uses of equipment, drilling, blasting, road or other access route construction, and excavated earth and other debris-disposal activities;

(C) An estimated timetable for conducting and completing each phase of the exploration, drilling, and reclamation;

(D) The estimated amounts of coal to be removed, a description of the methods to be used to determine those amounts, and the proposed use of the coal removed; and,

(E) A description of the measures to be used to comply with the applicable requirements of 30 CFR 815.15 and 30 CFR 211.40(a); which shall include the methods for grading, backfilling, soil stabilization, compacting and contouring, soil preparation, fertilizer application, planting, and type and mixture of vegetation to be planted.

(iv) The name and address of the owner of record of the surface land and of the subsurface mineral estate of the area;

(v) A map at a scale of 1:24,000 or larger showing the areas of land to be substantially disturbed by the proposed exploration and reclamation. The map shall specifically show existing roads, occupied dwellings, and pipelines; proposed location of trenches, roads, and other access routes and structures to be constructed; the location of land excavations to be conducted; water or coal exploratory holes and wells to be drilled or altered; earth or debris-disposal areas; existing bodies of surface water; historic, topographic, cultural and draingage features; and habitats of any endangered or threatened species listed pursuant to the

Endangered Species Act of 1973 (16 U.S.C. 1531 et seq.); and,

(vi) If the surface is owned by a person other than the applicant, a description of the basis upon which the applicant claims the right to that land for the purpose of conducting exploration and reclamation;

(vii) A narrative description including:

(A) The method for plugging drill holes.

(B) Estimated size and depth of drill holes, trenches, and test pits.

(C) The methods that will be used to protect any mineral resource encountered.

(D) Plans for transfer and modification of exploration wells for use as surveillance or monitoring wells.

(viii) Such other data as may be required by the Mining Supervisor.

(b) *Mining Plans.* (1) Before conducting any coal mining operation on Federal leases or licenses, and on any lands within an approved LMU, the operator shall submit and obtain approval of a mining plan, unless a mining plan has been approved prior to the effective date hereof under 30 CFR Part 211 or 30 CFR Part 741 for all the lands in the LMU.

(2) Mining plans and modification(s) thereof are submitted to the Regional Director pursuant to 30 CFR Part 741 and this part. On any lease issued or readjusted after August 4, 1976, the first mining plan containing a mining and operations plan shall be submitted to the Regional Director not later than 3 years after the effective date of the lease or 3 years after the date of readjustment unless a plan has been previously approved under 30 CFR Part 211 and/or 30 CFR Part 741 for the readjustment lease.

(3) A mining plan for any lease issued after August 4, 1976, must provide for the mining of the recoverable reserves of the LMU of which the lease is a part in a period of not more than 40 years; that period shall begin on the date of approval of the first mining plan for that LMU. Every existing Federal coal lease is considered to be an individual LMU as of June 1, 1976, until it may be combined with other Federal coal leases or with interests in non-Federal coal to form larger LMU. A mining plan for any existing lease issued prior to August 4, 1976, and consolidated into an enlarged LMU, must provide for the mining of the recoverable reserves of the LMU within 40 years from the effective date of the enlarged LMU. Information for the life of the mine shall be submitted under § 211.10(c) of this part.

(4) Nothing in this part shall relieve the operator of an LMU of the requirement to file a mining plan under the FCLAA, 30 U.S.C. 207(c). A mining plan submitted after the approval of an LMU must cover all lands within the LMU and contain the information required by § 211.10(c).

(5) No mining plan shall be approved which is not found to achieve the MER of the coal within the LMU.

(c) *Mining and operations plans.* The mining and operations plan shall cover operations to be conducted on leases and on any lands within an LMU under this part. The mining and operations plan under this part provides for the requirements of the MLA and shall be submitted as part of the mining plan required under 30 CFR Part 741. Mining and operations plans are reviewed and recommended for approval by the Mining Supervisor who may directly contact operators regarding requirements thereof. Formal MER determination shall be made at the time of mine plan approval based on information submitted in the mining and operations plan such as configuration of seams, actual mining costs, and revenues. The mining and operations plan shall contain all the requirements pursuant to the MLA for the life of the mine and for all lands within the LMU and shall include all of the following:

(1) Names, addresses, and telephone numbers of persons responsible for operations under the plan to whom notices and orders are to be delivered; and the names and addresses of lessees and surface and mineral owners of record, if other than the United States.

(2) A description of geologic condition, with maps and tables where appropriate, within the area where mining is to be conducted. Such description shall include, as a minimum, potential geologic hazards; and a description of the structural features of the coal and overlying strata, including faults, cleats, joints, and fractures, and any other information required by the Mining Supervisor which would affect the orientation of the mine or production methods.

(3) A description, with maps and tables where appropriate, of other mineral resources within the LMU.

(4) A description of the proposed operation, including: (i) The quality of the coal in terms of Btu content, ash, moisture, sulphur, volatile matter, and fixed carbon content over the extent of the coal deposit. If available, information on other chemical or physical properties of the coal that may affect blending or combustion should be included.

(ii) The method of mining, including mining sequence, proposed production rate, and estimated recovery factors.

(iii) Coal reserve base, minable reserve base, and recoverable reserves for each Federal lease covered in the mining plan. If the mining and operations plan covers an approved LMU, recoverable reserves will be reported for the non-Federal lands included in the plan. The recoverable reserves shall be reported for all coal seams considered to be of minable thickness, considering the type of mining and the value of the coal.

(iv) Sufficient data to assure MER and to determine the recovery factor for the coal reserve base. Data includes sufficient information in the form of a narrative, cross sections, coal thickness isopachs, overburden isopachs, and quality and quantity data of all known potentially minable seams on the lands involved. The areal extent of mining of each seam to be mined should be delineated.

(v) The engineering techniques to be used to ensure MER. The plan shall describe the method of mining, compare other mining methods, and present the justification for the method selected. For underground mining, longwall and room and pillar or conventional mining should be compared. For strip mining, draglines, shovels, scraper units, truck and shovel, or any combination of these systems should be evaluated. The selected mining system must conform to sound mining practices and be based on current technology and economics. Justification for not recovering any coal seams that may be damaged by future recovery or development of the proposed operation should be presented.

(vi) Sufficient economic data and analyses to indicate that the incremental cost of recovery (including reclamation and opportunity costs) of the coal seam(s) that are proposed to be mined would be less than or equal to the market value of the coal, and sufficient economic data and analyses to indicate that the costs of recovery (including reclamation and opportunity costs) of coal seam(s) that are not being recovered are greater than the market value of the coal.

(vii) The economic and engineering analyses should include processing costs and techniques for coal preparation, especially costs and techniques for coal washing or cleaning. Estimated recovery rates and comparisons of raw coal to processed coal should be included. If no coal preparation plant is planned and if the operator plans not to mine coal beds or portions of coal beds because of high sulfur, high ash, or other chemical or physical properties, the operator shall submit a narrative and analysis of the rationale for not mining such beds or

portions of seams, and a rationale, including economic and engineering analyses, why a preparation plant to process such beds is not feasible.

(viii) A list of all major equipment.

(ix) A description of the method of operation and measures by which the operator plans to comply with the obligations and requirements set forth in § 211.4 and § 211.40 of this part and any special terms and conditions of the lease or license.

(x) The anticipated starting and termination dates of each phase of the mining operation and number of acres of land to be affected.

(xi) The method of mineral abandonment proposed to protect the unmined coal deposits and other mineral resources.

(xii) The hydrology of the area as it may relate to the mining operations and recovery of the coal resource.

(xiii) Plans for protecting oil and gas wells as well as oil and gas resources when encountered. Plans should include any facilities for collection and use of gas from the coal seam or immediate overlying or underlying strata. When mining operations are conducted in areas of known wells or bore holes that may liberate oil, gas, water, or other fluid substances, the operator shall include in the proposed plan all measures determined necessary by the Mining Supervisor in consultation with the appropriate Oil and Gas Supervisor of the GS to protect wells or bore holes and obtain maximum recovery of the coal resource.

(5) Maps and cross sections.

(i) General. Plan map of the area to be mined on a suitable topographic base showing: (A) Lease boundaries and numbers.

(B) Boundaries of non-Federal coal.

(C) LMU boundaries.

(D) Surface ownership boundaries.

(E) Coal outcrop showing dips and strikes.

(F) Locations of abandoned surface and underground mines.

(ii) Structural contour map of coal bed(s) to be mined.

(iii) Isopach map of coal bed(s) to be mined.

(iv) Isopach map of overburden of surface mines on 20-foot intervals. If several seams are involved, interburden isopach map(s) on 10-foot intervals.

(v) Isopach map of overlying strata over underground mines on 250-foot intervals.

(vi) Drill hole location map showing elevations of collar and top of coal bed(s).

(vii) Cross-section showing thickness of any coal, any rider seams above coal to be mined, location of next known deeper coal seam below deepest coal to be mined, and nature of strata beneath the coal for 20 meters.

(viii) General layout of proposed surface or strip mine showing: (A) Planned sequence of mining by year for first 5 years, thereafter in 5-year increments for the remainder of mine life.

(B) Location and width of box cut(s).

(C) Location of main haulroads.

(D) Location and width of coal fenders.

(ix) General layout of proposed underground mine(s) showing: (A) Planned sequence of mining by year for first 5 years and by number in 5-year increments for the remainder of mine life.

(B) Location of shafts, slopes, main haulage entries, main return air courses, bleeder entries, and permanent barrier pillars.

(C) Sketch of typical panel showing width and length.

(D) Sketch showing typical entry system with centerline distances between entries and crosscuts.

(E) Sketch showing typical panel recovery, i.e., room and pillar, longwall, or other mining method which shows, by numbering such mining, the sequence of development and retreat.

(F) Sketch showing shaft and slope plan where applicable.

(x) Copy of any subsidence control plan required by 30 CFR 784.20.

(xi) Map showing location of surface building, tipple, coal storage area, load-out facilities, and railroad right-of-way.

(xii) Cross-section maps through mine area showing nature and thickness of overburden strata and the coal seam(s) involved.

(xiii) For auger mining, a plan map showing: (A) Area to be auger mined and the location of pillars to be left for access to deeper coal.

(B) Cross sections through area to be mined showing overburden strata and coal seam.

(C) Sketch showing details of operations including coal seam thickness, auger hole spacing, diameter of holes and depth or length of auger holes.

(6) Map and coal reserve base estimate of that coal within the LMU which is left in the ground due to designation of lands as unsuitable for all or certain types of surface coal mining operations or because of alluvial valley floor provisions.

(d) *Action on plans.* (1) *Exploration plans.* The Mining Supervisor, after evaluating a proposed exploration plan outside of an approved OSM permit area for surface mining and reclamation operations and all comments received thereon, and after consultation with the appropriate authorized officer, and the Regional Director when over 250 tons of coal are to be removed by means other than drilling, or where OSM has identified special data needs shall, in writing, promptly approve or disapprove such a plan. In approving such a plan, the Mining Supervisor shall determine that such a plan complies with all requirements of this part, 30 CFR 815.15, OSM Permanent Program Performance Standards Coal—Exploration, and any lease, or license terms or conditions. Reclamation must be accomplished as set forth in the exploration plan. The Mining Supervisor may impose additional conditions to conform to the provisions of this part. In disapproving such a plan, the Mining Supervisor shall indicate what modifications, if any, are necessary to achieve such conformity. No such plan may be approved unless a bond, executed pursuant to the provisions of 43 CFR Part 3474 and conditioned upon compliance with all of the provisions of such a plan, has been furnished to and approved by the appropriate authorized officer. When the land involved in the exploration plan is under the surface jurisdiction of an agency other than the DOI, that other agency must consent to the terms of the approval of the exploration plan.

(2) *Mining and operations plan.* (i) The Mining Supervisor, after evaluating the initial mining plan submitted to the Regional Director, shall report to the Regional Director on completeness in regard to compliance with requirements of the MLA, as amended, and this part.

(ii) The Mining Supervisor, after evaluating the mining and operations plan submitted for approval as part of the final mine plan, shall in writing concur with the mining and operations plan for compliance with the requirements of MLA, or specify objections in writing to the Secretary.

(3) No mining plan or modification shall be approved which is not found to achieve the MER of the coal within an LMU, including leases which were issued or readjusted after August 4, 1976. The determination of MER shall be made by the Mining Supervisor based on review of the mining and operations plan.

(4) No mining plan containing a mining and operations plan may be approved unless a bond executed pursuant to the provisions of 43 CFR Part 3474 and conditioned upon compliance with the provisions of the mining and operations plan has been furnished to and approved by the appropriate authorized officer, in consultation with the Mining Supervisor.

(e) *Changes in plans by Mining Supervisor.* (1) Approved exploration plans may be required to be reasonably revised or supplemented at any time by the Mining Supervisor, after consultation with the operator and the appropriate authorized officer, to adjust to changed conditions to correct oversights, or to reflect changes in statutory requirements.

(2) The Mining Supervisor may require approved mining and operations plans for underground mines to be reasonably revised or supplemented for minor modifications after consultation with the operator, to adjust to changed conditions, to correct oversights, or to adapt to new laws and regulations. Such revisions shall be made in writing, as appropriate, and copies submitted to the Regional Director.

(3) The Mining Supervisor may require approved mining and operations plans for surface mines to be reasonably revised or supplemented for minor modifications, after consultation with the operator and concurrence of the Regional Director, to adjust to changed conditions, to correct oversights, or to adapt to new laws and regulations.

(4) The Mining Supervisor shall promptly approve or disapprove in writing any such modifications, or specify conditions under which it would be accepted.

(f) *Changes by the operator.* (1) The operator may propose changes to an approved exploration plan outside the approved OSM permit area, and shall submit a written statement of any such proposed change and the justification therefor to the Mining Supervisor. The Mining Supervisor shall, after consultation with the appropriate authorized officer, in writing promptly approve or disapprove any such proposed change, or specify the modifications thereto under which it would be acceptable.

(2) The operator may propose minor modifications to the mining and operations plan for underground mines, and shall submit a written statement of such proposed change and the justification to the Mining Supervisor, with a copy to the Regional Director.

(3) The operator may propose minor modifications to the mining and operations plan for surface mines and shall submit a written statement of such proposed change and the justification to the Mining Supervisor who shall consult with and obtain the concurrence of the Regional Director.

(4) The Mining Supervisor shall promptly approve or disapprove in writing any such proposed modification, or specify the conditions under which it would be acceptable.

(g) *By petition.* Any interested person who is or may be adversely affected may petition the Mining Supervisor to exercise the authority set forth in paragraph (e) for the mining and operations plan. Any such petition shall be in writing; shall set forth the proposed modification; and shall state with reasonable particularity facts which demonstrate changed conditions, laws, or regulations or that oversights occurred at the time of approval which make modification necessary to bring the operations and plan into conformity with the obligations and requirements of §§ 211.2 through 211.80 of this part. Upon receipt of any such petition, the Mining Supervisor shall promptly decide whether the facts set forth are sufficient to warrant exercise of his authority pursuant to paragraph (e).

§ 211.12 Operation mine maps.

(a) *General requirements.* The operator shall maintain accurate and up-to-date maps of the mine, drawn to scales acceptable to the Mining Supervisor. All maps shall be appropriately marked with reference to Government landmarks or lines and elevations with reference to sea level. Before a mine, or section of a mine, is abandoned, closed, or made inaccessible, a survey of such mine or section shall be made and recorded on such maps, and a copy shall be furnished to the Mining Supervisor. All excavations in each separate bed shall be shown in such a manner that the production of coal for any royalty period can be accurately ascertained. Additionally, the maps shall show the name of the mine; the name of the lessee; the lease or license serial number; the lease boundary lines; surface buildings; dip of the bed(s); true north; map scale and explanatory legend; location, surface elevation, depth, and thickness of the coal, and total depth of each drill hole; auger holes; improvements; topography, including subsidence resulting from mining; the geologic conditions as determined from outcrops, drill holes, exploration, or mining; any unusual geologic or other occurrences such as dikes, faults, unusual splits, unusual water occurrences, or other conditions that may have an influence on the MER; and such other information as the Mining Supervisor may request. Copies of such maps shall be properly posted to date and furnished, in duplicate, to the Mining Supervisor annually, or at such other times as he may request.

(b) *Underground mine maps.* Underground mine maps shall, in addition to the general requirements of paragraph (a) of this section, show all mine workings; the date of extension of the mine workings; and a coal section at the face of each working unit; the location of all surface mine fans; the position of all fire walls, dams, main pumps, fire pipelines, permanent ventilation stoppings, doors, overcasts, undercasts, permanent seals, and regulators; the direction of the ventilating current in the various parts of the mine at the time of making the latest surveys; sealed areas; known bodies of standing water in other mine workings, either in or above the workings of the mine; areas affected by squeezes; the elevations of surface and underground levels of all shafts, slopes, or drifts, and the elevation of the floor, bottom of the mine workings, or mine survey stations in roof at regular intervals in main entries, panels, or sections, and sump areas. Any maps submitted to the MHSA which show any of the specific data required by this subparagraph shall be acceptable in fulfillment of the requirements hereof. Any maps submitted to the OSM to show subsidence shall also be submitted to the Mining Supervisor.

(c) *Surface mine maps.* Surface mine maps shall, in addition to the general requirements of paragraph (a) of this section, include the date of extension of the mine workings and a detailed stratigraphic section at intervals specified in the approved mining and operations plan. Such maps shall show the highwall; all worked-out and reclaimed areas; the uncovered, but unmined, coal beds; the elevation of the top of the coal beds; and known bodies of standing water.

(d) *Vertical projections and cross sections of mine workings.* When required by the Mining Supervisor, vertical projections and cross sections shall accompany plan views.

(e) *Accuracy of maps.* The accuracy of maps furnished shall meet acceptable standards and shall be certified by a professional engineer, professional land surveyor, or other professionally qualified person.

(f) *Liability of lessee for expense of survey.* If the operator fails to furnish a required or requested map, the Mining Supervisor, if necessary, shall employ a professionally qualified person to make the required survey and map, the cost of which shall be charged to, and promptly paid by, the operator.

(g) *Incorrect maps.* If any map submitted by an operator is believed to be incorrect, the Mining Supervisor may employ a professionally qualified person to make a survey and any necessary maps. If the survey shows the maps submitted by the operator to be substantially incorrect, in whole or in

part, the cost of making the survey and preparing the maps shall be charged to, and promptly paid by, the operator.

Performance Standards

§ 211.40 Exploration, surface mining, and underground mining standards.

The following performance standards shall apply to exploration, development, production, mineral resource recovery and protection, MER, preparation and handling of coal under Federal coal leases, coal licenses, exploration licenses, and approved LMU's.

(a) *Performance standards for exploration outside of an approved OSM permit area are:* (1) The operator shall comply with all applicable environmental and reclamation performance standards of 30 CFR 815.15, OSM's Permanent Program Performance Standards—Coal Exploration.

(2) The operator shall, when required by the Mining Supervisor, set and cement casing in the hole and install suitable blowout prevention equipment when drilling on lands valuable or potentially valuable for oil and gas or geothermal resources.

(3) Exploration drill holes will be conditioned as required by this section and 30 CFR 815.12(g). In addition, all exploration drill holes will be required to be plugged and capped with at least 10 feet of cement or other permanent plugging material which is unaffected by water and hydrocarbon gases and which under normal hole pressures will prevent the migration of gases and water in the drill hole, or shall be managed to prevent water pollution and mixing of ground and surface waters and to ensure the safety of people, livestock, wildlife, and machinery.

For exploration holes drilled deeper than stripping limits, the operator shall plug, using cement or other suitable plugging material approved by the Mining Supervisor, the hole through the thickness of the coal seam(s) or other mineral deposit(s) for a distance of at least 50 feet above and below the coal seam(s) or mineral deposit(s) or to the bottom of the drill hole, unless otherwise specified in writing by the Mining Supervisor.

(4) The operator shall retain, unless otherwise authorized by the Mining Supervisor, representative samples of all drill cores or cuttings for 1 year and shall make such cores or cuttings available for inspection or analysis by the Mining Supervisor, if requested. Confidentiality of such information will be accorded pursuant to the provisions of § 211.6 of this part.

(5) The operator may utilize exploration drill holes as surveillance wells for the purpose of monitoring subsequent operations upon the quantity, quality, or pressure of ground water or mine gases only with the written approval of the Mining Supervisor, in consultation with the Regional Director. The operator may utilize exploration drill holes for further use as water wells only after approval of the operator's written request by the Mining Supervisor and the surface owner or appropriate authorized officer, in consultation with the Regional Director. All such approvals shall be accompanied by a corresponding transfer of responsibility for any liability for damage and eventual plugging.

Nothing in this paragraph shall supersede or affect the applicability of any State law requirements for such a transfer.

(b) *General performance standards for surface and underground mines.* (1) *Maximum Economic Recovery (MER).* The operator shall conduct operations to achieve the MER of the coal. A formal MER determination will be made at the time of mine plan approval. To gain the MER of the coal seam(s), the following conditions and factors would have to be considered and evaluated by the Mining Supervisor:

(i) Method of mining and recovery rate.

(ii) Thickness of all coal seams encountered by drilling.

(iii) Coal quality and value.

(iv) Access to the coal.

(v) Mine equipment.

(vi) Sequence of mining.

(vii) Thickness and characteristics of the interburden and overburden.

(viii) Condition of immediate floor and roof rock.

(ix) Geologic conditions such as faults, dikes, and other adverse conditions.

(x) Distance from market.

(xi) Method of transportation to market.

(xii) Estimated costs of mining (including reclamation and opportunity costs) and estimated revenues.

(xiii) Estimated costs of coal preparation plants.

(2) *Diligent development.* The operator is required to meet the diligent development requirements of 43 CFR 3475.4.

(i) Diligent development for coal leases issued prior to August 4, 1976, must be met between June 1, 1976, and June 1, 1986.

(ii) If a lease(s) issued prior to August 4, 1976, is consolidated into an enlarged LMU, the LMU is required to meet diligent development between the effective date of the enlarged LMU and June 1, 1986, except that lease production between June 1, 1976, and the effective date of the enlarged LMU may be applied toward the diligence requirement of the enlarged LMU.

(iii) If Federal coal leases with different issue dates are included in the same LMU, the date for achievement of diligent development of the LMU shall be based on the date of the Federal lease with the earliest issue date. If a lease(s) issued after August 4, 1976, is included in an LMU with a lease(s) issued prior to August 4, 1976, the LMU must meet the diligent development requirements between the effective date of the LMU and June 1, 1986.

(iv) For leases issued after August 4, 1976, the lease must meet the diligent development requirements within 10 years after the effective date of the lease.

(v) The time to achieve diligent development on a lease cannot be extended solely by inclusion of that lease in an LMU with other leases.

(vi) Diligent development requirements for leases issued prior to August 4, 1976, may be extended in accordance with 43 CFR 3475.4(b).

(vii) When an approved LMU meets the diligent development requirements for commercial quantities, each Federal lease in the LMU is considered to have complied with the diligent development.

(viii) Applications for extension of the requirement for meeting diligent development shall be submitted in triplicate to the Mining Supervisor for review and for recommendation to the Secretary.

(3) *Continued operations.* After meeting diligent development, operators are required to comply with the continued operations requirements of 43 CFR 3475.4. The operator shall meet continued operations by the following:

(i) When diligent development has been achieved on a lease or LMU, the lease or LMU is subject to continued operations in the next lease or LMU year and each year thereafter, unless the Mining Supervisor authorizes the payment of advance royalty in lieu of continued operations.

(ii) Continued operations means production of coal equal to 1 percent of the LMU reserves for each of the first 2 years following the achievement of diligent development, and an average annual amount of 1 percent thereafter based on a 3-year period.

(iii) When an approved LMU meets continued operations, each Federal lease in the LMU is considered to have complied with the continued operations.

(iv) If an LMU fails to meet continued operations in any year, the operator may request the Mining Supervisor to authorize the payment of advance

royalty in lieu thereof in accordance with 43 CFR 3473.3–2(b).

(v) When the payment of advance royalty is authorized, it is paid in advance for the year following the year in which the continued operations requirement was not met.

(vi) The lessee's requests for authorization of advance royalty payments shall include the reasons the lease or LMU did not meet continued operations and show that the authorization to pay advance royalty in lieu of continued operations is in the public interest.

(vii) Advance royalty payments for each lease or LMU will be based on a percentage of the value of a minimum number of tons which shall not be less than lease terms for production. For any lease issued after August 4, 1976, the minimum number of tons shall be determined on a schedule sufficient to exhaust the lease reserve on that portion of reserves applicable to Federal leases in an LMU in 40 years from approval date of the mining plan. For any lease issued before August 4, 1976, the minimum number of tons shall be determined on a schedule sufficient to exhaust the leased reserves from June 1, 1976. The Mining Supervisor will establish a value for the coal to calculate the advance royalty owing.

(viii) Advance royalty payments made in the first 20 years of a lease issued or readjusted after August 4, 1976, can be credited against production royalty in that 20-year period only. Advance royalty paid after the first 20 years can be credited on production royalty during an extended or continued period of the lease.

(ix) The use of advance royalties in lieu of continued operation shall not be permitted for more than a total of 10 years during the life of any lease, including the life of the lease after readjustment.

(4) *Recoverable coal waste.* The operator shall store waste containing coal in such quantity that it may be later separated by washing or other means in a manner approved by the Mining Supervisor.

(5) *Unsuspected wells.* The operator shall promptly notify the Mining Supervisor if operations reveal unsuspected wells or drill holes which could affect mining operations and take no further actions which would disturb such wells or drill holes without his prior approval.

(6) *Mineral resource recovery and protection.* The operator shall conduct operations to efficiently recover the coal resources to avoid waste or loss of coal or other mineral resources; to prevent damage or degradation to coal-bearing or other mineral-bearing formation; and to insure that all mineral resources are protected upon abandonment.

Release of lease bond. Subsequent to temporary or permanent abandonment of mining operations, the Mining Supervisor will determine if the lessee has met obligations required under the lease bond for mineral resource recovery and protection, rentals, and royalties. The Mining Supervisor will make appropriate recommendations to the appropriate authorized officer for reduction or termination of the lease bond.

(8) *Preparation plants.* The operator shall conduct coal preparation operations to avoid coal waste and to encourage maximum economic recovery. The operator shall consider utilization of coal washing or cleaning techniques in order to meet requirements for the maximum economic recovery of the coal on the LMU.

(c) *Performance standards for underground mines.*—(1) *Maximum economic recovery (MER).* Underground mining operations shall be conducted so as to yield the MER of the coal deposits consistent with the protection and use of other natural resources, sound economic and mining practice, and the protection of the environment. No entry, room, or panel working in which the pillars have not been completely extracted within safe limits shall be permanently abandoned or rendered inaccessible, except with the prior written approval of the Mining Supervisor.

(2) *Subsidence.* The operator shall adopt mining methods which insure MER, as determined by the Mining Supervisor, except in those areas where it is determined that a degree of subsidence is not permissible. Where recovery of the coal deposit must be limited to protect surface values, it shall be restricted after consultation with the Regional Director, OSM, according to 30 CFR 817.121 through 817.126, provided that nothing in this Section shall be construed to prohibit the general use of standard method of room and pillar mining.

Each operator of an underground coal mine shall adopt measures consistent with known technology in order to prevent or, in those instances where the mining method used requires planned subsidence in a predictable and controlled manner, control subsidence, maximize mine stability, and maintain the value and use of surface lands consistent with 30 CFR 817.121, 817.122, 817.124, and 817.126.

Where pillars are not removed and controlled subsidence is not part of the mining plan, pillars of adequate dimensions shall be left for surface stability, giving due consideration to the thickness and strength of the coal beds and of the strata above and immediately below the coal bed.

(3) *Top coal.* Top coal will not be used for primary roof support in underground mines. Where technically feasible, mining will be conducted to the roof rock, and the roof rock shall be secured as primary roof support. Mining in thick seams will recover coal to a nominal mining height in the top part of the seam. The determination of mining height will take into consideration safety factors, available equipment, and the overall seam thickness. The bottom coal left will be maintained at a uniform thickness to allow recovery in the future as new technology is developed and economics allow. Provided, however, if the operator can demonstrate to the Mining Supervisor that some top coal must be left to protect the roof rock from rapid deterioration or the top part of the seam is not marketable because of distinct quality deficiencies, top coal may be left when approved in writing by the Mining Supervisor.

(4) *Multiple seam mining.*—(i) *Sequence of mining.* In general, the available coal in the upper beds shall be worked out before the coal in the lower beds is mined, and simultaneous workings in an upper coal bed shall be kept in advance of the workings in each lower bed. The Mining Supervisor may authorize mining of any lower beds before mining the available coal in each known upper bed only after a technical justification has been submitted to the Mining Supervisor by the operator and has shown that recovery of the upper coal will not be adversely affected.

(ii) *Protective barrier pillars in multiple seam mining.* In areas subject to multiple seam extraction, the protective barrier pillars for all main and secondary slope entries, main haulageways, primary aircourses, bleeder entries, and manways in each seam shall be superimposed regardless of vertical separation of rock competency; however, modifications, exceptions, or variations of this requirement may be approved in advance by the Mining Supervisor.

(5) *Advance workings.* Where the room-and-pillar or other system of mining requires advance workings in solid coal, including entries, room, or crosscuts, the lessee shall leave sufficient pillars to ensure the MER of the coal deposits upon retreat.

(6) *Pillars left for support.*—(i) *Barrier pillars.* The operator shall not, without the prior consent of the Mining Supervisor, mine any coal, drive any underground workings, or drill any lateral bore holes within 50 feet of any

of the outside boundary lines of the leased lands, or within such greater distance of said boundary lines as the Mining Supervisor may prescribe with consideration for State law. The operator may be required to pay for unauthorized mining of barrier pillars. The Mining Supervisor may require that payment shall be up to and including the full value of the coal mined from the pillars.

(ii) *Barrier pillars on adjacent unleased Federal lands.* If the coal beyond any barrier pillar has been worked out and the water level beyond the pillar is below the lessee's adjacent operations, the operator shall, on the written order of the Mining Supervisor, mine out and remove all available Federal coal in such barrier, if it can be mined without undue hardship to the lessee and with due consideration for safety and pursuant to existing surface mining, reclamation, and environmental rules.

(iii) *Privately or Indian-owned coal on adjoining premises.* If the coal in adjoining premises is privately or Indian owned and this coal has been worked out, an agreement may be made with the coal owner for the extraction of the coal remaining in the barrier pillars which otherwise may be lost.

(7) *Development of leased tract through adjoining mines.* An operator may, with the approval of the Mining Supervisor, mine leased lands from an adjoining underground mine on land privately owned or controlled or from adjacent leased lands, subject to the right of free access to the Federal premises by the Mining Supervisor.

(d) *Performance standards for surface mines.*—(1) *Maximum economic recovery (MER).* The operator shall conduct surface mining operations so as to yield the MER of the coal deposits consistent with the protection and use of other natural resources, sound economic and mining practice, and the protection of the environment.

(2) Pit widths for each seam shall be so engineered and designed as to minimize the amount of coal fender to be left as a permanent pillar on the spoil side of the pit.

(3) The amount of bottom or rider coal seams wasted in each pit will be minimized consistent with the coal quality standards that must be maintained by the operation.

(4) The abandonment of a mining area due to thinning of coal beds or reduction in the quality of the coal shall require the approval of the Mining Supervisor.

(5) If a coal seam exposed by surface mining or an accumulation of slack coal or combustible waste becomes ignited, the operator shall immediately take all necessary steps to extinguish the fire and protect the remaining coal.

(6) The Mining supervisor will approve the conditions under which a surface mine will be temporarily abandoned, pursuant to the requirements of development, production, resource recovery and protection, and royalties.

(7) *Barrier or boundary coal.* The operator may be required by the Mining Supervisor, in the interest of conservation of natural resources, to mine coal up to the lease boundary line; provided that the mining does not violate State law, the mining is in compliance with existing Federal environmental and reclamation laws and rules, the mining does not conflict with the existing surface rights, and the mining is carried out without undue hardship to the lessee and with due consideration for safety.

(e) *Performance standards for auger mines.* (1) If auger mining is proposed, the Mining Supervisor shall take into account the percentage of recovery, which in general shall exceed 30 percent; and the probable effects on recovering the remaining adjacent coal reserves by underground mining. If underground mining from the highwall or outcrop is contemplated in the foreseeable future, auger mining may not be approved since underground mining will assure greater recovery of the unmined reserves. Where auger mining is authorized, the Mining Supervisor will require leaving sufficient pillars at regular intervals along the highwall or outcrop to assure access to the unmined reserve. The size of pillars to be left will be determined by the Mining Supervisor and will be of sufficient size to accommodate the necessary underground development entries with sufficient barrier pillars to protect the development entries.

(2) A plan for recovery of coal by auger methods shall be designed to achieve MER.

(3) Auger mining must comply with the provisions of this part and 30 CFR 741.14(i), 30 CFR 785.20, and 30 CFR Part 819.

§ 211.41 Completion of operations and abandonment.

(a) Before permanent abandonment of exploration operations, all openings and excavations shall be closed, backfilled, or otherwise permanently dealt with in accordance with sound engineering practices and according to the approved plan. Drill holes, trenches, and other excavations for exploration shall be abandoned in such a manner as to protect the surface and not to endanger any present or future underground operation, or any deposit of oil, gas, other mineral resources, or ground water. Areas disturbed by exploration operations outside the approved OSM permit area will be graded, drained, and revegetated in accordance with the approved plan.

(b) Upon permanent abandonment of any mining operation, the Mining Supervisor will require that the unmined coal and other mineral resources will be adequately protected.

Reports, Records, Royalties, and Audits

§ 211.62 Reports.

(a) *Exploration reports.* The operator shall file, in duplicate, with the Mining Supervisor the information required in paragraph (b):

(1) Within 30 days after the end of each calendar quarter.

(2) Promptly upon request.

(3) Promptly upon completion or suspension of exploration operations.

(4) As provided in the lease or exploration license.

(b) *Report content.* The exploration report shall contain the following information:

(1) Identity and location of the lease or exploration license lands.

(2) Nature of exploration operation.

(3) Number of completed holes drilled and/or other work performed during the quarter.

(4) Total footage drilled during the quarter or other period as determined by the Mining Supervisor.

(5) Map showing all drill holes or other excavation locations and the coal outcrop.

(6) Analyses of coal and other pertinent tests of information on overburden characteristics obtained from the activity during the quarter. Coal analyses includes any tests for methane or other gaseous hydrocarbons.

(7) Signed copies of records and geological interpretation of all exploration operations performed on the lease or licensed lands, including recoverable reserve calculations along with vertical cross sections through the land.

(8) Copies of all in-hole mechanical or stratigraphic surveys or logs, such as electric logs, gamma ray-neutron logs, sonic logs, or any other logs produced. The records shall include a log of all strata penetrated and conditions encountered such as water, quicksand, gas, or any unusual conditions.

(9) Reclamation employed on the disturbed areas.

(10) A statement on availability and location of the representative samples of all drill holes, cores, or cuttings retained by the operator pursuant to § 211.40(a).

(11) Any other information requested by the Mining Supervisor, or requested by the Regional Director through the Mining Supervisor.

(c) *Production reports and payments.* (1) Operators shall report on the form provided, within 30 days after expiration of the period covered by the report, all coal mined, the basis for computing royalty, and make all payments due.

(2) Licensees shall report all coal mined on a semiannual basis on the report form provided.

(d) *Penalty.* If an operator records or reports less than the true weight or value for coal mined, the Secretary may impose a penalty equal to either double the amount of royalty due on the shortage, or the full value of the shortage. If, after notice, a lessee or permittee maintains false records or files false reports, the Mining Supervisor may recommend that action be initiated to cancel the lease or permit, in addition to the imposition of any penalties.

(e) *Confidentiality.* Confidentiality of any information required under this Section shall be determined in accordance with § 211.6 of this part.

§ 211.63 Royalties.

(a) Lessees shall submit, unless otherwise provided for in the lease, royalty payments on a monthly basis. The payment shall be made within 30 days after the end of the calendar month for which the royalty is owed.

(b) Royalty paid on a cents-per-ton basis or gross value basis shall be paid on the coal sold, used, or placed in inventory, where the inventory exceeds that which the Mining Supervisor determines to be in excess of that required for mining and processing operations

(c) Where royalty is based on a percentage basis, the value of coal for royalty purposes shall be the gross value at the point of sale. For captive operations or other than arms-lengths transactions, the Mining Supervisor will determine the point for gross value determination and gross value.

(d) The gross value shall be the sale or contract unit price times the number of units sold. If the Mining Supervisor determines:

(1) That a contract of sale or other business arrangement between the lessee and a purchaser of some or all of the coal produced from the lease is not a bona fide transaction between independent parties because it is based in whole or in part upon considerations other than the value of the coal; or

(2) That no consideration is received from some or all of such coal because the lessee is consuming such coal for his own use or adding it to inventories, and for which royalty is due and payable in accordance with § 211.62(c), the Mining Supervisor shall determine the gross value of such coal taking into account:

(i) Any consideration received by the lessee in other related transactions.

(ii) The highest price paid for coal of like quality produced from the same general area during the lease month.

(iii) Contracts or other business arrangements between coal producers and purchasers for the sale of coal other than coal produced under such lease, which are comparable in terms, volume, time of execution, area of supply, and other circumstances; and

(iv) Such other relevant factors as the Mining Supervisor may deem appropriate.

(e) If additional processing of the coal is performed prior to sale, such as washing to remove waste, bone, or other impurities, the processing costs above the cost of primary crushing, storing, and loading may be deducted from the gross value in determining value for royalty purposes. The Mining Supervisor will allow such deductions only when, in his judgment and subject to his audit, the lessee provides an accurate account of the costs incurred and the operation meets maximum economic recovery of the coal.

(f) If a Federal coal lease is developed by in situ technology, the gross value of production, for the purpose of computing royalty, shall be the sale or contract unit price of liquid and/or gaseous products times the number of units sold; provided, however, that where the Mining Supervisor determines:

(1) That a contract of sale of other business arrangement between the lessee and a purchaser of some or all of the products from the lease is not a bona fide transaction between independent parties because it is based in whole or in part upon considerations other than the value of the products; or

(2) That no consideration is received for some or all of such products because the lessee is consuming them, the Mining Supervisor shall determine the gross value of the products taking into account:

(i) Any considerations received by the lessee in other related transactions.

(ii) The highest price paid for production of like quality produced from the same general area during the lease month.

(iii) Contracts or other business arrangements between producers and purchasers for the sale of like products which are comparable in terms, volume, time of execution, area of supply, and other circumstances.

(iv) Such other relevant factors as the Mining Supervisor may deem appropriate.

(g) If a coal lease that provides for a cents-per-ton royalty is developed by in situ technology, the Mining Supervisor will establish a procedure for calculating tonnage for royalty purposes.

(h) The royalty shall be paid on the actual weight of the coal sold, used, or placed in inventory.

(i) In the event waste piles or slurry ponds are reworked to recover coal, or if a market becomes available to sell the waste products containing coal, the lessee shall pay royalty at a rate specified in the lease at the time of recovery. The lessee shall make payment based on the Federal share of the coal when the coal is recovered during the term of the lease whether or not it is stored on Federal lands. Where such waste containing coal from a Federal lease is commingled with similar reject from private lands, the lessee shall maintain adequate records from which Federal ownership of coal in the waste may be determined.

(j) Applications for reduction of royalty shall be filed in triplicate with the Mining Supervisor in accordance with 43 CFR 3473.3–2 and this part. The Mining Supervisor shall review and process such application in the interest of conservation of natural resources and for the purpose of encouraging the greatest ultimate recovery of coal.

(1) If the application does not meet the criteria of 43 CFR 3473.3–2 or this part, the Mining Supervisor may reject such application or request more data from the operator.

(2) If the application meets the criteria of 43 CFR 3473.3–2 and this part, the Mining Supervisor shall act upon the application.

§ 211.65 Audits.

An audit of the accounts and books of lessees for the purpose of determining compliance with lease terms relating to royalties may be required annually or at other such times as may be directed by the Mining Supervisor. Such audit shall be performed by a qualified independent certified public accountant or by an independent public accountant licensed by a State, territory, or insular possession of the United States or by the District of Columbia, and at the expense of the lessee. The lessee shall furnish, free of cost, duplicate copies of audit reports which express opinions on such compliance to the Mining Supervisor within 30 days after the completion of each audit. Where such audits are required, the Mining Supervisor will specify the purpose and scope of the

audit and the information which is to be verified or obtained.

§ 211.66 Maintenance of and access to records.

(a) Lessees shall maintain current and accurate records showing: (1) The weight of all coal mined, sold, used on the premises, or otherwise disposed of, and all coal in storage (remaining in inventory).

(2) The prices received for all coal sold and to whom and when sold.

(b) The Mining Supervisor, or his designee, shall have access to all records of the lessees pertaining to compliance with lease terms relating to royalties, including, but not limited to: (1) Quantities mined, processed, sold, delivered, or used by the lessee.

(2) Prices received for mined or processed products, prices paid for like or similar products, and internal transfer prices.

(3) Costs of mining, processing, handling, and transportation.

(c) Licensees must maintain a current record of all coal mined and removed.

Inspection, Issuance of Orders, Enforcement, and Appeals

§ 211.70 Inspections.

The operator shall provide access at all reasonable times for the Mining Supervisor to inspect or investigate the operation to determine whether it is in compliance with all applicable laws, rules, and orders; the terms and conditions of the lease or license; and the requirements of any approved exploration or mining and operations plan for:

(a) Production practices;

(b) Development;

(c) Mineral resource recovery and protection;

(d) Diligent development and continued operations;

(e) Royalty and rental audits;

(f) Mineral abandonment;

(g) MER determinations; and,

(h) Environmental and reclamation practices and protection for exploration activities outside an approved OSM permit area.

§ 211.71 Notices and orders.

(a) *Address of responsible party.* Before beginning operations, the operator shall inform the Mining Supervisor in writing of the operator's temporary and permanent post office address and the name and post office address of the superintendent or designated agent who will be in charge of the operations and who will act as the local representative of the operator. Thereafter, the Mining Supervisor shall be informed of any change of such address.

(b) *Receipt of notices and orders.* The operator shall be construed to have received all notices and orders that are mailed by certified mail, return receipt requested, posted at the mine or mine office or handed to the superintendent, the mine foreman, the mine clerk, or higher officials connected with the mine or exploration site for transmittal to the operator or his local representative.

§ 211.72 Enforcement.

(a) If the Mining Supervisor determines that an operator, subject to the provisions of this part, has failed to comply with the rules of § 211.2 through 211.80 in this part, the terms and conditions of the lease or license, the requirements of an approved exploration or mining and operations plan, or orders of the Mining Supervisor, and such noncompliance does not threaten immediate and serious damage to the mine or the deposit being mined, or other valuable mineral deposits or other resources or royalty provisions, the Mining Supervisor shall serve a notice of noncompliance upon the operator by delivey in person to him or his agent, or by certified or registered mail addressed to the operator at his last known address. Failure of the operator to take action in accordance with notice of noncompliance within the time limits specified by the Mining Supervisor, or to initiate an appeal pursuant to Part 290 of this title, shall be grounds for suspension of operations upon notice by the Mining Supervisor, or his recommendations for the initiation of action for cancellation of the lease or license and forfeiture of any lease bonds. A suspension of operations and production shall not preclude the OSM from requiring the operator to continue to comply with the reclamation requirements of 30 CFR Subchapter K and this part.

(b) The notice of noncompliance shall specify in what respect the operator has failed to comply with the provisions of applicable rules, the terms and conditions of the lease or license, the requirements of an approved exploration or mining and operations plan, or the orders of the Mining Supervisor, and shall specify the action which must be taken to correct such noncompliance and the time limits within which such action must be taken. A written report shall be submitted by the operator to the Mining Supervisor when such noncompliance has been corrected.

(c) If, in the judgment of the Mining Supervisor, an operator is conducting activities which fail to comply with the provisions of §§ 211.2 through 211.80 of this part, the terms and conditions of the lease or license, the requirements of approved exploration or mining and operations plans, or the Mining Supervisor's orders, and which threaten immediate and serious damage to the mine, the deposit being mined or other valuable ore-bearing mineral deposits, or in instance of exploration outside of an OSM permit area, serious environmental or reclamation damage, the Mining Supervisor shall order the immediate cessation of such activities, without prior notice of noncompliance. Such order may be appealed as provided in Part 290 of this title. Compliance with such order shall not be suspended by reason of the taking of such an appeal, unless such suspension is ordered in writing by the official before whom such appeal is pending, and then only upon a determination by such official that such suspension will not be detrimental to the lessor or adversely affect the public interest, or upon submission of a bond deemed adequate to indemnify the lessor from any resulting loss or damage.

(d) The Mining Supervisor shall enforce requirements of the SMCRA including §§ 211.81 through 211.98 only if he finds a violation, condition, or practice for which an authorized representative of the Secretary is required to act pursuant to 30 CFR 843.11 and 843.12.

(e) The Mining Supervisor is responsible for enforcing the regulations issued by the DOE relating to the leasing of mineral resources under the Department of Energy Organization Act, 42 U.S.C. 7152 and 7153.

§ 211.73 Appeals.

(a) Orders, determinations, decisions, and notices issued pursuant to the provisions of §§ 211.2 through 211.80 of this part may be appealed as provided in Part 290 of this title.

(b) Decisions issued by the Mining Supervisor under § 211.72(d) for environment and reclamation requirements may be appealed pursuant to 43 CFR Part 4.

Logical Mining Units

§ 211.80 Logical Mining Units.

General. Every Federal coal lease is considered to be an LMU on the effective date of the lease or June 1, 1976, whichever is later. Any LMU may be enlarged by the addition of other Federal coal leases or with interests in non-Federal coal deposits, or both. Any LMU may be diminished by creation of other separate leases or LMU's. An LMU containing any interest (Federal or non-

Federal) other than a single Federal lease shall become effective or may be enlarged only at the direction of the Mining Supervisor, or upon approval by the Mining Supervisor when requested by the lessee or operator. An LMU combining only Federal coal leases issued after August 4, 1976, may be established at the initiative of the lessee or operator, or by order of the Mining Supervisor. The Mining Supervisor may not direct the establishment of an LMU containing leases issued prior to August 4, 1976, until the terms of the leases are readjusted to include the requirements of the FCLAA. Leases issued or readjusted prior to August 4, 1976, but not since readjusted to conform to the requirements of the FCLAA may only be included in an enlarged LMU upon an operator's application and the Mining Supervisor's approval. Any lease included in such an LMU shall be amended so that its terms and conditions are consistent with the requirements imposed on the LMU of which it has become a part.

(a) Criteria for approving or directing the establishment of an LMU. An LMU shall be approved by the Mining Supervisor if the following criteria are met:

(1) The LMU consists of one or more Federal coal leaseholds, and may include intervening or adjacent non-Federal lands.

(2) The LMU is contiguous and under the effective control of a single operator. (For purposes of this Part, "contiguous" shall mean having at least one point in common.)

(3) The LMU does not exceed 25,000 acres, including Federal and non-Federal coal deposits.

(4) The LMU can be developed as a single operation in an efficient, economical, and orderly manner with MER of the coal with due regard for: (i) Conserving the coal and other resources.

(ii) Minimizing surface occupancy and disturbance.

(iii) Minimizing the impact on the environment.

(5) The LMU reserves shall be exhausted within 40 years of the approval of the first mining plan for the LMU, or within 40 years from the effective date of an enlarged LMU if all the lands of the LMU are already contained within an approved mining plan.

(6) Only reserves shown by drilling or other exploration methods to be recoverable are included.

(7) Geologic and geographic features, where applicable, are adequately considered in establishing the LMU.

(8) The applicant agrees not to surrender rights to a deposit if it would interfere with or preclude MER of the coal.

(9) If a single lease is included in more than one LMU, it will be segregated into two or more leases.

(10) If only a portion of a lease is included in an LMU, the remaining land will be segregated into another lease or be relinquished.

(b) *Criteria for administration of LMU operations.* An LMU will be administered in accordance with the following criteria: (1) Mining plans for LMU's will be required in accordance with §§ 211.10(b) and 211.10(c) of this part.

(2) The amount of production required to meet diligent development or continued operation in an LMU shall be based on the LMU reserves; for leases consolidated into an enlarged LMU, lease production between June 1, 1976, and the effective date of the enlarged LMU may be applied toward the diligence requirement of the LMU.

(3) The achievement of diligent development and continued operation requirements anywhere within the LMU, on either Federal or non-Federal coal deposits or a combination thereof, shall be deemed to satisfy the diligent development and continued operation requirements for each Federal lease in the LMU.

(4) Where production from non-Federal lands is the basis, in whole or in part, for satisfaction of the requirement that the lessee achieve diligent development or continued operation, the lessee must provide a certified report of such production annually, which shall include a map showing the area mined and the coal thickness mined.

(5) The rental and royalty payments on all Federal leases in an LMU will be combined, and advance royalties paid on any Federal lease in that LMU may be credited against the combined Federal production royalties.

(6) An LMU shall not provide for apportionment of production or royalties among the separate tracts based upon the coal reserves included in an LMU. Royalty will be paid only to the lessors from whose lands the coal is produced in the LMU. Royalty will be paid at the rate specified in the individual leases from which coal is produced.

(7) The boundaries of an LMU may later be modified either upon application by the lessee and with the approval of the Mining Supervisor after consultation with the authorized officer or by direction of the Mining Supervisor after consultation with the authorized officer.

(c) *Contents of an application.* An operator must submit seven copies of the application containing the following information to the Mining Supervisor if the operator is applying on his own initiative to combine lands into an LMU, or if he is directed to do so by the Mining Supervisor, in accordance with § 211.80, General:

(1) Name and address of the designated operator of the LMU.

(2) Description of the land and all known coal beds within an LMU. Identification of those beds proposed to be excluded from any Federal lease which would be a part of the LMU.

(3) Location map of the LMU to the scale of not smaller than 1"=1,000' which shows: (i) Proposed boundaries of the LMU.

(ii) Lease designation and numbers.

(iii) Surface and mineral ownership.

(iv) Legal land subdivision lines.

(v) Significant geologic and geographic features and cultural and natural resources which may influence mining methods, mining limits, and coal recovery.

(vi) Locations and surface elevations of drill holes that penetrate coal deposits.

(vii) Any lands designated as unsuitable for mining by the surface managing agency or the Regulatory Authority under the SMCRA.

(4) Evidence of ownership or control of all the coal land in the LMU, together with a statement showing ownership or control by the applicant of any other coal contiguous to the LMU.

(5) Typical stratigraphic sections showing all coal beds.

(6) Coal analyses by coal beds where available.

(7) Coal isopach maps on all beds of minable thickness.

(8) Overburden isopach maps for surface minable areas only.

(9) Recoverable reserves for each coal bed within the LMU by individual lease for Federal lands and in aggregate for non-Federal lands that are included in the LMU proposal.

(10) General plan of development, including: (i) Narrative describing the proposed development schedule.

(ii) Type and schedule of proposed development expenditures.

(iii) Area to be covered by the mining plan.

(iv) Area to be mined and projected mining sequence in at least 5-year intervals.

(v) Market for anticipated production.

(11) Statement of the advantages accruing to lessee and lessor by LMU establishment.

(12) Explanation of how MER of all coal in the lands will be achieved by establishment of the LMU.

(13) Royalty and rental rates and the issuance and/or readjustment date of each lease to be included in the application.

(d) *Confidentiality.* If any confidential information is included in a request to establish an LMU and identified as such by the operator, it shall be treated in accordance with 43 CFR Part 2 and 30 CFR 211.6.

Initial Regulatory Program on Federal Lands of the Surface Mining Control and Reclamation Act of 1977

§ 211.81 Applicability.

(a) All surface coal mining operations on Federal lands shall comply with the General Performance Standards of 30 CFR Part 715, the Special Performance Standards of 30 CFR Part 716, and the performance standards for underground mines in 30 CFR Part 717.

(b) All surface coal mining operations on Federal lands in Alaska from which coal has been mined on or after August 3, 1977, shall comply with all performance standards in 30 CFR Parts 715, 716, and 717 subject to the procedures in § 716.6.

(c) The requirements of §§ 211.81 through 211.99 are applicable on Federal lands until such time as they are superseded by the implementation of the permanent Federal lands program in a State in accordance with the provisions of 30 CFR Chapter VII, Subchapter D.

§ 211.82 Definitions.

(a) As used in §§ 221.81 through 211.99, the following terms have the specified meanings, except where otherwise indicated:

Acid drainage. See § 710.5 of this title.

Acid forming materials means earth materials that contain sulfide mineral or other materials which, if exposed to air, water, or weathering processes, will cause acids that may create acid drainage.

Act. See § 700.5 of this title.

Alluvial valley floors means unconsolidated streamlaid deposits holding streams where water availability is sufficient for subirrigation or floor irrigation agricultural activities but does not include upland areas which are generally overlain by a thin veneer of colluvial deposits composed chiefly of debris from sheet erosion, deposits formed by concentrated runoff or slope wash, together with talus, other mass movement accumulation, and windblown deposits.

Approximate original contour means that surface configuraton achieved by backfilling and grading of the mined area so that the reclaimed area, including any terracing or access roads, closely resembles the general suface configuration of the land prior to mining and blends into and complements the drainage pattern of the Water impoundments may be permitted where the regulatory authority determines that they are in compliance with § 715.17.

Aquifer. See § 710.5 of this title.

Auger mining. See § 700.5 of this title.

Authorized State regulatory authority means any State regulatory authority exercising authority to regulate surface coal mining operations on Federal lands pursuant to a State/Federal Cooperative Agreement which has been modified to comply with the requirements of section 523(c) of the Act.

Combustible materials. See§ 710.5 of this title.

Compaction means the reduction of pore spaces among the particles of the earth materials.

Disturbed area. See § 700.5 of this title.

Diversion. See § 710.5 of this title.

Downslope. See § 710.5 of this title.

Embankment. See § 710.5 of this title.

Federal lands. See § 700.5 of this title.

Groundwater. See § 710.5 of this title.

Highwall. See § 710.5 of this title.

Hydrologic balance. See § 710.5 of this title.

Hydrologic regime. See § 710.5 of this title.

Impoundment means a closed basin formed naturally or artificially built which is damned or excavated for the retention of water, sediment, or waste.

Intermittent or perennial stream. See §710.5 of this title.

Leachate. See § 710.5 of this title.

Noxious plants. See § 710.5 of this title.

Office. See § 710.5 of this title.

Operator means a lessee, licensee, or one conducting operations on lands under the authority of the lessee or licensee. In addition, the term "operator" includes a *person* holding a permit as these terms are defined in § 700.5 of this title. During the initial regulatory program applicable to this part, the term "operator" includes the term "permittee" as used in Parts 715, 716, and 717 of this title.

Outslope. See § 710.5 of this title.

Overburden means material of any nature, consolidated or unconsolidated, that overlies a coal deposit, excluding topsoil.

Permit. See § 700.5 of this title.

Person. See § 700.5 of this title.

Productivity. See § 710.5 of this title.

Recharged capacity. See § 710.5 of this title.

Recurrence interval. See § 710.5 of this title.

Regional Director means a Regional Director of the OSM or his authorized representative.

Regulatory Authority means the Secretary, acting by and through the Director, OSM: the Regional Directors of the OSM, when authorized by this part; and an authorized State Regulatory Authority.

Roads means access and haul roads constructed, used, reconstructed, improved, or maintained for use in surface coal mining and reclamation operations, including roads used by coal-hauling vehicles leading to transfer, processing, or storage areas. The term includes any such road used and not graded to approximate original contour within 45 days of construction other than temporary roads used for topsoil removal and coal haulage roads within the pit area. Roads maintained with public funds, such as all Federal, State, and country roads, are excluded.

Runoff water. See § 710.5 of this title.

Sediment. See § 710.5 of this title.

Sedimentation pond. See § 710.5 of this title.

Slope. See § 710.5 of this title.

Soil horizons. See § 710.5 of this title.

Soil means overburden that has been removed during surface mining.

Stabilize. See § 710.5 of this title.

Surface coal mining operations. See § 700.5 of this title.

Surface coal mining and reclamation operation. See § 700.5 of this title.

Surface managing agency means a Federal agency having administrative jurisdiction over the surface of Federal lands or over Federal minerals.

Surface water. See § 710.5 of this title.

Suspended solids. See § 710.5 of this title.

Toxic-forming materials means earth materials or wastes which, if acted upon by air, water, or weathering processes, may produce chemical or physical conditions in soils or water that are detrimental to biota or uses of water.

Toxic mine drainage. See § 710.5 of this title.

Waste means earth materials, which are combustible, physically unstable, acid-forming or toxic-forming, wasted or otherwise separated from product coal, and are slurried or otherwise transported from coal processing facilities or preparation plants after physical or chemical processing, cleaning, or concentrating of coal.

Water tables. See § 710.5 of this title.

§ 211.83 Responsiblities.

(a) Subject to the supervisory authority of the Secretary, the regulations in §§ 211.81 through 211.99 shall be administered as follows:

(1) The mining Supervisor, acting under the supervision of the Director, Division Chief, and Conservation Manager, is empowered to oversee

prospecting, exploration, testing, and development operations and shall be responsible for operator compliance with the royalty, development, and resource recovery aspects of approved mining and exploration plans in accordance with 30 CFR 211.2 through 211.80.

(2) The Regional Director is empowered to recommend to the Director, OSM, approval, disapproval, or approval upon condition of major modifications of mining plans previously approved under this part pursuant to the provisions of this part and 30 CFR Parts 715, 716, and 717.

(3) The Regional Director, acting under the supervision and control of the Director, OSM, is empowered to regulate surface coal mining and reclamation operations and abandonment operations subject ot the provisions of this part and the regulations in 30 CFR Parts 715, 716, and 717 of this title. The Regional Director, in the performance of his duties, may consult with and solicit the views of the Mining Supervisor, other appropriate Federal, State, and local agencies, and other interested parties and shall:

(i) *Inspection of operations.* Examine, as frequently as necessary, but not less than one partial inspection per month and one complete inspection per calendar quarter, the Federal lands where surface coal mining operations are conducted, or land which may be affected by such operations; inspect such operations for the purpose of determining whether all provisions of applicable performance standards in this Part and orders relating to the conduct of operations and reclamation of affected lands, and all environmental and reclamation requirements of approved mining plans are being complied with.

(ii) *Compliance.* Require operators to conduct surface coal mining and reclamation operations on Federal lands in compliance with all provisions of the applicable performance standards in this Part and in 30 CFR Parts 715, 716, and 717; all orders; all terms and conditions of leases, permits or licenses; and all requirements of an approved mining plan.

(iii) *Manner and form of records, reports, and notices.* Recommend to the Director, OSM, the manner and form in which records of mining and reclamation operations, reports, and notices shall be made to comply with the Act.

(iv) *Cessation and abandonment of operations.* Upon receipt of notice of proposed abandonment of operations or relinquishment of a lease, permit, or license, inspect and determine whether the operator has completed his operations in accordance with all applicable requirements and report to the appropriate authorized officer of the surface managing agency whether the lands have been properly conditioned for abandonment, and recommend that the period of liability under the appropriate bond or bonds be terminated. Before making his recommendation to the surface managing agency, the Regional Director shall consult with and, where required, obtain the concurrence of the Mining Supervisor. When the surface of the lands in a lease, permit, or license is not owned by the United States, the Regional Director shall, in addition, notify the surface owner and take into account his comments and recommendations when making his recommendations to the surface managing agency.

(v) *Trespass.* Report to the appropriate authorized officer any trespass that involves removal of coal.

(vi) *Compliance or performance bonds.* Determine whether the total amount of any bond or bonds furnished with respect to operations subject to this part is at all times adequate to satisfy the estimated costs of completion of remaining reclamation requirements of the approved mining plan and notify the appropriate authorized officer in the event of any inadequacies.

§ 211.84 General obligations of the operator.

(a) All operations involving the development, mining, preparation, handling of coal, and the reclamation and abandonment of affected lands shall be conducted pursuant to the obligations and applicable performance standards in this Part and in 30 CFR Parts 715, 716, and 717 and shall conform to the provisions of all other applicable laws and regulations, including effluent and emission limitations; the terms and conditions of any applicable lease, permit, or license; the requirements of any applicable approved exploration or mining plan; and any notices or orders issued by the Regional Director or the Mining Supervisor.

(b) The operator shall take such action as may be needed to minimize, control, or prevent (1) soil erosion; (2) pollution of air; (3) pollution of surface or ground water; (4) serious diminution of the normal flow of water; (5) adverse impact upon fish and wildlife, especially threatened or endangered species, and their habitat; (6) permanent damage to vegetative growth, crops, or timber; (7) creation of unsafe or hazardous conditions; (8) damage to improvements, whether owned by the United States, its permittees, licensees, lessees, or by others; (9) damage to the recreational, cultural, scientific, historical, and known or suspected archeological and paleontological values of the land; and (10) adverse impacts upon adjacent land uses. Good housekeeping practices shall be observed at all times. Where any question arises as to the necessity for or the adequacy of an action to meet the requirements of this paragraph, the determination of the Regional Director shall be final, subject to the right of appeal as provided in 43 CFR Part 4.

(c) The operator shall promptly report to the Regional Director or the Mining Supervisor, as appropriate, by telephone, accidents threatening damage to the mine, the lands or other resources, or accidents which could cause air or water pollution, along with corrective actions initiated. Within 30 days after any such accident, the operator shall submit a detailed report to the appropriate official, as requested, of any damage caused by such accident and any corrective actions taken. The obligation set forth in this paragraph shall be in addition to any obligations which may arise pursuant to the Federal Mine Safety and Health Act of 1977 and any regulations promulgated thereunder.

(d) The operator shall submit to the Mining Supervisor the reports required by Part 211 of this Chapter.

§ 211.85 Procedures and public participation.

(a) *Written findings.* Except as may be otherwise expressly set forth in this Part, all major decisions and determinations of any Regional Director or Mining Supervisor acting pursuant to this part and 30 CFR Chapter VII shall be in writing, shall set forth with reasonable specificity the facts and the rationale upon which such decisions or determinations are based, and shall be available for public inspection during normal business hours at the offices of such Regional Director or Mining Supervisor.

(b) *Availability of proposed plans and major modifications of plans.* All proposed mining plans and major modifications thereof, submitted under § 211.86 of this part, shall be available for public inspection in the office of the appropriate Regional Director subject to the restrictions contained in § 211.6. To allow for such public inspection, a notice of availability of any such plan or modification shall be prepared by the Regional Director and promptly posted at his office and mailed to the surface owner, if other than the United States, to appropriate Federal and State agencies, and to the clerk or other appropriate

officer in the county in which the proposed operations are located for posting or publication in accordance with the procedures of that office. A copy of the notice shall be published by the Regional Director in the **Federal Register.** No action with respect to approval of any such plan or modification shall be taken by the Regional Director for a period of 30 days after publication in the **Federal Register.** A copy of such notice shall be published by the operator in a local newspaper of general circulation in the locality of the proposed operation at least once a week for 4 consecutive weeks.

(c) *Public participation.* (1) Upon the timely written request to the appropriate Regional Director of any person having an interest which is or may be adversely affected, a public meeting shall be conducted with respect to any of the following actions:

(i) Release of any substantial portion of a bond submitted pursuant to this Part covering obligations of performance or reclamation, including revegetation.

(ii) Approval of final abandonment of any operation or portion thereof.

(iii) Approval of a new mining plan or any major modification thereof.

(2) Prior to the making of any decision or the taking of any of the actions described in paragraph (1) hereof, a notice of availability of such proposed decision or action shall be published in a newspaper of general circulation in the geographical area involved at least once in each of 2 consecutive weeks. In addition, not less than 20 days prior to the making of any such decision, such notice shall be posted at the appropriate State or regional offices of the Bureau of Land Management, the GS, and OSM; mailed to the operator, to all appropriate Federal and State agencies, including all agencies whose concurrence or consultation is sought or required, and to the surface owner if other than the United States; and published in the **Federal Register.** Such notice shall set a reasonable time period, not less than 20 days from the date of publication in the **Federal Register,** within which any person having an interest which is or may be adversely affected may, in writing, request a public meeting thereon.

(3) A complete transcript of any such public meeting, including any written comments submitted for the record, shall be kept and maintained available to the public during normal business hours at the appropriate Federal office under whose auspices such meeting is conducted, and shall be furnished at cost to any interested party. In making any decision or taking any action subject to any such public meeting, the Regional Director shall take into account all testimony submitted at such meeting, including any written comments submitted for the record.

§ 211.86 Exploration and mining plans.

(a) Before conducting exploration operations, other than casual use, within an area for which a mining permit has been approved by the Regulatory Authority or within an area of land on which mining and reclamation operations are occurring or are expected to occur prior to the time a permit is approved pursuant to 30 CFR Part 741, the operator shall submit to the Regional Director and obtain approval of an exploration plan under 30 CFR Part 211. Casual use, as used in this subsection, means activities which do not cause significant surface disturbance or damage to lands, resources, and improvements, such as activities which do not include use of heavy equipment, explosives, or vehicles off established roads and trails.

(b) Before conducting any surface coal mining operation on Federal lands, the operator shall submit to the Regional Director, and obtain approval of, a mining plan in accordance with this part. On any lease issued or readjusted after August 4, 1976, the first mining plan shall be submitted to the Regional Director not later than 3 years after the effective date of the lease or 3 years after the date of readjustment, whichever is later.

(c) The operator shall submit seven copies of the mining plans to the Regional Director. All such mining plans shall be identified by the name, address, and permit or lease number(s) of coal permits or leases, fee interest and State-owned tracts included in the plan, and shall show in detail the proposed exploration, testing, development, mining, preparation, environmental protection, monitoring, reclamation, abandonment methods, procedures, and operations to be conducted during the life of the mine. Mining plans shall be consistent with the requirements of the lease, permit, or license for maximizing recovery of mineral resources, for the protection of nonmineral resources, for the protection of land, air, and water resources during and after mining, and for the reclamation of the surface of the lands affected by the operations. The mining plans shall show that environmental protection and reclamation are an integral part of the proposed operations, will progress as contemporaneously as practicable with such operations, and shall provide sufficient information to substantiate the effectiveness of the proposed reclamation method as required by this Part and 30 CFR Parts 715, 716, and 717.

(d) *Mining plans.* A mining plan shall include all of the following:

(1) Names, addresses, and telephone numbers of persons responsible for operations under the plan to whom notices and orders are to be delivered, and the names and addresses of surface owners of record, and owners of record of subsurface minerals, if other than the United States.

(2) A description, with maps and tables where appropriate, of the environment within the area where mining is to be conducted. Such description shall include, as a minimum, geologic conditions, including potential geologic hazards; types, depths, and distribution of soils; types, density productivity, dominance, and distribution of vegetation; climatological data, including a monthly range of temperatures, precipitation and average direction and velocity of prevailing winds; and distribution, abundance and habitat of fish and wildlife, particularly threatened and endangered species.

(3) A description of the condition of the land covered by the mining plan, including:

(i) The uses existing at the time the mining plan is submitted for approval; and

(ii) The capability of the land, immediately prior to any mining, to support alternative uses, giving consideration to soil characteristics, including series, types, depths and distribution, topography, annual precipitation, and vegetative cover, including identification of dominant species.

(4) A description of the use which is proposed to be made of the land following reclamation which shall take into account all applicable land-use plans and programs.

(5) A description of how the proposed postmining land use is to be achieved, including any necessary support activities and facilities.

(6) A description of the proposed operations, including:

(i) The nature and extent of the coal deposit in terms of Btu content, ash, water, sulphur, volatile matter, and carbon content and including estimated recoverable reserves.

(ii) The method of mining, including mining sequence and proposed production rate.

(iii) The nature and timing of measures to be taken for surface reclamation, including as appropriate:

(A) A reclamation schedule, including the estimated timetable for each phase of the work and for final completion of the program.

(B) The method of grading, backfilling, soil stabilization, and compacting and contouring.

(C) The method of soil preparation and fertilizer application.

(D) The type and mixture of shrubs, trees, grasses, forbes, or other vegetation to be planted.

(E) The method of planting, including approximate quantity and spacing.

(iv) The engineering techniques proposed to be used in mining and reclamation, including the design and construction of roads, ditches, water retention facilities, dams, or settling ponds, and the control of water drainage and accumulation.

(v) A list of all major equipment.

(vi) An estimate of the cost per acre of reclamation including a separate breakdown for the cost of backfilling and grading, replacement of topsoil, seeding and/or planting, irrigation, fertilizing, and maintenance.

(vii) The method of operation and measures by which the operator plans to comply with the obligations and requirements set forth in § 211.84 and § 211.94 of this part and any special terms and conditions of the lease, permit, or license.

(viii) The anticipated starting and termination dates of each phase of the mining operation and number of acres of land to be affected.

(ix) The steps to be taken to comply with all applicable air and water quality laws and regulations.

(x) The measures for ensuring the maximum practicable recovery of the mineral resources.

(xi) The method of abandonment.

(xii) Logs and analyses of overburden samples of each stratum from a number of drill holes sufficient to obtain a representative sample of the overburden overlying the coal and the stratum immediately below the coal to be mined, which, unless specifically authorized by the Regional Director based upon date already known to the GS or OSM or upon the nature of the coal seam and geological inferences which may be drawn therefrom, shall be not less than one hole on each 40 acres. Such logs and analyses shall identify each stratum penetrated, and shall contain an analysis of each such stratum for at least the following: nitrogen, phosphorus, potassium, pH, specific conductance, exchangeable sodium percentage, and sodium absorption ratio. Such analyses will be used to determine which materials shall be buried and which materials are suitable for placement near the surface for favorable propagation of vegetation.

(xiii) The hydrology of the area, including quantity and quality of water in surface and ground water systems, water levels and water table measurements, data regarding dissolved and suspended solids under seasonal flow conditions, and an assessment of the probable impacts of the anticipated mining operation upon the hydrology of the area.

(xiv) Plans for protecting oil, gas, and water wells, as well as oil, gas, and underground water resources, when encountered.

(xv) Any justification for not recovering any coal deposits that may be detrimentally affected in terms of future recovery by the coal development operations proposed.

(xvi) If auger mining is proposed, the location and diameter of auger holes, the depth to be drilled, and the estimated percentage of recovery. In determining whether or not to approve proposed auger mining, the Mining Supervisor shall take into account the percentage of recovery, which shall in general exceed 30 percent, and the Regional Director shall take into account the probable adverse effects upon water quality.

(7) Suitable topographic maps or aerial photographs showing: (i) Topographic, cultural, archaeological, and natural drainage features, roads, and vehicular trails.

(ii) The name of the watershed and location of the surface stream or tributary into which mine waters will be discharged, if applicable.

(iii) Cross sections and plan views of the land to be affected, including the actual area to be mined, showing elevation and location of drill holes and depicting the following information: the nature and depth of the various strata of overburden; the nature, thickness, and extent of any coal or rider seams, if above the specific coal proposed to be mined; the nature of the strata beneath the coal to be mined for a vertical distance of at least 20 meters beneath the base of the coal seam; the location of the next known deeper coal seam below the deepest seam to be mined and representative characteristics thereof; the location of any other mineral values encountered; hydrologic data and other information relevant to the mining plan; all mineral crop lines and the strike and dip of the coal to be mined within the area of land to be affected; location and extent of known surface and underground mine workings, oil or gas wells, and water wells within ¼ mile of the affected lands, the location of aquifers; the estimated elevation of the water table, and potentiometric surface; the location of spoil, waste, or refuse areas, and sequence of placement and topsoil preservation area; the location of all impoundments or water treatment facilities; constructed or natural drainways and the location of any discharges to any surface body of water on the area of land to be affected or adjacent thereto; and cross sections of the anticipated final surface configuration that will be achieved pursuant to the operator's proposed reclamation activities.

(iv) Locations of surface structures and facilities, including loading facilities.

(v) For an underground mine, in addition, the planned mine layout, including location and dimensions of shafts, slopes, drifts, crosscuts, rooms, haulageways, aircourses, entries, and barrier pillars.

(e) *Action on plans.* The Regional Director, after reviewing and considering a proposed mining plan and all comments received thereon and after consultation with the appropriate authorized officer of the surface managing agency, shall, in writing, promptly recommend to the Director, OSM, approval or disapproval of such plan, and such recommendation shall include the review and recommendation of the Mining Supervisor and the authorized State Regulatory Authority. In recommending approval of such a plan, the Regional Director and the Mining Supervisor, in accordance with the division of responsibilities in § 211.83, shall determine that such plan complies with all requirements of this part, 30 CFR Parts 715, 716, and 717, or the requirements of State law in effect pursuant to a State/Federal Cooperative Agreement and any lease, permit, or license, and that reclamation as required thereby can be accomplished under the method, procedures, and operations set forth in such plan. The Regional Director and the Mining Supervisor may recommend such conditions upon such approval as may be necessary for the plan and operations to conform to the provisions of this part and the terms and conditions of the lease, permit, or license. In recommending disapproval of a plan, the Regional Director shall indicate what modifications, if any, are necessary to achieve such conformity. No such plan may be approved unless a bond, executed pursuant to the provisions of 43 CFR Subpart 3504 and conditioned upon compliance with all of the provisions of such plan, has been furnished to and approved by the appropriate authorized officer. When some or all of the proposed area is under the jurisdiction of an Agency other than the DOI, such other Agency must consent in writing to the terms of the mining plan prior to its approval. When some or all of the proposed area

of surface coal mining operations is on Indian lands, the mine plan must also be approved in accordance with 25 CFR Part 177.

(f) *Changes in plans.*—(1) *By Regional Director.* Approved plans may be required to be revised or supplemented at any time by the Regional Director after consultation with the operator and the Mining Supervisor; the appropriate authorized officer; the authorized State Regulatory Authority, if appropriate, to adjust to changed conditions; changed regulations; or statutory requirements and to require monitoring or to correct oversights. The Mining Supervisor may request the Regional Director to require changes in mining plans in connection with Geological Survey responsibilities in this part relating to diligent development, production, and resource recovery requirements. Significant revisions or supplements must be approved by the Director, OSM.

(2) *By the operator.* The operator may propose changes to an approved mining plan and shall submit a written statement of any such proposed change and the justification therefore to the Regional Director. The Regional Director shall, after consultation with the authorized State Regulatory Authority, the appropriate authorized officer, and the Mining Supervisor, in writing, promptly recommend approval, disapproval, or approval upon condition to the Director, OSM, of any such proposed change, or specify the modifications thereto under which it would be acceptable.

(3) *By petition.* Any interested person may petition the Regional Director to exercise the authority set forth in subparagraph (1) hereof. Any such petition shall be in writing, shall set forth the proposed revision, and shall state with reasonable particularity facts which demonstrate adequate justification for revision of the plan or that oversights occurred at the time of approval which make modification necessary to bring the operation and the plan into conformity with the obligations and requirements of this part. Upon receipt of any such petition, the Regional Director shall promptly decide whether the facts set forth are sufficient to warrant exercise of his or her authority pursuant to paragraph (1) above.

(4) *Public Notice.* If any change proposed under this subsection would constitute a major modification of an approved plan, the Regional Director shall follow the procedures provided in § 211.85 of this part, and shall take any comments received into account in his decision.

(g) States with § 211.99(c) agreements.

(1) *Wyoming.* A Federal coal lessee in the State of Wyoming who must submit a mining plan under both State and Federal law shall submit to both the State Regulatory Authority and the Denver Regional Office, Office of Surface Mining, in lieu of the submission required in this Section, a mining plan or revision or modification to an approved plan containing the information required by or necessary for the State Regulatory Authority and the Secretary to determine compliance with the statutory, regulatory and other requirements identified in paragraph B1 of Article IV of the modified Cooperative Agreement, the statement required by paragraph B2 of Article IV of the modified Cooperative Agreement and the requirements of 30 CFR 211.86(d).

(2) *Utah.* A Federal coal lessee in the State of Utah who must submit a mining plan or permit under both State and Federal law shall submit to both the State Regulatory Authority and the Denver Regional Office, Office of Surface Mining, in lieu of the submission required in this Section, a mining plan or revision or modification to an approved plan containing the information required by or necessary for the State Regulatory Authority and the Secretary to determine compliance with the statutory, regulatory and other requirements identified in paragraph B1 of Article IV of the modified Cooperative Agreement, the statement required by paragraph B2 of Article IV of the modified Cooperative Agreement, and the information required by:

(i) Utah Code Ann. 1953, as amended, Section 40–8–13;

(ii) Rule M–3 of the Utah Division of Oil, Gas, and Mining, except the paragraph following (h) due to the confidentiality provision which is not in conformity with the Surface Mining Control and Reclamation Act of 1977; and

(iii) 30 CFR 211.86(d); and

(iv) Any final action by the State Regulatory Authority or the Secretary with respect to a mining plan or revision or modification submitted for approval shall be in accordance with Article IV of the modified Cooperative Agreement.

(3) *New Mexico.* A Federal coal lessee in the State of New Mexico who must submit a mining plan or permit under both State and Federal law shall submit in lieu of the mining plan required in this Section, a mining plan containing the information required by:

(i) New Mexico Stat. Section 63–34–1 et seq. NMSA 1953;

(ii) New Mexico Coal Surface Mining Commission Regulations;

(iii) 30 CFR 211.86(d); and

(iv) A statement certifying that a copy of the plan or permit application has been given to both the New mexico Coal Surface Mining Commission and Secretary.

(4) *North Dakota.* A Federal coal lessee in the State of North Dakota who must submit a mining plan or permit application under both State and Federal law shall submit to the State Regulatory Authority and the Denver Regional Office, Office of Surface Mining, in lieu of submission required in this section, a mining plan or revision or modification to an approved plan containing the information required by or necessary for the State Regulatory Authority and the Secretary to determine compliance with the statutory, regulatory, and other requirements identified in paragraph B1 of Article IV of the modified Cooperative Agreement, and that statement required by paragraph B2 of Article IV of the modified Cooperative Agreement and requirements of 30 CFR 211.86(d).

(5) *Montana.* A Federal coal lessee in the State of Montana who must submit a mining plan under both State and Federal law shall submit to both the State Regulatory Authority and the Denver Regionl Office, Office of Surface Mining, in lieu of the submission required in this section, a mining plan or revision or modification to an approved plan containing the information required by or necessary for the State Regulatory Authority and the Secretary to determine compliance with the statutory, regulatory, and other requirements identified in paragraph B1 of Article IV of the modified Cooperative Agreement and the requirements of 30 CFR 211.86(d).

§ 211.87 Approaching oil, gas, or water wells.

When mining operations are conducted in areas of known wells or bore holes that may liberate oil, gas, water, or other fluid substances, the lessee shall include in his proposed plan all measures determined necessary by the Mining Supervisor in consultation with the Regional Director and the appropriate Oil and Gas Supervisor of the GS to protect wells or bore holes and obtain maximum recovery of the coal resource. If operations reveal unsuspected wells or bore holes, the operator shall promptly notify the Regional Director and take no further actions which would disturb such wells or bore holes without the Regional Director's prior approval after consultation with the Mining Supervisor.

§ 211.88 Mine maps.

(a) *General requirements.* The operator shall maintain accurate and up-to-date maps of the mine, drawn to scales acceptable to the Director, OSM. All maps shall be appropriately marked with reference to Government landmarks or lines, and elevations with reference to sea level. Before a mine or section of a mine is abandoned, closed, or made inaccessible, a survey of such mine or section shall be made and recorded on such maps and a copy shall be furnished to the Regional Director and the Mining Supervisor. Additionally, the maps shall show the name of the mine; the name of the lessee; the lease, permit, or license serial number; the lease boundary lines; surface buildings; dip of the bed; true north; map scale and explanatory legend; location, surface elevation, depth and thickness of the coal, and total depth of each borehole; auger holes; improvements; reclamation completed; topography, including subsidence resulting from mining; and the geologic and hydrologic conditions as determined from outcrops, drill holes, exploration or mining; and water monitoring stations and such other information as the Regional Director may request. Copies of such maps shall be properly posted to date and furnished, in duplicate, to the Regional Director annually or at such other times as he or she may request.

(b) *Vertical projections and cross sections of mine workings.* When required by the Regional Director, vertical projections and cross sections shall accompany plan views.

§ 211.89 Failure of lessee to furnish maps.

(a) *liability of lessee for expense of survey.* If the operator fails to furnish a required or requested map, the Regional Director shall consult with the operator to determine the cause of the failure. If the operator refuses or cannot supply the required or requested map, the Regional Director shall employ a professionally qualified person to make the required survey and map, the cost of which shall be charged to, and promptly paid by, the operator.

(b) *Incorrect maps.* If any map submitted by an operator is believed to be incorrect, the Regional Director or the Mining Supervisor, as appropriate, shall consult with the operator to determine the cause of the deficiency. If the operator refuses to correct the error or deficiency in the map, the Regional Director or Mining Supervisor may employ a professionally qualified person to make a survey and any necessary maps. If the survey shows the maps submitted by the lessee to be substantially incorrect, in whole or in part, the cost of making the survey and preparing the maps shall be charged to, and promptly paid by, the operator.

§ 211.90 Core and test holes.

(a) *Surveillance wells.* With the approval of the Mining Supervisor, after consultation with the Regional Director, drill holes may be utilized as surveillance wells for the purpose of monitoring the effect of subsequent operations upon the quantity, quality, or pressure of ground water or mine gases.

(b) *Use of wells by others.* Upon receipt of a written request from the surface owner or the appropriate authorized officer, the Mining Supervisor, in consultation with the Regional Director, may approve the transfer of an exploratory well for further use as a water well. Approval of such well transfer will be accompanied by a corresponding transfer of responsibility for any liability for damage and eventual plugging. Nothing in this paragraph shall be deemed to supersede or affect the applicability of any State law requirements with respect to such transfer.

§ 211.91 Maximum recovery for underground mining.

Underground mining operations shall be conducted so as to yield the maximum recovery of the coal deposits consistent with the protection and use of other natural resources, sound economic practice, and the protection of the environment—land, water, and air. No entry, level, or panel workings in which the pillars have not been completely extracted within safe limits shall be permanently abandoned or rendered inaccessible, except with the prior written approval of the Mining Supervisor and with the concurrence of the Regional Director.

§ 211.92 Subsidence.

The Mining Supervisor, in consultation with the Regional Director, may require the operator to install a subsidence monitoring system consisting of elevation stations and tiltmeters in a number sufficient to determine the extent of any area that may be affected. All records of such surveys shall be accessible for review by the Mining Supervisor and the Regional Director.

§ 211.93 Development of leased tracts through adjoining mines.

An operator may, with the approval of the Mining Supervisor, mine leased lands from an adjoining underground mine on land privately owned or controlled or from adjacent leased lands, subject to the right of free access to the Federal premises by the Regional Director.

§ 211.94 Operating and reclamation standards.

(a) *Performance standards for surface mines.* The following performance standards shall be applicable to all coal exploration, development, mining, preparation, handling, and reclamation operations on the surface of land subject to this part:

(1) The operator shall reclaim affected lands pursuant to his approved plan as contemporaneously as practicable with operations.

(2) The operator shall comply with the requirements of § 715.13 of this title for reclaiming the land to an approved land use.

(3) The operator shall comply with the requirements of § 715.14 of this title for backfilling, grading, and restoring approximate original contour.

(4) The operator shall stabilize and protect all surface areas, including spoil piles, affected by the coal mining and reclamation operation, to effectively control slides, erosion, subsidence, and attendant air and water pollution.

(5) The operator shall comply with the provisions of § 715.15 of this title for disposal of spoil in areas other than the mine workings or excavations.

(6) The operator shall comply with the provisions of § 715.16 of this title for replacing topsoil.

(7) The operator shall utilize water impoundments, water retention facilities, dams, or settling ponds only pursuant to an approved plan, and in compliance with the requirements of § 715.17 and § 715.18 of this title, if a permanent impoundment, and shall ensure that:

(i) Such facility is adequate for its intended purposes, and the quality and quantity of impounded water will be suitable for its intended use.

(ii) Such facility is designed, located, built, used, and maintained in accordance with sound engineering standards and practices, and applicable Federal and State laws and regulations to ensure that such facilities will have necessary stability with an adequate margin of safety.

(iii) Final grading will provide adequate safety and access for proposed or reasonably anticipated water users.

(iv) Such facilities will not have a significant adverse impact on the water resources utilized by adjacent or surrounding landowners for agricultural, industrial, recreational, or domestic uses: Provided, however, that this subparagraph shall not be deemed or construed to increase or diminish any

property rights to any water held by any person.

(v) No mine or processing waste is used in the construction of such facilities unless authorized in the approved plan and in compliance with § 715.17 and § 715.18 of this title.

(8) The operator shall cover or plug all auger mine holes with noncombustible and impervious material and where necessary to minimize, control, or prevent harmful drainage.

(9) The operator shall comply with the requirements of § 715.17 of this title relating to the protection of the hydrologic system.

(10) The operator shall:

(i) Treat or dispose of all rubbish and noxious substances in a manner designed to minimize, control, or prevent air and water pollution and the hazards of ignition and combustion; and,

(ii) Dispose of all waste resulting from the mining and preparation of coal in a manner designed to minimize, control, or prevent air and water pollution. Waste containing coal in such quantity that it may later be separated from the waste by washing or other means shall be stored separately.

(11) Except as provided herein, the operator shall not conduct excavation or drilling operations within 500 feet of an active or abandoned underground mine. Where it can be established, by certified maps or inspection of such an underground mine, that such activities may be conducted without danger or interference with, or penetration of, an underground mine, they may be authorized in an approved plan, subject to the concurrence of the MHSA where blasting is involved, to be conducted up to but not less than 25 feet from such underground mine: Provided, however, that, nothing in this paragraph shall preclude daylighting or similar surface coal mining activities intended to improve resource recovery, abate water pollution, or eliminate public hazards resulting from such underground mines.

(12) The operator shall comply with the blasting requirements of § 715.19 of this title.

(13) The operator shall design to applicable standards, construct, maintain, and, when no longer necessary and unless otherwise authorized in an approved plan, remove all roads, pipelines, powerlines, and similar utility access facilities, associated bridges, culverts, and ditches into and across the site of operations, in a manner that will minimize, control, or prevent erosion, siltation, and pollution of water pursuant to the requirements of § 715.17(1)(1) through (3) of this title, and minimize, control, or prevent fugitive dust, and damage to fish and/or wildlife or their habitat and public or private property.

(14) The operator shall comply with the requirements of § 715.17(1)(2) of this title for surfacing and constructing roads.

(15) No access roads will be constructed unless:

(i) The operator shall have first submitted a surveyed profile accompanied by typical cross sections of the road and ditches, showing pipe, entrance and exit channels, and sediment control structures or configurations to be used on the road to meet performance standards; and

(ii) The location shall have been marked, inspected, and approved by the appropriate surface managing agency and the Regional Director, and in consultation with the surface owner, if other than the United States.

(16) The operator shall comply with the revegetation requirements of § 715.20 of this title.

(17) The operator's responsibility and liability under his performance bond for revegetation of each planting area shall extend until such time as the appropriate authorized officer, in consultation with the Regional Director and the surface owner, if other than the United States, determines that successful revegetation in compliance with § 715.20 of this title has occurred: Provided, however, that this period shall extend for a minimum of 5 full years after the first planting and for a total period of liability not to exceed 10 years from the first planting; and further provided, that,

(i) Where the appropriate authorized officer, in consultation with the Regional Director, the surface owner, if other than the United States, and the operator, determines that natural conditions, such as annual precipitation, soil characteristics, and native vegetation, are stable and favor rapid revegetation and that revegetation pursuant to paragraph (i) of this Section is likely to occur before the expiration of such minimum period. Such minimum period will not apply with respect to some or all of the lands included in such lease, permit, or license; and

(ii) Where during any such minimum period such authorized officer, in consultation with the Regional Director, the surface owner, if other than the United States, and the operator, determines that natural conditions such as anual precipitation and soil characteristics are sufficiently unstable so as to favor only slow and uncertain revegetation, he may recommend to the Regional Director that the liability of the operator be extended for a period up to 5 years beyond the period initially established, if the financial liability that would be incurred by the operator as a result is reasonably commensurate with the increased probability of successful revegetation.

(iii) During the relevant period of liability, the Regional Director and the appropriate authorized officer shall jointly inspect and evaluate the revegetated area.

(18) The operator shall:

(i) Except as provided in paragraph (ii) hereof, alow public access to and upon Federal lands subject to his lease, permit, or license only under the presence of and the control, direction, and supervision of an agent of the Regional Director, authorized officer, or their authorized representative, for any lawful and proper purposes under the Act, except where such access would unduly interfere with his authorized use.

(ii) Provide warning signs, fencing, flagmen, barricades, and other safety and protective measures as may be necessary to regulate public access, vehicular traffic, and wildlife or livestock grazing in all areas of active operations, including lands undergoing reclamation:

(A) To protect the public, wildlife, and livestock from hazards associated with such operations; and

(B) To protect revegetated areas from unplanned and uncontrolled grazing.

(19) Coal storage areas shall be designed and maintained so as to eliminate fire hazards from spontaneous combustion and other accidental ignition. If a coal seam, exposed by surface mining or an accumulation of slack coal or combustible waste, becomes ignited during the term of a lease, the operator shall immediately take all necessary steps to extinguish the fire.

(20) Upon the completion of temporary or permanent abandonment of mining operations in all or any part of a strip pit, the face of the coal shall be covered with a minimum of 4 feet of nontoxic and noncombustible material or, if necessary, treated to neutralize toxicity in order to prevent water pollution and sustained combustion.

(21) The driving of any underground opening by auger or other methods from any strip pit shall not be undertaken except as specifically approved by the Regional Director in an approved plan.

(22) The operator shall comply with provisions of § 715.11 and § 715.12 of this title for availability of authorizations to operate and location of markers and signs.

(23) Operators of surface coal mining operations which are conducting mining operations on natural slopes that are defined as steep slopes shall comply with the regulations of § 716.2 of this title.

(24) Operators of surface coal mining operations that remove entire coal seams running through the upper fraction of a mountain ridge or hill (mountaintop removal) shall comply with the requirements of § 716.3 of this title.

(25) Operators of special bituminous surface coal mining operations that are located west of the 100th meridian west longitude as defined under § 716.4(a) shall comply with the requirements of § 716.4 of this title.

(26) Operators of anthracite coal mine operations must comply with the requirements of § 716.5 of this title.

(27) Operators of surface coal mining operations conducted on land that is considered to be prime farmland pursuant to § 716.7(b) shall comply with the special requirements of § 716.7 of this title. The Regional Director, in consultation with the surface management agency, shall obtain a determination of prime farmlands pursuant to § 716.7 of this title for operations on Federal lands.

(28) Operators of surface coal mining operations conducted on lands with alluvial valley floors shall comply with the applicable provisions of § 716.17(j) of this title.

(b) *Performance standards for underground mines.* The following performance standards shall be applicable to all coal exploration, development, mining, preparation, handling, and reclamation operations for the surface effects of underground mines on land subject to this Part. These standards, in addition to § 211.90, § 211.91, § 211.92, and § 211.93, shall apply to underground mining operations on Federal lands.

(1) Operators shall comply with the requirements of § 717.11 of this title, Authorization to Operate.

(2) Operators shall comply with the requirements of § 717.12(a) of this title, Sign and Marker Specifications; and § 717.12(b), Mine and Permit Identification Signs.

(3) Operators shall comply with the requirements of § 717.14 of this title, backfilling and grading or Road Cuts, Mine Entry Area Cuts, and Other Surface Work Areas. These requirements apply only to the surface area disturbed to provide access to the mine and such surfaces disturbed during the mining operation as are identified by the regulatory authority.

(4) Operators shall comply with the requirements of § 717.15 of this title for Disposal of Excess Rock and Earth Materials on Surface Areas.

(5) Operators shall comply with the requirements of § 717.17 of this title, Protection of the Hydrolegic System, in regard to surface discharges and surface areas that are disturbed.

(6) Operators shall comply with the requirements of § 717.18 of this title, Dams Constructed of or Impounding Waste Material.

(7) Operators shall comply with § 717.19 of this title, Use of Explosives, in regard to the use of explosives used during surface operations.

(8) Operators shall comply with the requirements of § 717.20 of this title, Topsoil Handling and Revegetation of Surface Areas Disturbed.

(9) The operator shall reclaim affected lands, pursuant to his approved plan, to a condition capable of supporting all practicable uses which such lands were capable of supporting immediately prior to any exploration or mining, or equal, better, or higher uses that have been approved in accordance with this part.

(10) The operator shall stabilize and protect all surface areas affected by the coal mining and reclamation operations to effectively control slides, erosion, subsidence, and attendant air and water pollution. The operator shall remove topsoil separately for replacement on the area pursuant to the approved plan.

(11) Coal storage areas shall be designed and maintained so as to eliminate fire hazards from spontaneous combustion and other accidental ignition. If a coal seam, exposed by surface mining, an accumulation of slack coal, or combustible waste, becomes ignited during the term of a lease, the operator shall immediately take all necessary steps to extinguish the fire.

(12) The operator may construct, if authorized in an approved plan, permanent water impoundments on mining sites as a part of reclamation activites only when they are adequately demonstrated to be in compliance with § 715.13 and § 715.14 of this title, in addition to the following requirements.

(i) The size of the impoundment is adequate for its intended purposes.

(ii) The impoundment dam is constructed with an adequate margin of safety compatible with that of structures constructed under Pub. L. 83–566 (16 U.S.C. 1006).

(iii) The quality of the impounded water will be suitable on a permanent basis for its intended uses, and discharges from the impoundment will not degrade the quality of receiving waters below the water quality standards established pursuant to applicable State and Federal law.

(iv) Final grading will comply with the provisions of § 715.14 of this title and will provide adequate safety and access for proposed water uses.

(v) Water impoundments will not result in the diminution of the quality and quantity of water used by adjacent or surrounding landowners for agricultural, industrial, recreational, or domestic uses.

(13) The operator shall:

(i) Except as provided in paragraph (ii) hereof, allow public access to and upon Federal lands subject to the lease, permit, or license for all lawful and proper purposes, except where such access would unduly interfere with his authorized use.

(ii) Provide warning signs, fencing, flagmen, barricades, and other safety and protective measures as may be necessary to regulate public access, vehicular traffic, and wildlife grazing in all areas of active operations, including lands undergoing reclamation.

(A) To protect the public, wildlife, and livestock from hazards associated with such operations; and

(B) To protect revegetated areas from unplanned and uncontrolled livestock grazing.

(14) The driving of any underground openings by auger or other methods from any strip pit shall not be undertaken except as specifically approved by the Regional Director.

(15) The operator shall:

(i) Treat or dispose of all rubbish and noxious substances in a manner designed to minimize, control, or prevent air and water pollution and the hazards of ignition and combustion.

(ii) Dispose of all waste resulting from the mining and preparation of coal in a manner designed to minimize, control, or prevent air and water pollution and hazards of ignition and combustion. Where surface disposal of solid wastes in areas other than the mine workings or other excavations has been authorized in the approved plan, stabilize such waste, including, where necessary, constructing waste piles in compacted layers with the use of incombustible and impervious materials; shape waste piles to be compatible with the natural surroundings and terrain; cover with topsoil or other suitable material in accordance with this section, and revegetate in accordance with this section. Waste containing coal in such quantity that it may be later separated from the waste by washing or other means shall be stored separately.

(16)(i) The operator shall design to applicable standards, construct,

maintain, and, when no longer necessary and unless otherwise authorized in an approved plan, remove all roads, pipelines, powerlines, and similar utility access facilities and associated bridges, culverts, and ditches, into and across the site of operations, in a manner that will minimize, control, or prevent erosion, siltation, and pollution of water pursuant to the requirements of section 717(j) (1) through (3) of this title and minimize, control, or prevent fugitive dust, damage to fish or wildlife or their habitat, and public or private property.

(ii) No access roads will be constructed unless:

(A) The operator shall have first submitted a surveyed profile accompanied by typical cross sections of the road and ditches, showing pipe, entrance and exit channels, and sediment control structures and other structures or configurations to be used on the road to meet performance standards; and

(B) The location shall have been marked, inspected, and approved by the Regional Director in consultation with the appropriate authorized officer and the surface owner, if other than the United States.

(17)(i) The operator shall comply with the revegetation requirements of § 715.20 of this title.

(ii) The operator's responsibility and liability under his performance bond for revegetation of each planting area shall extend until such time as the appropriate authorized officer, in consultation with the Regional Director and the surface owner, if other than the United States, determines that successful revegetation in compliance with § 715.20 of this title has occurred; provided, however, that this period shall extend for a minimum of 5 full years after the first planting and for a total period of liability not to exceed 10 years from the first planting; and further provided, that,

(iii) Where the appropriate authorized officer of the surface managing agency, in consultation with the Regional Director, the surface owner, if other than the United States, and the operator, determines that natural conditions such as annual precipitation, soil characteristics, and native vegetation are stable and favor rapid revegetation and the revegetation pursuant to paragraph (i) of this section is likely to occur before the expiration of such minimum period, such minimum period will not apply with respect to some or all of the land included in such lease, permit, or license; and,

(iv) Where during any such minimum period such authorized officer of the surface managing agency, in consultation with the Regional Director, the surface owner, if other than the United States, and the operator, determines that natural conditions such as annual precipitation and soil characteristics are sufficiently unstable so as to favor only slow and uncertain revegetation, he may recommend to the Regional Director that the liability of the operator be extended for a period up to 5 years beyond the period initially established, if the financial liability that would be incurred by the operator as a result is reasonably commensurate with the increased probability of successful revegetation.

(v) During the relevant period of liability, the Regional Director and the appropriate authorized officer shall jointly inspect and evaluate the revegetated area.

§ 211.95 Completion of operations and abandonment.

(a) *Grading and backfilling.* Upon completion of backfilling and grading, as required by the approved plan and prior to replacing topsoil and revegetation, the operator shall submit a report thereon, in duplicate, to the Regional Director and request inspection for approval. Whenever it is determined by such inspection that the backfilling and grading has met the requirements of the approved plan, the Regional Director shall recommend to the appropriate authorized officer release of an appropriate amount of the compliance bond for the area to be satisfactorily backfilled and graded.

(b) *Permanent abandonment.* Before permanent abandonment of mining operations, all openings and excavations, including water discharge points, shall be closed or backfilled, or otherwise permanently dealt with in accordance with sound engineering practices and according to the approved plan. Drill holes, trenches, and other excavations for exploration, development, or prospecting shall be abandoned in such a manner as to protect the surface and not to endanger any present or future underground operations or any deposit of oil, gas, other mineral resources, or ground water. Methods of abandonment shall be approved in advance as required in an approved plan, and may include backfilling, regrading, revegetating, cementing, and capped casing, or combinations of these, or other methods. Reclamation and cleanup of permanently abandoned underground or surface areas around and near permanently abandoned underground or surface mines, including, except where otherwise expressly provided in an approved plan, removal of equipment and structures related to the mining operation, shall commence without delay following cessation of mining operations. Areas affected by access roads will be graded, drained, and revegetated in accordance with the approved mining plan and the approved postmining land use prior to bond release. In the event that access or haul roads are intended to remain after abandonment of the operation, pursuant to § 211.94 of this part, they must be designed and constructed so as to be permanently stabilized, using adequate drains, water barriers, and other practices.

(c) *Notice of abandonment; release of bond.* (1) Not less than 30 days prior to cessation or abandonment of operations, the operator shall submit to the Regional Director, in duplicate, a notice of his intention to cease or abandon operations, together with a statement of the exact number of acres affected by his operations, the extent and kind of reclamation accomplished, and a statement as to the structures and other facilities that are to be removed from or remain on the leased, permitted, or licensed lands.

(2) Upon receipt of such notice, the Regional Director, the Mining Supervisor, and the appropriate authorized officer or officers shall promptly make a joint inspection to determine whether all operations have been completed in accordance with the terms and conditions of all leases, permits, or licenses, and with the requirements of the approved mining plan. Where the operator has complied with all such terms, conditions, and requirements, and the regulations of this part, the Regional Director shall recommend to the appropriate authorized officer that the appropriate period of bonded liability to be terminated.

(3) When the surface of lands in a lease, permit, or license is not owned by the United States, the Regional Director shall notify the surface owner and solicit and take into account his comments before recommending to the appropriate authorized officer that the period of such bond liability be terminated.

§ 211.96 Reports.

(a) *Operations.* The operator shall file with the Regional Director within 30 days after the end of each calendar year and within 30 days after any temporary or permanent abandonment of operations, a report, in duplicate, containing the following with respect to

his operations or the operations subject to such abandonment:

(1) Serial number of the lease, permit, or license and description of the affected lands.

(2) The number of acres disturbed and the number of acres reclaimed, including areas on which revegetation is being conducted.

(3) A description of the reclamation work remaining to be done on lands disturbed.

(b) *Revegetation.* (1) The operator shall file a report, in duplicate, with the Regional Director within 30 days after each planting is completed. The report shall:

(i) Identify the lease, permit, or license.

(ii) Show the types of planting or seeding, including mixtures and amounts.

(iii) Show the date of planting or seeding.

(iv) Identify or describe the planted or seeded lands.

(v) Describe any surface manipulation, mulching, fertilization, and irrigation procedures, if any, and contain such other information as may be considered relevant.

(c) The Regional Director and the authorized officer of the Federal surface managing agency shall, as soon as possible after each full growing season, inspect and evaluate the revegetated areas to determine, in consultation with the surface owner if other than the United States, whether satisfactory vegetative growth is being established, or whether additional revegetation efforts should be ordered by the Regional Director.

§ 211.97 Inspections, enforcement, and civil penalties.

(a) *Applicability.* The provisions of this Section shall apply to all activities subject to this subpart.

(b) The operator shall provide access for any authorized representative of the regulatory authority to inspect and investigate the operation without advance notice to determine whether it is in compliance with: all applicable laws, regulations, notices, and orders; the terms and conditions of the lease, permit, or license; and the requirements of any approved mining plan.

(c) Any authorized representative of the regulatory authority or the Mining Supervisor may, at reasonable times and without delay, have access to copy any records, and inspect any monitoring equipment or method of operations required under the regulations of an approved mining plan.

(d) The operator shall provide access at all reasonable times to any authorized representative of the regulatory authority to inspect or investigate the operation pursuant to § 721.13 of this title to determine whether it is in compliance with the Act.

(e) Violations of the Act, the applicable performance standards in this part and in Parts 715, 716, and 717 of this title or the requirements of State law in effect pursuant to a State/Federal Cooperative Agreement contained in this Part or pursuant to § 211.75(a) of this part, the terms and conditions of the lease, permit or license, the requirements of an approved mining plan, or notices or orders of the regulatory authority acting pursuant to section 521 of the Act shall be subject to the enforcement procedures set forth in Part 722 of this title.

(f) If the Director or his authorized representative determines in accordance with § 722.16 of this title that a pattern of violations of any requirement of the Act, the performance standards in this part and in Parts 715, 716, and 717 of this title or the requirements of State law in effect pursuant to a State/Federal Cooperative Agreement contained in this Part or pursuant to § 211.75(a) of this part, the terms and conditions of the lease, permit or license, the requirements of an approved plan, he shall issue an order to show cause why the permit and right to mine should not be suspended or revoked in accordance with the procedures of § 722.16 of this title. The issuance of such an order to show cause shall not diminish the power of the Secretary to seek cancellation of the lease, permit, or license and forfeiture of any compliance bonds under other laws or regulations.

(g) The appropriate authorized officer of the surface managing agency and the Mining Supervisor shall have the right to enter upon the lands subject to this Subpart under lease or license at any reasonable time.

(h) If the appropriate authorized officer or the Mining Supervisor discovers that an operator is conducting activities on lands subject to this part which are not in compliance with the requirements of a lease or licensee, applicable regulations, or an approved plan, and such activities create an imminent danger to the health or safety of the public, or can reasonably be expected to cause significant, imminent environmental harm to land, air, or water resources, such authorized officer or the Mining Supervisor may, upon consultation with an authorized representative of the Regulatory Authority, order the immediate cessation of such activities pursuant to section 521 of the Act and shall promptly notify the Regional Director. Upon receipt of such notification, the Regional Director will exercise jurisdiction to review the order pursuant to section 521 of the Act and determine whether other immediate remedial action is necessary.

(i) If, in the judgment of the Regional Director, the ordered cessation of surface coal mining and reclamation activities, or any portion thereof, will not completely abate the imminent danger to health or safety of the public or the significant, imminent environmental harm to land, air, or water resources, he shall by order impose any affirmative remedial action on the operator which he deems necessary to abate the imminent danger or environmental damage. A written report shall be submitted by the operator to the Mining Supervisor and Regional Director when noncompliance has been corrected.

(j) Failure of the operator to take action, in accordance with an order for cessation of activities, to comply with an order of the Regional Director to take affirmative remedial action to abate an imminent danger or imminent environmental harm issued pursuant to paragraph (f) of this section, or with a written notice of noncompliance issued by an appropriate authorized officer or by the Mining Supervisor in accordance with the provisions of paragraph (h) of this section, shall be grounds for suspension of the operation and for possible cancellation of the lease, permit, or license in accordance with the regulations in 43 CFR Part 3500.

(k) *Civil penalties.* The operator of any coal mining operation subject to the provisions of this part may be assessed civil penalties by the OSM for violations of the Act, the applicable performance standards in this part and the performance standards in Parts 715, 716, and 717 of this title, or any State laws or regulations adopted as Federal law as part of a State/Federal Cooperative Agreement in effect pursuant to this part, or any State standard adopted pursuant to Part 718 of this title, and the terms, conditions, or requirements of an approved mining and reclamation plan or permit in accordance with the procedures in Part 723 of this title. Violations found on Federal lands by an authorized State Regulatory Authority shall be considered by the office when determining whether to assess a civil penalty under Part 723 of this title.

§ 211.98 Appeals.

Orders, determinations, decisions, and notices issued by the Regional Director pursuant to this part may be appealed pursuant to 43 CFR Part 4.

§ 211.99 Applicability of State law.

(a)(1) Any State law or regulation of any State that did not have an approved State/Federal Cooperative Agreement on or before August 3, 1977, which is determined by the Secretary under the procedures in this Section to be a more stringent performance standard for the regulation of surface coal mining and reclamation than that provided under a performance standard in this part or in 30 CFR Parts 715, 716, and 717, shall be adopted by the Secretary and applied in that State as a condition for approval of any proposed exploration or mining plan relating to the mining and reclamation of Federal lands in such State, unless the Secretary determines that the law or regulation is inconsistent with the Act.

(2) A State may request the Secretary to review the provisions of any State law or regulation to determine whether such law or regulation provides a more stringent performance standard than comparable provisions in this part. No particular form of request is required. However, the request shall be in writing and shall include the text of the State law or regulation, identification of the comparable performance standard in this part, and an analysis of the reasons why the State law or regulation is a more stringent standard.

(3) If the Secretary determines that the requirements of State law or regulation may be more stringent than the comparable performance standard in this Part or in 30 CFR Parts 715, 716, and 717, rulemaking shall be initiated under the procedures of section 501 of the Act and 30 CFR part 718 for adoption of the standard.

(b) The Secretary will direct representatives of the Department to consult with appropriate representatives of each State or a number of States for the purpose of modifying cooperative agreements which existed on August 3, 1977, to provide for a joint Federal/State program with respect to the regulation of surface coal mining reclamation operations under the initial regulatory program of this Part. Such agreements shall, at a minimum, provide for:

(1) The cooperative review and approval of mining plans and permits for surface coal mining and reclamation operations on Federal lands;

(2) Enforcement by the Secretary and the authorized State Regulatory Authority of State environmental protection and reclamation standards if such standards are as stringent or more stringent than Federal environmental protection and reclamation standards adopted under the Act;

(3) Enforcement procedures by the State which are as effective as those required by section 502 of the Act; and,

(4) The timely reporting of all violations found by the authorized State Regulatory Authority to the Regional Director. Any such agreement shall be entered into by rulemaking and shall have as its principal purpose the cooperative administration and enforcement of a uniform regulatory program governing surface coal mining and reclamation operations on both Federal and State regulated lands.

(c)(1) Pursuant to section 523 of the Surface Mining Control and Reclamation Act of 1977, any State with a cooperative agreement existing on August 3, 1977, may elect to continue regulation of surface coal mining and reclamation operations on Federal lands within the State prior to approval or disapproval by the Secretary of its State Program pursuant to section 503 of the Act, provided that such existing cooperative agreement is modified to fully incorporate the initial regulatory procedures set forth in section 502 of the Surface Mining Control and Reclamation Act of 1977.

(2) Following promulgation of the Federal lands program pursuant to section 532(a) of the Act, the Secretary will review any cooperative agreements then in effect to determine whether the authorized State regulatory authority has the authority and and resources necessary to implement said program. Upon a determination by the Secretary that the authorized State regulatory authority does not have the necessary authority or resources, the cooperative agreement shall be terminated.

(3) The governor of any State that wishes to modify the cooperative agreement existing on August 3, 1977, shall notify the Secretary in writing of the State's intent to modify the cooperative agreement. The notice of intent to modify the cooperative agreement must have been received by the Secretary prior to December 31, 1977, and the modification to the existing cooperative agreement agreed to within 60 days of the date of publication of these regulations. Failure to give notice or to timely complete the modification shall result in termination of any cooperative agreement executed prior to August 3, 1977.

BILLING CODE 4310-31-M

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 52

(FRL 1494-2)

Approval and Promulgation of Implementation Plans—Rhode Island Receipt of Implementation Plan Revisions: Public Participation and Impact Analysis

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice of Receipt of Submittal to Satisfy Conditions of Plan Approval.

SUMMARY: This notice is to announce the receipt of State Implementation Plan (SIP) revisions for Rhode Island. The revisions were submitted on March 31, 1980 to satisfy two of the conditions of EPA's proposal of Rhode Island's Attainment Plan SIP revisions, which were required under Part D of the Clean Air Act. Rhode Island's submittal amends the narrative portion of the SIP by adding public participation provisions and an analysis of the effects of the Attainment Plan on air quality, health, welfare, the economy, energy supply, and the social environment.

ADDRESSES: Copies of the Rhode Island submittal are available for public inspection during normal business hours at the Environmental Protection Agency, Region I, Room 1903, JFK Federal Building, Boston, Massachusetts 02203; Public Information Reference Unit, Environmental Protection Agency, 401 M Street, S.W., Washington, DC 20460; and Rhode Island Department of Environmental Management, Air Resources Division, 75 Davis Street, Providence, Rhode Island 02908.

FOR FURTHER INFORMATION CONTACT: Gail Petersen, Office of Public Awareness, EPA Region I, Room 2203, JFK Federal Building, Boston, Massachusetts 02203, (617)223-0967.

SUPPLEMENTARY INFORMATION: EPA published a proposed rulemaking notice in the **Federal Register** on December 7, 1979 (44 FR 70486), proposing conditional approval of Rhode Island's Attainment Plan SIP revisions submitted on May 14, June 11, and August 13, 1979. These revisions were submitted to comply with the requirements of Part D of the Clean Air Act by implementing new measures for controlling air pollution, which are designed to achieve attainment of the National Ambient Air Standards by the required deadlines.

However, EPA's proposed approval is based on a commitment by the state to meet several conditions. One of the conditions was that by January 1, 1980 the state must submit a long-term public

participation and consultation program in compliance with grant conditions contained in Rhode Island's FY-1980 program grant under Section 105 of the Act; a second condition was that the state must submit an expanded analysis and summary of public comments on the effects of the SIP revisions, also by January 1, 1980. Although the submittal date agreed to at the time of the proposal was January 1, 1980, EPA and the state agreed that the plan would be submitted on March 31, 1980 due to unavoidable delays in the state's hiring of a public participation staff person. Additionally, although EPA had intended to hold a training course for public participation staff people during the summer of 1979, it was held in December. Since the change is not significant and the deadline was short, EPA did not repropose this condition before today's announcement of the receipt of the submittal.

Rhode Island has submitted SIP revisions, adding public participation provisions and an impact analysis of the Attainment Plan provisions, by the new deadline. EPA is presently reviewing the state's submittal to determine compliance with Clean Air Act requirements, and intends to publish a proposed rulemaking notice in the **Federal Register** by May 30, 1980.

Dated: May 6, 1980.

William R. Adams, Jr.,

Regional Administrator, Region I.

[FR Doc. 80-15276 Filed 5-16-80; 8:45 am]

BILLING CODE 6560-01-M

---

40 CFR Part 180

[FRL 1495-3; PP 9E2261/P133]

Prometryn; Proposed Tolerance

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed Rule.

SUMMARY: This notice proposes that a tolerance be established for residues of the herbicide prometryn on pigeon peas at 0.25 part per million (ppm). The proposal was submitted by Interregional Research Project No. 4. This regulation would establish a maximum permissible level for residues of the herbicide on pigeon peas.

DATE: Comments must be received by June 18, 1980.

ADDRESS COMMENTS TO: Mrs. Patricia Critchlow, Office of Pesticide Programs, Registration Division (TS-767), Environmental Protection Agency, 401 M St., SW, Washington, DC 20460, (202-426-0223).

FOR FURTHER INFORMATION CONTACT: Mrs. Patricia Critchlow at the above address.

SUPPLEMENTARY INFORMATION: Interregional Research Project No. 4 (IR-4), New Jersey Agricultural Experiment Station, PO Box 231, Rutgers University, New Brunswick, NJ 08903, on behalf of the IR-4 Technical Committee and the Agricultural Experiment Station of Puerto Rico, has submitted a pesticide petition (PP 9E2262) to the EPA under the provisions of the Federal Food, Drug, and Cosmetic Act. This petition requests that the Administrator propose that 40 CFR 180.222 be amended by the establishment of a tolerance for combined residues of the herbicide 2,4-bis(isopropylamino)-6-methylthio-*s*-triazine in or on the raw agricultural commodity pigeon peas at 0.25 ppm.

The data submitted in the petition and other relevant material have been evaluated. The toxicology data considered in support of the proposed tolerance included a two-year chronic dog feeding study with a no-observed-effect level (NOEL) of 150 ppm; a two-year chronic rat feeding study with an NOEL of 250 ppm; a reproduction and teratology study in the rat indicating no teratogenic effects at the highest level tested (250 milligrams (mg)/kilogram (kg) of body weight (bw); a three-generation rat reproduction study with no adverse effect noted in three generations at the highest dose tested (100 ppm). Currently, a second oncogenicity study in a second mammalian species is lacking. Mutagenicity testing indicates the subject herbicide is not mutagenic.

The acceptable daily intake (ADI) for this chemical is calculated to be 0.0375 mg/kg body weight bw/day, based on the two-year dog feeding study. Established tolerances use only 0.54% of the ADI. The proposed tolerance will contribute an insignificant amount to the ADI. The theoretical maximum residue contribution (TMRC) from currently established tolerances is calculated to be 0.0121 mg/day/1.5-kg daily diet. The maximum permissible intake (MPI) of this chemical is calculated to be 2.25 mg/day/60-kg human. Since the theoretical increment in exposure is very small (less than 1 percent), it is concluded that the present toxicity data are sufficient to determine that the proposed tolerance will protect the public health.

The metabolism of the subject herbicide is adequately understood, and an adequate analytical method (spectrophotometry) is available for enforcement purposes. There is no reasonable expectation of residues in meat and milk as delineated in 40 CFR 180.6(a)(3). There will be no problem of secondary residues in poultry tissue and eggs. There are presently no actions pending against the continued registration of this chemical, and no other considerations are involved in establishing the proposed tolerance.

The pesticide is considered useful for the purpose for which a tolerance is being sought. Based on the above information and the insignificance of pigeon peas in the diet, it is concluded that the tolerance of 0.25 ppm on pigeon peas established by amending 40 CFR 180.222 will protect the public health. It is proposed, therefore, that the tolerance be established as set forth below.

Any person who has registered or submitted an application for the registration of a pesticide, under the Federal Insecticide, Fungicide, and Rodenticide Act, which contains any of the ingredients listed herein, may request on or before June 18, 1980, that this rulemaking proposal be referred to an advisory committee in accordance with section 408(e) of the Federal Food, Drug, and Cosmetic Act.

Interested persons are invited to submit written comments on the proposed regulations. The comments must bear a notation indicating both the subject and the petition/document control number, "PP 9E2261/P133". All written comments filed in response to this notice of proposed rulemaking will be avaiable for public inspection in the office of Patricia Critchlow, Room 107, East Tower, from 8:30 a.m. to 4 p.m. Monday through Friday.

Under Executive Order 12044, EPA is required to judge whether a regulation is "significant" and therefore subject to the procedural requirements of the Order or whether it may follow other specialized development procedures. EPA labels these other regulations "specialized". This proposed rule has been reviewed, and it has been determined that it is a specialized regulation not subject to the procedural requirements of Executive Order 12044.

[Sec. 408(e), 68 Stat. 514, (21 U.S.C. 346a(e))]

Dated: May 7, 1980.

Douglas D. Campt,

Director, Registration Division, Office of Pesticide Programs.

It is proposed that Part 180, Subpart C, § 180.222 be amended by alphabetically adding pigeon peas at 0.25 ppm to the end of the table to read as follows:

§180.222 Prometryn; tolerances for residues.

* * * * *

Commodity	Parts per million
* * *	* * *
Pigeon peas	0.25

Grantee Personnel Management Policies for Programs Funded Under Titles II, IV, and VII of Economic Opportunity Act of 1964

Correction

In FR Doc. 80-14567, appearing on page 31133 in the issue of Monday, May 12, 1980, the subject heading is corrected to read as shown above.

BILLING CODE 1505-01-M

FEDERAL COMMUNICATIONS COMMISSION

47 CFR Part 73

[BC Docket No. 79-270]

Providing Optimum Conditions for Utilization of New Jersey Television Channel Assignments; Order Extending Time for Filing Comments and Reply Comments

Adopted: May 6, 1980;

Released: May 9, 1980.

AGENCY: Federal Communications Commission.

ACTION: Extension of Comment deadline of a notice of proposed rulemaking.

SUMMARY: At the request of the National Broadcasting Co., Inc., an extension of time for the filing of comments and reply comments in BC Docket No. 79-270 45 FR 16222, Providing Optimum Conditions for Utilization of New Jersey Television Channel Assignments, has been issued.

DATES: Comments must be filed on or before July 8, 1980, and reply comments on or before August 8, 1980.

ADDRESSES: Federal Communications Commission, Washington, D.C. 20554.

FOR FURTHER INFORMATION CONTACT: Israel Teitelbaum, Broadcast Bureau, (202) 632-7792.

SUPPLEMENTARY INFORMATION: In the Matter of providing optimum conditions for utilization of New Jersey televison channel assignments.

By the Chief, Policy and Rules Division:

1. On April 23, 1980 at 45 FR 16222, the National Broadcasting Company, Inc. (NBC) submitted a request for extension of time to file comments in the above-captioned proceeding. On April 30, 1980, CBS filed a pleading supporting NBC's request. Comments are due May 8, 1980.

2. In support of its request, NBC contends that the studies and analysis necessary to support meaningful comments require substantially more than 60 days of preparation. Also, many of the personnel needed to prepare its comments were involved in conducting affiliate relations at the recently concluded National Association of Broadcasters Convention. NBC therefore urges that a grant of its request is warranted.

3. NBC has demonstrated good cause for a grant of its request. Therefore, IT IS ORDERED, pursuant to delegated authority, That the time for filing comments and reply comments in this proceeding IS HEREBY extended to and including July 8, and August 8, 1980, respectively.

Federal Communications Commission.

Henry L. Baumann,

Chief, Policy and Rules Division Broadcast Bureau.

INTERSTATE COMMERCE COMMISSION

49 CFR Part 1033

[No. 37436]

Consolidated Rail Corporation To Furnish Equipment for Certain Unit Train Shippers; Order To Show Cause

April 23, 1980.

AGENCY: Interstate Commerce Commission.

ACTION: Show Cause Order.

SUMMARY: This decision orders Consolidated Rail Corporation (ConRail) to show cause why a cease and desist order should not be entered restraining ConRail from the practice of not providing unit-grain-trains to shippers not owning destination terminal export elevators.

DATE: Interested parties may file comments within the time allowed for respondents (10 days from date of service (May 13, 1980)) by filing 15 copies with the Secretary of the Commission and by serving contemporaneously on respondents by first class mail.

ADDRESS: Send comments to Interstate Commerce Commission, Office of the Secretary, Washington, D.C. 20423.

FOR FURTHER INFORMATION CONTACT: M. F. Clemens, Jr. (202) 275-7840.

By Petition filed October 30, 1979, Coshocton Grain Company (Coshocton), Coshocton, OH, requests the issuance of an Order requiring Consolidated Rail Corporation (ConRail) to show cause why a cease and desist order should not be issued, restraining ConRail from the practice of not providing unit-grain-trains to shippers not owning destination terminal export elevators.

The questions raised by Coshocton relate not only to Coshocton's situation, but also to other grain shippers not having on-line destination terminal export elevators.

There is reason to believe that ConRail's decision not to assign unit-grain-trains to Coshocton was based on a ConRail study regarding unit train turnaround time conducted January, 1979, through July, 1979. ConRail denied unit trains to Coshocton and certain other grain shippers on the basis that these shippers did not have on-line terminal elevators and were therefore less efficient than those shippers having on-line terminal elevators.

For the 1979-1980 shipping season, ConRail implemented the practice of assigning unit trains to those shippers having on-line terminal elevators. ConRail now purportedly assigns unit trains to shippers based upon the average unit train turnaround time of the shippers.

There is good cause to believe that the assignment of unit trains by ConRail solely to shippers having on-line terminal elevators is a practice which may be improper in that there may be no relationship between having on-line terminal elevators and unit train turnaround time. Our independent study of the matter which is attached hereto indicates no such relationship exists.

It appears to the Commission that good cause may exist for entering a service order requiring Consolidated Rail Corporation (ConRail) to furnish unit-grain-trains to all applicants on a fair and equitable basis who can comply with the load and unloading requirements of unit-grain-train tariffs, regardless of the ownership of the terminal elevators.

Accordingly ConRail is ordered to show cause why a service order should not be entered by filing with the Secretary of the Commission within 10 days from the service date of this order 15 copies of its comments setting forth all facts within its knowledge and any arguments which might tend to show that entry of any further order is unnecessary or would be inappropriate.

More specifically, the Commission is interested in obtaining specific information with regard to the following areas of inquiry:

1. The system which ConRail uses to determine which shippers receive unit-grain-trains, and which shippers are denied these trains.

2. Any other information which ConRail believes would be helpful to the Commission in determining the necessity and appropriateness of entering the proposed order. In this connection, ConRail is specifically requested to supply to the Commission the following:

a. A listing of all unit-grain-train shippers who ordered unit-grain-trains for the 1979–80 season. A full explanation, including documentation, describing which shippers will receive trains; which shippers will not receive trains, the reason for excluding trains to shippers not owning terminal elevators; and the method of notification to these shippers.

The Bureau of Investigations and Enforcement is directed to participate in this show cause proceeding for the purpose of developing the record.

A copy of this order shall be served upon the Washington agent for ConRail, and on David Henderson, Worthington, OH, for Coshocton Grain Company. Notice shall be given to the general public by depositing a copy in the Office of the Secretary of the Commission at Washington, D. C., and by publication in the **Federal Register.**

Any interested person may file comments or provide information and argument relating to the necessity and appropriateness of entering the proposed order within the time allowed for respondents to show cause (10 days from service date) by filing 15 copies with the Secretary of the Commission. Copies of any materials filed shall be served contemporaneously upon respondent by first-class mail, postage prepaid.

By the Commission, Chairman Gaskins, Vice Chairman Gresham, Commissioners Stafford, Clapp, Trantum, and Alexis.

Agatha L. Mergenovich,

Secretary.

Investigation to determine if the unit trains assigned to Coshocton Grain experience a slower turnaround time than those assigned to other shippers having on-line port elevators, and if delays existed, were they attributable to Coshocton Grain or to the carriers involved.

All unit-grain-trains moving in ConRail unit train service for the grain year October 1978 through September 1979, were surveyed. During this period (32) 100 car unit-grain-trains from six shippers made 534 trips between various origin elevators in Illinois, Indiana, Kentucky and Ohio to the ports of Albany, New York, Philadelphia, Pennsylvania, and Baltimore, Maryland.

Exhibit A—Summarizes the average movement cycle time for each Unit Train.

Coshocton Grain Company had the best average turnaround time of the 6 shippers checked. Also, their trains were 3rd in unloading efficiency at destination and 3rd in loading efficiency at origin.

ConRail's decision to assign trains to those shippers having on-line terminal elevators was based on a study made by them for period January 1979 through July 1979. This study determined overall turnaround time, but did not reflect the factors influencing the total figure. At that time, according to ConRail computations, Coshocton trains averaged 13.1 days per trip, but did not reflect if that time was railroad delay, origin delay, or destination delay. Another factor that could influence the overall movement cycle is mileage between origin and destination.

Coshocton Grain is 70 miles nearer destination than any other point from which surveyed unit-grain-trains originate, yet transit time, which is in the control of the carrier, in many cases is greater.

COMMISSION ON CIVIL RIGHTS

New Jersey Advisory Committee; Agenda and Notice of Open Meeting

Notice is hereby given, pursuant to the provisions of the Rules and Regulations of the U.S. Commission on Civil Rights, that a planning meeting of the New Jersey Advisory Committee (SAC) of the Commission will convene at 6:00 p.m. and will end at 8:30 p.m., on June 12, 1980, at the Ramada Inn, Schoolhouse Lane, New Brunswick, New Jersey.

Persons wishing to attend this open meeting should contact the Committee Chairperson or the Eastern Regional Office of the Commission, 26 Federal Plaza, Room 1639, New York, New York 10007.

The purpose of this meeting is to discuss program projects.

This meeting will be conducted pursuant to the provisions of the rules and regulations of the Commission.

Dated at Washington, D.C., May 13, 1980.

Thomas L. Neumann,
Advisory Committee Management Officer.

DEPARTMENT OF COMMERCE

Office of the Secretary

[Dept. Org. Order 25-5B; Amdt. 6; Transmittal 492]

National Oceanic and Atmospheric Administration; Department Organization Order Series

Subject: This order effective April 2, 1980 further amends the material appearing at 43 FR 41538 of the National Oceanic and Atmospheric Administration, November 3, 1978, 44 FR 3303 of January 16, 1979, 44 FR 15522 of March 14, 1979, 44 FR 24623 of March 26, 1979, 44 FR 63128 of November 2, 1979, 45 FR 19292 of March 25, 1980, Department Organization Order 25-5B, dated October 16, 1978, is hereby further amended as shown below. The purpose of this amendment is to: abolish the Marine Ecosystems Analysis Program Office and the Outer Continental Shelf Environmental Assessment Program Office, and establish the Office of Marine Pollution Assessment under the Assistant Administrator for Research and Development.

1. *Section 11. Assistant Administrator for Research and Development.*

a. In pen and ink, delete the last sentence of subparagraph .04a. and, in subparagraph .04b., delete the "Marine Ecosystems Analysis Program Office" and the "Outer Continental Shelf Environmental Assessment Program Office."

b. A new paragraph .05 is added to read as follows:

".05 The *Office of Marine Pollution Assessment* provides the focus for and coordinates NOAA's programs and activities in marine pollution research and development, monitoring and assessment, and provides the interface between NOAA marine pollution related programs and the NOAA staff office charged with developing the Comprehensive Federal Plan Relating to Ocean Pollution. It develops and implements comprehensive, integrated and continuing programs to assess short-term and long-term impacts of pollution and other people-induced changes of marine ecosystems; disseminates results developed from such programs to appropriate agencies and persons, and provides advice upon request; and ensures that information regarding ocean pollution research and development and monitoring programs are disseminated in a timely manner and useful form. It implements research necessary to design monitoring programs in marine environments, and provides information on pollution impacts, alternatives, and mitigating measures for resource management decisions when marine ecosystems are subjected to pollution or people-induced alterations. It recommends and advises the Assistant Administrator for Research and Development on policy, programmic priorities, emphasis and direction, and other issues concerned with marine pollution and its effects."

2. The organization chart, Exhibit 1, attached to this amendment supersedes the chart dated September 27, 1979. A copy of the organization chart is on file with the original of this document in the Office of the Federal Register.

Richard A. Frank,
Administrator, National Oceanic and Atmospheric Administration.

Elsa A. Porter,
Assistant Secretary for Administration.

Approved:

Guy W. Chamberlin, Jr.,
Deputy Assistant Secretary for Administration.

BILLING CODE 3510-17-M

International Trade Administration

Discrete Semiconductor Device Subcommittee of the Semiconductor Technical Advisory Committee; Closed Meeting

Pursuant to Section 10(a)(2) of the Federal Advisory Committee Act, 5 U.S.C. App. (1976), notice is hereby given that a meeting of the Discrete Semiconductor Device Subcommittee of the Semiconductor Technical Advisory Committee will be held on Wednesday, June 4, 1980, at 9:30 a.m. in Room 1851, Main Commerce Building, 14th Street and Constitution Avenue, N.W., Washington, D.C.

The Semiconductor Technical Advisory Committee was initially established on January 3, 1973. On December 20, 1974, January 13, 1977, and August 28, 1978, the Assistant Secretary for Administration approved the recharter and extension of the Committee, pursuant to Section 5(c)(1) of the Export Administration Act of 1969, as amended, 50 U.S.C. App. Sec. 2404(c)(1) and the Federal Advisory Committee Act. The Assistant Secretary for Industry and Trade established the Discrete Semiconductor Device Subcommittee on February 9, 1979, pursuant to the charter of the Committee.

The Committee advises the Office of Export Administration with respect to questions involving (A) technical matters, (B) worldwide availability and actual utilization of production technology, (C) licensing procedures which affect the level of export controls applicable to semiconductor products including technical data or other information related thereto, and (D) exports of the aforementioned commodities and technical data subject to multilateral controls in which the United States participates including proposed revisions of any such multilateral controls. The discrete Semiconductor Device Subcommittee was formed to study transistor, diode, photoconductive, and thyristor semiconductor devices with the goal of making recommendations to the Department of Commerce relating to the appropriate parameters for controlling exports for reasons of national security.

The Subcommittee will meet only in Executive Session to discuss matters properly classified under Executive Order 11652 or 12065, dealing with the U.S. and COCOM control program and strategic criteria related thereto.

Written statements may be submitted at any time before or after the meeting.

The Assistant Secretary of Commerce for Administration, with the concurrence of the delegate of the General Counsel, formally determined on September 6, 1978, pursuant to Section 10(d) of the Federal Advisory Committee Act, as amended by Section 5(c) of the Government In The Sunshine Act, P.L. 94–409, that the matters to be discussed in the Executive Session should be exempt from the provisions of the Federal Advisory Committee Act relating to open meetings and public participation therein, because the Executive Session will be concerned with matters listed in 5 U.S.C. 552b(c)(1). Such matters are specifically authorized under criteria established by an Executive Order to be kept secret in the interests of the national defense or foreign policy. All materials to be reviewed and discussed during the Executive Session of the meeting have been properly classified under Executive Order 11652 or 12065. All Subcommittee members have appropriate security clearances.

The complete Notice of Determination to close meetings or portions thereof of the series of meetings of the Semiconductor Technical Advisory Committee and of any subcommittee thereof was published in the **Federal Register** on December 21, 1978 (43 FR 59536).

For further information contact Mrs. Margaret Cornejo, Room 1617M, Office of Export Administration, International Trade Administration, U.S. Department of Commerce, Washington, D.C. 20230, phone 202–377–2583.

Dated: May 14, 1980.

Kent Knowles,

Director, Office of Export Administration, International Trade Administration, U.S. Department of Commerce.

[FR Doc. 80–15306 filed 5–16–80; 8:45 am]

BILLING CODE 3510–25–M

Electronic Instrumentation Technical Advisory Committee; Partially Closed Meeting

Pursuant to Section 10(a)(2) of the Federal Advisory Committee Act, as amended, 5 U.S.C. App. 10(a)(2) (1976), notice is hereby given that a meeting of the Electronic Instrumentation Technical Advisory Committee will be held on Tuesday, June 3, 1980, at 9:30 a.m. in Room 3708, Main Commerce Building, 14th Street and Constitution Avenue, NW., Washington, D.C.

The Electronic Instrumentation Technical Advisory Committee was initially established on October 23, 1973. On October 7, 1975, October 21, 1977, and August 28, 1978, the Assistant Secretary for Administration approved the recharter and extension of the Committee pursuant to Section 5(c)(1) of the Export Administration Act of 1969, as amended, 50 U.S.C. App. Section 2404(c)(1) and the Federal Advisory Committee Act.

The Committee advises the Office of Export Administration with respect to questions involving (A) technical matters, (B) worldwide availability and actual utilization of production technology, (C) licensing procedures which affect the level of export controls applicable to electronic instrumentation, including technical data or other information related thereto, and (D) exports of the aforementioned commodities and technical data subject to multilateral controls in which the United States participates, including proposed revisions of any such multilateral controls.

The Committee meeting agenda has five parts:

General Session

(1) Opening remarks by the chairman.

(2) Presentation of papers or comments by the public.

(3) Discussion of ATE in the infrastructure of manufacturing.

(4) Technology in the ATE system.

Executive Session

(5) Discussion of matters properly classified under Executive Order 11652 or 12065, dealing with the U.S. and COCOM control program and strategic criteria related thereto.

With respect to agenda item (5), the Assistant Secretary for Administration, with the concurrence of the delegate of the General Counsel, formally determined on September 6, 1978, pursuant to Section 10(d) of the Federal Advisory Committee Act, as amended by Section 5(c) of the Government In The Sunshine Act, Pub. L. 94–409, that the matters to be discussed in the Executive Session should be exempt from the provisions of the Federal Advisory Committee Act relating to open meetings and public participation therein, because the Executive Session will be concerned with matters listed in 5 U.S.C. 552b(c)(1). Such matters are specifically authorized under criteria established by an Executive Order to be kept secret in the interests of the national defense or foreign policy. All materials to be reviewed and discussed by the Committee during the Executive Session of the meeting have been properly classified under Executive Order 11652 or 12065. All Committee members have appropriate security clearances.

The complete Notice of Determination to close meetings or portions thereof of the series of meetings of the Electronic Instrumentation Technical Advisory

Committee and of any subcommittees thereof was published in the **Federal Register** on December 27, 1978 (43 FR 60328).

Copies of the minutes of the open portions of the meeting will be available by calling Mrs. Margaret Cornejo, Policy Planning Division, Office of Export Administration, International Trade Administration, Room 1617M, U.S. Department of Commerce, Washington, D.C. 20230, telephone: A/C 202–377–2583.

For further information, contact Mrs. Cornejo, either in writing or by phone at the address or number shown above.

Dated: May 14, 1980.

Kent N. Knowles,

Director, Office of Export Administration, Department of Commerce.

BILLING CODE 3510–24–M

Semiconductor Manufacturing Materials and Equipment Subcommittee of the Semiconductor Technical Advisory Committee; Closed Meeting

Pursuant to Section 10(a)(2) of the Federal Advisory Committee Act, 5 U.S.C. App. (1976), notice is hereby given that a meeting of the Semiconductor Manufacturing Materials and Equipment Subcommittee of the Semiconductor Technical Advisory Committee will be held on Wednesday, June 4, 1980, at 9:30 a.m. in Room 3708, Main Commerce Building, 14th Street and Constitution Avenue, N.W., Washington, D.C.

The Semiconductor Technical Advisory Committee was initially established on January 3, 1973. On December 20, 1974, January 13, 1977, and August 28, 1978, the Assistant Secretary for Administration approved the recharter and extension of the Committee, pursuant to Section 5(c)(1) of the Export Administration Act of 1969, as amended, 50 U.S.C. App. Sec. 2404(c)(1) and the Federal Advisory Committee Act. The Assistant Secretary for Industry and Trade established the Semiconductor Manufacturing Materials and Equipment Subcommittee on February 9, 1979, pursuant to the charter of the Committee.

The Committee advises the Office of Export Administration with respect to questions involving (A) technical matters, (B) worldwide availability and actual utilization of production technology, (C) licensing procedures which affect the level of export controls applicable to semiconductor products, including technical data or other information related thereto, and (D) exports of the aforementioned commodities and technical data subject to multilateral controls in which the United States participates including proposed revisions of any such multilateral controls. The Semiconductor Manufacturing Materials and Equipment Subcommittee was formed to study the technical and strategic value of semiconductor device production equipment and materials for the purpose of maintaining a continuous review of the export control technical parameters, and the formulation of recommendations to the Commerce Department for parameter updating as appropriate for reasons of national security.

The Subcommittee will meet only in Executive Session to discuss matters properly classified under Executive Order 11652 or 12065, dealing with the U.S. and COCOM control program and strategic criteria related thereto.

Written statements may be submitted at any time before or after the meeting.

The Assistant Secretary of Commerce for Administration, with the concurrence of the delegate of the General Counsel, formally determined on September 6, 1978, pursuant to Section 10(d) of the Federal Advisory Committee Act, as amended by Section 5(c) of the Government in the Sunshine Act, Pub. L. 94–409, that the matters to be discussed in the Executive Session should be exempt from the provisions of the Federal Advisory Committee Act relating to open meetings and public participation therein, because the Executive Session will be concerned with matters listed in 5 U.S.C. 552b(c)(1). Such matters are specifically authorized under criteria established by an Executive Order to be kept secret in the interests of the national defense or foreign policy. All materials to be reviewed and discussed during the Executive Session of the meeting have been properly classified under Executive Order 11652 or 12065. All Subcommittee members have appropriate security clearances.

The complete Notice of Determination to close meetings or portions thereof of the series of meetings of the Semiconductor Technical Advisory Committee and of any subcommittee thereof was published in the **Federal Register** on December 21, 1978 (43 FR 59536).

For further information contact Mrs. Margaret Cornejo, Office of Export Administration, International Trade Administration, Room 1617M, U.S. Department of Commerce, Washington, D.C. 20230, Phone (202) 377–2583.

BILLING CODE 3510–25–M

Minority Business Development Agency

Financial Assistance Application Announcement

The Minority Business Development Agency (MBDA), formerly the Office of Minority Business Enterprise, announces that it is seeking applications under its program to operate one project for a 12 month period beginning July 1, 1980, within the Borough of Queens. The cost of the project is estimated to be $229,200 and the Project Number is 02–10–45323–00.

Funding Instrument: It is anticipated that the funding instrument, as defined by the Federal Grant and Cooperative Agreement Act of 1977, will be a grant.

Program Description: Executive Order 11625 authorizes MBDA to fund projects which will provide technical and management assistance to eligible clients in areas related to the establishment and operation of businesses. This proposed project is specifically designed to provide business information, counseling, financial packaging assistance, and assistance in identifying and exploiting business opportunities and new and/or expanding markets.

Eligibility Requirements: There are no restrictions. Any for-profit or non-profit institution is eligible to submit an application.

Application Materials: An application kit for this project may be requested by writing to the following address: New York Regional Office, Minority Business Development Agency, U.S. Department of Commerce, 26 Federal Plaza, Rm. 3707, New York, NY 10007.

In requesting an application kit, the applicant must specify its profit status (i.e., a State or local government, federally recognized Indian tribunal unit, educational institution, hospital, other type of non-profit organization, or if the applicant is a for-profit firm). This information is necessary to enable MBDA to include the appropriate cost principles in the application kit.

Award Process: All applications that are submitted in accordance with the instructions in the application kit will be submitted to a panel for review and ranking. The applications will be ranked according to the capability of the staff assigned to the project, the management

capability of the applicant, the proposed program plan, the budget allocation plan, and the applicant's knowledge of the area to be served. Specific criteria will be included in the application kit.

Renewal Process: If an award is made, continuation awards for up to two additional years may be made to the successful recipient without competition, provided that funds have been appropriated for a project of this kind, and MBDA has determined that such funds are available, there is a continuing need for a project of this kind, and the recipient has performed satisfactorily.

Closing Date: Applicants are encouraged to obtain an application kit as soon as possible in order to allow sufficient time to prepare and submit an application before the closing date of June 5, 1980. Detailed submission procedures are outlined in each application kit.

11.800 Minority Business Development.
(Catalog of Federal Domestic Assistance)

Dated: May 13, 1980.

Allan A. Stephenson,

Deputy Director.

BILLING CODE 3510-21-M

National Oceanic and Atmospheric Administration

Receipt of Petition for Amendment of Rule

Notice is given that on April 3, 1980, the National Oceanic and Atmospheric Administration (NOAA) received a petition, from the Edison Electric Institute, for the reconsideration of a petition, denied on December 6, 1979, for the amendment of a rule. Petitioner request that NOAA amend certain regulations pertinent to the implementation of Section 307(c)(3)(A) of the Coastal Zone Management Act of 1972, as amended (16 U.S.C. 1456(c)(3)(A)).

The cited section of the Act requires that any activity which requires a Federal license or permit and which affects land or water uses in the coastal zone of a State must be conducted in a manner consistent with the State's approved coastal management program. The pertinent regulations declare this consistency requirement to apply to any such activity for which an *initial* application for a Federal license or permit is made and, under certain circumstances, to any such activity for which a *renewal* application is made. With regard to a renewal application, Petitioner seeks to restrict the application of the consistency requirement to a renewal only if the "affected State demonstrates that changes in the construction or operation of this facility or activity will cause *new* land or water use coastal zone effects substantially different than those originally authorized" (emphasis supplied). The pertinent regulations appear in 15 CFR Part 930, Subpart D (44 FR 37150, June 25, 1979).

Pursuant to § 14.03 of NOAA Directive 21-24, the petition has been referred to the Assistant Administrator for Coastal Zone Management for consideration. Pursuant to § 14.06 of the Directive, the Assistant Administrator must notify the Petitioner of a decision to proceed or not to proceed with the amendment within 120 days of receipt of the petition.

Questions with regard to this notice may be asked of Ms. Jane Rogers, Acting Chief, Policy and External Relations, NOAA, 2001 Wisconsin Avenue, N.W., Washington, D.C. 20235 (202-634-4245).

Dated: May 9, 1980.

Michael Glazer,

Assistant Administrator for Coastal Zone Management.

BILLING CODE 3510-08-M

COMMITTEE FOR PURCHASE FROM THE BLIND AND OTHER SEVERELY HANDICAPPED

Procurement List 1980; Addition

AGENCY: Committee for Purchase from the Blind and Other Severely Handicapped.

ACTION: Addition to Procurement List.

SUMMARY: This action adds to Procurement List 1980 a commodity to be produced by workshops for the blind and other severely handicapped.

EFFECTIVE DATE: May 19, 1980.

ADDRESS: Committee for Purchase from the Blind and Other Severely Handicapped, 2009 14th Street North, Suite 610, Arlington, Virginia 22201.

FOR FURTHER INFORMATION CONTACT: C. W. Fletcher (703) 557-1145.

SUPPLEMENTARY INFORMATION: On February 15, 1980, the Committee for Purchase from the Blind and Other Severely Handicapped published notice (45 FR 10394) of proposed addition to Procurement List 1980, Novembert 27, 1979 (44 FR 67925).

After consideration of the relevant matter presented, the Committee has determined that the commodity listed below is suitable for procurement by the Federal Government under 41 U.S.C. 46-48c, 85 Stat. 77.

Accordingly, the following commodity is hereby added to Procurement List 1980: *Class 8315,* Buckle, Belt, Trousers, 8315-00-543-3724.

E. R. Alley, Jr.,

Acting Executive Director.

BILLING CODE 6820-33-M

DEPARTMENT OF DEFENSE

Office of the Secretary

Defense Science Board Review Panel on ASW; Advisory Committee Meeting

An ASW Review Panel under the Defense Science Board will meet in closed session on 6 June 1980 in Washington, D.C.

The mission of the Defense Science Board is to advise the Secretary of Defense and the Under Secretary of Defense for Research and Engineering on scientific and technical matters as they affect the perceived needs of the Department of Defense.

The ASW Review Panel will review the technical aspects of ASW programs in the 6 June meeting.

In accordance with 5 U.S.C. App 1 § 10(d) (1976), it has been determined that this Defense Science Board Task Force meeting concerns matters listed in 5 U.S.C. § 552b(c)(1) (1976), and that accordingly this meeting will be closed to the public.

May 13, 1980.

M. S. Healy,

OSD Federal Register Liaison Officer, Washington Headquarters Services, Department of Defense.

BILLING CODE 3810-70-M

DEPARTMENT OF ENERGY

Bonneville Power Administration

Public Utility Regulatory Policies Act; Hearings

AGENCY: Department of Energy, Bonneville Power Administration.

ACTION: Notice of hearings respecting standards for utility practices.

SUMMARY: Bonneville Power Administration (Bonneville) will hold hearings on Wednesday, June 18, 1980, to consider and determine whether or not it is appropriate to implement standards for utility practices concerning master metering, automatic ajustment clauses, information to consumers, procedures for termination of electric service, and advertising, as provided by Section 113 of the Public Utility Regulatory Policies Act (PURPA, Pub. L. 95-617). Written data, views, and

comments on the standards are requested from any interested person.

DATES: Public hearings concerning the adoption of the utility practices will be held on Wednesday, June 18, 1980, in the Auditorium, Bonneville Power Administration headquarters building, 1002 NE. Holladay Street, Portland, Oregon, commencing at 9 a.m. and at 7 p.m.

SUPPLEMENTAL INFORMATION: The Public Utility Regulatory Policies Act (PURPA), Section 113, requires certain nonregulated electric utilities to consider certain specified standards for utility practices and to make a determination concerning whether or not it is appropriate to implement such standards for its practices. The consideration is required to be after a public hearing; the announced hearing is the public hearing for such purpose. Written and oral evidence will be accepted at the hearing. The determination concerning whether to implement standards must be based upon such evidence.

Bonneville already has considered ratemaking standards, as required by Section 111 of PURPA, and has adopted such standards as are appropriate for Bonneville.

SUBJECT OF HEARINGS: The Federal standards which must be considered and which define the scope of this hearing are specified by Section 113(b) of the Public Utility Regulatory Policies Act. Bonneville, after considering the evidence, may adopt or reject any one or more of the standards or may adopt any standard in part.

The electric consumers with which these standards are concerned include any person, State agency, or Federal agency to which electric power is sold by Bonneville.

The standards proposed by PURPA raise issues which are required to be considered and determined as a result of these hearings. The proposed standards generally provide that:

(1) *Master Metering*—Master metering of electric service in the case of new buildings shall be prohibited or restricted if

(a) there is more than one unit in the building,

(b) the occupant of each such unit has control over a portion of the electric energy used in such unit, and

(c) with respect to such portion of electric energy used in such unit, the long-run benefits to the electric consumers in such building exceed the costs of purchasing and installing separate meters in such building.

Master metering refers to, although is not defined as, the use of a single meter to measure electric energy consumed by a group of electricity customers. It is frequently found in apartment and office buildings. Bonneville does not directly serve any individual buildings.

(2) *Automatic Adjustment Clauses*—No electric utility may increase any rate pursuant to an automatic adjustment clause unless:

(a) such clause is determined to provide incentives for efficient use of resources (including incentives for economical purchases and use of fuel and electric energy) by such electric utilities. Such determination shall be made at least once every 4 years. And,

(b) such clause insures the maximum economy in those operations and purchases which affect the rates to which such clause applies. The clause will be reviewed at least once every 2 years.

The term "automatic adjustment clause" means a provision of a rate schedule which provides for increases or decreases, without prior hearing, in rates reflecting increases or decreases in costs incurred by an electric utility. The term does not include interim rates. Bonneville does not currently, nor does it plan to, have automatic adjustment clauses in its contracts.

(3) *Information to Consumers*—Each electric utility shall transmit to each of its electric consumers a clear and concise explanation of the existing rate schedule, and any rate schedule applied for, which is applicable to such consumer. Such statement shall be transmitted to each such consumer—

(a) not later than 60 days after the date of commencement of service to such consumer or 90 days after the standard is adopted with respect to such electric utility, whichever last occurs, and

(b) not later than 30 days after such utility's proposal for any change in a rate schedule applicable to such consumer.

Each electric utility shall transmit to each of its electric consumers not less frequently than once each year—

(a) a clear and concise summary of the existing rate schedules applicable to each of the major classes of its electric consumers for which there is a separate rate, and

(b) an identification of any classes whose rates are not summarized.

Each electric utility, on request of an electric consumer of such utility, shall transmit to that consumer a clear and concise statement of the actual consumption (or degree-day adjusted consumption) of electric energy by such consumer for each billing period during the prior year.

An electric utility means any person, State agency, or Federal agency which sells electric energy.

Electric consumer means any person, State agency, or Federal agency to which electric energy is sold other than for purposes of resale.

(4) *Procedures for Termination of Electric Service*—No electric utility may terminate electric service to any electric consumer unless reasonable prior notice (including notice of rights and remedies) is given to such consumer and such consumer has a reasonable opportunity to dispute the reasons for such termination; and during any period when termination of service to an electric consumer would be especially dangerous to health and such consumer establishes that—

(a) it is unable to pay for such service in accordance with the requirements of the utility's billing, or

(b) it is able to pay for such service but only in installments,

such service may not be terminated. Electric consumer means any person, State agency, or Federal agency to which electric energy is sold other than for purposes of resale.

(5) *Advertising*—No electric utility may recover from any person other than shareholders or other owners of such utility any direct or indirect expenditure by such utility for promotional or political advertising.

Political advertising means any advertising for the purpose of influencing public opinion with respect to legislative, administrative, or electoral matters, or with respect to any controversial issue of public importance.

Promotional advertising means any advertising for the purpose of encouraging any person to select or use the service or additional service of an electric utility, or the selection for installation of any appliance or equipment designed to use such utility's service.

PROCEDURE OF HEARING: All interested persons are invited to participate in this hearing. Persons desiring to appear and make statements shall present themselves, in person or by counsel, at the beginning of the hearing at 9 a.m. or 7 p.m. on June 18, 1980.

The hearing will be presided over by a hearing officer designated by the Bonneville Administrator. The hearing will be informal. Everyone who wishes to present his material, orally or in writing, will be permitted to do so. Those who make a presentation may be asked to clarify any part of that presentation upon inquiry by any other participant. Anyone wishing further information with respect to the

procedures may contact the Hearing Officer, Robert L. Jones, at the General Counsel's Office, Bonneville Power Administration, P.O. Box 3621, Portland, Oregon 97208, or at telephone number (503) 234–3361, extension 4208. The Hearing Officer will determine the order in which statements shall be made. If a large number of persons ask to speak, the time allowed each speaker may be limited. This will not be a judicial or evidentiary type hearing. Questions may be asked only by or with the permission of the Hearing Officer; and there will be no cross-examination of the persons presenting statements. Rebuttal statements will be given in the order in which the initial statements were made and will be subject to time limitations.

Any decision made by Bonneville with respect to the matters to be considered at the hearing will be based on the official record of the proceedings.

The Hearing Officer will disclose at the beginning of the hearing any additional rules necessary for insuring orderly procedure.

The hearing will be transcribed. Copies of the transcript may be ordered at the cost of reproduction from the Office of General Counsel, Bonneville Power Administration, P.O. Box 3621, Portland, Oregon 97208, or directly from the reporter.

Interested persons have an additional 30 days from the date of the hearing to submit written comments.

All written material received by Bonneville before 4:30 p.m. on July 18, 1980, will be made part of the official record and will be considered by Bonneville.

The Bonneville Branch of Rates has prepared written statements concerning the PURPA standards. The statements include information and analysis of each standard to be considered. The statements are now available to the public; and they will be made part of the official record.

Copies of the staff statement will be available at the hearings and are now available by contacting Mrs. Donna Lou Geiger, Public Involvement Coordinator, Bonneville Power Administration, P.O. Box 12999, Portland, Oregon 97212, or from Bonneville's Area and District Offices, located as follows: Spokane Area Office, Room 561, U.S. Court House, Spokane, Washington 99201; Kalispell District Office, Box 758, Kalispell, Montana 59901; Wenatchee District Office, Room 314, U.S. Federal Building, 301 Yakima Street, P.O. Box 741, Wenatchee, Washington 98801; Portland Area Office, 1500 NE. Irving Street, Room 288, P.O. Box 3621, Portland, Oregon 97208; Eugene District Office, U.S. Federal Building, Room 206, 211 East 7th Street, Eugene, Oregon 97401; Seattle Area Office, 415 First Avenue North, Room 250, Seattle, Washington 98109; Walla Walla Area Office, West 101 Popular, P.O. Box 1518, Walla Walla, Washington 99362; Idaho Falls District Office, 531 Lomax Street, P.O. Box 2558, Idaho Falls, Idaho 83401.

The official record of the proceedings will consist of the verbatim transcript of the hearings and copies of all written material submitted within the time set forth above. The summary of the record will be prepared by the Hearing Officer and will be transmitted to the Bonneville Administrator along with the complete official record. The record will be used by the Administrator in making the determinations required by Section 113 of PURPA.

Individual copies of the record will be available to the public at cost of reproduction. Copies will be also be kept on file for public inspection at the Office of the Public Involvement Coordinator, Bonneville Power Administration Building, 1002 NE. Holladay Street, Portalnd, Oregon.

WRITTEN COMMENTS: Written comments will be accepted before the hearing and until 4:30 p.m., July 18, 1980, and may be delivered or mailed to Mrs. Donna Lou Geiger, Public Involvement Coordinator, Bonneville Power Administration, P.O. Box 12999, Portland, Oregon 97212.

CONSUMER REPRESENTATION: Any person may appear at this hearing either in person or by an attorney or both.

As provided by Section 122 of PURPA, if no alternative means for assuring representation of electric consumers is provided, and if an electric consumer of Bonneville substantially contributes to the approval, in whole or in part, of a position advocated by such consumer at these hearings and relating to any of the subjects of this hearing, Bonneville will compensate such consumer for reasonable attorney fees, expert witness fees, and other reasonable costs incurred in preparation and advocacy of such position in this hearing.

A notice of intention to claim such fees and costs shall be presented in writing before the close of the oral hearing. Those electric consumers of Bonneville who are found to be entitled to such fees and costs under Section 122(a) of PURPA will be so notified and required thereafter to file a written claim. The written claim shall be on oath and shall state (1) the names and addresses of the consumer and of his attorney, (2) a recitation of the entire fee contract made between the consumer and his attorney and witness, (3) a detailed statement of the time and charges of the attorney or witness or both for which reimbursement is sought, (4) an itemization of any other costs for which reimbursement is sought, and (5) information as to the financial situation of the consumer.

The determination as to what, if any, attorney fees, witness fees, and costs will be reimbursed by Bonneville will be included in the final order or determination in these proceedings. Payment to be made will be processed in due course thereafter and mailed to the consumer, or his attorney, or both.

FURNISHING INFORMATION: Bonneville will furnish information on the PURPA standards in accordance with the Freedom of Information Act.

FOR FURTHER INFORMATION CONTACT: Ms. Donna Lou Geiger, Public Involvement Coordinator, Bonneville Power Administration, P.O. Box 12999, Portland, Oregon 97212; (503) 234–3361, extension 4261. Toll-free number for Oregon callers 800–452–8429; for callers from Washington, Idaho, Montana, Utah, Nevada, Wyoming, and California 800–547–6048.

Dated: May 9, 1980.

H. J. Durocher,

Acting Administrator.

[FR Doc. 80-15200 Filed 5-16-80; 8:45 am]

BILLING CODE 6450-01-M

Economic Regulatory Administration

Niagara Mohawk Power Corp.; Powerplant and Industrial Fuel Gas Act of 1978 Withdrawal of Acceptance of Petition for Exemptions; Withdrawal of Order Improvidently Issued

The Economic Regulatory Administration (ERA) of the Department of Energy hereby gives notice (1) that it has withdrawn its acceptance of a petition filed by Niagara Mohawk Power Corporation (Niagara) for special temporary public interest exemptions, pursuant to Section 311(e) of the Powerplant and Industrial Fuel Use Act of 1978 (FUA or the Act), 42 U.S.C. 8301 *et seq.* and 10 CFR Part 508, and (2) that it has withdrawn an order improvidently issued February 27, 1980, and published in the **Federal Register**, March 10, 1980 (45 FR 15253), to Delmarva Power and Light Company (Delmarva) pursuant to Section 311(e) of FUA, 10 CFR 501.68 and 10 CFR 508.

(1) The petition filed by Niagara for which ERA has withdrawn acceptance sought exemptions from the natural gas use prohibitions of Sections 301(a) (2) and (3) of the Act for the following units:

Docket No.	Petitioner	Generating station	Unit identification
52053-2539-01-41	Niagara Mohawk Power Corp	Albany Steam (Bethlehem, N.Y.)	No. 1.
52053-2539-02-41			No. 2.
52053-2539-03-41			No. 3.
52053-2539-04-41			No. 4.

(2) The order improvidently issued to Delmarva, which ERA has withdrawn, purported to grant exemptions from the natural gas use prohibitions of Sections 301(a) (2) and (3) of the Act to the following units:

Docket No.	Petitioner	Generating station	Unit identification
5769-0593-01-41	Delmarva Power and Light Co.	Edge Moor (Wilmington, Del.)	No. 1.
5769-0593-03-41			No. 3.
5769-0593-04-41			No. 4.

Both petitioners, Niagara and Delmarva, have been sent letters by certifiied mail informing them of the withdrawals.

SUPPLEMENTARY INFORMATION: (1) ERA published a notice of acceptance of Niagara's petition for special temporary public interest exemptions for the units listed in item (1), above, on March 21, 1980 (45 FR 18523). Niagara had filed for these exemptions pursuant to 10 CFR 508.

(2) ERA improvidently issued the order which purported to grant special temporary public interest exemptions to the units listed in item (2), above, on February 27, 1980, which was published in the **Federal Register**, March 10, 1980 (45 FR 15253).

Section 702(b) of the Fuel Use Act indicates that the provisions of Title III of FUA shall not apply to powerplants for which an order issued pursuant to Section 2(a) of the Energy Supply and Environmental Coordination Act of 1974 (ESECA), before the effective date of the Fuel Use Act, was pending on that date (May 8, 1979). Each of the above listed Niagara and Delmarva units were issued orders under the authority of Section 2(a) of ESECA. Since these units are not subject to the prohibitions of Sections 301(a)(2) and (3), of Title III of the Fuel Use Act, ERA has withdrawn its acceptance of the Niagara petition and the order issued improvidently to Delmarva.

Any questions regarding this action should be directed to Mr. James W. Workman, Acting Director, Existing Facilities Conversion Division, Office of Fuels Conversion, Economic Regulatory Administration, Department of Energy, Room 3128, 2000 M Street, NW., Washington, D. C. 20461, (202) 653-3637.

Issued in Washington, D. C. on May 9, 1980.

Robert L. Davies,

Assistant Administrator, Office of Fuels Conversion, Economic Regulatory Administration.

[FR Doc. 80-15255 Filed 5-16-80; 8:45 am]

BILLING CODE 6450-01-M

Refiners Crude Oil Allocation Program; First Supplemental Notice for Allocation Period of April 1, 1980, Through September 30, 1980 and Issuance of Emergency Allocations for March, April, May and June 1980

The notice specified in 10 CFR 211.65(g) of the refiners crude oil allocation (buy/sell) program for the allocation period of April 1, 1980, through September 30, 1980, was issued March 21, 1980 (45 FR 21010, March 31, 1980). The ERA hereby issues a first supplemental buy/sell list for the allocation period of April 1, 1980, through September 30, 1980, which sets forth new emergency allocations for the months of March, April, May, and June 1980, assigned pursuant to 10 CFR 211.65(c)(2), as amended on April 27, 1979, (44 FR 26060, May 4, 1979).

The supplemental buy/sell list for the allocation period April 1, 1980, through September 30, 1980, is set forth as an appendix to this notice. The list includes the names of the small refiners granted emergency allocations for the months of March, April, May, and June 1980, and their eligible refineries; the quantity of crude oil each refiner is eligible to purchase; the fixed percentage share for each refiner-seller; and the additional sales obligation of each refiner-seller, which reflects each refiner-seller's sales obligation for the emergency allocations listed herein.

The allocations for the small refiners on the supplemental buy/sell list were determined in accordance with 10 CFR 211.65(c)(2). Sales obligations for refiner-sellers were determined in accordance with 10 CFR 211.65(e) and (f).

The buy/sell list covers PAD Districts I through V, and amounts shown are in barrels of 42 gallons each, for the specified period. Pursuant to 10 CFR 211.65(f), each refiner-seller shall offer for sale during an allocation period, directly or through exchanges to refiner-buyers, a quantity of crude oil equal to that refiner-seller's sales obligation plus any volume that the ERA directs the refiner-seller to sell pursuant to 10 CFR Section 211.65(j).

Pursuant to 10 CFR 211.65(h), each refiner-buyer and refiner-seller is required to report to ERA in writing or by telegram the details of each transaction under the buy/sell list within forty-eight hours of the completion of arrangements therefor. Each report must identify the refiner-seller, the refiner-buyer, the refineries to which the crude oil is to be delivered, the volumes of crude oil sold or purchased, and the period over which the delivery is expected to take place.

The procedures of 10 CFR 211.65(j) provide that if a sale is not agreed upon subsequent to the date of publication of this notice, a refiner-buyer that has not been able to negotiate a contract to purchase crude oil may request that the ERA direct one or more refiner-sellers to sell a suitable type of crude oil to such refiner-buyer. Such request must be received by the ERA no later than June 9, 1980. Upon such request, the ERA may direct one or more refiner-sellers that have not completed their required sales to sell crude oil to the refiner-buyer.

In directing refiner-sellers to make such sales, ERA will consider the percentage of each refiner-seller's sales obligation for the allocation period that has been sold as reported pursuant to § 211.65(h), as well as the refiner-seller or sellers that can best be expected to consummate a particular directed sale. If, in ERA's opinion, a valid directed sale request cannot reasonably be expected to be consummated by a refiner-seller that has not completed all or substantially all of its sales obligation for the allocation period, the ERA may issue one or more directed sales orders that would result in one or more refiner-sellers selling more than their published sales obligations for that allocation period. In such cases, the refiner-seller or sellers will receive a barrel-for-barrel reduction in their sales obligations for the next allocation period pursuant to 10 CFR 211.65(f)(3)(ii).

If the refiner-buyer declines to purchase the crude oil specified by ERA, the rights of that refiner-buyer to purchase that volume of crude oil are forfeited during this allocation period, provided that the refiner-seller or refiner-sellers have fully complied with the provision of 10 CFR 211.65.

Refiner-buyers making requests for directed sales must document their

inability to purchase crude oil from refiner-sellers by supplying the following information to ERA:

(i) Name of the refiner-buyer and of the person authorized to act for the refiner-buyer in buy/sell program transactions.

(ii) Name and location of the refineries for which crude oil has been sought, the amount of crude oil sought for each refinery, and the technical specifications of crude oils that have historically been processed in each refinery.

(iii) Statement of any restrictions, limitations, or constraints on the refiner-buyer's purchases of crude oil, particularly concerning he manner or time of deliveries.

(iv) Names and locations of all refiner-sellers from which crude oil has been sought under the buy/sell notice, the refineries for which crude oil has been sought, and the volume and specifications of the crude oil sought from each refiner-seller.

(v) The response of each refiner-seller to which a request to purchase crude oil has been made, and the name and telephone number of the individual contacted at each such refiner-seller.

(vi) Such other pertinent information as ERA may request.

Note the change of address. All reports and applications made under this notice should be addressed to: Chief, Crude Oil Allocation Branch, 2000 M Street, N.W., Room 6128, Washington, D.C. 20461. TWX's may be sent to 710–822–9454 (answerback EVFTJ WSH).

Also note that the phone number for the Crude Oil Allocation Branch has been changed to 202–653–3459.

Section 211.65(c)(2)(ii), as amended on March 27, 1980, (45 FR 21196, March 31, 1980), states in part that applications for emergency allocations "must be submitted by the first day of the month prior to the month(s) for which an allocation is sought but not before the 20th day of the second month prior to the month(s) for which an allocation is sought." This provision is intended to permit ERA to receive applications and issue emergency allocations in a timely fashion.

Section 211.65(c)(2)(ii)(B), as amended, requires all applicants for emergency allocations to serve copies of their applications on refiner-sellers. Comments regarding an application will be accepted if received within eight days of receipt of the application. Applicants are required to mail copies of their application (and any amendments thereto) to refiner-sellers on the same date the application is mailed or delivered to ERA. Refiner-sellers must mail their comments on the applications to the Crude Oil Allocation Branch within eight days of the refiner-sellers' receipt of the application. The name and address of the contact for each refiner-seller is included in the appendix to this notice.

As has been stated in previous notices, if an applicant claims confidentiality for any of the information contained in its application, *the basis for the claim must be clearly stated.* ERA does not consider the names of potential suppliers contacted in unsuccessful attempts to obtain crude oil or offers of crude oil that the applicant has rejected to be proprietary.

Finally, ERA emphasizes that an application for an emergency allocation *must contain a detailed statement* as to why the applicant believes it has exhausted *all* supply possibilities, as required in § 211.65(c)(2)(ii)(D)(7). *Applications which fail to make this statement will be dismissed with prejudice.*

Copies of the decisions and orders assigning the emergency allocations listed herein may be obtained from: Economic Regulatory Administration, Public Information Office, 2000 M Street, NW., Rm. B110, Washington, D.C. 20461, (202) 634–2170.

This notice is issued pursuant to Subpart G of DOE's regulations governing its administrative procedures and sanctions, 10 CFR Part 205. Any person aggrieved hereby may file an appeal with DOE's Office of Hearings and Appeals in accordance with Subpart H of 10 CFR Part 205. Any such appeal shall be filed on or before June 18, 1980.

Issued in Washington, D.C., on May 13, 1980.

Doris J. Dewton,

Assistant Administrator, Office of Petroleum Operations, Economic Regulatory Administration.

Appendix

The Buy/Sell list for the period April 1, 1980, through September 30, 1980, is hereby amended to reflect new and amended emergency allocations, allocations made pursuant to recent decisions of the Office of Hearings and Appeals, and an amendment to a regular allocation. The amended list sets forth the name of each refiner-seller and the additional volumes of crude oil that each such refiner-seller is required to offer for sale to small refiners.

All refiner-sellers' percentage shares have been changed to reflect the Continental Oil Company and Exxon Company, U.S.A. Decision and Order dated March 20, 1979 (Case numbers FEX–0185 and FEX–0184). While the refiner-sellers' percentage shares displayed are rounded to three decimal places, six decimal places have been utilized to establish actual sales obligations.

Also included in the appendix is a list of the names and addresses of the persons designated by refiner-sellers to receive service of copies of applications for emergency crude oil allocations.

Crude Oil Allocation (Buy/Sell) Program Sales Obligations, April 1, 1980–September 30, 1980

Refiner-seller	Share	Additional sales obligation (Bbls) [1]	Total sales obligations (Bbls)
Amoco Oil Co.	.105	23,373	2,552,590
Atlantic Richfield Co.	.077	17,164	3,008,026
Chevron U.S.A., Inc.	.101	22,664	1,906,715
Cities Service Co.	.025	5,489	1,309,219
Continental Oil Co.	.004	893	155,538
Exxon Co., U.S.A.	.089	19,860	2,144,841
Getty Refining & Marketing Co.	.021	4,734	499,746
Gulf Refining & Marketing Co.	.091	20,331	2,723,418
Marathon Oil Co.	.022	5,100	537,286
Mobil Oil Corp.	.094	20,995	2,597,976
Phillips Petroleum Co.	.041	9,233	1,086,441
Shell Oil Co.	.113	25,353	3,431,406
Sun Co.	.055	12,384	1,959,401
Texaco Inc.	.114	25,374	2,540,248
Union Oil Co. of California	.046	10,200	2,324,294
Total sales obligations		223,147	28,777,135

[1] On September 13, 1979, OHA issued a Decision and Order (applications for temporary exception and for stay; case numbers DEL–8020 and DES–8020) in which six refiner-sellers were directed to sell crude oil to Commonwealth Oil Refining Co., Inc. (Corco) in late 1979. The refiner-sellers will receive credit for half their sales to Corco during the April–September 1980 allocation period. In the Buy/Sell list issued on March 21, 1980, it was noted that the six refiner-sellers had sold 3,668,026 bbls, resulting in total additional sales obligations for all refiner-sellers and credits for the six refiner-sellers of half that volume, or 1,834,013 bbls. The total sales obligation listed in this supplemental notice has been increased by half of additional sales made by Shell Oil Company but not previously reported to ERA. Shell made additional sales to Corco of 231,000 bbls, with a total additional sales obligation and credit against sales obligation of half that volume, or 115,500 bbls. The total additional sales obligation is, therefore, the sum of half of Shell's additional sales to Corco (115,500 barrels) plus additional allocations and adjustments (107,647 barrels), which are described below, or 223,147 barrels.

Office of Hearings and Appeals (OHA) Decisions

On March 17, 1980, OHA issued a Decision and Order (Case No. DMR–0054) to Sigmor Refining Company, directing Cities Service Company to make available to Sigmor 289,600 barrels of crude oil under the Buy/Sell Program within sixty days for Sigmor's Three Rivers, Texas, refinery.

On March 24, 1980, OHA issued a Decision and Order (Case Nos. BEA–0194; BES–0194; BST–0194; BEL–0962) to Industrial Fuel and Asphalt of Indiana (IFAI), in which OHA directed ERA to issue an emergency allocation to IFAI's Hammond, Indiana, refinery for 1,300 B/

D during the period March 1, 1980, through June 30, 1980. ERA issued such an Order on March 31, 1980.

Amended Regular Buy/Sell Allocation

On April 29, 1980, ERA issued a Decision and Order to Pride Refining, increasing Pride's April–September 1980 regular Buy/Sell allocation for its Abilene, Texas, refinery by 212,194 barrels, from 346,287 barrels to 558,481 barrels. The adjustment to Pride's allocation was made to account for a reduction in crude oil runs to stills due to unusual or nonrecurring operating conditions.

Amended Emergency Buy/Sell Allocations

On March 19, 1980, ERA issued an Amended Decision and Order to Allied Materials Corporation, in which ERA determined that Allied's Stroud, Oklahoma, refinery was eligible for an emergency allocation of 95,903 barrels for the month of February 1980 by reason of Allied's loss of at least 25 percent of its runs to stills.

On April 9, 1980, ERA issued an Amended Decision and Order to Hunt Oil Company, reducing Hunt's April 1980 emergency allocation for its Tuscaloosa, Alabama, refinery by 244,110 barrels, from 269,190 barrels to 25,080 barrels to reflect the regular Buy/Sell allocation issued to Hunt for the April–September 1980 period.

On April 23, 1980, ERA issued an Amended Decision and Order to OKC Corporation, reducing OKC's April 1980 emergency allocation for its Okmulgee, Oklahoma, refinery by 30,150 barrels, from 30,150 barrels to zero barrels, to reflect the regular Buy/Sell allocation issued to OKC for the April–September 1980 period.

On April 29, 1980, ERA issued an Amended Decision and Order to Energy Cooperative Inc. (ECI), reducing ECI's April 1980 emergency allocation for its East Chicago, Indiana, refinery by 417,090 barrels, from 2,008,800 barrels to 1,591,710 barrels. The amendment was issued to account for an increase in ECI's projected crude oil supply for April.

New Emergency Buy/Sell Allocation

On April 30, 1980, ERA issued a Decision and Order to Caribou Four Corners, Inc., granting Caribou's Woods Cross, Utah, refinery emergency allocations of crude oil of 21,000 barrels for April 1980 and 21,700 barrels for May 1980.

Additional Allocations and Adjustments for the April 1, 1980–September 30, 1980, Allocation Period

Refiner-buyer	Refinery	Volume (barrels)
Allied Materials	Stroud, OK	95,903
Caribou Four Corners	Woods Cross, UT.	42,700
Commonwealth Oil	Ponce, P.R	115,500
Energy Coop	E. Chicago, IN.	(417,090)
Hunt Oil	Tuscaloosa, AL.	(244,110)
Industrial Fuel and Asphalt	Kalamazoo, MI.	158,600
OKC Corp	Okmulgee, OK.	(30,150)
Pride Ref., Inc	Abilene, TX	212,194
Sigmor Ref. Co	Three Rivers, TX.	289,600
Total		223,147

Federal Energy Regulatory Commission

Advisory Committee on Revision of Rules of Practice and Procedures, Subcommittee on Review of Commission Decisional Process; Meeting

May 13, 1980.

Pursuant to the provisions of the Federal Advisory Committee Act (Public Law 92–463, 86 Stat. 770), notice is hereby given that the Subcommitee on Review of the Commission Decisional Process of the Advisory Committee on Revision of Rules of Practice and Procedure will meet Wednesday, June 4, 1980, from 2:00 p.m. to 5:00 p.m., at the Federal Energy Regulatory Commission, 825 North Capitol Street, N.E., Room 9306, Washington, D.C.

The purpose of the meeting is to continue discussions of the Subcommittee's work on the procedures for obtaining certificates under the Natural Gas Act.

The meeting is open to the public. A transcript of the meeting will be available for public review and copying at FERC's Division of Public Information, Room 1000, 825 North Capitol Street, N.E., between the hours of 8:30 a.m. and 5:00 p.m., Monday through Friday except Federal holidays. In addition, any person may purchase a copy of the transcript from the reporter.

Kenneth F. Plumb,

Secretary.

BILLING CODE 6450–85–M

[Docket No. ER80–375]

Arizona Public Service Co.; Filing

May 13, 1980.

The filing Company submits the following:

Take notice that Arizona Public Service Company on May 9, 1980, tendered for filing as an initial rate schedule a Firm Transmission Service Agreement between the Department of Water and Power of the City of Los Angeles (Los Angeles) and Arizona Public Service Company (Company) dated March 20, 1980.

Los Angeles requests waiver under the provisions of Section 35.11 so that service could be commenced on March 21, 1980.

A copy of this filing was served upon the Arizona Corporation Commission.

Any person desiring to be heard or to protest said filing should file a petition to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street, N.E., Washington,

DC 20426, in accordance with Sections 1.8 and 1.10 of the Commission's rules of practice and procedure (18 CFR 1.8, 1.10). All such petitions or protests should be filed on or before June 6, 1980. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a petition to intervene. Copies of this filing are on file with the Commission and are available for public inspection.

Kenneth F. Plumb,

Secretary.

BILLING CODE 6450-85-M

[Docket No. ER78-414]

Delmarva Power & Light Co.; Compliance Filing

May 13, 1980.

The filing Company submits the following:

Take notice that on May 7, 1980, Delmarva Power and Light Company (Delmarva) submitted for filing a Report of Compliance pursuant to the Commission's letter order of March 24, 1980 in the above-referenced proceeding.

Copies of this filing have been sent to the Mayor and Council of Middletown, Delaware Public Service Commission.

Any person to be heard or to protest said filing should file a protest with the Federal Energy Regulatory Commission, 825 North Capitol Street, NE., Washington, D.C. 20426, in accordance with Sections 1.8 and 1.10 of the Commission's rules of practice and procedure (18 CFR 1.8 and 1.10). All such protests should be filed on or before June 6, 1980. Protests will be considered by the Commission in determining the appropriate action to be taken. Copies of this filing are on file with the Commission and are available for public inspection.

Kenneth F. Plumb,

Secretary.

BILLING CODE 6450-85-M

[Docket No. ER80-380]

Utah Power & Light Co.; Tariff Change

May 13, 1980.

Take notice that Utah Power & Light Company (Utah Power) on May 9, 1980, tendered for filing proposed changes in its FERC Electric Tariff, Volume No. 1, together with the Electric Service Agreement to serve a number of municipal and cooperative customers, through their agent, Deseret Generation & Transmission Co-Operative (Deseret).

Most of these customers have for some time been purchasing power and energy requirements in excess of their own resources (principally from the U.S. Bureau of Reclamation—CRSP) from Utah Power, through Intermountain Consumers Power Association (ICPA). Two customers previously served directly by Utah Power are included in the proposed new Service Agreement (Murray City, Utah and Moon Lake Electric Association).

This new arrangement is the result of a pending agreement under which Deseret will purchase an undivided 49% interest in Utah Power's Hunter II Generating Unit for approximately $115,000,000. The unit, located in Emery County, Utah, will have a capacity of 400 Megawatts. It is scheduled to go in commerical operation on June 1, 1980, and it is proposed that the Service Agreement be accepted for filing by the Commission as of that same date. The Service Agreement will remain in effect until March 25, 1985. On or before that date the Moon Lake Plant is expected to go into commercial operation, making the member customers self-sufficient in generating capacity, and they would cease to be customers of Utah Power as of March 25, 1985.

Any person desiring to be heard or to protest said application should file a petition to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capital Street, N.E., Washington, D.C. 20426, in accordance with Section 1.8, 1.10) of the Commission's rules of practice and procedure (18 CFR 1.8, 1.10). All such petitions or protests should be filed on or before June 6, 1980. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a petition to intervene. Copies of this application are on file with the Commission and are available for public inspection.

Kenneth F. Plumb,

Secretary.

BILLING CODE 6450-85-M

[Docket No. ER80-379]

Utah Power & Light Co.; Rate Filings

May 13, 1980.

Take notice that Utah Power & Light Company (Utah Power), on May 9, 1980, tendered for filing two new rates for sales and wheeling services to a number of municipal and cooperative customers, through their agent, Deseret Generation & Transmission Co-Operative (Deseret).

These new filings result from pending agreement under which Deseret will purchase an undivided 49% interest in Utah Power's Hunter II Generating Unit for approximately $115,000,000. The unit, located in Emery County, Utah, will have a capacity of 400 Megawatts. It is scheduled to go in commercial operation on June 1, 1980, and it is proposed that the new rates be accepted for filing by the Commission as of that same date. The two rates cover:

1. Wheeling services from Hunter II unit to Deseret's customers.

2. Replacement power and energy to be supplied by Utah Power on a non-firm basis when the Hunter II unit is out of service.

Any person desiring to be heard or to protest said application should file a petition to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street, N.E., Washington, D.C. 20426, in accordance with Section 1.8 and 1.10 of the Commission's rules of practice and procedure (18 CFR 1.8, 1.10). All such petitions or protests should be filed on or before June 6, 1980. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a petition to intervene. Copies of this application are on file with the Commission and are available for public inspection.

BILLING CODE 6450-85-M

Office of Assistant Secretary for International Affairs

Proposed Subsequent Arrangements Under Additional Agreements Between Government of the United States of America and European Atomic Energy Community

Pursuant to Section 131 of the Atomic Energy Act of 1954, as amended (42 U.S.C. 2160), notice is hereby given of proposed "subsequent arrangements" under the Additional Agreement Between the Government of the United States of America and the European Atomic Energy Community (EURATOM) Concerning the Peaceful Uses of Atomic Energy.

The subsequent arrangements to be carried out under the above mentioned

agreement involve approval of the following sales:

S–EU–643, United States to United Kingdom, 1 gram of Uranium 238, containing 2.4 parts per million U–235, to be used as standards for mass spectrographic measurements for isotopic mass and cross section measurements.

S–EU–644, United States to United Kingdom, 10 grams of Uranium 238, containing less than 10 parts per million U–235, to be used as standards for mass spectrographic measurements for isotopic mass and cross section measurements.

S–EU–645, United States to United Kingdom, 1.25 grams of Plutonium, enriched to greater than 90% in Pu–242, to be used for measurement of tritium fission yields in both fast and thermal reactors, and for dilution mass spectrometric measurements.

S–EU–646, United States to United Kingdom, 10 grams of uranium, enriched to greater than 99.9% U–235, to be used as standards for mass spectrometric measurements for isotopic mass and cross section measurements.

In accordance with Section 131 of the Atomic Energy Act of 1954, as amended, it has been determined that the furnishing of these nuclear materials will not be inimical to the common defense and security.

These subsequent arrangements will take effect no sooner than June 3, 1980.

Dated: May 13, 1980.

For the Department of Energy.

Harold D. Bengelsdorf,

Director for Nuclear Affairs, International Nuclear and Technical Programs.

Office of Hearings and Appeals

Notice of Cases Filed; Week of April 4 Through April 11, 1980

Notice is hereby given that during the week of April 4, 1980 through April 11, 1980 the appeals and applications for exception or other relief listed in the Appendix to this Notice were filed with the Office of Hearings and Appeals of the Department of Energy.

Under the DOE's procedural regulations, 10 CFR Part 205, any person who will be aggrieved by the DOE action sought in such cases may file with the DOE written comments on the application within ten days of service of notice, as prescribed in the procedural regulations. For purposes of those regulations, the date of service of notice shall be deemed to be the date of publication of this Notice or the date of receipt by an aggrieved person of actual notice, whichever occurs first. All such comments shall be filed with the Office of Hearings and Appeals, Department of Energy, Washington, D.C. 20461.

Melvin Goldstein,

Director, Office of Hearings and Appeals.

May 8, 1980.

List of Cases Received by the Office of Hearings and Appeals

[Week of Apr. 4 through 11, 1980]

Date	Name and location of applicant	Case No.	Type of submission
Apr. 4, 1980	Exxon Co., U.S.A., Houston, Tex	BEX–0039	Supplemental order. If granted: The February 15, 1980 Interim Decision and Order issued to Petroleum Products Corporation would be modified with respect to Exxon Company, U.S.A.'s supply obligations to the firm.
Apr. 4, 1980	Gas del Oro, Inc., *et. al., Washington, D.C.*	EJ–0078	Motion for protective order. If granted: Gas del Oro, Inc. would enter into a protective order with Coastal Corporation and Valero Energy Corporation regarding the release of proprietary information to Gas del Oro, Inc. in connection with Coastal Corporation's Application for Exception (Case No. DEE–1479).
Apr. 4, 1980	Goodwin, Procter, & Hoar, Boston, Mass	BFA–0313	Appeal of information request denial. If granted: The March 4, 1980 Information Request Denial issued by the Northeast Deputy District Manager, Office of Enforcement, would be rescinded, and Goodwin, Procter, & Hoar would receive access to certain DOE information.
Apr. 4, 1980	Missouri Terminal Oil Co., Wahsingotn, D.C	BED–0013	Motion for discovery. If granted: Discovery would be granted to Missouri Terminal Oil Company in connection with the Statement of Objections submitted by the firm in response to the December 14, 1979 Proposed Decision and Order (Case No. BEE–0013) issued to Onyx Corporation by the Office of Hearings and Appeals.
Apr. 4, 1980	Plateau, Inc., Washington, D.C	BEE–1049	Exception from the entitlements program. If granted: Plateau, Inc. would receive an exception from the provisions of 10 C.F.R. § 211.67 which would modify its entitlements purchase obligations.
Apr. 4, 1980	Southern Natural Resources, Inc., Houston, Tex	BEE–1045; BEL–0046.	Exception from the reporting requirements; temporary exception. If granted: Southern Natural Resources, Inc. would not be required to file Form ERA–69 ("Crude Oil Reseller's Self-Reporting Form").
Apr. 4, 1980	Van Wert Manufacturing Co., Inc., Peckville, Pa	BEE–1051	Exception from the Energy Conservation Program for Consumer Products. If granted: Van Wert Manufacturing Co., Inc. would not be required to perform energy efficiency tests of its combination fuel boilers as required under 10 C.F.R. Part 430.
Apr. 7, 1980	Exxon Co., U.S.A., Washington, D.C	BEA–0315	Appeal of redirection order. If granted: The March 4, 1980 Redirection Order issued to Exxon Company, U.S.A. by the Economic Regulatory Administration, Region IV, regarding the firm's supply obligations to Major Oil Company of Georgia would be rescinded.
Apr. 7, 1980	Gulf Oil Corp., Houston, Tex	BEA–0316	Appeal of designation order. If granted: The February 27, 1980 Order issued to Arizona Chemical Company by the Economic Regulatory Administration designating Arizona Chemical Company as a producer of a petroleum substitute and assigning entitlements benefits to the firm would be rescinded.
Apr. 7, 1980	John R. Morris, Richland, Wash.	BFA–0314	Appeal of information request denial. If granted: The March 14, 1980 Information Request Denial issued by the Richland Operations Office would be rescinded, and John R. Morris would receive access to certain DOE information.
Apr. 7, 1980	Sun Oil Co. of Pennsylvania, Washington, D.C	BEL–0047	Temporary price exception. If granted: Sun Oil Company of Pennsylvania would receive a temporary exception from the provisions of 10 C.F.R. § 212.83 which would permit the firm to pass through incremental expenses relating to the blending, storage, distribution and marketing of gasohol.
Apr. 8, 1980	Aztex Energy Co., Washington, D.C	BES–0065	Request for stay. If granted: Aztex Energy Company would receive a stay of the March 21, 1980 Temporary Assignment Order issued to Murphy Oil Corporation and Cities Service Company by the Economic Regulatory Administration, Region IV, regarding the firms' supply obligations to Sexton Oil Company, pending a final determination on the Appeal which the firm intends to file.
Apr. 8, 1980	Marathon Oil Co., Washington, D.C	BST–0299	Request for temporary stay. If granted: Marathon Oil Company would receive a temporary stay of the February 19, 1980 Assignment Order issued by the Economic Regulatory Administration, Region IV, regarding the firm's supply obligations to Publix Oil Company, pending a final determination on its Appeal. (Case No. BEA–0299).
Apr. 8, 1980	Ron Clancy's Inc., Brookline, Mass	BEE–1059	Allocation exception. If granted: Ron Clancy's, Inc. would receive an exception from the provisions of 10 C.F.R. § 211 which would permit the firm to receive an increased allocation of unleaded motor gasoline for the purpose of blending gasohol.

List of Cases Received by the Office of Hearings and Appeals—Continued

[Week of Apr. 4 through 11, 1980]

Date	Name and location of applicant	Case No.	Type of submission
Apr. 8, 1980	Sun Oil Co. of Pennsylvania, Washington, D.C.	BED-0080; DEJ-0080.	Motion for discovery and protective order. If granted: discovery would be granted to Sun Oil Company of Pennsylvania in connection with the Statement of Objections submitted in response to the January 16, 1980 Proposed Decision & Order (Case No. DEE-7203) issued to American Motohol supply Corporation. Sun Oil Company would enter into a protective order with American Motohol Supply Corporation regarding the release to Sun Oil Company of proprietary information relating to American Motohol Supply Corporation's Application for Exception.
Apr. 9, 1980	Casson, Callegro & Mutryn, Washington, D.C.	BFA-0318	Appeal of information request denial. If granted: The April 9, 1980 Information Request Denial issued by the Office of Enforcement would be rescinded, and Casson, Callegro & Mutryn would receive access to certain DOE information.
Apr. 9, 1980	Cities Service Co., Washington, D.C.	DEA-0317	Appeal of buy/sell order. If granted: The February 5, 1980 Buy/Sell Order issued to Commonwealth Oil Refining Company by the Economic Regulatory Administration granting the firm an emergency allocation of crude oil would be rescinded.
Apr. 9, 1980	Elm City Filling Stations, Inc., New Haven, Conn	BEE-1060; BEL-1060.	Allocation exception; temporary exception. If granted: Elm City Filling Stations, Inc. would receive and exception from the provisions of 10 C.F.R. § 211 which would permit the firm to receive an increased allocation of unleaded gasoline for the purpose of blending gasohol.
Apr. 9, 1980	Exxon Co., U.S.A., Washington, D.C	BEA-0319	Appeal of assignment order. If granted: The March 10, 1980 Assignment Order issued to Exxon Company, U.S.A. by the Economic Regulatory Administration, Region III, regarding Exxon's supply obligations to Petroleum Products Corporation, would be rescinded.
Apr. 9, 1980	Marathon Oil Co./Edgington Oil Co., Findlay, Ohio	BEJ-0079	Motion for protective order. If granted: Edgington Oil Company and Marathon Oil Company would enter into a Protective Order regarding the release of proprietary information in connection with Edgington Oil Company's Application for Exception (Case No. BEE-0832).
Apr. 9, 1980	Welsch Oil & LP Gas, Inc., Bellevue, Iowa	BEE-1057	Allocation exception. If granted: Welsch Oil & LP Gas, Inc. would receive an exception from the provisions of 10 C.F.R. § 211 which would permit the firm to receive an increased allocation of unleaded motor gasoline for the purpose of blending gasohol.
Apr. 10, 1980	Charter Oil Co., Jacksonville, Fla.	BEE-1062	Price exception. If granted: Charter Oil Company would receive an exception from the provisions of 10 C.F.R. § 212.83 which would permit the firm to pass through incremental expenses relating to the blending, storage, distribution and marketing of gasohol.
Apr. 10, 1980	Getty Refining & Marketing Co., Tulsa, Okla.	BEN-0022	Request for interim order. If granted: Getty Refining and Marketing Company would receive exception relief on an interim basis pending a final determination on its Application for Exception (Case No. DEE-2098).
Apr. 10, 1980	Little America Refining Co., Washington, D.C.	BEE-1064	Allocation exception. If granted: Little America Refining Company would receive an exception from the provisions of 10 C.F.R. § 211.67 which would modify its entitlements purchase obligations.
Apr. 11, 1980	Shepherd Oil, Inc., Washington, D.C.	BEE-1065; BEL-1065.	Price exception and temporary exception. If granted: Shepherd Oil, Inc. would receive an exception and temporary exception from the provisions of 10 C.F.R. §§ 212.94 and 211.65 which would modify the price of crude oil allocated to the firm under the Buy/Sell Program.
Apr. 11, 1980	Yukon Industries, St. Paul, Minn	BEE-1066	Exception from the energy conservation program for consumer products. If granted: Yukon Industries would not be required to perform energy efficiency tests of its multi-fuel furnaces as required under 10 C.F.R., Part 430.

List of Cases Involving the Standby Petroleum Product Allocation Regulations for Motor Gasoline

Week of April 4, 1980 to April 11, 1980

If Granted: The following firms would receive an increase in their base period allocation of motor gasoline.

Name, Case No., and State

April 7, 1980

Bartlett Auto, Inc., BEE–1046 New Hampshire.

April 8, 1980

DeLuca Importing, Co., BEE–1056 Nevada.
Denny's Marine, Inc., BEE–1055 Wisconsin.

April 7, 1980

Department of the Army, Fort Rucker, AL, BEE–1061 Alabama.
Devosts Marina, BEE–1047 New Hampshire.
Gasamat Oil Corp. of Colorado, BEE–1048 Colorado.

April 9, 1980

Highway 269 Kwik Stop, BEE–1053 Alabama.

April 20, 1980

Service Oil Company, BEE–1063 North Carolina.

April 9, 1980

Small, Charles S., BEE–1058 Maryland.

April 4, 1980

Summitt Associates, Ltd., BEE–1050 Florida.
Whistle Stop, BEE–1040 Maryland.

Notices of Objection Received

Week of April 4, 1980 to April 11, 1980

Name and location of applicant, Case No.

April 7, 1980

Champion Oil Company, Washington, D.C., BEE–0619.
Connecticut General Life, Hartford, Connecticut, DEE–7599.

April 8, 1980

Frankfort Fuels, Inc., Frankfort, Illinois, DEE–8306.

April 9, 1980

Grundset, Kenneth W., Brooksville, Florida, BEO–1159.

April 4, 1980

Hartley Company, Cambridge, Ohio, BEE–0417.
Navajo Refining Company, Dallas, Texas, BXE–0811.
North Side Services, Washington, D.C., DEE–7601.

April 8, 1980

Red Rock Petroleum Company, Washington, D.C., BEE–0337.

Fuels and Fuel Additives

AGENCY: Environmental Protection Agency (EPA).

ACTION: Correction of April 17, 1980, Federal Register notice.

SUMMARY: The following Characterization Report supporting the Administrator's decision denying Beker Industries, Inc.'s request for a waiver for crude methanol pursuant to section 211(f) of the Clean Air Act (Act), as amended, 42 U.S.C. 7545(f) was inadvertently omitted when the Administrator's decision was published in the **Federal Register** (45 FR 26122, April 17, 1980).

FOR FURTHER INFORMATION CONTACT: Thomas E. Moore, Attorney/Advisor, Field Operations and Support Division (EN–397), Environmental Protection Agency, 401 M Streeet, SW., Washington, DC 20460, (202) 472–9367.

Dated: May 9, 1980.

Jeffrey G. Miller,

Acting Assistant Administrator for Enforcement.

CHARACTERIZATION REPORT

Executive Summary

This paper presents a summarization and analysis of the data relevant to the request from Beker Industries Corp. for a waiver of the limitation and prohibition from use of crude methanol (by weight, 75% methanol (methyl alcohol), 5.0% ethanhol, 7.5 n-proponal, and 12.5% i-butanol) in a 0–15% concentration (by volume) in unleaded fuel. Note that crude methanol is not identical to methyl (wood) alcohol, although it is a major constituent, but also contains additional alcohols, as specified. Included in this report are a description of the sources of the data, the analysis of the data, and conclusions. No specific testing information was available for crude methanol and therefore no statistical analysis was possible. Information on blends of gasoline and methanol suggests that evaporative emissions, materials compatibility, and driveability problems can be expected. Our analysis shows that Beker has not demonstrated that use of crude methanol will not cause or contribute to a failure of any emission control device or system to meet emission standards.

Sources of Data

Data were received from Beker Industries, Ford Motor Company, Chrysler Corporation, General Motors Corporation, and American Motors Corporation. The Agency assembled additional information that was available.

1. Beker Industries

The applicant submitted data from two Department of Energy Reports, "Status of Alcohol Fuels Utilization Technology for Highway Transportation," (1), and "Methanol Fuel Modification for Highway Vehicle Use." (2) (Numbers in parentheses refer to references listed at the end of this report.) The data were as follows:

(a) Average Federal Test Procedure (FTP) exhaust emission test results for two 1974 model year vehicles and eight 1975 vehicles operating on gasoline, 5% methanol/gasoline, and 10% methanol/gasoline. (1)

(b) Grams per test results of a 1.5 liter engine dynamometer simulation of the European cycle for gasoline, 15% methanol/gasoline, and 100% methanol. (1) These data are not suitable for comparison with FTP data.

(c) Data derived from the operation of a dynamometer mounted 151 CID Pontiac engine on 20% methanol-Indolene and Indolene. These data also are not suitable for comparison with FTP data. (1)

(d) Water tolerance data for methanol/gasoline and methanol/higher alcohols/gasoline mixtures. (2)

(e) Data pertinent to vapor-lock for methanol/gasoline and methanol/higher alcohols/gasoline mixtures. (2)

(f) Data on driveability with methanol/gasoline. (2)

(g) Data on materials compatibility with methanol/higher alcohols/gasoline mixtures. (2)

(h) Statement on Toxicity. (2)

(i) Statements on evaporative emissions with respect to charcoal canisters and vapor recovery distribution systems. (2)

2. Ford Motor Co.

The Ford Motor Company submitted two papers detailing work done with 20% methanol/gasoline, neat (100%) methanol, 20% methanol/gasoline with higher alcohols comprising a portion of the 20%, and a dual-fuel configuration. (3)(4) Only the methanol/gasoline data were applicable and included the following:

(a) Exhaust emission data.
(b) Fuel economy data.
(c) Motor oil economy data and used oil analyses.
(d) Driveability data.
(e) Vapor-lock data.
(f) Engine deposits and wear data.
(g) Materials compatibility data.
(h) Phase stability data.

3. Chrysler Corp.

The Chrysler Corporation submitted the following:

(a) A list of problems that can be expected to occur from the use of methanol/gasoline as an automotive fuel.

(b) A phase diagram showing the phase separation of methanol/gasoline with respect to water.

(c) Data on the rate of swell for carburetor elastomers in methanol/gasoline.

(d) Corrosion information.

(e) Statements on evaporative emissions, driveability, and vapor-lock potential.

4. General Motors Corporation

General Motors submitted comments, recently developed data, and five technical papers relevant to the emissions, volatility, fuel economy, driveability, materials compatibility, and durability of alcohol/gasoline. (17) (18) (19) (20) (21) (22)

5. American Motors Corporation

American Motors submitted comments on effects on materials, engine wear, and emissions. (23)

EPA has reviewed the reports referenced or submitted by Beker, Chrysler, Ford, General Motors, and American Motors. In addition, other information pertinent to methanol/gasoline mixtures has been obtained and reviewed. (6) (7) (8) (9) (10) (11) (12) (13) (14) (15) (16) Not all of the data are presented in the following analysis. Only the significant portions necessary to arrive at a conclusion are discussed.

Analysis of the Data

Tailpipe emissions

The addition of alcohol(s) to gasoline produces a fuel with characteristics significantly different from those of gasoline. Because alcohol contains oxygen, the use of alcohol(s)/gasoline mixtures in a carburetor calibrated for gasoline results in enleanment of the air/fuel ratio (A/F). Theory and experience predict that as a result of this enleanment carbon monoxide (CO) tailpipe emissions will decrease, hydrocarbon (HC, or unburned fuel, UBF) tailpipe emissions will decrease (although not to as great an extent as CO, and only if enleanment has not extended into the lean misfire region) and oxides of nitrogen NO_x may decrease or increase depending on the initial air-fuel ratio. Closed-loop (feedback) air/fuel ratio control systems will at least partially compensate for the enleanment and changes in tailpipe emissions will be less than for non-feedback systems.

Data from (1) indicate that for a group of ten 1974–75 49-state light duty vehicles operated on 10% methanol/gasoline that average emissions for the group decreased for CO (13.5 to 8.2 grams per mile-gpm) and NO_x (2.1 to 1.9 gpm) and increased for HC (1.1 to 1.5 gpm). See Figure 1. Note that while data are given for operating temperatures of

20 degrees F., 75 degrees F., and 100 degrees F., that only the 75 degree F data are applicable as FTP results. Also note that intermediate results were obtained for 5% methanol/gasoline at 75 degrees F.

Data from (8) for a 10% methanol/gasoline show that for a four vehicle 1977 49-state fleet, average CO emissions decreased significantly. See Figure 2. For a three vehicle 1978 California fleet (in which two vehicles had closed-loop A/F control) CO decreased only slightly. NO_x decreased slightly for the 1977 fleet and increased slightly for the 1978 fleet. See Figure 3. Tailpipe HC (or unburned fuel) increased slightly for both fleets. (DOE attributes at least part of this increase to the higher vapor pressure of the blend). See Figure 4.

Figures 5 and 6 present data on methanol and aldehyde emissions, respectively. In general, "emission rates of methanol from 1977 and 1978 vehicles operating on Indolene were an order of magnitude lower than when operating on the blend." (8) Aldehyde emissions for the 1977 fleet were an average of 75% higher with the blend while there was insignificant difference between the blend and gasoline for the 1978 fleet.

Figure 7 presents deterioration factors (DF) for the 1977 fleet compared to certification values. The deterioration factors for HC (UBF) and NO_x are not identical, but comparable. The DF for CO is higher for the blend, but due to the initial decrease in CO it has been calculated that over 50,000 miles the net CO emissions will be comparable.

Figure 8 presents DF data for the 1978 fleet. HC (UBF) factors are comparable. CO and NO_x are not comparable, with CO lower and NO_x higher for the blend.

No data for 1979–80 vehicles operated on methanol/gasoline blends were available.

No data for crude methanol/gasoline blends were available. Methanol/gasoline blends are an approximation and are expected to behave similarly for equivalent enleanments for oxidation catalyst vehicles.

However, General Motors has shown that three-way catalyst conversion efficiencies are not the same (particularly for NO_x), for different blends of alcohol and gasoline, even though air/fuel ratios are almost identical. (17) See Figure 9.

GM states: "In the exhaust gas environment, variations in the concentration of some species, as can occur when the fuel composition is changed as it is when oxygenated species are blended with gasoline, may have a significant effect on the oxygen sensor response characteristics. In these situations, exhaust gas stoichiometry may not be the sole determining factor in sensor response. The variations in exhaust gas composition produced by changes in the fuel composition may also affect the oxidation-reduction reactions occurring on the catalyst surface. It is apparent that the explanation for the observations shown in Figure 9 are not fully understood." (17)

Evaproative Emissions

Due to its polar nature, as measured by its dipole moment and dielectric constant, the addition of methanol to gasoline (which is non-polar) increases front-end volatility (as measured by ASTM D–86 or D–216 distillation), Reid Vapor Pressure (RVP) and vapor/liquid ratio (V/L). Increases in front-end volatility and RVP have correlated with increased evaporative hydrocarbon emission. This was particularly evident from the 1978 Gasohol (10% ethanol/gasoline) testing done by the Agency and others (15) where evaporative losses increased approximately 50%. Methanol increasses volatility and RVP to a greater degree than a comparable concentration of ethanol in gasoline, and thus a 10% crude methanol/gasoline blend would be expected to produce higher evaporative losses than Gasohol.

Data in (4) show that the addition of 2% methanol gives approximately a 3 psi RVP increase. Data submitted by GM show an approximate 0.9 psi RVP increase with 10% ethanol, 3.1 psi RVP increase for 15% crude methanol, over the base gasoline. This intermediate effect on RVP by crude methanol is to be expected because of the higher molecular weight alcohols content of the crude methanol. These other alcohols have a tendency to reduce the evaporative loss of methanol because they have chemical and physical properties similar to both methanol and gasoline. These similarities then act as a "bridge" to retain the methanol in the gasoline. Therefore, evaporative emissions for crude methanol in gasoline are expected to be less than for a comparable concentration of methanol in gasoline.

Methanol also affects charcoal adsorption. Data in (2) indicate that the adsorptive capacity of charcoal from canisters used by General Motors for evaporative emissions control was reduced approximately 10%–15% for a 20% methanol/gasoline mixture (with respect to gasoline), based on 1½ cycles of operation (loading with vapor, stripping, and reloading with vapor). However, similar tests for 4 cycles show the average adsorptive capacity to be about the same for 20% methanol/gasoline and gasoline. Thus, the authors of (2) state "We conclude that carbon canisters presently in use should be adequate to control evaporative emissions from blends but perhaps not from neat methanol, which is adsorbed less strongly than gasoline by the non-polar charcoal."

However, the Federal Test Procedure is the only test that can determine if charcoal adsorption is sufficient, and none were performed.

No vehicular data of any kind were submitted or obtained to evaluate the change in evaporative emissions resulting from the addition of methanol or crude methanol to gasoline.

Materials Compatibility

Materials compatibility is of concern (2) with alcohol and alcohol(s)/gasoline blends, with methanol being less compatible with the usual materials found in fuel systems than ethanol. As with evaporative emissions, the effects on automotive materials of crude methanol in gasoline would be expected to be between those for ethanol/gasoline and methanol/gasoline.

Beker cited for from (2) for blends similar to 18% crude methanol/gasoline. (75% wt % methanol and 25% C_2-C_4 Alcohols) Accelerated corrosion tests on brass, zinc, terne alloy, steel, magnesium, and aluminum indicated corrosion comparable to, but in general, more severe than that encountered with gasoline. Prolonged exposure of a variety of non-metals (Buna-N, Delrin acetal, a commercial fuel paper, high density polyethylene, Nylon 616, polypropylene, cork gasketing material, leather, neoprene, and viton) indicated no additional problems. Softening, swelling, blistering, and signs of delamination were encountered with polyester bonded fiberglass laminate, a material used for underground fuel tanks and tank linings. Polyurethane softened and swelled much more for the blend than for gasoline. The authors in (2) state: "It is concluded that some materials used successfully with gasoline deteriorate seriously in methanol containing fuels and that careful selection of suitable materials would be required to provide trouble-free fuel systems."

Purolator (12) reported that "in general filter components [gasoline filters] exhibited poor compatibility for 10% methanol blends."

Chrysler submitted data (5) showing a 35.1% increase in volume for a 1200 hour exposure of fluoroelastomer (accelerator pump cup for current Chrysler products) to a 10% methanol blend. A similar test for nitrite rubber (accelerator pump cup for older Chrysler products) resulted in a

40.9% increase in volume. For a 10% ethanol blend the changes were 15.4% and 18.5% respectively. Chrysler concludes "that compatibility of these materials with ethanol blends is marginally acceptable, but that compatibility with methanol blends is unacceptable."

For a 5.5% methanol blend the increases (500 hour exposure) for polysulfide, fluoroelastomer (high fluorine content), and fluorosilicone, (possible replacements for fluoroelastomer), were 25.2%, 8.75%, and 20.7% respectively. Chrysler states that the high fluorine content fluoroelastomer "would appear to be a viable candidate based on its resistance to swell. This material, however, has less retention of flexibility at low temperature than is desirable in a carburetor elastomer." Chrysler also believes that there will be corrosion problems with zinc alloy, alluminum alloy, and terne plate. While the Chrysler data are not for crude methanol, they are comparable to what can be expected.

Ford (4) presented data showing increased corrosion of copper and brass in the presence of methanol, especially with water, and this could impact fuel distribution systems.

Department of Energy testing (8) attributed the swelling and failure of a Chrysler accelerator pump cup and possibly the failure of a Volvo line pressure regulator o-ring to exposure to 10% methanol/gasoline.

General Motors listed sixteen automotive elastomers and found that "most of the elastomers are severly affected by the mixtures of the gasoline and methanol rather than the pure components." (22)

The cleansing effect of methanol can be expected to loosen fuel tank deposits with their resultant transfer to fuel filters and carburetors. (2)

No vehicular data on the materials compatibility of crude methanol/gasoline were submitted or obtained.

Chrysler and General Motors are concerned about materials compatibility problems to the extent that they will not extend warranty coverage to vehicles fueled with methanol blends, while they do cover Gasohol. (10% ethanol) (5) (10) (11)

Driveability

Driveability will be adversely affected by the addition of methanol or crude methanol to gasoline. It is well known that if water enters the blend then phase separation is likely and that operation on the lean lower phase of water, alcohol, and some gasoline is impossible or extremely poor, especially in cold climates. Phase separation is most severe with methanol/gasoline but the higher molecular weight alcohols in crude methanol will lessen the problem somewhat, but it will still be more of a problem than for Gasohol. (10% ethanol)

Also, too much enleanment from alcohol addition will result in hard starting and poor running. The current consensus is that the enleanment of a 10% ethanol/gasoline blend is the approximate maximum that should be allowed before encountering a significant number of driveability problems. However, DOE test vehicles were operated on 10% methanol/gasoline and only encountered driveability problems as a result of phase separation, or materials compatibility problems, not enleanment. (8)

It is also well known that vapor-lock correlates with vapor/liquid ratio (2) and since V/L increases with methanol addition, vapor-lock would be more frequent than with gasoline, especially in warm climates and at high altitudes.

Again, the applicant has not provided any specific vehicular data from which the maximum concentration of crude methanol for acceptable driveability can be determined. Beker concludes that for an engine with an equivalence ratio of 1.0 (Actual A/F divided by stoichiometric A/F) for operation on gasoline, then its equivalence ratio for 15% crude methanol would be .93. For one car GM reported a .90 limit before driveability deteriorated, and Beker concludes that for cars operating at 1.0 equivalence ratio, 15% crude methanol would be acceptable. It is true that three-way catalyst cars operate at or near 1.0 and that many new cars in the near future will have three-way catalyst, closed-loops systems. However, as Beker notes, current cars without three-way catalysts operate around 0.9, and the effect of the enleanment from a 15% methanol blend on these cars is not addressed.

Toxicity

The applicant presented the conclusion from (2) that the toxicity of methanol/gasoline blends would not be a problem. Ferry, et al (9) conclude that "the immediate risks of acute intense exposure to a methanol/petrol mixture are probably no greater than that to petrol alone."

Conclusions

The tailpipe emission impact of a specific concentration of crude methanol can probably be predicted from testing or comparing the test results of a known blend of alcohol/gasoline with an equivalent enleanment for oxidation catalyst vehicles. However, Beker has submitted no crude methanol vehicular FTP data for comparison with known data to support (or contradict) such an engineering judgement. This assumption is not applicable to three-way catalyst vehicles.

Evaporative emissions may increase with crude methanol in gasoline. No FTP data were presented to gauge the magnitude of the increase, beyond the inferred prediction of a larger increase than with a comparable concentration of ethanol.

Data suggest that in-use vehicles would experience excessive swelling of carburetor elastomers, especially Chrysler accelerator pump cups.

Crude methanol addition to gasoline may also increase the probability of phase separation and vapor lock.

No data were presented to support any specific concentration of crude methanol, much less the entire 0%–15% range. Volkswagon (13) has run cars on 15% methanol/gasoline, but the carburetors were modified, some standard non-metallic components were replaced with metal components, and isopropanol was added to prevent phase separation.

In summary there are insufficient data to conclude that 0–15% methanol as a fuel additive will not cause or contribute to the failure of vehicles to meet emission standards. Furthermore the data which are available for similar alcohol blends would tend to indicate that there will be evaporative emission problems with the use of 0–15% methanol blend.

BILLING CODE 6560-01-C

[FRL 1494-6; OPP-30189]

American Cyanamid Co.; Receipt of Application To Register a Pesticide Product Containing New Active Ingredient

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: American Cyanamid Co. has submitted an application to register the pesticide product Pay-Off Insecticide, which contains the active ingredient cyano(3-phenoxyphenyl)methyl-4-(difluoromethoxy)-alpha-(1-methylethyl)benzeneacetate not included in any previously registered pesticide product.

COMMENTS: Interested persons are invited to submit written comments on this application. Comments submitted should bear a notation indicating the EPA "File Symbol 241-ELO". Comments may be submitted, and inquiries directed, to: Mr. Franklin Gee, Product Manager (PM), 17, (TS-767), Room E-341, Office of Pesticide Programs, Environmental Protection Agency, 401 M Street, SW, Washington, DC 20460, 202-426-9417.

The label furnished by American Cyanamid as well as all written comments filed in connection with this notice, will be available for public inspection in the Product Manager's office from 8:30 a.m. to 4:00 p.m., Monday through Friday, excluding holidays.

DATE: Comments must be received by June 18, 1980. Comments received by the specified date will be considered before a final decision is made; comments received after the specified date will be considered only to the extent possible without delaying processing of the application.

FOR FURTHER INFORMATION CONTACT: Mr. Franklin Gee at the above address.

SUPPLEMENTARY INFORMATION: American Cynamid Co., PO Box 400, Princeton, NJ 08540, has submitted an application to EPA to register the pesticide product PAY-OFF INSECTICIDE (EPA File Symbol 241-ELO) containing 30% of the active ingredient cyano(3-phenoxyphenyl)methyl-4-(difluoromethoxy)-alpha-(1-methylethyl)-benzeneacetate, which has not been included in any previously registered pesticide product. The application proposes that the pesticide be classified for restricted use on cotton. A pesticide petition and a food additive petition proposing establishment of tolerances for residues of the active ingredient in or on cottonseed and cottonseed oil have been submitted by the company and are currently pending. Notice of approval or denial of this application to register Pay-Off Insecticide will be announced in the **Federal Register.** Except for such material protected by section 10 of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) as amended (92 Stat. 819; 7 U.S.C. 136), and the regulations thereunder (40 CFR Part 162), the test data and other scientific information deemed relevant to the registration decision may be made available after approval under the provisions of the Freedom of Information Act. The procedure for requesting such data will be given in the **Federal Register** if an application is approved. Notice of receipt of this application does not indicate a decision by the Agency on the application.

(Sec. 3(c)(4), 86 Stat. 972, (7 U.S.C. 136)).

Dated: May 12, 1980.

Herbert Harrison,

Acting Director, Registration Division, Office of Pesticide Programs.

[FR Doc. 80-15282 Filed 5-16-80; 8:45 am]

BILLING CODE 6505-01-M

[FRL 1494-4]

Environmental Impact Statement; Public Hearings

AGENCY: Environmental Protection Agency, Region IX.

ACTION: Notice of public hearings.

SUMMARY: EPA proposes to offer grant assistance for the recovery of resources from municipal wastewater sludges and to minimize the public health risks and environmental degradation.

In accordance with 40 CFR 1506.6(b)(2) notice is hereby given that public hearings will be held to consider a Draft Environmental Impact Statement for the Los Angeles/Orange County Metropolitan Area (LA/OMA) for the Proposed Sludge Management Program.

PUBLIC PARTICIPATION: To encourage and facilitate public participation in the decisions to be made on the proposed project, public hearings will be held in the localities as follows: on July 8, 1980 beginning at 7:30 PM at Board Room of the Hyperion Treatment Plant (City of Los Angeles), 12000 Vista del Mar, Playa del Rey, Los Angeles, CA; on July 9, 1980 beginning at 7:30 PM at Board Room of the Joint Water Pollution Control Plant, 24501 S. Figueroa Street, Carson, CA; on July 10, 1980 beginning at 7:30 PM at Board Room of the Orange County Sanitation Districts' Offices, 10844 Ellis Avenue, Fountain Valley, CA.

FOR FURTHER INFORMATION CONTACT: Ann Godfrey, Water Division (W-3), EPA, Region IX, 215 Fremont Street, San Francisco, CA 94105, Telephone: (415) 556-8037.

Dated: May 8, 1980.

Sheila M. Prindiville,

Acting Regional Administrator.

BILLING CODE 6560-01-M

[FRL 1495-2; OPP-50479]

Issuance of Experimental Use Permits

The Environmental Protection Agency (EPA) has issued experimental use permits to the following applicants. Such permits are in accordance with, and subject to, the provisions of 40 CFR Part 172, which defines EPA procedures with respect to the use of pesticides for experimental purposes.

No. 524-EUP-30. Monsanto Agriculture Products Co., St. Louis, Mo 63166. This experimental use permit allows the use of the remaining 1,560 pounds of the herbicide butachlor on rice to evaluate control of weeds. A total of 560 acres are involved. The program is authorized only in the States of Arkansas, Louisiana, Texas; and Puerto Rico. The program was previously effective from April 1, 1979 to April 1, 1980. It is now effective from April 23, 1980 to April 23, 1981. Temporary tolerances for residues of the active ingredient in or on rice, rice bran, rice straw, and rice hulls have been established. (PM-25, Robert J. Taylor Room: E-301, Telephone: 202-755-2196).

No. 2724-EUP-20. Zoecon Industries, Dallas, TX 75234. This experimental use permit allows the use of 0.3 pounds of the insecticides methoprene and resmethrin on or in homes to evaluate control of fleas. A total of 45 homes are involved. This program is authorized only in the States of California, Florida, and Texas. This permit is issued with the limitation that none of the material will enter the food chain. The experimental use permit is effective from April 1, 1980 to April 1, 1981. (PM 17, Franklin D. R. Ge, Room: E-341, Telephone: 202-426-9417).

Interested persons wishing to review the experimental use permits are referred to the designated Product Manger (PM), Registration Division (TS-767), Office of Pesticide Programs, EPA, 401 M Street, S.W., Washington, D.C. 20460. Inquiries regarding these permits should be directed to the contact persons given above. It is suggested that interested persons call before visiting the EPA Headquarters Office so that the appropriate file may be made

conveniently available for inspection from 8:30 a.m. to 4:00 p.m. Monday through Friday, excluding holidays.

(Sec. 5, 92 Stat. 189 as amended (7 U.S.C. 136))

Dated: May 12, 1980.

Herbert Harrison

Acting Director, Registration Division, Office of Pesticide Programs.

[FR Doc. 80-15278 Filed 5-16-80; 8:45 am]

BILLING CODE 6560-01-M

[FRL 1495-1; OPTS-59022]

Premanufacture Exemption Application

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: Section 5(a)(1)(A) of the Toxic Substances Control Act (TSCA) requires any person intending to manufacture or import a new chemical substance for a commercial purpose in the United States to submit a premanufacture notice (PMN) to EPA at least 90 days before he commences such manufacture or import. Under section 5(h) the Agency may, upon application, exempt any person from any requirement of section 5 to permit such person to manufacture or process a chemical for test marketing purposes. Section 5(h)(6) requires EPA issue a notice of receipt of any such application for publication in the **Federal Register.** This notice announces receipt of an application for an exemption from the premanufacture reporting requirements for test marketing purposes and requests comments on the appropriateness of granting the exemption.

DATES: The Agency must either approve or deny this application by June 12, 1980. Persons should submit written comments on the application no later then June 3, 1980.

ADDRESS: Written comments to: Document Control Officer (TS-793), Office of Pesticides and Toxic Substances, Environmental Protection Agency, 401 M St. SW, Washington, D.C. 20460.

FOR FURTHER INFORMATION CONTACT: Mr. George Bagley, Premanufacturing Review Division (TS-794), Office of Pesticides and Toxic Substances, Environmental Protection Agency, Washington, D.C. 20460, (202-426-3936).

SUPPLEMENTARY INFORMATION: Under section 5 of TSCA, any person who intends to manufacture or import a new chemical substance for commercial purposes in the United States must submit a notice to EPA before manufacture or import begins. A "new" chemical substance is any chemical substance that is not on the Inventory of existing chemical substances compiled by EPA under section 8(b) of TSCA. EPA first published the Initial Inventory on June 1, 1979. Notice of availability of the Initial Inventory was published in the **Federal Register** on May 15, 1979 (44 FR 28558). The requirement to submit a PMN for new chemical substances manufactured or imported for commercial purposes became effective on July 1, 1979.

Section 5(a)(1) requires each PMN to be submitted in accordance with section 5(d) and any applicable requirement of section 5(b). Section 5(d)(1) defines the contents of a PMN. Section 5(b)(1) contains additional reporting requirements for chemical substances that are subject to testing rules under section 4. Section 5(b)(2) requires additional information in PMN's for substances which EPA, by rules under section 5(b)(4), has determined may present unreasonable risks of injury to health or the environment.

Section 5(h), "Exemptions," contains several provisions for exemptions from some or all of the requirements of section 5. In particular, section 5(h)(1) authorizes EPA, upon application, to exempt persons from any requirement of section 5(a) or section 5(b) to permit the persons to manufacture or process a chemical substance for test marketing purposes. To grant such an exemption, the Agency must find that the test marketing activities will not present any unreasonble risk of injury to health or the environment. EPA must either approve or deny the application within 45 days of its receipt, and the Agency must publish a notice of its disposition in the **Federal Register.** If EPA grants a test marketing exemption, it may impose restrictions on the test marketing activities.

Under section 5(h)(6), EPA must publish in the **Federal Register** a notice of receipt of an application under section 5(h)(1) immediately after the Agency receives the application. The notice identifies and briefly describes the application (subject to section 14 confidentiality restrictions) and gives interested persons an opportunity to comment on it and whether EPA should grant the exemption. Because the Agency must act on the application within 45 days, interested persons should provide comments within 15 days after the notice appears in the **Federal Register.**

EPA has proposed Premanufacture Notificaton Requirements and Review Procedures published in the **Federal Register** of January 10, 1979 (44 FR 2242) and October 16, 1979 (44 FR 59764) containing proposed premanufacture rules and notice forms. Proposed 40 CFR 720.15 (44 FR 2268) would implement section 5(h)(1) concerning exemptions for test marketing and includes proposed 40 CFR 720.15(c) concerning the section 5(h)(6) **Federal Register** notice. However, these requirements are not yet in effect. In the meantime, EPA has published a statement of Interim Policy published in the **Federal Register** of May 15, 1979 (44 FR 28564) which applies to PMNs submitted prior to promulgation of the rules and notice forms.

Interested persons may, on or before June 3, 1980, submit to the Document Control Officer (TS-793), Rm. E-447, Office of Pesticides and Toxic Substances, 401 M St., SW., Washington, DC 20460, written comments regarding this notice. Three copies of all comments shall be submitted, except that individuals may submit single copies of comments. The comments are to be identified with the document control number "[OPTS-59022]". Comments received may be seen in the above office between 9:00 a.m. and 4:00 p.m., Monday through Friday, excluding holidays.

(Sec. 5, 90 Stat. 2012 (15 U.S.C. 2604))

Dated: May 13, 1980.

John P. DeKany,

Deputy Assistant Administrator for Chemical Control.

TM 80-22.

Close of Review Period. June 12, 1980.

Manufacturer's Identity. Claimed confidential.

Specific Chemical Identity. Claimed confidential. Generic name provided: Copolymer of substituted ethenylbenzene and substituted ethenylheterocycle.

The following summary is taken from data submitted by the manufacturer in the test marketing exemption application.

Use. Claimed confidential. No more than 200 kilograms (kg) of this substance, with a molecular weight in excess of 10,000, will be manufactured for test marketing purposes. This material will be incorporated into a manufactured article.

Physical/Chemical Properties. No physical/chemical properties were provided in the application.

Toxicity Data:

Acute oral toxicity (male and female rats) $LD_{50} > 5$ g/kg;

Primary eye irritation (rabbit), Mild irritant (no rinse);

Primary skin irritation (rabbit), Non-irritant;

Mutagenicity-Ames (*Salmonella*), Negative.

Exposure:

During Manufacturing. A total of 20 people will work in the area where this chemical will be manufactured, but generally no more than two, at any time, will be working on the production of this chemical. The only potential for human contact with the new chemical substance is skin contact with a solution containing this chemical. Where there is such potential during cleaning, packaging, and filter changes, industrial hygiene requirements include workers' use of chemical goggles and rubber gloves. Duration of production operations is estimated to be 34 eight-hour shifts.

During Processing and Use. A total of 26 people will work in the areas where this chemical will be processed and used, but no more than three will work on processing this polymer at any time. The only potential for human contact with the new chemical substance is skin contact with solutions containing this chemical. Where there is such potential during transfer, cleaning, and filter changes, industrial hygiene requirements include workers' use of safety glasses and rubber gloves. Duration of all processing operations is estimated to total 56 eight-hour shifts. During the processing and use steps, small quantities of the new chemical substance, along with other materials, become an integral part of an article.

[FR Doc. 80-15279 Filed 5-16-80; 8:45 am]

BILLING CODE 6560-01-M

[OPTS-51064]

Premanufacture Notice

AGENCY: Environmental Protection Agency (PA).

ACTION: Notice.

SUMMARY: Section 5(a)(1) of the Toxic Substances Control Act (TSCA) requires any person who intends to manufacture or import a new chemical substance to submit a premanufacture notice (PMN) to EPA at least 90 days before manufacture or import commences. Section 5(d)(2) requires EPA to publish in the **Federal Register** certain information about each PMN within 5 working days after receipt. This Notice announces receipt of a PMN and provides a summary.

DATES: Written comments by June 29, 1980.

ADDRESS: Written comments to: Document Control Officer (TS-793), Office of Pesticides and Toxic Substances, Environmental Protection Agency, 401 M St., SW, Washington, DC 20460, 202-755-8050.

FOR FURTHER INFORMATION CONTACT: Ms. Cindy Work, Premanufacturing Review Division (TS-794), Office of Pesticides and Toxic Substances, Environmental Protection Agency, 401 M St., SW, Washington, DC 20460, 202-426-2601.

SUPPLEMENTARY INFORMATION: Section 5(a)(1) of TSCA requires any person who intends to manufacture or import a new chemical substance to submit a PMN to EPA at least 90 days before manufacture or import commences. A "new" chemical substance is any substance that is not on the Inventory of existing substances compiled by EPA under Section 8(b) of TSCA. EPA first published the Initial Inventory on June 1, 1979. Notice of availability of the Initial Inventory was published in the **Federal Register** of May 15, 1979 (44 FR 28558). The requirement to submit a PMN for new chemical substances manufactured or imported for commercial purposes became effective on July 1, 1979.

EPA has proposed premanufacture notification rules and forms in the **Federal Register** issues of January 10, 1979 (44 FR 2242) and October 6, 1979 (44 FR 59764). These regulations, however, are not yet in effect. Interested persons should consult the Agency's Interim Policy published in the **Federal Register** of May 15, 1979 (44 FR 28564) for guidance concerning premanufacture notification requirements prior to the effective date of these rules and forms. In particular, see page 28567 of the Interim Policy.

A PMN must include the information listed in Section 5(d)(1) of TSCA. Under section 5(d)(2) EPA must publish in the **Federal Register** nonconfidential information on the identity and uses of the substance, as well as a description of any test data submitted under section 5(b). In addition, EPA has decided to publish a description of any test data submitted with the PMN and EPA will publish the identity of the submitter unless this information is claimed confidential.

Publication of the section 5(d)(2) notice is subject to section 14 concerning disclosure of confidential information. A company can claim confidentiality for any information submitted as part of a PMN. If the company claims confidentiality for the specific chemical identity or use(s) of the chemical, EPA encourages the submitter to provide a generic use description, a nonconfidential description of the potential exposures from use, and a generic name for the chemical. EPA will publish the generic name, the generic use, and the potential exposure descriptions in the **Federal Register.**

If no generic use description or generic name is provided, EPA will develop one and after providing due notice to the submitter, will publish an amended **Federal Register** notice. EPA immediately will review confidentiality claims for chemical identity, chemical use, the identity of the submitter, and for health and safety studies. If EPA determines that portions of this information are not entitled to confidential treatment, the Agency will publish an amended notice and will place the information in the public file, after notifying the submitter and complying with other applicable procedures.

After receipt, EPA has 90 days to review a PMN under section 5(a)(1). The section 5(d)(2) **Federal Register** notice indicates the date when the review period ends for each PMN. Under section 5(c), EPA may, for good cause, extend the review period for up to an additional 90 days. If EPA determines that an extension is necessary, it will publish a notice in the **Federal Register.**

Once the review period ends, the submitter may manufacture the substance unless EPA has imposed restrictions. When the submitter begins to manufacture the substance, he must report to EPA, and the Agency will add the substance to the Inventory. After the substance is added to the Inventory, any company may manufacture it without providing EPA notice under section 5(a)(1)(A).

Therefore, under the Toxic Substances Control Act, summaries of the data taken from the PMN's are published herein.

Interested persons may, on or before June 29, 1980, submit to the Document Control Officer (TS-793), Rm. E-447, Office of Pesticides and Toxic Substances, 401 M St., SW, Washington, DC 20460, written comments regarding these notices. Three copies of all comments shall be submitted, except that individuals may submit single copies of comments. The comments are to be identified with the document control number "[OPTS-51064]" and the PMN number "PMN-80-92". Comments received may be seen in the above office between 8:00 a.m. and 4:00 p.m., Monday through Friday, excluding holidays.

(Sec. 5, 90 Stat. 2012 (15 U.S.C. 2604))

Dated: May 13, 1980.

John P. DeKany,

Deputy Assistant Administrator for Chemical Control.

PMN 80-92.

Close of Review Period. July 29, 1980.

Manufacturer's Identity. Claimed confidential. The submitter intends to produce the substance at a plant in the east-north central region of the country whose 3-digit Standard Industrial Classification Code is 285.

Specific Chemical Indentity. Polymer of: Tall oil fatty acid, styrene-allyl alcohol copolymer, acrylic acid, and styrene.

The following summary is taken from data submitted by the manufacturer in the PMN.

Use. Claimed confidential. The substance will be used in an open use that will release less than 50 kilograms (kg) of the substance to the environment per year. As a small component of a final formulation, the use may possibly involve potential exposure to skin and eyes without causing harmful effects.

Production Estimates

Production year	Minimum (kg/yr)	Maximum (kg/yr)
First year	45,000	113,000
Second year	45,000	682,000
Third year	45,000	682,000

Physical/Chemical Properties

	Polymer solution	Dried polymer
Solid content	72.8	
Viscosity	Z_4-Z_7	
Density	8.28 lb/gal	8.74 lb/gal
Solubility in water		0.01g/100g H_2O
Average molecular weight	11,400–11,600	
Flash point (closed cup)	112°F (44°C)	
Residual monomer	≤ 1%	
Elemental analysis		%C = 78.36 %H = 9.82 %O = 11.82
Chemical oxygen demand	2,338,000 $\mu gO_2/g$	

Toxicity of Raw Materials. No test data were submitted on the PMN substance. Toxicity data were provided on the individual monomers.

Exposure

Occupational activity and exposure route	Maximum number exposed	Maximum duration Hr/Da	Maximum duration Da/Yr	Concentratrion Average	Concentratrion Peak
Manufacturing—Inhalation	3	2	66	0–1ppm	1–10ppm
(dermal)					
Disposal—Inhalation	2	2	10	0–1ppm	0–1ppm
(dermal)					

Physical state of the substance to which workers may be exposed: Solid.

Environmental Release/Disposal: Manufacturing media: Air

Amount/Duration of Chemical Release (kg/yr): 10–100, 24 hr/da; 66 da/yr.

Each reactor at the manufacturing plant is equipped with an exhaust and fume condenser. The effluent (air borne) is also treated by an exhaust fume scrubber. Scrubber water goes to biological treatment lagoons with a sixty day retention period. Sludge is transported by state licensed carriers to a state licensed landfill.

Premanufacture Notices

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: Section 5(a)(1) of the Toxic Substances Control Act (TSCA) requires any person who intends to manufacture or import a new chemical substance to submit a premanufacture notice (PMN) to EPA at least 90 days before manufacture or import commences. Section 5(d)(2) requires EPA to publish in the **Federal Register** certain information about each PMN within 5 working days after receipt. This Notice announces receipt of three PMN's and provides a summary of each.

DATES: Written comments by:
PMN 80–83—June 28, 1980.
PMN 80–88—June 23, 1980.
PMN 80–91—June 29, 1980.

ADDRESS: Written comments to: Document Control Officer (TS–793), Office of Pesticides and Toxic Substances, Environmental Protection Agency, 401 M St., SW, Washington, DC 20460, 202–755–8050.

FOR FURTHER INFORMATION CONTACT:

Notice Manager, PMN No. Telephone

George Bagley, 80–83, 202–426–3936.
Kirk Maconaughey, 80–88, 202–426–3936.
Rick Green, 80–91, 202–426–2601.

Mail Address for Notice Managers: Premanufacturing Review Division (TS–794), Office of Pesticides and Toxic Substances, Environmental Protection Agency, 401 M St., SW, Washington, DC 20460.

SUPPLEMENTARY INFORMATION: Section 5(a)(1) of TSCA requires any person who intends to manufacture or import a new chemical substance to submit a PMN to EPA at least 90 days before manufacture or import commences. A "new" chemical substance is any substance that is not on the Inventory of existing substances compiled by EPA under Section 8(b) of TSCA. EPA first published the Initial Inventory on June 1, 1979. Notice of availability of the Initial Inventory was published in the **Federal Register** of May 15, 1979 (44 FR 28558). The requirement to submit a PMN for new chemical substances manufactured or imported for commercial purposes became effective on July 1, 1979.

EPA has proposed premanufacture notification rules and forms in the **Federal Register** issues of January 10, 1979 (44 FR 2242) and October 6, 1979 (44 FR 59764). These regulations, however, are not yet in effect. Interested persons should consult the Agency's Interim Policy published in the **Federal Register** of May 15, 1979 (44 FR 28564) for guidance concerning premanufacture notification requirements prior to the effective date of these rules and forms. In particular, see page 28567 of the Interim Policy.

A PMN must include the information listed in Section 5(d)(1) of TSCA. Under section 5(d)(2) EPA must publish in the **Federal Register** nonconfidential information on the identity and uses of the substance, as well as a description of any test data submitted under section 5(b). In addition, EPA has decided to publish a description of any test data submitted with the PMN and EPA will publish the identity of the submitter unless this information is claimed confidential.

Publication of the section 5(d)(2) notice is subject to section 14 concerning disclosure of confidential information. A company can claim confidentiality for any information submitted as part of a PMN. If the company claims confidentiality for the specific chemical identity or use(s) of the chemical, EPA encourages the submitter to provide a generic use description, a nonconfidential description of the potential exposures from use, and a generic name for the chemical. EPA will publish the generic name, the generic use, and the potential exposure descriptions in the **Federal Register.**

If no generic use description or generic name is provided, EPA will develop one and after providing due notice to the submitter, will publish an amended **Federal Register** notice. EPA immediately will review confidentiality claims for chemical identity, chemical use, the identity of the submitter, and for health and safety studies. If EPA determines that portions of this information are not entitled to confidential treatment, the Agency will publish an amended notice and will place the information in the public file, after notifying the submitter and complying with other applicable procedures.

After receipt, EPA has 90 days to review a PMN under section 5(a)(1). The section 5(d)(2) **Federal Register** notice

indicates the date when the review period ends for each PMN. Under section 5(c), EPA may, for good cause, extend the review period for up to an additional 90 days. If EPA determines that an extension is necessary, it will publish a notice in the **Federal Register.**

Once the review period ends, the submitter may manufacture the substance unless EPA has imposed restrictions. When the submitter begins to manufacture the substance, he must report to EPA, and the Agency will add the substance to the Inventory. After the substance is added to the Inventory, any company may manufacture it without providing EPA notice under section 5(a)(1)(A).

Therefore, under the Toxic Substances Control Act, summaries of the data taken from the PMN's are published herein.

Interested persons may, on or before the date shown under "DATES" for each specific PMN, submit to the Document Control Officer (TS–793), Rm. E–447, Office of Pesticides and Toxic Substances, 401 M St. SW., Washington, DC 20460, written comments regarding these notices. Three copies of all comments shall be submitted, except that individuals may submit single copies of comments. The comments are to be identified with the document control number "[OPTS–51063]" and the specific PMN number. Comments received may be seen in the above office between 8 a.m. and 4 p.m., Monday through Friday, excluding holidays.

(Sec. 5, 90 Stat. 2012 (15 U.S.C. 2604).)

Dated: May 13, 1980.

John P. DeKany,

Deputy Assistant Administrator for Chemical Control.

PMN 80–83

Close of Review Period: July 27, 1980.

Manufacturer's identity: Claimed confidential. The submitter has annual sales in excess of $500,000,000. The 3-digit Standard Industrial Classification Code is 385.

Specific Chemical Identity. Claimed confidential. Generic name provided: Unsaturated polyester resin based on six monomers, including maleic anhydride, phthalic anhydride, an alkylene glycol, and an alkylene ether glycol.

The following summary is taken from data submitted by the manfuacturer in the PMN.

Use. Claimed confidential. The substance will be used in an open use that will release more than 5,000 kilograms (kg), but less than 50,000 kg, of the substance to the environment per year. The use may involve potential exposure to non-chemical industrial employees more than five times per week with potential skin, eye, oral, and inhalation contacts.

Production Estimates. Claimed confidential.

Physical/Chemical Properties—

Non/Volatile: 60%

Weight/gallon: 9 pounds

Molecular weight (estimate): 1,400–1,800

Acid value: 15–20

Flash point (reduced): 90°F

Boiling range: Above 145°C

Viscosity (reduced): 350–550 cps

Solubility (polymer)—

Water: Insoluble.

Alcohol: Partially soluble.

Ketones: Soluble.

Aliphatic hydrocarbons: Partially soluble.

Aromatic hydricarbons: Soluble.

Toxicity Data. No toxicity data were submitted with the PMN.

Exposure

Activity	Exposure route	Max. No. exposed	Max. duration Hr./Da.	Da./Yr.
Manufacture	Skin	15	24	260

Workers will not be exposed to the new polymer under normal operations since manufacture will be carried out in a closed system. The only exposure possible would be incidental skin contact during sampling for chemical analysis, accidental spillage (*e.g.,* valve leakage or line rupture) which would require cleanup procedures typical for chemical spills, and during infrequent periodic plant shutdowns for general maintenance and cleaning.

Exposure

Activity	Exposure route	Max. No. exposed	Max. duration Hr./Da.	Da./Yr.
Processing	Skin Inhalation...	6	24	260

During normal operations, contact is only incidental and accidental. However, workers may be exposed to the new chemical substance and to the diluent during blending, sampling, and transfer out of the system. Skin contact is minimized by use of protective gloves, and inhalation of diluent fumes is minimized by effective ventilation and by providing workers with respiratory equipment during loading and filling of drums, tankwagons and railcars.

Physical states of the chemical substance to which workers may be exposed in the work place: Solid or liquid solution.

Use. Workers will be exposed to the polymer solution and to the cured polymer. Exposure includes accidental skin contact which is minimized by use of protective equipment, eye contact with dust or aerosols, and inhalation of mist or aerosols. Eye, nose and mouth contact is minimized by use of protective equipment.

PMN 80–88

Close of Review Period: July 23, 1980.

Manufacturer's Identity: Ciba-Geigy Corp., PO Box 114222, Greensboro, NC 27409.

Specific Chemical Identity. Claimed confidential. Generic name provided: Cyanalkyl carbomonocyclicsulfonate.

The following summary is taken from data submitted by the manufacturer in the PMN.

Use. Use will be 100% as a process intermediate and will be site limited.

Production Estimates. Claimed confidential.

Physical/Chemical Properties—

Melting point: $< -96°C$

Boiling point: 42–44°C

Vapor density: 2.93 (air=1)

Specific gravity: 1.31

Volatility: 80%

Vapor pressure: 380 min. at 22°C

Solubility—

Water: Nil

Soluble in other solvents: Acetone, ether, alcohol.

Appearance: Clear yellowish liquid.

Odor: Methylene chloride.

Toxicity Data

Acute oral LD_{50} (rats): 1.07 g/kg

Acute dermal LD_{50} (rabbits): >5.0 g/kg

Eye irritation (rabbits): Moderately irritating. Range: 17.3–17.7/110

Primary skin irritation (rabbits): Moderately irritating. Range: 4.79/8.0

Exposure.

Manufacture will take place in a closed system. During manufacture, the only exposure would be during the sampling of the reaction mixture. Traces of the new chemical substances will

possibly be in the effluent streams from its manufacture and from the subsequent reaction step. However, the effluent from the new chemical substance is handled in a closed system and the effluent from the subsequent reaction step is an open system only when dumped into a sump to be pumped to an incinerator.

During early work with this material, a few workers developed skin rashes. The animal studies confirmed the material is moderately irritating to the eye and skin. Goggles and gloves are now required when working with the material.

Environmental Release/Disposal. Claimed confidential.

PMN 80-91

Close of Review Period: July 29, 1980.

Manufacturer's Identity: American Color & Chemical Corp., Mt. Vernon St., PO Box 88, Lock Haven, PA 17745.

Specific Chemical Identity. Claimed confidential. Generic name provided: 1,3-Naphthalenedisulfonic acid, 6,6'-[1,2-ethenediylbis[(3-sulfo-4,1-phenylene)azo]]bis[4-amino-3-hydroxy,-compounded with tris (2 substituted ethyl) ammonium hydroxide.

The following summary is taken from data submitted by the manufacturer in the PMN.

Use. Paper tinting by paper maker.

Production Estimates. Claimed confidential.

Toxicity Data. Dermatological tests performed on paper dyed with the PMN substance produced no irritation or sensitization.

Exposure

Occupational Activity and Exposure Route	Max No. Exposed	Max Duration Hr/Da	Max Duration Da/Yr	Concentration Average	Concentration Peak
Manufacture— Skin contact....	4	4	20	0-1 ppm	0-1 ppm

Workers will normally not touch any of the product. Splashes due to handling may occur at drumming station. Physical state of the substance to which workers may be exposed: Liquid.

Exposure

Occupational Activity and Exposure Route	Max No. Exposed	Max Duration Hr/Da	Max Duration Da/Yr	Concentration Average	Concentration Peak
Use: Coloring paper.	Unknown	8	200	0-1 ppm	0-1 ppm

Product is pumped in enclosed systems from drums, tanks, or other storage vessels to pulp make-up tanks. There is normally no worker contact with it.

Commercial User

External contact is in handling of paper; concentration in paper is exceedingly small and the color does not come off on handling.

Possibility of internal contact is remote. Concentrations extremely small.

Environmental Release/Disposal

Manufacturing—

Media: Amount/Duration of Chemical Release (kg/yr).

Water: Less than 10. 1 hr/da; 10 da/yr.

All waste streams namely-filtrates, wash water, and clean up solutions are confined within internal lines for pretreatment prior to transmission to the city publicly owned treatment works (POTW).

Pretreatment consists of collection, equalization, oxidization, and reduction treatment steps which reduces color and organics to levels acceptable at the city treatment plant.

FEDERAL MARITIME COMMISSION

[Docket No. 80-28]

Furnishing Container Chassis; Filing of Petition for Declaratory Order

Notice is given that a petition for declaratory order has been filed by Delaware River Port Authority, Maryland Port Administration, Massachusetts Port Authority and Virginia Port Authority. Petitioners seek an order of the Commission declaring that common carriers by water must tender cargo containers mounted on a chassis for removal of the cargo from the pier to the ultimate consignee at an interior point and that this apply at all ports within the United States.

Interested persons may inspect and obtain a copy of the petition at the Washington Office of the Federal Maritime Commission, 1100 L Street, N.W., Room 11101 or may inspect the petition at the Field Offices located at New York, New York; New Orleans, Louisiana; San Francisco, California; Chicago, Illinois; and San Juan, Puerto Rico. Interested persons may submit replies to the Secretary, Federal Maritime Commission, Washington, D.C. 20573 on or before June 15, 1980. An original and fifteen copies of such replies shall be submitted and a copy thereof served on petitioners. Replies shall contain the complete factual and legal presentation of the replying party as to the desired resolution of the petition.

Francis C. Hurney,

Secretary.

BILLING CODE 6730-01-M

[Docket No. 80-27]

Connell Bros. Co., Ltd. v. Lykes Bros. Steamship Co., Inc.; Filing of Complaint and Assignment

Notice is given that a complaint filed by Connell Bros. Company, Ltd. against Lykes Bros. Steamship Co., Inc. was served May 9, 1980. The complaint alleges that respondent has assessed charges for ocean transportation which are so unreasonably high as to be detrimental to commerce in violation of section 18(b)(5) of the Shipping Act, 1916.

This proceeding has been assigned to Administrative Law Judge Paul J. Fitzpatrick. Hearing in this matter, if any is held, shall commence on or before November 9, 1980. The hearing shall include oral testimony and cross-examination in the discretion of the presiding officer only upon a proper showing that there are genuine issues of material fact that cannot be resolved on the basis of sworn statements, affidavits, depositions, or other documents or that the nature of the matter in issue is such that an oral hearing and cross-examination are necessary for the development of an adequate record.

Francis C. Hurney,

Secretary.

[FR Doc. 80-15271 Filed 5-16-80; 8:45 am]

BILLING CODE 6730-01-M

Notice of Agreement Filed

Notice is hereby given that the following agreement has been filed with the Commission for review and approval, if required, pursuant to section 15 of the Shipping Act, 1916, as amended (39 Stat. 733, 75 Stat. 763, 46 U.S.C. 814).

Interested parties may inspect and obtain a copy of the agreement at the Washington office of the Federal Maritime Commission, 1100 L Street, N.W., Room 10423; or may inspect the agreement at the Field Offices located at New York, N.Y., New Orleans, Louisiana, San Francisco, California, and Old San Juan, Puerto Rico. Comments on such agreements, including requests for hearing, may be submitted to the Secretary, Federal Maritime Commission, Washington, D.C. 20573, on or before May 29, 1980. Any person desiring a hearing on the

proposed agreement shall provide a clear and concise statement of the matters upon which they desire to adduce evidence. An allegation of discrimination or unfairness shall be accompanied by a statement describing the discrimination or unfairness with particularity. If a violation of the Act or detriment to the commerce of the United States is alleged, the statement shall set forth with particularity the acts and circumstances said to constitute such violation or detriment to commerce.

A copy of any such statement should also be forwarded to the party filing the agreement (as indicated hereinafter) and the statement should indicate that this has been done.

Agreement No.: T-1768-14.

Filing Party: Dorothy L. Vecchiarelli, Supervising Paralegal, Law Department, Sea-Land Industries, Inc., P.O. Box 900, 10 Parsonage Road, Edison, New Jersey 08817.

Summary: Agreement No. T-1768-14, between the City of Oakland (City) and Sea-Land Service, Inc. (Sea-Land) modifies the parties' basic agreement which provides for the preferential assignment of certain facilities to Sea-Land. The purpose of the modification is to: (1) extend the time within which Sea-Land may exercise its right to terminate said agreement for an additional two month period to and including the 31st day of May, 1980; and (2) extend the period in which the current minimum and maximum compensation amounts will apply under said agreement for 2 months from and after the 1st day of June, 1980, to and including the 31st day of July, 1980.

By Order of the Federal Maritime Commission.

Date: May 14, 1980.

BILLING CODE 6730-01-M

FEDERAL RESERVE SYSTEM

Blue Hill Agency, Inc.

Blue Hill Agency, Inc., Blue Hill, Nebraska, has applied, pursuant to section 4(c)(8) of the Bank Holding Company Act (12 U.S.C. § 1843(c)(8)) and § 225.4(b)(2) of the Board's Regulation Y (12 CFR 225.4(b)(2)), for permission to retain its general insurance activities in Blue Hill, Nebraska, a community with a population not exceeding 5,000.

Applicant states that it would engage in the activities of a general insurance business, including the sale of property, casualty, life, health, fidelity and surety, and other types of insurance usually offered by a general insurance agency. These activities would be performed from an office of Applicant in Blue Hill, Nebraska, and the geographic areas to be served are Blue Hill and the surrounding area. Such activities have been specified by the Board in section 225.4(a) of Regulation Y as permissible for bank holding companies, subject to Board approval of individual proposals in accordance with the procedures of section 225.4(b).

Interested persons may express their views on the question whether consummation of the proposal can "reasonably be expected to produce benefits to the public, such as greater convenience, increased competition, or gains in efficiency, that outweigh possible adverse effects, such as undue concentration of resources, decreased or unfair competition, conflicts of interests, or unsound banking practices." Any request for a hearing on this question must be accompanied by a statement of the reasons a written presentation would not suffice in lieu of a hearing, identifying specifically any questions of fact that are in dispute, summarizing the evidence that would be presented at a hearing, and indicating how the party commenting would be aggrieved by approval of the proposal.

The application may be inspected at the offices of the Board of Governors or at the Federal Reserve Bank of Kansas City.

Any views or requests for hearing should be submitted in writing and received by the Secretary, Board of Governors of the Federal Reserve System, Washington, D.C. 20551, not later than June 9, 1980.

Board of Governors of the Federal Reserve System, May 12, 1980.

BILLING CODE 6210-01-M

Meader Insurance Agency, Inc.; Proposed Retention of General Insurance Activities

Meader Insurance Agency, Inc., Waverly, Kansas, has applied pursuant to section 4(c)(8) of the Bank Holding Company Act (12 U.S.C. § 1843(c)(8)) and § 225.4(b)(2) of the Board's Regulation Y (12 CFR 225.4(b)(2)), for permission to retain its general insurance activities. These activities would be performed from offices of Applicant's subsidiary, The First National Bank of Waverly, in Waverly, Kansas, and the geographic area to be served is Coffey County. Such activities have been specified by the Board in section 225.4(a) of Regulation Y as permissible for bank holding companies, subject to Board approval of individual proposals in accordance with the procedures of section 225.4(b).

Interested persons may express their views on the question whether consummation of the proposal can "reasonably be expected to produce benefits to the public, such as greater convenience, increased competition, or gains in efficiency, that outweigh possible adverse effects, such as undue concentration of resources, decreased or unfair competition, conflicts of interests, or unsound banking practices." Any request for a hearing on this question must be accompanied by a statement of the reasons a written presentation would not suffice in lieu of a hearing, identifying specifically any questions of fact that are in dispute, summarizing the evidence that would be presented at a hearing, and indicating how the party commenting would be aggrieved by approval of the proposal.

The application may be inspected at the offices of the Board of Governors or at the Federal Reserve Bank of Kansas City.

Any views or requests for hearing should be submitted in writing and received by the Secretary, Board of Governors of the Federal Reserve System, Washington, D.C. 20551, not later than June 9, 1980.

BILLING CODE 6210-01-M

Bank Holding Companies; Proposed de Novo Nonbank Activities

The bank holding companies listed in this notice have applied, pursuant to section 4(c)(8) of the Bank Holding Company Act (12 U.S.C. 1843(c)(8) and § 225.4(b)(1) of the Board's Regulation Y (12 CFR 225.4(b)(1)), for permission to engage *de novo* (or continue to engage in an activity earlier commenced *de novo*), directly or indirectly, solely in the activities indicated, which have been determined by the Board of Governors to be closely related to banking.

With respect to each application, interested persons may express their views on the question whether consummation of the proposal can "reasonably be expected to produce benefits to the public, such as greater convenience, increased competition, or gains in efficiency, that outweigh possible adverse effects, such as undue concentration of resources, decreased of unfair competition, conflicts of interest, or unsound banking practices." Any comment on an application that requests

a hearing must include a statement of the reasons a written presentation would not suffice in lieu of a hearing, identifying specifically any questions of fact that are in dispute, summarizing the evidence that would be presented at a hearing, and indicating how the party commenting would be aggrieved by approval of that proposal.

Each application may be inspected at the offices of the Board of Governors or at the Federal Reserve Bank indicated for that application. Comments and requests for hearings should identify clearly the specific application to which they relate, and should be submitted in writing and, except as noted, received by the appropriate Federal Reserve Bank not later than June 12, 1980.

A. *Federal Reserve Bank of Kansas City* (John F. Zoellner, Vice President) 925 Grand Avenue, Kansas City, Missouri 64198:

First Midwest Bancorp, Inc., St. Joseph, Missouri (agricultural financing; Missouri) to engage, through First AgCorp, Inc., in the following activities: all aspects of the business of agricultural finance, including the making and servicing of loans to individuals, partnerships, corporations and other business entities, the proceeds of which are to be used for the purpose of engaging in the production of livestock and other agricultural activities. Such activities will be conducted at offices in the following location: Fourth and Felix Streets, St. Joseph, Missouri and will service Missouri, Kansas, Iowa and parts of the states of Illinois and Colorado.

B. *Federal Reserve Bank of San Francisco* (Harry W. Green, Vice President) 400 Sansome Street, San Francisco, California 94210:

Seafirst Corporation, Seattle, Washington (leasing activities; Nationwide): to engage through its subsidiary, SF Leasing Corporation, in leasing real and personal property as permitted by Regulation Y, owning stock of special-purpose corporations which are so engaged, and acting as agent, broker, and adviser in leasing such property. These activities would be conducted from an office in Seattle, Washington, and the area to be served is nationwide. Comments on this application must be received by June 11, 1980.

C. *Other Federal Reserve Banks:* None.

Board of Governors of the Federal Reserve System, May 12, 1980.

Office of the Assistant Secretary for Health

National Committee Vital Health Statistics, Subcommittee on Environmental Health Statistics; Meeting

Pursuant to the Federal Advisory Act (Pub. L. 92-463), notice is hereby given that the Subcommittee on Environmental Health Statistics of the National Committee on Vital and Health Statistics, pursuant to functions established by Section 306(k), Paragraph (4) of the Public Health Service Act (42 U.S.C. 242(k)), will convene on Tuesday, May 27, 1980 at 9:00 a.m., Conference Room 1001, Johns Hopkins School of Hygiene, 615 North Wolfe Street, Baltimore, Maryland.

The Subcommittee will discuss the development of guidelines for environmental health data collection; NCHS staff will report on their activities in developing an outline for health effects guidelines; and the Subcommittee will present the environmental exposure component of the guideline outline.

Agenda items are subject to change as priorities dictate.

Further information regarding this meeting of the Subcommittee or matters pertaining to the National Committee on Vital and Health Statistics may be obtained by contacting Samuel P. Korper, Ph.D., M.P.H., Executive Secretary, National Committee on Vital and Health Statistics, Room 17A-55, 5600 Fishers Lane, Rockville, Maryland 20857, telephone: 301-443-2660.

BILLING CODE 4110-85-M

Health Resources Administration Advisory Council and Subcommittees; Meetings

In accordance with section 10(a)(2) of the Federal Advisory Committee Act (Public Law 92-463), announcement is made of the following National Advisory bodies scheduled to meet during the month of June 1980:

Name: National Guidelines, Goals, Priorities, and Standards Subcommittee of the National Council on Health Planning and Development
Date and Time: Thursday, June 12, 1980; 9:00 a.m.-12:00 Noon
Place: Conference Room 525A-529A, Hubert H. Humphrey Building, 200 Independence Avenue, SW., Washington, D.C. 20201
Open for entire meeting.

Purpose: The objectives of the National Guidelines, Goals, Priorities, and Standards Subcommittee are to study the experience nationwide in the public and private sectors with the adoption and/or adjustment of the National Guidelines for Health Planning and their impact and recommend changes as appropriate; study the experience of the Health Systems Agencies and State Health Planning and Development Agencies nationwide in implementation of high priority goals and sub-goals and their impact; advise the Council in identifying additional high priority goals and sub-goals; investigate and coordinate information on demonstrations underway by provider, reimbursement, regulatory, labor, industry, and community groups on sub-goals, such as those on alcoholism and prevention; study, investigate and identify research needs appropriate to the formulation, adjustment and refinement of the National Guidelines, and study and develop improved indicators to assess the impact of the Guidelines or the need for revisions; and recommend to the Council on the need for further development and/or revision of the National Guidelines.

Agenda: Briefing on National Health Planning Goals; Update on CT Scanner Standard; Consideration of Institute of Medicine Report on "Health Planning in the United States: Issues in Guidelines Development"; and Guideline Development in Rural Areas; and Follow-up to March 13, 1980 meeting.

Name: Technology and Productivity Subcommittee of the National Council on Health Planning and Development
Date and Time: Thursday, June 12, 1980, 3:00 p.m.-5:00 p.m.
Place: Conference Room 337A-339A, Hubert H. Humphrey Building, 200 Independence Avenue SW., Washington, D.C. 20201.
Open for entire meeting.

Purpose: The objective of the Technology and Productivity Subcommittee is to advise the full Council on matters related to the productivity of the health care delivery system and to the implications of new medical technology for the organization, delivery and equitable distribution of health care services. "Technology" includes the drugs, devices and medical and surgical procedures used in medical care and the organizational and supportive systems within which such care is delivered. "Productivity" is the efficiency with which health care is delivered.

The Subcommittee is to deliberate and to make recommendations to the full Council on matters chosen from among those brought to it by Council members, HHS staff and advisory committees, other Federal departments, congressional committees and staff, provider groups and the public at large. The Subcommittee in addition will study and investigate the current needs for assistance of HSAs and SHPDAs in the area of evaluating productivity improvement and new medical technology, help transmit concerns of HSAs and SHPDAs to appropriate Federal agencies, and review the current resources both within the Federal Government and among the educational, research and other developmental agencies for providing needed assistance to HSAs and SHPDAs. In addition, it will review technology assessment activities within the Department in order to assure they are relevent to the needs of the HSAs and are useful in the development and implementation of national standards, goals, and guidelines, and for the establishment of priorities with those goals.

Agenda: Discussion of overview paper and policy recommendations; discussion of subcommittee's full report on productivity; proceedings of the Conference on Incentives for Improving Productivity; and public comment.

Name: Implementation and Administration Subcommittee of the National Council on Health Planning and Development
Date and Time: Thursday, June 12, 1980; 5:00 p.m.-7:00 p.m.
Place: Conference rooms 303A-305A, Hubert H. Humphrey Building, 200 Independence Avenue SW., Washington, D.C. 20201.
Open for entire meeting.

Purpose: The objective of the Implementation and Administration Subcommittee is to study and make recommendations on the implementation and administration of Titles XV and XVI of the Public Health Service Act. Specific areas for the Subcommittee's consideration are (1) the impact of HHS's implementation/administration on the effectiveness of Health Systems Agencies and State Health Planning and Development Agencies; (2) the effectiveness of the interrelationships between health planning agencies and HHS, Central and Regional Offices; (3) the timing and strategy of implementation and of the dissemination and distribution of regulatory and technical material; (4) how to better meet the needs of HSAs and SHPDAs; and (5) the review of the Council's responsibilities under section 1122 of the Social Security Act.

Agenda: Presentation on the Evaluation of the Health Planning Program, four section 1122 cases, and subcommittee consideration on the following staff reports: 1) Analysis of Issues in the section 1122 Program, 2) Federal-State-Local Relationships, and 3) Consumer Participation in the Health Planning Program.

Name: National Council on Health Planning and Development
Date and Time: Friday, June 13, 1980; 8:45 a.m.–3:30 p.m.
Place: Auditorium, Hubert H. Hunphrey Building, 200 Independence Avenue SW., Washington, D.C. 20201.
Open for entire meeting.

Purpose: The National Council on Health Planning and Development is responsible for advising and making recommendations with respect to (1) the development of national guidelines under section 1501 of Public Law 93–641, (2) the implementation and administration of Title XV and XVI of Public Law 93–641, and (3) an evaluation of the implications of new medical technology for the organization, delivery and equitable distribution of health care services. In addition, the Council advises and assists the Secretary in the preparation of general regulations to carry out the purposes of section 1122 of the Social Security Act and on policy matters arising out of the implementation of it, including the coordination of activities under that section with those under other parts of the Social Security Act or under other Federal or federally assisted health programs. The Council considers and advises the Secretary on proposals submitted by the Secretary under the provisions of section 1122(d)(2) that health care facilities or health maintenance organizations be reimbursed for expenses related to capital expenditures notwithstanding that under section 1122(d)(1) there would otherwise be exclusion of reimbursement for such expenses.

Agenda: Introduction of new Council members; Status Reports from Administrator, Health Resources Administration and Directors of Bureau of Health Planning and Bureau of Health Facilities; discussion of subcommittee draft on Incentives for Improving Health Care Production; reports from subcommittees on Guidelines, Goals, Priorities, and Standards and Implementation and Administration; discussion of Council consultation role in termination of HSAs and SHPDAs and evaluation study; and report on Chronic Disease and Disability Activities in Health Systems Agencies.

Anyone requiring information regarding the subject Council should write to or contact Mrs. S. Judy Silsbee, Executive Secretary, National Council on Health Planning and Development, Health Resources Administration, Room 10–27, Center Building, 3700 East-West Highway, Hyattsville, Maryland 20782. Telephone (301) 436–7175.

Agenda items are subject to change as priorities dictate.

Dated: May 13, 1980.

James A. Walsh,

Associate Administrator for Operations and Management.

BILLING CODE 4110–83–M

Health Professions and Nursing Student Loans; "Low-Income Levels" for Loan Repayment, Start-Up Assistance Grants, Health Careers Opportunity Grants, Nursing Capitation Grants and Nursing Special Project Grants

This Notice updates the income levels that are used to define a "low income family" for purposes of repayment of educational loans and for the support of training for individuals from disadvantaged backgrounds as provided for under sections 787 and 798, Health Careers Opportunity Grants; section 788(a), Start-Up Assistance Grants; section 810, Nursing Capitation Grants; and section 820, Nursing Special Project Grants of the Public Health Service Act.

Under sections 741(l) and 836(j) and the applicable program regulations, the Secretary of Health and Human Services may repay all or part of an individual's educational loan made after November 17, 1971, to meet the costs of attending a school of medicine, osteopathy, dentistry, veterinary medicine, optometry, pharmacy, podiatry, or nursing if the Secretary determines that the individual:

(1) Failed after November 17, 1971, to complete the health professions studies leading to the individual's first professional degree or to complete the specified nursing studies for which the loan(s) was made,

(2) Is in exceptionally needy circumstances;

(3) Is from a low-income or disadvantaged family; and

(4) Has not resumed or cannot reasonably be expected to resume the course of study within two years following the date the individual ended the studies.

Sections 57.214(c) and 57.317(c) of the applicable program regulations (42 CFR Part 57, Subparts C and D) require the Secretary to publish annually in the **Federal Register** the low-income levels which will be used in determining an applicant's eligibility for this repayment program. Aside from their use in determining whether an individual comes from a "low-income family," these income levels, together with other relevant factors such as value of assets, unusual expenses, income available to the individual, etc., are also considered in determining whether an individual is "in exceptionally needy circumstances" or is from a "disadvantaged family."

The income figures below were taken from low-income levels, published by the U.S. Bureau of Census, using an index adopted by a Federal Interagency Committee for use in a variety of Federal Programs, then multiplied by a factor of 1.3 for adaptation to the Health Professions and Nursing Student Loan Programs and other designated grant programs for which training for individuals from disadvantaged backgrounds is supported. The income figures have been updated to reflect increases in the Consumer Price Index through December 31, 1979.

Size of parents' family (includes only dependents listed on Federal income tax forms):	*Income level* (adjusted gross income for calendar year 1979)*
1	$4,900
2	6,300
3	7,500
4	9,700
5	11,400
6 or more	12,800

* Rounded to $100.

Dated: May 13, 1980.

Henry A. Foley, Ph. D.,

National Institutes of Health

Aging Review Committee; Meeting

Pursuant to Pub. L. 92–463, notice is hereby given of the meeting of the Aging Review Committee, National Institute on Aging, on June 26–27, 1980, in Building 31, Conference Room 4, National Institutes of Health, Bethesda, Md.

The meeting will be open to the public from 9:00 a.m. to 10:00 a.m. on June 26, for introductory remarks. Attendance by the public will be limited to space available.

In accordance with the provisions set forth in Sections 552b(c)(4) and 552b(c)(6), Title 5, U.S. Code and Section 10(d) of Pub. L. 92–463, the meeting will be closed to the public on June 26, from 10:00 a.m. to adjournment on June 27, for the review, discussion and evaluation of individual grant applications. These applications and the discussions could reveal confidential trade secrets or commercial property such as patentable material, and personal information concerning individuals associated with the applications, disclosure of which would constitute a clearly unwarranted invasion of personal privacy.

Ms. June C. McCann, Committee Management Officer, NIA, Building 31, Room 5C–05, National Institutes of Health, Bethesda, Maryland, Area Code 301, 496–5345 will provide summaries of meetings and rosters of Committee members as well as substantive program information.

(Catalog of Federal Domestic Assistance Program No. 13.866, National Institutes)

Dated: May 13, 1980.

Suzanne L. Fremeau,

Committee Management Officer, National Institutes of Health.

BILLING CODE 4110–08–M

Biotechnology Resources Review Committee; Meeting

Pursuant to Pub. L. 92–463, notice is hereby given of the meeting of the Biotechnology Resources Review Committee, Division of Research Resources, June 9, 1980, Conference Room 6, Bldg. 31, National Institutes of Health, Bethesda, Maryland 20205.

This meeting will be open to the public from 9:00 a.m. to approximately 2:30 p.m. to discuss the current status of the Chemical/Biological Information-Handling Project and guidelines for review of PROPHET sites, and to discuss future Committee activities in connection with planning and new initiatives in the Biotechnology Resources Program. Attendance by the public will be limited to space available.

In accordance with the provisions set forth in Sections 552b(c)(4) and 552b(c)(6), Title 5, U.S. Code and Section 10(d) of Pub. L. 92–463, the meeting will be closed to the public from approximately 2:30 p.m. to adjournment for the review of PROPHET contract RFP notices and the review, discussion and evaluation of individual research prospectuses submitted by organizations seeking access to PROPHET System services. These prospectuses and the discussions could reveal confidential trade secrets or commercial property such as patentable material, and personal information concerning individuals associated with the prospectuses, disclosure of which would constitute a clearly unwarranted invasion of personal privacy.

Mr. James Augustine, Chief, Office of Science and Health Reports, Division of Research Resources, Bldg. 31, Rm. 5B–13, National Institutes of Health, Bethesda, Maryland 20205, telephone area code 301 496–5545, will provide summaries of meetings and rosters of committee members.

Dr. Charles L. Coulter, Executive Secretary, Biotechnology Resources Review Committee, Division of Research Resources, Bldg., 31, Rm. 5B–41, National Institutes of Health, Bethesda, Maryland 20205, telephone area code 301 496–5411, will furnish substantive program information.

(Catalog of Federal Domestic Assistance Program No. 13.371, National Institutes of Health)

Dated: May 13, 1980.

Mrs. Suzanne L. Fremeau,

Committee Management Officer, National Institutes of Health.

BILLING CODE 4110–08–M

Board of Scientific Counselors, NEI; Meeting

Pursuant to Pub. L. 92–463, notice is hereby given of the meeting of the Board of Scientific Counselors, National Eye Institute, June 9 and 10, 1980, Building 31, Room 6A–35, National Institutes of Health, Bethesda, Maryland.

This meeting will be open to the public on June 9 from 8:30 a.m. until approximately 2:30 p.m. for general remarks by the Institute's Acting Scientific Director on matters concerning the intramural programs of the National Eye Institute. Attendance by the public will be limited to space available.

In accordance with provisions set forth in Section 552b(c)(6), Title 5, U.S. Code and Section 10(d) of Pub. L. 92–463, the meeting will be closed to the public on June 9 from approximately 2:30 p.m. until adjournment and the entire day on June 10 for review, discussion, and evaluation of individual projects conducted by the Laboratory of Vision Research, NEI. This evaluation and discussion could reveal personal information concerning individuals associated with the projects, the disclosure of which would consitute a clearly unwarranted invasion of personal privacy. Consequently, this meeting is concerned with matters exempt from mandatory disclosure.

Mr. Julian Morris, Chief, Office of Program Planning and Scientific Reporting, National Eye Institute, Building 31, Room 6A–25, National Institutes of Health, Bethesda, Maryland 20205 (telephone 301/496–5248), will furnish summaries of the meeting and rosters of committee members.

Substantive program information may also be obtained from Dr. Jin Kinoshita, Acting Scientific Director, National Eye Institute, Building 6, Room 222–A, National Institutes of Health, Bethesda, Maryland 20205 (telephone 301/496–3552).

Dated: May 13, 1980.

Suzanne L. Fremeau,

Commitee Management Officer, National Institutes of Health.

BILLING CODE 4110–08–M

Vision Research Program Committee; Meeting

Pursuant to Pub. L. 92–463, notice is hereby given of the meeting of the Vision Research Program Committee, National Eye Institute, June 27, 1980, Building 31, C Wing, Conference Room 8, National Institutes of Health, Bethesda, Maryland.

This meeting will be open to the public on Friday, June 27, from 8:30 a.m. to 9:30 a.m. for opening remarks and discussion of program guidelines. Attendance by the public will be limited to space available.

In accordance with provisions set forth in Sections 552b(c)(4) and 552b(c)(6), Title 5, U.S. Code and Section 10(d) of Pub. L. 92–463, the meeting will be closed to the public from 9:30 a.m. on June 27 until adjournment for the review, discussion and evaluation of individual grant applications. These applications and the discussions could reveal confidential trade secrets or commercial property such as patentable material, and personal information concerning individuals associated with the applications.

Mr. Julian Morris, Chief, Office of Program Planning and Scientific Reporting, National Eye Institute, Building 31, Room 6A–25, National Institutes of Health, Bethesda, Maryland 20205 (telephone: 301/496–5248) will furnish summaries of the meeting and rosters of committee members.

Dr. Catherine Henley, Review and Special Projects Officers, Extramural and Collaborative Programs, National Eye Institute, Building 31, Room 6A–06 (telephone 301/496–5561) will furnish substantive program information.

(Catalog of Federal Domestic Assistance Program Nos. 13.867, 13.868, 13.869, 13.870, and 13.871, National Institutes of Health)

Dated: May 13, 1980.

BILLING CODE 4110–08–M

Genetic Basis of Disease Review Committee; National Institute of General Medical Sciences; Meeting

Pursuant to Pub. L. 92–463, notice is hereby given of the meeting of the Genetic Basis of Disease Review Committee, National Institute of General Medical Sciences on June 23, 1980, 9 a.m., conference Room 7, Building 12C, National Institutes of Health, Bethesda, Maryland.

This meeting will be open to the public on June 23, 1980, from 9:00 a.m. until 10:00 a.m. for background information and discussion of issues relevant to the National Institute of General Medical Sciences and its National Research Service Award training activities and research programs. Attendance by the public will be limited to space available.

In accordance with provisions set forth in Section 552b(c)(6), Title 5, U.S. Code and section 10(d) of Pub. L. 92–463, the meeting will be closed to the public for approximately six hours for the review, discussion, and evaluation of institutional training grant applications in genetics. It is anticipated that this will occur June 23, from approximately 10:00 a.m. until adjournment. These applications and the discussion could disclose information of a personal nature where disclosure would constitute a clearly unwarranted invasion of personal privacy.

Mr. Paul Deming, Public Information Officer, NIGMS, Westwood Building, Room 9A10, Bethesda, Maryland 20205, Telephone (301) 495–7301, will furnish summary minutes of the meeting and a roster of committee members.

Mrs. Mary L. Wolff, Executive Secretary, Genetic Basis of Disease Review Committee, NIGMS, Westwood Building, Room 953, Telephone (301) 496–7585, will furnish substantive program information.

Dated: May 13, 1980.

Suzanne L. Fremeau,

Committee Management Officer, National Institutes of Health.

BILLING CODE 4110–08–M

Minority Access to Research Careers Review Committee, National Institute of General Medical Sciences; Meeting

Pursuant to Pub. L. 92–463, notice is hereby given of the meeting of the Minority Access to Research Careers Review Committee, National Institute of General Medical Sciences, on June 26–27, 1980, 8:45 a.m., National Institutes of Health, Federal Building, Conference Room 6001.

This meeting will be open to the public on June 26, 8:45 a.m., to 12:00 a.m. The meeting will consist of opening remarks and discussion of procedural matters. Attendance by the public will be limited to space available.

In accordance with provisions set forth in section 552b(c)(6), Title 5, U.S. Code and section 10(d) of Pub. L. 92–463, the meeting will be closed to the public for approximately the last four hours of the day on June 26, and approximately four hours on June 27. It is estimated that this will occur from 1:00 p.m. on June 26, and on June 27 from 8:45 a.m., until noon for the review, discussion and evaluation of institutional and individual grant applications. These applications and the discussions could reveal personal information concerning individuals associated with the applications, the disclosure of which would constitute a clearly unwarranted invasion of personal privacy.

Mr. Paul Deming, Public Information Officer, NIGMS, Westwood Building, Room 9A–10, 5333 Westbard Avenue, Bethesda, Maryland 20205, telephone (301) 496–7301, will furnish summary minutes of the meeting and a roster of committee members.

Substantive program information may be obtained from Mrs. Dolores Lowery, Acting Executive Secretary, Westwood Building, Room 950, Bethesda, Maryland 20205, telephone (301) 496–7941.

(Catalog of Federal Domestic Assistance Program 13.880, General Medical Sciences)

BILLING CODE 4110–08–M

Population Research Committee, National Institute of Child Health and Human Development; Meeting

Pursuant to Pub. L. 92–463, notice is hereby given of the meeting of the Population Research Committee, National Institute of Child Health and Human Development, on June 23–24, 1980 in the Landow Building, Conference Room "A," 7910 Woodmont Avenue, Bethesda, Maryland.

This meeting will be open to the public on June 23 from 9 a.m. to 10:30 a.m. to discuss the program status, new developments and projections for population research centers, program projects and institutional fellowships. Attendance by the public will be limited to space available.

In accordance with the provisions set forth in Title 5, U.S. Code section 552b(c)(4) and 552b(c)(6) and section 10(d) of Pub. L. 92–463, the meeting will be closed to the public on June 23 from 10:30 a.m. to adjournment on June 24 for the review, discussion and evaluation of individual grant applications.

The applications and the discussions could reveal confidential trade secrets or commercial property such as patentable material, and personnel imformational concerning individuals associated with the applications, the disclosure of which would constitute a clearly unwarranted invasion of personal privacy.

Mrs. Marjorie Neff, Committee Management Officer, NICHD, Landow Building, Room 7C–09, National Institutes of Health, Bethesda, Maryland, Area Code 301, 496–1485, will provide a summary of the meeting and a roster of committee members. Dr. Dinesh C. Sharma, Executive Secretary of the Population Research Committee, NICHD, Landow Building, Room 6C–03, National Institutes of Health, Bethesda, Maryland, Area Code 301, 496–1485, will furnish other information.

BILLING CODE 4110–08–M

Division of Research Grants; Meetings

Pursuant to Pub. L. 92–463, notice is hereby given of the meetings of the following study sections for May through July 1980, and the individuals from whom summaries of meetings and rosters of committee members may be obtained.

These meetings will be open to the public to discuss administrative details relating to Study Section business for approximately one hour at the beginning of the first session of the first day of the meeting. Attendance by the public will be limited to space available. These meetings will be closed thereafter in accordance with the provisions set forth in sections 552b(c)(4) and 552b(c)(6), Title 5, U.S. Code and section 10(d) of Pub. L. 92–463, for the review, discussion and evaluation of individual grant applications. These applications and the discussions could reveal confidential trade secrets or commercial property such as patentable material, and personal information concerning individuals associated with the applications, the disclosure of which would constitute a clearly unwarranted invasion of personal privacy.

Ms. Marian Oakleaf, Acting Chief, Grants Inquiries Office, Division of Research Grants, Westwood Building, National Institutes of Health, Bethesda, Maryland 20205, telephone area code 301–496–7441 will furnish summaries of the meetings and rosters of committee members. Substantive program information may be obtained from each Executive Secretary whose name, room number, and telephone number are listed below each study section. Anyone planning to attend a meeting should contact the Executive Secretary to confirm the exact meeting time. All times are A.M. unless otherwise specified.

Study section	May–July 1980 meetings	Time	Location
Allergy and Immunology, Dr. Morton Reitman, Rm. 320, Tel. 301–496–7380.	June 5–7	8:30	Linden Hill, Bethesda, MD.
Applied Physiology and Orthopedics, Ms. Ileen E. Stewart, Rm. 350, Tel. 301–496–7581.	June 5–7	8:30	Room 4, Bldg. 31A, Bethesda, MD.

DEPARTMENT OF THE INTERIOR

Bureau of Land Management

Availability of BLM Maps of Public Lands and Minerals; Michigan and Wisconsin

Notice is hereby given that five new Bureau of Land Management (BLM) maps showing the location of public lands and Federal mineral rights in northern Wisconsin and western Upper Michigan are now available to the public. The maps, prepared as a result of a Bureau-wide program to map areas of mineral interests, are published at the scale 1:100,000 (one centimeter = one kilometer) in a format of 1° longitude by 30′ latitude (34 x 60 miles). They are sold for $2.00 each.

The maps now available cover the areas around Ashland, Merrill and Rhinelander, Wisconsin; and Iron River and L'Anse, Michigan. Ultimately, more maps will be printed covering all of northern Wisconsin and parts of east central Minnesota and Upper and Lower Michigan. BLM maps covering northern Minnesota have already been printed and are available to the public.

For further information, contact the Bureau of Land Management, Lake States Office, 125 Federal Building, Duluth, Minnesota 55802, (218) 727-6692; or Bureau of Land Management, Eastern States Office, 350 South Pickett Street,

Alexandria, Virginia 22304, telephone (703) 235–2840.

Roger L. Hildebeidel,

Eastern States Director.

Geological Survey

Oil and Gas and Sulphur Operations in the Outer Continental Shelf

AGENCY: U.S. Geological Survey, Department of the Interior.

ACTION: Notice of the receipt of a proposed development and production plan.

SUMMARY: Notice is hereby given that Zapata Exploration Company has submitted a Development and Production Plan describing the activities it proposes to conduct on Lease OCS–G 2713, Block A–562, High Island Area, offshore Texas.

The purpose of this Notice is to inform the public, pursuant to Section 25 of the OCS Lands Act Amendments of 1978, that the Geological Survey is considering approval of the Plan and that it is available for public review at the offices of the Conservation Manager, Gulf of Mexico OCS Region, U.S. Geological Survey, 3301 North Causeway Blvd., Room 147, Metairie, Louisiana 70002.

FOR FURTHER INFORMATION CONTACT: U.S. Geological Survey, Public Records, Room 147, open weekdays 9 a.m. to 3:30 p.m., 3301 North Causeway Blvd., Metairie, Louisiana 70002, Phone 837–4720, Ext. 226.

SUPPLEMENTARY INFORMATION: Revised rules governing practices and procedures under which the U.S. Geological Survey makes information contained in Development and Production Plans available to affected States, executives of affected local governments, and other interested parties became effective December 13, 1979, (44 FR 53658). Those practices and

procedures are set out in a revised Section 250.34 of Title 30 of the Code of Federal Regulations.

Dated: May 9, 1980.

Lowell G. Hammons,

Conservation Manager, Gulf of Mexico OCS Region.

National Park Service

Feral Burro Management and Ecosystem Restoration Plan for Grand Canyon National Park; Implementation of Plan and Availability of Analysis of Public Comments, Decision Document, and Guidelines for Live Capture Proposals

After considering public comments on the Draft and Final Environmental Statement for the Feral Burro Management and Ecosystem Restoration Plan for Grand Canyon National Park, the National Park Service has determined that burro management in Grand Canyon National Park should be conducted as proposed in the Final Environmental Statement. In keeping with this determination, the National Park Service today is implementing the proposed burro mangement program, which consists of a combination of live removal of burros by the public, herding of some burros out of the park followed by fencing to keep them from returning to the park, and if necessary, shooting of any remaining, uncapturable burros. Starting today, the Superintendent of Grand Canyon National Park will accept applications for Special Use Permits from people or groups who wish at their own expense and effort to capture and remove burros from Grand Canyon National Park. Persons or groups wishing to apply for such Special Use Permits must ensure that their burro collection proposals are made, received, approved, and satisfactorily implemented within the next 60 days, or within a 30 day extension period, if conditions outside their control justify a longer time period. If it is demonstrated that burros are being removed a rate determined to be suitable by the Park Superintendent, the program will be allowed to continue until live removal efforts are no longer effective. Guidelines for development of proposed live capture programs appear as Appendix H of the Final Environmental Statement. Special Use Permit applications and proposals for live removal of burros should be sent to the Superintendent, Grand Canyon National Park, P.O. Box 129, Grand Canyon, Arizona 86023.

Copies of the Decision Document, the Analysis of Public Comments, and the Guidelines may be obtained from the Superintendent of Grand Canyon National Park at the above address or from the following locations:

Natural Resources Management Division, Western Regional Office, National Park Service, 450 Golden Gate Avenue, P.O. Box 36063, San Francisco, California 94102; Natural Resources Division, National Park Service, DOI, Washington, D.C. 20240.

Dated: May 13, 1980.

Ira J. Hutchison

Acting Director, National Park Service.

BILLING CODE 4310-70-M

INTERSTATE COMMERCE COMMISSION

Motor Carrier Temporary Authority Application

The following are notices of filing of applications for temporary authority under Section 10928 of the Interstate Commerce Act and in accordance with the provisions of 49 CFR 1131.3. These rules provide that an original and two (2) copies of protests to an application may be filed with the Regional Office named in the **Federal Register** publication no later than the 15th calendar day after the date the notice of the filing of the application is published in the **Federal Register.** One copy of the protest must be served on the applicant, or its authorized representative, if any, and the protestant must certify that such service has been made. The protest must identify the operating authority upon which it is predicated, specifying the "MC" docket and "Sub" number and quoting the particular portion of authority upon which it relies. Also, the protestant shall specify the service it can and will provide and the amount and type of equipment it will make available for use in connection with the service contemplated by the TA application. The weight accorded a protest shall be governed by the completeness and pertinence of the protestant's information.

Except as otherwise specifically noted, each applicant states that there will be no significant effect on the quality of the human environment resulting from approval of its application.

A copy of the application is on file, and can be examined at the ICC Regional Office to which protests are to be transmitted.

Note.—All applications seek authority to operate as a common carrier over irregular routes except as otherwise noted.

Motor Carriers of Property

Correction

In FR Doc. 80-12038 appearing on page 26853, in the issue for Monday, April 21, 1980, the signature to the document was inadvertently left off. The signature should have read:

"Thomas Ehrlich,

Director."

BILLING CODE 1505-01-M

DEPARTMENT OF JUSTICE

Attorney General

[Attorney General Order No. 891-80]

Times Printing Co. and Chattanooga News-Free Press Co.; Joint Newspaper Operating Arrangement

May 13, 1980.

Decision of the Attorney General on the Application of the *Times Printing Company* and the *Chattanooga News-Free Press Company* for Temporary Approval of a Joint Newspaper Operating Arrangement.

Decision of the Attorney General

On April 29, 1980, the publishers of the *Chattanooga Times* and the *Chattanooga News-Free Press* filed an application seeking temporary approval, under 28 CFR § 48.15, of a joint operating arrangement between the companies. This application for temporary approval follows their request for permanent approval of such a joint operating arrangement pursuant to the Newspaper Preservation Act, 15 U.S.C. § 1801 *et seq.* The request for permanent approval is pending and, pursuant to 28 CFR § 48.7, the recommendation of the Antitrust Division with respect to that application is due May 18, 1980.

Having read applicants' request for temporary approval including the papers in support thereof, as well as the memoranda and telegram in opposition to said request, I have determined that the request for temporary approval must be denied at this time because I cannot conclude, as required by 28 CFR § 48.15, that the *Chattanooga Times* would otherwise fail before the procedures under the regulations can be completed.

The denial of this application is without prejudice to its renewal at a later date, should that be appropriate and, of course, without prejudice to the final disposition of the application under the Newspaper Preservation Act.

Benjamin R. Civiletti,

Attorney General.

BILLING CODE 6820–98–M

NEW ENGLAND RIVER BASINS COMMISSION

Intent To Prepare a Draft Environmental Impact Statement for the New England Ports and Harbors Program

AGENCY: New England River Basins Commission (NERBC).

ACTION: Notice of intent to prepare a draft environmental impact statement (DEIS).

SUMMARY OF THE PROPOSED ACTION: The New England Ports and Harbors Program will assess the New England ports and harbors system and offer strategies for: (1) Increasing the effectiveness of the region's cargo port system; and (2) promoting coordinated management of the region's harbors. Strategies will be developed through consensus-building of the affected federal, state and local governmental and nongovernmental interests in the five coastal New England states. Recommendations will be framed within the context of coastal zone management and environmental goals and standards.

Pursuant to section 102(2)(c) of the National Environmental Policy Act of 1969 (Pub. L. 91–190), and U.S. Water Resources Council (WRC) regulations entitled, "Compliance with the National Environmental Policy Act" (18 CFR Part 707), an Environmental Impact Statement will be prepared. To meet the spirit of the WRC regulations, the scope of significant issues to be addressed through the Draft Environmental Impact Statement (DEIS) will be determined at the same time as the scope of the significant environmental aspects of the program; namely, the identifications of potential new and redevelopment sites for port facility expansion. Among other considerations, the potential sites will be selected and evaluated on the basis of environmental sensitivity, including: requirements for filling of tidelands and/or open water; value and sensitivity of marine and inland habitat (short- and long-term habitat displacement and disruption); requirements for dredging and dredged materials disposal (quality of materials and adequacy of disposal sites); and harbor water pollution potential.

The DEIS will be based primarily on the environmental assessment of potential port expansion sites. The environmental impact assessment of other elements of the program will be "tiered" appropriately; in other words, the level of detail of the environmental analyses will be determined by the level of detail of the proposed actions.

Possible Alternatives

A reasonable range of alternatives will be assessed through the environmental sensitivity analysis and DEIS process. The "no-action" alternative, mitigation measures, plus three types of impacts—direct, indirect and cumulative—will also provide the bases for assessing proposed actions.

Scoping Process

To determine the significant issues to be analyzed in depth in the DEIS, and the scope of the environmental assessment of sites, NERBC will invite the participation of affected federal, state and local agencies, and other interested persons from a variety of backgrounds, in a scoping meeting to be held 10:00 A.M., on June 5, 1980, at the New England Regional Commission Library, 53 State Street, fourth floor, Boston, Massachusetts.

The environmental assessment of potential port expansion sites will be drafted by September 1, 1980, and finalized by December 1, 1980. The DEIS will be prepared by June 1981, as an integral part of the Draft Ports and Harbors Program Report, with the final EIS (and final report) projected for completion by December 1981.

John R. Ehrenfeld, Chairman of the New England River Basins Commission, is the responsible official. For further information, contact: Stanley R. Euston, Manager, New England Ports and Harbors Program, New England River Basins Commission, 53 State Street, Boston, Massachusetts 02109.

Respectfully submitted,

Stanley R. Euston,

Program Manager.

BILLING CODE 8410–01–M

OFFICE OF MANAGEMENT AND BUDGET

Agency Forms Under Review

May 14, 1980.

Background

When executive departments and agencies propose public use forms, reporting, or recordkeeping requirements, the Office of Management and Budget (OMB) reviews and acts on those requirements under the Federal Reports Act (44 U.S.C. Chapter 35). Department and agencies use a number of techniques including public hearings to consult with the public on significant reporting requirements before seeking OMB approval. OMB in carrying out its responsibility under the Act also considers comments on the forms and recordkeeping requirements that will affect the public.

List of Forms Under Review

Every Monday and Thursday OMB publishes a list of the agency forms received for review since the last list was published. The list has all the entries for one agency together and grouped into new forms, revisions, extensions, or reinstatements. Some forms listed as revisions may only have a change in the number of respondents or a reestimate of the time needed to fill them out rather than any change to the content of the form. The agency clearance officer can tell you the nature of any particular revision you are interested in. Each entry contains the following information:

The name and telephone number of the agency clearance officer (from whom a copy of the form and supporting documents is available); the office of the agency issuing this form; the title of the form; the agency from number, if applicable; how often the form must be filled out; who will be required or asked to report; an estimate of the number of forms that will be filled out; an estimate of the total number of hours needed to fill out the form; and the name and telephone number of the person or office responsible for OMB review.

Reporting or recordkeeping requirements that appear to raise no significant issues are approved promptly. Our usual practice is not to take any action on proposed reporting requirements until at least ten working

days after notice in the **Federal Register** but occasionally the public interest requires more rapid action.

Comments and Questions

Copies of the proposed forms and supporting documents may be obtained from the agency clearance officer whose name and telephone number appear under the agency name. The agency clearance officer will send you a copy of the proposed form, the request for clearance (SF83), supporting statement, instructions, transmittal letters, and other documents that are submitted to OMB for review. If you experience difficulty in obtaining the information you need in reasonable time, please advise the OMB reviewer to whom the report is assigned. Comments and questions about the items on this list should be directed to the OMB reviewer or office listed at the end of each entry.

If you anticipate commenting on a form but find that time to prepare will prevent you from submitting comments promptly, you should advise the reviewer of your intent as early as possible.

The timing and format of this notice have been changed to make the publication of the notice predictable and to give a clearer explanation of this process to the public. If you have comments and suggestions for further improvements to this notice, please send them to Jim J. Tozzi, Assistant Director for Regulatory and Information Policy, Office of Management and Budget, 726 Jackson Place, Northwest, Washington, D.C. 20503.

OFFICE OF THE UNITED STATES TRADE REPRESENTATIVE

Addition to the List of Countries and Instrumentalities Determined To Be Parties to the Agreement on Trade in Civil Aircraft

May 14, 1980.

On February 25, 1980, the Office of the U.S. Trade Representative published a list of countries and instrumentalities which were determined to be parties under the Agreement on Trade in Civil Aircraft (45 FR 12349). The discriminatory purchasing requirements of the Buy America Act (41 U.S.C. 10a et seq.) were waived with respect to those countries and instrumentalities.

On April 2, Switzerland deposited instruments of unconditional acceptance of the Agreement with the Secretariat of the General Agreement on Tariffs and Trade. Therefore, the list of countries

and instrumentalities is hereby amended, effective April 2, 1980, to include Switzerland.

Robert D. Hormats,

Acting U.S. Trade Representative.

SMALL BUSINESS ADMINISTRATION

[License No. 02/02-0398]

Columbia Pictures Capital Corp.; Application for a License To Operate as a Small Business Investment Company

Notice is hereby given that an application has been filed with the Small Business Administration pursuant to § 107.702 of the Regulations governing small business investment companies (13 CFR 107.102 (1980)), under the name of Columbia Pictures Capital Corporation (Applicant), for a license to operate as a Small Business Investment Company (SBIC) under the provisions of the Small Business Investment Act of 1958, as amended, and the Rules and Regulations promulgated thereunder.

The Applicant was incorporated under the laws of the State of Delaware and it will commence operations with a capitalization of $500,000, which amount is to be contributed by the parent company, Columbia Pictures Industries, Inc. (CPII), for 100% of the issued and outstanding stock of the Applicant.

The Applicant will have its place of business at 711 Fifth Avenue, New York, New York 10022, and it intends to conduct its operations primarily in the New York metropolitan area but, will consider investments to small business concerns outside of the New York metropolitan area.

The officers, directors and stockholders of the Applicant are:

(1) Columbia Pictures Industries, Inc., 711 Fifth Ave., New York, NY 10022, 100% Shareholder and Parent.

Francis T. Vincent, Jr., 45 Bush Ave., Greenwich, CT 06830, Director and President.

Robert L. Stone, 130 E. End Ave., New York, NY 10028, Director and Executive Vice President.

Joseph A. Fischer, 89 Downey Dr., Tenafly, NJ 07670, Director and Executive Vice President.

Lawrence B. Hilford, 860 U.N. Plaza, New York, NY 10017, Director and Senior Vice President.

Victor A. Kaufman, 24 Angler Lane, Port Washington, NY 11050, Director, Senior Vice President and Secretary.

Leo Jaffe, 425 E. 58th St., New York, NY 10022, Director.

Dan W. Lufkin, Wells Hill Road, Lakeville, CT 06039, Director.

Charles R. Lee, 9609 Persimmon Tree Rd., Potomac, MD 20854, Senior Vice President and Chief Financial Officer.

C. Charles Jowaiszas, 150 E. 69th St., Apt. 16T, New York, NY 10021, Vice President and Treasurer.

Margaret A. Reigle, 2 Beekman Place, New York, NY 10022, Controller.

Morton H. Fry II, 158 Waverly Place, New York, NY 10014, Assistant Secretary.

Ellis A. Regenbogen, 235 W. 71st St., New York, NY 10023, Assistant Secretary.

Jared Jussim, 3 Rosehill Rd., Briarcliff, NY 10510, Assistant Secretary.

(1) The Applicant's parent company, CPII, is a publicly held company. It is an international company engaged in various aspects of the entertainment and amusement games business. One of its major activities is the production and world wide distribution of theatrical motion pictures and television series.

Tracinda Investment Corporation (Tracinda) is located at 4045 South Spencer Street, Suite 202, Las Vegas, Nevada. Kirk Kerkorian as an individual owns 7.1% of CPII's stock (688,000 shares) and Tracinda which is wholly owned by Mr. Kerkorian owns 1,750,700 shares of CPII or 18.1%. Collectively, he owns and controls 25.2% of CPII's issued and outstanding stock as of September 29, 1979.

Matters involved in SBA's consideration of the Applicant include the general business reputation and character of the proposed owners and management, and the probability of successful operation of the Applicant under their management, including adequate profitability and financial soundness, in accordance with the Act and the SBA Rules and Regulation.

Notice is hereby given that any person may, not later than 15 days from the date of publication of this notice, submit to SBA written comments on the proposed Applicant. Any such communication should be addressed to the Associate Administrator for Investment, Small Business Administration, 1441 L Street, NW., Washington, D.C. 20416.

A copy of this notice shall be published in a newspaper of general circulation in New York, New York.

(Catalog of Federal Domestic Assistance Program No. 59.011, Small Business Investment Companies)

Dated: May 12, 1980.

Michael K. Casey,

Associate Administrator for Investment.

DEPARTMENT OF TRANSPORATION

Federal Aviation Administration

[Summary Notice No. PE-80-14]

Petitions for Exemption; Summary of Petitions Received and Dispositions of Petitions Issued

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of petitions for exemptions received and of dispositions of petitions issued.

SUMMARY: Pursuant to FAA's rulemaking provisions governing the application, processing, and disposition of petitions for exemption (14 CFR Part 11), this notice contains a summary of certain petitions seeking relief from specified requirements of the Federal Aviation Regulations (14 CFR Chapter I) and of dispositions of certain petitions previously received. The purpose of this notice is to improve the public's awareness of, and participation in, this aspect of FAA's regulatory activies. Publication of this notice and any information it contains or omits is not intended to affect the legal status of any petition or its final disposition.

DATES: Comments on petitions received must identify the petition docket number involved and must be received on or before: June 4, 1980.

ADDRESSES: Send comments on any petition in triplicate to: Federal Aviation Administration, Office of the Chief Counsel, Attn: Rules Docket (AGC-204), Petition Docket No. ——, 800 Independence Avenue, SW., Washington, D.C. 20591.

FOR FURTHER INFORMATION: The petition, any comments received and a copy of any final disposition are filed in the assigned regulatory docket and are available for examination in the Rules Docket (AGC-204), Room 916, FAA Headquarters Building (FOB 10A), 800 Independence Avenue, SW, Washington, D.C. 20591; telephone (202) 426-3644.

This notice is published pursuant to paragraphs (c), (e), and (g) of § 11.27 of Part 11 of the Federal Aviation Regulations (14 CFR Part 11).

Issued in Washington, D.C., on May 9, 1980.

Edward P. Faberman,

Acting Assistant Chief Counsel, Regulations and Enforcement Division.

Petitions for Exemptions

Docket No.	Petitioner	Regulations affected	Description of relief sought
13141	Trans World Airlines	14 CFR 121.433(c)(1)(iii), 121.441(a)(1), and 121.443(a).	Extension of expiration date of exemption to permit the Pilot in Command to be absent from the flight deck to rest during enroute flight that exceeds 8 hours and to permit a properly rated international relief officer to occupy a pilot seat during that period.
20314	Flight Training Devices	14 CFR 61.157(d)(1) and 61.63(d)(2).	To allow petitioner's trainees to complete a practical test, for the issuance of a type rating to be added to any grade of pilot certificate, in an airplane simulator as set forth in Appendix A of Part 61.
20334	Evergreen Helicopters, Inc	14 CFR 135.261(b)	To allow petitioner's pilots to have only 8 instead of 10 hours of rest during any 24 hours of duty or two periods of five consecutive hours.
20336	Executive Air Fleet Corp	14 CFR 135.89(b)(3) and 121.333(c)(2).	To allow petitioner to operate its Sabreliner aircraft up to 41,000 feet MSL without requiring at least one pilot to wear an oxygen mask.

Dispositions of Petitions for Exemptions

Docket No.	Petitioner	Regulations affected	Description of relief sought—disposition
17682	Air Lift Associates, Inc	14 CFR 135.261(b)	To allow petitioner's flight crewmembers to rest for only 8 hours instead of the required 10 hours. *Denied 5/2/80.*
19756	Britt Airways, Inc	14 CFR 135.261(b)	To allow a minimum rest period of no less than 8 consecutive hours in the 24-hour period preceding the planned completion of the assignment. *Denied 5/5/80.*
20043	Mr. Roger A. Wood	14 CFR 61.118	To permit petitioner, a private pilot, to operate a single-place gyroplane in airshows and for public demonstrations for compensation. *Denied 5/6/80.*
20050	Jimsair Aviation	14 CFR 135.10(b)(3) and 135.173	To permit operation of petitioner's Beech 99 aircraft with a 10 or more passenger seat configuration without Airborne Thunderstorm Detection Equipment installed. *Granted 5/5/80.*
20335	Northwest Airlines, Inc	14 CFR 121.291(a)	To allow petitioner to increase the passenger seating capacity of its B-727-100 aircraft from 93 to 111 (more than 5 percent) without first conducting a full seating capacity emergency evacuation demonstration. *Granted 5/7/80.*

Coast Guard

[CGD 79-097]

National Environmental Policy Act (NEPA) Implementing Procedures

AGENCY: Coast Guard, DOT.

ACTION: Notice of revised agency procedures.

SUMMARY: The U.S. Coast Guard has revised its procedures for considering environmental impacts. This is in accordance with the Regulations for Implementing the National Environmental Policy Act issued by the Council on Environmental Quality on November 29, 1978 (40 CFR Parts 1500-1508).

EFFECTIVE DATE: These procedures become effective on publication in the **Federal Register.**

FOR FURTHER INFORMATION CONTACT: Robert L. Evans, Acting Chief, Environmental Impact Branch, U.S. Coast Guard (G-WS-1), 2100 Second St. SW., Washington, D.C. 20593, (202) 426-3300.

SUPPLEMENTARY INFORMATION:

Background

In 1970 the Council on Environmental Quality (CEQ) issued Guidelines for preparation of environmental impact statements (EIS) under Executive Order 11514. The Guidelines were issued to implement Section 102(2)(C) of the National Environmental Policy Act (NEPA). In 1973 CEQ provided guidance to agencies for preparation of environmental impact statements. As a result the Coast Guard developed Commandant Instruction 16475.1 entitled Procedures for Considering Environmental Impacts. On November 29, 1978 CEQ published final regulations in response to Executive Order 11991 to uniformly implement all procedural provisions of NEPA (43 FR 55978). Federal agencies were directed to adopt implementing procedures to supplement the regulations published by CEQ (40 CFR 1507.3). Using as a basis the Department of Transportation (DOT) Order 5610.1C, which implements the CEQ regulations for DOT, the revised Coast Guard Instruction sets forth specific policies, responsibilities, and procedures for Coast Guard implementation of the CEQ regulations. The revised procedures are in the form of an internal directive, Commandant Instruction M16475.1A series, National Environmental Policy Act Implementing Procedures, and replace Commandant Instruction 16475.1.

Comments

On October 15, 1979, the Coast Guard published in the **Federal Register** (44 FR 59306) a notice of proposed revision of agency procedures for implementing the National Environmental Policy Act (NEPA). That notice served to inform the public and all interested parties of the proposed revision and to solicit comments. Interested parties were given until November 5, 1979 to comment. Four (4) pertinent comments were received from outside the Coast Guard.

The Department of Transportation (DOT), Office of Environmental Safety, (P-20) expressed the opinion that "maintenance dredging" should not be listed as a categorical exclusion in Section 2.B.3.(a) due to the fact that it may involve significant impact on the environment. The Coast Guard accordingly deleted "maintenance dredging" from the list of categorical exclusions.

The Environmental Protection Agency (EPA) questioned the wording in Section 2.B.4. Which suggested that the Environmental Assessment (EA) might be an appropriate alternative to the Environmental Impact Statement (EIS). This section was revised to more accurately express the relationship of the EA to the EIS and Finding of No Significant Impact (FONSI).

The Mississippi State Highway Department (MSHD) suggested that any projects that have satisfied the NEPA implementing requirements of any other agency should be treated as a categorical exclusion under Coast Guard procedures. The Coast Guard has not adopted this suggestion because it cannot assure that its requirements will be met by compliance with another agency's implementing procedures.

Several comments were made by the New York State Department of Transportation (NYDOT) citing specific requirements found in CEQ regulations. The NYDOT suggested incorporating, in Section 2.D.2. on FONSI, a statement that these documents are available to the public. This section has been revised accordingly. NYDOT questioned why there was no mention of the Record of Decision (ROD) in the Coast Guard procedures. This has not been included because a treatment of the subject in the DOT Order 5610.1C is considered adequate for Coast Guard purposes. Two comments concerned conflicts that may arise when Federal Highway Administration (FWHA) and Coast Guard officials disagree on whether a proposed action qualifies as a categorical exclusion or requires environmental documentation. A means for resolving such conflicts is contained in the Memorandum of Understanding on Coordinating the Preparation of Environmental Impact Statements between FHWA and Coast Guard (Feb. 2, 1977). Reference to this memorandum was not included in this Instruction because it is a matter of concern for only one specific office in the Coast Guard rather than the entire agency.

The Coast Guard made a number of minor editorial changes to the instruction resulting from its own review. One major addition which the Coast Guard made is the inclusion of a new Section 2.C. on Environmental Assessments (EA). This section prescribes the specific contents and format of a Coast Guard EA to establish uniform guidance for its preparation and a means of attesting to compliance with the CEQ regulations.

After full and careful consideration of all submitted comments, the proposal was revised and is set forth below as final NEPA implementing procedures.

Table of Contents

Chapter 1. Introduction.
A. Background.
B. Responsibility.
C. Use and Organization of this Instruction.
Chapter 2. Coast Guard Supplementary Implementing Instructions to DOT Order 5610.1C (Enclosure (1)).

(4) Finding of No Significant Impact Format (Applicant-Prepared (EA))

Commandant Instruction M16475.1A

Subj: National Environmental Policy Act (NEPA) Implementing Procedures

Ref: (a) Pub. L. 91–190 National Environmental Policy Act (NEPA)

(b) 40 CFR Parts 1500–1508, Council on Environmental Quality Regulations for Implementing the Procedural Provisions of the National Environmental Policy Act

(c) Coast Guard Planning and Programming Manual COMDTINST M16010.1

(d) Procedures Guide for the Coast Guard Regulatory System (NOTAL)

1. *Purpose.* This Manual Instruction establishes policy and prescribes responsibilities and procedures for Coast Guard implementation of references (a) and (b) and other related laws and regulations.

2. *Action.* District commanders, unit commanding officers, and chiefs of responsible program offices shall ensure that the provisions of this Instruction are followed in the consideration of environmental effects of Coast Guard actions. All program guidance in implementing this Instruction shall be submitted by program managers to Commandant via (G–WS–1) for review and concurrence with this Instruction prior to issuance.

3. *CHANGES.* Recommendations and amendments for improvement of these Coast Guard NEPA implementing procedures shall be submitted to the Commandant (G–WS–1).

Chapter 1—Introduction

A. *Background.*

1. *National Environmental Policy Act (NEPA).* NEPA, reference (a), sets the national policy for the protection of the environment. NEPA procedures ensure that environmental information is available to public officials and citizens before decisions are made and before actions are taken. The NEPA process is intended to help public officials make decisions that are based on an understanding of environmental consequences, and take actions that protect, restore and/or enhance the environment.

2. *Council on Environmental Quality (CEQ) Regulations.* The CEQ regulations, reference (b), establish and mandate policy requirements binding on all Federal Agencies for implementing NEPA and related statutory requirements.

3. *Department of Transportation (DOT) Order 5610.1C, Procedures for Considering Environmental Impacts.* DOT Order 5610.1C, enclosure (1), sets forth policy and procedures that supplement the CEQ regulations and applies them to DOT programs. The Coast Guard shall comply with the CEQ regulations and the provisions of the DOT Order.

4. *Purpose.* This Instruction prescribes policies, responsibilities, and procedures for Coast Guard implementation of references (a) and (b), and other related laws and legislation and supplements the DOT Order.

5. *Applicability.* All Coast Guard actions, as defined in this Instruction, shall be subject to and consistent with the procedures and intent of references (a) and (b), the DOT Order (Enclosure (1)), and the requirements of this Instruction.

B. *Responsibility.*

1. *Chief, Office of Marine Environment and Systems (G–W).* The Chief, Office of Marine Environment and Systems (G–W), has the primary responsibility to establish and maintain a coordinated Coast Guard environmental program.

2. *Chief, Ports and Waterways Planning Staff (G–WS).* The Chief, Ports and Waterways Planning Staff (G–WS), has the responsibility to insure compliance with reference (a) and other related environmental legislation.

3. *Chief, Environmental Impact Branch (G–WS–1).* The Chief, Environmental Impact Branch (G–WS–1), has the responsibility to develop and promulgate procedures to implement and direct compliance with references

(a), (b), and related legislation. G–WS–1 shall serve as the point of contact for coordination and review of Coast Guard and non-Coast Guard environmental documents.

4. *Chief, Bridge Division (G–NBR).* Shall be responsible for environmental documentation and review for the Bridge Administration Program, except as provided in paragraph 2–I–2 and 2–J–3, and obtaining concurrence from the DOT Office of Environment and Safety (P) as required to process bridge permit applications.

5. *Chiefs of Responsible Headquarters Program Offices.* Have the responsibility to implement the procedures in this instruction for Headquarters originated actions and those district actions so designated by the responsible Headquarters program office. This responsibility shall include: coordinating, directing, and assisting in the preparation of environmental documentation and guidance for their respective programs.

6. *District Commanders.* Have the responsibility to implement the procedures in this Instruction for all district originated actions, except those specifically designated to a responsible Headquarters program office.

C. *Use and Organization of this Instruction.*

1. *Use.* This Instruction should be used in conjunction with references (b), (c), and (d), and as a supplement to DOT Order 5610.1C (Enclosure (1)) for consideration of environmental impacts of Coast Guard actions.

2. *Organization.* The material in Chapter 2 of this Instruction supplements specific paragraphs in DOT Order 5610.1C (enclosure (1)) and is cross-referenced by including paragraph numbers of the DOT Order (in parenthesis) to which it applies. Additional chapters providing guidance in meeting new or changed requirements will be added to this Instruction as necessary.

Chapter 2. Coast Guard Supplementary Implementing Instructions to DOT Order 5610.1C (Enclosure (1))

A. *Planning and Early Coordination.*

1. (*3.c.*) *Scoping.* All interested or affected parties (Federal state, local, private) shall be notified and invited to participate in the early consultation process for all Coast Guard actions not categorically excluded in paragraph 2–B–3. below. Written notification shall be given to all state and areawide clearinghouses and all parties having statutory or regulatory involvement or directly affected. All other interested parties may be informally contacted; however, in all cases the responsible official shall maintain a written record of contacts made and responses received. For actions requiring preparation of an EIS, the scoping process shall be followed as described in Section 1501.7. of reference (b).

B. *Environmental Processing Choice.*

1. (*4.a.*) *Actions Covered.* In addition to those types of actions listed in the DOT Order, this Instruction applies to these Coast Guard actions: The decision to relocate, sell, dismantle, decommission, or close Coast Guard facilities; and research activities that have techniques or programs with potentially significant environmental effects during testing or implementation.

2. (*4.b.*) *Environmental Impact Statement (EIS).* Coast Guard actions which normally require an EIS include:

a. Actions assessed and found to have potentially significant environmental effects;

b. Actions having significant environmental effects on the global commons as described in section 2.3 of Executive Order 12114 dated 5 January 1979;

c. Actions which generate significant controversy because of effects on the human environment;

d. Actions having a significant effect on:

(1) Property protected under section 4(f) of the DOT Act;

(2) Wetlands or floodplains;

(3) Endangered species; and

(4) Significant scientific, cultural or historical resources.

e. Deepwater Port permit applications.

3. (*4.c.5*) *Categorical Exclusions.* In addition to those actions listed in paragraph 4.c of Enclosure (1) and subject to paragraph 2–B–4 of this Instruction, the following actions are not normally major Federal actions significantly affecting the environment and do not require an Environmental Assessment (EA), Finding of No Significant Impact (FONSI), or Environmental Impact Statement (EIS):

a. Actions involving repair and maintenance of existing Coast Guard facilities and which do not result in substantial change in functional use (e.g. replacement of existing materials or equipment, exterior maintenance and repair, interior maintenance, repair and alteration, maintenance of floating and fixed aids to navigation, etc.);

b. Actions to lease, acquire or construct facilities for Coast Guard personnel in areas currently zoned for that purpose and where such facilities are consistent with or approved by the local land use authority (e.g. lease or purchase of existing buildings without changing functional use, purchase or construction of housing in an approved residential subdivision, etc.);

c. Actions performed as part of the Coast Guard's statutory authority to conduct investigations, inspections, or to issue permits, licenses and certificates which do not directly affect the environment (e.g. commercial vessel documentation and inspection, facility inspections, merchant seaman documentation, Marine Boards of Inquiry, Boating Safety Detachment Team inspection of recreational boats, etc.);

d. Review of studies, reports, analyses etc. of legislative proposals not originating in DOT and relating to matters not the primary responsibility of the Coast Guard;

e. Excessing of Coast Guard real property to the General Services Administration;

f. Bridge Administration Program actions which can accurately be described as one of the following:

(1) Reconstruction or modification of an existing bridge structure on essentially the same alignment or locations including: widening less than a single travel lane, adding shoulders or safety lanes, walkways, bikeways, pipelines or fender works, except bridges with historic significance and bridges providing access to barrier islands.

(2) Reconstruction or modification of an existing one land bridge structure presently serviced by a two lane road and used for two lane traffic, to a two lane bridge on essentially the same aligment or locations, except bridges with historic significance and bridges providing access to barrier islands.

(3) Construction of pipeline bridges for transporting potable water;

(4) Construction of pedestrian, bicycle and/or equestrian bridges and stream gaging cableways used to transport people;

(5) Temporary replacement of a bridge which commences immediately after the occurance of a natural disaster or castastrophic failure where such bridge project is related to public safety, health and welfare;

(6) Approval of extension of time to commence or complete construction or to remove an existing or temporary bridge;

(7) Approval of deviations from approved plans prior to completion of construction which do not significantly alter the approved locations, plans, or environmental impacts;

(8) Promulgation of operating requirements or procedures for drawbridges.

g. Actions performed as a part of Coast Guard operations to carry out

statutory authority in the areas of maritime safety, protection of the environment, or military readiness (e.g. establishment of security zones, search and rescue, law and treaty enforcement, removal of oil or hazardous substances, military operations to maintain proficiency, actions to protect public safety, establishment of floating and minor fixed aids to navigation except electronic sound signals, etc.).

h. Administrative or procedural regulations which clearly do not have any environmental impacts.

4. *Restrictions on Categorical Exclusions.* An Environmental Assessment, Environmental Impact Statement, or both as appropriate shall be prepared for actions which would otherwise be classified as categorically excluded, but which are likely to involve:

(1) Significant impacts on the environment; (2) substantial controversy because of effects on the human environment; (3) impacts which are more than minimal on properties protected under section 4(f) of the DOT Act and section 106 of the Historic Preservation Act; or (4) inconsistencies with any Federal, State, or local law or administrative determination relating to the environment.

C. *Environmental Assessment (EA).*

1. *(4.d.) Environmental Assessment.* In accordance with section 1508.9 of reference (b) an EA shall provide sufficient evidence and analysis to determine whether an EIS or FONSI is required. All environmental assessments prepared by or for the Coast Guard shall contain:

a. The environmental assessment cover sheet, in the form at outlined in Enclosure (2), evidencing the date attested to be in conformance with reference (b) and this Instruction by signature and title of the preparer, the person responsible for the environmental review and the responsible official having direct responsibility and authority for implementing the proposed action;

b. A brief description of the proposed action;

c. A statement of need for the proposed action;

d. The alternatives considered;

e. A summary of the environmental impacts of the proposed action and alternatives;

f. A comparative analysis of the proposed action and alternatives;

g. A statement of environmental significance of the proposed action;

h. A list of all agencies and persons contacted during the environmental assessment.

D. *Finding of No Significant Impact (FONSI).*

1. *(5.a.) Format.* For Coast Guard purposes a FONSI shall be a separate document to which an environmental assessment (EA) is attached and notes any other environmental documents related to it. When a FONSI is based on a Coast Guard prepared EA, the format shall be as outlined in enclosure (3). When a FONSI is based on an applicant-prepared EA, the format shall be as outlined in Enclosure (4).

2. *(5.b.) Coordination.* To ensure copies of the FONSI and its environmental assessment are available to the public upon request, the originator shall forward one copy to Commandant (G–WS–1) and the responsible Headquarters program office as well as retain a copy in the originator's file. Public notice shall be given as to the availability of these documents in accordance with the requirements of Sections 1501.4.(e).(1) and (2), and 1506.6(b). of reference (b).

3. *(5.c.) Provisions of FONSI's to DOT.* A FONSI required to be provided to the DOT Office of Environment and Safety (P) shall be forwarded via Commandant (G–WS–1) by the responsible Headquarters program office.

E. *Lead Agencies and Cooperating Agencies.*

1. *(6.a.) Responsibility.* For District-originated actions the district commander or his designee will assume responsiblity for maintaining Coast Guard lead agency status. The chief of the responsible Headquarters program office or his designee will assume this responsibility for Headquarters-originated actions. In extraordinary circumstances (e.g. an action transcends more than one district, etc.) the responsible Headquarters program office via Commandant (G–WS–1) shall designate the individual responsible for maintaining Coast Guard lead agency status.

2. *(6.c.) Request for CEQ Resolution of Lead Agency Designation.* Notification to DOT (p–20) shall be made via Commandant (G–WS–1).

3. *(6.e.) Refusal to Participate.* Copies to DOT (P–1) shall be forwarded via Commandant (G–WS–1).

4. *(6.e.) Adverse Comments and Delays.* Matters referred to DOT (P–1) for discussion with CEQ shall be forwarded via Commandant (G–WS–1).

F. *Preparation and Processing of Draft Environmental Impact Statements.*

1. *(7.b.) Timing of Preparation of Draft Statements.* For other than rulemaking actions, Appendix P of reference (c) provides correlations of the NEPA process with the Coast Guard's Planning, Programming and Budgeting System. The section on Enviornmental Assessment of Regulatory Actions contained in reference (d) provides similar guidance for Coast Guard rulemaking actions.

2. *(7.f.) Circulation of Draft Environmental Impact Statements.* The originator or the responsible Headquarters program office shall forward twelve (12) copies of all draft EIS's to Commandant (G–WS–1) for distribution within U.S. Coast Guard (USCG) Headquarters offices and DOT elements as appropriate and for filing with the Environmental Protection Agency's Office of Environmental Review.

G. *Review of Environmental Statements Prepared by Other Agencies.*

1. *(9.f.) Comments on Non-Coast Guard EIS's.* One copy of all Coast Guard comments shall be sent to Commandant (G–WS–1).

H. *Predecision Referrals to the Council on Environmental Quality.*

1. *(10.a.1) DOT Lead Agency Proposals.* District commanders and Headquarters program offices receiving a notice of intended referral from another agency shall provide DOT (P) with a copy of the notice via Commandant (G–WS–1).

I. *Final Environmental Impact Statement.*

1. *(11.c.) Legal Review.* District legal officers shall provide legal sufficiency review of FEIS's for bridge permit actions that originate within their district. The Office of Chief Counsel (G–L) shall provide final legal sufficiency review of those FEIS's requiring concurrence of DOT (P).

2. *(11.d.) Internal Processing.* The Chief, Office of Marine Environment and Systems (G–W) shall have the authority to approve all Coast Guard EIS's. G–W delegates to district commanders the authority to approve Coast Guard EIS's for actions that originate within and having effects confined to their respective district except those requiring DOT (P) concurrence. DOT (P) concurrence will be obtained by the responsible Headquarters program office via Commandant (G–WS–1).

3. *(11.h.) Availability of Statements to Environmental Protection Agency and the Public.* Transmittal of the final statements to Environmental Protection Agency shall follow the method stated for draft statements in paragraph 2–F–2 of this Instruction.

J. *Determinations Under Section 4(f) of the DOT Act.*

1. *(12.a.) Integration of 4(f) Statement with EIS's.* Originators of EIS's for Coast Guard actions requiring determinations under section 4(f) of the DOT Act shall

incorporate the required 4(f) determination in the EIS.

2. *(12.b.) Legal Review.* District legal officers shall provide legal sufficiency review of Coast Guard section 4(f) determinations for projects that originate within their district that do not require the concurrence of DOT (P). The Office of Chief Counsel (G–L) shall provide final legal sufficiency review of all other Coast Guard Section 4(f) determinations.

3. *Approval of 4(f) Statements.* Approval of 4(f) statements for actions not requiring an EIS shall be made by Commandant (G–W) when DOT (P) concurrence is required. When DOT (P) concurrence is not required district commanders are delegated the authority for approving 4(f) statements for district originated actions, and chiefs of responsible Headquarters program offices, with Commandant (G–W) concurrence, shall have this authority for Headquarters actions not requiring DOT (P) concurrence.

K. *Citizen Involvement Procedures.*

1. *(14.b.) Notice of Intent.* As soon as the decision to prepare an EIS has been made, the responsible Headquarters Program Office via Commandant (G–WS–1) shall publish the required Notice of Intent (Section 1507.7(e)) in the **Federal Register.**

2. *(14.d.) Office of Management and Budget (OMB) A–95 Clearinghouse Review.* Originators of EA's or EIS's shall solicit comments from A–95 clearinghouses of affected states on the environmental consequences of the proposed action. The EA or EIS shall evidence this solicitation and consideration of comments received.

3. *(14.f.) Coast Guard Public Contact Point.* Interested persons can obtain copies and the status of Coast Guard environmental documents and information on other elements of the NEPA process by contacting the appropriate addressee below:

COMMANDANT (G–WS–1), U.S. Coast Guard, 2100 Second St. SW., Washington, D.C. 20593, COM: (202) 426–3300, FTS: 8–426–3300.

COMMANDER (oan), Seventeenth Coast Guard District, P.O. Box 3–5000, Juneau, AK 99802, FTS: 8–399–0150 ask for 586–7368.

L. *Proposals for legislation.*

1. *(15.a.) Preparation.* The responsible Coast Guard Headquarters program office shall prepare the environmental documentation for legislative proposals or reports on proposed legislation for which the coast Guard is primarily responsible.

2. *(15.b.) Processing.* The EIS shall be processed as required in paragraph 15.b. of the DOT Order via Commandant (G–WS–1).

M. *Timing of Agency Action.*

1. *(17.b.) Reduction of Prescribed Time Periods.* Request to reduce prescribed time periods for EIS processing shall be made via Commandant (G–WS–1) to EPA.

2. *(17.c.) Emergency Circumstances.* In emergency circumstances, CEQ will be consulted through DOT (P) via Commandant (G–WS–1).

N. *Mitigating Measures and Monitoring.* The responsible program manager, district commander, or commanding officer of headquarters unit as appropriate, shall assure the execution and monitoring of all mitigating measures stated in any environmental document (EA, FONSI, EIS, NOI) and/or record of decision for any Coast Guard action.

Dated: April 22, 1980.

W. E. Caldwell,

Rear Admiral, U.S. Coast Guard, Chief, Office of Marine Environmental Systems.

BILLING CODE 4910–14–M

National Highway Traffic Safety Administration

[Docket No. IP79-12; Notice 2]

Hyosung (America), Inc.; Action on Petition for Determination of Inconsequential Noncompliance

This notice grants in part and denies in part the petition by Hyosung (America) Inc. of New York City, New York to be exempted from the notification and remedy requirements of the National Traffic and Motor Vehicle Safety Act (15 U.S.C. 1381 et seq.) for an apparent noncompliance with 49 CFR 571.119, Motor Vehicle Safety Standard No. 119, *New Pneumatic Tires for Vehicles Other Than Passenger Cars.* The basis of the petition was that the noncompliance is inconsequential as it relates to motor vehicle safety.

Notice of receipt of the petition was published in the **Federal Register** on November 13, 1979, and an opportunity afforded for comment (44 FR 65514).

Paragraph S6.5(b) of Standard No. 119 requires tires to be marked with the tire identification number required by 49 CFR Part 574 and S6.5(f) requires them to be labeled with "the actual number of plies * * * in the sidewall * * *." Hyosung imported and distributed 2000 "Aurora–F8 1000–20 Load Range F" truck tires that lacked marking indicating the week and year of manufacture (the 19th week of 1979), and 200 of these also lacked the number of nylon tread plies (10) and nylon plies (8). Notwithstanding the filing of its petition Hyosung corrected the date code noncompliance of all but 200 tires no longer in its hands. Of these 200 tires, on the basis of having corrected the noncompliance on 1800 tires it estimates that no more than 20 lack the correct ply designation. All other information is said to be correct and petitioner believes that its noncompliances are inconsequential as they relate to motor vehicle safety since in its opinion manufacturing dates are unimportant, and the model number of the tires is clearly understood by the dealer.

No comments were received on the petition.

Hyosung presented no argument to support the conclusory statement in its petition that "the missing brand for the week and year of production is truly an inconsequential defect." On the contrary, this information is needed to effect tire registration and to implement any notification and remedy campaign covering safety-related defects or noncompliances in the tires. Accordingly, petitioner has failed to sustain its burden of persuasion that that noncompliance is inconsequential as it relates to motor vehicle safety, and its petition is denied. On the other hand the failure to mark the number of plies appears to have an inconsequential effect upon safety in that not more than 20 tires appear to be involved, all plies are present and the type of material involved (nylon) is stated on the sidewall. Petitioner has met its burden of persuasion as to this noncompliance and its petition is granted.

(Sec. 102, Pub. L. 93–492, 99 Stat. 1480 (15 U.S.C. 1417); delegations of authority at 49 CFR 1.50 and 501.8)

Issued on May 8, 1980.

Michael M. Finkelstein,

Associate Administrator for Rulemaking.

BILLING CODE 4910-59-M

Final Contract Briefing; Public Meeting

The National Highway Traffic Safety Administration will hold a public meeting on May 30, 1980, to present the results of a recently completed, contracted research study enitled "Relationship Between Truck Ride Quality and Drivers' Health: Methodology Development". The objective of the study was to review and explore various research approaches and alternative ways to evaluate the relationships between truck ride quality and drivers' health. Contingent upon Government review and approval of the recommended plan, NHTSA may implement a major research program in the truck ride quality area to determine if rulemaking is warranted.

The meeting will be held in Room 2230 at the DOT Headquarters Building, 400 Seventh Street, Southwest, beginning at 9:30 a.m. and lasting until about 11:30 a.m. The briefing, to be presented by the contractor (Dunlap and Associates, Inc.), will consist of a brief overview of the study findings, a detailed discussion of the research design recommendations, and an opportunity for audience questions.

Additional information may be obtained from Dr. Charles M. Overbey, Office of Driver and Pedestrian Research, Room 6240, Nassif Building, 400 Seventh Street Southwest, Washington, D.C. 20590, telephone: 202–755–8753.

Issued in Washington, D.C., on May 9, 1980.

R. Rhoads Stephenson,

Associate Administrator for Research and Development.

Research and Special Programs Administration

Applications for Exemptions

AGENCY: Materials Transportation Bureau, DOT.

ACTION: List of applicants for exemptions.

SUMMARY: In accordance with the procedures governing the application for, and the processing of, exemptions from the Department of Transportation's Hazardous Materials Regulations (49 CFR Part 107, Subpart B), notice is hereby given that the Office of Hazardous Materials Regulation of the Materials Transportation Bureau has received the applications described herein. Each mode of transportation for which a particular exemption is requested is indicated by a number in the "Nature of Application" portion of

the table below as follows: 1—Motor vehicle, 2—Rail freight, 3—Cargo vessel, 4—Cargo-only aircraft, 5—Passenger-carrying aircraft.

DATES: Comment period closes June 18, 1980.

ADDRESS COMMENTS TO: Dockets Branch, Information Services Division, Materials Transportation Bureau, U.S. Department of Transportation, Washington, DC 20590. Comments should refer to the application number and be submitted in triplicate.

FOR FURTHER INFORMATION: Copies of the applications are available for inspection in the Dockets Branch, Room 8426, Nassif Building, 400 7th Street, SW., Washington, DC.

New Exemptions

Application No.	Applicant	Regulation(s) affected	Nature of exemption thereof
8406-N	Sana Air, Incorporated, Toms River, NJ	49 CFR 172.101, 172.204(c)(3), 173.27, 175.30(a)(1), 175.320(b), Part 107, Appendix B.	To authorize carriage of Class A, B, and C explosives not permitted for air shipment or in quantities greater than those prescribed for air shipment. (Mode 4.)
8407-N	Hooker Chemical Company, Houston, TX	49 CFR Part 172, Subpart C, 173.245.	To transport within plant over public highway via fork-lift trucks waste residues, classed as corrosine liquids, n.o.s., without shipping papers, contained in non-DOT specification portable tanks. (Mode 1.)
8408-N	Presvac Systems (Burlington) Limited, Ontario, Canada.	49 CFR 173.119(a)(17), 173.245(a)(31), 178.342-5, 178.343-5.	To authorize non-DOT specification cargo tanks complying with DOT Specification MC-307/312 except for bottom outlet valve variation for transport of flammable or corrosive waste liquids or semi-solids. (Mode 1.)
8409-N	MCB Manufacturing Chemists, Inc., Cincinnati, OH	49 CFR 173.264(a)(4)	To authorize shipment of hydrofluoric acid solution no greater than 70% in non-DOT specification polyethylene bottles not exceeding 6 liters capacity packed in DOT Specification 12A fiberboard boxes. (Modes 1, 3.)
8410-N	MCB Manufacturing Chemists, Inc., Cincinnati, OH	49 CFR 173.269(a)	To authorize shipment of perchloric acid not to exceed 72% in glass bottles of not more than 2.5 liters overpacked 6 to a non-DOT Specification IMCO 4C2 wooden box. (Modes 1,3.)
8411-N	The Goodyear Tire & Rubber Co., Akron, OH	49 CFR 173.28(m)(1)	To authorize shipment of various hazardous waste materials in DOT Specification 17C, 17E, and 17H drums complying with the reconditining requirements except for the cleaning process. (Mode 1.)
8412-N	Mobay Chemical Corporation, Kansas City, MO	49 CFR 173.377(b)(6)	To authorize shipment of organic phosphate compound mixtures in DOT Specification 12B boxes containing no more than two inside DOT Specification 2D foil lined paper bags not to exceed 15 pounds each (Modes 1, 2, 3.)
8413-N	Williams Research Corporation, Walled Lake, MI	49 CFR 173.87, 173.114, 173.102	To authorize shipment of turbofan engines having residual or small amounts of JP 9 fuel, an oxygen bottle assembly with squib in valve and a starter cartridge, Class C explosive, as integral parts. (Modes 1, 2, 4.)
8414-N	Fauvet-Girel, Paris, France	49 CFR 173.315(a)	To authorized shipment of various non-inflammable, refrigerant, compressed gases in non-DOT specification IMCO V portable tanks. (Modes 1, 2, 3.)
8415-N	Bayonne Barrel & Drum Co., Newark, NJ	49 CFR 173.28(0), 178.116-10	To authorize conversion of non-DOT specification tight head 18 gauge steel 55 gallon drums to DOT Specification 17E except for location of markings for shipment of commodities authorized in DOT 17E. (Modes 1, 2, 3, 4.)
8416-N	The Pentectoseal Co., Bensenville, IL	49 CFR 173.119	To manufacture, mark and sell non-DOT specification stainless steel drums for shipment of various flammable liquids. (Mode 1.)
8417	Hugonnet, S.A., Paris, France	49 CFR 173.119, 173.125, 173.245, 173.346, 173.510.	To authorize shipment of various hazardous materials in non-DOT specification IMCO Type I portable tanks. (Modes 1, 2, 3.)
8418-N	Aerojet Tactical Systems Company, Sacramento, CA.	49 CFR 172.101, 175.30	To authorize a one time shipment of a rocket motor, Class B explosive, exceeding the weight limitations presently authorized by cargo-only aircraft. (Mode 4.)
8419-N	Department of Defense, Washington, DC	49 CFR 173.276	To authorize shipment of hydrazine anhydrous in DOT Specification 3A or 3E steel cylinder overpacked in a cardboard container cushioned by vermiculite. (Mode 4.)
8420-N	Soaper Chemical Co., Inc., Henderson, KY	49 CFR 172.500, Subpart F	To authorize shipment of various flammable, corrosive and irritant materials contained in properly labeled drums in open bed trucks without placarding. (Mode 1.)
8422-N	CIG Gas Cylinders, Marayong, Australia	49 CFR 173.302(a)(1), 173.304(a)(1), 173.304(d)(3), 173.336(a)(2), 173.337(a)(1), 175.3.	To ship compressed gases and other hazardous materials in non-DOT specification high pressure seamless aluminum cylinders. (Modes 1, 2, 3, 4, 5.)
8423-N	U.S. Environmental Protection Agency, Washington, DC.	49 CFR Parts 100-199	To ship minute quantities of a solution of 25% nitric acid and Group I through VI radionuclides in non-DOT specification composite packaging, described as "Analytical Standards" (modes 1, 2, 3, 4, 5.)
8424-N	Sporting Specialties, Ltd., Louisville, KY	49 CFR 172.101, 173.153(a)(1)	To ship calcium carbide in 1 kilogram size inside metal cans packed in a DOT Specification 12B fiberboard box not exceeding 50 pounds net weight, as a limited quantity. (Mode 1.)
8425-N	P B & S Chemical Co., Henderson, KY	49 CFR 173.245	To authorize shipment of aqua ammonia, 29% in DOT Specification 6D or 34 containers with vented closures. (Modes 1, 2.)
8426-N	Martin Tank Manufacturing, Cerritos, CA	49 CFR 173.119(a)(17), 173.245(a)(31), 178.342-5, 178.343-5.	To manufacture, mark and sell non-DOT specification cargo tanks complying generally with DOT specification MC-307/312 except for bottom outlet valve variations for transport of flammable or corrosive waste liquids or semi-solids. (Mode 1.)

This notice of receipt of applications for new exemptions is published in accordance with Section 107 of the Hazardous Materials Transportation Act (49 CFR U.S.C. 1806; 49 CFR 1.53(e)).

Issued in Washington, D.C., on May 7, 1980.

J. R. Grothe,

Chief, Exemptions Branch Office of Hazardous Materials Regulation, Materials Transportation Bureau.

BILLING CODE 4910-60-M

Applications for Renewal or Modification of Exemptions or Applications To Become a Party to an Exemption

AGENCY: Materials Transportation Bureau, DOT.

ACTION: List of applications for renewal or modification of exemptions or application to become a party to an exemption.

SUMMARY: In accordance with the procedures governing the application for, and the processing of, exemptions from the Department of Transportation's Hazardous Materials Regulations (49 CFR Part 107, Subpart B), notice is hereby given that the Office of Hazardous Materials Regulation of the Materials Transportation Bureau has received the applications described herein. This notice is abbreviated to expedite docketing and public notice. Because the sections affected, modes of transportation, and the nature of application have been shown in earlier **Federal Register** publications, they are not repeated here. Except as otherwise noted, renewal applications are for extension of the exemption terms only. Where changes are requested (e.g. to provide for additional hazardous materials, packaging design changes, additional mode of transportation, etc.) they are described in footnotes to the application number. Application numbers with the suffix "X" denote renewal; application numbers with the suffix "P" denote party to. These applications have been separated from the new applications for exemptions to facilitate processing.

DATES: Comment period closes June 18, 1980.

ADDRESS COMMENTS TO: Dockets Branch, Information Services Division, Materials Transportation Bureau, U.S. Department of Transportation, Washington, DC 20590. Comments should refer to the application number and be submitted in triplicate.

FOR FURTHER INFORMATION: Copies of the applications are available for inspection in the Dockets Branch, Room 8426, Nassif Building, 400 7th Street, S.W., Washington, DC.

BILLING CODE 4910-60-M

Office of the Secretary

[Notice 80-5]

Texas Deepwater Port Authority; Deepwater Port License Extension

AGENCY: Department of Transportation, Office of the Secretary.

ACTION: Request for public comment.

SUMMARY: The intent of this notice is to solicit public comment on the request of the State of Texas to extend for one year the date by which the deepwater port license offered the Texas Deepwater Port Authority (TDPA) must be accepted in order to become effective.

DATE: Comments must be received not later than June 19, 1980.

ADDRESS: Comments should be addressed to: Mr. Ernest T. Bauer, U.S. Department of Transportation, Office of Marine Transportation, Ports Division, P-73, 400 7th Street SW., Washington, D.C. 20590.

FOR FURTHER INFORMATION CONTACT: Ernest T. Bauer, (202) 426-4144.

SUPPLEMENTARY INFORMATION: On August 15, 1979, pursuant to section 4 of the Deepwater Port Act of 1974 (33 U.S.C. 1503), the Secretary of Transportation offered to the TDPA a license to own, construct, and operate a deepwater port off the coast of Freeport, Texas. The license decision provided that it would not be effective unless it was accepted by May 15, 1980. The license itself included a condition that the licensee demonstrate that the facility was financially feasible by obtaining throughput commitments from private oil company shippers for sufficient volume to finance the sale of revenue bonds. On April 17, 1980, the Governor of Texas requested that TDPA be granted a one year extension of the time within which to accept the license. In considering this request the Secretary has determined that, due to the possibility that other parties may desire to submit an application for the same location as the TDPA facility, and because the Deepwater Port Act of 1974 prevents the Secretary from accepting other applications for the same location for which a license offer is outstanding, the full year extension is not presently considered appropriate. However, a six-month extension of the original license is being considered.

An interim 45 day extension has been granted for the purpose of soliciting public comment. Our present intention is to grant a limited six-month extension to the TDPA License offer. The license would thus have to be accepted by November 15, 1980. If no decision is reached by TDPA on this offer by November 15, 1980, the Secretary intends to entertain further extension requests only if TDPA provides to him prior to November 15, 1980:

(1) Signed and binding commitments from potential shippers indicating their intent to ship collectively at least 1.4 million barrels per day through the proposed port for which TDPA holds a license offer, or

(2) An acceptable amended application from TDPA for a smaller capacity port in the application area, together with letters of intent from potential shippers which will enable TDPA to finance such a port.

Public comment is invited upon the State's request for a one-year extension, upon the proposal to issue the limited six-month extension upon the conditions discussed alone, and upon any other relevant issues. All comments received prior to the deadline will be considered.

(Deepwater Ports Act of 1974, 33 U.S.C. 1501) et seq.)

Issued in Washington, D.C. on May 15, 1980.

Neil Goldschmidt,

Secretary of Transportation.

BILLING CODE 4810-31-M

Granting of Relief; Disabilities Incurred by Conviction

AGENCY: Bureau of Alcohol, Tobacco and Firearms (ATF).

ACTION: Notice of Granting of Relief from Disabilities incurred by Conviction.

SUMMARY: The persons named in this notice have been granted relief by the Director, Bureau of Alcohol, Tobacco and Firearms, from their disabilities imposed by Federal laws. As a result, these persons may lawfully acquire, transfer, receive, ship, and possess firearms if they are in compliance with applicable laws of the jurisdiction in which they live.

FOR FURTHER INFORMATION CONTACT: Special Agent in Charge Michael L. Hall, Firearms Enforcement Branch, Investigations Division, Bureau of Alcohol, Tobacco and Firearms, Washington, DC 20026, (202–566–7457).

SUPPLEMENTARY INFORMATION: In accordance with 18 U.S.C. 925(c), the persons named in this notice have been granted relief from disabilities imposed by Federal laws with respect to the acquisition, transfer, receipt, shipment, or possession of firearms incurred by reason of their convictions of crimes punishable by imprisonment for a term exceeding one year.

It has been established to the Director's satisfaction that the circumstances regarding the convictions and each applicant's record and reputation are such that the applicants will not be likely to act in a manner dangerous to public safety, and that the granting of the relief will not be contrary to the public interest.

The following persons have been granted relief:

Anderson, Bobby J., Route 2, Box 413A, Wilkesboro, North Carolina, convicted on July 6, 1954, in the United States District Court, middle district of North Carolina.

Anderson, Raymond D., 1004 South Main Street, Redfield, South Dakota, convicted on September 30, 1975, and on March 12, 1976, in the Circuit Court, Ninth Judicial Circuit, South Dakota.

BILLING CODE 4810-31-M

VETERANS ADMINISTRATION

Station Committee on Educational Allowances; Meeting

Notice is hereby given pursuant to Section V, Review Procedure and Hearing Rules, Station Committee on Educational Allowances that on June 18, 1980, at 9:00 A.M., the Portland Oregon, Regional Office Station Committee on Educational Allowances, Room 1427, Federal Building, 1220 SW. Third Avenue, Portland, Oregon, will conduct a hearing to determine whether Veterans Administration benefits to all eligible veterans indentured to Metro Electrical JATC, Portland, Oregon, should be discontinued, as provided in 38 CFR 21.4134, as a requirement of law is not being met or a provision of the law has been violated. All interested persons shall be permitted to attend, appear before, or file statements with the Committee at that time and place.

Dated: May 8, 1980.

R. J. Vogel,

Director, VA Regional Office.

11

SECURITIES AND EXCHANGE COMMISSION.

Notice is hereby given, pursuant to the provisions of the Government in the Sunshine Act, Pub. L. 94–409, that the Securities and Exchange Commission will hold the following meetings during the week of May 19, 1980, in Room 825, 500 North Capitol Street, Washington, D.C.

Closed meeting will be held on Tuesday, May 20, 1980, at 10 a.m. An open meeting will be held on Thursday, May 22, 1980, at 10 a.m.

The Commissioners, their legal assistants, the Secretary of the Commission, and recording secretaries will attend the closed meeting. Certain staff members who are responsible for the calendared matters may be present.

The General Counsel of the Commission, or his designee, has certified that, in his opinion, the items to be considered at the closed meeting may be considered pursuant to one or more of the exemptions set forth in 5 U.S.C. 552b(c)(4)(8)(9)(A) and (10) and 17 CFR 200.402(a)(4)(8)(9)(i) and (10).

Chairman Williams and Commissioners Loomis and Evans determined to hold the aforesaid meeting in closed session.

The subject matter of the closed meeting scheduled for Tuesday, May 20, 1980, at 10 a.m., will be:

Formal orders of investigation.
Settlement of administrative proceedings of an enforcement nature.
Litigation matter.
Freedom of Information Act appeals.
Freedom of Information Act and Privacy Act appeal.
Institution of injunctive action.
Opinion.
Administrative proceeding of an enforcement nature.

The subject matter of the open meeting scheduled for Thursday, May 22, 1980, at 10:00 a.m., will be:

1. Consideration of whether to issue a release adopting an amendment to subsection (i) of Rule 15c3–3 under the Securities Exchange Act of 1934 eliminating the requirement that the Securities Investor Protection Corporation be informed of a broker or dealer's failure to make a necessary deposit to his reserve bank account or special account. For further information, please contact JoAnn Zuercher at (202) 272–2368.
2. Consideration of whether to adopt proposed amendments to Securities Exchange Act Rules 12f–1 and 12f–3 [17 CFR 240.12f–1, 12f–3] to require persons filing applications for an extension, suspension, or termination of unlisted trading privileges to certify that notice of such applications has been given to certain persons specified by Section 12(f)(5) of the Act. For further information, please contact Susan M. Wilk at (202) 272–2824.
3. Consideration of whether to grant the application of Paul R. Dupee, Jr., pursuant to Section 9(c) of the Investment Company Act of 1940, for an exemption from the provisions of Section 9(a) of the Act arising from a Final Judgment against Dupee by the United States District Court for the Southern District of New York in an enforcement action instituted

by the Commission. For further information, please contact Gary Sundick at (202) 272–2344.

4. Consideration of whether to amend Rule 17g–1 under the Investment Company Act of 1940, to define the terms "officer" and "employee" for the purposes of fidelity bonding. For further information, please contact Marsha Gilman at (202) 272–3036.

5. Consideration of whether to issue an interpretative release regarding the appropriate disclosure in solicitation materials incident to proxy contests of shareholders realizable value when disposition of the issuer's assets or outstanding stock is proposed. For further information, please contact Mary A. Binno, at (202) 272–2604.

6. Consideration of whether to grant the application of Gerald J. Kathol for relief pursuant to Rule 252(f) of Regulation A. For further information, please contact Thomas J. Baudhuin at (202) 272–2644.

7. Consideration of whether to publish a final statement concerning the Commission's consumer affairs activities. For further information, please contact Ann C. Stansbury at (202) 523–3952.

At times changes in Commission priorities require alterations in the scheduling of meeting items. For further information and to ascertain what, if any, matters have been added, deleted or postponed, please contact: Paul Lowenstein at (202) 272–2091.

AGENCY PUBLICATION ON ASSIGNED DAYS OF THE WEEK

The following agencies have agreed to publish all documents on two assigned days of the week (Monday/Thursday or Tuesday/Friday). This is a voluntary program. (See OFR NOTICE FR 32914, August 6, 1976.)

Monday	Tuesday	Wednesday	Thursday	Friday
DOT/SECRETARY	USDA/ASCS		DOT/SECRETARY	USDA/ASCS
DOT/COAST GUARD	USDA/APHIS		DOT/COAST GUARD	USDA/APHIS
DOT/FAA	USDA/FNS		DOT/FAA	USDA/FNS
DOT/FHWA	USDA/FSQS		DOT/FHWA	USDA/FSQS
DOT/FRA	USDA/REA		DOT/FRA	USDA/REA
DOT/NHTSA	MSPB/OPM		DOT/NHTSA	MSPB/OPM
DOT/RSPA	LABOR		DOT/RSPA	LABOR
DOT/SLSDC	HEW/FDA		DOT/SLSDC	HEW/FDA
DOT/UMTA			DOT/UMTA	
CSA			CSA	

Documents normally scheduled for publication on a day that will be a Federal holiday will be published the next work day following the holiday.

Comments on this program are still invited. Comments should be submitted to the Day-of-the-Week Program Coordinator, Office of the Federal Register, National Archives and Records Service, General Services Administration, Washington, D.C. 20408

REMINDERS

The "reminders" below identify documents that appeared in issues of the **Federal Register** 15 days or more ago. Inclusion or exclusion from this list has no legal significance.

Rules Going Into Effect Today

ENVIRONMENTAL PROTECTION AGENCY

26044 4–17–80 / Control of air pollution from new motor vehicles and new motor vehicle engines; voluntary abbreviated certification review program

FEDERAL EMERGENCY MANAGEMENT AGENCY

26052 4–17–80 / Disaster assistance: Reimbursement of other Federal agencies

ENERGY DEPARTMENT

Federal Energy Regulatory Commission—

28085 4–28–80 / Exemptions of small conduit hydroelectric facilities from Part 1 of the Federal Power Act

FEDERAL TRADE COMMISSION

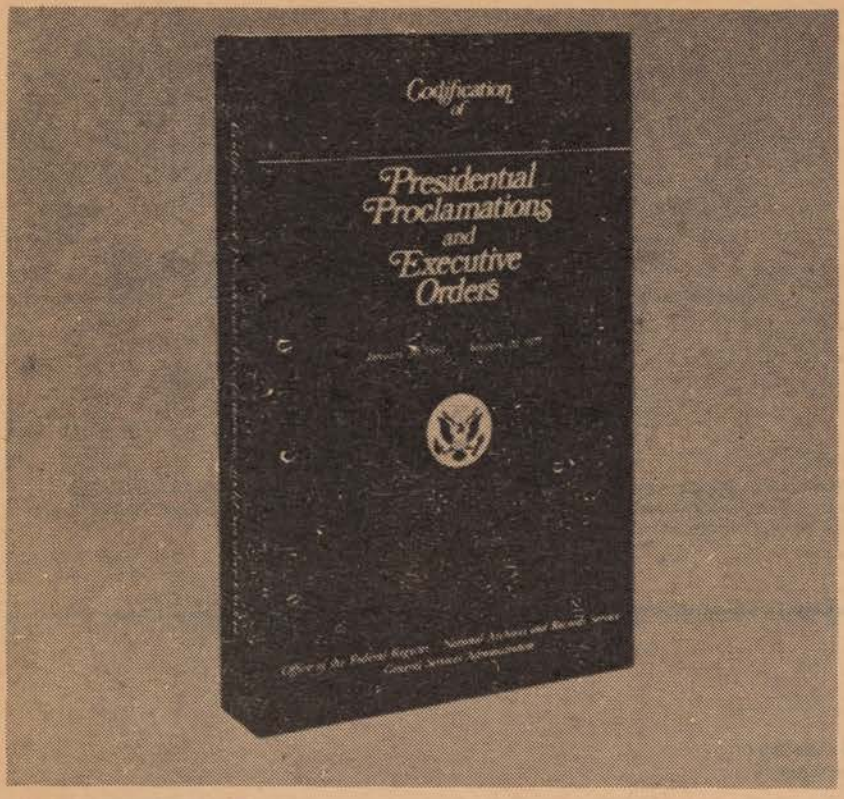
66466 11–19–79 / Rule for using energy costs and consumption information used in labeling and advertising for consumer appliances under the Energy Policy and Conservation Act

[Corrected at 44 FR 75133, 12–19–79]

GENERAL SERVICES ADMINISTRATION

27762 4–24–80 / Procurement; revised data requirement

NUCLEAR REGULATORY COMMISSION



14476 3–5–80 / Access to and protection of National Security Information and restricted data

List of Public Laws

Note: No public bills which have become law were received by the Office of the Federal Register for inclusion in today's **List of Public Laws.**

Last Listing May 8, 1980

NEW PUBLICATION NOW AVAILABLE

For those of you who must keep informed about Presidential proclamations and Executive orders, there is now a convenient reference source that will make researching certain of these documents much easier.

Arranged by subject matter, this first edition of the *Codification* contains proclamations and Executive orders that were issued or amended during the period January 20, 1961, through January 20, 1977, and which have a continuing effect on the public. For those documents that have been affected by other proclamations or Executive orders, the codified text presents the amended version. Therefore, a reader can use the *Codification* to determine the latest text of a document without having to "reconstruct" it through extensive research.

Special features include a comprehensive index and a table listing each proclamation and Executive order issued during the 1961–1977 period, along with any amendments, an indication of its current status, and, where applicable, its location in this volume.

Published by the Office of the Federal Register, National Archives and Records Service, General Services Administration

Environmental Protection Agency

Hazardous Waste Management System: General

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 260

[FRL 1395-7]

Hazardous Waste Management System: General

AGENCY: Environmental Protection Agency.

ACTION: Revisions to final rule and interim final rule and request for comments.

SUMMARY: Subtitle C of the Solid Waste Disposal Act, as amended by the Resource Conservation and Recovery Act of 1976, as amended (RCRA), directs the Environmental Protection Agency (EPA) to promulgate regulations to protect human health and the environment from the improper management of hazardous waste. The first phase of EPA's regulations implementing this directive are contained in Parts 262 and 263 of this chapter (which were promulgated on February 26, 1980) and Parts 261, 264, 265, 122, 123, and 124 of this chapter (which are being promulgated today).

This regulation (Part 260) sets forth definitions of words and phrases which appear in Parts 261 through 265 and contains provisions which are generally applicable to all those regulations. It was originally published on February 26, 1980, concurrent with the promulgation of EPA's Part 262 and 263 regulations. It is now being amended to add new provisions required by today's publication of Parts 261, 264 and 265 and to revise one of the definitions published in February.

DATES: Effective date: November 19, 1980. Comment date: For the interim final portions of this regulation, public comments will be accepted until July 18, 1980.

ADDRESSES: Comments on interim final portions should be sent to Docket Clerk [Docket No. 3000], Office of Solid Waste (WH-562), U.S. Environmental Protection Agency, 401 M Street, S.W., Washington, D.C. 20460. The public docket for this regulation is located in Room 2711 of the above address, and is available for viewing from 9:00 a.m. to 4:00 p.m., Monday through Friday, excluding holidays.

Single copies of these regulations will be available approximately 30 days after publication from Ed Cox, Solid Waste Information, U.S. Environmental Protection Agency, 26 West St. Clair Street, Cincinnati, Ohio 45268 (513) 684-5362. Multiple copies will be available from the Superintendent of Documents, Washington, D.C. 20402.

For information on the implementation of these regulations, contact the EPA Regional Offices below:

Region I—Dennis Huebner, Chief, Waste Management Branch, John F. Kennedy Building, Boston, Massachusetts 02203 (617) 223-5777;

Region II—Dr. Ernest Regna, Chief, Solid Waste Branch, 26 Federal Plaza, New York, New York 10007 (212) 264-0504/5;

Region III—Robert L. Allen, Chief, Hazardous Materials Branch, 6th and Walnut Streets, Philadelphia, Pennsylvania 19106 (215) 597-0980;

Region IV—James Scarbrough, Chief, Residuals Management Branch, 345 Courtland Street N.E., Atlanta, Georgia 30365 (404) 881-3016;

Region VI—R. Stan Jorgensen, Acting Chief, Solid Waste Branch, 1201 Elm Street, First International Building, Dallas, Texas 75270 (214) 767-2645

Region VII—Robert L. Morby, Chief, Hazardous Materials Branch, 324 E. 11th Street, Kansas City, Missouri 64106 (816) 374-3307

Region VIII—Lawrence P. Gazda, Chief, Waste Management Branch, 1860 Lincoln Street, Denver, Colorado 80203 (303) 837-2221

Region IX—Arnold R. Den, Chief, Hazardous Materials Branch, 215 Fremont Street, San Francisco, California 94105 (415) 556-4606

Region X—Kenneth D. Feigner, Chief, Waste Management Branch, 1200 6th Avenue, Seattle, Washington 98101 (206) 442-1260

FOR FURTHER INFORMATION CONTACT: John P. Lehman, Office of Solid Waste (WH-565), U.S. Environmental Protection Agency, 401 M Street, SW., Washington D.C. 20460 (202) 755-9185.

SUPPLEMENTARY INFORMATION:

I. Authority

This regulation is issued under the authority of Sections 1006, 2002(a), 3001 through 3007, 3010, and 7004 of the Solid Waste Disposal Act, as amended by the Resource Conservation and Recovery Act of 1976, as amended (RCRA), 42 U.S.C. 6905, 6912(a), 6921 through 6927, 6930, and 6974.

II Background

Subtitle C of RCRA establishes a Federal program to provide comprehensive regulation of hazardous waste. When fully implemented, this program will provide "cradle-to-grave" regulation of hazardous waste. Section 3001 of Subtitle C directs EPA to identify the characteristics of and to list those hazardous wastes which are subject to regulation under Subtitle C. Sections 3002 and 3003 require EPA to establish standards for generators and transporters of hazardous waste which will ensure proper recordkeeping and reporting, the use of a manifest system to track shipments of hazardous waste, the use of proper labels and containers, and the delivery of the waste to properly permitted treatment, storage, and disposal facilities. To ensure that these facilities are designed, constructed, and operated in a manner which protects human health and the environment, Section 3004 of RCRA directs EPA to promulgate technical, administrative, monitoring, and financial standards for them. These independently enforceable standards will be used by EPA to issue permits to owners and operators of facilities under Section 3005. For those States interested in administering the RCRA program instead of EPA, Section 3006 requires the Agency to issue guidelines under which States may seek authorization to carry out the program. Finally, under Section 3010, all persons engaging in activities subject to control under Sections 3002 through 3004 above must notify EPA or States having authorized RCRA hazardous waste programs.

Early this year, EPA began issuing the regulations which comprise the Subtitle C hazardous waste management system. On February 26, 1980, it promulgated standards for generators and transporters of hazardous waste under Sections 3002 and 3003 of RCRA, respectively (Parts 262 and 263), and issued a public notice establishing procedures for filing a notice of hazardous waste activity under Section 3010. Today EPA is publishing permit procedures and guidelines for the approval of State hazardous waste programs under Sections 3005 and 3006, respectively (Parts 122, 123, and 124), and the first phase of its Section 3001 hazardous waste list and characteristics and Section 3004 facility standards (Parts 261, 264, and 265). As discussed in the preambles to those two latter regulations, EPA expects to be amending its Sections 3001 and 3004 regulations later this year to bring additional wastes into the hazardous waste management system and to add additional facility standards.

Table 1 below, shows where each of these regulations appears in the **Federal Register.**

Table 1[1]

40 CFR	Corresponding RCRA section and descriptive title	Federal Register date
Part:		
260	Definitions used in other Parts corresponding to the Sections 3001 through 3004 rules, and general provisions applicable to these Parts.	5/19/80 Part II.

.....	Section 3010: Preliminary Notification of Hazardous Waste Activity.	2/26/80. (45 FR 12746)

[1] This table is self-explanatory except for that portion of it dealing with section 3004 of RCRA. There are three groups of owners and operators of hazardous waste facilities subject to control under this Section: owners and operators with interim status, those who own or operate RCRA permitted facilities, and those with neither interim status nor a permit. Owners and operators in the first group are subject to the Part 265 rules; those in the second group must comply with RCRA permits based on the Part 264 rules; those in the third group must stop operations on the effective date of these regulations. (See the preamble to the Parts 264 and 265 rules issued elsewhere in today's FEDERAL REGISTER for an explanation of how owners and operators qualify for interim status.)

The purpose of this regulation (Part 260) is to consolidate in one place a number of provisions which are applicable to all the Part 261 through 265 regulations. Subpart A contains rules concerning the designation and handling of confidential information and rules of grammatical construction which are generally applicable to Parts 261 through 265. Subpart B contains definitions of key words and phrases which are used in those Parts. Subpart C outlines the general procedures which EPA will follow in acting on petitions to amend Parts 260 through 265 and special procedures applicable to petitions for the approval of equivalent testing and analytical methods and petitions to amend Part 261. Finally, Appendix I contains a "road map" to the Subtitle C regulations which is designed to acquaint persons unfamiliar with EPA's Subtitle C regulations with the most important regulatory provisions in Parts 260 through 265 and Parts 122 through 124. (Note that Appendix I contains guidance, not regulations. If any part of the appendix is inconsistent with the regulations, the regulations should be considered controlling.)

III. Subpart A

1. *Section 260.1 (Purpose, scope, and applicability).* This section explains the purpose of Part 260 and outlines the contents of the remaining sections. It is largely self-explanatory.

2. *Section 260.2 (Availability of information; confidentiality of information).* The Agency expressed its basic stance on confidentiality in § 250.27 of the proposed Section 3002 regulations, which stated that all information provided in connection with the requirements of RCRA must be made available to any person, as authorized by Section 3007(b) of RCRA, the Freedom of Information Act (FOIA, 5 U.S.C. 552), and the EPA regulations adopted to implement the FOIA and Section 3007(b) (40 CFR Part 2). Proposed § 250.27 applied also to the recordkeeping and reporting systems under Section 3004 of the proposed regulations, because they were designed to use information supplied on the manifest as the data base.

A number of commenters argued that all RCRA reports and information should be made known to the public because public knowledge of this information is essential to the effective enforcement of RCRA. In particular, they argued that in order for the public oversight and citizen suit provisions of RCRA to be effective, the public must have information on the types and amounts of waste being handled by facilities, data from the monitoring of ground water and surface water, information on the type of process generating the waste and the hazardous properties of the waste, and any information reported to the Agency regarding fires, explosions, and discharges of hazardous waste, including data on the degradation of ground water.

The Agency has sought to balance the public need for information against legitimate claims of confidentiality. Neither Section 3007(b) of RCRA nor the Freedom of Information Act, however, authorize or require full public disclosure of information collected pursuant to RCRA. Section 3007(b) directs the Administator to consider as confidential any information which would be entitled to protection under Section 1905 of Title 18 of the United States Code, upon a satisfactory showing by the claimant that his information does indeed warrant confidential treatment. The provisions of the Freedom of Information Act concerning the availability of information do not apply to confidential trade secrets and commercial or financial information (Section 552(b)(4)).

Because of this provision in RCRA, the Agency cannot impose a blanket requirement in the regulations that specific information must be released to the public in all cases. However, the public may obtain information on the type of process producing the wastes listed in the Section 3001 rules from the background documents supporting the Section 3001 regulations. In addition, the Subpart D rules require owners or operators to notify local authorities of fires, explosions, or discharges of hazardous waste which have the potential for adversely affecting human health and the environment outside the facility. Thus, information of this type may also be available to the public.

Several commenters suggested that EPA should clearly state that the confidentiality provisions of proposed § 250.27 apply to the information required in the Section 3004 rules. The Agency agrees, and has therefore placed the provisions concerning confidentiality in Part 260 of the final rules. Section 260.1 of this Part makes it clear that the § 260.2 confidentiality provisions apply to all information required to be submitted under the final Sections 3001 through 3004 standards.

3. *Section 260.3 (Use of number and gender).* This section establishes simple rules of grammatical construction concerning number and gender. It has been added to allow EPA to simplify the drafting of its final Part 261 through 265 regulations by eliminating the need for such awkward phrases as "he/she/it" or "the owner (or in event there is more than one owner, the owners)". It is self-explanatory.

Although there is no direct counterpart to this section in the proposed Subtitle C rules, the Agency is issuing it as a final, rather than interim final standard. This is simply a rule of usage and, therefore, it is unnecessary to solicit comments on it.

IV. Supart B

In EPA's proposed regulations, each regulation had its own set of definitions (*see* §§ 250.11, 250.21, 250.31, and 250.41). To eliminate the unnecessary repetition this produced, all the definitions which are applicable to more than one of EPA's final regulations have been consolidated into this subpart. Definitions of terms which are used only once, or only in conjunction with a single section or subpart, will generally be defined in the section or subpart in which they are used. We hope this reorganization will make the regulations less cumbersome and easier to follow.

When Part 260 was published in February, it contained definitions of twelve terms used in EPA's Parts 262 and 263 regulations and a preamble discussion of each (45 FR 12722). Except for the definition of "on-site", which has been revised since February, these terms will not be discussed again here.

Of the new definitions which are being added to Part 260 today, most are self-explanatory and non-controversial and therefore need not be addressed in this preamble. Those which do require explanation are either dealt with in the preambles accompanying the regulation in which the term is used or in the discussion which follows.

1. *Definition of Active Portion.* The proposed difinition of "active portion" stated that portions of facilities closed in accordance with the facility closure plan, and all applicable closure requirements, were not active portions. Several commenters were concerned that portions of facilities which were closed before the effective date of the regulations, but not in accordance with the Section 3004 closure requirements, would be considered to be active portions. If this were the case, they argued that it was unreasonable to require owners and operators to re-close these portions in accordance with the RCRA standards.

The Agency believed that the following statement in the preamble to the proposed Section 3004 regulations stated that Agency's intent generally *not* to regulate portions of facilities closed before the effective date of the regulations:

> RCRA is written in the present tense and its regulatory scheme is organized in a way which seems to contemplate coverage only of those facilities which continue to operate after the effective date of the regulations. The Subpart D standards and Subpart E permitting procedures are not directed at inactive facilities. (43 FR 58984)

However, the Agency realizes that its original intent would have been more clearly stated if the words "or inactive portions of active facilities" had been added to the above sentence. The Agency's intent is not to regulate under Subtitle C portions of facilities closed before the effective date of the regulations. The only exception to this is that owners and operators of facilities which continue to operate after the effective date of the regulations must ensure that portions of facilities closed before the effective date of these rules do not interfere with the monitoring or control of active portions. This requirement regulates the facility which operates under the RCRA regulations, although it may require the owner or operator, before he receives a permit, or as a permit condition, to take certain measures on portions of his facility closed before the effective date of these regulations.

2. *Definitions of Disposal and Disposal Facility.* Several commenters suggested that the statutory definition of "disposal"given in Section 1004(3) of RCRA should be reworded to make it clear that an unplanned release or discharge of hazardous waste does not constitute disposal. They argued that this change is necessary because, otherwise, accidental discharges will have to be permitted before they are allowed to occur.

Regardless of whether a discharge of hazardous waste is intentional or not, the human health and environmental effects are the same. Thus, intentional and unintentional discharges are included in the definition of "disposal".

However, the Agency agrees that permits logically can only be required for intentional disposal of hazardous waste. Therefore, the definition of "disposal facility" has been modified to indicate the Agency's intent that the term does not apply to activities involving truly accidental discharge of hazardous waste.

In addition, the definition has been further modified to make it clear that only facilities at which hazardous waste is to remain after closure are, for the purposes of these regulations, disposal facilities. Thus, for example, a surface impoundment used for waste treatment from which the emplaced waste and waste residue is to be removed before closure of the impoundment, for purposes of these regulations, is not both a treatment and a disposal facility, but rather, only a treatment facility. That does not mean it might not be "disposing" of wastes within the meaning of that term in Section 1004(3) of RCRA. It merely means that EPA, for purposes of reference in these regulations, will call it a "treatment facility."

3. *Definition of Existing Facility.* Several commenters pointed out what they perceived as a serious fault in Section 3005(e) of RCRA, which is that the Section limits interim status to owners and operators of facilities "in existence" on or before October 21, 1976. The statute requires that, in order to operate legally, facilities which have come into existence after October 21, 1976, must obtain a permit by the effective date of the Section 3005 regulations (i.e., within 180 days after the promulgation date of the regulations). Because it is unlikely that permits can be issued within 180 days for all facilities not "in existence" by October 21, 1976, the commenters felt that the language of the statute was unfair to the owners and operators of these facilities.

EPA agrees that the language of the statute as it now stands would make the RCRA program unworkable. However, the language of RCRA is clear and EPA has had no alternative but to follow it in the regulations. As the preamble to the Part 122 regulations discusses, EPA expects that amendments to RCRA now in conference will be passed shortly and will cure this problem.[2]

In the proposed rules, existing facilities were limited to those which were in operation or under "physical construction" by a certain date. Physical construction was defined as:

> excavation, movement of earth, erection of forms or structures, the purchase of equipment or any other activity involving the actual preparation of the Hazardous Waste Management facility.

The Agency has expanded this aspect of the definition of "existing facility" in the final rules. The Agency believes that facilities for which substantial financial commitments have been incurred through contractual obligations to purchase specially designed structures or equipment, should also be considered to be existing facilities. Accordingly, the final Part 260 definition provides that a facility which has "commenced construction" by a certain date is an "existing facility".

In determining whether construction has commenced, as the term is defined in Part 260, it is first necessary to determine whether the owner or operator has obtained and continues to hold all necessary preconstruction approvals or permits required by Federal, State, and local laws and regulations. If all such permits have not been obtained or maintained, construction has not commenced.

Assuming that the permit requirement is satisfied, in order to have "commenced construction," it is still necessary for facilities to meet one of two additional requirements. The first requirement is that a continuous physical on-site construction program has begun by the date in question. The words "continuous" and "on-site" are key to this test. It will not suffice merely to have begun erection of auxiliary buildings or construction sheds unless there is clear evidence (through contracts or otherwise) that construction of the entire facility will go forward in a

[2] Accordingly, EPA encourages every facility built or under construction on the promulgation date of the RCRA program regulations to notify EPA and file Part A of the permit application so that it can be quickly processed for Interim Status when the change in the law takes effect.

continuous manner (no breaks greater than 18 months). Nor will it suffice that erection of certain components began off-site.

The alternative requirement is that by the date in question, binding agreements—which cannot be canceled or modified without substantial loss—were established for construction of the facility to be completed within a reasonable time. The words "substantial" and "for construction" are key to this test. In order to minimize administrative burdens and to provide some certainty, the Agency will consider a loss as being substantial if the cost to cancel a construction agreement is more than 10 percent of the total project cost. Whether a loss equal to or less than 10 percent is substantial will be considered on a case-by-case basis. The loss must also be related to contractual obligations for construction. Options to purchase or contracts for feasibility, engineering, or design studies will not be considered to be contractual obligations for construction.

These conditions for "commenced construction" are adopted from EPA's Prevention of Significant Deterioration (PSD) regulations issued under the Clean Air Act (see 43 FR 26395).

4. *Definition of Generator.* Several comments on the proposed definition of "generator" concerned corporations controlling plants in several locations which each produce hazardous waste. They questioned whether each plant, or only the corporate headquarters, is the generator. Some commenters thought that the latter should be designated as the generator because this would allegedly reduce the number of manifests and records that the corporation would collectively be required to develop.

RCRA directs the Agency to monitor and control the movement of hazardous waste. The only way that the Agency can do so is to know the source of the waste. If the reports which EPA received on hazardous waste identified the corporate headquarters as the generator, EPA would not know which of the corporation's plants produced the waste and, thus, would be unable to monitor the waste's movement. For this reason, the final definition has been modified to make it clear that the plant, and not the parent company, is the generator. However, corporate headquarters may prepare and submit separate reports for each of the corporation's facilities.

Certain producers (e.g., farmers and small generators) were excluded from the proposed definition of "generator." Because these exclusions are specifically dealt with in the final Part 261 and Part 262 regulations, it is unnecessary to attempt to include the substance of these regulations in the final definition of "generator".

5. *Definition of On-Site.* The Agency is amending the definition of "on-site", which was promulgated in the Part 260 regulations issued on February 26, 1980 (45 FR 12724). In the preamble which accompanied that definition, the Agency pointed out that the manifest is necessary "to safeguard human health and the environment in the transportation of hazardous waste, regardless of the distance that the waste is being transported." However, the preamble went on to say that:

> Merely *crossing* the public right-of-way to gain access to property under the control of the generator does not create the same dangers to the public that transportation upon public highways entails. [emphasis added]

For this reason, the proposed definition of "on-site" (43 FR 58976) was revised to include as "on-site," non-contiguous property owned by the generator which is connected by "a right-of-way which he controls and to which the public does not have access." This revision allowed generators to transport their waste within these confined limits without preparing a manifest for it.

The Agency now realizes, however, that the revised definition of "on-site" (45 FR 12724) cold be interpreted to allow unmanifested waste to be transported *along* a public right-of-way. This was not what the Agency had intended when revising the proposed definition. Therefore, that definition has been amended to make it clear that the entrance and exit of the geographically contiguous property—which may be divided by a public or private right-of-way—must be directly across from each other in order to be considered to be the same site.

6. *Definition of Representative Sample.* The Agency mistakenly provided two definitions of the term "representative sample" in the proposed rules, one in § 250.11(b)(5), and the other in § 250.41(b)(73). The latter was concerned solely with samples characteristic of ground water beneath a facility. Several commenters pointed out that the definition was too restrictive because the proposed regulations required samples to be taken of things other than ground water. The Agency agrees, and has restructured the final ground-water monitoring standards so that a definition of "representative sample" specific to ground water is no longer needed. It has therefore been deleted from the final rules.

The definition provided in § 250.11(b)(5) was broader than that contained in § 250.41(b)(73). § 250.11(b)(5) defined representative sample as:

> Any sample of the waste which is *statistically equivalent* to the total waste in composition, and in physical and chemical properties. Representative samples may be generated using the methods set out in Appendix I of this Subpart. [emphasis added]

Many commenters objected to the aspect of this definition which required that the sample be statistically equivalent to the total waste. They argued that statistical equivalence has an exact meaning, and that interpreted literally, the proposed definition would have required the entire waste stream to be sampled, or a statistical data base established for it, in order to ensure that every constituent of the waste stream was known to some level of accuracy and precision. These commenters felt that this aspect of the definition was unreasonable.

The Agency agrees that requiring a representative sample to be statistically equivalent to the waste is currently infeasible for most waste streams. This is particularly true for "composite" or heterogeneous wastes. The Agency will, in the future, develop and publish in SW–846, "Test Methods for the Evaluation of Solid Waste", practical procedures for obtaining statistically equivalent representative samples of hazardous waste. However, until they are developed, the Agency agrees that the definition of "representative sample" should not require that the samples be statistically equivalent to the total waste. Therefore, the definition has been changed to require that representative samples exhibit the average properties of the universe or whole (e.g., waste or ground water).

V. Subpart C

1. *Section 260.20 (General).* Section 7004 of RCRA states that any person may petition EPA for the promulgation, amendment, or repeal of any regulation under RCRA. That section further directs the Administrator to develop and publish minimum guidelines for the public to participate in this process.

EPA's proposed Subtitle C regulations contained no guidelines to assist the public in framing rulemaking petitions or to advise them of the procedures EPA would follow in acting on their petitions. EPA received a number of comments, often in the context of a specific regulatory provision (e.g., the list of hazardous wastes issued under Section 3001), suggesting that EPA establish rulemaking procedures for Subtitle C.

EPA agrees this would be desirable, and accordingly is adding a subpart to its final rules which (1) establishes the procedures for petitioning EPA to amend, modify, or revoke any provision in Parts 260 through 265 and (2) establishes procedures governing EPA's action on these petitions.

These procedures reflect normal informal rulemaking practice under the Administrative Procedures Act and are largely self-explanatory. Except for two types of petitions—petitions to approve equivalent methods and petitions to amend Part 261 to exclude a waste produced by a particular facility—EPA is not establishing information requirements for petitions. These requirements will of necessity vary with the nature of the regulatory provision which the petitioner is seeking to add or amend, and are not readily susceptible to precise articulation in a regulation. However, petitioners should be able to glean a great deal of information which would be useful in drafting rulemaking petitions from preamble discussions of provisions and associated background documents. In the case of EPA's hazardous waste characteristics and list, the regulations themselves identify the criteria against which all rulemaking (including that initiated by EPA) will be evaluated.

This entire subpart is being published in interim final form to give the public an opportunity to comment on EPA's procedures.

2. *Section 260.21 (Petitions for equivalent testing or analytical methods).* In its proposed Section 3001 regulations, EPA required persons to determine whether their waste exhibited one of the Agency's proposed hazardous waste characteristics using specified testing and analytical methods or "an equivalent method". (See proposed §§ 250.13(a) (i) and (ii), (a)(2)(i), (b)(i), and (d)(2)(ii)). Section 250.11(b)(2) of the proposed rules defined "equivalent method" as any method:

> which the Administrator determines to be functionally equivalent or superior to the method specified.

The proposed rules did not, however, provide any procedures for requesting EPA to approve testing or analytical methods as equivalent to those specified in proposed Section 3001. Several commenters suggested that such procedures should be included in the regulations.

EPA agrees and believes the procedures set forth in § 260.20 will work well for petitions for equivalent methods. However, because specific types of data are required to determine whether a testing or analytical protocol is "equivalent" or "superior" to an existing method, EPA has also established specific information requirements for petitions for equivalent methods. These requirements necessarily require a petitioner to fully evaluate the alternative method and to undertake a thorough comparative analysis of this method and EPA's. Requiring less data would place too large a burden on EPA, considering its limited resources for developing alternative testing methods. The Agency believes that those who desire to use a method other than that prescribed in the final rules will typically have the data required in § 260.21 because they will have found the prescribed method to be inappropriate for their purposes, and will have already committed resources to develop an equivalent method.

3. *Section 260.22 (Petitions to amend Part 261 to exclude a waste produced at a particular facility).* This provision is discussed in Section VII of the preamble to Part 261.

Regulatory Analysis

The Agency has prepared for the regulations promulgated under Sections 3001 through 3004 and 3010 of RCRA, an Economic Impact Analysis, an Environmental Impact Statement, a Reports Impact Analysis, an Operations Resources Impact Analysis, and an Evaluation Plan. EPA has prepared a summary regulatory analysis of its final regulations based on the above reports. This Regulatory Analysis describes the various alternative approaches that the Agency might have used to implement the hazardous waste program, and explains why certain choices were made.

Except for the Evaluation Plan (which was prepared under Executive Order 12044), or as otherwise specified below, copies of these documents may be reviewed in the EPA Regional Office libraries, and at the EPA headquarters library, Room 2404, Waterside Mall, 401 M Street, SW., Washington, D.C. 20460. The Evaluation Plan will be available for review only at the EPA headquarters library.

I. Economic Analysis

The Agency prepared an Economic Impact Analysis under Executive Order 11821, as amended by Executive Order 11949. It indicates that there are both costs and benefits associated with this regulatory program.

1. *Benefits.* The Subtitle C regulatory program will reduce the damage to human health and the environment from improper management of hazardous waste. The following is a brief list of some of the many expected improvements:

(1) Ground-water pollution from leaching of toxic pollutants from improperly designed and managed landfills and surface impoundments will be reduced.

(2) Poisoning and injury due to direct contact with randomly dumped wastes will be reduced.

(3) Pollution of surface waters from hazardous waste stored or disposed of in fields and on riverbanks will be reduced.

(4) Illicit dumping of waste in farm fields, wooded areas, along roadsides, and in ditches and streams will be reduced.

(5) Emission of toxic gases from improperly run incinerators will be reduced.

(6) Accidents, mistakes, and malfunctions at hazardous waste management facilities, which could affect people near the site, will be reduced in number and in severity, due to improved training of personnel, monitoring and inspections, and required emergency equipment.

(7) Contingency plans will spell out procedures to ensure rapid and effective responses to emergencies to minimize any danger to off-site residents and the environment.

(8) Facilities will be decontaminated or otherwise secured at closure, and disposal sites will be monitored and maintained after closure, to reduce the possibility of future adverse impacts on human health or the environment.

The Agency believes these improvements will be substantial and noticeable. The expected improvements are not quantifiable, however, since records of past practices and problems are extremely limited. Also, it is difficult or impossible to quantify benefits deriving from reduced adverse impacts on health or the environment. The dollar value of preventing a case of cancer, for example, is not truly ascertainable. In addition to the major non-quantifiable economic benefits expected from decreases in human health problems and in pollution of our air, land, and water, EPA expects an improvement in economic efficiency and equity, and substantial direct savings from avoiding clean up costs in the future.

An economy functions efficiently and equitably when the price of goods produced in the society reflects the actual social and private costs of production (i.e., when the costs are internalized). Until now, in most states, firms could dispose of wastes in environmentally unsafe ways at a cost substantially less than that for adequate disposal. Thus, the price of goods often

did not reflect the full social cost of production.

Pre-RCRA practices for managing hazardous waste created economic inequities. The costs of disposal often fell randomly on individuals affected by improper management or on the public at large since tax revenues were used to clean up inadequate facilities. It would be more equitable for the costs of adequate hazardous waste management to fall on the consumers and producers of the products which generate the hazardous waste.

Pre-RCRA management practices also caused economic inefficiencies. Because the price of goods did not reflect the cost of properly managing the waste produced as part of the manufacturing process, these goods were priced too low relative to other goods. Because prices were lower than the true social cost of producing the product, consumers were able to buy more of these goods than they could if proper waste management costs were included in the product price. Thus, companies manufactured and sold more of these products and generated more hazardous waste than was economically efficient. These products, thus, had an unfair competitive edge over other products which didn't generate hazardous waste. Furthermore, because companies did not have to either pay the cost of proper waste management or pass it along to customers, the incentives to develop technology and process changes to lessen the quantity of hazardous waste generated or to recover the waste as a useful material were weak compared to what they might have been if proper waste management was required. Additionally, companies which wanted to properly manage their wastes were put at a competitive disadvantage by doing so because they bore costs which their competitors did not.

The RCRA Subtitle C Regulations will ensure that those generating hazardous waste will pay appropriately for their safe management. Most of this cost will be passed on to consumers, while some may be borne by the generator, particularly where price increases are held down in some way (e.g., by foreign competition or competition with other products). In either case, the economy will be more efficient and equitable because those receiving the benefits will also pay the costs, and prices will serve as a more efficient allocator of resources.

In recent years, with increasing frequency, society has been forced to properly dispose of waste that was previously disposed of haphazardly. The best known example of this is Love Canal in New York, where 20,000 tons of waste were buried over a period of years. The diagnosis of a severe health hazard in the area due to wastes seeping into house basements and surfacing in backyards caused society to take remedial action. The price tag to the State and Federal governments is expected to be about $36 million for clean up, relocating residents, health and environmental testing services, and other expenses associated with the disaster. Thus, society is spending about $1,800 per ton in its effort to clean up waste improperly disposed of, and more will be spent before the area is returned to normal. Further, the $1,800 per ton excludes human health costs and suffering, which might easily outweigh actual dollar costs. Given that average disposal costs after the RCRA regulatory program is in place are estimated to be around $80 per ton, it clearly pays to do the job right in the first place.

Given that damages from improper hazardous waste management often take decades to surface, we may be paying dearly for past waste mismanagement for many years to come. Further, without a regulatory program, new problem sites would continue to be developed. Ultimately, clean up of all of these sites could cost billions of dollars.

2. *Costs and Impacts.* Phase I of the RCRA Subtitle C program will broadly affect American industry. The Agency focused its Economic Impact Analysis (EIA) on major hazardous waste-generating segments within 22[3] industries. The study covered approximately 29,000 generators who produced an estimated 13.7 million metric tons of hazardous waste in 1978. The RCRA hazardous waste standards are expected to cover about 67,000 hazardous waste generators that are expected to produce about 41 million metric tons of hazardous waste in 1980. The Agency's analysis shows that 62% of this hazardous waste is from the chemical and allied industries.

As a result of the Phase I regulations, the annual hazardous waste disposal costs for the 29,000 generators covered by the EIA are predicted to increase by $510 million.[4] Of this annual cost, about 50% is for compliance with surface impoundment requirements. Recurring operational and administrative expenses account for $430 million (1980 dollars) of the total annual cost; the rest is for capital and other initial expenditures (as annualized). Total capital and other initial expenditures are estimated at $310 million.

The distribution of the annual compliance cost by major RCRA hazardous waste management activity is provided in Table I. The major part of the cost is for treatment and disposal facility closure and post-closure activities which will occur in the future, but which EPA assumes owners will prepare for in advance of their occurrence. The $510 million annual cost amounts to less than 0.2 percent of the value of sales of the affected industries.

Table I.—*Distribution of RCRA Costs by Type of Requirement*

Compliance activity	Annual incremental cost in millions of dollars	Percent of total cost
Closure/post-closure	$303.3	59
Treatment and disposal	56.8	11
Monitoring/testing	67.5	13
Administration	28.7	6
Contingency planning	23.2	5
Recordkeeping/reporting	15.2	3
Training	15.8	3
Total	*$510.0	100

*Detail does not add to total due to independent rounding.

The Phase I standards establish the RCRA Subtitle C program, and will be followed by Phase II, which will establish the standards for permit issuance. These are scheduled to be promulgated in the fall of 1980. While the regulations have not yet been written, it is conceivable that the added costs of the Phase II regulations could double the total costs for the affected industries.

As part of the EIA, the Agency performed detailed analyses of parts of six major industries which EPA believed could be substantially affected economically by the regulations. They were segments of the textiles, leather tanning, electroplating, inorganic chemicals, organic chemicals, and nonferrous metal smelting and refining industries. The analyses showed that 86 plants may close out of the 4200 studied, costing as many as 5300 jobs. Negative impacts are concentrated in the following industry sectors: Primary zinc and secondary lead smelting and refining, sodium dichromate and titanium dioxide production; cattlehide non-chrome and sheephide (no beamhouse) tanning, electroplating job shops, and woven fabric finishing and

[3] The study included one additional segment, metals mining, which is not included in this summary. The calculations have not been completed and there are major questions as to whether significant quantities of waste from this industry will prove hazardous.

[4] This is an annualized cost developed by multiplying a capital recovery factor by the initial capital cost and adding the product to the recurring program costs. This provides an even projection of expenditures although generators will typically incur disproportionately more expenses in the beginning of the program and at the end of the useful life of the facility.

felted fabric processing in the textile industry. Overall, price increases resulting from the regulation for products from these industries were not found to be substantial except for projected price increases for electroplating job shops (6.6%) and cattlehide non-chrome tanneries (1–3%). Table II summarizes these impacts.

Table II.—*Summary of Costs and Impacts*

Industry	Plants generating hazardous waste (#)	Potential closure (#)	Potential employment loss	Possible price increase (percent)	Annual costs (in millions)
Electroplating[1]	2,336	60	1,680	6.6	$80.7
Inorganic chemicals[2]	95	3	607	<1	49.8
Leather tanning[3]	271	11	795	<1	11.8
Nonferrous smelting[4]	252	2	1,500	<1	64.2
Organic chemicals[5]	45	0	0	0	13.3
Textiles[6]	1,166	10	740	0	23.3
Other manufacturing	.....	.....	.....	.....	258.9
Service industries	.....	.....	.....	.....	8.0
Total	29,000	.....	.....	.....	510.0

[1] Job shops only.
[2] Cost study covered seven product lines, detailed impact study covered four. Significant impacts possible in sodium dichromate (1 closure of 3 plants—45 jobs) and titanium dioxide (2 closures of 13 plants—562 jobs).
[3] Significant impacts possible in cattlehide (6 closures of 16 plants—695 jobs) and sheephides (5 closures of 29 plants—100 jobs).
[4] Significant impact possible in primary zinc industry (1 closure of 6 plants—500 to 1,500 jobs).
[5] Cost study covered ten product lines, detailed impact study covered five.
[6] Cost study includes costs for five industry segments whose wastes are no longer listed as hazardous waste. Significant impact possible in the felted fabric processing segment (2 closures of 19 plants—326 jobs).

EPA performed less detailed analyses for the other industry segments in the EIA. This qualitative analysis shows the possibility of plant closures in some sectors of the explosives, petroleum rerefining, pharmaceuticals, organic chemicals, and plastics industries.

The effects of the Phase I requirements will interact with those of some other EPA regulations. It is too early to estimate these effects in general. But, as an example, the water pretreatment standards for electroplaters were expected to close 587 job shops until the Agency, working with the Small Business Administration, developed a Federal assistance program. As a result of the RCRA Subtitle C program alone, 60 job shops may close, and the Agency may find it more difficult to mitigate the effect of the pretreatment regulations on other plants.

3. *Limits of Analysis.* In order to make the economic analysis practical, the Agency had to make some fundamental assumptions and limit the scope of the analysis to what it believed were the major waste generating industries. The EIA could not cover all industry segments which generate hazardous waste. Simple extrapolation of the compliance cost for the 29,000 generators studied to the 67,000 generators that are expected to be regulated during Phase I, would more than double the EIA estimate. The costs for surface impoundments alone, for those industries not included in the analysis, have been roughly estimated to be somewhere between $60–900 million.[5]

The EIA was based on hazardous waste volumes believed to exist in the covered industry segments because their waste appeared on EPA's hazardous waste list or was believed to exhibit one of the four hazardous waste characteristics. The uncertainty over this latter aspect of the analysis is somewhat reflected in the 1980 waste volume estimate which EPA believes could range between 28 million and 56 million metric tons. The 41 million metric tons previously quoted is EPA's best estimate. To the extent these generators delist or discover that their specific wastes do not meet the hazardous waste characteristics, the costs and impacts will be less.

The EIA made two major assumptions: (1) Although disposal prices may increase significantly under RCRA, the study assumed that generators would be unable to reduce the volume of waste disposed and will not be able to find a cheaper way to manage it, and (2) acceptable off-site waste disposal capacity will be readily available.

Finally, the analysis is based on final Sections 3002 and 3003 regulations and a January 1980 draft of the Sections 3001 and 3004 requirements. The draft regulations have substantially changed since that time. In most instances, the alterations have led to cost reductions. For instance, a number of changes which would greatly reduce the amount of waste covered by the regulations have not been factored into the analysis. Also, the financial requirements have been deferred in the Part 265 regulations but are still covered in the economic impact study. On the other hand, control of underground injection has been added to the regulations, but it is not covered in the EIA.

The Agency is now analyzing the final Phase I regulations and will make the results publicly available this summer in an economic analysis summary. EPA will publish a notice in the **Federal Register** concerning its availability. In the interim, anyone wishing to review the current version of the economic analysis may do so at EPA Headquarters and Regional Office libraries. A more extensive summary of the economic analysis can be found in the Regulatory Analysis which is also available in the Regional Office and EPA Headquarters libraries.

II. Environmental Analysis

EPA voluntarily prepared an Environmental Impact Statement (EIS) under the National Environmental Policy Act 42 U.S.C. § 4321 *et seq.* (NEPA). (See the NEPA discussion in the preamble accompanying the Parts 264 and 265 rules issued elsewhere in today's **Federal Register.**) EPA will publish a **Federal Register** notice within 90 days of the promulgation of these regulations announcing the availability of the EIS for those interested in obtaining a copy of it.

Industry Assistance

The Agency recognizes that these regulations may have a substantial impact on certain industrial sectors, particularly on firms in a poor competitive position. The Agency will provide a limited degree of assistance to such firms. For example, the Agency is preparing guidance manuals which interpret the regulations and offer advice on efficient compliance with substantive requirements. Seminars and public hearings will be held to explain the regulations, respond to questions, and describe available financial

[5] Based on varied assumptions on site life and actual number of hazardous waste sites. Also, this estimation was based on a fixed $25 million cost assumption for closure of impoundments over 150 acres. The costs would have been nearly double that without this assumption and with strict use of a model cost equation used for impoundments of less area. However, uncertainty in the data base over site life, impoundment size and hazardousness of wastes, and the Agency belief that operators could develop less costly closure plans that EPA would accept, support this assumption.

assistance. Limited technological assistance may be available.

The Agency has also established an industry assistance program in the Office of Solid Waste. The staff of this program have been charged with (1) identifying industry and community RCRA compliance problems and seeking solutions to them, (2) coordinating assistance activities with the States, other parts of EPA, and other Federal agencies (e.g., the Small Business Administration and the Economic Development Administration), (3) planning and conducting seminars, and (4) coordinating production of written material designed to assist those least able to cope with the regulatory burden.

The Agency would ideally like to provide this assistance to anyone who wants it. However, because the industry assistance program may receive more requests for help than it can initially respond to, it may be necessary to establish priorities to determine which requests should be answered first. If this is the case, the program will concentrate first on the following industry sectors, which the Agency believes most need this help: chrome pigments, chlorine, electroplating (job shops), woven fabric finishing, felt fabric finishing, sheepskin tanneries, vegetable tanners, primary and secondary aluminum, primary and secondary copper, primary and secondary lead, primary tungsten, primary zinc, petroleum rerefining, pesticides, plastics, and pharmaceuticals. EPA plans to meet with the trade associations of these industries in order to define specific assistance responses.

Anyone having suggestions on how the Agency can help industry comply with these regulations should contact: Michael Barclay, RCRA Industry Assistance Coordinator, Office of Solid Waste (WH-565), U.S. Environmental Protection Agency, Washington, D.C. 20460 (202) 755-9190.

Dated: May 2, 1980.

Douglas M. Costle,

Administrator.

Title 40 CFR Part 260 is revised to read as follows:

PART 260—HAZARDOUS WASTE MANAGEMENT SYSTEM: GENERAL

Subpart A—General

Sec.

260.1 Purpose, scope and applicability.
260.2 Availability of information, confidentiality of information.
260.3 Use of number and gender.

Subpart B—Definitions

260.10 Definitions.

Subpart C—Rulemaking Petitions

260.20 General.
260.21 Petitions for equivalent testing or analytical methods.
260.22 Petitions to amend Part 261 to exclude a waste produced at a particular facility.
Appendix I—Overview of Subtitle C Regulations

Authority: Secs. 1006, 2002(a), 3001 through 3007, 3010, and 7004, of the Solid Waste Disposal Act, as amended by the Resource Conservation and Recovery Act of 1976, as amended (42 U.S.C. 6905, 6912(a), 6921 through 6927, 6930, and 6974).

Subpart A—General

§ 260.1 Purpose, scope, and applicability.

(a) This part provides definitions of terms, general standards, and overview information applicable to Parts 260 through 265 of this Chapter.

(b) In this part: (1) Section 260.2 sets forth the rules that EPA will use in making information it receives available to the public and sets forth the requirements that generators, transporters, or owners or operators of treatment, storage, or disposal facilities must follow to assert claims of business confidentiality with respect to information that is submitted to EPA under Parts 260 through 265 of this Chapter.

(2) Section 260.3 establishes rules of grammatical construction for Parts 260 through 265 of this Chapter.

(3) Section 260.10 defines terms which are used in Parts 260 through 265 of this Chapter.

(4) Section 260.20 establishes procedures for petitioning EPA to amend, modify, or revoke any provision of Parts 260 through 265 of this Chapter and establishes procedures governing EPA's action on such petitions.

(5) Section 260.21 establishes procedures for petitioning EPA to approve testing methods as equivalent to those prescribed in Parts 261, 264, or 265 of this Chapter.

(6) Section 260.22 establishes procedures for petitioning EPA to amend Subpart D of Part 261 to exclude a waste from a particular facility.

§ 260.2 Availability of information; confidentiality of information.

(a) Any information provided to EPA under Parts 260 through 265 of this Chapter will be made available to the public to the extent and in the manner authorized by the Freedom of Information Act, 5 U.S.C. section 552, section 3007(b) of RCRA and EPA regulations implementing the Freedom of Information Act and section 3007(b), Part 2 of this Chapter, as applicable.

(b) Any person who submits information to EPA in accordance with Parts 260 through 265 of this Chapter may assert a claim of business confidentiality covering part or all of that information by following the procedures set forth in § 2.203(b) of this Chapter. Information covered by such a claim will be disclosed by EPA only to the extent, and by means of the procedures, set forth in Part 2, Subpart B of this Chapter. However, if no such claim accompanies the information when it is received by EPA, it may be made available to the public without further notice to the person submitting it.

§ 260.3 Use of number and gender.

As used in Parts 260 through 265 of this Chapter:

(a) Words in the masculine gender also include the feminine and neuter genders; and

(b) Words in the singular include the plural; and

(c) Words in the plural include the singular.

Subpart B—Definitions

§ 260.10 Definitions.

(a) When used in Parts 260 through 265 of this Chapter, the following terms have the meanings given below: (1) "Act" or "RCRA" means the Solid Waste Disposal Act, as amended by the Resource Conservation and Recovery Act of 1976, as amended, 42 U.S.C. section 6901 et seq.

(2) "Active portion" means that portion of a facility where treatment, storage, or disposal operations are being or have been conducted after the effective date of Part 261 of this Chapter and which is not a closed portion. (See also "closed portion" and "inactive portion".)

(3) "Administrator" means the Administrator of the Environmental Protection Agency, or his designee.

(4) "Aquifer" means a geologic formation, group of formations, or part of a formation capable of yielding a significant amount of ground water to wells or springs.

(5) "Authorized representative" means the person responsible for the overall operation of a facility or an operational unit (i.e., part of a facility), e.g., the plant manager, superintendent or person of equivalent responsibility.

(6) "Closed portion" means that portion of a facility which an owner or operator has closed in accordance with the approved facility closure plan and all applicable closure requirements. (See also "active portion" and "inactive portion".)

(7) "Confined aquifer" means an aquifer bounded above and below by

impermeable beds or by beds of distinctly lower permeability than that of the aquifer itself; an aquifer containing confined ground water.

(8) "Constituent" or "hazardous waste constituent" means a constituent which caused the Administrator to list the hazardous waste in Part 261, Subpart D, of this Chapter, or a constituent listed in Table 1 of § 261.24 of this Chapter.

(9) "Container" means any portable device in which a material is stored, transported, treated, disposed of, or otherwise handled.

(10) "Contingency plan" means a document setting out an organized, planned, and coordinated course of action to be followed in case of a fire, explosion, or release of hazardous waste or hazardous waste constituents which could threaten human health or the environment.

(11) "Designated facility" means a hazardous waste treatment, storage, or disposal facility which has received an EPA permit (or a facility with interim status) in accordance with the requirements of 40 CFR Parts 122 and 124 of this Chapter, or a permit from a State authorized in accordance with Part 123 of this Chapter, that has been designated on the manifest by the generator pursuant to § 262.20.

(12) "Dike" means an embankment or ridge of either natural or man-made materials used to prevent the movement of liquids, sludges, solids, or other materials.

(13) "Discharge" or "hazardous waste discharge" means the accidental or intentional spilling, leaking, pumping, pouring, emitting, emptying, or dumping of hazardous waste into or on any land or water.

(14) "Disposal" means the discharge, deposit, injection, dumping, spilling, leaking, or placing of any solid waste or hazardous waste into or on any land or water so that such solid waste or hazardous waste or any constituent thereof may enter the environment or be emitted into the air or discharged into any waters, including ground waters.

(15) "Disposal facility" means a facility or part of a facility at which hazardous waste is intentionally placed into or on any land or water, and at which waste will remain after closure.

(16) "EPA hazardous waste number" means the number assigned by EPA to each hazardous waste listed in Part 261, Subpart D, of this Chapter and to each characteristic identified in Part 261, Subpart C, of this Chapter.

(17) "EPA identification number" means the number assigned by EPA to each generator, transporter, and treatment, storage, or disposal facility.

(18) "EPA region" means the states and territories found in any one of the following ten regions:

Region I—Maine, Vermont, New Hampshire, Massachusetts, Connecticut, and Rhode Island.
Region II—New York, New Jersey, Commonwealth of Puerto Rico, and the U.S. Virgin Islands.
Region III—Pennsylvania, Delaware, Maryland, West Virginia, Virginia, and the District of Columbia.
Region IV—Kentucky, Tennessee, North Carolina, Mississippi, Alabama, Georgia, South Carolina, and Florida.
Region V—Minnesota, Wisconsin, Illinois, Michigan, Indiana and Ohio.
Region VI—New Mexico, Oklahoma, Arkansas, Louisiana, and Texas.
Region VII—Nebraska, Kansas, Missouri, and Iowa.
Region VIII—Montana, Wyoming, North Dakota, South Dakota, Utah, and Colorado.
Region IX—California, Nevada, Arizona, Hawaii, Guam, American Samoa, Commonwealth of the Northern Mariana Islands.
Region X—Washington, Oregon, Idaho, and Alaska.

(19) "Equivalent method" means any testing or analytical method approved by the Administrator under §§ 260.20 and 260.21.

(20) "Existing hazardous waste management facility" or "existing facility" means a facility which was in operation, or for which construction had commenced, on or before October 21, 1976. Construction had commenced if:

(i) The owner or operator has obtained all necessary Federal, State, and local preconstruction approvals or permits; and either

(ii)(*a*) A continuous physical, on-site construction program has begun, or

(*b*) The owner or operator has entered into contractual obligations—which cannot be cancelled or modified without substantial loss—for construction of the facility to be completed within a reasonable time.

(21) "Facility" means all contiguous land, and structures, other appurtenances, and improvements on the land, used for treating, storing, or disposing of hazardous waste. A facility may consist of several treatment, storage, or disposal operational units (e.g., one or more landfills, surface impoundments, or combinations of them).

(22) "Federal agency" means any department, agency, or other instrumentality of the Federal Government, any independent agency or establishment of the Federal Government including any Government corporation, and the Government Printing Office.

(23) "Food-chain crops" means tobacco, crops grown for human consumption, and crops grown for feed for animals whose products are consumed by humans.

(24) "Freeboard" means the vertical distance between the top of a tank or surface impoundment dike, and the surface of the waste contained therein.

(25) "Free liquids" means liquids which readily separate from the solid portion of a waste under ambient temperature and pressure.

(26) "Generator" means any person, by site, whose act or process produces hazardous waste identified or listed in Part 261 of this Chapter.

(27) "Ground water" means water below the land surface in a zone of saturation.

(28) "Hazardous waste" means a hazardous waste as defined in § 261.3 of this Chapter.

(29) "Inactive portion" means that portion of a facility which is not operated after the effective date of Part 261 of this Chapter. (See also "active portion" and "closed portion".)

(30) "Incinerator" means an enclosed device using controlled flame combustion, the primary purpose of which is to thermally break down hazardous waste. Examples of incinerators are rotary kiln, fluidized bed, and liquid injection incinerators.

(31) "Incompatible waste" means a hazardous waste which is unsuitable for:

(i) Placement in a particular device or facility because it may cause corrosion or decay of containment materials (e.g., container inner liners or tank walls); or

(ii) Commingling with another waste or material under uncontrolled conditions because the commingling might produce heat or pressure, fire or explosion, violent reaction, toxic dusts, mists, fumes, or gases, or flammable fumes or gases.

(See Part 265, Appendix V, of this Chapter for examples.)

(32) "Individual generation site" means the contiguous site at or on which one or more hazardous wastes are generated. An individual generation site, such as a large manufacturing plant, may have one or more sources of hazardous waste but is considered a single or individual generation site if the site or property is contiguous.

(33) "In operation" refers to a facility which is treating, storing, or disposing of hazardous waste.

(34) "Injection well" means a well into which fluids are injected. (See also "underground injection".)

(35) "Inner liner" means a continuous layer of material placed inside a tank or container which protects the

construction materials of the tank or container from the contained waste or reagents used to treat the waste.

(36) "International shipment" means the transportation of hazardous waste into or out of the jurisdiction of the United States.

(37) "Landfill" means a disposal facility or part of a facility where hazardous waste is placed in or on land and which is not a land treatment facility, a surface impoundment, or an injection well.

(38) "Landfill cell" means a discrete volume of a hazardous waste landfill which uses a liner to provide isolation of wastes from adjacent cells or wastes. Examples of landfill cells are trenches and pits.

(39) "Land treatment facility" means a facility or part of a facility at which hazardous waste is applied onto or incorporated into the soil surface; such facilities are disposal facilities if the waste will remain after closure.

(40) "Leachate" means any liquid, including any suspended components in the liquid, that has percolated through or drained from hazardous waste.

(41) "Liner" means a continuous layer of natural or man-made materials, beneath or on the sides of a surface impoundment, landfill, or landfill cell, which restricts the downward or lateral escape of hazardous waste, hazardous waste constituents, or leachate.

(42) "Management" or "hazardous waste management" means the systematic control of the collection, source separation, storage, transportation, processing, treatment, recovery, and disposal of hazardous waste.

(43) "Manifest" means the shipping document originated and signed by the generator which contains the information required by Part 262, Subpart B, of this Chapter.

(44) "Manifest document number" means the serially increasing number assigned to the manifest by the generator for recording and reporting purposes.

(45) "Mining overburden returned to the mine site" means any material overlying an economic mineral deposit which is removed to gain access to that deposit and is then used for reclamation of a surface mine.

(46) "Movement" means that hazardous waste transported to a facility in an individual vehicle.

(47) "New hazardous waste management facility" or "new facility" means a facility which began operation, or for which construction commenced after October 21, 1976. (See also "Existing hazardous waste management facility".)

(48) "On-site" means the same or geographically contiguous property which may be divided by public or private right-of-way, provided the entrance and exit between the properties is at a cross-roads intersection, and access is by crossing as opposed to going along, the right-of-way. Non-contiguous properties owned by the same person but connected by a right-of-way which he controls and to which the public does not have access, is also considered on-site property.

(49) "Open burning" means the combustion of any material without the following characteristics:

(i) Control of combustion air to maintain adequate temperature for efficient combustion,

(ii) Containment of the combustion-reaction in an enclosed device to provide sufficient residence time and mixing for complete combustion, and

(iii) Control of emission of the gaseous combustion products.

(See also "incineration" and "thermal treatment".)

(50) "Operator" means the person responsible for the overall operation of a facility.

(51) "Owner" means the person who owns a facility or part of a facility.

(52) "Partial closure" means the closure of a discrete part of a facility in accordance with the applicable closure requirements of Parts 264 or 265 of this Chapter. For example, partial closure may include the closure of a trench, a unit operation, a landfill cell, or a pit, while other parts of the same facility continue in operation or will be placed in operation in the future.

(53) "Person" means an individual, trust, firm, joint stock company, Federal Agency, corporation (including a government corporation), partnership, association, State, municipality, commission, political subdivision of a State, or any interstate body.

(54) "Personnel" or "facility personnel" means all persons who work, at, or oversee the operations of, a hazardous waste facility, and whose actions or failure to act may result in noncompliance with the requirements of Parts 264 or 265 of this Chapter.

(55) "Pile" means any non-containerized accumulation of solid, nonflowing hazardous waste that is used for treatment or storage.

(56) "Point source" means any discernible, confined, and discrete conveyance, including, but not limited to any pipe, ditch, channel, tunnel, conduit, well, discrete fissure, container, rolling stock, concentrated animal feeding operation, or vessel or other floating craft, from which pollutants are or may be discharged. This term does not include return flows from irrigated agriculture.

(57) "Publicly owned treatment works" or "POTW" means any device or system used in the treatment (including recycling and reclamation) of municipal sewage or industrial wastes of a liquid nature which is owned by a "State" or "municipality" (as defined by Section 502(4) of the CWA). This definition includes sewers, pipes, or other conveyances only if they convey wastewater to a POTW providing treatment.

(58) "Regional Administrator" means the Regional Administrator for the EPA Region in which the facility is located, or his designee.

(59) "Representative sample" means a sample of a universe or whole (e.g., waste pile, lagoon, ground water) which can be expected to exhibit the average properties of the universe or whole.

(60) "Run-off" means any rainwater, leachate, or other liquid that drains over land from any part of a facility.

(61) "Run-on" means any rainwater, leachate, or other liquid that drains over land onto any part of a facility.

(62) "Saturated zone" or "zone of saturation" means that part of the earth's crust in which all voids are filled with water.

(63) "Sludge" means any solid, semi-solid, or liquid waste generated from a municipal, commercial, or industrial wastewater treatment plant, water supply treatment plant, or air pollution control facility exclusive of the treated effluent from a wastewater treatment plant.

(64) "Solid waste" means a solid waste as defined in § 261.2 of this Chapter.

(65) "State" means any of the several States, the District of Columbia, the Commonwealth of Puerto Rico, the Virgin Islands, Guam, American Samoa, and the Commonwealth of the Northern Mariana Islands.

(66) "Storage" means the holding of hazardous waste for a temporary period, at the end of which the hazardous waste is treated, disposed of, or stored elsewhere.

(67) "Surface impoundment" or "impoundment" means a facility or part of a facility which is a natural topographic depression, man-made excavation, or diked area formed primarily of earthen materials (although it may be lined with man-made materials), which is designed to hold an accumulation of liquid wastes or wastes containing free liquids, and which is not an injection well. Examples of surface impoundments are holding, storage,

settling, and aeration pits, ponds, and lagoons.

(68) "Tank" means a stationary device, designed to contain an accumulation of hazardous waste which is constructed primarily of non-earthen materials (e.g., wood, concrete, steel, plastic) which provide structural support.

(69) "Thermal treatment" means the treatment of hazardous waste in a device which uses elevated temperatures as the primary means to change the chemical, physical, or biological character or composition of the hazardous waste. Examples of thermal treatment processes are incineration, molten salt, pyrolysis, calcination, wet air oxidation, and microwave discharge. (See also "incinerator" and "open burning".)

(70) "Totally enclosed treatment facility" means a facility for the treatment of hazardous waste which is directly connected to an industrial production process and which is constructed and operated in a manner which prevents the release of any hazardous waste or any constituent thereof into the environment during treatment. An example is a pipe in which waste acid is neutralized.

(71) "Transportation" means the movement of hazardous waste by air, rail, highway, or water.

(72) "Transporter" means a person engaged in the offsite transportation of hazardous waste by air, rail, highway, or water.

(73) "Treatment" means any method, technique, or process, including neutralization, designed to change the physical, chemical, or biological character or composition of any hazardous waste so as to neutralize such waste, or so as to recover energy or material resources from the waste, or so as to render such waste non-hazardous, or less hazardous; safer to transport, store, or dispose of; or amenable for recovery, amenable for storage, or reduced in volume.

(74) "Underground injection" means the subsurface emplacement of fluids through a bored, drilled or driven well; or through a dug well, where the depth of the dug well is greater than the largest surface dimension. (See also "injection well".)

(75) "Unsaturated zone" or "zone of aeration" means the zone between the land surface and the water table.

(76) "United States" means the 50 States, the District of Columbia, the Commonwealth of Puerto Rico, the U.S. Virgin Islands, Guam, American Samoa, and the Commonwealth of the Northern Mariana Islands.

(77) "Water (bulk shipment)" means the bulk transportation of hazardous waste which is loaded or carried on board a vessel without containers or labels.

(78) "Well" means any shaft or pit dug or bored into the earth, generally of a cylindrical form, and often walled with bricks or tubing to prevent the earth from caving in.

(79) "Well injection": (See "underground injection".)

Subpart C—Rulemaking Petitions

§ 260.20 General.

(a) Any person may petition the Administrator to modify or revoke any provision in Parts 260 through 265 of this Chapter. This section sets forth general requirements which apply to all such petitions. Section 260.21 sets forth additional requirements for petitions to add a testing or analytical method to Parts 261, 264 or 265. Section 260.22 sets forth additional requirements for petitions to exclude a waste at a particular facility from § 261.3 of this Chapter or the lists of hazardous wastes in Subpart D of Part 261.

(b) Each petition must be submitted to the Administrator by certified mail and must include:

(1) The petitioner's name and address;
(2) A statement of the petitioner's interest in the proposed action;
(3) A description of the proposed action, including (where appropriate) suggested regulatory language; and
(4) A statement of the need and justification for the proposed action, including any supporting tests, studies, or other information.

(c) The Administrator will make a tentative decision to grant or deny a petition and will publish notice of such tentative decision, either in the form of an advanced notice of proposed rulemaking, a proposed rule, or a tentative determination to deny the petition, in the **Federal Register** for written public comment.

(d) Upon the written request of any interested person, the Administrator may, at his discretion, hold an informal public hearing to consider oral comments on the tentative decision. A person requesting a hearing must state the issues to be raised and explain why written comments would not suffice to communicate the person's views. The Administrator may in any case decide on his own motion to hold an informal public hearing.

(e) After evaluating all public comments the Administrator will make a final decision by publishing in the **Federal Register** a regulatory amendment or a denial of the petition.

§ 260.21 Petitions for equivalent testing or analytical methods.

(a) Any person seeking to add a testing or analytical method to Parts 261, 264, or 265 of this Chapter may petition for a regulatory amendment under this section and § 260.20. To be successful, the person must demonstrate to the satisfaction of the Administrator that the proposed method is equal to or superior to the corresponding method prescribed in Parts 261, 264, or 265 of this Chapter, in terms of its sensitivity, accuracy, and precision (i.e., reproducibility).

(b) Each petition must include, in addition to the information required by § 260.20(b):

(1) A full description of the proposed method, including all procedural steps and equipment used in the method;
(2) A description of the types of wastes or waste matrices for which the proposed method may be used;
(3) Comparative results obtained from using the proposed method with those obtained from using the relevant or corresponding methods prescribed in Parts 261, 264, or 265 of this Chapter;
(4) An assessment of any factors which may interfere with, or limit the use of, the proposed method; and
(5) A description of the quality control procedures necessary to ensure the sensitivity, accuracy and precision of the proposed method.

(c) After receiving a petition for an equivalent method, the Administrator may request any additional information on the proposed method which he may reasonably require to evaluate the method.

(d) If the Administrator amends the regulations to permit use of a new testing method, the method will be incorporated in "Test Methods for the Evaluation of Solid Waste: Physical/Chemical Methods," SW–846, U.S. Environmental Protection Agency, Office of Solid Waste, Washington, D.C. 20460.

[Comment: This manual will be provided to any person on request, and will be available for inspection or copying at EPA headquarters or any EPA Regional Office.]

§ 260.22 Petitions to amend Part 261 to exclude a waste produced at a particular facility.

(a) Any person seeking to exclude a waste at a particular generating facility from the lists in Subpart D of Part 261 may petition for a regulatory amendment under this section and § 260.20. To be successful, the petitioner must demonstrate to the satisfaction of the Administrator that the waste

produced by a particular generating facility does not meet any of the criteria under which the waste was listed as a hazardous waste and, in the case of an acutely hazardous waste listed under § 261.11(a)(2), that it also does not meet the criterion of § 261.11(a)(3). A waste which is so excluded may still, however, be a hazardous waste by operation of Subpart C of Part 261.

(b) The procedures in this section and § 260.20 may also be used to petition the Administrator for a regulatory amendment to exclude from § 261.3(a)(2)(ii) or (c), a waste which is described in those sections and is either a waste listed in Subpart D, contains a waste listed in Subpart D, or is derived from a waste listed in Subpart D. This exclusion may only be issued for a particular generating, storage, treatment, or disposal facility. The petitioner must make the same demonstration as required by paragraph (a) of this section, except that where the waste is a mixture of solid waste and one or more listed hazardous wastes or is derived from one or more hazardous wastes, his demonstration may be made with respect to each constituent listed waste or the waste mixture as a whole. A waste which is so excluded may still be a hazardous waste by operation of Subpart C of Part 261.

(c) If the waste is listed with codes "I", "C", "R", or "E" in Subpart D, the petitioner must show that demonstration samples of the waste do not exhibit the relevant characteristic defined in §§ 261.21, 261.22, 261.23, or 261.24 using any applicable test methods prescribed therein.

(d) If the waste is listed with code "T" in Subpart D, the petitioner must demonstrate that:

(1) Demonstration samples of the waste do not contain the constituent (as defined in Appendix VII) that caused the Administrator to list the waste, using the appropriate test methods prescribed in Appendix III; or

(2) The waste does not meet the criterion of § 261.11(a)(3) when considering the factors in § 261.11(a)(3) (i) through (xi).

(e) If the waste is listed with the code "H" in Subpart D, the petitioner must demonstrate that the waste does not meet both of the following criteria:

(1) The criterion of § 261.11(a)(2).

(2) The criterion of § 261.11(a)(3) when considering the factors listed in § 261.11(a)(3) (i) through (xi).

(f) [Reserved for listing radioactive wastes.]

(g) [Reserved for listed infectious wastes.]

(h) Demonstration samples must consist of enough representative samples, but in no case less than four samples, taken over a period of time sufficient to represent the variability or the uniformity of the waste.

(i) Each petition must include, in addition to the information required by § 260.20(b):

(1) The name and address of the laboratory facility performing the sampling or tests of the waste;

(2) The names and qualifications of the persons sampling and testing the waste;

(3) The dates of sampling and testing;

(4) The location of the generating facility;

(5) A description of the manufacturing processes or other operations and feed materials producing the waste and an assessment of whether such processes, operations, or feed materials can or might produce a waste that is not covered by the demonstration;

(6) A description of the waste and an estimate of the average and maximum monthly and annual quantities of waste covered by the demonstration;

(7) Pertinent data on and discussion of the factors delineated in the respective criterion for listing a hazardous waste, where the demonstration is based on the factors in § 261.11(a)(3);

(8) A description of the methodologies and equipment used to obtain the representative samples;

(9) A description of the sample handling and preparation techniques, including techniques used for extraction, containerization and preservation of the samples;

(10) A description of the tests performed (including results);

(11) The names and model numbers of the instruments used in performing the tests; and

(12) The following statement signed by the generator of the waste or his authorized representative:

I certify under penalty of law that I have personally examined and am familiar with the information submitted in this demonstration and all attached documents, and that, based on my inquiry of those individuals immediately responsible for obtaining the information, I believe that the submitted information is true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment.

(j) After receiving a petition for an exclusion, the Administrator may request any additional information which he may reasonably require to evaluate the petition.

(k) An exclusion will only apply to the waste generated at the individual facility covered by the demonstration and will not apply to waste from any other facility.

(l) The Administrator may exclude only part of the waste for which the demonstration is submitted where he has reason to believe that variability of the waste justifies a partial exclusion.

(m) The Administrator may (but shall not be required to) grant a temporary exclusion before making a final decision under § 260.20(d) whenever he finds that there is a substantial likelihood that an exclusion will be finally granted. The Administrator will publish notice of any such temporary exclusion in the **Federal Register.**

Appendix I.—Overview of Subtitle C Regulations

The Agency believes that there are many people who suspect, but are not sure, that their activities are subject to control under the RCRA Subtitle C rules. This appendix is written for these people. It is designed to help those who are unfamiliar with the hazardous waste control program to determine with which, if any, of the regulations they should comply.

Definition of Solid Waste

The first question which such a person should ask himself is: "Is the material I handle a solid waste?" If the answer to this question is "No", then the material is not subject to control under RCRA and, therefore, the person need not worry about whether he should comply with the Subtitle C rules.

Section 261.2 of this Chapter provides a definition of "solid waste" which expands the statutory definition of that term given in section 1004(27) of RCRA. This definition is diagrammed in Figure 1 below.

Figure 1 explains that all materials are either: (1) Garbage refuse, or sludge; (2) solid, liquid, semi-solid or contained gaseous material; or (3) something else. No materials in the third category are solid waste. All materials in the first category are solid waste. Materials in the second category are solid waste unless they are one of the five exclusions specified in § 261.4(a).

Definition of Hazardous Waste

If a person has determined that his material is a "solid waste", the next question he should ask is: "Is the solid waste I handle a hazardous waste?"

Hazardous waste is defined in § 261.3 of this chapter. Section 261.3 provides that, in general, a solid waste is a hazardous waste if: (1) It is, or contains, a hazardous waste listed in Subpart D of

Part 261 of this Chapter, or (2) the waste exhibits any of the characteristics defined in Subpart C of Part 261. However, Parts 260 and 261 also contain provisions which exclude (§§ 261.4(b), 260.20, and 260.22) certain solid wastes from the definition of "hazardous waste", even though they are listed in Subpart D or exhibit one or more of the characteristics defined in Subpart C. Figure 2 depicts the interplay of these special provisions with the definition of "hazardous waste". It presents a series of questions which a person should ask himself concerning his waste. After doing so, the person should be able to determine if the solid waste he handles is a hazardous waste.

Hazardous Waste Regulations

If this is the case, the person should look at Figure 3. Figure 3 depicts the special provisions specified in the final Part 261 rules for hazardous waste which:

1. Is generated by a small quantity generator
2. Is or is intended to be legitimately and beneficially used, re-used, recycled, or reclaimed
3. Is a sludge; is listed in Part 261, Subpart D; or is a mixture containing a waste listed in Part 261, Subpart D.

For each of these Groups, Figure 3 indicates with which Subtitle C regulations (if any) the person handling these wastes must comply. Figure 3 also explains that, if a person handles hazardous waste which is not included in any one of the above three categories, his waste is subject to the Subtitle C regulations diagrammed in Figure 4.

Figure 4 is a flowchart which identifies the three categories of activities regulated under the Subtitle C rules, and the corresponding set of rules with which people in each of these categories must comply. It points out that all people who handle hazardous waste are either: (1) Generators of hazardous waste, (2) transporters of hazardous waste, (3) owners or operators of hazardous waste treatment, storage, or disposal facilities, or (4) a combination of the above. Figure 4 indicates that all of these people must notify EPA of their hazardous waste activities in accordance with the Section 3010 Notification Procedures (see 45 FR 12746 *et seq.*), and obtain an EPA identification number.

It should be noted that people handling wastes listed in Subpart D of Part 261 who have filed, or who intend to file an application to exempt their waste from regulation under the Subtitle C rules, must also comply with the notification requirements of section 3010.

If a person generates hazardous waste, Figure 4 indicates that he must comply with the Part 262 rules. If he transports it, he must comply with the Part 263 rules. The standards in both these Parts are designed to ensure, among other things, proper recordkeeping and reporting, the use of a manifest system to track shipments of hazardous waste, the use of proper labels and containers, and the delivery of the waste to a permitted treatment, storage, or disposal facility.

If a person owns or operates a facility which treats, stores, or disposes of hazardous waste, the standards with which he must comply depend on a number of factors. First of all, if the owner or operator of a *storage* facility is also the person who generates the waste, and the waste is stored at the facility for less than 90 days for subsequent shipment off-site, then the person must comply with § 262.34 of the Part 262 rules.

All other owners or operators of treatment, storage, or disposal facilities must comply with either the Part 264 or the Part 265 rules. To determine with which of these sets of rules an owner or operator must comply, he must find out whether his facility qualifies for interim status. To qualify, the owner or operator must: (1) Have been treating, storing, or disposing of the hazardous waste, or commenced facility construction on or before October 21, 1976, (2) comply with the Section 3010 notification requirements, and (3) apply for a permit under Part 122 of this Chapter.

If the owner or operator has done all of the above, he qualifies for interim status, and he must comply with the Part 265 rules. These rules contain administrative requirements, monitoring and closure standards, and an abbreviated set of technical and closure and post-closure cost estimate requirements. The owner or operator must comply with these standards until final administrative disposition of his permit application is made. If a permit is issued to the owner or operator, he must then comply with the permit which will be based on the Part 264 rules.

If the owner or operator has not carried out the above three requirements, he does not qualify for interim status. Until he is issued a permit for his facility, the owner or operator must stop waste management operations (if any) at the facility, and send his hazardous waste (if any) to a facility whose owner or operator has interim status or to a storage facility following the Part 262 rules.

In order to apply for a permit, the owner or operator must comply with the procedures specified in Part 122 of this Chapter.

It should be noted that the Agency will be periodically revising the rules depicted in Figures 3 and 4. All persons are encouraged to write to EPA to verify that the regulations which they are reading are up-to-date. To obtain this verification, contact: Solid Waste Information, U.S. Environmental Protection Agency, 26 West St. Clair Street, Cincinnati, Ohio 45268 (513) 684–5362.

Part III

Environmental Protection Agency

Hazardous Waste Management System

Identification and Listing of Hazardous Waste

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 261

[FRL 1471-3]

Hazardous Waste Management System: Identification and Listing of Hazardous Waste

AGENCY: Enviromental Protection Agency.

ACTION: Final rule, interim final rule, and request for comments.

SUMMARY: Subtitle C of the Solid Waste Disposal Act, as amended by the Resource Conservation and Recovery Act of 1976, as amended ("RCRA"), requires the Environmental Protection Agency ("EPA") to promulgate regulations establishing a Federal hazardous waste management system. The keystone of Subtitle C is Section 3001, which requires EPA to identify the characteristics of and to list those solid wastes which must be managed as hazardous wastes under that system.

This regulation is the first phase of EPA's implementation of Section 3001. It identifies four characteristics of hazardous waste to be used by persons handling solid waste to determine if that waste is a hazardous waste. In addition, it lists 85 process wastes as hazardous wastes and approximately 400 chemicals as hazardous wastes if they are discarded. Persons who generate, transport, treat, store or dispose of hazardous wastes identified or listed in this regulation must comply with all applicable requirements of Parts 122, 124, and 262 through 265 of this Chapter and the notification requirements of Section 3010 of RCRA.

In addition to identifying and listing hazardous wastes, this regulation also sets forth the criteria used by EPA to identify characteristics of hazardous wastes and to list hazardous wastes.

DATES:

Effective Date: These regulations, in the form published today, complete EPA's initial rulemaking on the subjects covered and are final agency action. They become effective on November 19, 1980, which is six months from the date of promulgation as Section 3010 requires. Today's promulgation begins the various schedules provided by RCRA for filing notifications and permit applications, and for States to apply for interim authorization.

Comment Dates: EPA will accept public comments on these regulations as follows:

Regulation and Deadline for Submission of Comments

Final regulations—technical errors only (*e.g.*, typographical errors, inaccurate cross references); July 18, 1980.

Use, re-use, recycling and reclamation of wastes (see section IV.B. of the preamble and § 261.4(c) of the regulations); August 18, 1980.

Interim final regulations (§§ 261.2, 261.4(a)(1) and 261.11, Subpart D and Appendix VIII); July 18, 1980.

Public Meetings: EPA will hold three all-day public meetings each beginning at 9 a.m. on the following dates:

May 30, 1980—San Francisco, California.

June 2, 1980—Washington, D.C.

June 6, 1980—Chicago, Illinois.

ADDRESSES: Comments on interim final portions should be sent to Docket Clerk [Docket No. 3001], Office of Solid Waste (WH-562), U.S. Environmental Protection Agency, 401 M Street, S.W., Washington, D.C. 20460.

Public Docket: The public docket for this regulation is located in Room 2711, U.S. Environmental Protection Agency, 401 M Street, S.W., Washington, D.C., and is available for viewing from 9 a.m. to 4 p.m., Monday through Friday, excluding holidays. Among other things, the docket contains background documents which explain, in more detail than the preamble to this regulation, the basis for many of the provisions in this regulation.

Copies of Regulations: Single copies of this regulation will be available approximately 30 days after date of publication from Ed Cox, Solid Waste Information, U.S. Environmental Protection Agency, 26 W. Saint Clair Street, Cincinnati, Ohio 45268, (513) 684-5362. Multiple copies will be available from the Superintendent of Documents, Washington, D.C. 20402.

Public Meetings: EPA will hold three all-day public meetings, each beginning at 9 a.m., to answer questions about all of its final and interim final Subtitle C regulations. The dates and locations of these meetings are:

May 30, 1980—Sheraton Palace Hotel, 639 Market Place, San Francisco, California.

June 2, 1980—HEW Auditorium, HEW North Building, 330 Independence Avenue, S.W., Washington, D.C.

June 6, 1980—Palmer House Hotel, 17 East Monroe Street, Chicago, Illinois.

FOR FURTHER INFORMATION CONTACT: For general information, contact Alan S. Corson, Office of Solid Waste, U.S. Environmental Protection Agency, 401 M Street, S.W., Washington, D.C. 20460, (202) 755-9187. For information on implementation, contact:

Region I, Dennis Huebner, Chief, Radiation, Waste Management Branch, John F. Kennedy Building, Boston, Massachusetts 02203 (617) 223-5777.

SUPPLEMENTARY INFORMATION:

I. Introduction

The improper management of hazardous waste is probably the most serious environmental problem in the United States today. EPA estimates that in 1979 the United States generated almost 60 million metric tons of hazardous waste, but that only 10 percent of this waste was managed in an environmentally sound manner. The remainder—over 50 million tons—was transported, treated, stored or disposed of in a manner which potentially threatens human health and the environment.

This mismanagement has tragic consequences. EPA has on file hundreds of cases of damage to human health or the environment resulting from the

indiscriminate dumping or other improper management of hazardous waste. The vast majority of these cases involve the pollution of groundwater—the source of drinking water for about half the nations's population—from the open dumping of wastes or from improperly operated landfills and surface impoundments. In many of these cases, groundwater supplies were so badly contaminated with toxic or cancer-causing chemicals and heavy metals that residents in the area had to obtain drinking water from other sources. In other more tragic cases, residents were not aware of the contamination, continued to drink the water, and suffered serious health effects.

Groundwater pollution is not the only problem posed by improper hazardous waste management. EPA's damage case file also includes incidents where the improper disposal of hazardous waste has polluted streams, rivers, lakes and other surface waters, killing aquatic life, destroying wildlife, and denuding areas of vegetation. In other cases, the vaporization of volatile organic materials from wastes which were improperly disposed of has been linked to respiratory illnesses, skin diseases (including skin cancer) and elevated levels of toxic materials in the blood and tissues of humans and domestic livestock. In still other cases, the mismanagement of hazardous waste has resulted in fires, explosions or the generation of toxic gases which have killed or seriously injured workers and firemen.

It is against the backdrop of such incidents that Congress enacted the Resource Conservation and Recovery Act of 1976, as amended, 42 U.S.C. 6901 *et seq.* ("RCRA" or "Act"). Although the Act has several objectives (including the promotion of resource recovery and the proper management of non-hazardous solid waste), Congress' "overriding concern" (H.R. Rep. No. 96–1461, 96th Cong., 1st Sess. 3 (1976) ("H.R. Rep.")) in enacting RCRA was to establish the statutory framework for a national system which would insure the proper management of hazardous waste.

That framework is contained in Subtitle C of the statute. It requires EPA to establish a Federal "cradle to grave" management system for hazardous waste, including standards for generators of hazardous waste (Section 3002), standards for transporters of hazardous waste (Section 3003), standards and permit requirements for owners and operators of facilities that treat, store or dispose of hazardous waste (Sections 3004 and 3005) and a manifest system which will track the movement of the waste from the point of generation to the point of disposal (Sections 3002, 3003 and 3004). Under Section 3006 of Subtitle C, EPA may authorize States to operate a State hazardous waste program in lieu of the Federal program if they meet certain requirements.

The centerpiece of this system is Section 3001 of Subtitle C, which requires EPA to identify and list those solid wastes which must be managed as hazardous wastes according to the standards established by EPA under Sections 3002 through 3005. This identification is a two-part process. First, EPA is required to develop criteria for identifying the characteristics of hazardous waste and for listing hazardous wastes (Section 3001(a)). Then, based on these criteria, EPA must actually identify specific characteristics of hazardous waste and list particular hazardous wastes (Section 3001(b)).

EPA began developing regulations to implement these requirements shortly after RCRA was enacted. During 1977 and 1978, the Agency met extensively with experts in hazardous waste management, States, Federal agencies, industry, environmental groups and other individuals and organizations to discuss possible criteria, and to obtain suggestions for characteristics and listed wastes. Drafts of proposed regulations were developed and widely disseminated to the public for comment. Based on these meetings, several public hearings, written comments on its draft regulations and information collected by EPA, a final proposed regulation was developed and published in the **Federal Register** on December 18, 1978 (43 FR 58949–58968).

EPA held five public hearings on its December 18, 1978, proposal (43 FR 58946). Several hundred persons testified at these hearings. In addition, EPA received an estimated 1,000 sets of written comments on its proposed Section 3001 regulations.

Based in part on these comments, EPA proposed a supplemental list of hazardous wastes on August 22, 1979 (44 FR 49402–49404). The Agency also held a hearing on this proposal and received a number of written comments.

The Agency has carefully considered the comments received on its December 18, 1978, and August 22, 1979, proposals, as well as comments received on a number of reports, studies and other documents associated with its Section 3001 rulemaking which were noticed for public comment after the close of the comment period on the proposed regulations,[1] in developing the final and interim final regulations published today.

II. Organization of Regulations and Preamble

In response to comment that its proposed Subtitle C regulations were difficult to read, EPA has totally reorganized them. Regulations implementing Section 3001, which were originally proposed as Subpart A of Part 250 of Title 40 of the Code of Federal Regulations have been recodified as Part 261 of Title 40. Similar changes have been made in the remainder of the Subtitle C regulations. The following table shows the correlation between the statutory provisions of Subtitle C and the sections of EPA's proposed and final regulations which implement those provisions:

Statutory section	Proposed rule	Final rule
General provisions and definitions.	§§ 250.12(c), 250.11, 250.21, 250.31, 250.41	Part 260.
3001	§§ 250.10 (a) and (b), 250.12 through 250.15, 250.29(a)	Part 261.
3002	§§ 250.22 through 250.28, 250.29(b)	Part 262.
3003	§§ 250.32 through 250.38	Part 263.
3004 (permitting standards).	§§ 250.4 (a), (b), (d), and (e), 250.42 through 250.46–6	Part 264.
3004 (interim status standards).	§§ 250.40(c), 250.46	Part 265.
3005	Parts 122 and 124	Parts 122 and 124.
3006	Part 123, §§ 250.10(c), 250.20(b), 250.30(d)	Part 123.
3010	Part 250, Subpart E	45 FR 12746 (Feb. 26, 1980).

The recodification of EPA's Section 3001 regulations from a Subpart of Part 250 to Part 261 has necessitated some major reorganization of those regulations. Proposed § 250.10 is now largely incorporated in Subpart A. The purpose of this subpart is to tell the reader what materials are subject to the Federal hazardous waste management system established by Parts 262 through 265, 122 and 124. It contains a definition of solid waste, a definition of hazardous waste, and a list of materials which are excluded from all or a portion of the requirements in those parts. It also designates the points in the waste generation and handling process when a hazardous waste must begin to be managed in accordance with EPA's Parts 262 through 265 standards and explains when a hazardous waste ceases to be a hazardous waste. Finally, it establishes special requirements for small quantity generators of hazardous waste (originally contained in § 250.29(a) of EPA's proposed generator standards).

[1] See 44 FR 49277, 49278 (August 22, 1979); 44 FR 56724 (October 2, 1979); 44 FR 76827 (December 28, 1979); 45 FR 2059 (January 10, 1980); 45 FR 14232 (March 5, 1980).

Subpart B (§§ 250.12 and 250.14 of the proposed rule) establishes the criteria used by EPA in identifying the characteristics of hazardous waste and listing particular hazardous wastes. Subpart C (proposed § 250.13) contains the hazardous waste characteristics which EPA has identified and Subpart D (proposed § 250.14) the particular hazardous wastes which EPA has listed to date based on those criteria. As noted in the definition of hazardous waste in Subpart A, these two subparts are the cornerstone for the Federal hazardous waste management system because they identify which solid wastes will be regulated as hazardous wastes under that system.

The following table provides a rough correlation between the various provisions of EPA's proposed and final Section 3001 regulations:

Subject	Proposed rule	Final rule
Purpose of regulations	§ 250.10(a)	§ 261.1.
General definitions	§ 250.11	§§ 260.10, 261.2, 261.3.
Definition of solid waste	§ 250.10(b)	§ 261.2.
Definition of hazardous waste	§ 250.10(d)(1)	§ 261.3.
Exclusions	§§ 250.10(d)(2), 250.11(a)(7), 250.20(c)(4)	§ 261.4.
Small quantity generators	§ 250.29(a)	§ 261.5.
Criteria	§§ 250.12 (a) and (b), 250.14	Subpart B.
For identifying characteristics	§ 250.12(a)	§ 261.10.
For listing	§§ 250.12(b), 250.14	§ 261.11.
Characteristics	§ 250.13	Subpart C.
Ignitability	§ 250.13(a)	§ 261.21.
Corrosivity	§ 250.13(b)	§ 261.22.
Reactivity	§ 250.13(c)	§ 261.23.
Toxicity	§ 250.13(d)	§ 261.24.
Lists	§ 250.14	Subpart D.
Nonspecific sources	§ 250.14(a)	§ 261.31.
Specific sources	§ 250.14(b)(2)	§ 261.32.
Discarded chemicals	§ 250.14(a)	§ 261.33.
Procedures for exempting listed wastes from particular generating facilities.	§ 250.15	§§ 260.20, 260.22.
Petitions:		
Revision of list and characteristics.	§ 250.12(c)	§ 260.20.
Equivalent methods	§§ 250.13(a)(1)(i), (a)(2), (b)(1)(i), (b)(1)(ii), (d)(2)(ii)	§§ 260.20, 260.21.

Except for some broad issues which cut across all the Section 3001 regulations (and in some cases EPA's Section 3002 through 3004 standards), the preamble to this regulation will generally follow the structure of the final regulations. It will discuss some of the more significant issues raised during the public comment period on EPA's proposed regulations and the revisions made in response to those comments. Background documents which address these comments and revisions and explain the basis for these regulations in more detail are available as noted above.

III. General Issues

A. Phasing of Regulations

Several months prior to the proposal of EPA's Section 3001 regulations, the State of Illinois, several environmental groups, and a solid waste trade association sued the Agency under Section 7004 of RCRA to obtain a court order requiring EPA to promulgate final regulations under Section 3001 (and other sections of the Act) by a date certain. On January 3, 1979, the court issued an order directing EPA to issue final regulations under Section 3001 by December 31, 1979. *State of Illinois* v. *Costle*, 12 ERC 1597 (D.D.C. 1979). This order was subsequently modified to require EPA to use its best efforts to meet an April 1980, promulgation date (Order of December 18, 1979).

Given our limited resources, it has not been possible both to meet this deadline and to make final decisions on every segment of the very ambitious regulatory program which the Agency proposed on December 18, 1978, and August 22, 1979. We have tried to prioritize our efforts, insofar as possible, to deal with the most serious environmental problems first (*e.g.*, ones that are national in scope, are not dealt with by other State or Federal regulations) and to finalize those portions of the proposed regulations which must be issued if a core hazardous waste management program is to go into effect.

For these reasons, the final regulation published today defers final action on a number of aspects of the proposed regulation, including integrating the regulation of polychlorinated biphenyls ("PCBs") under RCRA and the Toxic Substances Control Act ("TSCA"); fully regulating wastes that are used, re-used, reclaimed or recovered; and a number of proposed listed wastes. To assist States in developing hazardous waste programs under Section 3006 of RCRA and the regulated community in preparing to comply with future regulatory requirements, EPA is providing the following information on its current schedule for acting on these deferred portions:

1. *PCB Integration.* On February 17, 1978 (43 FR 7150) EPA issued final regulations under Section 6(e) of TSCA establishing storage, landfilling, incineration, packaging, marking, placarding and recordkeeping requirements for waste PCBs. Revisions to these regulations were published on May 31, 1979 (44 FR 31514).

Because of the potential overlap between the RCRA hazardous waste management standards and the TSCA PCB marking and disposal regulations, in its proposed Section 3004 regulations, EPA requested comment on five alternative ways of integrating the two sets of regulations (43 FR 58993–58994). *See also* 43 FR 31539 (May 31, 1979). Based on the comments received, and EPA's own review of the two sets of regulations, the Agency has made a tentative decision that the best way to regulate PCBs is to merge the TSCA PCB rules into the final RCRA regulations.

Unfortunately, it has not been possible to complete this task to date. Both rules are lengthy and complicated, and must be carefully coordinated to avoid regulatory loopholes and disruption of the ongoing TSCA PCB program. Completing this coordination by April of this year would have required diverting personnel from the task of finalizing the RCRA hazardous waste program. EPA decided that it made little sense to focus its limited resources on revising an existing regulatory program when so much work needed to be done to develop a new one.

EPA expects to complete the task of integrating the RCRA regulations and TSCA PCB rules by the fall of 1980, and to amend Parts 261 through 265 to bring waste PCBs into the Subtitle C system at the same time that it promulgates its final Phase II Section 3004 standards. In the interim, the handling and disposal of waste PCBs will continue to be regulated under TSCA and other EPA statutes.

2. *Regulation of Wastes Which Are Used, Re-Used, Recovered or Reclaimed.* As discussed in some detail in section IV.B. of this preamble, EPA will be deferring the promulgation of standards to regulate hazardous waste recycling and reclamation operations and the actual use and re-use of hazardous waste until beginning in the fall of 1980.

3. *Radioactive Wastes.* In its December 18, 1978, regulation, EPA proposed to list the following radioactive materials as hazardous wastes: waste rock and overburden from uranium mining; overburden and slimes from phosphate surface mining; waste gypsum from phosphoric acid production; and slag and fluid bed prills from elemental phosphorous production (§ 250.14(b)(2)). At the same time, it proposed to establish special management standards for these wastes

which would regulate their disposal (§§ 250.46–2 and 250.46–4) and prevent their being used as fill in land used for residential development or in building products unless radon emissions and gamma radiation could be reduced to specified levels (§§ 250.46–3(c) and 250.46–4(b)). The purpose of these latter use restrictions was to reduce the amount of radiation to which persons living or working in buildings constructed either on land where these wastes were deposited or with materials containing these wastes would be exposed.

In February, 1980, the House of Representatives passed a bill which would amend RCRA to temporarily suspend EPA's authority to regulate these wastes under Subtitle C except as necessary:

> to prevent radiation exposure which presents an unreasonable risk to human health from the use in construction or land reclamation (with or without revegetation) of solid waste from the extraction, beneficiation or processing of phosphate rock or the extraction of uranium ore (Section 3(d) of H.R. 3994).

Because Congressional action on this provision is imminent (see section III.E. of this preamble), we are deferring the development of final or interim final regulations establishing a criterion for listing radioactive wastes, listing radioactive phosphate and uranium wastes, and establishing management standards for those wastes until Congress has spoken. Assuming Congress acts by the end of the summer, we would hope to promulgate regulations for radioactive wastes by the fall of 1980. This would give EPA some time to better refine its final standards and conform them to any legislative amendments, to fully respond to comments on its proposal and to coordinate its final standards with its other regulations on used, re-used, recovered and reclaimed wastes (see section IV.B.4. of this preamble).

Although the use of radioactive mining wastes in residential landfill and construction materials may pose a serious health hazard, this hazard is limited to approximately half a dozen states where these wastes are generated. Thus, in contrast with many of the wastes covered by today's regulation, which are more ubiquitous and are frequently transported across state lines, these wastes can probably be regulated effectively at the state level pending EPA action.

4. *Infectious Wastes.* In its proposed regulation, EPA listed as hazardous wastes infectious wastes generated by certain departments in health care facilities and veterinary hospitals, by laboratories handling etiologic agents, and by sewage treatment facilities, unless the wastes were sterilized or incinerated in accordance with the methods prescribed in Appendix VI or § 250.14(b)(1)(iii).

EPA received a number of comments on this proposal, particularly the absence of an infectious waste listing criterion, the breadth of sources covered and the Agency's proposed treatment methods. Although EPA has completed its evaluation of these comments and has developed a criterion for listing infectious wastes and refined its proposed list, it has not been able to complete the work necessary to identify the treatment methods it would allow to be used to exempt these wastes from regulation. Because logic dictates that these three parts of the regulation should be promulgated simultaneously, EPA is deferring action on infectious wastes until it can finish this last segment. It expects to complete this task by the fall of 1980.

In the meantime, none of these wastes will go entirely unregulated. Many will be subject to State disposal regulations or State laws governing hospitals and other health care facilities. Because of public health considerations, the operations of these facilities are generally closely scrutinized by State and local officials. In addition, during this interim period, these wastes will be subject to the "open dumping" prohibition under Section 4005(c) of RCRA. EPA's regulations defining those practices which constitute "open dumping" expressly prohibit the land disposal of infectious wastes unless measures have been taken to minimize disease vectors (40 CFR 257.3–6).

5. *Other Listed Wastes.* The other waste streams on which EPA has deferred final action fall into four basic categories: Wastes which EPA intends to list as hazardous but for which revised background documents could not be completed in time for promulgation as part of this regulation; wastes for which EPA currently has insufficient data to make a final determination that the wastes are hazardous; wastes which available data suggests are not hazardous; and wastes which are no longer produced.

It is EPA's intent to amend this regulation to add most of the wastes included in the first category of deferred wastes by June 15, 1980 (see Appendix A) and the remainder by fall, 1980 (see Appendix B). Persons handling wastes identified or listed in both this regulation and Appendix A may, if they desire, save themselves the expense and inconvenience of a second notification under Section 3010 of RCRA by including Appendix A wastes in the notification required to be filed on August 18, 1980. Owners and operators of facilities which treat, store or dispose of the wastes in both categories may similarly avoid having to amend their Part A permit application (*see* 40 CFR 122.22) by including Appendix A wastes in their initial application.

EPA will take action on the second category of deferred wastes—wastes for which EPA currently has insufficient data to make a final listing determination—as soon as it is able to obtain the information necessary to make those decisions. To enable the Agency to gather such information without the *ex parte* contact restraints normally imposed on post-proposal rulemaking activities, EPA will in the future be reopening the comment period on its December 18, 1978, proposal to list these wastes. EPA does not plan on taking any further action on the final two categories of wastes.

EPA does not believe that phasing the promulgation of Section 3001 in this fashion will frustrate the objectives of the statute or unduly complicate implementation of the hazardous waste program. Sections 2002(b), 3001(c) and 7002 of the Act clearly contemplate that regulations under Section 3001 will be periodically expanded or otherwise revised. *See also* H.R. Rep. at 25. The preview of the content and timing of future regulations provided above should help to minimize the disruption that phased promulgation of major portions of the Section 3001 regulations might cause for the regulated community and for States which are attempting to formulate their hazardous waste programs. In light of these considerations and the pressing need to begin implementation of a national hazardous waste program as soon as possible, EPA sees no reason to postpone publication of those portions of its Section 3001 regulations which it is ready to finalize today pending a final decision on the remaining portions. Such an approach would cause an unwarranted delay in the commencement of the program.

B. Interim Final Provisions

The following portions of this regulation are being published as "interim final" regulations: the lists of hazardous wastes (Subpart D), the criteria for listing hazardous wastes (§ 261.11), and the definitions of "solid waste" (§ 261.2) and "domestic sewage" (§ 261.4(a)). This means that, although these regulations are promulgated for purposes of the 90-day notification requirement under Section 3010(a), the six-month effective date under Section 3010(b) and the 90-day petition deadline under Section 7006, the public will have an additional opportunity to comment on them before they are published as "final final" regulations.

The lists of hazardous wastes under Subpart D are being published in interim final form to allow the public an opportunity to comment on the

additional data EPA has collected since the close of the public comment period to support the listing of these wastes. Because EPA received comments on only approximately twenty-five percent of the wastes listed in its December 18, 1978, and August 22, 1979, proposals, the Agency does not anticipate receiving very many comments on its revised support documents or having to make major changes in the list of wastes published today before issuing a "final final" regulation.

The criteria for listing (§ 261.11) have been substantially revised in response to public comment. While EPA believes that these changes are a logical outgrowth of the public comment period, it also recognizes that they would probably benefit from the fine tuning that an additional round of public comment would provide. For this reason, the Agency is also publishing § 261.11 in interim final form.

EPA's proposed definition of "solid waste" has been clarified and a new definition of "domestic sewage" has been added in response to public comment. Because of the difficulties inherent in devising workable, broadly applicable definitions of these terms, and their potential regulatory impact, we would like to obtain some additional comment on them before publishing them in final form.

It is EPA's intent to act on all interim final portions of these regulations prior to the compliance date of Parts 262 and 263 and the effective date of Parts 264 and 265.

C. Data Base for Regulations

EPA received a number of comments on its December 18, 1978, and August 22, 1979, proposals urging it to postpone the promulgation of final regulations under Section 3001 (and the rest of Subtitle C) until it could develop an extensive data base on hazardous waste characteristics and individual hazardous wastes, including extensive industry-specific waste studies, risk assessments, and in-depth waste analyses.

In the final regulation published today, the Agency has made every attempt to base its rules on the data available on waste generation, composition and management, on the potential health and environmental hazards posed by waste constituents, and on exposure pathways. It has also exercised its best efforts to use good scientific analysis and judgment to supplement available data and to respond to comments received on its proposed regulation. In some instances, within time and budget constraints, EPA has undertaken additional waste analyses and testing.

While the acquisition of more information is often a scientific objective, Section 3001 requires the Agency to establish regulations where it has limited, but meaningful data. The broad discretion provided to EPA under the statute, the tight statutory promulgation deadlines coupled with Congress' acknowledged recognition of the lack of available data on hazardous waste management (*see* H.R. Rep. at 26), and the critical nature of the hazardous waste problem (*see* H.R. Rep. at 3, 4, 11, 17–23; S. Rep. No. 94–988, 94th Cong. 2d Sess. at 3, 4 ("S. Rep.")) all support EPA's going forward with a regulatory program even though its data base and regulations are less than perfect. The courts have repeatedly sanctioned this approach under other EPA statutes where, as here, the Agency is implementing a complex program in an area "fraught with scientific uncertainty" where Congress has directed EPA "to act quickly and decisively despite the lack of exact data". *Weyerhaeuser Company v. Costle*, 590 F.2d 1011, 1025–1026 (D.C. Cir. 1978). *See also Ethyl Corp. v. EPA*, 541 F.2d 1, 24 (D.C. Cir. 1976); *Society of Plastics Industries, Inc. v. OSHA*, 509 F.2d 1301, 1308 (2d Cir.), *cert. denied*, 421 U.S. 992 (1975).

We are committed to improving our data base for these regulations and refining them in the future. The Agency has recently instituted a multi-year, multi-million dollar program to survey specific industries, and collect waste samples and other information which will expand its data base on the hazardous waste generated by these industries. EPA also anticipates that implementation of the Subtitle C regulations—particularly the waste testing requirements—will, over the next several years, substantially increase the national pool of information on hazardous wastes. The petitioning procedures set forth in §§ 260.20 through 260.22 should provide yet another revenue of information which can be used to improve this regulation in the future.

D. Developing a National Hazardous Waste Management System

EPA received a number of comments on its proposed regulations identifying particular wastes or management situations where a strict application of EPA's proposed regulations would result in overregulation of the wastes at issue. For exampe. commenters identified several wastes which exhibited EPA's proposed characteristics but which would not normally be thought of as hazardous, and described situations where the application of EPA's proposed Section 3004 standards was arguably unnecessary.

In the regulations promulgated today, particularly the Part 264 and 265 regulations, we have tried to address some of these criticisms, to the extent feasible, and to achieve a better balance between the often competing goals of regulatory specificity and broad applicability. Where we think specific standards are appropriate, we have promulgated specific standards; where more flexibility is required, we have either used broader standards or used specific standards and articulated exceptions or provided for individual variances. We have done our best to lay the groundwork for a hazardous waste management system which is workable and understandable, and which provides appropriate regulation of most hazardous wastes identified or listed in this Part.

This system may not work perfectly for every waste, however. It may overregulate in some instances and underregulate in others. This is an unavoidable consequence of attempting to develop a national hazardous waste managment program which has to regulate thousands of wastes in literally hundreds of thousands of individual transportation, treatment, storage and disposal situtations. To develop a program which would provide precisely the right degree of environmental and health protection in each management situation would require regulations that would be either so vague that they would offer little guidance to the regulated community and would be largely unenforceable or so extensive and so encumbered with provisions for case-by-case variances that they would be an administrative nightmare for both EPA and the hundreds of thousands of persons and facilities which are potentially subject to them.

We think that the system we have promulgated today, although not perfect in all aspects, is within the scope of what Congress intended when, in 1976, it directed EPA to establish hazardous waste management standards which were "necessary to protect health and the environment" in eighteen months. We do not think that Congress expected EPA to develop a program which it could not implement or enforce or to indefinitely postpone the issuance of regulations until it could develop standards which would provide the degree of precision desired by some commenters. Neither of these approaches would provide any health or environmental protection at all.

In these regulations we have tried to strike a balance between these two extremes. Where we have failed to achieve the right balance, we suspect that this will become apparent in the early stages of implementing the

program. If there are situations where a strict application of the standards contained in these rules would bring about a result which was obviously not intended, we would appreciate being advised of it so that we can take appropriate action. We are prepared to react to these problems with regulatory amendments, interpretive guidance and reasonable implementation and enforcment, as appropriate.

E. Pending Legislative Amendments

The United States Senate and House of Representatives have each recently passed a bill to reauthorize and amend RCRA (S. 1156 and H.R. 3994). Both bills contain amendments to Section 3001 which, if enacted, would repeal or temporarily suspend EPA's authority to regulate certain utility and energy development wastes as hazardous wastes under Subtitle C. These bills are now awaiting action by a conference committee. Because it appears likely that Congress will act before November 19, 1980 to exempt these wastes, EPA has temporarily excluded them from this regulation (*see* § 261.4(b)). This exclusion will be revised, if necessary, to conform to the legislation which is ultimately enacted.

F. Consideration of Economic Impact of the Development of the Regulations

In its proposed regulations, EPA expressed uncertainty on the appropriate role that cost considerations and economic impact should play in the development of the hazardous waste regulations:

> It is also not clear to what extent RCRA allows economic impact to be taken into account, since the Act is silent on this point. Thus, the Agency is faced with the problem of how to deal with these potential impacts with little economic data and without clear Congressional guidance. (43 FR 58971)

A variety of comments were received on this issue, expressing three predominant themes: (a) The Act and its legislative history require the Agency to analyze its regulations in terms of costs and benefits; (b) the legislative materials preclude any consideration of costs in the development of regulations; and, (c) EPA must prepare an economic impact analysis.

EPA has re-examined the legislative history of RCRA. Although the legislative history is sparse, it does contain sufficient indications of Congressional intent to lead the Agency to the conclusion that EPA may not consider cost burden upon industry in choosing the level of its standards. The Agency may, however, take cost considerations in account in order to select the most effective regulation among various alternatives that meet the statutory requirement of being "necessary to protect human health and the environment." In addition, the Agency may prepare economic analyses to supplement its regulations as an aid to congressional, intergovernmental, or public understanding of the regulatory program.

EPA disagrees with the position of several commenters that cost, or economic considerations more generally, must be a factor in EPA's decisions under Subtitle C. There is no explicit requirement in the Act directing EPA to consider costs in the development of its intitial regulations. The singular focus of protecting human health and the environment distinguishes RCRA from the other major pollution control statutes. For example, in developing effluent guideline limitations under the Clean Water Act, the Administrator is to consider, among other things, "the total cost of the application of technology in relation to the the effluent reductions to be achieved . . ." Section 304(b)(1)(B), 33 U.S.C. 1314(b)(1)(B). *See also* Section 304(b)(2)(B). The Clean Air Act also directs that in establishing new source performance standards for stationary sources of air pollution the Administrator should "consider the cost of achieving such emission reduction and any nonair quality health and environmental impact and energy requirements." Section 111(a)(1)(C), 42 U.S.C. 7211(a)(1)(C).

The silence of the statute itself appears especially significant because earlier drafts of the legislation had contained language which either explicitly called for considerations of cost or implicitly sanctioned such consideration. A draft bill for use by the relevant House Subcommittee would have required that hazardous waste regulations "shall be such as will minimize the risk of adverse effects on human health while taking to the greatest extent possible, into account the economic cost and benefits of achieving such standards." Section 351(e), Subcommittee on Transportation and Commerce, Draft of the Solid Waste Utilization Act (December 8, 1975). When this bill was redrafted for introduction to the House of Representatives as H.R. 14496, this provision calling for consideration of costs and benefits had been deleted. The House bill, however, required that hazardous waste regulations "reasonably protect" human health and the environment. H.R. 14496, 94th Cong., 2d Sess., § 306 (1976). The legislative materials accompanying H.R. 14496 provided no guidance on what effect, if any, the draftsmen intended the potentially moderating phrase "reasonably protect" should have on the development of regulations. In the compromise bill reconciling the differences between the Senate and House bills, the adverb "reasonably" was deleted. In the debate in the House prior to the Act's passage there was no discussion of the effect of this deletion on the intended operation of the Act.

Congress was aware that the hazardous waste regulation would impose substantial costs on the regulated community. *See, e.g.*, H.R. Rep. at 4, S. Rep. at 4. Despite this recognition, Congress deliberately rejected provisions that would require consideration of cost burden on industry or to moderate the Act's environmental objectives. For these reasons, the Agency concludes that the Act prohibits it from considering such costs in the development of Subtitle C regulations as a basis for lessening the standards it considers necessary to ensure protection of human health or the environment.

The Agency has, however, considered cost-effectiveness in choosing among alternatives that meet the requirements of the statute. In addition, the Administrator may refer to other considerations such as energy or environmental impacts, and implementation and enforcement burdens. For instance, the information received or developed in the course of rulemaking on the cost implications of its proposed regulations may be used by EPA to determine the relative cost-effectiveness of various methods to implement a particular requirement. Information on economic impacts may also be useful in informing Congress about the implementation of the hazardous waste program, developing new legislative or Agency intitatives which might affect the regulatory program, and advising the public about the projected impacts of the program. *See Hercules, Inc. v. Environmental Protection Agency*, 598 F. 2d 91, 113 (D.C.Cir. 1978). EPA has prepared an economic impact analysis on the entire Subtitle C regulatory program. This analysis provides detailed information on the projected economic impacts of these regulations. The report should facilitate public understanding of the task that the Agency is undertaking.

G. Rulemaking Petitions

EPA's December 18, 1978, proposed Section 3001 regulations contained no special procedures for petitioning the Agency to identify a new characteristic or list a new hazardous waste, or to modify or revoke an existing

characteristic or listing. They simply provided that a petition to identify a characteristic or list a solid waste as a hazardous waste would be granted if EPA found that the proposed characteristic or waste met EPA's criteria for characteristics or listing (proposed § 250.12(c)).

EPA received a number of comments urging it to establish standardized procedures for the submission and processing of petitions to modify its characteristics or list of wastes. Some of these commenters simply wanted to know how to file a petition and how EPA would act on it. Others insisted that EPA establish rulemaking procedures which complied with the Administrative Procedures Act, mistakenly thinking that because proposed § 250.12(c) did not articulate the procedures EPA would follow in acting on petitions, the Agency would grant petitions, thereby modifying its regulations, without going through normal rulemaking procedures.

To provide the guidance desired by the first set of commenters and to assuage the concerns of the second, we have included in Subpart C of Part 260 procedures for the submission and processing of petitions to add to, revoke or otherwise modify any of the Subtitle C hazardous waste regulations, including the hazardous waste characteristics and lists. This provision expressly requires that a tentative decision to grant a petition be made in the form of an advance notice of proposed rulemaking or a proposed regulation, thus starting the rulemaking process.

EPA received a number of comments suggesting that unless EPA specified the information to be contained in petitions to amend its characteristics or lists of hazardous wastes, petitioners would not know what type of data to submit to the Agency and that the Agency would have to expend a substantial amount of time reviewing incomplete petitions.

EPA agrees that this may have been a problem with its proposed regulation. The Agency's proposed criteria for listing were not particularly well-articulated. In addition, the background documents for characteristics and for individual wastes also failed, in some cases, to provide meaningful guidance as to the kinds of information which should be submitted in a rulemaking petition.

We think we have remedied most of these deficiencies in this regulation. In response to comment, we have substantially expanded the criteria for listing, so that the factors which EPA will be using in making a listing decision are much better stated. The background documents for both the characteristics and lists have been materially upgraded, so that they now provide a good model for rulemaking petitions. In short, we think the regulations published today, with their supporting materials, will enable petitioners to intelligently frame rulemaking petitions.

For this reason, EPA thinks it is probably unnecessary to establish detailed informational requirements for petitions. Moreover, developing a list of such requirements would be very difficult, because the types of data and degree of detail required will vary substantially from waste to waste and from characteristic to characteristic. If, in the future, EPA finds that most petitioners are submitting insufficient information, we will reconsider establishing more specific data requirements for these petitions.

EPA recognizes that some organizations—primarily environmental groups—may not have the skills, resources, or data collection authority to fashion rulemaking petitions which contain all of the information which EPA will need to make a decision to establish a new characteristic or list a new waste. If such petitions, although incomplete, appear to have merit, EPA will attempt to obtain the supplemental data necessary to make a tentative rulemaking determination. These organizations should recognize, however, that this will necessarily delay any final action on their petitions.

IV. Subpart A.

A. Section 261.1 (Purpose, Scope and Applicability)

Although this section is largely self-explanatory, two points regarding the function of EPA's Section 3001 regulation, which were apparently a source of misunderstanding during the comment period, are deserving of special attention.

First, the purpose of this regulation is to identify those wastes which, because of the hazards they may pose in transportation, treatment, storage or disposal, should be subject to appropriate management requirements under Subtitle C. It does not dictate how wastes should be managed (although it may identify properties of the waste which will affect management practices). Management standards and permitting requirements are imposed under Sections 3002 through 3005 and Section 3010.

Second, although this regulation limits what may be regulated as a "hazardous waste" under Sections 3002 through 3005 and 3010 of RCRA, it does not limit those materials which may be considered "hazardous wastes" under other sections of the statute, particularly Section 3007 (which authorizes EPA to obtain information on "hazardous waste" in order to develop regulations or enforce RCRA) and Section 7003 (which authorizes the Agency to institute civil actions to abate imminent and substantial hazards caused by "hazardous wastes"). Unlike Sections 3002 through 3004 and Section 3010, Congress did not confine the operations of Sections 3007 and 7003 to "hazardous wastes *identified or listed under this subtitle*" (emphasis added). To avoid future confusion on this point, EPA has stated it explicitly in § 261.1(b).

B. Section 261.2 (Definition of Solid Waste)

Because no material can be a "hazardous waste" without first being a "solid waste" (Section 1004(5)), what constitutes a "solid waste" is really the definitional starting point for the hazardous waste management system. Section 1004(27) of RCRA defines a solid waste as:

> any garbage, refuse, sludge from a wastewater treatment plant, water supply treatment plant or air pollution control facility and other discarded material, including solid, liquid, semisolid, or contained gaseous material resulting from industrial, commercial or mining and agricultural operations, and from community activities, but does not include solid or dissolved materials in domestic sewage, or solid or dissolved materials in irrigation return flows, or industrial discharges which are point sources subject to permits under section 402 of the Federal Water Pollution Control Act . . . or source, special nuclear, or byproduct material as defined by the Atomic Energy Act of 1954 . . . (Section 1004(27)).

In its proposed regulations, EPA adopted this definition, with its exclusions, in its entirety (§ 250.11(a)(7)). In addition, it proposed to construe the term "other discarded material" in Section 1004(27) to include:

(1) Any material which is not re-used—i.e., is abandoned or committed to final disposal;
(2) Any material which is re-used by being placed in or on the land or water so that the material or any constituent thereof is released into the environment; and
(3) Waste oil burned as fuel.

EPA noted that it would add other uses to the third category of discarded materials if it found that it was necessary to control such uses (43 FR 58954).

This definition of "other discarded material" was based on four major considerations. First, after reviewing both the language and framework of

RCRA and its legislative history, EPA concluded that Subtitle C was intended to regulate hazardous wastes irrespective of their end use—*i.e.*, regardless of whether they are committed to final disposal or intended to be used, re-used, recycled or reclaimed.

Second, the Agency concluded that all hazardous wastes, regardless of their end use, may pose significant health and environmental hazards. Wastes that present a hazard in storage or transport arguably pose the same danger in storage or transport irrespective of whether they are destined for disposal or for use, re-use, recycle or reclamation. Wastes which are used or re-used by being placed on the land—*e.g.*, chemical-bearing sludges used as fertilizers, contaminated waste oil used as a dust suppressant on roads and radioactive mining wastes used as residential land fill—may pose almost the same hazards as if they were simply dumped there. Wastes which are used, re-used, recycled or reclaimed in some other fashion, and the facilities which recycle or reclaim them, may also create serious health or environmental problems. For example, waste drums containing hazardous residues which were used as municipal trash cans have injured children; waste solvent reclamation facilities have caused serious air pollution problems.

Third, EPA decided that excluding wastes that are used, re-used, recycled or reclaimed from the Subtitle C system would make the regulatory program largely unworkable and create a major regulatory loophole not intended by the Act. Without a manifest system (or its functional equivalent) there would be no way of assuring that wastes which were intended to be used, re-used, recycled or reclaimed were in fact delivered to their intended destination. Whether a waste was subject to Subtitle C requirements would be based primarily on the intent of the person handling it. This would make the requirements difficult to enforce and theoretically allow wastes to move in and out of the hazardous waste management system depending on what the person then handling the waste planned to do with it.

Finally, the Agency decided that, insofar as feasible, its regulations should try to achieve a workable balance between the requirement in Subtitle C that hazardous waste be properly managed and RCRA's overall objective of promoting the use, re-use, recycling and reclamation of wastes. The use, re-use, recycling and reclamation of wastes not only helps preserve valuable natural resources and reduces the environmental problems which stem from the exploitation of those resources, but, if properly conducted, may eliminate or reduce some of the hazards associated with other types of waste management and alleviate the strain on national disposal capacity. For this reason, EPA proposed to regulate only those uses and re-uses which could readily be expected to pose significant health and environmental hazards.

EPA received a substantial number of comments on its proposed construction of the statutory definition of "solid waste" and "other discarded materials." Virtually all commenters agreed that the terms encompassed materials which were destined for disposal. There was substantially less consensus on EPA's proposed regulation of used, re-used, recycled or reclaimed wastes. Some commenters argued that EPA had no authority under RCRA to regulate wastes which were used, re-used, recycled or reclaimed. Others contended that the Agency did have such authority and that comprehensive regulation of the use and recycling of hazardous waste was essential to protect public health and the environment and to make the hazardous waste management system workable. Still other commenters claimed that imposing stringent Subtitle C requirements on waste use, re-use, recycling and recovery would discourage such activities, thwarting one of the primary objectives of RCRA and further aggravating hazardous waste management problems.

1. *Legal Authority to Regulate Wastes That Are Used, Re-used, Recycled or Recovered.* Most commenters who challenged EPA's authority to regulate the use, re-use, recycling or reclamation of wastes based their contention on the term "other discarded material" in the statutory definition of "solid waste". The common meaning of this term, they argued, would preclude regulating as "solid waste" wastes which were not intended to be "thrown away" or "abandoned" or which were of "no further use".

The United States Court of Appeals for the D.C. Circuit has already rejected this argument in *United States Brewers' Association, Inc. v. EPA*, 600 F.2d 974 (D.C. Cir. 1979), a lawsuit challenging a beverage container recycling guideline issued by EPA under Section 1008(a)(1) of RCRA. The petitioners in that proceeding contended, *inter alia*, that beverage containers were not "solid waste" until "discarded" and therefore that EPA had no authority under Section 1008(a)(1) to issue solid waste management guidelines requiring that beverages be sold in returnable containers, or that a minimum deposit be charged on containers (to encourage their return). The Court of Appeals gave short shrift to this contention, noting that it:

> flies squarely in the face of the explicit definition in the statute. Section 1008(a) directs EPA to publish "suggested guidelines for solid waste management", which, as defined in section 1004(30) expressly includes "planning or management respecting resource recovery and resource conservation" . . . and "utilization of recovered resources" [600 F. 2d at 982–983].

We think the Court's conclusion is applicable to the rest of RCRA as well. It seems highly improbable that Congress would have intended the term "solid waste" to include recycled wastes under Section 1008(a)(1) but not under Subtitle C. Indeed, RCRA and its legislative history evidence a clear Congressional intent that the terms "solid waste" and "hazardous waste" encompass wastes that are used, re-used, recycled or recovered wherever such terms are used in the statute.

For example, Section 1004 of RCRA contains numerous definitions—including the definition of "Hazardous Waste Management", the title of Subtitle C—which would be self contradictory if the terms "solid waste" and "hazardous waste" did not include wastes which were used, re-used, recycled or recovered. *See, e.g.*, Sections 1004(7), (18)–(24), (29) and (34). The repeated references to resource recovery and conservation in the statute would be similarly meaningless if solid wastes were never recycled, recovered or reclaimed. *See, e.g.*, Sections 1002(c)(2) and (3), 1003(1) and (5)–(8), 2003, 4002(c)(10), 4003(5) and (6), 4008(a)(2)(A) and (d), 5001, 5002 and 6002(c)–(g).

The legislative history of RCRA further supports this construction of the terms "solid waste" and "discarded material". The report of the House Committee on Interstate and Foreign Commerce on RCRA, for example, makes it clear that the term "discarded material" is meant to *expand*, not limit, the common meaning of the term "solid waste" (H.R. Rep. at 2). Other references in the legislative history confirm that the term "discarded material" covers wastes which are being recycled (*see, e.g., H.R. Rep.* at 3, 10). Several of the damage incidents cited by Congress as justification for establishing a national hazardous waste management system resulted from recycling or re-use activities (H.R. Rep. at 17, 19 and 22). Discussions of resource conservation and recovery activities presume the existence of a solid waste from which valuable resources can be reclaimed.

See, e.g., H.R. Rep. at 3, 4, 10, 11; S. Rep. at 2, 4, 6 (1976).

In short, under RCRA solid wastes do not cease to be solid wastes simply because they are being used, re-used, recycled or reclaimed. Rather, use, re-use, recycling, resource recovery and reclamation are ways of managing solid wastes which, if properly conducted, can avoid environmental hazards, protect scarce land supply, and reduce the nation's reliance on foreign energy and materials (H.R. Rep. at 4).

A number of commenters suggested that Congress could not have intended the term "solid waste" to include hazardous wastes which are used, re-used, recycled or reclaimed because the regulation of such wastes under Subtitle C would thwart RCRA's broad resource conservation and recovery objectives.

EPA does not agree. Although promoting waste re-use and recovery is certainly one of the goals of RCRA, Subtitle C does not require EPA to consider resource recovery implications in establishing hazardous waste management standards; nor does it suggest that promoting resource recovery should take precedence over assuring proper management of hazardous wastes. Furthermore, EPA does not agree that frustrating resource recovery is an inevitable result of requiring hazardous waste to be properly managed. As discussed below, EPA believes it may be possible to achieve a workable balance between Subtitle C's mandate that hazardous wastes be handled in an environmentally sound manner and RCRA's overall objective of encouraging th re-use and reclamation of wastes. However, in the event such a balance cannot be achieved, Congress' "overriding concern"—the safe handling of hazardous wastes (H.R. Rep. at 3) and the elimination of "the last remaining loophole" in environmental regulation (H.R. Rep. at 4)—must prevail.

2. *Assuring Proper Management of Hazardous Waste and Encouraging Resource Recovery.* The comments which EPA received on its proposal to regulate the use, re-use, recycling and recovery of hazardous waste in many ways mirrored the competing objectives which the Agency was trying to achieve in its proposal. Many commenters argued that EPA's approach would discourage the beneficial use and recycling of hazardous wastes by so escalating the cost of using or recycling wastes that they could no longer compete with virgin products, by increasing administrative burdens for the waste user or reclaimer, and by labeling recycling activities as another form of "hazardous waste" management. These commenters also suggested that the regulation of waste uses and reclamation would pose serious practical problems—*e.g.,* distinguishing between wastes and commercial by-products and intermediates, issuing permits for certain types of re-uses—and that EPA's proposed Section 3004 standards were not appropiate for many waste use and reclamation activities. Other commenters, citing the types of considerations outlined above, applauded EPA's regulation of the use and reclamation of hazardous wastes and urged that its proposed list of regulated waste re-uses and recycling operations be expanded to include the reclamation of waste solvents, the burning of spent catalysts and other organic wastes for energy, the use of metal-bearing sludges as fertilizers, the use of waste acids, and the re-use of contaminated drums. Still other commenters suggested that, at a minimum, wastes destined for re-use, or reclamation be properly stored and manifested.

EPA does not agree with the largely unsubstantiated claims of commenters that controlling the use and recycling of hazardous waste will necessarily discourage *bona fide,* environmentally sound re-use and reclamation activities. The impact of EPA's regulations on waste use and recovery will, in the Agency's opinion, hinge almost exclusively on the relative costs of re-use versus disposal. As disposal costs increase, it seems reasonable to expect that it will become profitable or more profitable to recycle or re-use wastes (even if regulated) than to dispose of them. EPA received no data during the comment period to suggest the contrary.

Commenters' claims about the chilling effect of regulating recycle and re-use activities also seem somewhat exaggerated. In many cases, Federal or State regulation of these activities should legitimatize, not stigmatize, them in the eyes of the public and increase the flow of wastes to well-operated facilities. Indeed, EPA received comments from several waste recyclers urging the Agency to extend Subtitle C control to their operations for these very reasons.

EPA does agree, however, that its proposed Section 3004 treatment and disposal standards (as well as the standards promulgated today) may not be well-suited for regulating all hazardous waste recovery and reclamation facilities or for regulating all uses and re-uses of hazardous waste. These standards are designed primarily to minimize the health and environmental hazards posed by traditional hazardous waste treatment and disposal facilities—such as incinerators and landfills. In many cases, the health and environmental dangers associated with the use or re-use of hazardous waste or with the recycle and reclamation operations are different in nature or degree, and therefore may justify the imposition of different management standards. For example, air emissions generated by the burning of waste oil for energy recovery can probably be effectively controlled without requiring boilers to meet hazardous waste incinerator requirements. Similarly, the leaching of metals from slag used in roadbeds can probably be successfully minimized without requiring compliance with Section 3004 landfill criteria.

At the same time, EPA also concedes that its proposed Section 3001 regulations probably did not go far enough in controlling the re-use and reclamation of hazardous waste. For example, there are a number of waste recycling operations which were not covered by EPA's proposed regulation—*e.g.,* solvent reclamation—which have been known to cause serious health and environmental hazards and should be subject to Subtitle C regulation. The long-term storage of hazardous wastes prior to recycling is another area where there have been damage incidents (*e.g.,* the incident at the Silresim Chemical Company) and where Subtitle C controls would appear to be essential for environmental protection.

In short, EPA acknowledges that it could have done a better job in its proposed regulations of attempting to balance Subtitle C's mandate that hazardous wastes be properly managed with RCRA's overall objective of promoting resource recovery. As we discovered during the comment period, however, this is not an easy task, and given other priorities in developing the regulations promulgated today, we have only been able to complete the first phase of it to date. That first phase, as well as EPA's long term plans for regulating the use, re-use, recycling and reclamation of hazardous wastes are discussed in sections IV.B.3. and IV.B.4., respectively, of this preamble. As indicated in those sections, we believe this program, when completed, will be responsive to the two major deficiencies in EPA's proposed regulation identified above.

3. *Regulating the Storage and Transportation of Hazardous Wastes Prior to Use, Re-use, Recycling or Reclamation; Defining "Waste".* As discussed above, EPA generally agrees

that many of its proposed (and final) treatment and disposal standards were not particularly well-suited for hazardous waste recycling and reclamation operations or for uses and re-uses of hazardous wastes. Because of the need to resolve other, more pressing issues in the rule published today, we have not been able to formulate more appropriate standards to date. We are therefore deferring Subtitle C regulation of the actual use and re-use of hazardous wastes and hazardous waste recycling and reclamation activities until such standards can be developed (§ 261.6(a)). As noted in section IV.B.4., we hope to begin issuing those standards later this year.

This temporary deferral, it should be noted, is confined to *bona fide* "legitimate" and "beneficial" uses and recycling of hazardous wastes. Sham uses and recovery or reclamation activities—*e.g.*, "landfilling" or "land reclamation" which is actually disposal and burning organic wastes that have little or no heat value in industrial boilers under the guise of energy recovery—are not within its scope and, if conducted in violation of Subtitle C requirements, will be subject to enforcement under Section 3008 of RCRA. In enforcing this provision, EPA will be particularly suspicious of use, and reclamation operations which were not conducted prior to the publication of these regulations.

We do not think that the types of criticisms which have been made of EPA's proposal to apply its treatment and disposal standards to the use, re-use, recycling and reclamation of hazardous waste are applicable to those regulations which govern waste management prior to actual use, re-use, recycling or reclamation—*i.e.*, the standards for generators, transporters and owners and operators of storage facilities. During these stages of the waste handling process, wastes present essentially the same hazards, and should therefore require essentially the same management, irrespective of whether they are destined for disposal or for re-use and recycling.

EPA has concluded, therefore, that although we are not now prepared to issue standards regulating the actual use, re-use, recycling and reclamation of hazardous wastes, we can and should begin to control the transportation and storage of wastes prior to use, re-use, recycling and reclamation, and that the general management standards set forth in Parts 262, 263 and selected sections of Parts 264 and 265 are entirely appropriate for that purpose.

The decision to regulate hazardous waste use and recycling necessitates the development of a working definition of "waste" which can appropriately distinguish between "wastes" and other materials (such as products and chemical intermediates) for purposes of determining whether their use is subject to RCRA's jurisdiction. Indeed, many commenters criticized EPA for failing to clearly distinguish between wastes and other materials in its proposed regulations and suggested language or conceptual approaches which they contended would draw that distinction.

We have carefully reviewed these suggestions; most, however, were not very useful. For example, a number of commenters suggested that the line of demarcation between a "waste" and other materials was whether a substance had value. This definition makes no sense in the context of recycle and re-use activities, since a waste which is being re-used or recycled by definition "has value". *See* H.R. Rep. at 3. Definitions keyed to whether a waste has a commercial use raise similar problems.

Other commenters contended that the proper inquiry was whether a material was "historically reused" or was "sometimes discarded". We think this is a much more productive line of analysis and is more consistent with the language and legislative history of RCRA and the purposes of Subtitle C.

A review of both RCRA and its legislative history indicate that Congress intended to regulate four broad categories of materials as solid wastes under RCRA, and particularly Subtitle C, irrespective of their ultimate disposition. The common thread linking all these materials is that they are "sometimes discarded." Because they are "sometimes discarded," they not only fall within the general rubric "waste", but also may become part of the "discarded materials disposal problem" (H.R. Rep. at 2) which Congress sought to remedy under RCRA. Proper tracking and management of these materials under Subtitle C would assure that they did not become part of this problem because they would be either properly disposed of or properly used or reclaimed.

The first category of materials which are regulated as "wastes" under RCRA are "garbage, refuse (and) sludge" (Section 1004(27)). These materials are almost always thrown away, and it is clear from both Section 1004(27) of the statute and its legislative history (H.R. Rep. at 2–4; S. Rep. at 5) that Congress regarded them as "wastes" regardless of their intended end use.

Of those materials which are not garbage, refuse or sludge, it also seems clear that any material which is intended to be or is in fact thrown away, abandoned or destroyed is a "waste." As noted above, there appears to be no disagreement among commenters on this point and of course it is fully supported by the legislative history of RCRA.

Of those materials which do not fall into either of these two categories—*i.e.*, materials other than garbage, refuse or sludge which are (or are intended to be) used, re-used, recycled or reclaimed—it appears that there are two types of substances which Congress intended to be regulated as "wastes" under RCRA.

The first are materials like waste solvents, paint wastes, waste acids, used drums and waste oil. These are what Congress referred to in the legislative history as "post-consumer wastes" or wastes which have "served their intended purpose" (H.R. Rep. at 2 and 9). While acknowledging that some of these post-consumer wastes might be recycled (*see* H.R. Rep. at 3, 10), Congress also recognized that they were sometimes discarded, and therefore were "wastes" (*see* H.R. Rep. at 9–10).

The second are tars, residues, slags and other materials which are incidentally generated as part of a manufacturing or mining process. A major concern of Congress in enacting RCRA was to assure regulation of "the waste by-products of the nation's manufacturing processes" (H.R. Rep. at 2) and "the by-products of the productive process" (H.R. Rep. at 9). There is nothing in the legislative history which suggests that these terms refer only to the by-products of pollution control. Indeed, even the definition of sludge in Section 1004(26A) indicates Congress was not simply concerned about wastewater treatment slurries and sludges and emission control dusts, but also materials having "similar characteristics and effects". The term "similar characteristics" would suggest that such materials not only contain similar types of substances but, like pollution control sludges and dusts, are also incidentally produced as a result of industrial processes; the term "similar . . . effects" implies that such materials, like wastewater and emission control sludges, are also sometimes discarded in ways that pose environmental problems.

EPA has incorporated these concepts into a definition of "solid waste" in § 261.2. This term is defined to include "garbage", "refuse", "sludge" and "other waste material" (§ 261.2(a)). "Other waste material" is in turn defined as (i) materials which are discarded (or stored or accumulated for that purpose), (ii) materials which have served their original intended purpose and are sometimes discarded and (iii) materials which are incidentally generated during

manufacturing or mining operations and are sometimes discarded (§ 261.2(b)). This latter category of materials expressly excludes primary products and product intermediates (§ 261.2(d)).

We are fairly confident that this definition will properly differentiate between "wastes" and other material with respect to those particular solid wastes that have been listed as hazardous wastes in Subpart D. In developing Subpart D, EPA has been careful to list only those materials that are either sludges, used materials which are typically discarded (*e.g.*, spent solvents) or manufacturing by-products which are typically discarded (*e.g.*, distillation residues). We have tried to avoid listing materials that are always used for manufacturing other products, because we believe that those are actually product intermediates, not wastes. Given the complexity of many manufacturing operations, however, it is possible that we might have erred in a few cases and we urge the public to bring these to our attention.

We are somewhat less confident that our definition of solid waste, particularly its inclusion of used materials and by-products, will work for all the materials which might exhibit the Subtitle C characteristics. For this reason, we are at the present time confining our regulation of the storage and transportation of wastes prior to use, re-use, recycling and reclamation to sludges, wastes listed in Subpart D and waste mixtures containing wastes listed in Subpart D (§ 261.6(b)). As discussed above, we are fairly sure that all these materials are "wastes" whose use, re-use, recycling and reclamation is subject to jurisdiction under RCRA.

As noted in Section III.B., the definition of "solid waste" is being issued as an interim final regulation. We are expressly soliciting comment on whether its application to unlisted materials (as well as listed wastes) leads to absurd results, and, if so, what these situations are and how they might be remedied by specific revisions to § 261.2.

4. *Regulating the Actual Use, Re-Use, Recycling and Reclamation of Hazardous Wastes.* One approach to regulating the use, re-use, recycling and reclamation of hazardous wastes which a number of commenters suggested and which EPA is considering very seriously is waste-specific, use-specific management standards. This approach would help avoid the problems, discussed above, of attempting to apply standards which are designed to deal with traditional waste disposal and treatment operations, such as landfills, to re-use and recycle activities.

EPA intends to begin issuing such standards in the fall of 1980. In some cases, these standards may require full or partial compliance with existing Subtitle C requirements; in others, they may include a special set of requirements (to be established in Part 266) which have been developed for a particular hazardous waste use or recovery operation. Using this regulatory approach, we believe we can not only better tailor Subtitle C management standards to the health and environmental hazards posed by use and recycling activities but also achieve a better balance between RCRA's dual goals of protecting human health and the environment and promoting resource conservation and recovery.

In the fall of 1980, we expect to start dealing with the following hazardous waste use and recovery operations:

Waste	Use or Recovery
Spent solvents listed in Subpart D.	Reclamation Burning as a fuel
Radioactive uranium mining and phosphate mining and processing wastes.	Land reclamation Use in building products
Waste oil	Road oiling and use in other land applications Burning as a fuel Reclaiming and re-refining
Residues from the production of chlorinated hydrocarbons.	Burning as a fuel

These operations were identified by commenters as being among those which posed the most serious potential health or environmental hazards and/or were the most ubiquitous. EPA agrees, and therefore will begin establishing standards for these activities first.

At a later date, possibly by the fall of 1981, we intend to address the re-use and recycling of other hazardous wastes, including but not limited to the following:

Waste	Use or Recovery
Residues from the production of organic chemicals listed in Subpart D (other than chlorinated hydrocarbons).	Burning as a fuel
Activated carbon used to treat hazardous wastes.	Regeneration
Wastewater and air emission treatment sludges listed in Subpart D.	Fertilizers and soil conditioners Other uses on the land

Eventually, EPA hopes to regulate the use, re-use, recycling and reclamation of all hazardous wastes listed in Subpart D which are known to be used, re-used or recycled. Our plans for extending regulatory coverage to unlisted hazardous wastes are less certain at this time because we do not have a good inventory of these wastes. As data are collected through the Section 3010 notification and annual reporting under Parts 262, 264 and 265, we hope to develop a more specific plan for regulating the use and recycling of these wastes.

EPA is anxious to obtain public comment on this approach. We specifically invite comments on the following questions:

1. Are there other hazardous wastes, particularly wastes listed in Subpart D, that should be placed on the above lists and given priority?

2. Are the above-listed wastes used or recycled in other ways that require regulation? If so, what types of regulatory controls would be appropriate?

3. Is there any reason not to prohibit the land disposal of spent solvents listed in Subpart D and require that they be reclaimed or destroyed? Is it necessary to manifest these wastes to assure that they are delivered to reclamation or treatment facilities? Can such facilities be effectively regulated by rule—*i.e.*, without individual permits?

4. Can the radiation hazards posed by radioactive mining wastes and phosphate mining and processing wastes be adequately controlled by (a) prohibiting the use of these wastes in residential construction and (b) imposing a few simple requirements on the use of these wastes as fill for land where habitable structures might be built?

5. Can facilities which burn waste oil as a fuel or reclaim or refine waste oil be adequately regulated by rule—*i.e.*, without individual permits? Is there any reason not to prohibit the use of waste oil for road oiling, dust suppression and other land (and water) applications?

6. Should full Subtitle C standards be applied to the use, re-use, recycling and reclamation of residues from the production of chlorinated hydrocarbons? From the production of other organic chemicals? If not, for what residues and uses should special standards be applied and what should those standards be?

7. Should full Subtitle C standards be applied to the regeneration of activated carbon? If not, what standards should be applied?

8. Can sites where waste treatment sludges are used as fertilizers, as soil conditioners or in other land applications be effectively regulated by rule—*i.e.*, without individual permits?

In each of the foregoing areas of inquiry, EPA would appreciate the submission of any relevant facts and data. Unsubstantiated opinions are generally not very helpful to us in coming to grips with these types of issues. On the other hand, information on the quantity of waste which is used

or recycled, management practices, environmental emissions that attend use or recycling, health and environmental effects resulting from use and recycling and other specific data are very useful.

We also invite commenters to submit specific proposed standards or suggestions for how standards might be developed. For example, where wastes might be burned as a supplemental fuel in industrial boilers, proposals on fuel ratios, burning temperatures, emission control requirements and residue disposal requirements would be useful. Obviously, the more specific and constructive the suggestions, the more helpful they will be in our rulemaking.

C. Section 261.3 (Definition of Hazardous Waste)

This section is a new provision which does not have a direct counterpart in the proposed regulations. It has been added for purposes of clarification and in response to questions raised during the comment period concerning waste mixtures and when hazardous wastes become subject to and cease to be subject to the Subtitle C hazardous waste management system.

If a material is a hazardous waste within the meaning of this section it must be managed in accordance with EPA's Part 262 through 265 standards and its Part 122 through 124 permitting requirements unless covered by one of the exclusions in those regulations or one of the Part 261 special management provisions (§§ 261.5 and 261.6).

1. *What is a Hazardous Waste?* Paragraph (a) of this section defines what a hazardous waste is. It provides that a solid waste is a hazardous waste if it is not excluded under § 261.4(b) and it either (1) is listed as a hazardous waste in Subpart D, (2) is a waste mixture containing one or more hazardous wastes listed in Subpart D or (3) exhibits one or more characteristics of hazardous waste identified in Subpart C. A listed waste or a solid waste mixture containing a listed waste which is generated by a particular facility may be excluded under the rulemaking procedures prescribed in §§ 260.20 and 260.22 (see section VIII.C., below). In that event, it will be considered a hazardous waste only if it exhibits one or more of the characteristics.

Except for waste mixtures, all these provisions were contained in EPA's December 18, 1978 proposal (*see* §§ 250.10 (b) and (d)(2), 250.13 and 250.14). The waste mixtures provision is a clarification which has been added in response to inquiries about whether mixtures of hazardous and nonhazardous wastes would be subject to Subtitle C requirements. This is a very real issue in real-world waste management, since many hazardous wastes are mixed with non-hazardous wastes or other hazardous wastes during storage, treatment, or disposal.

Although it was not expressly stated in the proposed regulation, EPA intended waste mixtures containing listed hazardous wastes to be considered a hazardous waste and managed accordingly. Without such a rule, generators could evade Subtitle C requirements simply by commingling listed wastes with nonhazardous solid waste. Most of these waste mixtures would not be caught by the Subpart C characteristics because they would contain wastes which were listed for reasons other than that they exhibit the characteristics (*e.g.*, they contain carcinogens, mutagens or toxic organic materials). Obviously, this would leave a major loophole in the Subtitle C management system and create inconsistencies in how wastes must be managed under that system.

EPA recognizes that designating all waste mixtures containing listed wastes as hazardous wastes under Subtitle C may create some inequities. For example, this approach may result in some waste mixtures which contain only very small amounts of listed hazardous wastes or which commingle waste in a way which renders them nonhazardous (*e.g.*, neutralization) having to be managed under Subtitle C. We have tried to address this problem by establishing provisions for amending this paragraph to exclude waste mixtures produced by individual facilities, if they can show that the mixture (or each constituent listed hazardous waste) is not hazardous, based on the criteria for which the consistuent hazardous wastes were listed. Because this is a rulemaking procedure, it will, as a practical matter, only be useful for facilities which routinely mix wastes in relatively constant proportions. With a regulated community potentially numbering in the hundreds of thousands, we simply do not have the resources to process petitions for exempting "one-shot" waste mixtures. Moreover, in most of these one-time cases, it seems likely that the burden of having to manage a waste mixture as a hazardous waste could be easily avoided by carefully segregating hazardous and non-hazardous waste.

We know of no other effective regulatory mechanism for dealing with waste mixtures containing listed hazardous wastes. Because the potential combinations of listed wastes and other wastes are infinite, we have been unable to devise any workable, broadly applicable formula which would distinguish between those waste mixtures which are and are not hazardous. If any members of the public have suggestions for other approaches, we would appreciate having them brought to our attention for future rulemaking.

Waste mixtures containing only wastes which meet the characteristics are treated just like any other solid waste *i.e.*, they will be considered hazardous only if they exhibit the characteristics. EPA recognizes that this may not be an altogether satisfactory regulatory approach. While it would no doubt encourage some desirable mixing of wastes, it would also allow some wastes (principally wastes caught by EPA's extraction procedure) to escape regulation merely by being mixed with other wastes or other materials. We know of no solution to this problem which does not create major inconsistencies in the way wastes are determined to be hazardous under Subpart C of this regulation. Again, if the public has suggestions for other ways of dealing with this issue, we would like to receive them.

2. *When Does a Waste Become a Hazardous Waste?* Paragraph (b) provides three simple rules for determining when a solid waste becomes a hazardous waste and therefore must be managed under Subtitle C. It has been provided in response to comment requesting clarification on this issue.

Paragraph (b) states that a solid waste which is a hazardous waste because it is listed in Subpart D must begin to be managed as a hazardous waste when it first meets the Subpart D listing description. Most of the hazardous wastes listed in §§ 261.31 and 261.32 of Subpart D are process residues, emission control dusts, or wastewater treatment sludges, and the point in time when they are created is generally well-defined. For those used materials which are listed as hazardous wastes in those sections or § 261.33 (*e.g.*, spent solvents), the point at which they meet the listing description is somewhat less well-defined, but generally occurs when their intended use has ceased, and they begin to be accumulated or stored for disposal, re-use or reclamation.

In the case of a waste mixture containing a listed hazardous waste, paragraph (b) requires that the waste mixture be managed as a hazardous waste as soon as the listed waste is added to it. The listed waste, of course, must be handled as a hazardous waste prior to that time.

Finally, paragraph (b) provides that a solid waste is a hazardous waste

whenever it exhibits one or more of the characteristics. As a practical matter, this means that persons handling solid wastes must determine whether they meet the characteristics whenever the management of the solid wastes would potentially be subject to EPA's Part 262 through 265 regulations.

The following examples illustrate how this provision would operate in practice:

- The ABC Company stores waste acid on-site in containers prior to transport off-site for disposal. The company must determine whether the acid meets Subpart C characteristics when it is poured into the containers.
- The DEF Company pipes waste acid into a tank, where it is neutralized by adding lime. The company must determine whether the acid meets Subpart C characteristics when it enters the neutralization tank. The neutralization operation is a treatment process.
- The GHI Company pipes waste acid into a tank truck for transport to an off-site treatment facility. The company must determine whether the acid meets Subpart C characteristics when it enters the tank truck.
- The JKL Company produces a wastewater which is piped into a surface impoundment, for the purposes of treatment prior to point-source discharge into surface waters. During treatment a sludge forms. This sludge is periodically dredged from the impoundment and disposed of. The company must determine (1) whether the wastewater meets Subpart C characteristics when it enters the impoundment and (2) whether the sludge meets Subpart C characteristics when it begins to accumulate on the bottom of the impoundment.

In drafting paragraph (b), EPA has attempted to cover the most common types of waste generation and management scenarios. The Agency recognizes, however, that some companies may generate and handle wastes in ways not contemplated by EPA and for which a strict application of paragraph (b) would make no sense. We would appreciate having those instances brought to our attention so that we can decide whether additional rulemaking or issuing guidance is appropriate for dealing with these situations.

3. When Does a Hazardous Waste Cease to be a Hazardous Waste?

Paragraphs (c) and (d) of this section explain when a hazardous waste ceases to be a hazardous waste and therefore is no longer subject to Subtitle C requirements. These are new provisions which have been added both in response to comment and as a logical outgrowth of paragraph (b).

Paragraph (c) provides that a hazardous waste remains a hazardous waste unless and until (1) it does not exhibit any of the characteristics identified in Subpart C and (2) where the waste is listed in Subpart D (or is a mixture containing a waste listed in Subpart D), the waste (or each of its constitutent listed wastes) is also excluded from paragraph (c) under the rulemaking procedures outlined in §§ 260.20 and 260.22. As a practical matter, this means that facilities which store, dispose of or treat hazardous waste must be considered hazardous waste management facilities for as long as they continue to contain hazardous waste and that any wastes removed from such facilities—including spills, discharges or leaks—must be managed as hazardous wastes.

EPA believes this is a very reasonable and rational rule. Wastes are typically stored for relatively short periods of time. Although solids in the waste may settle and the volume of the waste may be reduced by evaporation during this period, major chemical or biological changes affecting the hazardous character of the waste are unlikely to occur. Hazardous wastes which are disposed of in a landfill are more likely to undergo change (principally through leaching and anaerobic degradation), but only very slowly and over a long period of time.

Hazardous wastes placed in treatment facilities (including incinerators, surface impoundments and land treatment facilities) will, by definition, change character. However, treatment does not necessarily "render [a] waste nonhazardous" (Section 1004(34)). It may only make it "amenable for recovery, amenable for storage or reduced in volume"; or it may only eliminate one of several hazardous properties. Moreover, even in those cases where treatment does ultimately render a waste "nonhazardous", the waste will generally have been hazardous during part or all of the treatment process.

Paragraph (c) establishes a similar rule with respect to solid wastes generated by storage, disposal and treatment—including leachate and treatment residues such as sludges and incinerator ash. Here, too, it is reasonable to assume that these wastes, which are derived from hazardous wastes, are themselves hazardous.

Leachate is produced by the percolation of liquid through wastes; it typically contains solubilized heavy metals and organic materials and is virtually always highly toxic. Treatment residues, by definition, contain waste constituents which were removed during treatment or which were not completely destroyed by treatment. Sludges from wastewater treatment typically contain concentrated amounts of the toxic substances which were in the wastewater. Ash from the incineration of hazardous wastes often contains heavy metals and, if combustion is not complete, undestroyed toxic organic materials.

This is the best regulatory approach we can devise at this time for dealing with solid wastes generated by hazardous waste management facilities. We are not now in a position to prescribe waste-specific treatment standards which would identify those processes which do and do not render wastes or treatment residues nonhazardous. To list treatment residues on case-by-case basis would be an enormous job, and one which we think, given the reasons outlined above, is unnecessary.

This approach obviously is not without deficiencies. For example, one effect of treating wastes containing synthetic organic materials may be to create new hazardous constituents in the waste or treatment residue. This regulation obviously does not deal with those new constituents. It also does not cover run-off from hazardous waste facilities on the theory that the water in precipitation run-off in many cases may not have had sufficient contact with the waste to solubilize waste constituents. (Of course if collected, run-off would be a solid waste and, if it exhibited any of the characteristics, would have to be managed as a hazardous waste). For purposes of future rulemaking, we would be interested in any suggestions the public has for dealing with these issues.

D. Section 261.4 (Exclusions)

EPA's proposed Section 3001 regulations identified a number of wastes which would not be subject to Subtitle C requirements because they were either excluded from the statutory definition of solid waste (§ 250.11(a)(7)), not intended by Congress to be regulated under Subtitle C (§ 250.10(d)(2)(i) and (ii)), or subject to regulation under other EPA statutes (§ 250.10(d)(2)(iii)).

EPA received a number of comments on these proposed exclusions. Some commenters simply urged EPA to clarify which wastes were covered by each of the exclusions. Others challenged EPA's justification for some of its proposed exclusions. Still others contended that additional wastes should be exempted from regulation based on legislative history or an alleged lack of demonstrated harm to human health or the environment.

The exclusions contained in § 261.4 are based on interpretations of the statutory definition of "solid waste" and on those parts of RCRA's legislative history which indicate a Congressional intent that certain waste streams should not be regulated. Some commenters suggested that certain waste streams would never be hazardous and therefore should be excluded from these regulations. Those commenters did not, however, provide sufficient information on which EPA could base such sweeping determinations. Generators of solid wastes that are not hazardous may determine that their wastes are non-hazardous under these regulations. As these regulations are implemented more information will be developed about specific waste streams. EPA will then be in a better position to make categorical judgments about the lack of risk presented by certain wastes. At this time, however, EPA has limited the exclusions in § 261.4 to those which are based on expressed Congressional intent.

The following is a discussion of the specific exclusions contained in § 261.4:

1. *Domestic Sewage.* In defining "solid waste" Section 1004(27) specifically excludes "solid or dissolved material in domestic sewage." The proposed regulation did not specifically define "domestic sewage", but did contain provisions that were based on an interpretation of that term. Section 250.40(c)(3) of the proposed regulation exempted owners and operators of POTW's from all portions of the Section 3004 standards except those involving the manifest system, recordkeeping and reporting with respect to hazardous wastes received by truck or rail. As described in the preamble to the proposed regulation, that decision was based on the idea that the mixing of a hazardous waste with domestic sewage made the entire mixture a domestic sewage excluded under Section 1004(27).

Commenters raised several objections to this approach. First, commenters argued that the only basis for an exclusion under Section 3004 is one based on health or environmental risk rather than public ownership. Second, commenters argued that some POTW's will handle significant quantities of hazardous waste and that such facilities present the same environmental risks as private facilities that treat, store or dispose of hazardous waste. Third, some commenters merely argued that if POTW's are excluded because they handle a significant portion of domestic sewage, other private parties that handle wastes of a similar mix should be excluded also. Fourth, a commenter said that the proposed regulation did not clearly indicate whether a POTW could ever be subject to Subtitle C jurisdiction if it only treated industrial waste.

The term "domestic sewage" generally denotes sanitary wastes that pass through a sewer system. A waste stream comprised entirely of sanitary waste, that passes through a sewer system is "domestic sewage" under any reasonable interpretation of the statutory exemption. This exemption applies regardless of whether the sewer system or the treatment works to which it connects is publicly or privately owned.

A more difficult question is presented when pure sanitary wastes are mixed with other types of wastes in a sewer system. The issue of whether such mixed waste streams are within RCRA's jurisdiction has broad implications and thus it is necessary to carefully consider the Congressional purpose behind the exemption.

The legislative history of RCRA does not specifically address the exemption because it was a carry-over from the Solid Waste Disposal Act, which RCRA amended. The "domestic sewage" exemption first appeared in the definition of "solid waste" found in the Solid Waste Disposal Act of 1965. The legislative history of that act indicates that the exemption was based on a recommendation, made to the Congress by the Administration, that "organic solids in untreated domestic sewage" be excluded from coverage because such wastes were already subject to controls under the Federal Water Pollution Control Act (FWPCA). At that time, the portion of the FWPCA that addressed "untreated sewage" was the Federal construction grant program, which gave money to States and municipalities to construct treatment works and to study combined sewer systems.

This legislative history suggests a Congressional intent that the scope of the "domestic sewage" exemption must depend, in part, on the capacity of the Agency's construction grants program to address the environmental problems arising from any exempted waste streams. At the time the exemption was enacted, and under the present Clean Water Act, the Agency has grant programs that assist states and localities in the treatment of sanitary sewage by POTW's.

EPA believes that the Congressional policy reflected in the legislative history of the "domestic sewage" exemption should guide the Agency in its regulation of mixtures of sanitary waste with other waste streams. Mixed waste streams that pass through sewer systems to publicly-owned treatment works (POTW's) will be subject to controls under the Clean Water Act. The Agency's construction grants program provides financial assistance for the proper treatment of these wastes. In addition the Agency's pretreatment program provides a basis for EPA and the local communities to insure that users of sewer and treatment systems do not dump wastes into the system that will present environmental problems. Under these circumstances EPA believes that it is appropriate to include within the "domestic sewage" exemption mixtures of sanitary wastes and other wastes that pass to POTW's. Since the treatment of sewage by privately-owned treatment works is not similarly controlled through the Agency's construction grant and pretreatment program, the exemption would not be available for mixed waste streams going to such treatment works.

The "domestic sewage" exemption is only applicable to non-domestic wastes that *mix* with sanitary wastes in a sewer system leading to a POTW. An industrial waste stream that never mixes with sanitary wastes in the sewer prior to treatment or storage does not fall within the exemption, regardless of the public or private ownership of the treatment works. Defining the point at which "mixture" occurs may seem to be a relatively straightforward task. Practical problems arise, however, in defining the point at which mixture of sanitary and other wastes occurs in a complex sewer system. Moreover it is particularly difficult to define this point for regulatory purposes in such a way that all parties understand when RCRA obligations begin and end.

EPA has, therefore, decided that a waste falls within the domestic sewage exemption when it first enters a sewer system that will mix it with sanitary wastes prior to storage or treatment by a POTW. EPA recognizes that this interpretation brings various wastes within the exemption before they are actually mixed with sanitary wastes. In light of the fact that the wastes will be mixed prior to treatment and that the mixture will be properly treated by the POTW, EPA believes that the need for administrative clarity in this otherwise complicated regulatory program warrants such an approach.

In response to the comments on the exclusion of POTW's from Section 3004 standards, EPA has changed these regulations to make clear that the statutory exemption is one for "domestic sewage" rather than POTW's. Facilities receiving waste streams that are exclusively made up of sanitary wastes will not be subject to these regulations

regardless of the public or private ownership of the facility. Likewise a POTW receiving industrial wastes that do not mix with sanitary wastes prior to treatment would be handling a solid waste subject to these regulations.

The exclusion of domestic sewage and mixtures that pass through sewer systems to POTW's is based on Congressional intent, not an Agency determination about the relative health and environmental risks presented by such waste streams. The Agency acknowledges that some mixtures of domestic sewage with other wastes may present environmental risks and that some non-domestic wastes may have properties similar to these of exempted domestic wastes. In response EPA can only assume that such factors were not determinative in the Congress' creation of the exclusion.

The proposed regulation did not contain a specific definition of domestic sewage. EPA believes that the definition of domestic sewage, and the provision relating to mixtures of wastes with domestic sewage, contained in these regulations is a reasonable interpretation of RCRA's statutory language and legislative history. The Agency has decided, however, to promulgate this part of the regulation as interim final in order to gain the benefit of public comment on the concepts involved. The Agency considered several options for defining domestic sewage and classifying mixtures of such sewage with other wastes. Those options included:

(1) Defining "domestic sewage" to include all wastes mixed with sanitary wastes;

(2) Limiting the exemption to only sanitary wastes, treating any mixture of sanitary wastes and other wastes as solid wastes;

(3) Defining "domestic sewage" as any waste made up primarily (i.e. more than 50% by volume) of sanitary waste streams; and

(4) Linking the exemption for mixtures to those that flowed into a "publicly-serving" or "constructed-to-serve-the-public" treatment works, rather than POTW's.

The Agency is interested in comments on these options and the selected approach, as well as any other suggested interpretations of the provision. Commenters should recognize that the Agency's selected approach is based on an interpretation of Congressional intent. The Agency is interested generally in comments about the impact of this approach on regulated parties, but it particularly seeks comment on how such effects relate to the Congressional purpose of the exemption expressed in RCRA's legislative history.

These regulations, then, define domestic sewage as untreated sanitary wastes that pass through a sewer system. Such wastes are excluded from regulation as solid wastes under these regulations. In addition mixtures of wastes with domestic sewage that pass through a sewer system to a publicly-owned treatment works for treatment are also excluded from regulation as solid wastes.

2. *Industrial Point Source Discharges.* The statutory definition of "solid waste" in Section 1004(27) of RCRA excludes "solid or dissolved materials in . . . industrial discharges which are point sources subject to permits under Section 402 of the Federal Water Pollution Control Act". In its proposed regulations, EPA construed this phrase to include only actual discharges into navigable waters, not industrial wastewaters upstream from the point of discharge. The effect of this interpretation was to require surface impoundments, tanks, lagoons, holding ponds and other facilities used to treat or store hazardous industrial wastewater to meet Section 3004 standards and to obtain a Section 3005 permit. *See* 43 FR 58993 and proposed §§ 250.45–3 and 250.45–4.

The application of Subtitle C requirements to wastewater treatment impoundments was one of the most controversial aspects of EPA's proposed hazardous waste regulations. Most of commenters' objections to EPA's proposal as they pertain to Section 3004 interim status requirements are discussed in the preamble to the Section 3004 regulations published elsewhere in today's **Federal Register.** The only one addressed here is commenters' argument that the "industrial discharge" exclusion in Section 1004(27) refers to the entire wastewater stream, not simply the point source discharge, and that EPA therefore has no authority under RCRA to regulate industrial wastewater holding or treatment facilities.

This contention is not supported by either the plain language of the statute or its legislative history. The obvious purpose of the industrial point source discharge exclusion in Section 1004(27) was to avoid duplicative regulation of point source discharges under RCRA and the Clean Water Act. Without such a provision, the discharge of wastewater into navigable waters would be "disposal" of solid waste, and potentially subject to regulation under both the Clean Water Act and Subtitle C. These considerations do not apply to industrial wastewaters prior to discharge since most of the environmental hazards posed by wastewaters in treatment and holding facilities—primarily groundwater contamination—cannot be controlled under the Clean Water Act or other EPA statutes.

Had Congress intended to exempt industrial wastewaters in storage and treatment facilities from all RCRA requirements, it seems unlikely that the House Report on RCRA would have cited, as justification for the development of a national hazardous waste management program, numerous damage incidents which appear to have involved leakage or overflow from industrial wastewater impoundments. *See, e.g.,* H.R. Rep. at 21. Nor would Congress have used the term "discharge" in Section 1004(27). This is a term of art under the Clean Water Act (Section 504(12)) and refers only to the "addition of any pollutant to navigable waters", not to industrial wastewaters prior to and during treatment.

Since the comment period closed on EPA's regulations, both Houses of Congress have passed amendments to RCRA which are designed to provide EPA with more flexibility under Subtitle C in setting standards for and issuing permits to existing facilities which treat or store hazardous wastewater. *See* Section 3(a)(2) of H.R. 3994 and Section 7 of S. 1156. *See also* S. Rep. No. 96–172, 96th Cong., 1st Sess. 3 (1979); Cong. Rec. S6819, June 4, 1979 (daily ed.,); Cong. Rec. H1094–1096, February 20, 1980 (daily ed.). These proposed amendments and the accompanying legislative history should lay to rest any question of whether Congress intended industrial wastewaters in holding or treatment facilities to be regulated as "solid waste" under RCRA.

3. *Other Statutory Exclusions.* The definition of "solid waste" in Section 1004(27) excludes two other classes of wastes. "Solid or dissolved materials in irrigation return flows" and "source, special nuclear, or byproduct material as defined by the Atomic Energy Act of 1954" are not "solid waste" under RCRA.

In § 250.40(e) of the proposed regulation these two categories of wastes were excluded from regulation under Section 3004. No substantial comment was received on these exclusions. In these final regulations under Section 3001, the Agency has specifically excluded these materials from regulation as solid waste in accord with the statutory definition of "solid waste."

4. *Household Wastes.* Under § 250.20(c)(4) of the proposed regulation, a person or Federal agency who

generated only household refuse or household septic tank pumpings was excluded from regulation as a generator of hazardous waste. "Household refuse" was defined as trash or rubbish ordinarily produced by a family at their home. This exclusion, which also was available to apartment houses, condominiums and hotels, was based on the legislative history of RCRA.

The few commenters that addressed this provision made two general points. First they said that the "ordinarily produced" portion of the proposed "household refuse" definition might not include certain materials such as medicinal drugs and ointments, household cleaning agents and solvents, waste oils, paints and pesticides that might be purchased at a grocery, drug or hardware store. Second, a commenter pointed out that a Federal agency could not, by definition, produce household wastes.

The Agency has retained the general concept contained in proposed § 250.20(c)(4) in these regulations. The provision is stated, however, as an exclusion of a waste stream—namely "household wastes"—rather than as an exclusion of a class of generators. This change is more in accord with legislative intent. The exclusion is based on language in the Senate Report which states:

> (The hazardous waste program) is not to be used to control the disposal of substances used in households or to extend control over general municipal wastes based on the presence of such substances.
>
> (S. Rep. No. 94-988, 94th Cong., 2nd Sess., at 16.)

This indicates Congressional intent to exclude *waste streams* generated by consumers at the household level. Since the wastes generated at hotels and motels are essentially the same as those generated by consumers in their households, EPA believes that such wastes should be within the exclusion.

The Senate language makes it clear that household waste does not lose the exclusion simply because it has been collected. Since household waste is excluded in all phases of its management, residues remaining after treatment (e.g. incineration, thermal treatment) are not subject to regulation as hazardous waste. Such wastes, however, must be transported, stored, treated and disposed in accord with applicable State and federal requirements concerning management of solid waste (including any requirements specified in regulations under Subtitle D of RCRA.)

When household waste is mixed with other hazardous wastes, however, the mixture will be deemed hazardous in accord with § 261.3(a)(2)(ii) of these regulations except when they are mixed with hazardous wastes produced by small quantity generators (see § 261.5). While household waste may not be hazardous per se, it is like any other solid waste. Thus a mixture of household and hazardous (except those just noted) wastes is also regulated as a hazardous waste under these regulations.

Because of comments on this matter, the relationship of this exclusion to refuse-derived fuel (RDF) should also be explained. RDF is a processed material (usually shredded) that is produced from solid waste and used as a fuel. RDF production usually involves the extraction of inorganic components from the waste leaving the combustible organic component for its fuel value. In the same sense that residue from the treatment of household wastes is not subject to regulation as a hazardous waste, as discussed above, neither is RDF subject to such regulation. Moreover, RDF is not a "solid waste" under § 261.2 because it is not an "other discarded material;" it is or is not intended to be discarded (§ 261.2(b)(1)), it is not a material that has served its original intended purpose (§ 261.2(b)(2)) and it is not a manufacturing or mining by-product (§ 261.2(b)(3)).

EPA agrees with those commenters who suggested that Federal agencies cannot qualify as households. Therefore wastes generated by such agencies are not within the household waste exclusion. In addition EPA believes that medicinal drugs and ointments, household cleaning agents and solvents, waste oils, paints and pesticides purchased at grocery, drug or hardware stores may be disposed of as part of a consumer's household wastes. If a household disposes of such wastes, the wastes may be subject to the household waste exclusion.

Septic tank pumpings were included in the exclusion contained in § 250.20(c)(4) of the proposed regulation. After further examination of this provision, EPA has concluded that such pumpings should be excluded from regulation as hazardous wastes to the extent that they constitute household waste. Households often use septic tanks to dispose of a portion of their wastes. As with all household wastes, these sanitary wastes in household septic tanks are excluded from regulation as a hazardous waste in all phases of their management. Thus septic tank pumpings drawn from household septic tanks are not regulated as hazardous wastes under these regulations. Any wastes drawn from non-household septic tanks are regulated like any other solid waste under these regulations.

5. *Agricultural Wastes.* Under § 250.10(d)(2)(i) of the proposed regulation, agricultural wastes (including manures and crop residues) which are returned to the soil as fertilizers or soil conditioners were excluded from regulation as hazardous waste. The exclusion was based on the legislative history of RCRA which specifically calls for such an exclusion. See H. Rep. No. 94-1491, 94th Cong. 2nd Sess. 2 (1976). Commenters generally accepted this exclusion, and EPA has decided to retain it because the need for such an exclusion is so clearly identified in RCRA's legislative history.

Some commenters asked the Agency, however, to go beyond the specific language of the legislative history and expand the exclusion to include silvicultural wastes. They argued that the foliage and branches left in the forest after trees have been cut are not hazardous and that such wastes help to enrich the soil and control erosion. EPA has decided not to provide a specific exclusion for such wastes because there is no indication in the legislative history of RCRA that the Congress meant to include silvicultural wastes in the exclusion otherwise applicable to agricultural wastes. Moreover EPA has no basis to make a general determination that all silvicultural wastes will not pose environmental problems if mismanaged.

In response to the specific comment about tree branches, it must be recognized that the obligation placed on generators of solid waste is to determine whether their waste is hazardous. Tree branches are not listed as hazardous wastes. Therefore, the only obligation placed on a timber operation is to determine whether its wastes exhibit hazardous characteristics. EPA expects that, in the case of tree branches that are not hazardous, it will be a relatively easy task for the generator to determine that his waste is not hazardous.

6. *Mining Waste.* Section 250.10(d)(2)(ii) of the proposed regulation excluded overburden intended for return to the mine site from regulation under Subtitle C unless such overburden had been specifically listed as a hazardous waste. This exemption was based on the legislative history of RCRA.

Generally commenters accepted this exemption but sought a clearer specification of what wastes fall within the exclusion. Thus commenters sought a definition of both "overburden" and "mine site." Commenters also sought a

clearer interpretation of the time within which the "*return* to the mine site" would have to occur. Finally, several commenters objected to that portion of the proposed regulation which allowed EPA to list and regulate specific overburden materials otherwise covered by the exclusion. EPA had invoked this provision when listing uranium mining overburden and waste rock and phosphate mining overburden in the proposed regulation. These same commenters had also objected to the proposed listing of such wastes.

After review of the comments and further analysis, EPA has decided to retain an exemption for "mining overburden returned to the mine site", defining it as "any material overlying an economic mineral deposit which is removed to gain access to that deposit and is then used for reclamation of a surface mine."

In enacting RCRA, the Congress specifically included mining wastes within the Section 1004(27) definition of "solid waste." Therefore unless the statute or legislative history clearly indicate that mining wastes are to be exempt the presumption is that they are to be regulated like any other solid or hazardous waste. Portions of RCRA's legislative history in both the Senate and House of Representatives suggest, however, that certain kinds of mining overburden are not within the Act's jurisdiction. In discussing RCRA's scope the House Report states:

> [O]verburden resulting from mining operations and intended for return to the mine site is not considered to be discarded material within the meaning of this legislation. This however does not preclude any finding by the Administrator that specific mine wastes are hazardous within the scope of this legislation.

In the Senate this issue was discussed during the floor debate when Senator Domenici asked about the effect of RCRA on mining operations, particularly strip mining. As part of his response Senator Randolph stated:

> The measure would not affect surface mining activities. Reclamation is not solid waste disposal.

Reclamation of surface mines will commonly involve the return to the mine site of waste overburden that has been removed to gain access to the ore deposit. Since it is assumed that both the Senate and House had similar objectives in passing RCRA, the "returned to the mine site" language in the House Report must be read in light of the Senate's concern that mining wastes used to reclaim surface mines should not be subject to RCRA. EPA believes, therefore, that the most reasonable interpretation of the "return to the mine site" phrase is one that limits the exemption to mining waste used to reclaim surface mines.

Commenters suggested that EPA define overburden as any material removed to gain access to the "economic mineral" or the "mineral being mined for use." While both terms basically convey the same meaning, EPA has decided to use "economic mineral" because it may have a clearer meaning to mining operators. The intent of the term is to identify the material that the mining operator is in the business to extract from the ground.

In keeping with the Congressional intent that this exclusion is designed for overburden used to reclaim surface mines, the definition is limited to overburden "overlying" a mineral deposit. The Department of the Interior makes a similar distinction in the definition of overburden in its regulations under the Surface Mining Control Act. EPA does not intend this definition of overburden to be limited exclusively to the material located directly above a mineral deposit. Some material is removed from the sides of a mining pit to permit safe access to the economic mineral, and such material should be treated as overburden. EPA urges the public to provide suggestions about how the definition may be refined if there appears to be any confusion about the meaining of "overlying" in this context.

Overburden material must be "returned to the mine site" before it is excluded from regulation under RCRA. As indicated earlier, the purpose of the exemption is to assure that mining wastes used to reclaim surface mines are not subject to regulation as solid or hazardous waste. EPA recognizes that reclamation does not necessarily involve replacement of overburden into the portion of the ground from which it was taken. EPA also recognizes that surface mining reclamation may be subject to State or Federal regulation, making it difficulut to provide a national definition of what constitutes reclamation. In particular it is difficult to provide a general definition of "mine site" that will fit with the various State and federal requirements for reclamation.

EPA has decided, therefore, not to define what is meant by reclamation of a surface mine. Several commenters indicated that most reclamation activities are subject to State or Federal regulation. EPA expects that any permits or reclamation plans developed to satisfy such regulatory agencies will specify the reclaimed area, and these actions should provide an acceptable and understandable specification of the "mine site" as that term is used in this definition. EPA contemplated limiting the exemption to reclamation that was approved by State or Federal agencies. While such a requirement is not part of this regulation, EPA is considering whether such a requirement should be part of the final definition. EPA seeks public comment on such a modification and is particularly interested to discover the extent to which environmentally sound reclamation activity occurs in the absence of Federal and State regulation.

This approach addresses two specific suggestions made in comments. First it clarifies the time component of the "returned to the mine site" concept because it ties the exemption to reclamation activity. Particularly where the mining operation is subject to State or Federal regulation, it should be reasonably clear what portion of the mine's overburden will be used over what period of time to implement a reclamation plan. Second, as indicated above, it eliminates the need for a specific definition of mine site. In any case, EPA does not believe, as one commenter suggested, that the definition of "mine" used in the Agency's Effluent Limitations Guidelines for the Ore Mining and Dressing Point Source Category (under the Clean Water Act) is appropriate for this definition. The CWA definition is designed to identify a full range of mining and associated activities that should be regulated because they generate pollutants which may potentially discharge into navigable waters. The RCRA definition of "mine site" is to identify a reclaimed area that may receive a waste material which will thereby be excluded from environmental regulation under RCRA.

Finally the Agency has eliminated the part of the proposed exemption that would allow exempted overburden to be brought within RCRA jurisdiction through specific listing as a hazardous waste. (EPA believes, however, that uranium mining overburden and phosphate mining overburden will be brought back under Subtitle C jurisdiction, as discussed below.) The only overburden exempted is that which is used for reclamation purposes. EPA expects that the State and Federal agencies that regulate such reclamation will consider the overburden's potential to adversely affect public health and the environment.

EPA believes strongly that portions of the overburden from uranium and phospate mining should be regulated under Subtitle C with respect to their potential emissions of radon gas and gamma radiation. The Agency

recognizes that this is an issue currently before the Congress in amendments to RCRA. One such amendment would provide specific authority for EPA to regulate these overburdens. If this amendment is enacted, the "overburden returned to the mine site" exclusion will be modified accordingly.

Commenters also questioned the application of the Subtitle C system to in-situ mining wastes. In-situ mining of oil shale, uranium and other minerals may involve the placement of certain solvent solutions directly to a mineral deposit in the ground. This solvent passes through the earth, solubilizing the economic mineral as it goes. The mineral and solvent mixture leaches down to underground extraction wells which remove the solution.

EPA does not believe that the soil through which these solvent solutions pass is a waste to be regulated under RCRA for two reasons. First the removal of materials from their natural state does not transform all remaining elements of that environment into a waste material. For example, picking an apple from a tree does not transform the tree into a solid waste. Likewise the removal of minerals from the land does not make the earth a solid waste.

Second, the soil from which minerals are extracted by in-situ mining does not need to be managed as solid wastes. As indicated in *United States Brewers' Association, Inc.* v. *EPA, supra.*, the definition of "solid waste" under RCRA must be read in conjunction with Section 1004(28), the definition of "solid waste management," which sets forth the broad set of activities that RCRA is to regulate. None of the management activities identified in Section 1004(28), including "disposal," are relevant to in-place materials located hundreds, even thousands of feet below the ground. Only when these materials are actually removed from the ground can it be reasonable to establish regulations governing the management of those materials. Accordingly in-situ mining wastes, not removed from the ground, are not regulated as solid wastes under these regulations.

A final issue raised in the public comments concerns the relationship between these regulations and the study of mining wastes required under Section 8002(f) of RCRA. Commenters argued that all mining wastes should be excluded from coverage under RCRA regulatory programs (including Subtitle C) pending the outcome of that study.

While the study will certainly assist the Agency in refining these regulations to address the particular environmental problems presented by mining wastes, the Agency does not believe that mining wastes should be excluded from regulation, any more than any other solid or hazardous waste, until the study is completed. RCRA certainly does not require such a deferral. The fact that the Congress may have perceived a need for further information about mining wastes does not raise the implication that RCRA's regulatory programs should not address the environmental problems presented by such wastes. The definition of "solid waste" in Section 1004(27) specifically includes wastes from mining operations and no other statutory provision otherwise links EPA's jurisdiction over such wastes to completion of the study under Section 8002(f).

It is important to note that pending amendments to RCRA may provide for deferral of regulation of certain mining wastes until completion of the mining waste study. Clearly that indicates a Congressional belief that any deferral of regulation pending the outcome of the study was not contained in RCRA as originally enacted. Certainly if the legislative amendment is passed EPA will modify these regulations accordingly. The Agency has not, however, created such a deferral in anticipation of such an amendment because the amendment is contained in the bill of only one house. Thus the Agency cannot be certain that such an amendment will be part of the final legislation.

7. *Sewage Sludge.* Unlike the proposed regulation this regulation does not exclude from regulation under Subtitle C sewage sludge from publicly-owned treatment works (POTW's). Several commenters objected to the exclusion contained in the proposed regulation, arguing that it was inconsistent to exclude sewage sludge from POTW's and not exclude sewage sludge from privately-owned systems. They urged EPA to exclude sewage sludge from such private systems. Other commenters urged EPA to exclude wastewater treatment sludges from certain industries such as the meat packing and food processing industries because these sludges are very similar to domestic sewage sludge.

Finally, other commenters objected to the proposed exclusion of sewage sludge from POTW's and urged that this exclusion be dropped. They claimed that POTW sludge often is very contaminated and thereby can be a hazardous waste. They urged that it not enjoy an arbitrary exclusion. EPA has thoroughly re-examined this issue in light of the comments and has decided not to exclude POTW sludge and not to add exclusions for any other types of sludge.

The regulation of sewage sludge is necessarily a complex matter because such sludges fall within the jurisdiction of several Federal environmental programs. Under Section 1004(27) of RCRA, the definition of "solid waste" specifically includes "sludge from a waste treatment plant." In defining "sludge," Section 1004(26A) includes wastes from a "*municipal* wastewater treatment plant."

Because of these very clear statutory expressions, EPA must regulate sewage sludge under RCRA—either under Subtitle D, where it has already promulgated regulations covering sewage sludge (see 44 FR 53438 *et. seq.*), or under Subtitle C where these sludges that are deemed by EPA to be hazardous wastes should be regulated.

Under Section 102 of the Marine Protection, Research and Sanctuaries Act, EPA regulates the ocean dumping of sludge, including sewage sludge. In addition EPA establishes, under Section 405 of the Clean Water Act (CWA), guidelines for the disposal and utilization of sewage sludge. Under Section 405(e), owners and operators of publicly owned treatment works (POTW's) must comply with these guidelines. Sewage sludge often contains valuable organic matter and plant nutrients, and it may be distributed to the public as a soil conditioner or fertilizer. Such distribution of sewage sludge may be regulated under the Consumer Product Safety Act (CPSA) or the Toxic Substances Control Act (TSCA), in addition to Section 405 of the CWA.

Where such overlapping jurisdiction exists, EPA seeks to integrate and coordinate its regulatory actions to the extent feasible. Such efforts give the regulated community a clear picture of its obligations and improve the administrative efficiency of the Agency, both of which advance the environmental objectives contained in EPA's various statutory authorities. Section 1006 of RCRA specifically recognizes the need to integrate the solid and hazardous waste programs with other EPA regulatory programs.

To that end EPA has decided to develop a comprehensive set of regulations to deal with sewage sludge management. Such regulations would be co-promulgated under RCRA (Subtitles C and D), the Clean Water Act, the Marine Protection, Research and Sanctuaries Act and possibly the Toxic Substances Control Act and/or the Consumer Product Safety Act. These regulations will address sewage sludge

from both private and public sources, including septic tank pumpings.

In devising such regulations the Agency will, of course, make the distinctions and classifications necessary to make the regulation comport with the goals and requirements of each statute. Under such a comprehensive regulation, sewage sludge that would otherwise meet the test for being hazardous under Subtitle C will be subject to requirements providing a level of protection to human health and the environment equivalent to that found in the Subtitle C regulations.

The Agency has issued and is developing regulations which will eventually be part of the comprehensive sewage sludge regulation. For example the Agency promulgated Criteria for the Classification of Solid Waste Disposal Facilities and Practices (44 FR 53438) on September 13, 1979. These regulations, which apply to sewage sludge, include special provisions for the land application of solid waste to food chain crops and for the prevention of disease from pathogens contained in sewage sludge and septic tank pumpings. EPA issued the Criteria under the authority of Sections 1008(a)(3) and 4004(a) of RCRA as well as Section 405(d) of the CWA. EPA has also published two technical bulletins that provide guidance on sludge management: "Municipal Sludge Management: Environmental Factors" (42 FR 57420) and "Application of Sludges and Wastewater to Agricultural Land; A Planning and Education Guide."

In addition the Agency is in the process of developing regulations on the distribution and marketing of sewage sludge which will focus on the use of such material as a soil conditioner or fertilizer. These regulations will, at a minimum, be promulgated under Section 405(d) of the CWA. The Agency is also examining whether TSCA or CPSA authorities may be used in developing these regulations.

The Agency's strategy for the development of a comprehensive sewage sludge management regulation will eventually result in the establishment of a separate regulation. Once such a regulation is in place, sewage sludge will be exempted from coverage under other sets of regulations. In particular sewage sludge that qualifies as a hazardous waste will be exempted from this Part and Parts 262 through 265 once this separate sewage sludge regulation, which will provide an equivalent level of protection, is issued in final form.

Pending promulgation of this comprehensive sewage sludge regulation, sewage sludge will not be specifically excluded from Subtitle C. Like any other solid waste, sewage sludge that exhibits any of the characteristics of hazardous waste established in this regulation must be managed as a hazardous waste.

Some commenters urged EPA to list sewage sludge as a hazardous waste, contending that it was particularly hazardous when used in the growing of food chain crops because of the potential plant uptake of cadmium, PCB's and other contaminants. The Agency has decided not to specifically list sewage sludge as a hazardous waste at this time.

It is difficult to make general determinations about the hazardousness of sewage sludge, particularly those produced by POTW's, because of the wide variations in sludge quality. The makeup of a given community's sewage sludge, for example, reflects the range of contaminants generated by the industrial and commercial activities in the area. The sludges of two POTW's will differ as much as the communities themselves.

Determinations about the hazardousness of sewage sludge must, therefore, involve the making of some distinctions between types of sludge. EPA anticipates that it may make such distinctions as part of its comprehensive sewage sludge management regulations. Thus, it is reasonable for EPA to determine whether categorical classifications of sewage sludges are appropriate as part of the Agency's effort to develop such a regulation.

In addition it should be recognized that the particular hazard identified by the commenters, namely uptake of contaminants in food-chain crops, is being addressed by existing regulations. As mentioned above, EPA has issued the Criteria for the Classification of Solid Waste Disposal Facilities and Practices under Subtitle D of RCRA, which place limits on the application of solid waste (including sewage sludge) to food-chain crops. In addition, it is developing regulations covering the distribution and marketing of sewage sludge, which often is used by consumers in gardens for growing food crops. EPA believes that these regulations address the commenter's particular concern about cadmium and PCB contamination in sludge.

E. Section 261.5 (Special Requirements for Hazardous Waste Produced by Small Quantity Generators)

1. *Introduction.* In enacting RCRA, Congress was responding to a problem of unknown magnitude and dimension. With specific reference to the generation of hazardous waste, the House Committee stated:

> One of the major problems to be addressed in the hazardous waste area is the lack of information concerning the components, volumes and sources of hazardous waste. To date there has been no survey or other wide ranging investigation of the sources of hazardous or potentially hazardous waste generation or disposal. As a result, little is known about the actual volume of hazardous waste being generated, the geographical distribution of the generators or the extent to which hazardous wastes are transported [H.R. Rep. at 26].

In the proposed regulation, EPA recognized that the principal focus of the regulatory program should be directed towards effectively controlling the hazardous waste generated by the larger sources of hazardous waste. The Agency was uncertain, however, about the most appropriate manner of regulating generators of small quantities of hazardous waste. The proposed regulations exempted from regulation retailers and any person who generated and disposed of hazardous waste in quantities of less than 100 kilograms in any one month period, provided that these generators disposed of their waste in a waste disposal facility meeting the RCRA Section 4004 criteria or in a facility permitted to manage hazardous waste. In the preamble to the proposal, EPA explained the rationale for this exemption as follows:

> The principal element of this issue is how to balance the need to protect human health and the environment from the adverse impact of potential mismanagement of small quantities of hazardous waste with the need to hold the administrative and economic burden of management of these wastes under RCRA within reasonable and practical limits (43 FR 58970).

Since the time of proposal, the Agency has received and developed considerable information on the issue of the appropriate degree and manner of regulating small quantities of hazardous waste. The information obtained in this process indicates that the number of persons generating hazardous wastes is staggering. There are an estimated 760,000 large and small generators of hazardous wastes producing over 60 million tons of hazardous waste a year. The greatest amount of these wastes comes from very large generators, typically large manufacturing facilities. Just over 5 percent, or 40,000, of the total number of generators produce more than 5000 kg/mo of hazardous wastes; yet, these large generators produce 97.7 percent of the total quantity of hazardous waste. Roughly 91 percent, or 695,000 of the generators, produce less than 1000 kg/mo, yet contribute only one

percent, or 600,000 tons per year, of the total hazardous waste generated. At levels of generation below 100 kg/mo, 74 percent, or 563,000, of the generators produce only 0.23 percent, or 138,000 tons per year of hazardous waste.

The types of business activity generating small quantities of hazardous waste differ markedly from those generating large quantities of hazardous waste. In contrast to large quantity generators, which are almost entirely from the manufacturing sector, over 89 percent of the small generators—those producing hazardous waste at rates of less than 1000 kg/mo—are from the non-manufacturing sector. These generators are scattered among such diverse sectors as construction, special trade contractors (e.g. plumbers, electricians), secondary schools, and local transportation systems. Gasoline service stations and automobile repair garages (for wastes *other* than waste lubricating oil) comprise nearly 30 percent of these non-manufacturing small generators of hazardous waste.

The Agency has determined that the enormous number of small generators, if brought entirely within the Subtitle C regulatory system, would far outstrip the limited Agency resources necessary to achieve effective implementation.

The information developed in the rulemaking process has led EPA to adopt, in the final regulations, a system which incorporates various aspects of the different approaches suggested in the preamble to the proposed rule. The final regulation sets low (1 to 100 kg/mo) quantity exclusion limits for certain extremely hazardous wastes; sets an initial general exclusion limit for generators of less than 1000 kg/mo of all other hazardous wastes; and conditions this general exclusion to assure that excluded wastes are disposed of in either authorized hazardous waste management facilities or facilities approved by a State for municipal or industrial wastes. EPA believes the approach adopted will allow EPA and the States to initially focus implementation and enforcement of the Subtitle C regulatory program on those generators of hazardous waste who are presently producing 99 percent of all hazardous waste. In addition, the Agency will initiate rulemaking within 2 to 5 years to phase-in expanded Subtitle C coverage of small generators down to those generating more than 100 kg/mo quantities.

The final rule does not exempt retailers from coverage as did the proposed regulations. In the preamble to the proposed rule the Agency stated its belief that retailers rarely generate more than 100 kg/mo. However, commenters argued, and the Agency agrees, that some retailers may generate extremely hazardous wastes. Furthermore, some generators, such as large hardware or garden stores may generate substantial quantities of hazardous waste. To the extent that retailers do generate only very small quantities, they will be exempted by the exclusion level provided in the regulations. Thus, in the final regulation, retailers who generate hazardous waste are subject to the same requirements as any other generator.

The background document responds fully to the diverse and numerous comments received on the proposed exemption of generators of small quantities of hazardous waste. This preamble will discuss the issue raised most frequently during the comment period—the consideration of hazard in establishing quantity limitations for hazardous wastes—and the rationale for setting an initial quantity exclusion of 1000 kg/mo and for phasing down the exclusion to 100 kg/mo.

2. *Consideration of Hazard in Establishing Quantity Limitations.* A number of commenters stated that EPA should use consideration of hazard in determining the scope of regulatory coverage. Two methods were suggested: (1) Using quantity to define hazardous waste pursuant to Section 1005(5) of RCRA, i.e., determining the level for each waste below which it does not pose a substantial hazard to human health and the environment when improperly managed; or, (2) considering the degree of hazard presented by a particular waste to establish different levels or types of controls. Although both approaches are attractive, the Agency lacks at present the ability to use either approach in any extensive fashion, and therefore has had to adopt a general exclusion level.

3. *Using Quantity to Determine That a Waste is Hazardous.* The Agency considered whether the small quantity issue could be addressed through consideration of quantity in the definition of hazardous waste. Specifically, the Agency considered whether small quantity exclusion limits could be established by defining *de minimis* quantities below which a waste would not be hazardous under the statutory definition in Section 1005(5) of RCRA, i.e., below which no substantial hazard to human health and the environment exists under conditions of improper management. However, the Agency has not been able to find a way of determining *de minimis* quantities. To do so would require knowledge not only about the intrinsic properties of a waste but also about the possible *exposures* that attend various small quantities of waste under various plausible scenarios of waste mismanagement. Such exposure assessments require consideration of waste properties, numerous site-specific conditions, and alternative management scenarios. For example, the levels of exposure and hazard which could result from leaching of toxic constituents from a particular hazardous sludge in a landfill would depend on factors such as the persistence of the waste, site hydrogeology, depth to the groundwater, the attenuation of the constituent in the underground environment (including degradation of the constituent and its dilution in the groundwater), and the location of persons using the groundwater. The problem is made more complex by the fact that many wastes may be managed in several alternative ways, such as land disposal, treatment, or incineration, and each of these types of management exhibits different exposure and risk patterns.

Given current knowledge and information, these assessments cannot be made for most wastes with sufficient precision to determine the specific quantities which represent a threshold for finding a waste hazardous. Therefore, the Agency has not been able to establish *de minimis* quantities for defining hazardous wastes. The Agency must therefore consider all quantities of any waste listed or identified in Part 261 to be hazardous.

4. *Inability of the Agency to Use Degree of Hazard.* Because the Agency was unable to use quantity in determining whether a waste is hazardous, it considered using degree of hazard in determining the appropriate quantity exclusion level. Commenters heavily supported establishing exclusion limits based on degree of hazard of various wastes. These suggestions were part of a broader set of comments which recommended that the Agency establish a degree of hazard system that placed wastes into two or more levels of hazard depending on the risk that those wastes present to public health and the environment. Commenters argued that such a system could be used as a basis for phasing regulatory coverage, tailoring waste management standards, and establishing small quantity exclusion levels.

The Agency's response to the full scope of the degree of hazard proposals is included in the preamble to the Part 264 and 265 regulations being promulgated today. As explained there, the Agency has not adopted a degree of hazard system in the final regulations. Among other reasons, the Agency

concluded that none of the degree of hazard systems suggested by commenters, nor any it could itself conceive, is capable of comprehensively distinguishing different degrees of hazard among the myriad of hazardous wastes without application of very subjective judgment. This precluded establishing small quantity exemptions based on a hierarchy of hazard levels.

While the Agency has not found it possible to establish a comprehensive hazard ranking system, the Agency has attempted on a limited basis to make hazard distinctions in establishing small quantity cutoffs. The Agency has established very low exclusion limits for certain very acutely toxic or otherwise hazardous chemical products (if discarded), off-specification derivatives of those products, and the product containers and spill residues. The Agency may in the future establish specific (low) exclusion limits for other highly hazardous wastes on a case-by-case basis.

5. *Limited Administrative Resources Require Setting the Initial Exclusion Level at 1000 kg/mo.* EPA has decided to adopt for the present time, a general exclusion level of 1000 kg/mo. The Agency's basis for this decision is the current lack of sufficient administrative resources to allow the Agency and the States to effectively regulate all hazardous waste. Given that resource constraint, the Agency believes that the overall level of environmental protection which can be provided will be greater if the Agency focuses available resources on fully regulating wastes from large generators during the early years of regulation implementation rather than expanding the scope of regulatory coverage and achieving ineffectual implementation of a more ambitious program.

The primary reason for selecting 1000 kg/mo, i.e., the administrative impossibility of implementing at lower levels, deserves some elaboration. As noted earlier, regulation of all generators of hazardous waste would bring 760,000 persons into the regulatory system. Regulating only those persons who generate more than 100 kg/mo would exclude from the program 560,000 generators, 73.9 percent of the total. If the exclusion level were set at 1000 kg/mo, 695,000 generators or 91.2 percent would be excluded from regulation. At a 5000 kg/mo level, 722,000 generators or 94.7 percent would be excluded.

In 1981, the first full year of implementing the Subtitle C controls, analyses of Agency and State workload requirements and available resources to implement the Subtitle C controls indicate that, if all generators were fully regulated, workload requirements would exceed resources available by 1100 to 1200 workyears. If generators of less than 100 kg/mo quantities were exempted from full regulation, the shortfall would be much less, but still a substantial 200 to 300 workyears. However, if generators of less than 1000 kg/mo quantities are exempted, the shortfall is projected to be less than 100 workyears, about 5 percent of the total workload requirements.

The resource constraints and shortfalls have direct significance for the operation of the entire regulatory program. To expand the coverage to smaller generators would require direct sacrifices from other elements of the program, most notably regulation and enforcement of large generators, permitting of treatment, storage and disposal facilities, and enforcement and inspection of these facilities. Furthermore, with greater resource demands and projected shortfalls, greater difficulties are likely in the ability of States to obtain authorization to administer the program in lieu of the Federal government.

Given the enormity of the implementation task and the limited administrative resources, EPA has been forced to make difficult allocation decisions. Expanding the coverage of generators would entail direct sacrifices from other essential program components. The determination of the proper exclusion level in the final regulation represents a complicated balancing of a variety of factors. The decision reflects a judgment by the Agency that the overall environmental objectives will be best served by selecting a level which promises full and effective implementation of all elements of the program rather than one that promises ineffective implementation of a more ambitious program.

Accordingly, EPA has decided to establish for the present time a conditioned exclusion of hazardous wastes from generators who produce less than 1000 kilograms a month. This level will enable EPA to direct its attention to the effective regulation of 99 percent of the total wastes generated, and will entail only insignificant, if any, sacrifices in the task of issuing permits to hazardous waste management facilities.

In addition, the exclusion is not unqualified; generators of small quantities of hazardous waste must ensure that their wastes go to facilities that are approved by the State to handle municipal or industrial wastes. For most of these facilities the commingling of small quantities of hazardous waste with large quantities of non-hazardous waste is likely to minimize environmental problems attributable to the hazardous waste, particularly since dilution levels at a 1000 kg exclusion are generally at least 100 to 1. Importantly, this approach will give State agencies more flexibility in dealing with small quantity generators. If a State determines that certain types of exempted hazardous waste should not be managed in a particular non-hazardous facility, it can deal with that situation directly.

The Agency considered other types of reduced administrative or technical requirements for exempted generators, including various subsets of the full Subtitle C requirements. A limited number of commenters suggested particular reduced requirements which they felt would provide limited but necessary controls. The Agency's analysis of various reduced Subtitle C requirements indicated that they would either provide an insignificant level of additional control, or that they would not substantially reduce the administrative burden of the full Subtitle C requirements. Thus, the Agency decided to impose only the condition stated above.

6. *Phasing Down the Coverage of Small Quantity Generators.* On the basis of information presently available to the Agency, it appears that a general exclusion level of 100 kg/mo would better achieve the environmental protection objectives of Subtitle C. Therefore, EPA intends to initiate rulemaking within 2 to 5 years to expand Subtitle C coverage down to generators of 100 kg/mo. During this process, the Agency will consider the need for any special regulatory requirements to deal with any unique problems associated with these wastes.

A number of commenters argued that phasing regulatory coverage of small generators would significantly benefit the administration of the hazardous waste management program. The Agency believes that because of limited resources, the Agency *must* phase its regulation of small generators to be able to fully implement the Subtitle C controls on large generators, transporters, and waste management facilities.

7. *Environmental Considerations.* The information that the Agency was able to develop on the environmental impacts of different quantity cutoff levels was not fully conclusive. However, the data indicate that an exclusion level of 100 kg/mo, coupled with lower exclusions for certain highly hazardous wastes, and disposal of excluded waste in Subtitle C or State approved facilities will, in most

cases, minimize adverse impacts on human health and the environment.

The review of damage cases tends to support a 100 kg/mo exclusion level. First, there were very few damage cases involving quantities below that level. Second, those few cases involved indiscriminate dumping rather than disposal in managed facilities. This suggested that disposal of quantities less than 100 kilograms in a managed facility might provide sufficient environmental protection, even if the managed facility was not authorized to handle hazardous waste. Of the 11 damage incidents involving the disposal of less than 1000 kg quantities of hazardous waste in managed facilities the environmental damage or personal injury occurred in nine of the incidents because of mismanagement of single containers, i.e., 55 gallon drums of ignitable, corrosive or reactive materials. Setting the exclusion level at 100 kg/mo would in most cases ensure that single, full drums would be properly packaged and labeled, manifested and sent to Subtitle C facilities. A higher exclusion level would not provide this assurance.

Wastes generated by small quantity generators at the 100 kg/mo exclusion level comprise only 0.23 percent of all hazardous waste. The environmental analysis showed that these small generator hazardous wastes are typically mixed by the generator with non-hazardous wastes and subsequently disposed of in waste management facilities for municipal waste. If these mixed wastes were evenly distributed to such facilities, the dilution ratio of non-hazardous to hazardous waste would be roughly 900 to 1 at a 100 kg/mo exclusion limit.

Although even distribution will not occur, EPA believes that very large dilution ratios will result in most situations with a 100 kg/mo exclusion level. This is because 92 percent of the small generators (producing less than 100 kg/mo) are in the non-manufacturing sector and are distributed in reasonable proportion to population and, therefore, in reasonable proportion to quantities of diluting non-hazardous municipal wastes. The effect of even distribution and high dilution is to spread and, thereby, minimize exposure and risk. Although this effect cannot be assessed with great precision, it is not unreasonable to assume that human health exposure and risk is significantly reduced at dilution ratios of several hundred to 1.

8. *Resource Considerations.* Projecting administrative resources into the future is inherently speculative, requiring various assumptions and estimates of State and Agency budgets, and implementation workloads. The Agency studies assumed constant budgets, and predicted the administrative shortfall to become exacerbated, rather than reduced over time. Other projections, presented in the background document for small generators, also suggest some resource difficulties in phasing-in the coverage of small generators, but these projections show that the resource picture may improve over time. The Agency, however, believes it is appropriate to expand its regulatory coverage of small quantity generators, and will be seeking the budgetary increases necessary to accomplish that phasing. Additionally, once the regulatory apparatus is in place and operating, the Agency will be able to reassess the ability to achieve more comprehensive coverage by means of allocating its resources differently than presently projected.

F. Section 261.6 (Special Requirements for Hazardous Waste Which Is Used, Re-used, Recycled or Reclaimed)

This section sets forth the applicability of the Subtitle C regulations to the storage and transportation of hazardous waste sludges and hazardous wastes listed in Subpart D that are used, re-used, recycled or reclaimed. It also provides for the exclusion from regulation of all other aspects of the use, re-use, recycling or reclamation of hazardous waste until EPA promulgates regulations to the contrary. The content of and rulemaking considerations that went into this section are fully discussed in Section IV. B. of this preamble.

V. Subpart B—Criteria for Identifying Characteristics of Hazardous Waste and for Listing Hazardous Waste

A. Section 261.10 (Criteria for Identifying the Characteristics of Hazardous Wastes)

Section 3001 of the Act requires EPA to develop and promulgate criteria for identifying the characteristics of hazardous waste. The proposed regulations identified two such criteria. The first criterion was that the characteristic be capable of being defined in terms of physical, chemical or other properties which cause the waste to meet the definition of hazardous waste in the Act. This criterion embodied the simple but fundamental notion that a characteristic of hazardous waste must be one which causes the waste to be a hazardous waste within the meaining of the statutory definition. The second criterion was that the properties defining the characteristic be measurable by standardized and available testing protocols. EPA adopted this second criterion in recognition that the primary responsibility for determining whether wastes exhibit the characteristics rests with generators. It believed that unless generators were provided with widely available and uncomplicated test methods for determining whether their wastes exhibited the characteristics, the system would prove unworkable. Largely in reliance on this second criterion, EPA refrained from adding organic toxicity, carcinogenicity, mutagenicity, teratogenicity, bioaccumulation potential and phytotoxicity to the set of proposed characteristics and instead left it to listing mechanism to capture wastes exhibiting these properties. EPA considered the available test protocols for measuring these characteristics to be either insufficiently developed or too complex and too highly dependent on the use of skilled personnel and special equipment. Additionally, given the current state of the knowledge concerning such properties, EPA did not feel that it could define with any confidence the numerical threshold level at which wastes exhibiting these characteristics would present a substantial hazard. Furthermore, it questioned whether these tests sufficiently took into account the multiple factors which bore on the question of the hazardousness of such wastes.

EPA received a few comments on its proposed criteria for identifying characteristics, the most significant of which addressed the appropriate use of the identified characteristics. A number of commenters contended that EPA did not have authority to require generators to assess their wastes in accordance with the characteristics. These commenters were generally concerned about the burden placed on generators by such a requirement and argued that the characteristrics should only be used by the Agency in listing hazardous wastes. Other commenters believed that EPA was fully justified in requiring generators to assess their wastes in accordance with the identified characteristics and felt that this would assure the broadest possible coverage for hazardous wastes.

EPA disagrees with those commenters who argue that EPA has no authority to require generators to determine if their wastes exhibit any of the characteristics. Throughout the statute, Congress made reference to two alternative mechanisms for bringing a waste into the hazardous waste system—identification through characteristics, and listing. If Congress

had intended the identified characteristics to be used solely by EPA in listing wastes, then there would have been no point in making a distinction between these two mechanisms. Consequently, since the determination of whether a waste exhibits the characteristics appears to require some action by someone other than EPA, the most reasonable interpretation of the statutory language is that it requires generators to assess their wastes in accordance with the EPA-identified characteristics. This interpretation of the statutory language is substantially reinforced by the provision in Section 3002(4) that generators may be required to furnish information on the general chemical composition of their waste—a requirement which presumes testing.

The final regulation makes a few slight changes in the language of the criteria for identifying characteristics in an attempt to clarify the meaning of the regulation and better reflect EPA's regulatory intent. First, EPA has omitted reference to damage incidents and scientific and technical information as bases for identifying characteristics, out of a conviction that this reference is unnecessary and in partial agreement with those who argued that damage incidents should not be heavily relied on in identifying characteristics. Second, EPA has omitted the redundant phrase "can be defined in terms of specific, physical, chemical, toxic, infectious, or other properties of a solid waste." Third, EPA has expanded the criterion of "measurability" to make clear that any test for measuring characteristics must be within the capability of the generator community and to provide that characteristics such as reactivity need not be accompanied by a testing protocol if the characteristic can be "reasonably detected by generators . . . through their knowledge of the waste."

B. Section 261.11 (Criteria for Listing Hazardous Waste)

In the proposed regulation, EPA specified two criteria for listing hazardous waste. The first criterion was that the waste possess one or more of the identified characteristics. The second criterion was that the waste meet the definition of hazardous waste found in Section 1004(5) of the Act.

The first criterion to a large extent reflected EPA's regulatory strategy at the time of the proposal. Under that strategy, EPA planned to identify and quantitatively define all of the characteristics of hazardous waste, including organic toxicity, carcinogenicity, mutagenicity, teratogenicity, bioaccumulation potential and phytotoxicity. Generators would be required to assess their wastes in accordance with these characteristics and EPA would list hazardous wastes where it had data indicating the wastes exhibited one of the identified characteristics. Listing would thus play a largely supplementary function and would serve as a device for injecting certainty into the process of hazardous waste determination. As noted above, however, EPA has found it impossible to fully effectuate this strategy because of the lack of suitably uncomplicated test protocols, the difficulty of establishing numerical hazardous threshold levels for these additional characteristics, and the failure of the available test protocols to fully incorporate all of the multiple factors bearing on the hazards presented by such characteristics.

The second criterion was adopted against the backdrop of this inability to capture all hazardous wastes through identified characteristics, and was intended to give the Agency an independent basis for capturing such wastes. Although this proposed criterion was admittedly somewhat general in nature, it implicitly incorporated the more specific criteria embodied in the delisting requirements and the waste codes which accompanied each listing—provisions which made it clear that EPA was specifically concerned with radioactive, mutagenic, bioaccumulative, toxic organic and infectious wastes. Thus, although EPA appeared to have prescribed for itself a very broad and inexact listing standard in the proposed regulation, in actuality the Agency followed a fairly particularized set of criteria in listing wastes.

EPA received a large number of comments in response to its proposed criteria for listing. None of these commenters objected to EPA's first criterion for listing wastes that exhibit one of the characteristics. A large number of commenters, however, objected to the second criterion. Many of these commenters felt that the mere articulation of the statutory definition as the basis for listing was circular and constituted an abrogation of EPA's statutory duty to establish criteria for listing which expand upon the statutory definition. Others argued that the second criterion was inappropriate because it failed to take into consideration such things as concentration, degradation potential and bioaccumulation potential—factors which are specifically mentioned by the Act.

EPA agrees that the proposed criterion for listing wastes which do not exhibit any of the characteristics was as a general matter, too broad. Accordingly, we have promulgated a considerably expanded and more specific set of criteria to take the place of the proposed criterion. These criteria are broken down into two categories—criteria for listing acutely hazardous waste and criteria for listing toxic waste.

The criteria for listing acutely hazardous waste are intended by EPA to serve as the criteria for identifying wastes which are so hazardous that they can be said to meet part (A) of the statutory definition of hazardous waste—i.e., wastes which may "cause, or significantly contribute to an increase in serious irreversible, or incapacitating reversible, illness", regardless of how they are managed. It is EPA's conviction that most wastes are hazardous only because they "pose a substantial present or potential hazard to human health or the environment *when improperly managed*" and thus meet part (B) of the statutory definition of hazardous waste. Nevertheless, EPA recognizes that there are wastes which are so acutely hazardous that they can be considered to present a substantial hazard whether improperly managed or not. EPA has defined this category of wastes to include those which have been shown to be fatal to humans in low doses or have been shown in mammalian studies to have an oral LD 50 toxicity of less than 50 milligrams per kilogram, (as determined using rats), an inhalation LC 50 toxicity of less than 2000 milligrams per cubic meter (as determined using rats), or a dermal LD 50 toxicity of less than 200 milligrams per kilogram (as determined using rabbits). Numerous government agencies and private organizations, including the Department of Transportation, the Consumer Product Safety Commission and the National Academy of Sciences, recognize that substances exhibiting these LD 50 and LC 50 toxicities are so potentially lethal as to be considered poisonous or acutely toxic. EPA has also defined this category of wastes to include wastes, such as explosives, which otherwise meet part (A) of the statutory definition of hazardous waste. This has been done in recognition that wastes may be acutely hazardous even if they are not toxic. Inasmuch as a waste will meet the acutely hazardous criteria only when the whole waste, rather than just its constituents, presents an acute hazard, EPA has employed and intends to employ these criteria primarily to list the discarded pure chemical substances and associated materials specified in § 261.33. EPA recognizes, however, that there may be

wastes such as wastes containing substantial concentrations of potent carcinogens which meet these criteria even though they are not pure substances.

The criteria for listing toxic wastes are intended by EPA to identify all those wastes which are toxic, carcinogenic, mutagenic, teratogenic, phytotoxic, or toxic to aquatic species. These criteria provide that a waste will be listed where it contains any of a number of designated toxic constituents—unless, after consideration of certain specified factors, EPA concludes that the waste does not meet part (B) of the statutory definition of hazardous waste. As in the proposed regulation, the ultimate requirement for listing a waste as hazardous is whether it meets the definition of hazardous waste found in the Act. Unlike the proposed regulation, however, the final criteria significantly channel the route the Agency must follow in determining whether a waste meets the statutory definition. The first inquiry which must be made under the final criteria is whether the waste contains any of the toxic constituents listed in Appendix VIII. These constituents are ones which have been shown in reputable scientific studies to have toxic, carcinogenic, mutagenic or teratogenic effects on humans or other life forms and include such substances as those identified by the Agency's Carcinogen Assessment Group. Consequently, the presence of any of these constituents in the waste is presumed to be sufficient to list the waste unless after consideration of the designated multiple factors, EPA concludes the waste is not hazardous. These multiple factors include the type of toxic threat posed, the concentrations of the toxic constituents in the waste, the migration potential, persistence and degradation potential of the toxic constituents, the degree to which the toxic constituents bioaccumulate in ecosystems, the plausible types of improper management to which the waste could be subjected, the quantities of waste generated, and other factors not explicitly designated by the Act, including damage incidents involving wastes containing the toxic constituents and actions taken by other governmental agencies with respect to the waste or its toxic constituents.

EPA has adopted this flexible, multiple factor approach to listing rather than the formulaic approach embodied in the characteristics because it considers this approach to be better able to accommodate itself to complex determinations of hazard. EPA further believes that this multiple factor approach was to some extent contemplated by Congress. Most of the factors selected are specifically mentioned in Section 3001 of the Act. Additionally, the report which accompanied the Senate bill provided that at a minimum the Administrator should designate as hazardous each mixture of solid waste which contained a toxic or hazardous substance listed in section 112 of the Clean Air Act or section 307(a) and section 311(b) of the Clean Water Act unless he determined that the waste did not meet the criteria for identifying hazardous wastes. Senate Report 94–988, 94th Cong., 2d Sess. at 14. Thus the Senate bill, like EPA's final regulations, envisioned a presumption in favor of listing based on the presence of a toxic constituent in the waste which is rebuttable by a consideration of further factors. Although the Senate version of the bill was not adopted, the concept embodied therein was not specifically rejected in the final statute, providing some further basis for concluding that EPA's approach for listing toxic wastes reflects congressional intent.

As can be seen from the above discussion, the final criteria for listing reflect a change in emphasis in the Agency's regulatory strategy. EPA is not fully confident that it can suitably define and construct testing protocols for the characteristics of organic toxicity, carcinogenicity, mutagenicity, teratogenicity, bioaccumulation potential, phytotoxicity, radioactivity and infectiousness, and is consequently relying on the listing mechanism to bring wastes exhibiting these properties into the system. One negative aspect of this change in approach is that it shifts to EPA the primary burden for identifying, analyzing and evaluating these wastes with the result that it may take longer to achieve full regulatory coverage. This negative aspect is substantially offset, however, by the greater flexibility and assurance which the listing approach provides, especially when accompanied by the delisting procedure.

A notable difference between the approach embodied in the characteristics and the approach embodied in the criteria for listing is that EPA attaches less emphasis to waste constituent migration and subsequent environmental fate in the listing mechanism than in the characteristics. This is nowhere better demonstrated than in the listing of waste which contain primary drinking water standards contaminants. In listing wastes which contain primary drinking water standards contaminants EPA has elected to focus, in the first instance, on the actual presence of the toxic constituent in the waste and to treat other factors such as migration potential as essentially mitigating considerations which might render the waste non-hazardous. EPA feels justified in concentrating primarily on the composition of the waste because the listing mechanism allows for a more individualized consideration of hazard and because the delisting procedure affords generators an opportunity to demonstrate, through reliance on the specified factors, that their waste is not in fact hazardous. In the case of wastes exhibiting the characteristic of EP toxicity, on the other hand, there is no opportunity to make such a demonstration—since the test prescribed in the characteristic constitutes a final determination of hazard. Consequently, out of concern that the characteristic not be overinclusive, EPA has placed somewhat greater emphasis on migration potential and has rigorously incorporated this consideration into the EP test.

As noted in section III.A.3. of this preamble, EPA intends to supplement the listing criteria to allow listing of radioactive and infectious wastes. We are deferring promulgation of the criteria for listing radioactive wastes because we want to wait until Congress has spoken on this issue and because deferral will give EPA more time to refine its standards for listing these wastes and to coordinate these standards with the regulations governing used, re-used recovered, and reclaimed wastes. We are similarly deferring promulgation of the criteria for listing infectious wastes because we have not finished developing the treatment standards applicable to such wastes.

A few clarifying changes have been added to the final regulation. First, the regulation provides that EPA may list classes or types of wastes if it has reason to believe that all wastes within the class or type typically or frequently are hazardous. Second, the regulation provides that the criteria for listing will be used to establish the exclusion limits for acutely toxic wastes generated by small generators. These exclusion limits are referred to in § 261.5(c).

VI. Subpart C—Characteristics of Hazardous Waste

A. Section 261.20—General

This section is largely self-explanatory. It states that a solid waste is a hazardous waste if it exhibits any of the characteristics of hazardous waste, explains the assignment of EPA Hazardous Waste Numbers, and

explains the method for obtaining a representative sample in testing for characteristics. Rather than specifying particular procedures to be used in obtaining representative samples, EPA is simply requiring the regulated community to obtain samples which meet the definition of representative sample found in Part 260 of the regulations. To provide some guidance concerning compliance with this requirement, EPA will consider any sample obtained using the sampling methods indexed in Appendix I to be a representative sample within the meaning of the Part 260 definition. Since, however, these sampling methods are not being officially required by EPA anyone desiring to use a different sampling method may do so without demonstrating the equivalency of that method under the procedures set forth in § 260.21.

B. Section 261.21 (Characteristic of Ignitability)

In the proposed regulation, EPA defined ignitable waste to include the following: (1) Liquids having a flashpoint of less than 140° F (60° C) (2) non-liquids liable to cause fires through friction, absorption of moisture, spontaneous chemical change or retained heat from manufacturing or liable, when ignited, to burn so vigorously and persistently as to create a hazard (3) ignitable compressed gases and (4) oxidizers.

EPA's objective was to identify wastes capable of causing fires during routine transportation, storage and disposal and wastes capable of severely exacerbating a fire once started. Such fires, EPA recognized, pose a particular danger to transportation and disposal personnel and also threaten the general public by generating toxic fumes and creating convection currents which transport toxic particulates to the surrounding area. EPA adopted the Department of Transportation's definitions of ignitable compressed gas and oxidizer and borrowed heavily from the Department of Transportation's definition of non-liquid ignitable because it believed these definitions adequately reflected routine waste management conditions. At the same time, it chose a flashpoint limit for ignitable liquid wastes different from that specified by the Department of Transportation's "flammable" liquid category because it believed that the flashpoint limit specified by the Department of Transportation did not fully reflect conditions likely to be encountered during routine waste management.

A large number of commenters argued that EPA should adopt the Department of Transportation's 100° F flashpoint for flammable liquids. These commenters argued that EPA's adoption of a different flashpoint limit from the Department of Transportation is not justified by conditions likely to be encountered during waste management and will create undue confusion in the regulated community.

The Agency disagrees with these commenters. A number of EPA studies reveal that ambient temperatures of 140° F are regularly encountered during landfill disposal. In such environments, liquid wastes with flashpoints lower than 140° F will readily volatilize and can be easily ignited by the numerous ignition sources to which wastes are exposed during management. The need to regulate such wastes is borne out by an early Department of Transportation study which recommended that the Department of Transportation adopt a flashpoint limit of 140° F for flammable liquids because temperatures of this order can be encountered during transportation. The commenters who argue that EPA's 140° F flashpoint limit is not justified by waste management conditions forget that, through the creation of its "combustible liquid" category, the Department of Transportation regulates liquids with flashpoints of up to 200° F—a tacit acknowledgement that EPA's 140° F flashpoint is well within the sphere of potential concern.

EPA does not believe that its ignitable liquids category will create undue confusion in the regulated community. The term "ignitable" was specifically chosen to eliminate confusion between EPA's "ignitable" liquids category and the Department of Transportation's "flammable" liquids category. Furthermore, EPA's ignitable liquids category is one with which the regulated community should already be familiar since it encompasses Class I and Class II liquids in the National Fire Protection Association's classification scheme. While EPA believes that maintaining consistency between its definitions of hazard and those of the Department of Transportation is a desirable goal, it does not believe that such consistency should be achieved at the expense of human health and environmental protection.

A number of commenters argued that the 140° F flashpoint for liquids improperly included many liquid wastes such as wine and some latex paints which exhibit low flashpoints because of their alcohol content but do not sustain combustion because of the high percentage of water present.

EPA agrees that such wastes should not be designated as hazardous, but unfortunately has no data on hand which identifies the correlation between the concentration of alcohol in such wastes and the established flashpoint of 140° F. Accordingly, it has for the time being opted to follow the Department of Transportation's lead and exclude from its ignitable liquids category aqueous solutions containing less than 24 percent of alcohol by volume. This exclusion will remove from the ignitability characteristic liquid wastes which the Agency knows may flash but not sustain combustion. In the meantime, EPA hopes to undertake further study to determine whether another exclusion limit is more appropriate and to evaluate tests which might be capable of identifying wastes which exhibit this phenomenon.

Many commenters argued that the proposed definition of solid ignitable wastes was too vague and that a testing protocol was needed to provide proper guidance. A number of these commenters took particular issue with the phrase ". . . or when ignited burns so vigorously and persistently as to create a hazard during its management . . ." which they felt could be construed to include such non-hazardous materials as bark, wood chips, wastepaper, sawdust, corrugated boxes, etc.

EPA agrees that the proposed definition of solid ignitable wastes was perhaps imprecise and could stand clarification. It has no intention of designating such things as wastepaper and sawdust to be hazardous and is only interested in capturing the small class of thermally unstable solids which are liable to cause fires through friction, absorption of moisture or spontaneous chemical changes. Accordingly, to eliminate any misunderstanding, we have changed the definition of ignitable solid to read ". . . *and* when ignited burns so vigorously and persistently that it creates a hazard."

Although EPA would have preferred providing a test method for identifying ignitable solids, it has determined, after diligent inquiry, that there are no test methods capable of accurately identifying the small class of ignitable solids to which its regulation is directed. EPA is presently working with the Department of Transportation and other organizations to correct this deficiency. In the meantime, the absence of a test should not cause too much of a problem since generators of thermally unstable solids, like generators of reactive wastes, are likely to be aware that their waste exhibits this property.

A number of commenters argued that EPA improperly included in its definition of ignitable solids, wastes such as slags which are liable to cause

fires through "retained heat from manufacturing or processing."

EPA agrees that these wastes should not be designated as hazardous and has accordingly deleted the phrase "or retained heat from manufacturing or processing" from the definition of ignitable solids. EPA was originally concerned that wastes such as slags, if placed in a landfill, could present a hazard by raising the temperature of other wastes to their flashpoints. It is now convinced that the likelihood of such high volume wastes being placed in a landfill is sufficiently small as not to warrant their regulation.

C. Section 261.22 (Characteristic of Corrosivity)

In the proposed regulation, EPA defined corrosive wastes to include (1) aqueous wastes exhibiting a pH of less than or equal to 3 or greater than or equal to 12 and (2) liquid wastes capable or corroding steel at a rate greater than 0.250 inches per year. This definition attempted to address the various hazards presented by corrosive wastes. EPA chose pH as one barometer of corrosivity because wastes exhibiting low or high pH can cause harm to human tissue, promote the migration of toxic contaminants from other wastes, react dangerously with other wastes, and harm aquatic life. EPA chose metal corrosion rate as its other barometer of corrosivity because wastes capable of corroding metal can escape from the containers in which they are segregated and liberate other wastes.

A majority of commenters argued that the proposed pH limits were unduly stringent. These commenters pointed out that the proposed upper pH limit of 12.0 would include many otherwise non-hazardous lime-stabilized wastes and sludges, thereby discouraging use of this valuable treatment technique. They further pointed out that the proposed lower pH limit of 3.0 would include a number of substances generally thought to be innocuous and many industrial wastewaters prior to neutralization. They questioned EPA's assertion that the proposed lower pH limit was needed to protect against tissue damage.

EPA agrees that the proposed pH limits were unnecessarily stringent and has accordingly adjusted the upper pH limit to 12.5 and the lower pH limit to 2.0. In originally establishing the proposed limits, EPA was confronted with the difficulty that while the tendency to promote the solubilization of heavy metal contaminants and to cause harmful reactions generally increases as pH approaches the upper and lower limits of the pH scale, there are no threshold levels for these effects. Consequently, to a significant extent, EPA based the proposed pH levels on studies demonstrating a correlation between pH and eye tissue damage. Since eye tissue is considered to be more sensitive than other human tissue, the proposed pH levels were unnecessarily conservative and had the unintended effect of inhibiting the use of such beneficial processes as the lime stabilization of wastes. The expanded pH range being adopted today rectifies this problem by excluding such things as lime stabilized wastes from the system. It also addresses the problem of tissue damage more realistically while at the same time providing ample protection against the solubilization of toxic contaminants and dangerous reactions.

A number of commenters commented on the need for addressing percent acidity and alkalinity in the pH provision of the corrosivity characteristic. A few commenters favored adding percent acidity/alkalinity to the pH provision because it would provide useful information for disposal purposes. Most commenters, however, felt that percent acidity/alkalinity should not be addressed because it would not add significantly to the determination of hazard and would require the use of a more complicated measurement technique.

EPA agrees with most commenters that the addition of percent acidity/alkalinity to the pH provision is unnecessary. Percent acidity/alkalinity provides an indication of the capacity of a waste to resist a change in pH and therefore to aid in the assessment of the hazard presented by a waste over the long term. However, it adds little to the assessment of the hazard posed by the waste during transportation, storage and initial disposal. Furthermore, because the capacity of a waste to retain low or high pH is as much a function of its disposal or storage environment as of its percent acidity/alkalinity, the Agency knows of no scientifically valid basis upon which to establish hazardous threshold levels of percent acidity/alkalinity. Accordingly, EPA has elected not to address percent acidity/alkalinity in the corrosivity characteristic.

A few comments were received on the need for including corrosive solids in the corrosivity characteristic. All advocated including solids in the corrosivity characteristic but none described situations where the improper disposal of such wastes would be likely to cause damage.

EPA has concluded that, inasmuch as the great majority of wastes are presumed to be in liquid or semi-liquid form, there is no demonstrated need to address corrosive solids at this time. EPA will, however, continue to seek information on the dangers presented by these wastes and will consider specific regulatory measures if the need for more control becomes apparent.

A number of commenters suggested that the corrosivity characteristic should address tissue damage more directly and employ a skin corrosion test. Several of these commenters pointed to a Consumer Product Safety Commission survey which ostensibly casts doubt on the ability of pH to predict tissue damage.

EPA believes that there is sufficient correlation between pH and tissue damage to justify the use of pH in a regulatory context, especially in view of the fact that it is using pH as a multi-purpose measure of many elements of concern. Requiring the regulated community to conduct skin corrosion tests, which necessitate the maintenance of special facilities and skilled personnel, would prove unnecessarily burdensome and would yield little in the way of extra results. Accordingly, EPA is not including a skin corrosion test in the final regulation.

At least one commenter noted that the NACE metal corrosion test specified in the proposed regulations permits variation in a number of test conditions.

To correct this problem, EPA has standardized the conditions of the NACE test in its test methods guidance manual and has required generators to utilize this standardized version in running the test.

D. Section 261.23 (Characteristic of reactivity)

The proposed regulation defined reactive wastes to include wastes which (1) readily undergo violent chemical change (2) react violently or form potentially explosive mixtures with water (3) generate toxic fumes when mixed with water or, in the case of cyanide or sulfide bearing wastes, when exposed to mild acidic or basic conditions (4) explode when subjected to a strong initiating force (5) explode at normal temperatures and pressures or (6) fit within the Department of Transportation's forbidden explosives, Class A explosives, or Class B explosives classifications.

This definition was intended to identify wastes which, because of their extreme instability and tendency to react violently or explode, pose a problem at all stages of the waste management process. The definition was to a large extent a paraphrase of the narrative definition employed by the National Fire Protection Association, although test protocols for measuring thermal and shock instability were

prescribed as a partial aid in assessing reactivity. The Agency chose to rely on a descriptive, prose definition of reactivity because the available tests for measuring the variegated class of effects embraced by the reactivity definition suffered from a number of deficiencies.

EPA received a large number of comments which argued that the prose definition of reactivity employed by EPA is too indefinite and vague and gives generators inadequate guidance in assessing the reactivity of their waste. These comments advocated replacing the prose definition with a numerically quantified definition accompanied by appropriate testing protocols.

EPA has attempted where possible to define hazardous waste characteristics in terms of specific, numerically quantified properties measurable by standardized testing protocols. The available test methods for reactivity, however, suffer from a number of generic and individual shortcomings which make a numerically quantified definition with accompanying test protocols inappropriate. First, these tests are too restrictive in scope and confine themselves to measuring how one specific aspect of reactivity correlates with a specific initiating condition or stress. No test is sufficiently general to even begin to measure the variety of different stresses and reactions found within the reactive classification. Second, because the reactivity of a waste sample is a function not just of its intensive properties such as density and composition but also of its extensive properties such as mass and surface area, the reactivity of the sample as measured by the tests will not necessarily reflect the reactivity of the whole waste. Third, most of the available tests are not of the "pass-fail" type and require subjective interpretation of the results.

The unavailability of suitable test methods for measuring reactivity should not cause problems. Most generators of reactive wastes are aware that their wastes possess this property and require special handling. This in because such wastes are dangerous to the generators' own operations and are rarely generated from unreactive feed stocks. Consequently, the prose definition should provide generators with sufficient guidance to enable them to determine whether their wastes are reactive.

A number of commenters argued that the two proposed test methods for measuring reactivity were, among other things, unreliable and difficult to interpret. EPA agrees with these commenters that the two proposed test methods—the Explosion Temperature Test and the Bureau of Explosives shock instability test suffer from a number of inadequacies and add little to the prose definition. Although the Explosion Temperature Test was originally thought to be a suitable method for measuring one aspect of reactivity, field testing demonstrates that this test requires subjective interpretation of the results. Re-evaluation of the shock instability test suggests that it too possesses problems which make its utility as a measure of reactivity questionable—especially in view of its narrow scope. Accordingly, EPA has stricken these two tests from the regulations except to the extent the Department of Transportation's definition of Class A explosives requires use of the shock instability test.

Several commenters took issue with the inclusion in the reactivity definition of any waste which "generates toxic gases, vapors or fumes when mixed with water" and "any cyanide or sulfide bearing waste which can generate toxic gases, vapors or fumes when exposed to mild acidic or basic conditions." These commenters complained that this language lacks specificity. As an example, they noted that quite a few things contain sulfides and cyanides in trace amounts and can generate minute quantities of hydrogen sulfide or hydrogen cyanide under acidic or basic conditions.

EPA agrees that the language in question could benefit from clarification. It has accordingly amended the regulation to include only those wastes which generate toxic gases, vapors and fumes in *"a quantity sufficient to present a danger to human health or the environment"*. It has also specified that, by mild acidic or basic conditions, it means pH conditions of between 2 and 12.5. This pH range was chosen because only waste inside this pH range can be managed without regard to the prohibitions imposed by Subtitle C. Consequently, these pH conditions are likely to be the most stringent encountered by cyanide and sulfide bearing wastes.

E. Section 261.24 (Characteristic of EP Toxicity)

There is persuasive evidence that the contamination of groundwater through the leaching of waste contaminants from land disposed wastes is one of the most prevalent pathways by which toxic waste constituents migrate to the environment. EPA's damage files contain numerous incidents of groundwater pollution resulting from the indiscriminate dumping and improper landfilling of wastes. Additionally, the legislative history of RCRA is replete with indications that such groundwater contamination was one of Congress' primary areas of concern. In the proposed regulation, EPA addressed this problem by developing a test procedure called the Extraction Procedure (EP) designed to identify wastes likely to leach hazardous concentrations of particular toxic constituents into the groundwater under conditions of improper management. Under this procedure, constituents were extracted from the waste in a manner designed to simulate the leaching action that occurs in landfills. This extract was then analyzed to determine whether it possessed any of the toxic contaminants identified in the National Interim Primary Drinking Water Standards (NIPDWS). If the extract contained any of the contaminants in concentrations 10 times greater than that specified in the National Interim Primary Drinking Water Standards, the waste was considered to be hazardous.

Like other test procedures employed to identify hazardous characteristics, the EP was intended to serve as a quick test for identifying wastes which are capable of posing a substantial present or potential hazard when improperly managed. Consequently, in devising the test, EPA necessarily had to make certain assumptions about the improper management to which toxic wastes capable of contaminating groundwater are likely to be subjected. In making such assumptions, EPA believed it important to employ a reasonably conservative mismanagement scenario—in view of the statutory mandate to protect human health and the environment, the broad statutory definition of hazardous waste and also because the phenomenon of long term leaching is only incompletely understood. On the other hand, EPA considered it important not to utilize a wholly implausible mismanagement scenario, since by doing so it would end up regulating as hazardous those wastes which were quite unlikely to ever cause a problem.

The result of these deliberations was a decision to model the EP upon a mismanagement scenario for toxic wastes which constitutes a prevalent form of improper management—namely, the co-disposal of toxic wastes in an actively decomposing municipal landfill which overlies a groundwater aquifer. EPA realized in making its co-disposal assumption that actively decomposing municipal waste landfills generate more aggressive leachate media than other landfills and thus, that its assumption was a relatively conservative one. It

nevertheless believed the co-disposal assumption to be reasonable, first, because wastes are customarily landfilled, second, because most categories of waste have the potential to be disposed of in municipal waste landfills, third, because the predicted degree of contaminant concentration in leachate could occur with respect to wastes which are not likely to be disposed of in municipal landfills and fourth, because Congress expressed particular concern about the disposal of toxic wastes in municipal landfills. EPA also realized its assumption that the landfill overlies a groundwater aquifer was a relatively conservative one. It believed, however, that this assumption was consistent with its concern for the disposal of wastes in environmentally sensitive areas and with the fact that a groundwater body, once contaminated, may remain contaminated for a number of years. Furthermore, it believed this assumption to be somewhat mitigated by its further assumption that there would be some attenuation in the concentration of toxicants in the leachate between the point the leachate leaves the disposal site and the point the toxicants reach environmental receptors.

Taking these assumptions as its framework, EPA developed the EP test to simulate the physical processes which would occur in an actual landfill characterized by these assumptions. To simulate the acidic leaching medium which occurs in actively decomposing municipal landfills, EPA chose to employ an acetic acid leaching medium with a pH of 5.0 (±0.2). To simulate the leaching process, EPA specified a procedure requiring mixing of the solid component of the waste with the acidic leaching medium for a period of 24 hours. To duplicate the attenuation in concentration expected to occur between the point of leachate generation and the point of human or environmental exposure, EPA applied a dilution factor of 10 to the concentration of toxic constituents observed in the test extract.

EPA was convinced that the proposed EP represented a valid and acceptable test for identifying wastes likely to leach toxic constituents into groundwater. Because, however, this test was innovative in character and reflected a fair amount of groundbreaking inquiry, it drew the greatest response from the public of all the test protocols utilized in identifying the characteristics. The most important of these comments are discussed below.

A number of commenters expressed disagreement with EPA's proposed use of a 10-fold dilution factor to calculate the attenuation in toxicant concentration expected to occur between the point at which the leachate leaves the waste and the point of human or environmental exposure. Some commenters thought that the 10-fold dilution factor was too liberal and that no dilution factor would be more appropriate. The majority felt that the 10-fold dilution factor was too conservative and that a higher dilution factor would be more appropriate.

Choosing an attentuation factor which reasonably represents the amount of attenuation likely to occur in the real world was one of the most difficult problems EPA faced in formulating the EP—a problem which reflects in microcosm many of the difficulties of modeling complex physical processes with a short term test. As leachate migrates vertically from the landfill site towards the groundwater strata, a number of attenuating processes can occur—including adsorption, absorption, ion exchange, filtration, and dilution. When the leachate enters the groundwater zone its movement changes from vertical to horizontal and it will tend to form a slug or plume of contaminated water rather than mix generally with the groundwater flow. This plume of contaminants may experience some dilution, depending on the local geology, the groundwater flow, and the nature of the contaminants. Once the plume of contaminated water is drawn into a pumping well, some further dilution tends to take place, depending upon the amount of water withdrawn and the rate at which it is withdrawn. Unfortunately, all these attenuation mechanisms are dependent upon site specific conditions. While some sites may exhibit attenuation of 500-fold, others will exhibit very little attenuation at all. Moreover over time, a site that originally exhibits 500-fold attenuation may become so saturated that the attenuation mechanisms no longer work and the site begins to flush at the same rate at which it is charged.

In order to formulate a reasonable dilution factor, EPA assumed in the proposed regulations that leachate from the landfill passed unattenuated through the soil underlying the landfill to the groundwater zone and that drinking water wells were situated 500 feet down gradient from the landfill site. Relying on projections from a mathematical model which incorporated these assumptions and on empirical data from field analyses, EPA concluded that a dilution factor of 10 was a conservative, but reasonable, figure.

EPA has had an opportunity to carefully re-evaluate its original choice of a dilution factor and is now of the opinion that the 10-fold dilution factor was inappropriate. A number of considerations have prompted it to come to this conclusion. In the first place, EPA is concerned that, while the dilution factor plays a critically important role in determining the scope of coverage of the EP, there is relatively little empirical data upon which to base such an attenuation factor. It is consequently somewhat troubled by its assumption that the soil underlying the landfill is a delay mechanism only and that there is no attenuation in the concentration of toxic contaminants between the point of actual leachate generation and arrival at the groundwater aquifer. Second, in view of this uncertainty, EPA attaches some importance to the fact that there is no variance or "delisting" procedure for wastes which fail the EP. This absence of a variance procedure, while perfectly permissible, tends to magnify the consequences of a wastes being anomalously brought into the system by the EP. Third, EPA believes the EP to be a somewhat less precise instrument than the listing mechanism for determining hazard, inasmuch as the EP fails to take into account factors such as the concentration of toxicants in the waste itself and the quantity of waste generated which could have a bearing on the hazardousness of the waste. EPA consequently prefers to entrust determinations of marginal hazard to the listing mechanism rather than to the EP.

On the basis of these considerations, EPA has decided, pending the completion of further studies, to alter the proposed dilution factor by adopting an attenuation factor of 100. EPA is adopting a 100-fold attenuation factor because it is confident that anything which fails the EP at this factor has the potential to present a substantial hazard regardless of the attentuation mechanisms at play. If forthcoming studies demonstrate that another attenuation factor is more appropriate EPA will adjust the dilution factor accordingly.

EPA does not intend this alteration in the dilution factor to constitute what may be perceived as an untoward relaxation of the EP. It is simply electing to exercise a degree of caution in the face of the lack of empirical substantiation for its EP leaching test to ensure that the EP only captures wastes which are certain to present a substantial hazard. Since this alteration of the attenuation factor is based as much on EPA's desire to engage in

cautionary rulemaking as on an environmental re-evaluation of the attenuative processes which influence concentrations in leachate, EPA has listed and intends to continue to list wastes which have extract concentrations of less than 100-times drinking water standards. This listing will to a significant degree compensate for the alteration in the attenuation factor and will prevent the overall coverage of the Subtitle C regulations from being measurably reduced.

A number of commenters argued that EPA improperly based the EP on a mismanagement scenario which assumed co-disposal in the acidic environment of a municipal waste landfill. These commenters generally argued that the co-disposal assumption is inapplicable to numerous classes of waste which are never co-disposed with municipal wastes and which do not leach at the aggressive rates characteristic of co-disposal situations. These commenters suggested that EPA employ an alternative leachate medium, such as distilled water, for those wastes which are unlikely to be co-disposed with municipal wastes.

EPA disagrees with these commenters. EPA believes that the level of leachate concentration predicted by the EP is reasonably in keeping with the concentrations which could realistically occur in most waste management situations and that employment of an acidic leaching medium is therefore appropriate. Most wastes, even those which are unlikely to be disposed of in a municipal landfill, are likely to come into contact with some form of acidic leaching media during their management histories or could otherwise encounter environments which could cause them to leach comparable levels of toxic constitutents. Furthermore, inasmuch as the phenomenon of long term leaching is not well understood and there is no consensus within the scientific community on a short term leaching test, EPA believes it has the power to employ a leaching model which fails to take into account the physical processes affecting particular generators even if this model errs on the side of caution. See, *Ethyl Corp.* v. *EPA*, 541 F.2d 1, 24–29 (D.C. Cir. 1976 *en banc*); *Hercules, Inc.* v. *EPA*, 598 F.2d 91, 104–106 (D.C. Cir. 1978).

In any event, the change to an attenuation factor of 100 lays to rest the concerns of those who argued that the acidic leaching medium was too aggressive to apply to them. EPA is quite convinced that any waste which fails the EP at the 100-times standard presents the potential for substantial hazard if improperly managed no matter what leaching media it is actually exposed to.

A number of commenters argued that the EP is not sufficiently reproducible for use in defining hazardous waste. Some commenters, basing their argument on studies which have been conducted on the reproducibility of the EP, argued that these studies demonstrate an unacceptable variability in the results obtained by the EP. Other commenters, who did not base their arguments on these studies, argued simply that EPA has not shown the EP to be reproducible and therefore may not appropriately employ the EP in a regulatory framework.

EPA disagrees. Sensitive throughout the process of developing the EP to the issue of ensuring reproducibility, EPA commissioned a number of studies to evaluate the EP, including a study by the NUS Corporation, a study by the American Electroplaters' Society, and an ongoing study being conducted by the Oak Ridge National Laboratory. In addition, a study commissioned by the Electric Power Research Institute (EPRI) has been completed. None of these studies present enough data to draw any hard and fast conclusions. However, data from the EPRI report—the only report which was able to separate out the reproducibility of the EP from the reproducibility of the analytical procedures—suggests that the reproducibility of the EP itself is of the same order of magnitude as the analytical procedures used to analyze the toxic constituents in the extract. Since these analytical procedures have proven to be widely acceptable to private industry, EPA believes that the EP should also prove acceptable.

EPA concedes that the preliminary data indicate some variability in the results obtained by the EP. This, however, is true of all analytical procedures and test methods, especially those which are novel in character. Furthermore, variability can be easily corrected by running further replicates of the test to achieve greater certainty in the results. To accommodate any problems with variability, EPA intends to provide generators with guidance on the number of extractions which they can perform if they want to ensure confidence in the result. In addition, EPA is engaged in research studies which will enable it to further isolate and get a handle on the causes of this variability.

A number of commenters argued that extract from the EP should be tested for toxic contaminants other than those specified in the National Interim Primary Drinking Water Standards.

EPA originally intended the extraction procedure to identify toxic contaminants other than those specified in the National Interim Primary Drinking Water Standards. EPA has been unable to do this, however, because no other chronic exposure threshold levels relating to drinking water consumption have been established for other contaminants. This should not cause a problem, because EPA is regulating wastes containing non-drinking water standard contaminants through the listing process. EPA will reassess its position on this issue, when thresholds are developed for additional contaminants or when the Clean Water Act Water Quality Criteria are adopted in final form.

The proposed EP required generators to separate the liquid and solid portions of their waste as the first step of the procedure, based on the assumption that the liquid portion of the waste would flow out of the landfill independent of any leaching action. Generators were then required to mix the separated solid portion with the acidic leaching medium and, after a further separation, combine the resulting extract with the originally separated liquid portion for analysis. EPA gave generators the option of using either centrifugation or filtration to perform the initial solid-liquid separation and to perform the subsequent separation of solid from leaching solution. However, information obtained since publication of the proposed regulation indicates that use of centrifugation alone is not as efficient as filtration and can lead to carryover of particles larger than 0.45 um. Since a filter the size of 0.45 um was originally selected because particles larger than 0.45 um are expected to be filtered out by the soil prior to reaching the groundwater, EPA has revised the EP to require filtration of both the liquid portion and the extract prior to analysis.

A number of commenters said they encountered severe operational problems when performing the EP on liquids containing very small percentages of solids. To accommodate this problem, EPA is amending the proposed regulation so generators need not perform the EP on liquids containing less than 0.5% solids. Instead, the liquid itself, after filtration, should be considered the extract and directly analyzed for its toxic constituents.

VII. Subpart D

A. Sections 261.31 and 261.32 (Hazardous Wastes From Specific and Non-Specific Sources)

1. *Methodology for Listing Hazardous Waste Streams.* Detailed justification

for listing each hazardous waste in Subpart D is contained in specific background documents, and so will not be set forth in this preamble. The general methodology used to support listings will, however, briefly be described.

The listing documents are based on the listing criteria contained in § 261.11. The documents are organized in the following sequence: (1) A summary of the Administrator's basis for listing each identified waste stream; (2) a brief description of the industry (or industries) generating the listed waste stream; (3a) a description of the manufacturing process or other activity which generates the waste, (3b) identification of waste composition, constituent concentrations, and annual quantity generated,[1] and (3c) a description of waste management methods; (4) a discussion of the basis for listing each waste stream (described more fully below); and (5) a summary of the adverse health effects of each of the waste constituents of concern. The documents also contain appendices describing in more detail the adverse health effects of the waste constituents of concern, and (for certain documents) compiling available environmental fate and transport data (including data on waste constituent solubility, volatility, and environmental persistence) for each such waste constituent.

a. *Basis for Listing Toxic Wastes.* (1) Outline of Listing Discussion.

For hazardous wastes listed because they meet the criteria of toxicity, the discussion of the basis for listing identifies the waste constituents of concern, whether these constituents are present in significant concentrations, and the hazards associated with each waste constituent. The discussion then addresses whether these waste constituents, if the waste are managed improperly, could migrate from waste management sites, persist in the environment, and reach environmental receptors so as to cause substantial hazard. The analysis generally follows a physical continuum: whether waste constituents are inherently capable of migrating from the matrix of the waste in concentrations sufficient to cause substantial hazard, whether waste mismanagement could lead to environmental release of the migrating waste constituents, and whether waste constituents are mobile and persistent enough to reach environmental receptors and cause substantial hazard upon environmental release. In some cases, actual damage incidents involving the waste or waste constituents demonstrate empirically that waste constituents may migrate, persist, and cause substantial harm if mismanaged.[2]

A word as to the types of mismanagement situations considered. The Agency has limited its discussion to waste management situations which could plausibly occur with regard to the waste at issue. In the Agency's view, the hazard posed by a waste are not "substantial" (Section 1004(5)(B)) if hazards could arise only as a result of implausible types of waste mismanagement. Thus, the Agency would not examine possible hazards arising from improper waste incineration if the waste in question is not likely to be incinerated. On the other hand, the fact that a waste is properly managed by particular generators or particular classes of generators does *not* make the waste non-hazardous, as the statute requires that EPA determine whether a waste is hazardous if substantial hazard could result when wastes are "improperly treated, stored, transported, or disposed of, or otherwise managed." The potential of the waste to cause hazard is therefore the key factor. Consequently, if most or all generators of an otherwise hazardous waste dispose of the waste properly, for example in lined lagoons, the Agency may still consider hazards which could result from improper waste lagooning.[3]

(2) Relative Importance Attached to Identity of Waste Constituents and Constituents' Transport and Fate in Making Toxicity Listing Determinations.

It must be emphasized that in making listing determinations, the Agency's principal focus is on the identity of the waste's constituents, and on constituent concentrations in the waste and the nature of the toxicity presented by the constituents. Where a waste contains significant concentrations of hazardous waste constituents, the Agency is likely to list the waste as hazardous unless it is evident that the waste constituents are incapable of migrating in significant concentrations even if improperly managed, or that the waste constituents are not mobile or persistent should they migrate. This is particularly true where the waste constituents include suspect or proven carcinogens. As EPA recently stated, "(T)here is no scientific basis for estimating 'safe' levels of carcinogens. The draft criteria for carcinogens therefore state that the recommended concentration for maximum protection of human health is zero." (EPA *Water Quality Criteria,* 44 FR 15926, 15930 (March 15, 1979).) Thus, if suspect or known carcinogens are present, an additional cancer may result should the waste constituent migrate and reach a receptor in any concentration, certainly a sufficient risk to constitute a "substantial present or potential hazard" (Section 1004(5)(B)). In this situation, the Agency would require virtual assurance that waste constituents will not migrate and persist if improperly managed to justify a decision not to list the waste.

The Agency therefore does not seek to demonstrate that waste constituents will migrate and persist in sufficient concentrations to cause substantial hazard. Rather, fate and transport information is relevant to show that the potential for harm inherent in the waste (by virtue of its composition) will not eventuate. But, as stated, there must be a very strong likelihood that hazardous constituents are unable to migrate or persist to cause substantial harm before the Agency will decide not to list a waste.[4]

The Agency believes that this methodology is fully in accord with statutory requirements. Thus, this approach accords with the requirement of Section 3001(a) that environmental fate be considered in identifying wastes as hazardous. At the same time, the key focus is on the inherent potential of waste constituents to cause substantial harm, in accord with the definition of hazardous waste, which requires only that a waste "may pose a substantial present or *potential* hazard" to be hazardous. (Section 1004(5)(B), emphasis added.)

(3) Data Base for Toxicity Listing Determinations.

The Agency anticipates arguments that these toxicity listing determinations are made on the basis of inadequate data, and that listings be deferred until further information is gathered. EPA recognizes that these listing

[1] Waste composition and constituent concentrations have been determined either by actual analysis of waste samples, through literature searches, or on the basis of process engineering and process chemistry assumptions. When process assumptions are used to identify waste constituents and concentrations, the bases for the assumptions are contained in the document.

[2] Other factors identified in § 261.11(a)(3) are also considered when relevant, and when information is available. These factors include the quantities of waste managed, and actions of other governmental agencies or regulatory programs with regard to health or environmental hazards posed by the waste or by waste constituents.

[3] Indeed, in this hypothetical example, the fact that an industry takes special precautions in managing the waste suggests that the industry itself regards the waste as hazardous.

[4] § 261.11(a)(3) reflects that the waste's composition is the key factor in determining to list wastes as hazardous, since wastes containing enumerated constituents are to be listed unless consideration of particular additional factors demonstrates that the wastes do not meet the statutory hazardous waste definition.

determinations are essentially qualitative judgments, generally involving expert assumptions based on available physical data rather than precise field determinations of waste composition or of how the wastes will act under identified conditions. However, the statute requires only that a qualitative judgment be made, namely that the wastes, if mismanaged, pose sufficient potentiality of hazard to warrant careful regulation. The Agency believes that it has compiled sufficient information on which to make this judgment. Nor would the delay necessary to compile in-depth (though quite likely cumulative or redundant) information on potentially hazardous wastes be sufferable in light of the urgent need for rapid implementation of the hazardous waste management program.[5] In any case, opportunity is afforded by means of a new comment period for affected parties to present additional information on the listed waste streams, and such comments are solicited.

b. Basis for Listing Ignitable, Corrosive, Reactive or EP Toxic Wastes

The basis for listing ignitable, corrosive, or reactive wastes is much simpler. These wastes, to be listed, must possess the appropriate characteristic, and the listing discussion is directed toward making this demonstration.

2. *Legal Authority to List Wastes Generically.* A number of commenters challenged the Agency's legal authority to list wastes generically. They stated that under Section 3001(b), the Administrator is to list "particular hazardous wastes," arguing that this language requires wastes to be listed individually, rather than as a generic class. These commenters also argued that the statute's legislative history supports their view, noting that the House report to RCRA states that "the Administrator shall promulgate regulations identifying and *specifically listing* those hazardous wastes subject to this title." H.R. Rep. at 56 (empasis added). The Agency disagrees with this interpretation. Although Congress clearly intended to distinguish the promulgation of hazardous waste characteristics from the listing of hazardous wastes, there is no clear indication that Congress further intended to limit the Administrator's discretion by precluding listing of classes of wastes. In the Agency's view, a class of wastes may be listed generically so long as most of the wastes in the class are typically or frequently hazardous, and so long as the listing description is sufficiently specific and particularized for individual generators to determine whether their wastes streams are included within the listing.

Thus, Section 3001(a), far from prohibiting listing of wastes by classes, simply distinguishes the use of criteria to identify hazardousness characteristics and to identify listed hazardous wastes.

> The Administrator shall * * * develop and promulgate criteria for identifying the characteristics of hazardous waste, and for listing hazardous waste * * *

Section 3001(b) carries forward this distinction:

> [T]he Administrator shall promulgate regulations identifying the characteristics of hazardous waste and listing particular hazardous wastes * * * Such regulations shall be based on the criteria promulgated under subsection (a) * * *

To argue that Section 3001(b) was intended to bar any listing of wastes by class consequently reads far too much into the language of that provision. Indeed, Section 3001(a) does *not* refer to listing of particular wastes. This wording certainly militates against attaching too much importance to the reference to "particular wastes" in Section 3001(b).[6]

The legislative history likewise indicates that Congress' concern was that the identification of wastes through characteristics or through listing be regulatorily distinct mechanisms, and that the listing criteria not be confused with hazardous wastes themselves, *not* that generic listing be prohibited. The House report to RCRA thus refers to a "bifurcation of developing the criteria for what is a hazardous waste separate from the identification and listing of the hazardous wastes * * *" and cautions that "the critera for determining what should be considered hazardous should not be confused with an actual hazardous waste * * *" H.R. Rep. at 25.

Moreover, Congress itself, in the principal report to RCRA, used generic waste descriptions to identify hazardous wastes involved in damage incidents. Examples include identification of "electroplating wastes" (H.R. Rep. at 18), waste "petrochemicals" (*id.* at 18, 19), and "munitions waste" (*id.* at 20). This means of identification again suggests strongly that Congress envisioned generic identification as a means of bringing hazardous wastes into the Subtitle C management system.

Some commenters went on the argue that the statutory requirement to take factors such as toxicity, persistence, potential for bioaccumulation, quantity, and concentration into account in making listing determinations (see Sections 3001(a) and 1004(5); *see also* H.R. Rep. at 25) demonstrates Congresssional intent to prohibit generic listings because "(t)hese factors by their very nature are specific to particular hazardous waste rather than to generic categories." (Comments of Dow Chemical Co., October 10, 1979, p. 10). The Agency again disagrees. A class of wastes may exhibit sufficient unformity of hazard to warrant listing on a class basis. (The Agency of course, must demonstrate that sufficient uniformity exists or is likely to exist). Furthermore, the commenters' argument, taken to its logical conclusion, would mean that the Agency could only list wastes on a generator by generator basis, since waste streams will vary to some degree with respect to these factors depending upon the precise composition of the individual waste (although the degree of difference ordinarily will not be of regulatory significance). Yet Congress clearly did not envision site-by-site listing.

The Agency therefore intends to list generically those wastes which demonstrate a reasonable likelihood of hazard as a class. The listing descriptions will be sufficiently specific to allow generators to determine if their wastes are covered, and, as discussed above, the listing of wastes will be distinct from their identification by means of hazardousness characteristics. This approach, we believe, is fully in accord with Congressional intent.

3. *Changes in Proposed Waste Listing Descriptions and Proposed Waste Lists.* Certain of the waste listing descriptions proposed in December, 1978 have been revised in the lists contained in §§ 261.31 and 261.32. These changes generally were made to clarify where in the process wastes are generated so as to enable generators to determine more easily if their wastes are listed. Since the coverage of these clarified listing descriptions remains identical with the

[5] *See, e.g., Report on Hazardous Waste Management and the Implementation of the Resource Conservation and Recovery Act,* Senate Subcommittee on Oversight of Government Management of the Senate Committee on Governmental Affairs, 96th Cong., 2d Sess. 7 (1980).

[6] In any case, the words "particular" and "specific" do not necessarily connote "individualized." For instance, the first definition of "specific" in Webster's *New Collegiate Dictionary* is "constituting or falling into a specifiable category." Similarly, the same source defines "particular" as "distinctive among others of the same general category." Thus, the statutory language, far from requiring individualized listing, requires that listing be done with sufficient particularity to distinguish listed and unlisted wastes.

proposal, the revised descriptions are not being reproposed.

Certain other listed waste streams arise out of waste generation processes listed in the December proposal, but are newly identified. These waste streams are being proposed today, rather than issued in interim final form.

Finally, some of the waste streams initially proposed are not contained in the present list of wastes. The Agency's reasons for this action are discussed in Section III A.

B. Section 261.33 (Discarded Commercial Chemical Products, Off-Specification Species, Containers, and Spill Residues Thereof)

The proposed regulation contained three appendices listing a variety of materials which the Agency proposed to treat as hazardous waste if discarded. Appendix III listed selected cancelled pesticides or pesticides undergoing RPAR (Rebuttable presumption against registration) review within the Agency that were not listed elsewhere in the proposed regulation. Appendix IV listed selected substances regulated by the Department of Transportation (DOT) and classified as Poison A, Poison B, or ORM–A that were also not listed elsewhere. Appendix V listed substances which are being regulated as toxic priority pollutants under the Clean Water Act. In addition to the substances themselves, the regulation proposed to regulate (1) off-specification materials, which if they had met specifications, would have been shipped using the names of the substances listed in these appendices (2) containers, unless triple rinsed, containing the materials listed in the appendices, and (3) spill clean-up residues and debris from spills of materials listed in these appendices. Subsequently, in a supplemental proposed rule, EPA published another appendix (Appendix XII) listing thirty-three chemicals found to be human carcinogens or potential human carcinogens by the International Agency for Research on Cancer. 44 FR 49404 (August 22, 1979). In the proposed regulation, these materials were to be subject to the general exemption level of 100 kg/mo. Quantities of these materials below this level were not subject to full Subtitle C regulation.

In listing these materials in the proposed rule, EPA intended to encompass those chemical products which possessed toxic or other hazardous properties and which, for various reasons, are sometimes thrown away in pure or undiluted form. The reasons for discarding these materials might be that the materials did not meet required specifications, that inventories were being reduced, or that the product line had changed. The regulation was intended to designate chemicals themselves as hazardous wastes, if discarded, not to list all wastes which might contain these chemical constituents. In drawing up these lists, the Agency drew heavily upon previous work by EPA and other organizations identifying substances of particular concern.

On the basis of comments received and also EPA's own re-examination of the proposed rule, we have substantially revised this regulation. In the final regulations, commercial chemicals are treated in two separate provisions. First, substances listed in § 261.33(f) of the regulations are considered hazardous wastes if they or their off-specification species are thrown away in their pure form. These substances are regulated in the same manner as other hazardous wastes and are subject to the general exclusion level in § 261.5 (a) and (b) for the generation of small quantities of hazardous waste. Second, a number of the substances, which meet the criterion for listing acutely hazardous wastes, are separately listed in § 261.33(e). This section applies to the chemical substances if they or their off-specification species are thrown away in their pure form, containers and inner liners containing these materials, and spill residue and debris created by spills of these listed materials. Section 261.5(c) establishes low quantity exclusion levels for these acutely hazardous materials.

1. *Section 261.33(f) (Commercial Chemical Products).* A number of commenters stated that, as proposed, the materials listed in the various appendices were not tied to any of the criteria for listing, and, accordingly, the reasons for their listing were unclear. The Agency agrees that the basis for its proposed listings was not adequately specified. A table accompanying the background document on commercial chemical products sets forth the specific basis for including each substance on the list published today.

Commenters also expressed some uncertainty as to whether the proposed regulations made hazardous any waste that contained the listed substance as a constituent of the waste. The intent of the regulation was to encompass only those materials which were being thrown away in their pure form or as an off-specification species of the listed material, as well as the contaminated residues and debris from those materials. The final regulation has been redrafted to limit the application of this section to the commercial chemical product itself, its off-specification species and derived spill residues and debris.

Several commenters argued that the wholesale incorporation of lists developed by EPA or other Federal agencies for other regulatory purposes was not appropriate. In the proposal, EPA had, for example, listed all materials that DOT lists as ORM–A materials pursuant to its authority under the Hazardous Materials Transportation Act. A number of commenters argued that these substances should not be listed by EPA because DOT's basis for listing used different criteria—the potential for interfering with transportation. DOT's standard is very broad and somewhat vague: ORM–A material is one that has "an anesthetic, irritating, noxious, toxic or similar property which can cause extreme annoyance of discomfort to passengers and are in the event of leakage during transportation." 49 CFR 173.500(a)(1).

EPA agrees with these comments and, rather than adopting lists of substances on a wholesale basis, has evaluated each against EPA's criteria for listing. Included in § 261.33(f) are those chemical substances which are toxic and which meet the listing criteria set forth in § 261.11(a)(3). These hazardous properties have been documented in EPA rulemaking, studies and other materials, including health effects documents prepared in support of these regulations materials supporting RPAR actions background documents supporting National Interim Primary Drinking Water Standards, materials produced by EPA's Cancer Assessment Group and, in the case of chlorofluorcarbons, documents supporting regulations under TSCA.

This approach has led to certain deletions from the lists of hazardous wastes contained in the proposed rules. A table accompanying the background document sets forth the disposition of all 295 chemicals originally listed in the proposed rules. Eight substances have been deleted from the list because they did not meet any of the criteria for listing hazardous wastes; sixteen were deleted because the listing description was not precise enough to enable generators to determine whether particular materials fell within that description. Examples of these deletions are "medicines N.O.S." and "motor fuel antiknock compound." In addition, thirty-one substances are not presently listed because EPA lacks data to assess the propriety of listing them on the basis of the listing. These substances are presently under review by the Agency to

determine whether they should be included on the § 261.33(f) list.

This process has reduced the chemical products listed, to those substances which are demonstrated to pose a substantial threat to human health or the environment. These materials, their off-specification variants, and contaminated residues and debris from the spills of these materials are subject to full regulation under Subtitle C in the same manner as other hazardous wastes.

2. *Section 261.33(e) (Commercial Chemical Products).* In considering the hazards presented by commercial chemical products, EPA recognized that some substances in their pure form possessed extremely hazardous properties. To account for these substances, EPA has established a new criterion for listing which examines the potentially lethal capacity of chemical substances in very small quantities. The basis for this criterion is explained in section V.B. above.

Applying this criterion to the proposed lists of chemicals products has led the Agency to list 122 substances in § 261.33(e). As with the substances listed in § 261.33(f), the regulatory language has been clarified to restrict the application of this section to chemical products, or their off-specification species, and not to wastes which contain these materials as a constituents. Because of their acutely hazardous nature, however, containers and inner liners which contained these materials and spill cleanup debris and residues resulting from spill of these materials are also included.

At the suggestion of commenters, EPA also reviewed chemical substances on the TSCA inventory list for inclusion on the § 261.33(e) list. A number of those substances do meet the acutely hazardous criterion and accordingly have been added to the list. However, because all interested persons have not had an opportunity to comment on the listing of these materials, the Agency is promulgating them in interim final (together with the remainder of Subpart D).

The final regulations establish stringent quantity cutoff levels for materials listed in § 261.33(e). In the proposed regulation, all hazardous wastes in quantities generated or disposed of at rates greater than 100 kg/mo were subject to full Subtitle C regulation. Although the Agency recognized that many, if not all, of the proposed chemicals listed possessed acutely hazardous characteristics, it did not propose lesser limits for these substances because the general exclusion level—less than ½ of a 55 gallon drum—appeared sufficient to regulate most of the chemical products that would be thrown away. For the reasons discussed in section IV. E., above, the general exclusion level has been raised to 1000 kg/mo. This higher level undercuts the original rationale for proposing a single exclusion level for all hazardous wastes. Many commenters urged that EPA employ a degree of hazard system for determining exclusion levels, for allocating Agency resources and determining priorities, and for establishing management standards. Although EPA is unable to adopt a degree of hazard system, we agree with the commenters that considerations of hazard are appropriate in establishing quantity exclusion levels for those substances which posses acutely hazardous properties. The criterion used in listing these substances ensures that those materials that are listed in § 261.33(e) are those which are lethal in very small quantities.

Accordingly, the Agency has adopted very low exclusion levels for these chemical products and their off-specification variants, containers and inner liners which contained these materials, and spill residues and debris. The selection of these levels reflects the judgment of the Agency that, although even lesser quantities may be hazardous, the levels selected, on the basis of probable exposure scenarios, are sufficient to minimize the threat to human health and the environment while enabling the Agency to implement and enforce these regulations. The one kilogram level for the chemicals will, in the Agency's judgment, bring under full regulation virtually all of the substances being thrown away. The quantity limit for containers which have not been triple rinsed (20 liters) represents the Agency's judgment of probable exposure and consequential injury from the use of discarded containers. The Agency has records of damage incidents resulting from improperly disposed containers that occurred when people salvaged large containers for such uses as garbage containers and barbecue pits. The levels chosen for inner liners and spill residue and debris represent the same type of judgment based on probable exposure.

A number of commenters suggested that the proposed rule regarding containers be revised. The proposal had included within its scope all containers which had not been triple-rinsed. Some commenters argued that there were other effective ways of cleaning containers and therefore the rule was unduly restrictive. One commenter pointed out, for example, that the EPA registered label for certain pesticides requires different rinsing procedures from those specified in the proposed rule. EPA agrees with these comments and has revised the regulation to allow other cleaning methods provided they are equally effective.

The listing of spill residues and debris attracted several comments. One commenter suggested that small quantities of contaminated spill clean-up be excluded. EPA has, in the final regulation, excluded aggregate amounts of less than 100 kilograms. Another commenter felt that EPA should define the term "spill debris" more precisely to avoid including wrecked rail cars or trucks. EPA has chosen not to exclude such debris by definition. If contaminated, these items pose a substantial threat to human health and the environment and should be handled carefully. EPA presumes, however, that in virtually all cases, heavy equipment can be decontaminated and therefore will not become part of the contaminated debris.

C. Delisting

EPA's proposed regulations contained procedures allowing a person to show that a listed waste generated by an individual facility was not hazardous beause of plant-specific variations in raw materials, processes or other factors (§ 250.15). These demonstrations of non-hazardousness were to be based on the results of specific tests for each of the hazardous properties for which the waste was listed (§ 250.15(a)) and submitted and processed in accordance with procedures set forth in § 250.15(c) through (h) of the proposed regulations.

Although virtually all commenters supported the concept of a "delisting" process in principle, most were dissatisfied with the specifics of EPA's proposal. Many criticized the delisting standards as being too inflexible, too vague, and based on tests which EPA itself was unwilling to propose as characteristics or use as listing criteria; some specifically urged that other factors—including how a waste was managed at an individual facility—be considered in determining whether a waste should be delisted. Other commenters objected to the procedures themselves, urging EPA to provide trial-type hearings on delisting petitions, extensive procedural safeguards and multiple administrative appeals.

After re-examining its proposed regulation and considering public comments, EPA has concluded that its delisting procedures should be revised and simplified in four major respects.

First, EPA has concluded that the delisting of a waste from a particular

facility is really a modification of its original listing determination and therefore should take the form of a regulatory amendment to the lists of wastes in Subpart D. The informational requirements for petitions to amend Subpart D to exclude wastes from a particular generating facility are set forth in §§ 260.20 and 260.22 of this Chapter. EPA will follow the Administrative Procedures Act's informal rulemaking procedures in acting on them (*see* § 260.20).

Some commenters argued that EPA's delisting regulations should provide for elaborate adjudicatory hearings with administrative law judges. EPA thinks such procedures would be unduly costly, burdensome and time-consuming and that the relevant issues can be adequately aired and decided in informal rulemaking procedures. EPA is on firm legal ground in this regard, for RCRA requires only informal rulemaking here. The Supreme Court has recently confirmed that an agency need not provide more formal procedures than are specifically required by statute (*Vermont Yankee* v. *NRDC*, 435 U.S. 519, 524 (1978)).

The second major change which EPA has made in its delisting procedures pertains to the effect of filing a petition. In its proposal, EPA stated that a requested exclusion would take effect 90 days after submission, but that the Administrator could revoke the effectiveness at any time thereafter simply by disapproving the demonstration (§ 250.15(d)). In the regulations promulgated today, no exclusion will be deemed effective until either (i) EPA has taken final action under § 260.20(e), or (ii) EPA has granted a temporary exclusion on the grounds of substantial likelihood of success under § 260.22(m).

EPA has concluded that it would be inappropriate to consider a delisting petition effective until EPA has taken some affirmative action in response. Once a listing has been established through rulemaking procedures it must be presumed valid, and those seeking to amend any portion of it should have the burden of establishing the correctness of their position. The proposed provision allowing a demonstration to become effective without EPA action improperly shifted the burden. At the same time, new § 260.22(m) will benefit generators because EPA will be able to grant temporary exclusions in appropriate cases before the rulemaking process is complete.

The third major change which EPA has made to its proposed delisting regulations is to key the standards for approving a delisting petition to the criteria which EPA used to list the waste in the first place. This approach not only is consistent with EPA's decision to treat delisting as a rulemaking, but also is responsive to commenters' criticisms that EPA's proposed delisting standards were unrelated to its listing criteria. Moreover, because the listing criteria have been substantially clarified and expanded (see section V.B.), it is also responsive to objections that those standards were vague, inflexible and failed to consider the multiple factors which might cause a waste to be hazardous.

Two points concerning the standards for granting a delisting petition are deserving of special comment. First, the fact that a waste is properly managed by an individual facility is not grounds for delisting it, any more than the fact that a waste is generally properly managed by industry is grounds for not listing it (see section VII.A.). Second, in the case of a waste which has been listed for acute toxicity, a generator will be required to show not only that the waste does not meet EPA's acute toxicity criterion but also that it does not meet its general toxicity criterion. Although an off-specification acutely toxic waste or a mixture containing an acutely toxic waste may no longer be deadly, it may still continue to pose a substantial hazard to human health and the environment.

The final major revision which EPA has made in its proposed regulations relates to the effect of successful delisting petition. Under the regulations published today, a decision to exclude a waste from the hazardous waste lists in Subpart D is not a decision that the waste is not hazardous. It simply relegates the waste to the same general category as any other unlisted waste—*i.e.*, if the waste exhibits one of the characteristics, it must be regulated as hazardous waste. This approach is necessitated by the fact that wastes from individual facilities may exhibit characteristics not exhibited by waste in general and that, in deciding to list a waste, EPA has not tested it against every one of the characteristics.

VIII. Environmental, Economic and Regulatory Impacts

In accordance with Executive Order 11821, as amended by Executive Order 11949, and Executive Order 12044, EPA has prepared an Environmental Impact Analysis and a Regulatory Analysis of all of its Section 3001 through 3004 regulations. The Agency has also voluntarily prepared an Environmental Impact Statement for these regulations under the National Environmental Policy Act, 42 U.S.C. 4321 *et seq.*

Copies of these documents, and EPA's Reports Impact Analysis and Operations Resources Impact Analysis for Sections 3001 through 3004, may be reviewed in all EPA Regional Office Libraries, and at the EPA headquarters library, Room 2404, 401 M Street, S.W., Washington, D.C. 20460.

Appendix A—Scheduled June Promulgation

Generics

1. Paint residues generated from industrial painting
2. Wastewater treatment sludges from industrial painting [Comment: The above two listing descriptions have been changed from those originally proposed on December 18, 1978 (43 FR 58957) as: Paint wastes (such as used rags, slops latex sludge, spent solvent); Water-based paint waste; and Waste paint and varnish remover or stripper.]

Process Wastes

1. Woven fabric dying and finishing wastewater treatment sludges
2. Mercury bearing sludges from brine treatment and mercury bearing brine purification muds from the mercury cell process in chlorine production [Comment: This listing description includes two wastes which were originally proposed on December 18, 1978 (43 FR 58958) as: Mercury bearing sludges from brine purification muds from mercury cell process in chlorine production and mercury bearing brine purification muds from mercury cell process in chlorine production.]
3. Wastewater treatment sludge from the diaphragm cell process using graphite anodes in the production of chlorine [Comment: This listing description was originally proposed on December 18, 1978 (43 FR 58958) as: Wastewater treatment sludge from diaphragm cell process in production of chlorine.]
4. Chlorinated hydrocarbon bearing wastes from the diaphragm cell process using graphite anodes in chlorine production [Comment: This listing description was originally proposed on December 18, 1978 (43 FR 58958) as: Chlorinated hydrocarbon wastes from diaphragm cell process in chlorine production.]
5. Wastewater treatment sludges from the production of TiO_2 pigment using chromium bearing ores by the chloride process [Comment: This listing description was originally proposed on December 18, 1978 (43 FR 58958) as: Chromium bearing wastewater treatment sludges from the production of TiO_2 pigment by the chloride process.]

6. Wastewater treatment sludges from the production of TiO_2 pigment using chromium bearing ores by the sulfate process [Comment: This listing description was originally proposed on December 18, 1978 (43 FR 58958) as: Chromium bearing wastewater treatment sludges from the production of TiO_2 pigment by the sulfate process.]
7. Arsenic bearing sludges from the purification process in the production of antimony oxide
8. Antimony bearing wastewater treatment sludge from the production of antimony oxide
9. Solvent cleaning wastes from paint manufacturing
10. Water cleaning wastes from paint manufacturing
11. Caustic cleaning wastes from paint manufacturing
12. Wastewater treatment sludges from paint manufacturing
13. Air pollution control sludges from paint manufacturing [Comment: The above five listing descriptions have been changed from those originally proposed on December 18, 1978 (43 FR 58958) as: Wastewater treatment sludges from paint production and Air pollution control sludges from paint production.]
14. Still bottoms from aniline production
15. Sludges, wastes from tub washers (Ink Formulation)
16. Coking: Decanter tank tar/pitch/sludge [Comment: This listing description includes two wastes which were originally proposed on December 18, 1978 (43 FR 58959) as: Coking: Decanter tank tar and Coking: Decanter tank pitch sludge.]
17. Spend potliners (cathodes) from primary aluminum production
18. Lead bearing wastewater treatment sludges from gray iron foundries
19. Arsenic or organo-arsenic containing wastewater treatment sludges from the production of veterinary pharmaceuticals
20. Distillation residue from the separation of chlorobenzenes in the production of chlorobenzenes [Comment: This listing description was originally proposed on December 18, 1978 (43 FR 58958) as: Distillation residues from fractionating tower for recovery of benzene and chlorobenzenes.]
21. Emission control dust/sludge from ferrochromium-silicon production [Comment: This listing description was originally proposed on December 18, 1978 (43 FR 58959) as: Ferrochromesilicon furnace emission control dust or sludge.]
22. Emission control dust/sludge from ferrochrome production [Comment: This listing description was originally proposed on December 18, 1978 (43 FR 58959) as: Ferrochrome emissions control: furnace baghouse dust, and ESP dust.]
23. Emission control dust/sludge from ferromanganese production [Comment: This listing description was originally proposed on December 18, 1978 (43 FR 58959) as: Ferromanganese emission control: baghouse dusts and scrub water solids.]

Appendix B*—Scheduled Fall Promulgation

Generic

1. Reactor clean-up wastes from the chlorination, dehydrochlorination, or oxychlorination of aliphatic hydrocarbons
2. Fractionation bottoms from the separation of chlorination hydrocarbons
3. Distillation bottoms from the separation of chlorinated aliphatic hydrocarbons
4. Washer wastes from the production of chlorinated aliphatic hydrocarbons
5. Spent catalyst from the production of chlorinated aliphatic hydrocarbons
6. Reactor clean-up wastes from the chlorination of cyclic aliphatic hydrocarbons
7. Fractionation bottoms from the separation of chlorinated cyclic aliphatic hydrocarbons
8. Distillation bottoms from the separation of chlorinated cyclic aliphatic hydrocarbons
9. Washer wastes from the production of chlorinated cyclic aliphatic hydrocarbons
10. Spent catalyst from the production of chlorinated cyclic aliphatic hydrocarbons
11. Batch residues from the batch production of chlorinated polymers
12. Solution residues from the production of chlorinated polymers
13. Reactor clean-up wastes from the chlorination of aromatic hydrocarbons
14. Fractionation bottoms from the separation of chlorinated aromatic hydrocarbons
15. Distillation bottoms from the separation of chlorinated aromatic hydrocarbons
16. Washer wastes from the production of chlorinated aromatic hydrocarbons
17. Waste Oil [Comment: This listing description was originally proposed on December 18, 1978 (43 FR 58957) as: Waste lubricating oil and Waste hydraulic or cutting oil.]
18. Polychlorinated biphenyls (PCB) and PCB items as defined in 40 CFR Part 761 [Comment: The Agency indicated in the preamble to the Section 3004 regulations (43 FR 58993), their intention to integrate the TSCA regulations for the disposal of PCB's with the RCRA hazardous waste regulations.]

Process Wastes

1. Sub-ore from underground and surface mining of uranium, overburden from surface mining of uranium and waste rock from underground mining of uranium with a radium-226 activity in excess of 5pCi/gm [Comment: This listing description was originally proposed on December 18, 1978 (43 FR 58958) as: Waste rock and overburden from uranium mining.]
2. Leach zone overburden and discarded phosphate ore from phosphate surface mining and slimes from phosphate ore beneficiation [Comment: This listing description was originally proposed on December 18, 1978 (43 FR 58958) as: Overburden and slimes from phosphate surface mining.]
3. Waste gypsum from processing phosphate ore to produce phosphoric acid [Comment: This listing description was originally proposed on December 18, 1978 (43 FR 58958) as: Waste gypsum from phosphoric acid production.]
4. Slag and fluid bed prills from processing phosphate ore to produce elemental phosphorous [Comment: This listing description was originally proposed on December 18, 1978 (43 FR 58958) as: Slag and fluid bed prills from elemental phosphorous production.]
5. Washwater/sludges from ink printing equipment clean-up [Comment: This listing description includes three wastes which were originally proposed on August 22, 1979 (44 FR 49403 and 49404) as: Waste from equipment cleaning from flexoprinting in the manufacture of paperboard boxes; Waste from press clean-up in newspaper printing and Wash water from printing ink equipment cleaning.]
6. Wastes from photographic processing [Comment: This listing was originally proposed on August 22, 1979 (44 FR 49404) as: Waste Ferricyanide bleach, dichromate bleach, color developer (Agfa), bleach fix (Agfa) and acid solution from photographic processing.]
7. Lead acid storage battery production wastewater treatment sludges
8. Lead acid storage battery production clean-up wastes from cathode and anode paste production

*Since these wastes will not be promulgated until the fall, the listing descriptions for some of these wastes may change as additional information is gathered.

9. Nickel cadmium battery production wastewater treatment sludges
10. Lead slag from lead alkyl production
11. Emission control dust/sludge from reverberatory furnace and converters from primary copper production [Comment: This listing description was included in the listing description originally proposed on December 18, 1978 (43 FR 58959) as: Primary copper smelting and refining electric furnace slag, converter dust, acid plant sludge and reverberatory dust.]

Dated: May 2, 1980.

Douglas M. Costle,

Administrator.

Title 40 of the Code of Federal Regulations is amended by adding the following new Part 261:

PART 261—IDENTIFICATION AND LISTING OF HAZARDOUS WASTE

Subpart A—General

Sec.

261.1 Purpose and scope.
261.2 Definition of solid waste.
261.3 Definition of hazardous waste.
261.4 Exclusions.
261.5 Special requirements for hazardous waste produced by small quantity generators.
261.6 Special requirements for hazardous waste which is used, re-used, recycled or reclaimed.

Subpart B—Criteria for Identifying the Characteristics of Hazardous Waste and for Listing Hazardous Wastes

261.10 Criteria for identifying the characteristics of hazardous wastes.
261.11 Criteria for listing hazardous waste.

Subpart C—Characteristics of Hazardous Waste

261.20 General.
261.21 Characteristic of ignitability.
261.22 Characteristic of corrosivity.
261.23 Characteristic of reactivity.
261.24 Characteristic of EP toxicity.

Subpart D—Lists of Hazardous Wastes

261.30 General.
261.31 Hazardous wastes from non-specific sources.
261.32 Hazardous wastes from specific sources.
261.33 Discarded commercial chemical products and associated off-specification materials, containers and spill residues.

Appendices

Appendix I—Representative Sampling Methods
Appendix II—EP Toxicity Test Procedures
Appendix III—Chemical Analysis Test Methods
Appendix IV—[Reserved for Radioactive Waste Test Methods]
Appendix V—[Reserved for Infectious Waste Treatment Specifications]
Appendix VI—[Reserved for Etiologic Agents]
Appendix VII—Basis for Listing
Appendix VIII—Hazardous Constituents

Authority: Secs. 1006, 2002(a), 3001, and 3002 of the Solid Waste Disposal Act, as amended by the Resource Conservation and Recovery Act of 1976, as amended (42 U.S.C. 6905, 6912, 6921 and 6922).

Subpart A—General

§ 261.1 Purpose and scope.

(a) This Part identifies those solid wastes which are subject to regulation as hazardous wastes under Parts 262 through 265 and Parts 122 through 124 of this Chapter and which are subject to the notification requirements of Section 3010 of RCRA. In this Part:

(1) Subpart A defines the terms "solid waste" and "hazardous waste," identifies those wastes which are excluded from regulation under Parts 262 through 265 and 122 through 124 and establishes special management requirements for hazardous waste produced by small quantity generators and hazardous waste which is used, re-used, recycled or reclaimed.

(2) Subpart B sets forth the criteria used by EPA to identify characteristics of hazardous waste and to list particular hazardous wastes.

(3) Subpart C identifies characteristics of hazardous waste.

(4) Subpart D lists particular hazardous wastes.

(b) This Part identifies only some of the materials which are hazardous wastes under Sections 3007 and 7003 of RCRA. A material which is not a hazardous waste identified in this part is still a hazardous waste for purposes of those sections if:

(1) In the case of Section 3007, EPA has reason to believe that the material may be a hazardous waste within the meaning of Section 1004(5) of RCRA.

(2) In the case of Section 7003, the statutory elements are established.

§ 261.2 Definition of solid waste.

(a) A solid waste is any garbage, refuse, sludge or any other waste material which is not excluded under § 261.4(a).

(b) An "other waste material" is any solid, liquid, semi-solid or contained gaseous material, resulting from industrial, commercial, mining or agricultural operations, or from community activities which:

(1) Is discarded or is being accumulated, stored or physically, chemically or biologically treated prior to being discarded; or

(2) Has served its original intended use and sometimes is discarded; or

(3) Is a manufacuring or mining by-product and sometimes is discarded.

(c) A material is "discarded" if it is abandoned (and not used, re-used, reclaimed or recycled) by being:

(1) Disposed of; or

(2) Burned or incinerated, except where the material is being burned as a fuel for the purpose of recovering usable energy; or

(3) Physically, chemically, or biologically treated (other than burned or incinerated) in lieu of or prior to being disposed of.

(d) A material is "disposed of" if it is discharged, deposited, injected, dumped, spilled, leaked or placed into or on any land or water so that such material or any constituent thereof may enter the environment or be emitted into the air or discharged into ground or surface waters.

(e) A "manufacturing or mining by-product" is a material that is not one of the primary products of a particular manufacturing or mining operation, is a secondary and incidental product of the particular operation and would not be solely and separately manufactured or mined by the particular manufacturing or mining operation. The term does not include an intermediate manufacturing or mining product which results from one of the steps in a manufacturing or mining process and is typically processed through the next step of the process within a short time.

§ 261.3 Definition of hazardous waste.

(a) A solid waste, as defined in § 261.2, is a hazardous waste if:

(1) It is not excluded from regulation as a hazardous waste under § 261.4(b); and

(2) It meets any of the following criteria:

(i) It is listed in Subpart D and has not been excluded from the lists in Subpart D under §§ 260.20 and 260.22 of this Chapter.

(ii) It is a mixture of solid waste and one or more hazardous wastes listed in Subpart D and has not been excluded from this paragraph under §§ 260.20 and 260.22 of this Chapter.

(iii) It exhibits any of the characteristics of hazardous waste identified in Subpart C.

(b) A solid waste which is not excluded from regulation under paragraph (a)(1) of this section becomes a hazardous waste when any of the following events occur:

(1) In the case of a waste listed in Subpart D, when the waste first meets the listing description set forth in Subpart D.

(2) In the case of a mixture of solid waste and one or more listed hazardous wastes, when a hazardous waste listed

in Subpart D is first added to the solid waste.

(3) In the case of any other waste (including a waste mixture), when the waste exhibits any of the characteristics identified in Subpart C.

(c) Unless and until it meets the criteria of paragraph (d):

(1) A hazardous waste will remain a hazardous waste.

(2) Any solid waste generated from the treatment, storage or disposal of a hazardous waste, including any sludge, spill residue, ash, emission control dust or leachate (but not including precipitation run-off), is a hazardous waste.

(d) Any solid waste described in paragraph (c) of this section is not a hazardous waste if it meets the following criteria:

(1) In the case of any solid waste, it does not exhibit any of the characteristics of hazardous waste identified in Subpart C.

(2) In the case of a waste which is a listed waste under Subpart D, contains a waste listed under Subpart D or is derived from a waste listed in Subpart D, it also has been excluded from paragraph (c) under §§ 260.20 and 260.22 of this Chapter.

§ 261.4 Exclusions.

(a) *Materials which are not solid wastes.* The following materials are not solid wastes for the purpose of this Part:

(1) (i) Domestic sewage; and

(ii) Any mixture of domestic sewage and other wastes that passes through a sewer system to a publicly-owned treatment works for treatment. "Domestic sewage" means untreated sanitary wastes that pass through a sewer system.

(2) Industrial wastewater discharges that are point source discharges subject to regulation under Section 402 of the Clean Water Act, as amended.

[Comment: This exclusion applies only to the actual point source discharge. It does not exclude industrial wastewaters while they are being collected, stored or treated before discharge, nor does it exclude sludges that are generated by industrial wastewater treatment.]

(3) Irrigation return flows.

(4) Source, special nuclear or by-product material as defined by the Atomic Energy Act of 1954, as amended, 42 U.S.C. 2011 *et seq.*

(5) Materials subjected to in-situ mining techniques which are not removed from the ground as part of the extraction process.

(b) *Solid wastes which are not hazardous wastes.* The following solid wastes are not hazardous wastes:

(1) Household waste, including household waste that has been collected, transported, stored, treated, disposed, recovered (e.g., refuse-derived fuel) or reused. "Household waste" means any waste material (including garbage, trash and sanitary wastes in septic tanks) derived from households (including single and multiple residences, hotels and motels.)

(2) Solid wastes generated by any of the following and which are returned to the soils as fertilizers:

(i) The growing and harvesting of agricultural crops.

(ii) The raising of animals, including animal manures.

(3) Mining overburden returned to the mine site.

(4) Fly ash waste, bottom ash waste, slag waste, and flue gas emission control waste generated primarily from the combustion of coal or other fossil fuels.

(5) Drilling fluids, produced waters, and other wastes associated with the exploration, development, or production of crude oil, natural gas or geothermal energy.

§ 261.5 Special requirements for hazardous waste generated by small quantity generators.

(a) Except as otherwise provided in this section, if a person generates, in a calendar month, a total of less than 1000 kilograms of hazardous wastes, those wastes are not subject to regulation under Parts 262 through 265 and Parts 122 through 124 of this Chapter, and the notification requirements of Section 3010 of RCRA.

(b) If a person whose waste has been excluded from regulation under paragraph (a) of this Section accumulates hazardous wastes in quantities greater than 1000 kilograms, those accumulated wastes are subject to regulation under Parts 262 through 265 and Parts 122 through 124 of this Chapter, and the notification requirements of Section 3010 of RCRA.

(c) If a person generates in a calendar month or accumulates at any time any of the following hazardous wastes in quantities greater than set forth below, those wastes are subject to regulation under Parts 262 through 265 and Parts 122 through 124 of this Chapter, and the notification requirements of Section 3010 of RCRA:

(1) One kilogram of any commercial product or manufacturing chemical intermediate having the generic name listed in § 261.33(e).

(2) One kilogram of any off-specification commercial chemical product or manufacturing chemical intermediate which, if it met specifications, would have the generic name listed in § 261.33(e).

(3) Any containers identified in § 261.33(c) that are larger than 20 liters in capacity;

(4) 10 kilograms of inner liners from containers identified under § 261.33(c);

(5) 100 kilograms of any residue or contaminated soil, water or other debris resulting from the cleanup of a spill, into or on any land or water, of any commercial chemical product or manufacturing chemical intermediate having the generic name listed in § 261.33(e).

(d) In order for hazardous waste to be excluded from regulation under this section, the generator must comply with § 262.11 of this Chapter. He must also either treat or dispose of the waste in an on-site facility, or ensure delivery to an off-site treatment, storage or disposal facility, either of which is:

(1) Permitted by EPA under Part 122 of this Chapter, or by a State with a hazardous waste management program authorized under Part 123 of this Chapter;

(2) In interim status under Parts 122 and 265 of this Chapter; or,

(3) Permitted, licensed, or registered by a State to manage municipal or industrial solid waste.

(e) Hazardous waste subject to the reduced requirements of this section may be mixed with non-hazardous waste and remain subject to these reduced requirements even though the resultant mixture exceeds the quantity limitations identified in this section, unless the mixture meets any of the characteristics of hazardous waste identified in Subpart C.

§ 261.6 Special requirements for hazardous waste which is used, re-used, recycled or reclaimed.

(a) Except as otherwise provided in paragraph (b) of this section, a hazardous waste which meets either of the following criteria is not subject to regulation under Parts 262 through 265 or Parts 122 through 124 of this Chapter and is not subject to the notification requirements of Section 3010 of RCRA until such time as the Administrator promulgates regulations to the contrary:

(1) It is being beneficially used or re-used or legitimately recycled or reclaimed.

(2) It is being accumulated, stored or physically, chemically or biologically treated prior to beneficial use or re-use or legitimate recycling or reclamation.

(b) A hazardous waste which is a sludge, or which is listed in Subpart D, or which contains one or more hazardous wastes listed in Subpart D; and which is transported or stored prior

to being used, re-used, recycled or reclaimed is subject to the following requirements with respect to such transportation or storage:

(1) Notification requirements under Section 3010 RCRA.

(2) Part 262 of this Chapter.

(3) Part 263 of this Chapter.

(4) Subparts A, B, C, D and E of Part 264 of this Chapter.

(5) Subparts A, B, C, D, E, G, H, I, J and L of Part 265 of this Chapter.

(6) Parts 122 and 124 of this Chapter, with respect to storage facilities.

Subpart B—Criteria for Identifying the Characteristics of Hazardous Waste and for Listing Hazardous Waste

§ 261.10 Criteria for identifying the characteristics of hazardous waste.

(a) The Administrator shall identify and define a characteristic of hazardous waste in Subpart C only upon determining that:

(1) A solid waste that exhibits the characteristic may:

(i) Cause, or significantly contribute to, an increase in mortality or an increase in serious irreversible, or incapacitating reversible, illness; or

(ii) Pose a substantial present or potential hazard to human health or the environment when it is improperly treated, stored, transported, disposed of or otherwise managed; and

(2) The characteristic can be:

(i) Measured by an available standardized test method which is reasonably within the capability of generators of solid waste or private sector laboratories that are available to serve generators of solid waste; or

(ii) Reasonably detected by generators of solid waste through their knowledge of their waste.

§ 261.11 Criteria for listing hazardous waste.

(a) The Administrator shall list a solid waste as a hazardous waste only upon determining that the solid waste meets one of the following criteria:

(1) It exhibits any of the characteristics of hazardous waste identified in Subpart C.

(2) It has been found to be fatal to humans in low doses or, in the absence of data on human toxicity, it has been shown in studies to have an oral LD 50 toxicity (rat) of less than 50 milligrams per kilogram, an inhalation LC 50 toxicity (rat) of less than 2 milligrams per liter, or a dermal LD 50 toxicity (rabbit) of less than 200 milligrams per kilogram or is otherwise capable of causing or significantly contributing to an increase in serious irreversible, or incapacitating reversible, illness. (Waste listed in accordance with these criteria will be designated Acute Hazardous Waste.)

(3) It contains any of the toxic constituents listed in Appendix VIII unless, after considering any of the following factors, the Administrator concludes that the waste is not capable of posing a substantial present or potential hazard to human health or the environment when improperly treated, stored, transported or disposed of, or otherwise managed:

(i) The nature of the toxicity presented by the constituent.

(ii) The concentration of the constituent in the waste.

(iii) The potential of the constituent or any toxic degradation product of the constituent to migrate from the waste into the environment under the types of improper management considered in paragraph (a)(3)(vii) of this section.

(iv) The persistence of the constituent or any toxic degradation product of the constituent.

(v) The potential for the constituent or any toxic degradation product of the constituent to degrade into non-harmful constituents and the rate of degradation.

(vi) The degree to which the constituent or any degradation product of the constituent bioaccumulates in ecosystems.

(vii) The plausible types of improper management to which the waste could be subjected.

(viii) The quantities of the waste generated at individual generation sites or on a regional or national basis.

(ix) The nature and severity of the human health and environmental damage that has occurred as a result of the improper management of wastes containing the constituent.

(x) Action taken by other governmental agencies or regulatory programs based on the health or environmental hazard posed by the waste or waste constituent.

(xi) Such other factors as may be appropriate.

Substances will be listed on Appendix VIII only if they have been shown in scientific studies to have toxic, carcinogenic, mutagenic or teratogenic effects on humans or other life forms.

(Wastes listed in accordance with these criteria will be designated Toxic wastes.)

(b) The Administrator may list classes or types of solid waste as hazardous waste if he has reason to believe that individual wastes, within the class or type of waste, typically or frequently are hazardous under the definition of hazardous waste found in Section 1004(5) of the Act.

(c) The Administrator will use the criteria for listing specified in this section to establish the exclusion limits referred to in § 261.5(c).

Subpart C—Characteristics of Hazardous Waste

§ 261.20 General.

(a) A solid waste, as defined in § 261.2, which is not excluded from regulation as a hazardous waste under § 261.4(b), is a hazardous waste if it exhibits any of the characteristics identified in this Subpart.

[Comment: § 262.11 of this Chapter sets forth the generator's responsibility to determine whether his waste exhibits one or more of the characteristics identified in this Subpart]

(b) A hazardous waste which is identified by a characteristic in this subpart, but is not listed as a hazardous waste in Subpart D, is assigned the EPA Hazardous Waste Number set forth in the respective characteristic in this Subpart. This number must be used in complying with the notification requirements of Section 3010 of the Act and certain recordkeeping and reporting requirements under Parts 262 through 265 and Part 122 of this Chapter.

(c) For purposes of this Subpart, the Administrator will consider a sample obtained using any of the applicable sampling methods specified in Appendix I to be a representative sample within the meaning of Part 260 of this Chapter.

[Comment: Since the Appendix I sampling methods are not being formally adopted by the Administrator, a person who desires to employ an alternative sampling method is not required to demonstrate the equivalency of his method under the procedures set forth in §§ 260.20 and 260.21.]

§ 261.21 Characteristic of ignitability.

(a) A solid waste exhibits the characteristic of ignitability if a representative sample of the waste has any of the following properties:

(1) It is a liquid, other than an aqueous solution containing less than 24 percent alcohol by volume, and has a flash point less than 60°C (140°F), as determined by a Pensky-Martens Closed Cup Tester, using the test method specified in ASTM Standard D–93–79, or a Setaflash Closed Cup Tester, using the test method specified in ASTM standard D–3278–78, or as determined by an equivalent test method approved by the Administrator under the procedures set forth in §§ 260.20 and 260.21.[1]

[1] ASTM Standards are available from ASTM, 1916 Race Street, Philadelphia, PA 19103.

(2) It is not a liquid and is capable, under standard temperature and pressure, of causing fire through friction, absorption of moisture or spontaneous chemical changes and, when ignited, burns so vigorously and persistently that is creates a hazard.

(3) It is an ignitable compressed gas as defined in 49 CFR 173.300 and as determined by the test methods described in that regulation or equivalent test methods approved by the Administrator under §§ 260.20 and 260.21.

(4) It is an oxidizer as defined in 49 CFR 173.151.

(b) A solid waste that exhibits the characteristic of ignitability, but is not listed as a hazardous waste in Subpart D, has the EPA Hazardous Waste Number of D001.

§ 261.22 Characteristic of corrosivity.

(a) A solid waste exhibits the characteristic of corrosivity if a representative sample of the waste has either of the following properties:

(1) It is aqueous and has a pH less than or equal to 2 or greater than or equal to 12.5, as determined by a pH meter using either the test method specified in the "Test Methods for the Evaluation of Solid Waste, Physical/Chemical Methods" [2] (also described in "Methods for Analysis of Water and Wastes" EPA 600/4–79–020, March 1979), or an equivalent test method approved by the Administrator under the procedures set forth in §§ 260.20 and 260.21.

(2) It is a liquid and corrodes steel (SAE 1020) at a rate greater than 6.35 mm (0.250 inch) per year at a test temperature of 55°C (130°F) as determined by the test method specified in NACE (National Association of Corrosion Engineers) Standard TM–01–69 [3] as standardized in "Test Methods for the Evaluation of Solid Waste, Physical/Chemical Methods," or an equivalent test method approved by the Administrator under the procedures set forth in §§ 260.20 and 260.21.

(b) A solid waste that exhibits the characteristic of corrosivity, but is not listed as a hazardous waste in Subpart D, has the EPA Hazardous Waste Number of D002.

[2] This document is available from Solid Waste Information, U.S. Environmental Protection Agency, 26 W. St. Clair Street, Cincinnati, Ohio 45268.

[3] The NACE Standard is available from the National Association of Corrosion Engineers, P.O. Box 986, Katy, Texas 77450.

§ 261.23 Characteristic of reactivity.

(a) A solid waste exhibits the characteristic of reactivity if a representative sample of the waste has *any* of the following properties:

(1) It is normally unstable and readily undergoes violent change without detonating.

(2) It reacts violently with water.

(3) It forms potentially explosive mixtures with water.

(4) When mixed with water, it generates toxic gases, vapors or fumes in a quantity sufficient to present a danger to human health or the environment.

(5) It is a cyanide or sulfide bearing waste which, when exposed to pH conditions between 2 and 12.5, can generate toxic gases, vapors or fumes in a quantity sufficient to present a danger to human health or the environment.

(6) It is capable of detonation or explosive reaction if it is subjected to a strong initiating source or if heated under confinement.

(7) It is readily capable of detonation or explosive decomposition or reaction at standard temperature and pressure.

(8) It is a forbidden explosive as defined in 49 CFR 173.51, or a Class A explosive as defined in 49 CFR 173.53 or a Class B explosive as defined in 49 CFR 173.88.

(b) A solid waste that exhibits the characteristic of reactivity, but is not listed as a hazardous waste in Subpart D, has the EPA Hazardous Waste Number of D003.

§ 261.24 Characteristic of EP Toxicity.

(a) A solid waste exhibits the characteristic of EP toxicity if, using the test methods described in Appendix II or equivalent methods approved by the Administrator under the procedures set forth in §§ 260.20 and 260.21, the extract from a representative sample of the waste contains any of the contaminants listed in Table I at a concentration equal to or greater than the respective value given in that Table. Where the waste contains less than 0.5 percent filterable solids, the waste itself, after filtering, is considered to be the extract for the purposes of this section.

(b) A solid waste that exhibits the characteristic of EP toxicity, but is not listed as a hazardous waste in Subpart D, has the EPA Hazardous Waste Number specified in Table I which corresponds to the toxic contaminant causing it to be hazardous.

Table I.—Maximum Concentration of Contaminants for Characteristic of EP Toxicity— Continued

EPA hazardous waste number	Contaminant	Maximum concentration (milligrams per liter)
D004	Arsenic	5.0
D005	Barium	100.0
D006	Cadmium	1.0
D007	Chromium	5.0
D008	Lead	5.0
D009	Mercury	0.2
D010	Selenium	1.0
D011	Silver	5.0
D012	Endrin (1,2,3,4,10,10-hexachloro-1,7-epoxy-1,4,4a,5,6,7,8,8a-octahydro-1,4-endo, endo-5,8-dimethano naphthalene.	0.02
D013	Lindane (1,2,3,4,5,6-hexachlorocyclohexane, gamma isomer.	0.4
D014	Methoxychlor (1,1,1-Trichloro-2,2-bis [p-methoxyphenyl]ethane).	10.0
D015	Toxaphene ($C_{10}H_{10}Cl_8$, Technical chlorinated camphene, 67–69 percent chlorine).	0.5
D016	2,4-D, (2,4-Dichlorophenoxyacetic acid).	10.0
D017	2,4,5-TP Silvex (2,4,5-Trichlorophenoxypropionic acid).	1.0

Subpart D—Lists of Hazardous Wastes

§ 261.30 General.

(a) A solid waste is a hazardous waste if it is listed in this Subpart, unless it has been excluded from this list under §§ 260.20 and 260.22.

(b) The Administrator will indicate his basis for listing the classes or types of wastes listed in this Subpart by employing one or more of the following Hazard Codes:

Ignitable Waste	(I)
Corrosive Waste	(C)
Reactive Waste	(R)
EP Toxic Waste	(E)
Acute Hazardous Waste	(H)
Toxic Waste	(T)

Appendix VII identifies the constituent which caused the Administrator to list the waste as an EP Toxic Waste (E) or Toxic Waste (T) in §§ 261.31 and 261.32.

(c) Each hazardous waste listed in this Subpart is assigned an EPA Hazardous Waste Number which precedes the name of the waste. This number must be used in complying with the notification requirements of Section 3010 of the Act and certain recordkeeping and reporting requirements under Parts 262 through 265 and Part 122 of this Chapter.

(d) Certain of the hazardous wastes listed in § 261.31 or § 261.32 have exclusion limits that refer to § 261.5(c)(5).

§ 261.31 Hazardous waste from nonspecific sources.

Industry and EPA hazardous waste No.	Hazardous waste	Hazard code
Generic:		
F001	The spent halogenated solvents used in degreasing, tetrachloroethylene, trichloroethylene, methylene chloride, 1,1,1-trichloroethane, carbon tetrachloride, and the chlorinated fluorocarbons; and sludges from the recovery of these solvents in degreasing operations.	(T)
F002	The spent halogenated solvents, tetrachloroethylene, methylene chloride, trichloroethylene, 1,1,1-trichloroethane, chlorobenzene, 1,1,2-trichloro-1,2,2-trifluoroethane, o-dichlorobenzene, trichlorofluoromethane and the still bottoms from the recovery of these solvents.	(T)
F003	The spent non-halogenated solvents, xylene, acetone, ethyl acetate, ethyl benzene, ethyl ether, n-butyl alcohol, cyclohexanone, and the still bottoms from the recovery of these solvents.	(I)
F004	The spent non-halogenated solvents, cresols and cresylic acid, nitrobenzene, and the still bottoms from the recovery of these solvents	(T)
F005	The spent non-halogenated solvents, methanol, toluene, methyl ethyl ketone, methyl isobutyl ketone, carbon disulfide, isobutanol, pyridine and the still bottoms from the recovery of these solvents.	(I, T)
F006	Wastewater treatment sludges from electroplating operations	(T)
F007	Spent plating bath solutions from electroplating operations	(R, T)
F008	Plating bath sludges from the bottom of plating baths from electroplating operations	(R, T)
F009	Spent stripping and cleaning bath solutions from electroplating operations	(R; T)
F010	Quenching bath sludge from oil baths from metal heat treating operations	(R, T)
F011	Spent solutions from salt bath pot cleaning from metal heat treating operations	(R, T)
F012	Quenching wastewater treatment sludges from metal heat treating operations	(T)
F013	Flotation tailings from selective flotation from mineral metals recovery operations	(T)
F014	Cyanidation wastewater treatment tailing pond sediment from mineral metals recovery operations	(T)
F015	Spent cyanide bath solutions from mineral metals recovery operations	(R, T)
F016	Dewatered air pollution control scrubber sludges from coke ovens and blast furnaces	(T)

§ 261.32 Hazardous waste from specific sources.

Industry and EPA hazardous waste No.	Hazardous waste	Hazard code
Wood Preservation: K001	Bottom sediment sludge from the treatment of wastewaters from wood preserving processes that use creosote and/or pentachlorophenol	(T)
Inorganic Pigments:		
K002	Wastewater treatment sludge from the production of chrome yellow and orange pigments	(T)
K003	Wastewater treatment sludge from the production of molybdate orange pigments	(T)
K004	Wastewater treatment sludge from the production of zinc yellow pigments	(T)
K005	Wastewater treatment sludge from the production of chrome green pigments	(T)
K006	Wastewater treatment sludge from the production of chrome oxide green pigments (anhydrous and hydrated)	(T)
K007	Wastewater treatment sludge from the production of iron blue pigments	(T)
K008	Oven residue from the production of chrome oxide green pigments	(T)
Organic Chemicals:		
K009	Distillation bottoms from the production of acetaldehyde from ethylene	(T)
K010	Distillation side cuts from the production of acetaldehyde from ethylene	(T)
K011	Bottom stream from the wastewater stripper in the production of acrylonitrile	(R, T)
K012	Still bottoms from the final purification of acrylonitrile in the production of acrylonitrile	(T)
K013	Bottom stream from the acetonitrile column in the production of acrylonitrile	(R, T)
K014	Bottoms from the acetronitrile purification column in the production of acrylonitrile	(T)
K015	Still bottoms from the distillation of benzyl chloride	(T)
K016	Heavy ends or distillation residues from the production of carbon tetrachloride	(T)
K017	Heavy ends (still bottoms) from the purification column in the production of epichlorohydrin	(T)
K018	Heavy ends from fractionation in ethyl chloride production	(T)
K019	Heavy ends from the distillation of ethylene dichloride in ethylene dichloride production	(T)
K020	Heavy ends from the distillation of vinyl chloride in vinyl chloride monomer production	(T)
K021	Aqueous spent antimony catalyst waste from fluoromethanes production	(T)
K022	Distillation bottom tars from the production of phenol/acetone from cumene	(T)
K023	Distillation light ends from the production of phthalic anhydride from naphthalene	(T)
K024	Distillation bottoms from the production of phthalic anhydride from naphthalene	(T)
K025	Distillation bottoms from the production of nitrobenzene by the nitration of benzene	(T)
K026	Stripping still tails from the production of methyl ethyl pyridines	(T)
K027	Centrifuge residue from toluene diisocyanate production	(R, T)
K028	Spent catalyst from the hydrochlorinator reactor in the production of 1,1,1-trichloroethane	(T)
K029	Waste from the product stream stripper in the production of 1,1,1-trichloroethane	(T)
K030	Column bottoms or heavy ends from the combined production of trichloroethylene and perchloroethylene	(T)
Pesticides:		
K031	By-products salts generated in the production of MSMA and cacodylic acid	(T)
K032	Wastewater treatment sludge from the production of chlordane	(T)
K033	Wastewater and scrub water from the chlorination of cyclopentadiene in the production of chlordane	(T)
K034	Filter solids from the filtration of hexachlorocyclopentadiene in the production of chlordane	(T)
K035	Wastewater treatment sludges generated in the production of creosote	(T)
K036	Still bottoms from toluene reclamation distillation in the production of disulfoton	(T)
K037	Wastewater treatment sludges from the production of disulfoton	(T)
K038	Wastewater from the washing and stripping of phorate production	(T)
K039	Filter cake from the filtration of diethylphosphorodithoric acid in the production of phorate	(T)
K040	Wastewater treatment sludge from the production of phorate	(T)
K041	Wastewater treatment sludge from the production of toxaphene	(T)
K042	Heavy ends or distillation residues from the distillation of tetrachlorobenzene in the production of 2,4,5-T	(T)
K043	2,6-Dichlorophenol waste from the production of 2,4-D	(T)
Explosives:		
K044	Wastewater treatment sludges from the manufacturing and processing of explosives	(R)
K045	Spent carbon from the treatment of wastewater containing explosives	(R)
K046	Wastewater treatment sludges from the manufacturing, formulation and loading of lead-based initiating compounds	(T)
K047	Pink/red water from TNT operations	(R)
Petroleum Refining:		
K048	Dissolved air flotation (DAF) float from the petroleum refining industry	(T)
K049	Slop oil emulsion solids from the petroleum refining industry	(T)
K050	Heat exchanger bundle cleaning sludge from the petroleum refining industry	(T)
K051	API separator sludge from the petroleum refining industry	(T)
K052	Tank bottoms (leaded) from the petroleum refining industry	(T)
Leather Tanning Finishing:		
K053	Chrome (blue) trimmings generated by the following subcategories of the leather tanning and finishing industry: hair pulp/chrome tan/retan/wet finish; hair save/chrome tan/retan/wet finish; retan/wet finish; no beamhouse; through-the-blue; and shearling.	(T)

§ 261.32 Hazardous waste from specific sources. —Continued

Industry and EPA hazardous waste No.	Hazardous waste	Hazard code
K054	Chrome (blue) shavings generated by the following subcategories of the leather tanning and finishing industry: hair pulp/chrome tan/retan/wet finish; hair save/chrome tan/retan/wet finish; retan/wet finish; no beamhouse; through-the-blue; and shearling.	(T)
K055	Buffing dust generated by the following subcategories of the leather tanning and finishing industry: hair pulp/chrome tan/retan/wet finish; hair save/chrome tan/retan/wet finish; retan/wet finish; no beamhouse; and through-the-blue.	(T)
K056	Sewer screenings generated by the following subcategories of the leather tanning and finishing industry: hair pulp/chrome tan/retan/wet finish; hair save/chrome tan/retan/wet finish; retan/wet finish; no beamhouse; through-the-blue; and shearling.	(T)
K057	Wastewater treatment sludges generated by the following subcategories of the leather tanning and finishing industry: hair pulp/chrome tan/retan/wet finish; hair save/chrome tan/retan/wet finish; retan/wet finish; no beamhouse; through-the-blue and shearling.	(T)
K058	Wastewater treatment sludges generated by the following subcategories of the leather tanning and finishing industry: hair pulp/chrome tan/retan/wet finish; hair save/chrome tan/retan/wet finish; and through-the-blue.	(R, T)
K059	Wastewater treatment sludges generated by the following subcategory of the leather tanning and finishing industry: hair save/non-chrome tan/retan/wet finish.	(R)
Iron and Steel:		
K060	Ammonia still lime sludge from coking operations	(T)
K061	Emission control dust/sludge from the electric furnace production of steel	(T)
K062	Spent pickle liquor from steel finishing operations	(C, T)
K063	Sludge from lime treatment of spent pickle liquor from steel finishing operations	(T)
Primary Copper: K064	Acid plant blowdown slurry/sludge resulting from the thickening of blowdown slurry from primary copper production	(T)
Primary Lead: K065	Surface impoundment solids contained in and dredged from surface impoundments at primary lead smelting facilities	(T)
Primary Zinc:		
K066	Sludge from treatment of process wastewater and/or acid plant blowdown from primary zinc production	(T)
K067	Electrolytic anode slimes/sludges from primary zinc production	(T)
K068	Cadmium plant leach residue (iron oxide) from primary zinc production	(T)
Secondary Lead: K069	Emission control dust/sludge from secondary lead smelting	(T)

§ 261.33 Discarded Commercial Chemical Products, Off-Specification Species, Containers, and Spill Residues Thereof.

The following materials or items are hazardous wastes if and when they are discarded or intended to be discarded:

(a) Any commercial chemical product, or manufacturing chemical intermediate having the generic name listed in paragraphs (e) or (f) of this section.

(b) Any off-specification commercial chemical product or manufacturing chemical intermediate which, if it met specifications, would have the generic name listed in paragraphs (e) or (f) of this section.

(c) Any container or inner liner removed from a container that has been used to hold any commercial chemical product or manufacturing chemical intermediate having the generic name listed in paragraph (e) of this section, unless:

(1) The container or inner liner has been triple rinsed using a solvent capable of removing the commercial chemical product or manufacturing chemical intermediate;

(2) The container or inner liner has been cleaned by another method that has been shown in the scientific literature, or by tests conducted by the generator, to achieve equivalent removal; or

(3) In the case of a container, the inner liner that prevented contact of the commercial chemical product or manufacturing chemical intermediate with the container, has been removed.

(d) Any residue or contaminated soil, water or other debris resulting from the cleanup of a spill, into or on any land or water, of any commercial chemical product or manufacturing chemical intermediate having the generic name listed in paragraphs (e) or (f) of this Section.

[Comment: The phrase "commercial chemical product or manufacturing chemical intermediate having the generic name listed in . . ." refers to a chemical substance which is manufactured or formulated for commercial or manufacturing use. It does not refer to a material, such as a manufacturing process waste, that contains any of the substances listed in paragraphs (e) or (f). Where a manufacturing process waste is deemed to be a hazardous waste because it contains a substance listed in paragraphs (e) or (f), such waste will be listed in either §§ 261.31 or 261.32 or will be identified as a hazardous waste by the characteristics set forth in Subpart C of this Part.]

(e) The commercial chemical products or manufacturing chemical intermediates, referred to in paragraphs (a) through (d) of this section, are identified as acute hazardous wastes (H) and are subject to the small quantity exclusion defined in § 261.5(c). These wastes and their corresponding EPA Hazardous Waste Numbers are:

U239	Xylene

[1] The Agency included those trade names of which it was aware; an omission of a trade name does not imply that it is not hazardous. The material is hazardous if it is listed under its generic name.

Appendix I—Representative Sampling Methods

The methods and equipment used for sampling waste materials will vary with the form and consistency of the waste materials to be sampled. Samples collected using the sampling protocols listed below, for sampling waste with properties similar to the indicated materials, will be considered by the Agency to be representative of the waste.

Extremely viscous liquid—ASTM Standard D140–70 Crushed or powdered material—ASTM Standard D346–75 Soil or rock-like material—ASTM Standard D420–69 Soil-like material—ASTM Standard D1452–65

Fly Ash-like material—ASTM Standard D2234–76 [ASTM Standards are available from ASTM, 1916 Race St., Philadelphia, PA 19103]

Containerized liquid wastes—"COLIWASA" described in "Test Methods for the Evaluation of Solid Waste, Physical/Chemical Methods," [1] U.S. Environmental Protection Agency, Office of Solid Waste, Washington, D.C. 20460. [Copies may be obtained from Solid Waste Information, U.S. Environmental Protection Agency, 26 W. St. Clair St., Cincinnati, Ohio 45268]

Liquid waste in pits, ponds, lagoons, and similar reservoirs.—"Pond Sampler" described in "Test Methods for the Evaluation of Solid Waste, Physical/Chemical Methods." [1]

This manual also contains additional information on application of these protocols.

[1] These methods are also described in "Samplers and Sampling Procedures for Hazardous Waste Streams," EPA 600/2–80–018, January 1980.

Appendix II— EP Toxicity Test Procedure

A. Extraction Procedure (EP)

1. A representative sample of the waste to be tested (minimum size 100 grams) should be obtained using the methods specified in Appendix I or any other methods capable of yielding a representative sample within the meaning of Part 260. [For detailed guidance on conducting the various aspects of the EP see "Test Methods for the Evaluation of Solid Waste, Physical/Chemical Methods," SW–846, U.S. Environmental Protection Agency Office of Solid Waste, Washington, D.C. 20460.[1]]

2. The sample should be separated into its component liquid and solid phases using the method described in "Separation Procedure" below. If the solid residue [2] obtained using this method totals less than 0.5% of the original weight of the waste, the residue can be discarded and the operator should treat the liquid phase as the extract and proceed immediately to Step 8.

3. The solid material obtained from the Separation Procedure should be evaluated for its particle size. If the solid material has a surface area per gram of material equal to, or greater than, 3.1 cm^2 or passes through a 9.5 mm (0.375 inch) standard sieve, the operator should proceed to Step 4. If the surface area is smaller or the particle size larger than specified above, the solid material should be prepared for extraction by crushing, cutting or grinding the material so that it passes through a 9.5 mm (0.375 inch) sieve or, if the material is in a single piece, by subjecting the material to the "Structural Integrity Procedure" described below.

4. The solid material obtained in Step 3 should be weighed and placed in an extractor with 16 times its weight of deionized water. Do not allow the material to dry prior to weighing. For purposes of this test, an acceptable extractor is one which will impart sufficient agitation to the mixture to not only prevent stratification of the sample and extraction fluid but also insure that all sample surfaces are continously brought into contact with well mixed extraction fluid.

5. After the solid material and deionized water are placed in the extractor, the operator should begin agitation and measure the pH of the solution in the extractor. If the pH is greater than 5.0, the pH of the solution should be decreased to 5.0 ± 0.2 by adding 0.5 N acetic acid. If the pH is equal to or less than 5.0, no acetic acid should be added. The pH of the solution should be monitored, as described below, during the course of the extraction and if the pH rises above 5.2, 0.5N acetic acid should be added to bring the pH down to 5.0 ± 0.2. However, in no event shall the aggregate amount of acid added to the solution exceed 4 ml of acid per gram of solid. The mixture should be agitated for 24 hours and maintained at 20°–40° C (68°–104° F) during this time. It is recommended that the operator monitor and adjust the pH during the course of the extraction with a device such as the Type 45–A pH Controller manufactured by Chemtrix, Inc., Hillsboro, Oregon 97123 or its equivalent, in conjunction with a metering pump and reservoir of 0.5N acetic acid. If such a system is not available, the following manual procedure shall be employed:

(a) A pH meter should be calibrated in accordance with the manufacturer's specifications.

(b) The pH of the solution should be checked and, if necessary, 0.5N acetic acid should be manually added to the extractor until the pH reaches 5.0 ± 0.2. The pH of the solution should be adjusted at 15, 30 and 60 minute intervals, moving to the next longer interval if the pH does not have to be adjusted more than 0.5N pH units.

(c) The adjustment procedure should be continued for at least 6 hours.

(d) If at the end of the 24-hour extraction period, the pH of the solution is not below 5.2 and the maximum amount of acid (4 ml per gram of solids) has not been added, the pH should be adjusted to 5.0 ± 0.2 and the extraction continued for an additional four hours, during which the pH should be adjusted at one hour intervals.

6. At the end of the 24 hour extraction period, deionized water should be added to the extractor in an amount determined by the following equation:

V = (20)(W) − 16(W) − A

V = ml deionized water to be added

W = weight in grams of solid charged to extractor

A = ml of 0.5N acetic acid added during extraction

7. The material in the extractor should be separated into its component liquid and solid phases as described under "Separation Procedure."

8. The liquids resulting from Steps 2 and 7 should be combined. This

[1] Copies may be obtained from Solid Waste Information, U.S. Environmental Protection Agency, 26 W. St. Clair Street, Cincinnati, Ohio 45268.

[2] The percent solids is determined by drying the filter pad at 80° C until it reaches constant weight and then calculating the percent solids using the following equation:

$$\frac{\text{(weight of pad + solid) − (tare weight of pad)}}{\text{initial weight of sample}} \times 100 = \%\ \text{solids}$$

combined liquid (or the waste itself if it has less than ½ percent solids, as noted in Step 2) is the extract and should be analyzed for the presence of any of the contaminants specified in Table I of § 261.24 using the Analytical Procedures designated below.

Separation Procedure

Equipment: A filter holder, designed for filtration media having a nominal pore size of 0.45 micrometers and capable of applying a 5.3 kg/cm² (75 psi) hydrostatic pressure to the solution being filtered shall be used. For mixtures containing nonabsorptive solids, where separation can be affected without imposing a 5.3 kg/cm² pressure differential, vacuum filters employing a 0.45 micrometers filter media can be used. (For further guidance on filtration equipment or procedures see "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods.")

Procedure: [3]

(i) Following manufacturer's directions, the filter unit should be assembled with a filter bed consisting of a 0.45 micrometer filter membrane. For difficult or slow to filter mixtures a prefilter bed consisting of the following prefilters in increasing pore size (0.65 micrometer membrane, fine glass fiber prefilter, and coarse glass fiber prefilter) can be used.

(ii) The waste should be poured into the filtration unit.

(iii) The reservoir should be slowly pressurized until liquid begins to flow from the filtrate outlet at which point the pressure in the filter should be immediately lowered to 10–15 psig. Filtration should be continued until liquid flow ceases.

(iv) The pressure should be increased stepwise in 10 psi increments to 75 psig and filtration continued until flow ceases or the pressurizing gas begins to exit from the filtrate outlet.

(v) The filter unit should be depressurized, the solid material removed and weighed and then transferred to the extraction apparatus, or, in the case of final filtration prior to analysis, discarded. Do not allow the material retained on the filter pad to dry prior to weighing.

(vi) The liquid phase should be stored at 4°C for subsequent use in Step 8.

B. Structural Integrity Procedure

Equipment: A Structural Integrity Tester having a 3.18 cm (1.25 in.) diameter hammer weighing 0.33 kg (0.73 lbs.) and having a free fall of 15.24 cm (6 in.) shall be used. This device is available from Associated Design and Manufacturing Company, Alexandria, VA., 22314, as Part No. 125, or it may be fabricated to meet the specifications shown in Figure 1.

Procedure:

1. The sample holder should be filled with the material to be tested. If the sample of waste is a large monolithic block, a portion should be cut from the block having the dimensions of a 3.3 cm (1.3 in.) diameter x 7.1 cm (2.8 in.) cylinder. For a fixated waste, samples may be cast in the form of a 3.3 cm (1.3 in.) diameter x 7.1 cm (2.8 in.) cylinder for purposes of conducting this test. In such cases, the waste may be allowed to cure for 30 days prior to further testing.

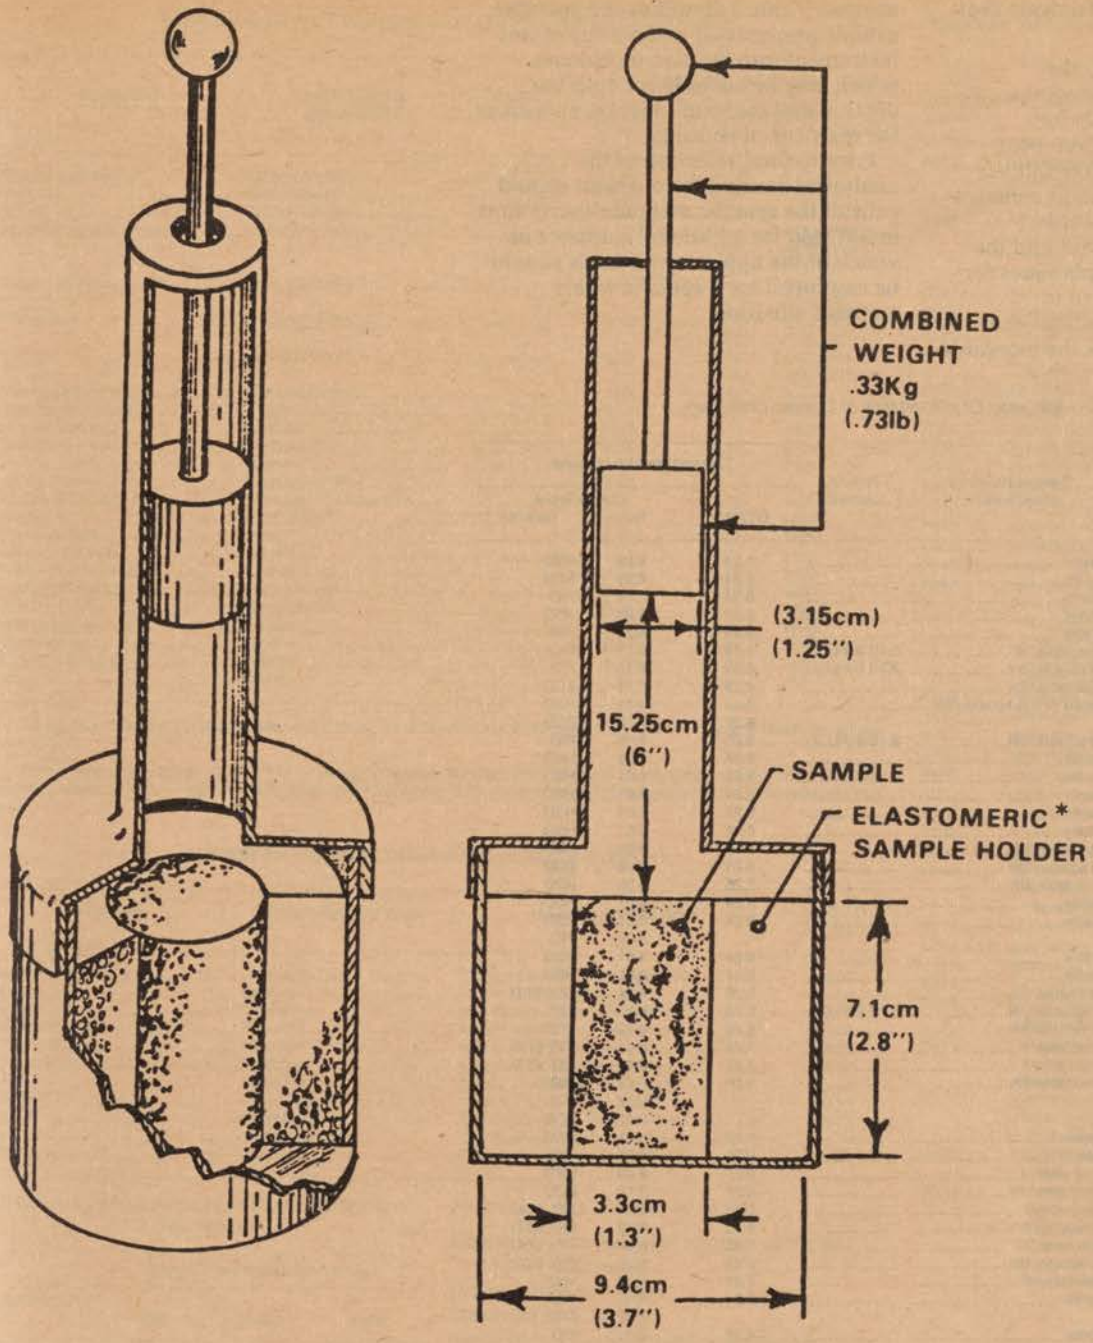
2. The sample holder should be placed into the Structural Integrity Tester, then the hammer should be raised to its maximum height and dropped. This should be repeated fifteen times.

3. The material should be removed from the sample holder, weighed, and transferred to the extraction apparatus for extraction.

Analytical Procedures for Analyzing Extract Contaminants

The test methods for analyzing the extract are as follows:

(1) For arsenic, barium, cadmium, chromium, lead, mercury, selenium or silver: "Methods for Analysis of Water and Wastes," Environmental Monitoring and Support Laboratory, Office of Research and Development, U.S. Environmental Protection Agency, Cincinnati, Ohio 45268 (EPA–600/4–79–020, March 1979),



(2) For Endrin; Lindane; Methoxychlor; Toxaphene; 2,4-D; 2,4,5-TP Silver: in "Methods for Benzidine, Chlorinated Organic Compounds, Pentachlorophenol and Pesticides in Water and Wastewater," September 1978, U.S. Environmental Protection Agency, Environmental Monitoring and Support Laboratory, Cincinnati, Ohio 42568,

as standardized in "Test Methods for the Evaluation of Solid Waste, Physical/Chemical Methods."

For all analyses, the method of standard addition shall be used for the quantification of species concentration. This method is described in "Test Methods for the Evaluation of Solid Waste." (It is also described in "Methods for Analysis of Water and Wastes.")

BILLING CODE 6560-01-M

[3] This procedure is intended to result in separation of the "free" liquid portion of the waste from any solid matter having a particle size >0.45um. If the sample will not filter, various other separation techniques can be used to aid in the filtration. As described above, pressure filtration is employed to speed up the filtration process. This does not alter the nature of the separation. If liquid does not separate during filtration, the waste can be centrifuged. If separation occurs during centrifugation the liquid portion (centrifugate) is filtered through the 0.45um filter prior to becoming mixed with the liquid portion of the waste obtained from the initial filtration. Any material that will not pass through the filter after centrifugation is considered a solid and is extracted.

Appendix III—Chemical Analysis Test Methods

Tables 1, 2 and 3 specify the appropriate analytical procedures, described in "Test Methods for Evaluating Solid Waste" (SW–846), which should be used in determining whether the waste in question contains a given toxic constituent. Table 1 identifies the analytical class and the approved measurement techniques for each organic chemical listed in Appendix VII. Table 2 identifies the corresponding methods for the inorganic species. Table 3 identifies the specific sample preparation and measurement instrument introduction techniques which may be suitable for both the organic and inorganic species as well as the matrices of concern.

Prior to final selection of the analytical method the operator should consult the specific method descriptions in SW–846 for additional guidance on which of the approved methods should be employed for a specific waste analysis situation.

Table 1.—*Analytical Characteristics of Organic Chemicals*

Compound	Sample handling class/fraction	Non-GC methods	Measurement techniques		
			GC/MS	Conventional GC	Detector
Acetonitrile	Volatile		8.24	8.03	NSD
Acrolein	Volatile		8.24	8.03	NSD
Acrylamide	Volatile		8.24	8.01	FID
Acrylonitrile	Volatile		8.24	8.03	NSD
Benzene	Volatile		8.24	8.02	PID
Benz(a)anthracene	Extractable/BN	8.10 (HPLC)	8.25	8.10	FID
Benzo(a)pyrene	Extractable/BN	8.10 (HPLC)	8.25	8.10	FID
Benzotrichloride	Extractable/BN		8.25	8.12	ECD
Benzyl chloride	Volatile or Extractable/BN		8.24	8.01	HSD
			8.25	8.12	ECD
Benz(b)fluoanthene	Extractable/BN	8.10 (HPLC)	8.25	8.10	FID
Bis(2-chloroethoxymethane)	Volatile		8.24	8.01	HSD
Bis(2-chloroethyl)ether	Volatile		8.24	8.01	HSD
Bis(2-chloroisopropyl)ether	Volatile		8.24	8.01	HSD
Carbon disulfide	Volatile		8.24	8.01	HSD
Carbon tetrachloride	Volatile		8.24	8.01	HSD
Chlordane	Extractable/BN		8.25	8.08	HSD
Chlorinated dibenzodioxins	Extractable/BN		8.25	8.08	ECD
Chlorinated biphenyls	Extractable/BN		8.25	8.08	HSD

Hexachlorocyclopentadiene	Extractable/BN		8.25	8.12	ECD
Lindane	Extractable/P		8.25	8.08	HSD
Maleic anhydride	Extractable/BN		8.25	8.06	ECD, FID
Methanol	Volatile		8.24	8.01	FID
Methomyl	Extractable/BN	8.32 (HPLC)			
Methyl ethyl ketone	Volatile		8.25	8.01	FID
				8.02	FID
Methyl isobutyl ketone	Volatile		8.25	8.01	FID
				8.02	FID
Naphthalene	Extractable/BN		8.25	8.10	FID
Napthoquinone	Extractable/BN		8.25	8.06	ECD, FID
				8.09	FID
Nitrobenzene	Extractable/BN		8.25	8.09	ECD, FID
4-Nitrophenol	Extractable/A		8.24	8.04	ECD, FID
Paraldehyde (trimer of acetaldehyde).	Volatile		8.24	8.01	FID

Table 1.—*Analytical Characteristics of Organic Chemicals—Continued*

Compound	Sample handling class/fraction	Non-GC methods	Measurement techniques		
			GC/MS	Conventional GC	Detector
Pentachlorophenol	Extractable/A		8.25	8.04	ECD
Phenol	Extractable/A		8.25	8.04	ECD, FID
Phorate	Extractable/BN			8.22	FPD
Phosphorodithioic acid esters	Extractable/BN			8.06	ECD, FID
				8.09	ECD, FID
				8.22	FPD
Phthalic anhydride	Extractable/BN		8.25	8.06	ECD, FID
				8.09	ECD, FID
2-Picoline	Extractable/BN		8.25	8.06	ECD, FID
				8.09	ECD, FID
Pyridine	Extractable/BN		8.25	8.06	ECD, FID
				8.09	ECD, FID
Tetrachlorobenzene(s)	Extractable/BN		8.25	8.12	ECD
Tetrachloroethane(s)	Volatile		8.24	8.01	HSD
Tetrachloroethene	Volatile		8.24	8.01	HSD
Tetrachlorophenol	Extractable/A		8.24	8.04	ECD
Toluene	Volatile		8.24	8.02	PID
Toluenediamine	Extractable/BN		8.25		
Toluene diisocyanate(s)	Extractable/nonaqueous		8.25	8.06	FID
Toxaphene	Extractable/P		8.25	8.08	HSD
Trichloroethane	Volatile		8.24	8.01	HSD
Trichloroethene(s)	Volatile		8.24	8.01	HSD
Trichlorofluoromethane	Volatile		8.24	8.01	HSD
Trichlorophenol(s)	Extractable/A		8.25	8.04	HSD
2,4,5-TP (Silvex)	Extractable/A		8.25	8.40	HSD
Trichloropropane	Volatile		8.24	8.01	HSD
Vinyl chloride	Volatile		8.24	8.01	HSD
Vinylidene chloride	Volatile		8.24	8.01	HSD
Xylene	Volatile		8.24	8.02	PID

[1] Analyze for phenanthrene and carbazole; if these are present in a ratio between 1.4:1 and 5:1, creosote should be considered present.

ECD = Electron capture detetor; FID = Flame ionization detector; FPD = Flame photometric detector; HSD = Halide specific detector; HPLC = High pressure liquid chromotography; NSD = Nitrogen-specific detector; PID = Photoionization detector.

Table 2—*Analytical Characteristics of Inorganic Species*

Species	Sample handling class	Measurement technique	Method number
Antimony	Digestion	Atomic absorbtion-furnace/flame	8.50
Arsenic	Hydride	Atomic absorbtion-flame	8.51
Barium	Digestion	Atomic absorbtion-furnace/flame	8.52
Cadmium	Digestion	Atomic absorbtion-furnace/flame	8.53
Chromium	Digestion	Atomic absorbtion-furnace/flame	8.54
Cyanides	Hydrolysis	Atomic absorbtion-spectroscopy	8.55
Lead	Digestion	Atomic absorbtion-furnace/flame	8.56
Mercury	Cold Vapor	Atomic absorbtion	8.57
Nickel	Digestion	Atomic absorbtion-furnace/flame	8.58
Selenium	Hydride digestion	Atomic absorbtion-furnace/flame	8.59
Silver	Digestion	Atomic absorbtion-furnace/flame	8.60

Table 3.—*Sample Prepartion/Sample Introduction Techniques*

Sample handling class	Physical characteristics of waste [1]		
	Fluid	Paste	Solid
Voltile	Purge and trap.	Purge and trap.	Headspace.
	Direct injection.	Headspace	
Semivolatile and nonvolatile.	Direct injection.	Shake out	Shake out. Soxhlet. Sonication.
	Shake out		
Inorganic	Direct injection.		
	Digestion	Digestion	Digestion.
	Hydride	Hydride	Hydride.

[1] For purposes of this Table, fluid refers to readily pourable liquids, which may or may not contain suspended particles. Paste-like materials, while fluid in the sense of flowability, can be thought of as being thixotropic or plastic in nature, e.g. paints. Solid materials are those wastes which can be handled without a container (i.e., can be piled up without appreciable sagging).

Procedure and Method Number(s)

Digestion—See appropriate procedure for element of interest.
Direct injection—8.80
Headspace—8.82
Hydride—See appropriate procedure for element of interest.
Purge & Trap—8.83
Shake out—8.84
Sonication—8.85
Soxhlet—8.86

Appendix VII.—*Basis for Listing Hazardous Wastes*

EPA hazardous waste No.	Hazardous constituents for which listed
F001	tetrachloroethylene, methylene chloride trichloroethyllene, 1,1,1-trichloroethane chlorinated fluorocarbons, carbon tetrachloride
F002	tetrachloroethylene, methylene chloride, trichloroethylene, 1,1,1-trichloroethane, chlorobenzene, 1,1,2-trichloro-1,2,2-trifluoroethane, o-dichlorobenzene, trichlorofluoromethane
F003	N.A.
F004	cresols and cresylic acid, nitrobenzene
F005	methanol, toluene, methyl ethyl ketone, methyl isobutyl ketone, carbon disulfide, isobutanol, pyridine
F006	cadmium, chromium, nickel, cyanide (complexed)
F007	cyanide (salts)
F008	cyanide (salts)
F009	cyanide (salts)
F010	cyanide (salts)
F011	cyanide (salts)
F012	cyanide (complexed)
F013	cyanide (complexed)
F014	cyanide (complexed)
F015	cyanide (salts)
F016	cyanide (complexed)
K001	benzene, benz(a)anthracene, benzo(a)pyrene, chrysene, 4-nitrophenol, toluene, naphthalene phenol, 2-chlorophenol, 2,4-dimethyl phenol, 2,4,6-trichlorophenol, pentachlorophenol, 4,6-dinitro-o-cresol, tetrachlorophenol
K002	chromium, lead
K003	chromium, lead
K004	chromium
K005	chromium, lead
K006	chromium
K007	cyanide (complexed), chromium
K008	chromium
K009	chloroform, formaldehyde, methylene chloride, methyl chloride, paraldehyde, formic acid

Di-isopropylfluorophosphate (DFP)
Dimethoate
3,3'-Dimethoxybenzidine
p-Dimethylaminoazobenzene
7,12-Dimethylbenz[a]anthracene
3,3'-Dimethylbenzidine
Dimethylcarbamoyl chloride

[1] The abbreviation N.O.S. signifies those members of the general class "not otherwise specified" by name in this listing.

1,1-Dimethylhydrazine
1,2-Dimethylhydrazine
3,3-Dimethyl-1-(methylthio)-2-butanone-0-((methylamino) carbonyl)oxime
Dimethylnitrosoamine
alpha,alpha-Dimethylphenethylamine
2,4-Dimethylphenol
Dimethyl phthalate
Dimethyl sulfate
Dinitrobenzene, N.O.S.
4,6-Dinitro-o-cresol and salts
2,4-Dinitrophenol
2,4-Dinitrotoluene
2,6-Dinitrotoluene Di-n-octyl phthalate
1,4-Dioxane
1,2-Diphenylhydrazine
Di-n-propylnitrosamine
Disulfoton
2,4-Dithiobiuret
Endosulfan
Endrin and metabolites
Epichlorohydrin
Ethyl cyanide
Ethylene diamine
Ethylenebisdithiocarbamate (EBDC)
Ethyleneimine
Ethylene oxide
Ethylenethiourea
Ethyl methanesulfonate
Fluoranthene
Fluorine
2-Fluoroacetamide
Fluoroacetic acid, sodium salt
Formaldehyde
Glycidylaldehyde
Halomethane, N.O.S.
Heptachlor
Heptachlor epoxide (alpha, beta, and gamma isomers)
Hexachlorobenzene
Hexachlorobutadiene
Hexachlorocyclohexane (all isomers)
Hexachlorocyclopentadiene
Hexachloroethane
1,2,3,4,10,10-Hexachloro-1,4,4a,5,8,8a-hexahydro-1,4:5,8-endo,endo-dimethanonaphthalene
Hexachlorophene
Hexachloropropene
Hexaethyl tetraphosphate
Hydrazine
Hydrocyanic acid
Hydrogen sulfide
Indeno(1,2,3-c,d)pyrene
Iodomethane
Isocyanic acid, methyl ester
Isosafrole
Kepone
Lasiocarpine
Lead and compounds, N.O.S.
Lead acetate
Lead phosphate
Lead subacetate
Maleic anhydride
Malononitrile
Melphalan
Mercury and compounds, N.O.S.
Methapyrilene
Methomyl
2-Methylaziridine
3-Methylcholanthrene
4,4'-Methylene-bis-(2-chloroaniline)
Methyl ethyl ketone (MEK)
Methyl hydrazine
2-Methyllactonitrile
Methyl methacrylate
Methyl methanesulfonate
2-Methyl-2-(methylthio)propionaldehyde-o-(methylcarbonyl) oxime
N-Methyl-N'-nitro-N-nitrosoguanidine
Methyl parathion
Methylthiouracil
Mustard gas
Naphthalene
1,4-Naphthoquinone
1-Naphthylamine
2-Naphthylamine
1-Naphthyl-2-thiourea
Nickel and compounds, N.O.S.

Part IV

Environmental Protection Agency

Hazardous Waste Management System

Proposal To Modify 40 CFR Part 261—Hazardous Waste Lists

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 261

[FRL 1471-4]

Identification and Listing of Hazardous Wastes

AGENCY: Environmental Protection Agency.

ACTION: Proposed rule.

SUMMARY: The Environmental Protection Agency (EPA) is proposing to add eleven wastes to the interim final list of hazardous wastes which it is promulgating today under Section 3001 of the Resource Conservation and Recovery Act of 1976, as amended (RCRA). The effect of adding these wastes to the hazardous waste list will be to make them subject to the management standards issued by EPA under Sections 3002 through 3006 and 3010 of RCRA (Parts 262 through 265, 122 through 124 of this Chapter and 45 FR 12746).

DATES: EPA will accept public comments on the proposed listings until July 18, 1980. Any person may request a hearing on this proposal by filing a request with John P. Lehman, whose address appears below, by June 9, 1980. The request must contain the information prescribed in § 260.20(d) of this chapter.

ADDRESSES: Comments and requests for hearing should be addressed to John P. Lehman, Director, Hazardous and Industrial Waste Division, Office of Solid Waste [WH-565], U.S. Environmental Protection Agency, Washington, D.C. 20460. Communications should identify the regulatory docket number "Section 3001."

The public docket for this proposed rulemaking is located in Room 2711, U.S. Environmental Protection Agency, 401 M Street, S.W., Washington, D.C. 20460 and is available for viewing from 9:00 a.m. to 4:00 p.m., Monday through Friday, excluding holidays.

FOR FURTHER INFORMATION CONTACT: Alan S. Corson, Office of Solid Waste (WH-565), U.S. Environmental Protection Agency, 401 M Street, S.W., Washington, D.C. 20460, (202) 755-9187.

SUPPLEMENTARY INFORMATION: Section 3001 of RCRA requires EPA to publish criteria for listing hazardous waste and to list particular hazardous wastes. In today's **Federal Register** EPA is promulgating interim final criteria for listing hazardous wastes (§ 261.11) along with an interim final list of hazardous wastes (Part 261, Subpart D). The Agency is now proposing to expand this list of hazardous wastes to add eleven wastes which EPA has determined meet its interim final listing criteria.

Included in this proposed supplemental listing are five wastes generated in the organic chemicals industry, four wastes from the manufacture of pesticides, one waste stream from the wood preserving industry and one waste stream from the non-ferrous metals industry. All eleven of these wastes were identified by the Agency in the course of developing the necessary technical data to support the interim final hazardous waste list promulgated today. These wastes and the hazards they pose to health or the environment are:

(1) *Distillation bottoms and heavy ends from the production of 1,1,1-trichloroethane.* These two wastes contain known carcinogens, many of which are soluble in water or are volatile. If the waste is improperly managed, the carcinogens may contaminate surface water, groundwater, or air.

(2) *Vacuum stripper discharge from chlordene chlorinator in the production of chlordane.* This waste contains dissolved or suspended highly toxic constituents which are soluble and may migrate through leaching from the waste if the waste is improperly managed.

(3) *Untreated wastewater from the production of 2,4-D.* This waste contains carcinogens and mutagens which are soluble in water. If the waste is improperly managed, these constituents can contaminate surface water or groundwater.

(4) *Wastewater from the production of methomyl.* This waste contains toxic compounds, a carcinogen and mutagenic substances. If this waste is improperly managed, these compounds could migrate from the waste and contaminate groundwater and surface water.

(5) *Distillation residues both light ends and bottoms from the production of phthalic anyhride from ortho-xylene.* These two wastes contain toxic compounds, a known carcinogen, and a suspected carcinogen. Some of these compounds are soluble in water, and, if the waste is improperly managed, these compounds can contaminate surface water and groundwater. If the residues are improperly incinerated, these compounds (or equally or more toxic degradation products) may be emitted into the air.

(6) *Wastewater from wood preserving processes that use creosote and/or pentachlorophenol.* This waste contains carcinogens, mutagens and toxic compounds, many of which are soluble in water or are volatile. If the waste is improperly managed, these compounds can contaminate surface water, groundwater, or air.

(7) *Untreated process wastewater from the production of toxaphene.* This waste contains toxaphene, a carcinogenic and extremely toxic compound. If the waste is improperly managed, this compound could migrate from the waste and contaminate groundwater and surface water.

(8) *Process wastewater from creosote production.* This waste contains a number of known carcinogens. If this waste is improperly managed, these compounds are capable of migrating and persisting in the environment and could contaminate surface water and groundwater.

(9) *Waste leaching solution from acid leaching of emission control dust/sludge from secondary lead smelting.* This waste contains toxic heavy metals which, when solubilized, can contaminate surface water and groundwater if the waste is improperly managed.

When surface water, groundwater, or air is contaminated, human health or the environment can be adversely affected.

BACKGROUND DOCUMENT: Background documents have been prepared in support of this proposed rule. Copies are available for review in all EPA Regional office libraries, in the EPA headquarters (Public Information Reference Unit) Room 2404, Waterside Mall, 401 M Street, S.W., Washington, D.C. and in the docket located in Room 2711, Waterside Mall, 401 M Street, S.W., Washington, D.C.

ECONOMIC, ENVIRONMENTAL AND REGULATORY IMPACTS: In accordance with Executive Order 11821, as amended by Executive Order 11949, and OMB Circular A-107, EPA policy as stipulated in 39 FR 37419, October 21, 1974, and Executive Order 12044, analyses of the economic, environmental, and regulatory impacts were performed for the entirety of Subtitle C. EPA does not believe that amending Part 261 to add these additional wastes is a major action for the purposes of Executive Order 12044, in part because the wastes are generated by processes which produce other listed wastes and because the cost of managing those other listed wastes has already been accounted for in the final Regulatory Analysis which was prepared for the entirety of Subtitle C. However, EPA requests that any date commenters have on the generation rates of the wastes listed in the proposal, current management costs and practices for these wastes or on the cost or economic impacts of the proposed

regulations be sent to John P. Lehman at the address listed above.

Dated: May 2, 1980.

Douglas M. Costle,

Administrator.

It is proposed to amend Title 40 CFR, Part 261, by revising 40 CFR, Part 261, as follows:

§ 261.32 [Amended]

1. In § 261.32, add the following waste streams:

Industry	EPA hazardous waste No.*	Hazardous waste	Hazardous code
Wood preservation.		Wastewater from wood preserving processes that use creosote or pentachlorophenol.	(T).
Organic chemicals.		Distillation bottoms from the production of 1,1,1-trichloroethane.	(T).
		Heavy ends from the heavy ends column from the production of 1,1,1-trichloroethane.	(T).
		Vacuum stripper discharge from chlordene chlorinator in the production of chlordane.	
		Distillation light ends from the production of phthalic anhydride from ortho-xylene.	(T).
		Distillation bottoms from the production of phthalic anhydride from ortho-xylene.	(T).
Pesticides.....		Untreated process wastewater from the production of toxaphene.	(T).
		Untreated wastewater from the production of 2,4-D.	(T).
		Wastewater from the production of methomyl.	(T).
		Process wastewater from creosote production.	(T).
Secondary lead.		Waste leaching solution from acid leaching of emission control dust/sludge from secondary lead smelting.	(T).

*The EPA Hazardous Waste Number will not be assigned until the listed waste is promulgated.

Part V

Environmental Protection Agency

Hazardous Waste Management System

Standards Applicable to Generators of Hazardous Waste

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 262

[FRL 1470-7]

Standards for Generators of Hazardous Waste

AGENCY: Environmental Protection Agency.

ACTION: Final rule.

SUMMARY: The Resource Conservation and Recovery Act, as amended, seeks to promote the protection of human health and the environment and to conserve valuable material and energy resources. In order to accomplish this, the Act establishes a national program to improve solid waste management, including the control of hazardous waste, the promotion of resource conservation and recovery, and the establishment of environmentally sound solid waste disposal practices.

The EPA promulgated regulations establishing standards for generators of hazardous waste. These regulations were published in the **Federal Register** on February 26, 1980 (45 FR 12722). The amendments published today are both administrative and technical changes to the regulations which are intended to clarify the operation of these regulations. Areas of change include clarification of the effective date and compliance date of the regulation; clarification of the applicability of the regulations to generators which treat, store, or dispose of hazardous waste on-site; a corrected citation to the Part 261 provisions establishing equivalent test methods for determining whether a waste is a hazardous waste; inclusion of a generator's requirement to designate a facility or accept the waste if it cannot be delivered to the designated or alternate facility; a technical correction concerning placarding for rail shipments; expanded requirements for accumulation time in tanks and for contingency plans; addition of the EPA mailing address for generators who are required to notify the Administrator of international shipments; a corrected citation to triple rinsing in the Farmers section; and additions to the Annual Report (EPA Forms 8700-13, 8700-13A and 8700-13B).

DATES: Effective date: November 19, 1980. EPA will accept public comment on these regulations and amendments for administrative errors only (e.g., typographical errors, inaccurate cross references) until July 18, 1980. No extension in the effective date will be made, however, as a result of such comments.

ADDRESSES: The official docket for this regulation is located in Room 2711, U.S. Environmental Protection Agency, 401 M Street SW., Washington, D.C., and is available for viewing from 9:00 a.m. to 4:00 p.m., Monday through Friday, excluding holidays.

For information on implementation of these regulations, contact your EPA Regional Office.

FOR FURTHER INFORMATION CONTACT: For technical assistance on these regulations contact Harry W. Trask or Rolf P. Hill, Office of Solid Waste (WH-563), U.S. Environmental Protection Agency, Washington, D.C. 20460 (202-755-9150). For single copies of the amended Part 262 preamble and regulations published today and for copies of the February 26, 1980 version which contained a more descriptive preamble of this whole Part, contact Edward Cox, Solid Waste Publications, 26 W. St. Claire, Cincinnati, Ohio 45268 (513) 684-5362. Multiple copies will be available from the Superintendent of Documents, Washington, D.C. 20402.

SUPPLEMENTARY INFORMATION:

I. Authority

These amendments are issued under authority of sections 2002(a), 3001, 3002, 3003, 3004 and 3005 of the Solid Waste Disposal Act, as amended by the Resource Conservation and Recovery Act of 1976 and as amended by the Quiet Communities Act of 1978 ("RCRA" or "the Act"), 42 U.S.C. 6912(a), 6921, 6922, 6923, 6924, 6925.

II. Background

This regulation was published in the **Federal Register** in proposed form for public review and comment on December 18, 1978 as 40 CFR Part 250, Subpart B (43 FR 58969 *et seq.*). The Agency held five public hearings and received a substantial number of written comments on the proposal. The public comment period closed on March 16, 1979.

After consideration of the views of the public, the Agency promulgated the Part 262 regulations in the **Federal Register** February 26, 1980 and promulgates these amendments today.

These amendments are in two categories, administrative amendments and technical amendments. Administrative amendments are corrections or clarifications which are being made to meet the intent of Part 262 preamble and regulations. The technical amendments address the additions or changes which were specified in the February 26, 1980 preamble to the Part 262 regulations.

III. Amendments

1. Effective Date

RCRA establishes the effective date of Subtitle C regulations as "the date six months after the date of promulgation thereof . . ." (Section 3010(b)). Regulations implementing Section 3001 (40 CFR Part 261) identify characteristics of hazardous waste and list particular wastes as hazardous. These regulations are essential in determining who must comply with the Subtitle C regulations. Therefore, EPA intends to make the effective date of regulations implementing Sections 3002 and 3003 six months from the date of promulgation of Part 261. Since Part 261 is promulgated today, the effective date is November 19, 1980.

Some confusion developed when in the **Federal Register** EPA stipulated that the "effective date" was August 26, 1980 and that the "compliance date" was six months after the promulgation of 40 CFR Part 261. For determining the date at which generators will be subject to these regulations, the August 26, 1980 date is incorrect. All generators must comply with these regulations as of November 19, 1980.

2. Purpose, Scope and Applicability

The generator's responsibility to comply with these regulations when treating, storing or disposing of hazardous waste on-site has been clarified. Section 262.10(b) of the February 26, 1980 **Federal Register** stated that a generator who "treats, stores, or disposes of hazardous waste . . ." must only comply with certain sections of Part 262.

It was the Agency's intent, as indicated in the note which followed § 262.10, that the provision only applied to generators who treat, store or dispose of hazardous waste on-site. This administrative amendment clarifies § 262.10(b) by specifying that a generator who "treats, stores, or disposes of hazardous waste on-site . . ." must only comply with certain sections of Part 262. If he treats, stores, or disposes of all of his waste on-site, he need only comply with those specific sections of Part 262 which are identified in § 262.10(b). As a treater, storer, or disposer, however, he must comply with 40 CFR Parts 264, 265 and 122. For those portions of hazardous waste that a generator ships off-site, he must comply with all of the Part 262 regulations.

3. Hazardous Waste Determination

Section 262.11(c)(1) identified two ways for a generator to determine by testing whether the waste he generated was a hazardous waste as identified in

Subpart C of 40 CFR Part 261. The first was by using the EPA Part 261 tests. The second was using equivalent testing methods approved by the Administrator. The citation to the equivalent testing methods which appeared in the February 26 rule was incorrect. Equivalent methods are now described in 40 CFR 260.21.

4. Designated Facility

In the preamble to the final rules promulgated February 26, 1980, the Agency discussed the generator's responsibility to either "designate another facility or instruct the transporter to return the waste" if the transporter was unable to deliver the hazardous waste to the designated facility or the alternate facility. The text of the regulation inadvertently omitted this requirement. A new subparagraph, § 262.20(d), is added today which includes this requirement and makes these regulations consistent with the preamble to the final rules for this Part and the requirements of § 263.21(b).

5. Placarding

Placarding requirements are described in § 262.33. The rule promulgated February 26 required generators to offer the appropriate placard to the initial transporter. DOT, however, has a special requirement for placarding of rail shipments (49 CFR 172.508). The shipper (generator) according to DOT is the person responsible for properly placarding a rail shipment rather than simply offering the appropriate placard. EPA recognizes this difference and is applying the same responsibility for shipments of hazardous waste by rail. This administrative amendment clarifies the operation of § 262.33 by requiring generators to placard rail shipments rather than just offering the appropriate placard. It removes an inconsistency which inadvertently occurred between EPA's and DOT's regulations.

6. Accumulation Time

The preamble to the regulations promulgated on February 26 stated that "accumulation of hazardous waste in storage tanks meeting the technical standards of the Part 264 and 265 regulations" would be added when those standards were promulgated. This amendment requires that the accumulation of hazardous waste in tanks meet the interim status standards in Part 265, Subpart J (except for the waste analysis and trial tests required for treatment tanks). Part 262 may be amended again to include the Part 264 final standards for tanks when they are promulgated later this year.

The container management section of the 40 CFR Part 265, Subpart I regulations, published elsewhere in today's **Federal Register**, is not cited in its entirety as applicable to the accumulation of wastes in DOT containers. Rather, only the sections requiring inspection of the accumulation area (§ 265.174) and buffer zones between the container storage area and adjacent property lines (as required for ignitable and reactive wastes under § 265.176) are stipulated. Since generators who ship hazardous waste off-site are already required to comply with DOT container standards (e.g., must not leak and must be compatible with the waste), these sections from Subpart I were not cited. The Agency believes that it is unnecessary and potentially confusing to require generators to comply with two very similar standards for containers. Such duplication also would not provide additional protection of human health and the environment.

The proposed rule which appeared in the **Federal Register** December 18, 1978 indicated that the Agency was seeking comments regarding the desirability of requiring contingency plans for generators who accumulated hazardous waste. The preamble to the February 26 Part 262 regulations also indicated that the Agency was considering the inclusion of such provisions for generators who accumulated hazardous waste on-site. This amendment requires that such generators comply not only with the Contingency Plan and Emergency Procedures of 40 CFR Part 265, Subpart D but also with the Preparedness and Prevention requirements of 40 CFR Part 265 Subpart C and the personnel training requirements of § 265.16.

These plans and procedures are required of owners or operators of treatment, storage, or disposal facilities, and the Agency believes that there is little difference between accumulation of hazardous waste for shipment off-site and storage so far as potential damage to human health and the environment is concerned. Therefore, the same standards for protection of human health and the environment should apply. (The February 26 preamble and the Background Document discuss the rationale for the accumulation provisions in more detail.)

Similarly, the rationale for requiring all the Part 265, Subpart J requirements for generators who accumulate hazardous waste on-site for 90 days or less (without obtaining a permit) and for requiring certain standards for managing containers and personnel training is based on the belief that less stringent standards could jeopardize human health and the environment.

7. Recordkeeping

Section 262.40(b) which appeared in the February 26, 1980 **Federal Register** did not specify the date from which copies of the Annual and Exception Report were to be kept for three years. This amendment initiates the three year retention period from the due date of the report (March 1).

8. International Shipments

The rule which was promulgated February 26, 1980 required that generators who ship hazardous waste outside the jurisdiction of the United States notify the Administrator prior to the first shipment of each different hazardous waste in each calendar year. This amendment includes a specific address as a means to expedite EPA's handling of this information. In addition, the generator is specifically required to include the name and address of the foreign consignee.

The regulations published elsewhere in today's **Federal Register** under 40 CFR Part 123 do not permit States to be authorized to receive the generator's notice of international shipment. This amendment includes a note reminding generators that they are required to notify the Administrator, rather than the local State authority.

9. Triple Rinsing

The citation for triple rinsing of containers which appeared in the February 26, 1980 **Federal Register** referenced Part 260 of the regulation. The Agency decided to include the triple rinsing provisions in Part 261 rather than in the Part 260 definitions. This amendment corrects the citation for the triple rinsing provisions.

10. Annual Reporting

The Annual Report for generators was promulgated in § 262.41 of the February 26, 1980 **Federal Register.** It consisted of a cover form (8700–13) and a type A form (8700–13A). Each part of this Report had associated instructions. This report was intended for use by generators who shipped hazardous waste to an off-site treatment, storage, or disposal facility. Annual Reports are also required for owners or operators of treatment, storage, or disposal facilities. In an effort to simplify the reporting requirements for the regulated community, the Agency has combined both reports into a single report with similar instructions for each part. Accordingly, the form and instructions which were promulgated in the February

26, 1980 **Federal Register** are amended in today's Part 262. A Facility Annual Report form (8700–13B) and the associated instructions are also promulgated today in Parts 264 and 265.

The changes which appear on the first page of the Hazardous Waste Report (EPA form 8700–13) are not extensive. Section I, (Type of Report), has been modified to include Part A for Generator Annual Reports, Part B for Facility Annual Reports, and Part C for Unmanifested Waste Reports.

The major change which occurred on this form was the addition of a new Section VIII entitled Cost Estimates for Facilities. Both closure and post-closure costs for treatment, storage, or disposal facilities must now be included as required by Parts 264 and 265 promulgated today.

On the Part A report, only minor heading changes have occurred (e.g., to the Waste Identification section) and a general renumbering of all sections due to the addition of the Cost Estimates for Facilities section. Also, the applicability of Part A reports to generators who ship hazardous waste off-site to facilities which they do not own or operate is clarified. Since facility owners or operators are required to file Annual Reports by Part 264, the Agency found it unnecessary to burden generators who treat, store, or dispose of hazardous waste on-site by requiring them to file two nearly identical reports on the same waste. Therefore, generators who ship hazardous waste off-site to a facility which they own or operate or who treat, store or dispose of hazardous waste on-site are not required to file the Part A report. Rather, they are required to file the Part B report for those wastes.

The amended instructions for Generator Annual Report (Part A) are included in Part 262 in today's **Federal Register.** The instructions for Facility Annual Reports (Part B) and Unmanifested Waste Reports (Part C) are published in Parts 264 and 265 elsewhere in today's **Federal Register.**

10. State Programs

The preamble to the February 26, 1980 regulation did not discuss the effect of EPA authorization of State programs on the applicability of these regulations. This Part applies in States which have not received interim or final authorization to operate the hazardous waste management system in lieu of the Federal program. With two exceptions, the provisions of these regulations do not apply in States which have been authorized under the provisions of 40 CFR Part 123. Section 40 CFR 123.128(d), enables States to obtain interim authorization while allowing EPA to administer and enforce the Federal manifest system as established in 40 CFR Parts 262 and 263. Further, EPA will not authorize States to receive the notice of international shipment required in § 262.50. Even in States whose programs are authorized, generators shipping their hazardous waste to a foreign country will be required to notify EPA four weeks prior to the initial shipment.

IV. OMB Review

The preamble to the February 26, 1980 regulations indicated that OMB had not completed its review of the recordkeeping and reporting provisions of the section 3002, 3003 and 3010 standards. OMB has now completed its review and has approved all of those provisions. EPA has developed an evaluation plan for the entire hazardous waste regulatory program. The plan commits EPA to an evaluation of each of those provisions and to modifying them, if necessary, based on the practical experience gained during implementation.

The provisions of § 262.34(a)(5) of this amendment pertaining to recordkeeping and reporting have been submitted to the Office of Management and Budget for review in light of the requirements of the Federal Reports Act, 44 U.S.C. 3501, *et seq.* Time has not permitted completion of this review.

Dated: May 8, 1980.

Douglas M. Costle,

Administrator.

Title 40 CFR Part 262 is revised to read as follows:

PART 262—STANDARDS APPLICABLE TO GENERATORS OF HAZARDOUS WASTE

Subpart A—General

Sec.

262.10 Purpose, scope, and applicability.
262.11 Hazardous waste determination.
262.12 EPA identification numbers.

Subpart B—The Manifest

262.20 General requirements.
262.21 Required information.
262.22 Number of copies.
262.23 Use of the manifest.

Subpart C—Pre-Transport Requirements

262.30 Packaging.
262.31 Labeling.
262.32 Marking.
262.33 Placarding.
262.34 Accumulation time.

Subpart D—Recordkeeping and Reporting

262.40 Recordkeeping.
262.41 Annual reporting.
262.42 Exception reporting.
262.43 Additional reporting.

Subpart E—Special Conditions

262.50 International shipments.
262.51 Farmers.

Appendix—Form

Annual Report (EPA Form 8700–13).

Authority: Secs. 2002(a), 3001, 3002, 3003, 3004, and 3005 of the Solid Waste Disposal Act, as amended by Resource Conservation and Recovery Act of 1976 and as amended by the Quiet Communities Act of 1978, (42 U.S.C. 6912(a), 6921, 6922, 6923, 6924, 6925)

Subpart A—General

§ 262.10 Purpose, scope, and applicability.

(a) These regulations establish standards for generators of hazardous waste.

(b) A generator who treats, stores, or disposes of hazardous waste on-site must only comply with the following sections of this Part with respect to that waste: Section 262.11 for determining whether or not he has a hazardous waste, § 262.12 for obtaining an EPA identification number, § 262.40(c) and (d) for Recordkeeping, § 262.43 for additional reporting and if applicable, § 262.51 for Farmers.

(c) Any person who imports hazardous waste into the United States must comply with the standards applicable to generators established in this Part.

(d) A farmer who generates waste pesticides which are hazardous waste and who complies with all of the requirements of § 262.51 is not required to comply with other standards in this Part or 40 CFR Parts 122, 264, or 265 with respect to such pesticides.

(e) A person who generates a hazardous waste as defined by 40 CFR Part 261 is subject to the compliance requirements and penalties prescribed in Section 3008 of the Act if he does not comply with the requirements of this Part.

Note.— A generator who treats, stores, or disposes of hazardous waste on-site must comply with the applicable standards and permit requirements set forth in 40 CFR Parts 264, 265, and 266 and Part 122.

§ 262.11 Hazardous waste determination.

A person who generates a solid waste, as defined in 40 CFR 261.2, must determine if that waste is a hazardous waste using the following method:

(a) He should first determine if the waste is excluded from regulation under 40 CFR 261.4 and 261.5.

(b) He must then determine if the waste is listed as a hazardous waste in Subpart D of 40 CFR Part 261.

Note.— Even if the waste is listed, the generator still has an opportunity under 40 CFR 260.22 to demonstrate to the Administrator that the waste from his

particular facility or operation is not a hazardous waste.

(c) If the waste is not listed as a hazardous waste in Subpart D of 40 CFR Part 261, he must determine whether the waste is identified in Subpart C of 40 CFR Part 261 by either:

(1) Testing the waste according to the methods set forth in Subpart C of 40 CFR Part 261, or according to an equivalent method approved by the Administrator under 40 CFR 260.21; or

(2) Applying knowledge of the hazard characteristic of the waste in light of the materials or the processes used.

§ 262.12 EPA identification numbers.

(a) A generator must not treat, store, dispose of, transport, or offer for transportation, hazardous waste without having received an EPA identification number from the Administrator.

(b) A generator who has not received an EPA identification number may obtain one by applying to the Administrator using EPA form 8700–12. Upon receiving the request the Administrator will assign an EPA identification number to the generator.

(c) A generator must not offer his hazardous waste to transporters or to treatment, storage, or disposal facilities that have not received an EPA identification number.

Subpart B—The Manifest

§ 262.20 General requirements.

(a) A generator who transports, or offers for transportation, hazardous waste for off-site treatment, storage, or disposal must prepare a manifest before transporting the waste off-site.

(b) A generator must designate on the manifest one facility which is permitted to handle the waste described on the manifest.

(c) A generator may also designate on the manifest one alternate facility which is permitted to handle his waste in the event an emergency prevents delivery of the waste to the primary designated facility.

(d) If the transporter is unable to deliver the hazardous waste to the designated facility or the alternate facility, the generator must either designate another facility or instruct the transporter to return the waste.

§ 262.21 Required information.

(a) the manifest must contain all of the following information:

(1) A manifest document number;

(2) The generator's name, mailing address, telephone number, and EPA identification number;

(3) The name and EPA identification number of each transporter;

(4) The name, address and EPA identification number of the designated facility and an alternate facility, if any;

(5) The description of the waste(s) (e.g., proper shipping name, etc.) required by regulations of the U.S. Department of Transportation in 49 CFR 172.101, 172.202, and 172.203;

(6) The total quantity of each hazardous waste by units of weight or volume, and the type and number of containers as loaded into or onto the transport vehicle.

(b) The following certification must appear on the manifest: "This is to certify that the above named materials are properly classified, described, packaged, marked, and labeled and are in proper condition for transportation according to the applicable regulations of the Department of Transportation and the EPA."

§ 262.22 Number of copies.

The manifest consists of at least the number of copies which will provide the generator, each transporter, and the owner or operator of the designated facility with one copy each for their records and another copy to be returned to the generator.

§ 262.23 Use of the manifest.

(a) The generator must:

(1) Sign the manifest certification by hand; and

(2) Obtain the handwritten signature of the initial transporter and date of acceptance on the manifest; and

(3) Retain one copy, in accordance with § 262.40(a).

(b) The generator must give the transporter the remaining copies of the manifest.

(c) For shipment of hazardous waste within the United States solely by railroad or solely by water (bulk shipments only), the generator must send three copies of the manifest dated and signed in accordance with this section to the owner or operator of the designated facility. Copies of the manifest are not required for each transporter.

Note.—See § 263.20(e) for special provisions for rail or water (bulk shipment) transporters who deliver hazardous waste by rail or water to the designated facility.

Subpart C—Pre-Transport Requirements

§ 262.30 Packaging.

Before transporting hazardous waste or offering hazardous waste for transportation off-site, a generator must package the waste in accordance with the applicable Department of Transportation regulations on packaging under 49 CFR Parts 173, 178, and 179.

§ 262.31 Labeling.

Before transporting or offering hazardous waste for transportation off-site, a generator must label each package in accordance with the applicable Department of Transportation regulations on hazardous materials under 49 CFR Part 172.

§ 262.32 Marking.

(a) Before transporting or offering hazardous waste for transportation off-site, a generator must mark each package of hazardous waste in accordance with the applicable Department of Transportation regulations on hazardous materials under 49 CFR Part 172;

(b) Before transporting hazardous waste or offering hazardous waste for transportation off-site, a generator must mark each container of 110 gallons or less used in such transportation with the following words and information displayed in accordance with the requirements of 49 CFR 172.304:

HAZARDOUS WASTE—Federal Law Prohibits Improper Disposal. If found, contact the nearest police or public safety authority or the U.S. Environmental Protection Agency.
Generator's Name and Address ————.
Manifest Document Number ————.

§ 262.33 Placarding.

Before transporting hazardous waste or offering hazardous waste for transportation off-site, a generator must placard or offer the initial transporter the appropriate placards according to Department of Transportation regulations for hazardous materials under 49 CFR Part 172, Subpart F.

§ 262.34 Accumulation time.

(a) A generator may accumulate hazardous waste on-site without a permit for 90 days or less, provided that:

(1) All such waste is shipped off-site in 90 days or less;

(2) The waste is placed in containers which meet the standards of § 262.30 and are managed in accordance with 40 CFR 265.174 and 265.176 or in tanks, provided the generator complies with the requirements of Subpart J of 40 CFR Part 265 except § 265.193;

(3) The date upon which each period of accumulation begins is clearly marked and visible for inspection on each container;

(4) Each container is properly labeled and marked according to § 262.31 and § 262.32; and

(5) The generator complies with the requirements for owners or operators in Subparts C and D in 40 CFR Part 265 and with § 265.16.

(b) A generator who accumulates hazardous waste for more than 90 days

is an operator of a storage facility and is subject to the requirements of 40 CFR Parts 264 and 265 and the permit requirements of 40 CFR Part 122.

Subpart D—Recordkeeping and Reporting

§ 262.40 Recordkeeping.

(a) A generator must keep a copy of each manifest signed in accordance with § 262.23(a) for three years or until he receives a signed copy from the designated facility which received the waste. This signed copy must be retained as a record for at least three years from the date the waste was accepted by the initial transporter.

(b) A generator must keep a copy of each Annual Report and Exception Report for a period of at least three years from the due date of the report (March 1).

(c) A generator must keep records of any test results, waste analyses, or other determinations made in accordance with § 262.11 for at least three years from the date that the waste was last sent to on-site or off-site treatment, storage, or disposal.

(d) The periods or retention referred to in this section are extended automatically during the course of any unresolved enforcement action regarding the regulated activity or as requested by the Administrator.

§ 262.41 Annual reporting.

(a) A generator who ships his hazardous waste off-site must submit Annual Reports:

(1) On EPA forms 8700–13 and 8700–13A according to the instructions on the form (See the Appendix to this Part);

(2) To the Regional Administrator for the Region in which the generator is located;

(3) No later than March 1 for the preceding calendar year.

(b) Any generator who treats, stores, or disposes of hazardous waste on-site must submit an Annual Report covering those wastes in accordance with the provisions of 40 CFR Parts 264, 265, and 266 and 40 CFR Part 122.

§ 262.42 Exception reporting.

(a) A generator who does not receive a copy of the manifest with the handwritten signature of the owner or operator of the designated facility within 35 days of the date the waste was accepted by the initial transporter must contact the transporter and/or the owner or operator of the designated facility to determine the status of the hazardous waste.

(b) A generator must submit an Exception Report to the EPA Regional Administrator for the Region in which the generator is located if he has not received a copy of the manifest with the handwritten signature of the owner or operator of the designated facility within 45 days of the date the waste was accepted by the initial transporter. The Exception Report must include:

(1) A legible copy of the manifest for which the generator does not have confirmation of delivery;

(2) A cover letter signed by the generator or his authorized representative explaining the efforts taken to locate the hazardous waste and the results of those efforts.

§ 262.43 Additional reporting.

The Administrator, as he deems necessary under section 2002(a) and section 3002(6) of the Act, may require generators to furnish additional reports concerning the quantities and disposition of wastes identified or listed in 40 CFR Part 261.

Subpart E—Special Conditions

§ 262.50 International shipments.

(a) Any person who exports hazardous waste to a foreign country or imports hazardous waste from a foreign country into the United States must comply with the requirements of this Part and with the special requirements of this section.

(b) When shipping hazardous waste outside the United States, the generator must:

(1) Notify the Administrator in writing four weeks before the initial shipment of hazardous waste to each country in each calendar year;

(i) The waste must be identified by its EPA hazardous waste identification number and its DOT shipping description;

(ii) The name and address of the foreign consignee must be included in this notice;

(iii) These notices must be sent to: Hazardous Waste Export, Division for Oceans and Regulatory Affairs (A–107), United States Environmental Protection Agency, Washington, D.C. 20460.

Note.—This requirement to notify will not be delegated to States authorized under 40 CFR Part 123. Therefore, all generators must notify the Administrator as required above.

(2) Require that the foreign consignee confirm the delivery of the waste in the foreign country. A copy of the manifest signed by the foreign consignee may be used for this purpose;

(3) Meet the requirements under § 262.21 for the manifest, except that:

(i) In place of the name, address, and EPA identification number of the designated facility, the name and address of the foreign consignee must be used;

(ii) The generator must identify the point of departure from the United States through which the waste must travel before entering a foreign country.

(c) A generator must file an Exception Report, if:

(1) He has not received a copy of the manifest signed by the transporter stating the date and place of departure from the United States within 45 days from the date it was accepted by the initial transporter; or

(2) Within 90 days from the date the waste was accepted by the initial transporter, the generator has not received written confirmation from the foreign consignee that the hazardous waste was received.

(d) When importing hazardous waste, a person must meet all requirements of § 262.21 for the manifest except that:

(1) In place of the generator's name, address and EPA identification number, the name and address of the foreign generator and the importer's name, address and EPA identification number must be used.

(2) In place of the generator's signature on the certification statement, the U.S. importer or his agent must sign and date the certification and obtain the signature of the initial transporter.

§ 262.51 Farmers.

A farmer disposing of waste pesticides from his own use which are hazardous wastes is not required to comply with the standards in this Part or other standards in 40 CFR Parts 122, 264 or 265 for those wastes provided he triple rinses each emptied pesticide container in accordance with § 261.33(c) and disposes of the pesticide residues on his own farm in a manner consistent with the disposal instructions on the pesticide label.

HAZARDOUS WASTE REPORT

PLEASE PLACE LABEL IN THIS SPACE

I. TYPE OF HAZARDOUS WASTE REPORT

PART A: GENERATOR ANNUAL REPORT
THIS REPORT IS FOR THE YEAR ENDING DEC. 31, 19__

PART B: FACILITY ANNUAL REPORT
THIS REPORT FOR YEAR ENDING DEC. 31, 19__

PART C: UNMANIFESTED WASTE REPORT
THIS REPORT IS FOR A WASTE RECEIVED *(day, mo., & yr.)* __ __ – __ __ – 19__

INSTRUCTIONS: You may have received a preprinted label attached to the front of this pamphlet; affix it in the designated space above—left. If any of the information on the label is incorrect, draw a line through it and supply the correct information in the appropriate section below. If the label is complete and correct, leave Sections II, III, and IV below blank. If you did not receive a preprinted label, complete all sections. "Installation" means a single site where hazardous waste is generated, treated, stored, or disposed of. Please refer to the specific instructions for generators or facilities before completing this form. The information requested herein is required by law *(Section 3002/3004 of the Resource Conservation and Recovery Act)*.

II. INSTALLATION'S EPA I.D. NUMBER

F (1–2) | (3–13) | X/A (14) | C (15) 1

III. NAME OF INSTALLATION

(39–47)

IV. INSTALLATION MAILING ADDRESS

EPA Form 8700-13A (5-80)

BILLING CODE 6560-01-C

PAGE ____ OF ____

General Instructions, Hazardous Waste Report (EPA Form 8700–13)

Important: READ ALL INSTRUCTIONS BEFORE COMPLETING THIS FORM.

Section I. Type of Hazardous Waste Report

Part A: Generator Annual Report—For generators who ship their waste off-site to facilities which they do not own or operate, fill in the reporting year for this report (e.g., 1982).

Note.—Generators who ship hazardous waste off-site to a facility which they own or operate must complete the facility (Part B) report instead of the Part A report.

Part B: Facility Annual Report—For owners or operators of on-site or off-site facilities that treat, store, or dispose of hazardous waste, fill in the reporting year for this report (e.g., 1982).

Part C: Unmanifested Waste Report—For facility owners or operators who accept for treatment, storage, or disposal any hazardous waste from an off-site source without an accompanying manifest, fill in the date the waste was received at the facility (e.g. 04–12–1982).

Section II thru Section IV. Installation I.D. Number, Name of Installation, and Installation Mailing Address

If you received a preprinted label from EPA, attach it in the space provided and leave Sections II through IV blank. If there is an error or omission on the label, cross out the incorrect information and fill in the appropriate item(s). If you did not receive a preprinted label, complete Section II through Section IV.

Section V. Location of Installation

If your installation location address is different than the mailing address, enter the location address of your installation.

Section VI. Installation Contact

Enter the name (last and first) and telephone number of the person who may be contacted regarding information contained in this report.

Section VII. Transportation Services Used (For Part A Reports ONLY)

List the EPA Identification Number for each transporter whose services you used during the reporting year.

Section VIII. Cost Estimates for Facilities (For Part B Reports ONLY)

A. Enter the most recent cost estimate for facility closure in dollars. See Subpart H of 40 CFR Parts 264 or 265 for more detail.

B. For disposal facilities only, enter the most recent cost estimate for post closure monitoring and maintenance. See Subpart H of 40 CFR Parts 264 or 265 for more detail.

Section IX. Certification

The generator or his authorized representative (Part A reports) or the owner or operator of the facility or his authorized representative (Parts B and C reports) must sign and date the certification where indicated. The printed or typed name of the person signing the report must also be included where indicated.

Note.—Since more than one page is required for each report, enter the page number of each sheet in the lower right corner as well as the total number of pages.

Generator Annual Report, Part A Instructions (EPA Form 8700–13A)

Generator Annual Report for generators who ship their hazardous waste off-site to facilities which they do not own or operate.

Important: READ ALL INSTRUCTIONS BEFORE COMPLETING THIS REPORT.

Section X. Generator's Identification Number

Enter your EPA identification number.

Example:

X. GENERATOR'S EPA I.D. NO.												
G	N	J	D	7	8	4	6	2	1	3	8	3

Section XI. Facility's Identification Number

Enter the EPA identification number of the facility to which you sent the waste described below in Section XIV (a separate sheet must be used for each facility to which you sent hazardous waste.)

Section XII. Facility Name

Enter the name of the facility corresponding to the facility's EPA identification number in Section XI.

Section XIII. Facility Address

Enter the address of the facility corresponding to the facility's EPA identification number in Section XI.

Section XIV. Waste Identification

All information in this section must be entered by line number. Each line entry will describe the total annual amount of each waste shipped to the facility identified in Section XI, above.

Section XIV–A. Description of Waste

For hazardous wastes that are listed under 40 CFR Part 261, Subpart D, enter the EPA listed name, abbreviated if necessary. Where mixtures of listed wastes were shipped, enter the description which you believe best describes the waste.

For unlisted hazardous waste identified under 40 CFR Part 261, Subpart C, enter the description which you believe best describes the waste. Include the specific manufacturing or other process generating the waste (e.g., green sludge from widget manufacturing) and, if known, the chemical or generic chemical name of the waste.

Section XIV–B. DOT Hazard Class

Enter the two digit code from Table 1 which corresponds to the DOT hazard class of the waste described. (If the waste described has been shipped under more than one DOT hazard class, use a separate line for each DOT hazard class.)

Table 1

DOT hazard class	Code
Combustible	01
Corrosive	02
Etiologic agent	03
Explosive A	04
Explosive B	05
Flammable gas	06
Flammable liquid	07
Flammable solid	08
Irritating agent	09
Nonflammable gas	10
Organic peroxide	11
ORM–E	12
Oxidizer	13
Poison A	14
Poison B	15
Radioactive	16

Section XIV–C. EPA Hazardous Waste Number

For listed wastes, enter the EPA Hazardous Waste Number from 40 CFR Part 261, Subpart D, which identifies the waste.

For a mixture of more than one listed waste, enter each of the applicable EPA Hazardous Waste Numbers. Four spaces are provided. If more space is needed, continue on the next line(s) and leave all other information on that line blank.

XIV. WASTE IDENTIFICATION					
LINE NUMBER	A. DESCRIPTION OF WASTE	B. DOT HAZARD CLASS	C. EPA HAZARDOUS WASTE NUMBER (see instructions)	D. AMOUNT OF WASTE	UNIT OF MEASURE (enter code)
1	Steel finishing sludge	02	K060 K061 K062 K063	41246	T
2			K064		

For unlisted hazardous wastes, enter the EPA Hazardous Waste Numbers from 40 CFR Part 261, Subparts C, applicable to the waste. If more than four spaces are required, follow the procedure described above.

Section XIV–D. Amount of Waste

Enter the amount of this waste you shipped to the facility identified in Section XI and include the weight of containers if left at the treatment, storage, or disposal facility.

Section XIV–E. Unit of Measure

Enter the unit of measure code for the quantity of waste described on this line. Units of measure which must be used in this report and the appropriate codes are:

Units of measure	Code
Pounds	P
Short tons (2,000 lbs)	T
Kilograms	K
Tonnes (1,000 kg)	M

Units of volume may not be used for reporting but must be converted into one of the above units of weight taking into account the appropriate density or specific gravity of the waste.

Section XV. Comments

This space may be used to explain or clarify any entry. If used, enter a cross reference to the appropriate Section number.

Note.—Since more than one page is required for each report, enter the page number of each sheet in the lower right corner as well as the total number of pages.

BILLING CODE 6560–01–M

federal register

Monday
May 19, 1980

Part VI

Environmental Protection Agency

Hazardous Waste Management System

Standards Applicable to Transporters of Hazardous Waste

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 263

[FRL 1470-8]

Standards for Transporters of Hazardous Waste

AGENCY: Environmental Protection Agency.
ACTION: Final rule.

SUMMARY: The Resource Conservation and Recovery Act, as amended, seeks to promote the protection of human health and the environment and to conserve valuable material and energy resources. In order to accomplish this, the Act establishes a national program to improve solid waste management, including the control of hazardous waste, the promotion of resource conservation and recovery, and the establishment of environmentally sound solid waste disposal practices.

The Part 263 regulations published February 26, 1980 in the **Federal Register** and the amended version published today establish standards for transporters of hazardous waste. These amendments are administrative changes to the regulations. Areas of change include: clarification of the effective date and compliance date of the regulation, clarification of the recordkeeping retention time, and an additional telephone number(s) for reporting discharges.

DATES: Effective date: November 19, 1980. EPA will accept public comment on these regulations and amendments for administrative errors only (e.g., typographical errors, incorrect cross references) until July 18, 1980. No extension in the effective date will be made, however, as a result of such comments.

ADDRESSES: The official docket for this regulation is located in Room 2711, U.S. Environmental Protection Agency, 401 M Street SW., Washington, D.C., and is available for viewing from 9:00 am to 4:00 pm, Monday through Friday, excluding holidays.

For information on implementation of these regulations, contact your EPA Regional Office.

FOR FURTHER INFORMATION CONTACT: For technical assistance on these regulations, contact Harry W. Trask or Carolyn Barley, Office of Solid Waste, (WH-563), U.S. Environmental Protection Agency, Washington, D.C. 20460 (202-755-9145). For single copies of the amended Part 263 preamble and regulations published today and for copies of the February 26, 1980 version which contains a more descriptive preamble of this whole Part, contact Edward Cox, Solid Waste Publications, 26 West Saint Claire, Cincinnati, Ohio 45268 (513/684-5362). Multiple copies will be available from the Superintendent of Documents, Washington, D.C. 20402.

SUPPLEMENTARY INFORMATION:

I. Authority

These amendments are issued under authority of Sections 2002(a), 3001, 3002, 3003, 3004 and 3005 of the Solid Waste Disposal Act, as amended by the Resource Conservation and Recovery Act of 1976 and as amended by the Quiet Communities Act of 1978 ("RCRA" or "the Act"), 42 U.S.C. 6912(a), 6921, 6922, 6923, 6924, 6925.

II. Background

This regulation was published in the **Federal Register** in proposed form for public review and comment on April 28, 1978 as 40 CFR Part 250, Subpart C (43 FR 18506 *et seq.*). The Agency held six public hearings, one of which was a joint hearing with the Department of Transportation (DOT) and received a substantial number of written comments on the proposal. The public comment period closed on March 16, 1979.

After consideration of the views of the public, the Agency promulgated the Part 263 regulations in the **Federal Register** February 26, 1980 and promulgates this amended version today.

These amendments are administrative amendments and are corrections or clarifications to the intent of Part 263 preamble and regulations.

III. Amendments

1. Effective Date

RCRA establishes the effective date of Subtitle C regulations as "the date six months after the date of promulgation thereof . . ." (Section 3010(b)). Regulations implementing Section 3001 (40 CFR Part 261) identify characteristics of hazardous waste and list particular wastes as hazardous. These regulations are essential in determining who must comply with the Subtitle C regulations. Therefore, EPA intends to make the effective date of regulations implementing Sections 3002 and 3003 six months from the date of promulgation of Part 261. Since Part 261 is promulgated today, the effective date is November 19, 1980.

Some confusion developed when in the **Federal Register** EPA stipulated that the "effective date" was August 26, 1980 and that the "compliance date" was six months after the promulgation of 40 CFR Part 261. For determining the date at which transporters will be subject to these regulations, the August 26, 1980 date is incorrect. All transporters must comply with these regulations as of November 19, 1980.

2. Recordkeeping

Section 263.22 (b) and (c) which appeared in the February 26, 1980 **Federal Register** did not specify the length of time the transporter was required to retain a copy of the manifest or shipping paper. These amendments clarify this requirement by requiring records to be kept for three years from the date the manifest was accepted by the initial transporter. This time period is consistent with the other manifest recordkeeping requirements.

3. Discharge Reporting

The regulations which appeared in the February 26, 1980 **Federal Register** concerning immediate action for discharges did not include a telephone number(s) for reporting discharges which occur outside the toll free calling area. Therefore, Section 263.30(c)(1) is amended to include a toll call telephone number for transporters to use when reporting discharges which occur outside the continental United States. DOT will also amend 49 CFR 171.15 to require carriers (transporters) to use this toll number when applicable.

Section 263.30(d) limited water (bulk shipment) transporters to telephone reporting of discharges to either a toll free number or a District of Columbia number. Since it is not always practicable for water transporters (bulk shipment) to report discharges using these two numbers, EPA is amending this section to reference the Coast Guard's broader telephone reporting requirements found in 33 CFR 153.203.

4. State Programs

The preamble to the February 26, 1980 regulation did not discuss the effect of EPA authorization of State programs on the applicability of these regulations. This Part applies in States which have not received interim or final authorization to operate the hazardous waste management system in lieu of the Federal program. With one exception, the provisions of these regulations do not apply in States which have been authorized under the provisions of 40 CFR Part 123. Section 40 CFR 123.128(d) enables States to obtain interim authorization while allowing EPA to administer and enforce the Federal manifest system as established in 40 CFR Parts 262 and 263.

IV. OMB Review

The preamble to the February 26, 1980 regulations indicated that OMB had not completed its review of the recordkeeping and reporting provisions of the Section 3002, 3003 and 3010 standards. OMB has now completed its review and has approved all of those provisions. EPA has developed an evaluation plan for the entire hazardous waste regulatory program. The plan commits EPA to an evaluation of each of those provisions and to modifying them, if necessary, based on the practical experience gained during implementation.

Dated: May 8, 1980.

Douglas M. Costle,

Administrator.

Title 40 CFR Part 263 is revised to read as follows:

PART 263—STANDARDS APPLICABLE TO TRANSPORTERS OF HAZARDOUS WASTE

Subpart A—General

Sec.
263.10 Scope.
263.11 EPA Identification Numbers.

Subpart B—Compliance With the Manifest System and Recordkeeping

263.20 The Manifest System.
263.21 Compliance with the Manifest.
263.22 Recordkeeping.

Subpart C—Hazardous Waste Discharges

263.30 Immediate Action.
263.31 Discharge Clean Up.

Authority: Sec. 2002(a), 3002, 3003, 3004 and 3005 of the Solid Waste Disposal Act as amended by the Resource Conservation and Recovery Act of 1976 and as amended by the Quiet Communities Act of 1978, (42 U.S.C. 6912, 6922, 6923, 6924, 6925).

Subpart A—General

§ 263.10 Scope.

(a) These regulations establish standards which apply to persons transporting hazardous waste within the United States if the transportation requires a manifest under 40 CFR Part 262.

Note.—The regulations set forth in Parts 262 and 263 establish the responsibilities of generators and transporters of hazardous waste in the handling, transportation, and management of that waste. In these regulations, EPA has expressly adopted certain regulations of the Department of Transportation (DOT) governing the transportation of hazardous materials. These regulations concern, among other things, labeling, marking, placarding, using proper containers, and reporting discharges. EPA has expressly adopted these regulations in order to satisfy its statutory obligation to promulgate regulations which are necessary to protect human health and the environment in the transportation of hazardous waste. EPA's adoption of these DOT regulations ensures consistency with the requirements of DOT and thus avoids the establishment of duplicative or conflicting requirements with respect to these matters. These EPA regulations which apply to both interstate and intrastate transportation of hazardous waste are enforceable by EPA.

DOT has revised its hazardous materials transportation regulations in order to encompass the transportation of hazardous waste and to regulate intrastate, as well as interstate, transportation of hazardous waste. Transporters of hazardous waste are cautioned that DOT's regulations are fully applicable to their activities and enforceable by DOT. These DOT regulations are codified in Title 49, Code of Federal Regulations, Subchapter C.

EPA and DOT worked together to develop standards for transporters of hazardous waste in order to avoid conflicting requirements. Except for transporters of bulk shipments of hazardous waste by water, a transporter who meets all applicable requirements of 49 CFR Parts 171 through 179 and the requirements of 40 CFR sections 263.11 and 263.31 will be deemed in compliance with this Part. Regardless of DOT's action, EPA retains its authority to enforce these regulations.

(b) These regulations do not apply to on-site transportation of hazardous waste by generators or by owners or operators of permitted hazardous waste management facilities.

(c) A transporter of hazardous waste must also comply with 40 CFR Part 262, Standards Applicable to Generators of Hazardous Waste, if he:

(1) Transports hazardous waste into the United States from abroad; or

(2) Mixes hazardous wastes of different DOT shipping descriptions by placing them into a single container.

Note.—Transporters who store hazardous waste are required to comply with the storage standards in 40 CFR Parts 264 and 265 and the permit requirements of 40 CFR Part 122.

§ 263.11 EPA identification number.

(a) A transporter must not transport hazardous wastes without having received an EPA identification number from the Administrator.

(b) A transporter who has not received an EPA identification number may obtain one by applying to the Administrator using EPA Form 8700–12. Upon receiving the request, the Administrator will assign an EPA identification number to the transporter.

Subpart B—Compliance With the Manifest System and Recordkeeping

§ 263.20 The manifest system.

(a) A transporter may not accept hazardous waste from a generator unless it is accompanied by a manifest, signed by the generator in accordance with the provisions of 40 CFR Part 262.

(b) Before transporting the hazardous waste, the transporter must sign and date the manifest acknowledging acceptance of the hazardous waste from the generator. The transporter must return a signed copy to the generator before leaving the generator's property.

(c) The transporter must ensure that the manifest accompanies the hazardous waste.

(d) A transporter who delivers a hazardous waste to another transporter or to the designated facility must:

(1) Obtain the date of delivery and the handwritten signature of that transporter or of the owner or operator of the designated facility on the manifest; and

(2) Retain one copy of the manifest in accordance with § 263.22; and

(3) give the remaining copies of the manifest to the accepting transporter or designated facility.

(e) The requirements of paragraphs (c) and (d) of this section do not apply to rail or water (bulk shipment) transporters if:

(1) The hazardous waste is delivered by rail or water (bulk shipment) to the designated facility; and

(2) A shipping paper containing all the information required on the manifest (excluding the EPA identification numbers, generator certification, and signatures) accompanies the hazardous waste; and

(3) The delivering transporter obtains the date of delivery and handwritten signature of the owner or operator of the designated facility on either the manifest or the shipping paper; and

(4) The person delivering the hazardous waste to the initial rail or water (bulk shipment) transporter obtains the date of delivery and signature of the rail or water (bulk shipment) transporter on the manifest and forwards it to the designated facility; and

(5) A copy of the shipping paper or manifest is retained by each rail or water (bulk shipment) transporter in accordance with § 263.22.

(f) Transporters who transport hazardous waste out of the United States must:

(1) indicate on the manifest the date the hazardous waste left the United States; and

(2) sign the manifest and retain one copy in accordance with § 263.22(c); and

(3) return a signed copy of the manifest to the generator.

§ 263.21 Compliance with the manifest.

(a) The transporter must deliver the entire quantity of hazardous waste which he has accepted from a generator or a transporter to:

(1) The designated facility listed on the manifest; or

(2) The alternate designated facility, if the hazardous waste cannot be delivered to the designated facility because an emergency prevents delivery; or

(3) The next designated transporter; or

(4) The place outside the United States designated by the generator.

(b) If the hazardous waste cannot be delivered in accordance with paragraph (a) of this section, the transporter must contact the generator for further directions and must revise the manifest according to the generator's instructions.

§ 263.22 Recordkeeping.

(a) A transporter of hazardous waste must keep a copy of the manifest signed by the generator, himself, and the next designated transporter or the owner or operator of the designated facility for a period of three years from the date the hazardous waste was accepted by the initial transporter.

(b) For shipments delivered to the designated facility by rail or water (bulk shipment), each rail or water (bulk shipment) transporter must retain a copy of a shipping paper containing all the information required in § 263.20(e)(2) for a period of three years from the date the hazardous waste was accepted by the initial transporter.

(c) A transporter who transports hazardous waste out of the United States must keep a copy of the manifest indicating that the hazardous waste left the United States for a period of three years from the date the hazardous waste was accepted by the initial transporter.

(d) The periods of retention referred to in this Section are extended automatically during the course of any unresolved enforcement action regarding the regulated activity or as requested by the Administrator.

Subpart C—Hazardous Waste Discharges

§ 263.30 Immediate action.

(a) In the event of a discharge of hazardous waste during transportation, the transporter must take appropriate immediate action to protect human health and the environment (e.g., notify local authorities, dike the discharge area).

(b) If a discharge of hazardous waste occurs during transportation and an official (State or local government or a Federal Agency) acting within the scope of his official responsibilities determines that immediate removal of the waste is necessary to protect human health or the environment, that official may authorize the removal of the waste by transporters who do not have EPA identification numbers and without the preparation of a manifest.

(c) An air, rail, highway, or water transporter who has discharged hazardous waste must:

(1) Give notice, if required by 49 CFR 171.15, to the National Response Center (800–424–8802 or 202–426–2675); and

(2) Report in writing as required by 49 CFR 171.16 to the Director, Office of Hazardous Materials Regulations, Materials Transportation Bureau, Department of Transportation, Washington, D.C. 20590.

(d) A water (bulk shipment) transporter who has discharged hazardous waste must give the same notice as required by 33 CFR 153.203 for oil and hazardous substances.

§ 263.31 Discharge clean up.

A transporter must clean up any hazardous waste discharge that occurs during transportation or take such action as may be required or approved by Federal, State, or local officials so that the hazardous waste discharge no longer presents a hazard to human health or the environment.

I. Authority

These regulations are issued under the authority of Sections 1006, 2002(a), 3001 through 3007, and 3010 of the Solid Waste Disposal Act, as amended by the Resource Conservation and Recovery Act of 1976, as amended, 42 U.S.C. §§ 6905, 6912(a) and 6921 through 6927, and 6930.

II. Introduction

A. Background

Early this year, EPA began issuing the regulations which comprise the Subtitle C hazardous waste management system. On February 26, 1980, it promulgated standards for generators and transporters of waste under Sections 3002 and 3003 of RCRA (Parts 262 and 263, respectively) and a public notice establishing procedures for filing a notice of hazardous waste activity under Section 3010. Today, in addition to these Part 264 and Part 265 regulations, EPA is publishing permit procedures, and guidelines for the approval of State hazardous waste programs under Sections 3005 and 3006 (Parts 122, 123, and 124) and the first phase of its Section 3001 hazardous waste list (part 261) and Part 260, which defines words and phrases used in Parts 261 through 265, and contains provisions generally applicable to all of those regulations.

The preamble to the Section 3001 regulations should be read for an introduction to the hazardous waste management problem in the United States and an explanation of the framework of Subtitle C. It also discusses many of the general issues and difficult problems the Agency has faced in finalizing the Section 3001 and Section 3004 regulations.

The Agency developed its Section 3004 regulations in tandem with its Section 3001 regulations, holding numerous meetings with experts in hazardous waste management, States, Federal agencies, industry, environmental groups, and other individuals and organizations to discuss possible management standards. EPA also circulated draft regulations for comment and held several public hearings. Based on the comments received in meetings, hearings, and on its draft regulations, and on information the Agency collected, on December 18, 1978, EPA proposed national standards for the location, design, operation, monitoring, closure, and post-closure care of facilities which treat, store, or dispose of hazardous waste (43 FR 58982–59022). The standards were designed to protect human health and the environment by ensuring the proper design, construction, and operation of hazardous waste management facilities in accordance with the mandate of Section 3004 of RCRA.

EPA held five public hearings on its December 18, 1978, proposal, at which several hundred persons testified. The Agency received over one thousand sets of written comments on the proposed Section 3004 regulations. The Agency has carefully considered all of the comments it received. Many of them raised difficult technical questions. Analysis and resolution of these questions is hampered in general by the Nation's lack of long-term experience with advanced waste management technologies. This limited experience has made it difficult to evaluate the accuracy of the often conflicting claims which the commenters made regarding the proposed Section 3004 standards.

It has become clear to the Agency that it may take several years, in some cases, to adequately develop the data and perform the analyses necessary to resolve the more complex technical issues raised by the regulations and the comments in a way that will allow promulgation of nationally applicable detailed technical standards. As a result, promulgation of regulations involving these issues is being postponed. On the other hand, some of the proposed regulations prescribed recordkeeping and reporting requirements, and many involved recognized "good management practices" which are not highly technical. This second category of standards is adequately supported by existing data, and can be promulgated now. Accordingly, the standards for hazardous waste management facilities will be promulgated and implemented in phases.

B. Overview

1. *Phasing of the Regulations.* The Phase I standards are being promulgated today. They include a nearly complete set of interim status standards, in Part 265, and most ot the general status (Part 264) administrative and non-technical operating standards. The interim status standards cover the following areas:

1. Purpose, Scope, and Applicability and other General Standards
2. Waste Analysis Requirements
3. Security
4. Inspections
5. Training
6. Preparedness and Prevention
7. Contingency Plans and Emergency Procedures
8. Manifest System, Recordkeeping, and Reporting
9. Ground-Water Monitoring
10. Closure and Post-Closure Care
11. Financial Requirements (Partial)
12. Use and Management of Containers
13. Tanks
14. Surface Impoundments
15. Waste Piles
16. Land Treatment
17. Landfills
18. Incinerators
19. Thermal Treatment
20. Chemical, Physical, and Biological Treatment
21. Underground Injection

The general status regulations promulgated today cover the first eight of these areas and are essentially identical to the corresponding interim status standards. The section of the preamble entitled "Interim Status Standards" explains when the interim status standards apply to facilities and when the general standards apply.

As previously mentioned, the Agency believes it may take several years to resolve all of the issues necessary to promulgate detailed national technical standards for some types of facilities (e.g., the design requirements for landfills). In the meantime, however, in order to issue permits which will protect human health and the environment, EPA must evaluate the technical capabilities of specific facilities to manage hazardous waste. Therefore, as an interim measure, EPA will publish in the near future Phase II of the Section 3004 regulations—a set of technical regulations which will allow permits to be issued based on the Agency's best engineering judgment of the technical requirements which individual facilities must meet. These regulations will allow permits to be processed in a manner that will ensure the protection of human health and the environment by evaluating hazardous waste management facilities in terms of both site-specific factors and the nature of the waste that the facility will manage. At a minimum, these regulations will contain a set of factors (e.g., distance to ground water and waste mobility) which must be considered. Where they are available, the regulations will also contain models, formulas, and performance standards to provide a standardized method of analysis. In determining whether a facility will adequately safeguard human health and the environment, the Regional Administrator will apply his best engineering judgment to data which the applicant submits concerning these factors.

The third phase of this regulatory program will involve the resolution of the complex technical issues described earlier, and the reproposal and ultimate promulgation of more definitive counterparts of the Phase II standards. These more definitive standards are expected to supplant the Phase II standards and make the permitting process more straightforward. In addition to standards for specific types of facilities, the Phase III regulations may also include standards for specific industries and waste which require special management standards.

The Agency believes that this three-phase regulatory strategy will give maximum protection to human health and the environment without imposing the more complex regulations as national technical standards before the controversial issues surrounding them can be fully investigated. This strategy also should not complicate implementation of the hazardous waste program. Its only effect will be to postpone by some months the beginning of facility permitting using the Phase II standards. Any postponement in issuing these Part 265 interim status regulations, however, would cause an unwarranted delay in commencement of the Subtitle C management program.

All the standards EPA is promulgating today are written so as to be broadly applicable to large numbers of facilities and vast amounts of hazardous waste. The Agency has been faced with the task of balancing the goals of broad applicability and regulatory specificity. EPA believes that the technical regulations promulgated today are clear and sufficiently straightforward so that any reasonably qualified engineer should be able to interpret and implement them.

EPA has used all of the information available to it to try to write standards which begin to address its mandate in Section 3004—to promulgate such standards as may be necessary to protect human health and the environment. Some members of the regulated industry may argue that the Agency should wait to promulgate its Section 3004 standards until it has an even broader data base and can write much more specific nationally applicable technical standards. EPA does not believe that it would be reasonable to wait longer. The Agency has been called upon to address an extremely serious environmental problem and must proceed as quickly as possible given its limited resources.

These standards form only the bare outline of those that will be coming in Phases II and III. Interim status standards are not the final answer to the long-term environmental problems caused by hazardous waste disposal; they really form the outline of the technical standards and best engineering judgment permits that are to come. Nevertheless, through the use of the manifest system, the recordkeeping and reporting requirements, and the closure, waste analysis, training, inspection, and contingency plan requirements, EPA will begin to bring under control environmentally disastrous practices that up to now have often gone largely unregulated.

2. *Organization of Regulations and Preamble.* EPA has totally reorganized its Subtitle C regulations in response to comments that its proposed regulations were difficult to read. Regulations implementing Section 3004 were originally proposed as Subpart D of Part 250 of Title 40 of the Code of Federal Regulations. The proposed interim status standards were specified in paragraph (c) of § 250.40. The interim status standards have been recodified as Part 265, while the general status standards (i.e., those independently enforceable standards which will be used to issue permits and which apply to facilities without interim status) appear in Part 264. Definitions of terms used in these regulations, like those used in Parts 261 through 263, are contained in § 260.10.

Subparts A of Parts 264 and 265 specify how the regulations are to be used and which facilities are subject to which regulations. All facilities which treat, store, or dispose of hazardous waste (as defined in the Part 261 regulations), other than those excluded in Subpart A are, by and large, subject to these regulations. Some of the regulations, however, apply only to certain kinds of facilities or contain special conditions for certain classes of facilities.

Subparts B to H (excluding Subpart F) of Part 265 and Subparts B to E of Part 264 contain standards which apply generally to all types of facilities. Subparts I to R of Part 265 contain standards for specific types of facilities (landfills, tanks, incinerators, etc.). The corresponding facility-specific Part 264 standards will be promulgated in Phases II and III of this regulatory program.

The remainder of this preamble is divided into four sections. The first section discusses the role of the interim status standards and the major issues raised by the commenters on those standards. The next section deals with a number of general issues which pertain to all of the Section 3004 standards. Many of the issues discussed in this section pertain to the Phases II and III regulations as much or more than they do to the Phase I regulations. EPA is making an effort, insofar as decisions have been made, to inform the public of how the standards for hazardous waste management facilities will develop over time. The third section is a subpart-by-subpart analysis of the final Phase I rules. This analysis summarizes the major issues raised by the commenters on each section of the proposed rules, and explains how the final rules reflect the Agency's resolution of these issues. The last section of the preamble describes the documents which support these regulations.

3. *Interim Final Provisions.* Most sections of these regulations have been changed in response to comments. Those sections which have been modified substantially are being issued as interim final regulations so that the public can comment on the modified standards before they are promulgated as "final final" regulations. All of the Part 264 and Part 265 regulations are promulgated today, however, for purposes of the six-month effective date under Section 3010(b).

Those sections of the regulations which EPA is promulgating as interim final are as follows:

PART 264

Sec.
264.12 Required notices.

PART 265

Subpart B—General Facility Standards

265.12 Required notices.
265.17 General requirements for ignitable, reactive, or incompatible wastes.

Subpart F—Ground-Water Monitoring

265.90 Applicability.
265.91 Ground-water monitoring system.
265.92 Sampling and analysis.
265.93 Preparation, evaluation, and response.
265.94 Recordkeeping and reporting.

Subpart G—Closure and Post-Closure

265.111 Closure performance standard.
265.112 Closure plan; amendment of plan.
265.113 Time allowed for closure.
265.117 Post-closure care and use of property; period of care.
265.118 Post-closure plan; amendment of plan.

Subpart I—Use and Management of Containers

265.176 Special requirements for ignitable or reactive waste.

Subpart J—Tanks

265.198 Special requirements for ignitable or reactive waste.

Subpart K—Surface Impoundments

265.228 Closure and post-closure.

Subpart L—Waste Piles

265.251 Protection from wind.
265.252 Waste analysis.
265.253 Containment.
265.256 Special requirements for ignitable or reactive waste.
265.257 Special requirements for incompatible wastes.

Subpart M—Land Treatment

265.272 General operating requirements.
265.273 Waste analysis.
265.276 Food chain crops.
265.278 Unsaturated zone (zone of aeration) monitoring.
265.280 Closure and post-closure.

Subpart N—Landfills

Sec.
265.310 Closure and post-closure.
265.314 Special requirements for liquid waste.
265.315 Special requirements for containers.

Subpart O—Incinerators

265.343 General operating requirements.
265.345 Waste analysis.
265.347 Monitoring and inspections.
265.351 Closure.

Subpart P—Thermal Treatment

265.373 General operating requirements.
265.375 Waste analysis.
265.377 Monitoring and inspections.
265.381 Closure.
265.382 Open burning; waste explosives.

Subpart Q—Chemical, Physical, and Biological Treatment

265.405 Special requirements for ignitable or reactive waste.

Subpart R—Underground Injection

265.430 Applicability.

Certain sections of the Part 265 regulations were proposed as general status standards, and have not been so substantially modified that the Agency is accepting further public comments on their substance. However, because they have now been incorporated in the interim status standards, EPA will accept comments on the propriety of their inclusion as such. As the preamble indicates, almost all of the additions to the interim status standards were made in response to comments, but EPA believes that additional public comments will assist the Agency in any necessary adjustments to the Part 265 standards. The Agency will accept comments on the propriety as interim status standards of the following sections:

PART 265

Subpart B—General Facility Standards

Sec.
265.13 General waste analysis.

Subpart J—Tanks

265.192 General operating requirements.
265.193 Waste analysis and trial tests.

Subpart K—Surface Impoundments

265.222 General operating requirements.
265.223 Containment system.
265.225 Waste analysis and trial tests.
265.229 Special requirements for ignitable or reactive waste.
265.230 Special requirements for incompatible wastes.

Subpart M—Land Treatment

265.281 Special requirements for ignitable or reactive waste.
265.282 Special requirements for incompatible wastes.

Subpart N—Landfills

Sec.
265.302 General operating requirements.
265.312 Special requirements for ignitable or reactive waste.

Subpart Q—Chemical, Physical, and Biological Treatment

265.401 General operating requirements.
265.402 Waste analysis and trial tests.

It is EPA's intent to act on all interim final portions of these regulations prior to their effective date.

III. Interim Status Standards

Section 3005(e) of RCRA specifies that if the owner or operator of a facility which is in existence on October 21, 1976, (the date of enactment of RCRA) notifies EPA, as required by Section 3010 of RCRA, and properly applies for a permit, the facility owner or operator is to "be treated as having been issued such permit." EPA refers to such an owner or operator as one who has "interim status" (the title of subsection 3005(e)). Accordingly, for facility owners or operators who have notified EPA and applied for a permit, the interim status period extends from the date the initial Section 3001 through 3005 regulations go into effect to the date final administrative action on the individual permit application is taken.

Congress, in enacting this provision, apparently recognized that it will take a considerable period of time for EPA to act on all facility permit applications. The provision for interim status, to allow a smooth transition to full regulation under new national standards, allows owners and operators of existing facilities to continue to operate them until decisions on their permit applications are made.

The Agency expects that most of the approximately 26,000 prospective permittees will notify EPA of their hazardous waste activities (as required by Section 3010 of RCRA and explained in a notice of February 26, 1980 (45 FR 12745–54)) and will apply for a permit. Considering the potential number of applicants, the potential administrative complexity of issuing hazardous waste permits, the limited staff that EPA expects to have available to review and negotiate permit applications, and EPA's experience with the National Pollutant Discharge Elimination System (NPDES) permit program under the Clean Water Act, the Agency estimates that it will take several years to act on all permit applications. Therefore, many prospective permittees will be operating in interim status for an extended period of time. In keeping with the intent of Congress that hazardous waste management be regulated by national standards as quickly as possible, and with the statutory structure making Section 3004 standards independent of the Section 3005 permitting process (see discussion below), EPA believes that these prospective permittees should at least comply with selected minimum requirements of Section 3004 during interim status.

The Agency believes that permit applicants with interim status should not be expected to meet all of the Phase II and Phase III Part 264 standards, because some of the specific requirements of these standards may be inappropriate for certain facilities, and different requirements may be substituted when a permit is issued using the variance provisions in the regulations. Alternatively, during permitting under the Phase II regulations, each permit will be issued on the basis of the permit writer's "best engineering judgment." In addition, some permittees may be allowed a reasonable period of time to come into compliance with certain of the general Section 3004 (i.e., Part 264) standards, as permitted by Section 3005(c) of RCRA. The Agency believes that decisions regarding certain standards and all individual compliance shedules should be made in the permit issuance process where there is full opportunity for public participation and for interaction between the Agency and the permit applicant.

On the other hand, given Congress' intent that hazardous waste management be regulated as quickly as possible, and the independent enforceability of the Section 3004 standards, EPA believes that prospective permittees should begin to meet at least those threshold requirements of Section 3004 which apply generally to all facilities and which will definitely be included in all permits. This will begin to achieve RCRA's goal of protecting human health and the environment.

The Agency has chosen a middle course between, on the one hand, having no requirements applicable during the interim status period and, on the other, making the complete set of independently enforceable standards apply.

A. Authority

A number of commenters supported the concept of interim status standards and agreed that authority for these requirements exists in Section 3004 of the Act. Others stated that neither Section 3005 nor Section 3010 of RCRA authorizes EPA to impose facility requirements during the interim status period. They recommended deleting the interim status standards, because EPA

has the power to deal with imminent hazards under Section 7003, and because those facilities not posing an imminent hazard can continue under existing local control until new permits are issued.

These commenters apparently misunderstood the relationship of Section 3004 to Sections 3005, 3008, and 3010 of RCRA. The Section 3004 regulations are independently enforceable national standards which apply to owners and operators of hazardous waste facilities. Section 3008 authorizes enforcement actions against persons violating *any requirement* of Subtitle C. Thus, enforcement actions against persons violating the Section 3004 requirements are authorized by Section 3008.

EPA does not believe that the "requirements of Subtitle C" referred to in Section 3008 are only those requirements incorporated in a permit pursuant to Section 3005. The requirement that facility owners and operators comply with the permit requirements of Section 3005 is one independent requirement of Section 3004 (see Section 3004(7)).

Section 3005(c) requires that EPA determine that a facility complies with the Section 3004 requirements before issuing a permit. Permit revocation under Section 3005(d) also is based on non-compliance with Section 3005 *or* Section 3004 requirements. Thus, under the terms of the statute, Section 3004 standards are independently enforceable and are "requirements of Subtitle C" within the meaning of that term in Section 3008. As the preambles to Parts 122 and 123 of the consolidated permit regulations discuss, EPA will, however, regard compliance with a duly issued RCRA permit as compliance with the terms of the statute except for the case of state-issued permits that fail to reflect EPA suggestions made during EPA review.

Section 3005(a) requires that EPA promulgate regulations requiring owners or operators of hazardous waste facilities to have a permit, and prohibits treating, storing, or disposing of hazardous waste without a permit after the effective date of these regulations. Section 3010(b) states that all of the Subtitle C regulations, including both Section 3004 and 3005 regulations, take effect six months after they are promulgated.

Thus, on the effective date of the Section 3004 regulations, facility owners and operators are required to comply with all of the Section 3004 standards and have a permit under Section 3005 in order to operate legally. Clearly, it is beyond the capability of facility owners or operators to comply with all of the Section 3004 requirements, and beyond the capability of the Agency (or authorized States) to issue all permits, within the six months between the date the regulations are promulgated and their effective date.

Section 3005(e) resolves part of this problem by authorizing facility owners or operators, under certain conditions, to obtain interim status. This allows owners or operators to be treated as having been issued a permit until EPA makes a final administrative disposition of their permit application, and thus satisfies the mandates of Section 3005(a) and of Section 3004(7) which prohibit operations without a permit. Having interim status thus relieves the owner or operator of a facility of the possibility of being prosecuted for operating without a permit. It does not, however, relieve owners and operators of facilities of the necessity to comply with the Section 3004 standards when they become effective.

As discussed above, Section 3004 standards are independently enforceable requirements which apply to all treatment, storage, and disposal of hazardous waste. In addition to the automatic applicability of Section 3004 standards, however, EPA interprets the language of Section 3005(e)(3), that a person shall be treated as having been issued a permit, to mean that a person who operates with interim status must accept the responsibilities and liabilities associated with being a permittee. Thus the conditions of Section 3004 which are imposed on permit holders by operation of Section 3005 (c) and (d) are also applicable to owners or operators of facilities with interim status because they "shall be treated as having been issued such permit."

For the reasons noted above (i.e., that decisions regarding certain standards and all individual compliance schedules should be made in the permit issuance process), the Agency does not believe that permit applicants with interim status should be expected to meet all of the general Section 3004 standards immediately. Hence, the Agency decided to promulgate separate interim status standards to avoid the burden on existing facilities which could otherwise result if all of the Section 3004 standards were applied immediately.

The Administrator's general rulemaking authority under Section 2002(a)(1) of RCRA provides an additional basis for the establishment of interim status standards and the relief to permit applicants of the need for immediate compliance with all of the Part 264 Section 3004 standards, as they are promulgated. Section 2002(a) states:

"In carrying out this Act, the Administrator is authorized to:

(1) Prescribe, in consultation with Federal, State, and regional authorities, such regulations as are necessary to carry out his functions under this Act;"

The Agency believes, for the technical and policy reasons mentioned above, that the establishment of interim status standards is an appropriate use of this general rulemaking authority.

B. Criteria for Interim Status Standards

In general, EPA used the following criteria for deciding which standards should apply during interim status:

(1) The standards can be met in a straightforward manner without need for substantial interpretation by, or negotiation with, EPA. EPA's limited resources will be consumed at the outset of the program with implementing other features of this complex regulatory program, such as the notification and manifest system, enforcement, and the permitting process itself. The Agency, therefore, plans to minimize individual contact with the regulated community during the interim status period. If individual applicants are to have substantial contact with the Agency during interim status, it will be more productive for the Agency to put its resources into implementing the full standards through the permitting process which the Act envisions, rather than postponing or slowing down the implementation of the full standards so that a more complex set of interim standards can be implemented.

(2) Compliance does not require substantial capital expenditures which are properly the result of the certainty of permit conditions. Many of the technical regulations could require costly construction or retrofitting, and the designs underlying these expenditures will be the subject of discussion during the permitting process. The Agency believes it is unreasonable to require costly construction during interim status, which may then be disallowed or required to be modified during permitting.

(3) Compliance can be achieved within the six-month period between the date the regulations are promulgated and the date they become effective. Many of the Part 264 standards may entail time for equipment delivery, construction, installation, training, and shakedown which could significantly exceed the six months available. While the Agency could delay the effective date of regulations requiring an implementation period longer than six months, a multitude of different effective dates for different regulations could

complicate the implementation process, leading to confusion.

It should be emphasized that the Agency used these criteria only as guidelines in developing the interim status regulations. The Agency has included other requirements in the interim status standards which are exceptions to these guidelines when it judged that requirements were of unusual importance and that the benefits to be gained from early implementation of the requirements would substantially outweigh the disadvantages. One important exception involves the closure and post-closure care regulations. Improper facility closure and abandonment has historically been a major cause of human health impacts and environmental damage. The Agency believes that no facility should be closed during interim status without being closed properly. Therefore, permit applicants who close all or parts of their facilities during interim status will be required to meet the full closure and post-closure care requirements, including the requirement to have the plans for those activities approved by the Agency. Similarly, even though the ground-water monitoring provisions do not meet the criteria for interim status standards specified earlier, owners or operators of surface impoundments, landfills, and land treatment facilities are also required to comply with these provisions during the interim status period (although EPA has provided a 12-month delay in the date for compliance). The Agency believes it of prime importance to require owners or operators of these facilities to monitor ground water during interim status in order to know whether an existing facility may already have contaminated the ground water. The rationales for other standards which are exceptions to these guidelines are discussed below.

The Agency views the interim status standards as dynamic regulations which, for many facilities, may be in effect for a number of years before permits are issued or denied. As the need and support for additional regulations becomes clear, the Agency expects to add to this initial set of interim status standards through additional rulemaking. EPA will, of course, continue to refine both the Part 264 and Part 265 regulations as the state of technology of hazardous waste management improves.

As discussed previously, promulgation of parts of the Section 3004 standards will be phased in over time. Consequently, the Agency is specifying the interim status standards independently of the general Section 3004 standards. This procedure will allow the initial phase of the RCRA hazardous waste control program to be implemented without further delay. It will also avoid the ambiguity and confusion which can arise when standards are extensively referenced and cross-referenced, as was the case in the December 1978 proposal.

The Agency received numerous comments from a wide cross-section of commenters concerning general issues raised by the proposed interim status standards. These comments fall into the following areas, which are discussed in turn below:

(1) requirements to be added to interim status standards;

(2) compliance period for some or all standards;

(3) notes and variances; and

(4) equity.

C. Added Requirements

Several commenters felt that the scope of the proposed interim status standards should be expanded to include all requirements of the general Section 3004 regulations which could be implemented immediately and that would be unlikely to require modification when a permit is issued. In general, EPA agrees.

Several of the more important suggestions for additional interim status standards are discussed below.

1. *Ground-Water and Leachate Monitoring.* The proposed interim status standards required ground-water and leachate monitoring at landfills and surface impoundments where one or both of these monitoring systems were already in place. Several commenters suggested requiring ground-water and leachate monitoring at *all* facilities during interim status, whether or not such systems were already in place. They felt that exempting some sites from conducting this monitoring would mean that local and State implementing authorities would be deprived of the warning needed to determine if sites are endangering ground water and local water supplies. Further, some of the commenters stated that ground-water monitoring systems must be installed at all facilities that receive permits. They felt that EPA should not postpone monitoring until the final permit was issued, because that could take five years or longer. Other commenters felt that monitoring data were essential to (1) identify sites which are violating the human health and environmental standards, and (2) to trigger appropriate action against those sites, even though the human health and environmental standards were not proposed as interim status standards.

The Agency has considered these comments carefully. First of all, it should be noted that leachate monitoring in the unsaturated zone beneath existing landfills and surface impoundments will not be required in Phase II of the general Section 3004 standards for technical reasons (see the preamble discussion on Ground-Water Monitoring for details). However, the Agency has determined that leachate monitoring is technically feasible and appropriate for land treatment facilities (land farms), and, therefore, has added this requirement to the interim status standards for these facilities (see the preamble discussion on Land Treatment facilities).

The Agency does not believe that *all* facilities require ground-water monitoring systems during the interim status period or otherwise. For example, it would be an unnecessary expense with little benefit to human health or the environment to require above-ground storage tanks or incinerators to have ground-water monitoring systems, because leakage of hazardous waste into the ground can be detected visually at these facilities. The Agency believes ground-water monitoring is appropriate primarily at facilities where hazardous waste is purposely placed onto or into the land—such as at landfills, surface impoundments, injection wells, and land treatment facilities—and where ground-water location, quantity, and usage, and other factors such as geology and climate, indicate the need for ground-water monitoring.

Another issue is whether or not all landfills, surface impoundments, and land treatment facilities should have ground-water monitoring systems during the interim status period. There are a number of factors upon which this issue turns. On the one hand, it is true that nearly all landfills, surface impoundments, and land treatment facilities will eventually be required to install ground-water monitoring systems as a permit condition. If these systems are installed during interim status, they would supply several years of monitoring data and early warning of potential ground-water contamination problems which would otherwise be unavailable. Given the recent spate of ground-water problems identified at hazardous waste disposal facilities (see Ground-Water Monitoring Background Document), there is good reason for requiring ground-water monitoring during the interim status period.

On the other hand, the planning and construction of ground-water monitoring systems takes time, and should be overseen by qualified hydrogeologists.

Also, ground-water monitoring systems may be inappropriate in some circumstances. Furthermore, the proposed ground-water sampling and analysis requirements were extensive, and contained provisions for variances in some cases.

On balance, the Agency has decided that the advantages—in terms of increased human health and environmental protection—of requiring all landfills, surface impoundments, and land treatment facilities to have ground-water monitoring systems during the interim status period outweigh the drawbacks outlined above. However, the Agency is concerned about the short time in which facilities currently operating without ground-water monitoring systems must comply, i.e., Section 3010(b) provides that Section 3004 standards take effect six months after their promulgation. Consequently, the Agency has written the final interim status standards to require that all hazardous waste landfills, surface impoundments, and land treatment facilities have ground-water monitoring systems within 18 months of the promulgation of the regulations unless the owner or operator conducts hydrogeological studies which demonstrate that such a system is unnecessary. This delayed schedule for compliance should allow enough time to properly plan and install the systems. In addition, to minimize the need for owners or operators to interact with the Agency, the ground-water sampling and analysis requirements have been simplified so that variances are no longer necessary.

While these regulations require owners and operators of surface impoundments, landfills and land treatment facilities to begin to set up ground-water monitoring programs, the Agency has yet to specify the appropriate corrective action that is to follow the discovery and initial assessment of contamination. The Agency believes that its ground-water protection strategy under Section 3004 is a critical element of the entire Subtitle C program. EPA, therefore, intends to develop that standard as part of the Phase II regulations, which better allows the Agency to integrate its ground-water protection objectives with its strategy for setting other environmental performance objectives.

The absence of a specific ground-water quality protection standard in Part 265 does not in any sense undermine the need for ground-water monitoring requirements during the interim status period. The monitoring system required here is designed to answer two questions. Has the facility contaminated ground-water? If so, what is the degree of contamination? The answers to these questions will be essential to whatever ground-water quality protection standard (and corrective action) is included in the Phase II regulations. Moreover, a careful assessment of these issues will require an examination of background ground-water quality, for which owners and operators of surface impoundments, landfills, and land treatment facilities can and should begin to monitor.

2. *Incinerators.* The proposed regulations contained detailed requirements for the operation of hazardous waste incinerators. These included destruction efficiency, combustion levels, detailed monitoring and inspection, and trial burns. These were not made applicable during the interim status period. A comment suggested that the proposed monitoring and inspection requirements should be made applicable during the interim status period.

Full application of those standards would require major capital outlays for equipment which may not be readily available and which might need to be altered during the permitting process. On the other hand, existing damage incidents and operator requests (in comments on the proposed regulations) for emission variances during start-up and shut-down periods show that improper incineration of hazardous waste can be a serious health problem. In addition, for some facilities, the interim status period will last longer than EPA had expected at the time the regulations were first proposed.

Because of this the Agency is now issuing, on an interim final basis, a set of "threshold" requirements designed to assure a basic level of environmental and human health protection throughout the interim status period. These standards are discussed in the Subpart O analysis in this preamble and in an accompanying background document. They meet EPA's informal interim status criteria while offering protection from the most serious dangers of hazardous waste incineration.

3. *Thermal Treatment.* The proposed regulations contained no provisions specifically applicable to all types of thermal treatment of hazardous waste. Commenters feared that the proposed incineration regulations, focusing on flame combustion techniques, would unduly restrict innovative treatment of hazardous waste in other thermal treatment facilities. The Agency wishes to encourage the development of new techniques that can adequately render waste less hazardous or non-hazardous, or more amenable to transport or store. Thus, these regulations include a new set of standards—Subpart P—regulating other forms of thermal treatment.

The risks associated with the thermal treatment of hazardous waste are similar to those posed by hazardous waste incineration. The Agency has therefore designed, for the interim status period, a set of "threshold" requirements to provide a basic level of protection for human health and the environment. They are discussed in the Subpart P analysis in this preamble and in an accompanying background document. They are being issued on an interim final basis.

4. *Closure and Post-Closure.* A number of commenters suggested adding the requirement for submitting a closure plan to EPA (as outlined in proposed § 250.43–7(c)) to the interim status standards.

Upon reviewing the comments, it is clear that some members of the public did not understand the Agency's intention regarding closure plans during the interim status period. The Agency intended that each facility owner or operator with interim status would prepare a closure plan for his facility, to include estimates of closure costs, and post-closure costs, if applicable. The owner or operator would then use this information as the basis for complying with the financial requirements (a closure trust fund, and post-closure trust fund, if applicable). However, the Agency did not believe that it was necessary for owners or operators routinely to *submit* these closure plans to the Agency for review during the interim status period. In EPA's opinion, the Agency staff should focus their attention on issuing permits and on enforcement matters, rather than reviewing closure plans. The Agency can ensure that closure plans are prepared when it conducts facility inspections. Further, the facility owner or operator must submit a closure plan with Part B of his permit application. No later than the time the permit is considered, the Agency will review the plan and require it to be revised, if necessary.

EPA agrees with the thrust of comments in this area, though, and should an owner or operator wish to close his facility during the interim status period (i.e., before final administrative action on the permit application) he must contact the Regional Administrator 180 days before he expects to begin closure. At that time, the Agency will review the closure plan and require it to be adjusted as necessary. These procedures have been clarified in the final rules. (See Closure

and Post-Closure Care Background Document for details.)

5. *Ignitable, Reactive, or Incompatible Wastes.* Several commenters suggested that the proposed standards which restricted the handling of ignitable, reactive, and incompatible wastes at certain facilities be included in the set of interim status standards. These standards were not, for the most part, proposed as interim status standards because the extensive and complex provisions in the Notes (i.e., variances) to these proposed standards would have required extensive interaction with the Agency. However, many commenters suggested that owners and operators should be allowed to make for themselves the judgments embodied in the Notes, without obtaining the approval of the Regional Administrator. As discussed below, the Agency decided that this could be made a workable arrangement and has made the objectives of the Notes a self-executing part of the regulations. Deletion of the requirement for approval of the Regional Administrator now allows inclusion of these regulations in the interim status regulations. They now appear in § 265.17 and are discussed in the Subpart B analysis of this preamble. The inclusion in the interim status standards of fairly extensive requirements for the analysis of waste should provide owners and operators with sufficient information to safely handle ignitable, reactive, or incompatible wastes under these regulations.

6. *Landfill Rules.* Several commenters felt that requirements for landfill diversion structures and cover material should be included in the interim status standards.

The need for landfill diversion structures arises from the potential for precipitation from outside the active portion of the facility to run onto the active portion and become contaminated. This contaminated water may then run off into surface waters creating a threat to human health and the environment. A related problem involves precipitation which falls directly on the active portion of a facility. It may also become contaminated run-off, and thereby cause similar problems.

The Agency shares the commenters' concern regarding contaminated surface water run-off, and agrees that provisions for its control should be included in the final interim status regulations. Similarly, these problems also may arise at land treatment facilities. Accordingly, during the interim status period, the final rules require that run-on must be diverted away from the active portions of a landfill or land treatment facility, and the run-off from the active portions of a facility must be collected. These provisions are discussed in the Subpart N section of this preamble.

Landfill cover material requirements were not proposed as interim status standards because cover requirements can vary on a site-specific basis, and the proposed requirement was subject to a Note (i.e., variance). The Agency has decided not to include a landfill cover requirement in the final interim status standards, except for final cover during closure (see discussion in the Subpart N section of this preamble).

7. *Waste Analysis.* Some commenters felt that sampling and analysis of hazardous waste by facility owners or operators (proposed § 250.43(f), (g), and (h)) should be included as an interim status standard.

Waste sampling and analysis provisions were not specifically proposed as interim status standards. On the other hand, some level of waste analysis was required by the need to meet other interim status standards such as the prohibition on placing wastes in tanks or containers that previously held an incompatible material. In response to the numerous comments received on these proposed standards (see the Waste Analysis Background Document and the Subpart B section of this preamble), the Agency has modified the requirements for waste sampling and analysis. The facility owner or operator is now required to prepare and follow a waste analysis plan that is appropriate to the waste that is handled and to the type of facility. In addition to the general waste analysis standards applicable to all facilities, waste analysis requirements specific to different types of facilities (e.g., landfills and tanks) are also included in each technical section of the regulations.

The Agency believes that these sampling and analysis requirements are amenable to all waste management facilities, so that variances to the waste analysis standards are no longer necessary. Furthermore, the Agency believes that facility owners or operators need to know certain information about the wastes they handle in order to handle them safely and to comply with the reporting and technical requirements of the Phase I regulations. Consequently, both general and specific waste analysis requirements have been added to the interim status standards.

8. *Site Selection Standards.* Some commenters felt that the general site selection standards (proposed § 250.43–1) should be made a part of the interim status requirements, because omitting these standards would be "contrary to the intent of the law and completely unacceptable."

Section 3004(4) of the Act specifies that regulations must include such requirements for the location of hazardous waste facilities as are necessary to protect human health and the environment, and the Agency proposed location standards in § 250.43–1. The Agency excluded them from the interim status requirements, however, because there would have been few options, other than closure, for existing facilities which were already located in areas restricted by the proposed site location standards. Immediate closure of such facilities during the interim status period might cause a severe shortage of hazardous waste facilities and could well lead to illegal dumping, which would only exacerbate the problems EPA is trying to control. The Agency is in the process of finalizing its site location standards for promulgation as part of the Phase II standards. EPA believes there may be circumstances where variances or waivers to site location standards will be in the best interests of protecting human health and the environment. Therefore, the Agency has continued to exclude site selection standards from the interim status requirements. EPA believes that such standards should be applied on a case-by-case basis during the permitting process.

D. Compliance Period

Many commenters suggested alternate schedules for compliance with the interim status requirements. The suggested schedules spanned the range from before, at, and up to a year after the effective date of the regulations. EPA does not have the authority to require owners and operators to comply with requirements *before* the effective date of the regulations. Those commenters requesting that the effective date of the interim status standards be deferred *beyond* the six-month period after promulgation of the regulations argued that these six months would be used for analyzing waste and preparing permit applications, and thus additional time would be needed to comply with the substantive interim status requirements, such as those for security and the development of contingency plans.

The Agency does not agree with these arguments. Wastes listed in the Section 3001 regulations need not be analyzed to fill out the permit application necessary for the owner or operator of a facility to obtain interim status. For nonlisted wastes, it takes a maximum of 24 hours to perform the test protocols to determine whether or not a waste

stream meets one of the hazardous waste characteristics specified in the Section 3001 regulations. In any event, these tests must be completed within 90 days (not six months) in order to comply with the notification requirements of Section 3010 of RCRA.

The comments on what period EPA should allow for compliance with the interim status standards were submitted before the permit application regulations under Section 3005 of RCRA were proposed, and therefore, commenters may have assumed that applying for a permit would be a difficult and time-consuming task. However, the permit rules specify a two-step permit application process. A facility owner or operator may satisfy Section 3005(e) of RCRA, and thereby qualify for interim status (provided Sections 3005(e)(1) and (2) are also complied with), by submitting Part A of the permit application within six months after promulgation of the Section 3005 (Part 122) regulations. The Agency believes that assembling the information required in Part A is neither difficult nor time-consuming. Consequently, the burden of preparing Part A of the permit application should be substantially less than the commenters anticipated. Most of the substantive information is not required until Part B is submitted, just before the Agency is ready to review the application. For some facilities, this may take several years.

The final security requirements have been made more flexible than they were in the proposed rules (see the preamble discussion on Subpart B). The Agency believes that facilities should be able to comply with these requirements within the six-month period following the promulgation of the regulations. The Agency also believes that a facility owner or operator should be able to prepare a contingency plan and the other plans required by the interim status standards within this same time frame.

For all of the reasons given above, the Agency does not believe that a compliance period longer than six months is justified, except to install new ground-water monitoring systems and to construct surface water run-off controls.

E. Notes and Variances

Many commenters suggested that the applicability, during the interim status period, of the "Notes" in the proposed rules should be clarified. Some commenters felt that the regulations should allow facility owners or operators with interim status to make good faith judgments of their own compliance with the applicable regulations, including the provisions of the attendant "Notes," without special approval from the Agency.

In response to numerous comments concerning the "Note" system in general, the Agency has incorporated all of the alternative standards and other substantive "Notes" directly into the final rules (as discussed *infra*). Consequently, there should be no confusion as to whether or not certain alternative standards are allowed during the interim status period. The "Comments" included with these regulations are not intended to create alternatives to the requirements of the regulations.

The Agency agrees that, to a certain degree, facility owners or operators should be allowed to make good faith judgments as to whether or not certain alternative requirements apply to them during interim status. The final rules typically specify that a facility owner or operator may choose to follow alternative requirements allowed by a variance, *provided* he can demonstrate the facts and rationale supporting that judgment when requested to do so by the Regional Administrator. Thus, a self-implementing system (as requested by the commenters) applies to variances during the interim status period, but that system is subject to oversight by EPA, which can request evidence to support the variance at any time. It is likely that the Agency will review this evidence only in conjunction with making a routine facility inspection or when the Agency has reason to believe that a violation has occurred.

In any event, variances will be reviewed by EPA during the permitting process, and will be reflected in the permit conditions if a facility owner or operator can demonstrate eligibility for the variance as the regulations require.

F. Equity

Many commenters expressed concern that inequities are likely to develop in permitting facilities during the interim status period. Below are the three major concerns raised by the commenters on this issue.

1. *Common Permit Effective Date.* EPA estimated in the preamble to the proposed regulations that it could take up to five years to issue all of the permits. Several commenters pointed out that EPA or an authorized State may review one facility's permit application early in the period and impose a compliance schedule to meet the full set of Section 3004 standards, while a similar competing facility might be subject only to the interim status standards for several years until its permit application is reviewed.

To minimize potential inequities, several commenters urged EPA to establish a definite period during which only the interim status standards apply, regardless of when a permit is issued. In other words, all permits and permit requirements would become effective at the same time. The interim status period, according to some commenters, should be sufficiently long to ensure that essentially all of the permits would be issued. Others specifically suggested a five-year period as is prescribed by the Clean Water Act.

Unlike the Clean Water Act, which mandated a specific date by which all waste water treatment systems were to be in compliance with the BPT requirements, there is no language in RCRA which suggests that EPA should, or could use a similar approach. Further, EPA believes that the suggested approach is inconsistent with the clear Congressional mandate in RCRA to provide safer hazardous waste management practices as quickly as possible.

2. *Case-by-Case Interim Status Standards.* Some commenters suggested that interim status requirements should be imposed on existing facilities on a case-by-case basis using the past operating experience of these facilities with which State environmental agencies should be familiar. The commenters felt that these case-by-case evaluations would be more equitable than the "blanket" proposed approach.

The Agency does not agree that interim status standards should be applied on a case-by-case basis. This approach would be a *de facto* permit program. It would require the Agency to commit substantial resources to these case-by-case preliminary analyses which would be better spent in developing final permits. It is difficult to see how this approach could be considered more equitable than uniform national standards which apply to everyone, as proposed. Consequently, the Agency has not adopted a case-by-case approach for the interim status standards.

3. *No Intention To Obtain Permits.* Commenters suggested that many facility owners or operators who never intend to actually obtain a permit will take advantage of the interim status period by applying for a permit, using unrealistically low estimates for establishing closure and post-closure funds, competing in the market place with legitimate owners or operators for the several years it will take to fully review permit applications, and then close their facilities prior to permit issuance or final denial. Because EPA proposed to issue an identification

number to each facility owner or operator who meets the requirements for interim status under Section 3005(e) of RCRA, commenters suggested that ways of countering the above problem would be: (a) before issuing an identification number, inspect each facility to determine the facility owner's or operator's financial capability and his potential to comply ultimately with the requirements of RCRA, or (b) issue identification numbers only to those facility owners or operators who presently hold valid State or Federal NPDES permits to receive and dispose of specific hazardous waste compounds.

The Agency shares the concern expressed by these commenters, but disagrees with their suggested solutions. Interim status is achieved automatically by a facility owner or operator who complies with Section 3005(e) of RCRA. EPA cannot initially withhold interim status from facility owners or operators who otherwise qualify, based on the Agency's subjective judgments of financial capability, intent to ultimately comply with RCRA's requirements, or on the basis of State or Federal permits issued under other statutes. If EPA becomes aware of facilities which are not meeting the interim status standards, the Agency can bring an enforcement action against them under Section 3008 of RCRA, or can move quickly towards final disposition of the facility's permit application.

The Agency has made it clear in the regulations that facility owners or operators who choose to close their facilities while in interim status (before a permit is issued or denied) must do so in accordance with the full set of closure requirements and post-closure requirements (if they apply). Thus, these owners or operators will not escape the responsibilities (and costs) of complying with these requirements. Consequently, the potential inequities which the commenters feared should be greatly reduced, if not totally eliminated.

IV. General Issues

A. Degree of Hazard

The proposed Sections 3001 and 3004 regulations did not create a classification scheme which separated hazardous wastes into varying *degrees* of hazard or risk for purposes of regulation. The proposed Section 3004 regulations did, however, take into account certain types of hazardous properties or *classes* of hazard in imposing management requirements. For instance, certain management requirements were proposed for wastes with ignitable and reactive properties that were not proposed for other wastes.

A large number of commenters argued, for a variety of reasons, that a *degree* of hazard system is necessary in order to effectively implement the hazardous waste control program. Several commenters suggested that wastes should be classed into two or more levels of hazard (i.e., "extremely hazardous" or "hazardous"), depending on the intrinsic risk associated with the waste. Many commenters stated that because the intrinsic hazard presented by a waste is a function of certain *chemical and physical parameters*, classification by risk should be based on a quantification of these parameters. On the other hand, several commenters felt that the hazard persented by a waste is a function of its *management* and, therefore, wastes should be classed into hazard levels according to how they are managed. Many commenters suggested using a combination of intrinsic hazard and hazard based on management.

In support of these suggestions, a number of commenters argued that the two-part definition of "hazardous waste" given in Section 1004(5) of RCRA requires a system for classifying wastes by degree of hazard. They claimed that one class should consist of those wastes described in the first part of the definition, i.e., those wastes which "cause or significantly contribute to an increase in mortality or an increase in serious irreversible, or incapacitating reversible, illness," and that the other class should consist of those wastes described in the second part of the statutory definition of hazardous waste, i.e., those wastes which "pose a substantial present or potential hazard to human health or the environment when improperly treated, stored, transported, or disposed of, or otherwise managed."

The suggestions made by the commenters differed widely in the complexity of the suggested hierarchy or classification system for risks, and in the relationship of the resulting risk classes to the waste management standards. Many commenters supported the concept of a degree of hazard system but did not propose a specific approach for carrying it out.

The degree of hazard proposals were based primarily on concerns about the *priority* of implementation and the *economic burdens* that might be imposed if the same standards were applied both to wastes with relatively low hazard and wastes with higher hazard. Accordingly, commenters generally associated one of the following objectives with a degree of hazard system:

(1) Phasing of the regulations to address first the wastes which present the greatest risk to human health and the environment. (This comment was frequently coupled with the issue of a perceived national shortfall of facility capacity.)

(2) Tailoring of management standards to the properties of wastes so that adequate protection of human health and the environment could be achieved without overregulating some wastes, and thus unnecessarily increasing the economic burden of the regulations.

(3) Setting quantity threshold levels below which small quantities of wastes could be exempted from some or all of the Subtitle C management requirements without significant impact on human health and the environment.

The Agency believes that the final regulations, when promulgated in full, will achieve each of these objectives, although without adoption of a degree of hazard system. EPA has made the decision not to adopt a degree of hazard system with full realization of the conceptual appeal of such a system and the recognition that all wastes do not present the same level of risk to human health and the environment. The Agency has taken this position for two reasons:

(1) The Agency does not believe that any of the degree of hazard systems suggested by commenters (or any the Agency could itself conceive) are capable of actually distinguishing different degrees of hazard among the myriad hazardous wastes and also reasonably relating management standards to these degrees in a technically and legally defensible way.

(2) The Agency believes that the final regulations already achieve the objectives of a degree of hazard system; thus, such a potentially complex and challengable system is unnecessary.

1. *Classification of Waste by Risk.* The central element of a degree of hazard system is a classification of hazardous wastes according to their level of hazard or risk to human health and the environment. The Agency is convinced that all of the degree of hazard classification schemes suggested by commenters and otherwise considered by the Agency are extremely judgmental and prone to arbitrariness.

Classification of wastes by intrinsic hazard would require the Agency to make determinations such as the following:

(1) Levels of hazard within a characteristic, i.e., whether one ignitable waste is more hazardous than another ignitable waste;

(2) Levels of hazard within listed wastes, i.e., whether all properties which form the basis for listing (e.g.,

carcinogenicity, bioaccumulativity) present different degrees of hazard;

(3) Relative hazard of different characteristics, i.e., whether an ignitable waste is more hazardous than a reactive waste.

Furthermore, most wastes exhibit more than one characteristic, i.e., a waste may be ignitable, toxic, and bioaccumulative, so that the difficulty of the classification task is compounded.

With the exception of a few well known wastes of extremely high hazard, such as dioxin, the Agency generally lacks the information or techniques to make these distinctions between hazardous wastes. While distinctions between *some* very high hazard wastes and other much lower hazard wastes may be possible, there is a broad middle ground where classification by degree of hazard would be extremely difficult. This is particularly true when all potentially hazardous wastes must be considered, not just those on which there is significant information available and for which hazard distinctions may be obvious.

The task of classifying wastes by degree of hazard is all the more difficult because an assessment of hazard, i.e., risk to public health, cannot be made based on intrinsic hazard alone, but must be based on the likelihood of *exposure* as well. Exposure assessments depend on many situation-specific factors that determine the pathways through which exposure may occur, e.g., the hydrogeology, proximity and use of ground water and surface water, etc. Making exposure assessments the purpose of constructing a multi-level degree of hazard system would prove enormously complicated, if not impossible.

2. *Tailoring of Management Standards.* The second element of a degree of hazard system is to establish different management standards for the different degrees of hazard. While the Agency agrees with commenters that it is desirable for the regulations to provide for flexibility to achieve tailoring of management requirements, EPA does not believe that the best approach to tailoring is to prescribe nationally applicable requirements based on the degree of hazard of a waste.

Within the universe of hazardous wastes, distinctions in technical management requirements can best be based on the actual properties of the waste, i.e., the type or *class* of hazard a waste presents, and on local site conditions, rather than on the *level* of hazard of a waste. In the final regulations the Agency has included a number of tailored waste management requirements relating to waste classes, i.e, properties such as ignitability, reactivity, compatibility, or liquid state. EPA plans to continue to differentiate among waste classes in its Phase II and Phase III regulations. The Agency found it far easier to justify differences in regulatory requirements for these classes of waste, than to base facility performance, design, or operation on intrinsic hazard levels. For example, one can readily justify a prohibition of hazardous waste containing free liquids in landfills because they create hydraulic head, and thus promote leaching. However, different facility design requirements for dealing with, for example, an acutely toxic waste versus a less toxic waste are much less clearly defined. In such cases, differences in intrinsic hazard may be overshadowed by the *types* of constituents in a waste (i.e., do they migrate rapidly, or are they persistent), by the amount of waste, or by the site conditions (e.g., type of soil, or distance to ground water).

Distinctions in management requirements can also be made based on the local site conditions and peculiarities of the waste involved. Factors such as hydrogeology, rainfall, and soil type can be considered on a case-by-case basis as a part of the permitting process given appropriate flexibility in the regulations. Such a case-by-case consideration of site conditions and, to some extent, waste properties, is feasible and desirable, and the Agency plans to adopt such a system in its Phase II regulations.

Thus, the Agency has concluded that it does not have the necessary technical information and criteria to develop a technically supportable set of national standards which would rank wastes by degree of hazard; the Agency also has not determined that it is feasible or beneficial to relate management standards to an abstractly conceived degree of hazard, rather than to the waste's actual properties and the site conditions. Furthermore, EPA believes that its current and intended future regulations will otherwise accomplish the objectives of a degree of hazard system

3. *Response to Degree of Hazard Objectives.* It is difficult for the Agency to demonstrate fully how its regulatory scheme under RCRA responds to all of the objectives of a degree of hazard system because the regulations are being promulgated in two major phases. The first phase includes the definition of hazardous waste in Part 261 as well as a limited set of management standards in Parts 264 and 265. The second phase will include the bulk of the technical management requirements. The Phase II standards in particular will effectively achieve at least as much flexibility in management standards as would a degree of hazard system.

As discussed above, the commenters generally associated one or more of three objectives with a degree of hazard system: (1) Phasing of the regulations to include highest risk wastes in the system first; (2) tailoring of management standards to particular wastes to avoid over-regulation; and (3) setting quantity threshold levels below which small quantities of wastes could reasonably be exempted from some or all of the Subtitle C requirements. Although still developing the Phase II regulations, EPA can describe its basic regulatory approach and some specifics of its initial response to commenters' requests for phasing, tailoring, and threshold levels.

The Phase I regulations accomplish the objectives of phasing in several ways, although they were not designed specifically for that purpose. The listing of wastes in Part 261 includes primarily wastes of high intrinsic hazard because those are the wastes on which significant health effects information has been most readily available. The listing process itself is a phasing mechanism which brings additional waste under RCRA Subtitle C control over time. Also, the exclusion levels for small quantity generators are set initially at 1000 kg/mo, but will be phased down to 100 kg/mo over time. There is also an administrative mechanism for phasing during implementation to deal with the capacity issue. Each EPA regional office and authorized State implementing the regulations will have the flexibility to administer the permitting and enforcement process in such a way that the most severe human health and environmental problems are addressed first.

The Phase I regulations provide for tailoring of waste management standards by providing significant flexibility. In addition, some specific requirements for certain waste classes of hazard are incorporated.

The Phase I standards under Part 265 are minimum requirements which the Agency believes are appropriate for all wastes during the interim status period. Some of these standards are administrative requirements dealing with manifests, recordkeeping, and reporting that are minimums for adequate tracking of all waste. Other general technical requirements, such as waste analysis, training, and contingency plans, provide flexibility by requiring the owner or operator to

prepare a plan in which he details the requirements for his specific facility. Other more technical requirements such as ground-water monitoring and closure, also allow significant flexibility for the owner or operator to include site-specific factors in the requirements for his facility. For example, the closure standards require a plan addressing various performance factors. Specifics of how to close the facility to meet these objectives are left to the owner or operator, subject to approval by the Regional Administrator. Many other parts of the technical standards for the interim status period provide similar flexibility.

The Phase II technical standards will continue to provide a basis for tailoring standards to particular sites. The Phase II regulations are sometimes referred to in the preamble to these regulations as "best engineering judgment" regulations. The Agency envisions that these regulations will provide basic performance requirements and a set of relevent technical factors that relate to those performance standards. Specific permit requirements will then be based on the engineering judgment of the permitting officials, supplemented by technical reference manuals. This system will allow maximum flexibility for tailoring of the specific permit requirements based on waste specific and site-specific knowledge. This case-by-case approach is appropriate because the possible combinations of types of waste and types of management scenarios throughout the Nation are almost limitless.

Finally, the Agency has established thresholds for exemption of wastes from small quantity generators through the combination of a general exclusion, and specific exclusions, based on considerations of hazard. Although not based on a comprehensive degree of hazard system, the exclusion level for some wastes has been set at very low levels based on case-by-case hazard determinations.

In summary, the Agency believes that the final regulations accomplish the objectives of a degree of hazard system, while avoiding the enormous problems that would be associated with development and implementation of such a system.

B. Volatile Waste

Because most hazardous waste can volatilize into the air to some degree, EPA is concerned about the treatment, storage, or disposal of hazardous waste which could result in the emission of toxic compounds into the air.

In the proposed regulations, volatile waste was defined as any hazardous waste mixture with a true vapor pressure greater than 78 mm Hg at 25° C. Using this definition, the proposed regulations contained a number of prohibitions and limitations on the management of volatile waste in various types of facilities.

A number of people commented on the impracticality of the limitations and prohibitions on volatile waste, and felt it was inappropriate to use the OSHA permissible exposure levels for airborne contaminants as a mechanism for allowing variances to the prohibitions (i.e., under the proposed regulations, if an owner or operator could show that his facility could manage volatile wastes so that the OSHA levels for pollutants in the air were not exceeded, then he was allowed to do so).

Although no comments directly addressed the proposed definition of volatile hazardous wastes, EPA became concerned about a number of technical difficulties associated with defining volatile waste solely in terms of the waste's vapor pressure. First, vapor pressure is only one of the several factors which influence the volatilization rate of hazardous waste. Other factors (such as solubility, temperature, molecular weight of the waste, and surface area of a landfill or impoundment) can lead to radically different volatilization rates for compounds with similar vapor pressures. Second, if the vapor pressure of a hazardous waste mixture were used to determine whether it is a volatile waste (and thus, subject to more stringent standards than non-volatile waste), owners or operators might dispose of toxic compounds with high pure vapor pressures by mixing them with compounds with low vapor pressures. Third, EPA is concerned that there is not enough information about the inhalation toxicity of individual compounds in waste to substantiate an estimate of a safe volatilization rate.

Since the regulations were proposed, the Agency has examined several alternatives for defining and controlling volatile waste. These included attempts to develop a new definition, and a new variance provision. However, because these attempts thus far have not been successful, the Agency is not defining volatile waste as a waste class at this time.

The primary or secondary purpose of some of the interim status standards, however, is to reduce airborne emissions that result from volatilization. For example, the final cover requirements for landfills, and the requirement that waste storage drums be kept closed, will reduce volatile emissions from these devices.

Nonetheless, EPA is concerned that there may be little control of volatilization for surface impoundments, open tanks, and land treatment facilities in the Phase I rules.

This is clearly an area in which there is a great need for additional information regarding how to properly define volatile waste, how to relate the quantity of volatile waste being land disposed to the toxicity of volatile compounds, and how to arrive at appropriate control measures to minimize emission of these compounds to the air. The Agency is committed to solving this problem and will continue its investigations.

The Agency solicits comment and data on this matter. As information becomes available, the Phase II and Phase III regulations will contain additional provisions to control volatile wastes and the interim status standards may be revised where appropriate.

C. Performance Versus Design and Operation Standards

In the proposed standards, the Agency relied primarily on facility design and operation standards in an effort to provide specific requirements which could be easily understood and interpreted by permit applicants and permit writers alike, and which could be easily enforced. Recognizing that these specific standards might discourage the development of new technology, or that different design and operation requirements might be necessary for particularly facilities in certain locations handling certain types of waste, the Agency attempted to incorporate flexibility into the regulations by supplementing some standards with "Notes." Each "Note" described the circumstances under which the Regional Administrator would allow deviation from the specific standard to which the "Note" applied. No deviations were allowed for those proposed standards not accompanied by "Notes."

In addition to the design and operation standards, the proposed regulations contained overriding performance standards (i.e., human health and environmental standards) for protecting ground water, surface water, and air quality. These were very elementary ambient performance standards which were to be used in unusual waste management situations where the design and operation standards were insufficient to protect human health and the environment.

Several commenters pointed out significant drawbacks to using the proposed human health and environmental standards as fail-safe mechanisms for regulating hazardous

waste management. In response to these comments, the Agency has deleted the human health and environmental standards from the Section 3004 regulations.

EPA's strategy in the proposed rules of relying primarily on design and operation standards was also criticized by many commenters. Most of their comments focused on four concerns regarding regulations based on design and operation standards: (1) design and operation standards discourage innovative technology, (2) design and operation standards eliminate flexibility for permit officials to allow for local situations, (3) some existing facilities may be unable to comply with the design and operation standards and yet may be environmentally acceptable, and (4) RCRA does not authorize the establishment of design and operation standards.

The Agency rejects this fourth point. Section 3004 of RCRA states that: "The Administrator shall promulgate regulations establishing such *performance* standards applicable to owners and operators of facilities for the treatment, storage, or disposal of hazardous waste identified or listed under this subtitle, as may be necessary to protect human health and the environment." However, it *also* states that: "Such standards shall include, but need not be limited to, requirements respecting:

(1) Treatment, storage, or disposal of all such wastes received by the facility pursuant to such *operating methods, techniques, and practices* as may be satisfactory to the Administrator; and

(2) The *location, design, and construction* of such hazardous waste treatment, storage, or disposal facilities;" (emphasis added).

Thus Section 3004 of RCRA authorizes both performance standards and specific design and operation standards.

Nonetheless, the Agency believes that some of the arguments for greater flexibility raised in the first three points have merit, and the Agency has evaluated several approaches to respond to these commenter's concerns.

One approach which the Agency considered was to accommodate the requests for greater flexibility through specific changes in the regulations. These changes include establishing a class of hazard system, and expanding and clarifying the variances. These topics are discussed elsewhere in this preamble. These changes are desirable, and they have been incorporated to a limited extent in the interim status standards. They will be more evident in the technical regulations yet to be issued under Phases II and III. However, these changes do not fully and directly address the commenters criticism of the proposed rules, because they do not really shift the emphasis from design and operation standards.

A second approach which the agency has used to a very limited extent in these rules and is considering for the Phase II rules is to expand the use of "operation performance standards," which, for example, could place limits on emissions or specify results. Such standards are advantageous because they provide more flexibility than design and operation standards. Operation performance standards were already implicit in many of the proposed design and operation regulations. The Agency plans to make them more explicit in the Phase II rules.

The Agency believes that using operation performance standards, in conjunction with the other changes in the regulations mentioned above, should provide a much more flexible approach for designing and operating facilities than was possible under the proposed rules, while avoiding the many disadvantages of ambient performance standards. Using operation performance standards also directly responds to the majority of comments on this issue. It should be noted, however, that the Agency has retained explicit facility design and operation standards where their use is appropriate such as in the emergency preparedness and response regulations.

D. Notes, Variances, and Equivalency

As was mentioned in the discussion above, the Agency attempted to incorporated flexibility into some of the proposed design and operation standards by allowing variances from the standards. These variances were specified in "Notes" which accompanied many of the standards. In most cases, these "Notes" required that, in order to deviate from the prescribed standard, the applicant had to show that the modification to the standard would provide an *equivalent degree of protection or performance* as the prescribed standard. In reviewing the comments requesting more flexibility in the regulations, it became clear that many commenters had simply ignored the "Notes." This was obvious from the many specific complaints about the impracticality of certain standards under certain conditions without reference to the attendant "Notes," which were designed to provide the flexibility to deal with such conditions.

Other commenters felt that the permitting official would be reluctant to use the "Notes," because to do so would require him to decide whether the substitute design or operation modification would provide equivalent performance. The commenters believed that permit writers would not want to make these types of decisions because it would place their technical and professional reputations on the line. Specific suggestions made by commenters to rectify this problem, and to incorporate additional flexibility into the regulations, included:

(1) Incorporate the "Notes" into the regulations to make the variance procedure an integral part of the permitting process;

(2) Provide variance procedures for more standards than those included in the proposed rules;

(3) Provide a general variance procedure which would apply to all standards; and

(4) Provide guidance on what is meant by "equivalent performance."

As mentioned earlier, the Agency agrees with suggestions (1) and (2), and has incorporated them into the Phase I regulations, and also will do so in the Phase II and III regulations.

EPA does not agree that variances to *all* standards should be allowed. For example, every facility needs a contingency plan. Furthermore, for most variances to be implemented with a maximum degree of specificity, they must be tailored to the individual standard. For these reasons, the Agency has chosen not to develop one general variance procedure to apply to all regulations.

The Agency has attempted to lessen the need for demonstrating "equivalent performance" by making the variance procedures more specific. By so doing, in a few cases, there may be some decreased latitude in the degree of permissible variation from the standard than was the case when variances were keyed to demonstration of "equivalent performance." The Agency believes, however, that the reduced potential for confusion and disagreement between the Agency and the regulated community associated with this change outweighs this slight loss in flexibility.

During the interim status period, allowable variances to Part 265 standards are self-implemented by the facility owner or operator, subject to EPA oversight (see discussion under "Interim Status Standards"). The Part 264 Phase I standards contain some variance provisions and the Agency expects that the Part 264 Phase II technical standards will also contain variances where appropriate. The Agency intends that permit writers make full use of the flexibility available through these variances to Part 264 standards, where allowable and

appropriate, because this is the essence of the best engineering judgment approach discussed earlier.

Data on the applicability of many variances, among other things, will be included in the Part 264 Phase II Reference Manuals (discussed later in this preamble) which will be available to permit writers and the public.

E. Commercial Products Standards

Several types of materials (process wastes, residues, etc.) which may be classified as hazardous wastes are being used to make commercial products, e.g., fuel oil, building blocks, and soil conditioners. Aside from a few radioactive special wastes, no hazardous waste standards were proposed to cover these products.

The Agency, however, addressed the issue of commercial products in the preamble to the proposed regulations and EPA indicated that it was considering developing standards for re-use of hazardous waste. One suggested approach would require a product made from hazardous waste not to pose a threat to human health or the environment greater than the threat posed by the virgin product it replaces. The Agency requested commenters to indicate other feasible regulatory approaches and to provide data which could be used to support commercial product standards.

Comment response to EPA regulation of commercial products was almost entirely negative. Several commenters questioned EPA's authority to promulgate such standards under RCRA and suggested that product regulation is more properly the purview of the Consumer Product Safety Commission and the Toxic Substances Control Act. Others pointed out that the Agency should encourage recovery, recycling, and re-use but that regulation discourages such activities.

EPA believes it has the authority under RCRA to regulate the management of materials which can be classified as hazardous wastes even when that management involves the re-use of the waste as a product. (The reader is referred to the preamble accompanying the promulgation of the Part 261 regulations of this Chapter for a discussion of the circumstances under which recycled materials may be classified as hazardous wastes.) Also, the focus of the Consumer Product Safety Commission is not on wastes and products made from them. EPA believes that waste-related matters should, in most cases, be dealt with under RCRA, although EPA also may choose to promulgate some standards dealing with the re-use of wastes under the Toxic Substances Control Act.

On the other hand, EPA sees several problems with setting generic requirements for the processing for re-use, and re-use of hazardous wastes. First, it is difficult to determine generically how hazardous wastes can be appropriately re-used or processed for re-use. The Agency recognizes that the approach in the preamble to the proposed regulations, which would have required all products made from hazardous waste to be at least as safe as virgin products, is flawed and is not adopting it at present.

The Agency agrees with the substantial body of comment which urged the Agency not to place the hazardous waste stigma on recovered products without very good cause. Recovery or re-use is generally among the best of all possible ways to minimize the hazardous waste problem—it removes the need for disposal while conserving resources and energy and eliminating the wastes associated with making virgin products. Regulating the processing or re-use of hazardous wastes into products could decrease acceptance of these products in the marketplace.

The Agency has concluded that the best approach is case-by-case regulation of specific processing or re-uses of hazardous waste where the potential hazards of uncontrolled processing and re-use are clear. Certain of these requirements may be included in the Phase II standards.

F. Storage of Recycled Waste

In the Phase I regulations under RCRA Section 3004, the Agency has decided to regulate storage of hazardous waste which is listed in Subpart D of Part 261 prior to its use, re-use, recycling, reclamation, or treatment for these purposes. Several damage cases point to the need for a storage regulation for such wastes at this time. The Agency may include additional requirements in the Phase II or Phase III standards. On and after the effective date of these Phase I regulations, storage of such wastes in containers, tanks, piles, or surface impoundments, until it is used, re-used, recycled, reclaimed, or treated for these purposes is subject to control under these regulations. These requirements apply both to on-site and off-site facilities. Facility owners or operators who store such waste prior to its use, re-use, recycling, reclamation, or treatment for these purposes must comply with the RCRA Section 3010 notification and Section 3005 permit application requirements (see 40 CFR Part 122) in order to qualify for interim status.

G. General Standards for Storage

The proposed § 250.44 storage standards required that storage be conducted so that no discharge of hazardous waste occurred. Because most wastes have some vapor pressure, the proposed rules specified that all hazardous waste must be stored in covered tanks or containers. Many commenters claimed that this "no discharge" performance standard for all storage was technically infeasible and inconsistent with the concept of controlled air emissions under the Clean Air Act and controlled discharges under the Clean Water Act. They also felt that the requirement to store waste only in tanks and containers was unduly burdensome; they claimed that (1) it is unnecessary to store low-volatility wastes in covered storage devices, and (2) it is impractical to store bulk-solid or semi-solid materials in enclosed tanks or containers. For these reasons, the commenters recommended that storage be allowed in devices other than storage tanks and containers, e.g., basins, surface impoundments, and piles.

EPA developed the proposed "no-discharge" standard based on its interpretation of the RCRA definition of "storage," which means ". . . containment . . . in such a manner as not to constitute disposal . . . ." RCRA defines "disposal" as:

> The discharge, deposit, injection, dumping, spilling, leaking, or placing of any solid waste or hazardous waste into or on any land or water so that such solid waste or hazardous waste or any constituent thereof may enter the environment or be emitted into the air or discharged into any waters, including ground waters.

EPA interpreted this statutory language as requiring "no discharge" (emission) from any hazardous waste storage facility.

Although some commenters considered this a proper interpretation of the Act, others took strong exception to it as noted above. Commenters also contended that the standard was inconsistent with the approach of Section 3004 of RCRA which in their view is to minimize adverse effects. The standards for storage, they argued, should recognize that there are environmentally responsible ways other than no discharge to store hazardous wastes, and should approach the problem by minimizing the potential for discharges, or requiring only that no significant discharges occur. On a narrower level, commenters argued that under the definition of disposal, air

emissions from materials that have not been discharged onto land or water are not "disposal"; thus, RCRA does not mandate the prohibition of air emissions from tanks or containers.

These comments suggest perhaps a more basic issue concerning storage. While RCRA defines storage as containment in such a manner as not to constitute disposal, it does permit disposal under appropriate conditions. Thus, it seems anomalous in the Section 3004 regulations to require an absolute prohibition of emissions when handling of wastes is called "storage," while permitting some level of emissions in other facilities performing "disposal." Surface impoundments, indeed, appear to fall somewhere between a clear example of storage, such as a sealed container, and a clear example of disposal, such as a landfill. An unlined impoundment, for example, may be used to accumulate hazardous wastes for a number of years, and over that time at least some of the waste will almost certainly migrate into the soil under the impoundment. Yet, if at the end of its life the residue and contaminated soil are removed, the impoundment might be rendered non-hazardous, and certainly presents a different picture from a landfill. This situation suggests that the proper focus for regulation of storage facilities is on whether the wastes will eventually be removed from the facility. This approach to storage, under interim status, is reflected primarily in appropriate standards for closure and financial responsibility (i.e., the cost estimate for closure).

The Agency believes that RCRA permits this approach. The definition of storage in RCRA refers to "containment . . . either on a temporary basis or for a period of years," which is a central factor in the current regulatory definition. RCRA apparently would permit the Agency to regulate treatment, storage, and disposal without anywhere prescribing different standards or approaches for facilities falling into different statutory categories; indeed, the statute typically, as in Section 3004, mentions "treatment, storage, and disposal" in a single phrase, indicating that the same statutory provisions apply to all three. This is to be compared with RCRA's much different treatment of generators, and of transporters. This is not to say, of course, that the Agency cannot or should not prescribe quite different standards for facilities that are storage facilities (under some regulatory definition) than for disposal facilities, but simply to say that RCRA permits the Agency to use that concept of storage which seems most appropriate for regulatory purposes.

With these considerations in mind, and recognizing the impracticality of completely eliminating emissions from most types of facilities, the Agency has redefined "storage" to mean "the holding of hazardous waste for a temporary period, at the end of which the hazardous waste is treated, disposed of, or stored elsewhere."

A few commenters suggested that the Agency consider adding a standard which would limit the time or quantity (or both) of waste that can be stored at a hazardous waste facility. Any such standard would best be based on the type of waste to be stored, the design and construction of the containment device used to store the material, and the climatic conditions under which the storage is to take place. At present, the Agency lacks sufficient data to develop such standards, and a detailed consideration of such information can for now best be made in permitting proceedings. However, the Agency expects to examine further appropriate limitations for storage, and may propose regulations in the future.

In addition, the closure and financial responsibility requirements will set limits indirectly on the quantity of hazardous waste in storage. The Phase II financial standards are expected to require that adequate funds be placed in the closure trust (or other acceptable mechanism) to close the facility at any given time, considering the amount of waste on hand. The amount of these funds will create a definite upper limit on the amount of waste in storage at any time, and will create financial incentives for owners and operators to minimize this amount.

H. Owner or Operator

In a majority of cases, the owner and operator of a hazardous waste treatment, storage, or disposal facility are the same person or corporation. However, it is not uncommon for an operator to lease the land and perhaps structures from a landowner. In a few cases, the owner of the land, the owner of the structures, and the operator may all three be different persons or companies.

In the proposed regulations, the Agency used the term "owner/operator" when referring to any or all of these parties, and defined the term to mean "the person who owns the land on which a facility is located and/or the person who is responsible for the overall operation of the facility." Commenters complained that the definition was vague and ambiguous and that it was not clear who (the owner or operator) was responsible or liable for what. A few commenters also pointed out that for a few of the requirements, only the owner can legally comply—a case in point being the requirement to record a note on the deed in proposed § 250.43–7(b).

The Agency's first priority is to protect human health and the environment. Thus, where there has been a default on any of the regulatory provisions, the Agency will attempt to gain compliance as quickly as possible. In so doing, the Agency may bring enforcement action against either the owner or operator or both. EPA considers the owner (or owners) and operator of a facility jointly and severally responsible to the Agency for carrying out the requirements of these regulations.

One reason for this joint responsibility is that, as the commenters pointed out, there is at least one provision of the Section 3004 regulations that only the owner can comply with—that is the requirement to record a notation on the deed to property where hazardous waste remains after closure. Second, if the owner is not bound by the regulations, EPA could have a very hard time trying to implement and enforce the closure and financial responsibility provisions of the regulations. Third, the legislative history of RCRA indicates that responsibility for complying with the regulations pertaining to hazardous waste facilities should rest equally with owners and operators where the owner is not the operator (H.R. Rep. No. 94–1491, 94th Cong., 2d Sess. 28 (1976)).

With most of the regulations, the Agency is primarily concerned with compliance, and is secondarily concerned with who ensures compliance. The Agency believes that decisions concerning who should be responsible for ensuring compliance for which requirements can properly and adequately be a matter between the owner and operator. Nonetheless, both the owner and operator ultimately remain responsible, regardless of any arrangement between them.

Some facility owners have historically been absentees, knowing and perhaps caring little about the operation of the facility on their property. The Agency believes that Congress intended that this should change and that they should know and understand that they are assuming joint responsibility for compliance with these regulations when they lease their land to a hazardous waste facility. Therefore, to ensure their knowledge, the Agency will require owners to co-sign the permit application and any final permit for the facility. Part 122 of the consolidated permit

regulations has been changed to reflect this.

The Agency agrees with those commenters who pointed out that in a few cases only the owner can legally comply with a requirement. Where this is so, the Agency has specified the "owner" in these final regulations. EPA has also changed its usage of the term "owner/operator" to "owner or operator" to indicate when EPA will be satisfied by compliance by either party (but also to indicate that the Agency may enforce against either or both).

I. Inactive Facilities

RCRA is written in the present tense and its regulatory scheme is prospective. Therefore, the Agency believes Congressional intent to be that the hazardous waste regulatory program under Subtitle C of RCRA is to control primarily hazardous waste management activities which take place after the effective date of these regulations. Thus, the proposed Subtitle C regulations did not by their terms apply to inactive (either closed or abandoned) disposal facilities.

Comments received on the subject pointed out the need to protect the public from inactive and abandoned disposal sites, stressing that because these facilities are normally very poorly designed and situated, they represent a more severe hazard than new facilities. Love Canal and other disasters were cited to support this argument.

The Agency agrees that inactive and abandoned hazardous waste sites (particularly dumps, landfills, and lagoons) may pose serious hazards to human health and the environment. RCRA already provides one tool which can be used to deal with the problem of inactive and abandoned sites—the imminent hazard provision of Section 7003. This provision—which is applicable to both inactive and active sites—can be used to obtain injunctive relief from any party who can be shown to be causing or contributing to ". . . an imminent and substantial endangerment to health or the environment . . . ."

The Agency is actively using Section 7003 and other applicable laws to force responsible parties to bear the costs of cleaning up sites posing a hazard. These authorities will remain in place and continue to be actively employed even after the effective date of the Subtitle C regulations.

To provide site cleanup in those situations where the responsible parties are unknown or lack the funds to do the job, the Administration has proposed "Superfund" legislation currently pending in Congress.

While RCRA's regulatory scheme is generally prospective, certain inactive facilities, or portions of inactive facilities, because of their relationship to facilities which continue to operate, may be subject to some RCRA Subtitle C regulatory controls. Some existing landfills or other facilities are expected to close if they do not or cannot meet the Subtitle C standards. The owners or operators may then design a facility which meets the standards and apply for a permit to locate it on land immediately adjacent to the inactive portion. This is not an improper action, but, in some cases, problems associated with the inactive site (leachate, emissions, etc.) may interfere with the ability of the owner or operator to adequately monitor the "new" facility. In these cases, the Regional Administrator may require that the owner or operator of the new facility ensure that certain actions are taken on the inactive site, in order to minimize or eliminate any interference with monitoring or enforcement activities at the "new" facility.

J. New Facilities and Existing Facilities

In some regulatory programs regulated operations are subject to different requirements, depending on how old the operation is when the regulatory program begins. Often, existing operations are exempted or are subject to less stringent regulations than new operations.

The original language of RCRA did not distinguish between new and existing facilities. Consequently, EPA made the proposed Section 3004 regulations applicable to both new and existing facilities. The Agency recognized, however, that some existing facilities would have difficulty complying with some of the regulations. The Agency envisioned that the "Note" (variance) procedure, as well as the use of compliance schedules would accommodate the possible difficulties associated with retrofitting existing facilities.

The Agency received numerous comments on this general issue. The most frequent comment on the subject concerned RCRA coverage of NPDES permitted wastewater treatment impoundments. Nearly all commenters were opposed to having RCRA cover these impoundments, citing the impracticality of retrofitting existing lagoons to meet the proposed standards. Specific comments addressed:

(a) The tremendous cost associated with lining existing impoundments or building new ones,

(b) The costs of transporting wastes to off-site facilities from manufacturing operations which may be located in areas which are unsatisfactory for waste management,

(c) The likelihood that many manufacturing plants would have to close while the impoundment was being retrofitted, and

(d) The possibility that some existing facilities may not be polluting now and may never in the future pollute the environment, even though they do not meet all of the proposed RCRA surface impoundment standards.

After substantial additional study, EPA has concluded that the proposed surface impoundment regulations can be changed to answer many of the commenters' concerns about their application to existing wastewater treatment impoundments. The Agency, in keeping with its general guideline of not imposing major capital expenditures on existing facilities during interim status will not require extensive retrofitting of existing surface impoundments in the interim status standards. Furthermore, it is anticipated that the general regulations yet to be promulgated in Phases II and III will also not require retrofitting of these facilities, if the owner or operator can demonstrate that the impoundment is not contributing statistically significant quantities of contaminants to ground water. The Phase I regulations require a ground-water monitoring program in order to determine whether an impoundment is polluting. Regulations yet to be issued in Phases II and III of this regulatory program will set forth additional technical requirements for impoundments. Most of these requirements probably will not apply to existing impoundments found not to be affecting ground water.

The Agency believes that this regulatory approach will (1) substantially reduce the number of existing NPDES facilities which might otherwise had to have been retrofitted, closed, or replaced in order to comply with the proposed Subtitle C rules, and (2) ensure that human health and the environment is protected. Further, this approach is consistent with pending Congressional amendments to RCRA.

Some commenters suggested that all existing facilities, and particularly existing landfills, should be regulated differently than new facilities. After careful consideration, the Agency has concluded, for the following reasons, that landfills do not pose the special problems or deserve the same consideration as "existing" facilities that surface impoundments do:

(1) Sections of landfills are typically filled in sequentially; i.e., one trench or part (cell) of the total landfill area is

filled and then another part is filled. This activity may or may not be done in discrete increments, but it is almost always done in progression moving away from a starting point. Thus, owners or operators can close existing portions of most landfills at virtually any time without retrofitting the facility and can design the unclosed portion in accordance with the RCRA standards. This option is not available to impoundment owners or operators because the entire base of the impoundment is normally covered with wastes from the beginning of operations.

(2) Impoundments are usually temporary structures; i.e., wasted are normally removed from such facilities when they are closed. By contrast, landfills normally constitute permanent disposal; i.e., wastes remain in landfills essentially forever.

(3) Landfills are not normally integrally connected to manufacturing operations. Therefore, any necessary retrofitting which requires diverting solid waste to storage or other facilities would not be likely to cause the manufacturing operation to shut down during the retrofit period. This is not the case with surface impoundments, which typically are integral components of manufacturing operations.

Similarly, except for some minor changes, the Agency could find no good reason for making major distinctions between new and existing incinerators, storage facilities, and other kinds of facilities in these Phase I regulations.

Commenters also pointed to the impracticality of the siting standards, which would have required closure of all existing facilities which were not located in areas which met the proposed siting requirements. No location standards are included in the Phase I regulations (see preamble discussion on "Interim Status Standards"). EPA is considering what relief consonant with RCRA's human health and environmental protection mandate might be granted to existing facilities unable to comply with the location standards. EPA expects to address these considerations in the Phase II standards.

K. References to Other Acts, Regulations, and Standards

In the proposed regulations, many references were made to legislation and regulations other than RCRA to alert owners and operators that these laws and regulations might apply to their facilities. These included references to proposed and final Federal regulations, State standards, industry standards, and Executive Orders.

Many comments were received concerning this practice. These comments challenged the legality and the appropriateness of referencing or incorporating standards from other regulations. Several commenters stated that, by citing requirements from other legislation or regulations in RCRA regulations, EPA would be including provisions that are subject to change by the authority responsible for the referenced regulation, without regard for required public participation under the Administrative Procedure Act (5 U.S.C. § 533). Other commenters discussed the potential for duplicate civil or criminal penalties which would result form EPA references to other acts in the Section 3004 standards. Commenters stated that Congressional intent was not to make a violation under one set of regulations a violation under another. For example, in the view of commenters, a National Pollution Discharge Elimination System (NPDES) permit violation should not automatically be a RCRA permit violation.

The Agency agrees with certain of these arguments and has deleted references to other acts, regulations or laws which would constitute an unwarranted imposition of duplicate liability. However, EPA always may adopt language identical or similar to that of another statute, regulation, or code of practice, if, in EPA's judgment, the standard is pertinent and independently supportable under RCRA. For example, the requirement for set-back distances for tanks containing ignitable waste is adopted directly from the National Fire Protection Association (NFPA) "Flammable Combustible Code—1977" for storage tanks; it is independently supportable for RCRA purposes, and is now effective regardless of changes made by NFPA.

L. Integration With Other Acts

1. *Underground Injection Control Program.* The final RCRA interim status standards regulate the underground injection of hazardous waste until these activities receive a permit under a State UIC program approved or promulgated under the Safe Drinking Water Act (SDWA). Thereafter, they will receive a permit by rule under RCRA. However, underground injection facilities typically have above-ground treatment and storage operations which are and will remain subject to RCRA controls as hazardous waste management facilities. Thus, most of these facilities will ultimately require both RCRA and UIC permits. To facilitate the granting of these permits, EPA has consolidated the permit and State program authorization procedures for the two programs. These consolidated procedures will allow EPA, or a State, if it has an approved program, to process RCRA and UIC permits together, thereby avoiding overlap and inconsistencies. (See the preamble discussion on Subpart A and on Subpart R—Underground Injection for more details on the integration of RCRA and SDWA.)

2. *Ocean Disposal Program.* The disposal of hazardous waste in the ocean is regulated under the authority of the Marine Protection, Research, and Sanctuaries Act. EPA has, therefore, in Part 122 of the consolidated permit regulations, granted these facilities a permit by rule to avoid duplicative regulation. However, most ocean disposal operations involve on-shore facilities which may store or treat hazardous waste prior to ocean disposal. These storage and treatment facilities are subject to these Section 3004 regulations and will require a RCRA permit. Therefore, it will be necessary to coordinate the two EPA regulatory programs which have jurisdiction in this area. In addition, where wastes subject to RCRA control are delivered directly to a barge or other vessel which conducts ocean disposal operations, such vessels will have to comply with certain requirements of RCRA. This is necessary to complete the manifest system. Thus, the owners of such vessels must notify the Agency in accordance with Section 3010 of RCRA and comply with the manifest requirements. The permit by rule provisions of Part 122 make these obligations clear.

3. *NPDES Permitted Facilities.* Commenters raised three major issues with regard to the coverage of NPDES permitted facilities and their wastes under RCRA. These are discussed in turn below. One, commenters questioned the exclusion of POTWs from regulation under Section 3004. Proposed § 250.40(c)(3) required that POTWs that received hazardous waste by truck or rail comply only with the manifest system; other POTWs were not subject to Subtitle C at all because mixed industrial and domestic sewage waste streams were considered "domestic sewage," and thus not "solid waste." Two, commenters questioned the inclusion, as facilities subject to Section 3004 regulations, of industrial wastewater treatment train facilities with discharges permitted under Section 402 of the Clean Water Act; and three, commenters questioned the exclusion of sewage sludge from regulation as a hazardous waste, as proposed in § 250.10(d)(2)(iii). The Section 3001 preamble analyzes and responds to these comments in some detail because all three issues depend on whether

certain materials are "solid waste" and thus, if hazardous, subject to regulation under Subtitle C of RCRA.

a. *Regulation of POTWs as Section 3004 Facilities.* To summarize, domestic sewage, which is excluded from the statutory definition of solid waste in Section 1004(27) of RCRA, is defined in § 261.4 of the Section 3001 regulations as "untreated sanitary wastes that pass through a sewer system." In addition, any mixture of domestic sewage and other wastes that pass through a sewer system to a POTW for treatment are excluded from the regulatory definition of solid waste. That regulatory exclusion is based on the legislative history of the Solid Waste Disposal Act. EPA believes that such mixed waste streams properly should be subject to controls under the Clean Water Act's construction grants program and pretreatment programs. Because the treatment of sewage by privately owned treatment works is not similarly controlled by EPA, there is no exclusion in the Section 3001 regulations for mixed waste streams going to such facilities. On the other hand, publicly owned or privately owned wastewater treatment works that receive hazardous waste by truck, rail or pipe are treatment or storage facilities subject to Section 3004 regulations, although as the Purpose, Scope and Applicability (Subpart A) discussion in this preamble points out, the same expressions of Congressional intent that led EPA to treat mixed waste streams passing through sewer systems to POTWs differently than those flowing to private treatment works also have led the Agency to treat POTWs and private treatment works differently under Section 3004 and 3005 regulations.

b. *Regulation of NPDES Treatment Train Facilities Under Section 3004.* The second issue raised by commenters was that the exclusion of "solid or dissolved materials in . . . industrial discharges which are point sources subject to permits under Section 402 of the Federal Water Pollution Control Act" from the definition of "solid waste" in Section 1004(27) of RCRA, excluded facilities that are part of treatment trains leading to such discharges from Subtitle C coverage. EPA disagrees and construes the exclusion for point sources to apply only to actual discharges into navigable waters, not to industrial wastewaters upstream from the point of discharge. The result of EPA's interpretation is that, as proposed, surface impoundments, tanks, lagoons, holding ponds and other facilities used to treat, store, or dispose of hazardous industrial wastewaters must meet applicable Section 3004 standards and must obtain a Section 3005 permit. The standards to which existing surface impoundments will be subject are discussed in the section of this preamble entitled "New and Existing Facilities" and the section on surface impoundments (Subpart K).

c. *Regulation of Sewage Sludge Under Subtitle C.* EPA agrees with the commenters who argued that sewage sludge from POTWs should not be categorically exempted from regulation as a hazardous waste. Those sewage sludges which are hazardous now fall within the jurisdiction of Subtitle C of RCRA. The Section 3001 preamble summarizes and responds to the comments on this issue and also discusses EPA's efforts to integrate and coordinate its regulatory actions governing sewage sludge.

4. *BAT Toxics and Pretreatment Standards.* Many commenters strongly urged avoiding conflicts between these RCRA regulations and other regulatory programs, including the BAT and pretreatment programs.

The Clean Water Act provides a comprehensive scheme for the regulation of discharges to navigable waters. This scheme includes a role for EPA in the establishment of effluent limitations guidelines that set technology based effluent limitations for specific pollutants in the effluents of certain classes of industrial point sources. These standards, and other applicable requirements such as State water quality standards, are used by EPA and approved States in the establishment of specific permit conditions under the NPDES program.

The effluent limitations guidelines may be written for conventional pollutants (e.g., suspended solids, fecal coliform, biochemical oxygen demand) or toxic pollutants (a list of over 65 chemical substances and heavy metals). For conventional pollutants, dischargers must achieve effluent limits attainable by the "best conventional pollutant control technology" (BCT) by July 1, 1984. For toxic pollutants, dischargers must achieve effluent limits attainable by the "best available technology economically achievable" (BAT) by July 1, 1984.

In addition, the Clean Water Act created a pretreatment program, which provides the basis for regulating discharges to sewers served by publicly-owned treatment works. This program is designed to insure that users of public sewer systems do not discharge pollutants into the system that would (1) interfere with the operation of the treatment works, (2) cause the POTW's discharge to navigable waters to exceed the requirements that would otherwise be applicable to the user's discharge if he had discharged directly, or (3) interfere with the POTW's ability to safely dispose of its sewage sludge. Solid waste pollution is one of the factors EPA considers when analyzing water problems and developing BAT and pretreatment regulations. While these RCRA regulations are designed primarily to address ground-water pollution from hazardous waste management, the Agency clearly has authority under RCRA to address surface water and air pollution. Thus there is overlapping jurisdiction between the CWA and RCRA.

Due to the specific exclusion of discharges permitted under Section 402 in Section 1004(27) from RCRA, and the comprehensiveness of the Clean Water Act programs, EPA has decided to rely on those programs to regulate the discharge of wastewater effluents (which may be hazardous) to navigable waters. In addition, the Agency's pretreatment program will be used to regulate such discharges to sewer systems served by POTW's.

It must be recognized, however, that this use of Clean Water Act programs to regulate hazardous wastes only extends as far as the jurisdiction and goals of those programs. Management activities and environmental objectives for hazardous waste facilities which are not addressed by the Clean Water Act, or which can be addressed more efficiently under RCRA, are and will continue to be addressed under RCRA regulations. Thus, for example, pretreatment unit operations may require a RCRA permit to operate if the feed to the facility is hazardous and the process is not integrally connected (via pipe or conveyor) to a manufacturing operation. Likewise any impoundment containing a hazardous waste is covered by these regulations, particularly with regard to their effect on air and ground water, until the hazardous waste in the impoundment comes within CWA jurisdiction.

5. *Clean Air Act.* Owner and operators of hazardous waste management facilities must comply with all applicable standards promulgated under the authority of the Clean Air Act. However, at the moment, very few hazardous emission pollutant standards or new source performance standards under the Federal Clean Air Act apply to hazardous waste facilities.

RCRA, in Section 1006(b) calls upon the Administrator to integrate these regulations with the Clean Air Act, "to the extent that it can be done in a manner consistent with the goals and policies expressed in this Act" and in the Clean Air Act. Significantly, Section 1006(a) does *not* include the Clean Air

Act in the list of statutes whose regulatees are excluded from RCRA regulation to the extent such regulation is "inconsistent" with the other Act. This statutory structure grants considerable discretion to the Administrator in choosing which statute to rely upon for the most efficient and effective control of hazardous wastes affecting the air.

The hazardous pollutant provisions of the Clean Air Act require the use of certain procedures for each pollutant regulated. Because wastes are usually complex mixtures of many materials, hazardous waste facilities are capable of emitting thousands of different substances to the air, many of which are toxic. The procedures of the Clean Air Act would be a less efficient way to control a large number of hazardous air pollutants than RCRA, under which design, operation, or performance criteria (such as incinerator destruction efficiencies) can be set more easily for the many pollutants emitted by facilities. Therefore, the Agency has chosen RCRA as the primary vehicle for controlling air emissions from hazardous waste facilities.

In developing regulations to control air emissions from hazardous waste facilities, the Agency's greatest challenge has been in correlating waste volatility characteristics with potential air emission hazards. As stated earlier in this preamble, EPA has thus far been unable to develop a protocol for predicting hazard potential based on the volatility of a waste, but is continuing its investigations.

6. *Toxic Substances Control Act.* Final rules regarding disposal and marking requirements for polychlorinated biphenyls (PCBs) were promulgated on February 17, 1978, and May 31, 1979, under Section 6(e) of the Toxic Substances Control Act (TSCA). Those rules are intended to protect the environment from further contamination resulting from improper handling and disposal of PCBs.

Because of the potential overlap between the RCRA hazardous waste management standards and the TSCA PCB marking and disposal regulations, the Agency solicited comments in the preamble to the proposed RCRA regulations on how it should manage the TSCA PCB regulations (and by inference, other specific toxic wastes) vis-a-vis the RCRA regulations. Most commenters were equally divided between two positions:

(1) Publish the TSCA PCB and RCRA regulations independently and exempt PCBs from RCRA requirements, or

(2) Merge the PCB rules with the RCRA standards and co-promulgate them.

To minimize confusion and the burden on the regulated community, the Agency has tentatively determined that wherever possible, hazardous waste management control will be covered under RCRA. It has not been possible to complete this task to date, but the Agency expects to incorporate the TSCA PCB disposal regulations into the Phase II RCRA regulations.

Special disposal requirements for specific wastes will, in the future, normally be proposed as an amendment to these RCRA regulations but may be co-promulgated under TSCA authority.

7. *Surface Mining Control and Reclamation Act.* The Office of Surface Mining (OSM) of the Department of the Interior administers the Surface Mining Control and Reclamation Act (SMCRA). The primary purpose of SMCRA is to protect the environment from the effects of surface mining of coal, although surface disposal of underground coal mining waste is also covered. Thus there is overlapping authority with RCRA. The Agency is negotiating an agreement with OSM whereby RCRA control of coal mining wastes would be deferred to OSM. Such an agreement will be based on a determination by EPA that the SMCRA regulations provide control equivalent to that which RCRA would impose. In anticipation of such an agreement, the Agency has deferred regulation of coal mine waste under RCRA.

8. *National Environmental Policy Act.* The National Environmental Policy Act (NEPA) requires the preparation of a statement which considers environmental impacts, alternatives, and resource commitments for any "major federal action significantly affecting the quality of the human environment." At least ten appellate decisions have considered the applicability of that requirement to EPA. All ten have concluded that the Agency is exempt from the requirements of NEPA because its own processes provide for the "functional equivalent" of that Act. These analyses are concisely summarized in *State of Maryland v. Train,* 415 F. Supp. 116, 122 (D. Md., 1976):

> Where federal regulatory action is circumscribed by extensive procedures, including public participation, for evaluating environmental issues and is taken by an agency with recognized environmental expertise, formal adherence to the NEPA requirements is not required unless Congress has specifically so directed.

These Subtitle C regulations have been developed through an extensive evaluation of environmental issues. This was specifically required by the statutory mandate to consider what might "be necessary to protect human health and the environment," and by the Agency's developed environmental expertise and concern. That evaluation underlies this preamble and the Background Documents prepared to help develop specific sections of these regulations. Extensive public participation at many public meetings, following pre-proposal circulated drafts, and in hundreds of comments, helped the Agency in evaluating environmental issues raised by these regulations. Federal, State, and local agencies all participated in this process. Congress, well aware of the "functional equivalency" rule, did not alter that status in the RCRA statute. Thus the Agency is not bound by NEPA's requirements. The Agency has, however, voluntarily prepared an Environmental Impact Analysis which will be available to the public in EPA Headquarters and Regional libraries.

M. Special Wastes

The proposed regulations established a class of solid wastes for which, if hazardous, application of the full set of Subtitle C standards was deferred. These solid wastes, called "special wastes" were cement kiln dust, utility waste (ashes and sludges), phosphate rock mining and beneficiation wastes, uranium and other mining wastes, and gas and oil drilling muds and oil production brines. For hazardous portions of these solid wastes, a very limited subset of the Subtitle C standards was to be applicable pending completion of studies defining the most appropriate waste management practices.

When the proposed rules were issued, the Agency had only limited information on these wastes. However, the information the Agency did have suggested that application of the full set of proposed waste management standards would not be appropriate.

The attributes of these wastes which caused the Agency to reach this conclusion were:

(1) The total annual quantity of each of these wastes (both hazardous and non-hazardous portions) was very large, and individual disposal facilities tended to involve very large piles or ponds. Should large volumes of the wastes be hazardous, the size of the facilities could have made the application of some of the regulations technically infeasible or unpracticable.

(2) Any portions of the wastes which did fail the proposed hazardous waste characteristics were thought to be on the

margins of failure. Thus the hazardous portions of the wastes appeared to have relatively low intrinsic hazard relative to other wastes. However, the Agency's data base was very limited.

(3) The Agency did not believe that it had sufficient information to propose specific alternate waste management requirements without additional study.

The Agency's proposed approach to special wastes generated widespread and divergent protest from both the regulated community and the public. Commenters generally objected either to the concept of the special waste category or to the need for, or the sufficiency of, the limited standards proposed for that category. Many commenters identified other solid wastes which they urged also be defined as special wastes. The major comments were:

(1) EPA should not regulate these wastes at all unless it can demonstrate that the wastes, as presently managed, pose a significant threat to human health and the environment.

(2) Many of the limited standards proposed are not suitable for these wastes because of the low hazard and large volume of the wastes. The requirement for facility security was a particular target of criticism.

(3) The stigma of singling out these wastes and regulating the hazardous portions under Subtitle C will impact negatively on the potential for their reuse.

(4) The singling out of only these few hazardous wastes for special favored treatment is inequitable when there are other wastes with similar characteristics which must bear the full regulatory burden. Commenters suggested about 50 additional wastes to be added to the special waste category.

(5) If these wastes (or portions thereof) fail the 3001 characteristics, then they pose significant hazards to human health and the environment and therefore should be regulated like any other hazardous waste.

Several commenters recommended alternatives to the special waste category:

(1) The Agency should replace the special waste category with a variance procedure involving public participation.

(2) The standards for a given waste should be determined on a case-by-case basis with requirements specified in the permits for each facility and location.

The thrust of many of the comments was universal disapproval of the special waste category as proposed.

In the course of its consideration of the comments, including proposed additions to the special waste category, EPA made two significant changes in the basic structure and content of the Subtitle C regulations. These are (1) changes in the toxicity and corrosivity hazardous waste characteristics under Part 261 which narrow the category of waste which will be brought into Subtitle C by these characteristics, and (2) the incorporation of significantly more flexibility, through phasing and standard-setting, in the Parts 264 and 265 regulations. The Agency now has concluded that these changes accomplish the objectives of, and eliminate the need for, a special solid waste category.

1. *Changes in the Section 3001 Characteristics.* In response to comments, the toxicity and corrosivity hazardous waste characteristics have been modified and now include more demanding conditions for defining a hazardous waste. In the proposed regulations, a waste would have been considered hazardous under the toxicity characteristic if the extract from that waste (obtained through the defined Extraction Procedure) contained any hazardous constituents in the Primary Drinking Water Standards (PDWS) at a concentration of more than 10 times the PDWS limits. In the final regulations, the characteristic concentration bringing a hazardous waste under regulation has been increased from 10 to 100 times the PDWS. Thus, waste extracts must contain a tenfold higher concentration of one of the PDWS substances than originally proposed in order for the waste now to be brought under Subtitle C control by that characteristic. The reasons for the change in this characteristic are explained in the Toxicity Characteristic Background Document.

The upper and lower limits of pH which define a hazardous waste also have been revised in response to comments so that the corrosivity characteristic now is more demanding in signaling a waste as hazardous. The basis for this change is explained in the Corrosivity Characteristic Background Document.

These changes have had two important effects on the special waste concept. One is that a much smaller portion of the proposed special solid wastes are expected to fail the characteristics and be subject to control as hazardous wastes. The data available to the Agency indicate that most of the special wastes that would have entered the control system would have done so due to toxic extracts between 10 and 100 times the PDWS. Thus, the probability that large volumes of the proposed special solid wastes will be hazardous now appears remote. Second, those portions of the proposed special solid wastes which do fail the characteristics can no longer be labeled "low hazard" wastes. Thus the concern over the inapplicability of the proposed regulations to hazardous special wastes due to the potentially large volume and low level of hazard of these wastes is not a valid concern in the final regulations.

2. *Phasing and Increased Flexibility in Parts 264 and 265.* To the extent that special accommodation for any of the hazardous portions of these wastes may still be needed, the second major regulatory change, i.e., the incorporation of more flexibility in the hazardous waste management requirements through regulatory changes and phasing of requirements, will accomplish essentially the same result as the proposed special solid waste category. This is true for the hazardous portions of those wastes proposed as special solid wastes as well as for all of the wastes that commenters suggested should be special solid wastes.

The new three-stage regulatory process itself provides the same opportunity for phased regulation as the creation of the special waste category. Initial regulations under Phase I standards include administrative and limited technical requirements which provide a basic level of environmental protection similar to that provided in the limited standards proposed for the hazardous portions of special wastes.

The plans for Phase II of the regulations will allow hazardous waste facilities to be permitted largely on the basis of performance standards coupled with the "best engineering judgment" of the Regional Administrator. This flexibility will allow the permit writer to consider site- and waste-specific factors in determining specific design and operating permit requirements. Thus, unnecessary or overly stringent requirements should not be forced upon any hazardous wastes by the regulations. To the extent the Agency becomes aware of the inapplicability of certain requirements on a site- or waste-specific basis, it is committed to making needed regulatory changes as quickly as possible. In addition, the Agency plans to gather further information both on the proposed special solid wastes and on at least some of the wastes suggested by commenters as special solid wastes, and where needed, develop technical standards or guidance specific to these wastes in the Phase III regulations and thereafter. Additional data and information on these, as well as the other solid and hazardous wastes the

Agency is studying also will be useful in issuing best engineering judgment permits under the Phase II Section 3004 regulations.

In consideration of all of the above factors, the Agency has concluded that the special solid waste category is no longer necessary. It has been eliminated in these final Phase I regulations. Those portions of the six proposed special wastes which are determined by the characteristics to be hazardous will be subject to the applicable Part 264 and 265 regulations.

The Agency is, however, temporarily delaying imposition of the regulations for two of the wastes EPA originally proposed as special solid wastes, i.e., oil and gas drilling muds and oil production brines, and utility waste. This temporary deferral is in response to action by Congress to exempt these wastes from most Subtitle C regulation for a limited time pending completion of certain EPA studies. Congress has not yet completed action on the amendments which would mandate this deferral. However, bills have been passed both in the House and Senate, indicating strong Congressional intent to mandate a deferral of regulations for these two proposed special solid wastes.

In the absence of a regulatory deferral by EPA, the hazardous portions of these wastes would be subject to the requirements of the regulations on their effective date. In order to be in compliance by the effective date, the facilities handling these wastes would need to take certain actions soon, involving possibly significant expenditures, which could then be halted in mid-stream by final Congressional action. In EPA's view, such a situation would be inefficient and counterproductive. Therefore, Part 261 defers the effective date of the regulations for the hazardous portions of the proposed oil and gas and utility special wastes. The other proposed special solid wastes are the subject of bills which have passed either the House or the Senate, but only the oil and gas and utility waste deferrals are contained in both the House and Senate bills. EPA is not presuming the outcome of the additional proposed deferrals, but will, where necessary, amend Part 261 regulations after the currently proposed amendments to RCRA are finally acted on by Congress.

V. Detailed Analysis of Phase I Rules

A. Subpart A—General

Subparts A of Parts 264 and 265 contain requirements under three general headings. The first is "Purpose, Scope, and Applicability" (§§ 264.1 and 265.1). These provisions explain who is subject to the regulations in the Part, and whether there are any circumstances under which a person is excluded from coverage by the regulations or subject only to limited requirements. The second section in Part 264 (§ 264.3) explains the relationship of Part 264 requirements (which EPA has termed "general standards" or "permitting standards") to Part 265 requirements (the "interim status standards"). Section 265.1(b) is the counterpart of § 264.3. It explains that the Part 265 regulations, rather than the Part 264 regulations, are applicable to an owner or operator who has fully complied with the requirements for interim status under Section 3005(e) of RCRA, and who has not had final administrative action taken on his permit application. Sections 264.4 and 265.4 notify people who handle hazardous waste that imminent hazard actions may be brought notwithstanding any other provisions of the regulations. Each of these sections is discussed in detail below.

1. *Purpose, Scope, and Applicability.* The content of this section has changed substantially from the proposal. This preamble discussion explains the final requirements, and, in addition, contains a table showing the correlation of each of the paragraphs in proposed § 250.40 with the final regulations.

Paragraphs (a) of §§ 264.1 and 265.1 set forth the purpose of the Section 3004 regulations and are self-explanatory.

Paragraphs (b) of §§ 264.1 and 265.1 state the general applicability of the regulations, which is to all owners and operators of facilities that treat, store, or dispose of hazardous waste (TSDFs), except as specifically provided otherwise in the Parts 264, 265, or 261 regulations.

Paragraphs (c) through (g) of § 264.1 and paragraph (c) in § 265.1 delimit the general applicability of the regulations. In addition, each Subpart in Parts 264 and 265 contains an applicability section. Some of these special applicability sections now merely refer back to the requirements in §§ 264.1 and 265.1, but Subparts F through R of Part 265 contain applicability sections which limit the applicability of the requirements in those sections to certain kinds of facilities. The requirements in Subpart N of Part 265, for example, apply only to owners and operators of facilities which dispose of hazardous waste in landfills (which include waste piles used as disposal facilities).

a. *Ocean Disposal.* Paragraph (c) of § 264.1 states that the requirements of Part 264 apply to a person disposing of hazardous waste by means of ocean disposal subject to a permit issued under the Marine Protection, Research, and Sanctuaries Act (MPRSA) only to the extent they are included in a RCRA permit by rule granted to such a person under Part 122 (i.e., the RCRA Section 3005 regulations). The preamble to the Part 122 regulations explains the basis of EPA's decision to issue such persons RCRA permits by rule. Basically, EPA has found that compliance with an ocean dumping permit issued under 40 CFR Part 220 (Ocean Dumping under MPRSA) provides the human health and environmental protection mandated by RCRA. Persons carrying out such disposal, however, must comply with certain recordkeeping and reporting requirements which are necessary for EPA to ensure that the "cradle-to-grave" management system for hazadous waste established in RCRA tracks all manifested hazardous waste.

Paragraph (c)(1) of § 265.1 excludes persons disposing of waste by ocean disposal subject to a MPRSA permit from coverage under Part 265 (interim status standards). The Part 265 requirements never apply to such people because on the effective date of RCRA regulations persons disposing of hazardous waste in accordance with MPRSA permits automatically receive RCRA permits by rule which require them to comply with selected Part 264 requirements.

Treatment or storage of hazardous waste before it is loaded onto an ocean vessel for incineration or disposal at sea is covered by the Parts 264 and 265 regulations because MPRSA offers no regulatory scheme comparable to RCRA for such facilities.

b. *Underground Injection.* Coverage under RCRA of persons disposing of hazardous waste by underground injection is complicated because, depending on the circumstances, such persons are subject to regulation (1) by RCRA Part 265 standards, (2) by RCRA Part 264 standards, (3) by State standards effective under an authorized hazardous waste program (under Section 3006 of RCRA, 40 CFR Part 123, Subparts A, B, and F), (4) by State standards effective under an approved underground injection control program (under the Safe Drinking Water Act (SDWA), 40 CFR Part 123, Subparts A and C), or (5) by Federal standards in a State with an EPA promulgated underground injection control program under SDWA. The preamble to the Part 122, Subpart C, regulations explains these various regulatory schemes and their statutory underpinnings. Because Section 3004 of RCRA requires that all owners and operators of facilities which

treat, store, or dispose of hazardous waste must have a RCRA permit, these Section 3004 (Parts 264 and 265) regulations and the Section 3005 (Parts 122 and 124) regulations so provide.

Part 265 standards (as stated in § 265.1(c)(2)) do not apply to persons disposing of hazardous waste by means of underground injection subject to a permit issued under an Underground Injection Control Program approved or promulgated under the Safe Drinking Water Act. That means that the Part 265 interim status regulations do apply to persons disposing of hazardous waste by underground injection who have met the Section 3005(e) requirements for interim status and who either (1) do not have such a SDWA UIC permit, or (2) do not have a RCRA permit and are injecting hazardous waste underground in a State without an authorized RCRA program that covers underground injection.

Part 264 requirements (see § 264.1(d)) apply to people disposing of hazardous waste with permits issued under an UIC program approved or promulgated under SDWA only to the extent that they are included in § 122.45 (Requirements for UIC permits for wells injecting hazardous wastes). The same reasoning that applies to hazardous waste disposal under an MPRSA permit applies to SDWA UIC permits. Although all of the technical requirements for waste disposal by means of underground injection have not yet been promulgated under the Safe Drinking Water Act, EPA is including this section to state its intention to issue a RCRA permit by rule to persons who meet SDWA requirements. EPA will insure that the combination of UIC technical requirements, and § 122.45, which incorporates appropriate requirements from Part 264 for underground injection of hazardous waste, meets RCRA's human health and environmental protection mandate.

The implication of § 264.1(d) is that until an underground injection facility receives a SDWA UIC permit, it is subject to RCRA interim status standards (if the owner or operator has met the requirements of Section 3005(e) of RCRA) or must have a RCRA permit. EPA intends, as part of its Phase II Section 3004 regulations to promulgate technical requirements that can be used to issue interim (two year) permits to Class I (and perhaps Class IV) underground injection wells. Until then, or until permitted by a SDWA UIC program, all hazardous waste disposal by underground injection is governed by the RCRA interim status standards. See the discussion of the Subpart R standards in this preamble for an explanation of those requirements. EPA believes that this system will ensure that underground injection of hazardous waste is carried out in accordance with the purposes and requirements of both RCRA and SDWA, while avoiding unnecessary dual regulation. For a more detailed discussion of this issue, see the preamble to Part 122, Subpart C.

As with on-shore facilities associated with ocean disposal, above-ground treatment or storage of hazardous waste associated with an underground injection facility is covered by Parts 264 and 265 regulations. The Safe Drinking Water Act is designed to protect underground sources of drinking water and does not have authority comparable to RCRA's to ensure human health and environmental protection from all aspects of potential pollution (air, land, surface, and ground water) from above-ground facilities that treat, store, or dispose of hazardous waste.

c. *POTWs.* As discussed above in the section of this preamble on "NPDES Permitted Facilities," the regulatory definition of solid waste excludes hazardous waste that is mixed with domestic sewage and passes through a sewer system to a publicly-owned treatment works. That exclusion is based on the legislative history of the Solid Waste Disposal Act. As discussed in the Part 122 preamble, EPA believes that the reasoning which led the Agency to exempt such hazardous waste mixed with domestic sewage from the definition of solid waste, also applies to the decision of what sort of RCRA requirements to impose on POTWs which receive hazardous waste which has not lost its character as solid waste (i.e., hazardous waste which is discharged to the POTW by truck or rail, or through a pipe which carries only industrial waste).

EPA will issue POTWs which receive hazardous waste a permit by rule. The Agency's reasoning is that the wastes will be placed in a facility subject to an extensive set of Federal regulatory and subsidy provisions that should be sufficient to deal with any hazardous waste problems. In addition, this exemption for POTWs from most of the Section 3004 requirements is based on Congressional intent that EPA avoid disruption of the existing patterns of funding and operation of such facilities. Note, however, that in order for a POTW to qualify for this permit by rule, it must have and be in compliance with an NPDES permit, must comply with certain of the RCRA recordkeeping and reporting requirements, and must meet all applicable Federal, State, and local pretreatment requirements (such requirements are applicable to truck or rail shipments of hazardous waste just as if they had come through a sewer, pipe, or similar conveyance).

Paragraph (c)(3) of § 265.1 excludes the owner and operator of a POTW that treats, stores, or disposes of hazardous waste from coverage by Part 265. Paragraph (e) of § 264.1 provides that the requirements of Part 264 apply to such owners and operators only when included in a RCRA permit by rule. This scheme is the same as that described above for ocean disposal in accordance with an MPRSA permit. The interim status standards never apply to POTWs because owners and operators of POTWs are required to comply with the Part 264 requirements which are included in their permit by rule.

d. *Authorized State RCRA programs.* Paragraph (c)(4) of § 265.1 provides that the Part 265 requirements do not apply to persons treating, storing, or disposing of hazardous waste in a State with a RCRA hazardous waste program authorized under Subparts A and B (i.e., full authorization), or Subpart F (i.e., interim authorization) of 40 CFR Part 123. This exclusion is provided in the regulations because Section 3006 of RCRA states that authorized State programs are to operate in lieu of the Federal program. Thus Federal requirements, as a general rule, do not apply in States with authorized RCRA programs. The exception to this rule is a State with Phase I, but not Phase II interim authorization as discussed below and in the preamble to Part 123, Subpart F. Pursuant to Section 3006 of RCRA and Part 123 requirements, a State program must be "substantially equivalent" to the Federal program to receive interim authorization; a State program must be "equivalent, consistent, and provide for adequate enforcement" to receive full authorization.

Paragraph (f) of § 264.1 establishes the same sort of general inapplicability of Part 264 requirements as is established for Part 265 requirements, with one exception. The one exception is that Part 264 requirements do apply in States which have only Phase I interim authorization. In such States, EPA retains the authority to issue hazardous waste permits because the State program does not yet have that authority. Such a lack of State permitting authority could last in a State for a maximum of about nine months. As noted in the Part 123 preamble discussion of this issue, EPA would rarely exercise this authority, but if the Agency failed to retain such authority,

EPA would be in effect prohibiting the permitting of any facilities in such a State during that period. Because of Section 3005 of RCRA, no new facilities could begin operations. Because newer facilities, subject to full Federal requirements, generally will be the better facilities, such a result certainly seems anomalous, particularly in light of the current shortfall of environmentally acceptable hazardous waste management facilities in the United States.

There is one additional aspect to the applicability of Parts 264 and 265 in States with authorized RCRA programs. That is the regulation of hazardous waste disposal by underground injection in such States. As mentioned briefly above, and as discussed in the Part 123 preamble, States seeking authorization to operate RCRA hazardous waste programs in lieu of the Federal program will have an option to include coverage of underground injection facilities. If a State which receives interim or full authorization chooses not to regulate underground injection under its RCRA program (prior to the opportunity to receive approval for a State UIC program under the Safe Drinking Water Act), the Parts 264 and 265 requirements will remain effective for underground injection facilities in that State. EPA realizes such a result will subject underground injection facility owners and operators to regulation by both State and Federal agencies, but sees no real alternative. EPA does not believe that it should mandate that State RCRA programs include coverage of underground injection facilities. No such requirement was proposed with the State authorization requirements, and such a decision could disrupt the progress many States have been making towards developing all of the legislative and regulatory authority necessary to receive interim or full authorization under RCRA. On the other hand, it seems fair and reasonable to give States the chance to include such facilities in their programs because if a State has sufficient authority, a facility owner or operator then need deal only with the State.

e. *Part 261 Exclusions, Including Small Quantities of Hazardous Waste, and Recycled or Re-used Hazardous Waste.* Sections 264.1 and 265.1 both provide that Parts 264 and 265 are not applicable if specifically provided otherwise in 40 CFR Part 261. Part 261 covers the identification and listing of those solid wastes which must be handled as hazardous waste according to the standards established by EPA under Sections 3002 through 3005. Among other things, Part 261 contains regulatory definitions of solid waste and hazardous waste, a list of materials which are excluded from all or a portion of certain Subtitle C requirements, and establishes special requirements for generators of small quantities of hazardous waste. Thus EPA believes it is appropriate for the Parts 264 and 265 requirements to refer people to the Part 261 regulations which designate which wastes are within Subtitle C control, when those wastes must begin to be managed in accordance with Part 262 through 265 standards, and when a hazardous waste ceases to be a hazardous waste. The exclusions in § 261.4 (i.e., the statements of which materials are not solid wastes and which solid wastes are not hazardous wastes) are not included in the Parts 264 and 265 regulations. Owners and operators of treatment, storage, and disposal facilities should read the Part 261 regulations to determine to what extent the wastes they handle are subject to the Parts 264 and 265 regulations.

EPA has, in §§ 264.1(g)(1) and 261.1(c)(5), excluded from regulation under Parts 264 and 265 facilities permitted, licensed, or registered by a State to manage municipal or industrial solid waste, if the only hazardous waste the facility handles is excluded from regulation under the small quantity provisions of § 261.5. Section 261.5, among other things, excludes certain small quantities of hazardous waste from regulation under Parts 262 through 265, if the generator of those small quantities ensures delivery of them to a facility which has (1) interim status, (2) a RCRA permit, or (3) is permitted, licensed, or registered by a State to manage municipal or industrial solid waste. To avoid the confusion that could result if this third category of facility were not specifically excluded from regulation in Parts 264 and 265, EPA has provided an exclusion. The special regulatory requirements for hazardous waste produced by small quantity generators are discussed in the preamble to Part 261 and an accompanying background document.

EPA also has referenced in Parts 264 and 265 (see §§ 264.1(g)(2) and 265.1(c)(6)) the exclusion from most Subtitle C requirements provided in § 261.6 for hazardous waste that is used, re-used, recycled, or reclaimed. Such waste is subject to transportation and storage requirements prior to its re-use and reclamation and the provisions of § 261.6 which so provide are referenced in Parts 264 and 265. Regulation of re-used and recycled waste is discussed in the preamble to Part 261.

f. *Generators Who Accumulate On-Site, Farmers, and Totally Enclosed Treatment Facilities.* The last three exclusions from Part 264 and 265 requirements are two activities carried on by certain generators of hazardous waste and one type of facility which EPA believes need not be subject to any RCRA Section 3004 requirements in order to ensure protection of human health and the environment.

40 CFR 262.34 exempts generators who accumulate hazardous waste on-site for 90 days or less (for subsequent shipment off-site) from the requirement to have a permit, provided they comply with certain requirements that EPA deems sufficient to protect human health and the environment during that period. These requirements are specified in § 262.34. If a farmer disposes of waste pesticides in accordance with § 262.51, those wastes are exempt from all Section 3004 requirements. This is another exemption made in the Part 262 regulations which EPA is codifying in the Part 264 and 265 regulations to avoid confusion. Both of these exemptions are discussed in the preamble to the Part 262 regulations (45 FR 12724–12732, February 26, 1980) and the supporting material for those regulations.

The third exemption is for owners and operators of "totally enclosed treatment facilities," as defined in 40 CFR 260.10. Commenters pointed out that in some production processes, wastes (particularly acid and alkaline solutions) are treated in pipes and other types of totally enclosed on-site facilities, often resulting in a non-hazardous discharge.

EPA agrees that to classify on-site "totally enclosed systems," such as pipes, as hazardous waste treatment facilities and to require them to meet Section 3004 standards and obtain a permit would not make a great deal of sense. Accordingly, for the reasons discussed below under "Supart Q—Chemical, Physical, and Biological Treatment Facilities," EPA has exempted these facilities from regulation under Parts 264 and 265 and from the requirement to obtain a permit in Part 122. Persons who handle hazardous waste in what they believe to be a "totally enclosed treatment facility" should carefully read the definition of that term in § 260.10.

2. *Relationship to Interim Status Standards.* Section 264.3 puts owners and operators of TSDFs on notice that they are required to comply with Part 265 requirements, rather than Part 264 requirements, if they have qualified for interim status under Section 3005(e) of RCRA and final administrative

disposition of their permit application has not been made. Section 265.1(b) is a parallel requirement.

3. *Imminent Hazard Action.* Sections 264.4 and 265.4 put owners and operators of TSDFs on notice that nothwithstanding any of the other provisions of those parts, imminent hazard actions may always be brought pursuant to Section 7003 of RCRA when the statutory elements of such an action are established.

Correlation of Proposed and Final Rules for Purpose, Scope, and Applicability

Subject	Proposed rule	Final rule	Explanation
Purpose of requirements	§ 250.40(a)	§§ 264.1(a) and 265.1(a)	The proposed and final rules contain the same standard.
State program requirements; EPA enforcement authority.	§ 250.40(b)	Part 123	The requirements a State program must meet to receive interim or full authorization under Section 3006 of RCRA are now set out in Part 123. EPA's independent enforcement authority is established in Section 3008 of RCRA and discussed, in the context of its use in a State with an authorized RCRA program, in the Part 123 preamble.
Compliance with permit requirements	§ 250.40(c)	§ 264.1(b), Part 122, and Part 123	The Part 264 standards are independently enforceable national standards, but the circumstances under which EPA will consider compliance with an EPA or a State RCRA permit compliance with the standards are provided in Parts 122 and 123 regulations, and discussed in the preamble to those Parts.
Special waste standards	§ 250.40(c)(1)	Deleted	See the discussion in this preamble entitled "Special Wastes."
Interim status standards	§ 250.40(c)(2)	Part 265	For ease of reference, and because EPA is phasing its Section 3004 standards, the interim status standards are now set out in a separate Part (Part 265) of Title 40 of the Code of Federal Regulations.
POTW exemption	§ 250.40(c)(3)	§§ 264.1(e) and 265.1(c)(3)	This exemption is discussed in the Section 3004 preamble in the section on Subpart A requirements.
Requirement for ID code	§ 250.40(c)(4)	§ 264.11	This requirement was properly a generally applicable facility standard rather than a scope of coverage requirement so it has been made a Subpart B (General Facility Standards) standard.
Receipt of hazardous waste only from small quantity generators.	§ 250.40(c)(5)	§§ 261.5, 264.1(g)(1), and 265.1(c)(5).	This exclusion is discussed in the preamble to Part 261.
Receipt of unmanifested hazardous waste	§ 250.40(c)(6)	§§ 264.76 and 265.76	This reporting requirement has been placed in Subpart E (Manifest System, Recordkeeping, and Reporting) of Parts 264 and 265 where it more properly belongs.
Use of requirements for:			
Assessing State programs	§ 250.40(d)(1)	Part 123	How EPA will use the Section 3004 requirements to assess State programs for interim and full authorization is more properly the subject of the Section 3006 regulations and is set out in Part 123 and discussed in the preamble to that Part.
Issuing permits	§ 250.40(d)(2)	Part 122	The use of the Part 264 standards in issuing, reissuing, or revising permits is more properly the subject of the Section 3005 (i.e., the Part 122) regulations and is set out there and discussed in that preamble. The decision to incorporate the proposed "Notes," (i.e., variances) directly into the Section 3004 standards is discussed in the Section 3004 preamble. EPA's position on reopening and modification of permits is discussed in the Part 122 preamble.
Bringing enforcement action against:			
TSDF with a State permit	§ 250.40(d)(3)(i)	Part 123	The circumstances under which EPA will enforce State requirements which are not included in State permits is discussed in the preamble to Part 123.
TSDF with no permit or pending permit application.	§ 250.40(d)(3)(ii)	§§ 264.1(b), 264.3, and 265.1(b)	Part 264 standards are independently enforceable national standards which apply of their own force to owners and operators of TSDFs who do not have interim status. Compliance with Part 264 standards does not, of course, relieve an owner or operator from the requirement to get a permit under Part 122, nor does it insulate him from an action under Section 7003 of RCRA, or an action seeking an order for compliance with certain Part 265 requirements, should those requirements be more extensive than the extant Part 264 requirements.
Requirements do not apply:			
Domestic sewage	§ 250.40(e)(1)	Part 261	§ 261.4 excludes materials that are not solid wastes for purposes of Subtitle C requirements; domestic sewage is so excluded.
Irrigation return flows	§ 250.40(e)(2)	Part 261	§ 261.4 excludes materials that are not solid wastes for purposes of Subtitle C requirements; irrigation return flows are so excluded.
CWA Section 402 discharge	§ 250.40(e)(3)	Part 261	§ 261.4 excludes materials that are not solid wastes for purposes of Subtitle C requirements; discharges permitted under Section 402 of the CWA are so excluded. This exclusion does not exclude from Subtitle C regulation industrial wastewaters while they are being collected, stored, or treated before discharge, nor does it exclude sludges that are generated by industrial wastewater treatment.
Source, special nuclear, or by-product material.	§ 250.40(e)(4)	Part 261	§ 261.4 excludes materials that are not solid wastes for purposes of Subtitle C requirements; source, special nuclear, or by-product material as defined by the Atomic Energy Act of 1954, as amended, is so excluded.
Section 111 and 112 air emissions	§ 250.40(e)(5)	Deleted	This exclusion from Subtitle C coverage didn't really "fit" with the rest of the exclusions, which are of solid or hazardous wastes. Although this exclusion has been deleted from the regulations, EPA's policy is not to promulgate any requirements under RCRA which would be inconsistent with point source air emission regulations under Sections 111 and 112 of the Clean Air Act.
Disposal of hazardous waste via underground injection.	§ 250.40(e)(6)	§§ 264.1(d) and 265.1(c)(2); Parts 122 and 123.	As discussed in the Section 3004 preamble in the section on Subpart A requirements, and in the preambles to the Parts 122 and 123 regulations, the disposal of hazardous waste via underground injection is subject to certain RCRA requirements.
Ocean disposal of hazardous waste	§ 250.40(e)(7)	§§ 264.1(c) and 265.1(c)(1); Part 122.	As discussed in the Section 3004 preamble in the section on Subpart A requirements, ocean disposal of hazardous waste subject to a MPRSA permit is subject to a RCRA (Part 122) permit by rule.

B. Subpart B—General Facility Standards

Subpart B of both Parts 264 and 265 contains a number of discrete sets of standards, each of which applies to owners and operators of all hazardous waste facilities. The Subpart includes requirements for waste analysis, security, inspections, and training—all of which were contained in § 250.43 of the proposed rules.

1. *Identification Number.* Sections 264.11 and 265.11 of Subpart B contain a standard which requires that the owner or operator apply to EPA for an identification code. This requirement was in the Purpose, Scope, and Applicability section of the proposed rules. However, because the standard is applicable to all facilities, the Agency believes that it is more logical to include the standard in the General Facility section of the final rules.

2. *Required Notices.* Sections 264.12 and 265.12 require that the owner or operator of a facility notify the Regional Administrator at least four weeks in advance of the date of any shipments of hazardous waste from foreign sources. This requirement is a corollary to the proposed § 250.20(c)(3) standard, which required generators who ship their waste to foreign countries to inform the foreign government having jurisdiction over the facility to which the waste is to be sent. The Agency believes that this requirement is necessary in order for EPA to effectively oversee the transportation and management of hazardous waste imported to the United States.

Sections 264.12 and 265.12 also require that, before transferring ownership or operation of a facility during its operating life, or of a disposal facility during the post-closure care period, the owner or operator must notify the new owner or operator of the RCRA Section 3004 and Section 3005 requirements. The Agency has added this requirement to the final rules in order to minimize the possibility that an unsuspecting buyer may purchase a facility, not knowing that this purchase entails his having to comply with these Subtitle C regulations. However, it should be noted that if the "old" owner or operator fails to comply with this standard, the "new" owner or operator is still required to comply with all applicable RCRA regulations, including those in Part 122 establishing requirements for permits.

Section 264.12 also requires the owner or operator of an off-site facility to inform the generator in writing that the facility has the appropriate permit(s) for, and will accept, the generator's waste. The Agency believes this provision, which was suggested in the comments, is necessary for the proper functioning of the manifest system, because Part 262 requires that generators send their hazardous waste only to a facility with appropriate permits for the waste (or to facilities whose owner or operator has interim status). A written certification by the facility owner or operator thus assures the waste generator that the requirements of Part 262 are satisfied. It also avoids the potential problem of a generator designating a facility on the manifest which has the appropriate permits for his waste, but which has not agreed to accept the waste.

The rest of this section of the preamble discusses the comments received on the proposed § 250.43 standards contained in this Subpart.

3. *General Waste Analysis.* The purpose of the proposed waste analysis standards was to ensure that owners or operators possessed sufficient information on the properties of the wastes which they managed, to be able to treat, store, or dispose of their waste in a manner which would not pose a threat to human health or the environment. The proposed standards included requirements which specified the level of analysis to be performed on wastes managed at facilities, the minimum frequency with which these analyses were to be repeated, and the properties of the waste which were to be determined to verify the identity of each truckload, shipment, or batch of hazardous waste managed at facilities.

The Agency received many comments which stated that the generator should be required to provide the owner or operator with the information needed to comply with the Section 3004 waste analysis standards, because the generator is more familiar with the properties of the waste than is the owner or operator, and it would thus be less expensive for the generator to conduct the required analysis. The Agency believes, however, that although many generators may be familiar with the properties of the waste which they generate, there are many companies which generate waste about whose properties the generators know very little. In the latter case, for those companies lacking analytical equipment, the cost of sending their waste to commercial laboratories for analysis is comparable to the cost of analysis at facilities with on-site labs, or facilities which sub-contract their analytical work. In addition, many generators will not have the "hands on" knowledge of the information needed to treat, store, or dispose of the waste at any particular type of facility. Owners or operators will necessarily be in a better position to use that knowledge. The Agency believes that the approach taken in the proposed rules (whereby owners or operators can either conduct the analysis themselves or acquire the analysis from the generator) provides as flexible and cost effective a means as that suggested by the commenters, to ensure that owners or operators obtain the information needed to manage hazardous waste.

A number of commenters suggested that the regulations should specify that the waste analysis required under the Section 3001 regulations satisfies the requirements for waste analysis required under Section 3004. The Agency does not agree with these commenters because the information needed to characterize a waste (as required in proposed § 250.13) may overlap with, but is not identical to, the information needed to manage a waste (as required in proposed § 250.43). For example, to treat a waste, one needs to know not only the chemical composition of the waste, but also the compatibility of the waste with the techniques and chemical reagents used at the facility to treat the waste. The waste analysis required under Section 3001 may not provide the latter type of information, and thus, does not fully satisfy the requirements for waste analysis prescribed under Section 3004. However, the standard has been revised to make it clear that data developed pursuant to Section 3001 may be included in the data base that the owner or the operator compiles to comply with the Section 3004 waste analysis standards.

Several commenters felt that the nature and the scope of the required analysis should be more specific. The Agency purposely wrote objective-oriented waste analysis standards in proposed § 250.43 because the information needed to treat, store, or dispose of waste differs depending on the methods used to manage waste (e.g., the information needed to incinerate waste differs from that needed to neutralize waste). However, the Agency agrees that the regulations can be somewhat more detailed regarding the standards for waste analysis. For this

reason, in addition to the general waste analysis standards which apply to all facilities, the final rules also include, in most technical sections of the regulations, waste analysis standards specific to the management method regulated in that particular section. For example, the § 265.345 standards for incineration contain specific parameters (e.g., halogen and sulfur content and heating value) for which waste must be analyzed before it is incinerated. By including the more detailed informational requirements in the technical sections of the regulations, while leaving the more general requirements in the general facility section of the regulations, the Agency believes that the regulations are specific enough so that owners or operators will know what is expected of them, and yet are flexible enough so that an owner or operator will only be required to conduct analyses which are appropriate for the management methods used at his facility.

Several commenters objected to the minimum annual retesting requirement, stating that it was unnecessary to re-analyze waste when the owner or operator is confident that the properties of the wastes are unchanged.

The Agency believes that the properties of most waste streams vary within the course of a year, and therefore most owners or operators should re-analyze waste, at least annually, to determine if such variations will influence the effectiveness of the method used at the facility to manage waste. However, if the owner or operator correctly believes that the properties of the waste which he manages will not change, then to re-analyze the waste would be an unnecessary expense. Therefore, the minimum annual retesting requirement has been deleted from the revised rules. However, the regulations do require that, at a minimum, waste must be re-analyzed (1) when the owner or operator is notified, or has reason to believe, that the process or operation generating the waste has changed in a way that would lead him to believe that the hazardous property or characteristics of the waste would change, and (2) for off-site facilities, when the results of the verification analysis required in §§ 264.13 and 265.13 indicate that the composition or characteristics of the waste do not match the identity of the waste designated on the accompanying manifest.

Objections were also raised regarding the requirement to analyze waste for the four properties specified in proposed § 250.43(h) (i.e. physical appearance, specific gravity, pH, and vapor pressure), because analysis for these properties is not appropriate for all categories of waste. Many commenters also felt that to require owners or operators to sample each truckload of waste for these four properties was unreasonable for multiple truckloads of waste which have uniform physical and chemical characteristics.

The Agency agrees that measuring for the four properties specified in proposed § 250.43(h) may be inappropriate for certain categories of waste and may be unnecessary for multiple truckloads of uniform waste. Therefore, the four properties have been deleted from the waste analysis standards. Instead, the final rules require that owners or operators develop and follow a waste analysis plan which specifies the tests to be used, and the frequency with which these tests will be conducted, to determine the identity of incoming waste managed at the facility. The plan must be prepared and followed during interim status. The Regional Administrator may request the plan at any time after the effective date of these regulations. The Agency also will review the content of the plan when it evaluates the facility's permit application. Where the Regional Administrator believes that the facility's waste analysis plan is inadequate, he will require that the plan be modified to include procedures which he believes are appropriate to determine the identity of incoming waste to the facility.

In addition to the procedures used to determine the identity of incoming waste, the final rules also require that the facility's waste analysis plan describe:

(1) the parameters for which each waste will be analyzed in the detailed chemical and physical analysis required for each waste managed at the facility;

(2) the test methods to be used to test for these parameters; and

(3) the sampling methodology which will be used to obtain representative samples of the waste to be analyzed.

The Agency believes that the requirement for developing and maintaining a waste analysis plan will not only allow owners or operators to tailor their waste analysis procedures to the type of wastes and techniques which the facility uses to manage these wastes, but will also provide the Agency with a review mechanism which will encourage owners or operators to conduct thorough analyses of the wastes which they manage. Compliance with the self-developed waste analysis plan, as with the other plans required in these regulations, is a separate, enforceable, regulatory requirement.

EPA is promulgating waste analysis requirements in Part 265, but will accept comments on their appropriateness as interim status standards because they were not specifically proposed as interim status standards.

4. *Security.* The purpose of the proposed security standards was to prevent the unknowing or unauthorized entry of people or livestock onto the active portions of facilities. To accomplish this objective, the proposed rules included requirements which specified the height of the fence, the means to control entry at the gate, and the height of the letters on the warning sign which was to be posted at the entrance to the active portion of the facility. However, the proposed rules contained rather flexible variances from the specific requirements for fences and signs.

Most of the comments received on the security standards addressed the requirement for a six-foot fence. The majority of the commenters felt that the standard should allow means other than a six foot fence (or the alternatives specified in the "note" to the standard) to prevent entry onto a facility. Several commenters suggested that the standard be written in terms of a performance standard, and a few commenters noted that the implicit performance standard in the proposed rules, which required the *prevention* of unauthorized entry onto a facility, should be changed to require the *deterrence* of unauthorized entry onto a facility, because it is impractical to construct a non-climbable fence. In addition, a number of commenters suggested that facilities should not have to comply with the security requirements if the wastes are sufficiently benign so that people need not be kept away from the site. Furthermore, a few commenters pointed out that the active portion of a facility should not have to be surrounded by a fence if the active portion is located within a facility or plant that meets the security requirements.

In response to these comments, the security standards have been rewritten to include the general performance standard that a facility's security system must prevent the *unknowing* entry of people, and minimize the potential for the *unauthorized* entry of people or livestock onto the active portions of facilities. The final rules contain two conditions for an exemption from the performance standard: (1) if unauthorized or unknowing entry will not result in injury to people or livestock who might enter the facility, and (2) if such entry will not result in injury to the environment (e.g., as a result of

disturbing the waste or the equipment within the active portion). Because these two conditions are rarely concurrently satisfied, the Agency does not expect that many sites will be exempt from the security requirements.

To indicate how to comply with the general performance standard, a revision of the proposed fencing requirement has been provided in the final rules. The height of a fence, if used, is not specified, and alternatives to fences are allowed. In addition, the standard has been made more flexible by allowing the use of an around-the-clock surveillance system, instead of the physical barrier (i.e., a fence) specified in the proposed rules, to control entry onto a facility. The Agency believes that a continuous surveillance system can be as effective as a physical barrier to control access to the active portion because, when an unauthorized person approaches this area, facility guards or facility personnel can ensure that the person does not enter the active portion.

The Agency agrees that when access to the facility is already controlled by an adequate security system, to erect a fence or other barrier around the active portion would not provide additional protection to human health and the environment. Accordingly, EPA has clarified the regulations so that an owner or operator can demonstrate that the active portion of his facility complies with the security regulations, based upon the security system of the facility (or the manufacturing operation) within which the active portion is located.

In addition, a number of commenters pointed out that the proposed standard, which only required signs to be posted at the gates to the active portion of the facility, could result in inadequate warning to unknowing persons approaching facilities where fences are not used to control access to the facility. For this reason, several commenters suggested that the standard should require that signs be posted in sufficient numbers to be seen from any approach to the active portion of the facility.

The Agency agrees that because the security systems (including fences) used to control access to facilities will not be impenetrable, signs should be posted along the periphery of the active portion to warn unknowing people that entering onto the active portion is potentially hazardous. Therefore, EPA has taken the commenters' suggestion and has revised the requirement for the placement of the warning signs.

Although the Agency received no criticism of the four-inch lettering requirement for signs, the underlying theme of the majority of the comments was that the proposed security standards were too specific. Because the Agency believes that the four-inch lettering requirement may have been too inflexible, a more performance-oriented provision, which requires that the warning on the sign be legible from at least 7½ meters (25 feet), has been substituted for it in the final rules. This new approach will provide more flexibility.

The Agency believes that because the "note" to the proposed standard provided a variance to the requirement for the statement: "Warning—Unauthorized Personnel Keep Out" on the sign, no comments were received on this aspect of the standard. The Agency believes that a variance to the wording requirement should be retained in the final rules for existing signs, because it would be unnecessarily expensive to replace signs at facilities which do not contain the exact wording specified in the final standard, but which nonetheless give adequate warning to unknowing people to stay away. However, to make sure that the new signs posted at hazardous waste facilities are uniform, the Agency believes that they should contain the wording specified in the standard. Therefore, in the final rules, the variance to the message on the sign only applies to existing signs.

In addition, the Agency has substituted the word "danger" for "warning" in the final rules. The reason for this change is that word "danger," more than "warning," indicates the potential for harm.

5. *General Inspection Requirements.* § 250.43–6 of the proposed regulation specified seven parts or aspects of a facility which owners or operators were required to inspect daily for specific signs of deterioration or malfunction. Owners or operators were also required to record observations noted during the inspection in the facility's operating log.

The Agency received many comments concerning the specific listing of required inspection items (i.e., dikes, fences, etc.) and the absolute requirement for *daily* inspections. Several of the commenters noted that for some of the listed items (for example, fugitive emissions), the required inspections were either not applicable to all facility types, or would be impractical to implement. Others noted that such a list could not include all of the possible items which should be inspected. As for inspection frequency, many of the comments argued that daily inspections are simply unnecessary. They pointed out that, in many cases, the rate of deterioration is so slow (in the corrosion of tanks, and the erosion of dikes, for example) that occasional inspections are sufficient to reveal any problems long before failure occurs.

The thrust of these comments was that the specific items to be inspected and the frequency of inspection should be determined by the owner or operator on a case-by-case basis. The Agency agrees, and has revised the regulations to require the owner or operator to develop and follow his own written inspection schedule. This will be based on the facility's criticial processes, equipment, and structures, and on the potential for failure and the rate of any deterioration processes (corrosion, erosion, etc.) which may lead to failure. Compliance with the plan is a separate, enforceable regulatory requirement.

During the permitting process, the Agency will review the inspection schedule for its adequacy in protecting human health and the environment, for comprehensiveness, and for consistency with inspection schedules for similar facilities. The Agency will also assist the owner or operator in optimizing the efficiency and effectiveness of the schedule based on its experience with similar facilities. During interim status, consultation and review with the Agency will not normally be required.

The Agency realizes that not all owners or operators are equally knowledgeable. Therefore, EPA has retained minimum specific inspection requirements, which include some obvious inspection points, and some minimum frequencies for inspecting them. These requirements have been incorporated into the regulations for specific facility types (tanks, surface impoundments, etc.) to clarify how they are to be applied to these facilities.

The final rules also require the owner or operator to make a record of all inspections, and to keep it on file for three years. In addition to information on the observations, this record must specify when the inspection was made, who made it, and when any repairs were made. The record can take the form of an inspection checklist; this would combine the recordkeeping with a useful inspection procedure. In any case, the record will help assure the Agency that the owner or operator is in fact conducting inspections, and is making any needed repairs. Additionally, should an environmental or human health incident actually occur, these records will help to reconstruct the events that led to it, and may also provide a valuable resource for any emergency decisions. As one incidental benefit, the record will help management audit the reliability of equipment, the efficiency of maintenance activities, and the effectiveness of the inspection schedule.

6. *Personnel Training.* The purpose of the proposed training requirements was to reduce the potential for mistakes which might threaten human health or the environment by ensuring that facility personnel acquire expertise in the areas to which they are assigned. The proposed standards included requirements which specified the time by which facility personnel must obtain the training necessary to do their jobs, the records to be maintained at the facility of the training received by its employees, and the minimum frequency with which the initial training received by the employees must be reviewed. In addition, the proposed rules required facility personnel to be familiar with the facility's contingency plan.

Many of the comments received on the proposed rules addressed the format and content of the required training programs. Some commenters suggested that the standards allow in-house training programs and on-the-job training in place of the formal classroom instruction in hazardous waste management required in the proposed rules. Several other commenters requested that the regulations specify the type, length, and intensity of the courses of instruction to be administered to facility personnel.

The Agency agrees that formal classroom instruction may not always be the best approach to training, and that supervised on-the-job training is a valid substitute for, or supplement to, formal instruction. Accordingly, the final training standards reflect the Agency's acceptance of in-house training programs and on-the-job training as a means of complying with the training requirements. However, the content, schedule, and techniques to be used in the on-the-job training program must be described in the training records maintained at the facility and will be subject to approval during the permitting process. Compliance with the program described in the training records is a separate, enforceable regulatory requirement.

Given the variability in waste types, management processes, and employee functions at hazardous waste facilities, the Agency believes that it is neither necessary nor desirable to rigidly specify training courses in regulations. However, the Agency is preparing a training manual which will provide advice on desirable types of instruction for the various jobs carried out at hazardous waste management facilities.

Several commenters were concerned that the six-month period for complying with the training requirements may be too short, because there may be a shortage of formal training programs in hazardous waste management.

The Agency believes that its acceptance of supervised on-the-job training to achieve compliance with the training requirements will help to offset the problems caused by a possible shortage of formal training programs. Where formal programs are unavailable, a facility can use in-house training programs and supervised on-the-job training to provide the required training. Because the majority of the Phase I standards are non-technical (e.g., the manifest and recordkeeping requirements), the Agency believes that most training can be conducted in-house. When the Phase II standards are promulgated, facility personnel will have another six months from the effective date of the Phase II standards to acquire the expertise needed to comply with the additional standards. Thus, the shortage in formal courses in hazardous waste managment should not cause facility personnel to miss the deadline by which compliance with the training requirements must be achieved.

Commenters suggested that the six-month "grace period" for untrained employees should not be extended to employees hired after the effective date of these regulations. Work and training schedules may make that an impractical requirement, but the Agency has decided, for safety reasons, to require that untrained employees work only in supervised positions.

A number of commenters were also concerned that the requirement for detailed written job descriptions might lead to union grievances and arbitration. For this reason, the commenters suggested that the standard be revised to allow the job descriptions to be written in a manner similar to descriptions for other similar positions in the same company location or bargaining unit.

It was not the Agency's intent to interfere in labor-management issues. EPA's only interest in the job descriptions of facility personnel is to enable the Agency to determine if each person is receiving a level training that is commensurate with the person's duties and responsibilities. Since the Agency believes that the suggested revision of the recordkeeping requirements will not diminish the Regional Administrator's ability to make this determination, the standards have been revised according to the commenters' suggestion.

Two other standards have now been placed with the training requirements. The first of these standards specifies the length of time the facility must keep training records. This requirement was proposed in the section of the regulations dealing with Manifest, Recordkeeping, and Reporting (§ 250.43–5). However, in order to reduce the need to cross-reference within the regulations, the Agency has decided to place all of the recordkeeping standards which deal with training into the section of the regulations on training. Similarly, the elements of the facility's emergency response procedures with which facility personnel must become familiar have been incorporated into the training requirements.

7. *General Requirements for Ignitable, Reactive, or Incompatible Wastes.* As discussed earlier, the Agency has added general requirements for handling ignitable, reactive, or incompatible wastes in § 265.17 of the interim status standards. In the Phase II regulations, the Agency plans to amend Part 264 by moving § 264.36 to a new § 264.17(a), and by adopting § 265.17(b) as a new § 264.17(b). Therefore, the Agency will use any comments on § 265.17 for that purpose also.

As the present definition of incompatible wastes reveals, the problems posed by incompatible wastes fall into two general areas. The first covers wastes which are incompatible with the materials containing them because they would corrode or otherwise cause the decay of those materials. The standards in the substantive regulations were drawn from the proposed standards for storage generally, tanks, containers, treatment generally, basins, and chemical, physical, and biological treatment facilities, and now are applied to waste piles as well, because they pose similar problems. The Agency has chosen slightly different solutions to these problems for containers, tanks and treatment facilities, and waste piles. These solutions are discussed in the separate sections for these types of equipment or facilities.

The second and broadest group of problems is the potential for the creation of harmful reactions or substances during the mixing of incompatible wastes and the treatment of ignitable or reactive wastes. The proposed definition of incompatible wastes, Appendix I to Subpart D of proposed Part 250, and the Note to proposed § 250.45(c) indicated that a variety of substances and reactions were of concern. The present definition and substantive regulations have been drawn from these proposed regulations with some modifications.

The regulations and Appendix V have been coordinated, as suggested in part by one commenter. Several standards have been deleted. The part of the proposed definition concerning the

volatilization of ignitable and toxic chemicals has been partly subsumed into the parts covering production of flammable or toxic fumes and gases. As explained elsewhere, further regulation of volatile waste is being postponed. The part of the proposed definition covering shock-sensitive, friction-sensitive, and similarly unstable substances has been deleted because reactive substances are adequately covered in the sections dealing directly with them, and there are few or no damage incidents resulting from the production of such substances from non-reactive wastes. The detailed air emission formulas in the Note to proposed § 250.45(c) have been eliminated in response to comments that the OSHA standards employed there were not generally appropriate for the circumstances of waste treatment, storage, and disposal facilities.

Finally, Appendix I to Subpart D of proposed Part 250 indicated in Groups 2–A and 2–B that toxic wastes were incompatible with flammable or explosive wastes because mixtures of them would release toxic substances in fires or explosions. No comments were received on this standard, but the Agency is still considering whether and how toxic and ignitable, flammable, or reactive wastes or materials should be segregated during treatment, storage, or disposal in order to avoid the release of toxic substances in case of fire or explosion. The problem is compounded by the fact that some toxic substances are themselves ignitable, flammable, or reactive. This portion of the Appendix (now Appendix V to Part 265) has been deleted for the time being, and the Agency solicits comments on this problem.

Many commenters pointed out that incompatible wastes such as acids and bases are frequently mixed so that they will neutralize each other, and that this may be done safely so that violent reactions are avoided. Consequently, the regulations have been modified to allow mixing incompatible wastes if the general standards described below are complied with. In addition, contrary to the contention of one commenter, materials other than wastes, such as treatment reagents or non-hazardous wastes, may be incompatible with hazardous wastes and are therefore included in the incompatible waste regulations. These requirements have been extended to storage facilities as well as treatment and disposal facilities, because they can experience similar problems when incompatible wastes are mixed. If facility operators mix incompatible wastes, they must anticipate the reactions which may occur and the substances which may be formed, and control the mixing so as to avoid or control the reactions and substances produced.

The general standards in § 265.17(b) are intended to insure that several undesirable results are avoided when ignitable or reactive wastes are handled or incompatible wastes are mixed. Extreme heat or pressure, fires or explosions, violent reactions, and damage to the structural integrity of the device or facility containing the waste are clearly undesirable because of the likelihood that they will cause or lead to injury or death of facility personnel, and the spread of toxic wastes into the environment. These standards were uncontroversial. The production of uncontrolled flammable fumes or gases in sufficient quantities to pose the risk of fire or explosion is undesirable for similar reasons. The creation of uncontrolled toxic dusts, mists, fumes, and gases in sufficient quantities to threaten human health is also prohibited, in order to protect both facility personnel and people off-site. The Agency is primarily concerned here with gases such as chlorine, hydrogen sulfide, and hydrogen cyanide, which some mixtures of wastes or waste treatment processes may produce. As explained elsewhere, the Agency need not rely on the Clean Air Act to regulate airborne emissions from hazardous waste facilities.

Finally, because the possible undesirable results from the mixing or handling of wastes may be enormously varied, the general regulations prohibit the creation of conditions like the ones mentioned above which threaten human health or the environment. This standard requires owners and operators of facilities to be aware of the possible results of treatment, storage, or disposal of ignitable or reactive wastes, and the commingling of incompatible wastes, to avoid conditions which would pose threats to human health or the environment similar to the ones specifically listed in the regulation.

The regulations on ignitable or reactive wastes are typically more restrictive than those on incompatible wastes. While incompatible wastes require attention primarily at the time they are introduced into a facility or treatment process, ignitable or reative wastes pose a continuing danger of ignition or reaction, and require continuing protection from conditions which would cause them to ignite or react. This is sometimes practical in containers, tanks, and waste piles. However, since landfills, surface impoundments, and land treatment facilities generally cannot be managed so that this protection is provided, ignitable or reactive wastes may be placed in such facilities only if they are treated before or immediately after placement in the facility so that they are no longer ignitable or reactive. This relaxation of the complete bar in the proposed rule responds to comments indicating that such treatment is not uncommon and should not be prohibited. The regulations require that this treatment meet the same standards applied to the mixing of incompatible wastes.

The Agency is currently considering adding another class of incompatible wastes to these regulations. It would declare incompatible those wastes which would solubilize or otherwise mobilize another hazardous waste or constituent in a landfill, land treatment facility, or surface impoundment, and thus increase the likelihood that the mobilized waste or constituent would be leached into ground water. Because the potential scope of this concept is so broad—even water could be considered incompatible with many wastes—the Agency currently believes that it would be most practical to implement such a regulation by listing only specified pairs of wastes as being incompatible. Those currently under consideration are:

(1) PCBs and organic solvents,

(2) Organic pesticides and organic solvents, and

(3) Metal-containing wastes and acids.

The first material in each of these pairs can be substantially mobilized by the second, but may be relatively immobile in its absence. It therefore seems prudent to dispose of such pairs in separate landfill cells, land treatment areas, or impoundments. The Agency requests comment on this concept of incompatibility, on these and other possible pairs of wastes which might be listed as incompatible under this standard, and on circumstances under which these wastes can safely be commingled in land disposal facilities.

C. Subpart C—Preparedness and Prevention and Subpart D—Contingency Plan and Emergency Procedures

Section 250.43–3 of the proposed rules contained three general types of provisions: (1) Requirements for developing contingency plans for effective action to minimize unanticipated damage from the treatment storage, or disposal of hazardous waste; (2) requirements for preparedness and prevention measures to minimize the need for ever using contingency plans, and (3) requirements for emergency response measures to be

taken during and after situations in which a contingency plan is implemented. In the final rules, standards for preparedness and prevention have been made a separate Subpart because: (1) They contain explicit facility requirements (e.g., fire protection equipment, and aisle space) which are independent of the implementation of a facility contingency plan; (2) it is more logical to discuss preparedness and prevention aspects of facility operations before discussing planning for and response to emergencies which may or may not occur; and (3) placement of the three types of standards in the same section in the proposed rules tended to be confusing because the requirements for developing and implementing the contingency plan were interspersed with requirements for preparedness and prevention. However, preparedness and prevention, contingency plans, and emergency response are all discussed in this section of the preamble because they are closely related, and many of the comments received on these requirements addressed all of them simultaneously.

The final Part 264 and 265 Subpart C preparedness and prevention rules are intended to minimize the possibility of and effect of a release, fire, or explosion which could threaten human health or the environment. They require that facilities have, where necessary, internal communications or alarm systems, equipment capable of summoning external emergency assistance from local agencies, fire control equipment, spill control equipment, and decontamination equipment. This equipment, where required, must be routinely tested, and maintained in proper operating condition.

Subpart C also requires that employees operating the facility have immediate access to both internal and external communications systems, where these are required. In addition, where needed, aisle space must be maintained to allow the unobstructed movement of emergency equipment to any area of facility operation. Precautions to prevent accidental ignition or reaction of waste are specified. And lastly, facility owners or operators must attempt to make arrangements for local authority to provide emergency support, where this is appropriate.

The final Part 264 and 265 Subpart D contingency plan rules are intended to minimize hazards to human health and environment in the event of fires, explosions, or any unplanned sudden or non-sudden release of hazardous waste to air, soil, or surface water. The contingency plan must include:

- A description of the planned response to emergencies at the facility,
- Any arrangements with local and State agencies to provide emergency response support, where needed,
- A list of the facility's emergency coordinators,
- A list of the facility's emergency equipment, and
- An evacuation plan, where necessary.

Rules for distributing and amending the plan are specified, as is the requirement that a facility emergency coordinator be either present, or on call, whenever the facility is in operation.

Provisions for emergency procedures specified in Subpart D of the final rules include:

- Immediate notification of employees, and local, State, and Federal authorities of any imminent or actual emergencies,
- Immediate assessment of possible hazards to the environment and human health outside the facility,
- Measures to preclude the spread of fires and explosions to other waste,
- Proper management of residues,
- Rehabilitation of emergency equipment and notification of authorities before operations are resumed, and
- Recordkeeping and reporting to EPA on the nature and consequences of any incident that requires implementing the contingency plan.

Commenters from many organizations submitted numerous comments on the proposed requirements for contingency plans, preparedness, and emergency response. Highlights of these issues are discussed below:

1. *Defer Regulations Until Permit Issued.* Some commenters suggested that the contingency plan, preparedness, and emergency response requirements should be negotiated when a permit is issued, and thus should not apply to facilities during the interim status period.

The Agency sees no reason to delay implementing these requirements until a permit is issued. Most of the requirements are explicit and straightforward, and therefore, do not require negotiation with or interpretation by the Regional Administrator before they can be implemented. Those proposed requirements which might have been interpreted as requiring negotiation with EPA, have been rewritten to eliminate the need for interaction with the Agency during the interim status period. For this reason, some of the final Part 265 rules applicable during interim status are written differently than the corresponding Part 264 rules.

2. *Tailor Rules to Circumstances.* Many commenters felt that the proposed contingency plan, preparedness, and emergency response provisions should be restructured to allow requirements to be tailored to particular circumstances. In the same vein, other commenters complained that the proposed provisions were overly restrictive for some types of facilities (e.g., facilities which handled only "low" hazard waste, such as utility boiler fly ash or waste oil).

The Agency recognizes that there are different types of facilities handling many different kinds of wastes in widely differing circumstances with respect to climate, proximity to people, etc. In the proposed rules, the "Notes" following certain provisions provided some flexibility to account for these differences. In the final rules, these "Notes" have been incorporated into the regulations. Further, the Agency has expanded the concept of case-by-case determination of appropriate requirements with many revisions throughout the final rules to provide greater flexibility. In addition, requirements specific to particular circumstances (e.g., ignitable and reactive waste) have been clearly identified in the final rules.

3. *Protection Inside Versus Outside Facilities.* Several commenters questioned whether the proposed contingency plan and emergency response provisions were designed to deal with the potential for damage to human health and the environment both *inside* and *outside* hazardous waste facilities.

RCRA's mandate to protect human health and the environment is not limited to dangers occurring outside hazardous waste management facilities. In fact, many of the damage cases cited in the background documents involve death or injury to facility personnel, as well as threats to people outside the facility.

The Agency is concerned about the health and safety of facility personnel. The RCRA Section 3002 regulations for waste manifests and waste shipping container labeling and marking, and the Section 3004 waste analysis, training, inspection, and facility design and operation regulations, are designed, among other things, to reduce hazards to facility personnel.

In addition, the RCRA contingency and emergency response plans should include steps to respond to both internal and external threats. In designing internal plans to respond to employee health threats, however, respondents

must recognize that primary responsibility for regulating workplace health and safety rests with the Occupational Safety and Health Administration of the Department of Labor.

4. *Delete Contingency Plan.* Some commenters felt that the provision regarding the proposed contingency plan provision was unnecessary and should be deleted, because the Spill Prevention, Control, and Countermeasures (SPCC) plan required by the Clean Water Act would be sufficient to fulfill contingency planning requirements for hazardous waste management facilities.

The Agency disagrees with this comment. The universe of facilities which are currently required to have an SPCC plan is not identical to the universe of hazardous waste facilities controlled under RCRA. Further, the proposed rules for RCRA contingency plans are not identical to the SPCC plan requirements, and the SPCC plan is not an adequate substitute for RCRA contingency plan requirements. However, the two plans can be complementary. (See later discussion.)

5. *Ground-Water Contamination.* Commenters were concerned that the proposed rules seemed to address only acute emergencies, and argued that the contingency plan should include the responses to be taken if ground-water contamination were detected.

The Agency agrees that the discharge of any hazardous waste, whether sudden or non-sudden, is a potential threat to people or the environment, and therefore, is of concern to the Agency. However, the Agency has concluded that the ground-water monitoring regulations, rather than the contingency plan regulations, are the appropriate place to deal with contingency planning and response to ground-water contamination incidents. The final ground-water monitoring rules include requirements for evaluating ground-water analyses, and requirements for planning and describing the response required where a potential ground-water problem is identified.

6. *Implementation of the Contingency Plan.* Several commenters suggested that the final rules should make it clear that the provisions of the contingency plan need only be implemented in the event of a discharge or release of hazardous waste from the facility which has the potential for damaging human health or the environment.

It was not the Agency's intention to require facility owners or operators to invoke their contingency plan when insignificant amounts of hazardous waste are released (e.g., very small spills or a leaking valve). The final rules have been reworded to better reflect the Agency's original intent.

7. *Submission of Contingency Plans.* The proposed rules required that copies of the contingency plan and any amendments be filed, as soon as they were prepared, with the Regional Administrator, and local agencies that might be called upon to provide emergency services. Also, the contingency plan was to be submitted to the Regional Administrator as part of the facility permit application. Many commenters argued that facility owners or operators should be required to maintain contingency plans on file, but not be required to submit plans and amendments to the Regional Administrator or to local emergency or health agencies. The commenters offered the following reasons to support their position:

SPCC plans are required to be available for inspection, but are not required to be submitted; RCRA plan requirements should be consistent with this.

Contingency plans are amended frequently; it is burdensome to everyone to file amended plans.

Local authorities may refuse to accept plans; therefore, the rule is unenforceable.

Plans submitted to local authorities are relegated to obscure files; therefore, the rule is useless.

Similarly, some commenters felt that contingency plans should be filed with local authorities only when a release of hazardous waste would require their response or endanger those under their protection, or when a facility handles "extremely" hazardous waste.

The Agency believes that the contingency plan requirement is an important part of the overall RCRA Section 3004 standards, and that EPA should ensure that each facility has an acceptable plan. Because the Agency accomplishes this by requiring that a contingency plan be:

Prepared by each facility,

Amended as necessary,

Made available to EPA inspectors during on-site reviews, or to the Regional Administrator when requested, and

Submitted to EPA as part of the permit application, the Agency agrees that contingency plans and revisions need not be submitted routinely to EPA. This approach is consistent with SPCC plan requirements, which are being revised to require that plans be submitted to EPA only upon request of the Regional Administrator.

However, the Agency disagrees with the commenter's arguments regarding the need for local authorities to have an up-to-date facility contingency plan. The final rules require that the contingency plan must be amended in the following cases:

If there are revisions to applicable regulations (interim status);

If there are revisions to the facility permit (permitted status);

If the plan fails in an emergency;

If there are changes in the facility design, construction, operation, maintenance, or other circumstances that materially increase the potential for fires, explosions, or releases of hazardous waste or change the response necessary in an emergency;

If there are changes in the person(s) qualified to act as facility emergency coordinator;

If there are changes in the emergency equipment at the facility.

The Agency believes that all these reasons for amending the plan are important, and that local authorities, where appropriate, have a need to know about these changes. The first four cases could involve significant amendments to a facility's contingency plan, but such amendments should occur infrequently. The last two cases may occur more often, but the change and notification requirements are not burdensome.

The proposed rule required facility owners or operators to file contingency plans with local authorities. It did not require these authorities to accept them. The Agency believes that most local authorities are responsible and competent, and that they rarely will reject facility plans or relegate them to obscure files. Nevertheless, if they do refuse to accept a facility's plan, the facility owner or operator will have complied with the rule if he can document in the operating record that he submitted a contingency plan to local authorities.

The proposed rules used the phrase ". . . who may be called upon to provide emergency services." This phrase means that a contingency plan need not be filed with local authorities if the nature of the waste handled at a facility, or if the internal emergency response capabilities at the facility, are such that local authorities will not be called upon to provide services either to the facility or to people outside the facility. This provision has been retained in the final rules.

8. *Confidential Information.* Several commenters claimed that facility contingency plans frequently contain confidential information which companies would insist not be maintained in public files. Therefore, the commenters felt contingency plans should not be submitted to EPA (or by extension, to local authorities), but

rather maintained on the facility premises open to EPA inspection.

The contingency plan must be submitted to EPA with Part B of the permit application under 40 CFR Part 122, and will become a condition of any permit issued. The permit regulations state that permit-related information, asserted to be confidential at the time it is submitted, will be disclosed by EPA only in accordance with the procedures in 40 CFR Part 2. Because the contingency plan will be part of the permit, portions of contingency plans asserted to be confidential will be available to the public only in accordance with 40 CFR Part 2.

As stated earlier, the Agency believes that where appropriate to protect human health and the environment in emergencies, it is vital that local authorities have up-to-date facility contingency plans in their possession. A facility's contingency plan need not contain details of proprietary processes or operations. For this reason, the Agency does not believe that contingency plans often, if ever, need to be confidential.

9. *Insufficient Time for Plan Submission.* A few commenters stated that: "Requiring the submittal of an SPCC plan as part of a [RCRA] permit application is unreasonable since the development of an adequate and effective SPCC plan may require a significantly greater period of time than available between promulgation of the [RCRA] regulations and submissions of a [RCRA] permit application."

As described in the preamble discussion entitled "Interim Status Standards", to qualify for interim status, facilities must submit the Part A permit application to EPA within six months after promulgation of the RCRA Section 3001 regulations. They must submit Part B of the permit application upon request at a later date.

The facility contingency plan must be submitted with Part B, but is not required for Part A. Further, as noted above, the RCRA contingency plan may be merged with an existing SPCC plan, but the final rule does not require that an SPCC plan be submitted as part of a RCRA permit application. Moreover, the Agency believes that an acceptable RCRA facility contingency plan can be prepared within the six-month period between promulgation of the RCRA Section 3001 regulations and the effective date of these regulations. Consequently, each facility owner or operator is required to have a contingency plan on the effective date of these regulations, and to submit it to appropriate local authorities, even though it is not required to be submitted to EPA until a later date, with Part B of the permit application.

10. *Emergency Coordinator.* Many commenters felt it was unnecessary and burdensome for an emergency coordinator to be present at all times when a facility is in operation, as the proposed rules required. Some commenters pointed out that "in operation" can be interpreted to include passive or automated situations, such as storage in tanks or surface impoundments, but that, the possibility that an emergency will occur during these situations is small. These commenters suggested that the proposed rule should include a variance where emergency situations are unlikely to develop, or that the rule be modified to allow an emergency coordinator to be on call, rather than present on-site.

EPA agrees that there are many situations where the facility emergency coordinator's presence on-site is not essential. However, the Agency believes an emergency coordinator should at least be available (on call) to respond immediately to emergencies at the facility, initially by giving phone instructions to local authorities and facility personnel, but also by being able to be on-the-scene within a short time. This arrangement should impose no undue burden.

Several commenters felt that no one person could be cognizant of, and responsible for, all the duties of the emergency coordinator specified in the proposed rule. They suggested the rule be modified to allow an "emergency coordination team" under the supervision of the facility's management.

The Agency recognizes that the emergency coordinator's duties are many and varied, and fully expects that many people with different disciplines will be required to assist the emergency coordinator in fulfilling these duties. However, based on analysis of past emergencies, the Agency feels strongly that there must be a single person in charge during an emergency with the responsibility and necessary authority to direct response measures. A "team" approach dilutes responsibility and authority, and can lead to divisiveness or confusion under stress. Consequently, the Agency disagrees with these last comments and has retained the proposed approach in the final rule. However, the final rule does not preclude the use of a response team, as long as one person has central responsibility over it.

11. *Resuming Operations After an Emergency.* The proposed rules required the facility's emergency coordinator to prohibit the facility from accepting any waste which was incompatible with material released during an emergency until clean-up procedures were completed, emergency equipment was restored to pre-accident condition, and the affected area was declared safe by EPA, State, or local officials. One commenter felt that the decision that the facility could safely resume operations should be the responsibility of the facility emergency coordinator, rather than EPA or other government officials.

The Agency agrees that it would be unreasonable to require a formal declaration by government officials that a facility is safe to operate before allowing the facility to accept potentially incompatible wastes. It is quite possible that a release, fire, or explosion could occur in one part of a facility without affecting the safety of operations in other parts of the facility. Thus, it would be unnecessary to keep the whole facility from accepting a waste just because the waste may be incompatible with the material released during an emergency in one limited part of the facility.

However, EPA, State and local officials have a responsibility to ensure that human health and the environment are protected. This is particularly true where a facility has had a release, fire, or explosion of sufficient magnitude to invoke the facility's contingency plan. The Agency believes that the owner or operator should be required to notify EPA and appropriate State and local authorities that cleanup procedures following an emergency have been completed, before the part(s) of the facility affected by the emergency begin to accept potentially incompatible waste. This notification will allow EPA, State, and local authorities to be informed about the current status of facility operations.

D. Subpart E—Manifest System, Recordkeeping, and Reporting

The principal purpose of the manifest system, established in the Part 262 regulations, is to track hazardous waste from its origin with the generator, through its trip with the transporter, to its disposition at a treatment, storage, or disposal facility. The regulations in Subpart E of Parts 264 and 265 specify requirements concerning the return of the manifest from the facility owner or operator to the generator. These requirements form the last step in the information loop initiated in the Part 262 manifest requirements for generators.

Subpart E of Parts 264 and 265 also includes requirements for recordkeeping and reporting. One purpose of these requirements is to ensure that the regulated community complies with the

hazardous waste regulations, by providing the enforcement agency with sufficient information to monitor facility operations. A second purpose of the records required in Subpart E is to ensure prompt, proper, and effective response to emergencies, by providing facility owners and operators, and local authorities, with information which allows them to accurately assess any hazard posed to human health and the environment and to respond accordingly.

The Agency received numerous comments from many sources on the proposed rules for manifests, recordkeeping, and reporting. Some comments raised general issues applicable to the entire Subpart; others were specific to the requirements for either manifest, recordkeeping, or reporting. This preamble discusses the general issues first, followed by a section-by-section analysis of the comments specific to the three types (i.e., manifest, recordkeeping, or reporting) of Subpart E standards.

1. *General Issues.* a. *Burden.* Many commenters felt that the proposed manifest, recordkeeping, and reporting requirements were excessive, particularly for small firms. They stated that the requirements were unnecessary and impractical—particularly in requiring the various reports and signatures of treatment, storage, and disposal operators—and did not contribute substantially to human health and environmental protection. Other commenters were concerned that the paperwork associated with the requirements would be duplicative, and require additional personnel in government and industry to process.

The Agency does not agree that the proposed manifest, recordkeeping, and reporting requirements imposed an *unnecessary* burden on the waste management community. Numerous past documented damage cases have resulted from improper waste disposal in part because wastes were not tracked, and little liability or responsiblity was assigned or accepted by the waste generators, transporters, or disposers. These requirements are designed to minimize the likelihood of incidents like these occurring again. To this end, the Agency believes that the various records, reports, and signatures of treaters, storers, and disposers are necessary to allow EPA enforcement officials to assign responsibility, and ultimately liability, in cases where problems arise.

The Agency does not agree that the resulting paperwork will be *duplicative.* The Agency has made every effort to eliminate any duplication, and has documented these attempts in the Reports Impact Analysis, which was developed in response to the President's campaign to reduce paperwork. The total RCRA interim status administrative cost, including the cost of complying with notification, manifest, recordkeeping, and reporting requirements as well as other requirements such as inspections and preparing closure plans, is estimated at about 36 million dollars initially and 40 million dollars annually thereafter. Considering that an estimated 72,000 installations will be regulated under this program, the Agency does not believe that, for the waste management community in general, the cost of this aspect of the program will be excessive.

b. *Class of Hazard.* A few commenters supported the reporting of detailed information on "truly" hazardous wastes, but added that, for other wastes, this information is not needed and would not be of value.

The Agency agrees with the concept that information needs could vary with the class or degree of hazard of a waste. As noted earlier in this preamble, EPA is developing a class of hazard system for the technical waste management requirements under the Section 3004 regulations. The Agency believes, however, the final manifest, recordkeeping, and reporting requirements are the minimum necessary for any hazardous waste, regardless of class of hazard. The Agency anticipates the possibility of adding different recordkeeping and reporting requirements in the future for the classes of highest hazard identified in the new system.

2. *Manifest System.* The final rules require owners or operators of facilities which receive waste from off-site to sign, date, and return a copy of the manifest to the transporter immediately, and to the generator within 30 days of receiving the waste. Owners or operators must also note significant discrepancies in the type or quantity of waste received, and notify EPA if discrepancies cannot be resolved. This section of the preamble discusses the major comments received on the proposed § 250.43–5(a) manifest requirements.

a. *Manifest Copies.* The Agency proposed a 30-day period for the facility owner or operator to return the manifest to the generator in order to allow the facility owner or operator to return the manifests at the same time as he sends monthly bills to generators, thus reducing paperwork and postage costs. A number of commenters supported the proposed 30-day time period allowed for transmitting the manifest as reasonable, and argued that it should be retained to (1) allow an orderly return of manifests, (2) greatly reduce paperwork and the chances of losing one of the manifests, and (3) allow the generator to prepare his reports based on receipt of submittals at expected times rather than on a continuous stream of manifests received at varying intervals.

A number of other commenters requested that the time period be shortened to one day, or one or two weeks, to (1) allow more effective and timely follow-up on waste shipments, (2) give generators more time to complete exception reports, and (3) avoid losing documents. However, some commenters argued against requiring owners or operators to immediately return manifests, claiming that this was unreasonable because time would be needed to check out any discrepancies, and record data from the manifest. These commenters felt a shorter return period would not provide any enforcement benefit, nor prevent illegal dumping.

Still other commenters recommended that the period be extended to allow more time for recording data from each manifest for reporting.

After careful review of these comments, the Agency has decided to retain the proposed 30-day time period allowed for returning manifests to the generator. The Agency believes that a 30-day time period is reasonable, and does not preclude returning manifests within a shorter time period should a generator insist upon it.

The final Part 262 rules require that, if the generator does not receive a properly signed manifest within 45 days of the waste's shipment to a hazardous waste facility, he must make an exception report to EPA. One commenter suggested that owners or operators should return manifests to the permitting agency, rather than to the generator, to eliminate the need for the generator to make exception reports. Another commenter argued that the regulation should be flexible enough to allow manifests to be returned to either an authorized State agency or the generator, in order to allow States to become aware of exceptions earlier. A related comment argued that States with programs that are adequate to identify missing shipments should have the authority not to require the manifest be returned to the generator. Another commenter recommended that efforts be made to reduce the number of copies of manifests that must be distributed and retained in order to minimize costs and space requirements.

The Agency strongly believes that the waste generator, rather than EPA,

should be responsible for ensuring that his hazardous waste actually arrives at the intended facility. The manifest routing system is designed to provide the generator with the feedback information necessary to make that determination. While this system may require more copies of manifests to be distributed and maintained than would be the case in other systems, it will result in more timely and effective discovery of errant shipments and allow prompt enforcement actions. The rationale for the EPA manifest system is discussed in more detail in the Section 3002 Background Document.

b. *Manifest Discrepancies.* Proposed § 250.43–5(a)(4) required that owners or operators notify the Regional Administrator immediately when there is a discrepancy between the type or quantity of waste designated on the manifest, and the type or quantity of waste actually received at the facility. Several commenters felt that the proposed rule would result in the Agency being inundated with unnecessary paperwork, resulting from facilities reporting inadvertent or unimportant errors. They suggested that the Agency specify allowable deviations which would not require submitting a discrepancy report to the Regional Administrator.

The Agency agrees that it is reasonable to set limits which would not routinely trigger discrepancy findings, but which also do not allow excessive amounts of hazardous waste to be unaccounted for.

Many factors entered into the decision regarding the limits to set on the variation in amounts of waste which would trigger a discrepancy notation and report. Because of the limits on the sensitivity and calibration of weighing scales, as well as possible variations in volume and density measurements, it would seem reasonable to allow relatively large errors for bulk shipments, such as 5 to 10 percent. Further, the Agency does not wish to be swamped with discrepancy reports as a consequence of setting the discrepancy limits too tightly.

Consequently, for the final rule, the Agency has selected an allowable discrepancy limit of 10 percent in weight of the manifested waste amount for bulk shipments. This limit, however, does not apply to batch shipments. A discrepancy of one drum in a shipment is sufficient cause for the facility owner or operator to start follow-up procedures in the final rules. The Agency decided to apply a different limit to batch shipments—even though the Agency recognizes that the amounts of waste involved can vary considerably—because such discrepancies can be detected by a simple count.

Another kind of possible discrepancy between the waste manifest and the actual shipment is a difference in the chemical or physical nature of the waste. The Agency's intention in this respect is to have facilities flag obvious differences in waste type (such as waste solvents received instead of the waste acids listed on the manifest), as opposed to more subtle changes, such as part-per-million variations in the concentrations of heavy metals within a sludge. The Agency wishes to ensure that a facility is properly equipped to handle the wastes it receives, and is not subject to surprises in waste type introduced by mistake or on purpose by waste generators or transporters. The Subpart B requirements for waste sampling and analysis should, in most cases, ensure that facilities discover obvious differences in waste type.

The Agency believes that a distinction should be made between *discovering* a discrepancy and *reporting* the discrepancy. The Agency believes that the facility owner's or operator's logical and reasonable response, upon discovering a discrepancy in waste amount or type is for him to contact the waste generator, and the transporter if necessary, and try to resolve the discrepancy. Therefore, the final rules now specify that discrepancies should be reported to EPA only if they cannot be resolved satisfactorily. By so doing, the number of discrepancy reports can be reduced, and the reports submitted to the Agency will focus on truly significant discrepancies.

Several commenters felt that the proposed requirement for immediate discrepancy reporting was too stringent. They asked that a time limit be set to report discrepancies, because more time might be needed to determine that a discrepancy in fact exists. Some commenters suggested that a time limit of 10 working days would make the system more efficient. Other commenters suggested that a more practical requirement would be 30 days from receipt of the shipment.

The Agency agrees with the commenters that the regulations should specify a time frame for reporting discrepancies to the Regional Administrator. All discrepancies should be discovered soon after the waste arrives at the disposal facility. Discrepancies in amount should be found at the weighing station or waste receiving area before the facility owner or operator signs the incoming manifest. Discrepancies in type can be discovered by inspecting the waste, in some cases, or by sampling and analyzing the waste, which usually takes a few hours.

The Agency expects that the facility owner or operator will attempt to reconcile most potentially reportable discrepancies through telephone conversations with the waste generator or transporter. It should be possible to check records, etc., and provide feedback in a matter of days, even including mailing time. Consequently, the Agency believes that it is possible to discover and reconcile discrepancies within 15 days of receiving the waste at the disposal facility. The final rules, therefore, specify that within 15 days after receiving the waste, unresolved significant discrepancies and attempts to reconcile them must be reported in a letter to the Regional Administrator, with a copy of the manifest at issue.

A commenter suggested that if there are discrepancies in the manifest, the hazardous waste should not be accepted until the generator or transporter reconciles the discrepancies.

The Agency agrees in principle that significant discrepancies in the manifest should be reconciled between the generator or transporter and the disposer. However, the Agency disagrees with the suggestion that the Agency require that the waste *not* be accepted by the disposer. In the Agency's view, it is more protective of human health and the environment for wastes to be accepted by a responsible disposer, and properly managed while reconciliation is attempted, rather than for the waste to be rejected with the possibility that it may then be improperly disposed elsewhere. Consequently, the suggestion has not been adopted in the final rule. However, the disposer is not obligated by these regulations to accept the shipment if there is a significant discrepancy in quantity or type.

c. *Manifest Retention.* Proposed § 250.43–5(b)(6) required the owner or operator of a facility accepting deliveries of hazardous waste from off-site sources for treatment, storage, or disposal, to retain for three years a copy of each manifest or delivery document, as certified by the generator, transporter, and owner or operator of the facility. This rule has been moved from the recordkeeping section to the manifest section of the final rules in order to consolidate all manifest-related requirements in one location within the rules.

One commenter stated that all facilities accepting waste should retain all manifests for the duration of the facility's operation, rather than for only three years. The commenter argued that problems at Love Canal surfaced 25

years after the last recorded use of the dump, and that three years is too short a period for recordkeeping, considering the longevity of many hazardous materials and their potential threat to human health and the environment.

The Agency agrees that *records* of all hazardous wastes handled at a facility should be kept until facility closure. However, the Agency does not agree that all hazardous waste *manifests* need be kept on file for that long a period.

The Agency anticipates both short-range and long-range uses for hazardous waste records. Retaining manifests for a three-year period is sufficient for the majority of enforcement cases involving generation and transportation of hazardous waste, which will likely be discovered and acted upon within that period. Thus, the Agency has specified a three-year retention period for manifests in the rules for generators (Section 3002) and transporters (Section 3003), as well as in these rules for facility owners or operators. For longer-range uses, such as responding to Love Canal-type situations, the facility recordkeeping rules require owner or operators to retain *records* (but not necessarily manifests) of all hazardous waste handled at the facility until facility closure. However, that requirement allows the owner or operator the flexibility to design a recordkeeping system suitable to the specific needs of his operation. Larger facilities may use automatic data processing systems. Smaller facilities may choose to retain manifests as the basis for recordkeeping.

In addition, the Agency will receive and retain reports which summarize the waste transported to each facility. These reports will contain a description of the waste, the quantity of the waste, and the numerical identifier of the generator or transporter. In this way, the Agency will be able to review and summarize the data on the annual reports for a particular facility, should any emergency or slow release problem arise at the facility after the manifests have been destroyed.

3. *Recordkeeping.* The final rules require facility owners or operators to keep records of the type and quantity of each hazardous waste received and how this waste is treated, stored, or disposed. Also, records are to be kept on the location of waste, waste analyses, inspections, personnel training, monitoring results, incidents that require implementing the facility contingency plan, and cost estimates for closure and post-closure care. This section of the preamble discusses the major comments received on the proposed § 250.43–5(b) recordkeeping requirements.

a. *Congressional Intent.* A commenter claimed that the proposed recordkeeping requirements were contrary to Congressional intent because manifests are not required for on-site diposal of hazardous waste, yet the information required to be kept by the proposed regulation was substantially identical to the information on a manifest.

The Agency disagrees that recordkeeping at on-site facilities is contrary to Congressional intent. Section 3004(l) of RCRA which mandates recordkeeping at hazardous waste facilities, makes no distinction between on-site and off-site facilities. The manifest is primarily a waste transport tracking and control document. Recordkeeping requirements for facilities are independent of the manifest and serve different purposes. The core information which appears on the manifest, e.g., origin, quantity, and type of waste, is also necessary for recordkeeping purposes.

b. *Operating Record.* A commenter suggested that the proposed term "operating log" be changed to the term "operating record" to allow the use of automatic data processing systems.

The Agency agrees that the use of an ADP system is consistent with the recordkeeping system flexibility intended by the proposed regulations. Further, the large area of some facilities, and the variety of functions performed at some facilities, make it very unlikely that all required information would be recorded in one operating log at only one location. In writing the proposed rules the Agency assumed a number of logs, or records, would be maintained at a site. All such records at a facility taken together would then constitute the facility's operating log.

The term "operating record" more accurately reflects the Agency's intentions and expected commercial practice, than does the term "operating log." The Agency has therefore changed all references in the final regulations from "log" to "record."

c. *Warrantless Inspections.* A commenter, relying on *Marshall V. Barlow's, Inc.*, 413 U.S. 266 (1978), suggested that the proposed requirement that the operating record be open to any duly designated employee or agent of the Agency authorized warrantless administrative inspections without the consent of facility's owner or operator.

EPA's information-gathering activities under RCRA Section 3007 are subject to the Fourth Amendment's protection against unreasonable searches as enuniciated by the Supreme Court in *Marshall V. Barlow's, Inc.*, supra. It should be noted that the Supreme Court in *Barlow's*, quoting *Almeida-Sanchez V. United States* (413 U.S. 266, 271), emphasized that:

> A central difference between those cases [involving warrantless searches of pervasively regulated industries] and this one is that businessmen engaged in such Federally licensed and regulated enterprises accept the burdens as well as the benefits of their trade whereas the petitioner here was not engaged in any regulated or licensed business. The businessman in a regulated industry in effect consents to the restrictions placed on him.

EPA's exercise of its Section 3007 authority will be conducted in a manner consistent with the decision.

d. *Nomenclature for Waste Information.* One commenter complained that proposed § 250.43–5(b)(2)(i)(A), which required using DOT or EPA waste descriptions in the operating record, was confusing.

The Agency allowed the use of DOT, as well as EPA nomenclature, to describe waste on the proposed operating record, because the manifest, which contains much of the information needed to fill in the record, describes waste using DOT nomenclature. The Agency thought that providing the flexibility of using either the Agency's or DOT's terminology in the operating record, would be the most cost-effective and least burdensome method for recording waste management information.

In retrospect, the Agency now believes this was not the best approach. The proposed Section 3004 rules for *recordkeeping* applied to both on-site and off-site facilities, although separate rules for on-site facility *reporting* were contained in the proposed Section 3002 rules. On-site facilities do not use manifests, and thus recordkeeping based on DOT nomenclature is not appropriate for these facilities. Therefore, to simplify the rules, and to avoid confusion between on-site and off-site facility recordkeeping requirements, the Agency has decided to use EPA nomenclature for all facility recordkeeping and reporting.

4. *Reporting.* The final rules require facility owners or operators to file an annual report summarizing the type and quantity of each hazardous waste received, and how this waste is treated, stored, or disposed of at the facility. In addition, owners or operators are required to make reports to the EPA Regional Adminstrator within 15 days after wastes are received without a manifest; incidents such as fires, explosions, and releases; and problems detected via ground-water monitoring.

Reporting requirements for facility owners or operators that generate and

dispose of their waste at the same location (i.e., on-site disposers) were specified in the proposed Section 3002 rules. Because these rules were nearly identical to those specified in the proposed Section 3004 reporting requirements, the Agency has consolidated the reporting requirements for both on-site and off-site facilities in these final Section 3004 rules.

This section of the preamble discusses the major comments received on the proposed § 250.43–5(c) reporting requirements.

a. *Joint Filing of Reports.* Commenters suggested that firms with more than one site should be allowed to submit reports for all sites. Another commenter felt the regulations should allow for an assumption of duties contract between the generator and the facility owner or operator whereby legal responsibility for complying with the generator reporting requirements can be allocated to the owner or operator.

If a corporate headquarters maintains the records for the various facilities it controls, both the proposed and final rules allow the firm's headquarters to submit reports for each of its facilities.

The Agency cannot prohibit owners or operators from assuming responsibility for the generator's reporting if they choose to do so. Contract law provides the mechanism for owners or operators to assume these responsibilities. If, however, the generator's contracted duties are not performed, the generator will be held responsible for not complying with the RCRA reporting requirements.

b. *Submission of the Annual Report.* The proposed rules required that the facility's annual report be sent to the Regional Administrator within four weeks after the closing date of the reporting year. Some commenters felt that this turnaround time was too short because:

(a) Most large firms will require more than four weeks to prepare the annual report;

(b) The paperwork burden of the report is so great that the facility will have to stop operations in order to complete the report if the required turnaround time is only 30 days; and

(c) Four weeks does not allow sufficient time for recent manifests to be returned.

The Agency agrees that it may take more than 30 days to compile the information needed to complete the facility annual report. The owners or operators of both on-site and off-site facilities may be generators of hazardous waste sent elsewhere, as well as disposers of hazardous waste. To allow waste generators sufficient time to collect all manifests in order to file their annual report, the final Section 3002 rules allow 60 days, rather than 30 days, from the end of the calendar year to file the annual report. In order to be consistent with the reporting requirements for waste generators, and to avoid unnecessary confusion by specifying separate deadlines for generators and facilities, the deadline for submitting the annual report for all waste managment facilities has also been extended to 60 days.

c. *Certification Statement.* The proposed rules required that facility owners or operators sign on the annual report form a statement which certified that the information on the form was true, accurate, and complete. Several commenters objected to the proposed wording of the certification statement on the report form. They suggested that the phrase "to the best of my knowledge" be inserted, and the word "personal" be deleted, from the certification statement because:

(a) The person signing the certification may not have compiled the actual information reported, and thus, will not have personal knowledge of each of the many pieces of information reported, and

(b) The proposed wording of the statement places the individual who signs the report in the position of being criminally liable for errors beyond his control. In many instances, an error could be made even though there was a good faith effort to submit accurate information.

These commenters also felt that the sentence "I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment." should be deleted from the statement. They claimed that the sentence was unnecessary, because it is evident that anyone who knowingly submits a false report to the Federal government is subject to significant penalties.

The Agency agrees that the certification statement should reflect, to the extent possible, the signer's personal knowledge of the truth, accuracy, and completeness of the submission. The owner or operator or his authorized representative may not have firsthand knowledge of the truth, accuracy, and completeness of the information submitted. Accordingly, the Agency has changed the certification statement on the annual report to require the owner or operator or his authorized representative to state that "based on my inquiry of those individuals immediately responsible for obtaining the information, I believe that the information is true, accurate, and complete." This formulation, adopted from EPA's NPDES regulations, recognizes both the limits of the signer's personal knowledge and the Agency's need for accurate and complete information. It allows the owner or operator to respond on the basis of his belief, but sets forth precisely what the basis of that belief must be.

The Agency disagrees with a commenter's suggestion that EPA delete from the certification statement: "I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment." The Agency included this sentence in the statement to impress upon the signer the necessity for submitting complete and accurate information. The Agency believes that some owners or operators may not realize that the knowing submission of false information to EPA may subject the signer to significant penalties. Therefore, the sentence has been retained in the certification statement in the final rules.

d. *Unmanifested Waste Report.* The proposed rules required owners or operators to file a quarterly report to the Regional Administrator describing hazardous waste received at the facility not accompanied by a manifest, unless the waste was not required to be accompaned by a manifest because of the exclusions provided in the Section 3002 rules.

Some commenters felt the unmanifested waste reporting requirement should be deleted because it was burdensome, unnecessary, and submitted so infrequently as to make the information of little or no value to the Agency.

The Agency disagrees that the information contained in the report is useless. Because of the uncertainty associated with unmanifested hazardous waste, the Agency wants to know as much as it can about the waste, as soon as possible. Prompt submission of the details regarding unmanifested waste will enable the Agency to ensure that the facility is managing the waste (with which the facility may have limited management experience) in an appropriate manner. It will also allow the Agency to detect any suspicious patterns of unusually high incidences of unmanifested waste in particular areas.

However, the Agency does agree that the reports will be more useful for enforcement purposes if they are submitted soon after the unmanifested waste is received. Therefore, in the final rules, the report is required to be returned to the Agency within 15 days of the date the waste is received at the facility. The Agency does not believe

that requiring a 15-day turn-around time for these reports will be burdensome. This is because it is illegal to transport hazardous waste without a manifest, and thus, the incidence of unmanifested waste arriving at a facility—and the attendant need to fill out a report for these wastes—should be infrequent.

Small quantities of hazardous waste are excluded from regulation under this Part and do not require a manifest. Where a facility receives unmanifested hazardous wastes, it may be difficult for the facility owner or operator to determine whether an unmanifested waste report should be filed. In such cases, the Agency suggests that the owner or operator obtain from each generator a certification that the waste qualifies for exclusion. Otherwise, the owner or operator should file an unmanifested waste report for the hazardous waste movement.

E. Subpart F—Ground-Water Monitoring

The Agency received many comments on the ground-water and leachate monitoring portions of the proposed regulation. Based on these comments the Agency has made substantial changes in these interim status regulations. In particular the regulations have been changed to require ground-water monitoring at surface impoundments, landfills, and land treatment facilities. The proposed interim status regulation required ground-water monitoring only at those surface impoundments and landfills where a ground-water monitoring system was already in place. EPA has decided, therefore, to issue this Subpart as "interim final" to provide an opportunity for further public comment on this portion of the regulation.

The proposed regulation required leachate monitoring in addition to ground-water monitoring at landfills and surface impoundments. Such a system was to collect leachate samples in the zone of aeration between the water table and the primary liner or natural soil barrier of the disposal facility. Variances were allowed for owners or operators who could demonstrate that an alternative leachate monitoring technique would detect leaks as effectively as the prescribed system.

Many commenters raised objections to the leachate monitoring requirement, arguing that it was expensive, redundant and technically infeasible. Some commenters suggested that leachate monitoring be used in lieu of ground-water monitoring or that the Regional Administrator have the option to waive leachate monitoring for specific facility locations or designs. The most frequently mentioned comment was that it was virtually impossible to install leachate monitoring systems at existing landfills and surface impoundments.

While EPA still believes that leachate monitoring can be an effective and useful detection device in addition to ground-water monitoring, the Agency has decided not to require leachate monitoring during the interim status period. This decision is based on the technical problems associated with such a system at landfills and surface impoundments. Monitoring of leachate in the aeration zone has not been widely used to date. EPA is aware of research investigations on the use of lysimeters and other techniques to monitor leachate, but is not aware of any applications of aeration zone monitoring beneath a full-sized disposal facility to determine whether the facility is leaking.

Available leachate monitoring technology generally involves the placement of probes (lysimeters) beneath the disposal facility. Since each probe is not generally capable of monitoring a large area, many of them would have to be placed under a facility in order to detect a localized flaw in the landfill design. It may not be possible to place such devices below an existing landfill or surface impoundment without completely removing the waste and re-designing the facility. Moreover, once such a system is in place, the probes tend to fail over time due to deterioration or plugging. It is difficult to determine when such a failure occurs and, if discovered, the damage is generally irreparable. Under these circumstances EPA does not believe that leachate monitoring should be a general requirement for landfills and surface impoundments during interim status. The Agency will continue to examine the appropriateness of leachate monitoring at new landfills and surface impoundments. Depending upon the results of these studies, the Agency may include leachate monitoring requirements in the Phase II or Phase III regulations.

At land treatment facilities, however, soil pore water monitoring (the equivalent of leachate monitoring) is feasible, even at existing facilities. Such a system can provide valuable information on the effectiveness of the land treatment processes occurring in the soil. However, it is no substitute for ground-water monitoring for determining actual contamination of ground water. This requirement is discussed in more detail in the "Land Treatment" portion of this Preamble.

EPA believes that a reliance on ground-water monitoring, instead of leachate monitoring, at landfills and surface impoundments will adequately protect human health and the environment. As will be described later, the monitoring system required for all such facilities relies on testing for indicator parameters at the edge of the waste management area. Such a scheme should give the owner or operator, as well as EPA, a relatively prompt indication of any leakage from the facility into ground water.

The following is a discussion of the specific elements of the interim status ground-water monitoring requirements:

1. *Applicability.* The proposed regulations specified a minimum ground-water monitoring system, capable of detecting and identifying hazardous waste or its constituents if they entered an underlying aquifer in sufficient quantities to cause a "significant" change in ground-water quality.

The proposed regulation contained a variance to the effect that a ground-water monitoring system would not be required, or a lesser degree of ground-water monitoring could be used, if the owner or operator could demonstrate, at the time a permit was issued, that geologic and hydrologic conditions underlying the facility indicated no potential for discharge to ground water. Some commenters argued that the current state of knowledge about ground-water monitoring is too limited to serve as a basis for regulation. The majority of commenters discussing this section, however, focused on the variance provision, suggesting that it allow consideration of a variety of factors. These included the existing suitability of the aquifer as an underground source of drinking water, waste characteristics, expense of monitoring and facility design.

Some commenters suggested relaxing the variance by changing "no potential" to "low potential". Some thought monitoring should be required only over an underground source of drinking water. Other commenters suggested that for deep water tables, as in the West, a variance or alternative monitoring technique would be appropriate.

These final interim status regulations require owners and operators to implement a ground-water monitoring program, including the installation, operation, and maintenance of a monitoring system specified in the regulations. The program must be capable of determining the facility's impact on ground-water quality in the uppermost aquifer underlying the facility. While EPA acknowledges that ground-water monitoring is complicated and that the current state of knowledge will continue to be improved, adequate monitoring methods for detecting

contaminant migration are available. In light of the crucial role which such monitoring plays in the assessment of environmental damage, a ground-water monitoring program must be a basic element of any disposal activity. The Agency will continue to refine these regulations as the state of the technology improves.

In focusing on the uppermost aquifer, EPA does not mean to suggest that it is unconcerned about contamination of deeper aquifers. The monitoring program seeks to detect contamination of the uppermost aquifer because that will be the first ground water to be affected by a leaking disposal facility. If an owner or operator knows, or wishes to assume, that his facility is contributing hazardous waste constituents to the ground water, the regulations allow him to install and operate a ground-water monitoring system other than the indicator parameter monitoring system discussed below. In this case he must implement the ground-water quality assessment program discussed in detail later.

In these final interim status regulations, the Agency has again incorporated a variance within the ground-water monitoring requirement. As the commenters suggested, a lesser degree of ground-water monitoring will be allowed in those circumstances where an owner or operator can demonstrate to the Regional Administrator that there is a low potential for hazardous waste constituents to migrate to water supply wells or to surface water via the uppermost aquifer. (Migration via the uppermost aquifer includes migration through such an aquifer to a deeper aquifer hydraulically connected to water supply wells or surface waters.) A complete waiver of monitoring is only available when the owner or operator can demonstrate that there will be no potential for migration to water supply wells or surface water.

An owner or operator who wishes to install a lesser degree of monitoring must document the justification for such an approach. That written demonstration must be certified by a qualified geologist or geotechnical engineer, kept on the facility premises, and, during interim status, provided to the Regional Administrator upon his request. Such a demonstration to support a lesser degree of monitoring must include an evaluation of (1) a water balance of precipitation, evapotranspiration, runoff and infiltration; (2) characteristics of the saturated and unsaturated zones; and (3) the proximity of the facility to water supplies or surface waters.

The Agency does not believe that aquifers underlying the facility that do not qualify as underground sources of drinking water should be exempted from consideration. Such aquifers may have other uses worthy of protection, or may be hydraulically connected to other water supply wells or surface waters needing protection.

RCRA's goal of protecting human health and the environment does not allow the Agency to reduce the basic monitoring requirements simply because of the cost. EPA has also rejected a consideration of the nature of the waste and the facility design as a basis for reduced monitoring requirements. EPA does not believe that the state of knowledge about hazardous wastes and facility designs is sufficiently certain to justify reductions in the basic monitoring system during interim status.

2. *Ground-Water Monitoring System.* The proposed regulation required the installation of at least four wells. At least one well was to be located hydraulically upgradient to yield samples of background ground-water quality. At least three were to be located hydraulically downgradient in order to detect migration from the facility. One of the three wells had to be located at the solid waste boundary. The downgradient wells were to be placed at different depths in order to detect potential migration. Owners and operators were required to case their wells and backfill the annular space in order to prevent migration of water down the well bore. The most frequent comment received on these requirements requested a more flexible approach to ground-water monitoring. Commenters were concerned that the Agency was proposing rigid requirements which would be too difficult to implement, considering the highly variable nature of subsurface conditions. They expressed concern over the required number, placement, and depth of wells and suggested various options.

Several commenters discussed the requirement for a minimum number of wells arguing that the number of wells needed will vary with conditions such as the hydrogeology of the area, the size of the facility, and the configuration of the waste management area. Some commenters believed that the proposed minimum number of wells was adequate while others suggested one, two or more than three wells.

These final regulations require that the owner or operator drill a sufficient number of wells to characterize the potential contamination of ground-water quality caused by his hazardous waste facility. On the upgradient side of the waste management area this means that there must be enough wells (at least one) to characterize background ground-water quality in the uppermost aquifer. The owner or operator must assure that the upgradient samples represent true background conditions and are not contaminated by the facility.

There must also be a sufficient number of downgradient wells to provide representative samples capable of detecting migration of hazardous waste constituents from the facility. EPA has retained its requirement that a minimum of three wells should be drilled at the downgradient side of the waste management area. This number was recommended to the Agency by several respected groups familiar with ground-water monitoring at disposal facilities. The public comments did not present a specific rationale for any other minimum number of wells.

While the Agency has maintained in the regulations the requirement for a minimum of three wells, it expects that many facilities will have to drill more than three wells because of the size of the facility or because of the complex hydrogeology below the facility. Ultimately the burden is on the owner or operator to develop the monitoring system necessary to accurately characterize the aquifer and detect migration. It should be recognized that an owner or operator that can present a convincing case for a lower number of wells has the option of justifying and installing such lesser monitoring under the terms of § 265.90(c) of this regulation.

Some commenters suggested that EPA specify a spacing interval and maximum or minimum depths for monitoring wells. Other commenters sought more flexibility in the standards, particularly in defining well depth, to allow for consideration of site-specific factors. EPA believes that the spacing and depth of wells should depend on the particular pattern of ground-water flow below a facility, making it extremely difficult to specify national minimums or maximums in this area. Thus the Agency has decided to leave the spacing and depth of wells up to the owners and operators. They will have to be able to justify their selection of a monitoring system in light of the particular hydrogeology below their facilities.

Commenters also suggested that the placement of monitoring wells between the waste boundary and the property boundary be a matter for owner or operator discretion. Two objections were raised to placement of wells at the solid waste boundary. First, commenters

argued that such placement was redundant in light of the requirement for leachate monitoring. Second, commenters suggested that if wells were placed close to the active portion of the facility, leachate that moved laterally in the soil below the facility would enter the annular space around the monitoring well and quickly pass into the ground-water.

EPA believes that the monitoring wells should be placed as close to the waste boundary as possible in order to give a prompt indication of ground-water contamination. This is particularly important since leachate monitoring has been deleted. If significant ground-water contamination occurs before detection, the difficulties of corrective action are made all the more severe. Therefore it is appropriate to place monitoring wells at the edge of the waste management area to provide early detection.

EPA does not believe that the placement of wells required in this regulation presents a significant risk that monitoring wells will become conduits for leachate passing to ground-water. EPA expects that most of the leachate flow will be vertical rather than horizontal. In addition, the regulation calls for monitoring at the edge of the waste management area rather than under the solid waste itself. This is to eliminate any suggestion that the wells should be drilled through any natural or artificial barrier that may contain the waste. The problem of migration of leachate will be reduced by place monitoring wells outside of any such containment barrier. Lastly, the regulations call for backfilling of the annular space around the monitoring well casing, which should reduce the risk of the "conduit" problem.

The few comments that addressed the requirements for casing wells and backfilling the annular space generally sought further clarification of the Agency's intent for the requirement. One commenter suggested that the term "casing" be clarified. Other commenters suggested design measures, such as gravel or sand packing, that would improve the well's capacity to provide representative samples. Another commenter suggested that EPA delete the requirement that backfill be "impermeable" because no backfill material is truly impermeable.

Generally EPA believes that this provision should be more performance-oriented. Thus the final Part 265 regulation specifies that the casing construction and any necessary gravel or sand packing should be directed toward the objective of collecting samples at the appropriate aquifer flow zone and of protecting the integrity of the bore hole. An open hole would not provide such assurances and thus it is clear that some well pipe structure capable of drawing samples at selected depths is required. Likewise backfilling should be directed at assuring the samples and the ground water itself are not contaminated, rather than the question of whether particular materials are truly impermeable. The regulation, therefore, has been changed to make clear that those are the objectives of the well design provision. Finally, these regulations do not require separate monitoring systems for each component of a facility that consists of more than one landfill, impoundment, or land treatment area. The Agency's past and present intent was and is that the ground-water monitoring system would be installed at the perimeter of the waste management area. That intent is specifically stated in these regulations.

3. *Sampling and Analysis.* The proposed regulations required the owner or operator to establish the background ground-water quality of the underlying aquifer for a "comprehensive" set of over 40 contaminants. The determination of this background quality was to be based on monthly sampling for one year. Thereafter, the facility was to sample annually for the "comprehensive" list. In addition the owner or operator was to sample at shorter intervals (that depended on ground-water flow rate) for a "routine" set of contaminants. The "routine" list of parameters included specific conductivity, pH, chloride, total dissolved solids, dissolved organic carbon and the principal hazardous constituents in the waste. A "Note" allowed a reduction in the "comprehensive" list of contaminants for those substances that would not result from the treatment, storage, or disposal of a particular waste.

Commenters questioned the need for monthly sampling to determine background water quality, arguing for a more flexible approach. The Agency believes that obtaining representative background data at a reasonably frequent interval is of critical importance in establishing an accurate ground-water monitoring system. As an initial step, annual monitoring is unacceptable because it cannot reflect seasonal fluctuations. The Agency has, therefore, decided to require quarterly background monitoring which should be more sensitive to seasonal fluctuations. Owners and operators are certainly free to monitor at greater frequencies to provide a more thorough characterization of the aquifer.

Several commenters suggested that the Agency specify particular procedures for sampling, sample preservation, and methods of analysis. The Agency is not at this time specifying such procedures in the regulations; there may be several acceptable approaches. Thus the regulations require the owner or operator to develop and follow a ground-water sampling and analysis plan. The terms of the plan will be enforceable against the owner or operator. The plan must specify procedures for sample collection, sample preservation and shipment, analytical procedures, and chain of custody control. Simply to provide guidance in this area, a comment in the regulation suggests that owners and operators consider using methods contained in two EPA publications: "Procedures Manual for Ground-Water Monitoring at Solid Waste Disposal Facilities" (August 1977) and "Methods for Chemical Analysis of Water and Wastes" (March 1979).

EPA received many comments on the list of parameters to be used in the sampling program. Those who argued that the list was too extensive said that some parameters were redundant and that variances should be allowed for contaminants not expected to be in the waste. They also suggested that the "routine" set of contaminants should be short and be used to trigger the need for more extensive monitoring. Those who believed that the list was not extensive enough argued that broad parameters such as dissolved organic carbon, biochemical oxygen demand, and chemical oxygen demand were insufficiently sensitive to detect some highly toxic organics which are dangerous at low levels. In addition, they suggested that the ground-water level be recorded because such fluctuations may require modification of the sampling program to make it effective.

The final regulations drop the reference to "comprehensive" and "routine" parameters. The regulations require monitoring for three sets of parameters that each serve a different purpose.

The first set reflect the aquifer's suitability as a drinking water supply. These parameters, contained in Appendix III, are those specified in the Interim Primary Drinking Water Regulations established under the Safe Drinking Water Act. Owners and operators are to test for these parameters quarterly during the first year only and report this information to the Regional Administrator.

While the Agency is concerned about ground-water protection for a variety of

purposes, use of ground water as a drinking water source is of particular concern. These interim status regulations do not establish a specific ground-water protection standard, but the Agency has decided that the Phase II regulations will, at a minimum, be designed to protect drinking water supplies. The purpose of the initial sampling for drinking water parameters is to identify facilities that may be severely degrading present and future drinking water supplies. The fact that a particular aquifer is becoming unsuitable as a drinking water source will be useful to the Agency in establishing priorities for permits. The Agency will focus its initial attention on facilities which appear to be having the greatest effect on an aquifer's suitability as a drinking water supply. By using contaminants from the Interim Primary Drinking Water Regulations the Agency does not mean to suggest that this specifies a complete list of the parameters that define an aquifer's potential as an acceptable drinking water supply, but these contaminants will be useful to the Agency in establishing its priorities.

The second set of parameters includes chloride, iron, manganese, phenols, sodium, and sulfate. These parameters are generally recognized as useful for characterizing ground-water quality. These contaminants are ubiquitous in the environment and are often used to characterize a ground-water supply's suitability for a variety of uses. The owner or operator is to draw quarterly samples for these parameters during the first year and annually thereafter. Information on these parameters will be useful in any assessment of ground-water contamination that follows the determination that a facility is leaking. Such information will, for example, assist the Agency in determining the extent to which contamination of the aquifer may be coming from sources other than the disposal facility.

The third set of parameters consists of four indicators that will be used to determine whether a facility is leaking. As indicated earlier the Agency will be developing its ground-water protection strategy as part of the Phase II regulations. For any such standard it will be important for a facility to answer the threshold question of whether hazardous waste constituents are entering the aquifer underlying the facility. The four indicators—specific conductance, pH, total organic carbon, and total organic halogen—reflect changes in the organic and inorganic makeup of the ground-water. A statistically significant change (increase or decrease for pH, increase only for the others) in these indicators between the initial background concentration or value and those from downgradient wells suggests that organic or inorganic substances are being introduced into the aquifer by the facility.

Increases in specific conductance indicate the presence of inorganic substances in the ground water. Likewise increases or decreases in pH suggest the presence of inorganic contamination. Total organic carbon (TOC) and total organic halogen (TOX) concentrations in ground water tend to increase as a result of organic contributions from a hazardous waste facility. The methodology to sample and analyze for these indicators is presently available. EPA believes that monitoring these indicators will be sufficient to make the threshold assessment of whether a facility is leaking. Certainly owners and operators are free to perform more extensive monitoring.

Since ground water monitoring data for the indicator parameters is to be evaluated statistically, the Agency has specified that each determination of the concentration or value of an indicator parameter in a ground water sample be based upon a minimum of four replicate measurements. This number of replicates, using generally accepted techniques, will assure a reasonable degree of accuracy, needed for the specified statistical testing, which is explained in the next section.

EPA agrees with the commenter who suggested that a determination of the ground-water elevation should be made each time a sample is taken. Such information will assist the owner or operator in determining whether the monitoring system is drawing samples from appropriately located wells. The regulation, therefore, includes a requirement that ground-water elevation be determined each time a sample is obtained.

In response to commenters EPA has specified a two-stage monitoring system. Broad indicators are used initially to determine whether a facility is leaking. If such leaking is detected, a more specific ground-water quality assessment program, described later in this Preamble, is initiated. EPA believes that the use of broad parameters as indicators is an appropriate strategy to determine whether a facility is leaking. In response to the general concern expressed by commenters on the number of parameters to be monitored, EPA has limited its requirements for indicator monitoring to four parameters which are necessary, at a minimum, to detect leaks. It is unlikely that a facility would selectively emit low levels of highly toxic organics that would thereby miss detection.

4. *Preparation, Evaluation, and Response.* According to the proposed regulations, detection of significant changes in ground-water quality required the operator to notify the Agency, to determine the cause and the extent of contamination, and to discontinue the facility's operation. Comments received showed that the proposed language did not clearly indicate whether these actions should be taken simultaneously or sequentially. Commenters stated that discontinuing operations, based solely upon a statistically significant monitoring result, was unjustified.

The final regulations have been revised to remove ambiguities. Also, rather than requiring that facility operations cease, the final regulations specify a sequential approach. Upon detecting any suspected discharge from the facility by statistical evaluation of the ground-water monitoring data, the owner or operator is required to notify the Regional Administrator, within one week of any such detection, that his facility may be contaminating the ground water. He must also, within 15 days after this notification, develop and submit to the Regional Administrator a plan, certified by a qualified geologist or geotechnical engineer, for assessing the quality of the ground water. The regulations require that an outline of such a ground-water quality assessment program be developed and kept on-hand at the facility by the time ground-water monitoring is initiated. The plan must specify: the number, location, and depths of monitoring wells to be used for the assessment; the sampling, analysis, and evaluation procedures to be followed; and a schedule of implementation. The owner or operator must then implement this plan and determine as quickly as technically feasible the rate and extent of migration and concentration of hazardous waste and hazardous waste constituents from the facility in the ground water. Within 15 days after completion of the first determination, he must submit to the Regional Administrator a report containing the results of the ground-water quality assessment. If the owner or operator can demonstrate, using newly acquired and previously gathered ground-water monitoring data (including the general water quality data developed to satisfy § 265.92(b)(2)), that his facility is not contributing hazardous waste or hazardous waste constituents to the ground water, he must so state in the report and may reinstate his original ground-water monitoring program.

However, if his assessment shows that hazardous wastes or hazardous waste constituents from his facility are entering the ground water, he must repeat the ground water assessment at least quarterly thereafter, until final closure of the facility.

Detection of statistically significant changes in the indicator parameters in the upgradient wells does not require implementation of ground-water quality assessment program. This information may be useful at a later time, though, in demonstrating that significant changes in downgradient water quality resulted from sources other than the hazardous waste facility.

As indicated earlier, an owner or operator may install an alternate ground-water monitoring system if he feels that monitoring for indicator parameters would show that his facility was affecting the ground water. Any such alternate monitoring program must be able to provide the above described ground-water quality assessment.

The final rule specifies different requirements for the duration of ground-water monitoring depending upon the operating status of the facility and the monitoring program utilized.

Monitoring of indicator parameters is intended to detect facility leakage into the ground water. If such leakage is detected the ground-water quality assessment program is to be implemented to establish the magnitude of the problem. If the assessment demonstrates the absence of hazardous waste constituents in the ground water, the owner or operator may reinstate indicator parameter monitoring until suspected leakage into the ground water is again detected. This detection could, of course, trigger the need for another ground-water quality assessment, and so on, throughout the active life of the facility, and for disposal facilities, throughout the postclosure care period as well. If, on the other hand, the first determination under the ground-water quality assessment program demonstrates that hazardous waste constituents have indeed entered ground water, the assessments must be repeated quarterly, until final closure of the facility. Since additional hazardous wastes will be received at the facility throughout this time, additional assessments are necessary to determine any further impact from these wastes on the ground-water quality.

If the first determination of ground-water contamination, by implementation of the ground-water quality assessment plan, occurs during the post-closure care period, however, the sources of contamination are expected to be relatively stable such that repeated assessments would only confirm the initial determination of contamination. For this reason only one ground-water quality assessment which demonstrates contamination is required during the post-closure care period. By a similar line of reasoning, those facilities which from the beginning utilize an alternate ground-water monitoring system, equivalent to a ground-water quality assessment program, are not required to make repeated assessments after final closure of the facility.

The more frequent monitoring (i.e., quarterly) under the assessment program is required to enable the Regional Administrator and the owner or operator to be fully aware of the extent of ground-water contamination. Such information will be useful, for example, in providing warning to downgradient ground-water users of any potential danger, if necessary.

The final regulations also require that any ground-water quality assessment which is initiated prior to facility closure be completed and reported to the Regional Administrator. An assessment which is underway may not, therefore, be halted merely because the facility closes.

The final rule also differs from the proposed version in the test for statistical significance. As proposed, analyses of ground-water quality were to be compared to the background quality established for each facility, using the single-tailed Student's t-test at the 95 percent confidence level. Commenters claimed that the Student's t-test at the 95 percent confidence level was too restrictive. Commenters stated that the Student's t-statistic is inappropriate because it is dependent upon a normal distribution, which cannot be assumed for ground-water data because of seasonal fluctuations. One commenter suggested establishing tolerance limits as an alternative to specifying a statistical test of significance.

After considering these comments, the Agency reproposed the statistical test on September 19, 1979 (44 FR 54323–54324) and specified the use of the Mann-Whitney U-test at the 95 percent confidence level. In specifying the Mann-Whitney U-test, which is a non-parametric test, the Agency sought to overcome the major weakness of the Student's t-test, namely, its underlying assumption of "normality." Commenters on the reproposal generally preferred the Student's t-test over the Mann-Whitney U-test, for two reasons. First, they were more familiar with the Student's t-test. Second, several commenters explained that while there is an underlying assumption of normality for the Student's t-test, it is tolerant of considerable departures from that assumption. The Agency has therefore again specified the Student's t-test in these final regulations.

The required statistical comparison in these regulations, however, differs from that proposed in several ways as a result of concerns which commenters raised on the broader topic of statistically differing ground-water quality. Commenters suggested that there was a high probability of statistically significant increases resulting from anticipated natural fluctuations in ground-water quality and from analytical error (i.e., false significance). The Agency has incorporated several changes which, when combined, should greatly minimize the possibility of "false" significance. These include: limiting to four the number of indicator parameters to be compared; performing the t-test at the 99 percent level of significance instead of the proposed 95 percent level; and intitially responding to detected statistically significant difference by taking additional ground-water check samples to confirm the significant difference.

In addition, to assure that accurate data is used by the owner or operator in the statistical comparisons, the Agency requires that four replicate measurements be made on each obtained ground-water sample for each indicator parameter. Four replicates provide 95 percent confidence that the average of the measured values will be within five percent of the actual value if generally accepted analytical procedures are followed.

In its investigations of statistical test procedures which could be useful in interpreting ground-water monitoring data, the Agency gave consideration to standard industrial quality control concepts and procedures for data evaluation. The Agency is aware that these procedures were developed for relatively well controlled and operated industrial processes. However, the conceptual basis of monitoring ground-water quality indicators is similar in the sense that the variation of the indicator measurements under typical circumstances should be predictable within limits. If no leakage from a hazardous waste facility or other hydrologic change has occurred, the ground-water quality indicator levels should remain within such limits. Excursions outside the limits would indicate that changes may have occurred that require further investigation. Quality control methods may be adaptable to such a situation.
