The key responsibility under this system for the evaluation of hazards lies with the manufacturer or importer of a substance or mixture of substances. This is because the manufacturer or importer is in the best position to know the chemical identity and properties of a substance or mixture.

The proposed hazard identification standard requires each manufacturer to evaluate each substance and mixture the manufacturer makes to determine if it is hazardous according to criteria the standard specifies. Importers of substances and mixtures destined for the workplaces of industrial users must evaluate them under the same criteria.

The evaluative procedures of the porposed standard do not require manufacturers and importers to test substances and mixtures for hazards. They do require a manufacturer or importer to determine whether any of the substances or mixtures which they manufacture or import poses a physical hazard (Category A hazard) or an acute or chronic health hazard (Category B hazard). To make this determination, the manufacturer is required to assemble scientific materials from specified sources, including both private and publicly available materials by means of the evaluation schemes set out in Appendices A and B.

Manufacturers and importers must maintain files on all chemicals and mixtures they manufacture or import. Each file must contain the references, studies, reports, or other documents upon which a conclusion of hazard, or lack of hazard, is based.

With certain shipments of chemical substances or mixtures from their premises, manufacturers and importers must forward the following information:

The precise identity of hazardous substances, and the identity of hazardous constituent substances which are part of a mixture;

An appropriate hazard warning and precautionary statement for the hazardous material shipped;

Where a substance or mixture has been determined not to meet the standard's criteria for a hazard, a statement to that effect.

This information must accompany shipments to any employer whose activities are classified under Division D (Manufacturing), Major Groups 20–39 of the Standard Industrial Classification Manual. These are employers who manufacture, process, formulate or use chemicals, and who are referred to in the proposed standard as "industrial users." This information must also accompany shipments to suppliers who will subsequently distribute a hazardous substance or mixture to an industrial user.

The proposed standard does not require manufacturers and importers to develop safety data sheets on the hazards of chemicals and mixtures. With the first shipment of a hazardous chemical or mixture to a workplace of an industrial user or a supplier of an industrial user, however, a manufacturer or importer must forward one copy of the most current safety data sheet which the manufacturer or importer does have concerning the dangers posed by the material shipped. A supplier must forward with every shipment to another supplier or to an industrial user the hazards-related information received from a manufacturer or importer. A supplier has no other duties under the proposed standard.

Industrial users are employers who manufacture, process, formulate or

otherwise use chemicals and mixtures. Thus, the manufacturer of a particular substance or mixture is also an industrial user. Protection of the employees of industrial users is the primary purpose of the hazards identification standard. To insure that employees of industrial users know the hazards of the substances and mixtures with which they work, the hazard identification standard would require such industrial users to:

Label containers of every hazardous substance in the workplace with the CAS number and common name of its contents, and with appropriate hazard warnings.

Label containers of mixtures with the CAS number and common name of its hazardous constituent substances, and with appropriate hazard warnings.

Provide employees with any available safety data sheets concerning the dangers posed by hazardous chemicals and mixtures in the workplace.

Update the information provided to employees as new information about the hazards of a substance or mixture become available.

Triggering the responsibility to label and to provide available safety data sheets is the determination that a substance or mixture is hazardous. In determining if a workplace substance or mixture is hazardous, only the manufacturer or importer of that substance or mixture need undertake a review and evaluation of internal records and of the scientific literature. Other industrial users of the substance or mixture may simply rely upon the determination made by the manufacturer or importer. These determinations will be evidenced by the hazard-related information received by industrial users with shipments of substances or mixtures from manufacturers, importers, or suppliers.

The proposed hazard identification standard would also provide employees, former employees, and their designated representatives, with access to safety data sheets relevant to the areas in which the requesting employee works or worked. A designated representative may be anyone the employee chooses, including, but not limited to, a union representative, a physician, or a family member. Unions representing employees in the workplace would have access to all safety data sheets in the workplace.

Under the proposed standard, employees, former employees, unions representing employees in the workplace and other designated representatives, OSHA, and NIOSH, may inspect any file containing the references and documents upon which hazard determinations for workplace chemicals and mixtures are based.

Safety data sheets and files containing hazard determination materials must be preserved for specified periods of time. The proposed standard makes provision for permanent transfer of these records in case an employer subject to its recordkeeping requirements goes out of business.

IV. Major Issues for the Rulemaking.

There are a number of major issues inherent in the provisions of the proposal concerning which OSHA specifically invites comment. A brief discussion of some of the most important of these issues follows. There are undoubtedly additional issues raised by this notice of proposed rulemaking which should and will be addressed, and OSHA may amend the proposed standard on the basis of comments received or alternatives discussed concerning such issues.

A. Issues of Scope and Type of Standard

1. *The generic approach to a hazard identification standard.* The proposed hazard identification standard embraces a generic approach to rulemaking. The standard sets out a list of defined hazards, mandates procedures which manufacturers and importers must follow to determine the existence of those hazards, and requires that substances and mixtures meeting any hazard definition be labeled and otherwise identified in various ways. Some industry representatives have strongly objected to the generic approach and have suggested that substances and mixtures in the workplace should be subjected to regulation by the standard on a case-by-case basis.

As discussed elsewhere in this preamble, OSHA believes that it is authorized by applicable law to undertake generic rulemaking. Moreover, OSHA believes strongly that the generic approach to rulemaking is particularly applicable to hazard identification. It is generally accepted among health scientists that literally thousands of chemicals in the workplace are capable of harming human health. Consequently, it would take many years to accomplish comprehensive and effective identification of hazardous chemicals in the workplace if there were separate rulemakings concerning each potentially hazardous workplace chemical. Indeed, in its entire ten (10) year history, through substance-specific rulemakings OSHA has been able to promulgate currently effective standards regulating only 20 chemicals.

The current proposed generic standard places the responsibility for the hazard determination process upon the manufacturer or importer (paragraph (i) of the standard). Without changing any of the other requirements of the standard or abondoning the generic approach, an alternative approach is conceivable in which the Agency itself could undertake to carry out the hazard determination process in the final rule. Thus, the final rule would retain the current scope of hazard coverage, the hazard determination process, the data evaluation scheme and the regulatory requirements concerning hazardous substances or mixtures.

The Agency could perform the hazard determination process in the following manner:

1. Appointed panels of experts would review classes of chemicals using the scientific materials mandated by Appendix A and the data evaluation scheme set out in Appendix B;

2. OSHA would review the expert determination of hazard and require conformity with the provisions of the standard for those substances or mixtures where it approves the expert panel's decision.

3. If an interested party disagreed with the Agency's hazard determination decision, then the Agency could apply a summary procedure to determine whether a hearing were required. Issues in the summary judgment procedure would be confined to the question of whether the quantity and quality of data underlying the positive hazard determination satisfied the rule's requirements.

The Federal Food and Drug Administration (FDA) has extensive experience in the use of the elements just described. Expert panels were utilized to evaluate 16573 claims of effectiveness for 4,000 drug formulations following passage of the 1962 Drug Amendment (see Note: *Drug Efficacy and the 1962 Drug Amendments*, 60 Geo. L. J. 185–224 (1971)). The FDA's summary judgment procedure has been upheld *(Weinberger v. Hynson, Westcoff and Dunning, Inc.*, 412 U.S. 609 (1973)). The summary judgment procedure involved regulations which defined, "* * * the essentials of adequate and well-controlled clinical investigations * * * (as a) * * * basis for the determination whether there is substantial evidence to support the claims of effectiveness * * * (21 CFR 314.111(a)(5)(ii) (1979)).

The Agency invites comments on the advisability of this alternative approach. The Agency did not choose this alternative because it believes that the hazard determination process which it has mandated in the proposal will result

in labeling of hazardous materials sooner.

OSHA solicits comments directed at the appropriateness of generic rulemaking in the context of the need for hazard identification in the workplace under either of the two alternative approaches described. Should OSHA conclude that generic rulemaking is inappropriate, OSHA may still adopt a two-tiered approach similar to its Cancer Policy (45 FR 5002 *et seq.*) Under such an approach, the hazard definitions and evaluation procedures proposed in the standard, with any appropriate modifications which arise from comments and testimony, would be adopted generically. Using these, OSHA would then formulate lists of hazardous chemicals which, either individually or in groups, may then be subjected to rulemakings to determine if they should trigger the informational requirements of the proposed standard.

2. *Employers covered by the standard.* The proposed standard is designed primarily to provide hazards-related information to employees of employers engaged in manufacturing. To this end, the standard regulates the activities of both manufacturers who produce chemicals (called "manufacturers" in the standard) and manufacturers who use chemicals (called "industrial users" in the standard), as well as importers and suppliers of hazardous chemicals. Under the standard, Division D (Manufacturing), Major groups 20–39, in the most recent revision of the Standard Industrial Classification Manual; Executive Office of the President—Office of Management and Budget, defines the class of manufacturers and industrial users covered by the standard. Employers excluded include those in agriculture and construction among others.

It should be noted, however, that the proposed standard intends that where an employer otherwise exempted from coverage works on the premises of a workplace covered by the standard, chemicals utilized by the exempted employer will be subject to the provisions of the standard.

Although evidence is presently lacking, the need for the protections of the hazards identification standard may well be as great in some industries excluded from coverage as they are in those covered. Accordingly, OSHA invites comment on the appropriate scope of coverage. Employers currently excluded from the scope of the proposal may be included in the scope of the final standard if evidence in the record ultimately warrants such inclusion. They and others interested in this issue are therefore given notice that they should be prepared to participate in the rulemaking and provide justification, if they so desire, of why particular classes of employers should or should not be excluded.

3. *Duty to disclose specific chemical identity and impact on trade secrets.* A keystone of the proposed hazard identification standard is the duty to provide workers with specific chemical identity of hazardous chemicals. As discussed elsewhere in this preamble, OSHA considers the disclosure of specific chemical identity in addition to basic hazard warning information as crucial to the goal of worker self-protection.

Certain industry representatives have stated that provision of the specific chemical identity of hazardous chemicals is inappropriate. They claim that workers and their representatives generally are neither properly trained or equipped to utilize the chemical identity of hazardous chemicals to decipher additional facts about their effects; nor to develop new modes of treatment for, or prevention of, such effects.

OSHA invites detailed comments on these contentions. OSHA also invites detailed comments from workers and their representatives concerning the need for and uses of the specific chemical identification which the proposed standard would make available to them.

OSHA is particularly interested in this issue because of the likely impact of this standard on employer trade secret interests. The trade secrets issue is presented by the proposal because, in some instances, disclosure of a hazardous substance's chemical identity may involve revelation of a trade secret.

In developing this proposal, therefore, OSHA has considered the effect of this standard on trade secrets. An extended legal analysis of OSHA's authority to issue standards requiring disclosures affecting trade secrets may be found in the preamble to the access to exposure and medical records standard (45 FR 35248–251). In general, OSHA believes that in rulemaking it must balance the safety and health interests in disclosure of hazards-related information with the employer's interest in trade secrets, but that it may require disclosure by rule, notwithstanding a trade secret interest, where non-disclosure could pose a significant risk to employees. In OSHA's view, this means that chemical identities of hazardous chemicals and their hazardous properties must be disclosed to employees, but that the secret chemical identities of non-hazardous chemicals, as well as secret process and formula information concerning hazardous chemicals, need not be disclosed. OSHA recognizes that the impact on trade secrets of this proposed rule is in some respects greater than the records access rule because of the element of "downstream" disclosure. On the other hand, the more focused scope of the chemicals covered by this standard and the percentage exclusion for chemical constituents of mixtures below 1.0% for non-carcinogens and 0.1% for carcinogens should eliminate some of the anticipated trade secret problems.

Industry representatives have suggested, however, that even where a substance is admittedly hazardous, disclosure of its identity should not automatically be required where a trade secret is involved. These representatives propose that industry be allowed in every case involving a claimed trade secret to challenge the need for disclosure. Presumably, the issue would be whether the potential for harm to workers risked by non-disclosure outweighs the damage to a firm by forced disclosure of its trade secrets in the individual case.

Once a firm has through its own evaluation found a chemical hazardous, OSHA believes that case by case adjudication is unjustified and unworkable. OSHA believes that each of the hazards it has identified in the proposed standard is significant. Consequently, if the potential for a hazard exposure in the workplace exists, disclosure of the identity of chemicals posing that hazard is clearly essential to providing the capability for workers to protect themselves from workplace hazards. Moreover, allowing individual challenges to the need for the disclosure of the chemical identity of hazardous chemicals might well create an administrative nightmare as thousands of challenges to disclosure were lodged. It could take years before a final decision were reached in any case. In the interim, with enough challenges, the standard's requirements for disclosure would be meaningless.

OSHA recognizes that the legal and policy issues surrounding the disclosure of trade secrets are troublesome and complex. OSHA solicits comments on all aspects of trade secrets disclosure and particularly on the following points:

—How important are trade secrets to the competitive structure of the industries covered under the proposal or which may be covered by any final standard?

—To what extent will the proposed standard require trade secrets disclosure?

—Are there ways to provide trade secrets protections greater than those afforded under the proposal, and still

insure that chemical identification is disclosed in a timely fashion to all those with a need to know?

B. Scientific Issues

The scientific elements occupy a central position in the proposed standard because the extent of regulation of a substance or mixture is controlled by the hazard determination process which, in turn, is constructed from these elements. The elements are most appropriately considered under three headings: scope of hazards covered, hazard determination process and the evaluation procedure.

1. *Hazards covered by the standard (general issues).* a. *Universal vs. hazard labeling.* The proposed standard would require provision of chemical identification and hazard warnings for chemicals which meet the criteria for any hazard as defined by the standard (see paragraphs (i)–(1) and Appendices A and B). Hazard definitions fall into two general categories, Category A and Category B, which generally correspond to physical and health hazards, respectively, and which together are calculated to embrace all significant workplace hazards.

By focusing on workplace hazards, the proposed standard falls short of a system of universal chemical identification. By contrast, some unions and other worker advocates have urged OSHA to require chemical identification of all substances in the workplace whether or not they pose proven hazards to human health. They claim that such identification is necessary to insure the capability of workers, and scientists assisting them, to identify the hazards of chemicals in the workplace before injury to worker health actually occurs. Without worker capability to conduct their own studies, these advocates claim that the identification of hazardous properties of workplace chemicals, especially those with long latency periods, will be unnecessarily delayed with a resultant increase in death or disablement of workers.

As previously stated, however, there is at least one major drawback to universal chemical identification of substances in the workplace: disclosure of chemical identity may, at times, reveal a trade secret. OSHA believes that the required disclosure of a trade secret is most clearly justified where the chemical involved poses a known hazard to human health. With universal chemical identification, the identity of chemicals which may turn out to be harmless would be revealed. This, in turn, risks the potential for unwarranted disclosure of industry trade secrets. To outweigh this important disadvantage, workers, and those assisting them, would have to show a comprehensive capability of using chemical identity to determine hidden hazardous effects of workplace chemicals with no present known potential to injure human health.

OSHA invites comments concerning the utility of a requirement for universal chemical identification in the workplace and any effects such a requirement might have upon trade secrets.

b. *General or workplace-specific hazard determinations.* Under the proposed standard, the determination of a hazard is not made dependent on the particular conditions under which the chemical will be used in a particular workplace. Instead, the proposal provides for a single hazards determination procedure.

On scientific grounds, OSHA believes that its proposed approach is preferable. Traditional public health preventive practice has considered a substance or mixture potentially hazardous for any occupational exposure once its toxicity, based upon definitions like the ones presented in this proposal, has been documented with sound toxicologic, clinical or epidemiologic studies. This current Agency position is consistent with the 1974 NIOSH criteria document (7).

Moreover, the Agency believes that adoption of the workplace-specific alternative would lead to an unreasonable demand on OSHA consultation and enforcement resources. Since manufacturers and importers have no reliable methods of knowing the conditions surrounding the end-use of their chemicals by industrial users, OSHA belives that the hazard determination process would need to be performed in that case by the industrial users themselves. Industrial users, as a class, in comparison to manufacturers and importers, have substantially less experience in making such basic hazard determinations for chemicals. As a consequence, industrial user hazard determinations would probably take longer, cost more and require greater OSHA involvement.

As a result of the single hazard determination approach of this proposal, some industry representatives have stated that the hazard definitions do not adequately take into account, and may in fact overstate, the true risk of potential hazards in the workplace. Thus, they feel it is unnecessary, or even harmful, to apprise workers of the hazards of chemicals tested in one physical form (solid, liquid, or gas) and presented in the workplace in another physical form. OSHA believes that, in the case of Category B health hazards, the physical form of a substance is largely irrelevant to the risk imposed by the exposure.

Moreover, these industry representatives would not apprise workers of the hazards of chemicals where the existence of a hazard was established at dosages, or by routes of administration, not frequently encountered in particular workplaces. OSHA invites further comment on this issue.

c. *Impurities, Intermediates, By-Products.* The proposed standard would require that impurities, intermediates, and by-products be evaluated and regulated, if known to be present (paragraphs (d)(2)(iv), (e)). OSHA does not intend that a manufacturer or importer perform chemical analysis to detect these materials in order to comply with this standard.

The Agency expects that its jurisdiction over these classes of materials, as potential workplace hazards, will extend to the point at which the Environmental Protection Agency assumes jurisdiction under the Solid Waste Disposal Act as amended by the Resource Conservation and Recovery Act (42 U.S.C. 6907(a)(3), 6944).

OSHA invites comment on the appropriateness of including these categories of chemicals in the proposed standard.

2. *Hazards covered by the standard (definitional issues).* a. *General.* The proposed standard covers physical hazards, acute health hazards and chronic health hazards. The covered hazards are categorized into these three categories as follows:

Table 8

Category		
(A)	(B)	(B)
Physical hazards	Acute/subacute health hazards	Chronic health hazards
Corrosives	Highly toxic material.	Sensitizers.
Extremely flammable liquids.	Toxic materials	Carcinogens
Flammable materials.	Irritants	Reproductive toxins.
Aerosols, gases	Materials that have endangered or killed workers.	Materials that cause other chronic adverse health effects.
Liquids, solids	Materials that cause other acute adverse health effects.	
Combustible liquids.		
Pyrophoric materials.		
Strong oxidizers		
Reactive materials:		
Explosives		
Organic peroxides.		
Pressure-generating materials.		

Table 8—Continued

Category		
(A)	(B)	(B)
Physical hazards	Acute/subacute health hazards	Chronic health hazards
Water-reactive materials.	.....	
Compressed gases.	.....	

b. *Physical Hazards.* The Category A (physical) hazards are defined in terms of objective physical properties to facilitate compliance. The definitions for physical hazards are stated in terms of numerical criteria (flammability, combustability, compressed gas), chemical structure (organic peroxides) or reactive properties (corrosives, pyrophoric materials, strong oxidizers, explosives, pressure-generating materials, water-reactive materials). Based upon discussions with industry and the Agency's own expertise, OSHA believes that data and studies necessary to determine whether a substance meets the objective criteria of the physical hazards' definitions are available either in company files or in the scientific literature. To comply, a manufacturer or importer would evaluate such data or studies for the presence of physical hazards using sound scientific judgment. An extensive literature search is not required (see Appendix A) nor need the formal evaluation scheme be followed (see Appendix B).

In the case of mixtures, the Agency understands that compliance based upon material in the scientific literature will not often be possible because of the scientists' tendency to evaluate the effects of pure substances. However, the Agency believes, based on discussions with industry, that many manufacturers of mixtures obtain the requisite physical hazards data on a proprietary basis as a customary incident of offering the mixture for sale. The Agency has, therefore, provided for the use of such data when available (paragraph (a), Appendix A). In general, however, OSHA does not rely on such mixture data and the standard provides that where data for the mixture as a whole is unavailable, the hazard determination for a mixture reflect the hazards of the constituent substances (paragraph (i) of the regulation and Appendix A).

c. *Health Hazards.* In addition to physical hazards, OSHA has provided for broad coverage of health hazards. OSHA recognizes that Category B hazard determinations are inherently more complex than Category A hazard determinations. Category B (health) hazard determinations will require greater expenditures of professional time and will call for the exercise of more sophisticated professional judgments (see Appendix B) than do the more mechanical Category A hazard determinations. Nevertheless, OSHA does not believe that complexity of the task or occasional ambiguities of the data are sufficient reason to omit coverage of various health hazards. Each of the covered health hazards is justified on the grounds that the category represents well-documented medical and/or toxicologic adverse health effects. The Agency believes that it is prudent public health policy to reflect in the proposed standard that range of adverse health effects already documented by occupational physicians, toxicologists and other health professionals.

In view of the complexity inherent in Category B hazard determinations, the proposed standard provides assistance in the form of explicit directions to the manufacturers or importers. The standard describes the hazard determination process (Appendix A), details the materials (including the output of a required literature search) that must be used for the determination (Appendix A) and provides an evaluative scheme for such materials (Appendix B). The Agency believes that the explicit directions for compliance just described reflect the best current scientific practice and will reduce the ambiguities inherent in a less detailed standard, will facilitate compliance and result in many fewer enforcement actions. Extensive discussions with industry have produced no alternative evaluative schemes. Moreover, specification of the Category B hazard determinations process is required to obtain uniformity of labeling.

Nevertheless, representatives of the chemical industry have informally advised OSHA that they believe OSHA's proposed hazard definitions are deficient in at least the following general respects:

—Some hazard definitions could include insignificant health effects that almost any workplace substance or mixture will cause. If this is true, implementation of the hazard identification standard would lead to overlabeling in the workplace, and the value of informing workers of chemical hazards would be greatly reduced. OSHA believes that it has dealt adequately with this issue by setting a threshold level of severity for diseases, signs and symptoms requiring a positive hazard determination (paragraph (gg)(31)).

—The hazard definitions for some Category B hazards are too imprecise, and the science for establishing such hazards is, in any case, presently inadequate to indicate the existence of such hazards reliably.

OSHA invites comments concerning these criticisms and other issues regarding its categorization of hazards.

d. *Specific definitional issues.* In selecting the particular Category B (health) hazard definitions contained in the proposed standard, OSHA has made a series of science policy decisions. OSHA believes that identification of the specific science policy decisions involved in each definition will ensure that the scientific issues are fully aired in subsequent hearings. The following discussion is not meant to be exhaustive but, rather, is meant to identify the most important of these issues. The Agency encourages affected parties to identify and discuss additional science policy issues involved in either Category A or Category B hazard determinations.

OSHA invites comment on the following issues of scientific definition, which it regards as particularly noteworthy:

(i) "Highly toxic" and "toxic" substances or mixtures. As noted in the discussion concerning Table 10 (below), several other regulatory efforts have included these hazard categories. The Agency believes that the boundaries it has selected for the two toxicity classes, varying by route of administration, represent a reasonable composite of what other regulatory bodies currently require. However, the Agency invites comments on whether the upper boundaries for each toxicity class should be raised to more nearly approximate the higher values adopted under the Federal Insecticide, Fungicide, and Rodenticide Act (see 40 CFR 162.10(h)(1)).

(ii) "Irritant". The Agency has adopted a somewhat more expansive definition than that used by other agencies in that results of testing in other mammalian species also must be considered in the hazard determination. Other definitions (Table 10 below) have relied only upon data from human and selected mammalian species. The Agency believes that all available data from mammalian species should be used to classify a substance or mixture as an irritant unless such studies utilize inappropriate animal models (paragraph (a)(1)(vi) of Appendix B) or human data of a specified quality establish a lesser risk (paragraphs (c)(3), (5) of Appendix B).

(iii) "Sensitizer". The Agency definition is more expansive than that generally in use for the following reasons:

A. The definition requires consideration of mammalian data as a part of the hazard determination

process. The Agency believes that this represents sound scientific policy since there is substantial scientific experience identifying human sensitizers in non-human mammalian test systems. (Also see the discussion under "Irritants" concerning the use of non-human mammalian data in general).

B. The definition requires classification of a substance or mixture as a "sensitizer" if it produces an allergic or photodynamic reaction in medically disabled as well as normal humans. This provision was included to increase the protection afforded workers who already have hypersensitivity diseases. Such workers are known to be at substantially greater risk of developing a hypersensitivity reaction to new substances or mixtures to which they are exposed. The Agency believes that it is appropriate to utilize data derived from such sensitized individuals for the purpose of classifying a substance or mixture as a "sensitizer".

C. The definition requires a substance or mixture to be classified as a "sensitizer" if the material produces a photodynamic reaction. The Agency believes that this additional definitional scope is justified by the extensive documentation of this effect for such chemical as drugs.

(iv) "Carcinogen". The Agency has adopted the definition contained in its recently promulgated standard, "Identification, Classification and Regulation of Potential Occupational Carcinogens" (Cancer Policy) (29 CFR 1990.101 *et seq*, 49 FR 5282, January 22, 1980). Inasmuch as the OSHA Cancer Policy was the product of an intensive three-year Agency effort which considered the definitional questions, this definition is the most appropriate for OSHA regulatory purposes.

However, the Agency recognizes that the proposed hazards identification standard would require a conforming amendment to its Cancer Policy if the proposed standard is enacted in its present form. OSHA would issue such a conforming amendment at the same time as the hazards identification standard is finally issued. This conforming amendment would reflect OSHA's determination that the labeling of carcinogens should be governed by the hazard determination process of this standard, just as are the labeling determinations of other hazards. The Agency invites comment on the advisability of such a conforming amendment.

The present standard differs from the Cancer Policy in the following ways:

A. A substance or mixture could be determined to be a cancer hazard upon less data than that currently required by the Cancer Policy. In the case of human data, the present standard utilizes case reports (paragraph (b)(3) of Appendix B) and/or formal epidemiologic studies (paragraph (b)(1) of Appendix B) to determine whether a substance or mixture is a carcinogen. The Cancer Policy does not explicitly accept case reports as "suggestive" evidence establishing a substance or mixture as a Category II potential occupational carcinogen. (cf. 45 FR 5044 and 45 FR 5026, January 22, 1980).

B. The carcinogen hazard determination is self-executing under the present proposal while the Cancer Policy specifies that the identification of a carcinogen is one of the issues to be addressed in an individual substance rulemaking (29 CFR 1990.1469)).

C. Under this proposal, Category II potential occupational carcinogens would, without exception, be labeled as cancer hazards, while the Cancer Policy indicates that the need for labeling of Category II carcinogens as such would be determined on a case-by-case basis.

The Agency believes that its present policy position is justified by the following rationale. First, and foremost, a requirement that carcinogen identification occur in the context of an individual rulemaking would preclude the agency from enacting an effective hazard identification standard. The Agency's experience with individual substance rulemakings indicates that for carcinogens, as well as other hazards, it would be well into the next century before current scientific material could be filtered through such hearings. The present proposal's hazard determination process (Appendix A) and evaluation scheme (Appendix B) should provide equivalently accurate results in much less time. Second, there appears to be no sound scientific rationale which would justify treating cancer hazard determinations differently from other health hazards. The Agency invites comments on the elements of this rationale. In addition, the Agency solicits comments on whether the present labeling standard should continue the distinction between Category I and II potential occupational carcinogens contained in the Cancer Policy for purposes of this standard (45 FR 5284, January 22, 1980). The Agency is interested to know whether such a dichotomy would facilitate worker education programs regarding the dangers of carcinogens.

(v) "Reproductive toxin". The definition is based upon objectively ascertainable end results in humans or other mammals. The end results could represent measures of adverse reproductive outcomes which are commonly accepted by the scientific community. The relevance of such measures to the identification of a human reproductive toxin seems apparent to the Agency. The definition does not require a positive hazard determination based upon *in vitro* evidence such as chromosomal abnormalities, including sister chromotid exchanges, mutagenic assays, or measures of DNA repair. The Agency has presently excluded such evidence from consideration because it is uncertain of the precise clinical significance of such *in vitro* results. The Agency invites comments on whether it should require utilization of such *in vitro* assay results in the final standard.

(vi) "Endangered worker life or caused worker death". This hazard category has been inserted to cover the situation where a substance or mixture has killed a worker or produced serious life threatening illness in workers but where data are unavailable which would permit its classification as "toxic" or "highly toxic."

The Agency anticipates that this hazard category will be particularly useful in the case of mixture hazard determinations. The Agency believes that acute toxicology information permitting mixture categorization as "toxic" or "highly toxic" is frequently unavailable and, as a result, a mixture might avoid a positive hazard determinations, were it not for this category.

OSHA anticipates that categorization into the "endangered worker life" category or one of the categories "toxic" or "highly toxic" would be made in addition to the category "other acute, subacute or chronic adverse health effects." There is a need to identify both the former and latter types of hazards on the label in that the former three hazard categories represent immediate lethal or life-threatening dangers which require separate emphasis.

The Agency does not intend that data or reports concerning intentional (self) poisonings be used to determine inclusion in this category, except to the extent that such data or reports reveal pathophysiologic mechanisms relevant to potential actual or emergency working conditions which are not discussed elsewhere.

OSHA invites comments on any perceived ambiguities in the definition of this health hazard.

(vii) "Other acute, sub-acute or chronic adverse health effects." This category, which includes decreased mental alertness and behavior alterations, is expected to generate substantial scientific comment. The category was inserted to reach

documented health effects not otherwise covered. These include such well-documented health effects as erosion of the nasal septum by chromium compounds, intoxication due to involuntary solvent vapor exposures, and liver toxicity from carbon tetrachloride. The Agency believes that potential ambiguities in the scope of coverage have been adequately addressed by restricting the health effects covered to those above a threshold severity (paragraph (gg)(31) of the regulation.)

This health effect threshold is meant to be identical to that severity level which should trigger the filing of an occupational illness report under the Occupational Safety and Health Act (Section 8(c)(2) of the Act; 29 U.S.C. 657(c)(2); cf. 29 CFR Part 1904). Though under-reporting of occupational illness is well documented, the Agency believes that the experience gained over the past 10 years by manufacturers and importers in the filing of such illness reports will facilitate their identification of adverse health effects which must be labeled. Moreover, no adverse health effect need be labeled unless the effect has been reported in the scientific literature as described in Appendices A and B.

Thus, the utilization of a two-step inquiry should permit the manufacturer or importer to determine whether a particular adverse health effect is a Category B hazard within the scope of this standard. First, is the adverse health effect one that must generally be reported? Note that actual reporting is not the determining factor in view of documented under-reporting of occupational illnesses. Second, and this is common to all health hazard determinations, is there scientific material documenting the effect (Appendix A) and does such material establish the hazard on a scientific basis (Appendix B)? The Agency believes that rigorous application of this two-step process will resolve any uncertainty surrounding this particular determination.

OSHA does not intend that chemical substances or mixtures which are intentionally ingested over a long period of time in reasonable quantities as part of a normal diet should be classified as producing "other chronic adverse health effects" solely because studies document adverse health effects from immoderate use, e.g., NaCl and hypertension. The Agency solicits comments on whether this interpretation sufficiently clarifies any ambiguities perceived in this hazard category.

In addition, OSHA requests comments on whether an alternative definition for this hazard category is preferable. In developing the present definition, the Agency considered defining the hazard either in terms of specified pathologic effects, e.g., inflammation, or fibrosis, or by specifying a list of disease outcomes which would trigger labeling. The Agency decided not to adopt either of these alternatives because they were less protective than the one selected.

e. *Regulation of Physical Hazards By Other Agencies.* A comparison of the scope of physical hazards coverage by OSHA, other Federal regulatory agencies, voluntary industry standards and the European Economic Community (EEC) is provided in Table 9. In general, the definitions are approximately equivalent when various Federal agencies regulate the same hazard. OSHA based its physical hazards definitions on the voluntary industry standards developed by the American National Standards Institute (ANSI) so that there are only minor discrepancies in scope of coverage. There are more discrepancies between OSHA's physical hazard definitions and comparable definitions developed by the EEC.

During the course of this standard's comment period, the Agency will make an effort to harmonize the minor inconsistencies, largely involving test procedures, among Federal agencies. A more intensive harmonization effort between OSHA and EEC appears to be required and OSHA expects to participate in such an effort, together with other affected United States agencies.

f. *Regulation of Health Hazards By Other Agencies.* Table 10 provides a comparison of the efforts of Federal agencies, ANSI and EEC to define health effects for the purposes of labeling regulations. All the organizations listed define and regulate all or most of the first four health hazards listed (highly toxic, irritant, sensitizer). Manufacturers and importers thus should be able to utilize their organizational experience in complying with the OSHA standard, though they must still perform the required OSHA hazard determination process. OSHA is particularly interested in comments which would lead to a harmonization of definitions among the various agencies involved. OSHA

expects to participate in international efforts aimed at harmonization in this area.

Regulatory experience with the remaining health effects that OSHA proposes to cover in this labeling standard is substantially more limited (see table 10). However, OSHA does not believe that lack of substanfial regulatory experience by other organizations concerning carcinogens, reproductive toxins, and the categories involving endangerment to human life and other adverse health effects should preclude OSHA's regulatory effort concerning these health effects. OSHA believes that the validity of the scope of hazards coverd in this standard should be judged solely on whether the scope of hazards regulated corresponds to the scope of hazards which the worker faces. OSHA further believes, on the basis of its accumulated expertise in the development of health standards, that the current consensus among occupational physicians, industrial hygienists, toxicologists and other health personnel is that workers face hazards in all the health effects categories defined. Moreover, the agency does not believe that the technical problems involved with defining or identifying carcinogens or reproductive toxins are inherently more difficult than those involved with sensitizers and irritants, two health effects which have been extensively regulated. The Agency would benefit from an exchange of ideas in this area between government, academic, labor and industry witnesses in the course of extensive rulemaking proceedings.

3. *Hazard determination process.* a. *Description.* The hazard determination process is described in Appendix A of the proposed standard. (References in this section of the preamble are to Appendix A). A manufacturer or importer must utilize this process in determining whether a substance is hazardous. However, the extent to which the process is applicable varies depending upon whether a substance is being evaluated as a Category A (physical) hazard or Category B (acute or chronic health) hazard.

To determine whether a substance poses a Category A hazard, the manufacturer or importer need only evaluate material contained either in the National Library of Medicine's Toxicology Data Bank (TDB) or in a representative selection of standard reference works or relevant NIOSH documents (See App. A paragraph (b)(1)). In addition, the manufacturer or importer may use any other relevant data (paragraph (b)(1)(ii)). The manufacturer or importer is not required to undertake a literature search (paragraph (c)). The evaluation is to be based upon sound scientific judgment (paragraph (b)(3)) and the formal evaluation scheme described in Appendix B is not required.

OSHA believes that an abbreviated hazard determination process for Category A hazards is adequate to determine whether the substance possesses the physical properties specified in the Category A definitions. The data sources required are sufficient because the physical properties are based upon standardized physical or chemical tests which ordinarily demonstrate rather small variations in results, if performed as specified. Analogously, there is no need for an extensive evaluation scheme since there is widespread professional agreement on the interpretation of such test results.

In contrast, the hazard determnation process for Category B hazards for substances is more extensive, both in the scientific sources which are required to be consulted and the evaluation scheme to be applied. In addition to the sources required to be consulted for Category A hazard determinations, the manufacturer or importer is required to undertake a literature search using specified computerized data files, to obtain copies of the scientific studies so identified, and to evaluate such material using the scheme set out in Appendix B of the proposed standard (paragraph (c)). IN addition, a manufacturer's or importer's in-house health effects studies must be evaluated by the Appendix B scheme (paragraph (c)(1)(ii)). A manufacturer or importer need not evaluate search material or in-house health effects data for a particular health hazard, if he or she has elected to label the substance for the hazard based upon the TDB, standard reference works or NIOSH documents (paragraph (c)(1)).

Category B substance hazard determinations are necessarily more extensive than those required for Category A hazards because health effects studies involving animals or humans yield substantially more variable results than do purely physical

or chemical determinations and the interpretation of such results calls for more professional judgment. The Category B hazard determination process will ensure that the results of substantially all relevant scientific studies involving a substance are considered. Moreover, the Appendix B evaluation scheme should ensure uniform judgment outcomes based upon what the Agency believes is a sound scientific approach.

The present hazard determination process would not normally apply directly to mixtures. Mixtures are deemed to represent the same hazards posed by their constituent substances, with some qualifications (paragraph (i) of the standard). A similar assumption has been used by the European Economic Community in its directives (regulations) governing the labeling of preparations (mixtures) (73/173/EEC, 77/728/EEC, 78/631/EEC). If a manufacturer or importer is dissatisfied with the results of a hazard determination based upon its constituent substances, he is free to test the mixture. Of course, if a mixture has been evaluated for a particular hazard, then the manufacturer or importer must use his or her sound scientific judgment to determine whether a Category A hazard is present (paragraph (b)(3)) or the Appendix B evaluation scheme to determine whether a Category B hazard is present (see, in particular, paragraph (c)(5) in Appendix B). The proposed standard would not, however, require that a manufacturer or importer perform a literature search for mixture hazard determinations because OSHA believes that the yield from such searches would not justify the required expenditures of time and money. This belief is based upon a professional judgment that the scientific literature reflects a strong preference of epidemiologists and toxicologists for analyzing the properties of substances, rather than mixtures.

Thus, in view of the complexity inherent in Category B hazard determinations, the proposed standard provides assistance in the form of explicit directions to the manufacturers or importers. The standard describes the hazard determination process (Appendix A), details the materials (including the output of a required literature search) that must be used for the determination (Appendix A) and provides an evaluative scheme for such materials (Appendix B). The Agency believes that the explicit directions for compliance just described will reduce the ambiguities inherent in a less detailed standard, will facilitate compliance and result in many fewer enforcement actions. Moreover, specification of the Category B hazard determinations process is required to obtain uniformity of labeling.

b. *Performance vs. specification standard for the hazard determination process and evaluation scheme.* Some industry sources have objected to the approach taken in the proposal. They advocate a "performance" standard under which manufacturers or importers of a chemical would be free to determine the existence of a defined hazard by whatever procedures they consider appropriate.

These industry sources claim that there are alternatives to the hazard determination (Appendix A) and evaluative procedures (Appendix B) OSHA has chosen which are just as reliable. They also claim that these are presently in use, and that it therefore makes no sense to require firms to shift to the procedure OSHA prefers.

However, those making these claims have not, to date, actually described the procedures which might function adequately as alternatives to the procedures of the proposed standard. Nor have these sources informed OSHA of the hazard determination and data evaluation procedures presently employed by any particular firm. Consequently, OSHA presently has no information which would substantiate the claim that a performance standard is appropriate.

OSHA believes that it is appropriate and necessary to establish the quantity and quality of scientific evidence required in the hazards determination process. A performance standard would simply not guarantee that any firm would utilize an appropriate alternative to the hazard determination and evaluation procedures of the proposed standard. Under a performance standard, every firm would be free to utilize any procedure, or no procedure at all, to determine hazards.

Moreover, the enforcement mechanisms at OSHA's command are simply inadequate to protect against the very real possibility that under a performance standard a substantial number of firms might utilize procedures which are scientifically deficient or inconsistent to identify the hazards of workplace chemicals. There are thousands of chemicals which are manufactured in, or imported into, this country. Yet, OSHA has at its disposal only approximately 1500 inspectors, whose duties encompass enforcement of all requirements imposed by OSHA in the workplace. Obviously, in terms of total numbers and the considerable responsibilities already incumbent upon these inspectors, this inspection force would be utterly inadequate to ensure that each manufacturer and importer subject to the standard employed a reliable procedure to determine hazards.

OSHA is willing to consider reasonable alternatives to its proposed evaluation procedures. OSHA is also willing to offer the choice of a number of scientifically sound procedures, if they exist. Accordingly, OSHA solicits comments on these issues. Following comment, should OSHA choose to move to a performance standard, the agency may adopt Appendices A and B as recommended rather than mandatory procedures.

c. *Literature Search.* 1. OSHA has made a concerted effort in the course of revising earlier drafts to ensure that the search requirement is technically feasible. As a consequence of extensive discussion, and based upon sound science policy grounds, the Agency has decided not to include a search requirement for mixtures (paragraph (a)(2) of Appendix A), to permit manufacturers and/or importers to undertake hazard determinations jointly to the extent permitted by law (paragraph (a)(3) of Appendix A), and to extend compliance times for small manufacturers and importers (paragraph (ii)(1)(ii) of the standard). The delay in compliance dates for small manufacturers and importers will permit them to rely on hazard determinations of larger manufacturers or trade groups (paragraph (ii)(1)(ii) of the standard) by obtaining copies of their labels from a national label repository (subsection (w) of the standard).

The mandated literature search for Category B hazard determinations (paragraph (b)(2)(ii)(C) of Appendix A) appears well within the current search capability of existing computerized information services.

The following analysis, based upon material submitted in compliance with the Toxic Substances Control Act Inventory requirements (40 CFR Part 710), indicates that the present standard will impose a one (1) time increase in search requests of some 250,000.

Table 11.—*TSOSCAI Substances (33)*

Number of companies reporting a substance	percent of TOSCAI inventory	Number of substances reported (approximate)	Maximum of average number of companies reporting a substance	Estimated number of searches
—4	90	49,500	2.5	123,750
5–9	6.3	3,465	7	24,255
—10 (x=30)	3.7	2,035	30	61,050
Total				229,055

The estimate has been adjusted upward from that in the table to provide for search requests involving the other substances not on TOSCAI which must be evaluated (paragraph (d) of the standard). Taken together, such other substances contribute a comparatively small number to the total. The Agency wishes to stress that this is a "worst case" estimate in that the estimate has not been reduced to reflect the probable impact of joint evaluations or reliance on the national label repository in lieu of a search (paragraph (w) of the standard and paragraph (a)(3) of Appendix A).

On the supply side, OSHA understands that the recent expansion of the computer facilities for MEDLARS®, only one of the available computerized information services, has substantially increased search capacity. The August, 1980, search load of some 60,000 searches appears to represent less than half of the system's monthly capacity (Phone communication. NLM. 1980).

Thus, the Agency concludes that the literature search requirement is technically feasible. OSHA invites comments on the related issues of whether searches may be delayed in various regions because of a dearth of trained information system users and whether some manufacturers or importers lack access through inter-library loan programs to duplicates of the scientific material identified in the search.

While OSHA believes that the expansion of existing commercial information services will prevent any serious compliance problems in this area, the Agency intends to explore additional mechanisms for complying with the search requirement. Among the additional mechanisms under consideration are permitting reliance on duplicate copies of current searches (thus avoiding the actual search) with payment as appropriate and exploring creation of a central duplicating service for search materials. The Agency may, in addition, extend compliance dates if rulemaking comments so indicate.

d. *Use of TDB, standard reference works and NIOSH documents.* OSHA believes that TDB (paragraphs (b)(1) and (c)(1) of Appendix A), the NIOSH documents (paragraphs (b)(1)(5)(i)(B) and (c)(1) of Appendix A), and the standard reference works (paragraphs (b)(1)(i)(A) and (c)(1) of Appendix A) are essential elements of the hazard determination process. All these materials have been subject to scientific peer review and thus represent unusually reliable sources of scientific information. OSHA invites comments on whether alternative data sources should be considered.

The Agency does not, however, believe it would be productive in the rulemaking to urge consideration of a particular text not on the list of standard reference books, "Source Used to Prepared Toxicology Data Bank Records" (paragrahs (b)(1) and (c)(1) of Appendix A). Additional texts can already be used in determining whether a Category A hazard is present under paragraph (b)(1)(ii) of Appendix A. In the case of Category B hazard determinations, unrestricted expansion of the standard reference book list beyond that determined by the TDB expert scientist group would certainly cloud the compliance responsibility of the manufacturer or importer without necessarily improving the hazard determination process. OSHA believes that a current standard reference book list, developed by an expert committee, represents the most reliable list for the limited purposes for which it is intended, i.e., positive hazard determinations in the case of Category B hazards are ultimately dependent on evaluation of scientific studies and not on reference book content, unless the manufacturer or importer chooses to rely on the standard reference book (see paragraph (b)(2)(iii)). The standard provides for modification of the list.

e. *Search files.* The Agency also invites comments on the particular data files required for the literature search (paragraph (c)(1)(ii) of Appendix A) and whether equivalent alternative data files are available. CANCERLIT® is required because it is a unique source of information on the National Cancer Institute's carcinogen bioassay program. OSHA specifically invites comment on the extent of duplication resulting from the use of the three remaining data files: MEDLINE®, TOXLINE® and RTECS.

The Agency requires all three data files be used because it is current scientific practices to include all three in routine searches. Comments are also invited on the need for any additional data files. The Agency is aware of only the Excerpta Medica information file as a possible alternative but invites comment on this issue.

f. *Concentration of Constituent Substances and Mixtures Hazard Determination.* The proposed standard sets threshold limits for concentrations of hazardous substances in mixtures, above which, except in certain defined circumstances, such substances, and the mixtures in which they appear, are regulated by the standard. For non-carcinogens, the threshold value is at least 1.0% (by weight) of a mixture. For carcinogens, the threshold value is at least 0.1% (by weight) of a mixture (see paragraph (i)(2) of the standard).

OSHA believes that the uniform thresholds it has chosen are appropriate, and that the use of a uniform threshold is integral to the generic approach to regulation which the hazard identification standard embodies. Elimination of any threshold would greatly burden the hazard determination process and likely render it infeasible. On the other hand, adoption of a system which required the establishment of an individual threshold value for each substance, case by case, would in OSHA's view render the standard impossible to administer and enforce. There may, however, be acceptable formulas, taking account of the variables of potency and concentration, which can be applied reliably to determine whether constituent substances and the mixtures in which they appear should be regulated as hazards (see EEC directives for labeling mixtures 73/173/EEC, 77/728/EEC and 78/631/EEC). OSHA invites comments on this possibility and other issues germane to the threshold percentage exclusion question.

4. *Evaluation Procedure.* a. *In General.* The proposal mandates that a substance or mixture be classified as a Category B hazard, if the proprietary in-house studies or the studies identified in the literature search satisfy the following criteria:

1. The study is either "adequate and well-controlled" (paragraphs (a)(1) and (b)(1),(2) of Appendix B) or represents an acceptable "case report" (paragraphs (a)(2) and (b)(3) of Appendix B); and

2. The study establishes a "statistically significant" (paragraph (a)(6) of Appendix B) relationship between exposure to the substance and the subsequent occurrence of a covered hazard or "strongly suggests" such a relationship (paragraph (b)(3) of Appendix B); and

3. The relevant study conclusion is accepted by any subgroup of qualified experts (paragraph (b)).

OSHA believes that this hazard determination process and its

evaluation procedure represents the sequence and content of any inquiry that a reasonable and prudent modern scientist would undertake to determine whether a chemical is a Category B hazard. The evaluation procedure does not consider anecdotal material because the Agency does not believe that such "data" warrant a positive hazard determination under this standard. Nor does the evaluation procedure consider expert opinion evidence based upon structure-function or stereo isomer relationships. Although the Agency believes that such opinion evidence may be too problematic to warrant labeling, it invites comments on this point.

b. *Adequate and Well-controlled Study.* The definition of an "adequate and well-controlled" study is based upon the Epidemiology Work Group's "Draft I.R.L.G. Guideline for Documentation of Epidemiologic Studies" (34). The definition has been modified to meet the proposed standard's need to define a minimal set of criteria for evaluating studies that have already been performed. Consequently, while OSHA recognizes that some of the elements that have been dropped from the present definition would have enhanced the utility of some of the scientific studies that will be evaluated under this standard, their omission should not preclude consideration of such studies. The Agency invites comments on whether additional study elements should be required.

In addition, an alternative route of identifying an "adequate and well-controlled study" was provided to ensure that past studies which have achieved general professional acceptance would be considered in the evaluation. The Agency believes that publication of a study in a "peer review" journal (paragraphs (a)(1)(vii) and (a)(4) of Appendix B) provides sufficient scientific credibility as to warrant the standard's requirement that it be considered in the evaulation process. Such studies must still demonstrate "statistical significance" and be accepted by a subgroup of experts to warrant a positive hazard determination.

The Agency requests comments on its determination that a single adequate and well-controlled study shall trigger a positive hazard determination. In coming to this conclusion, OSHA weighed the possibility that there would be some false positive hazard determination under this approach, i.e., positive studies later invalidated, against the certainty that workers would experience prolonged exposures to hazardous chemicals if confirmation were required. NIOSH indicated the following periods required to complete a second study, assuming it is begun after the first study becomes available:

Table 12.—*Completion Times for Various Types of Epidemiologic Studies*

Types of study	Average time to completion (years)
1. Retrospective cohort mortality studies	[1] 3.9
2. Health hazard evaluations	.63
3. Case-control studies	.5

[1] Ten in period 1978-80.

Source: Personal communication from Mr. Richard Lemen, NIOSH, 1980.

Of course, this table seriously underestimates the actual duration of continued exposure. The capacity of the scientific community to undertake major epidemiologic studies is limited. Therefore, considerable time may elapse before a confirming study may even be begun. In view of the extraordinary shortage of trained epidemiologists and toxicologists, delays in undertaking studies will likely be substantial.

c. *Case Studies Use.* The proposed standard requires reliance on well-documented case studies (paragraphs (a) (2) and (b) (3) of Appendix B). OSHA believes that such studies should serve as a basis for a positive hazard determination, e.g., vinyl chloride monomer exposure and resultant hemangiosarcoma. In response to a request from OSHA, NIOSH investigated two relevant issues: 1) the historical utility of case reports and 2) the current utility of case reports that would be generated from the required literature search. OSHA invites comments on the issue of reliance on case reports for Category B hazard determinations. The following are summary tables:

Table 13.— *Historical Utility of Case Reports—Selected Examples*

I. Substances first identified by case reports in occupational settings which are now widely accepted as hazardous to health
- Hydrogen Sulfide
- Methyl Alcohol
- Carbon Disulfide
- Nitrogen Oxides
- Asbestos
- Benzene

II. Hazardous substances called to attention following case reports of occupational exposure but for which preliminary animal data existed
- Vinyl Chloride
- Bis (chloromethyl) ether
- DBCP (dibromochloropropane)

Table 13.— *Historical Utility of Case Reports—Selected Examples*—Continued

III. Hazardous Substances first identified as carcinogens by case reports of occupational exposures which have been supported by epidemiological studies
- Chromium
- Nickel
- Arsenic
- Benzene

IV. Hazardous Substances first identified from case reports of occupational exposure which have not been addressed by epidemiological studies
- DMAPN (dimethylaminopropionitrile)
- Sodium Hydroxide

V. Substances first identified as hazardous by case reports which were later discredited by epidemiological and/or animal studies
- Aniline
- Fibrous Glass
- Hair Spray

Table 14.—*An Assessment of the Appropriateness of the Use of Case Reports for the Determination of a Hazard*

	Number of case reports published	
	1960–1976	1977–1986
Case reports reviewed (5% sample)	10 (100%)	14 (100%)
Causal relationship sufficiently established	8 (80%)	11 (79%)
Reported situation amenable to labeling	7 (70%)	10 (71%)
Reported situation possibly covered by the standard proposed by OSHA	8 (80%)	7 (50%)
First indication of the hazard	3 (30%)	4 (29%)
Based Only on the Case Reports Which Were the First Indication of the Hazard		
Causal relationship sufficiently established	3 (100%)	3 (75%)
Reported situation amenable to labeling	2 (66%)	3 (75%)
Reported situation possibly covered by the standard proposed by OSHA	2 (66%)	3 (75%)
May possibly indicate labeling is appropriate	2 (66%)	1 (25%)

Source: Personal communication from Mr. Richard Lemen, NIOSH, 1980.

The Agency believes that these data clearly support the necessity for including case reports as one basis for a positive hazard determination, especially in view of the probable difficulty in mounting epidemiologic studies to confirm the case reports. The Agency invites comments on the advisability of its decision to require utilization of case reports.

d. *Statistical Significance.* The significance level has been set at 0.10 rather than the customary 0.05 level (paragraph (a)(6) of Appendix B). While the increased Type I error results, by definition, in an increase in false positive hazard determinations, there will be a corresonding decrease in false negative determinations. While the Agency believes that this is an appropriate strategy for a preventive

health standard, it recognizes that the significance level chosen is non-traditional and invites testimony addressed to this issue.

Testimony is also invited on the related question of whether the criteria which govern the use of inconsistent data are advisable (paragraph (c) of Appendix B). For example, the power (0.80) of data to detect a hazard of a specified magnitude (25% increase in risk) is consistent with that of the Cancer Policy (29 CFR 1990.144 (a), 1980). However the magnitude of the risk that must be detectable by the negative study has been decreased from 50% to 25%. The Agency believes that, given data or studies that indicate a potential hazard, the worker should be informed of the potential hazard unless extremely reliable negative data are available.

e. *Expert Opinions.* The final element of the data evaluation scheme requires that a substance or mixture be classified as a hazard if a subgroup of experts accepts the conclusion of statistical significance for results in an adequate and well-controlled study (paragraph (b)(1) of Appendix B) or accept the cause-effect relationship demonstrated in case report(s). This acceptance may be manifested in a variety of ways and a rebuttable assumption of such acceptance is established when at least one qualified independent expert has endorsed the results (paragraph (d) of Appendix B).

The Agency understands that this position regarding the role of experts is different from that which prevails in the course of adjudication. However, as a matter of policy, OSHA believes that labeling a substance or mixture as a hazard should not require support from the majority of experts. Such an *ad hoc* choice of consultants does not guarantee that the entire spectrum of professional opinion is adequately represented. Rather, the Agency believes that a substance or mixture should be classified as a hazard if evidence of the specified quality is available, two or more experts (including the author) concur in the conclusion that a hazard is present, and strong evidence to the contrary is not available at the time of hazard determination (paragraph (d) of Appendix B). The Agency invites comments on this approach.

C. Regulatory Issues

1. *"Performance" vs. "specification" requirements.* As previously stated in the discussion of hazard evaluation procedures, OSHA believes that employers should be required to follow specified procedures where established scientific principles are applicable. OSHA is not opposed, however, in appropriate technical areas, to setting goals ("performance" standards) and allowing employers to reach those goals by whatever means they consider practicable. For instance, the proposal sets performance standards for labeling piping systems (paragraph (r)) and labeling continuous operations (paragraph (t)(8)). OSHA will consider performance standards in other areas where it can be shown that specifying particular procedures is unnecessary, and invites comment on this issue.

2. *Content and format of labels and placards.* The proposed standard would require chemical identification and hazard warning information on labels and placards for hazardous chemicals. This is because OSHA believes that labeling is the most immediate and reliable way of communicating hazard related information to workers.

Some indusrty representatives have expressed concerns about this requirement. they believe that it will be difficult to include all required information in readable form on normal size labels. There have also been suggestions from both industry and representatives of workers that the hazard warnings set out in Appendix C are either too comprehensive or not comprehensive enough. OSHA invites comments upon all aspects of the label format requirements of the proposed standard. OSHA also invites alternative proposals for labeling format.

As previsouly stated, the requirement for disclosure of chemical identity is closely related to the trade secrets issue. Some industry representatives have suggested that confidentiality for trade secrets might be enhanced if chemcial identity of hazardous materials were maintained in reference books stored centrally and made available to workers upon request. In this way, employers could keep track of those receiving potential trade secret information and require confidentiality agreements from those to whom trade secret information is disclosed.

Advocates for workers have opposed this alternative to labeling on several grounds. First, it is cumbersome. The worker must make a request to see information he or she wishes to check. Second, the worker must leave the work area in order to check such information. Third, the employer knows which employees are making requests concerning the identity of hazardous materials, and unions fear this may lead to reprisal and harassment. OSHA invites comment on whether possible enhancement of confidentiality afforded by a reference book system outweighs the drawbacks of removing a requirement for workplace labeling.

3. *Disclosure of chemical identity in labels shipped in commerce.* A closely related issue involves the inclusion of CAS numbers on labels being shipped downstream to industrial users. The proposed standard requires that labels indicating the chemical identity (the CAS number) of hazardous chemicals be placed on containers before being shipped downstream to workplaces where such substances and mixtures will be used (paragraph (o)). Industry representatives have stated that this requirement will only compound the trade secrets problem because the identity of hazardous trade secret chemicals will be open to scrutiny, not only in workplaces, but in commerce to other employers who may be competitors. Worker representatives have countered that without a requirement that labels be in place when containers reach a downstream workplace, there is no certainty that containers of hazardous materials in downstream workplaces will be speedily and accurately labeled.

The proposed policy to require labeling before hazardous materials are shipped is grounded on several preliminary conclusions. OSHA has concluded that once manufacturers and importers are required to disclose the chemical identity of hazardous substances to both their own employees and the employees of downstream users, the incremental damage to confidentiality caused by requiring chemical identification to appear on labels in commerce is relatively inconsequential. OSHA has also concluded, in the absence of evidence to the contrary, that there is a substantial possiblity for tardy and inaccurate labeling if labels are not required to be in place upon arrival at a downstream workplace. OSHA invites comments on these points.

4. *Exclusion of small containers.* The proposed standard provides for certain exemptions from labeling requirements applicable to containers of hazardous materials in the workplace (paragraphs (u)(i), (gg)(12)). Of particular concern may be the exemption for containers of 5 gallons (19 liters) or less in volume which are used to transfer hazardous materials from one container to another in a particular work area. OSHA requests comments concerning the sizes and purposes of containers which should be exempted from labeling requirements.

5. *Access to records and documents required by the standard.* The proposed standard would provide access to a number of types of records and

documents by workers, their designated representatives, their unions, and OSHA and NIOSH (paragraphs (cc) and (dd)). In addition, the standard requires manufacturers and importers to maintain separate files containing the materials relevant to the hazard evaluation for each substance and mixture they produce or import (paragraph (m)). The material in these files is to be made available on request to employees and former employees in work areas where the substance or mixture is or was present (paragraph (dd)). In the event a firm goes out of business, the standard provides for the transfer of documents and records to NIOSH (paragraph (ee)).

OSHA believes that maintenance of the specified documents and records is essential to the ability of workers to protect themselves from workplace hazards for several reasons. First, these documents and records may provide important information relevant to chemical hazards which is not required to be on labels. Second, access to the materials upon which a manufacturer or importer bases hazard evaluations provides workers and their representatives the means to verify the determination made. Likewise, these materials provide OSHA with the ready documentation intrinsic to efficient enforcement of the standard.

The benefits of the access and record keeping provisions of the standard must be weighed against the burdens these provisions will impose upon importers, manufacturers, and industrial users. Information presently available to OSHA indicates that in some workplaces at least some of the material covered by the access and record keeping provisions of the standard is presently made available. Whether filing systems similar to those proposed by the standard are in general use is less clear.

Comments on a number of issues would be helpful to OSHA in making a jugment as to the adequacy of its proposals concerning access and recordkeeping. These include:

The nature of the burden these provisions will place upon industry, with particular reference to existing industry practices in the access and recordkeeping areas;

The use to which information to which access is provided by the proposed standard will be put by workers and their representatives;

Whether employers who use chemicals should be entitled to inspect the records and documents of manufacturers and importers pertaining to those chemicals;

Whether the classes of persons and groups to whom access to records and documents are granted should otherwise be expanded or limited; and

Suggestions for any alternative access and record keeping mechanisms which would reduce the burden on industry, or make access to information by workers easier or more efficent.

6. *Worker access to safety data sheets.* The proposed standard would provide material safety data sheets (if they exist) to workers upon request. There is no requirement that an employer affirmatively make copies available to each worker in the workplace. This provision is intended to minimize the administrative burden upon employers of providing copies in every work area.

Representatives of workers have objected to such a provision, claiming that to require workers to request these documents will leave workers open to employer harassment and discrimination. These representatives would prefer that copies of relevant material safety data sheets be posted in each work area. They also suggest that additional copies be made available in work area locations where they can be picked up without a specific request. Finally, these representatives have stated that worker health and safety requires that these documents be available for immediate inspection on the job where necessary.

OSHA does not have before it specific evidence that would justify the allegation that workers who request documents will be harassed or discriminated against. Nor does OSHA have before it evidence of the need for material safety data sheets to be immediately available on the job. OSHA invites comments on these issues.

7. *Material safety data sheets.* The proposed standard requires that, where available, copies of material safety data sheets (MSDS) for hazardous substances and mixtures be given to workers and their representatives upon request (paragraph (cc)). The proposed standard does not, however, require that manufacturers and importers of hazardous substances and mixtures produce an MSDS for each hazardous substance and mixture. Nor does the proposed standard define the content of any MSDS a manufacturer or importer decides to produce (see the definition of an MSDS in paragraph (gg)(29)).

OSHA chose to impose neither of these requirements because, under the proposed regulation, the MSDS is not the primary vehicle for communicating essential hazard related information to workers. On this assumption, to have imposed such requirements would have put a large and unjustifiable burden upon industry.

OSHA invites comments on whether the MSDS should play a more prominent role than presently contemplated in the information system proposed under the hazard identification standard. If so, OSHA also invites comment on whether a MSDS should be produced under some defined format for every hazardous substance and mixture to be used in the workplace.

8. *Substance-employee identification lists.* In developing this proposal, OSHA very seriously considered requiring manufacturers and industrial users to develop substance-employee identification lists for each work area. Such lists would provide a cross-reference between the hazardous chemicals present in a given work area and the identities of the employees working in the area.

The purpose of such a listing requirement would be to give workers an overall picture of the hazardous chemicals present in the areas in which they work, and which might, therefore, adversely affect their health. If required to be preserved for extended periods of time, e.g., 30 years, these lists would also provide an accurate record of potential chemical exposures affecting a worker over time, although the lists would not establish quantitative levels of exposure. This information, in turn, could provide epidemiologists valuable assistance in tracking down potential sources of occupational disease.

The costs and administrative burden connected with the creation and long term preservation of substance-identification lists would not be insubstantial. Yet, as the Regulatory Analysis of the proposed standard shows, a requirement for such lists may well yield results which dramatically increase the benefits of the hazard identification in terms of improved worker health and safety over time.

OSHA did not include a requirement for the development and preservation of substance-employee identification lists because while they potentially would establish a record of basic evidence essential to determining the effects of hazardous chemicals with precision, the extent of the burden they would impose upon manufacturers and industrial users is not yet clear. In particular, OSHA is uncertain about the burden development and maintenance of such lists would place upon downstream users of chemicals, such as automobile manufacturer, whose operations tend to be labor-intensive and to use thousands of chemicals. This type of industrial structure would obviously compound the difficulty of tracking and cross-referencing chemicals and employees, but to what degree is unknown. On the

other hand, these employers, as well as others, may now have in place systems for keeping track of chemicals and employees which might be adapted to the same use as substance-employee identification lists, or might at least reduce the burden of putting substance-employee identification lists in place.

Accordingly, to determine whether a requirement for substance-employee identification lists should be incorporated in the final standard, OSHA invites comment upon the uses to which workers, their representatives, governmental agencies, and medical researchers would put the information provided by substance-employee identification lists. OSHA also invites comments upon the burden which compilation of such lists would impose upon industry, with particular reference to the extent industry presently compiles and maintains similar information.

9. *The need for generic training requirements.* The proposed standard does not include any requirement that workers be trained to use the hazard identification information communicated to them. This is not because OSHA believes that training is unimportant to the overall effort to make workplaces healthful and safe. It is because OSHA sees the communication of hazard-related information and worker training as distinct tasks which are not necessarily interdependent for the provision of meaningful benefits. Thus, although the usefulness of hazard related information would undoubtedly be enhanced by appropriate training, such information is extremely helpful to workers in and of itself. Moreover, OSHA is aware that some employers already provide employees with adequate training in hazard identification.

Furthermore, OSHA believes there is a major advantage in creating a comprehensive communication and training system in several stages. This procedure minimizes the burdens upon industry by spreading cost and effort over time, while still providing substantial benefits to workers with the promulgation of each component of the overall system. OSHA believes this to be a sound approach, and comment on this view is invited.

10. *Impact on small business.* OSHA recognizes that the proposed standard may impose greater burdens on small business than it does on large firms. For example, as mentioned, some large chemical manufacturers have indicated that they already follow chemical evaluation procedures similar in scope to those proposed in the standard. Consequently, the burden in additional cost and effort which implementation of the standard would impose such firms is less than that upon smaller firms which have no such procedures in place.

The proposed standard attempts to minimize the differential burden upon large and small firms by establishing a repository for hazard warning information and by delaying the dates by which small manufacturers and importers must complete evaluation of chemicals they produce or import (paragraphs (w) and (ii)). The repository for hazard warning information will contain all information relevant to the results of the hazard evaluation for any chemical. This information will be available to manufacturers and importers. Delaying the compliance dates for small manufacturers and importers will allow them to utilize the hazard evaluations made by large manufacturers or importers for chemicals they also produce or import.

There may be other provisions which would ease the burden upon small business without sacrificing the comprehensiveness and accuracy on which the hazard identification standard relies to help protect worker health. OSHA invites comments and suggestions regarding these.

11. *Miscellaneous issues.* Finally, there are several specific issues upon which comment in response to publicly released preliminary drafts has been sparse, but which may be controversial. Accordingly, OSHA seeks comment on the following:

Is the partial exemption from regulation which OSHA has allowed for research chemicals in paragraph (f) appropriate?

Are the special enforcement provisions OSHA has developed in paragraph (hh) adequate?

Should the compliance dates mandate by paragraph (ii) be either shortened or legthened?

Are there measures to assure the communication of updated hazard related information preferable to those proposed in paragraphs (z)–(aa)?

V. Legal Authority

This notice of proposed rulemaking is being published in conformity with the requirements of section 6(b)(2) of the Occupational Safety and Health Act, 29 U.S.C. 655(b)(2), for publishing a proposed rule promulgating an occupational safety and health standard in the **Federal Register**, and section 4(b) of the Administrative Procedure Act, 5 U.S.C. 553(b) regarding the publication of notices of proposed rulemakings in the **Federal Register**.

Authority for issuance of this standard is found in sections 6(b) and 8(g)(2) of the Act, 29 U.S.C. 655(b) and 657(g)(2). Section 6(b) governs the issuance of an occupational safety and health standard, which is defined in section 3(8) of the Act, 29 U.S.C. 652(8), as:

> [A] standard which requires conditions, or the adoption or use of one or more practices, means, methods, operations, or processes, reasonably necessary or appropriate to provide safe or healthful employment and places of employment.

The proposal comtemplates the issuance of a generic standard for the determination and communication of workplace hazards. This will require the adoption and use of one or more practices (e.g. labeling and access to records) which the secretary has reason to believe are reasonably necessary and appropriate to provide employees with safe and healthful employment and places of employment. The issuance of a generic standard is a necessary and effective means to carry out the purposes of the Act and to set priorities under the Act whenever the Secretary identifies common occupational health or safety problems which warrant common solutions (see the Cancer Policy standard, 45 FR 5002 et seq., and the access to exposure to exposure and medical records standard, 45 FR 35212 et seq.).

In particular, the proposed standard is a generic implementation of sections 6(b)(7) and 6(b)(5) of the Act, 29 U.S.C. 655 (b)(7) and (b)(5). Section 6(b)(7) pertinently states that:

> Any standard promulgated under this subsection shall prescribe the use of labels or other appropriate forms of warning as are necessary to insure that employees are apprised of all hazards to which they are exposed, relevant symptoms and appropriate emergency treatment, and proper conditions and precautions of safe use or exposure * * *.

Section 6(b)(5) authorizes the Secretary, in promulgating standards dealing with toxic materials or harmful physical agents:

> * * * to set the standard which most adequately assures, to the extent feasible, on the basis of the best available evidence, that no employee will suffer material impairment of health or functional capacity even if such employee has regular exposure to the hazard dealt with by such standard for the period of his working life * * *.

The philosophy of this proposal is to require the identification and disclosure of a hazard to employees as soon as the scientific literature reliably indicates such a conclusion, even though the evidence or OSHA's priorities may not yet warrant comprehensive regulation of the hazardous chemical. This is consistent with the Supreme Court's statement in *Industrial Union Dep't (IUD)* v. *American Petroleum Institute (API)*, 100 S.C.T. 2844, at 2872, fn. 66 that Congress had an "information-gathering function" in mind when it enacted section 6(b)(7), and that requirements of this nature may be imposed at lower levels than can currently be set for the regulation of a toxic substance on the basis of a finding of significant risk. This is so because it is necessary to "keep a constant check on the validity of the assumption made in developing the permissible exposure limit, giving it a sound evidentiary basis for decreasing the limit if it was initially set too high," id. at 2872, or, *a fortiori*, not at all.

The Secretary's authority to issue this proposed standard is further supported by the general rulemaking authority granted in section 8(g)(2) of the Act. This section empowers the Secretary "to prescribe such rules and regulations as he may deem necessary to carry out [his] responsibilities under the Act." The authority thus granted to the Secretary is as broad as the purposes of the Act, which include:

> Encouraging employers and employees in their efforts to reduce the number of occupational safety and health hazards at their places of employment, and to stimulate employers and employees to institute new and to perfect existing programs for providing safe and healthful working conditions (29 U.S.C. 651(b)(1)).
>
> Building upon advances already made through employee and employer initiative for providing safe and healthful working conditions (29 U.S.C. 651(b)(4)).
>
> Exploring ways to discover latent diseases, establishing causal connections between diseases and work in environmental conditions * * * (29 U.S.C. 651(b)(6))
>
> Encouraging joint labor-management efforts to reduce injuries and diseases arising out of employment (29 U.S.C. 651(b)(13)).

OSHA believes that this proposal, when issued in final form, will significantly advance these statutory goals.

In addition, Section 8(c)(1) of the Act, 29 U.S.C. 657(c)(1), authorizes the Secretary to issue regulations requiring employers to, "make, keep and preserve, and make available to the Secretary * * * such records regarding his activities relating to this Act as the Secretary * * * ¼deems½ necessary or appropriate for the enforcement of this Act or for developing information regarding the causes and prevention of occupational accidents and illnesses."

This proposal directs its major obligations toward those employers who are in the best position to develop information concerning chemical hazards or who are the primary users of chemicals in industry. To this end, "manufacturers" and "industrial users" are limited, by definition, to employers in Division D (Manufacturing), Major Groups 20–39, of the SIC Manual. In issuing standards, the Secretary may, under his section 6(g), 29 U.S.C. 655(g), priority-setting discretion apply the standard only to certain segments of business, thus "[giving] due regard to the urgency of the need for mandatory safety and health standards for particular industries, trades, crafts, occupations, businesses, workplaces or work environments."

The system of hazard identification and communication established by this proposal is also designed to impose the duty of hazard evaluation primarily on the manufacturers and importers who distribute hazardous chemicals in commerce. It would require the

disclosure of hazard related information not only to employees involved in the manufacture of chemicals but also to the employers to whom the chemicals are shipped for the benefit of the employees of such employers. This approach is similar to the one OSHA used in its benzene standard and which was approved in relevant part by the Court of Appeals in *American Petroleum Institute v. OSHA*, 581 F. 2d 493 (5th Cir. 1978) (standard vacated on other grounds), aff'd other grounds *sub nom. Industrial Union Dep't., AFL–CIO* v. *American Petroleum Institute*, 100 S. ct. 2844 (1980). The Court stated (*Id.* at 510):

> Placing the responsibility to warn downstream employees of concealed hazards on those upstream employers who create the hazards and know of the hazard is consistent with the remedial purpose of the Act and is within OSHA's broad authority to prescribe warning labels.

The Court was also influenced by the fact that the upstream employer's own employees were exposed to the same hazards and had to be warned via labels in any event. The responsibility to warn downstream employees placed on manufacturers by this proposal is not conceptually different than in benzene. As in benzene, their own employees are at least as much exposed to the chemicals which they must evaluate for hazards and provide warning for accordingly. OSHA recognizes, however, that importers may be in a different position than manufacturers since, if they are not themselves manufacturers, they may not have employees exposed in any significant way to the chemicals they ship and may have difficulty getting information concerning the identities and hazards of the chemicals they import from overseas' suppliers. Nevertheless, the proposal treats importers like manufacturers because it appears necessary that chemical identification and hazard warnings be developed at the earliest possible point in the chain of distribution after a chemical enters the Customs Territory of the United States to avoid a significant regulatory gap. Cf. *Mourning v. Family Publications Services*, 411 U.S. 356 (1973). OSHA specifically invites comment on how best to regulate hazardous imported chemicals so that employees may be informed of their chemical identity and warned of their hazards.

VI. Regulatory Analysis, Environmental Impact and Regulatory Flexibility Requirements

This proposal has been developed in conformity with pertinent laws, regulations, and executive orders. In particular, pursuant to Executive Order 12044 and the implementing Secretary's Order (44 FR 5370; January 26, 1979) OSHA has developed a Regulatory Analysis that extensively considers the expected benefits and economic impacts of the proposed standard, together with regulatory alternatives considered by the Agency. This document is available to the public from the following address: Docket Officer, Docket No. H–022, Room S–6212, U.S. Department of Labor, 200 Constitution Avenue, N.W., Washington, D.C. 20210, Tel: (202) 523–7894.

The Regulatory Analysis also serves as the Agency's draft Environmental Impact Statement (EIS) and Regulatory Flexibility Analysis. Under the National Environmental Policy Act, 42 U.S.C. 4321 *et seq.*, as interpreted by 40 CFR Part 1500 *et seq.* (Council on Environmental Quality) and 29 CFR Part 11 (Department of Labor), (45 FR 51187 *et seq.*; August 1, 1980) OSHA is required to prepare a draft EIS if it determines that a proposed action will have significant environmental effects. Because OSHA has identified significant, albeit beneficial, effects external to the workplace resulting from this proposed standard, the Regulatory Analysis has accordingly been written so that it may simultaneously function as the draft EIS. The consolidation of documents in this manner is explicity permitted by 40 CFR 1506.4 and 29 CFR 11.12(d). In addition to assuring that the substantive subject matter required of a draft EIS has been addressed, OSHA has also undertaken to comply with the notice and filing requirements set forth in the NEPA regulations, 40 CFR 1506.6 and 1506.9 and 29 CFR 11.12(d).

In like manner, the Regulatory Analysis also contains an analysis of the proposed standard's impact on small businesses, as required by the Regulatory Flexibility Act of 1980, Pub. L. 96–353. As detailed in the Regulatory Analysis and in the preamble above, OSHA has not only considered the effects on small businesses, but also has taken steps designed to lessen the compliance burden on manufacturers and importers with 250 or fewer employees. The decision at this time to limit the scope of the proposed standard primarily to employers engaged in manufacturing (Division D, SIC Major Groups 20–39)—thereby excluding construction and other non-manufacturing industries from its scope—may also be seen in part as an attempt to minimize the impact of the proposed standard on small businesses.

To the extent necessary, OSHA will issue a final EIS and Regulatory Flexibility Analysis at the time of the final standard. It will also make final determinations regarding the technical and economic feasibility of the standard. To assist it in this task, the Agency specifically invites comments on any issue relating to the benefits, costs and other economic impacts, environmental consequences, and impacts on small business of the proposed standard.

VII. Public Participation

Interested persons are invited to submit written data, views, and arguments on this proposed standard. These comments must be received on or before April 18, 1981, and submitted in quadruplicate to the Docket Officer, Docket H–022, U.S. Department of Labor, Occupational Safety and Health Administration, 200 Constitution Avenue, N.W., Room S–6212, Washington, D.C., 20210; (202) 523–7894. Written submissions must clearly identify the provisions of the proposal which are addressed, and the position taken on each issue.

OSHA is scheduling public hearings in several locations to permit interested persons an opportunity to submit oral testimony concerning the issues raised by the proposed standard, including the economic and environmental impacts. The dates and cities for these hearings are as follows:

Date Hearing Will Begin in City

1. May 26, 1981, Washington, D.C.
2. July 7, 1981, Houston, Texas.
3. July 21, 1981, Chicago, Illinois.
4. August 11, 1981, Philadelphia, Pennsylvania.
5. September 1, 1981, San Francisco, California.

The addresses for the location of the hearing in each city will be announced in the Federal Register at a later date.

Notices of Intention to Appear

All persons wishing to participate in the public hearings must file a notice of intention to appear, in quadruplicate, on or before May 1, 1981, addressed to Mr. Tom Hall, OSHA Division of Consumer Affairs, Docket No. H–022, Room N3635. U.S. Department of Labor, 200 Constitution Avenue, N.W., Washington, D.C. 20210; (202) 523–8024.

The notices of intention to appear must contain the following information:

(1) The name, address and telephone number of each person to appear;

(2) The capacity in which the person will appear;

(3) The approximate amount of time requested for the presentation;

(4) The specific issues that will be addressed;

(5) A detailed statement of the position that will be taken on each issue addressed; and

(6) Whether the party intends to submit documentary evidence and if so, a brief summary of that evidence.

Filing of Testimony and Evidence Before Hearing

Any party requesting more than 15 minutes for a presentation at the hearing, or submitting documentary evidence, must provide in advance the complete text of the testimony or documentary evidence to be presented. These texts shall be submitted in quadruplicate to the OSHA Division of Consumer Affairs, at the above address, and must be submitted by May 8, 1981.

These submissions will be available for inspection and copying at the OSHA Docket Office, Room S–6212, at the above address.

Each submission received will be reviewed to ascertain if the amount of time requested in the notice of intention to appear is appropriate. In those instances where the information contained in the submission does not justify the amount of time requested, a more appropriate time allocation will be made and the participant will be notified of the change. Any party who has not substantially complied with this requirement may be limited to a 15-minute presentation, and may be requested to return for questioning at a later time.

Conduct of Hearings

The hearings will begin at 9:30 a.m. with resolution of any procedural matters relating to the proceeding. The hearings will be conducted in accordance with 29 CFR Part 1911, allowing full development of the record and permitting all parties to exercise their rights of participation.

The hearing will be presided over by an Administrative Law Judge who will have all the powers necessary or appropriate to conduct a full and fair informal hearing as provided in 29 CFR Part 1911. Following the close of the hearing or of any post hearing comment period, the presiding Administrative Law Judge will certify the record to the Assistant Secretary of Labor for Occupational Safety and Health.

All written and oral submissions, as well as other information gathered by the Agency, will be considered in any action taken. The record of this rulemaking, including written comments and materials submitted in response to this notice and notices of intention to appear at the public hearings, will be available for inspection and copying in the Docket Office, Room S–6212, at the above address, between the hours of 8:15 a.m. and 4:45 p.m.

VIII. Authority and Signature

This document was prepared under the direction of Eula Bingham, Assistant Secretary of Labor for Occupational Safety and Health, U.S. Department of Labor, 200 Constitution Avenue, NW., Washington, D.C. 20210.

(Secs. 6(b), 8(c), and 8(g). Pub. L. 91–596, 84 Stat. 1593, 1599, 1600; 29 U.S.C. 655, 657; 29 CFR Part 1911; Secretary of Labor's Order No. 8–76 (41 FR 25059))

Signed at Washington, D.C. this 13th day of January, 1981.

Eula Bingham,

Assistant Secretary of Labor.

I. General

(a) Overview.
(b) Purpose.

II. Scope and Application

(c) Employers covered by the standard.
(d) Substances covered by the standard.
(e) Mixtures covered by the standard.
(f) Coverage of research materials.
(g) Coverage of non-hazardous substances and mixtures.
(h) Substances not covered by the standard.

III. Evaulation and Communication of Hazards—Duties of Manufacturers and Importers

(i) Evaluation of substances and mixtures for hazards.
(j) Categories of hazards.
(k) Determination of Category A hazards.
(l) Determination of Category B hazards.
(m) Maintenance of hazard evaluation files.
(n) Deletion from hazard evaluation files of trade secret information.
(o) Information to accompany shipments.

IV. Workplace Requirements

(p) Responsibility to determine hazards—industrial users and suppliers.
(q) Workplace labels for hazardous substances and mixtures.
(r) Workplace labels or placards—piping systems.
(s) Hazard warning labels of other agencies.
(t) Label and placard display requirements.
(u) Exceptions from workplace labeling and placarding requirements.
(v) Labeling duties of other employers.

(ii) Compliance dates.
(jj) Appendices.
(kk) Effective dates.

I. General

(a) *Overview.*

Paragraphs (a) and (b) of this standard do not themselves impose requirements on employers but are intended to set forth the general purpose of this standard and to summarize (with appropriate cross-references) the major provisions of the standard which implement that purpose.

This standard establishes a system designed to communicate to workers and employers essential information concerning the hazards of workplace chemicals. Chemicals are classified under the standard as either substances (paragraph (gg)(40)) or mixtures (paragraph (gg)(30)). Employers covered by the standard generally fall into four categories: manufacturers (paragraph (c)(1)(i)), importers (paragraph (c)(1)(ii)), suppliers (paragraph (c)(1)(iii)), and industrial users (paragraph (c)(1)(iv)). Manufacturers and industrial users covered by this standard are those whose establishments are covered by Division D (Manufacturing), Major groups 20–39, in the most recent revision of the Standard Industrial Classification Manual; Executive Office of the President-Office of Management and Budget. In addition, other employers (i.e. those which fall under other SIC categories) are required to leave labels on containers they receive unless or until the container is put up for retail sale (paragraph (v)).

This standard requires (1) the evaluation of substances and mixtures to determine whether they are hazardous according to the criteria specified in the standard (paragraph (i)-(1); Appendices A and B) and (2) certain regulatory actions to be taken with respect to those substances and mixtures which are determined to be hazardous. The responsibility for hazard evaluation is placed on the manufacturers or importers of a substance or mixture because they are in the best position to make such an evaluation. The standard identifies 17 different kinds of hazards which must be evaluated (paragraph (gg)(22)). The evaluation procedures of the standard require manufacturers or importers to make use of information available in

their own records and to search relevant scientific literature for evidence of those hazardous (paragraphs (k)–(l)). Appendices A and B of the standard specify the accepted scientific principles which are to be followed when evaluating the evidence indicating a possible hazard. The evaluation procedures of the standard, however, do not require manufacturers and importers to perform any tests to determine the hazardousness of a substance or mixture.

Once a substance or mixture is determined by a manufacturer or importer to be hazardous under the standard, the standard requires each manufacturer and industrial user to:

(1) Label every container of every hazardous substance in the workplace with the precise chemical identity of its contents, and with appropriate hazard warnings, (paragraph (q) and Appendix C);

(2) Label every container of a mixture with the precise chemical identities of the constituent chemicals which are or may be hazardous, and with appropriate hazard warnings (paragraph (q) and Appendix C);

(3) Provide employees with any available material safety data sheets concerning the dangers posed by hazardous substances and mixtures in the workplace (paragraph (cc)); and

(4) Update the information provided to employees as new information about hazards becomes available (paragraphs (x)–(aa)).

To provide the information which industrial users need to protect their employees, the standard requires manufacturers and importers to:

(1) Maintain files (i.e. references, studies, reports or other documents used in the hazards evaluation procedure) on all substances and mixtures they manufacture or import (paragraph (m));

(2) Assure that the appropriate chemical identity and hazard warning labels are affixed to containers that are being shipped to industrial users and the suppliers of industrial users (paragraph (o)); and

(3) Provide with the first shipment to an industrial user or supplier of an industrial user one copy of any safety data sheet which the manufacturer or importer has developed concerning the hazards posed by the substance or mixture being shipped (paragraph (o)(6)). The standard, however, does not require safety data sheets to be developed or published if they do not otherwise exist.

To assure that industrial users receive the chemical identification and hazard warning information developed by the manufacturer or importer, the standard requires suppliers to forward this information which they receive from manufacturers or importers with their shipments of hazardous substances and mixtures to industrial users and to other suppliers of industrial users (paragraph (o)(5)). The standard permits industrial users, for the purposes of complying with their labeling and placarding duties, to rely on the hazard-related information which they receive from manufacturers, importers or suppliers. (paragraph (p)).

The standard requires that material safety data sheets and files containing hazard determination references and documents must be preserved for specified periods of time. (paragraph (bb)). Access to these records is generally provided to employees (including former employees), their designated representatives (including unions with collective bargaining rights in the workplace), OSHA and NIOSH (the National Institute for Occupational Safety and Health, Department of Health and Human Services). (paragraphs (cc) and (dd)). The standard provides for the transfer of these records when an employer subject to its recordkeeping provisions goes out of business (paragraph (ee)). The standard also requires each manufacturer and importer to send to OSHA, after completing a hazard determination on a substance or mixture, either a notice stating that the substance or mixture has not been found to meet the criteria for a hazard or a copy of the appropriate hazard warning for the substance or mixture. This information will be kept in a central repository and made available to other employees on request (paragraph (w)). The compliance dates of the standard have been extended by three months for manufacturers and importers with less than 250 employees so that they may take advantage of the hazard evaluations on file with OSHA (paragraph (ii).)

(b) *Purpose.*

The system of hazards evaluation and communication established by this standard will, by making information about workplace hazards generally available to workers, their representatives, OSHA and NIOSH, yield direct and indirect improvements in occupational health. Container labels will give workers immediate access to the identities and dangers of the hazardous substances and mixtures with which they work directly. Material safety data sheets will provide workers and their representatives with detailed information about the properties and handling of hazardous substances and mixtures, supplementing the information on hazard warning labels. Hazard evaluation files will provide the documentation to enable workers and their representatives to make their own hazard determinations and to check the employer's determinations.

II. Scope and application

(c) *Employers covered by the standard.*

(1) This standard applies to any employer who:

(i) Is engaged in the manufacturing or processing of a substance or mixture for distribution in commerce and whose business is covered by Division D (Manufacturing), Major Groups 20–39, in the most recent revision of the *Standard Industrial Classification Manual*, Executive Office of the President—Office of Management and Budget (hereafter "manufacturer"); or

(ii) Imports a substance or mixture into the Customs Territory of the United States (i.e., the 50 States, Puerto Rico, and the District of Columbia), and is the first person who, knowing the substance or mixture will be imported, controls the identity and total amount of the substance or mixture to be imported (hereafter "importer"); or

(iii) Receives a substance or mixture regulated by this standard and distributes such substance or mixture to an industrial user or another supplier of an industrial user in unaltered form, whether or not in its original container (hereafter "supplier"); or

(iv) Uses a substance or mixture received from a manufacturer, importer, or supplier, and whose business is covered by Division D (Manufacturing), Major Groups 20–39, in the most recent revision of the *Standard Industrial Classification Manual*, Executive Office of the President—Office of Management and Budget (hereafter "industrial user").

(2) This standard applies to employers who are neither manufacturers, importers, suppliers, or industrial users only to the extent set forth in paragraph (v).

(d) *Substances covered by the standard.*

(1) Any substance covered by this standard must be evaluated in accordance with paragraphs (i)–(1) and Appendices A and B.

(2) This standard applies to any substance which is:

(i) Listed in the Toxic Substances Control Act Chemical Substance Inventory, including UVCBs; or

(ii) A pesticide; or

(iii) A food additive, a prior sanctioned food additive, a color additive, cosmetic or a drug; and includes

(iv) A by-product, intermediate, or impurity known to be present during the manufacturing or processing of a substance or mixture. Impurities include impurities in food and tobacco.

Note.—There is necessarily a continuum between "intermediates," "by-products," and "impurities." Any material within this continuum is a material subject to regulation under this standard.

(e) *Mixtures covered by the standard.*

(1) Any mixture covered by this standard must be evaluated in accordance with paragraphs (i)–(1) and Appendices A and B.

(2) This standard applies to any mixture all of whose constituent substances are covered by paragraph (d).

(f) *Coverage of research materials.*

(1) Substances or mixtures used for scientific experimentation or analysis, or chemical research, or product development are covered only by the requirements to maintain a hazard evaluation file for each such substance or mixture (paragraph (m)) and to provide access to such file (paragraph (dd)), provided that:

(i) The quantities used are no greater than reasonably necessary for such purposes; and

(ii) The substance or mixture is used by, or directly under the supervision of, an individual assigned to conduct research or product development; and

(iii) The importer, manufacturer, or industrial user conducting, sponsoring, or initiating the experimentation, analysis, research, or product development, uses the substance or mixture only for these purposes and not for any commercial application, and

(iv) The substance or mixture is not known to be used by any other person for any commercial application.

(g) *Coverage of non-hazardous substances and mixtures.*

Any substance or mixture which is determined not to be hazardous under the criteria of paragraphs (i)–(1) and Appendices A and B is regulated only to the extent specified in paragraphs (o)(4), (bb) and (dd)–(ee).

(h) *Substances not covered by the standard.*

(1) This standard does not apply to:

(a) A source material, special nuclear material, or by-product material as defined in the Atomic Energy Act of 1954, 42 U.S.C. 2014 *et. seq.*, and the regulations issued there under; or

(b) Food or tobacco; or

(c) Wood in any of its physical forms need not be evaluated for flammability.

(2)(a) An importer need not evaluate any substance if it is to be distributed directly or indirectly in unaltered form to:

(i) A workplace covered by this standard for personal use by employees; or

(ii) A destination other than a workplace covered by this standard.

(b) An importer who does not know the contemplated use or ultimate destination of a substance must evaluate such substance for hazards.

III. Evaluation and Communication of Hazards—Duties of Manufacturers and Importers

(i) *Evaluation of substances and mixtures for hazards.*

(1) Each manufacturer and importer of a substance covered by this standard shall determine whether that substance is to be regulated as a hazard in accordance with the requirements of paragraphs (j)–(l) and the procedures set forth in Appendices A and B.

(2) The manufacturer or importer of a mixture shall determine that it poses the hazards of its constituent substances if:

(i) The mixture contains a constituent substance in an amount of at least 0.1% (by weight) which is determined to be a carcinogen, unless the mixture as a whole is determined not to be a carcinogen (Appendices A and B); or

(ii) Any of the constituent substances of the mixture in an amount of at least 1.0% (by weight) meets the definition for one or more Category A or Category B hazards, and the mixture as a whole cannot be evaluated for that Category A or B hazard because of a lack of adequate information about the mixture's effects.

(3) If there is adequate information (Appendix A) to evaluate a mixture for a particular Category A or Category B hazard, the mixture shall be determined to be hazardous if, evaluated as a whole, it meets the definition of such a hazard. In such case, its constituent substances need not be evaluated for the same hazards.

Note.—For purposes of paragraphs (2) and (3), "adequate information" means studies or data which meet the requirements of Appendices A and B.

(4) Where a hazard can be traced to a general chemical structure (i.e., a chemical family), but not to a particular substance, the most specific chemical structure to which the hazard can be traced, and which the mixure contains in an amount of at least 1.0% (by weight), shall be treated for purposes of this standard as a substance.

(j) *Categories of hazards.*

An importer or manufacturer shall determine hazardous properties of substances and mixtures under two distinct sets of criteria and procedures. To reflect this fact, hazardous properties have been grouped in two categories, "Category A" (physical hazards) and "Category B" (health hazards) according to the hazard determination criteria and procedures by which they are governed. The hazards in each category are set out under the definition of "hazardous," under paragraph (gg)(22).

(k) *Determination of Category A hazards.*

A Category A hazard exists if:

(1) The substance or mixture possesses the physical or chemical properties specified in the definition for any Category A hazard as determined by the procedure set out in Appendix A; and

(2) The substance or mixture is present in the workplace under normal or emergency working conditions in the physical state and chemical form in which its hazardous properties were ascertained.

(l) *Determination of Category B hazards.*

A Category B hazard exists if:

(1) A substance meets the definition for any listed category B hazard as demonstrated by the procedures set out in Appendices A and B; and

(2) The substance or mixture is present in the workplace under normal or emergency working conditions in the chemical form in which its hazardous properties were ascertained.

(m) *Maintenance of hazard evaluation files.*

Each importer or manufacturer must maintain and make available, for examination and copying (see paragraph (dd)), a separate hazard evaluation file for each substance and mixture in the workplace. Each file shall contain all publicly unavailable documents, and a list of all publicly available documents and their sources, submitted to or in the possession of the importer or manufacturer concerning the substance or mixture relevant to the hazard determination process.

(n) *Deletion from hazard evaluation files of trade secret information.*

(1) An importer or manufacturer may delete from any publicly unavailable document produced for an employee, former employee, or certified or recognized collective bargaining agent, trade secret information which discloses manufacturing processes, or which discloses the percentage of a substance in a mixture.

(2) An importer or manufacturer may also delete from any publicly unavailable document produced for an employee, former employee, designated representative, or collective bargaining agent, trade secret information which discloses the chemical name of CAS number of a substance or a mixture:

(i) Where the importer or manufacturer has determined that the substance or mixture to which such document pertains is not hazardous; or

(ii) Where the importer or manufacturer has not yet determined whether such substance or mixture is hazardous; or

(iii) Where the substance or mixture is used solely in research as described in paragraph (f).

(3) Information which an importer or manufacturer is required to disclose to any agency of the federal government, or to any state or subdivision of a state, and which is available to competitors or the public without compensation to the provider of the information, shall not be considered "publicly unavailable" information entitled to trade secret status.

(o) *Information to accompany shipments.*

(1) No shipment of a hazardous substance may be sent by a manufacturer or importer to an industrial user or supplier, unless each container is labeled with the following information:

(i) The common name of the substance;

(ii) The CAS number of the substance; and

(iii) The appropriate hazard warning label prescribed by Appendix C.

(2) No shipment of a regulated mixture may be sent by a manufacturer or importer to an industrial user or supplier, unless each container is labeled with the following information:

(i) The common name of the mixture;

(ii) The CAS numbers and common names of all hazardous constituent substances in a mixture listed in order of relative concentration, by CAS number, with the substance of greatest concentration being listed first; and

(iii) The appropriate hazard warning label prescribed by Appendix C.

(3) The chemical names of substances and constituent substances of mixtures may either be placed on labels prepared for shipment, or may be forwarded, with appropriate cross references to common names and CAS numbers, in a separate listing accompanying the shipment.

(4) No shipment of a substance or mixture determined not to be hazardous may be sent by a manufacturer or importer to an industrial user or supplier without a written statement that the substance or mixture has been evaluated in compliance with this standard and found not to meet the critiera for a hazard as defined by this standard. Any industrial user or supplier who receives such a statement must forward it with any shipment of such substance or mixture to any other industrial user or supplier.

(5) A supplier who receives a shipment from an importer or manufacturer accompanied by the information described in this paragraph shall carry forward such information in any further shipment using either the labeling or separate listing format.

(6) Each importer, manufacturer, or supplier shall supply with the first shipmetn of a hazardous substance or a hazardous mixture to any workplace of any industrial user or supplier, one copy of any available material safety data sheet concerning such substance or mixture.

(7) Each printing of a material safety data sheet must reflect the most current pertinent information in possession of the importer or manufacturer who supplies it.

(8) An importer or manufacturer who does not know the contemplated use or ultimate destination of a shipment shall forward information as required by this paragraph with the shipment.

(9) A shipment of a hazardous substance or mixture by an importer or manufacturer shall not be subject to the labeling requirements of this paragraph if another OSHA standard has specific labeling requirements affecting the substance or mixture different from those of this paragraph. In such cases, an importer or manufacturer shall label in accordance with the requirements of the specific standard and shall assure that the label remains affixed to the container when sent to an industrial user or supplier.

(10) A hazardous substance or mixture which has been finally processed to a solid state, whether originally a solid, liquid or gas, and is inert and not susceptible to decomposition in any workplace, shall be subject only to the requirements of paragraph (o)(4).

IV. Workplace Requirements

(p) *Responsibility to determine hazards—industrial users and suppliers.*

An industrial user or supplier receiving a shipment may rely upon the determination by a manufacturer or importer that a hazard does or does not exist as required to be forwarded by paragraph (o) with shipments of substances and mixtures. However, an industrial user who has actual knowledge of hazards posed by a substance or mixture generally, or as used in the workplace, which has not been communicated to the industrial user by the manufacturer or importer, must convey the information regarding such hazards, as required by this standard, to his or her employees.

(q) *Workplace labels for hazardous substances and mixtures.*

(1) Except as provided by paragraph (u), each manufacturer and industrial user shall ensure that each container of a hazardous substance in the workplace is labeled with the common name and CAS number of the substance within.

(2) Each manufacturer and industrial user shall ensure that each container of a hazardous mixture in the workplace is labeled with:

(a) The common name of the mixture.

(b) The common name(s) and CAS number(s) of the mixture's hazardous constituent substances, listing CAS number(s) first. Constituent hazardous substances shall be listed on the label in order of relative concentration with the substance of highest concentration being listed first.

(3) Each manufacturer and industrial user shall ensure that each container of a hazardous substance or mixture in the workplace is labeled with the appropriate hazard warning label indicated in Appendix C.

(r) *Workplace labels or placards—piping systems.*

(1) The hazardous contents of a piping system shall be indentified by labels or placards. Labels or placards shall be placed at reasonable intervals along the piping system in places accessible to employee view. Labels or placards shall show the common name, the CAS number, and the hazard warning for each hazardous substance and mixture flowing through the piping system.

(2) Whenever an employee is assigned to do maintenance or repair work on a pipe, the employee must be notified of at least the common name and the hazard warnings pertinent to the substance or mixture in the pipe.

(s) *Hazard warning labels of other agencies.*

(1) Each manufacturer and industrial user shall ensure that hazard warning labels affixed to containers of substances or mixtures to comply with the regulations of other Federal agencies are not removed or obscured after entering the workplace. Such labels need not be transferred to other workplace containers into which a substance or mixture is subsequently placed.

(2) In addition to the common names and CAS numbers required by paragraph (q), a manufacturer or industrial user may use labels affixed in accordance with requirements of the Department of Transportation, 49 CFR Part 172, and the Environmental Protection Agency, 40 CFR Part 162, in lieu of the hazard warnings required by paragraph (q) and indicated by Appendix C of the standard.

(t) *Label and placard display requirements.*

(1) A label must be displayed on, or securely affixed to, the surface of the container. For the purposes of this section, "securely affixed" means that a label can reasonably be expected to remain affixed and legible during foreseeable conditions and the period of use. If a hazardous substance or mixture is packaged in a container that has a separate inner liner, the hazard warning label must be securely affixed to the outer surface of the container and not to the inner liner.

(2) A label or placard must be prominently displayed. Prominent display shall be achieved by the use of distinct typography and colors that contrast sharply with the background, and in the use of suitable size, design, and placement. In addition, any label which is affixed to comply with this standard shall contain a statement to that effect.

(3) A label or placard must be clearly legible to a person with normal vision. A label or placard must not be obscured by any other marking on the container (such as advertising) that could substantially reduce its legibility.

(4) All required label or placard text must be printed in English, and may be printed in languages other than English as well.

(5) A label or placard may include additional hazard warning information not required by this section, provided that the additional information does not contradict or detract from the required information. Terms such as "safe," "non-toxic," or "harmless" shall not appear on the label or placard.

(6) Chemical identification and hazard warning components may be included on a single label or appear on separate labels.

(7) A manufacturer or industrial user who refills a labeled container of a hazardous substance or mixture must remove or mask the hazard warning label before refilling the container with another substance or mixture.

(8) A manufacturer or industrial user need not change labels or placards to reflect every stage of a continuous reaction or every change in the contents of a container or pipe, provided the manufacturer or industrial user adopts any alternative system or format which:

(i) Utilizes labels and placards;

(ii) Accurately conveys the same information as would changing individual labels or placards contemporaneously with changing the contents of the container or pipe;

(iii) Is immediately accessible to employees nearby; and

(iv) Assures that all employees assigned to work on pipes or their attachments, labeled or placarded under this paragraph, are informed at all times of the chemical identity and hazard warnings appropriate to the contents of such pipes or containers.

(u) *Exceptions from workplace labeling and placarding requirements of this section.*

A manufacturer or industrial user need not label workplace containers as required by paragraph (q) or use placards as provided for in paragraph (r) if:

(1) The container is five gallons (19.0 liters) or less in volume, is used to transfer hazardous substances or hazardous mixtures from labeled containers, and is intended only for use in the work area where the transfer occurs; or

(2) Another OSHA standard has specific labeling or placarding requirements affecting a substance or mixture which are different from those of paragraph (q), in which case the manufacturer or industrial user shall label or placard in accordance with the requirements of the specific standard; or

(3) The hazardous substance or mixture, whether originally a solid, liquid or gas, has finally been processed to a solid state and is inert and not susceptible to decomposition in the workplace.

(v) *Labeling duties of other employers.*

Each employer who is not a manufacturer, importer, industrial user or supplier, and who receives a container labeled in compliance with this section, shall not remove or obscure the label unless and until the container is actually put up for retail sale.

(w) *Label reference service.*

(1) Upon completion of the hazard determination for a substance a manufacturer or importer of such substance shall forward to the Assistant Secretary within 60 days of such determination either:

(i) Notice that the chemical substance has been evaluated and determined not to meet the criteria for a hazard as defined by this standard; or

(ii) Notice that the substance is hazardous.

(2) Each notice shall include the common name, the chemical name, and the CAS number of the substance in question.

(3) The notice for a hazardous substance must also include all hazard warning information required by this standard to appear upon the container label.

(4) The Assistant Secretary will maintain a registry of the information required to be reported under this paragraph.

(5) Any manufacturer or importer may have access to the notices submitted for any substance appearing in the registry. The manufacturer or importer requesting this information must identify a substance by either its chemical name or its CAS number. OSHA will not release any information concerning the common name or trade name of any substance, or the identity of any manufacturer or importer of a substance.

(6) Information obtained from the registry may be relied upon to comply with the hazard determination and hazard warning requirements of this standard. Users of the registry are, however, under a continuing obligation to ensure that hazard determinations and hazard warnings are up to date.

(7) OSHA will charge users of the registry a reasonable fee reflecting the cost to OSHA of providing the requested information.

V. Updating Hazard Information and Hazard Determinations

(x) *Duty to update—importers and manufacturers.*

(1) Whenever an importer or manufacturer acquires private or public information:

(a) Concerning new hazards a hazardous substance or mixture has been found to pose;

(b) Concerning additional information about the hazards such substance or mixture has been found to pose; or

(c) Indicating that a substance or mixture previously determined to pose a hazard does not pose such hazard, the hazard determination for such substance or mixture and the information pertinent to it shall be updated accordingly.

(2) The procedures governing the determination of hazards under paragraphs (i)–(1) and Appendices A and B shall govern the determination of new hazards under this paragraph.

(y) *Duty to update—industrial users.*

Whenever an industrial user has actual knowledge, contrary to the information previously received with the shipment of a substance or mixture, that the substance or mixture is hazardous, or poses hazards additional to those of which he or she was informed, the industrial user shall revise the hazard determination for use in the workplace. An industrial user need not forward the revised determination, or the information underlying it, however, unless the information underlying the revised determination was actually generated by the industrial user. Likewise, where an industrial user discovers new information about the hazards of a currently hazardous

substance or mixture, such information need to be forwarded only if actually generated by the industrial user.

(z) *Communication of updated hazard determinations and information.*

(1) Updated hazard determinations and hazard information generated or received by an importer or manufacturer shall be distributed promptly as follows:

(i) To each industrial user, or supplier, to whom the importer or manufacturer has supplied the substance or mixture to which the updated determination or information refers within the lesser of:

(A) The period from the effective date of this standard (see paragraph (kk)) to the date the updated determination was made or the updated information was acquired; or

(B) The 24 month period immediately preceding the date the updated determination was made or acquired.

(2) Updated determinations and information generated by an industrial user shall be distributed promptly to the importer, manufacturer, or supplier who last supplied the substance or mixture to the industrial user.

(3) A supplier who receives an updated determination or updated information shall distribute it to the last manufacturer or importer who supplied the substance or mixture to the supplier. In addition such determinations and information shall be distributed promptly to each industrial user and supplier of an industrial user to whom the supplier has supplied the substance or mixture to which the updated determination or information refers within the lesser of:

(i) The period from the effective date of this section (see paragraph (kk)) to the date the updated determination was made or the updated information was acquired; or

(ii) The 24 month period immediately preceding the date the updated determination was made or the updated information was acquired.

(aa) *Duties upon receipt of updated information.*

(1) Each manufacturer and industrial user shall promptly make updated hazard information available with all relevant material safety data sheets.

(2) Each importer, manufacturer, industrial user, or supplier shall promptly revise relevant labels and information to accompany shipments to reflect accurately updated hazard determinations.

VI. Recordkeeping and Access Requirements.

(bb) *Records preservation.*

(1) Each manufacturer and industrial user shall preserve a copy of a material safety data sheet (if any) until it is replaced by a more recent copy or until the hazardous substance or mixture to which it pertains is no longer present in the workplace.

(2) Each importer and manufacturer shall preserve the hazard evaulation files required by paragraph (m) for three years.

(3) Each manufacturer and industrial user shall preserve the statement that a substance or mixture has been evaluated and determined not to meet the criteria for a hazard as defined by this standard unless and until the substance or mixture to which it applies is determined to be hazardous or the substance or mixture is no longer present in the workplace.

(cc) *Access to records.*

Within 48 hours of a request for any hazardous substance or mixture in a work area, each manufacturer or industrial user shall supply a copy of any available material safety data sheet, and the chemical name of any hazardous substance or constituent hazardous substance of a mixture, appropriately cross-referenced to the common name and CAS number, in writing to:

(1) Any employee assigned to, formerly assigned to, or about to be assigned to that work area.

(2) Any former employee who was assigned to that work area.

(3) The designated representative of any such employee or former employee.

(4) The recognized or certified bargaining representative for any employee in the workplace.

(5) The Assistant Secretary.

(6) The Director.

(dd) *Access to hazard evaluation files.*

(1) Within 7 calendar days of a request, each importer or manufacturer shall make available for examination and copying all publicly unavailable reports, studies, or other documents used, or being used, to assess whether a substance or mixture is hazardous by this standard, or to develop material safety data sheets or hazard warnings. Such materials shall be made available to the same persons specified in paragraph (cc).

(2) Where reports, studies, or other documents used, or being used, by the importer or manufacturer for such purposes are publicly available, the importer or manufacturer may, within the same time limits, provide a list of each document source, for examination and copying, instead of the reports, studies, or other documents themselves.

(ee) *Transfer of records.*

(1) Whenever an importer, manufacturer or industrial user ceases to do business, he or she shall transfer all records subject to this standard to his or her successor. The successor shall receive and maintain these records.

(2) Whenever an importer, manufacturer or industrial user ceases to do business and there is no successor to receive and maintain the records subject to this standard, the importer, manufacturer, or industrial user shall notify present or former affected employees who leave the employer's employment after this standard becomes effective of their rights of access to records. Notification shall be given at least three (3) months prior to disposal of such records. Former employees shall be considered notified if written notification has been sent to their last known address with a request to forward such notification.

(3) Whenever an importer or manufacturer ceases to do business and there is no successor to receive and maintain records, or whenever an importer or manufacturer intends to dispose of any hazard evaluation files, the importer or manufacturer shall:

(i) Notify the Director in writing of the impending disposal of records at least three (3) months prior to the disposal of the records. Upon request by the Director, the importer or manufacturer shall transfer such records to NIOSH; or

(ii) Transfer the records to the Director if so required by a specific occupational safety and health standard.

(ff) *Duty of a manufacturer or industrial user to inform employee of right of access.*

A manufacturer or industrial user shall inform his or her employees of their rights of access to information under the standard. A manufacturer or industrial user may comply with this requirement using any reasonable format, except that:

(1) The information on access required by this paragraph shall be permanently displayed in an area readily observable to employees in each work area, and

(2) The display format shall contain the words "Worker's Right to Know" in conspicious lettering.

VII. Definitions.

(gg) *Definitions.*

(1) The following terms shall have the meaning contained in the Federal Food, Drug and Cosmetic Act, 21 U.S.C. 321 *et seq.*, and the regulations issued under that Act: "food," "cosmetic," "drug," "food additive," "prior sanctioned food additive," "food ingredient generally recognized as safe," and "color additive."

(2) "Access" means the right and opportunity to examine and copy.

(3) "Assistant Secretary" means the Assistant Secretary of Labor for

Occupational Safety and Health, U.S. Department of Labor, or designee.

(4) "By-product" means a substance or mixture produced without separate commercial intent during the manufacture or processing of another substance(s) or mixture(s). A "by-product" is covered by this rule whether or not it is volatile.

(5) "Carcinogen" means a substance or mixture which meets the definition of a Potential Occupational Carcinogen as specified in 29 CFR 1990.103 and qualified in 29 CFR 1990.143–.144, (45 Fed. Reg. 5282, *et seq.*, January 22, 1980) or is identified in a previous Occupational Safety and Health Administration regulation as a carcinogen (29 C.F.R. Part 1910, Subpart Z).

(6) "CAS number" means the unique identification number assigned by the Chemical Abstracts Service to substances.

(7) "Chemical identity" means the "CAS number" or the "chemical name" of a substance.

(8) "Chemical name" is the scientific designation of a substance in accordance with the nomenclature system developed by the International Union of Pure and Applied Chemistry (IUPAC) or the Chemical Abstracts Service (CAS) rules of nomenclature.

(9) "Combustible liquid" means any liquid having a flash point at or above 100°F (37.8°C) but below 200°F (93.3°C), except that this term does not include any liquid mixture having one or more components with a flash point at or above 200°F (93.3°C) which together make up 99 percent or more of the total volume. (For test method, see definition of "flash point").

(10) "Common name" means any designation or identification such as code name, code number, trade name, brand name or generic name used by an industrial user to identify a substance or mixture other than by its chemical name.

(11) "Compressed gas" means:

(i) A gas or mixture of gases having in a container an absolute pressure exceeding 40 pounds per square inch at 70°F (21.1°C); or

(ii) A gas or mixture of gases having in a container an absolute pressure exceeding 104 pounds per square inch at 130°F (54.4°C), regardless of the pressure at 70°F (21.1°C).

(iii) A flammable liquid having a vapor pressure exceeding 40 pounds per square inch absolute pressure at 100°F (37.8°C), as determined by the American Standard Method of Test for Vapor Pressure of Petroleum Products (Reid Method), Z11:44–1973 (ASTM D 323–72).

(iv) The contents of a self-pressurized container.

(12) "Container" means any bag, barrel, bottle, box, can, cylinder, drum, stationary storage tank, pipe, pump, reaction vessel, stack, oven or the like that contains a substance or mixture and those inner surface is in direct contact with the substance or mixture. "Container" does not include a container with total contents of less than 500 milliliters (1.057 pints) in volume or less than 500 grams (1.102 pounds) in weight.

(13) "Corrosive material" means a substance or mixture which causes visible destruction of, or irreversible alterations in, living tissue by chemical action at the site of contact. A material is considered corrosive if, when tested on the intact skin of the albino rabbit by the method described by the U.S. Department of Transportation in Appendix A to 49 CFR Part 173 (Oct. 1, 1979), it destroys or changes irreversibly the structure of the tissue at the site of contact following an exposure period of no more than four hours.

(14) "Designated representative" means any individual or organization to whom an employee or former employee gives written authorization to exercise such employee's rights under this standard.

(15) "Director" means the Director, National Institute for Occupational Safety and Health, U.S. Department of Health and Human Services, or designee.

(16) "Emergency" means any occurrence such as, but not limited to, equipment failure, rupture of containers, or failure of control equipment which may or does result in an uncontrolled release of a hazardous substance or hazardous mixture into the workplace.

(17) "Employer" means one or more individuals, partnerships, associations, corporations, business trusts, legal representatives, or any organized group of persons engaged in a business affecting commerce who have employees. The term person does not include the United States or any state or political subdivision of a state.

(18) "Explosive material" means a substance or mixture that causes a sudden, almost instantaneous release of pressure, gas, and heat when subjected to sudden shock, pressure, or high temperature.

(19) "Extremely flammable liquid" means a liquid having a flash point at or below 20°F (−6.7°C) (For test method see definition of "Flash point")

(20) "Flammable" material means a substance or mixture that falls into one of the following categories:

(i) "Flammable aerosol." A substance or mixture dispensed from its container as a mist, spray, or foam by a propellant under pressure which, when tested by the method described in 16 CFR 1500.45 (Jan. 1, 1979), projects a flame longer than 18 inches when the valve is fully open or a flashback (a flame extending back to the valve) at any valve opening;

(ii) "Flammable gas." A gas which at atmospheric temperature and pressure, forms a flammable mixture with air when present at a concentration of 13 percent or less by volume, or the flammable range with air is wider than 12 percent regardless of the lower limit;

(iii) "Flammable liquid." A liquid that has a flash point above 20°F (−6.7°C) but below 100°F (37.8°C), except that this term does not include any liquid mixture having one or more components with a flash point at or above 100°F (37.8°C) which together make up 99 percent or more of its total volume (for test method, see definition of "Flash point");

(iv) "Flammable solid." A solid, other than an explosive that can cause fire through friction, absorption of moisture, spontaneous chemical change, or retained heat from manufacturing or processing, or that can be readily ignited and, when ignited, continues to burn vigorously and persistently after removal of the source of ignition. A material is considered a flammable solid if, when tested by the method described in 16 CFR 1500.44 (Jan. 1, 1979), it ignites and burns with a self-sustained flame at a rate greater than one-tenth of an inch per second along its major axis.

(21) "Flash point" means the minimum temperature at which a liquid gives off a vapor in sufficient concentration to ignite when tested as follows:

(i) Tagliabue Closed Tester (See American National Standard Method of Test for Flash Point by Tag Closed Tester, Z11.24–1979 (ASTM D 56–79))—for liquids with a viscosity of less than 45 Saybolt Universal Seconds (SUS) at 100°F (37.8°C), that do not contain suspended solids and do not have a tendency to form a surface film under test; or

(ii) Pensky-Martens Closed Tester (see American National Standard Method of Test for Flash Point by Pensky-Martens Closted tester, Z11.7–1979 (ASTM D 93–79))—for liquids with a viscosity equal to or greater than 45 SUS at 100°F (37.8°C), or that contain suspended solids, or that have a tendency to form a surface film under test; or

(iii) Setaflash Closed Tester (see American National Standard Method of Test for Flash Point by Setaflash Closed Tester (ASTM D 3278–78)).

Note.—For mixtures, if the result of any test method described in paragraphs (i)–(iii) is above 100°F (37.8°C), evaporate a fresh sample to 90 percent of the original volume and retest. The lower of the two values shall be taken as the flash point.

(22) "Hazardous" substance or mixture means a substance or mixture which meets the definition for one or more of the terms in the two following groups of hazards:

Category A Hazards

(i) A corrosive material;
(ii) An explosive material;
(iii) An extremely flammable liquid;
(iv) A flammable material;
(v) A combustible liquid;
(vi) A pyrophoric material;
(vii) A strong oxidizer;
(viii) A reactive material;
(ix) A compressed gas;

Category B Hazards

(x) A highly toxic material;
(xi) A toxic material;
(xii) An irritant;
(xiii) A sensitizer;
(xiv) A carcinogen;
(xv) A reproductive toxin;
(xvi) A material that has acutely endangered the life of a worker of either sex, whether normal or medically disabled, or has caused death from exposure via the respiratory tract (excluding asphyxiation), skin or mouth except that substances or mixtures shall not be placed in this category if available data permit their classification as "highly toxic" or "toxic"; or
(xvii) A material that causes the immediate or delayed onset of other acute, subacute or chronic adverse health effects in humans of either sex, normal or medically disabled, or experimental or domestic animals, if animal models of these human health effects are available.

Note.—Category B hazard (xvii) includes the immediate or delayed onset of acute, subacute or chronic dimunition in mental alertness or behavior alterations in humans of either sex, normal or medically disabled, or in experimental or domestic mammals if animal models of these human health effects are available.

(23) "Highly Toxic material" means a substance or mixture that kills within 14 days:

(i) At least half of a group of 10 or more albino rats weighing between 200 and 300 grams each, when administered orally at a single dose of 50 milligrams or less per kilogram of body weight (LD50); or

(ii) At least half of a group of 10 or more albino rabbits weighing between 2 and 3 kilograms each, tested at a dosage of 200 milligrams or less per kilogram of body weight, when administered by continuous contact with the bare skin for 24 hours (LD50); or

(iii) At least half of a group of 10 or more albino rats weighing between 200 and 300 grams each, tested at a concentration in air of 200 parts per million or less by volume of gas or vapor, or 2 milligrams or less per liter of mist, fume, or dust when administered by continuous inhalation at a steady concentration for one hour or for four hours when there is difficulty maintaining a steady concentration (LC50).

(24) "Impurity" means a substance which is unintentionally present with another substance or mixture.

(25) "Intermediate" means any substance which is present during the manufacture of other substances or mixtures and which either (1) is consumed in whole or in part in the course of manufacturing the other substances or mixtures or (2) is intentionally present for the purpose of altering the rate of such chemical reaction(s) (this latter category includes "catalysts").

(26) "Irritant" means a substance or mixture, not a corrosive, which on immediate, prolonged or repeated contact with living human or mammalian tissue induces the immediate or delayed onset of an acute, subacute or chronic local inflammatory response in the skin, eyes, or mucous membranes by chemical action. A substance or mixture is considered a skin irritant if it receives a score of five or more when tested by the method described in 16 CFR 1500.41 (Jan. 1, 1979). A substance or mixture is considered an eye irritant if a positive result is obtained when tested by the method described in 16 CFR 1500.42 (Jan. 1, 1979).

(27) "Label" means written, printed, or graphic matter displayed on or affixed to the containers of a substance or mixture.

(28) "Lableled container" means a container bearing hazard warning and content labels in accordance with the requirements of the section.

(29) "Material safety data sheet" means any safety data sheet or technical bulletin which contains information regarding the physical, chemical, and hazardous properties of a substance or mixture, e.g., OSHA Form 20.

(30) "Mixture" means any combination of two or more substances if the combination does not occur in nature and is not, in whole or in part, the result of a chemical reaction; except that such term does include any combination which occurs, in whole or in part, as a result of a reaction if none of the substances comprising the combination is a new chemical substance and if the combination could have been manufactured for commercial purposes without a chemical reaction at the time the substances comprising the combination were combined.

(31) "Other adverse health effects" means diseases, signs, or symptoms which (1) are caused wholly, or in part, by occupational exposures to a hazardous material; (2) occur either immediately or after a latency period which may extend into the retirement period; and (3) for which a reasonably prudent employee would seek medical treatment or a job transfer in order to mitigate or resolve the "other adverse health effect," or (4) which causes loss of consciousness or vision, restriction of worker motion, or has been associated with a reduction in working-life expectancy or total life expectancy. Reductions in working-life or total life expectancy shall be based, directly, upon standard life table methodologies or, indirectly, upon relative or attributable risk methodologies or proportional mortality studies.

(32) "Pesticide" shall have the meaning contained in the Federal Insecticide, Fungicide, and Rodenticide Act (7 U.S.C. 136 *et seq.*) and the regulations under that Act.

(33) "Pipes" means any conduits for the transport of gases, liquids, semi-liquids, or fine particulate dust.

(34) "Piping system" means pipes of any type, including fittings, valves, and pipe coverings.

(35) "Pyrophoric material" means a substance or mixture that will ignite spontaneously in dry or moist air at or below 130°F (54.4°C).

(36) "Reactive material" means a substance or mixture that is able to undergo a violent, self-accelerating exothermic chemical reaction with common materials or by itself and includes a substance or mixture that falls within any of the following categories:

(i) "Organic peroxide." An organic compound that contains the bivalent —O—O— structure and which may be considered a structural derivative of hydrogen peroxide, in which one or both of the hydrogen atoms has been replaced by an organic radical.

(ii) "Pressure-generating material." A substance or mixture which may spontaneously polymerize, with an increase in pressure, unless protected by the addition of an inhibitor, or by refrigeration or other thermal control; or which may decompose to release gas in its container.

(iii) "Water-reactive material." A substance or mixture that reacts with water to release heat or a gas which is hazardous.

(37) "Reproductive toxin" means a substance or mixture which causes fetal wastage or undergrowth, malformation, growth retardation, or functional disorders in the products of mammalian conception, or prematurity or diminished fertility in mammals. For the purposes of regulation, it is immaterial whether a specific locus of action has been identified, assignment to this category being based upon the enumerated end-results.

(38) "Sensitizer" means a substance or mixture that causes humans of either sex, normal or medically disabled, or other mammals to develop either a hypersensitive allergic reaction involving normal tissue upon reapplication of the substance or mixture, or a photodynamic reaction. The hypersensitive reaction may be of the anaphylactic, immediate, delayed or fixed type, and may be of acute, subacute or chronic duration.

(39) "Strong oxidizer" means a substance or mixture that initiates or promotes combustion in other materials, thereby causing fire either of itself or through the release of oxygen or other gases.

(40) "Substance" means any organic or inorganic entity of a particular molecular identity, including any combination of such substances occurring in whole or in part as a result of a chemical reaction, or occurring in nature, and any chemical element or uncombined radical, except mixtures. For purposes of this section, a "UVCB" shall be treated as a chemical substance.

(41) "Toxic material" means a substance or mixture that kills within 14 days:

(a) At least half of a group of 10 or more albino rats weighing between 200 and 300 grams each, when administered orally at a single dose or more than 50 milligrams but not more than 500 milligrams per kilogram or body weight (LD 50); or

(b) At least half of a group of 10 or more albino rabbits weighing between 2 and 3 kilograms each tested at a dosage of more than 200 milligrams but not more than 1,000 milligrams per kilogram of body weight, when administered by continuous contact with the bare skin for 24 hours (LD 50); or

(c) At least half of a group of 10 or more albino rats weighing between 200 and 300 grams each tested at a concentration in air of more than 200 parts per million but not more than 2,000 parts per million by volume of gas or vapor, or more than 2 milligrams but not more than 20 milligrams per liter of mist, fume, or dust when administered by continuous inhalation at a steady concentration for one hour or for four hours when there is difficulty maintaining a steady concentration (LC 50).

(42) "UVCB" means a substance or mixture listed in the Toxic Substances Control Act Inventory which is of unknown or variable composition, a complex reaction product or biological material and which has been assigned a CAS number.

(43) "Work area" means a room or defined space in a room or open area where substances or mixtures are manufactured, handled, used, reacted, processed, packaged or repackaged, or transported and where employees are present. For the purposes of this section, each importer, manufacturer, industrial user or supplier shall designate a work area for each employee if no such designation now exists.

(44) "Workplace" means an establishment at one geographical location containing one or more work areas.

VIII. Miscellaneous

(hh) *Enforcement.*

To the extent and in the manner allowed by law, and for the purpose of determining compliance with this section, employees of OSHA, designated by OSHA, may enter the premises of any importer, manufacturer, industrial user, or supplier to take or require samples of the contents of any container. Pursuant to inspections to determine compliance with this section, the importer, manufacturer, industrial user, or supplier, whose premises are being inspected shall supply to any investigating OSHA employee, upon request, copies of any existing inventories of the substances and mixtures on the premises. These enforcement powers are in addition to OSHA's other enforcement powers which are not specified in this section.

(ii) *Compliance dates.*

(1)(i) Each manufacturer or importer of a substance or mixture who has two hundred and fifty or more employees shall comply with the provisions of this section as they apply to such substance or mixture within the following time frame:

(A) Regarding a substance, within one year of the effective date of this standard;

(B) Regarding a mixture, within two years of the effective date of this standard.

(ii) Each manufacturer or importer of a substance or mixture who has fewer than two hundred and fifty employees shall comply with the provisions of this section as they apply to such substance or mixture within the following time frame:

(A) Regarding a substance, within fifteen months of the effective date of this standard;

(B) Regarding a mixture, within twenty-seven months of the effective date of this standard.

(2) Each industrial user and supplier shall comply with the provisions of this section within the following time frame:

(i) Regarding a substance, within two years of the effective date of this standard;

(ii) Regarding a mixture, within three years of the effective date of this standard.

(jj) *Appendices.* The Appendices following this standard are mandatory unless otherwise stated.

(kk) *Effective dates.*

Appendix A—Hazard Determination Procedures

General

(1) A manufacturer or importer must evaluate each substance and mixture specified by paragraphs (d) and (e) of the standard for each of the Category A and Category B hazards listed in paragraph (gg)(22) of the standard. Appendix A describes the materials a manufacturer or importer must review, and the evaluative procedures a manufacturer or importer must follow, to determine whether a substance or mixture poses a particular Category A hazard. Appendix A also describes the materials a manufacturer or importer must review in considering whether a substance or mixture poses a particular Category B hazard. Generally, however, materials must be evaluated under the procedures and criteria of Appendix B to determine whether a particular Category B hazard exists.

(2) Unless a manufacturer or importer has hazard data or studies concerning a mixture as a whole and meeting the evaluative criteria of these Appendices, a mixture shall be deemed to pose the hazards of its hazardous constituent substances. For any particular hazard, available data and studies concerning a mixture as a whole meeting these criteria shall take precedence over conflicting data and studies concerning the constituent substances of the mixture.

(3) Hazard determinations may be undertaken individually or jointly by any group of manufacturers and importers.

(b) *Category A Hazard determinations.*

(1) To determine whether a substance or mixture poses a particular Category A hazard, a manufacturer or importer shall utilize the following materials:

(i) Any relevant data or statements contained in the National Library of Medicine's Toxicology Data Bank (TDB) file for a substance, or if there is no relevant information in the TDB, then any relevant information contained in a representative selection of standard reference works and documents published by the National Institute for Occupational Safety and Health.

(A) Standard reference works are textbooks and handbooks listed in the most recent compilation of "Sources Used to Prepare Toxicology Data Bank (TDB) Records" developed by the expert National Institutes of Health scientific peer review group responsible for evaluating information on TDB substances. A selection of standard reference works shall be considered representative if the selected references reflect all applicable techniques for measuring the Category A hazard being evaluated. Where more than one edition of a textbook or handbook is listed, the latest edition which discusses the hazard shall be used.

(B) Where a substance is not listed in TDB, the following NIOSH documents shall be reviewed: Criteria Documents; Special Hazard Reviews; Occupational Hazard Assessments; or Current Intelligence Bulletins.

For further information, contact: Publications Dissemination, DTS, National Institute for Occupational Safety and Health, 4676 Columbia Parkway, Cincinnati, Ohio 45226.

(ii) The manufacturer may also use any other relevant data in evaluating a substance or mixture for a Category A hazard.

(2) In the event that the data or statements identified indicate inconsistent conclusions, e.g., categorization as both an extremely flammable and flammable liquid, the manufacturer or importer shall classify a substance or mixture in the greatest hazard category. Where the inconsistency involves the presence or absence of a hazard the manufacturer or importer shall classify the substance or mixture as a hazard.

(3) In evaluating statements or data, the manufacturer shall exercise sound scientific judgment. Statements or data indicating a hazard may be disregarded if the physical measurements on which they are based are shown to be incorrect.

(c) *Category B Hazard Determinations.*

(1) *Materials To Be Reviewed.* To determine whether a substance or mixture poses a particular Category B hazard, a manufacturer or importer shall review statements and data in the TDB. If the substance is not listed in TDB, the manufacturer or importer shall review all standard reference works and relevant NIOSH documents specified in paragraph (b)(1) of this Appendix. A determination that a substance or mixture does not pose a particular Category B hazard may not be based upon data or statements discovered through this initial review. However, a positive determination that a substance or mixture poses a particular Category B hazard may be based upon statements or data discovered through this review, without further evaluation for that hazard. If a manufacturer or importer chooses not to base a positive hazard determination upon data or statements in the TDB, standard reference works, and NIOSH documents then to determine whether a substance or mixture poses the particular Category B hazard in question, the manufacturer or importer shall:

(i) Review unpublished studies or data subject to the manufacturer's or importer's custody or control, or the custody or control of the manufacturer's or importer's employees, agents, and contractors; and

(ii) Conduct a literature search, including available back files, utilizing the following four (4) computerized files or commercial on-line files containing at least the equivalent information: Medline ®, Toxline ®, Cancerlit ®, and RTECS.

For further information on the data files cited contact: National Library of Medicine, 8600 Rockville Pike, Bethesda, Maryland 20209, Telephone: (301) 496–6193.

Data Files:

Medline ®: This data base contains references to biomedical journal articles published in the current, as well as the two (2) preceding years. Medline ® can also be used to update a search periodically. Coverage of previous periods (back to 1966) is provided by back files. An English abstract, if available, is frequently included.

Toxline ®: (Toxicology Information Online) contains a collection of references published since 1976 together with earlier references concerning mutagens and teratogens. Coverage of previous periods (in some cases, antedating 1965) is provided by Toxback. Almost all references have abstracts or indexing terms.

Cancerlit ®: A large data file concerned with various aspects of cancer. All references have English abstracts.

RTECS: (Registry of Toxic Effects of Chemical Substances, formerly the Toxic Substances List) is a compilation prepared by the National Institute for Occupational Safety and Health (NIOSH). There is no back file. RTECS contains acute and chronic toxicity data.

(2) *Search Parameters.* The literature search shall:

Use CAS number, chemical name, generic name, trade name and brand name to identify the toxicologic and epidemiologic literature for the substance. Additional search parameters may be specified by a manufacturer or importer, as necessary, to expedite the search performance.

(3) *Search Output.* The material identified in the literature search shall be obtained and used for hazard determinations by the party performing the evaluation, under the following conditions:

(i) In the case of material published entirely in English (including material with a foreign language summary), all such material shall be evaluated.

(ii) In the ase of material published entirely in a foreign language (including material with an English summary), such material shall be evaluated only if:

(A) The material is available for review by the manufacturer or importer as part of the National Library of Medicine inter-library loan program or any other inter-library loan program; and

(B) An English version of the summary indicates the possible existence of a regulated hazard not documented in the English literature.

(iii) Notwithstanding paragraphs (1) and (2), the manufacturer or importer has actual knowledge of the content of the foreign language material.

(4) Relevant unpublished studies and data, and relevant studies or data disclosed by a literature search, shall be evaluated as required by Appendix B.

(5) A review of unpublished studies and data, and a review of the materials covered by a literature search may not disclose evidence which meets the evaluative criteria of Appendix B demonstrating whether the substance or mixture poses the Category B hazard in question. In such cases, if the initial review of the TDB, or standard reference works and relevant NIOSH documents, disclosed or cited to relevant data or studies, these data or studies shall be evaluated as required by Appendix B.

(d) *Updating.* Following the initial evaluation of any substance or mixture for all Category A and Category B hazards, a manufacturer or importer shall remain current with the scientific

literature in a manner generally accepted by the scientific community.

Appendix B—Evaluation of Scientific Materials Relating to Category B Hazards

This Appendix describes how relevant unpublished data and studies and relevant material disclosed by a literature search is to be evaluated in determining whether a substance or mixture poses a Category B hazard. This Appendix is applicable both to evaluation of evidence concerning substances and mixtures as a whole. Substances regulated by 29 CFR Part 1910, Subpart Z are deemed to be hazardous without the need for an independent evaluation but must be evaluated to determine the particular hazard they pose.

(a) *Definitions*

(1) "Adequate and well-controlled study" means a study whose design and presentation incorporate principles that have been developed and recognized by the scientific community as essential to the production of valid scientific conclusions. A study which incorporates the following principles shall be considered "adequate and well-controlled" for the purpose(s) of this section:

(i) *Study subjects (Cases):* Study subjects shall constitute a representative sample from the source population. In the case of cross-sectional studies (see paragraph (3)(i) of this subsection of this Appendix) the study and comparison population are the same. This means that:

(1) The extent to which the study subjects represent the population from which they are drawn is documented.

(2) Although random selection of study cases is preferred, a systematic selection process which minimizes bias is acceptable.

(3) Selection and exclusion criteria are documented.

(ii) *Comparison subjects (Controls):* Comparison subjects shall constitute a representative sample from an appropriate comparison population. The term "appropriate comparison population" shall include populations used in studies utilizing matching techiques. This means that:

(1) The extent to which the comparison subjects represent the population from which they are drawn is documented.

(2) Although random selection of comparison cases is preferred, a systematic selection process which minimizes bias is acceptable. Where appropriate, an historical control is suitable for establishing that a substance or mixture is hazardous.

(3) The appropriateness of the control population is addressed.

(iii) *Data Collection.* The methods of data collection shall be fully described. This means that:

(1) The risk factors, including degree of exposure, are characterized.

(2) The diagnostic criteria for the health conditions are indicated.

(3) The steps taken to minimize observer bias in data collection–e.g., double-blind evaluation techniques, are documented.

(4) The potential sample biasing effect of differential response rates in study and comparison subjects is considered, where the situation arises.

(iv) *Analytic methods.* The analytic methods shall be identified precisely. This means that:

(1) Where differential response rates occur between study and comparison subjects, the method used to compensate for this differential is identified;

(2) Steps taken to identify observer bias are described;

(3) The use of appropriate methods to control confounding, e.g., matching or statistical techniques, such as blocking or covariance analysis, are documented; and

(4) The various quantitators of hypothesis testing, e.g., Type I and II error probabilities and one-tailed versus two-tailed tests, are specified.

(v) *Documentation.* The study shall provide sufficient documentation of results so as to permit adequate peer review.

(vi) *Animal studies.* In the case of paragraph (gg)(22)(xvii) of this regulation, other acute or chronic adverse health effects, the animal effects must be generally accepted as a model for the indicated human health effects.

(vii) Regardless of paragraphs (i)–(vi) of this definition of "adequate and well controlled," a study shall be considered "adequate and well-controlled" for the purposes of this section if the study has been published in a peer-reviewed journal in which the articles are published entirely in English (except for a foreign language summary), or the conclusions of the study have been substantially endorsed in standard reference works or NIOSH documents or material identified in the literature search (See Appendix A) or in other published material, by at least one (1) other independent qualified expert.

(2) "Case report" means, for the purposes of this section, a statistically uncontrolled report involving two or more cases which asserts a cause and effect relationship between exposure to a substance or mixture and the subsequent occurrence of adverse effects. At a minimum, to be acceptable for further evaluation under this Appendix, a "case report" must describe, at least qualitatively, the level and duration of exposure and specify the diagnostic criteria for the morbid condition described.

(3) "Epidemiological study" means a study employing one of the following sample designs:

(i) "Cross-sectional design" in which an evaluation is made of the differential prevalence of disease where individuals are classified by level of exposure and relevant characteristics and where neither disease nor exposure is selected for;

(ii) "Case-control design" in which an evaluation is made of the differential exposure to a substance or mixture for individuals who are initially selected according to the presence or absence of a specific disease or injury and relevant variables.

(iii) "Cohort design" in which an evaluation is made of the differential incidence of disease among two or more groups, the individuals of which are classified by level of exposure to a specific agent and relevant characteristics, each group being free of the outcome variable at the outset and followed over some period of time.

For purposes of this section, the term "cohort design" shall include "proportional mortality studies" in which the percent distribution of causes of death of a group exposed to a hazardous material is compared with that of an appropriate control group.

(4) "Peer-review" journal means a scientific journal which routinely distributes articles submitted for publication to one or more qualified experts whose judgment as to the quality of an article, including the appropriateness of its conclusions, is an important determinant in the journal's decision whether to publish the article.

(5) "Qualified expert" means a person who, because of his or her education, training, experience or a combination of these factors, is capable of evaluating and interpreting data on the hazards associated with exposure to, or of contact with, a substance or mixture.

(6) "Statistically significant" means a Type I error of 0.10 or less (significance level of 10 percent or less) for the particular statistic used for significance testing. The Type I error level may be based upon a one-or-two tailed significance test, at the investigator's discretion. In uncommon circumstances, the determination of a probability level in a particular study may be informal, e.g., the uniform occurrence of a tumor

following exposure which would otherwise be rarely encountered.

(b) *Ascertaining Hazardous Materials.* A substance or mixture shall be classified as a Category B hazard under paragraph (1) by an importer or manufacturer, if one or more of the following reports is found:

(1) A single adequate and well-controlled epidemiologic study demonstrates a statistically significant association between exposure to the substance or mixture and a covered hazard, and the conclusion that the hazard is the result of the exposure, in whole or in part, is accepted by any subgroup of experts qualified in epidemiology, biostatistics, clinical pharmacology or human genetics; or

(2) A single adequate and well-controlled laboratory experiment involving domestic or experimental mammals demonstrates a statistically significant relationship between exposure to the substance or mixture and a covered hazard, where the exposure is through routes of administration other than cavity instillation or implantation in any organ system and the conclusion that the hazard is the result of the exposure, in whole or in part, is accepted by a subgroup of experts qualified in biostatistics, pharmacology, physiology, toxicolity or genetics; or

(3) Case-reports involving a total of more than two individuals strongly suggest the conclusion that there is a cause and effect relationship, in whole or in part, between exposure to the substance or mixture and the subsequent occurrence of a covered hazard and the conclusion that such a relationship exists is accepted by a subgroup of experts qualified in the relevant scientific discipline.

(c) *Resolving a Material's Status Where Data or Analyses Are Inconsistent.*

In determining whether a substance or mixture is a Category B hazard, the following rules of data construction for evaluating studies shall apply:

(1) When comparing studies of the same type (human or animal) which yield conflicting results, the importer or manufacturer shall consider a substance or mixture as hazardous if a subgroup of qualified experts, considering the available studies, would conclude that the substance or mixture is hazardous. Studies which yield differing estimates of disease, all of which are greater than zero, shall not be considered in conflict;

(2) When considering inconsistent studies of different types (human and animal), the importer or manufacturer shall rely upon human data if the human data indicate a greater hazard than the animal data.

(3) The importer or manufacturer may rely upon human data if such data indicate a lesser hazard in humans than in animals, provided that the group of exposed human subjects was large enough for an increase in hazard incidence or prevalence (whichever statistic was used in the study) of 25% above that in controls not exposed to that substance to have been detected 80% of the time and the studies meet the criteria of subsection (a) of this Appendix. However, negative case reports in humans, i.e., no hazard on exposure, usually will not negate positive animal data.

(4) Where alternative analytic statistical techniques produce inconsistent results in terms of statistical significance, the study shall be considered to demonstrate statistical significance, provided that the alternative techniques demonstrating significance is acceptable to a subgroup of experts qualified in epidemiologic or toxicologic study methods.

(5) An importer or manufacturer may conclude that a mixture dos not present the same hazards as a hazardous constituent substance, provided that the group of animal or human subjects exposd to the mixture was large enough so that an increase in hazard incidence or prevalence equal to that established for the substance or 25% above that in unexposed controls, whichever is the lesser, would have been detected 80% of the time and the studies meet the criteria of subsection (a) of this Appendix.

(d) *Creation of a Rebuttable Presumption by Expert Opinion.* The determination that a subgroup of qualified experts accepts the conclusions of a study may be evidenced by informal memos, correspondence, evaluation or reference to published material such as the references, handbooks or NIOSH materials (See Appendix A). When the conclusions of a study have been substantially endorsed by at least one qualified independent expert, i.e., an expert not an author of the original study or a collaborator of any of the authors at the time of the endorsement, the conclusions of the study shall be rebuttably presumed to be acceptable to a subgroup of qualified experts, in the absence of strong evidence to the contrary.

(e) *Delabeling.* A determination by an importer or manufacturer that a substance or mixture is hazardous may be withdrawn by that importer or manufacturer if:

(1) Subsequent to the hazard determination, the methodology of the study or studies upon which the hazard determination is based are found to be critically flawed or inappropriate, i.e., the association originally observed is subsequently shown to be due to sample bias, observer bias or a confounding variable; or

(2) The availability of a negative adequate and well-controlled study or studies results in a revision of the opinion of qualified experts such that no subgroup of experts, considering all the relevant evidence, accepts the association or relationship between exposure to the substance or mixture and the covered hazard.

Appendix C—Hazard Warnings Information

Introduction

This APPENDIX specifies the hazard warnings for hazardous substances and mixtures. In using this APPENDIX, the following rules apply in communicating hazard warnings for mixtures:

1. Hazard warnings must appear for hazardous mixtures.

2. Hazard warnings must appear for hazardous constituent substances of a mixture where such substances pose hazards for which the mixture as a whole was not evaluated.

3. The priority of hazard warnings as set out in this Appendix is not affected by whether a hazard attaches to a mixture as a whole, or to one of its constituent substances.

(a) *Label Elements for Hazardous Warnings—Summary of Requirements.*

A hazard warning must include the following elements:

(1) Signal word, as prescribed in paragraph (b)(1) of this Appendix;

(2) The word POISON and the skull and crossbones symbol for highly toxic materials, as prescribed in paragraph (b)(2) of this Appendix;

(3) Statement of hazards, as prescribed in paragraph (b)(3) of this Appendix;

(4) Precautionary statements, as prescribed in paragraph (b)(4) of this Appendix;

(5) Additional labels elements, if appropriate, or specified in subsection (c) of this Appendix.

(6) Hazard warning elements (1)–(3) must be cross-referenced to the CAS number and common name of the substance or common name of the mixture producing the hazard.

(7) In the event that precautionary statements or additional label elements are contradictory in the case of mixture, the manufacturer or importer shall

resolve the contradiction using sound scientific judgment.

(b) *Label Elements—Description.*

(1) *Signal Word.* If a substance or mixture has more than one hazard a hazard warning label shall include only the signal word (DANGER!, WARNING!, OR CAUTION!) that corresponds to the category of its most severe hazard.

(2) *The Word POISON and the Skull and Crossbones Symbol.* A hazard warning for a highly toxic material must include the word POISON and the skull and crossbones symbol. On a hazard warning label, the word POISON and the symbol, in any color, must appear on a background of distinctly contrasting color. The symbol must appear in immediate proximity to the word POISON. Use the word POISON and the symbol, in addition to, and not in place of, the signal word DANGER!

(3) *Statement of Hazards.* A hazard warning label must include the statement of hazards prescribed in Table 1 for Category A hazards and Table 2 for Category B hazards for the appropriate hazard class. If the hazard may have a delayed onset, the hazard warning shall also indicate this. Subsection (d) of this APPENDIX lists examples of useful statements of hazard which may be used in addition to those mandated by Tables 1 and 2 of this APPENDIX. If a substance or mixture has more than one hazard, its hazard warning must include a statement of hazard of each hazard. If a substance or mixture has more than one hazard, statements of hazard for which the signal word "DANGER!" is required, together with the signal word, must precede statements of hazard for which the signal word "WARNING! or CAUTION!" is required, and statements of hazard for which the signal word "WARNING!" is required together with the signal word, must precede statements of hazard for which the signal word "CAUTION!" is required.

(4) *Precautionary Statements.* A hazard warning must describe appropriate precautionary measures (such as "Keep away from heat, sparks, or open flames" or "Wear rubber gloves") to avoid injury as a substance or mixture is used in the workplace. If a substance or mixture has more than one hazard, its hazard warning must include appropriate precautionary statements for each hazard. If precautionary statements can be combined for different classes of hazards, eliminate any redundant phrases.

Table I.—*Hazard warning statements for Category A hazards*

Class of hazard	Signal word	Statement of hazard
Corrosive:		
Eye	Danger	Corrosive: Causes severe eye burns.
Eye and skin	do	Corrosive: Causes severe eye and skin burns.
Dangerously reactive material:		
Explosive	do	Explosive.
Water-reactive	do	Dangerous when wet: Reacts violently with water.
Organic peroxide	do	May form explosive organic peroxides.
Extremely flammable liquid.	do	Extremely flammable.
Pyrophoric material	do	Extremely flammable: Catches fire if exposed to air.
Strong oxidizer	do	Strong oxidizer: Contact with other material may cause fire.
Flammable material	Warning	Flammable.
Pressure-generating material.	do	May generate dangerous pressure.
Compressed gas	Caution	Contents under pressure.
Combustible liquid	do	Combustible.

Table 2.—*Hazard warning statements for Category B hazards*

Class of hazard	Signal word	Statement of hazard
Toxic:		
By inhalation	Warning	Toxic: May be fatal if inhaled.
By absorption	do	Toxic: May be fatal if absorbed through skin.
By ingestion	do	Toxic: May be fatal if swallowed.
Highly toxic:		
By inhalation	Danger! Poison.	Highly toxic: Fatal if inhaled.
By absorption	do	Highly toxic: Fatal if absorbed through skin.
By ingestion	do	Highly toxic: Fatal if swallowed.
Endangers human life.	do	Highly toxic: May be fatal if inhaled, absorbed, or swallowed.
Carcinogens	Danger	May cause (optional: Organ/system) cancer.
Reproductive toxins	do	May cause birth defects. May cause reproductive problems.
Irritant:		
Eye	Warning	Irritant: Causes eye irritation.
Eye and skin	do	Irritant: Causes eye and skin irritation.
Lung	do	Irritant: Causes lung (chest) irritation.
Sensitizer:		
Lungs	do	Sensitizer: Causes respiratory reaction.
Skin	do	Sensitizer: Causes allergic skin reaction.
Other adverse health effects.		Exposure may cause (specify disease(s), sign(s) or symptom(s)).
Includes mental or behavior alterations.	Warning	Or may cause acute or chronic health effects.

(c) *Additional Label Elements.*

(1) A hazard warning or other listing must include the following elements, if they are appropriate:

(i) Antidotes, as prescribed in paragraph (2); or

(ii) Instructions in case of fire, spill, or leak, as prescribed in paragraph (3).

(iii) Instructions for container handling and storage, as prescribed in paragraph (4).

(2) *Antidotes.* If there is any appropriate antidote that is generally available and may be administered by a layman, the hazard warning must include it.

(3) *Instructions in Case of Fire, Spill, or Leak.* If there are any special instructions for confining and extinguishing fires and for cleaning up spills or leaks, the hazard warning must include them.

(4) *Instructions for Container Handling and Storage.* If there are any special instructions for container handling and storage, the hazard warning must include them.

(5) *Optional Additional Information.* A hazard warning may include additional hazard warning information that is not required by this Part, provided that the additional information does not contradict or detract from the required information. Terms such as "safe," "non-toxic," or "harmless" must not be used on a hazard warning.

(d) *Useful Phrases for Category A and Category B Hazard Warnings.*

This subsection of the APPENDIX contains a listing of additional warning phrases that a manufacturer or importer of a hazardous substance or mixture may use together with the required hazard warning. The Agency is providing this subsection of this APPENDIX simply as a listing of useful warning phrases. OSHA does not require that a manufacturer or importer of a hazardous substance or mixture use any of these additional phrases with a hazard warning.

(a) *Statements of Hazard.*

(1) *Liberates Gas.* Liberates Poisonous Gas. Fire Liberates Poisonous Gas. Contact With Acid Liberates Poisonous Gas. Contact With Water or Acid Liberates Poisonous and Flammable Hydrogen Sulfide Gas.

Spills Liberates Dangerous Gas. Contact With Water or Moist Air Liberates Irritating Gas. Liberates Heavy Gas Which May Cause Suffocation.

(2) *Fire Hazard.* Contact With Water May Cause Flash Fire. May Catch Fire If Allowed To Become Damp. Spills May Cause Fire. Heat, Shock, or Contact With Other Materials May Cause Fire. Contact With Other Materials May Cause Fire, Especially if Heated Reacts Violently With Water to Liberate and Ignite Hydrogen Gas. Powerful Oxidizer.

May Form Flammable Dust-Air Mixtures.

(3) *Explosive.* Heat, Shock, or Contact With Other Materials May Cause Explosion.

Contact With Other Materials May Cause Explosion, Especially If Heated.

May Form Explosive Peroxides. Forms Shock-Sensitive Mixtures With Certain Other Materials. May Explode if Water Content is 10 percent or Below.

(4) *Pressure Hazard.* Contamination May Result in Buildup of Dangerous Pressure. Liquid (GAS) (VAPOR) Under Pressure. Extremely Hazardous Liquid (GAS) (VAPOR) Under Pressure.

(5) *Miscellaneous.* Cannot Be Made Nonpoisonous.

Department of the Interior

Bureau of Land Management

Draft Wilderness Management Policy; Opening of Public Comment Period

DEPARTMENT OF THE INTERIOR

Bureau of Land Management

Draft Wilderness Management Policy

AGENCY: Bureau of Land Management, Interior.

ACTION: Draft wilderness management policy and opening of public comment period.

SUMMARY: The Draft Wilderness Management Policy describes how the Bureau of Land Management (BLM) proposes to manage lands administered by the BLM which are designated by Congress as part of the National Wilderness Preservation System. The BLM's Wilderness Management Policy will apply to public lands specifically designated as wilderness by an Act of Congress. The document closely parallels the existing wilderness management policy of the U.S. Forest Service.

DATES: Comments by April 1, 1981.

ADDRESS: Comments or suggestions should be sent to: Director (430), Bureau of Land Management, 1800 C Street N.W., Washington, D.C. 20240. Comments will be available in Room 5600 of the above address during regular business hours (7:45 a.m. to 4:15 p.m.) Monday through Friday.

FOR FURTHER INFORMATION CONTACT: David E. Porter, Division of Wilderness and Environmental Areas, (202) 343-6064. Requests for copies of this draft should be addressed to: David E. Porter, Division of Wilderness and Environmental Areas (430), Bureau of Land Management, 1800 C Street NW, Washington, D.C. 20240. Copies will also be available from the Bureau of Land Management State Directors in the Western States.

SUPPLEMENTARY INFORMATION: Publication of the Draft Wilderness Management Policy opens a 75-day public comment period beginning January 16, 1981, and closing April 1, 1981. Copies of this will be available from the Bureau of Land Management in approximately two weeks. To compensate for this delay, a 75-day, rather than a 60-day, public comment period is provided. During this time, the public is encouraged to comment on the policy, standards and guidelines proposed in the draft.

Dated: January 12, 1981.

Ed Hastey,

Associate Director.

Draft—Wilderness Management Policy

Chapter I—Introduction

I. A. The Purpose of This Document

The purpose of this document is to describe how the Bureau of land Management (BLM) proposes to manage lands administered by the BLM which are designated by Congress as part of the National Wilderness Preservation System. This is a draft document which is being published for public review and comment. The document has been written to parallel closely the existing wilderness management policy of the U.S. Forest Service, as published in the Forest Service Manual, because the same statutory direction applies to both agencies.

At present, the Bureau of Land Management administers no wilderness areas. the Bureau is developing a Wilderness Management Policy at this time for the following reasons: (1) to inform BLM field officials, Congress, and the public as to how BLM will manage wilderness areas, so this can be taken into account during BLM wilderness studies and during deliberations on wilderness recommendations affecting BLM public lands, and (2) to provide guidance ready for BLM personnel to use in managing future BLM wilderness areas at such time as Congress designates them.

BLM's Wilderness Management Policy will apply to public lands administered by BLM that have been specifically designated as wilderness by an Act of Congress. The Wilderness Management Policy has a different purpose than BLM's *Interim Management Policy and Guideline for Lands Under Wilderness Review*. The *Interim* Management Policy is an interim measure governing lands under wilderness review. The Wilderness Management Policy governs lands designated by Congress as wilderness. (Appendix C of this document summarizes BLM's wilderness review process.) If Congress designates a wilderness study area as wilderness, the Interim Management Policy ceases to apply, and instead the Wilderness Management Policy applies thereafter. If Congress decides that a particular wilderness study area will *not* be designated as wilderness, the Interim Management Policy ceases to apply, and instead the area is managed as ordinary public lands, with the uses and activities indicated in the pertinent BLM planning documents for the areas.

B. Mandate From Congress

The BLM wilderness review program stems from Section 603 of the Federal Land Policy and Management Act of 1976 (FLPMA). In FLPMA, Congress gave BLM its first unified, comprehensive mandate on how the public lands should be managed. The law establishes a policy of generally retaining the public lands in Federal ownership, and it directs the BLM to manage them under principles of multiple use and sustained yield. The BLM is to prepare an inventory of the public lands and their resources, including identification of areas having wilderness characteristics. Management decisions for the public lands are to be made through a land-use planning process that considers all potential uses of each land area. All public lands are to be managed so as to prevent unnecessary or undue degradation of the lands.

Under FLPMA, wilderness preservation is part of BLM's multiple-use mandate, and wilderness values are recognized as part of the spectrum of resource values and uses to be considered in the inventory and in the land-use planning process. Section 603 of FLPMA specifically directs the BLM, for the first time, to carry out a wilderness review of the public lands. (The complete text of section 603 appears in Appendix A of this

document. The BLM's wilderness review process implementing section 603 is summarized in Appendix C.)

Section 603(c) of FLPMA tells the Bureau how to manage public lands designated as wilderness, in these words:

> Once an area has been designated for preservation as wilderness, the provisions of the Wilderness Act which apply to national forest wilderness areas shall apply with respect to the administration and use of such designated area, including mineral surveys required by section 4(d)(2) of the Wilderness Act, and mineral development, access, exchange of lands, and ingress and egress for mining claimants and occupants.

The Wilderness Act of 1964 contains a number of provisions addressing the administration and use of national forest wilderness areas. Those most pertinent to BLM wilderness management are cited in the following paragraphs. Section 2(a) says:

> . . . it is hereby declared to be the policy of the Congress to secure for the American people of present and future generations the benefit of an enduring resource of wilderness. For this purpose there is hereby established a National Wilderness Preservation System to be composed of federally-owned areas designated by Congress as "wilderness areas," and these shall be administered for the use and enjoyment of the American people in such manner as will leave them unimpaired for future use and enjoyment as wilderness, and so as to provide for the protection of these areas, the preservation of their wilderness character, and for the gathering and dissemination of information regarding their use and enjoyment as wilderness. . . .

Section 4 of the Wilderness Act is devoted to the use of wilderness areas. Section 4(b) says:

> Except as otherwise provided in this Act, each agency administering any area designated as wilderness shall be responsible for preserving the wilderness character of the area and shall so administer such area for such other purposes for which it may have been established as also to preserve its wilderness character. Except as otherwise provided in this Act, wilderness areas shall be devoted to the public purposes of recreational, scenic, scientific, educational, conservation, and historical use.

Section 4(c) prohibits certain activities, in these words:

> Except as specifically provided for in this Act, and subject to existing private rights, there shall be no commercial enterprise and no permanent road within any wilderness area designated by this Act and, except as necessary to meet minimum requirements for the administration of the area for the purpose of this Act (including measures required in emergencies involving the health and safety of persons within the area), there shall be no temporary road, no use of motor vehicles, motorized equipment or motorboats, no landing of aircraft, no other form of mechanical transport, and no structure or installation within any such area.

Sections 4(c), 4(d), and 5 provide special exceptions to the prohibitions in section 4(c) by providing for the following activities:

- Existing private rights.
- Measures required in emergencies involving the health and safety of persons within the area.
- Activities and structures that are the minimum necessary for the administration of the area as wilderness.
- Use of aircraft and motorboats, where already established.
- Measures necessary in the control of fire, insects, and diseases.
- Any activity, including prospecting, for the purpose of gathering information about mineral or other resources, if carried on in a manner compatible with the preservation of the wilderness environment. (This includes mineral surveys conducted on a planned, recurring basis by the U.S. Geological Survey and Bureau of Mines.)
- Continued application of the U.S. mining and mineral leasing laws until December 31, 1983.
- Water resource developments may be authorized by the President where he determines that such use will better serve the interests of the United States and the people thereof than will its denial.
- Livestock grazing, where already established.
- Commercial services necessary for activities which are proper for realizing the recreational or other wilderness purposes of the areas.
- Adequate access to surrounded State-owned and privately-owned lands, or such lands shall be exchanged for Federally-owned land.
- Ingress and egress to surrounded valid mining claims and other valid occupancies.

Section 5(c) provides land acquisition authority, in these words:

> Subject to the appropriation of funds by Congress, the Secretary of Agriculture is authorized to acquire privately owned land within the perimeter of any area designated by this Act as wilderness if (1) the owner concurs in such acquisition or (2) the acquisition is specifically authorized by Congress.

In addition to the basic management authority contained in the Wilderness Act, management provisions may appear in the legislation establishing each wilderness area. Standard provisions included in most wilderness legislation make clear that the effective date of the new law will apply wherever the Wilderness Act's management provisions mentioned the effective date of the Wilderness Act, and, for areas administered by the Department of the Interior, make clear that the Secretary of the Interior will continue to administer the areas.

In some cases, special provisions have been incorporated into the legislation (e.g., special mining area in the recently enacted River of No Return Wilderness in Idaho). These provisions override the general management provisions of the Wilderness Act and must be regarded as specific direction for management of the area in question.

Congress has subsequently commented on wilderness management in House and Senate committee reports and conference reports accompanying wilderness legislation. These reports are part of the legislative history of the laws they accompany and can be helpful in determining the intent of Congress where the language in the law itself is unclear. Although reports on wilderness laws passed after 1964 do not become part of the legislative history of the Wilderness Act, they nonetheless indicate the interpretation given to the Wilderness Act by the congressional committees during their consideration of the subsequent legislation. Such report language addresses a variety of subjects. For example, guidelines for administering grazing use in wilderness areas appear in the Conference Report (House Report 96–838) on the Central Idaho Wilderness Act of 1980 (P.L. 96–312). House Report 95–540 on the Endangered American Wilderness Act of 1978 discusses the interpretation of the Wilderness Act as it relates to such uses and activities as: hunting and fishing; trails, bridges, and trail signs; control of fire, insects, and diseases; cabins and sanitary facilities; shelters and campsite facilities; and weather modification and special equipment.

The provisions of FLPMA, the Wilderness Act, and future Acts of Congress designating specific BLM areas as wilderness are BLM's mandates on the management of wilderness areas. All activities in wilderness areas must be carried out in conformance with these mandates.

C. Meaning of the Congressional Mandate

The congressional mandate contains three basic concepts which form the basis for BLM's Wilderness Management Policy.

- *Wilderness Preservation Concept:* Congress has directed the BLM to perpetuate the wilderness resource by managing wilderness areas so that their wilderness character is preserved unimpaired.

• *Wilderness Use Concept:* Congress has directed the BLM to provide opportunities for the public to use wilderness areas for recreational, scenic, scientific, educational, conservation, and historical purposes in a manner so as to leave the wilderness area unimpaired for future use and enjoyment as wilderness.

• *Nonconforming Use Concept:* Congress has directed the BLM to accommodate in wilderness areas certain activities, existing uses, and private rights which are generally nonconforming to wilderness preservation and wilderness use.

The meaning of each of these concepts is discussed below.

1. *Wilderness Preservation Concept.* The Wilderness Act directs that wilderness areas be managed to provide for "the preservation of their wilderness character." The factors which make up an area's wilderness character are spelled out in the Wilderness Act's definition of wilderness (section 2(c)). These factors are referred to in FLPMA collectively as "wilderness characteristics," and they fall into three broad categories:

a. Naturalness—A wilderness area "generally appears to have been affected primarily by the forces of nature, with the imprint of man's work substantially unnoticeable." Wilderness areas must be managed to ensure that this description remains accurate.

b. Outstanding Opportunities for Solitude or a Primitive and Unconfined Type of Recreation—A wilderness area "has outstanding opportunities for solitude or a primitive and unconfined type of recreation." Solitude is defined as (1) the state of being alone or remote from habitations; isolation; (2) a lonely, unfrequented or secluded place. The emphasis is on the opportunities a person has to avoid the sights, sounds, and evidence of other people within a particular area, rather than on opportunities for solitude in comparison to habitations of man. Primitive and unconfined types of recreation are defined as those activities that provide dispersed, undeveloped recreation which do not require facilities or motorized equipment. In most cases, opportunities for solitude and primitive recreation go hand-in-hand, and both are dependent on naturalness. Wilderness areas must be managed to insure that these opportunities are not impaired.

c. Special Features—Congress specified that wilderness areas "may also contain ecological, geological, or other features of scientific, educational, scenic, or historical value." These are optional wilderness characteristics; an area may meet the Wilderness Act's definition of wilderness without having these special features, but they are usually present in wilderness areas, and in some cases they may be a prime reason for wilderness designation. Also, these features may contribute to an area's opportunities for primitive recreation. Wilderness areas must be managed to ensure that these features are not impaired.

In order to preserve these wilderness characteristics in perpetuity as Congress directed, the management of BLM-administered wilderness must be based on a *principle of nondegradation.* Under this principle, the central thrust of BLM wilderness management is to prevent degradation of natural conditions, opportunities for solitude or primitive recreation, and special features.

It is recognized that there is often variation in the level of naturalness, solitude, types of primitive recreation and special features present within a wilderness area—or between different wilderness areas. The principle of nondegradation means that wilderness areas will be managed to provide for the protection and perpetuation of the values of the wilderness resource and prevent deterioration caused by other resource activities or by visitor use, and, when necessary, to restore deteriorated sites to an acceptable condition. (Of course, some of the nonconforming uses authorized by Congress are exempt from the nondegradation principle, as is explained below.)

Most uses will result in some change in the condition of the wilderness resource. Some uses cause little or no change, while others have the potential for serious change. Therefore, it is necessary to define the acceptable level of change. This must be established using the conditions prevailing in each wilderness at the time of congressional designation as a benchmark, determining what human-caused changes can be allowed without causing degradation and what measures can be taken to bring situations below the level of acceptable change back within an acceptable level. This may influence the ways in which recreational, scenic, scientific, educational, conservation, and historical uses are done in the area, so their impact on the wilderness resource can be kept within the acceptable level of change.

In the case of some of the nonconforming uses, such as mining, provided for by Congress in the Wilderness Act and subsequent legislation, the condition of the wilderness resource may be degraded as a result of an allowed use; the nondegradation principle does not apply. However, in such cases, the principle of nondegradation and the acceptable level of change should be used as an analysis tool for the reasonable mitigation of impacts, consistent with the applicant's exercise of the allowed use, and as a standard for determining the condition to which the area will be returned where and when rehabilitation is appropriate.

In this document, the principle of nondegradation is reflected in the policies and guidelines for specific activities.

Two equivalent terms used many times in this document reflect the wilderness preservation concept—"preservation of wilderness character" and "protection of the wilderness resource."

2. Wilderness Use Concept. Section 4(b) of the Wilderness Act provides fundamental guidance on how wilderness areas shall be used, in these words:

> Except as otherwise provided in this Act, each agency administering any area designated as wilderness shall be responsible for preserving the wilderness character of the area and shall so administer such area for such other purposes for which it may have been established as also to preserve its wilderness character. Except as otherwise provided in the Act, wilderness areas shall be devoted to the public purposes of recreational, scenic, scientific, educational, conservation, and historical use.

Wilderness areas are thus open to use and provide a variety of benefits to society. Use might be "on-site," taking direct advantage of the multiple resources of the area, or the use and benefits may be derived "off-site," such as through enjoyment of the scenery at a distance from a nearby highway, through indirect benefits from the area's resources (i.e., water quality, wildlife, etc.), or just the knowledge that the area exists.

There is a limit to the extent to which such uses as recreation and education may take place within wilderness, because the Wilderness Act also says that they must occur in a manner so as to leave the wilderness unimpaired for future use and enjoyment as wilderness. Provision may be made for recreational, scenic, scientific, educational, conservation, and historical use of wilderness areas in ways that do not jeopardize the conditions of naturalness, the opportunities for solitude or a primitive and unconfirmed type of recreation, or the special features that existed at the time an area was designated as wilderness by Congress. All public use will be administered to ensure that the wilderness resource is kept unimpaired.

Public use for recreation purposes is generally a prevalent use of wilderness. However, the Wilderness Act makes it clear that recreation is only one of the purposes of the National Wilderness Preservation System. Sometimes there are places within wilderness where particularly sensitive values—such as colonial bird nesting sites—may dictate that recreation activities be restricted or entirely excluded. The recreation-use capacity, based on social and ecological elements, will be established for each wilderness area, and will be considered in determining how much recreational use to allow.

A second factor which may limit the use of wilderness has to do with the nonconforming use provisions of the Wilderness Act and subsequent legislation. Permitted activities such as mining or grazing may displace any of the public purposes listed in section 4(b) either temporarily or permanently.

3. *Nonconforming But Accepted Use Concept.* Congress specially provided for certain activities and existing uses which otherwise would have been prohibited in wilderness areas under the general management provisions of section 2(a), 4(b) and 4(c). For a complete list of these nonconforming but accepted activities, refer to section I.B.; generally they are: existing private rights; aircraft and motorboats; control of fire, insects, and diseases; gathering of resource information; mining; grazing; water resource development; commercial recreation services; and access to non-Federal inholdings.

FLPMA directs that all uses of the public lands be conducted so as to prevent unnecessary or undue degradation of the lands. In wilderness areas, this means that the BLM must manage the nonconforming but accepted uses described above so as to prevent unnecessary or undue degradation of the area's wilderness character, insofar as is consistent with the congressional mandate for the particular use in question.

II. Management Policy for BLM-Administered Wilderness

The policy guidance in this chapter is followed in Chapter III by guidelines for specific activities, based on these policies and on their interaction with other applicable policies for the management of public lands.

No policy document can address every potential situation. Managers must use their best judgment in applying these policies and guidelines to particular situations. In cases not covered by specific guidance, managers will resolve questions by testing alternative courses of action against the policies in this chapter to arrive at the alternative that is most consistent with the policy as a whole.

A. General Policy

1. The Department of the Interior's policy is, except as stated in paragraph 2 below, to manage wilderness areas under the administration of the Bureau of Land Management so as to preserve their wilderness character, and to manage them for the use and enjoyment of the American people in a manner that will leave them unimpaired for future use and enjoyment as wilderness. The wilderness areas will be devoted to the public purposes of recreational, scenic, scientific, educational, conservation, and historical use.

2. The Department's policy is to allow the nonconforming but accepted uses specifically permitted in wilderness areas by the Wilderness Act and subsequent laws in a manner that will prevent unnecessary or undue degradation of the area's wilderness character.

3. The Department's policy is to manage BLM wilderness areas consistent with the policies above so as to augment multiple use management of adjacent and nearby lands through protection of watersheds and water yield, wildlife habitat, natural plant communities, and similar natural values.

B. Specific Policy Guidance

1. *Preservation of Wilderness Character.* BLM wilderness areas will be managed so as to be affected primarily by the forces of nature, with the imprint of man's work substantially unnoticeable; so as to maintain the area's outstanding opportunities for solitude or primitive and unconfined recreation; and so as to protect any ecological, geological, or other features of scientific, educational, scenic, or historical value which the area may contain.

a. *Naturalness.* BLM will foster a natural distribution of native species of wildlife, fish, and plants by ensuring that natural ecosystems and ecological processes continue to function naturally. BLM will work to prevent the extinction by human causes of plants and animals found in the areas. BLM will minimize human influence on wildlife populations. Sport hunting, fishing, and trapping will continue as authorized by State law, when carried out in a manner consistent with preservation of an area's wilderness character.

The BLM will allow fire, insects, and diseases to play a natural role in the wilderness ecosystem, except where these activities threaten human life, property, or adjacent nonwilderness lands, or where these would result in unacceptable damage to the wilderness resource. (The guidelines in Chapter III will indicate some types of unacceptable damage.)

The BLM will keep watersheds, water bodies, water quality, and soils in a natural condition and will allow associated ecological processes previously altered by human influences to return to their natural condition.

The level of acceptable change will be defined in the wilderness management plan for each wilderness area, and the BLM will, at a minimum, endeavor to restore those sites which have dropped below this level.

b. *Solitude.* BLM will maintain and enhance the area's outstanding opportunities for solitude by providing natural settings with few reminders of human activity or civilization.

c. *Special Features.* BLM will maintain unimpaired the ecological, geological, and other features of scientific, educational, scenic, or historical value found in BLM wilderness areas.

2. *Visitor Use.* BLM wilderness areas will be managed to provide for their use and enjoyment in ways that are consistent with preservation of their wilderness character and that will leave them unimpaired for future use and enjoyment as wilderness.

Visitor use may be related to any of the following public purposes: recreational, scenic, scientific, educational, conservation, and historical use.

Visitor use facilities may be installed if they are the minimum necessary for the health and safety of wilderness visitors or for the protection of the wilderness resource. (See also "minimum tool," in section B.5. below.) facilities that are solely for the convenience of the visitor are not compatible with preservation of wilderness character and therefore will not be provided in wilderness areas.

The recreation-use capacity of the wilderness area will be determined, and will be used by managers to anticipate and avert degradation of the area's wilderness character.

If visitor use threatens to impair the area's wilderness character, managers will limit the threatening use to prevent impairment. Methods of reducing visitor's impact, such as low-impact camping techniques, will be preferred over outright limitations on visitor use. In case of conflict between visitor uses that depend upon a wilderness setting and those that do not, the uses dependent upon a wilderness setting will be favored.

Visitor use in wilderness involves certain risks to the visitor as a consequence of isolation from the conveniences of a technological world. The visitor accepts these risks in entering a wilderness area. In emergencies involving the health and safety of persons within the area, managers will take appropriate measures, such as search and rescue operations.

3. *Nonconforming Uses.* a. Valid Existing Rights. Private rights existing as of the date an area was designated as wilderness will be recognized. In some cases, such rights may involve activities addressed elsewhere in this document under standards prescribed by the Wilderness Act. (One example of this is valid mining claims, addressed in section (j).) Valid existing rights in situations not covered by these policies will be considered by the BLM on a case-by-case basis, in consultation with the Regional Solicitor, to determine the nature of the rights and the extent to which the BLM must regulate the exercise of those rights pursuant to the Wilderness Act and other laws.

b. *Aircraft and Motorboats.* Use of aircraft or motorboats may be permitted to continue in wilderness areas where such uses were established prior to the date the area entered the National Wilderness Preservation System. Such use will be monitored on a regular basis to determine if its continuation is appropriate. Use may be regulated as necessary to protect resources in the area.

c. *Control of Fires, Insects, and Diseases.* Where fire, insects and diseases threaten human life, property, or resources on adjacent nonwilderness lands, or where they would cause unacceptable damage to the wilderness resource, measures may be taken as necessary to control them. Allowable actions will be specified in the wilderness management plan for each wilderness area.

d. *Gathering Information About Resources.* Any activity, including mineral prospecting, for the purpose of gathering information about natural resources in wilderness, will be permitted provided it is carried on in a manner compatible with the preservation of the wilderness resource. (This section does not affect mineral prospecting activities conducted under the mining laws, which are covered in section (h) below. The Wilderness Act extends the mining laws to wilderness areas administered by BLM or the U.S. Forest Service until January 1, 1984.)

(1) No form of overland mechanical transport may be used in connection with prospecting for minerals or any activity for the purpose of gathering information about individual resources, unless approved by the BLM.

(2) Any person desiring to use motorized equipment, to land aircraft, or to conduct mineral prospecting or for other purposes is required to notify the BLM in writing. Approval documents will provide for the protection of public land resources, including wilderness values, protection of the public, and restoration of disturbed areas. Performance bonds may be required.

e. *Proposed Water Resource Facilities.* If the President authorizes new water resource facilities or activities, pursuant to section 4(d)(4)(1) of the Wilderness Act, the BLM will manage those authorized operations to prevent unnecessary or undue degradation of the area's wilderness character. (Existing water resource facilities are discussed in (f) below, and water facilities for livestock grazing are discussed in (g) below.)

f. *Existing Water Resource Facilities.* Some wilderness areas may contain minor water resource facilities that were found to be substantially unnoticeable in the area. If such structures are present and were explicitly recognized by Congress as being acceptable in a specific wilderness, they may be operated and maintained to keep them in an effective, usable condition. Maintenance may not change the location, size, or type of the facility, or increase the storage capacity of a reservoir.

g. *Livestock Grazing.* Grazing of livestock, where established prior to the effective date of the Act designating the area as wilderness, shall be permitted to continue subject to the BLM grazing regulations 43 CFR 4100. Existing grazing may include not only the utilization of the forage resource, but also the use and maintenance of livestock management improvements and facilities associated with the grazing activity at the time of designation and which are in compliance with an approved Allotment Management Plan.

Congressional guidelines regarding "Grazing in National Forest Wilderness Areas," published in House Report 96–1126, dated June 24, 1980, will be implemented in all BLM-administered wilderness with pre-existing grazing. These guidelines will be applied using the normal planning and environmental assessment process and will be integrated into all management plans for the wilderness area.

h. *Minerals Management.* Until December 31, 1983, the United States mining laws and all laws pertaining to mineral leasing shall extend to BLM-administered wilderness areas to the same extent as applicable prior to the date the wilderness was incorporated into the National Wilderness Preservation System.

(1) *Mining Claims.* Holders of unpatented mining claims validly established on any BLM-administered wilderness prior to inclusion of such unit in the National Wilderness Preservation System are accorded the rights provided by the United States mining laws as then applicable to public land involved. Persons prospecting or locating mining claims in BLM-administered wilderness on or after the date on which the said unit was included in the National Wilderness Preservation System are accorded similar rights subject to the provisions of the Wilderness Act and subsequent establishing legislation. All claimants must comply with reasonable conditions for the protection of resources in accordance with the general purposes of maintaining the National Wilderness Preservation System unimpaired for future use and enjoyment of its wilderness character.

Timber on mining claims within BLM-administered wilderness may be cut only for the actual development of the claim or uses reasonably incident thereto. Any severance or removal of timber, other than that necessary to provide clearance, shall be in accordance with sound principles of forest management and shall be done in such a manner as to minimize the adverse effect on the wilderness resource. In the development and operation of mining claims, claimants will be required to prevent erosion and the obstruction, pollution, or siltation of streams, lakes, or springs or deterioration of the land.

A bond as prescribed in 43 CFR 3809.1–9 may be required. All reasonable measures will be required to reclaim disturbed lands as soon as feasible after operations cease, and in every case needed work will be accomplished within one year after operations cease, unless provided otherwise by the BLM. Whenever possible and feasible the objectives of reclamation shall be to restore the surface as nearly as possible to its original conformation. Where such measures are impractical or impossible, the objective shall be to provide for the maximum achievable slope stability. Reclamation shall in cases include revegetation where feasible and practical. If revegetation by natural means will not occur in time to prevent serious soil loss or other damage to wilderness values, revegetation by planting may be required, with

preference given to the use of native species.

If an application for patent has been filed but not acted upon when the requirements of the immediately preceding paragraph would normally be invoked, the requirements will be suspended while the patent application is under consideration. However, those requirements for the prevention of erosion and pollution, siltation or obstruction of streams, lakes, or springs or deterioration of the land will continue to be observed.

The title to timber on patented mining claims validly established after the land was included in the National Wilderness Preservation System will remain in the United States, subject to a right of the patentee to cut and use timber. The patentee may cut and use as much of the mature timber as is needed in the extraction, removal and beneficiation of the mineral deposits, if needed timber is not otherwise reasonably available. The cutting shall comply with the requirements for sound principles of forest management as set forth in stipulations issued by the BLM.

In the development and operation of mining claims, claimants will be required to prevent unnecessary or undue degradation of the land.

(2) *Mineral Leasing.* Authority to issue mineral leases in wilderness is reserved to the Director. The Director's decision to issue leases will be based on an evaluation of all environmental and land use values, alternatives for operations, and mineral values.

(3) *Stipulations.* Reasonable stipulations for the protection of the wilderness character of the land will be incorporated into mineral leases, permits, and licenses covering lands within BLM-administered wilderness. Stipulations will be consistent with the use of the land for purposes for which they are leased, permitted, or licensed.

(4) *Common Varieties.* Permits shall not be issued for the removal of mineral materials commonly known as common varieties under the Materials Act of July 31, 1947, as amended and supplemented.

(5) *Withdrawal.* Subject to valid rights then existing, effective January 1, 1984, the minerals in lands designated as wilderness are withdrawn from all forms of appropriation under the mining laws and from disposition under all laws pertaining to mineral leasing, unless Congress specifically provides otherwise in the law designating the area as part of the National Wilderness Preservation System.

i. *Commercal Services.* Commercial services such as those provided by packers, outfitters, and guides may be provided within wilderness areas to the extent necessary for activities which are proper for realizing the recreational or other wilderness purposes of the areas.

j. *Access to Non-Federal Lands.* States or persons, and their successors in interest, who own land completely surrounded by a wilderness area shall be given such rights as may be necessary to assure adequate access to that land. Adequate access is defined as the combination of routes and modes of travel which will, as determined by the BLM cause the least lasting impact on the wilderness resource, and at the same time serve the reasonable purposes for which the State or private land is held or used.

No road shall be constructed across wilderness until authorized by the BLM. Access by routes or modes of travel not available to the general public may, when fully justified, be permitted by written authorization. The authorization will prescribe routes and modes of travel which will result in the least lasting impact on wilderness values and, at the same time, serve the reasonable purposes for which the land is held or used. A performance bond will usually be required. Where the exercise of rights of access to surrounded State or private land would be detrimental to wilderness values, the BLM shall, before granting access, attempt to acquire such land by purchase or by exchange.

4. *Prohibition of Certain Uses.* Except where subject to existing private rights, where necessary to meet minimum requirements for the administration of the wilderness area or as specifically provided for elsewhere in these policies, there shall be no temporary road, no use of motor vehicles, motorized equipment, or motor boats, no landing of aircraft, no other form of mechanical transport and no structure or installation within wilderness areas. There shall be no commercial enterprise or permanent road, except where subject to existing private rights or as specifically provided for in these policies.

5. *Minimum Tool.* Tools, equipment, or structures may be used for management when they are the minimum necessary for protection of the wilderness resource or when necessary for the health and safety of the visitor. Management will use the *minimum* tool, equipment, or structure necessary to successfully, safely, and economically accomplish the objective. When establishing the minimum tool, equipment, or structure necessary for a mangement need within wilderness areas, economic factors should be considered the least important of the three criteria. The chosen tool, equipment, or structure should be the one that least degrades wilderness values temporarily or permanently.

For the purpose of the above paragraph, accepted tools, equipment, and structures may include but are not limited to: fire towers, patrol cabins, pit toilets, temporary roads, spraying equipment, hand tools, fire-fighting equipment caches, fencing, and controlled burning. In special or emergency cases involving the health and safety of wilderness visitors or the protection of wilderness values, aircraft, motorboats, and motorized vehicles may be used.

6. *Existing Structures and Installations.* After Congress has designated a wilderness area, an inventory will be made of structures and installations existing in the area, critically evaluating the purposes and need for each, and its historical significance. If a structure or installation has historical significance, it may be retained as a historic feature of the area. If it does not have historical significance, it may be maintained for continued use either if it meets the "minimum tool" policy in paragraph 5 above, or if it is necessary for a use specifically permitted by the Wilderness Act or by the law designating the affected wilderness area. Any structure or installation that does not qualify for retention under the above criteria will be removed.

In maintaining or modifying existing structures and installations, the manager should consider the potential for using native materials and alternative technological approaches to make them as unobtrusive as possible.

7. *Acquisition of Non-Federal Lands.* Non-Federal lands within wilderness areas will be acquired by purchase or exchange when and where possible. BLM will seek to acquire the mineral rights as well as the surface rights. Acquisition of privately-owned lands will occur only if the private owner concurs with the acquisition, or if the acquisition is specifically authorized by Congress to be accomplished by eminent domain.

8. *Research and Collection of Management Information.* BLM-administered wilderness areas will provide opportunities for research and scientific activities that use wilderness areas for study of natural environments and ecosystems. Information collection activities by resource managers for wilderness and other purposes may also be conducted in wilderness. All research and collection of management information within the wilderness area will be conducted in an unobtrusive manner, by methods compatible with the preservation of the area's wilderness

character. (Refer to section II. B. 3. d. for policy on gathering information about resources.)

9. *Buffer Zones and Adjacent Lands.* No buffer zones will be created around wilderness areas to protect them from the influence of activities on adjacent land.

Adverse impacts upon the wilderness resource from activities both within the wilderness and on adjacent lands will be addressed in environmental assessments or environmental impact statements, as appropriate. Mitigation of impacts from outside wilderness will not be so stringent as to preclude or seriously impeded such activities.

10. *Visitor Information and Education.* Part of the wilderness experience valued by many visitors is the freedom from rules and regulations. Visitor education will be used to achieve management objectives where feasible. Only the minimum amount of regulation necessary to achieve desired objectives will be used.

To protect the natural appearance of wilderness areas, visitor informational and educational programs, signs, and poster boards will normally be located outside of the wilderness boundary. An exception to this general rule is that informational or regulatory signs may be placed within wilderness areas as a management tool to correct specific problems and protect the wilderness resource or for the health and safety of visitors when these signs meet the "minimum tool" standard (see section II B. 5.).

Informational and educational meterials pertaining to the management of BLM-administered wilderness in general, or for specific wilderness areas will be readily available to the wilderness user at BLM offices. Such materials will inform visitors of the responsibilities and risks involved in visiting a wilderness area.

11. *Administration.* a. *Wilderness Management Plans.* A wilderness management plan will be developed for each BLM-administered wilderness area as a means of applying the Wilderness Management Policy to that specific area. The plan will be tailored to the local conditions of each wilderness by adopting any specific objectives appropriate to the area, consisent with the Wilderness Management Policy. Plans should reflect the different kinds of environmental settings, history of use, special congressional guidance, and management situations pertaining to the individual wilderness area. The wilderness management plan will describe the strategy to be used to implement both the Wilderness Management Policy and the specific objectives adopted for the area.

b. *Coordination.* When a wilderness area's boundaries overlap BLM administrative boundaries, management will be coordinated between District and State Offices to ensure uniformity in management practices.

When a wilderness area involves contiguous lands administered by BLM and by another Federal agency, the BLM will remain an active manager of lands under its administration, unless it has been determined that more effective management can be achieved by transferring the land to the other agency or by some form of cooperative management. State Directors have the option of approving cooperative management agreements with other Federal agencies on a case-by-case basis. Wherever appropriate, a joint management plan by all agencies involved will be encouraged.

Coordinated planning efforts will also involve State fish and wildlife agencies and all other State, county, and local agencies that may be affected by wilderness management activities.

c. *Wilderness Management Personnel.* Wilderness management personnel may be employed to help implement the provisions of a wilderness management plan on the ground. They can facilitate protecting the wilderness resource by assisting visitors with suggestions, advice, and information; enforcing regulations; performing minor trail repairs; and removing trash. Wilderness management personnel can reduce site-specific problems, such as the overuse of popular camp areas, by relocating camp sites and performing rehabilitation work. The manager may also use wilderness management personnel to gather information about existing conditions within an area. During their patrols, these employees can gather information about resource trends and visitor use. The decision to employ wilderness management personnel should be made on a case-by-case basis. Their use may or may not be required, depending on local conditions.

Chapter III. Guidelines for Specific Activities

The guidelines in this chapter are an application of the policies set forth in Chapter II to various activities that may or may not take place in BLM-administered wilderness areas. These guidelines are also based on other applicable laws and on other policies and regulations of the Department of the Interior. In addition, wherever feasible, these guidelines correlate closely with the wilderness management policies of the U.S. Forest Service, as that agency is the other multiple-use resource managing agency that administers lands in the National Wilderness Preservation System.

These guidelines will be used in developing a Wilderness Management Plan for each BLM-administered wilderness area, containing guidance on how specific activities will be treated in that area. Until such time as a Wilderness Management Plan is approved by the State Director, decisions on specific activities in a wilderness area will be made by BLM field officials based on these guidelines.

Decisions on any activities not addressed in these guidelines will be made on the basis of the policies in Chapter II.

A. Recreation and Visitor Use

BLM-administered wilderness areas shall provide a variety of uses including, but not limited to, recreational, scenic, scientific, educational, conservation, and historical.

The wilderness resource will be dominant in all management decisions where a choice must be made between preservation of wilderness character and visitor use. There are places and times within wilderness where unique values may require that recreation and visitor use activities be restricted or entirely prohibited in order that an enduring resource of wilderness be preserved. The highest priority among various kinds of visitor use will be accorded those activities which (1) are most dependent upon the wilderness environment and cannot be reasonably accommodated outside of wilderness, (2) least affect the wilderness environment.

Consideration msut be given to the ability of the wilderness resource to sustain visitor use without loss or degradation of the wilderness resource itself. Carrying capacity, both psychological and physical, may vary widely between kinds of visitors, mode of travel, length of stay, kind of wilderness (desert, water, high mountain, etc.), size of wilderness area, and season of use. The leading management tool and document to consider these factors and set guidelines for managing visitor use will be the Wilderness Management Plan. These plans will describe the level at which an area is able to absorb use and impacts and describe measures needed to protect wilderness values.

The following specific guidance applies to visitor use within BLM wilderness:

1. *Visitor Management.* Visitor management techniques will be utilized in wilderness when necessary to

perserve both the wilderness resource and the visitor's wilderness experience and opportunities. Management and regulation of visitor use will be the minimum necessary to provide for use of the area as wilderness, and to preserve the wilderness character of the area.

Distribution of visitors should be planned to maintain a high-quality wilderness resource and to protect the quality of the wilderness experience. The Wilderness Management Plan will consider all appropriate and compatible methods to distribute the level of use that is within the capacity of the wilderness. Distribution can be influenced by both direct and indirect methods.

(a) *Indirect Methods.* Visitors may be distributed through such indirect management efforts as:

(1) Obliteration of improvements at overcrowded or undesirable sites.

(2) Stock grazing or canoe- and boat-beaching restrictions, both private and commercial, on overused or concentration areas.

(3) Improve access to tributary, lightly used areas.

(4) Information to (1) encourage use of lightly used or relatively unknown areas and to (2) stress the experience and value to be found outside the peak use period.

(5) Minimize the promotion of an outdoor experience in wilderness and emphasize such uses of undeveloped areas outside wilderness.

(6) Manipulation of the fishery resource in cooperation with fish and game agencies.

(7) Design and management of trail-head areas, including access roads and parking areas.

(8) Education of visitors about good wilderness manners and ethics.

(9) Use of built-in frictions or obstacles, such as low-standard access roads.

(10) Removal of trail-head improvements and/or restriction of travel into areas already overused or where capacity use already occurs.

(b) *Direct Methods.* More direct methods to achieve visitor distribution may include:

(1) Regulating the use of saddle horses and/or pack stock.

(2) Zoning of areas strictly for foot or horse use only, zoning to protect sensitive sites and resources, or zoning to provide different experiences within the wilderness.

(3) Requiring permits for specific areas or time periods. A permit or registration system can be an important tool for both the wilderness manager and wilderness visitor. Both systems provide visitor use data necessary to provide information regarding the number and distribution of visitors. In addition, a permit or registration system can give a visitor information on areas of use in preplanning a trip. A permit system can be utilized also to limit or redistribute and disperse visitor use.

(4) Wilderness Rangers informing visitors about less congested areas.

(5) Limiting the number of people in parties or the number permitted to stay overnight at specific locations.

(6) Limiting numbers of users. The Wilderness Management Plan will analyze needed methods and identify necessry measures.

2. *Improvements and Facilities.* Facilities and improvements such as trails, bridges, signs, and compsites, will be provided only where they are the minimum necessary for protection of the wilderness resource. No facilities or improvements will be provided primarily for the convenience of the visitor. The need for proposed facilities, such as latrines, fire circles, and fences will be explained in the Wilderness Management Plan. Improvements and facilities will be constructed of materials which harmonize with the natural environment.

Existing improvements or facilities not specifically provided for in these guidelines—those having no historical value and not necessary for preservation of an area's wilderness character—will be removed.

Construction, maintenance, and removal of facilities and improvements will be by primitive means. Exceptions to this policy, such as using handpowered portable tools and aircraft, may be approved by the State Director if no other alternatives exist, the mechanized or mechanical equipment is the minimum necessary, and they will not degrade or impair the area's wilderness character.

(a) Trail Systems. (1) New trails will be constructed only if they are needed to preserve wilderness values and resources and they will not significantly degrade the degree of naturalness or solitude in the area. Trails are an acceptable improvement provided they are constructed and maintained so they appear to be a part of the country rather than an intrusion upon it. Wilderness management plans will address where trails and related facilities are appropriate.

(2) Existing trails and trail systems will be evaluated for possible expansion, relocation, restoration, or closure. Wilderness Management Plans will address the present situation and evaluate future needs. Trailhead access points will be evaluated at this time. Trailhead locations should be carefully chosen as they have a profound influence over management of visitor use. It may be desirable to locate trailhead access points well outside the wilderness boundary to reduce their impact upon the wilderness area.

(3) Trail routes shall be selected to provide scenic vistas and, where possible, a varied scene. Heavily used areas should generally be served by spur trails and should be bypassed by primary trails. Trails will not be constructed with treads of more than 24 inches in width. Trails should follow natural contours where possible and results in minmum disturbance to soil and ground cover.

(4) Bridges will be designed an constructed so as to harmonize with the environment and will be the minimum size and complexity necessary to allow foot or stock use.

(b) *Signing.* Only a minimum of signs will be provided to aid the visitor, in combination with availability of accurate maps, route descriptions, brochures, etc.

(1) Signs may be erected at trail junctions, showing directions with arrows.

(2) Signs will not be placed within the wilderness for the convenience of the user. Informational or interpretive signs will not be used to mark streams, lakes, mountain peaks, passes, or points of interest.

(3) Regulatory signs will be kept to the minimum necessary, and may be of materials other than wood. When regulatory signs are posted within a wilderness, notice pertaining to these regulations will also be posted at trailheads and published where feasible on brochures or maps or otherwise made available to the user prior to entry into the wilderness.

(c) *Use of Campsites.* (1) Campsites or camping areas may be designated if necessary for the purpose of wilderness resource protection. They will be located sufficiently distant from lakes, streams, trails, or other natural attractions as to allow appropriate use without unacceptable depreciation of the focal point of public interest. Space between sites should be sufficient to ensure a reasonable degree of solitude and quiet.

(2) Shelters or lean-tos will not be constructed, and existing shelters will be removed from within wilderness. Shelters or lean-tos determined to have historical value may remain, and their protection and use will be addressed in the Wilderness Management Plan.

(3) Garbage pits will not be permitted, and existing garbage pits will be closed. A "pack-it-in, pack-it-out" philosophy will be encouraged with visitors. Every

practicable medium will be used to educate and inform the visitor on this point.

(4) Improvised camp structures constructed by vistors will not be permitted. They will be dismantled and obliterated when and where found.

(5) Hitchracks or corrals and other improvements to facilitate stock use may be used as necessary to prevent damage to the wilderness resource. They will be located away from main-traveled trails, streams, lakes, camping areas, and focal points of interest, and will be constructed of materials which harmonize with the government.

(d) *Outfitter Camps.* The Wilderness Management Plan will carefully analyze the role of the outfitter-guide in a particular wilderness. If outfitter-guide services are allowed, they will be planned and administered to meet public needs while maintaining the wilderness resource. Operations will be so administered as to be harmonious with those of wilderness visitors who do not employ such services. Outfitter-guide camps will be located off the primary trails or scenic spur trails and at sufficient distance from attractions to avoid conflicts with other visitors. The BLM will select the location of outfitter-guide campsites as necessary to protect wilderness resources and the wilderness experience of other visitors. Outfitter-guides will operate under special recreation permits. The Wilderness Management Plan will evaluate the need for caches and, if approved, shall designate their locations.

(3) *Fuelwood.* If campfires or cooking fires are permitted, fuelwood cutting should be limited to dead or down material. The use of portable cookstoves will be encouraged whenever possible. The Wilderness Management Plan will define any regulations or restrictions needed for wilderness resource protection.

(4) *Contests.* Contests, such as physical or mental endurance of a person or animal; foot races; canoe or boat races; competitive trail rides; survival contests or exercises (including military); and other activities of this nature shall not be permitted in wilderness areas. These activities do not depend on a wilderness setting, and they cause impacts that derade the wilderness character of the area, thus adversely affecting wilderness-dependent uses.

(5) *Recreational or Hobby Mineral Collecting.* Recreational or hobby collecting of mineral specimens (rockhounding) will be allowed in wilderness. Such use will be limited to hand methods or detection equipment that does not cause surface disturbance, such as a metal detector or Geiger counter. In addition, methods shall not be permitted that in any way adversely affect or degrade the wilderness resource or the experiences of visitors in the area. (This paragraph does not cover mining claims, which are addressed in section I below.)

B. Cultural and Historic Resources

Archeological and historical sites and values are a unique and nonrenewable part of the wilderness resource. They are protected by provisions of the Uniform Rules and Regulations (43 CFR Part 3) to carry out the Antiquities Act of 1906, the Historic Sites Act of 1935, Executive Order 11593, the National Historic Preservation Act of 1966, as amended, and the Archaeological Resources Protection Act of 1979. To the extent not inconsistent with the concept of wilderness preservation and the intent of the Wilderness Act, and objectives for cultural resource management, these resources are available for recreational, scenic, scientific, educational, conservation, and historical uses (including ceremonial or religious use by Native Americans).

Cultural resources, in most instances, will be subject to the forces of nature in the same manner as other wilderness resources. Study or management will not normally include any excavation, stabilization, or interpretation activities. Salvage, rehabilitation, stabilization, reconstruction, and restoration work on archeological and historic sites; excavation; and intensive inventories may be permitted on a case-by-case basis where the project will not degrade the overall wilderness character of the area and such activity is needed to preserve the particular resource. State Director approval is required for all such projects.

The National Historic Preservation Act and Executive Order 11593 require an inventory and evaluation of cultural resources. The evaluation study for National Register of Historic Places eligibility is made using criteria in 36 CFR 1204 and in consultation with the State Historic Preservation Office (SHPO). Those cultural resources found to qualify are nominated to the National Register of Historic Places.

Those sites or structures that do not qualify for the National Register may be removed or obliterated unless they meet the "minimum tool" policy (refer to section II. B. 5.) or are necessary for a use specifically permitted by the Wilderness Act or by the law designating the affected wilderness area.

Management direction for cultural resources that qualify for nomination to the National Register is subject to compliance with Section 106 of the National Historic Preservation Act and 36 CFR 800. A decision to destroy, maintain, or allow historic or prehistoric structures to deteriorate naturally is a Federal undertaking which will affect the resources. In working through the compliance processes, a determination will be made as to what feasible and prudent alternatives exist to satisfactorily mitigate adverse effects of the proposed decision on the cultural resources. The range of alternatives might include recording to established standards (by drawings and photographs), salvage (by removing or dismantling), stablizing, or restoration. Stabilization or restoration and subsequent maintenance may be considered for administrative structures that meet the "minimum tool" policy (refer to section II. B. 5).

If the involved parties (SHPO, Advisory Council, BLM) agree upon data recovery as the appropriate mitigation action, they shall execute a Memorandum of Understanding specifying the steps to be taken to mitigate any adverse effects.

C. Forestry Resources

1. *Cutting of Trees and Shrubs.* Management of the forest cover will be directed toward retaining the primeval character of the environment and allowing natural ecological processes to operate freely. Trees, shrubs, and other vegetative products will not be sold or cut for nonwilderness purposes except under specified conditions set forth in these guidelines for valid mining claims and under emergency conditions such as fire, insect, and disease control.

2. *Cutting of Trees for Administrative Purposes.* Trees may be cut for use in the construction and maintenance of authorized improvements that are located within the wilderness when the necessary material cannot be reasonably obtained or brought in from outside the wilderness. Such cutting within the wilderness shall be done away from trails or campsites, and all evidence of cutting shall be disposed of insofar as possible.

3. *Cutting of Trees for Fuelwood.* (Refer to section III. A. 3., Fuelwood, for specific guidance.)

4. *Reforestation.* Reforestation, in the absence of natural revegetation, will generally be prohibited, but in rare cases may be authorized by the Director to prevent deterioration or loss of the wilderness resource when the cause of the damage or loss is due to human activities and there is no reasonable

expectation of natural reforestation. The natural processes of ecological succession will be the preferred method of site-restoration. When reforestation action is necessary, only native species and only primitive methods, such as hand seeding, will be used.

D. Fish and Wildlife

Management will seek a natural distribution, number, and interaction of indigenous species of fish and wildlife. Natural processes will be allowed to occur in wilderness ecosystems, which include fish and wildlife populations, as far as possible without human influences. Management will protect the conditions that allow natural processes a maximum degree of freedom.

To the extent possible, wildlife species in BLM wilderness should be allowed to maintain a natural balance with their habitat and with each other. Wildlife may be harvested under State regulations; fisheries management will be consistent with preservation of the area's wilderness character; and direct fish and wildlife control measures will be applied only upon a showing of need under standards described below.

The BLM, in cooperation with State and Federal public health and fish and game officials, may make special exceptions, where necessary to control disease epidemics or other health hazards in which wildlife species are involved as carriers.

The basic responsibilities of the BLM and other cooperating State and Federal agencies in the management of fish and wildlife are not altered by the Wilderness Act. However, the constraints of the Act and the intent of the Congress articulated in the Act and in subsequent legislation will guide the management of wildlife in wilderness.

The preservation of rare, threatened, and endangered species dependent on wilderness conditions will be favored.

The killing of native birds and animals which are a natural component of the biotic community, but are not provided protection by State or Federal law, will be discouraged or controlled if necessary through public education and cooperative agreements with State game and fish agencies.

1. *Hunting and Fishing.* Hunting and fishing are permitted in BLM-administered wilderness, subject to applicable State and Federal laws and regulations. Coordination with State game and fish agencies for the management of resident wildlife and fish species will be sought in order to ensure maintenance of the wilderness resource. Specific management criteria may be cited in cooperative agreements.

2. *Wildlife Habitat.* The proper balance of game animals with their habitat may be achieved by managing public hunting. Objectives for the management of wildlife habitat are normally compatible with the objectives for maintaining general wilderness character, or careful planning usually can make them so. Where incompatible, the requirements for maintenance of wilderness values will be overriding.

Vegetative manipulation projects for wildlife purposes may be approved if they do not degrade wilderness character, or if they correct conditions which are a result of man's influence, or the project will promote the perpetuation of a threatened or endangered species.

Habitat manipulation by chemical or mechanical means may only be approved on a project-by-project basis where necessary for threatened or endangered species, or to correct unnatural conditions resulting from human influence. Such activities will be allowed only where manipulation would enhance the wilderness resource and where natural processes have been unsuccessful. Hand or aerial seeding of native vegetation species may be permitted after disturbances, such as wildlife, to restore essential food plants to a wilderness where the natural process of healing is not expected to occur. Actions of this type will be allowed only to enhance wilderness values and not to optimize habitat needs of any single wildlife species at the detriment of wildlife diversity in an untrammeled environment.

Prescribed or controlled burning may be used as a wildlife management tool if carefully designed to maintain or enhance the wilderness resource. Prescribed or controlled burning is to be used only when the project can be accomplished without serious or long-lasting damage to watershed or the area's wilderness character. It may be done only for the following purposes:

a. It is needed to maintain the natural condition of a fire-dependent ecosystem or to re-introduce fire where past strict wildlife control measures had interfered with natural, ecological processes.

b. A primary value of a given wilderness will be sustained as a result of the burning.

c. It will promote the perpetuation of a threatened or endangered species.

Prescribed burning will not be permitted to improve wildlife utilization.

Additional specific guidelines on prescribed burning appear in section E, Fire Management.

The BLM may authorize State and Federal agencies to use temporary enclosures and facilities to trap or transplant wildlife as long as they are the minimum necessary to protect or maintain the wilderness resource.

Although construction of facilities to enhance an area's value for wildlife or fish is not consistent with the free operation of natural processes, there are situations where such measures may be necessary for the continued existence or welfare of wildlife or fish living in wilderness. This is particularly true in the case of species adversely affected through human activities in such areas. Certain permanent installations to maintain conditions for wildlife and fish, upon consideration of their design, placement, duration, and use, may be permitted if the resulting change is compatible with preservation of wilderness character and is consistent with wilderness management objectives for the area, and if the installations are the minimum necessary to accomplish the task. Permissible actions under these criteria may include: installations to protect sources of water on which native wildlife depend, such as exclosures; and water sources such as springs, wells, and guzzlers. Fisheries activities may be permitted as long as their purpose is to protect natural conditions, restore deteriorated habitat, and maintain wilderness values.

3. *Wildlife Manipulation.* In some instances, wildlife species once native to the wilderness have been forced from their original habitat by the encroachment of man and his activities. To the extent that these factors can be altered or managed within the intent of the Wilderness Act, native species no longer established in the wilderness area may be reintroduced and managed as a part of the wilderness resource. Proposals must be in concert with the concept of wilderness and must protect, or perpetuate, the wilderness resource. Care must be exercised to be certain that the species is native. Such programs will be carefully addressed in wilderness management plans.

Management of established exotic species (e.g., chukar partridge, pheasant) not natural to an area may continue where they enhance the wilderness character of a particular wilderness. Introduction of new exotics will not be permitted. Carefully coordination with State and Federal agencies should be established for control of undesirable exotic populations.

4. *Fish Stocking.* Fish-stocking programs needed to meet wilderness management objectives shall be developed in cooperation with the State agencies or the Fish and Wildlife Service and shall be coordinated with overall wilderness management objectives. The probability of increased

visitor use at stocked waters and their full impact and effect on the wilderness resources will be recognized and considered.

Cooperative agreements with State agencies should be developed to establish a stocking policy for each wilderness where stocking is permitted, as a basis for a stocking plan. Basic decisions will be spelled out in the wilderness management plan for each wilderness. Aerial stocking of fish by State agencies or the Fish and Wildlife Service may continue where this was an established practice prior to designation. Authorization will be on a case-by-case basis. Aerial stocking must be done outside of general visitor use seasons. Wilderness management plans should contain all necessary justification, mitigation, and definition of planting programs.

Some general guides for fish stocking in BLM wilderness units are: a. Native species should be favored in waters with a history of supporting such species. Species native to the vicinity or region may be considered as an alternative. Exotic fish will not be considered, except where such practice existed prior to wilderness designation.

b. Waters with established undesirable fish or where overpopulations of fish have occurred should be managed for fish best suited to the water under natural conditions, and to meet wilderness objectives. Barren waters may be stocked only if the wilderness management plan defines the desirability of such an action.

c. Presently nonstocked waters which at one time supported a native fish population, and which would provide suitable habitat for native fish species that would enhance the wilderness experience of visitors, may be considered for stocking on a case-by-case basis.

d. In all fish-stocking activities, threatened or endangered species shall receive primary consideration.

5. *Trapping.* Under State laws and regulations, trapping of furbearers will be allowed when population levels justify a harvest program. Commercial trapping will not be permitted.

6. *Rodents.* Rodents in BLM-administered wilderness areas shall be exempt from control programs, except where overpopulations pose a serious threat to other wilderness values or resources outside the boundaries of the wilderness. Control projects must be approved on a case-by-case basis.

7. *Predators.* Predacious animals and birds are an important part of natural life systems within wilderness. They play an important role in the natural selection and survival processes, helping to maintain critical population balances of wild species. They should be able to survive and compete with other species, free from the unregulated interference of man and his traditional pursuit of sport or bounty. Where control of predators is necessary to protect threatened or endangered wildlife species or on a case-by-case basis to prevent special and serious losses of domestic livestock, it will be accomplished by methods which are directed as eliminating the offending individuals while at the same time presenting the least possible hazard to other animals or to wilderness visitors. Poison baits or cyanide guns are not compatible. Control programs will be carried out by or under the direction of the U.S. Fish and Wildlife Service (FWS) and will be consistent with the Secretary of the Interior's policies on animal damage control and with the Memorandum of Understanding between the BLM and FWS. The State Director will approve predator-control programs on a case-by-case basis, and under such conditions as to ensure minimum disturbance to the wilderness resource and visitors.

Approval must be contingent upon a clear showing that the removal of the offending predators will not diminish the wilderness values of the area, because this kind of wildlife is an integral part of the wilderness, as well as an adjunct to the visitor's experience.

E. Fire, Insect, and Disease Management

1. *Fire Management*—a. *Overriding Fire Guidance.* All fires will be controlled to prevent loss of human life or property within wilderness areas or to prevent the spread of fire to areas outside of the wilderness where life, resources, or property may be threatened.

b. *Natural Fire.* Natural fire (i.e., lightning-caused) is normally a part of the ecology of the wilderness, and man's efforts to ban this agent may have resulted in significant ecological changes in the flora and fauna of some areas. In order to return some wilderness ecosystems to a more natural state, it may be appropriate to allow natural fire to burn. Natural fire will be allowed to burn only in conformance with an approved Fire Management Plan and the overriding fire guidance in section (a) above.

c. *Prescribed Burning.* Prescribed burning may be conducted to reintroduce or maintain the natural condition of a fire-dependent ecosystem or to restore fire where past strict fire control measures had interfered with natural, ecological processes, where a primary value of a given wilderness will be sustained as a result of the burning, or where it will perpetuate a threatened or endangered species. Prescribed fires will be allowed only in conformance with an approved Fire Management Plan.

d. *Removal of Evidence of Fire Control Activities.* Temporary fire camps, helispots, and other sites used for fire suppression or control activities shall be removed upon completion of use and the site rehabilitated to as natural a state as possible.

e. *Fire Detection.* Fire detection methods necessary to meet wilderness objectives will be used. Structures such as lookouts may be maintained or constructed if they are the minimum necessary to achieve wilderness management objectives. Preference will be given to detection methods which have the least permanent impact on wilderness values, such as aircraft overflights and lookouts located outside the wilderness boundary.

f. *Pre-Suppression.* Pre-suppression activities may be allowed where necessary to protect private property, and resources within and outside the wilderness boundary. All pre-suppression programs will be addressed in the Fire Management Plan.

g. *Suppression.* Fire-suppression measures and techniques shall be used which achieve the wilderness management objectives with the minimum adverse impact on the wilderness resource. Preference shall be given to the methods and equipment which least alter the landscape or disturb the land surface. Structures and improvements shall be located outside the wilderness boundary, except those that are the mimimum necessary to achieve wilderness management objectives.

h. *Fire Management Plans.* The following considerations will be covered in each Fire Management Plan: wilderness management objectives for the area, historic fire occurrence, natural role of fire, proposed degree of suppression, expected fire behavior, acceptable suppression techniques, adequate buffer zones, smoke management, and effects on adjacent landowners. The plan will conform to criteria defined by the BLM defining the limits of acceptable fire weather, fire behavior, and fire effects. Each Fire Management Plan will be written to conform to the Wilderness Management Plan (WMP) for the area it addresses and will become an addendum to the WMP upon approval.

2. *Control of Insects and Diseases.* Insect and disease outbreaks will not be

artificially controlled, unless it is necessary to protect timber or other values outside of the wilderness area, or in special instances when loss to resources within a wilderness is undesirable (e.g., absence of control would threaten rare or endangered plants or animals). Such control measures will consist of the effective combination of actions which have the least adverse impact on the wilderness resource.

Special care must be taken when using chemicals or other artificial methods to control insect and disease outbreaks because of their possible adverse effect on the total biological community.

Insect or disease suppression projects in BLM wilderness must be approved by the Director.

F. Water Resources Management

1. *Watershed Restoration.* Watershed restoration may be undertaken where deteriorated soil and hydrologic conditions caused by man or his influences create a serious threat or loss of wilderness values; or where, even though not man-caused, these conditions present a definite hazard to life or property, or where such conditions could cause serious depreciation of important environmental quality outside the wilderness. Where such dangers are not imminent or where natural vegetation may be expected to return in a reasonable time, restoration work will not be done.

Re-establishment of vegetation as a watershed-restoration measure, where there is no reasonable expectation of natural healing, will be accomplished using native or naturalized species. Overland motorized equipment will not be used where more primitive equipment can accomplish the restoration objectives. Exceptions must be fully justified, based upon serious imminent threat to high downstream values. Approval by the Director is required for all watershed restoration proposals.

2. *Water Improvements*—a. *Water-yield Improvements.* Protection of wilderness values and management objectives generally preclude use of water-yield improvement techniques. Water-yield improvement prescriptions, if contemplated, must be clearly compatible with maintenance of the wilderness resource. The Director's approval is required for project approval.

b. *New Water-Development Structures.* The establishment of new water-regulating structures, power installations, and related improvements is subject to approval by the President. (Range and wildlife water-development structures are discussed under separate subheadings and are not subject to Presidential approval.)

The BLM's conclusions and recommedations in connection with proposals for new water-resource developments will be based upon comprehensive, factual information developed by an environmental analysis, and draft and final environmental impact statements, as prescribed by the National Environmental Policy Act. The final environmental impact statement requires the Director's approval. Any recommendation in favor of the proposal must be based upon a clear showing that the public values to be gained exceed the values that would be lost, and that the need cannot be met outside the wilderness. When a proposed structure is thus found to be in the public interest, consideration should also be given to a recommendation to exclude the applicable area from wilderness.

c. *Existing Structures.* Reservoirs, ditches, catchments, and related facilities for the control or use of water may have existed within BLM wilderness under valid permits or other authority prior to the area's designation as wilderness. These may be maintained if they are needed in the public interest, or are a part of a valid existing right.

Routine maintenance and repair of an existing structure which does not change the location, size, type, or increase the original intended storage capacity of a reservoir may be approved by the State Director. The operation, maintenance and repair of such facilities may include occasional motorized access where no other reasonable or practical alternatives exist.

Reconstruction of any structure or restoration of a natural body to its original or historic level must be approved by the Director. Primitive means of transport and hand tools will be used wherever and whenever feasible. Any proposal to increase the storage capacity of a reservoir, or the replacement of a reservoir, which was not under a valid permit at the time the unit was incorporated into the National Wilderness Preservation System, will be considered as a new structure and subject to approval by the President.

The wilderness management plan for the unit should carefully evaluate each improvement to determine if the continuation of the use is needed in the public interest, or is part of a valid existing right. Maintenance needs and methods of accomplishing maintenance must be specifically stated if the improvement is to remain. If not, the improvement should be allowed to deteriorate naturally. When natural processes themselves cannot effectively return the abandoned improvement back to a natural condition, restoration by other means may be used. Only hand labor and tools, and seeding with native or naturalized species may be pemitted. All restoration projects are subject to approval by the State Director.

d. *Snow Measurement.* The measurement of snow within BLM wilderness is permitted under the following conditions: (1) Measurement of snow will be accomplished by primitive means. If use of a helicopter was an established practice in measuring snow within an area prior to wilderness designation, that same use may be permitted, however, ways and means of eliminating the need will be explored.

(2) No new data sites can be established unless they are parts of projects approved by the President under provisions of section 4(d)(4) of the Wilderness Act. Use of existing data sites may continue until adequate correlation can be established with data sites outside the wilderness. Installation of automated equipment (sensing devices, data collection platforms, etc.) may be permitted on a temporary basis at existing data sites to accelerate the development of correlations with data sites outside the wilderness. Access will be by primitive means. However, where the use of a helicopter was an established practice, the practice may be continued.

(3) Only miniaturized and unobtrusive types of equipment may be installed, and must be camouflaged to blend with the terrain as much as possible. Practices such as burying equipment and using antennae which can be removed during nonuse periods, will be used to minimize the visual impacts of the data site.

e. *Water Quality.* Maintaining or enhancing water quality is of high priority in management of the wilderness resource. Water quality monitoring instruments and hydrometeorological devices may be permitted if these are the minimum necessary for protection of the wilderness resources. All instruments and devices must be miniaturized and unobtrusive. No motorized vehicles will be permitted for installation, maintenance, or monitoring and surveillance.

f. *Weather Modification Over Wilderness.* Use of lands within the National Wilderness Preservation System as target areas for weather modification activities will not be

approved unless the following conditions are met:

1. The proponent can provide reasonable, scientifically supportable assurance that his activities will not produce permanent, substantial changes in natural conditions.

2. The proposal does not include any feature that might reasonably be expected to produce conditions incompatible in appearance with the wilderness environment or reduce its value for recreation, scenic, scientific, educational, conservation, or historical use.

The effects of weather modification activities may be permanent or temporary depending upon the type, duration, and degree of change in weather brought about by that activity.

Generally, short-term weather-modification activities, which will produce only occasional, incidental, temporary, or transitory changes in the weather with carryover effects on the ground lasting only a few days beyond the actual seeding period, can be permitted over wilderness because little or no permanent, identifiable ecological or physical impact is likely. Conversely, long-term weather modification programs, which will produce a repeated or prolonged change in the weather during any part of successive years, are likely to have a direct and often substantial impact in terms of ecological and physical effects. Even though the human contribution to these impacts on the ecology and physical conditions on the ground may be obscured by the fact that the activities are carried on outside or above the wilderness, they nevertheless can be recognized to be the result of human activities and therefore cannot be permitted where they will directly affect wilderness areas.

State Directors will gather necessary information relative to items 1 and 2 and make recommendations to the Director on any activity or application. The Director will approve activities or installations relative to weather modification affecting wilderness.

G. Air Quality

Under the Clean Air Act (as amended, 1977), BLM-administered lands were given Class II air quality classification, which allows moderate deterioration associated with moderate, well-controlled industrial and population growth. The BLM will manage designated wilderness areas as Class II unless they are reclassified by the State as a result of the procedures prescribed in the Clean Air Act (as amended, 1977).

According to the Clean Air Act, air quality reclassification is the prerogative of the States. The States must follow a process mandated by the Clean Air Act Amendments of 1977, involving a study of health, environmental, economic, social, and energy effects, a public hearing, and a report to the Environmental Protection Agency.

Administrative actions within wilderness areas will comply with the air quality classification for that specific area.

H. Rangeland Management

1. *Livestock Grazing Operations.* Section 4(d)(4)(2) of the Wilderness Act provides for continued livestock grazing where established prior to designating the area as wilderness. The objective of livestock management in wilderness is:

> Utilize the forage resource in conformity with established wilderness objectives for each area and the BLM grazing regulations (43 CFR 4100), and through practical, reasonable and uniform application of the committee guidelines and policy.

Further insight on the subject is in the Conference Report on S. 2009 (House Report 96–1126), under the heading "Grazing in National Forest Wilderness Areas." These committee guidelines and policy are to be considered in the overall context of the purposes and direction of the Wilderness Act and will be applied nationwide. They are reprinted here verbatim as an excerpt from House Report 96–1126:

Grazing in National Forest Wilderness Areas

Section 4(d)(4)(2) of the Wilderness Act states: "the grazing of livestock, where established prior to the effective date of this Act, shall be permitted to continue subject to such reasonable regulations as are deemed necessary by the Secretary of Agriculture."

The legislative history of this language is very clear in its intent that livestock grazing, and activities and the necessary facilities to support a livestock grazing program, will be permitted to continue in National Forest wilderness areas, when such grazing was established prior to classification of an area as wilderness.

Including those areas established in the Wilderness Act of 1964, Congress has designated some 188 areas, covering lands administered by the Forest Service, Fish and Wildlife Service, National Park Service and Bureau of Land Management as components of the National Wilderness Preservation System. A number of these areas contain active grazing programs, which are conducted pursuant to existing authorities. In all such cases, when enacting legislation classifying an area as wilderness, it has been the intent of the Congress, based on solid evidence developed by testimony at public hearings, that the practical language of the Wilderness Act would apply to grazing within wilderness areas administered by all Federal agencies, not just the Forest Service. In fact, special language appears in all wilderness legislation, the intent of which is to assure that the applicable provisions of the Wilderness Act, including Section 4(d)(4)(2), will apply to all wilderness areas, regardless of agency jurisdiction.

Further, during the 95th Congress, Congressional committees became increasingly disturbed that, despite the language of section 4(d)(4)(2) of the Wilderness Act and despite a history of nearly 15 years in addressing and providing guidance to the wilderness management agencies for development of wilderness management policies, National Forest administrative regulations and policies were acting to discourage grazing in wilderness, or unduly restricting on-the-ground activities necessary for proper grazing management. To address this problem, two House Committee on Interior and Insular Affairs Reports (95–620 and 95–1321) specifically provided guidance as to how section 4(d)(4)(2) of the Wilderness Act should be interpreted. This guidance appeared in these reports as follows:

> Section 4(d)(4)(2) of the Wilderness Act states that grazing in wilderness areas, if established prior to designation of the area as wilderness, "shall be permitted to continue subject to such reasonable regulations as are deemed necessary by the Secretary of Agriculture". To clarify any lingering doubts, the committee wishes to stress that this language means that there shall be no curtailment of grazing permits or privileges in an area simply because it is designated as wilderness. As stated in the Forest Service regulations (36 CFR 293.7), grazing in wilderness areas ordinarily will be controlled under the general regulations governing grazing of livestock on National Forests * * *. This includes the establishment of normal range allotments and allotment management plans. Furthermore, wilderness designation should not prevent the maintenance of existing fences or other livestock management improvements, nor the construction and maintenance of new fences or improvements which are consisent with allotment management plans and/or which are necessary for the protection of the range.

Despite the language of these two reports, RARE II hearings and field inspection trips in the 96th Congress have revealed that National Forest administrative policies on grazing in wilderness are subject to varying interpretations in the field, and are

fraught with pronouncements that simply are not in accordance with section 4(d)(4)(2) of the Wilderness Act. This had led to demands on the part of grazing permittees that section 4(d)(4)(2) of the Wilderness Act be amended to clarify the intentions of Congress. However, because of the great diversity of conditions under which grazing uses (including different classes of livestock) are managed on the public lands, the Conferees feel that the original broad language of the Wilderness Act is best left unchanged. Any attempts to draft specific statutory language covering grazing in the entire wilderness system (presently administered by four separate agencies in two different Departments) might prove to be unduly rigid in a specific area, and deprive the land management agencies of flexible opportunities to manage grazing in a creative and realistic site specific fashion.

Therefore, the conferees declined to amend section 4(d)(4)(2) of the Wilderness Act, agreeing instead to reaffirm the existing language and to include the following nationwide guidelines and specific statements of legislative policy. It is the intention of the conferees that the guidelines and policies be considered in the overall context of the purposes and direction of the Wilderness Act of 1964 and this Act, and that they be promptly, fully, and diligently implemented and made available to Forest Service personnel at all levels and to all holders of permits for grazing in National Forest Wilderness areas.

1. There shall be no curtailments of grazing in Wilderness areas simply because an area is, or has been designated as wilderness, nor should wilderness designations be used as an excuse by administrators to slowly "phase out" grazing. Any adjustments in the numbers of livestock permitted to graze in wilderness areas should be made as a result of revisions in the normal grazing and land management planning and policy setting process, giving consideration to legal mandates, range condition, and the protection of the range resource from deterioration.

It is anticipated that the numbers of livestock permitted to graze in wilderness would remain at the approximate levels existing at the time an area enters the wilderness system. If land management plans reveal conclusively that increased livestock numbers or animal unit months (AUMs) could be made available with no adverse impact on wilderness values such as plant communities, primitive recreation, and wildlife populations or habitat, some increases in AUMs may be permissible. This is not to imply, however, that wilderness lends itself to AUM or livestock increases and constuction of substantial new facilities that might be appropriate for intensive grazing management in non-wilderness areas.

2. The maintenance of supporting facilities, existing in an area prior to its classification as wilderness (including fences, line cabins, water wells and lines, stock tanks, etc.), is permissible in wilderness. Where practical alternatives do not exist, maintenance or other activities may be accomplished through the occasional use of motorized equipment. This may include, for example, the use of backhoes to maintain stock ponds, pickup trucks for major fence repairs, or specialized equipment to repair stock watering facilities. Such occasional use of motorized equipment should be expressly authorized in the grazing permits for the area involved. the use of motorized equipment should be based on a rule of practical necessity and reasonableness. For example, motorized equipment need not be allowed for the placement of small quantities of salt or other activities where such activities can reasonably and practically be accomplished on horseback or foot. On the other hand, it may be appropriate to permit the occasional use of motorized equipment to haul large quantities of salt to distribution points. Moreover, under the rule of reasonableness, occasional use of motorized equipment should be permitted where practical alternatives are not available and such use would not have a significant adverse impact on the natural environment. Such motorized equipment uses will normally only be permitted to those portions of a wilderness area where they had occurred prior to the area's designation as wilderness or are established by prior agreement.

3. The replacement or reconstruction of deteriorated facilities or improvements should not be required to be accomplished using "natural materials", unless the material and labor costs of using natural materials are such that their use would not impose unreasonable additional costs on grazing permittees.

4. The construction of new improvements or replacement of deteriorated facilities in wilderness is permissible if in accordance with those guidelines and management plans governing the area involved. However, the construction of new improvements should be primarily for the purpose of resource protection and the more effective management of these resources rather than to accommodate increased numbers of livestock.

5. The use of motorized equipment for emergency purposes such as rescuing sick animals or the placement of feed in emergency situations is also permissible. This privilege is to be exercised only in true emergencies, and should not be abused by permittees.

In summary, subject to the conditions and policies outlined above, the general rule of thumb on grazing management in wilderness should be that activities or facilities established prior to the date of an area's designation as wilderness should be allowed to remain in place and may be replaced when necessary for the permittee to properly administer the grazing programs. Thus, if livestock grazing activities and facilities were established in an area at the time Congress determined that the area was suitable for wilderness and placed the specific area in the wilderness system, they should be allowed to continue. With respect to areas designated as wilderness prior to the date of this Act, these guidelines shall not be considered as a direction to re-establish uses where such uses have been discontinued.

It is also the understanding of the conferees that the authorizing Committees intend to closely monitor the implementation of the guidelines through subsequent oversight hearings to insure that the spirit, as well as the letter, of the guidelines are adhered to by the Forest Service. Of course, the inclusion of these guidelines in this Joint Statement of Managers does not preclude the Congress from dealing with the issue of grazing in wilderness areas statutorily in the future.

This concludes the excerpt from House Report 96–1126.

a. *Management Plans.* The above committee guidelines and policies will be applied in accordance with the environmental analysis process. Management prescriptions will be determined through the BLM resource management planning process and implemented by the allotment management plan.

Planning for livestock grazing operations in designated wilderness will be through the normal BLM resource management planning processes.

(1) Resource management plans establish: (a) Objectives and prescriptions for management of wilderness. These are based on resource inventory data which includes, but is not limited to, ecosystem identification, rangeland conditions, existing uses, and areas of existing or potential conflict.

(b) Use of levels of the rangeland resource and its relationship with other uses.

(2) Allotment mangement plans, within the direction established by the resource management plan, prescribe: (a) The manner and extent to which livestock grazing will be conducted to meet wilderness, rangeland resource needs, desired conditions of ecosystems, and other resource values.

(b) Direction and scheduling for accomplishing goals and objectives on individual allotments including the development of rangeland improvement schedules and grazing system to be followed.

b. *Permits.* Grazing operations within wilderness areas will be authorized by grazing permits. Permits for livestock operations will be issued only in areas where grazing was established at the time the wilderness was designated.

c. *Rangeland Analysis.* (1) Rangeland analysis in wilderness areas will follow the normal BLM standards.

(2) The development of the allotment management plan will determine the need for and standards of rangeland improvements and will prescribe the grazing system to be followed.

Where an approved allotment management plan exists at the time an area is designated as wilderness it will be reviewed in context with the committee guidelines and policy. Necessary modifications will be integrated into the resource management plan and the allotment management plan.

Allotment management plans for allotments partially or entirely within designated wilderness will specifically identify the following:

(a) The use of motor vehicles, motorized equipment or other forms of mechanical equipment including: specific equipment, where it is to be used, when it is to be used, and what it is to be used for.

(b) Rangeland improvement structures and installations to be maintained, constructed, or reconstructed in achieving rangeland management objectives, including maintenance standards.

(c) The means to handle emergencies. In bonafide emergencies or urgent situations, decisions will be based on consideration of all relevant factors and use of good judgment.

d. *Rangeland Improvements.* The following criteria should be considered in determining the use of motor vehicles, motorized equipment or mechanical transport in constructing, maintaining or applying rangeland improvements and practices.

(1) Minimizing threat to or loss of property.

(2) Minimum use of motorized equipment within wilderness.

(3) Develop and manage the rangeland resource in cost-effective manner.

(4) Achieve least amount of impact by non-conforming uses on wilderness values through: (a) Scheduling during periods of low use.

(b) Harmonizing improvements to surrounding landscape.

(c) Locate improvements to achieve maximum screening and fully utilize natural feature opportunities.

(5) Type of practice or construction material.

(6) Timeliness, including frequency and time of year.

(7) Need to deal with emergency or urgent situations that develop through acts of nature, such as drought, heavy snow.

(8) Location of nearest ranch facilities in relation to the project.

(9) Availability of primitive transport, e.g., team and wagon, saddle and pack stock, etc.

(10) Length of time to complete a project by alternative methods.

(11) Availability of temporary camp and feed sites.

(12) Age and health factors of permittee.

Documentation of the environmental analysis which considers the authorization of rangeland improvement construction and/or maintenance, and the use of motor vehicles, motorized equipment, and mechanical transport shall be made in an environmental assessment.

e. *Structural Rangeland Improvements.* Rangeland improvement alternatives will be developed and evaluated through the environmental analysis process, including consultation with grazing permittees and other interested publics. Alternatives which utilize a practical and reasonable approach to meet rangeland and wilderness management objectives will be selected.

Permit modifications for the construction of new rangeland improvements or replacement of existing rangeland improvements will be made in accordance with BLM grazing regulations. Special consideration will be given to construction standards and techniques to achieve the most practical and reasonable approach considering the wilderness resource. Specific consideration will be given to:

—Costs of using natural materials.

—Alternative means of construction which harmonize to the extent possible with the wilderness resource.

—Use of motor vehicles, motorized equipment or mechanical transport needed for construction of improvements.

All rangeland improvements will be listed in the allotment management plan along with maintenance schedules.

(1) *Maintenance.* The maintenance of existing necessary rangeland improvements may be allowed to continue. Those determined unnecessary through an environmental analysis will be phased out and removed on an agreed upon schedule.

The techniques by which maintenance of rangeland improvements and other related grazing activities are performed will require careful study, consideration of options, and a practical and reasonable solution. Existing use and requests for new use of motor vehicles, motorized equipment or other forms of mechanical transport, including emergencies, will be reviewed and congressional grazing guidelines applied. The occasional use of motor vehicles, motorized equipment, or mechanical transport may be permitted where practical alternatives are not available.

The guidelines address occasional use of motor vehicles, motorized equipment, or mechanical transport where practical alternatives do not exist, with application only to those portions of a wilderness where they occurred prior to wilderness designation. It is important to look at all options and their impacts. Good judgments will be necessary in the decisionmaking process.

(2) *New Improvements.* The construction of new rangeland improvements is permissible if determined to be necessary for the purpose of resource protection (rangeland and/or wilderness) and the effective management of these resources rather than to accommodate increased numbers of livestock. The rangeland analysis may indicate that a reduction of use is necessary for rangeland protection, or new rangeland improvemenets are necessary for improved management or protection of wilderness values. New improvements will not be justified solely on the basis that they will aid intensive management resulting in increased grazing.

(3) *Types of materials.* When permitted, new or existing improvements should be of materials which harmonize with the wilderness character of the area to reduce the impact of artificial objects on the natural environment. Natural (native) materials for improvements will be used unless costs are prohibitive or they do not harmonize with the wilderness.

(a) The necessity of the rangeland improvement for livestock grazing operations, resource protection, or enhancement of wilderness values. Some improvements may no longer be needed or should be relocated. Existing rangeland improvements may be necessary for management of the rangeland and wilderness resources. Other alternatives for meeting needs will be explored.

(b) Design, location, and type of materials feasible to serve the purpose and yet be harmonious with natural features of the wilderness will be considered. A steel post and wire fence may be less obtrusive than native pole fence. A redwood water trough may be less noticeable than a steel one. A windmill may better harmonize with wilderness values than an earthen stock pond.

(c) Material and labor costs for natural materials vs. artificial materials. Good judgment, in consultation with permittees, will provide the basis for determining what is reasonable for the permittee's livestock grazing operation and the particular wilderness values involved.

f. *Non-Structural Rangeland Improvements.* Non-structural rangeland improvement practices can be approved where they were part of the management at the time the wilderness was established and where their continuance is necessary to maintain livestock grazing operations. The need for non-structural rangeland improvements and practices will be carefully analyzed using the following criteria: (1) *Seeding.* The need for seeding will be carefully analyzed. Seeding will be approved only for:

(a) Areas where human activities have caused the loss or threaten the existence of indigenous species.

(b) Areas where human activities have denuded or cause loss of soil, providing the actions or activities responsible for the deterioration have been corrected and natural vegetation is insufficient and ineffective.

(c) Maintenance of livestock grazing operations where seeding was practiced prior to the designation of wilderness. Species seeded will be those that are native or naturalized to the area. Seed will be broadcast, except in special situations where other seeding methods are necessary.

(2) *Plant Control.* Plant control will be approved only for: (a) Native plants when needed to maintain livestock grazing operations where practiced prior to the designation of wilderness.

(b) Noxious farm weeds by grubbing or with chemicals when they threaten lands outside wilderness or are spreading within the wilderness, provided the control can be effected without serious adverse impacts on wilderness values.

(3) *Irrigation.* Artifical irrigation or water spreading will be done only to maintain livestock grazing operations where practiced prior to the designation of wilderness.

(4) *Fertilizing.* Fertilization may be used only as an aid to revegetation of disturbed areas approved in item 1 or to maintain livestock grazing operations where practiced prior to the designation of wilderness. Liming will be considered a fertilization practice.

(5) *Prescribed Burning.* Prescribed burning will be approved for rangeland management purposes only where it was practiced prior to the designation of wilderness and is necessary to achieve maintenance of livestock grazing operations; such use must be approved in a fire management plan. (Prescribed burning may be permitted for other purposes, under guidelines in section III. D. 2. and III. E. 1 of this document, such as in cases where reestablishment of natural fire regimes is desired. Rangeland management objectives may be achieved through such prescribed burns and through management of natural fire as prescribed in fire management plans.)

2. *Recreational Livestock.* Commercial recreational livestock, such as that used by packers and outfitters, will be grazed under permit. Noncommercial recreational livestock may also be subject to permit when necessary for the administration or protection of the wilderness. All recreational livestock users, including commercial outfitters, will be required to pack in feed for their domestic animals when it is determined that adequate forage is not available within the area to be visited. The Wilderness Management Plan will analyze the need for regulations or restrictions relating to recreational saddle and pack stock; including, but not limited to hobbling rather than tethering of horses, restrictive zoning, and horse-party size limits.

3. *Wild Horses and Burros.* The Wild Free-Roaming Horse and Burro Act of 1971 declares that wild horses and burros ". . . are to be considered in the area where presently found, as an integral part of the natural system of the public lands."

Viable, healthy populations of wild horses and burros will be maintained in wilderness areas at levels determined appropriate by the BLM planning system. The herd numbers and management techniques will be compatible with preservation of the area's wilderness character.

Herd Management Area Plans (HMAP's) will be developed in wilderness areas with wild horses or burros. The plans will detail the present condition and potential of the herd and herd management area. The plans will describe management actions required to meet the wilderness objectives as well as the herd needs. HMAP's will establish the habitat requirements and any necessary improvements; herd structure (sex and age ratios, etc.); methods of population manipulation and control (including removal, if necessary); migratory habits; and projections of population changes over time. Monitoring studies for the herd and its habitat will be an integral part of the plan. HMAP's will describe the physical improvements necessary for maintenance of healthy, viable herds and their habitat.

Use of motorized vehicles, including aircraft; use and maintenance of equipment such as temporary corrals; and the location, frequency, and timing of such uses will be specified in HMAP's and wilderness management plans. Such uses will be allowed when no other alternatives exist, they are the minimum necessary to accomplish the task, and they are the least degrading of wilderness values temporarily or permanently. Use of these facilities and equipment require State Director approval.

Habitat manipulation and nonstructural improvements will conform to those described under 1.f. above.

Environmental assessments will analyze the impacts of the management prescribed by the HMAP's, and alternatives and mitigating measures to minimize those impacts upon the wilderness resource.

I. Minerals Management

1. *Prospecting and Mining.* The Wilderness Act recognizes the rights of the mining claimant under the mining laws and provides for prospecting and mining in wilderness while still recognizing the wilderness resource.

BLM officials considering operating or prospecting notices of intent or plans of operation are faced with the task of serving two masters which may tend to be mutually exclusive. Nevertheless, the rights of the mining claimant must be met with the least possible impact on the wilderness resource in accordance with the direction in the Wilderness Act.

All BLM officials involved must ensure that provisions approved in operating plans are the minimum necessary to accomplish the rights of the

claimant while creating the least impact on the wilderness resource. Operators must be allowed to carry out operations that are reasonably necessary and incidental to the mining operation, but may not, in any circumstance, cause unnecessary or undue degradation. District Managers will call for the expertise of mining engineers or geologists, soil experts, landscape architects, engineers, watershed specialists, and any other technical expertise necessary to ensure that both the wilderness and the rights of the minerals claimant are adequately and properly served. Appropriate mineral examination will be a part of consideration of any operating plan.

All prospecting and mining activities must comply with the mining laws, BLM and Department regulations and policies, and other applicable Regulations.

a. *Plans of Operations.* (1) An approved plan of operations is required prior to commencing any operation, except casual use, in all BLM-administered wilderness areas. Operations include all functions, work, facilities, and activities in connection with prospecting, development, extraction, and processing of mineral deposits and all other uses related to these activities. Casual use resulting in only negligible disturbance to wilderness resources and not involving the use of mechanized or mortorized equipment, overland mechanical transport, landing of aircraft, or explosives will not require an approved plan of operation.

(2) Contents of a plan of operations and plan approval shall comply with all items listed in the 3809 Regulations at § 3809.1–4(c) and 3809.1–5. The following criteria will also be considered:

(a) *Access*—Access may be proposed in a plan of operations by foot, horseback, road, cross-country vehicles, boat, or aircraft. From the wilderness resource standpoint, foot or horseback is the most preferable and this approach should be considered first. However, this may be impractical from the standpoint of the requirements of the proposed plan. BLM may assist the operator in selecing the most appropriate access route. The final approved method must be that which creates the least lasting impact on the wilderness resource, while still reasonably serving the needs of the operator. In some cases, consideration for the least lasting effect might override another form of access which has more short-term impact.

Those activities otherwise generally prohibited in wilderness, including the use of mechanized transport, motorized equipment, or aircraft, shall be authorized only when proved essential. An approved operating plan will serve as authorization for such otherwise prohibited activities on mining claims within wilderness. All access across wilderness by other than primitive means, whether on or off a mining claim, will be addressed under a plan of operation.

In consideration of the use of motorized equipment and means and type of access, the following criteria shall be satisfied in arriving at a decision:

i. District Managers shall determine that there is reasonable expectation of the presence of a mineral deposit.

ii. There is no reasonable alternative to the use of motorized or mechanical equipment.

iii. When authorized, the use of motorized or mechanical equipment should be timed to have the minimum possible impact on wilderness visitors' enjoyment.

iv. The transportation of prospecting personnel by helicopter or other forms of motorized transport may be approved after a satisfactory showing that the need is reasonably necessary and incidental to the mining operation.

(b) *Motorized Equipment*—The use of motorized equipment may be necessary and incidental to properly perform mining operations. Decisions whether or not to allow the use of such equipment will be based on whether the equipment is necessary to accomplish the task. Where possible, this use will be limited to periods outside the heaviest wilderness use.

(c) *Timber*—Timer determined necessary for removal will be cut in such a manner as to minimize lasting evidence of its removal. Individual trees will be carefully selected so as not to make obvious artificial openings. Stumps will be cut as close to the ground as practical.

(d) *Fire*—The operator will be required to keep spark arresters and fire extinguishers on all internal combustion engines during periods of fire danger. The operator will generally be required to maintain caches of handtools in sufficient quantities to equip those personnel expected to be on the operation. The operator and his personnel will be expected to take initial action on any fire in the vicinity of the operation.

Slash and other flammable debris will generally require complete disposal by burning to reduce fire hazard, prevent insect buildup, and more rapidly reduce evidence of the timber cutting. This will generally consist of careful hand piling away from standing green trees and burning at a time approved by the BLM District Manager. Careful attention during burning operations will be required to prevent damage to standing trees and to ensure a clean burn.

(e) *Site Reclamation*—The reclamation of the site and other disturbed areas will vary with the location, type of soil erosion hazard, type of vegetative cover, and type and extent of disturbance. As a minimum, all sites will be treated in such a manner that they will not cause accelerated erosion, siltation of streams, a hazard to wilderness visitors, or unnecessary or undue degradation of the land. Also, as a minimum, all excavations with vertical cuts in soil will be sloped to their natural angle of repose. Generally, hand-dug pits or shafts with the excavated material still at hand will be refilled. Here, as with timber cutting, the main objective will be to minimize remaining evidence of human activities. It may not be practical to return an area to its original contour, but it will generally be entirely reasonable to return it to a contour which might appear to be natural. An effort will be made to put topsoil equal in quality to that which was removed over disturbed soil surfaces to promote natural revegetation or to aid in seeding. Where native seed is available, disturbed areas will be seeded to native plant species provided the area originally supported such vegetation. Exotic species will not be used.

(f) *Structures and Improvements*—Plans of operations shall identify all structures and improvements planned as an adjunct to the operation. The plan will also show the ultimate disposition of the improvements and when this will occur. The objective will be to ensure the removal of all works or improvements when they are no longer needed for the prospect or future mining.

(g) *Unnecessary or Undue Degradation*—A plan of operations shall include measures to be taken to prevent unncessary or undue degradation of the area resulting from the proposed operation. This may require measures to prevent water pollution through contamination or siltation of streams while the operation is in progress and to leave the site in such a condition that a vegetative cover can be reestablished when the operation is abandoned. Such measures may include trenching of disturbed slopes, placing retaining walls to prevent tailings from entering stream channels, etc. It may also require the scalping and stockpiling of the topsoil or sod from the area to be disturbed so that it might be spread over the surface to aid in reestablishing vegetation. Air and

noise pollution are also critical elements. Plans shall identify mitigating measures to minimize noise and air pollution.

(3) *Performance Bond.* No bond shall be required for operations considered as casual use. A bond may be required for any operator who conducts operations under an approved plan of operations. The primary purpose for a bond is to ensure compliance with the plan of operations. Requirement for posting a bond is at the discretion of the authorized officer.

(4) *Environmental Assessment.* Operating plans for prospecting and mining activities will normally involve surface disturbance of the wilderness resource and will require an environmental assessment which considers the impact of the proposed operation on the lands and all feasible alternatives for complying with the rights of the claimant. Upon completion of the analysis, the District Manager will determine if an environmental impact statement is needed.

b. *Mineral Leasing.* Mineral leasing will be governed by the policy stated in Chapter II, section 3. h. of this document.

c. *Mineral Patents.* The Wilderness Act, section 4(d)(3), states in part:

> Mining locations . . . shall be held and used solely for mining . . . and hereafter, subject to valid existing rights, all patents issued . . . affecting national forest lands designated by this Act as wilderness areas shall convey title to the mineral deposits . . . but each such patent shall reserve to the United States all title in or to the surface. . . .

The same subsection further states that:

> Mining claims located after the effective date of this Act within the boundaries of wilderness areas designated by this Act shall create no rights in excess of those rights which may be patented under the provisions of this subsection.

d. *Common Varieties of Mineral Materials.* Permits to remove such materials will not be issued.

e. *Paleontological Resources.* Paleontological resource inventories, studies, and research involving surface examination or limited subsurface sampling may be permitted. Salvage of paleontological sites, excavation, and collection of artifacts may be allowed if the project will not degrade the wilderness character of the area and such activity is needed to preserve the particular resource, and/or similar studies and research cannot be conducted elsewhere. Use of mechanized equipment and permanent physical protection structures may be permitted if all the above conditions are met and there are not other feasible alternatives. State Director approval is required for all projects.

J. Administrative Structures and Facilities

1. *Administrative Sites.* Existing administrative sites will be limited to the existing structures or their replacement with similar structures of compatible design provided their continued use is necessary to meet minimum requirements for the administration of the area. Tents will usually be used to supplement housing and kitchen demands brought about by special projects and expanding workloads. As maintenance becomes impractical, first consideration will be given to eliminating the site. Replacement of facilities will require the Director's approval. The Wilderness Management Plan will address the need for existing sites. No new sites will be planned unless they are the minimum necessary for management of the area as wilderness.

2. *Fences.* Corrals and fences for the control of administrative pack and saddle stock may be built only at administrative sites where the animals are regularly used for periods of more than a few days' duration. New permanent fences shall be constructed of materials compatible with the particular wilderness. The Wilderness Management Plan will consider the need for, location of, and material to be used in administrative fence construction.

3. *Trails.* Trails for administrative purposes may be constructed when they are the minimum necessary for the preservation of the wilderness resource and have been authorized in the Wilderness Management Plan. (Trails and associated structures for visitor use are discussed as part of the specific guidance under Recreation and Visitor Use, section III. A. of this document.)

4. *Airfields.* New airfields, including emergency airstrips, shall not be located in BLM-administered wilderness. The Wilderness Management Plan shall review existing airstrips and determine whether or not to permit the continued use of existing airfields. Such use will be monitored on a regular bisis to determine if its continuation is appropriate. Use may be restricted when necessary to protect wilderness resources, such as wildlife values during nesting season. If use is approved, maintenance will generally be by primitive, non-motorized equipment only.

6. *Heliports and Helispots*—a. *Heliports.* Heliports may be constructed and maintained at existing administrative sites where they are the minimum necessary for wilderness purposes. Complete justification for continuing heliports or constructing new ones will be required. Unless otherwise approved by the Director, other heliports shall not be located within wildernesses. The Wilderness Management Plan will fully evaluate the need for heliports. Only those heliports considered the minimum necessary for wilderness resource management will be continued.

b. *Helispots.* State Directors may approve construction of individual helispots or systems of helispots when they are the minimum necessary for administration or protection of the area as wilderness. The Wilderness Management Plan will fully evaluate helispot needs. Except for emergencies, helispot construction is prohibited if not specifically identified in the wilderness plan.

7. *Communication Facilities.* Communication facilities will be constructed and maintained only when they are the minimum necessary for administration and protection of the area as wilderness. The Wilderness Management Plan will fully evaluate the need for existing and proposed sites and their maintenance.

8. *Structures and Facilities Constructed, Used, or Proposed by Other Agencies.* Other agencies conducting activities within BLM wilderness shall be equally constrained by provisions of the Wilderness Act that are applicable to the BLM. These guidelines will apply: a. Authorized structures used by other agencies shall be reviewed periodically to determine whether their continued existence is essential for meeting the minimum requirements for administration of the area as wilderness. If it is not, the authorization shall be terminated and the structure removed. The Wilderness Management Plan will assess and determine the disposition of all such structures.

b. When existing improvements deteriorate to the point that normal maintenance will not suffice to keep them usable, the necessity for such buildings shall be critically analyzed. If they are not essential to meet the minimum requirements of administration of the wilderness, or essential to a continuing program that was established on the basis of the structure, they shall not be replaced. Permits for new buildings or replacement of existing structures must be approved by the Director.

c. The maintenance or replacement of existing signs, instruments, and other improvements of a minor nature, used in connection with such projects as snow surveys, water measurement, game and

fish management, and geological studies may be approved by the State Director. New installations may be approved if they are essential to meet the minimum requirements for administration of the wilderness for the purposes of the Wilderness Act.

K. Use of Motorized and Mechanical Equipment

Travel within a BLM-administered wilderness will normally be by nonmotorized, nonmechanical means consistent with the preservation of wilderness character.

The wilderness management plan will specify the instances and places in which administrative use of mechanized equipment, mechanical transport, or aircraft is the minimum necessary to protect and administer the wilderness resource or is necessary as part of a nonconforming, but accepted, use. Where approved, that equipment which is the minimum necessary to accomplish the task with the least lasting and damaging impact on the wilderness resource will be selected. Such motorized and mechanical equipment use will be scheduled at times and locations which will have the least impact on the visitors' wilderness experience.

Conditions under which use may be allowed (unless otherwise stated, all use is subject to the standards spelled out in the preceding paragraph) are: 1. The public use of aircraft or motorboats, where these uses were established prior to the area's designation as wilderness, may be permitted to continue. Wilderness Management Plans will assure periodic review of such use to determine if its continuation is necessary and impacts on the area's wilderness character are minimized.

2. Motorized and mechanical equipment use may be authorized for mining or prospecting purposes if approved in a Plan of Operation or in association with valid existing rights. Refer to specific guidance for Minerals Management.

3. The use of motor vehicles, motorized equipment, and mechanical transport may be approved for certain situations involving established livestock grazing operations. Refer to specific guidance for Rangeland Management.

4. Motorized equipment and mechanical transport use may be allowed when an emergency condition exists which involves the health and saftey of visitors. The Area Manager or District Manager may approve such action.

5. Motorized equipment and mechanical transport may be permitted during a fire suppression emergency. Impacts resulting from overland vehicle travel (either cross-country travel or temporary road construction) and impacts from equipment use will be obliterated and rehabilitated in a manner which permits the wilderness resource an opportunity to heal rapidly. Motorized equipment and mechanical transport uses will be specifically addressed in a wilderness area's Fire Management Plan. The Area Manager or District Manager may approve such action. Refer to specific guidance for Fire Management.

6. The use of aircraft may be allowed in nonemergency situations to deliver supplies or materials to construct or maintain improvements needed for administration of the area as wilderness when use of pack and saddle stock or other non-mechanized means is not feasible. Approval must be authorized by the State Director.

7. Powered hand-portable tools, such as chain saws or rock drills, may be approved by the State Director when they are the minimum necessary for administrative purposes where work cannot be accomplished with nonpowered tools. (In some cases, such tools may be necessary in trail construction and maintenance, due to limitations of time, season, etc.)

8. Mechanized or motorized equipment may be used for wilderness research, other wilderness-enhancing purposes where no other alternatives exist and where such use is the minimum necessary for administration of the area as wilderness and will not degrade the area's wilderness character. Instances could include wildlife transplants or fish stocking by State Divisions of Wildlife. State Director approval is required. (Refer also to specific guidance for Research and Studies.)

9. Mechanized or motorized equipment may be used in gathering information about resources, so long as the use is compatible with preservation of the wilderness environment. Instances could include mineral surveys by the U.S. Geological Survey or water resource investigations. State Director approval is required.

10. Where feasible, control of insects and diseases will be conducted without the use of motorized equipment, otherwise aircraft use is permissible without landing of aircraft. Approval must be authorized by the State Director.

11. Motorized equipment necessary to meet temporary emergencies involving violations of criminal law and/or including the pursuit of fugitives may be approved by the District Manager.

12. There is no specific prohibition of overflight of wilderness by aircraft. Low-flying aircraft cause disturbance of the solitude of an area. Except in bona fide emergencies, such as search and rescue efforts and essential military missions, low flight should be discouraged. Where low overflight is a problem, or expected to become a problem, wilderness management plans will provide for liaison with proper military authorities and the Federal Aviation Administration, and contact with pilots in the general area in an effort to reduce low flight.

L. Research and Studies

Research is a valid and important use of the wilderness resource. Research will be permitted and encouraged as long as all projects are conducted in such a manner as to preserve the area's wilderness character and they further the management, scientific, educational, and conservation purposes of the area.

Research will be conducted or supported to evaluate the effectiveness in achieving objectives of ongoing wilderness management. Research will also be encouraged to identify problems and improve management techniques to increase efforts to futher the purposes of the Wilderness Act.

Research and studies to investigate scientific value may also be conducted in wilderness provided that wilderness is essential to results of such research, and wilderness values would not be jeopardized.

Research and other studies will be conducted without use of motorized equipment or construction of temporary or permanent structures. Exceptions to this policy may be approved by the State Director in projects that are essential to management of the specific wilderness when no other feasible alternatives exist. Such use, when approved, must be the minimum necessary and must not degrade the area's wilderness character.

IV. Implementation of the Wilderness Management Policy

This chapter explains how the BLM will implement the Wilderness Management Policy through the process of developing a plan for each wilderness area under its administration.

The purpose of the Wilderness Management Plan (WMP) is to describe the management strategy that will be used to work toward attainment of the objectives of the Wilderness Management Policy. The plan must clearly show the actions that will be taken to preserve the wilderness resource, and the linkage between these actions and the objectives.

Each WMP will address the management situations present in an individual wilderness area or in two or more closely related areas. Plans should reflect the different kinds of environmental settings, history of use, and management situations found in individual areas within the framework of this policy.

Public involvement must be included in the development of each WMP. A minimum of at least one meeting or workshop must be open to the general public and the public must be given at least 45 days to comment upon the proposed Wilderness Plan. Issues, questions, and problems raised by the public will be considered during the development of the final WMP. WMP's will be updated on a regular basis or as conditions change. The public will be given the opportunity to be involved in plan changes.

The Wilderness Management Plan will include the general policy for all BLM wilderness areas. Additions may be made to tailor the policy to the current management situation for each area. Selected statements from the Wilderness Management Policy may be included to show the connection between actions proposed in the plan and the objective found in the management policy. Other policy statements may be included where appropriate, so long as they do not conflict with the Wilderness Management Policy.

During the time period before a WMP is prepared for a wilderness area, the Wilderness Management Policy will guide the conduct of day-to-day activities. The approval of activities, programs, or projects initiated by the Bureau, other governmental bodies, or private individuals will be contingent upon the completion of an environmental assessment. Proposals determined to be inconsistent with the intent of the Wilderness Management Policy or other elements of the BLM's legislative and regulatory mandate will be modified or disapproved as appropriate.

Upon completion of the WMP for an area, the viability of activities, programs, or projects will be determined through the BLM's environmental assessment process. If the proposed action is part of an approved WMP, the environmental assessment will consider if it is the best way to meet objectives of the plan from an on-the-ground perspective and if the action conforms to other applicable elements of the BLM's legislative and regulatory mandate. If the proposal is not part of the WMP, the environmental assessment will be used also to determine if it is in conformance with the WMP. Proposals found to be inconsistent with the WMP or other applicable Bureau guidance will be modified or disapproved as appropriate.

Specific guidance regarding the procedure for developing Wilderness Management Plans will be issued to BLM field offices after issuance of the final Wilderness Management Policy.

Appendix A—Section 603 of the Federal Land Policy and Management Act of 1976; Pub. L. 94–579

Sec. 603. (a) Within fifteen years after the date of approval of this Act, the Secretary shall review those roadless areas of the five thousand acres or more and roadless islands of the public lands, identified during the inventory required by section 201(a) of the Act as having wilderness characteristics described in the Wilderness Act of September 3, 1964 (78 Stat. 890; 16 U.S.C. 1131 et seq.) and shall from time to time report to the President his recommendation as to the suitability or nonsuitability of each such area or island for preservation as wilderness: Provided, that prior to any recommendations for the designation of an area as wilderness the Secretary shall cause mineral surveys to be conducted by the U.S. Geological Survey and the Bureau of Mines to determine the mineral values if any, that may be present in such areas: Provided further, that the Secretary shall report to the President by July 1, 1980, his recommendations on those areas which the Secretary has prior to November 1, 1975, formally identified as natural or primitive areas. The review required by this subsection shall be conducted in accordance with the procedures specified in section 3(d) of the Wilderness Act.

(b) The President shall advise the President of the Senate and the Speaker of the House of Representatives of his recommendations with respect to designation as wilderness of each such area, together with a map thereof and with a definition of its boundaries. Such advice by the President shall be given within two years of the receipt of each report from the Secretary. A recommendation of the President for designation as wilderness shall become effective only if so provided by an Act of Congress.

(c) During the period of review of such areas and until Congress has determined otherwise, the Secretary shall continue to manage such lands according to his authority under this Act and other applicable law in a manner so as not to impair the suitability of such areas for preservation as wilderness, subject, however, to the continuation of existing mining and grazing uses and mineral leasing in the manner and degree in which the same was conducted on the date of approval of this Act: Provided, that, in managing the public land the Secretary shall by regulation or otherwise take any action required to prevent unnecessary or undue degradation of the lands and their resources or to afford environmental protection. Unless previously withdrawn from appropriation under the mining laws, such lands shall continue to be subject to such appropriation during the period of review unless withdrawn by the Secretary under the procedures of section 204 of this Act for reasons other than the preservation of their wilderness character. Once an area has been designated for preservation as wilderness, the provisions of the Wilderness Act which apply to national forest wilderness areas shall apply with respect to the administration and use of such designated area, including mineral surveys required by section 4(d)(2) of the Wilderness Act, and mineral development, access, exchange of lands, and ingress and egress for mining claimants.

Appendix B—The Wilderness Act of September 3, 1964; Public Law 88–577; 88th Congress, S. 4

AN ACT

To establish a National Wilderness Preservation System for the permanent good of the whole people and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled:

Short Title

Section 1. This Act may be cited as the "Wilderness Act."

Wilderness System Established—Statement of Policy

Section 2. (a) In order to assure that an increasing population, accompanied by expanding settlement and growing mechanization, does not occupy and modify all areas within the United States and its possessions, leaving no lands designated for preservation and protection in their natural condition, it is hereby declared to be the policy of the Congress to secure for the American people of present and future generations the benefits of an enduring resource of wilderness. For this purpose there is hereby established a National Wilderness Preservation System to be composed of federally owned areas designated by Congress as "wilderness areas", and these shall be administered for the use and enjoyment of the American people in such manner as will leave them unimpaired for future use and enjoyment as wilderness, and so as to provide for the protection of these areas, the preservation of their wilderness character, and for the gathering and dissemination of information regarding their use and enjoyment as wilderness; and no Federal lands shall be designated as "wilderness areas" except as provided for in this Act or by a subsequent Act.

(b) The inclusion of an area in the National Wilderness Preservation System notwithstanding, the area shall continue to be managed by the Department and agency having jurisdiction thereover immediately before its inclusion in the National Wilderness Preservation System unless otherwise provided by Act of Congress. No appropriation shall be available for the payment of expenses or salaries for the administration of the National Wilderness Preservation System as a separate unit nor shall any appropriations be available for additional personnel stated as being required solely for the purpose of managing or administering areas solely because they are included within the National Wilderness Preservation System.

Definition of Wilderness

(c) A wilderness, in contrast with those areas where man and his own works dominate the landscape, is hereby recognized as an area where the earth and its community of life are untrammeled by man, where man himself is a visitor who does not remain. An area of wilderness is further defined to mean in this Act an area of undeveloped Federal land retaining its primeval character and influence, without permanent improvements or human habitation, which is protected and managed so as to preserve its natural conditions and which (1) generally appears to have been affected primarily by the forces of nature, with the imprint of man's work substantially unnoticeable; (2) has outstanding opportunities for solitude or a primitive and unconfined type of recreation; (3) has at least five thousand acres of land or is of sufficient size as to make practicable its preservation and use in an unimpaired condition; and (4) may also contain ecological, geological, or other features of scientific, educational, scenic, or historical value.

National Wilderness Preservation System—Extent of System

Section 3. (a) All areas within the national forests classified at least 30 days before the effective date of this Act by the Secretary of Agriculture or the Chief of the Forest Service as "wilderness," "wild," or "canoe" are hereby designated as wilderness areas. The Secretary of Agriculture shall—

(1) Within one year after the effective date of this Act, file a map and legal description of each wilderness area with the Interior and Insular Affairs Committees of the United States Senate and the House of Representatives, and such descriptions shall have the same force and effect as if included in this Act: *Provided, however,* That correction of clerical and typographical errors in such legal descriptions and maps may be made.

(2) Maintain, available to the public, records pertaining to said wilderness areas, including maps and legal descriptions, copies of regulations governing them, copies of public notices of, and reports submitted to Congress regarding pending additions, eliminations, or modifications. Maps, legal descriptions, and regulations pertaining to wilderness areas within their respective jurisdictions also shall be available to the public in the offices of regional foresters, national forest supervisors and forest rangers.

Classification. (b) The Secretary of Agriculture shall, within ten years after the enactment of this Act, review, as to its suitability or nonsuitability for preservation as wilderness, each area in the national forests classified on the effective date of this Act by the Secretary of Agriculture or the Chief of the Forest Service as "primitive" and report his findings to the President.

Presidential recommendation to Congress. The President shall advise the United States Senate and House of Representative of his recommendations with respect to the designation as "wilderness" or other reclassification of each area on which review has been completed, together with maps and a definition of boundaries. Such advice shall be given with respect to not less than one-third of all the areas now classified as "primitive" within three years after the enactment of this Act, not less than two-thirds within seven years after the enactment of this Act, and the remaining areas within ten years after the enactment of this Act.

Congressional approval. Each recommendation of the President for designation as "wilderness" shall become effective only if so provided by an Act of Congress. Areas classified as "primitive" on the effective date of this Act shall continue to be administered under the rules and regulations affecting such areas on the effective date of this Act until Congress has determined otherwise. Any such area may be increased in size by the President at the time he submits his recommendations to the Congress by not more than five thousand acres with no more than one thousand two hundred and eighty acres of such increase in any one compact unit; if it is proposed to increase the size of any such area by more than five thousand acres or by more than one thousand two hundred and eighty acres in any one compact unit the increase in size shall not become effective until acted upon by Congress. Nothing herein contained shall limit the President in proposing, as part of his recommendations to Congress, the alteration of existing boundaries of primitive areas or recommending the addition of any contiguous area of national forest lands predominantly of wilderness value. Notwithstanding any other provisions of this Act, the Secretary of Agriculture may complete his review and delete such areas as may be necessary, but not to exceed seven thousand acres, from the southern tip of the Gore Range-Eagles Nest Primitive Area, Colorado, if the Secretary determines that such action is in the public interest.

Report to President. (c) Within ten years after the effective date of this Act the Secretary of the Interior shall review every roadless area of five thousand contiguous acres or more in the national parks, monuments and other units of the national park system and every such area of, and every roadless island within, the national wildlife refuges and game ranges, under his jurisdiction on the effective date of this Act and shall report to the President his recommendation as to the suitability or nonsuitability of each such area or island for preservation as wilderness.

Presidential recommendation to Congress. The President shall adviser the President of the Senate and the Speaker of the House of Representatives of his recommendation with respect to the designation as wilderness of each such area or island on which review has been completed, together with a map thereof and a definition of its boundaries. Such advice shall be given with respect to not less than one-third of the areas and islands to be reviewed under this subsection within three years after enactment of this Act, not less than two-thirds within seven years of enactment of this Act, and the remainder within ten years of enactment of this Act.

Congressional approval. A recommendation of the President for designation as wilderness shall become effective only if so provided by an Act of Congress. Nothing contained herein shall, by implication or otherwise, be construed to lessen the present statutory authority of the Secretary of the Interior with respect to the maintenance of roadless areas within units of the national park system.

Suitability. (d)(1) The Secretary of Agriculture and the Secretary of the Interior shall, prior to submitting any recommendations to the President with respect to the suitability of any area for preservation as wilderness—

Publication in **Federal Register.** (A) Given public notice of the proposed action as they deem appropriate, including publication in the **Federal Register** and in a newspaper having general circulation in the area or areas in the vicinity of the affected land;

Hearings. (B) Hold a public hearing or hearings at a location or locations convenient to the area affected. The hearings shall be announced through such means as the respective Secretaries involved deem appropriate, including notices in the **Federal Register** and in newspapers of general circulation in the area: *Provided,* That if the lands involved are located in more than one State, at least one hearing shall be held in each State in which a portion of the land lies;

(C) At least thirty days before the date of a hearing advise the Governor of each State and the governing board of each county, or in Alaska the borough, in which the lands are located, and Federal departments and agencies concerned and invite such officials and Federal agencies to submit their views on the proposed action at the hearing or by no later than thirty days following the date of the hearing.

(2) Any views submitted to the appropriate Secretary under the provisions of (1) of this subsection with respect to any area shall be included with any recommendations to the President and to Congress with respect to such area.

Proposed modification. (e) Any modification or adjustment of boundaries of any wilderness area shall be recommended by the appropriate Secretary after public notice of such proposal and public hearing or hearings as provided in subsection (d) of this section. The proposed modification or adjustment shall then be recommended with map and description thereof to the President. The President shall advise the United States Senate and the House of Representatives of his recommendations with respect to such modification or adjustment and such recommendations shall become effective only in the same manner as provided for in subsections (b) and (c) of this section.

Use of Wilderness Areas

Section 4. (a) The purposes of this Act are hereby declared to be within and supplemental to the purposes for which national forests and units of the national park and wildlife refuge systems are established and administered and—

(1) Nothing in this Act shall be deemed to be in interference with the purpose for which national forests are established as set forth in the Act of June 4, 1897 (30 Stat. 11), and the Multiple-Use Sustained-Yield Act of June 12, 1960 (74 Stat. 215).

(2) Nothing in this Act shall modify the restrictions and provisions of the Shipstead-Nolan Act (Public Law 539, Seventy-first Congress, July 10, 1930; 46 Stat. 1020), the Thye-Blatnik Act (Public Law 733, Eightieth Congress, June 22, 1948; 62 Stat. 568), and the Humphrey-Thye-Blatnik-Andresen Act (Public Law 607, Eighty-fourth Congress, June 22, 1956; 70 Stat. 326), as applying to the Superior National Forest or the regulations of the Secretary of Agriculture.

(3) Nothing in this Act shall modify the statutory authority under which units of the national park system are created. Further, the designation of any area of any park, monument, or other unit of the national park system as a wilderness area pursuant to this Act shall in no manner lower the standards evolved for the use and preservation of such park, monument, or other unit of the national park system in accordance with the Act of August 25, 1916, the statutory authority under which the area was created, or any other Act of Congress which might pertain to or affect such area, including, but not limited to, the Act of June 8, 1906 (34 Stat. 225; 16 U.S.C. 432 et. seq.); section 3(2)) of the Federal Power Act (16 U.S.C. 796 (2)); and the Act of August 21, 1935 (40 Stat. 666; 16 U.S.C. 461 et seq.).

(b) Except as otherwise provided in this Act, each agency administering any area designated as wilderness shall be reasonable for preserving the wilderness character of the area and shall so administer such area for such other purposes for which it may have been established as also to preserve its wilderness character. Except as otherwise provided in this Act, wilderness areas shall be devoted to the public purposes of recreational, scenic, scientific, educational, conservation, and historical use.

Prohibition of Certain Uses

(c) Except as specifically provided for in this Act, and subject to existing private rights, there shall be no commercial enterprise and no permanent road within any wilderness area designated by this Act and, except as necessary to meet minimum requirements for the administration of the area for the purpose of the Act (including measures required in emergencies involving the health and safety of persons within the area), there shall be no temporary road, no use of motor vehicles, motorized equipment or motorboats, no landing of aircraft, no other form of mechanical transport, and no structure or installation within any such area.

Special Provisions

(d) The following special provisions are hereby made: (1) Within wilderness areas designated by this Act the use of aircraft or motorboats, where these uses have already become established, may be permitted to continue subject to such restrictions as the Secretary of Agriculture deems desirable. In addition, such measures may be taken as may be necessary in the control of fire, insects, and diseases, subject to such conditions as the Secretary deems desirable.

Nothing in this Act shall prevent within national forest wilderness areas any activity, including prospecting, for the purpose of gathering information about mineral or other resources, if such activity is carried on in a manner compatible with the preservation of the wilderness environment. Furthermore, in accordance with such program as the Secretary of the Interior shall develop and conduct in consultation with the Secretary of Agriculture, such areas shall be surveyed on a planned, recurring basis consistent with the concept of wilderness preservation by the Geological Survey and the Bureau of Mines to determine the mineral values, if any, that may be present; and the results of such surveys shall be made available to the public and submitted to the President and Congress.

Mineral leases, claims, etc. (3) Notwithstanding any other provisions of this Act, until midnight December 31, 1983, the United States mining laws and all laws pertaining to mineral leasing shall, to the same extent as applicable prior to the effective date of this Act, extend to those national forest lands designated by this Act as "wilderness areas"; subject, however, to such reasonable regulations governing ingress and egress as may be prescribed by the Secretary of Agriculture consistent with the use of the land for mineral location and development and exploration, drilling, and production, and use of land for transmission lines, waterlines, telephone lines, or facilities necessary in exploring, drilling, producing, mining, and processing operations, including where essential the use of mechanized ground or air equipment and restoration as near as practicable of the surface of the land disturbed in performing prospecting, location, and, in oil and gas leasing, discovery work, exploration, drilling, and production, as soon as they have served their purpose. Mining locations, lying within the boundaries of said wilderness areas shall be held and use solely for mining or processing operations and uses reasonably incident thereto; and hereafter, subject to valid existing rights, all patents issued under the mining laws of the United States affecting national forest lands designated by this Act as wilderness areas shall convey title to the mineral deposits within the claim, together with the right to cut and use so much of the mature timber therefrom as may be needed in the extraction, removal, and beneficiation of the mineral deposits, if the timber is not otherwise reasonably available, and if the timber is cut under sound principles of forest management as defined by the national forest rules and regulations, but each such patent shall reserve to the United State all title in or to the surface of the lands and products thereof, and no use of the surface of the claim or the resources therefrom not reasonably required for carrying on mining or prospecting shall be allowed except as otherwise expressly provided in this Act: *Provided*, That, unless hereafter specifically authorized, no patent within wilderness areas designated by this Act shall issue after December 31, 1983, except for the valid claims existing on or before December 31, 1983. Mining claims located after the effective date of the Act within the boundaries of wilderness areas designated by this Act shall create no rights in excess of those rights which may be patented under the provisions of this subsection. Mineral leases permits, and licenses covering lands within national forest wilderness areas designated by this Act shall contain such reasonble stipulations as may be prescribed by the Secretary of Agriculture for the protection of the wilderness character of the land consistent with the use of the land for the purposes for which they are leased, permitted, or licensed. Subject to valid rights then existing, effective January 1, 1984, the minerals in lands designated by this Act as wilderness areas are withdrawn from all forms of appropriation under the mining laws and from disposition under all laws pertaining to mineral leasing and all amendments thereto.

Water resources. (4) Within wilderness areas in the national forests designated by this Act, (1) the President may, within a specific area and in accordance with such regulations as he may deem desirable, authorize prospecting for water resources, the establishment and maintenance of reservoirs, water conservation works, power projects, transmission lines, and other facilities needed in the public interest, including the road construction and maintenance essential to development and use thereof, upon his determination that such use or uses in the specific area will better serve the interests of the United States and the people thereof than will its denial; and (2) the grazing of livestock, where established prior to the effective date of this Act, shall be permitted to continue subject to such reasonable regulations as are deemed necessary by the Secretary of Agriculture.

(5) Other provisions of this Act to the contrary notwithstanding, the management of the Boundary Waters Canoe Area, formerly designated as the Superior, Little Indian Sioux, and Caribou Roadless Areas, in the Superior National Forest, Minnesota, shall be in accordance with regulations established by the Secretary of Agriculture in accordance with the general purpose of maintaining, without unnecessary restrictions on other uses, including that of timber, the primitive character of the area, particularly in the vicinity of lakes, streams, and portages: *Provided*, That nothing in this Act shall preclude the continuance within the area of any already established use of motorboats.

(6) Commercial services may be performed within the wilderness areas designated by this Act to the extent necessary for activities which are proper for realizing the recreational or other wilderness purposes of the areas.

(7) Nothing in this Act shall constitute an express or implied claim or denial on the part of the Federal Government as to exemption from State water laws.

(8) Nothing in this Act shall be construed as affecting the jurisdiction or responsibilities of the several States with respect to wildlife and fish in the national forests.

State and Private Lands Within Wilderness Areas

Section 5. (a) In any case where State-owned or privately owned land is completely surrounded by national forest lands within areas designated by this Act as wilderness, such State or private owner shall be given such rights as may be necessary to assure adequate access to such State-owned or privately owned land by such State or private owner and their successors in interest, or the

State-owned land or privately owned land shall be exchanged for federally owned land in the same State of approximately equal value under authorities available to the Secretary of Agriculture:

Transfer, restriction. Provided, however, That the United States shall not transfer to a State or private owner any mineral interests unless the State or private owner relinquishes or causes to be relinquished to the United States the mineral interest in the surrounded land.

(b) In any case where valid mining claims or other valid occupancies are wholly within a designated national forest wilderness area, the Secretary of Agriculture shall, by reasonable regulations consistent with the preservation of the area as wilderness, permit ingress and egress to such surrounded areas by means which have been or are being customarily enjoyed with respect to other such areas similarly situated.

Acquisition. (c) Subject to the appropriation of funds by Congress, the Secretary of Agriculture is authorized to acquire privately owned land within the perimeter of any area designated by this Act as wilderness if (1) the owner concurs in such acquisition or (2) the acquisition is specifically authorized by Congress.

Gifts, Bequests, and Contributions

Section 6. (a) The Secretary of Agriculture may accept gifts or bequests of land within wilderness areas designated by this Act for preservation as wilderness. The Secretary of Agriculture may also accept gifts or bequests of land adjacent to wilderness areas designated by this Act for preservation as wilderness if he had given sixty days advance notice thereof to the President of the Senate and the Speaker of the House of Representatives. Land accepted by the Secretary of Agriculture under this section shall become part of the wilderness area involved. Regulations with regard to any such land may be in accordance with such agreements, consistent with the policy of this Act, as are made at the time of such gift, or such conditions, consistent with such policy, as may be included in, and accepted with, such bequest.

(b) The Secretary of Agriculture or the Secretary of the Interior is authorized to accept private contributions and gifts to be used to further the purposes of this Act.

Annual Reports

Section 7. At the opening of each session of Congress, the Secretaries of Agriculture and Interior shall jointly report to the President for transmission to Congress on the status of the wilderness system, including a list and descriptions of the areas in the system, regulations in effect, and other pertinent information, together with any recommendations they may care to make.

Appendix C—The Bureau of Land Management Wilderness Review Process

To carry out the wilderness mandate of FLPMA, the Bureau of Land Management has developed a wilderness review process with three phases: Inventory, study, and reporting to Congress.

Inventory: In the wilderness inventory, the BLM examined the public lands, with public participation, and identified those areas that meet the definition of wilderness established by Congress. These areas were identified as wilderness study areas (WSA's). The inventory was completed by November 14, 1980, in the contiguous Western States, resulting in identification of approximately 24 million acres as wilderness study areas and in elimination from further wilderness consideration of approximately 150 million acres.

Study: Each wilderness study area will be studied through the BLM resource management planning system to analyze all values, resources, and uses within the area. The findings of the study, including public participation, determine whether the area will be recommended as suitable or nonsuitable for designation as wilderness. In practice, determining an area's "suitability or nonsuitability . . . for preservation as wilderness," in the words of FLPMA, means determining whether the area is more suitable for wilderness designation or more suitable for other uses.

Reporting: When the study has been completed, a recommendation as to whether the wilderness study area is suitable or nonsuitable for designation as wilderness is submitted through the Secretary of the Interior and the President to Congress. A mineral survey will be conducted by the U.S. Geological Survey and Bureau of Mines for any area recommended as suitable. Reports on all wilderness study areas must reach the President no later than October 21, 1991, and reach Congress by October 21, 1993. Only Congress can designate an area as wilderness.

Appendix D—Definitions

Some of the terms used in this document have specific meanings and are defined as follows:

Domestic Livestock: Aninals kept and managed for their products or for breeding purposes, not visitors' animals or administrative livestock.

FLPMA: The Federal Land Policy and Management Act of 1976 (Public Law 94–579, 90 Stat. 2743, 43 U.S.C. 1701).

Livestock Grazing Operations: Those operations under permit where the primary purpose is the grazing of livestock for the production of food and fiber. Includes pack and saddle stock used in conjunction with such operations.

Mechanized Transport: Includes any wheeled contrivance which constitutes a mechanical advantage to the user and which is powered by a living or nonliving source contained on, within, or attached thereto; such as bicycles, deer carriers, and wagons.

Motorized Equipment: Machines incorporating a motor, engine, or other nonliving power source to accomplish a task. Includes such machines as aircraft, hovercraft, motorboats, automobiles, motor scooters, snowmobiles, bulldozers, duffel carriers, chainsaws, rock drills, and generators. (For administrative guidance, this term is not interpreted to include such things as electric shavers or toothbrushes, portable radios or televisions, Geiger counters, wristwatches, gas stoves, flashlights, and other such small contrivances.)

Motor Vehicle: A device for transporting personnel or material, that incorporates a motor or engine of any type for propulsion, with wheels, tracks, skids, skis, air cushion, or other contrivance, for traveling on, over, through or adjacent to land and/or water.

Multiple Use: ". . . the management of the public lands and their various resource values so that they are utilized in the combination that will best meet the present and future needs of the American people; making the most judicious use of the land for some or all of these resources or related services over areas large enough to provide sufficient latitude for periodic adjustments in use to conform to changing needs and conditions; the use of some lands for less than all of the resources; a combination of balanced and diverse resource uses that take into account the long-term needs of future generations for renewable and nonrenewable resources, including, but not limited to, recreation, range, timber, minerals, watershed, wildlife and fish, and natural scenic, scientific and historical values; and harmonious and coordinated management of the various resources without permanent impairment of the productivity of the land and the quality of the environment with consideration being given to the relative values of the resources and not necessarily to the combination of uses that will give the greatest economic return or the greatest unit output." (From section 103, FLPMA)

Naturalized: Refers to a non-native species of plant or animal which is well established in the area as a part of the wilderness ecosystem and which sustains its population without requiring human assistance (such as stocking or reseeding). Non-native species that are not in equilibrium with the wilderness ecosystem (such as those which are

increasing their population and displacing native species) are not considered naturalized.

Naturalness: Refers to an area which "generally appears to have been affected primarily by the forces of nature, with the imprint of man's work substantially unnoticeable." (From section 2(c), Wilderness Act.)

Outstanding: Standing out among others of its kind; conspicious; prominent: Superior to others of its kind; distinguished; excellent.

Permanent Improvement: A manmade structural or nonstructural improvement which will remain at a particular location for more than one field season—as differentiated from temporary structures; includes such items as toilet buildings, trails, cabins, signs, fences, vegetative cover manipulation, shelters, and fire grills.

Primitive and Unconfined Recreation: Nonmotorized and nondeveloped types of outdoor recreational activities.

Rangeland Improvements: Any structural or nonstructural improvement which directly affects or supports the use of the forage resource by domestic livestock, such as fences, line cabins, water wells and lines, and stock tanks.

Recreational Livestock: Horses, mules, or burros used for recreational purposes to transport people and/or their supplies.

Solitude: The state of being alone or remote from habitations; isolation. A lonely, unfrequented, or secluded place.

Temporary Structure: Any structure which can be readily and completely dismantled and removed from the site between periods of actual use. It may or may not be authroized at the same site season to season or year to year.

Unnecessary or Undue Degradation: Surface disturbance greater than what would normally result when an activity is being accomplished by a prudent operator in usual, customary, and proficient operations of similar character and taking into consideration the effects of operations on other resources and land uses, including those resources and uses outside the area of operations. Failure to initiate and complete reasonable mitigation measures, including reclamation of disturbed areas or creation of a nuisance may constitute unnecessary or undue degradation. Failure to comply with applicable environmental protection statutes and regulations thereunder will constitute unnecessary or undue degradation.

Visitor Use: Visitor use of the wilderness resource for inspiration, stimulation, solitude, relaxation, education, pleasure, or satisfaction.

Wilderness: The definition contained in section 2(c) of the Wilderness Act of 1964 (78 Stat. 891). (See Appendix B for its full text).

Wilderness Area: An area formally designated by Act of Congress as part of the National Wilderness Preservation System.

Wilderness Characteristics: The definition contained in section 2(c) of the Wilderness Act of 1964. (78 Stat. 891) (See Appendix B for its full text).

Part XIII

Department of Energy

Commercial and Apartment Conservation Service Program

DEPARTMENT OF ENERGY

10 CFR Part 458

[Docket No. CAS-RM-80-125]

Commercial and Apartment Conservation Service Program; Proposed Rulemaking and Public Hearing

AGENCY: Department of Energy.

ACTION: Notice of Proposed Rulemaking and Public Hearings.

SUMMARY: The Department of Energy (DOE) proposes to implement the Commercial and Apartment Conservation Service (CACS) Program pursuant to Title VII of the National Energy Conservation Policy Act (NECPA), Pub. L. No. 95-619, as amended by the Energy Security Act (ESA), Pub. L. No. 96-294. The purpose of the CACS Program is to encourage the installation of energy conservation measures and the adoption of energy conserving operation and maintenance procedures in existing small commercial buildings and large (five or more units) multifamily dwellings. Large gas and electric utilities are required, and building heating suppliers may volunteer, to offer and to provide, upon request, energy audits of commercial buildings and multifamily dwellings. The State may submit State Plans to DOE. The State Plans would require large utilities to participate and could include, in the Governor's discretion, nonregulated utilities (e.g., municipalities and cooperatives) and/or building heating suppliers. If a State chooses not to submit a plan, DOE would require covered utilities in the State to carry out a CACS Program for their customers. When a nonregulated utility is not included in a State Plan it is required to submit its own plan for the CACS Program.

The proposed rule sets out the requirements for State Plans and Nonregulated Utility Plans. In addition, it addresses procedures that must be followed in order for a utility to be exempted by the State Regulatory Authority from some requirements of the State Plan. The proposed rule describes the situations and terms under which the Federal Standby Authority would be exercised.

DOE also proposes in this rulemaking amendments to the RCS Program regulations (10 CFR 456) to extend coverage of the RCS Program to include residential units in residential buildings with five or more units which have neither central heating nor central cooling.

DATES: Written comments must be received no later than March 17, 1981, in order to ensure their consideration.

Public hearings will be held in three cities, beginning at 9:00 a.m. local time on the dates and at the locations specified below: February 19, 1981 in Washington, D.C., February 23 and 24, 1981 in San Francisco, California, and February 26, 1981 in Kansas City, Missouri. Requests to speak must be received no later than 4:00 p.m. on February 5, 1981 for Washington, D.C.; February 10, 1981 for San Francisco, CA; February 12, 1981 for Kansas City, Missouri.

ADDRESSES: Public hearings will be held at the following locations: Room 2105, 2000 M Street, N.W., Washington, D.C. 20036; Ramada Inn/Fisherman's Wharf, Crocker-Hopkins Room 509 Bay Street, San Francisco, California 94133; Federal Office Building, 911 Walnut Street, Room 302, Kansas City, Missouri 64106.

All written comments and requests to speak at the Washington, D.C. hearing should be addressed to Carol A. Snipes (Hearing Procedures), U.S. Department of Energy, Office of Conservation and Solar Energy, Office of Hearings and Dockets, Mail Station 6B-025, 1000 Independence Avenue, S.W., Washington, D.C. 20585 (202-252-9319).

Requests to speak at the San Francisco, California hearing should be addressed to Doris Harris, DOE Regional Office, Region IX, 333 Market Street, San Francisco, California 94105 (415-764-7027).

Requests to speak at the Kansas City, Missouri hearing should be addressed to Dottie Doll, DOE Regional Office, Region VII, 324 East 11th Street, Kansas City, Missouri 64106 (816-374-5533).

FOR FURTHER INFORMATION CONTACT:

James R. Tanck, Director, Building Conservation Services Division, Office of Conservation and Solar Energy, Department of Energy, 1000 Independence Avenue SW., Room GH-068, Washington, D.C. 20585, (202) 252-9161

Laura Rockwood, Office of General Counsel, Department of Energy, 1000 Independence Avenue SW., Room 6B-128, Washington, D.C. 20585, (202) 252-9519.

SUPPLEMENTARY INFORMATION:

I. Introduction.

II. Part 456—Amendments to the Residential Conservation Service Program.

III. Part 458, Subpart A—General Provisions and Definitions.

IV. Part 458, Subpart B—Preparation, Submission, and Approval of State Plans.

V. Part 458, Subpart C—Preparation, Submission, and Approval of Nonregulated Utility Plans.

VI. Part 458, Subpart D—Energy Conservation Services for Commercial Buildings.

VII. Part 458, Subpart E—Energy Conservation Services for Multifamily Dwellings.

VIII. Part 458, Subpart F—Federal Standby Planning Authority.

IX. Appendix—Program Measures by Climate and Category of Building.

X. Draft Regulatory Analysis and Urban and Community Impact Statement.

XI. Draft Supplement to the Environmental Impact Statement for the Residential Conservation Service Program.

XII. Consultation with Other Federal Agencies.

XIII. Contractor Contributions to Rulemaking.

XIV. Comment and Hearing Procedures.

I. Introduction

The Department of Energy (DOE) proposes to amend Title 10 CFR, Part 456, the regulations governing the RCS Program. The purpose of the amendment is to extend coverage of the RCS Program to include residential units in multifamily dwellings with 5 units or more which do not have central heating or cooling facilities (units in buildings with central heating or cooling are covered by the CACS Program). Beginning January 1, 1982, a newly eligible customer under the expanded RCS Program would be able to request the audit described in Section 456.307, and receive all the services available under the RCS Program, or request the audit described in Section 458.503(b) of the CACS proposed rule, and not receive the additional RCS Program services. DOE feels that in many cases the audit described in the CACS Program would be more appropriate for large residential buildings than would the audit described in the RCS Program. Furthermore, the additional RCS Program services often may not be necessary for the owners of larger residential buildings.

DOE also proposes to amend Chapter II of Title 10 CFR by adding a new Part 458. The proposed regulation will fulfill the requirements of Title VII of the National Energy Conservation Policy Act (NECPA), Pub. L. No. 95-619, as amended by the Energy Security Act (ESA), Pub. L. No. 96-294. The proposed regulation covers the Commercial and Apartment Conservation Service (CACS) Program. The program is aimed at aiding small businesses and apartment building owners in achieving energy savings that are cost effective. Since information is costly to obtain, and small businesses often lack the time and resources necessary to obtain and analyze such information, the utilities can play a useful role in making this

information available and in providing assistance.

DOE recognizes that the CACS Program as legislated is principally an information program that does not require any specific actions that will conserve energy. It will aid energy conservation only to the extent that the owners and tenants of commercial and residential buildings are stimulated to implement conservation measures and procedures. Thus, the impact of the program depends largely upon the extent to which owners and tenants are made aware of potential energy savings, and of the cost effectiveness of conservation measures and procedures. The utilities have the leading role in disseminating information and encouraging customer audit requests; the success of the program depends largely upon the enthusiasm with which the utility carries out the program in obtaining a high response rate for customers with high potentials for energy savings. DOE feels that the States and utilities are best able to judge how to reach the target groups in an effective manner within the local environment, and has proposed the rules so as to allow considerable latitude for innovation on the part of the State and the utilities.

In view of the above, DOE feels that emphasis should be placed throughout the program on actions that will facilitate the dissemination of information, and encourage a substantial response rate to the audit offer. Obviously, the success of the CACS Program will be measured by the extent to which it achieves the more efficient use of energy in the commercial buildings and multifamily dwellings sectors.

II. Part 456—Amendments to the RCS Program

A. Introduction

Title II of NECPA originally defined a covered residential building as a building with one to four dwelling units which has a heating or cooling system. The ESA amended Title II of NECPA extending coverage, after January 1, 1982, to residential buildings that contain five or more dwelling units unless such building contains a central heating or cooling system. (Those buildings containing a central heating or cooling system would be covered by the CACS Program.) Tenants and owners of such residential buildings may request the audit described in § 456.307, and receive all the services and benefits prescribed under the RCS Program. DOE proposes to allow tenants and owners to request, in the alternative, the audit described in Section 458.503(b), and to forego the additional RCS Program services and benefits. All utilities covered by the RCS Program would be covered by these proposed amendments to the RCS Program.

B. Definition of Residential Building

The proposed amended definition of the term "residential buildings" is based on the definition contained in Section 541 of the Energy Security Act. The definition, as amended, extends coverage of the RCS Program to residential buildings containing five or more dwelling units, unless such building is centrally heated, centrally cooled, or both. Buildings that are centrally heated or cooled are covered by the proposed CACS Program.

Either tenants or owners of residential buildings may request an audit and receive all the RCS Program services and benefits if such tenant or owner receives a fuel bill. DOE recognizes that in most cases tenants will not be able to install measures unless the building owner approves such installations. DOE has considered adding a provision to the proposed amendment requiring that tenants receive written permission from their landlord, indicating that the tenant is allowed to make such installations, before the utility is required to provide arranging services. DOE seeks comment concerning the necessity of such a requirement.

DOE also recognizes that several eligible customers in the same residential building may request audits at different times, thus placing a burden on utilities. DOE seeks comments or how to alleviate this burden while ensuring that eligible customers receive the benefits to which they are entitled.

C. Program Announcement

The proposed amendment would add a new § 456.320 to require utilities and participating home heating suppliers to include a special statement in all Program Announcements distributed to eligible customers in residential buildings containing five or more units. This statement would explain that an eligible customer has a choice between obtaining the RCS Program audit and all the RCS Program services and benefits, or obtaining the CACS Program audit. Nothing is intended to prohibit a utility company that so chooses to offer RCS-type services to customers receiving a CACS audit. The statement must also describe the differences between the two types of audits and services provided within each program. It must be clearly stated that election of one audit and its program services shall preclude the customer from future requests for the other program audit and its services.

Utilities and States could, of course, provide the complete range of RCS services to eligible customers in residential buildings containing five of more units who elect the CACS Program audit. However, this would create additional requirements for both the utility (i.e., arranging) and the State (i.e., listing), and therefore is not required by DOE. Comment is sought on this option.

D. Requirements for Program Audit

The proposed amendment would add a new § 456.321, which would require utilities and participating home heating suppliers to provide to eligible customers in residential buildings containing five or more units, upon request, either an RCS type audit and all the attendant services and benefits, or a CACS type audit.

DOE believes that an RCS audit might be less helpful to an eligible residential customer than would the CACS audit because the RCS audit covers measures applicable principally to single family residences. The CACS audit, on the other hand, is geared to the type of building (5 or more units) owned or occupied by the eligible customer covered by this proposed rule. Consequently, a CACS audit would provide more appropriate information.

Since Title VII of NECPA limits a customer's entitlement under the CACS Program to an energy audit, the additional services and benefits of the RCS Program are not available. As a result, the CACS audit, although more relevant to the large residential buildings, does not carry with it the advantages of extra services (i.e., arranging installation) or benefits (i.e., warranties and standards) provided under RCS.

Consequently, DOE has proposed that the eligible customer in a large residential building have a choice of audit based upon his or her judgment of the relative value of a more relevant audit (CACS audit) versus more services and benefits (RCS audit).

The major alternative would be to provide all RCS services and benefits and a CACS audit. This alternative would be particularly burdensome to States and utilities and would create substantial additional requirements in DOE's regulations. For example: States would be required to develop lists of suppliers, contractors, and lenders for the added measures applicable to the multifamily dwellings covered by the CACS Program, and would be required to provide redress, post-installation inspections, etc.; installers and contractors would have to follow DOE-

developed standards for materials and installations; and utilities would be required to provide the lists, arrange for installation and financing, etc. The additional regulatory burden of these requirements on States, utilities, suppliers, and contractors would be substantial. DOE recognizes this burden and in keeping with the requirement that the amendments contained in the Energy Security Act should not delay or impair implementation of the RCS Program, has decided against this alternative.

DOE is concerned that the eligible customers receive useful information and services, and seeks comment on the proposed approach and other alternatives to that approach.

III. Part 458, Subpart A–General Provisions and Definitions

Section 711 of NECPA states that "this program shall apply to any public utility for which coverage is provided under Section 211." DOE shall publish a list of covered utilities in the **Federal Register** before the beginning of each calendar year, which list shall apply equally to the RCS Program and to the CACS Program. It is made clear in Section 458.102(c) of the proposed rule that a utility which meets the definition of a covered utility is fully subject to the requirements of these rules and the applicable plan whether or not it is included on the list published in accordance with this provision. Inclusion or noninclusion on such list is not determinative of a utility's coverage.

This subpart also contains a provision which reflects the Secretary's authority to enforce the provisions of the CACS Program by petitioning the appropriate U.S. district court to enjoin any person from violating any provision, plan, or order under the CACS Program. Section 741(c) of NECPA. Although the statutory provision for this authority is contained under the section entitled "Federal Standby Authority," both the wording of Section 741(c) and the language of the Conference Report specifically state that the Secretary's authority to request injunctive relief extends to enforcing any provision of the regulations and not just to enforcing the Federal standby authority. The word "person" is not defined in the statute nor explained in the Conference Report. DOE interprets the word "person" to include any utility company, supplier, installer, contractor, financial institution, and State or municipal agency. We believe this is consistent with the statutory purpose of Federal standby authority and the need to ensure appropriate redress of violations of DOE regulations.

Section 710 of NECPA states that the definitions in Section 210 of NECPA are applicable to this program except as otherwise provided in Section 710. Several of the definitions in Section 210 are clearly not applcable to this program and have been deleted (i.e., Class B energy audit, measures warranty, residential building, and useful life). Nine definitions are given in Section 710 of NECPA, the applicable definitions of Section 210 of NECPA, and contains definitions of other terms used in the proposed rule. Many of these other definitions are identical to those contained in the RCS Program final rule (Part 456), and are listed in this proposed rule for convenience. Specific definitions are provided for the various "commercial energy conservation measures" listed in Section 710(b)(5) of NECPA, as well as for the conservation measures added by DOE. The term "energy efficient improvements," as defined in Section 710(b)(4) of NECPA, has been replaced by the term "energy conserving operation and maintenance procedures" to more clearly describe for a building owner the types of actions included. Specific definitions for each of the "energy conserving operation and maintenance procedures" recommended by DOE are provided. These include many of the practices defined in the RCS Program, as well as new procedures applicable to commercial buildings and multifamily dwellings. A number of practices, because of their cost implications in apartment buildings, are included as measures.

No discussion is provided here of the definitions contained in this part that are also contained in the final rule for the RCS Program.

The term "building heating supplier" means any person engaged in the business of providing No. 2, No. 4, or No. 6 heating oil, kerosene, or propane to owners or tenants of commercial buildings, or selling No. 2, No. 4, or No. 6 heating oil, kerosene, or propane to owners of multifamily dwellings.

The term "Commercial Announcement" means the brochure or letter which must be sent to each eligible commercial customer to announce the availability of an audit and provide information on the energy conservation and energy conserving operation and maintenance procedures. The term "Apartment Announcement" means the brochure or letter which must be sent to each eligible multifamily dwelling customer to announce the availability of an audit and provide information on the energy conservation and energy conserving operation and maintenance procedures. The more general term "program information" refers to all the information activities undertaken by a utility or building heating supplier related to the CACS Program. This includes the Commercial and Apartment Announcements and the Tenant's Energy Conservation Information Package.

The definition of "covered utility" is based on Section 211 of NECPA, and is identical to the definition given for this term in the RCS Program final rule. Coverage is limited to large gas and electric utilities.

DOE recognizes that the defintions of the terms "commercial building" and "eligible commercial customer" contained in Section 710(b) of NECPA, are subject to a variety of interpretations. In arriving at the definitions presented in the proposed rule, DOE carefully considered the language of the law, the intent of Congress as reflected in the committee reports, and the problems utilities might have in indentifying eligible customers.

The statutory definition of "commercial building" provides that the building must have been completed by June 30, 1980; the building is primarily used for carrying out a business (including nonprofit business) or for carrying out the activities of a State or local government; the building is not used primarily for the manufacture or production of products, raw material, or agricultural commodities; and it is not a Federal building. Finally, the average monthly usage of energy for 1980 for the building must be less than 4,000 kilowatt hours of electricity or 1,000 therms of natural gas or the Btu equivalent of other fuels. The Btu equivalent of 1,000 therms of natural gas is 100 million Btu.

DOE would define the term commercial building also as a roofed and walled structure. This would include, for example, the separate stores in a building containing several stores such as a shopping center, but would not include separate establishments in an office building. The term building is not defined in Title VII of NECPA. DOE feels it is appropriate to clarify the term building by including in the definition of commercial building, the definition used by the DOE Energy Information Administration.

The definition of "eligible commercial customer" for a public utility identifies the owner or tenant of a commercial building to which that public utility supplies gas or electricity as being potentially eligible for the program. This definition permits tenants in master-metered buildings to be eligible; it is not necessary to pay a utility bill directly to be considered an eligible customer. In this case, the burden is on the utility to obtain names of eligible customers who are not directly metered by the utility.

Similarly, an eligible commercial customer for a building heating supplier is the owner or tenant of a commercial building to which that building heating supplier supplies No. 2, No. 4, or No. 6 heating oil, kerosene, or propane.

The definition given in the proposed rule for the term "eligible multifamily dwelling customer" is identical to the definition contained in Section 710(b) of NECPA. Only the owner of a multifamily dwelling is eligible to request an audit. DOE considered allowing tenants to request audits of their individual dwelling units, but rejected this approach as not being cost effective and not being within the scope of the law.

The definition of the term "multifamily dwelling" is identical to the definition contained in Section 710(b)(3) of NECPA.

The two categories of "energy conservation measures" and "renewable resource measures" have been included in the proposed rule. DOE has attempted to maintain the same format for the proposed rule as for the existing RCS Program. Thus, each of the categories is similar to those in the RCS Program. However, while the renewable resource measures remain the same for the Title VII program, additional energy conservation measures and applicability criteria have been included for the proposed rule. The changes and rationale are discussed in the following paragraphs.

The proposed rule identifies twenty-two "energy conservation measures" for commercial and multifamily buildings. The list includes all of the energy conservation measures specified by the existing RCS program plus the additional measures specified by the Energy Security Act. The additional measures were required because large multifamily buildings and small commercial facilities may have substantially different energy requirements than smaller residential buildings. DOE specifically requests that commenters address the practicality of the applicability criteria with respect to the measures.

The lighting system in a smaller residential structure is considerably less energy intensive and less sophisticated than those commonly found in multifamily and commercial buildings. The potential for saving energy in lighting operations in the larger buildings is commensurately greater and therefore requires more attention. DOE believes that lighting systems will be similar in many building types and climate zones. Therefore, all of the eligible buildings would receive a lighting audit, subject to the building meeting the lighting applicability criteria.

Automatic energy control systems have been defined broadly to include a wide range of devices that regulate lighting, heating, cooling or ventilating systems. These devices reduce energy costs by providing automatic regulation based on time, temperature or humidity. Such equipment has been shown to reduce energy usage by allowing for more precise equipment control than is likely to occur manually. Examples are timers for lighting systems, temperature and humidity sensors for outside air intake, and outside temperature sensors for boiler water temperature control. The definition also includes programmable equipment, such as computerized energy management systems, control of ventilation on the basis of occupancy, electrical demand control equipment, or other types. Such equipment is often valuable in small commercial property, since there is not likely to be an individual assigned to controlling lighting, heating, and ventilating systems carefully. Automatic devices may therefore prove valuable.

Heating systems in multifamily facilities may be quite large as may those serving several small commercial facilities. In larger heating systems, modifications short of complete replacement are available that are more effective for reducing energy costs than with smaller systems. Efficiency of such systems can be increased by increasing heat exchanger surface areas; by adding devices to increase turbulence of hot gases, thereby increasing the residence time of the gases in the boiler; by recycling hot gases to burn remaining hydrocarbons; and by allowing controlled condensation of steam within the heat exchanger, thereby recovering the latent heat of vaporization. Consequently, DOE has broadened this definition for use in the CACS from that used in RCS.

Energy recovery systems are of value where there exists a source of energy which is presently disposed of into the atmosphere or into waste water, and where a building energy requirement exists which can be met by using this waste energy. Such opportunities are more likely to be available in facilities with multiple energy uses, such as refrigeration, ventilation, heating, hot water, and cooking. These activities are most often valuable in larger facilities. Therefore, this measure is included although only applicable to a portion of the covered facilities.

DOE recognizes that cogeneration systems have the potential to significantly reduce both energy consumption and environmental pollutants. For some small commercial facilities and multifamily buildings, there are opportunities to use cogeneration systems. DOE has attempted to leave the definition of a cogeneration system as broad as possible while at the same time prescribing energy demand limitations. DOE believes that this approach gives the auditor the requisite information necessary to determine applicability, while at the same time not excluding products currently available in the market place.

In the proposed rule DOE has retained all of the categories of "renewable resource measures" and all of the applicability criteria from the original RCS Program. DOE believes that the renewable resource measure will have similar applicability in the Title VII program. All of the identified measures have reached commercial acceptance. Retrofit domestic hot water systems, Trombe walls, and other passive applications are increasingly being installed in commercial facilities. Wind systems, combined active solar space heating and domestic hot water systems, and solar swimming pool heaters are also being installed in multifamily and commercial buildings with greater frequency. DOE believes that adoption of renewable resource measures will often result in substantial fossil fuel energy savings while at the same time being reasonably economically feasible.

DOE solicits comments on both the inclusion of renewable resource measures as a general category and on each specific measure.

The use of the term "energy conserving operation and maintenance procedures" is similar to the term energy conserving practices in Title II of NECPA, except for two additions. DOE believes that a building energy use monitoring list will be a useful item for a building manager and that the auditor is capable of providing the manager with such a list. DOE also believes that every building should receive a visual inspection of its steam distribution lines to check for obvious abnormalities, including steam trap failures and poorly functioning condensate lines. The terminology was changed from "practices" to "operation and maintenance procedures" to more clearly describe for a building owner the types of actions included.

DOE has attempted, buy use of the term "estimates based on typical practice," to define the minimum effort required of the auditor. Audit results which estimate energy savings and installation costs based on typical practice are perhaps the cheapest and quickest audit tool which retains a

degree of end-use accuracy. DOE believes that this approach is the minimum level of effort which will lead to adoption of energy conservation measures or renewable level of effort which will lead to adoption of energy conservation measures or renewable resource measures on the part of the building owner. The utility is encouraged to provide greater analysis if the utility believes it is necessary.

The definition of "participating building heating supplier" reflects the voluntary participation of building heating suppliers and the Governor's choice whether to include building heating suppliers in the State Plan.

The term "program measures" means those energy conservation or renewable resource measures which have been deemed appropriate by climatic region and building category, and which are found in the Appendix to this part. This listing is similar to the list used for the RCS Program. In addition, it includes new measures that are required under the CACS Program.

The term "State measures" means an energy conservation measure that has been approved by the Secretary in the State Plan pursuant to §§ 458.404 and 458.504 of the proposed rule.

The term "Tenant's Energy Conservation Information Package" means the information package required to be provided by a covered utility or participating building heating supplier to each owner of a multifamily dwelling once an audit has been requested by the owner of such dwelling. Prior to receiving the audit the owner must agree to distribute an Information Package to each tenant in the building.

IV. Part 458, Subpart B—Preparation, Submission and Approval of State Plans

A. Scope

This subpart identifies the responsibilities of the States and the Tennessee Valley Authority (TVA) in the preparation and submission of State Plans, and the procedures for approval of the State Plan by the Secretary. The authority for this subpart is derived from Section 721(a) of NECPA. Every attempt has been made to ensure that this Subpart of the proposed rule is consistent with the corresponding Subpart B of the final rule for the RCS Program.

B. Initial Submission, Lead Agency and Coverage of State Plan.

Section 458.202 of the proposed rule requires that, if a State intends to submit a State Plan, then the Governor or State agency specifically authorized by State law to submit a State Plan must inform the Secretary within 30 days of the promulgation of the final rules of the name and address of the Agency which will have principal responsibility for the development of the State Plan. This provision would enable the Secretary to provide technical assistance to the appropriate persons in the State, and inform the Secretary of the State's intentions. DOE has not proposed to require that the Lead Agency for this program be the same as the Lead Agency for the RCS Program. We invite comments on this decision, particularly as it will affect coordination between the two programs.

The Governor would be required to notify the Secretary, within 30 days of promulgation of the final rules, of which nonregulated covered utilities, if any, will be subject to the State Plan. Within 90 days of promulgation of the final rules, the Governor would be required to notify the Secretary whether or not any building heating suppliers will be included in the State Plan. These requirements parallel those in the RCS Program.

C. Coordination Requirements

Section 458.203 proposes three requirements for coordination in the development of the State Plan. Section 458.203(a) would require the Lead Agency to coordinate the Plan with neighboring States which have jurisdiction over any covered utility or participating building heating supplier subject to the Plan. Section 458.203(b) would require the Lead Agency, if such agency is not the State Regulatory Authority, to provide a copy of the Plan to such Authority 30 days prior to the public hearing required by § 458.204. In every State, regardless of who is the Lead Agency, the State Regulatory Authority will have a significant role to play in the implementation of utility programs. The purpose of § 458.203(b) is to emphasize DOE's interest in cooperation between State agencies in the development of the Plan. Section 458.203(c) would require States to coordinate their CACS Program with their RCS Program and with the State Plans developed under Section 367(b)(1) of the Energy Policy and Conservation Act (10 CFR Part 420, State Energy Conservation Plans). Such coordination must not have the effect of delaying implementation of the RCS Program. This provision is based on § 712(c) of NECPA, which instructs DOE to assure that the Title VII rules are coordinated with these other programs and requires that nothing in the Title VII rules will have the effect of delaying implementation of the RCS Program.

D. Notice, Comment, and Public Hearing

Section 458.204 reflects the provisions of Section 722(4) of NECPA, which requires that no State Plan shall be approved by the Secretary unless such plan is adopted after notice and public hearing. DOE expects that States will consult very early with utilities, building heating suppliers, consumers, Public Utility Commissions and others in the development of the Plan. Because NECPA allows only 180 days for the development of the State Plan, we decided not to include in the proposed Rule any prescription of the specific groups to be consulted or the schedule for their consultation.

E. Procedures for Submission and Approval of State Plans

Section 458.205 contains the proposed schedule for development, submission, and approval or disapproval of the State Plan. This section repeats the requirements of Section 721(a) of NECPA, and parallels the requirements contained in the RCS Program final rule. Ten copies of the proposed State Plan would be required to be submitted to the Secretary within 180 days of the promulgation of the final rule. If the plan were to meet the necessary requirements, it would be approved within 90 days of submittal. Within 30 days of approval of the State Plan, the Lead Agency would be required by Section 458.205(c) to notify the covered utilities and participating building heating suppliers of the approval of the State Plan by the Secretary, to direct their compliance with it and to certify their compliance to the Secretary within 13 months.

If the State Plan were not to meet the criteria of Subpart B, it would be disapproved within 90 days of submission, and the reasons for disapproval would be specified in writing. The Governor or Lead Agency would be allowed to submit another proposed State Plan within 60 days.

Section 458.205(e) provides for States to submit amendments to the State Plan to the Secretary. Such amendments shall be considered according to the same procedures and schedule as the original Plan, except that the Secretary may waive any of the submission requirements for amendments that would not have a substantial impact on large numbers of individuals or businesses.

F. Building Heating Suppliers

Section 721(c) of NECPA gives a Governor discretion to submit a plan applicable to building heating suppliers. Section 458.202(c), as proposed, requires

the Governor, within 90 days of promulgation of the final rules, to inform the Secretary whether building heating suppliers will be included in the State Plan. To give affect to the Congressional intent to encourage a unified State effort, Section 458.206 would require that, if the Governor elects to submit a plan for building heating suppliers, the plan must be part of the State Plan and be submitted according to the same procedures for submission of the State Plan. The mechanism for coordinating this plan with other elements of the State Plan would be left to the discretion of the Governor.

G. Special Provisions for TVA

NECPA gives the same authority to the TVA, with respect to those utilities over which TVA has ratemaking authority, as it does to both a Governor and a State Regulatory Authority. This creates an overlap of jurisdictions in those States where the TVA-regulated utilities are located. Section 458.207 contains provisions necessary to clarify the role of the TVA. In particular, DOE expects, the TVA to coordinate the development of its Plan closely with the States in which its utilities are located. In addition, the TVA Plan is not to cover building heating suppliers. We seek comment on additional provisions which may be required to reduce the potential for conflict or duplication of such Plans.

H. Special Procedures for Exemptions

Section 458.208 proposes provisions for exemption from the CACS Program. The statutory basis for these exemption provisions is given in Section 722 of NECPA. The major issues entailed in these exemption provisions stem from the act that Section 722 of NECPA leaves several questions unanswered. (Related issues result from the fact that other sections of NECPA give very specific treatment to concepts involved in the meaning of Section 722.)

Section 722 states, in essence, that no energy conservation plan (State Plan or Nonregulated Utility Plan) shall be approved by the Secretary unless it requires each regulated utility to implement a CACS Program, except that no such program "may be required to apply to all" of the eligible buildings in its service area if, within six months of the date of these rules, the State Regulatory Authority or other regulatory body having ratemaking authority "determines that the inclusion of such additional buildings or dwellings would significantly impair such utility's ability to carry out the RCS Program under Title II of NECPA or to provide utility service to its customers."

The major issues inherent in this section are:

(1) Is this intended to allow a partial or a total exemption from program requirements?

(2) Is this intended to be a permanent or a temporary exemption from program requirements?

(3) What is the definition of a "significant impairment" of a utility's ability to carry out the RCS program or to provide utility service?

(4) What is DOE's role in this exemption process? Does exemption authority belong solely to the State Regulatory Authority?

As a starting point, it is convenient to discuss the first two issues together. The language in Section 722 of NECPA does not make it clear whether the exemption is intended to be partial or temporary. The discussion of this section contained in the Conference Committee Report leaves these issues equally unclear. DOE believes, however, that the exemption is intended as an interim measure to allow more gradual program implementation in places where full and immediate implementation might be disruptive.

The interpretation reflected in the proposed rule is that DOE should have a role in defining significant impairment of the RCS Program but should not be involved in defining significant impairment of a utility's ability to provide utility service.

DOE has the clear authority to specify State Plan requirements (Section 712(a) of NECPA) and any other rules necessary to carry out Title VII provisions (Section 712(d) of NECPA). However, the State Regulatory Authority alone has the authority to determine the existence of "significant impairments." In the proposed rule DOE requires a record of the basis for State Regulatory Authority exemption decisions as a part of the State Plan submittal but DOE does not have authority to reverse these decisions. DOE's authority to determine the content of State Plans allows DOE to require that exemptions be only an interim measure and that full implementation is to ultimately follow. The proposed rule requires that State Plans contain "conditional programs" for those utilities that are granted an exemption. These are partial programs that must be implemented until the "conditions" causing significant impairments may be eliminated. State Plans containing conditional programs must also propose actions to be taken to remove these "conditions."

In the proposed rule, § 458.208(a) repeats the exemption provision of Section 722 of NECPA. Section 458.208(a) of the rule also outlines the exemption process whereby the criteria for significant impairment specified in § 458.208(b) are to be used by the State Regulatory Authority in making a determination of significant impairment via the procedure specified in § 458.208(c). A determination of significant impairment must be submitted in a State Plan containing a conditional program which meets the requirements given in § 458.208(d).

In defining "significant impairment of the RCS Program" in § 458.208(b) of the proposed rule, DOE proposes that nothing in these rules shall have the effect of delaying the submission, approval, or implementation of Residential Conservation Service Programs developed under Title II. This requirement is contained in Section 712(c) of NECPA. DOE believes that this provision of the law precludes any other possible definition of significant impairment of the RCS Program because any form of impairment may be thought of as a delay in program implementation. Consequently, this language from the law was adopted as the definition used in the proposed rule.

Section 458.208(b) of the proposed rule permits the State Regulatory Authority to establish its own definition of significant impairment of a utility's ability to provide utility service.

Section 458.208(c) of the proposed rule describes two procedures by which the State Regulatory Authority could make the determination of the existence of conditions of significant impairment. The first procedure reflects the provision of Section 722 of NECPA, which requires that the State Regulatory Authority make the significant impairment determination within six months of the final rules. The second procedure is intended to provide the State Regulatory Authority with the option to take more time to review cases. Under this approach, the State Regulatory Authority may, within six months of the effective date of these rules, make a preliminary determination that significant impairment is probable. The State Regulatory Authority would then be permitted to take up to one year from the effective date of the CACS rules to either confirm or reverse this determination. In the meanwhile, the State Plan would be required to propose full program implementation. If the State Regulatory Authority were to confirm its determination, however, then an amendment to the State Plan containing a proposal for a conditional program would be required. DOE invites comments on this alternative.

Section 458.208(d) defines conditional programs and specifies State Plan

requirements for conditional programs. A conditional program is defined as a program which temporarily provides only partial coverage of commercial buildings and multifamily dwellings. However, conditional programs would not be permitted to change the audit content requirements specified in NECPA. The proposed rule provides some permissible types of conditional programs. Comments proposing other alternatives will be carefully considered. A conditional program is further defined by § 458.208(d) to be conditioned on the existence of significant impairments and must be accompanied by a plan to remove such impairments.

The special State Plan requirements for conditional programs would include a technical analysis to support the significant impairment determination, the rationale for the conditional program, and specification of the steps to be taken to alleviate significant impairments and State enforcement measures to assure these steps are taken.

V. Part 458, Subpart C—Preparation, Submission, and Approval of Nonregulated Utility Plans

A. Scope

This subpart identifies the responsibilities of covered nonregulated utilities, not subject to a State Plan, for the preparation and submission of Nonregulated Utility Plans, the procedures for approval of Nonregulated Utility Plans by the Secretary, and the minimum requirements for the content of Nonregulated Utility Plans. Every effort has been made to coordinate this subpart of the proposed rule with the corresponding section, Subpart D, of the final rules for the RCS Program.

B. Coverage

Subpart C applies to all nonregulated utilities which are not covered by a State Plan.

C. Initial Submission

Section 458.303 would require each nonregulated utility not covered by a State Plan to notify the Secretary within 60 days of these rules of the person responsible for the preparation of its Nonregulated Utility Plans.

D. Coordination Requirements

Section 458.304 require each nonregulated utility subject to this subpart to coordinate the preparation of its Nonregulated Utility Plan with the preparation of the applicable State Plan for the purpose of minimizing inconsistent provisions between the two plans.

E. Notice, Comment, and Public Hearing

Section 458.305 sets forth the proposed requirements for public notice and the opportunity for public comment and public hearing on Nonregulated Utility Plans. These provisions are the same as those required of States and the same as those in the RCS Program.

F. Procedures for Submission and Approval of Nonregulated Utility Plans

Section 458.306 presents procedures for the submission, approval, disapproval, and amendment of Nonregulated Utility Plans. These procedures are the same as those for States and are the same as the RCS Program. Section 458.306 also provides special qualifications on the plan content requirements for nonregulated utilities.

G. Special Procedures for Exemptions

Section 723(a) of NECPA provides certain conditions under which nonregulated utilities may be exempted from some plan requirements. Section 723(a) accomplishes this by referring to Section 722 which provides exemption procedures for State Plans. In the case of nonregulated utilities all of the requirements are the same except that the Governor of the State is designated to perform the role of the State Regulatory Authority. Likewise, § 458.208 of these rules would refer to § 458.208 of these rules and change the designation from the State Regulatory Authority to the Governor. All of the issues discussed above in reference to § 458.208 also apply to § 452.307. Procedures and actions by the Governor in granting exemptions would be required in the Plan. If the State were not to submit a plan, the procedures and actions would be required to be submitted to DOE nonetheless.

VI. Part 458, Subpart D. Energy Conservation Services for Commercial Buildings

A. Scope and Coverage

The Commercial and Apartment Conservation Service Program is divided into two Subparts for purposes for clarity. Subpart D describes the proposed minimum requirements for the content of State Plans covering commercial building. The State would be allowed, and is encouraged, to include additional information and provide additional requirements in the State Plan pertaining to the commercial building in the CACS Program if such information and requirements are not specifically prohibited.

All utilities covered by the RCS Program are covered by the CACS Program. Title VII of NECPA contains no provisions for temporary programs. However, utilities may be exempted by the State Regulatory Authority from providing services to some commercial buildings. The State Plan is required to identify which utilities have received such exemptions and to which commercial buildings the exemptions applies.

B. Eligibility for Audit

To receive an audit from a public utility or participating building heating supplier, the requesting party must be an eligible commercial customer of that utility or building hearing supplier by being the owner or tenant of a commercial building as these terms are defined in Section 458.103.

Certain factors related to program coverage presented the most difficult problem DOE encountered in structuring the CACS Program. The proposed rule is a compromise of several desirable, but conflicting, objectives. The following discussion provides additional detail on the issues and alternatives considered for adoption. DOE solicits comments on the proposed rule and the alternatives discussed below, and welcomes suggestions of other approaches. Three key factors are involved in the commercial coverage problem the concept of "building" customer status relative to the utility or building heating supplier, and the level of energy usage. These factors will be discussed separately below and are followed by alternative approaches to coverage.

Commercial Building

The Energy Security Act refers to owners or tenants of "commercial buildings" in establishing the eligibility for energy audits. Since the intent of Congress was to assist small commercial enterprises in achieving energy conservation, DOE has interpretated the term "commercial building" to include any small commercial establishment with walls and a roof, whether or not the establishment is a part of a larger structure. This has the effect of extending commercial coverage to more small commercial enterprises than would the concept of a "commercial building" as only the outer structure and would include, for example, any establishments located in large shopping centers. Such shopping centers may not quality for an audit under the energy usage criteria, but the individual establishments might.

It is felt that such individual establishments should be included because they can engage in energy conservation apart from action directed toward the entire shopping center. Such tenant establishments may or may not be separately metered for energy usage. Those which are separately metered, or submetered have a direct incentive to invest in energy conservation. Those which are not separately metered or submetered have an incentive to cooperate with the landlord/owner to conserve energy since many commercial leases have energy cost pass-through provisions and because rents are affected by energy cost in any event.

DOE recognizes that buildings that are not at least submetered may present problems in terms of determining eligibility and identification (see also the discussion in the preamble on Section 458.403(a)). However, these problems can reasonably be addressed at the local level where the particular characteristics of the service population are available for structuring a program to reach the small end of the commercial sector.

DOE considered extending coverage of "commercial building" to all commercial establishents that met the energy usage requirments and that did not have their own direct roof (or their own walls). This alternative would include, for example, establishments in large office buildings. DOE rejected this alternative because it felt that it was not Congress' intent cover such establishemts and because the incentives for such establishments to invest in energy conservation are minimal. DOE invites comments on this determination.

As provided by Section 731(a) of NECPA, new customers are eligible for an audit unless the occupied space had previously been audited. In the letter event, the new customer could request a copy of the audit. The marginal benefits which could be expected to result from an additional audit may not justify the expense. DOE solicits comments on this determination.

Eligible Customer

The statue provides that an eligible commercial customer is an owner or tenant of a commercial building to whom a public utility, building heating supplier, covered by the program sells natural gas or electricity.

One interpretation of the statute is that the utility/building heating supplier is expected to offer the program only to direct customer (that is, those which are separately metered) of that concern. However, this interpretation would exclude from coverage many of the smaller businesses that were the major concern of Congress. DOE feels that the program should include all similar small commercial enterprises, regardless of particular metering arrangements in any particular case. For this reason, we have interpreted "eligible customer" to include any small commercial enterprise which is *supplied with* utility service by a participating utility/building heating supplier. The result is that similar establishment in two different buildings, one master-metered and one individually-metered, would be treated the same in terms of program eligibility. Again, DOE recognizes that this approach presents problems in terms of identifying and qualifying eligible customers but feels that at the local level reasonable solutions to these problems are possible.

Energy Usage

Congress specified the program as applying to building with monthly energy use less than 4000 kWh of electricity of 1000 therms of gas or the equivalent amount of certain other fuels in Btu. (Note that 4000 kWh=136 therms=13.6 million Btu, 1000 therms=100 million Btu.

The intent of Congress was the usage criteria would identify buildings of the same size, compatible with the small business focus of the program. After an extended period of discussion during which virtually all combinations of the usage criteria were considered, DOE has chosen 100 million Btu as the maximum limit for limit for average monthly energy usage of any fuel. This is equivalent in energy to 1000 therms of natural gas. The kWh criterion remains. The result is that a building would qualify, from a usage standpoint, if (a) it uses less than 4000 kWh of electricity, or (b) it uses less the 100 million Btu of natural gas or any other covered fuel.

One possible interpretation of the energy usage criterion contained in the Title VII definition of commercial building is that a building using more than 4000 kWh of electricity but using no natural gas would qualify, since zero Btu of natural gas is less that 100 million Btu. This case would result in making eligible for a CACS Program audit 20 percent of the total national commercial floor space. This "zero" case could result in covering some rather large buildings. However, it would ensure that small business occupying all electric buildings would receive CACS services. The "zero" case would be particularly important in climate zones where cooling is a significant energy use category in a building. (The "zero" natural gas case is more likely to arise than the "zero" electricity case since almost all buildings use some electricity. However, the "zero" natural gas case approach would also apply in cases of "zero"electricity.)

Another alternative regarding energy usage which DOE considered was assigning a specific minimum level—other than zero—of electricity and natural gas (or other fuel) consumption for CACS eligibility. However, the available data on building size versus energy usage was conflicting and not helpful. Consequently, DOE could establish no useful and rationally based minimum level of other fuel consumption. Moreover, to require a minimum would somewhat arbitrarily eliminate some small business from CACS coverage.

A third possile approach, which would avoid coverage of larger all-electric buildings, would be to require that such buildings use at least some natural gas or some fuel other than electricity in order to be covered (i.e., less than 4000 kWh of electricity, or, of another covered fuel is used in the eligible building, less the 100 million Btu of that fuel). DOE believes it is possible to imply from the statutory language the assumption that a building must consume some of a praticular fuel in order to include that fuel in the computation of eligibility. Under this approach, coverage of the CACS would drop to approximately 10 percent of the commercial floor space.

DOE invites comment and submission of documented data on this issue and on the three alternatives presented (the "zero usage" case, the "specific minimum usage" case, and the "any munimum usage" case). Commenters may also want to include comments on the alternatives discussed below which would require legislative change to accomplish.

Alternate Approaches

Serious consideration was given to three other approaches to determining program coverage or eligibility. One was to base eligibility on building size, instead of energy usage, that is, square feet of floor space. A size of 10,000 square feet was considered to be representative of the desired program coverage. A major disadvantage of this approach is that such data are not easily availabe to utilities or building heating suppliers. Additional problems arise when one cosiders how to define "square feet." Should it include only usable floor space or gross building size? Perhaps it should only cover space that is either heated or cooled. These issues further complicate the problems

associated with acquiring the descriptive data needed to define eligibility. Use of this definition would require a legislative change.

A second alternative approach to eligibility that was considered was to use the Small Business Administration's definition of small business and to make all small businesses eligible. This approach also had problems in that such data are not readily available to utilities or building heating suppliers. Present SBA definition rely mainly on the dollar amounts of gross business volume and are related to Standard Industrial Classification (SIC) codes. SBA has recently proposed a new small business definition based on number of employees that is also SIC code specific. Use of this definition would also require a legislative change.

The third alternative considered was to interpret the 4000 kWh limit as applying to uses other than space conditioning, and the 1000 therms limit as applying to space conditioning. Under this interpretation, for example, an all electric building would be covered if it used less than 4000 kWh for lighting and less than 29,400 kWh (the Btu equivalent of 1000 therms) for space conditioning. DOE rejected this interpretation as being inconsistent with Congressional intent.

Again, DOE solicits comments and suggestions on the proposed approach to eligibility and on each of the above alternatives. The DOE wishes to point out that a variety of comprises were necessary regarding the proposed design of program coverage. Most of the difficulties are associated with restricting the program to the smaller commercial establishments mandated by Congress. In view of the gains, from the utility's or supplier's viewpoint, it may be very cost effective for the utility or supplier to extend the coverage of the program beyond the minimum required by the Energy Security Act and this proposed rule.

C. Commercial Announcement

Section 731(a)(1) of NECPA requires that each public utility offer to each eligible commercial customer an audit of the eligibile customer's commercial building. The offer of the audit must be made within 12 months of approval of the applicable State Plan, and every 24 months thereafter until 1990. The proposed rule requires the Commercial Announcement to be distributed to every eligible commercial customer, but the rule does not specify how this distribution is to be accomplished. DOE recognizes that utilities and participating building heating suppliers may have difficulties in identifying commercial tenants that are not individually metered. DOE invites comments on how these commercial tenants may be identified and on what requires concerning identification of such tenants may need to be included in the rules.

DOE has considered requiring utilities to send Commercial Announcements to all commercial customers and requesting such customers to distribute the announcements to all their commercial tenants. However, this would require the distribution of announcements to many customers that are not eligibile for the audit. This may lead to confusion on the part of customers which could result in great inconvenience to the utilities. Furthermore, there would be no assurance that owners would distribute the Commercial Announcement to their tenants. DOE has also considered, in addition to requiring utilities to send the announcement to all easily identifiable customers, requiring that utilities advertise the program through the mass media. The advertising would briefly describe the program, include a statement of eligibility, and give a contact point for additional information. The amount of advertising necessary to reach all eligible customers and the cost of such advertising have not been estimated. Further, advertising has the disadvantage of not insuring that all eligible customers have been reached. DOE invites comments on these alternative methods of distributing the Commercial Announcement.

The proposed rule would require that the Commercial Announcement include a list of program measures and energy conserving operation and maintenance procedures, an offer to perform an audit, a description of the audit, a brief explanation of applicable Federal, State, and local energy tax credits, and not include any advertising. Although Title VII of NECPA does not specify these requirements, they are similar, though not as extensive, as the requirements contained in the RCS Program final rule.

The Commercial Announcement would have to contain a list of the program measures and of any State measures included in the State Plan. Unlike the RCS Program, the proposed rule for the CACS Program would not require that measures be listed by building type. Listing measures by building type would place an extra burden on utilities which DOE wishes to avoid.

The proposed rule requires that Commercial Announcements list the energy conserving operation and maintenance procedures and state that they are low-cost or no-cost. Although Section 712(b) of NECPA indicates that DOE may specify energy conserving procedures by climatic region or building type, we have not done this in the proposed rule. Most of the operation and maintenance procedures are effective in all climatic regions and building types. The individual audit will provide specific information on the effectiveness of each procedure for the particular building.

Unlike the RCS Program, the proposed rule would not require that the Commercial Announcement include estimates of savings likely to result from installation of the measures or adoption of the energy conserving operation and maintenance procedures. It is felt that such estimates would create an additional burden for the utilities and complicate the announcement. The wide range of energy usages, business types, and other factors would make it very difficult for utilities to predict savings for all types of commercial buildings. The auditor is required to provide costs and savings information. DOE invites comment on this decision.

In the Commercial Announcement the utility must offer to perform an audit, explain how the audit may be requested, and state the cost, if any, of the audit. The aduits must be available when the Commercial Announcements are distributed, and must be performed within a reasonable period of time following the request for an audit. The Commercial Announcement may be distributed throughout the 12 month period, or at one time. It may be desirable to allow audits to be scheduled by neighborhood, type of building, or some other nondiscriminatory criterion. In order to mitigate impairment of the RCS Program, utilities will be allowed some flexibility in scheduling audits. However, as in the RCS Program, an unconditional offer of an audit must be made within 2 years of approval of the State Plan. DOE invites comment on this approach.

The proposed rule requires that the Commercial Announcement include an explanation of the benefits of the Federal energy tax credits, and any State or local energy tax credits. This explanation would also be required to include a list of eligible measures and the amounts of the credits.

The proposed rule contains a ban on advertising in the Commercial Announcement. However, it has been suggested that allowing advertising, especially by lenders, may improve the effectiveness of the program. Comments on the proposed ban are invited.

The proposed rule does not describe the form that the Commercial

Announcement must take. It was originally thought that it would resemble the Program Announcement for the RCS Program. However, the information required for this program is not as extensive as that required for the RCS Program. Also, it is recognized that a different group of people will be targeted by the Commercial Buildings Program. Therefore, it is possible that the offer of an audit might be made in a letter signed by the president of the utility of participating building heating supplier and addressed to the eligible commercial customer. It is felt that a Commercial Announcement of this type could be a convenient and effective vehicle for presenting the benefits of the commercial buildings audit program. DOE invites comments on what form the Commercial Announcement should take.

Section 458.403(a)(2) would define a new customer and require that a utility send a Commercial Announcement to such a customer. A new customer would be eligible for an audit unless the occupied space had previously been audited. In that case, the new customer could request a copy of the audit results.

D. Energy Audits for Commercial Buildings

DOE has attempted to retain, wherever practicable, both the audit requirements and the audit format from the existing RCS Program. DOE believes the similarities between the two programs will allow for coordination of the Title II and Title VII Programs. However, it has not been possible to retain all of the existing RCS audit program. The proposed regulations must take into account the differences in the building population and the customer population of this program as compared with Title II. Among the differences affecting the audit content are the following:

(1) Commercial buildings vary substantially in size, structure and energy use. The diversity is much greater than that of the Title II buildings.

(2) The owners are predominantly business persons, including the owners of the eligible multifamily buildings, which may affect the type and quantity of information and the need for services.

(3) The energy conservation measures available are diverse, and the equipment types in each category of building have a wide range of differences.

As a result of these differences, the level of regulation of audit content, measures and calculation procedures in the RCS Program is not always appropriate for the CACS Program. Consequently, the proposed CACS regulations would allow substantially greater flexibility, fewer services, and greater use of estimates than in the RCS Program.

What can be provided effectively to an eligible customer by this program is information on the energy use of its facilities; estimates of the likely financial value of applicable measures; and guidance to further analysis, engineering, and implementation. Many of the estimates may be based on typical values achieved in similar facilities which, if properly applied to a customer's facility, produce results that demonstrate the likely value of measure implementation. However, full analysis, with sized equipment and carefully calculated costs and energy savings, is required for only a small number of measures. The full analyses are intended to serve as an example of an engineered solution for a recommended measure. It is anticipated that this approach would raise the credibility of the audit, the auditor, and the value of further services if necessary.

Building specific analyses are required for five measures: lighting systems, caulking and weather stripping, building insulation, storm windows and doors, and hot-water pipe insulation. These measures were selected on the basis of the limited expense and effort required to perform such analyses, their widespread applicability, and their high potential impact on energy use and costs. The audit of lighting systems meets these criteria for small commercial buildings, and these facilities use over 50 percent of their electricity for lighting. Through use of a light meter, a count of lamps and fixtures, and some straight forward calculations, the auditor can evaluate the cost and savings of a range of lighting energy measures. The remaining selected measures which reduce heat loss, can also be evaluated in a straight forward manner requiring only tape measurements for input data.

While these additional efforts may add thirty minutes to one hour to the audit and increase auditor training requirements, substantial benefits from these analyses are anticipated. First, the detailed analyses are more likely to promote early implementation of the selected measures, as all of the information needed by the building owner for implementation is provided. Second, the detailed analyses provide an example of more complete technical assistance. It is anticipated that these analyses will improve the credibility of the auditor and the audit. It is also possible that such examples of technical assistance will increase the owner's likelihood of seeking further technical services.

DOE considered two alternatives to the use of building specific analyses for a minority of measures. One alternative was to perform building specific analyses for all measures. This was rejected, as the expense of such an audit would be several times greater than as proposed. DOE also considered allowing all analyses to be performed on the basis of typical practice estimates. DOE believes that the benefits of improved audit credibility and higher retrofit rates justify the increased cost per audit. DOE requests specific comment on the cost and benefits of the proposed approach and the alternatives.

The audit can be designed to be completed in one day or less for all facilities through the use of estimation techniques and the adoption of systematized approaches, including computer applications. This would allow the utility to control costs while at the same time providing guidance to small businesses without supplanting the role of private engineering and technical energy services.

The regulations are considered sufficiently flexible to allow a utility to adapt its existing RCS program for larger residential buildings, or in some cases, commercial buildings. The regulations are designed to describe the minimum audit content. A State or utility has the option of requiring more of the auditor. The proposed minimum content is: the provision of information that describes how energy is used, a list of the measures that are the most attractive investments, cost and savings estimates for a few measures, notice of available government funds to reduce the costs of installation or financing, and guidance for the evaluation of competing products and services.

1. Requirements for Program Audit. DOE proposes to retain the single audit approach that is required in the existing RCS Program. DOE believes that audit cost will be minimized if the building receives only one audit. DOE estimates that a small commercial facility can be audited in approximately 3½ to 4 hours and that an auditor or audit team can average two buildings per day. From the evidence available to DOE, it is unlikely that any audit will require more than a full day. DOE invites comment on whether the minimum audit content may require more than one day, especially in respect to existing utility programs.

The provisions of the proposed rule do not mean that one person necessarily must perform the entire audit or that the audit must be carried out in one visit. DOE believes that it is possible for one person to be trained to address all measures in a particular building. This can be facilitated by the utility acquiring

certain information, such as type of furnace from the customer before the audit. However, a utility would be allowed to subcontract for all or part of its audit services. Whatever the contracting arrangement of the utility or the number of visits, the customer who requests an audit would be entitled to receive an analysis of all applicable program measures.

The following paragraphs provide a discussion of the requirements for the CACS Program audit. Those sections of the proposed rule which are not discussed are straightforward and do not appear to require further elaboration.

Section 458.403(b)(1)(i): DOE believes that changes in building operation and maintenance will generally involve little or no capital cost and will result in substantial energy savings. The changes can often be implemented rapidly by the building owner with no outside assistance. Therefore, DOE considers that such changes should be separately identified by the auditor and recommended to the building owner prior to any recommendations concerning applicable program measures.

Section 458.403(b)(1)(ii): DOE has attempted to make the proposed audit procedure similar to the audit procedures for the RCS Program to assure effective coordination between programs and to mitigate confusion over a new format. DOE would retain all of the program measures and applicability criteria from the existing RCS Program because small commercial buildings and multifamily dwellings will often require the same audit considerations as residential buildings. However, DOE realizes that there are measures which are unique to commerical buildings, for example, lighting systems, which require new applicability criteria. The proposed new applicability criteria are discussed below.

DOE has attempted to define useful applicability criteria which will allow an auditor to eliminate a measure from consideration by simple observation. However, because there is so much variety among the building types, it is probable that the applicability criteria will be insufficient for some buildings. It is DOE's intention to rely upon the discretion of the auditor in cases where the applicability criteria fail to give a reasonable initial indication as to the appropriateness of a measure.

DOE considered eliminating applicability criteria from the proposed rule. DOE believes, however, that the applicability criteria will be useful in establishing the minimum audit content. DOE invites comment on the concept of applicability criteria and on each criterion identified in the proposed rule.

Replacement or modification of lighting system: DOE recognizes that lighting systems will be similar in many building types and most climate zones. Studies have shown that lighting requires a substantial portion of typical commercial energy consumption and the potential for reducing waste is very high. Therefore, DOE intends that all commercial buildings should receive audits of the lighting systems. DOE has proposed stringent applicability criteria for the lighting systems to assure that buildings receive this audit. It is expected that the applicability criteria would cover most buildings and that buildings not falling within the applicability criteria already would have an efficient lighting system.

Ceiling and wall insulation: DOE has proposed the use of the same applicability criteria for commercial buildings insulation levels as it did for residential buildings in the Title II Program. The rationale for this approach is that small commercial facilities will exhibit building characteristics similar to residential buildings as regards building insulation. DOE also believes that the economics of retrofitting the commercial buildings to the levels identified in the Appendix will be similar to residential buildings. DOE recognizes that there may be instances where the applicability criteria are inadequate. It may be physically impossible to retrofit some building types without an inordinate effort and in other instances the auditor may not be able to determine the existing building insulation levels due to structural characteristics. DOE proposes to rely upon the discretion of the auditor to determine the applicability of retrofit insulation in buildings where DOE criteria are inadequate.

Stream/condensate pipe insulation: DOE believes that steam and condensate pipes should be insulated to at least the level of the thermal equivalent of one inch of fiberglass.

Automatic energy control systems, equipment associated with automatic energy control systems: The applicability criteria for this measure would describe the circumstances where automatic energy control systems could effectively reduce energy costs. Generally, where energy savings can be achieved by limiting equipment operation as a function of time, temperature, and humidity, automatic control should be considered.

Energy recovery systems: Energy recovery systems should only be considered once building energy wastes have been minimized. However, should such wastes remain where a requirement exists in the building for such energy, then energy recovery should be considered. Options include heat wheels, heat pipes, heat exchangers, and preheaters.

Cogeneration systems: DOE believes that cogeneration is a desirable method of reducing energy consumption but that cogeneration may not be appropriate for many small commercial facilities. Installing a cogeneration system requires that several technical, economic, environmental and regulatory criteria be met. Generally, it is difficult to achieve these criteria in a new facility and it is probable that it is more difficult to do so in a retrofit situation. Accordingly, DOE has attempted to define stringent applicability criteria which would allow the auditor to make a rapid judgement for most buildings. However, the applicability criteria attempt to define a situation in which a cogeneration system may meet technical and economic acceptance. In no instance does DOE anticipate that the auditor would be required to provide more than an estimate of the type of cogeneration system appropriate to a particular building or an estimate of the energy savings which could be achieved.

Renewable resource measures: It is the intent of DOE to foster the adoption of renewable resource measures whenever feasible. Small commercial facilities will generally exhibit similar characteristics as residential buildings in regard to the conditions appropriate for renewable resource measures. Accordingly, DOE has proposed to retain all of the applicability criteria from the existing RCS Program for renewable resource measures.

Section 458.403(b)(1)(iii): DOE intends to assure that an on-site visit include such items as measurement and inspection. It is expected that measurements will include such items as determining the area of building devoted to window space or counting the number of lamp fixtures. While DOE realizes that these actions would increase the length of the audit and therefore the cost, an audit without these actions could not make meaningful estimates of installation costs or energy savings.

Section 458.403(b))(1)(iv): DOE believes that installation costs and energy savings should be based on costs which the eligible customer is likely to encounter when attempting to implement a recommended program measure. This section is similar to the existing RCS requirements except that in the proposed program the auditor is to include an estimate of the real energy cost escalation rates which the eligible customer may experience. DOE believes

that energy cost savings estimates without this provision would be inadequate in that they would not accurately depict the financial conditions that the eligible customer is likely to experience. By using energy cost escalation rates in the calculation procedure, the potential for conservation can be more realistically conveyed to the building owner. DOE intends to allow any reasonable real price escalation on rates to be identified by the State or utility.

Section 458.403(b)(1)(v),(vi),(vii): The requirements for (v) (estimates for solar systems), (vi) (procedures to assure the validity of audits), and (vii) (cost and saving estimates of furnace efficiency modifications) are the same as in the RCS Program audit.

Section 458.403(b)(1)(viii): Calculation procedures. DOE has determined that several program measures are common to many building types in all climate zones, generally have rapid payback periods and do not involve complicated calculation procedures. Further, DOE believes that the audit will have enhanced value if audit calculations are performed that are unique to the building being audited. DOE therefore proposes that several program measures receive a level of attention greater than other program measures. It is anticipated that the State will require that the detailed analysis be consistent with accepted engineering practice. DOE expects that auditors will employ computerized or other forms of systematized approaches for the detailed analysis effort.

DOE considered allowing workbook format approaches for all program measures. This approach was rejected because no existing workbook was identified which covered all of the measures and all of the building types. Workbooks do exist for approximately 75 percent of the building types but the workbooks often have out-of-date energy costs and installation costs. The workbooks also generally are not comprehensive with respect to the eligible program measures for the proposed program. DOE believes that it will be less expensive to require that only a few program measures receive a detailed analysis as opposed to developing new workbooks to cover all building types and program measures. DOE has not proposed to restrict the use of workbooks that a State or utility believes meet the program criteria. DOE solicits comments on this approach.

Section 458.403(b)(1)(ix): DOE anticipates that the program measures will cover most of the energy consuming functions of the building. Because small commercial buildings are diverse and may include unique process applications, it is conceivable that a large energy consuming function may not receive an audit. DOE believes that if the audit did not address a major energy consuming function because of regulatory oversight, then the credibility of the audit process would be weakened. DOE therefore proposes that an energy consuming activity which accounts for more than ten percent of total energy use should receive particular attention during the audit.

DOE recognizes that some unique activities may be quite difficult to audit. It is DOE's intention that the auditor use discretion when addressing a unique function but in no case should the auditor be required to provide detailed costs and savings estimates for a unique function. DOE seeks comment on this approach. Further, in order to assist States and utilities in providing audits, DOE would develop and provide technical assistance.

2. Results of Program Audit The purpose of this section is to discuss the program audit end product: the delivery of results to the customers.

The requirements in the proposed section are intended to guide the developers of the State Plan as to the quantity and detail of information that would be provided by the audit. DOE has chosen not to propose specifics of format, computation, and delivery of results in the regulation in order to allow for flexibility on the part of a State or utility in the development of its audit program.

DOE considered requiring in-person delivery of audit results. Such delivery might be feasible if the auditor were to prepare the results at the site, or if the resources expended on the audit where substantial. However, DOE proposes not to require in-person delivery in order to permit flexibility in program design and in recognition of the limited time availability of many small businessowners who may not desire in-person presentation. However, DOE proposes to require that the customer have the opportunity to fully discuss the audit if he or she requests it.

Section 458.403(b)(2)(i): As proposed, the auditor must determine the type of fuels consumed by the building, and the quantities consumed annually, in order to provide a basis for evaluation of measures. Where data is lacking, estimates from part-year data or estimates from similar buildings can be used.

Section 458.403(b)(2)(ii): This section would require a determination of how much energy is consumed by the building, and where energy is consumed by quantity and end use. This proposed section describes the data required for evaluation of energy savings, and for selection of measures for analysis. The data is also believed to be useful to the building owner by providing an understanding of where his purchased energy is being consumed. In addition, the energy use per square foot calculation would allow for comparison with other buildings of similar type and climate. DOE considered requiring that such a comparison be performed by the auditor, but believes the expense of preparing normalized data is not justifiable.

DOE recognizes that an accurate end-use analysis for many businesses can be expensive and time-consuming to compute. Therefore, estimates of Btu consumption by end use would be allowable, and might be based on typical end use breakdowns for that building type and location. DOE recognizes that this might limit the ability of building owners and operators to compare energy performance, and seeks comment on this provision.

Section 458.403(b)(2)(iii): This section would require the audit to provide notice of any government incentives for energy conservation that may be available. DOE believes that a valuable service is provided to the customer by these notices, as the increasing number of such programs at the Federal, State, and local level have rarely been presented comprehensively to building owners. DOE considered proposing the inclusion of the benefits of these programs in the economic analyses of program measures where the availability of the benefits were certain, for example, tax credits. DOE believes that such a requirement may be overly burdensome. DOE requests comments on this decision.

Section 458.403(b)(2)(iv): This section proposes that at least limited guidance be provided to the customer to assist him in implementing applicable measures. DOE envisions that such guidance would include generic information on the types of equipment and/or kinds of businesses that are appropriate for proper implementation. DOE would not require the arrangement of services as is required for the RCS Program, presuming that the customers eligible under the CACS Program are more accustomed to arranging their own services. DOE, however, would not preclude the arranging of services should a State desire to include such a requirement.

Sections 458.403(b)(2)(vi),(vii): For limited number of measures, DOE proposes to require that costs and savings be specifically computed. DOE intends these analyses to describe the

type and amount of equipment recommended to be purchased, and to base costs and savings estimates on these measured quantities. DOE feels that such analyses, which are typical of privately-offered technical assistance audits, should be provided to the building owner as an example of the content of a technical assistance audit. DOE believes that sample full analyses would improve the credibility of the audit findings for all measures provided to the building owner.

Sections 458.403(b)(2)(viii),(ix): DOE has found that the program measures available to the building types have generalizable implementation costs, energy savings, and investment payback when properly qualified by building size, function, and operating characteristics. DOE is also interested in restricting the necessary cost of the program audit. As a result, DOE proposes to allow most measures to be analyzed based on typical practice, as defined in § 458.103.

Typical savings estimates could be based on examples from similar facilities. However, these estimates would have to be specific to the end-use analysis, most commonly as a likely percentage saved to the particular end-use category. The auditor would then determine the likely value of savings. Implementation costs would also be based on typical practice estimates specific to the building size, function, and operating characteristics. DOE solicits comment on this approach to audit analysis.

Section 458.403(b)(2)(x): Only simple payback, which is the ratio of implementation costs to first-year savings, is proposed to be required as part of the audit. DOE believes that other computations, including ten-year cash flow, internal rate of return, projected actual payback, and lifecycle cost computations are useful, but not for all owners or for all measures and that, therefore, the expense of such computations may be unjustified. States may, however, find such additional computation useful and would be allowed to include them in State Plans. DOE also seeks comment on whether additional computations should be required by rule.

Section 458.403(b)(2)(xi): Disclosure of the basis of cost and savings estimates are proposed to ensure that the findings are presented without unreasonable expectations for accuracy.

Section 458.403(b)(2)(xii): DOE feels that maintenance costs, where applicable, should be estimated to fully characterize the economic impact of implementing program measures.

Sections 458.403(b)(2)(xiii),(xiv),(xv): The proposed requirements for reporting on renewable energy resources are essentially the same as for the RCS Program.

Section 458.403(b)(2)(xvi): The measures recommended for detailed analysis were selected based on the level of applicability, the ease of evaluation, the quantity of energy savings, and the quickness of payback. Measures meeting these criteria can be fully analyzed without excessive costs in a wide range of buildings. DOE requests comments on the selected measures.

Section 458.403(b)(2)(xvii): The remaining proposed measures may be analyzed based on typical practice, as described above.

E. Reporting and Record Keeping Requirements

Section 458.403(c) sets forth proposed reporting the recordkeeping requirements. It would require each State to provide as a part of their State Plan an annual report to the Secretary apprising the Secretary of program features such as the identities of participating utilities, the estimated number of eligible customers, the number of people employed in the program, the number of audits requested, the program costs, the nature of complaints, and manpower shortages. The recordkeeping requirements would entail maintenance of audit data and related information for specified retention periods. The proposed rule in § 458.403(c) is taken to the maximum extent directly from the RCS regulations. Items pertaining to installation and financing requirements of Title II of NECPA were deleted, since Title VII contains no such prohibitions, and some other minor changes have been made.

F. Complaints Processing Procedures

Section 458.403(d) of the proposed rule, would require that the State Plan contain complaints processing procedures and that these be the same as those used in the RCS Program to the maximum extent possible. This is intended to simplify matters and provide some economy of costs. It is presumed that the new program woud not have significantly different compliant processing needs. Complaints would be limited to those incident to the Title VII Program. Consequently, complaints would involve those against utilities and, potentially, owners of multifamily buildings who fail to share audit results with tenants. DOE believes that some mechanism is necessary for handling complaints in order to ensure adequate implementation of the CACS Program, and believes the proposed approach will be both cost-effective and a reasonable method of providing for complaint resolution. Comments are invited on this proposed approach.

G. Addition of Measures by States

In the RCS program many States expressed the desire to have the flexibility to add measures which they believed to be particularly important. DOE subsequently developed a procedure which encouraged States to tailor additional program measures to best fit the needs of the State. In the Title VII Program DOE proposes to retain the same approach for State measures. Each State would be allowed to add either energy conservation measures or renewable resource measures if the State could demonstrate that the measures would save energy, not increase the consumption of oil, and not adversely affect the RCS Program.

DOE solicits comments on this proposed approach. DOE specifically requests that States address the issues of in-house technical expertise available to the Lead Agency and the State's ability to consider additional measures.

H. Auditor Qualification Requirements

Sections 458.405 and 458.505 outline the proposed requirements for auditor qualification through training. DOE proposes the same requirements as in the RCS Program to define areas in which the auditor must be knowledgeable, and has added to those requirements items concerning measures applicable to Title VII audits. It is DOE's intention that there need not be two classes of auditors, but rather that a pool of qualified personnel could be created which would be capable of performing audits under either Program. DOE proposes not to make the requirements for the CACS Program more rigorous than those for the RCS Program, in part because of the desire to keep the audit under both Programs simple, and in part to assure that costs would be minimized.

DOE would require that States develop a training curriculum which would assure that auditors completing the training would be able to analyze energy use and determine the advisability of implementing the applicable measures. Auditors would have to have an understanding of the various energy saving measures and will be able to discuss energy conserving operation and maintenance procedures with the customers. Under a model curriculum, which DOE intends to develop, auditors would also be required to be knowledgeable of the

advantages and disadvantages of State and program measures.

DOE considered requiring engineering training but rejected this approach because the intent of the program is not to compete with existing auditing companies but rather to give eligible customers a first step approach to energy savings at a reasonable cost. The amount of information that the audits would contain and the number and types of measures covered also dictate an uncomplicated approach. A full audit, including specifications and computed energy savings particular to the unit, would result in costs that would be prohibitive, or, at best, unjustified in relation to the amount of savings that would result. For example, DOE proposes that covered multifamily dwellings and commercial buildings be examined for the potential savings that could result from cogeneration. The result of such an investigation should be the indication of whether the customer should further pursue the option; a detailed analysis would be costly, and for a building where cogeneration is not justified irrelevant to potential energy measures. Therefore, DOE is not proposing to require specalized training such as requiring a college degree in engineering. DOE solicits comments on this approach, and specifically invites comments on the potential quality difference in this approach versus one requiring engineering or related field experience.

DOE has attempted through the proposed fourteen subsections in Section 458.405(a) to indicate specifically the areas in which States would be required to assure course training. DOE would not require that the training include field work, but would leave that option to the States. DOE has also not proposed the specific content of the curriculum. DOE is aware that curriculum development is expensive and that some States may prefer to have a model to use as with the RCS model curriculum. DOE solicits comments on the extent to which an additional curriculum is necessary for those sections not already covered in the RCS model.

(a) DOE has allowed States to determine whether RCS auditors must be qualified in the three phases of auditing—conservation, renewables, and furnace efficiency. The same flexibility is proposed for CACS auditors.

(b) DOE does not propose that States become the trainers, but rather is flexible in determining how auditors could be taught. This flexibility would allow a utility to be responsible for training its own personnel if a State so desired, for example. In return for this flexibility, however, DOE would require that the State Plan address how this utility training would be monitored to assure quality.

I. Procedures for Investigating and Enforcing Compliance With the State Plan

Section 458.406 of the proposed rule contains the same investigation and compliance provisions as the corresponding § 456.303 of the RCS Program.

J. Coordination

Section 458.407 contains the same provisions requiring coordination between energy conservation programs, energy suppliers, and regulatory agencies as those of the corresponding § 456.316 of the RCS regulations. One additional provision has been added to account for the requirement of Section 731(a)(4) of NECPA which requires that no utility may be required to audit a building which has been audited previously under Title VII of NECPA or under the Schools and Hospitals Program.

K. Accounting and Payment Requirements

The accounting and payment requirements proposed in § 458.408 rules are similar to the corresponding § 456.310 of the RCS regulations. The State Regulatory Authority would be given the responsibility of determining the customer charge, if any, and how utilities would recover the costs of providing commercial audits. Portions pertaining to installation and financing have been deleted, but the sections are otherwise identical. Not appearing in the proposed rule are provisions that are contained in § 456.311 of the RCS regulations concerning customer billing requirements and limitations on termination of service. These sections are not present because they were never included in Title VII of NECPA. We invite comments on whether such requirements should be included in this program.

VII. Part 458, Subpart E—Energy Conservation Services for Multifamily Dwellings

A. Scope and Coverage

Subpart E describes the proposed requirements for the content of State Plans pertaining to multifamily dwellings. All utilities covered by the RCS Program are covered by the Multifamily Dwellings Program. However, utilities may be exempted by the State Regulatory Authority from providing services to some multifamily dwellings. The State Plan would be required to identify which utilities have received exemptions and to which multifamily dwellings the exemption applies.

B. Eligibility for Audit

DOE considers the outreach portion of the program to be quite important to penetration efforts. Therefore, DOE proposes to review State descriptions of how program recipients learn of and participate in the program. While DOE proposes to leave implementation of this section to the States, DOE would reject a State Plan which contained procedures so cumbersome as to limit participation. DOE seeks comment on this proposal.

Section 458.502(b)(3) contains the proposed requirement that an owner of a multifamily dwelling agree to give his or her tenants information pertinent to the tenants' units as a precondition to receiving audit services. DOE has not, however, detailed procedures for gaining the customer's assurance to provide tenants with the information, but proposes to leave this area to the States. DOE solicits comment on whether specific regulatory language would be helpful. DOE has not required that tenants receive audit information about common areas or equipment, such as hallways or furnaces. Comments on the appropriateness of such a requirement are invited.

Section 458.502(b)(4) contains the proposed requirement that an owner of a multifamily dwelling agree to distribute to each tenant of such dwelling a Tenant's Energy Conservation Information Package as a precondition to receiving an audit. The Information Package would be supplied to the owner by the utility or the building heating supplier which would perform the audit. DOE considered proposed that the utility or building heating supplier distribute the Information Package directly to the tenants once an audit had been requested. This alternative was not proposed because DOE felt that it would place an unnecessary burden on utilities and participating building heating suppliers and not necessarily result in the tenant receiving the audit results to which the tenant is entitled. Comments on the proposed approach and the alternative are requested.

C. Apartment Announcement

Section 731(a)(1) of NECPA requires that each public utility offer to each eligible multifamily dwelling customer an audit of the eligible customer's multifamily dwelling. The offer of the audit must be made within 12 months of approval of the applicable State Plan, and every 24 months thereafter until 1990. Although the proposed rule would

require the Apartment Announcement to be distributed to every eligible multifamily dwelling customer, the rule does not specify how this distribution is to be accomplished. DOE believes that utilities and building heating suppliers will not find it difficult to identify eligible multifamily dwelling customers. Utilities and building heating suppliers may find it convenient to include the Apartment Announcement with the monthly bill. DOE seeks comments on methods of distributing the Apartment Announcement.

DOE considered requiring that Apartment Announcements be sent to all tenants of multifamily dwellings. It was thought that such a requirement might encourage tenants to request building owners to request an audit and might encourage tenants to conserve energy on their own regardless of the actions of the building owner. However, this requirement was not proposed because of the added expense to utilities, and because NECPA does not require a utility to offer services to multifamily dwelling tenants. DOE has proposed, however, that utilities and participating building heating suppliers distribute the Tenant's Energy Conservation Information Package to all owners of buildings for which a request for an audit is made. The owner would be required to distribute the Information Package to the tenants along with the audit results. This Information Package is discussed in detail in Section D below.

The proposed rule would require that the Apartment Announcement distributed to multifamily dwellings include a list of program measures and energy conserving operation and maintenance improvements; an offer to perform an audit and a description of the audit; an explanation of applicable energy tax credits; and explanations of the Weatherization Assistance Program for Low Income Persons; no advertising; information on loans and grants available through the Solar Energy and Energy Conservation Bank; information on loans or grants available at the State or local level; and a notice that, in order to receive an audit, the owner must agree to make the results available to the tenants.

The proposed rule requires that Apartment Announcements list the program measures and any State measures included in the State Plan. It would not require that measures be listed by building category, such as building size or type of fuel used. Most of the measures are applicable to all multifamily buildings, and the audit, as proposed, would evaluate which measures are most appropriate for the specific building. The proposed Apartment Announcement would list the energy conserving operation and maintenance procedures and state which are low-cost and which are no-cost. It would not be required that these procedures be listed by building category, since most are applicable to any type of building. Because the RCS Program required that measures and energy efficient practices be listed by building category, DOE invites comments concerning the decision not to require such a listing for the Multifamily Dwellings Program.

The proposed rule does not require that the Apartment Announcement include estimates of savings likely to result from installation of the measures or adoption of the energy conserving operation and maintenance procedures. It is felt that such estimates may be misleading, and would create an additional burden for the utilities. The wide range of energy use habits, configuration of buildings, and other factors would make it very difficult to predict savings in a large multifamily dwelling. Comments are sought on this decision.

The proposed Apartment Announcement would offer to perform an audit, explain how the eligible customer may request the audit, and list the direct cost if any, of receiving the audit. The proposed rule also permits that offers of audits be conditional. This provision is similar to one contained in the original RCS Program. DOE considered eliminating conditional offers. However, in order to mitigate the chance that the expanded program would significantly impair a utility's ability to fulfill the requirements of the RCS Program or provide utility service to its customers, some flexibility in scheduling audits would be provided. DOE seeks comments on this provision.

DOE proposes to require in the Apartment Announcement an explanation of the Federal energy tax credits and a description of who is eligible for them. Although renters, not owners, are eligible for the residential tax credit, it is felt that there is a benefit in having this information included in the Apartment Announcement. Landlords may want to make this information available to their tenants, especially those that are submetered. In addition, cooperative housing corporations and associations of condominimum owners are eligible for the tax credit, and may request an audit directly. Information explaining the Weatherization Assistance Program for Low Income Persons should be included in the Apartment Announcement because the cooperation of the owner of the building is necessary in order for the tenant to take advantage of the Weatherization Program. It should be noted that under the Weatherization Assistance Program, no apartment can be weatherized without first having written permission of the owner, and rents cannot be raised because of the increased value of the unit due to the weatherization work. DOE seeks comments on the requirements concerning tax credit and weatherization information.

Apartment Announcements would not be allowed to include any advertising. The ban on advertising is proposed in this program for the same reason it was included in the RCS Program. Allowing advertising would give the utilities an unfair advantage over other suppliers, installers, and leaders. Because of the relative scarcity of energy conservation financing programs, utilities would be allowed to state that they finance the sale and installation of measures. DOE invites comment on this ban.

The Apartment Announcement should include a notice stating that, in order to receive the audit, the owner must agree to make the audit results available to the tenants. Title VII of NECPA requires that, in order to receive the audit, the owner must first agree to make the results available to tenants. There is some concern that, by stating this requirement in the Apartment Announcement, the response rate may suffer. The alternative is to make no such statement in the Announcement, but to notify the owner of the requirement when the request for an audit is made. DOE seeks comments on which approach would be more desirable.

DOE proposes to require that utilities and participating building heating suppliers distribute a supplement to the Apartment Announcement to eligible multifamily dwelling customers that have requested an audit. This supplement would contain information designed to show how landlords and tenants may share in the benefits of energy conservation, and would include sample landlord/tenant agreements demonstrating how such benefits may be shared. DOE invites comments regarding this proposed supplement.

D. Tenant's Energy Conservation Information Package

Section 458.403(a)(3) of the proposed rule would require utilities and participating building heating suppliers to distribute to all owners of multifamily buildings for which an audit has been provided a Tenant's Energy

Conservation Information Package, which would be distributed by the owner to each tenant. Although it is not specificially required by Title VII of NECPA, it is felt that distribution of such an Information Package would greatly enhance the success of the Title VII Program. Section 731(a)(2) of NECPA provides the Secretary the authority to require such a package.

The Title VII Program is an information program. The service specifically required is the conducting of an audit, upon request, of multifamily dwellings and small commercial buildings. The audit is intended to provide information on actions the building owner may take to conserve energy. In the case of multifamily dwellings, many of these actions would require the understanding and the cooperation of the tenants in order to be effective. This is especially true of the energy conserving operation and maintenance procedures, which, because of their low-cost/no-cost aspect, may be particularly attractive to the building owner. The audit would provide information to the building owner, but unless the tenants also are furnished with certain energy conservation information, they cannot be expected to cooperate with the owner.

On the other hand, many of the energy conservation measures require a substantial investment on the part of the owner. Understandably, may owners will be reluctant to make such investments. This reluctance may be tempered by tenants who have been informed about the benefits of energy conservation, and who urge such investments. Furthermore, if tenants have been notified of the audit program, and have been convinced of the beneifts of energy conservation, they may be able to persuade their landlord to take action on an audit when he or she might not otherwise do so.

DOE believes that the Tenant's Energy Conservation Information Package should also include suggestions of how the tenant may conserve energy in his or her apartment, regardless of the actions taken by the landlord. It is important, though, to encourage landlord/tenant cooperation in an effort to conserve energy.

The Information Package would be required to contain an explanation of how the installation of each program measure or the adoption of each energy conserving operation and maintenance procedure would affect the level of services the tenant receives. The effect on the level of services, such as lighting, in the common areas of the building as well as in individual units should be explained. DOE believes that this information should be designed to help the tenant understand that the goal of such actions is the conservation of energy, not the reduction of services. In many cases, energy can be conserved without any change in the comfort level the tenant experiences. In such cases there may be a reduction in costs which may eventually be passed on to the tenant. It might be pointed out that it is in the tenant's interest not only to conserve energy but to encourage his or her landlord to take energy conservation actions.

DOE considered, but did not propose, requiring an explanation of the Resident Utility Billing System (RUBS). RUBS is a pro-rata billing system that passes through energy costs to residents. DOE studies indicate that the adoption of RUBS can result in energy savings of 5 to 10 percent. Pamphlets explaining RUBS for tenants have been developed by DOE and are available through the University of Colorado (The RUBS Project, Campus Box 468, University of Colorado, Boulder, Colorado 80309, 303/492–6746). States may include a requirement in their State Plan that RUBS be described in the Information Package.

The proposed rule requires that the Information Package contain low-cost/no-cost energy conservation information. It is felt that such information would lead to substantial conservation regardless of the actions of the building owner. DOE seeks comments on this requirement.

The Information Package would be required to describe the residential energy tax credit and the Weatherization Assistance Program for Low Income Persons. In addition, State and local programs should be described. Such information would encourage tenants to install conservation measures.

DOE invites comments on the distribution and content of the proposed Tenant's Energy Conservation Information Package. Specific suggestions concerning additions and/or deletions would be appreciated.

E. Alternative for Disseminating Information

A State would be allowed to provide in its State Plan an alternative requirement for disseminating the program information contained in the Information Package to tenants. No such alternative is proposed for disseminating the Apartment Announcement.

F. New Customers

In addition to requiring the sending of announcements to current customers, the proposed rule in § 458.503(a)(5) requires that new eligible customers be sent Apartment Announcements. In addition, new tenants may request a copy of the results of an audit performed on the new tenant's multifamily dwelling that are applicable to that new tenant's individual dwelling unit.

G. Energy Audits for Multifamily Dwellings

DOE believes that the audit requirements for multifamily dwellings should be nearly identical to the audit procedure for commercial buildings. The buildings will, in general, exhibit similar characteristics in the building shell, HVAC system, hot water generation and air-conditioning systems. DOE believes that it is expedient to develop similar audit formats to allow close coordination between audits of these buildings types. DOE realizes that in most cases, the applicability of measures can be evaluated through an examination of only a sampling of dwelling units in a multifamily dwelling. For example, the cost and savings of storm windows can be evaluated for the entire building by examining a few typical units. DOE proposes to allow multifamily dwelling audits to be performed on such a basis. It is DOE's intention to rely upon the auditor to make the discretionary judgement in cases where program measures clearly do apply to the multifamily dwelling. A discussion of these proposed audit requirements can be found in the section of the preamble dealing with audits of commercial buildings.

H. Reporting and Recordkeeping Requirements

Section 458.503(c) proposes requirements for multifamily dwellings identical to those of § 458.403(c) for commercial buildings.

I. Complaints Processing Procedures

Section 458.503(d) proposes requirements for Subpart E identical to those of § 458.403(d) for Subpart D.

J. Addition of Measures by States

Section 458.504 proposes requirements for Subpart E identical to those of § 458.404 for Subpart D.

K. Auditor Qualification Requirements

Section 458.505 proposes requirements for Subpart E identical to those of § 450.405 for Subpart D.

L. Procedures for Investigating and Enforcing Compliance With the State Plan

Section 458.506 proposes requirements for Subpart E identical to those of § 458.406 for Subpart D.

M. Coordination

Section 458.507 proposes requirements for multifamily dwellings identical to those of § 458.407 for commercial buildings. Discussions on recordkeeping, complaints processing, investigation and enforcement, and coordination can be found in Part VI of the preamble.

N. Accounting and Payment Requirements

Section 458.508 proposes requirements for multifamily dwellings identical to those of § 458.408 for commercial buildings, except that § 458.508 contains a limit on audit charges to the multifamily dwelling customer of § 15.00 per dwelling unit or actual audit costs, whichever is less. This limit is specifically prescribed in Title VII of NECPA. Treatment of audit costs beyond those charged directly to the customer receiving the audit is in the discretion of the State Regulatory Authority.

VIII. Part 458, Subpart F—Federal Standby Authority and Enforcement Provisions

This subpart proposes the procedures to be followed to ensure that eligible customers receive the services of the program when a State or nonregulated utility does not submit an acceptable plan within the necessary time or fails to implement adequately an approved plan. This Federal Standby Authority is provided for in Section 741 of NECPA. The provisions of Section 741 are very similar to the provision of Title II. Likewise, the proposed rule corresponds to Subpart F of the RCS regulations. The proposed rule has been slightly restructured to make it easier to distinguish provisions pertaining to States from those pertaining to nonregulated utilities.

IX. Appendix—Program Measures by Climate and Category of Building

DOE proposes to include the majority of program measures and applicability criteria from Appendix I contained in the existing RCS Program in the CACS Program. The rationale for using this approach to the audit requirements is that the major building components exhibit similar characteristics between all building types covered by this proposed rule, regardless of general building category. DOE believes that the levels of insulation identified in Appendix I of the existing RCS Program are reasonable insulation levels for small commercial and multifamily buildings. DOE realizes that these insulation levels will not be appropriate for all of the diverse building types, but rather believes that the Appendix will serve as a general guide for the building auditor. DOE intends to rely upon the auditor to a greater degree in the CACS Program than in the existing RCS Program. In this regard, DOE has proposed several provisions for the auditor to use discretion when considering the applicability of program measures.

X. Draft Regulatory Analysis and Urban Community Impact Analysis

Executive Order 12044 directs agencies of the Executive Branch to conduct a Regulatory Analysis of regulations that are likely to have a major economic impact. The objective of the Regulatory Analysis is to examine alternative regulatory provisions which might permit achievement of the regulatory goals at a lower cost. The Department of Energy, in an Interim Management Directive dated April 25, 1978, expanded the scope of Regulatory Analyses conducted for regulations within its jurisdiction. DOE is requiring, in addition to economic impact estimates, projections of the impact of regulatory alternatives on the goals of the National Energy Plan and on institutional issues created by the proposed regulations. In keeping with these objectives, DOE has prepared a Draft Regulatory Analysis of the proposed rules published herein.

This Summary of the Draft Regulatory Analysis is published concurrently with the publication of the proposed rules for the RCS Program. A copy of the complete Regulatory Analysis may be obtained by contacting: Mr. James Tanck, Director, Building Conservation Services Division, Office of Assistant Secretary for Conservation and Solar Energy, U.S. Department of Energy, Room GH–068, Forrestal Building, 1000 Independence Avenue, S.W., Washington, D.C. 20585, (202) 252–9161.

A. Legislative Background and Authority

On November 9, 1978, Public Law 95–619, the National Energy Conservation Policy Act (NECPA) was enacted into law. Under part 1 of Title II, Congress established a Residential Conservation Services (RCS) Program which requires that large public utilities and home heating oil suppliers provide energy audits and certain other conservation services to customers who reside in single-family homes or multi-family dwellings with up to four units per building.

On June 30, 1980, the Energy Security Act (ESA) was signed into law providing, inter alia for the expansion of Title II of NECPA to include, as of January 1, 1982, multi-family dwellings with five or more units which are neither centrally heated nor cooled. ESA also established a new Title VII of NECPA which provided for a similar program for small commercial buildings and multi-family dwellings with five or more units per buildings which are centrally heated, centrally cooled or both.

The ESA requires that DOE promulgate rules to implement the new provisions of Title II and Title VII of NECPA. The Draft Regulatory Analysis for the Commercial and Apartment Conservation Service (CACS) forms a part of DOE's rulemaking process for Title VII and supports the Proposed Rule as published herein. A broad spectrum of general options was considered to determine the relative effectiveness of the Proposed Rule in meeting national energy conservation objectives.

B. Scope of Regulations

The residential and commercial sectors which are the targets of the RCS and CACS Programs consume about 36 percent of the total U.S. energy use. In the residential sector, 90 percent of the energy is consumed in single-family homes and multi-family dwellings with fewer than five units. This subsector is covered under the RCS rules adopted by DOE in November, 1979. The remaining 10 percent of the energy use in the residential sector (representing 15 percent of the living units) is consumed in multi-family dwellings with five or more units and is a subject of this rulemaking.

C. Need for Regulations

The energy use in the sectors covered under this rulemaking, while smaller than that of single-family homes, is nonetheless very significant as evidenced by the fact that it represents 30 percent of the energy equivalent of U.S. oil imports. Numerous studies by DOE and others have demonstrated that a major fraction of this energy use could be eliminated by cost effective investments in retrofit of existing buildings. In June, 1980, Congress acted to extend DOE's regulatory authority, already in effect for single-family homes, to multi-family and small commercial buildings.

Because Congress specifically requires in Section 712 of NECPA that DOE promulgate regulations in this area, a discussion herein of the need for such regulations is not necessary.

D. General Provisions of the Proposed Rule

The Proposed Rule is set forth in detail elsewhere in the Federal Register. This section briefly summarizes the rule and indicates the general approach and applicability. Specific legal interpretations of the rule should not be derived from this material, which is merely an abstract of the rule.

The rule is modeled to the maximum extent possible after rules previously promulgated under Title II of NECPA. The new rule provides that:

1. Covered public utilities (gas and electric) and participating building heating suppliers are required to provide upon request to eligible customers an on-site energy audit. The offer is to be made in periodic announcements mailed directly to the eligible customers.

2. Covered utilities and participating heating suppliers must also provide certain other services such as information on availability of governmental financial assistance.

3. Each State may develop a State Plan and assume responsibility for administration of the program within the State. The State may also choose to provide certain services otherwise provided by the utilities or DOE.

4. Non-regulated utilities must either develop individual plans or be included under the State Plan.

5. DOE must develop and invoke its own plan in each State which has no approved State plan, or is inadequately implementing an approved State plan. DOE is also required to order a nonregulated utility to promulgate a plan if it is not covered by an approved plan or inadequately implementing an approved plan.

The coverage of the program is specified through the definition of eligible customers. Under the CACS Program, eligible customers include owners of certain centrally heated or cooled apartment buildings and tenants and owners of small commercial buildings. Small commercial buildings are those which used less than 1000 therms per month of fuel or 4000 KWH per month of electricity for 1980.

The proposed rule would require certain minimum information be provided in Program Announcements to assure that eligible customers are apprised of the audit program. The rule also establishes specific requirements to assure that all energy conservation and renewable resource measures are adequately considered in the audit.

E. Findings of the Regulatory Analysis

The findings of the Regulatory Analysis are that the Proposed Rule will:

1. result in a significant reduction in energy consumption in the multi-family dwelling and commercial sectors;

2. achieve energy savings at a cost well below the cost of oil imports;

3. lead to small but positive effects on employment; and

4. lead to small but positive effects on urban areas.

The Department finds that institutional impacts will be small and mostly positive on affected institutions.

Having evaluated a number of feasible alternatives to the Proposed Rule, the Department offers its rule for public comment as representing its best judgement at this time as to the appropriate rule pursuant to legislative authority. As is pointed out in the preamble to the rule, there are several issues in this rulemaking about which the Department is particularly desirous of obtaining public opinion.

The costs and benefits of the program as proposed are summarized below.

Summary of Cost/Benefit Analysis

	Multifamily	Commercial	Total
Energy savings, million BOE[1]			
Per year (1990)	9.8	5.30	14.38
Total to year 2000	136.2	79.5	215.7
Employment (jobs created, 1990)	11023	6599	17622
Cost (total to 1990, $ millions)	1026	677	1703
Federal Government	16	15	31
State governments	53	50	103
Utilities	252	210	462
Building owners and tenants	705	402	1107
Dollars per BOE			
Undiscounted	7.54	8.51	7.90
Discounted	11.50	12.99	12.05

[1] BOE = barrel of oil equivalent, 6.8 million BTU.

The summary table provides projected energy savings per year; total energy savings; jobs created; costs for Federal Government, State Governments, utilities, and building owners and tenants; and cost per unit of energy saved. The energy savings per year are given for 1990 after the completion of the retrofit program. Total savings, of course, continue to accumulate for the life of the retrofit measures. For the purpose of this analysis, savings are accumulated to the year 2000.

The employment impact includes actual employment by agencies responsible for the program (Federal, State, and utility jobs) as well as jobs created by retrofit activities, jobs eliminated in energy supply industries, and jobs created by increased funds available to customers after payback of retrofit investment.

Costs are totaled through the end of the program on an undiscounted basis and are given in 1980 dollars. Annual costs average about one-ninth of the total for the nine year program. The cost for an average State of 4 million population would be an aggregate 2 million dollars or about $220,000 per year. An average utility with 300,000 customers is estimated to have net program costs (after accounting for revenues from audit charges) of about 1.5 million dollars or $165,000 per year.

The cost/benefit measure used for the progam is the cost of displacing the energy equivalent of a barrel of oil. If this figure is below the cost of imported oil (about 30 dollars per barrel), the program provides net benefits over oil imports.

The program is highly cost effective as compared to imports of foreign oil at greater than 30 dollars per barrel. The Proposed Rule was found to be the most cost effective of the alternatives available to DOE in meeting national energy objectives within the authority granted by NECPA.

F. Analysis of Alternatives

DOE has evaluated four basic strategies which could be employed in a CACS Program: a non-action case which relies on existing programs and fuel price responses to achieve energy conservation; a limited rule which would provide only non-mandatory guidelines for the program; a case which represents the regulatory strategy embodied in the Proposed Rule; and an enhanced regulatory strategy which includes some provisions beyond DOE's existing authority under NECPA and would require additional legislation.

1. *No-Action Case.* Beginning with the 1973/74 oil embargo, significant moves have been made to reduce energy consumption in buildings in response to both economic incentives resulting from higher fuel prices and national policy objectives. Total energy use in the residential and commercial sectors has increased at a rate of only one percent per year, about the same rate of increase as the population.

One of the most important Federal actions initiated since the embargo was the Energy Tax Act of 1978 which provided a residential energy tax credit for investments in energy conservation in a taxpayer's principal residence. The tax credit serves not only as an incentive for conservation but also as a very broad based source of statistical information on baseline conservation actions in the residential sector.

According to the Internal Revenue Service (IRS) report on 1978 tax returns, over 5.9 million taxpayers claimed the credit for expenditures of 4.2 billion dollars. The predominant actions were insulation and storm windows/doors representing together over 84 percent of the investment. A substantial number of the returns claimed credit to several different measures.

The 1978 return includes a credit for not only 1978 but also for 1977 after April 20 of that year. Thus the returns represent actions taken over a period of 1.7 years. Overall this indicates that some conservation actions were being taken at a rate of about 6 percent of residences per year. However, most of the claims indicate only partial weatherization with only about one percent per year investing in full weatherization. Two-thirds of the claims indicated less than half the investment required for full weatherization. Preliminary data from IRS indicates claims have fallen about fifteen percent (on an annual basis) for 1979. The IRS statistics predominantly reflect retrofit of single-family homes. For the multi-family and small commercial sectors covered under this rulemaking, the Department's research indicates that significantly lower rates of retrofit than observed in the single-family sector may be expected.

2. *Limited Rule Case.* In the process leading to the drafting of the Proposed Rule, the Department considered as an alternative a much more limited rule than that proposed herein. The general approach of such a rule would be to provide general guidelines to States and utilities for establishing an effective multi-family and commercial audit program with essentially no mandatory requirements.

The Limited rule would have the following basic features:

- Participation by public utilities would be voluntary.
- Procedures for offering audits including the content and distribution of Program Announcements would not be specified.
- No requirements would be established for State Plans.
- No set time would be specified for initiating a program.
- The content of the audit would be entirely at the discretion of the utility. No particular energy conservation or renewable resource measures would be required to be included in the audit.

A Limited rule would be expected to have some favorable impact on energy conservation; however, a major part of the potential energy savings achievable under the program would not be realized.

3. *Proposed Rule Case.* This case represents the expected results from the promulgation of a Proposed Rule which is closely modelled after the RCS program for single-to-four unit family homes.

For the purpose of the Regulatory Analysis, DOE has identified certain existing utility programs which were established prior to the Federal program. The Department has closely examined these programs and found that a number of them are sufficiently similar to the program established by these rules to allow quantitative data obtained on participation rates of customers, conservation investments, and energy savings to be applied to projects for the Proposed Rule Case.

4. *Enhanced Regulation Case.* As previously discussed, the Proposed Rule is fundamentally permissive with respect to all sectors except large public utilities. This Proposed Rule is to some extent a guideline in that States, manufacturers, suppliers, installers, financial institutions, tenants, and building owners are not compelled to participate in the program. Even the public utility sector, the only sector facing obligatory requirements, is given extreme flexibility in carrying out the audit program. For example, no mandatory goals are established for the numbers of audits to be performed or for energy savings. Nonetheless, the Department's research has indicated that similar (non-Federal) utility programs have achieved the significant participation and energy savings projected for the Proposed Rule Case without mandatory goals.

This performance is due in large part to underlying economic incentives that, once clarified, documented, and elucidated, are extremely compelling to the public utilities as well as the other program participants. It also results from the clear signal inherent in Federal legislation and regulations that energy conservation is a primary national policy objective.

There are, however, further steps that could be taken by the Government to speed and insure energy conservation. In several areas other than retrofit of buildings, Congress has previously adopted such approaches as mandatory standards and requirements, for example, in setting mandatory requirements for gasoline mileage in new automobiles at lowest cost per unit of energy displaced of the cases studied. However, this regulatory strategy is beyond DOE's legislative authority.

Table 1 summarizes the cost/benefit analysis for multifamily. Table 2 covers commercial buildings.

G. Urban and Community Impact Analysis (UCIA)

The purpose of the UCIA is to assess the impacts of the proposed CACS program covering large centrally heated or colled multi-family dwellings and small commercial buildings. For the purposes of the UCIA, unit-heated and centrally heated apartments are treated as one group.

1. *Absolute Impacts.* Because of the geographic distribution of the majority of larger apartment buildings, the CACS program will have its greatest effect on urban areas. Other communities containing sizeable clusters of these buildings will also experience substantial program impacts. The small commercial building sector is more ubiquitously distributed on the landscape and will not likely result in any significant impacts occurring in any one particular area relative to any other.

2. *Relative Impacts.* A sizeable portion of the units in the covered buildings are occupied by low-income tenants. Buildings housing such tenants may be eligible for special grants and other weatherization assistance aimed specifically at this income group. If these financial programs are tapped in conjunction with CACS, this income group may receive a large proportion of the program impact. Other fiscal incentives exist for the overall apartment dwelling population (i.e., loans, tax credits, grants) which may serve to minimize the possible difference in program participation between income groups.

An enhanced regulatory approach could be directed to either State governments, utilities, tenants, building owners, or a combination of these sectors. The mandatory requirements could establish targets for energy audits or energy efficiency or for both.

5. *Program Coverage of Commercial Sector.* The Department's primary concern in the commercial sector relates to the degree of coverage of the sector. Congress has clearly stated in both the wording of the law itself and the adopted Conference Committee report that the program is meant to apply only to a part of the commercial sector, that part where modest amounts of energy are used by each customer.

This intent has been translated in the law into specific numerical limits on energy consumption per commercial customer (4000 KWH/month of electricity or 1000 therms/month of fuel). DOE has considered three options for qualification of eligible customers.

• Option 1—The customer must completely occupy a building. This limits coverage to buildings as well as customers which use less than the energy consumption limits.

• Option 2—The customer can occupy all or part of a building. This incorporates some larger buildings if each customer occupying the building is in itself a small direct energy user.

• Option 3—This option extends the definition of utility customer to include *indirect* customers; that is, firms which are not separately metered but which, in effect, pay for a portion of a building's energy use (incorporated in rent) which on a pro rata basis is less than the specified energy consumption limits.

In addition the Department considered three alternate interpretations as to application of the consumption limits on electricity and fuel. These were as follows:

• Alternative A—The limits on electricity and fuel consumption are applied on an *exclusive* basis. That is, a customer who exceeds either the electric limit or the fuel limit is excluded from the program.

• Alternative B—The limits are applied on an *inclusive* basis. That is, a customer qualifies for the program if he consumes less than either limit.

• Alternative C—This alternative is the same as alternative B except that special treatment is given to electrically heated buildings. Since 1000 therms of fuel has an energy content that is equivalent to 29,300 KWH of electricity, customers using electric heat would allowed to use up to 29,300 KWH for space conditioning in addition to the 4000 KWH specified for other uses.

Alternates A, B, and C were considered for option 1. Only alternate C was evaluated for options 2 and 3.

The analysis resulted in the following percentage coverage of commercial floorspace on a national basis.

Option				
1A	1B	1C	2	3

6. *Results of Cost/Benefit Analysis.* The quantitative results of the analysis are summarized below and presented in detail in the Draft Regulatory Analysis.

The No-Action Case requires no additional Federal expenditures but would realize little in energy savings. The limited rule achieve significant energy savings but at a relatively high cost per unit of energy saved. The proposed rule provides increased energy savings and considerably improved cost effectiveness. Enhanced regulations are estimated to result in the highest energy savings.

Table 1.—*Cost/Benefit Analysis for Multifamily*

	No-action case	Limited rule case	Proposed rules case	Enhanced rule case
Energy savings (million barrels of oil equivalent):				
Per year (1990)	0.76	3.03	9.08	21.18
Total to year 2000	11.35	45.38	136.15	317.69
Employment: Jobs created, 1990	599	4,233	11,023	25,078
COST (total to 1990, million dollars)	$61.3	$532.2	$1,026.1	$2,048.9
Federal Government	$0.0	$15.8	$16.0	$16.4
State governments	$0.0	$51.2	$52.5	$55.2
Utilities	$24.4	$235.3	$251.7	$284.6
Building owners and tenants	$36.9	$229.8	$705.9	$1,690.8
Dollars per barrel of oil equivalent saved:				
Undiscounted	$5.40	$11.73	$7.54	$6.44
Discounted	$8.24	$17.90	$11.50	$9.63

Table 2.—*Cost/Benefit Analysis for Small Commercial*

	No-action case	Limited rule case	Proposed rules case	Enhanced rule case
Energy savings (million barrels of oil equivalent):				
Per year (1990)	0.66	1.99	5.30	11.60
Total to year 2000	9.94	29.83	79.55	174.0
Employment: Jobs created, 1990	674	3,111	6,599	13,384
COST (total to 1990, million dollars)	$61.3	$426	$677	$1,166
Federal Government	$0	$15	$15	$16
State governments	$0	$50	$50	$51
Utilities	$20.9	$208	$210	$216
Building owners and tenants	$42.2	$153	$402	$883
Dollars per barrel of oil equivalent saved:				
Undiscounted	$6.35	$14.28	$8.51	$6.70
Discounted	$9.60	$21.79	$12.99	$10.23

The CACS program is expected to result in creation of about 17,000 jobs nationwide. While a portion of this employment will be in Federal and State Government and in administrative positions at utilities, a significant number of jobs will be available to the low-income urban sector.

3. *Conclusion.* The CACS program is seen as a particularly effective mechanism for improving the energy efficiency of large apartment dwellings and small commercial buildings. These needed improvements in apartment buildings should aid in upgrading the overall quality of life for the urban dweller.

XI. Environmental Impact Analysis

An environmental impact statement (EIS) was issued for the Residential Conservation Service program in November, 1979 (DOE–EIS–0050) in compliance with the National Environmental Policy Act (NEPA). The Department of Energy has determined that the extension of the Residential Conversation Service program to commercial and multi-family buildings involves "substantial changes" in the program "that are relevant to environmental concerns" (40 CFR 1502.9(c)(1)(i)). Therefore, a supplement to the existing environmental impact statement is required. A Notice of Intent regarding the preparation and scope of the supplement was published in the **Federal Register** on December 9, 1980. If you wish to receive a copy of the draft supplement when it is completed, please contact: Mr. James Tanck, Director, Building Conservation Services Division, M.S. GH–068, Forrestal Building, 1000 Independence Avenue SW., Washington, D.C. 20585, (202–252–9161)

The NEPA regulations issued by the Council on Environmental Quality state that publication of a draft rule shall "normally" be accompanied by issuance of a draft environmental impact statement (or draft supplement). In the present case this is not possible, if the statutory deadline for issuance of the proposed rule is to be met. DOE therefore plans to issue a draft supplement to the EIS for the Residential Conservation Service program after publication of this proposed rule. However, the supplement will be available to the public for review for a reasonable period of time prior to the public hearings on the proposed rule.

as specified in the Department's NEPA guidelines.

Key Environmental Issues

Under the existing Residential Conservation Service program, concerned utilities are required to make available a number of services to residential customers, including energy audits, and installation financing, and inspection of certain conservation measures. The existing environmental impact statement for the Residential Conservation Service program identifies a number of potential adverse health and safety impacts from measures covered in these programs. These impacts are related to four measures (urea-formaldehyde foam wall insulation, vent dampers, electric and mechanical ignition systems, and small wind energy conversion systems) which, in the event of improper performance, may have significant impacts. There is also a general concern about the increased concentration of certain indoor air pollutants due to reduction of the air exchange rate resulting from installation of certain energy conservation measures. The principal mitigating measures for these potential impacts are the installation standards and follow-up inspections mandated under the Residential Conservation Service program.

The legislation establishing the proposed Commercial and Apartment Conservation Service (CACS) program provides only for energy audits. Thus, the program does not include the mitigating measures noted above. The proposed program also includes several additional measures whose potential environmental impacts were not assessed in the existing environmental impact statement.

The environmental impacts related to single family and multifamily residence programs differ in the type of mitigating measures incorporated in the two programs and the types of conservation measures which may be installed. In the case of the single family and individually heated and cooled multifamily residences under the RCS program, several mitigating measures are available to reduce health and safety impacts. These include product standards and warranties, installation standards and inspections. Such measures, intended to reduce impacts related to indoor air quality and accidents, would not be available under the CACS program to centrally-heated and cooled multifamily residences. In addition, different measures or different participation rates may apply to multifamily residences. Air handling equipment may be present in multifamily dwellings which may increase air infiltration and reduce indoor air quality impacts. However, certain measures, such as changes in heating equipment, might increase the risk of indoor air quality degradation or accidents in the installation and use of the conservation measure. Similar considerations would apply to the application of the program to small commercial buildings.

The following issues will be analyzed during the preparation of the Supplement. This list is not intended to be all inclusive, nor is it intended to be a predetermination of impacts.

1. Effect on indoor air quality of decreased air infiltration due to conservation measures.
2. Effect on indoor air quality of increased emission sources from conservation measures.
3. Decrease in emissions due to decreased energy use.
4. Increased emissions due to production of conservation measures.
5. Regional distribution of impacts and benefits.
6. Health and safety impacts related to installation or utilization of the measures.
7. Land use and aesthetic impacts.
8. Socioeconomic impacts related to changes in employment and increase demand for conservation measures.

XII. Consultation With Other Federal Agencies

In preparing the proposed rule, DOE consulted with representatives of the Secretary of Housing and Urban Development (HUD), particularly to achieve continuity as HUD developed the proposed rule for Title V, Subtitle A, Solar Energy and Energy Conservation Bank.

XIII. Contractor Contributions to Rulemaking

The following entities made contributions to the development of the proposed rule for the Commercial and Apartment Conservation Service Program.

1. Jack Faucett Associates and its subcontractor, Xenergy, provided analytical and technical support for the proposed rule.

2. Oak Ridge National Laboratory (ORNL) and its subcontractor, TRW, assisted in the preparation of the Draft Regulatory Analysis and Urban and Community Impact Statement. ORNL and its subcontractor, Battelle-Columbus Laboratories assisted in the preparation of the Draft Supplement to the Environmental Impact Statement for the Residential Conservation Service Program.

XIV. Comment and Hearing Procedures

A. Written Comments

Interested persons are invited to participate in this rulemaking by submitting data, views, or arguments with respect to the proposed procedures, requirements, and criteria. Comments should be submitted to the address indicated in the addresses section of this preamble and should be identified on the envelope and on the documents submitted to DOE with the designation "Commercial and Apartment Conservation Service Program" (Docket No. CAS–RM–80–125). Fifteen copies should be submitted. All written comments must be received by (60 days after publication), to insure consideration.

All written comments received after publication of these proposed rules, whether or not submitted in accordance with these procedures, will be available for public inspection in the DOE Reading Room, Room 1E–190 Forrestal Building, 1000 Independence Avenue, S.W., Washington, D.C. between the hours of 8:00 a.m. and 4:00 p.m., Monday through Friday. Any information or data considered by the person furnishing it to be confidential must be so identified and submitted in writing, one copy only. DOE reserves the right to determine the confidential status of the information or data and treat it according to its determination.

B. Hearing Procedures

The time and place of the public hearings are indicated in the dates and addresses section of this preamble. DOE invites any person who has an interest in the proposed rulemaking, or who is a representative of a group or class of persons that has an interest in the proposed rulemaking, to make a written request for an opportunity to make an oral presentation. Such a request should be direct to the address indicated in the addresses section of this preamble and must be received before 4:30 p.m. on January 21, 1981 for Kansas City, January 23, 1981 for Washington, D.C. and January 27 for San Francisco.

Such a request may be hand delivered to Room 1F–085, 1000 Independence Avenue, S.W., between the hours 9:00 a.m. and 4:30 p.m., Monday through Friday. A request should be labeled both on the document and on the envelope "Commercial and Apartment Conservation Service Program.", CAS–RM–80–125.

The person making the request should briefly describe the interest concerned; if appropriate, state why she or he is a proper representative of a group or class of persons that has an interest; give a

concise summary of the proposed oral-presentation; and provide a telephone number where he or she may be contacted through the day of the hearing.

Each person who, in DOE's judgment, proposes to present relevant material and information shall be selected to be heard and shall be notified by DOE of his or her participation before 4:30 p.m. on: February 12 for Washington, D.C.; February 17 for San Francisco, California; and February 19 for Kansas City, Missouri.

Each person selected to appear at the hearing must bring 15 copies of her or his statement to the hearing at the address given to the addresses section of this preamble.

The hearings will be held beginning at 9:00 a.m., local time.

C. Conduct of Hearings

DOE reserves the right to arrange the schedule of representatives to be heard and to establish the procedures governing the conduct of the hearing. The length of each presentation may be asked only by those conducting the hearing, and there will be no cross-examination of persons presenting statements.

Any participant who wishes to ask a question at the hearing may submit the question, in writing, to the presiding officer. The presiding officer will determine whether the question is relevant and material, and whether the time limitations permit it to be presented for answer.

Any further procedural rules needed for the proper conduct of the hearing will be announced by the presiding officer.

A transcript of the hearing will be made and the entire record of the hearing, including the transcript, will be retained by DOE and made available for inspection at the DOE Freedom of Information Reading Room, Room GA-152, Forrestal Building, 1000 Independence Avenue, S.W., Washington, D.C. 20585, between the hours of 8:00 a.m. and 4:30 p.m. Monday through Friday. Any person may purchase a copy of the transcript from the reporter.

In consideration of the foregoing, the Department of Energy hereby proposes to amend Chapter II of Title 10 of the Code of Federal Regulations, by establishing Part 458 and amending Part 456 as set forth below.

(Part 1 of Title II of the National Energy Conservation Policy Act, Pub. L. 95-619, 92 Stat. 3206 et seq., as amended by Title V, Subtitles B and D of the Energy Security Act, Pub. L. 96-294, 94 Stat. 611 et seq.; Department of Energy Organization Act, Pub. L. 95-91 Stat. 565 et seq., 42 U.S.C. 7101 et seq.)

Issued in Washington, D.C., January 7, 1981.

T. E. Stelson,

Assistant Secretary, Conservation and Solar Energy.

PART 456—RESIDENTIAL ENERGY CONSERVATION PROGRAM

1. The Table of Contents to Title 10, Part 456 of the Code of Federal Regulations is amended by revising the heading for § 456.306 ("Program Announcement.") to read "Program Announcement for residential buildings containing fewer than five dwelling units.", and by revising the heading for § 456.307 ("Requirements for program audits.") to read "Requirements for program audits for residential buildings containing fewer than five dwelling units."

2. The Table of Contents to Title 10, Part 456 of the Code of Federal Regulations is amended by adding two new headings to read as follows:

Sec.

456.320 Program Announcement for residential buildings containing five or more dwelling units.

456.321 Requirements for program audits for residental buildings containing five or more dwelling units.

3. Section 456.105(w) The definition of "Residential Building", is revised to read as follows:

§ 456.105 Definitions.

* * * * *

(w) Residential Building. The term "residential building" means any building used for residential occupancy which—

(1) Is not a new building to which final standards under Section 304(a) and 305 of the Energy Conservation and Production Act apply;

(2) Has a system for heating or cooling, or both heating and cooling, living spaces; and

(3) Contains at least one but not more than four dwelling units (townhouses and rowhouses in rows of more than four separate houses are included in this definition, but garden apartment complexes which contain clusters of four or fewer apartment units are not) except that after January 1, 1982, such term shall also include any building which contains more than four dwelling units (including garden apartment complexes) unless such building contains a heating or cooling system, or both, which is a central system.

4. Section 456.306 is amended by revising the section heading to read:

§ 456.306 Program announcement for residential buildings containing fewer than five dwelling units.

* * * * *

5. Section 456.307 is amended by revising the section heading to read:

§ 456.307 Requirements for program audits for residential buildings containing fewer than five dwelling units.

* * * * *

6. Part 456 is amended by adding a new § 456.320 to read as follows:

§ 456.320 Program announcement for residential buildings containing five or more dwelling units.

The State Plan shall require that beginning on January 1, 1982, each covered utility and each participating home heating supplier shall include a statement in all Program Announcements sent to eligible customers in residential buildings containing five or more dwelling units which are neither centrally heated nor centrally cooled that such persons may choose to either obtain an audit and be eligible for the services under the RCS Program as described in the Program Announcement or obtain an audit under the CACS Program (10 CFR 458). Such statement shall adequately describe the difference between the two types of audits and services provided within each program and shall clearly state, if appropriate, that an election of one audit and its program services shall preclude the customer from receiving in the future the other program audit and its services.

7. Part 456 is amended by adding a new § 456.321 to read as follows:

§ 456.321 Requirements for program audits for residential buildings containing five or more dwelling units.

The State Plan shall require that beginning on January 1, 1982, if an eligible customer in a residential building containing five or more dwelling units which is neither centrally heated nor centrally cooled requests an energy audit under the RCS Program, the covered utility or participating home heating supplier shall provide an energy audit which meets the requirements of § 456.307 of these regulations, and shall allow the customer to take advantage of the other services and benefits available under the RCS Program. If, however, such a customer requests a CACS Program audit, the State Plan shall require the covered utility or participating home heating supplier to provide an energy audit which meets the requirements of 10 CFR 458.503(b).

Chapter II, Title 10 of the Code of Federal Regulations is amended by

adding a new Part 458 to read as follows:

PART 458—COMMERCIAL AND APARTMENT CONSERVATION SERVICE PROGRAM

Subpart A—General Provisions and Definitions

Sec.
458.101 Purpose and scope.
458.102 List of covered utilities.
458.103 Definitions.
458.104 Enforcement.
458.105 Request for confidential treatment.

Subpart B—Preparation, Submission, and Approval of State Plans

458.201 Scope.
458.202 Initial submission.
458.203 Coordination requirements.
458.204 Notice, comment, and public hearing.
458.205 Procedures for submission and approval of state plans.
458.206 Building heating suppliers.
458.207 Special provisions for the Tennessee Valley Authority (TVA).
458.208 Special procedures for exemptions.

Subpart C—Preparation, Submission, and Approval of Nonregulated Utility Plans

458.301 Scope.
458.302 Coverage.
458.303 Initial submission.
458.304 Coordination requirements.
458.305 Notice, comment, and public hearing.
458.306 Procedures for submission and approval of nonregulated utility plans.
458.307 Special procedure for exemptions.

Subpart D—Energy Conservation Services for Commercial Buildings

458.401 Scope and coverage.
458.402 Eligibility for audit.
458.403 Services provided by utilities and participating building heating suppliers.
458.404 Addition of measures by states.
458.405 Auditor qualification requirements.
458.406 Procedures for investigating and enforcing compliance with the State Plan.
458.407 Coordination.
458.408 Accounting and payment of costs.
458.409 Plans for participating building heating suppliers.

Subpart E—Energy Conservation Services for Multifamily Dwellings

458.501 Scope and coverage.
458.502 Eligibility for audit.
458.503 Services provided by utilities and participating building heating suppliers.
458.504 Addition of measures by states.
458.505 Auditor qualification requirements.
458.506 Procedures for investigating and enforcing compliance with the State Plan.
458.507 Coordination.
458.508 Accounting and payment of costs.
458.509 Plans for participating building heating suppliers.

Subpart F—Federal Standby Authority and Enforcement Provisions

458.601 Scope.
458.602 Conditions under which Federal standby authority shall be invoked.
458.603 Procedures for Federal standby planning process.
458.604 Failure to comply with orders.
458.605 Enforcement provisions.
Appendix—Program Measures by Climate and Category of Building.

Authority: Part 1 of Title II and Title VII of the National Energy Conservation Policy Act, Pub. L. 95-619, 92 Stat. 3206, et. seq. (42 U.S.C. 8211 et seq.), as amended by Title V, Subtitles B and D, of the Energy Security Act, Pub. L. 96-294, 94 Stat. 611 et. seq.; Department of Energy Organization Act, Pub. L. 95-91 Stat. 565 et. seq., (42 U.S.C. 7101 et seq.).

Subpart A—General Provisions and Definitions

§ 458.101 Purpose and scope.

This part contains the regulations to implement Title VII of the National Energy Conservation Policy Act, 42 U.S.C. 8211 *et seq.*, as amended by the Energy Security Act, Pub. L. 96-294 (references to NECPA hereinafter refer to Title VII of the Act unless otherwise stated). NECPA requires the establishment of utility programs to provide energy audits of commercial and multifamily buildings, to encourage and facilitate the use of energy conserving operation and maintenance procedures and the installation of energy conservation measures and renewable resource measures.

§ 458.102 List of covered utilities.

(a) Before the beginning of each calendar year, the Department of Energy shall publish in the **Federal Register** a list of all covered utilities for that calendar year.

(b) After publication of the list, each State Regulatory Authority shall notify DOE in writing of those utilities on the list which are under the jurisdiction of that Regulatory Authority.

(c) The publication of the list is for informational purposes, and the failure to include a covered utility on the list or the failure of a State Regulatory Authority to designate a utility subject to its jurisdiction in no way affects the duties of or requirements upon such covered utility under these rules or any plan promulgated pursuant to these rules.

§ 458.103 Definitions.

For purposes of this Part:

(a) *Apartment Announcement.* The term "Apartment Announcement" means the CACS Programs information and offer of services required by § 458.503(a)(1)to be sent by a coverd utility or participating building heating supplier to each eligible multifamily dwelling customer.

(b) *Building Heating Supplier.* The term "building heating supplier" means a person who sells or supplies heating fuel (including No. 2, No. 4, and No. 6 heating oil, kerosene, butane, and propane) to an eligible customer for consumption in a commercial or multifamily building.

(c) *Commercial and Apartment Conservation Service (CACS) Program.* The term "Commercial and Apartment Conservation Service (CACS) Program" means the program required by Title VII of NECPA to be implemented by public utilities pursuant to an approved State Plan, and approved Nonregulated Utility Plan, or a Federal Standby Plan.

(d) *Commercial Announcement.* The term "Commerial Announcement" means the CACS Program information and offer of services required by § 458.403(a) to be sent by a coverd utility or participating building heating supplier to each eligible commercial customer.

(e) *Commercial Building.* The term "commercial building" means a building—

(1) Which was completed on or before the date of enactment of this Title,

(2) Which is a roofed and walled structure designed to shelter persons, animals, or things,

(3) Which is used primarily for carrying out a business (including a nonprofit business) of for carrying out the activities or administration of a State or local government,

(4) Which is not used primarily for the manufacture or production of products, raw materials, or agricultural commodities,

(5) For which the average monthly use of energy for the calendar year 1980 was

(i) Less than 4,000 kilowatt hours of electricity, or

(ii) Less the 100 million BTU of natural gas, No. 2, No. 4, or No. 6 heating oil, kerosene, or propane, except that such term does not include a Federal building as defined in § 458.103(1). The energy consumption of any energy using devices not inside the building, such as parking lot lights, in the area associated with a given building is attributed to the building for purposes of this definition.

(f) *Covered Utility.* The term "covered utility" means in any calendar year a public utility which during the second preceding calendar year had either:

(1) Sales of naturl gas for purposes other than resale which exceeded 10 billion cubic feet, or

(2) Sales of electric energy for purposes other than resale which exceed 750 million kilowatt-hours.

(g) *Eligible Commercial Customer.* The term "eligible commercial customer" means—

(1) With respect to a public utility, the owner or tenant of a commercial building to which that public utility

provides natural gas or electricity for use in such building.

(2) With respect to a building heating supplier, the owner or tenant of a commercial building to which that building heating supplier provides No. 2, No. 4, or No. 6 heating oil, kerosene, or propane for use in such building.

(h) *Eligible Multifamily Dwelling Customer.* The term "eligible multifamily dwelling customer" means—

(1) With respect to a public utility, the owner of a multifamily dwelling to whom that public utility sells naturl gas or electricity for use in such dwelling, or

(2) With respect to a building heating supplier, the owner of a multifamily dwelling to whom that building heating supplier sells No. 2, No. 4, or No. 6 heating oil, kerosene, or propane for use in such dwelling.

(i) *Energy Conservation Measures.* The term "energy conservation measures" means the following measures:

(1) *Caulking.* The term "caulking" means pliable materials used to reduce the passage of air and moisture by filling small gaps including a fixed joints on a building, uderneath baseboards inside a building, in exterior walls at electric outlets, around pipes and wires entering a building, and around dryer vents and exhaust fans in exterior walls. Caulking includes, but is not limited to, materials commonly known as "sealants," "putty," and "glazing compounds."

(2) *Weatherstripping.* The term "weatherstripping" means narrow strips of material placed over or in movable joints of windows and doors to reduce the passage of air and moisture.

(3) *Furnace Efficiency Modifications.* The term "furnace efficiency modifications" means:

(i) *Replacement Furnaces or Boilers.* The term "replacement furnaces or boilers" means a furnace or boiler, including a heat pump, which replaces an exising furnance or boiler of the same fuel type and which reduces the amount of fuel consumed due to an increase in combustion efficiency, improved heat generation or reduced heat losses.

(ii) *Furnace Replacement Burner (Oil).* The term "furnace replacement burner (oil)" means a device which atomizes the fuel oil, mixes it with air, and ignites the fuel-air mixture, and is an integral part of an oil-fired furnance or boiler including the combustion chamber, and which because of its design, achieves a reduction in the oil used from that used by the device which it replaces.

(iii) *Flue Opening Modifiction (Vent Damper).* The term "flue opening modification (vent damper)" means an automatically operated damper installed in a gas-fired furnance which:

(A) Is installed dowstream from the drafthood; and

(B) Conserves energy by substantially reducing the flow of heated air through the chimney when the furnace is not in operation.

(iv) *Automatic Intermittent Pilot Ignition Device (IID).* The term "automatic intermittent pilot ignition device (IID)" means a device which, when installed in a gas-fired furnace or boiler, automatically ignites the gas burner and replaces a gas pilot light.

(4) *Replacement Central Air Conditioner.* The term "replacement central air conditioner" means a central air conditioner which replaces an existing central air conditioner of the same fuel type and which reduces the amount of fuel consumed due to an increase in efficiency.

(5) *Ceiling Insulation.* The term "ceiling insulation" means a material primarily designed to resist heat flow which is installed between the conditioned area of a building and an unconditioned attic. Where the conditioned area of a building extends to the roof, the term "ceiling insulation" also applies to such material used between the underside and upperside of the roof. The term "ceiling insulation" also includes such material installed on the exterior of the roof.

(6) *Wall Insulation.* The term "wall insulation" means a material primarily designed to resist heat flow which is installed within or on the walls between conditioned areas of a building and unconditioned areas of a building or the ouside.

(7) *Floor Insulation.* The term "floor insulation" means a material primarily designed to resist heat flow which is installed between the first level conditioned area of a building and an unconditioned basement, a crawl space, or the outside beneath it. Where the first level conditioned area of a building is on a ground level concrete slab, the term "floor insulation" also means such material installed around the perimeter of or on the slab. In the case of mobile homes, the term "floor insulation" also means skirting to enclose the space between the building and the ground.

(8) *Duct Insulation.* The term "duct insulation" means a material primarily designed to resist heat flow which is installed on a heating or cooling duct in an unconditioned area of a building.

(9) *Pile Insulation.* The term "pipe insulation" means a material primarily designed to resist heat flow which is installed on a heating or cooling pipe in an unconditioned area of a building.

(10) *Water Heater Insulation.* The term "water heater insulation" means a material primarily designed to resist heat flow which is suitable for wrapping around the exterior surface of the water heater casing.

(11) *Storm Window.* The term "storm window" means a window or glazing material placed outside or inside an ordinary or prime window, creating an air space, to provide greater resistance to heat flow than the prime windows alone.

(12) *Thermal Window.* The term "thermal window" means a window unit with improved thermal performance through the use of two or more sheets of glazing materials affixed to a window frame to create one of more insualted air spaces. It may also have an insulating frame and sash.

(13) *Storm or Thermal Door.* The term "storm or thermal door" means:

(i) A second door, installed outside or inside a prime door, creating an insulating air space,

(ii) A door with enhanced resistance to heat flow through the glass area by affixing two or more sheets of glazing material, or

(iii) A prime exterior door with a R-value of at least 2.

(14) *Heat Reflective and Heat Absorbing Window or Door Material.* The term "heat reflective and heat absorbing window or door material" means a window or door glazing material with exceptional heat-absorbing or heat-reflecting properties; or reflective or absorptive films and coatings applied to an existing window or door which thereby result in exceptional heat-absorbing or heat-reflecting properties.

(15) *Devices Associated with Electric Load Management Techniques.* The term "devices associated with electric load management techniques" means customer-owned or leased devices that reduce the maximum kilowatt demand on an electric utility and which are either:

(i) Part of a radio, ripple or other utility controlled load switching system on the customer's premises;

(ii) Clock-controlled load switching devices;

(iii) Interlocks, and other load-actuated, load-limiting devices; or

(iv) Energy storage devices with control systems.

(16) *Clock Thermostat.* The term "clock thermostat" means a device which is designed to reduce energy consumption by regulating the demand on the heating or cooling system in which it is installed, and uses:

(i) A temperature control device for interior spaces incorporating more than one temperature control level, and

(ii) a clock or other automatic mechanism for switching from one control level to another.

(17) *Automatic Energy Control System.* The term "automatic energy control system" means devices which regulate the operation of lighting, heating, cooling, or ventilating equipment automatically based on time, inside and/or outside temperature or humidity, or space utilization. Such equipment can include, but is not limited to:

(i) Temperature or humidity control devices or any type which are not replacing an existing device;

(ii) Temperature or humidity control devices which, due to their automatic control capabilities, can be expected to reduce the overall energy consumption of the facility compared to those presently in place.

(18) *Equipment Associated with Automatic Energy Control Systems.* The term "equipment associated with automatic energy control systems" means devices including but not limited to, automatic dampers on ventilating equipment and boiler stacks, wiring, relays, valves and other equipment which, when regulated by automatic energy control systems, produces a reduction in energy consumption.

(19) *Replacement of Modification of Lighting Systems.* The term "replacement or modification of lighting systems" means devices and actions which reduce overall lighting energy consumption while maintaining satisfactory lighting levels. These devices and actions include:

(i) Reducing light levels to levels cited in applicable codes and standards in each area of the building. This action may include installation of task lighting and reduction of general area lighting;

(ii) Controlling lamp operating time to limit lighting operation to periods of area use. Installation of local switching, time control devices and sensing devices are included;

(iii) Replacement of lamps with more efficient sources. These devices and actions may include, but are not limited to, replacement of incandescent and fluorescent lighting with low energy equivalent lamps, or replacement of any fixture type with one of greater lumens per watt efficiency such that total lighting demand can be reduced.

(20) *Furnace, or Utility Plant and Distribution System Modifications.* The term "furnace, or utility plant and distribution system modifications" means:

(i) With respect to replacement burners, furnaces, boilers, or any combination thereof, equipment which substantially increases the combustion of the fuel undergoing combustion as a result of:

(A) Greater heat exchange surface and/or turbulence;

(B) Recombustion of gases; or

(C) Recovery of latent heat of vaporization.

(21) *Energy Recovery Systems.* The term "energy recovery systems" means any of the following equipment:

(i) Recuperator,

(ii) Heat wheel,

(iii) Regenerator,

(iv) Heat exchanger, or

(v) Economizer.

(22) *Cogeneration System.* The term "cogeneration system" means any system which can be used to simultaneously produce electricity, as well as steam or other forms of thermal or mechanical energy.

(j) *Energy Conserving Operation and Maintenance Procedures.* The term "energy conserving operation and maintenance procedures" means:

(1) Furnace Efficiency Maintenance and Adjustments, which means cleaning and combustion efficiency adjustment of gas or oil furnaces, periodic cleaning or replacement of air filters on forced-air heating or cooling systems, lowering the bonnet or plenum thermostats to 80°F on a gas or oil forced-air furnace, and turning off the pilot light on a gas furnace during the summer;

(2) Nightime Temperature Setback, which means manually lowering the thermostat control setting for the furnace during the heating season to a maximum of 55°F during sleeping hours or hours when building is unoccupied;

(3) Reducing Thermostat Settings in Winter, which means limiting the maximum thermostat control setting for the furnace to 68°F during the heating season;

(4) Raising Thermostat Setting in Summer, which means setting the thermostat control for an air conditioner to 78°F or higher during the cooling season;

(5) Water Flow Reduction in Showers and Faucets, which means placing a device in a shower head or faucet to limit the maximum flow to three gallons per minute or less, or replacing existing showerheads or faucets with those having built-in provisions for limiting the maximum flow to three gallons per minute or less;

(6) Reducing Hot Water Temperatures, which means manually setting back the water heater thermostat setting to 120°F, and reducing the use of heated water for clothes washing and other purposes when high temperatures are not needed;

(7) Reducing Energy Use When a Building is Unoccupied, which means reducing the thermostat setting to 55°F when a building is empty for four hours or longer in the heating season, turning an air conditioner off in the cooling season when no one is present and turning a water heater off when a building is vacant for two days or longer;

(8) Plugging Leaks in Ceiling Space and Basements, which means (i) installing scrap insulation or other pilable materials in gaps around pipes, ducts, fans, or other items which enter the ceiling space or basement from a heated space, (ii) adding insulation to a ceiling or basement door;

(9) Sealing Leaks in Pipes and Ducts, which means installing caulking in any leak in a heating or cooling duct, tightening or plugging any leaking joints in hot water or steam pipes, and replacement of washers in leaking water valves;

(10) Efficient Use of Shading, which means using shades or drapes (i) to block sunlight from entering a building in the cooling season, (ii) to allow sunlight to enter during the heating season, and (iii) to cover windows tightly at night during the heating season;

(11) Building Energy Use Monitoring List, which means a worksheet which allows a building owner to monitor energy cost and energy use on a monthly basis for at least a two year period;

(12) Steam Distribution System Maintenance Procedures, which means the visual inspection of the steam distribution system for the purpose of detecting steam leaks, ensuring that steam is not entering the condensate system and operation of condensate return lines to return all condensate to the boiler;

(13) Such other low or no cost practices designated by the Governor and approved by the Secretary in a State Plan which (i) save energy; (ii) do not require the installation of energy conservation or renewable resource measures; and (iii) do not adversely impact the CACS Program.

(k) *Estimates Based on Typical Practice.* The term "estimates based on typical practice" means a determination of energy savings, implementation costs, or energy end-usage based upon the experience of facilities of the same function and climate for which full analyses have been performed. In order to perform estimates based on typical practice, the utility must document and update the results of full analysis audits that provide the basis for the estimate. The data may include, but is not limited to, the State commercial and multifamily audit data base, government or trade association studies or guidebooks, or

other compiled results from the implementation of program audits.

(l) *Federal Building.* The term "Federal building" means any building or other structure owned in whole or part by the United States or any Federal agency, including any such structure occupied by a Federal agency under a lease-acquisition agreement under which the United States or a Federal agency will receive fee simple title under the terms of such agreement without further negotiation.

(m) *Governor.* The term "Governor" means the Governor or chief executive officer of a State or his designee.

(n) *Multifamily Dwelling.* The term "multifamily dwelling" means a building which is used for residential occupancy, was completed on or before June 19, 1980, and contains five or more dwelling units and a central heating or central cooling system, or both.

(o) *Nonregulated Utility.* The term "nonregulated utility" means a public utility which is not a regulated utility.

(p) *Nonregulated Utility Plan.* The term "nonregulated utility plan" means a plan developed pursuant to Subpart C of this Part.

(q) *Participating Building Heating Supplier.* The term "participating building heating supplier" means a building heating supplier that has elected to participate in a State CACS Program which includes building heating suppliers.

(r) *Program Audit.* The term "program audit" means an energy audit in which the estimates of costs and savings are based on an on-site inspection of the building of an eligible customer by an auditor qualified according to a State or Nonregulated Utility Plan.

(s) *Program Information.* The term "program information" means the CACS Announcement and any information dissemination activities related to a Commercial and Apartment Conservation Service Program.

(t) *Program Measures.* The term "program measures" means those energy conservation or renewable resource measures which the Secretary has by rule determined to be appropriate by climatic region and building category and which are found in the Appendix to this Part.

(u) *Public Utility.* The term "public utility" means any person, State agency, or Federal Agency which is engaged in the business of selling natural gas or electric energy, or both, to commercial or multifamily dwelling customers for use in a commercial building or multifamily dwelling.

(v) *Rate.* The term "rate" means any price, rate, charge, or classification made, demanded, observed, or received with respect to sales of electric energy or natural gas, any rule, regulation, or practice respecting any such rate, charge or classification, and any contract pertaining to the sales of electric energy or natural gas.

(w) *Ratemaking Authority.* The term "ratemaking authority" means authority to fix, modify, approve, or disapprove rates.

(x) *Regulated Utility.* The term "regulated utility" means a public utility with respect to whose rates a State regulatory authority has ratemaking authority.

(y) *Renewable Resource Measure.* The term "renewable resource measure" means the following measures in or with respect to a commercial building or multifamily dwelling:

(1) *Solar Domestic Hot Water Systems.* The term "solar domestic hot water systems" means equipment designed to absorb the sun's energy and to use this energy to heat water for use in a commercial building or multifamily dwelling other than for space heating, including thermosiphon hot water heaters.

(2) *Active Solar Space Heating Systems.* The term "active solar space heating systems" means equipment designed to absorb the sun's energy and to use this energy to heat space by use of mechanically forced energy transfer, such as fans or pumps.

(3) *Combined Active Solar Space Heating and Solar Domestic Hot Water System.* The term "combined active solar space heating and solar domestic hot water system" means equipment designed to perform both of the functions described in paragraphs (1) and (2) above.

(4) *Passive Solar Space Heating and Cooling Systems.* The term "passive solar space heating and cooling systems" means systems that make most efficient use of, or enhance the use of, natural forces—including solar isolation, winds, night time coolness and opportunity to lose heat by radiation to the night sky—to heat or cool space by the use of conductive, convective or radiant energy transfer. Passive solar systems include only:

(i) *Direct Gain Glazing Systems.* The term "direct gain glazing systems" means the use of south-facing (+ or −45° or True South) panels of insulated glass, fiberglass, or other similar transparent substances that admit the sun's rays into the space where the heat is retained. Glazing is either double-paned, or single-paned equipped with moveable insulation.

(ii) *Indirect Gain Systems.* The term "indirect gain systems" means the use of panels of insulated glass, fiberglass or other transparent substances that direct the sun's rays into specially constructed thermal walls, ceilings, rockbeds, or containers of water or other fluids where heat is stored and radiated.

(iii) *Solaria/Sunspace Systems.* The term "solaria/sunspace systems" means a structure of glass, fiberglass or similar transparent material which is attached to the South-facing (+ or −45° of True South) wall of a structure which allows for air circulation to bring heat into the building, and which is able to be closed off from the structure during periods of low solar insulation.

(iv) *Window Heat Gain and/or Loss Retardants.* The term "window heat gain and/or loss retardants" means those mechanisms which significantly reduce summer heat gain or wintertime heat loss through windows by use of devices such as awnings, insulated rollup shades (external or internal), metal or plastic solar screens, or moveable rigid insulation.

(5) *Wind Energy Devices.* The term "wind energy devices" means equipment that uses wind energy to produce energy in any form for personal purposes.

(6) *Replacement Solar Swimming Pool Heaters.* The term "replacement solar swimming pool heaters" means devices which are used solely for the purpose of using the sun's energy to heat swimming pool water and which replace a swimming pool heater using electricity, gas or other fossil fuel.

(z) *Secretary.* The term "Secretary" means the Secretary of Energy.

(aa) *Standard Industrial Classification Code.* The term "Standard Industrial Classification Code" means the numerical codes used by the Department of Commerce to classify industries.

(bb) *State.* The term "State" means a State, the District of Columbia, and Puerto Rico.

(cc) *State Agency.* The term "State agency" means a State, a political subdivision thereof, or any agency or instrumentality of either.

(dd) *State Measure.* The term "State measure" means an energy-saving measure which has been approved by the Secretary in the State Plan pursuant to § 458.404 and § 458.504.

(ee) *State Plan.* The term "State Plan" means a plan developed pursuant to Subpart B of this Part.

(ff) *State Regulatory Authority.* The term "State regulatory authority" means any State agency which has ratemaking authority with respect to the sales of electric energy or natural gas by any public utility (other than by such State agency); except that in the case of a public utility with respect to which the

Tennessee Valley Authority has ratemaking authority, such term means the Tennessee Valley Authority.

(gg) *Tenant's Energy Conservation Information Package.* The term "Tenant's Energy Conservation Information Package" means the Information Package required to be provided, by § 458.503(a)(2), by a covered utility or participating building heating supplier to each owner for distribution to each tenant in a multifamily dwelling for which an audit has been performed.

§ 458.104 Enforcement.

If the Secretary determines that any person, including an individual, corporation, association, public or private organization, or State or municipal agency, has violated any provisions of these regulations, any plan approved or promulgated under these regulations, or any order issued pursuant thereto, the Secretary may file a petition in the appropriate United States district court to enjoin such person from violating such provision, plan, or order.

§ 458.105 Request for confidential treatment.

(a) *Request.* If you wish to file a document with DOE claiming some or all of the information contained in the document is exempt from the mandatory public disclosure requirements of the Freedom of Information Act (FOIA), 5 U.S.C. Section 552, or is otherwise exempt by law from public disclosure, and if you wish to request that DOE not disclose information, you must comply with the DOE FOIA regulations set forth in 10 CFR 1004 (44 FR 1908, January 8, 1979).

(b) *Disposition of Request.* DOE retains the right to make its own determination with regard to any claim of confidentiality. Notice of the decision by DOE to deny such claim, in whole or in part, and an opportunity to respond thereto, will be given to the person claiming confidentiality of the information no less than seven days prior to the public disclosure of such information.

(c) *Document by Document Identification.* Each request for confidential treatment must be made with respect to each separately identified document and must be made at the time that document is first submitted to DOE.

Subpart B—Preparation, Submission, and Approval of State Plans

458.201 Scope.

This Section identifies the responsibilities of the States and the Tennessee Valley Authority (TVA) in the preparation and submission of a State Plan, hereinafter referred to as "State Plan," if a State or the TVA chooses to submit a State Plan; and the procedures for approval of the State Plan by the Secretary.

458.202 Initial submission.

If a State intends to submit a State Plan, the Governor or State Agency specifically authorized by State law to submit a State Plan shall submit the following information to the Secretary:

(a) *Lead Agency.* Within 30 days of the effective date of this rule, the name and address of the State Agency, hereinafter referred to as "Lead Agency," which has principal responsibility for the development of the State Plan. The Lead Agency shall be either:

(1) An Agency designated by the Governor to develop and submit a State Plan; or

(2) A State Agency specifically authorized by law to develop and submit a State Plan.

(b) *Nonregulated Utilities.* Within 30 days of the effective date of this rule, a list of which nonregulated covered utilities, if any, operating in the State will be subject to the State Plan; and

(c) *Building Heating Suppliers.* Within 90 days of the effective date of this rule, whether or not building heating suppliers will be included in the State Plan.

458.203 Coordination requirements.

(a) *Among States.* The Lead Agency shall, to the extent feasible, coordinate the preparation of the State Plan with any other State which has jurisdiction over any covered utility or participating building heating supplier subject to the State Plan for the purpose of minimizing any inconsistent provisions governing such covered utility or participating building heating supplier.

(b) *Between the Lead Agency and the State Regulatory Authority.* If the Lead Agency is not the State Regulatory Authority, then the Lead Agency shall provide such Authority a copy of the proposed State Plan 30 days prior to the public hearing required by § 458.204.

(c) *Between State Plans.* The Lead Agency shall coordinate the State Plan for the Commercial and Apartment Conservation Service (CACS) Program with any existing or proposed State Energy Conservation Plan developed under Section 367(b)(1) of the Energy Policy and Conservation Act and with any State Plan for the Residential Conservation Service (RCS) Program established under Title II of the National Energy Conservation Policy Act (NECPA). Such coordination shall not have the effect of delaying the submission, approval, or implementation of the RCS State Plans developed under Title II of NECPA.

458.204 Notice, comment, and public hearing.

Prior to submission of the State Plan to the Secretary for approval, the Governor or Lead Agency shall:

(a) *Notice and Comment.* Provide meaningful public notice of the intention of the State to submit a State Plan. To be meaningful, this notice shall, at a minimum—

(1) Appear in newspapers of general circulation published in the State;

(2) Indicate where a copy of and information pertaining to the proposed State Plan can be obtained;

(3) Indicate the date, time, and location of each public hearing to be held pursuant to § 458.204(b) at least 30 days prior to such hearing; and

(4) Invite public comments on the content of the proposed State Plan, with at least 30 days notice.

(b) *Hearing.* Hold at least one public hearing in the State for the purpose of hearing testimony and receiving comments on the content of the proposed State Plan.

458.205 Procedures for submission and approval of State Plans.

(a) *Who Shall Submit.* Ten (10) copies of the proposed State Plan shall be submitted to the Secretary by either:

(1) The Governor of the State;

(2) The Lead Agency; or

(3) the TVA with respect to all covered utilities over which the TVA has exclusive ratemaking authority and, in the discretion of TVA, with respect to any covered utility over which the TVA and another State Regulatory Authority have ratemaking authority.

(b) *Time for Submission.* The proposed State Plan shall be submitted within 180 days of the effective date of this rule. The time for submission may be extended by the Secretary if:

(1) The Governor or Lead Agency requests an extension at least 10 days prior to the formal deadline; and

(2) Good cause is shown for allowing an extension.

(c) *Approval.*

(1) If a proposed State Plan meets the criteria of Subparts B, D, and E of this Part, the Secretary shall approve it

within 90 days of the date the proposed State Plan was submitted.

(2) Within 13 months after the date of approval of a State Plan, the Lead Agency shall provide to the Secretary a statement certifying whether or not all covered utilities and building heating suppliers subject to the State Plan are in compliance with the State Plan.

(3) The Lead Agency shall, within 30 days of approval of the State Plan:

(i) Inform covered utilities subject to the State Plan and participating building heating suppliers of the contents of the State Plan;

(ii) Direct such covered utilities and participating building heating suppliers to comply with the State Plan; and

(iii) Inform such covered utilities and participating building heating suppliers of the State procedures for investigating and enforcing compliance with the State Plan.

(d) *Disapproval.*

(1) If a proposed State Plan does not meet the criteria of Subparts B, D, and E of this Part, the Secretary shall, within 90 days of the date the proposed State Plan was submitted, disapprove the proposed State Plan in writing and shall specify in writing the grounds for disapproval.

(2) Within 60 days of the date of disapproval of a proposed State Plan, or such longer period as the Secretary may determine pursuant to the criteria of § 458.205(b), the Governor or Lead Agency may submit another proposed State Plan. Except for the time in which a proposed State Plan must be submitted and the requirment for notice, comment, and public hearing, all procedures of this Subpart for submission of the original proposed State Plan shall be applicable to the submission of any proposed State Plan submitted after initial disapproval. The Secretary may, in disapproving a State Plan, require that the notice, comment, and public hearing requirements be complied with prior to resubmission.

(e) *Amendments.*

(1) The Governor or Lead Agency may submit proposed amendments to an approved State Plan at any time.

(2) Except for the time in which a proposed State Plan must be submitted, all procedures of this Subpart for submission of the original State Plan shall be applicable to the submission of proposed amendments to any approved State Plan. Exception: The Secretary may waive any of the submission requirements for proposed amendments if the Secretary finds that the amendment is unlikely to have a substantial impact on large numbers of individuals or businesses.

§ 458.206 Building heating suppliers.

If the Governor or Lead Agency submits a plan applicable to building heating suppliers in the State, it shall be a part of the State Plan and shall be submitted in accordance with the procedures of this Subpart applicable to the submission of the State Plan.

§ 458.207 Special provisions for the Tennessee Valley Authority (TVA).

In this Part, except as otherwise specified, references to the Lead Agency shall be deemed to refer also to the TVA and references to the State Plan shall be deemed to refer also to the TVA Plan. References in this Part to a State as a geographic area shall, with respect to the TVA Plan, be references to the service areas of the covered utilities subject to the TVA Plan. Reference in this Part to a State as a governmental entity (other than references to State laws or regulations) or to any State Agency or officer shall be deemed to refer also to the TVA. If the TVA chooses to submit a Plan, it shall be subject to the following exceptions and additional requirements:

(a) *Exclusion from Initial Submission.* The TVA need not submit the Initial Submission as required in § 458.202. However, within 30 days after the effective date of this rule, the TVA shall notify the Secretary of the person(s) in charge of its Plan and shall submit to the Secretary a list of which covered utilities will be subject to its Plan.

(b) *Coordination Requirement.* The TVA shall coordinate its Plan with each State Plan developed by a State in which the utilities covered by the TVA Plan are located.

(c) *Exclusion of Building Heating Suppliers.* The TVA Plan shall not cover building heating suppliers.

§ 458.208 Special procedures for exemptions.

(a) *Exemption Procedure.* If the State Regulatory Authority having ratemaking authority over a utility determines, according to the criteria of § 458.208(c) and the procedures of § 458.208(d), that the full implementation by that utility of a CASC Program meeting the requirements of this part would produce a significant impairment of such utility's ability to fulfill the requirements of the RCS program, 10 CFR Part 456, or to provide utility service to its customers, then a State Plan may be submitted which instead proposes a conditional program, meeting the requirements of § 458.208(d), for such utility.

(b) *Criteria for Significant Impairment.*

(1) The criteria for determining the existence of a significant impairment of a utility's ability to provide utility service to its customers shall be established by the State Regulatory Authority which exercises ratemaking authority over the utility subject to the following restriction specified by NECPA.

(2) A significant impairment of the RCS Program is defined as anything which has the effect of delaying the submission, approval, or implementation of residential energy conservation plans under 10 CFR Part 456. The criteria for significant impairment, as determined by the State Regulatory Authority, shall be included in the State Plan. If there is no State Plan submitted, such criteria shall be included in a separate submission.

(c) *Determination of Significant Impairment.* A determination of the existence of a significant impairment must be made by the State Regulatory Authority having ratemaking authority over the utility through either of the following two procedures:

(1) Within 6 months of the date of these rules, the State Regulatory Authority may establish its criteria for significant impairment (consistent with § 458.208(b)), review exemption requests with regard to these criteria, and produce findings of significant impairment. In such cases, the State Plan may be submitted containing conditional programs which meet the requirements of § 458.208(d) for the exempted utilities; or

(2) Alternatively, within six months of the date of these rules, the State Regulatory Authority may make a preliminary determination of significant impairment. In this case, the State Plan submitted shall provide for full implementation of the CACS Program by utilities applying for exemption under this procedure. The State Plan submission should include, as an appendix, a description of the basis for the preliminary determination specified by the State Regulatory Authority. If, within one year of the effective date of this rule, the State Regulatory Authority confirms its finding of significant impairment, then an amended State Plan may be submitted containing conditional programs which meet the requirements of § 458.208(d) for the exempted utilities.

(d) *Requirements for State Plans Containing Conditional Programs.*

(1) *Condtional Programs.* A conditional program is a partial CACS Program which is permitted due to the existence of certain conditions which would produce significant impairments, as described in § 456.208(b), if full implementation were undertaken.

(2) A conditional program need not provide immediate coverage of all of the commercial buildings and multifamily dwellings in the utility's service area. Conditional programs may not have the effect of changing the nature of the program as defined by Subpart D and E of this part. Allowable partial programs include the following possibilities:

(i) All commercial, no multifamily;

(ii) All multifamily, no commercial;

(iii) Geographic partitioning of utility service area; or

(iv) Partitioning of commercial sector on a Standard Industrial Classification code basis.

(3) A conditional program is conditioned on the existence of significant impairments as described in § 458.208(a). Accompanying a conditional program there must be a plan to alleviate such impairments if possible, whereupon the conditional program shall be converted to a full program meeting all the requirements of this Part.

(4) *State Plan Requirements.* State Plans containing conditional programs must include for each such program the following items:

(i) Specification of the significant impairment(s) and analysis sufficient to demonstrate the engineering and/or economic basis for this determination;

(ii) Specification of the partial program to be implemented and analysis sufficient to demonstrate the rationale for this program as an interim means of avoiding significant impairments;

(iii) Specification of the conditions which will ultimately result in complete alleviation of the impairment(s) and of the steps the utility will take to bring about such conditions;

(iv) Specification of an implementation schedule, identifying the target dates for alleviation of significant impairments and full program implementation;

(v) Specification of special enforcement measures which the State shall employ to monitor the progress of utilities in alleviating significant impairments; and

(vi) Specification of procedures the State will employ to regularly update and review the State Plan until all conditional programs have been brought to full implementation.

Subpart C—Preparation, Submission, and Approval of Nonregulated Utility Plans

§ 458.301 Scope.

This Subpart identifies the responsibilities of covered nonregulated utilities not subject to a State Plan for the preparation and submission of Nonregulated Utility Plans, the procedures for approval of Nonregulated Utility Plans by the Secretary, and the minimum requirements for the content of Nonregulated Utility Plans.

§ 458.302 Coverage.

Subpart C shall apply to all nonregulated covered utilities which are not covered by a State Plan.

§ 458.303 Initial submission.

Each nonregulated utility subject to this Subpart shall notify the Secretary within 60 days after the effective date of these rules, of the person responsible for the preparation of its Nonregulated Utility Plan.

§ 458.304 Coordination requirements.

Each nonregulated utility subject to this Subpart shall, to the extent feasible, coordinate the preparation of its Nonregulated Utility Plan with the preparation of the applicable State Plan for the purpose of minimizing inconsistent provisions between the two plans.

§ 458.305 Notice, comment, and public hearing.

Prior to submission of the Nonregulated Utility Plan to the Secretary for approval, the nonregulated utility shall:

(a) Notice and Comment. Provide meaningful public notice of the requirement for the nonregulated utility to submit a Nonregulated Utility Plan. To be meaningful, this notice shall, at a minimum:

(1) Appear in newspapers of general circulation published in the nonregulated utility's service area;

(2) Indicate where a copy of the proposed Nonregulated Utility Plan can be obtained and where questions concerning the Plan can be answered;

(3) Indicate the date, time, and location of each public hearing to be held with at least 30 days notice; and

(4) Invite public comments on the content of the proposed Nonregulated Utility Plan, at least 30 days prior to the final date for receiving such comments.

(b) *Hearing.* Hold at least one public hearing in the nonregulated utility's service area for the purpose of hearing testimony and receiving comments on the content of the proposed Nonregulated Utility Plan.

§ 458.306 Procedures for submission and approval of nonregulated utility plans.

(a) *Submission.* Each nonregulated utility subject to this Section shall submit to the Secretary within 180 days of the effective date of these rules a proposed Nonregulated Utility Plan. The time for submission may be extended by the Secretary if:

(1) The nonregulated utility requests an extension at least 10 days prior to the formal deadline; and

(2) Good cause is shown for allowing an extension.

(b) *Approval* (1) If a proposed Nonregulated Utility Plan meets the criteria of Subpart C the Secretary shall approve it within 90 days of the date the proposed Nonregulated Utility Plan was submitted.

(2) Within 13 months after the approval of the Nonregulated Utility Plan, the nonregulated utility shall provide to the Secretary a statement certifying whether or not it is in compliance with its Nonregulated Utility Plan.

(c) *Exceptions to Plan Requirements for Nonregulated Utilities.* (1) Except as provided in this Section, each Nonregulated Utility Plan shall meet all the requirements for State Plans in Subparts D and E.

(2) Except as otherwise provided in this Section, all references in Subparts D and E to:

(i) Covered utilities shall be deemed to refer to utilities subject to this section;

(ii) A State Plan shall be deemed to refer to a Nonregulated Utility Plan;

(iii) Participating building heating suppliers shall not apply;

(iv) A State (as a governmental entity, other than references to State laws or regulations) or any State Agency or officer shall be deemed to refer to the nonregulated utility submitting the plan; and

(v) A State (as a geographic area) shall be deemed to refer to the nonregulated utility's service area.

(3) A nonregulated utility shall coordinate with the State Lead Agency to minimze inconsistencies with respect to the estimates of costs and savings contained in the Commercial Announcement and the Apartment Announcement distributed by the nonregulated utility and those distributed by utilities subject to the State Plan in the same area.

(4) A Nonregulated Utility Plan must provide complaint processing procedures similar to those required in State Plans under Subparts D and E, but need not provide a basis in State law for enforcing decisions or appealing decisions.

(5) The requirements of § 458.407 (b) and (c) and of § 458.507 (b) and (c) are not applicable to Nonregulated Utility Plans.

(6) In a State submitting a State Plan, a nonregulated utility may, by written understanding with the appropriate

State agency, utilize services which have been provided for in the State Plan.

(7) If the Nonregulated Utility Plan utilizes State Plan services all references in the State Plan to those services with regard to utilities subject to the State Plan shall be deemed to refer to the nonregulated utility.

(8) If the Nonregulated Utility Plan proposes to utilize any of the State Plan services, the Plan shall so state and copies of the written agreements with the appropriate State Agencies shall be included with the Nonregulated Utility Plan in the submission to the Secretary.

(d) *Disapproval.* (1) If the Nonregulated Utility Plan does not meet the criteria of this Section, the Secretary shall, within 90 days of the date the proposed Nonregulated Utility Plan was submitted, disapprove Nonregulated Utility Plan and specify in writing the grounds for disapproval.

(2) Within 60 days of the date of disapproval of a proposed Nonregulated Utility Plan, or such longer period as the Secretary may determine, the nonregulated utility shall submit another proposed Nonregulated Utility Plan. Except for the time in which a proposed Nonregulated Utility Plan must be submitted and the requirements for notice, comment, and a public hearing, the procedures of this Section for submission of the original proposed Nonregulated Utility Plan shall be applicable to the submission of any proposed Nonregulated Utility Plan submitted after initial disapproval. The Secretary may, in disapproving a plan, require that the notice, comment, and public hearing requirements be complied with prior to resubmission.

(e) *Amendments.* (1) The nonregulated utility may submit proposed amendments to an approved Nonregulated Utility Plan at any time.

(2) Except for the time in which a proposed plan must be submitted, the procedures of this Section for submission of the original Nonregulated Utility Plan shall be applicable to the submission of proposed amendments to an approved Nonregulated Utility Plan. Exception: The Secretary may waive any of the submission requirements for proposed amendments if the Secretary finds that the amendment is unlikely to have a substantial impact on large number of individuals or businesses.

§ 458.307 Special procedures for exemptions.

The procedures for exemptions which apply to State Plans, specified in § 458.208, shall also apply to a nonregulated utility seeking exemption except that, in applying the specifications of § 458.208 in the case of a nonregulated utility, any reference to a regulated utility shall be treated as a reference to a nonregulated utility; any reference to a State (government) or lead agency shall be treated as a reference to a nonregulated utility; any reference to a State Plan shall be treated as a reference to a Nonregulated Utility Plan; and any reference to a State Regulatory Authority shall be treated as a reference to the Governor.

Subpart D—Energy Conservation Services for Commercial Buildings

§ 458.401 Scope and coverage.

(a) *Scope.* This Subpart prescribes the minimum requirements for the content of State Plans regarding energy conservation services for commercial buildings. The State may include additional information and provide additional requirements in the State Plan for commercial buildings in the Commercial and Apartment Conservation Service Program if such information and requirements are not specifically prohibited by these rules or by any applicable law or regulation. All references in this Subpart to covered utilities apply to regulated and nonregulated covered utilities subject to the State Plan.

(b) *Coverage.* (1) *Regulated Utilities.* All regulated utilities providing utility service in a State which meet the definition of "covered utility" in § 458.105(g) shall be subject to the State Plan and shall be identified in the State Plan.

(2) *Nonregulated Utilities.* The State Plan shall identify which nonregulated covered utilities, if any, are covered under the State Plan.

(3) *Building Heating Suppliers.* The State Plan shall state whether or not it includes a Commercial and Apartment Conservation Service Program for building heating suppliers.

(4) *Exemptions.* The State Plan shall identify which regulated utilities have been exempted by the State Regulatory Authority from providing services to commercial buildings, and which nonregulated utilities have been exempted by the Governor from providing services to commercial buildings.

§ 458.402 Eligibility for audit.

(a) The State Plan shall describe how an eligibile commercial customer may request an audit. Such procedures shall not be so cumbersome as to unreasonably limit participation.

(b) The State Plan shall provide that, in order to request an audit from a public utility or participating building heating supplier, the requesting party must:

(1) Be an owner or tenant of a commercial building; and

(2) Be an eligible customer of such public utility or participating building heating supplier.

(c) The State Plan shall include procedures designed to provide that each public utility shall not be required to conduct an energy audit of a commercial building which has been audited previously pursuant to this part or pursuant to Chapter II, Title 10 CFR Part 455 (Grant Programs for Schools and Hospitals and Buildings Owned by Units of Local Government and Public Care Institutions).

§ 458.403 Services provided by utilities and participating building heating suppliers.

(a) *Information to Eligible Customers.* (1) *Commercial Announcement, Distribution and Content.* The State Plan shall require each covered utility and each participating building heating supplier to send to each eligible commercial customer, no later than 12 months after approval of the State Plan and every two years thereafter until January 1, 1990, a Commercial Announcement which shall—

(i) List the program measures and, if any, the State measures applicable to commercial buildings;

(ii) List the energy conserving operation and maintenance procedures and state that they are of low or no cost;

(iii) Offer and describe the audit;

(A) The offer of the program audit may be conditioned upon a nondiscriminatory and reasonable factor such as serving one geographic area at a time. At a minimum, the State Plan shall contain procedures to assure that all customers who receive a conditional offer of a program audit are recontacted and receive an unconditional offer of a program audit within one year of receiving the conditional offer;

(B) Explain how the eligible customer may request the audit; and

(C) List the direct cost, if any, of receiving the audit.

(iv) Include a brief explanation of the benefits of the Federal energy tax credits, and State energy tax credits, if any;

(v) Not include any advertising for the sale, installation or financing by any supplier, contractor, or lender (including the covered utility) of any energy conservation measure, renewable resource measure, State measure, or energy conserving operation and maintenance procedure; however, if the covered utility or participating building heating supplier finances the sale or

installation of such measures, the Commercial Announcement may so state;

(vi) Not include any information regarding any product which is not an energy conservation measure, a renewable resource measure, a State measure, or an energy conserving operation and maintenance procedure.

(2) *New Customers.* (i) A new customer is a person who becomes an eligible customer after initial distribution of the Commercial Announcement but before January 1, 1990.

(ii) The State Plan shall require that each covered utility and participating building heating supplier send a Commercial Announcement which meets the requirements of this section to each new customer within 60 days of such customer becoming a new customer.

(iii) The State Plan shall require that covered utilities and participating building heating suppliers inform each new customer that upon request the customer may receive a copy of the results of any program audit of the customer's building which the covered utility or participating building heating supplier may have performed pursuant to the State Plan and require that upon such a request such utility or building heating supplier provide such results.

(b) *Energy Audits.* (1) *Requirements for Program Audits.* The State Plan shall describe the program audit services to be offered by covered utilities and participating building heating suppliers and shall require at a minimum that each covered utility and participating building heating supplier provide to each eligible customer a comprehensive program audit which addresses all applicable energy conserving operation and maintenance procedures, program measures and State measures, if any, upon request by such eligible customer.

(i) The State Plan shall require that in each program audit, the auditor determines which of the energy conserving operation and maintenance procedures would save energy in the commercial building, inform the eligible customer of such changes in building operation and maintenance, emphasize the importance of the changes and recommend that they be accomplished before the installation of any program measure or State measure.

(ii) The State Plan shall require that in each program audit the auditor determine the applicability of each program measure in the commercial building. If the program measure is not applicable, then the requirements of this section to provide estimates of the cost and savings of the installation of such measures in such building need not apply. A program measure is applicable in a commercial building if:

(A) The measure is not already present in the commercial building.

(B) Installation of the measure is not a violation of Federal, State, or local law or regulation.

(C) With respect to lighting systems, the hours of lighting system operation are greater than the period of time the building is open for occupancy; the existing lighting levels exceed the applicable State regulations; if any of the following conditions exist; if incandescent lighting is present in general use; if mercury lighting is present in general use; if outdoor lighting or security lighting is done with other than high or low pressure sodium lighting; or (for all instances of fluorescent lighting) where low energy lamps or ballasts are not in use.

(D) With respect to ceiling insulation, the difference between the effective R-value of any existing insulation and the program measure level for that building is R-11 or more. If it is not possible to determine the existing insulation level then analysis is not required.

(E) With respect to wall insulation, there is no insulation in a substantial portion of the exterior walls and it is practical to insulate the wall.

(F) With respect to water heater insulation, the remaining useful life of the water heater appears to the auditor to be at least three years and space is available around the water heater to install insulation.

(G) With respect to steam/condensate pipe insulation, the existing insulation level is less than the thermal equivalent of one inch of fiberglass.

(H) With respect to hot water pipe insulation with the presence of a continuous hot water circulator, the insulation level is less than the thermal equivalent of one inch of fiberglass.

(I) With respect to window heat gain and/or loss, retardants, the building has mechanical cooling.

(J) With respect to automatic energy control systems, there is the capability to reduce the period of consumption of energy for lighting, heating, or cooling systems through automatic time regulation; or the capability to reduce the rate of consumption of energy through equipment modulation based on inside or outside temperature and/or humidity or building occupancy; or the the capability to reduce electricity costs through regulation of demand; or the capability to reduce costs through regulation of demand; or the capability to reduce mechanical heating or cooling requirements through replacement with outside air based on inside or outside temperature and/or humidity.

(K) With respect to equipment associated with automatic energy control systems which is required to operate steam, hydronic or ventilating systems, there is an applicable automatic energy control system whose function requires or can be enhanced by electrical or mechanical equipment.

(L) With respect to replacement burners, furnaces, boilers, or any combination thereof, the existing burner, furnace, boiler or combination are approximately five years old or older.

(M) With respect to flue opening modifications, the furnace combustion air is taken from a conditioned area.

(N) With respect to energy recovery systems (which may include but not be limited to, water-to-water, air-to-air and other heat recovery systems), there exists a source of energy presently disposed to the atmosphere or to waste water, while a building energy requirement exists which can be met with the waste energy in a manner that reduces total building energy consumption, and after other measures for reducing the wasted energy have been considered, and is in compliance with all applicable building, health, and safety codes.

(O) With respect to cogeneration systems which produce electricity, as well as steam or other forms of thermal of mechanical energy, there exists a ratio of kilowatt electrical demand to thermal demand of one kilowatt to the range of 4,000 to 12,000 BTU thermal and the demand is coincident on an annual basis.

(P) With respect to wind energy devices: the estimated average annual wind resource in the vicinity of the site is 10 miles per hour, or greater, adjusted to 10 meters (33 feet) above ground level; and there are no major wind obstructions over 55 feet high, greater than 30 feet wide, within 100 feet of a potential location for the wind energy device.

(Q) With respect to active solar heating systems, or combined active solar systems, a site exists on or near the building which is free of major obstruction to solar radiation and the building has a space heating system other than a steam heating, electric resistance radiant heating, or electric resistance baseboard heating system.

(R) With respect to active domestic hot water systems, a site exists on or near the building which is free of major obstruction to solar radiation.

(S) With respect to solaria/sunspace systems, the building has a South-facing ground level wall, which is free of major obstruction to solar radiation.

(T) With respect to replacement central air conditioners, the building has a central air conditioner that is approximately five years old or older.

These above applicability criteria may in a State Plan be expanded or restricted, subject to the approval of the Secretary.

(iii) The State Plan shall require that each estimate of energy cost savings and of installation costs provided as a result of a program audit be based on an adequate assessment including actual measurements or inspections, as appropriate, performed on-site by the auditor, of the building shell, the lighting system and of the space heating, space cooling, and water heating equipment.

(iv) The State Plan shall contain procedures to assure that the estimates of energy cost savings and of installation costs and any other economic calculation provided as a result of a program audit shall be based on typical recent local electricity rates, reasonable real energy cost escalation rates that are likely to be experienced by the eligible customer, typical local prices for materials and installation of program measures, and typical local climate data for the eligible customer's location.

(v) The State Plan shall require that the estimates of energy cost savings for active solar space heating systems, solar domestic hot water systems, and combined active solar space heating and solar domestic hot water systems be based on the calculation procedures contained in the HUD Intermediate Minimum Property Standards Supplement, Solar Heating and Domestic Hot Water Systems, 4930.2, 1977 Edition; U.S. Department of Housing and Urban Development, or equivalent calculation procedures, included in the State Plan and approved by the Secretary.

(vi) The State plan shall contain procedures to assure the validity of the program audit with respect to all program measures and shall contain either:

(A) A brief description of the program audit procedures which shall be followed under the State Plan and a detailed description of the method which will be used by the State to assure the accuracy of these procedures; or

(B) A detailed description of the program audit procedures which shall be followed under the State Plan, subject to the approval of the Secretary as to their validity; and

(C) A certification that the State has sought the approval of the Secretary as to the accuracy of the program audit procedures.

For the purposes of this paragraph, the term "program audit procedures" means the measurements or inspections which the auditor must make in a customer's building and the calculations which must be performed in making energy costs savings estimates.

(vii) The State Plan shall require that any cost and savings estimate for any applicable furnace efficiency modification to a gas or oil furnace or boiler be based on an evaluation of the seasonal efficiency of such furnace or boiler. This seasonal efficiency shall be based on estimated peak (tuned up) steady state efficiency corrected for cycling losses. Steady state efficiency shall be derived from the manufacturer's design data and observation of the furnace components, or alternatively, by a flue gas analysis of measured flue gas temperature and carbon dioxide content.

(viii) The State Plan shall require that detailed costs and savings estimates be calculated for the applicable program measures identified in § 458.403(b)(2)(xvi). The State Plan shall require that the detailed analysis calculations be consistent with accepted engineering practice. The analytic approach shall not be limited to exclude systematized procedures, including computer-based analysis.

(ix) The State Plan shall require that the auditor provide at least installation costs and energy savings estimates based on typical practice for any energy consuming function within the building, including but not limited to the measures identified in § 458.103, if the function accounts for more than ten percent of the total building energy consumption.

(2) *Results of Program Audits.* The State Plan shall require that the auditor deliver the following information in writing, to each eligible commercial customer who receives a program audit, upon completion of the audit. The State Plan shall require that the auditor offer to the eligible customer an opportunity to discuss upon request the audit results.

(i) An estimate of the type, quantity, and rate of energy consumption of the eligible customer's building;

(ii) A determination of the total BTU of fuel consumed by the building, as measured at the building line, of the energy use in BTU per square foot of building floor space as well as description of the BTU consumed by each fuel as proportion of total BTU and of the costs of each fuel as a proportion of total costs, and an estimate of the proportion of each fuel that is consumed by at least the following end-uses: space heating, space cooling, ventilation, lighting, and domestic hot water. This estimate may be based on typical practice in buildings of the same type and climate.

(iii) Notice as to the availability of Government sponsored low-interest loans, weatherization programs, competitive grants, applicable tax credits and other forms of assistance which may reduce implementation costs.

(iv) Guidance for implementation of recommended measures. This activity may include methods of finding and evaluating contractors, suppliers and financing institutions.

(v) An estimate of the costs and savings that the eligible building may experience with adoption of appropriate changes in building operation and maintenance.

(vi) An estimate, based on the calculation procedures developed pursuant to § 458.403(b)(1)(viii), of the total installed cost of each applicable program measure identified in § 458.403(b)(2)(xvi).

(vii) An estimate, based on the calculation procedures developed pursuant to § 458.403(b)(1)(viii), of the energy savings which would occur during the first year from installation of each applicable program measure identified in § 458.403(b)(2)(xvi).

(viii) An estimate, based on typical practice in similar building types in the same climate zone, of the installed total cost of the measure expressed in a range of dollars for the applicable program measures identified in § 458.403(b)(xvii).

(ix) An estimate of the savings in energy costs, based on typical practice in similar building types in the same climate zone, which would occur during the first year from installation of each applicable program measure identified in § 458.403(b)(2)(xvii).

(x) An estimate of the simple payback period of each applicable program measure, taking into account the interactions among the various measures. The simple payback period is calculated by dividing the estimated total cost of the measure, as determined pursuant to § 458.403(b)(2)(vi) or § 458.403(b)(2)(viii), by the estimated annual cost saving accruing from the measure, as determined pursuant to § 458.403(b)(2)(vii) or § 458.403(b)(2)(ix). Other economic analyses, such as life-cycle costing, which consider all costs and cost savings, such as maintenance costs and/or savings, resulting from an energy conservation measure, are recommended, but are not required.

(xi) The following disclosure or its equivalent: "The procedures used to make these estimates are consistent with DOE criteria for commercial energy audits or have been evaluated by the State for accuracy. However, the actual installation costs you incur and energy

savings you realize from installing these measures may be different from the estimates contained in this audit report. Although the estimates are based on measurements of your building, they are also based on assumptions which may not be totally correct for your establishment."

(xii) An estimate of the annual normal maintenance costs, if any, of each applicable program measure.

(xiii) With respect to a program audit addressing an applicable solar domestic hot water system or active solar space heating system, or combination thereof, a description of the solar system assumed by the auditor in preparing energy savings estimates which shall include the following information:

(A) Square feet of collector;

(B) Collector characteristics, including glazing materials and other collector materials;

(C) Any storage system needed, including the capacity of storage;

(D) Any freeze protection needed;

(E) The estimated percent of the space and/or water heating load to be met by solar energy;

(F) Any physical connections needed with existing heating systems;

(G) Any site preparation needed; and

(H) If the results are based on a simulation, the following disclosure or its equivalent: "The energy cost savings estimates you receive are based on systems which may be different from the ones you purchase. Also, these estimates were not determined using actual conditions but using simulated measurements. Therefore, the cost savings we have estimated may be different from the savings which actually occur."

(xiv) With respect to a program audit addressing an applicable passive solar space heating and cooling system:

(A) The generic designation and a pictorial description of the particular system considered by the auditor;

(B) The estimated percent of the heating load to be met by such system;

(C) The approximate dimensions of such system;

(D) Collection storage characteristics, including the recommended heat capacity of storage; and

(E) The disclosure provided in § 458.403(b)(2)(xii)(H) of this subsection.

(xv) With respect to a program audit addressing an applicable wind energy device:

(A) Installation cost estimates as required in § 458.403(b)(2)(viii) based on commercially available wind devices of a kilowatt rating appropriate to the level of electricity consumption in the customer's building;

(B) Estimates of energy cost savings as required in § 458.403(b)(2)(ix), provided in the form of a function of average yearly wind speeds for the system used in § 458.403(b)(2)(xv)(A);

(C) A description of the type of wind energy device used by the auditor in preparing the energy saving estimates;

(D) The average yearly wind speed as indicated by the appropriate Wind Energy Resource Atlas for the region, and the relationship between that data and the likely wind speeds at the residence; or

(E) The average yearly wind speed at the nearest qualified measuring station and the relationship between that data and the likely wind speeds at the residence. A qualified measuring station is one which meets the following requirements:

(1) The anemometer is located no less than 6 meters (19.8 feet) above ground level;

(2) Data used to determine the annual average wind speed has been collected for one year or more; and

(3) Calibration of the data collection and recording instrument(s) had been certified by the instrument manufacturer(s) at the time of purchase.

(xvi) A detailed analysis, developed pursuant to § 458.403(b)(1)(viii), shall be provided for the following energy conservation measures, except where the applicability criteria militate otherwise:

(A) Lighting systems,

(B) Caulking and weatherstripping,

(C) Ceiling, roof and wall insulation,

(D) Storm windows and storm doors, and

(E) Hot water/steam/condensate pipe insulation.

(xvii) The following measures shall be audited for cost and savings estimates determined pursuant to typical practice in similar building types in the same climate zone:

(A) Hot water generation and distribution system;

(B) Furnace, or utility plant and distribution system, modifications, including replacement burners, furnaces, boilers, or any combination thereof, which substantially increase the energy efficiency of the heating system; devices for modifying flue openings which will increase the energy efficiency of the heating system; intermittent pilot ignition devices (IID's) which replace standing gas pilot lights; and devices for modifying and improving the air-conditioning and air-handling systems which may include but are not limited to enthalpy controls, economizers and various load management techniques;

(C) Heat absorbing or heat reflecting window and door systems, reductions in glass area, and other window and door system modifications;

(D) Automatic energy control systems (which include, but are not limited to, computer control systems, time clocks, thermostats, and damper motors);

(E) Equipment, associated with automatic energy control systems, which is required to operate variable steam, hydronic, or ventilating systems;

(F) A solar energy system, as defined in Section 504(8) of the Solar Energy and Energy Conservation Bank Act;

(G) Energy recovery systems (which may include, but are not limited to, water-to-water, air-to-air and other heat recovery systems); and

(H) Cogeneration systems which produce electricity, as well as steam or other forms of thermal or mechanical energy, and which meet such fuel efficiency requirements as the Secretary may, by rule, prescribe.

(c) *Reporting and Record Keeping Requirements.* (1) *Reporting.* The State Plan shall contain provisions to assure that a report is submitted to the Secretary on July 1, 1981, and annually thereafter through July 1, 1990. The report shall contain the following information for the twelve-month period ending the preceding April 1, except that the Secretary may waive any of the reporting requirements, in approving the State Plan, for good cause:

(i) Any revision to the list of covered utilities and a list of participating building heating suppliers subject to the State Plan;

(ii) For each covered utility or participating building heating supplier:

(A) The approximate number of eligible commercial customers and, if available, the percentage of those customers for whom the utility or heating supplier is the primary heating fuel supplier;

(B) A copy of the Commercial Announcement distributed to eligible commercial customers;

(C) The number of eligible commercial customers who have requested an audit and the number of requests the utility or participating building heating supplier has fulfilled;

(D) The number and function of people assigned to the covered utility's or participating building supplier's program, including part-time employees; and

(E) The costs incurred by the utility or building heating supplier in providing commercial audits under the CACS Program including separately those costs paid by individual customers for services received and those costs paid by all ratepayers.

(iii) The number and nature of complaints by eligible customers against

the utility which have been handled through the procedures established under § 458.403(d);

(iv) A brief description of the status of activities carried out pursuant to § 458.405 (Auditor Qualification Requirements) including whether sufficient qualified personnel are available for program needs, the reasons for any shortages and the proposed resolution of any such shortage problem;

(v) The cost to the State of developing and implementing the State Plan; and

(vi) A citation to and brief description of any State or local law or regulation relevant to the State Plan and the status of any proposed State or local legislation or regulation relevant to the State Plan.

(2) *Record Keeping.* The State Plan shall contain procedures to assure that the following records are kept for the periods indicated and made available to the Secretary upon request, except that the Secretary may for good cause waive any of the record keeping requirements in approving the State Plan:

(i) The name and address of each eligible commercial customer who receives a program audit, which shall be kept for ten years from the date of such program audit;

(ii) A copy of the data collected during the audit, and a copy of the estimates of costs and savings presented to the customer, which shall be kept for ten years from the data of such program audit;

(iii) The amount and cost of fuel purchased each month or other billing period for the twelve months following each program audit for each eligible commercial customer, which shall be kept for two years from the date of such program audit; and

(iv) The names of the individuals who have met the qualification criteria described in § 458.405, which records shall be updated within a reasonable time following the qualification of such individuals.

(d) *Complaints Processing Procedures.* The State Plan shall contain procedures for resolving complaints against utilities. The complaint resolution procedures should use the procedures established under the RCS Program, § 456.315, as much as practicable.

§ 458.404 Addition of measures by States.

(a) The State may require or allow covered utilities or participating building heating suppliers to offer services for State measures in conjunction with the CACS Program subject to the approval of the Secretary in the State Plan.

(b) The Secretary may approve a State measure to be offered in conjunction with the CACS Program if:

(1) The measure is an energy conservation measure;

(2) The measure is a renewable resource measure; or

(3) The State Plan contains the following:

(i) Information demonstrating that the measure effectively saves non-renewable energy sources and does not increase the consumption of oil;

(ii) A method for adequately ensuring safe installation and use of such measure;

(iii) Adequate assurances that offering such measure in conjunction with the CACS Program will not adversely affect the environment, competition or the CACS Program in the State and will not increase the cost to an elibible customer of a program audit under the CACS Program; and

(iv) An adequate analysis of the effects on the environment of offering the State measures in conjunction with the CACS Program.

(c) The State plan shall describe how the State measures are to be offered in conjuction with the CACS Program.

§ 458.405 Auditor qualification requirements.

(a) The State Plan shall provide for an auditor training course. At a minimum, course content shall assure that a successful trainee will have gained the following:

(1) A general understanding of the three types of heat transfer and the effects of temperature and humidity on heat transfer;

(2) A general understanding of commercial construction terminology and components;

(3) A general knowledge of the operation of the heating and cooling systems used in the commercial building;

(4) A general knowledge of the different types of each applicable program and State measure of the advantages, disadvantages and applications of each;

(5) The capacity to conduct the audit as required in § 458.403(b), including:

(i) A familiarity with the energy conserving operation and maintenance procedures required to be audited for;

(ii) The capability to determine the applicability of the program measures and any State measures; and

(iii) A proficiency in the pertinent auditing procedures, as prescribed in or pursuant to the State Plan, for each applicable program and State measure.

(6) Where a furnace efficiency modification is an applicable program measure, and the source of fuel for the existing furnace or boiler is either gas or oil, a working ability to calculate the steady state efficiency of the furnace or boiler as required by § 458.403(b)(1)(vii);

(7) Where a renewable resource measure, other than a wind energy device, is an applicable program or State measure, an understanding of the nature of solar energy and its commercial buildings applications, including:

(i) Insulation;

(ii) Shading;

(iii) Heat capture and transport; and

(iv) Where appropriate, heat transfer for hot water and space heating;

(8) Where a wind energy device is an applicable program or State measure, an understanding of the nature of wind energy and its commercial building applications, including:

(i) Wind availability;

(ii) Effects of obstruction;

(iii) Wind capture;

(iv) Power generation; and

(v) Interfaces with residential and utility power lines;

(9) A general understanding of the applicability of air-to-air, water-to-water and air-to-water heat exchangers and the criteria for cost-effective applications;

(10) A general knowledge of pneumatic, electrical and hydronic control systems and their applicability to automatic energy control systems;

(11) The ability to recognize the compatibility between process heat loads and electrical loads in the eligible building population and to recognize when the criteria for potential applicability is appropriate;

(12) A general knowledge of lamps and lighting systems used in commercial buildings;

(13) A general knowledge of the functions and operating characteristics and the various modes and symptoms of failures of steam traps in commercial buildings;

(14) Where an automatic energy control system is an applicable measure, an understanding of the relationships between heating, air-conditioning and lighting systems and the common elements which require system automation;

(b) Each State may determine whether to teach the course in the entirety or in parts, and the State Plan shall indicate how each subject in section (a) will be taught.

(c) The State Plan shall specify how course content shall be monitored to ensure compliance with the requirements of § 458.405(a) above.

(d) The State Plan shall describe the following:

(1) Length of training program,
(2) Name of entity which developed the curriculum,
(3) Subject areas covered,
(4) How trainers shall be selected,
(5) An estimate of how many trainers will be required, and
(6) A description of the facilities and materials to be used.

§ 458.406 Procedures for investigating and enforcing compliance with the State plan.

(a) The State Plan shall require each covered utility and participating building heating supplier to comply with the State Plan.

(b) The State Plan shall contain adequate procedures for investigating and enforcing compliance with the State Plan by covered utilities and participating building heating suppliers.

(c) The State Plan shall cite and describe the existing or proposed State authority(ies) for such investigation and enforcement, including authorities with respect to any nonregulated utility covered in the State Plan.

(d) The State Plan shall identify the State agency(ies) responsible for such investigation and enforcement and shall include a description of the resources available for such investigation and enforcement.

§ 458.407 Coordination.

(a) *Other Programs.* The State Plan shall provide procedures to ensure effective coordination between its CACS Program as described in the State Plan and all local, State and Federal energy conservation programs within and affecting the State which shall include, but not be limited to:

(1) The Residential Conservation Service Program;

(2) The Federal Energy Extension Service;

(3) The Basic State Energy Conservation Program of the Department of Energy; and

(4) The Supplemental State Energy Conservation Program of the Department of Energy.

(b) *Energy Suppliers.* If the State Plan permits coordination of the CACS Program among energy suppliers in the State then it shall provide procedures describing how such coordination may occur and ensuring that no collusion on prices charged to eligible customers will occur.

(c) *State Regulatory Authority.* If the Lead Agency is not the State regulatory authority, then the State Plan shall contain a description of how the Lead Agency shall coordinate the implementation of the State Plan with the State regulatory authority

(d) The State Plan may contain provisions for coordination between utilities and building heating suppliers to ensure that a utility is not required to conduct an energy audit of a commercial building which has been audited previously pursuant to this section or pursuant to Chapter II, 10 CFR Part 455 (Grant Programs for Schools and Hospitals and Buildings Owned by Units of Local Government and Public Care Institutions).

§ 458.408 Accounting and payment of costs.

(a) *Accounting.* The State Plan shall require, and may permit with respect to costs of revenues directly associated with State measures, that covered utilities use the following accounts and procedures:

(1) All amounts expended or received by a covered utility which are attributable to the CACS Program, including any penalties paid under Subpart F (Federal Standby Authority) shall be accounted for on the books and records separately from amounts attributable to all other activities of the covered utility.

(2) Covered utilities subject to the jurisdiction of the Federal Energy Regulatory Commission (FERC) shall utilize the Uniform System of Accounts as prescribed in Title 18, CFR Parts 101, 104, 201 and 204. Covered rural electric cooperatives shall utilize the Uniform System of Accounts as prescribed by the Rural Electrification Administration (REA) in Title 7, CFR Part 1701, Appendix A. Other covered nonregulated utilities shall adopt accounts within their accounting system with the attributes of the appropriate accounts prescribed by the FERC.

(i) All amounts expended by a covered utility for the CACS Program shall be charged to subaccounts within Account 908, Customer Assistance Expenses, its equivalent or successor, or the appropriate account designated specifically by FERC or REA for CACS Program expenses. Appropriate records shall be maintained thereunder so as to allow ready indentification of costs attributable to the following program elements:

(A) Program Information and

(B) Program Audit;

(ii) Billed income attributable to the CACS Program shall be accounted for in subaccounts within Account 456, Other Electric Revenue (for electric utilities) or Account 495, Other Gas Revenues (for gas utilities), their equivalents or successors, or the appropriate account designated specifically by FERC or REA for Program billed income.

(b) *Payment of Costs.* The State Plan shall contain provisions requiring that a covered utility treat costs as described below and shall contain a description of how such costs will be treated.

(1) All amounts expended by a covered utility for the Commerical Announcement and all public education and program promotion directly related to providing information about a utility's Commercial CACS Program shall be treated as a current expense of providing utility service and be charged to all ratepayers of the covered utility in the same manner as other current operating expenses of providing such utility service.

(2) Other costs will be charged as determined by the State Regulatory Authority for all regulated utilities covered by the State Plan and individually by each nonregulated utility covered by the State Plan. Such costs include administrative and general expenses, including those associated with program audits.

(3) Costs incurred by a covered utility for services carried out by such utility on behalf of the State may be reimbursed by the State.

(c) *Duplication of Audits.* The State Plan shall contain a provision stating that a covered utility need not conduct an energy audit of a commercial building which has been previously audited pursuant to this Part or pursuant to 10 CFR Part 455 (Grant Programs for Schools and Hospitals and Buildings Owned by Units of Local Government and Public Care Institutions).

§ 458.409 Plans for participating building heating suppliers.

(a) *Requirements.* The procedures for each building heating supplier program shall be identical to the procedures required for utilities in this Subpart.

(b) *Participation and Withdrawal.* The State Plan, if it covers building heating suppliers, shall include a procedure by which the Governor shall allow a building heating supplier to participate in the commerical part of its CACS Program. The State Plan shall also provide for the voluntary withdrawal of participating building heating suppliers from the commercial part of its CACS Program.

(c) *Waiver of Requirements.* The State Plan shall contain a procedure by which the Governor may waive for any participating building heating supplier any requirement of the State Plan, except those listed below, upon a demonstration to the Governor's satisfaction that the resources of such supplier do not enable it to comply with the particular requirement. The requirements which the Governor shall

not waive with respect to any building heating supplier who chooses to participate in the program are those established according to:

(1) Section 458.406 (Procedures for Investigating and Enforcing Compliance with the State Plan);

(2) Section 458.403(b)(1)(iii)–(vii) (Accuracy of Auditing Procedures), for those measures for which a participating building heating supplier performs program audits for its eligible commercial customers;

(3) Section 458.405 (Auditor Qualification Requirements); and

(4) The following reporting and record keeping requirements:

(i) Section 458.403(c)(1)(i);

(ii) Section 458.403(c)(1)(ii), except that the Governor may waive § 458.403(c)(1)(ii)(E) concerning the accounting of program costs; and

(iii) Section 458.403(d) (Record Keeping).

Subpart E—Energy Conservation Services for Multifamily Dwellings

§ 458.501 Scope and coverage.

(a) *Scope.*

This Subpart prescribes the minimum requirements for the content of State Plans regarding energy conservation services for multifamily dwellings. The State may include additional information and provide additional requirements in the State Plan for multifamily dwellings in the CACS Program if such information and requirements are not specifically prohibited by these rules or by any applicable law or regulation. All references in this Subpart to covered utilities apply to regulated and nonregulated covered utilities subject to the State Plan.

(b) *Coverage.*

(1) *Regulated Utilities.* All regulated utilities providing utility service in a State which meet the definition of "covered utility" in § 458.105(g) shall be subject to the State Plan and shall be identified in the State Plan.

(2) *Nonregulated Utilities.* The State Plan shall identify which nonregulated covered utilities, if any, are covered under the State Plan.

(3) *Building Heating Suppliers.* The State Plan shall state whether or not it includes a CACS Program for building heating suppliers.

(4) *Exemptions.* The State Plan shall identify which regulated utilities have been exempted pursuant to § 458.208 in whole or in part by the State Regulatory Authority from providing services to multifamily dwellings, and which nonregulated utilities have been exempted pursuant to § 458.307 in whole or in part by the Governor from providing services to multifamily dwellings.

§ 458.502 Eligibility for audit.

(a) The State Plan shall describe how an eligible multifamily dwelling customer may request an audit. Such procedures shall not be so cumbersome as to unreasonably limit participation.

(b) The State Plan shall require that covered utilities and participating building heating suppliers provide, upon request, an audit to any party who:

(1) Is an owner of a multifamily dwelling,

(2) Is an eligible customer of such public utility or building heating supplier,

(3) Agrees to provide to the tenants, if any, of the customer's multifamily dwelling, the information developed by such audit concerning energy conserving operation and maintenance procedures, program measures, and State measures, if any, applicable to the individual dwelling units in such dwelling, and

(4) Agrees to provide to each tenant of the customer's multifamily dwelling a copy of the Tenant's Energy Conservation Information Package supplied by the utility or building heating supplier that would conduct the audit.

(c) The State Plan shall include procedures to provide that each public utility shall not be required to conduct an energy audit of a multifamily dwelling which has been audited previously pursuant to this part or pursuant to Chapter II, 10 CFR Part 455 (Grant Programs for Schools and Hospitals and Buildings Owned by Units of Local Government and Public Care Institutions).

§ 458.503 Services provided by utilities and participating building heating suppliers.

(a) *Information to Eligible Customers.*

(1) *Apartment Announcement: Distribution and Content.*

The State Plan shall require each covered utility and each participating building heating supplier to send to each eligible multifamily dwelling customer, no later than 12 months after approval of the State Plan and every two years thereafter until January 1, 1990, an Apartment Announcement which shall:

(i) List the program measures and, if any, the State measures applicable to multifamily dwellings.

(ii) List the energy conserving operation and maintenance procedures and state that they are of low or no cost.

(iii) Offer and describe the audit:

(A) The offer of the program audit may be conditioned upon a nondiscriminatory and reasonable factor such as serving one geographic area at a time. At a minimum, the State Plan shall contain procedures to assure that all customers who receive a conditional offer of a program audit are recontacted and receive an unconditional offer of a program audit within two years of receiving the conditional offer.

(B) Explain how the eligible customer may request the audit; and

(C) List the direct cost, if any, of receiving the service.

(iv) Include a brief explanation of the benefits of the Federal energy tax credits, and a description of who is eligible for them. This explanation should include at least the following information:

The Energy Tax Act of 1978 provides a residential energy credit for insulation, certain other energy-conservation components, and certain renewable energy source property expenditures made in connection with the taxpayer's principal residence. In the case of insulation and other energy conserving components, the credit is 15 percent of the first $2,000 of expenditures, or a maximum credit of $300. In the case of solar, wind, and geothermal energy expenditures, the credit is 40 percent of the first $10,000 spent, for a maximum credit of $4,000.

(v) Include a brief explanation of the benefits of the Weatherization Assistance Program for Low Income Persons, 10 CFR Part 440, and a brief description of who is eligible for such assistance.

(vi) Not include any advertising for the sale, installation or financing by any supplier, contractor, or lender (including the covered utility) of any energy conservation measure, renewable resource measure, State measure, or energy conserving practice; however, if the covered utility or participating heating supplier finances the sale or installation of such measures, the Apartment Announcement may so state.

(vii) Not include any information regarding any product which is not an energy conservation measure, a renewable resource measure, a State measure, or an energy conserving operation and maintenance procedure.

(viii) Include information on loans and grants available through the Solar Energy and Energy Conservation Bank.

(ix) Include information on any other loan grant programs available at the State or local level.

(x) Include a notice that, in order to receive the audit, the owner must agree to make any results of the audit applicable to an individual dwelling unit available to the tenant of such unit.

(2) *Supplemental Apartment Announcement.*

The State Plan shall require that a supplement to the Apartment Announcement shall be provided to eligible multifamily customers that have requested an audit. This supplement will contain information designed to show how landlords and tenants may share in the benefits of energy conservation, and will include sample landlord/tenant agreements showing how such benefits may be shared.

(3) *Tenant's Energy Conservation Information Package, Distribution and Content.*

The State Plan shall require each covered utility and each participating building heating supplier to supply to each customer who receives an audit under this subpart, for distribution by such customer to each tenant in the customer's multifamily dwelling, a Tenant's Energy Conservation Information Package (Information Package). The Information Package shall:

(i) List the energy conservation measures and energy conserving operation and maintenance procedures applicable to multifamily dwellings.

(ii) Explain how each of these measures or procedures would affect the level of utility service the tenant receives.

(iii) Contain a pamphlet describing how tenants may conserve energy in their apartments.

(iv) Contain low-cost/no-cost information.

(v) Contain information on tax credits and weatherization programs for renters.

(4) *Alternative.*

The State Plan may contain an alternative requirement for disseminating program information that shall be used instead of the Information Package described in § 458.503(a)(3), if the Secretary determines that such alternative requirement fulfills the same functions as the Information Package in an equivalent manner.

(5) *New Customers.*

(i) A new customer is a person who becomes an eligible customer after initial distribution of the Apartment Announcement but before January 1, 1990.

(ii) The State Plan shall require that each covered utility and participating building heating supplier send an Apartment Announcement which meets the requirements of this section to each new customer within 60 days of such customer becoming a new customer.

(iii) The State Plan shall require that covered utilities and participating building heating suppliers inform each new customer that upon request the customer may receive a copy of the results applicable to the new customer's dwelling unit of any program audit of the customer's building which the covered utility or participating heating supplier may have performed pursuant to the State Plan and require that upon such a request such utility or heating supplier provide such results.

(b) *Energy Audits.*

(1) *Requirements for Program Audits.*

The State Plan shall describe the program audit services to be offered by covered utilities and participating building heating suppliers and shall require at a minimum that each covered utility and participating building heating supplier provide to each eligible multifamily customer a comprehensive program audit which addresses all applicable energy conserving operation and maintenance procedures, program measures and State measures, if any, upon request by such eligible customer.

(i) The State Plan shall require that, in each program audit, the auditor determines which of the energy conserving operation and maintenance procedures would save energy in the multifamily dwelling, inform the eligible customer of such changes in building operation and maintenance, emphasize the importance of the changes and recommended that they be accomplished before the installation of any program measure or State measure.

(ii) The State Plan shall require that, in each program audit, the auditor determine the applicability of each program measure in the multifamily dwelling. If the program measure is not applicable, then the requirements of this section to provide estimates of the cost and savings of the installation of such measures in such multifamily dwelling need not apply.

A program measure is applicable in a multifamily dwelling if:

(A) The measure is not already present in the multifamily dwelling.

(B) Installation of the measure is not a violation of federal, State, or local law or regulation.

(C) With respect to lighting systems, the existing lighting levels exceed the applicable State regulations, if incandescent lighting is present in general use, if mercury lighting is present in general use, if outdoor lighting or security lighting is done with other than high or low pressure sodium lighting, (for all instances of fluorescent lighting) where low energy lamps or ballasts are not in use.

(D) With respect to ceiling insulation, the difference between the effective R-value of any existing insulation and the program measure level for that building is R-11 or more. If it is not possible to determine the existing insulation level then analysis is not required.

(E) With respect to wall insulation, there is no insulation in a substantial portion of the exterior walls and it is practical to insulate the wall.

(F) With respect to water heater insulation, the remaining useful life of the water heater appears to the auditor to be at least three years and space is available around the water heater to install insulation.

(G) With respect to steam/condensate pipe insulation, the existing insulation level is less than the thermal equivalent of one inch of fiberglass.

(H) With respect to hot water pipe insulation with the presence of a continuous hot water circulator, the insulation level is less than the thermal equivalent of one inch of fiberglass.

(I) With respect to window heat gain and/or loss retardants, the building has mechanical cooling.

(J) With respect to automatic energy control systems, there is the capability to reduce the period of consumption of energy for lighting, heating, or cooling systems through automatic time regulation; or the capability to reduce the rate of consumption of energy through equipment modulation based on inside or outside temperature and/or humidity or building occupancy; or the capability to reduce electricity costs through regulation of demand; or the capability to reduce costs through regulation of demand; or the capability to reduce mechanical heating or cooling requirements through replacement with outside air based on inside or outside temperature and/humidity.

(K) With respect to equipment associated with automatic energy control systems which is required to operate steam, hydronic or ventilating systems, there is an applicable automatic energy control system whose function requires or can be enhanced by electrical or mechanical equipment.

(L) With respect to replacement burners, furnaces, boilers, or any combination thereof, the existing burner, furnace, boiler or combination are approximately five years old or older.

(M) With respect to flue opening modifications, the furnace combustion air is taken from a conditioned area.

(N) With respect to energy recovery systems (which may include but not be limited to, water-to-water, air-to-air and other heat recovery systems), there exists a source presently disposed to the atmosphere or to waste water, while a building energy requirement exists which can be met with the waste energy in a manner that reduces total building energy consumption, and after other

measures for reducing the wasted energy have been considered, and is in compliance with all applicable building, health, and safety codes.

(O) With respect to cogeneration systems which produce electricity, as well as steam or other forms of thermal or mechanical energy, there exists a ratio of kilowatt electrical demand to thermal demand of one kilowatt to the range of 4,000 to 12,000 BTU's thermal and the demand is coincident on an annual basis.

(P) With respect to wind energy devices: the estimated average annual wind resource in the vicinity of the site is 10 miles per hour, or greater, adjusted to 10 meters (33 feet) above ground level; and there are no major wind obstructions over 55 feet high, greater than 30 feet wide, within 100 feet of a potential location for the wind energy device.

(Q) With respect to active solar heating systems, or combined active solar systems, a site exists on or near the building which is free of major obstruction to solar radiation and the building has a space heating system other than a steam heating, electric resistance radiant heating, or electric resistance baseboard heating system.

(R) With respect to active domestic hot water systems, a site exists on or near the building which is free of major obstruction to solar radiation.

(S) With respect to solaria/sunspace systems, the building has a South-facing ground level wall, which is free of major obstruction to solar radiation.

(T) With respect to replacement central air conditioners, the building has a central air conditioner that is approximately five years old or older.

(U) The above applicability criteria may in a State Plan be expanded or restricted, subject to the approval of the Secretary. If a large residential building customer covered by the RCS Program requests a CACS type audit, the auditor may substitute alternative applicability criteria for those contained in C, G, J, K, N, and O.

(iii) The State Plan shall require that each estimate of energy cost savings and of installation costs provided as a result of a program audit be based on an adequate assessment including actual measurements or inspections, as appropriate, performed onsite by the auditor, of the building shell, the lighting system and of the space heating, space cooling, and water heating equipment.

(iv) The State Plan shall contain procedures to assure that the estimates of energy cost savings and of installation costs and any other economic calculation provided as a result of a program audit shall be based on typical recent local electricity rates, reasonable real energy cost escalation rates that are likely to be experienced by the eligible customer, typical local prices for materials and installation of program measures, and typical local climate data for the eligible customer's location.

(v) The State Plan shall require that the estimates of energy cost savings for active solar space heating systems, solar domestic hot water systems, and combined active solar space heating and solar domestic hot water systems be based on the calculation procedures contained in the HUD Intermediate Minimum Property Standards Supplement, Solar Heating and Domestic Hot Water Systems, 4930.2, 1977 Edition; U.S. Department of Housing and Urban Development, or equivalent calculation procedures, included in the State Plan and approved by the Secretary.

(vi) The State Plan shall contain procedures to assure the validity of the program audit with respect to all program measures and shall contain either:

(A) A brief description of the program audit procedures which shall be followed under the State Plan and a detailed description of the method which will be used by the State to assure the accuracy of these procedures; or

(B) A detailed description of the program audit procedures which shall be followed under the State Plan, subject to the approval of the Secretary as to their validity; and

(C) A certification that the State has sought the approval of the Secretary as to the accuracy of the program audit procedures.

(D) For the purposes of § 458.503(b)(1)(vi), the term "program audit procedures" means the measurements or inspections which the auditor must make in a customer's building and the calculations which must be performed in making energy costs savings estimates.

(vii) The State Plan shall require that any cost and savings estimate for any applicable furnace efficiency modification to a gas or oil furnace or boiler be based on an evaluation of the seasonal efficiency of such furnace or boiler. This seasonal efficiency shall be based on estimated peak (tuned up) steady state efficiency corrected for cycling losses. Steady state efficiency shall be derived from manufacturer's design data and observation of the furnace components, or alternatively, by a flue gas analysis of measured flue gas temperature and carbon dioxide content.

(viii) The State Plan shall require that detailed costs and savings estimates be calculated for the applicable program measures identified in § 458.503 (b)(2)(xvi). The State Plan shall require that the detailed analysis calculations be consistent with accepted engineering practice. The analytic approach shall not be limited to exclude systematized procedures, including computer-based analysis.

(ix) The State Plan shall require that the auditor provide at least installation costs and energy savings estimates based on typical practice for any energy consuming function within the building, including but not limited to the measures identified in Subpart A 105, if the function accounts for more than ten percent of the total building energy consumption.

(2) *Results of Program Audits.*

The State Plan shall require that the auditor deliver the following information in writing, to each eligible customer who receives a program audit, upon completion of the audit. The State Plan shall require that the auditor offer to the eligible customer an opportunity to discuss the audit results if the customer requests an explanation.

(i) An estimate of the type, quantity, and rate of energy consumption of the eligible customer's building.

(ii) A determination of the total BTU's of fuel consumed by the building, as measured at the building line, of the energy use in BTU's per square foot of building floor space as well as description of the BTU's consumed by each fuel as a proportion of total BTU's and of the costs of each fuel as a proportion of total costs, and an estimate of the proportions of each fuel that are consumed by at least the following end-uses; space heating, space cooling, ventilation, lighting, and domestic hot water. This estimate may be based on typical practice of buildings of the same type and climate.

(iii) Notice as to the availability of Government sponsored low-interest loans, weatherization programs, competitive grants, applicable tax credits and other forms of assistance which may reduce implementation costs.

(iv) Guidance to implementation of recommended measures. This activity may include methods of finding, and evaluating contractors, suppliers and financing institutions.

(v) An estimate of the cost and savings that the eligible building may experience with adoption of appropriate changes in building operation and maintenance.

(vi) An estimate, based on the calculation procedures determined pursuant to § 458.503(b)(1)(viii), of the

total installed cost of each applicable program measure identified in § 458.503(b)(2)(xvi).

(vii) An estimate, based on the calculation procedures determined pursuant to § 458.503(b)(1)(viii), of the energy savings which would occur during the first year from installation of each applicable program measure identified in § 458.503(b)(2)(xvi).

(viii) An estimate, based on typical practice of similar building types in the same climate zone, of the total installed cost of the measure expressed in range of dollars for the applicable program measures identified in § 458.503(b)(2)(xvii).

(ix) An estimate of the savings in energy costs, based on typical practice of similar building types in the same climate zone, which would occur during the first year from installation of each applicable program measure identified in § 458.503(b)(2)(xvii)

(x) An estimate of the simple payback period of each applicable program measure, taking into account the interactions among the various measures. The simple payback period is calculated by dividing the estimated total cost of the measure, as determined pursuant to § 458.503(b)(2)(vi) or § 458.503(b)(2)(viii), by the estimated annual cost saving accruing from the measure, as determined pursuant to § 458.503(b)(2)(vii) or § 458.503(b)(2)(ix). Other economic analyses, such as life-cycle costing, which consider all costs and cost savings, such as maintenance costs and/or savings, resulting from an energy conservation measure, are recommended, but not required.

(xi) The following disclosure or its equivalent: "The procedures used to make these estimates are consistent with DOE criteria for apartment energy audits or have been evaluated by the State for accuracy. However, the actual installation costs you incur and energy savings you realize from installing these measures may be different from the estimates contained in this audit report. Although the estimates are based on measurements of your building, they are also based on assumptions which may not be totally correct for your establishment."

(xii) An estimate of the annual normal maintenance costs, if any, of each applicable program measure.

(xiii) With respect to a program audit addressing an applicable solar domestic hot water system or active solar space heating system, or combination thereof, a description of the solar system assumed by the auditor in preparing energy savings estimates which shall include the following information:

(A) Square feet of collector;

(B) Collector characteristics, including glazing materials and other collector materials;

(C) Any storage system needed, including the capacity of storage;

(D) Any freeze protection needed;

(E) The estimated percent of the space and/or water heating load to be met by solar energy;

(F) Any physical connections needed with existing heating systems;

(G) Any site preparation needed; and

(H) If the results are based on a simulation, the following disclosure or its equivalent:

The energy cost savings estimates you receive are based on systems which may be different from the ones you purchase. Also, these estimates were not determined using actual conditions but using simulated measurements. Therefore, the cost savings we have estimated may be different from the savings which actually occur.

(xiv) With respect to a program audit addressing and applicable passive solar space heating and cooling system:

(A) The generic designation and a pictoral description of the particular system considered by the auditor,

(B) The estimated percent of the heating load to be met by such system,

(C) The approximate dimensions of such system,

(D) Collection storage characteristics, including the recommended heat capacity of storage, and

(E) The disclosure provided in § 458.503(b)(2)(xiii)(H).

(xv) With respect to a program audit addressing an applicable wind energy device:

(A) Installation cost estimates as required in § 458.403(b)(2)(viii) based on commercially available wind devices of kilowatt rating appropriate to the level of electricity consumption in the customer's building;

(B) Estimates of energy cost savings as required in § 458.403(b)(2)(ix), provided in the form of a function of average yearly wind speeds for the system used in § 458.403(b)(2)(xv)(A);

(C) A description of the type of wind energy device used by the auditor in preparing the energy saving estimates,

(D) The average yearly wind speed as indicated by the appropriate Wind Energy Resource Atlas for the region, and the relationship between that data and the likely wind speeds at the residence, or

(E) The average yearly wind speed at the nearest qualified measuring station and the relationship between that data and the likely wind speeds at the residence. A qualified measuring station is one which meets the following requirements:

(1) The anemometer is located no less than 6 meters (19.8 feet) above ground level;

(2) Data used to determine the annual average wind speed has been collected for one year or more; and

(3) Calibration of the data collection and recording instrument(s) had been certified by the instrument manufacturer(s) at the time of purchase.

(xvi) A detailed analysis, developed pursuant to § 458.503(b)(1)(viii) shall be provided for the following energy conservation measures, except where the applicability criteria militate otherwise:

(A) Lighting systems,

(B) Caulking and Weatherstripping,

(C) Ceiling, roof and wall insulation,

(D) Storm windows and storm doors, and

(E) Hot water/steam/condensate pipe insulation.

(xvii) The following measures shall be audited for cost and savings estimates determined pursuant to typical practice in similar building types in the same climate zone;

(A) Hot water generation and distribution system;

(B) Furnance, or utility plant and distribution system, modifications, including replacement burners, furnaces, boilers, or any combination thereof, which substantially increase the energy efficiency of the heating system; devices for modifying flue openings which will increase the energy efficiency of the heating system; intermittent pilot ignition devices (IID's) which replace standing gas pilot lights; and devices for modifying and improving the air-conditioning and air-handling systems which may include but are not limited to enthalpy controls, economizers and various load management techniques.

(C) Heat absorbing or heat reflecting window and door systems, reductions in glass area, and other window and door system modifications;

(D) Automatic energy control systems (which include, but are not limited to, computer control systems, time clocks, thermostats, and damper motors);

(E) Equipment, associated with automatic energy control systems, which is required to operate variable steam, hydronic, or ventilating systems;

(F) A solar energy system, as defined in section 504(8) of the Solar Energy and Energy Conservation Bank Act;

(G) Energy recovery systems (which may include, but are not limited to, water-to-water, air-to-air and other heat recovery systems); and

(H) Cogeneration systems which produce electricity, as well as steam or other forms of thermal or mechanical energy, and which meet such fuel

efficiency requirements as the Secretary may, by rule, prescribe.

(c) *Reporting and Record Keeping Requirements*

(1) *Reporting.* The State Plan shall contain provisions to assure that a report is submitted to the Secretary on July 1, 1981, and annually thereafter through July 1, 1990. The report shall contain the following information for the twelve-month period ending the preceding April 1, except that the Secretary may waive any of the reporting requirements, in approving the State Plan, for good cause:

(i) Any revision to the list of covered utilities and a list of participating building heating suppliers subject to the State Plan;

(ii) For each covered utility or participating building heating supplier:

(A) The approximate number of eligible multifamily dwelling customers and, if available, the percentage of those customers for whom the utility or heating supplier is the primary heating fuel supplier;

(B) A copy of the Apartment Announcement distributed to eligible multifamily dwelling customers;

(C) The number of eligible multifamily dwelling customers who have requested an audit and the number of requests the utility or participating building heating supplier has fulfilled;

(D) The number and function of people assigned to the covered utility's or participating building heating supplier's program, including part-time employees; and

(E) The costs incurred by the utility or building heating supplier in providing audits under the CACS Program including separately those costs paid by individual customers for services received and those costs paid by all ratepayers.

(iii) The number and nature of complaints by eligible multifamily dwelling customers against the utility which have been handled through the procedures established under § 458.503(d);

(iv) A brief description of the status of activities carried out pursuant to § 458.505 (Qualification Procedures for Auditors) including whether sufficient qualified personnel are available for program needs, the reasons for any shortages and the proposed resolution of any such shortage problem;

(v) The cost to the State of developing and implementing the State Plan; and

(vi) A citation to and brief description of any State or local law or regulation relevant to the State Plan and the status of any proposed State or local legislation or regulation relevant to the State Plan.

(2) *Record Keeping.* The State Plan shall contain procedures to assure that the following records are kept for the periods indicated and made available to the Secretary upon request, except that the Secretary may for good cause waive any of the record keeping requirements in approving the State Plan:

(i) The name and address of each eligible multifamily dwelling customer who receives a program audit, which shall be kept for ten years from the date of such program audit;

(ii) A copy of the data collected during the audit, and a copy of the estimates of costs and savings presented to the customer, which shall be kept for ten years from the date of such program audit;

(iii) The amount and cost of fuel purchased each month or other billing period for the twelve months following each program audit for each eligible multifamily dwelling customer, which shall be kept for two years from the date of such program audit, and

(iv) The names of the invididuals who have met the qualification criteria described in § 458.505. These records shall be updated within a reasonable period of time following each implementation of the qualification procedures.

(d) *Complaints Processing Procedures.*

The State Plan shall contain procedures for resolving complaints against utilities. The complaint resolution procedures should use the procedures established under the RCS Program, § 456.315, as much as practicable.

§ 458.504 Addition of measures by states.

(a) The State may require or allow covered utilities participating building heating suppliers to offer services for State measures in conjunction with the CACS Program subject to the approval of the Secretary in the State Plan.

(b) The Secretary may approve a State measure to be offered in conjunction with the CACS Program if:

(1) The measure is an energy conservation measure;

(2) The measure is a renewable resource measure; or

(3) The State Plan contains the following: (i) Information demonstrating that the measure effectively saves nonrenewable energy sources and does not increase the consumption of oil;

(ii) A method for adequately ensuring safe installation and use of such measure;

(iii) Adequate assurances that offering such measure in conjunction with the CACS Program will not adversely affect the environment, competition or the CACS Program in the State and will not increase the cost to an eligible customer of a program audit under the CACS Program; and

(iv) An adequate analysis of the effects on the environment of offering the State measures in conjunction with the CACS Program.

(c) The State plan shall describe how the State measures are to be offered in conjunction with the CACS Program.

§ 458.505 Auditor qualification requirements.

(a) The State Plan shall provide for an auditor training course. At a minimum, course content shall assure that a successful trainee will have gained the following: (1) A general understanding of the three types of heat transfer and the effects of temperature and humidity on heat transfer;

(2) A general understanding of multifamily construction terminology and components;

(3) A general knowledge of the operation of the heating and cooling systems used in the multifamily building;

(4) A general knowledge of the different types of each applicable program and State measure, of the advantages, disadvantages and applications of each;

(5) The capacity to conduct the audit as required in § 458.503(b), including: (i) A familiarity with the energy conserving practices and energy conserving operation and maintenance procedures required to be audited for;

(ii) The capability to determine the applicability of the program measures and any State measures; and

(iii) A proficiency in the pertinent auditing procedures, as prescribed in or pursuant to the State Plan, for each applicable program and State measure.

(6) Where a furnace efficiency modification is an applicable program measure, and the source of fuel for the existing furnace or boiler is either gas or oil, a working ability to calculate the steady state efficiency of the furnace or boiler as required by § 458.503(b)(1)(vii);

(7) Where a renewable resource measure, other than wind energy devices, is an applicable program or State measure, an understanding of the nature of solar energy and its multifamily dwelling applications, including: (i) Insulation,

(ii) Shading,

(iii) Heat capture and transport, and

(iv) Where appropriate, heat transfer for hot water and space heating.

(8) Where a wind energy device is an applicable program or State measure, an understanding of the nature of wind energy and its multifamily dwelling

applications, including: (i) Wind availability,

(ii) Effects of obstruction,

(iii) Wind capture,

(iv) Power generation, and

(v) Interfaces with residential and utility power lines.

(9) A general understanding of the applicability of air-to-air, water-to-water and air-to-water heat exchangers and the criteria for cost-effective applications.

(10) A general knowledge of pneumatic, electrical and hydronic control systems and their applicability to automatic energy control systems.

(11) The ability to recognize the compatibility between process heat loads and electrical loads in the eligible building population and to recognize when the criteria for potential applicability is appropriate.

(12) A general knowledge of lamps and lighting systems used in multifamily dwellings.

(13) A general knowledge of the functions and operating characteristics and the various modes and symptoms of failures of steam traps in multifamily dwellings.

(14) Where an automatic energy control system is an applicable measure, an understanding of the relationships between heating, air-conditioning and lighting systems and the common elements which require system automation.

(b) Each State may determine whether to teach the course in the entirety or in parts, and the State Plan shall indicate how each subject in § 458.505(a) will be taught.

(c) The State Plan shall specify how course content whall be monitored to ensure compliance with the requirements of § 458.505(a) above.

(d) The State Plan shall describe the following: (1) Length of training program,

(2) Name of entity which developed the curriculum,

(3) Subject areas covered,

(4) How trainers shall be selected,

(5) An estimate of how many trainers will be required, and

(6) A description of the facilities and materials to be used.

§ 458.506 Procedures for investigating and enforcing compliance with the State Plan.

(a) The State Plan shall require each covered utility and participating building heating supplier to comply with the State Plan.

(b) The State Plan shall contain adequate procedures for investigating and enforcing compliance with the State Plan by covered utilities and participating building heating suppliers.

(c) The State Plan shall cite and describe the existing or proposed State authority(ies) for such investigation and enforcement, including authorities with respect to any nonregulated utility covered in the State Plan.

(d) The State Plan shall identify the State agency(ies) responsible for such investigation and enforcement and shall include a description of the resources available for such investigation and enforcement.

§ 458.507 Coordination.

(a) *Other Programs.* The State Plan shall provide procedures to ensure effective coordination between its Commercial and Apartment Conservation Service Program as described in the State Plan and all local, State and Federal energy conservation programs within and affecting the State which shall include, but not be limited to: (1) The Residential Conservation Service Program;

(2) The Federal Energy Extension Service;

(3) The Basic State Energy Conservation Program of the Department of Energy; and

(4) The Supplemental State Energy Conservation Program of the Department of Energy.

(b) *Energy Suppliers.* If the State Plan permits coordination of the Commercial and Apartment Conservation Service Program among energy suppliers in the State then it shall provide procedures describing how such coordination may occur and ensuring that no collusion on prices charged to eligible customers will occur.

(c) *State Regulatory Authority.* If the Lead Agency is not the State regulatory authority, then the State Plan shall describe how the Lead Agency shall coordinate the implementation of the State Plan with the State Regulatory Authority.

(d) The State Plan may provide for coordination between utilities and building heating suppliers to ensure that a utility is not required to conduct an energy audit of a multifamily dwelling which has been audited previously pursuant to this section or pursuant to Chapter II, 10 CFR Part 455 (Grant Programs for Schools and Hospitals and Buildings Owned by Units of Local Government and Public Care Institutions).

§ 458.508 Accounting and payment of costs.

(a) *Accounting.* The State Plan shall require, and may permit with respect to costs of revenues directly associated with State measures, that covered utilities use the following accounts and procedures: (1) All amounts expended or received by a covered utility which are attributable to the CACS Program, including any penalties paid under Subpart F (Federal Standby Authority) shall be accounted for on the books and records separately from amounts attributable to all other activities of the covered utility.

(2) Covered utilities subject to the jurisdiction of the Federal Energy Regulatory Commission (FERC) shall utilize the Uniform System of Accounts as prescribed in Title 18, CFR Parts 101, 104, 201 and 204. Covered rural electric cooperatives shall utilize the Uniform System of Accounts as prescribed by the Rural Electrification Administration (REA) in Title 7, CFR Part 1701, Appendix A. Other covered nonregulated utilties shall adopt accounts within their accounting system with the attributes of the appropriate accounts prescribed by the FERC.

(i) All amounts expended by a covered utility for the CACS Program shall be charged to subaccounts within Account 908, Customer Assistance Expenses, its equivalent or successor, or the appropriate account designated specifically by FERC or REA for CACS Program expenses. Appropriate records shall be maintained thereunder so as to allow ready identification of costs attributable to the following program elements: (A) Program Information, and

(B) Program Audit;

(ii) Billed income attributable to the CACS Program shall be accounted for in subaccounts within Account 456, Other Electric Revenue (for electric utilities) or Account 495, Other Gas Revenues (for gas utilities), their equivalents or successors, or the appropriate account designated specifically by FERC or REA for Program billed income.

(b) *Payment of Costs.* The State Plan shall require that covered utilities treat cost as described below and shall describe how the costs described in this section will be treated.

(1) All amounts expended by a covered utility for the Apartment Announcement, the Tenant's Information Package, and all public education and program promotion directly related to providing information about a utility's multifamily dwelling CACS Program shall be treated as a current expense of providing utility service and be charged to all ratepayers of the covered utility in the same manner as other current operating expenses of providing such utility service.

(2) That all other amounts expended by a public utility to carry out the provisions of this title, are recovered in the manner specified by the State

Regulatory Authority which has ratemaking authority over such utility (or in the case of a nonregulated utility in the manner specified by such nonregulated utility); except that the amount which may be recovered directly from an eligible multifamily dwelling customer for whom the activities described in § 458.503(b) are performed shall not exceed a total of $15 per dwelling unit or the actual cost of such activities, whichever is less; in determining the amount to be recovered directly from customers as provided under this paragraph, the State Regulatory Authority (in the case of a regulated utility) shall take into consideration, to the extent practicable, the customers' ability to pay and the likely levels of participation in the CACS Program which will result from such recovery.

(3) Costs incurred by a covered utility for services carried out by such utility on behalf of the State may be reimbursed by the State.

(c) *Duplication of Audits.* The State Plan shall contain a provision stating that a covered utility need not conduct an energy audit of a multifamily dwelling which has been audited previously pursuant to this Part or pursuant to 10 CFR Part 455 (Grant Programs for Schools and Hospitals and Buildings Owned by Units of Local Government and Public Care Institutions).

§ 458.509 Plans for participating building heating suppliers.

(a) *Requirements.* The procedures for each building heathing supplier program shall be identical to the procedures required for utilities in this Subpart.

(b) *Participation and Withdrawal.* The State Plan, if it includes building heating suppliers, shall include a procedure by which the Governor shall allow a building heating supplier to participate in the multifamily dwelling part of its CACS Program. The State Plan shall also provide for the voluntary withdrawal of participating building heating suppliers from the multifamily dwelling part of its CACS Program.

(c) *Waiver of Requirements.* The State Plan shall contain a procedure by which the Governor may waive for any participating building heating supplier any requirement of the State Plan, except those listed below, upon a demonstration to the Governor's satisfaction that the resources of such supplier do not enable it to comply with the particular requirement. The requirements which the Governor shall not waive with respect to any building heating supplier who chooses to participate in the program are those established according to: (1) Section 458.506 (Procedures for Investigating and Enforcing Compliance with the State Plan);

(2) Sections 458.503(b)(1)(iii)–(vii) (Accuracy of Auditing Procedures), for those measures for which a participating building heating supplier performs program audits for its eligible multifamily dwelling customers;

(3) Section 458.505 (Auditor Qualification Requirements); and

(4) The following reporting and record keeping requirements: (i) Section 458.503(c)(1)(i);

(ii) Section 458.503(c)(1)(ii), except that the Governor may waive 458.503 (c)(1)(ii)(E) concerning the accounting of program costs; and

(iii) Section 458.503(d) (Record Keeping).

Subpart F—Federal Standby Authority and Enforcement Provisions

§ 458.601 Scope.

The Subpart specifies the procedures to be followed to ensure that eligible customers receive the services of the audit program when a State or nonregulated utility does not submit an acceptable State plan within the necessary time or fails to implement adequately an approved plan. These procedures are required to be implemented by the Secretary by Section 741 of NECPA. Section 458.602 specifies the conditions under which the Secretary shall invoke standby authority for covered regulated utilities (a) and covered nonregulated utilities (b). Sections 458.603(a) and (b) specify the content of the Federal plans for States and nonregulated utilities, respectively. Section 458.604 specifies the procedures followed by the Secretary if a public utility fails to comply with a Federal standby order issued pursuant to 458.603(a) or (b). Section 458.605 specifies the civil penalties which the secretary may assess and the enforcement provisions.

§ 458.602 Conditions under which Federal standby authority shall be invoked.

(a) The Secretary shall invoke standby authority for States and the TVA if he determines: (1) That a State fails to submit a Plan meeting the requirements of Subparts B, D and E within 180 days after the effective date of these rules or within such additional period as the Secretary allows, or

(2) After notice and opportunity for a public hearing, that an approved State plan is not being adequately implemented in a State.

(b) The Secretary shall invoke standby authority for non-regulated utilities if he determines: (1) That a nonregulated utility fails to submit a plan meeting the requirements of Subparts C, D and E within 180 days after the effective date of these rules or within such additional periods as the Secretary allows, or

(2) After notice and opportunity for a public hearing, that an approved plan is not being adequately implemented by a covered nonregulated utility.

§ 458.603 Procedures for Federal standby planning process.

(a) *For States.* When the Secretary determines that one of the conditions specified in § 458.602(a) exists: (1) The Secretary shall promulgate a Plan which meets the appropriate requirements of Subparts B, D and E of this part and which is applicable to each covered regulated utility in the State;

(2) The Secretary shall, by order, require each covered regulated utility in the State to carry out a CACS Program, which meets the requirements of the plan promulgated pursuant to § 458.603(a)(1), within 90 days of the issuance of the order; and

(3) If the State had an approved plan which included nonregulated utilities, the Secretary shall take the actions described in § 458.603(b) with respect to such nonregulated utilities.

(b) *For Nonregulated Utilities.* When the Secretary determines that one of the conditions specified in § 458.602(b) exists: (1) The Secretary shall, by order, require the covered nonregulated utility to promulgate a plan which meets the requirements of Subparts C, D and E of this part; and

(2) The Secretary shall, by order, require such nonregulated utility to carry out a CACS Program, which meets the requirements of the plan promulgated pursuant to paragraph (1) of this section, within 90 days of the issuance of the order.

§ 458.604 Failure to comply with orders.

If the Secretary determines that any covered utility to which an order has been issued pursuant to § 458.603 (a) or (b) has failed to comply with such order, the Secretary may file a petition in the appropriate United States district court to enjoin such utility from violating the order.

§ 458.605 Enforcement provisions.

(a) Any covered utility which violates any requirement of a plan promulgated under § 458.603(a)(1) or § 458.603(b)(1) or which fails to comply with an order under § 458.603(a)(2), § 458.603(a)(3) or § 458.603(b)(2) within 90 days from issuance of such order, shall be subject

to a civil penalty of not more than $25,000 for each violation.

(b) Each day that such violation continues shall be considered a separate violation.

(c) A civil penalty under this section shall be assessed by an order of the Secretary.

(d) Before issuing an order assessing a civil penalty against any person under this section, the Secretary shall provide to such person notice of the proposed penalty. The notice of the proposed penalty shall inform the person of the opportunity to make an election, in writing, within 30 days after receipt of the notice. The election involves deciding whether to have the procedures of § 458.605(f) apply, in lieu of the procedures in § 458.605(e) with respect to the assessment of a civil penalty.

(e)(1) Unless the election described in § 458.605(d) is made within 30 calendar days after receipt of the notice given under § 458.605(d) the Secretary shall assess the penalty, by order, after a determination of violation has been made on the record. Such determination of violation shall be made after an opportunity has been afforded for an agency hearing pursuant to Section 554 of Title 5, United States Code, before an administrative law judge appointed under Section 3105 of Title 5, United States Code. The assessment order shall include the administrative law judge's findings and the basis for such assessment.

(2) Any person against whom a civil penalty is assessed under this subsection may, within 60 Calendar days after the date of the order of the Secretary assessing the penalty, institute an action in the United States court of appeals for the appropriate judicial circuit for judicial review of such order in accordance with Chapter 7 of Title 5, United States Code. The court shall have jurisdiction to enter a judgement affirming, modifying, or setting aside, in whole or in part, the order of the Secretary, or the court may remand the proceeding to the Secretary for such further action as the court may direct.

(f)(1) In any case where the procedures of this subsection have been elected, as described in § 458.605(d) the Secretary shall assess such penalty by order. The order shall be made not later than 60 calendar days after the alleged violator's date of receipt of notice of the proposed penalty § 458.605(d).

(2) If the civil penalty assessed by order under § 458.605(f)(1) has not been paid within 60 calendar days after the assessment order was made, the Secretary shall institute an action in the appropriate district court of the United States for an order affirming the assessment of the civil penalty. The court shall have authority to review de novo the law and the facts involved, and shall have jurisdiction to enter a judgement enforcing, modifying, and enforcing as so modified, or setting aside in whole or in part, such assessment.

(3) Any election to have this Subsection apply may not be revoked, except with the consent of the Secretary.

(g) If any person fails to pay an assessment of a civil penalty after it has become a final and unappealable order under § 458.605(e), or after the appropriate district court has entered final judgement in favor of the Secretary under § 458.605(f), the Secretary shall recover the amount of such penalty in any appropriate district court of the United States. In such action, the validity and appropriateness of the respective final order or judgement imposing the civil penalty shall not be subject to review.

(h) Notwithstanding the provisions of Title 28, United States Code, or of Section 502 of the Department of Energy Organization Act, the Secretary shall be represented by the General Counsel of the Department of Energy (or any attorney or attorneys within the Department of Energy designated by the Secretary) who shall supervise, conduct, and argue any civil litigation to which this section applies (including any related collection action) in a court of the United States or in any other court, except the Supreme Court. However, the Secretary or the General Counsel shall consult with the Attorney General concerning such litigation and the Attorney General shall provide, on request, such assistance in the conduct of such litigation as may be appropriate.

Appendix: Program Measures by Climate and Category of Building

(a) Climate Zones for Program Measures. In the table of program measures shown in (c) below, the climate zones are as follows:

Climate and Heating Degree-Days

1—0–1000
2—1001–2500
3—2501–3500
4—3501–4500
5—4501–5000
6—5001–6000
7—6001–7000
8—7001 and above

(b) Category of Residential, Multifamily and Commercial Buildings. The program measures are designated in the following tables by categories of residential, multifamily and commerical buildings. These categories are: (1) For energy conservation measures and wind energy devices: (i) "Electricity", which includes all buildings in which the principal source of space heating is an electric resistance heating system;

(ii) "Gas", which includes all buildings in which either natural gas, propane, or butane is the principal space heating fuel;

(iii) "Oil", which includes all buildings in which either No. 2, No. 4, or No. 6 heating oil or kerosene is the principal space heating fuel, and includes all other buildings not included in the categories "Electricity", "Gas" or "Heat Pump";

(iv) "Heat Pump", which includes all buildings in which the principal source of space heating is a electric pump;

(2) For solar domestic hot water systems: (i) "Electricity", which includes all buildings in which electricity is the principal fuel for domestic water heating;

(ii) "Gas", which includes all buildings in which either natural gas, or butane is the principal fuel for domestic water heating; and

(iii) "Oil" which includes all buildings in which No. 2, No. 4, or No. 6 heating oil or kerosene is the principal fuel for domestic water heating, and includes all other buildings not included in the categories of "Gas" or "Electricity";

(3) For active solar space heating systems and for combined active solar space heating and solar domestic hot water systems, "Electricity", "Gas", "Oil", and "Heat Pump" (as in (1) above) with respect to each of the building types.

(4) For passive solar space heating and cooling systems, "all buildings."

(c) (1) The following are program measures for all cateories of buildings in all States and climate zones:

(i) Replacement furnaces or boilers,
(ii) Replacement central air conditioning,
(iii) Caulking and weatherstripping,
(iv) Duct insulation,
(v) Pipe insulation,
(vi) Water heater insulation,
(vii) Heat reflective and heat absorbing window or door material,
(viii) Clock thermostats,
(ix) Passive solar space heating and cooling systems,
(x) Steam/condensate pipe insulation,
(xi) Automatic energy control systems,
(xii) Equipment associated with automatic energy control systems,
(xiii) Energy recovery systems,
(xiv) Cogeneration systems.

(2) Devices associated with electric load managment techniques are program measures for all categories of buildings if the local electric utility offers a rate which relects any differences in the

utility's cost-of-service (either energy or demand costs) between peak and off-peak periods.

(3) Furnace replacement burners (oil). Furnace replacement burners (oil) are program measures for the category "oil" in all States and climate zones.

(4) Flue opening modifications. Flue opening modifications are program measures for the category "gas" in all States and climate zones.

(5) Electrical or mechanical ignition systems. Electrical or mechanical ignition systems are program measures for the category "gas" in all States and Climate zones.

(d) Table of Program Measures by State. All other program measures are displayed in the following table organized by State.

Part XIV

Department of Education

Office of Elementary and Secondary Education

Asbestos Detection and Control: Local Educational Agencies: Asbestos Detection and State Plan: State Educational Agencies; Final Regulations

DEPARTMENT OF EDUCATION

Office of Elementary and Secondary Education

34 CFR Parts 230 and 231

Asbestos Detection and Control: Local Educational Agencies; Asbestos Detection and State Plan: State Educational Agencies

AGENCY: Department of Education.

ACTION: Final regulations.

SUMMARY: The Secretary of Education issues these regulations to implement the Asbestos School Hazard Detection and Control Act of 1980. These regulations establish procedures to make available Federal grants to assist local educational agencies (LEAs) and State educational agencies (SEAs) in the identification of asbestos hazards in school buildings and Federal interest-free loans to LEAs to correct those hazards.

EFFECTIVE DATE: February 17, 1981.

FOR FURTHER INFORMATION CONTACT: Dr. Herman Goldberg, U.S. Department of Education, Room 2079, FOB-6, 400 Maryland Avenue, SW., Washington, D.C. 20202. Telephone: (202) 245-8094.

SUPPLEMENTARY INFORMATION: Regulations to implement the Asbestos School Hazard Detection and Control Act of 1980 (the Act) were published as a notice of proposed rulemaking (NPRM) in the **Federal Register** on September 17, 1980 (45 FR 61950). The purposes of the Act and the major provisions of the proposed regulations were outlined in the preamble to the NPRM.

The Department of Education received a number of comments from the public on those proposed regulations. A summary of the comments and the Secretary's responses, including changes made in the regulations, is attached as Appendix F to this document.

Members of the Asbestos Task Force, an advisory body established in accordance with the Act, played a significant role in reviewing the regulations and the comments, particularly with regard to the scientific procedures for asbestos detection and control. The Environmental Protection Agency, the source of many of those procedures and a member agency of the Task Force, was also helpful to the Secretary in preparing the Secretary's responses to comments requiring scientific expertise.

Members of the Task Force suggested a number of changes in the proposed regulations that reflect their scientific and technical expertise in asbestos-related activities. These changes, which were adopted by the Secretary, are summarized below.

1. The statutory definition of "imminent hazard to the health and safety," which was paraphrased in the proposed regulations, has been changed. The Task Force believes that the change will make the definition more precise scientifically and, thus, less confusing to school districts.

2. The statutory term "likelihood of leakage of asbestos fibers," which appeared in several sections of the proposed regulations, has been changed to read "likelihood of *release* of asbestos fibers." The Task Force believes that the revised language is more precise and more in keeping with current usage.

3. The "Asbestos Exposure Assessment Algorithm," which appeared as Appendix A to the proposed regulations, has been revised. The Task Force believes that a less rigid system for guiding school districts in evaluating the health risks associated with the likelihood of release of asbestos fibers is preferable. The new document, entitled "Guidance System for Assessing Exposure to Asbestos," appears as Appendix B to these regulations. A more detailed summary of the changes made to the original algorithm is contained in the introduction to the new document.

4. A new paragraph has been added to § 230.43 ("What standards does a grantee apply in determining the qualifications of a contractor to carry out an asbestos detection program?"). The Task Force believes this new paragraph will help a grantee avoid a possible conflict-of-interest problem by hiring to carry out its asbestos detection project a contractor different from the one it might later consider hiring to carry out its asbestos control project.

5. The regulations in § 230.11(b) make it clear that loans cannot be provided for management systems. However, the Secretary and the Task Force encourage schools to consider management systems where there are low risks and when corrective actions are not necessary.

At present no funds have been appropriated under the Act for either the Asbestos Detection Program or the Asbestos Control Program. Despite the lack of an appropriation, however, every SEA should note that the Act requires it to have submitted a State plan as described in Part 231 of these regulations by December 15, 1980. Those SEAs that have already submitted their State plans based on the provisions in the NPRM will have an opportunity to amend plans that do not comply with the amended § 231.70(b)(1) of these regulations but will be held accountable for meeting only the statutory requirements.

Citation of Legal Authority

A citation of statutory or other legal authority is placed in parentheses on the line following each substantive provision of these proposed regulations.

Dated: January 9, 1981.

Shirley M. Hufstedler,

Secretary of Education.

(Catalog of Federal Domestic Assistance Number not assigned)

The Secretary amends Title 34 of the Code of Federal Regulations by adding a new Part 230 to read as follows:

PART 230—ASBESTOS DETECTION AND CONTROL: LOCAL EDUCATIONAL AGENCIES

Subpart A—General

Sec.

230.1 Asbestos Detection and Control: Local Educational Agencies.
230.2 Who is eligible for assistance under these programs?
230.3 What regulations apply to these programs?
230.4 What definitions apply to these programs?

Subpart B—What Kinds of Projects Does the Department of Education Assist Under These Programs?

230.10 What kinds of activities are assisted under the LEA Asbestos Detection Program?
230.11 What kinds of activities are assisted under the LEA Asbestos Control Program?

Subpart C—How Does One Apply Under These Programs?

230.20 How does one apply for a grant under the LEA Asbestos Detection Program?
230.21 How does one apply for a loan under the LEA Asbestos Control Program?
230.22 In what circumstances may an LEA apply for a grant or loan greater than 50 percent?
230.23 What records must an LEA maintain?

Subpart D—How Does the Secretary Make an Award?

230.30 How does the Secretary determine the amount of a grant for an asbestos detection project?
230.31 What criteria does the Secretary apply in selecting loan recipients?
230.32 How does the Secretary determine the amount of a loan for an asbestos control project?
230.33 What criteria does the Secretary apply in considering an application for a grant or loan greater than 50 percent?
230.34 What criteria does the Secretary apply if appropriations do not meet the 50 percent levels of assistance?

Subpart E—What Conditions Must Be Met by a Recipient?

Procedures and Standards for an Asbestos Detection Project

230.40 What are the procedures for conducting an asbestos detection project?
230.41 What are the safety measures for conducting an asbestos detection project?
230.42 How does a grantee evaluate the likelihood of release of asbestos fibers?
230.43 What standards does a grantee apply in determining the qualifications of a contractor to carry out an asbestos detection project?
230.44 [Reserved]

Procedures and Standards for an Asbestos Control Project

230.45 What are the procedures for containing or removing asbestos materials?
230.46 What are the procedures for replacing building materials and restoring school buildings?
230.47 What standards does a recipient of a loan apply in determining the qualifications of a contractor to carry out an asbestos control project?
230.48–230.49 [Reserved]

Fiscal Requirements

230.50 What are the rules for repayment of a loan?

Subpart F—What Are the Administrative Responsibilities of a Grantee?

230.60 What report must a grantee submit?

Authority: The Asbestos School Hazard Detection and Control Act of 1980, Pub. L. 96–270 (20 U.S.C. 3601–3611, 94 Stat. 487) and Section 414(a) of the Department of Education Organization Act, Pub. L. 96–88 (20 U.S.C. 3474(a), 93 Stat. 685).

Subpart A—General

§ 230.1 Asbestos Detection and Control: Local Educational Agencies.

The Asbestos Detection and Control Programs for Local Educational Agencies (LEAs) consist of—

(a) *LEA Asbestos Detection Program.* This program provides Federal grants to LEAs to identify asbestos hazards in school buildings; and

(b) *LEA Asbestos Control Program.* This program provides Federal interest-free loans to LEAs to correct imminent hazards to the health and safety of school children and school employees posed by the presence of asbestos in school buildings.

(20 U.S.C. 3604(a)(1)(A); 20 U.S.C. 3605(a)(1) and (2))

§ 230.2 Who is eligible for assistance under these programs?

(a)(1) An LEA [1] is eligible for a grant under the LEA Asbestos Detection Program if that LEA proposes to conduct or has not completed before January 1, 1976 an asbestos detection project that is in conformity with the procedures and standards in §§ 230.40 through 230.42, and 230.43 if applicable.

(2) As used in paragraph (a)(1) of this section and throughout this part, the term "conformity" in reference to any asbestos detection project conducted prior to the effective date of these regulations means substantial conformity.

(b)(1) An LEA is eligible for a loan under the LEA Asbestos Control Program if that LEA—

(i) Has conducted an asbestos detection project in conformity with the procedures and standards in §§ 230.40 through 230.42, and 230.43 if applicable; and

(ii) Proposes to carry out or has not completed before January 1, 1976 an asbestos control project—

(A) In conformity with the procedures and standards in §§ 230.45 through 230.47, as applicable;

(B) Involving more than 2,500 square feet of surface in the school buildings in the LEA; and

(C) Meeting the criteria established by the Secretary under Section 7(a)(2) of the Act. These criteria will be established if appropriations become available for the LEA Asbestos Control Program.

(2) As used in paragraphs (b)(1)(i) and (b)(1)(ii)(A) of this section and throughout this part, the term "conformity" in reference to any asbestos control project conducted prior to the date—which will be published in the Federal Register—when loan applications will be accepted means substantial conformity.

(20 U.S.C. 3604(a)(1)(A) and (b)(3); 20 U.S.C. 3605(a)(2) and (c)(1) and (3))

§ 230.3 What regulations apply to these programs?

(a) In addition to the regulations in this Part 230, the following regulations apply to the LEA Asbestos Detection Program and the LEA Asbestos Control Program:

(1) The Education Division General Administrative Regulations (EDGAR) in 34 CFR Part 77 (General) except the following definitions:

(i) Award.

(ii) Recipient.

(2) The regulations in 34 CFR Part 231 (Asbestos Detection and State Plan: State Educational Agencies).

(b) In addition to the regulations in paragraph (a) of this section, the LEA Asbestos Detection Programs is governed by the regulations in EDGAR, 34 CFR Part 75 (Direct Grant Programs) except the following:

(1) Sections 75.107 and 75.108 (pertaining to applications for new grants under discretionary grant program and under formula grant programs).

(2) Section 75.111 (pertaining to the description of a project).

(3) Section 75.116 (pertaining to the demonstration of capability).

(4) Sections 75.200 through 75.215 (pertaining to the selection of new projects, including selection criteria).

(5) Sections 75.217 through 75.236 (pertaining to selection procedures and procedures for making a grant).

(20 U.S.C. 3474(a))

§ 230.4 What definitions apply to these programs?

The following definitions apply to the LEA Asbestos Detection Program and the LEA Asbestos Control Program:

(a) *Definitions in EDGAR.* The following terms used in this part are defined in 34 CFR 77.1:

Applicant
Application
EDGAR
Grant
Grantee
Nonprofit
Private
Project
Secretary
State educational agency (SEA)

(b) *Definitions that apply to this part.* The following definitions apply to this part:

"Act" means the Asbestos School Hazard Detection and Control Act of 1980 (Pub. L. 96–270).

"Asbestos" means—

(a) Chrysotile, amosite, or crocidolite; or

(b) In fibrous form, tremolite-asbestos, anthophyllite-asbestos, or actionolite-asbestos.

"Asbestos control project" means activities—described in § 230.11—designed to correct imminent hazards to the health and safety of school children and school employees posed by the presence of asbestos in school buildings.

"Asbestos detection project" means activities—described in § 230.10—designed to identify asbestos hazards in school buildings.

"Award" means—

[1] (Note: As used in these programs, the term LEA includes the governing authority of a nonprofit private elementary or secondary school as defined in §230.4(b))

(1) The amount of funds that the Secretary provides to a grantee under the LEA Asbestos Detection Program; or

(2) The amount of funds that the Secretary provides to an applicant for a loan under the LEA Asbestos Control Program.

"Friable" means able to be crumbled, pulverized, or reduced to powder by hand.

"Imminent hazard to the health and safety" means, with reference to asbestos, that the asbestos is contained in building material whose fibers could be released into a school building environment.

"Local educational agency" means—

(1) An LEA as defined in EDGAR, 34 CFR 77.1;

(2) The governing authority of a nonprofit private elementary or secondary school, as defined in Section 11 of the Act; or

(3) A school of an agency of the United States.

"Management system" is a system in which the condition of materials that contain asbestos are monitored to ascertain any changes in the materials that may require direct corrective action.

"Recipient" means—

(1) A grantee under the LEA Asbestos Detection Program; or

(2) An applicant that receives a loan under the LEA Asbestos Control Program.

"School buildings" means—

(1) Structures suitable for use as classrooms, laboratories, libraries, school eating facilities, or school facilities used for the preparation of food;

(2) Gymnasiums or other facilities designed especially for athletic or recreational activities included in an academic course in physical education in the regular curriculum;

(3) Other facilities used for the instruction of students, for research, or for the administration of educational or research programs; or

(4) Maintenance, storage, or utility facilities essential to the operation of any of the facilities listed in paragraphs (1) through (3) of this definition.

"State" means—

(1) A State as defined in EDGAR, 34 CFR 77.1; and

(2) The Bureau of Indian Affairs.

(20 U.S.C. 3610; 20 U.S.C. 2854; 34 CFR 77.1)

Subpart B—What Kinds of Projects Does the Department of Education Assist Under These Programs?

§ 230.10 What kinds of activities are assisted under the LEA Asbestos Detection Program?

(a) The Secretary provides a grant to an eligible applicant under the LEA Asbestos Detection Program for the following activities conducted in accordance with the procedures and standards in §§ 230.40 through 230.42, and 230.43 if applicable:

(1) Making a visual inspection of school buildings to detect friable building materials.

(2) Collecting samples of the friable building materials referred to in paragraph (a)(1) of this section, including insulation materials.

(3) Analyzing the samples referred to in paragraph (a)(2) of this section to determine the presence of asbestos and the level of asbestos content.

(4) Determining the extent of the imminent hazards posed by the asbestos referred to in paragraph (a)(3) of this section by evaluating the likelihood of the release of fibers of that asbestos into the school environment.

(b) If appropriate, the Secretary may also provide funds for administrative costs incurred in the preparation and supervision of the LEA Asbestos Detection Program.

(20 U.S.C. 3604(b)(4))

§ 230.11 What kinds of activities are assisted under the LEA Asbestos Control Program?

(a) The Secretary provides a loan to an eligible applicant under the LEA Asbestos Control Program for the following activities conducted in accordance with the procedures and standards in §§ 230.45 through 230.47, as applicable:

(1) Containing or removing school building materials that contain asbestos posing an imminent hazard to the health and safety of school children and school employees.

(2) Replacing the removed materials referred to in paragraph (a) of this section with other appropriate building materials.

(3) Making repairs the Secretary considers necessary to restore school buildings to conditions comparable to those that existed before the activities in paragraphs (a) (1) and (2) of this section were carried out.

(b) The Secretary does not provide loans for an asbestos management system.

Note.—Although the asbestos control program does not fund asbestos management systems, the Secretary and the Asbestos Hazards School Safety Task Force encourage schools to carefully consider this alternative before engaging in costly control projects. These projects may not be funded if a management system is more appropriate and cost-effective.

(Cross-Reference: 34 CFR 230.31)

(20 U.S.C. 3605(a)(2))

Subpart C—How Does One Apply Under These Programs?

§ 230.20 How does one apply for a grant under the LEA asbestos detection program?

(a) To apply for a grant under the LEA Asbestos Detection Program, an applicant must file with the Secretary an application that—

(1) Meets the requirements of—

(i) EDGAR, 34 CFR 75.109 and 75.110; and

(ii) EDGAR, 34 CFR 75.112 through 75.115;

(2) Contains a description of the methods to be used by the LEA to determine whether hazardous concentrations of asbestos fibers or materials emitting those fibers exist in school buildings under the jurisdiction of the applicant agency;

(3) Contains an estimate of the total cost of the detection project, including whatever detailed descriptions of the costs of each component of the project the Secretary may require;

(4) Designates the party that will conduct the detection project and describes that party's qualifications for conducting that project;

(5) Contains assurances that—

(i) The project will be carried out in conformity with the requirements in §§ 230.40 through 230.42;

(ii) Any party employed to carry out the project will satisfy the competency standards established under § 230.43; and

(6) Contains any other information or assurances the Secretary may require.

(b) An applicant for a grant for an asbestos detection project conducted prior to the date of its application but not completed before January 1, 1976 shall include in its application—in addition to the information required in paragraph (a) of this section—an assurance that it conducted the project in conformity with the requirements in §§ 230.40 through 230.42, and 230.43 if applicable.

(20 U.S.C. 3604(b)(1) and (3); 34 CFR 75.109-110; 34 CFR 75.112-115)

§ 230.21 How does one apply for a loan under the LEA Asbestos Control Program?

(a) To apply for a loan under the LEA Asbestos Control Program, an applicant must file with the Secretary an application containing—

(1) All information the Secretary may require, including information describing—

(i) The nature of the asbestos problem for which the loan is sought;

(ii) The asbestos content of the material to be contained or removed by the LEA, as determined from the results of an asbestos detection project conducted in conformity with the requirements in §§ 230.40 through 230.42, and 230.43 if applicable;

(iii) The methods to be used to contain or remove the asbestos materials, in conformity with the requirements in §§ 230.45 through 230.47, as applicable; and

(iv) Any other pertinent details relating to the control project; and

(2) Assurances that—

(i) The LEA conducting the asbestos control project—

(A) Will notify in writing any employee engaged in any activity to carry out the project of the hazards of working with asbestos; and

(B) Will require each employee to use all appropriate safety procedures to minimize health risks;

(ii) The LEA will not permit a child, or a school employee not engaged in asbestos containment, removal, or replacement activity to be in the vicinity of such activity; and

(iii) The LEA will pay employees engaged in containment, removal, or replacement activities to carry out the asbestos control project, reasonable rates of pay, as established by the Secretary on the basis of prevailing wage rates in the location of that work.

(b) An applicant for a loan for an asbestos control project conducted prior to the date of its application but not completed before January 1, 1976 shall include in its application—in addition to the information required in paragraph (a) of this section—an assurance that it conducted the project in conformity with the requirements in §§ 230.45 through 230.47, as applicable.

(20 U.S.C. 3605(c)(1) and (3))

§ 230.22 In what circumstances may an LEA apply for a grant or loan greater than 50 percent?

(a) If an LEA believes that it has limited resources and would be unable to participate in the LEA Asbestos Detection Program or the LEA Asbestos Control Program without an increased award, the LEA may submit to the Secretary, together with its application, a request for a grant or loan greater than the amount provided by the Secretary under §§ 230.30 or 230.32.

(b) The LEA shall include in its request for an increased award information that substantiates its claim of limited financial resources. This may include the most recently available data describing any applicable factors listed in § 230.33(b).

(20 U.S.C. 3604(a)(2); 20 U.S.C. 3605(a)(3); 20 U.S.C. 3474(a))

§ 230.23 What records must an LEA maintain?

An LEA that applies for a grant under the LEA Asbestos Detection Program or a loan under the LEA Asbestos Control Program shall maintain and make available to the Secretary on request whatever records are necessary to substantiate claims—including cost claims—in the LEA's application.

(20 U.S.C. 3604(b)(1); 20 U.S.C. 3605(c)(1); 20 U.S.C. 3474(a))

Subpart D—How Does the Secretary Make an Award?

§ 230.30 How does the Secretary determine the amount of a grant for an asbestos detection project?

(a) Except as provided in §§ 230.33 and 230.34, the Secretary makes a grant equal to 50 percent of the costs that an eligible LEA incurs or has incurred in conducting an asbestos detection project.

(b)(1) The amount awarded by the Secretary is the Federal share of the grantee's project.

(2) This applies whether Federal funds for the project are paid—

(i) Directly to the LEA;

(ii) To the SEA under 34 CFR Part 231 for reimbursement of funds it has paid to the LEA for this project; or

(iii) To both the LEA and the SEA.

(20 U.S.C. 3604(a)(2) and (a)(1)(B))

§ 230.31 What criteria does the Secretary apply in selecting loan recipients?

In selecting loan recipients under the LEA Asbestos Control Program, the Secretary applies the following criteria:

(a)(1) The likelihood of release of asbestos fibers into a school environment, as determined under the Guidance System for Assessing Potential Asbestos Problems in Schools in Appendix B of these regulations; or

(2) Any other evidence of the extent of the hazards caused by the presence of asbestos.

(b)(1) The extent to which the corrective action proposed by the applicant will reduce the imminent hazards to the health and safety of school children and school employees; or

(2) The extent to which corrective action that the applicant took in a control project not completed before January 1, 1976 was successful in reducing imminent hazards to the health and safety of school children and school employees.

(c)(1) The extent to which the corrective action proposed by the applicant is cost-effective compared to other techniques including management of material containing asbestos; or

(2) The extent to which corrective action that the applicant took in a control project not completed before January 1, 1976 was cost-effective compared to other techniques, including management of material containing asbestos.

(20 U.S.C. 3606(a)(2))

§ 230.32 How does the Secretary determine the amount of a loan for an asbestos control project?

Except as provided in §§ 230.33 and 230.34, the Secretary may make an interest-free loan equal to 50 percent of the costs that an eligible LEA incurs or has incurred in conducting an asbestos control project.

(20 U.S.C. 3605(a)(2))

§ 230.33 What criteria does the Secretary apply in considering an application for a grant or loan greater than 50 percent?

(a) The Secretary may increase the amount of a grant or loan if the Secretary determines that an eligible LEA has limited financial resources and would be unable to participate in the LEA Asbestos Detection Program or the LEA Asbestos Control Program without an increased award.

(b) The Secretary considers one or more of the following factors in making the determination described in paragraph (a) of this section:

(1) A measure of financial need used by the State in which the LEA is located.

(2) The per capita income of the LEA or county.

(3) The local school millage rate compared with the millage rate that the State determines to be reasonable for that LEA or county.

(4) The ratio, expressed as a percentage, of the cost of the project to the total budget of the LEA.

(5) Any other factor that demonstrates that the LEA has limited financial resources.

(20 U.S.C. 3604(a)(2); 20 U.S.C. 3605(a)(3))

§ 230.34 What criteria does the Secretary apply if appropriations do not meet the 50 percent levels of assistance?

(a) If appropriations under the LEA Asbestos Detection Program or the LEA Asbestos Control Program do not meet the levels of assistance described in §§ 230.30 and 230.32, the Secretary determines which applicant LEAs have the greatest financial need for receiving

funds to conduct asbestos detection or control activities.

(b) In making the determination described in paragraph (a) of this section, the Secretary considers:

(1) One or more of the factors in paragraph (b) of § 230.33; and

(2) One or more of the following factors:

(i) The square footage of the structures to be included in the project compared with the total square footage of school buildings in the LEA.

(ii) The known or estimated asbestos content in friable building materials used in the LEA's school buildings.

(iii) The likelihood of release of asbestor fibers in building materials used in the LEA's school buildings.

(iv) The number of persons using the LEA's school buildings who are or will be exposed to asbestos that poses an imminent hazard.

(v) Any other factor that demonstrates the extent of the LEA's financial need for receiving funds to conduct asbestos detection or control activities.

(20 U.S.C. 3611(c); 20 U.S.C. 1226a)

Subpart E—What Conditions Must Be Met by a Recipient?

Procedures and Standards for an Asbestos Detection Project

§ 230.40 What are the procedures for conducting an asbestos detection project?

In conducting an asbestos detection project, a grantee under the LEA Asbestos Detection Program shall adhere to the following procedures:

(a) For making a visual inspection of school buildings, the procedures in Part I of Appendix A.

(b) For sampling friable materials, the procedures in Part II of Appendix A.

(c) For analyzing friable materials to determine their asbestos content, the procedures in Part III of Appendix A.

(d) For evaluating the likelihood of release of asbestos fibers, the procedures referred to in § 230.42.

(20 U.S.C. 3606(a)(1) and (c))

§ 230.41 What are the safety measures for conducting an asbestos detection project?

A grantee under the LEA Asbestos Detection Program shall comply with the best available safety measures for conducting its asbestos detection project. A grantee is considered by the Secretary to be in compliance with this section if that grantee adheres to the following safety measures:

(a) Material is sampled only when the area in which that material is located is not in use.

(b) Only persons needed for sampling are present.

(c) The sampling container is held away from the face during the actual collection of the sample.

(d) The material is not disturbed more than is necessary.

Note.—The Secretary and the Task Force recommend that when persons take bulk samples, they use respirators or other respiratory protection.

(20 U.S.C. 3606(a)(1) and (c))

§ 230.42 How does a grantee evaluate the likelihood of release of asbestos fibers?

A grantee under the LEA Asbestos Detection Program shall apply the Guidance System for Assessing Potential Asbestos Problems in Schools in Appendix B of these regulations to evaluate the likelihood of the release of asbestos fibers into a school environment.

(20 U.S.C. 3606(a)(1) and (c))

§ 230.43 What standards does a grantee apply in determining the qualifications of a contractor to carry out an asbestos detection project?

(a) A grantee under the LEA Asbestos Detection Program may, if it so chooses, select a contractor to carry out any or all of the activities under the grantee's asbestos detection project.

(b) A grantee that selects a contractor to carry out any or all of the activities under the grantee's asbestos detection project shall determine the qualifications of that contractor by applying the following standards:

(1) For making a visual inspection of school buildings, the contractor's knowledge of and ability to comply with the procedures in Part I of Appendix A.

(2) For sampling friable materials, the contractor's knowledge of and ability to comply with the procedures in Part II of Appendix A.

(3)(i) For analyzing friable materials to determine their asbestos content, the contractor's knowledge of and ability to comply with the analytic techniques in Part III of Appendix A.

(ii) In addition, the Secretary encourages the grantee to consult the results of the Asbestos Analytic Laboratory Proficiency Program developed by the Environmental Protection Agency (EPA), which assessed the ability of participating laboratories to analyze materials for asbestos.

(iii) The Secretary makes available to SEAs on request the results of the analytical proficiency program referred to in paragraph (b)(3)(ii) of this section.

(4)(i) For evaluating the likelihood of release of asbestos fibers, the contractor's knowledge of and familiarity with the Guidance System for Assessing Potential Asbestos Problems in Schools in Appendix B of these regulations.

(ii) In addition, the Secretary encourages the grantee to consider the contractor's—

(A) Experience with the guidance system referred to in paragraph (b)(4)(i) of this section; and

(B) Past participation in training programs for using the guidance system or an EPA algorithm.

(iii) The Secretary makes available to SEAs on request training materials and instructional aids to assist contractors in applying the guidance system referred to paragraph (b)(4)(i) of this section.

(c) The Secretary encourages a grantee to consider hiring a different contractor to carry out the grantee's control activities than the one the grantee hired to carry out its detection activities.

(20 U.S.C. 3606(a)(1) and (c))

§ 230.44 [Reserved]

Procedures and Standards for an Asbestos Control Project

§ 230.45 What are the procedures for containing or removing asbestos materials?

(a) A recipient of a loan under the LEA Asbestos Control Program shall comply with the applicable procedures in Appendix C of these regulations if the asbestos control project involves—

(1) Removal of asbestos materials; or

(2) Containment of asbestos materials and there is a significant risk of friable materials being released in the air.

(b) If the asbestos control project involves containment of asbestos materials and there is *no* significant risk of friable materials being released in the air, less restrictive procedures than those in Appendix C may be appropriate. Nevertheless, the Secretary recommends, in this case that the recipient follow the applicable procedures in Appendix C.

(20 U.S.C. 3606(b)(1) and (c))

§ 230.46 What are the procedures for replacing building materials and restoring school buildings?

(a) In replacing building materials and restoring a school building to its previous condition, the recipient of a loan under the LEA Asbestos Control Program shall use materials that do not pose an imminent hazard to the health and safety of school children and school employees.

(b) In conducting replacement and restoration activities, the recipient of a loan shall use the most appropriate method. This method should be the most cost-effective.

(c) In conducting restoration activities, the recipient of a loan under the LEA Asbestos Control Program may use those funds to make only those repairs the Secretary considers necessary to restore a school building to a condition comparable to the condition that existed before the recipient carried out activities in § 230.11(a)(1).

(20 U.S.C. 3606(b)(1))

§ 230.47 What standards does a recipient of a loan apply in determining the qualifications of a contractor to carry out an asbestos control project?

(a) If the recipient of a loan under the LEA Asbestos Control Program selects a contractor to contain or remove asbestos materials as part of the recipient's asbestos control project, the recipient shall determine the qualifications of that contractor on the basis of the contractor's—

(1) Knowledge of and ability to comply with EPA's National Emission Standards for Hazardous Air Pollutants, 40 CFR 61.01 through 61.25;

(2) Knowledge of and ability to comply with the standards in the Occupational Safety and Health Act (OSHA) asbestos regulations, 29 CFR 1910.1001;

(3)(i) Knowledge of and ability to comply with the containment and removal practices described in Appendix C of these regulations.

(ii) In addition, the Secretary encourages the grantee to consider the contractor's experience in carrying out asbestos containment and removal operations and past participation in training programs for proper containment and removal operations.

(iii) The Secretary makes available to SEAs on request training materials and instructional aids to assist contractors in carrying out proper containment and removal operations.

(b) If the recipient of a loan under the LEA Asbestos Control Program selects a contractor to replace building materials and restore school buildings as part of the recipient's asbestos control project, the recipient shall determine the qualifications of that contractor on the basis of the contractor's knowledge of and ability to comply with the requirement of § 230.46(a).

(20 U.S.C. 3606 (b)(2) and (c))

§§ 230.48–230.49 [Reserved]

Fiscal Requirements

§ 230.50 What are the rules for repayment of a loan?

The following provisions apply to an interest-free loan to an LEA under the LEA Asbestos Control Program:

(a) The loan period begins on the effective date of the loan agreement.

(b) The LEA shall repay the loan within the period determined by the Secretary, but not to exceed 20 years.

(c) All other terms and conditions of the loan are contained in a loan agreement that the Secretary prepares and sends to the LEA.

(20 U.S.C. 3605(b))

Subpart F—What Are the Administrative Responsibilities of a Grantee?

§ 230.60 What report must a grantee submit?

In addition to any reports required by EDGAR, 34 CFR Part 75, a grantee under the LEA Asbestos Detection Program shall, not later than 120 days after receiving its grant, file with the Secretary a report that shall include—

(a) A detailed accounting of the funds used to carry out the grantee's asbestos detection project; and

(b) A description of—

(1) The detection activities that the grantee conducted;

(2) The results of the asbestos detection project, incuding any findings of the presence in school building materials of asbestos that poses an imminent hazard to the health and safety of school children and school employees; and

(3) The grantee's plans for correcting any imminent asbestos hazards that it detected.

(20 U.S.C. 3604(c); 34 CFR Part 75)

Note.—Information in the following part—34 CFR Part 231—has a direct bearing on programs carried out under this Part 230. Readers are encouraged to read the following part for that information.

The Secretary amends Title 34 of the Code of Federal Regulations by adding a new Part 231 to read as follows:

PART 231—ASBESTOS DETECTION AND STATE PLAN: STATE EDUCATIONAL AGENCIES

Subpart A—General

Sec.

231.1 Asbestos Detection and State Plan: State Educational Agencies.
231.2 Who is eligible for a grant under the SEA Asbestos Detection Program?
231.3 What regulations apply to this part?
231.4 What definitions apply to this part?

Subpart B—[Reserved]

Subpart C—How Does One Apply for a Grant Under the SEA Asbestos Detection Program?

231.20 How does an SEA apply for a grant under the SEA Asbestos Detection Program?
231.21 In what circumstances may an SEA apply for a grant greater than 50 percent?
231.22 What records must an SEA maintain?

Subpart D—How Does the Secretary Make an Award?

231.30 How does the Secretary determine the amount of a grant under the SEA Asbestos Detection Program?
231.31 In what circumstances may the Secretary award a grant greater than 50 percent?
231.32 What criteria does the Secretary apply if appropriations do not meet the 50 percent level of assistance?

231.72 What records must a State maintain?
231.73 What reports must a State submit?
Appendix A—Procedures for Conducting an Asbestos Detection Project
Appendix B—Guidance System for Assessing Potential Asbestos Problems in Schools
Appendix C—Procedures for Containing and Removing Asbestos-Containing Building Materials
Appendix D—Comments and Responses

Authority: The Asbestos School Hazard Detection and Control Act of 1980, Pub. L. 96-270 (20 U.S.C. 3601–3611, 94 Stat. 487) and Section 414(a) of the Department of Education Organization Act, Pub. L. 96-88 (20 U.S.C. 3474(a), 93 Stat. 685).

Subpart A—General

§ 231.1 Asbestos Detection and State Plan: State Educational Agencies.

The Asbestos Detection Program and State Plan for State Educational Agencies (SEAs) consists of—

(a) *SEA Asbestos Detection Program.* This program provides Federal grants to SEAs to reimburse those States that have made or are making grants to their local educational agencies (LEAs) [1] to conduct asbestos detection projects; and

(b) *State Plan.* The SEA of any State that receives Federal funds for the administration of any applicable program—as defined in Section 400(c)(1)(A) of the General Education Provisions Act—shall submit to the Secretary a plan as described in Subpart H of these regulations. Under the Asbestos School Hazard Detection and Control Act of 1980, the SEA shall

[1] (Note: As used in this part the term LEA includes the governing authority of a nonprofit private elementary or secondary school as defined in 34 CFR 230.4(b))

submit this plan regardless of whether the SEA or its LEAs participate in the SEA or LEA asbestos detection programs.

(20 U.S.C. 3604(a)(1)(B); 20 U.S.C. 3603(a))

§ 231.2 Who is eligible for a grant under the SEA Asbestos Detection Program?

An SEA is eligible for a grant under the SEA Asbestos Detection Program if the State—through the SEA or other appropriate State agency—has made or is making grants to its LEAs to conduct asbestos detection projects—

(a) Conducted on or after the effective date of these regulations in conformity with the procedures and standards in 34 CFR 230.40 through 230.42, and 230.43 if applicable; or

(b) Conducted prior to the effective date of these regulations, but not completed before January 1, 1976, in substantial conformity with the procedures and standards in 34 CFR 230.40 through 230.42, and 230.43 if applicable.

(20 U.S.C. 3604(a) (B); and (b)(3))

§ 231.3 What regulations apply to this part?

In addition to the regulations in this Part 231, the following regulations apply to Asbestos Detection and State Plan: State Educational Agencies:

(a) The Education Division General Administrative Regulations (EDGAR) in 34 CFR Part 75 (Direct Grant Programs) and 34 CFR Part 77 (General) except the following:

(1) Sections 75.107 and 75.108 (pertaining to applications for new grants under discretionary grant programs and under formula grant programs).

(2) Section 75.111 (pertaining to the description of a project).

(3) Section 75.116 (pertaining to the demonstration of capability).

(4) Sections 75.200 through 75.215 (pertaining to the selection of new projects, including selection criteria).

(5) Sections 75.217 through 75.236 (pertaining to selection procedures and procedures for making a grant).

(b) The regulations in 34 CFR Part 230 (Asbestos Detection and Control: Local Educational Agencies).

(20 U.S.C. 3474(a))

§ 231.4 What definitions apply to this part?

The following definitions apply to Asbestos Detection and State Plan: State Educational Agencies:

(a) *Definitions in EDGAR.* The following terms used in this part are defined in 34 CFR 77.1:

Applicant
Application
Award
EDGAR
Grant
Grantee
Nonprofit
Private
Project
Recipient
Secretary
State educational agency (SEA).

(b) *Definitions in 34 CFR Part 230.* The definitions in 34 CFR 230.4(b) (the definitions section of Asbestos Detection and Control: Local Educational Agencies) apply also to this Part 231 except the following:

Award
Recipient.

(c) As used in this part, the term "State plan" or "plan" means the plan referred to in § 231.1(b) and described in Subpart H of these regulations.

(20 U.S.C. 3610; 20 U.S.C. 2854; 34 CFR 77.1)

Subpart B—[Reserved]

Subpart C—How Does One Apply for a Grant Under the SEA Asbestos Detection Program?

§ 231.20 How does an SEA apply for a grant under the SEA Asbestos Detection Program?

(a) To apply for a grant under the SEA Asbestos Detection Program, an SEA must file with the Secretary an application that—

(1) Meets the requirements of—

(i) EDGAR, 34 CFR 75.109 and 75.110; and

(ii) EDGAR, 34 CFR 75.112 through 75.115;

(2) Contains a description of the methods to be used by the LEAs receiving grants from the State to determine whether hazardous concentrations of asbestos fibers or materials emitting those fibers exist in school buildings of the LEA;

(3) Contains an estimate of the total cost of LEA detection projects receiving grants from the State, including whatever detailed descriptions of the costs of the components of the projects the Secretary may require;

(4) Designates the parties conducting LEA detection projects that receive grants from the State, and describes those parties' qualifications for conducting those projects;

(5) Contains assurances that LEA detection projects receiving grants from the State are being carried out in conformity with the requirements in 34 CFR 230.40 through 230.42, and that parties employed to carry out those projects satisfy the competency standards established under 34 CFR 230.43; and

(6) Contains any other information or assurances the Secretary may require.

(b)(1) For asbestos detection projects conducted by its LEAs prior to the effective date of these regulations, but not completed before January 1, 1976, an assurance by the SEA that the LEAs conducted those projects in substantial conformity with the requirements in 34 CFR 230.40 through 230.42, and 230.43 if applicable; and

(2) For asbestos detection projects conducted by its LEAs on or after the effective date of these regulations, an assurance by the SEA that the LEAs conducted those projects in compliance with the requirements in 34 CFR 230.40 through 230.42, and 230.43 if applicable.

(20 U.S.C. 3604 (b)(1); and (b)(3); 34 CFR 75.109–75.110; 34 CFR 75.112–75.115)

§ 231.21 In what circumstances may an SEA apply for a grant greater than 50 percent?

(a) If an SEA believes that it has limited financial resources and would be unable to participate in the SEA Asbestos Detection Program without an increased award, the SEA may submit to the Secretary, together with its application, a request for a grant greater than the amount provided by the Secretary under § 231.30.

(b) The SEA shall include in its request for an increased award information that substantiates its claim of limited financial resources.

(20 U.S.C. 3604(a); 20 U.S.C. 3474(a))

§ 231.22 What records must an SEA maintain?

An SEA that applies for a grant under the SEA Asbestos Detection Program shall maintain and make available to the Secretary on request whatever records are necessary to substantiate claims—including cost claims—in the SEA's application.

(20 U.S.C. 3604(b)(1); 20 U.S.C. 3474(a))

Subpart D—How Does the Secretary Make an Award?

§ 231.30 How does the Secretary determine the amount of a grant under the SEA Asbestos Detection Program?

(a) Except as provided in §§ 231.31 and 231.32, the Secretary makes a grant to an SEA equal to 50 percent of that State's award to its LEAs to conduct asbestos detection projects.

(b) However, the Secretary may restrict the amount of the grant to the SEA to ensure that the Federal share of any LEA asbestos detection project in the State does not exceed the Federal share as specified in 34 CFR 230.30.

(20 U.S.C. 3604(a)(2))

§ 231.31 In what circumstances may the Secretary award a grant greater than 50 percent?

The Secretary may increase the amount of a grant if the Secretary determines that an eligible SEA has limited financial resources and would be unable to participate in the SEA Asbestos Detection Program without an increased award.

(20 U.S.C. 3604(a)(2))

§ 231.32 What criteria does the Secretary apply if appropriations do not meet the 50 percent level of assistance?

If appropriations under the Act do not meet the level of assistance described in § 231.30, the Secretary may determine which applicant SEAs have the greatest financial need for assistance under the SEA Asbestos Detection Program by—

(a) Considering in each of those States the percentage of LEAs that have requested State funds for detecting asbestos hazards; and

(b) Considering—according to one or more of the factors in each of paragraphs (b) (1) and (2) of 34 CFR 230.34—the needs of the LEAs that those SEAs have funded or are funding.

(20 U.S.C. 3611(c))

Subpart E—[Reserved]

Subpart F—What Are the Administrative Responsibilities of a Grantee?

§ 231.50 What report must a grantee submit?

In addition to any reports required by EDGAR, 34 CFR 75, an SEA that receives a grant under the SEA Asbestos Detection Program shall, not later than 120 days after receiving its grant, file with the Secretary a report that shall include—

(a) A detailed accounting of the funds that LEAs have received from the State to conduct asbestos detection projects; and

(b) A description of—

(1) The asbestos detection projects conducted by LEAs with financial assistance from the State;

(2) The results of those asbestos detection projects, including any findings of the presence in school building materials of asbestos that poses an imminent hazard to the health and safety of school children and school employees; and

(3) The plans of the assisted LEAs for correcting any imminent asbestos hazards that those LEAs detected.

(20 U.S.C. 3604(c); 34 CFR Part 75)

Subpart G—[Reserved]

Subpart H—What Is the State Plan Under This Act?

§ 231.70 What must a State plan contain?

An SEA, as described in § 231.1(b)(1), shall submit to the Secretary not later than December 15, 1980, a plan that—

(a) Describes the manner in which the State shall distribute to its LEAs the information required in § 231.71;

(b)(1) Describes the content of the information required in § 231.71(a) and any additional information the State considers desirable to distribute to its LEAs; and

(2) Provides an assurance that the State will continually revise, as necessary, the information described in § 231.71 and distribute the revised information to its LEAs;

(c) Describes the procedures the State will use for maintaining records as required in § 231.72; and

(d)(1) Designates a State agency or other State administrative unit responsible for submitting to the Secretary the reports required under § 231.73; and

(2) Provides an assurance that the designated agency or unit will carry out the duties required under § 231.73.

(20 U.S.C. 3603(a))

§ 231.71 What information must a State distribute to its LEAs?

(a) Not later than March 15, 1981, a State shall distribute to its LEAs information describing—

(1) The asbestos detection and control programs under this Act;

(2) The procedures and standards for conducting asbestos detection projects;

(3) The procedures and standards for conducting asbestos control projects; and

(4) The health hazards associated with exposure to asbestos fibers.

(b) A State that distributes to each of its LEAs a copy of these regulations, including all appendices, is considered by the Secretary to be in compliance with paragraphs (a)(1)–(3) of this section.

(20 U.S.C. 3603(a)(1))

§ 231.72 What records must a State maintain?

(a) A State shall maintain records on every LEA within its jurisdiction concerning the following:

(1) The asbestos detection activities conducted by the LEA.

(2) The presence, if any, of friable building materials containing asbestos in each school building of the LEA.

(3) The asbestos control activities conducted by the LEA. These include any activities related to the—

(i) Containment of asbestos materials;

(ii) Removal of asbestos materials;

(iii) Replacement of asbestos materials with other appropriate building materials;

(iv) The repairs made by the LEA to restore school buildings to conditions comparable to those that existed before the LEA conducted any of the activities listed in paragraphs (a)(3)(i) and (ii) of this section.

(b) A State is considered by the Secretary to be in compliance with paragraphs (a) (1) and (2) of this section if that State maintains a copy of a form filled out by each of its LEAs in compliance with any EPA procedures that require an LEA to record the information in paragraphs (a) (1) and (2) of this section.

(20 U.S.C. 3603(a)(3))

§ 231.73 What reports must a State submit?

(a) The State agency or other administrative unit designated by the State in its State plan (see § 231.70(d)(1)) shall submit to the Secretary reports describing the actions taken by the State in accordance with its plan.

(b)(1) The designated agency or unit shall submit its first report no later than six months after the State submits its State plan.

(2) The designated agency or unit shall submit its subsequent reports every six months after submitting its first report.

(3) The designated agency or unit shall submit its final report no later than June 15, 1982.

(20 U.S.C. 3603(b))

Note.—Information in the preceding part—34 CFR Part 230—has a direct bearing on this Part 231. Readers are encouraged to read the preceding part for that information.

Appendix A—Procedures for Conducting Asbestos Detection Projects

Note.—These procedures originally appeared as 40 CFR 763.3 through 763.5 in proposed EPA regulations published in 45 FR 61987 (September 17, 1980). The Department of Education has made minor stylistic changes in the original procedures.

I. Inspection of School Buildings

LEAs shall visually inspect each school building under their authority to locate all friable materials. This inspection shall include surfaces behind suspended ceilings or other non-permanent structures that may be entered during normal building maintenance or repairs. For further information on inspection procedures,

officials should consult Chapter 4, "Asbestos-Containing Materials in School Buildings: A Guidance Document," Part 1 (EPA No. C00090), which is incorporated by reference. Copies of the document can be obtained by calling 800-424-9065 (in Washington, D.C., call 554-1404). The document is also available for inspection at the Office of the Federal Register Library, Room 8301, 1100 L Street, NW., Washington, D.C. 20408.

II. Sampling Friable Materials

If friable materials are found in a school building, an LEA shall:

(a) Identify each distinct sampling area of friable materials within the school building.

(b) Take at least three samples from locations distributed throughout the sampling area. Sampling locations should not be selected for convenience (ease of reaching the sample) or because the sampler judges the location to be representative. Samples shall be taken using small sealable containers. Samples shall penetrate the depth of the friable material to the substrate.

(c) Label each sample container with a sample identification number unique to the sampling location and building. Officials should consult "Asbestos-Containing Materials in School Building: A Guidance Document," Part 1, Chapter 5, for further information on sampling procedures. The requirement that at least three samples be taken in each sampling area supersedes the recommendation made in the Guidance Document to take one sample per 5,000 square feet of friable material.

"Sampling area" means, within a school building, any area, whether contiguous or not, that contains friable material that is homogeneous in texture and appearance.

III. Analyzing Friable Materials

LEA's shall have all samples of friable material analyzed for asbestos—using Polarized Light Microscopy (PLM), supplemented, if necessary, by X-ray Diffraction—in accordance with "Interim Method for the Determination of Asbestiform Minerals in Bulk Insulation Samples," which is incorporated by reference.

Persons interested in analyzing bulk samples for asbestos can obtain copies of the document by calling 800-424-9065 (in Washington, D.C., call 554-1404) The document is also available for inspection at the Office of the Federal Register Library, Room 8301, 1100 L Street, NW., Washington, D.C. 20408.

A list of laboratories capable of conducting analyses of friable materials can be obtained by calling 800-334-8571, extension 6741. Officials should consult "Asbestos-Containing Materials in School Buildings: A Guidance Document," Part 1, Chapter 6, for further information on analysis of friable materials.

Appendix B—Guidance System for Assessing Potential Asbestos Problems in Schools

I. Introduction

Asbestos fibers may be released within schools from friable materials containing asbestos, leading to exposure of building occupants. A variety of factors may influence the potential for release of fibers. By considering these factors, a school official can determine which friable materials containing asbestos pose the greatest potential to release fibers and, therefore, which materials may require corrective action.

To assist school officials in evaluating health risks, the Education Department and the Task Force has prepared a guidance system for assessing exposure. It must be emphasized that this guidance system does not quantify health risks. It does assist in assessing the potential for contamination. The most important use of this system is to rank several buildings or areas within buildings in order of priority for corrective action.

This guidance system is designed to assist officials to determine not only whether a building has a problem, but, also, which sections of the building have a higher potential for the release of fibers. The system can also be used a number of times within one room, such as a large auditorium, where the content of the material might be the same but the condition of the material changes.

The four factors used in the guidance system are—

(a) Condition of the material;

(b) Proportion of the material exposed;

(c) Friability (very soft to quite hard); and

(d) Total asbestos content.

The guidance system is a numerical combination of these four factors.

The guidance system should be used on friable materials that contain more than 5 percent asbestos. Materials with less than 5 percent asbestos are generally less friable and, therefore, less easily damaged than materials with larger amounts of fiber. A material with less than 5 percent asbestos can usually be assigned a low priority, and may not need corrective action, keeping in mind that the material must be maintained in good condition.

The guidance system presented here is a revision of an earlier draft that has been used by the Environmental Protection Agency (EPA) for the past year. It incorporates a number of changes recommended by persons with extensive experience in using this method.

In order to use this assessment method effectively, evaluators—whether they be school officials or State or local health personnel—should be trained. There is a degree of subjectivity in applying the factors used in the system. To ensure that these factors are uniformly applied, evaluators should visit schools with a range of conditions to become familiar with the various types of materials that may be encountered. Because of extensive evaluating experience, EPA Regional Asbestos Coordinators are able to assist evaluators in the use of the guidance system.

II. Using the Guidance System

Using the guidance system is a two step process: assigning a factor value to each of the four factors (Step A); and then calculating the guidance number (Step B).

Step A. Assigning Values to Each Factor

In each area with friable material containing asbestos, the evaluator must choose the factor score that corresponds to the description best fitting the area. An evaluated area could be an entire building having constant values for each factor, separate rooms, or even sections of one room. For example, an auditorium with a sloping floor might have a section of the ceiling that is accessible and shows marks caused by vandalism, while other sections, beyond reach, remain unmarked. After the evaluator applies the guidance system *specifically to that section of the damaged ceiling*, the evaluator might find that it might be the *only* portion of the ceiling requiring direct corrective action.

Note that for condition of the material, the evaluator assigns only the values 0, 2, or 5; for friability, only 1, 2, or 3. For exposed surface, the evaluator assigns a value between 0 and 4 (it may be a decimal) that is proportional to the percent of the surface exposed. For asbestos content, the evaluator converts the reported mean asbestos concentration to a value between 1 and 3.

Factor One—Condition of Material

This factor is a measure of damage or disruption. Poor condition may be a result of a number of events. These include: everyday use, vandalism, maintenance, building vibration, water damage, or deterioration of the material itself. This damage or deterioration may appear as material delaminating or

separating from the substrate, water spots, gouged out areas, missing pieces of material, or indented areas. The condition shall be scored as follows:

Virtually No Damage or Deterioration: Score 0

The material is intact and shows no signs of deterioration. The material is adhering to the substrate. Essentially there are no missing pieces and no significant water spotting.

Moderate Damage or Deterioration: Score 2

The material is breaking up into layers or beginning to come loose from the substrate. There may be small areas (less than 10% of the total area) where the material is deteriorating. There are signs of accidental or intentional damage that cover no more than 10% of the area.

Extensive Damage or Deterioration: Score 5

Pieces are dislodged, and debris may be evident. Parts of the material may be hanging from the ceiling or may have fallen to the floor. Damage extends over more than 10% of the surface.

Note.—IF FRIABLE MATERIAL CONTAINING ASBESTOS IS WATER DAMAGED, CORRECT THE CONDITION THAT CAUSED THE WATER DAMAGE (e.g. roof leak) BEFORE PROCEEDING WITH ANY CORRECTIVE ACTION.

Factor Two: Proportion of the Material Exposed

The material is exposed if it can be seen by occupants of the area. The material is not exposed if it lies behind a false or suspended ceiling or other barrier that is intact. The exposed surface shall be evaluated as follows:

Estimate the percent of the surface of the friable material containing asbestos that is exposed. Multiply by 4 to convert to the factor score.

(Examples: 25% exposed—Therefore, $0.25 \times 4 = 1.0$; 60% exposed—Therefore, $0.60 \times 4 = 2.40$)

Proportion of the Material Exposed: Score 0–4

Factor Three: Friability

The term friable is applied to material that can be crumbled, pulverized, or reduced to powder by hand pressure. The evaluator must touch the material in order to score friability.

Material containing asbestos can vary in degree of friability. Sprayed asbestos material is generally more friable than trowelled material.

MATERIAL EVALUATED AS NOT FRIABLE NEED NOT BE FURTHER CONSIDERED.

Note.—It is possible to have friable materials with little or no asbestos content. Cellulose, fibrous glass, and other fibers can produce a material that is friable.

Friability shall be evaluated as follows:

Not Friable: Score 0

Low Friability: Score 1

The material can be damaged by hand but with difficulty.

Moderate Friability: Score 2

It is fairly easy to mark, damage, or dislodge the material by hand or to crush or pulverize it by hand. The material can be removed in small or large pieces.

High Friability: Score 3

The material is fluffy in appearance and is soft or spongy to the touch. It may be flaking. It is easy to penetrate the material with the fingers. Almost any brushing or touching of the material causes a visible breaking away or dusting.

Factor Four: Total Asbestos Content

The percentages for all types of asbestos present in a given sample shall be added to determine the total asbestos content.

The asbestos content must be determined by bulk sample analysis. Building records or assumptions are not reliable or acceptable. Only materials with greater than 5 percent asbestos should be evaluated using the guidance system. This cut-off is due to the difficulty of analysis below 5 percent and the uncertainty of establishing percentage of content.

Generally, materials containing less than 5 percent asbestos need not be considered further; however, unusual circumstances, such as extensive damage, may require special consideration.

Asbestos content is scored on a scale of 1 to 3. Convert the mean concentration of asbestos to a score in this range by multiplying the concentration by 2 and adding the result to 1.

(Example: A material has average content of 10% chrysotile-asbestos and 15% amosite-asbestos. The total concentration of asbestos is, therefore, 25%. Convert to a decimal for use in the formula—0.25)

Score = 1 + (0.25 x 2) = 1 + (0.50) = 1.50.
The asbestos content score is 1.50.

Step B. Calculating the Guidance Number

Once scores have been assigned to the individual factors, the evaluator must calculate the guidance number. The number is simply the sum of the first two factors (condition of material and proportion of the material exposed) multiplied by the product of the next two factors (friability and total asbestos content).

Enter the factor numbers in the following table and compute the guidance number—

1. Condition of material:
   No damage, 0
   Moderate damage, 2
   Severe damage, 5, ———
2. Proportion of the material exposed:
   Scale, 0–4 + ———
   Sum (No. 1 + No. 2) = (Sum)———
3. Friability (not friable = 0):
   Low, 1
   Moderate, 2
   High, 3, ———
4. Total asbestos content:
   Scale, 1–3 × ———
   Product (No. 3 × No. 4) = (Product)———
   Guidance No. = Sum (No. 1 + No. 2) × Product of (No. 3 × No. 4) (Guidance No.)———

Example

An 8th grade classroom has been evaluated and found to have the following:

1. Condition of Material: Some of the ceiling material is hanging, and the custodian reports frequently finding clumps of the ceiling material on the floor. Also, the damage covers 25% of the ceiling's surface—Score: 5.

2. Proportion of the Material Exposed: The ceiling material is totally visible and there is no hung ceiling. (100% exposed; $1.0 \times 4 = 4$)—Score: 4.

3. Friability: The material is fairly easy to dislodge and can be crushed by hand—Score: 2.

4. Total Asbestos Content: The analysis of the sample indicates 10–15% chrysotile-asbestos, and 80–85% fibrous glass. (Average the reported asbestos content if a range is given. In this case use 12.5%)

Calculation: $1 + (0.125 \times 2) = 1.25$—Score = 1.25
Guidance No. is: $(5 + 4) \times (2 \times 1.25) = 22.5$

Step C. Interpreting the Guidance No.

The four approaches for dealing with asbestos are—

(1) A management system that monitors the condition of the material (but does not require direct corrective action unless the condition of the material changes);

(2) Enclosure with a containment system to isolate the material behind a solid barrier;

(3) Encapsulation with sealant; and

(4) Removal.

After applying the guidance system, the evaluator shall determine whether a management system or direct corrective action is appropriate. In many cases, the use of a management system to monitor an asbestos condition, prevent material disturbance, and control any necessary disturbance is adequate. In other cases, only some type of direct corrective action is appropriate.

The guidance system does not determine the type of action required. The choice of removal, encapsulation, or enclosure will be determined by a number of other factors as listed in Section III. Removal, encapsulation, and enclosure have advantages and disadvantages that must be considered in each case.

The guidance number can provide guidance for the decision maker. The guidance number is to be used as an indicator for the appropriate approach. The final determination should take into consideration such specific conditions of the building and room as those listed in Section III.

Note.—At present there are no specific guidance numbers that establish criteria to assist school administrators in deciding whether a management program or corrective action program needs to be implemented once asbestos is found. Several members of the Asbestos Hazards School Safety Task Force are conducting a comprehensive analysis of data in order to develop these guidance numbers. When the Task Force completes its analysis, the Secretary will distribute guidance numbers to the appropriate organizations and educational agencies.

The appropriateness of a management program should be reevaluated if the use of the area changes in such a way that damage may increase; e.g., because a more active population uses the space. Also, officials should periodically reconsider the effectiveness of a management program if the condition of the material changes.

III. Other Factors To Be Considered When Deciding Which Approach Is Most Appropriate

A school official will encounter conditions and considerations not explicitly included in the rating system that will influence the action decision. The approach selected will depend on factors not specified in the guidance system. The following is a non-exhaustive list of these considerations and how they may affect the decision:

A. *Number of persons using the area.* This affects likelihood of damage and overall risk because of exposure to the person involved.

B. *Planned renovations and frequency of maintenance and repair.* If renovations are planned or the asbestos is in an area frequently subject to repair work, it may be best to remove the material.

C. *Complexity of surface.* It is difficult to remove friable materials containing asbestos from very complex surfaces. Encapsulation or enclosure may be preferred.

D. *Remaining life of building.* If the building is soon to be demolished or abandoned, good management of the material may be preferred in the interim.

E. *Accessibility.* A highly accessible material should not be encapsulated. A material that is inaccessible (e.g., a very high ceiling)—even though it is totally exposed and has a high asbestos content—might be a candidate for a management approach, rather than direct corrective action, if the material were in good, undamaged condition.

F. *Change in use, activity, and movement.* Increased or changed activity may lead to damage. For example, placing 7th and 8th graders in what had been a kindergarten-through-6th-grade school might make previously inaccessible surfaces vulnerable to damage.

G. *Need to maintain fire rating.* If the friable material containing asbestos is needed to meet fire codes, it cannot be removed without being replaced. Similarly, if it is to be encapsulated, check the fire-retardant characteristics of the sealant.

H. *Need to maintain acoustics.* A material that has acoustic properties may have to be replaced if removed. It may not be appropriate to encapsulate the material since most sealants eliminate the acoustical quality of the material on which they are sprayed.

Some of these factors do not directly affect exposure (e.g., fire rating). However, they will affect the decision to correct a material by limiting the scope of available actions, increasing the cost, etc.

Appendix C—Procedures for Containing and Removing Building Materials Containing Asbestos

These procedures have been developed by the Environmental Protection Agency and represent the best information currently available on controlling the release of fibers from friable materials containing asbestos. The purpose of the procedures is to reduce to the maximum extent possible the risk of contamination of areas of a building adjacent to the area in which asbestos containment or removal activities are being conducted and to provide maximum protection for workers involved in those activities and other users of the building.

I. Introduction

(a)(1) The three methods for containing or removing material containing asbestos are: (i) Encapsulation, in which the material is coated with a bonding agent called a sealant to prevent the release of fibers.

(ii) Enclosure, in which the material is separated from the building environment by impermeable barriers.

(iii) Removal.

(2) Each of these methods can be used separately or in combination with one or both of the others.

(b) In order for encapsulation, enclosure, or removal to reduce imminent hazards to the health and safety of school children and school employees, the work must be performed carefully. Poorly performed work not only creates a risk for persons performing this work, but is likely to increase the risk to students, school employees, and other persons using the building. To insure that the building environment and the outside air are not contaminated and that workers are protected from exposure to asbestos, all procedures for encapsulation, enclosure, or removal must—

(1) Conform to the procedures contained in Section II (of this appendix), General Work Practices;

(2) Conform to the specific work practices contained in the appropriate section of this appendix for the specific control method used. Section III contains work practices for encapsulation. Section IV contains work practices for enclosure. Section V contains work practices for removal;

(3) Comply with OSHA asbestos regulations, 29 CFR 1910.1001; and

(4) Comply with EPA regulations, 40 CFR Part 61, Subpart B, National Emission Standards for Hazardous Air Pollutants (NESHAPS): Asbestos

(c) Persons who perform encapsulation, enclosure, or removal must become familiar with these requirements before taking any action. The OSHA and NESHAPS regulations can be found in "Asbestos-Containing Materials in School Buildings: A Guidance Document," Part 1, which is available by calling 800-424-9065 (in Washington, D.C. 554-1404).

II. General Work Practices

All procedures for containment and removal of asbestos must comply with the following:

(a) *Medical services.* The party responsible for the encapsulation, enclosure, or removal (referred to in these appendices as "the contractor") shall provide medical services to employees as required by OSHA regulations, 29 CFR 1910.1001(j).

(b) *Worker Instruction.* The contractor and its employees shall be instructed, prior to the beginning of the encapsulation, enclosure, or removal, in—

(1) The health hazards of asbestos;

(2) The use of respirators and protective clothing;

(3) Work practices and safety procedures;

(4) Control of the release of asbestos fibers; and

(5) Proper prepation and decontamination of a worksite.

(c) *Materials.* The contractor shall obtain the following materials, which are necessary for any procedure related to the encapsulation, enclosure, or removal of asbestos:

Note.—The following list does not include ordinary construction materials such as lumber and hardware. It also does not include materials that are necessary for one procedure but not the others. These are discussed in the individual sections on encapsulation, enclosure, and removal.

(1) Respirators (see paragraph (d)).
(2) Replacement cartridges for respirators.
(3) Disposable clothing for workers, including headgear and footwear.
(4) Shoes for use in the work area. Workers may not wear the same pair of shoes in the work area as they do in the clean areas of the building.
(5) Duct tape.
(6) Polyethylene sheets (6 mil., and 2 or 4 mil.).
(7) Warning signs. (See OSHA regulations, 29 CFR 1910.1001(g).)

(d) *Respirators.* The contractor shall select the proper type of respirator in accordance with OSHA regulations 29 CFR 1910.1001(d). The contractor shall be able to demonstrate that the type of respirator used by its employees is appropriate for the level of fibers found or expected in the work area, as required by § 1910.1001(d)(2).

(e) *Decontamination area.*

(1) Before beginning the encapsulation, enclosure, or removal, the contractor shall construct a decontamination area to prevent release of fibers to the exterior environment and to protect workers and others from fiber inhalation. This decontamination area must consist of three rooms: (i) A clean room where workers enter and leave the job area.

(ii) A shower for decontamination of workers before they leave the job area.

(iii) A room for removal and storage of contaminated items. This room is referred to in this appendix as the "contaminated room."

(2) If it is possible to use existing rooms in close proximity to the worksite, it may be necessary to construct temporary tunnels, from lumber and plastic, to connect these rooms to the work area. If it is not possible to use existing rooms in close proximity to the worksite, it may be necessary to construct a temporary clean room, shower, and contaminated room, from lumber and plastic, near the work area. Although some innovation is likely to be necessary, the arrangement for the decontamination area must include the following features: (i) There must be one clearly designated route from the clean room through the contaminated room into the work area, and back out. The shower may be used as a segment of the passageway between the clean room and the contaminated room. The doorway between the contaminated room and the work area is the only doorway through which anyone may be allowed to enter the work area; there may not be any other entrance. If there is a doorway directly from the clean room to the contaminated room, it must be used for traffic in that direction only. No one may be allowed to go from the contaminated room to the clean area without first passing through, and using, the shower.

(ii)(A) The contractor shall construct airlocks in any passages between the clean room and the contaminated room. Each airlock must consist of two sets of two plastic sheets: one set at one end of the airlock and the other at the other end, at least two meters away. Each of the sheets must extend from floor to ceiling and be constructed of 2 or 4 mil plastic. The plastic sheets must be hung close together, with one sheet taped along the top of the doorway and down one side and the other taped along the top and down the other side.

(B) The shower should also function as an airlock with a set of two sheets at each entrance. If the shower is the only passage between the clean room and the contaminated room, no other airlocks are necessary.

(iii) The clean room must contain a space where workers can place their street clothes and a space for the storage of clean work clothes, respirators, respirator cartridges, soap, and towels.

(iv) If there are no usable permanent shower facilities, the contractor shall construct a temporary shower. The shower must have a ceiling. The shower must have a container for the disposal of used respirator cartridges. Water from the shower must be pumped to an existing drain in the building or collected for disposal.

(v) The contaminated room must have an area for workers to remove contaminated clothing and shoes and to store contaiminated personal items (such as workshoes and gloves) and contaminated tools and equipment. It must also have containers for disposal of contaminated clothing as contaminated waste (see paragraph (k)).

(vi) Toilets, permanent or portable, must be available in the work area or contaminated room.

(f) *Work area preparation.* Before beginning the encapsulation, enclosure, or removal, the contractor and its employees shall use the following procedures to prevent the release of asbestos fibers from the work area: (1) Clean all movable items—such as furniture and equipment—with damp cloths and store them in a clean area outside of the work area. Clean all immovable items with damp cloths, wrap the immovable items completely in plastic, and secure the plastic with duct tape. Dispose of the cleaning cloths as contaminated waste (see paragraph (k)).

(2) Bring in any large pieces of equipment, such as scaffolds and airless sprayers, that will not fit easily through the airlocks.

(3) Isolate the work area completely from the rest of the building by constructing barriers across all doorways or corridors except those in the decontamination area that are to be used by the workers. Construct the barriers so as to prohibit passage through them. Use 6 mil plastic, and tape the seams securely.

(4) Turn off all heating, ventilation, and air conditioning systems. Seal all heating registers, vents, and air ducts with plastic sheeting and duct tape. Lock windows and seal them with plastic tape. Remove all curtains, blinds, and other window coverings.

(5) Cover the floors with at least one layer of 6 mil plastic sheets. Bring the floor coverings up the walls and attach them with duct tape to the wall coverings approximately two feet above the floor. cover the walls with 2 or 4 mil plastic sheets so that the sheets overlap the floor sheets, and secure them in place with tape.

(6) Turn off all electrical circuits and lock the electrical panels or boxes. If necessary, install temporary lighting.

(7) Post warning signs outside all entrances to contaminated areas of the building as specified in OSHA regulations, 29 CFR 1910.1001(g).

(8)(i) Arrange for air monitoring and inspections as required by OSHA regulations, 29 CFR 1910.1001(f) (air monitoring services should be provided by a reputable laboratory under direct contract to the building owner). At a minimum, have a single environmental sample collected outside the building at the beginning of the project.

(ii) Each day during the encapsulation, enclosure, or removal procedure, collect at least two air samples within the work area and two air samples immediately outside the work area.

(9) Take down light fixtures in the work area. Clean them with damp cloths and remove them from the work area, or—if debris on the fixtures cannot be removed—discard the fixtures as contaminated waste (see paragraph (k)).

(10) If it is necessary to remove a suspended ceiling to reach the materials containing asbestos, carefully take down the ceiling. Clean the ceiling tiles with damp cloths and store them outside the work area, or—if debris on the tiles cannot be removed—dispose of the tiles as contaminated waste (see paragraph (k)).

(g) *Measures for worker protection.* Each worker, and any other person who enters the job site (e.g., an industrial hygienist, an inspector, etc.) shall follow these procedures: (1) In the clean room before entering the work area, remove all street clothing, underwear, and shoes. Put on respirator, then dress in disposable coveralls and headgear (note that it is necessary to put on the respirator before the disposable headgear). Pass through the airlocks into the contaminated room. Then proceed to the work area.

(2) Never remove respirator while in the work area. No one may eat, drink, smoke, or chew tobacco or gum while in the work area.

(h) *Procedures for worker decontamination.* At the end of each work shift and before breaks, workers and any other persons in the work area shall follow these procedures when leaving the work area: (1) Before entering the contaminated room, remove all gross contamination from disposable clothing.

(2) In the contaminated room, remove all clothing and work shoes, leaving on only the respirator.

(3) Proceed to the shower and wet hair, body, and respirator before removing respirator. Complete shower, washing thoroughly with soap and water.

(4) Remove and discard respirator cartridges in the container provided in the shower. Proceed to the clean room. Clean respirator with a disinfectant, dry it, insert new cartridges, and place respirator in a dry, clean plastic bag.

(5) Put on street clothes and shoes or a new set of disposable clothing.

(i) *Corrective action.* Refer to Sections III, IV, and V of this appendix for directions on the specific control procedures being used.

(j) *Procedures for cleaning the work area.*

Note.—The contractor and its employees shall follow personal protection procedures (see paragraphs (g) and (h)) while conducting steps (1) through (7) of this paragraph (j).

(1) Dispose of all scrap and debris from the work area, the contaminated room, and the clean room. Treat this debris as contaminated waste (see paragraph (k)).

(2) Remove all floor and wall coverings except heating and ventilation duct covers, barriers, and airlocks. Dispose of the plastic and other materials as contaminated waste.

(3) Wet-clean—with a damp mop, sponge, or cloth—all floors, walls, and other surfaces—including any furniture and equipment in the work area or contaminated room. Wait 24 hours to allow airborne fibers to settle; during this period allow no ventilation or traffic in the area.

(4) Wet-clean all surfaces again, and again wait 24 hours.

(5) Wet-clean all surfaces once more (EPA recommends that this final cleaning be supplemented by the use of a High Efficiency Particulate Absolute (HEPA) vacuum cleaner).

(6) Visually inspect the entire area to make sure it is clean. If dry wiping of surfaces reveals dust contamination, do further wet-cleaning. The monitoring of air may be required by the State or locality or specified in the contract.

(7) When the entire area is clean, dismantle all airlocks, barriers, and temporary shower facilities. Remove coverings from heating and ventilation ducts. Inspect all ducts, especially the horizontal sections, for debris containing asbestos, and vacuum with a HEPA vacuum or wet-clean the ducts, as necessary. Replace all heating, ventilation, and air conditioning filters, and dispose of old filters as contaminated waste. Dispose of all plastic and lumber as contaminated waste. Remove from the work area all cleaned equipment belonging to the contractor.

(8) Return to the work area furniture and other movable items stored during the encapsulation, enclosure, or removal. Restore electrical and other systems to operation, and return the building to normal use.

(k) *Disposal of contaminated waste.* The contractor and its employees shall follow the procedures in paragraphs (k) (1) through (4) when disposing of asbestos-contaminated waste—including asbestos-containing materials removed from the building structure, lumber and plastic used in barriers and airlocks, debris remaining on the floor, cleaning cloths, and any other contaminated materials.

(1) Place the waste in impermeable containers (EPA recommends that the waste be placed in 6 mil. polyethylene bags and that the bags be placed in sealable fiber drums). The waste containers must be sealed and labeled with warning signs as required by OSHA regulations, 29 CFR 1910.1001(g)(2).

(2) Handle containers carefully so that they do not break. The containers must be taken to the entrance of the work area, cleaned with a damp cloth, and placed in the airlock.

(3) A decontaminated worker shall take the waste containers from the airlock to a loading area for transportation to a disposal site.

(4) EPA recommends that all workers involved in disposal activities wear respirators.

(5) Dispose of the waste in compliance with EPA regulations, 40 CFR 61.22 and 61.25.

(6) Contractors using bags and drums shall observe the following procedures:

(i) If a bag is intact, it may be removed from the drum before disposal, and the drum may be recycled.

(ii) If a drum has been contaminated by leakage from a broken bag inside it, it must be buried with the bags.

III. Work Practices for Removal

These procedures are for wet removal of building materials containing asbestos. Wet removal is the most common removal method. Removal operations using other techniques are also acceptable if the contractor can demonstrate that those techniques are in compliance with EPA and OSHA regulations.

After completing construction of the decontamination area and preparation of the work area, the contractor and its employees shall follow these procedures in removing and disposing of materials containing asbestos:

(a) *The removal process.*

(1) Thoroughly saturate with water the material containing asbestos. EPA recommends the use of water that has been amended with a surfactant, or wetting agent, to increase its penetration and reduce the volume of water required. This surfactant is usually 50 percent polyoxyethylene ether and 50 percent polyoxyethylene ester or the equivalent (such as a low-sudsing soap). It is mixed with water at a rate of one ounce of surfactant to five gallons of water.

(2) Spray the amended water onto the material in a fine mist, using either an airless spray gun set at low pressure or some other low-pressure applicator such as a hand-held pesticide applicator.

(3) To make sure the material is thoroughly saturated, it may be necessary to spray it several times or to spray it once the night before removal is planned and again immediately before removal.

(4) Remove material containing asbestos, using broad-bladed putty knives or any other suitable tools. If any dry areas are exposed during the course of removal, stop scraping immediately and spray the dry material with water. To remove the last of the material containing asbestos, use a wire brush, wet rag, or sponge.

(5) Usually the material containing asbestos is allowed to drop to the ground. If the workers are standing on the ground, they can immediately place

the removed material directly into sealable, impermeable containers. If scaffolding is used, the wet material containing asbestos can be collected in sealable, impermeable containers mounted on the scaffolding. One convenient method involves constructing chutes that lead directly into containers that are also attached to the scaffolding near the floor.

(6) No matter what collection technique is used, the wet material must be placed in sealable, impermeable containers before it dries.

(7) If the material is to remain on the floor for any length of time, it must be periodically resprayed with water to keep it moist.

(8) EPA recommends that 6 mil. plastic bags be used as containers for asbestos waste and that the bags be placed in fiber drums for transportation to the disposal site.

(9) OSHA requires that the filled containers be sealed and warning labels attached. (See 29 CFR 1910.1001(g)(2).)

(b) *The disposal process.*

(1) The contractor shall dispose of containers of asbestos-contaminated waste in accordance with the provisions of paragraph (k) of Section II of this appendix.

IV. Work Practices for Encapsulation

(A) A contractor that encapsulates material containing asbestos in order to reduce imminent hazards to the health and safety of school children and school employees shall use sealants that have been awarded fireproofing ratings of Class "A."

(b)(1) In order to minimize the release of fibers, sealants should be applied with an airless spray gun set at the minimum pressure at which the sealant can be applied.

(2) Sealants that cannot be applied by airless spray shall be applied at the lowest possible pressure to reduce fiber release.

(c) The contractor shall consult with the sealant's manufacturer to learn the recommended coverage rate, number of coats, time allowed between coats, and dilution of sealant, if any.

V. Work Practices For Enclosure

(a) A contractor that encloses material containing asbestos in order to reduce imminent hazards to the health and safety of school children and school employees shall insure that—

(1) The material to be enclosed is not exposed to an air plenum system; and

(2) The barriers constructed to enclose the material are airtight and impermeable.

(b) Installation of an enclosure barrier usually necessitates either penetrating or touching the material containing asbestos. Because this operation is usually performed dry, higher fiber levels than those created during removal operations are usually present and may require more stringent respiratory protection for workers. These requirements are described in OSHA regulations, 29 CFR 1910.1001.

Appendix D—Comments and Responses to Notice of Proposed Rulemaking (NPRM)

These comments and responses are arranged in order of the sections in the NPRM.

§ 230.2 Who is eligible for assistance under these programs?

Comments. One commenter made the following comments: 1. Paragraph (a)(1) of this section refers to projects *conducted* since January 1, 1976, whereas the Act prohibits funding of projects *completed* before January 1, 1976. Also, paragraph (b)(1)(ii) of this section refers to projects *carried out* before January 1, 1976, whereas the Act uses the term *completed.*

2. A provision of the Act states that projects completed before the effective date of the Act must be in substantial conformity with the requirements established by the Secretary for conducting an asbestos detection project. Paragraph (a)(2) of this section, however, changes this provision to apply before the effective date of the *regulations,* and furthermore changes substantial conformity to *substantial compliance.*

3. Paragraph (b)(1)(ii)(B) of this section is vague as to whether the 2,500 square feet minimum applies to the entire LEA or a single school.

4. Paragraph (b)(1)(ii)(C) of this section states that the criteria for determining the minimum asbestos level will be established by the Secretary if appropriations become available for the control program. It would seem preferable to establish those criteria in the one regulations package.

5. Paragraph (b)(2) of this section states that control projects conducted *prior to the date when loans are available* must be in substantial compliance with applicable procedures, whereas the Act refers to projects conducted *prior to the effective date of the Act.* Also, it is unclear what *prior to the date when loans are available* means.

Responses. 1. Paragraph (a)(1) has been changed and now reads: "An LEA is eligible for a grant * * * if that LEA proposes to conduct or has not completed before January 1, 1976 an asbestos detection project * * *." Paragraph (b)(1)(ii) has been changed and now reads: "Proposes to carry out or has not completed before January 1, 1976 an asbestos control project * * *." (Also, paragraph (b) of § 231.2—the analogous section applicable to SEAs—has been similarly changed.)

2. Paragraph (a)(2) has been changed and now reads: "* * * the term 'conformity' in reference to any asbestos detection project conducted prior to the effective date of these regulations means substantial conformity." (Also, paragraph (b) of § 231.2 has been similarly changed.)

The Act itself does not establish the standards and procedures for conducting an asbestos detection project but leaves those requirements for the Secretary to establish in consultation with the Task Force. Those standards and procedures are established in the final regulations. LEAs cannot conform strictly to the standards until the regulations take effect because they will not know what the standards are. Under the Act the Secretary has authority to define conformity with the standards and procedures the Secretary has established. The Secretary has used that authority to establish the "grace period" between the effective date of the Act and the effective date of the regulations.

3. The regulations have been changed. Paragraph (b)(1)(ii)(B) tracks verbatim the language of the Act. The Secretary felt that the only reasonable interpretation of the Act is to apply the minimum to the entire LEA. To remove any doubt, paragraph (b)(1)(ii)(B) now reads "Involving more than 2,500 square feet of surface in the school buildings in the LEA * * *."

4. No change has been made. The Task Force has informed the Secretary that this is an area which calls for extensive analysis based on the scientific and technical expertise of the Task Force. A subcommittee headed by one of the Task Force members is expected to review this area and make recommendations to the Secretary. The scientific information necessary to establish the criteria referred to in paragraph (b)(1)(ii)(C) is currently incomplete.

5. The regulations have been clarified. The comment on paragraph (b)(2) does not take into account the language of the Act. Section 6(C)(3) of the Act reads: "No loans may be made * * * for projects * * * which commenced before the *availability of loans under the loan program* unless * * * any work completed by the applicant has been carried out in substantial conformity * * *." (emphasis ours). The Secretary interprets the underscored phrase to mean the date—published in the Federal

Register—when applications for loans will begin to be accepted. For clarity, paragraph (b)(2) has been changed to read" * * * [t]he term 'conformity' in reference to any asbestos control project conducted prior to the date—which will be published in the **Federal Register**—when loan applications will be accepted means substantial conformity."

Comment. One commenter suggested that the regulations should make assistance under these programs available to universities, colleges, and public meeting places, as well as schools.

Response. No change has been made. The Act, which is concerned with the particular vulnerability of children to environmentally induced illnesses, authorizes funds for these programs in elementary and secondary schools only.

Comment. One commenter felt that the 2,500- square-foot minimum surface amount for a project's eligibility under the LEA Asbestos Control Program discriminates against persons exposed to asbestos found in surface areas that do not meet the minimum square footage.

Response. No change has been made. The 2,500-square-foot minimum is a statutory requirement, which the Secretary is unauthorized to change. The legislative history explains that the reason for the minimum square footage is that school districts are believed to be able to support the costs of very small projects without Federal assistance.

§ 230.4 What definitions apply to these programs?

Comments. One commenter made the following comments on the definitions in paragraph (b):

1. "Asbestos detection project." According to the legislation, detection encompasses more than just the testing of building materials.

2. "Imminent hazards." The term "to the health and safety" was deleted. Also, the Act gives the Secretary the authority to establish additional standards to further interpret this definition, yet this authority was not exercised.

3. "Local educational agency." The regulations use the term "governing body," whereas the Act uses "governing authority." Also, the definition should repeat Section 11 of the Act rather than incorporate it by reference.

4. "School buildings." the regulations add the word "indoor" before "facilities."

5. "State." The regulations should repeat the EDGAR definition rather than incorporate it by reference.

6. The Office of Overseas Schools, which is included in the definition of "State" in the law, is omitted in the regulations.

Responses. 1. The regulations have been changed and now read: "* * * activities—described in § 230.10—designed to identify asbestos hazards in school buildings."

2. The regulations have been changed and now read: "Imminent hazards to the health and safety * * *." The Secretary feels that the definition is satisfactory and that there is no need at this time to establish additional standards to interpret the definition further.

3. The regulations have been changed and now read: "* * * the governing authority * * *." The reference to Section 11 of the Act is not meant to incorporate it by reference, but, rather, to highlight to the reader that the statute mandates the expansion of the traditional definition of an LEA to include nonprofit private schools.

4. The regulations have been changed and now read: "Gymnasiums or other facilities * * *."

5. No change has been made. The EDGAR document was compiled with the intention that it was to be read in conjunction with most grant programs operated by the Department. To incorporate the relevant provisions of EDGAR into all of the Department's grant regulations, including these, would result in very bulky documents and needless duplication. Therefore, the Secretary's general policy, in most instances, is not to reprint relevant EDGAR provisions and definitions in the Department's regulations.

6. No change has been made. The Office of Overseas Schools in the Department of Defense (now called the Office of Dependents' Education) would not qualify as a State under the statute either for purposes of the SEA Asbestos Detection program or the State plan. Therefore, it was omitted from the definition of "State."

Comment. One commenter suggested that the definition of "local building" be modified to reflect ownership rather than function, since many schools use for school activities facilities that are not under their jurisdiction.

Response. No change has been made. The Act clearly defines "school building" according to function, not ownership, and the Department is not authorized to alter the plain wording and meaning of the Act.

Comment. Several commenters felt that the definition of "imminent hazards" is too broad.

Response. A change was made. The Secretary and the Task Force carefully reviewed the definition. The Secretary changed the definition to be more scientifically precise and less confusing to school administrators.

§ 230.10 What kinds of activities are assisted under the LEA Asbestos Detection Program?

Comments. One commenter made the following comments:

1. Paragraph (a) of this section limits the visual inspection to seeking out *friable* materials when the Act does not so limit it. Furthermore, paragraph (b) of this section limits sampling to friable materials when the Act does not so restrict it.

2. The Act states that insulation materials, as well as building materials, can be sampled. Why are insulation materials omitted from paragraph (b)?

3. There is no reference, in paragraph (c) of this section, to tests to determine the level of asbestos content, as suggested in the Act.

4. There is no reference in this section to the use of funds for administrative costs, as suggested in the Act.

Responses. 1. No change has been made. The Environmental Protection Agency (EPA) has concluded—based on available data on exposure and health effects—that friable building materials containing asbestos constitute the major hazard to the health and safety of school children. Based on this conclusion, EPA's proposed regulations published simultaneously with the Department's proposed regulations mandate only that friable school building materials be inspected for asbestos.

Since the Act and legislative history direct the Department to cooperate with EPA and to avoid interference with that agency's efforts to correct asbestos hazards, the inspection and sampling requirements in these regulations are limited to friable building materials to be consistent with the requirements and conclusions of EPA. The Task Force has reviewed those requirements and expressed satisfaction with them.

2. Paragraph (b) has been changed and now reads as paragraph (a)(2): "Collecting samples of the friable building materials referred to in paragraph (a)(1) of this section, including insulation materials."

3. Section 230.10(c) has been changed and now reads as § 230.10(a)(3): "Analyzing the samples * * * to determine the presence of asbestos and the level of asbestos content."

4. The regulations have been changed. A provision has been added to § 230.10, which now reads, as new paragraph (b): "If appropriate, the Secretary may also provide funds for administrative costs incurred in the preparation and supervision of the LEA Asbestos Detection Program."

§ 230.11 What kinds of activities are assisted under the LEA Asbestos Control Program?

Comments. One commenter made the following comments:

1. Paragraph (b) of this section is unclear because it suggests, contrary to the Act, that materials that have been contained, as well as removed, should be replaced.

2. Paragraph (c) of this section refers to restoring school buildings to conditions comparable to those that existed before the containment, removal, and *replacement* activities, whereas the Act speaks only to conditions that existed before the containment and removal activities.

3. What factors will the Secretary take into consideration to make this determination of comparable building conditions?

Responses. 1. Section 230.11(b) has been changed and now reads as paragraph (a)(2): "Replacing the removed materials referred to in paragraph (a) * * *."

2. Section 230.11(c) has been changed and now reads as paragraph (a)(3): "* * * conditions comparable to those that existed before the activities in paragraphs (a)(1) and (2) of this section were carried out."

3. No change has been made. The Secretary believes that school districts will have no trouble in determining what are comparable building conditions. In the absence of any indication that school districts need additional guidance in this matter, the Secretary has not established factors for making this determination. If and when the need for establishing these factors is demonstrated, the Secretary will amend the regulations.

§ 230.20 How does one apply for a grant under the LEA Asbestos Detection Program?

and

§ 230.21 How does one apply for a loan under the LEA Asbestos Control Program?

Comments. One commenter made the following comments:

1. The applicable statutory sections concerning the contents of the applications should be repeated instead of incorporated by reference.

2. See comment No. 1 for § 230.2 regarding the use of the term "conducted" rather than "completed."

3. Is a mere assurance, without substantiating information, adequate grounds for the Secretary to determine whether the detection and control activities were in substantial conformity with the Secretary's guidelines?

Responses. 1. Sections 230.20(a)(3) and 230.21(a) have been changed to include the applicable statutory language, with minor wording changes to be consistent with the language in the regulations. Similarly, paragraph (a)(3) of § 231.20, describing the SEA's procedures in applying for a detection grant, has been changed to include the applicable statutory language.

2. Section 230.20(b) has been changed and now reads: "An applicant for a grant for an asbestos detection project conducted prior to the date of its application but not completed before January 1, 1976 shall include in its application * * *."

Section 230.21(b) has been changed and now reads: "An applicant for a loan for an asbestos control project conducted prior to the date of its application but not completed before January 1, 1976 shall include in its application * * *."

3. No change has been made. Although the Act appears to require only "assurances" of substantial conformity (sections 5(b)(3)(B) and 6(c)(3)(B)), it does provide that the applications contain "such other information * * * as the Secretary may require" (sections 5(b)(1)(E) and 6(c)(1)(A)). Therefore, should the Secretary feel that assurances are not sufficient, the Act authorizes the Secretary to require substantiating information. Paragraph (a)(6) of this section in the regulations reflects this statutory authorization.

Comment. One commenter suggested funding options for the LEA's detection projects other than the direct grant program—such as a reimbursement system—to insure that LEAs are funded only for actual work completed.

Response. No change has been made. Except, of course, for work already completed, the Act provides for a funding system in which the Secretary makes grants to eligible LEAs, based on information in their applications, to conduct asbestos detection activities. The regulations implement this funding system. To insure that the grant funds are to be used to pay for the actual costs of the detection project, these regulations (and the Act) require that, within 120 days of the receipt of a grant, an LEA must submit to the Secretary a report that includes a detailed accounting of the funds used to carry out the detection project (§ 230.60).

Comment. Several commenters felt that requiring LEAs to apply directly to the Secretary for assistance for the detection and control programs circumvents the role of the SEA, and suggested that applications be sent to the SEA for review and sign-off.

Response. No change has been made. The Act establishes application procedures that require LEAs desiring assistance to apply directly to the Secretary. Of course, an SEA on its own may choose to require its LEAs first to submit their applications to the SEA to review for compliance with those procedures. Alternatively, an SEA may require that a copy of an LEA's application to the Secretary be sent to the SEA.

Comment. One commenter pointed out that a State statute currently prohibits boards controlling local school districts from obligating their districts to an indebtedness that extends more than one year without voter approval. The commenter expressed concern that, in light of that statute, LEAs in that State would be reluctant to participate in the Asbestos Control Program.

Response. No change has been made. The Secretary is sympathetic with the potential dilemma in that State, as well as in other States that may have similar statutes. Both the Act and the legislative history, however, make it very clear that the control phase of the Asbestos Program is to be funded by long-term, no-interest loans. The Secretary cannot change the method of funding for the control program, as that would subvert the language and intent of the Congress in enacting this law. Of course, the State statute described by the commenter would not prevent the LEAs from participating in the control program if they obtained voter approval for the long-term indebtedness or agreed to repay the debt within one year.

§ 230.22 In what circumstances may an LEA apply for a grant or loan greater than 50 percent?

Comment. One commenter noted that Section 5(a)(2) of the Act pertains to LEAs that would be unable to participate in the detection and control programs *without receiving such increased award,* whereas this section of the regulations refers to LEAs that would be unable to participate in any event.

Response. Section 230.22(a) has been changed and now reads: "If an LEA believes that it has limited resources and would be unable to participate in the LEA Asbestos Detection Program or the LEA Asbestos Control Program without an increased award * * *."

§ 230.30 How does the Secretary determine the amount of a grant for an asbestos detection project?

Comment. One commenter wanted to know why this section omits the statutory language that the Secretary considers recommendations made by

the Task Force before determining the amount of a grant.

Response. No change has been made. There are several provisions in the Act that indicate that certain decisions of the Secretary will be made in consultation with the Task Force. These are matters of internal procedure; they do not affect the rights or duties of the public or grantees. The Secretary's policy is to omit internal procedures of this sort from the Department's regulations. Repeating those procedures in the regulations whenever they are found in the Act would not be of particular value to an SEA or a potential applicant for whom, primarily, the regulations were written.

The lack of specific references to the Task Force should not be taken to mean that the Task Force has been assigned a secondary role in the decision-making process. On the contrary, the Task Force has met regularly, formed into subcommittees, and is playing an active role in the development of these programs and regulations.

Because the law requires the Secretary to promulgate final regulations within 240 days of the effective date of the statute, it was necessary, in order to meet the deadline, to begin drafting the notice of proposed rulemaking (NPRM) before the Task Force was fully organized. The Secretary expected the Task Force to take a major role in revising the NPRM and in considering the public comments. This expectation has proved correct. At their first meeting members of the Task Force expressed gratitude at having before them the published NPRM to use as a working document. The Task Force has closely reviewed the NPRM and made a number of valuable recommendations to the Secretary.

Furthermore, as outlined in the Act, the Secretary will rely heavily on the recommendations of the Task Force in making decisions mandated by statute, such as approval of applications and determining the amount of an award.

§ 230.31 What criteria does the Secretary apply in selecting loan recipients?

Comment. One commenter noted that the criterion in paragraph (a) of this section—the likelihood of leakage as determined under the algorithm—applies only to prospective projects and therefore penalizes already completed projects that are in competition for loans.

Response. The regulations have been changed. Paragraph (a) has been renumbered (a)(1). Paragraph (a)(2) has been added and reads: "Any other evidence of the extent of the hazards caused by the presence of asbestos."

Comment. One commenter felt that the criterion of "cost effectiveness" in paragraphs (c) (1) and (2) is out of place in dealing with health hazards.

Response. No change has been made. The "cost effectiveness" criterion is only one of several criteria that the Secretary considers in selecting loan recipients and does not take precedence over any of the other criteria dealing with the extent of the health hazards. Nevertheless, this criterion is an important consideration in selecting loan recipients, since it would not be sound public policy to fund corrective action that an LEA proposes to conduct, or has conducted, in an unnecessarily costly manner. For example, the Secretary may reasonably not choose to fund a particular applicant that proposes to remove (or has removed) asbestos-containing materials, if, judging from the extent of the health hazards, containment or management would be (or would have been) a more appropriate corrective action.

§ 230.33 What criteria does the Secretary apply in considering an application for a grant or loan greater than 50 percent?

Comment. One commenter felt that the factors listed in paragraphs (c)(2) through (c)(5)—relating to the Secretary's determination of whether an LEA would be unable to participate in the LEA detection or control program without an increased award—are non-financial factors and have nothing to do with an LEA's ability to participate.

Response. The regulations have been changed. The Act reads: "Upon a determination by the Secretary that an applicant has limited fiscal resources and would be unable to participate in the program * * * (without an increased award) * * *." (Section 5(a)(2)) Originally, the Secretary felt that this language meant that an applicant must meet two separate but related tests to qualify for an increased award: (1) Limited fiscal resources and (2) inability to participate in the program due to non-financial factors relating to the nature of the project. On reconsideration the Secretary concluded that the intention was to base this determination on financial factors only. Therefore, paragraph (c) has been eliminated—except for the first factor relating to fiscal need; that has been placed in paragraph (b).

Comments. One commenter felt that this section addressed only those LEAs that have not yet conducted a detection or control project and was concerned that LEAs that have already completed projects would not be eligible for an increased award. Another commenter expressed difficulty in understanding how LEAs that have already completed projects would qualify for an increased award.

Response. No change has been made. The Act does not rule out making increased awards to LEAs that have already completed detection and control activities. The Secretary will consider the same financial factors in this section to determine whether an eligible LEA that has already completed a detection or control project qualifies for an increased award.

Comment. One commenter urged that the section be revised to indicate to what extent the Secretary will consider one or more of the factors listed in paragraph (b) in determining eligibility for an increased award.

Response. No change has been made. The Secretary determines an LEA's eligibility for an increased award on a case-by-case basis, based upon all the information the LEA submits to demonstrate its financial need. The factors listed in paragraphs (b) (1)–(4) are meant to give an LEA some idea of the type of financial information the Secretary looks for, but, as evidenced by paragraph (b)(5), the Secretary considers any demonstration of an LEA's financial need.

§ 230.34 What criteria does the Secretary apply if appropriations do not meet the 50 percent levels of assistance?

Comment. One commenter made several points. Section 230.34 ties the criteria the Secretary applies if appropriations do not meet the 50 percent levels of assistance to the criteria the Secretary applies for making an increased award. Since the Act makes clear that these are two separate issues, separate criteria for this section should be established. Also, most of the factors that this section incorporates by reference from section 230.33 are not relevant to the determination of greatest financial need.

Response. No substantive change has been made. The Secretary recognizes that the two determinations—which LEAs have limited financial resources and would be unable to participate in the program without an increased award, and which LEAs have the greatest need for financial assistance in the event appropriations are insufficient—involve two separate issues. The Secretary also recognizes that, as explained previously, the non-financial factors in proposed paragraphs (c)(2) through (c)(5) of § 230.33 are *not* relevant to the *first* determination.

However, the Secretary does feel that these non-financial factors *are* relevant to the latter determination in § 230.34. This view is based on sound public policy. If funds are not available to meet all needs, the Secretary cannot ignore students' and teachers' health needs in deciding which containment projects should be funded. A very poor school district with a very modest asbestos problem should not be preferred over a school district that is somewhat less poor but has extremely dangerous levels of asbestos in its schools.

This view is also based on language in the Act. The stated purpose of the Act is to reduce health hazards associated with the presence of asbestos. Section 12(c) provides that if funds appropriated under the Act are insufficient, the Secretary shall establish criteria to be used in determining which applicants have the "greatest financial need for receiving funds *under this Act*" (emphasis ours). A district may have great financial need but still not have the greatest need for assistance under the Act. Therefore, the factors in paragraphs (c) (2) through (5), which have been taken out of § 230.33, are retained and renumbered in § 230.34.

§ 230.40 What are the procedures for conducting an asbestos detection project?

Comment. One commenter asked why the Department chose to adopt EPA's proposed standards for conducting a detection project, and how the Department will proceed if the final EPA regulations should be delayed or substantially changed.

Response. The regulations have been changed. As explained in the preamble to the NPRM, the Secretary's reliance on EPA's procedures is part of a larger effort to coordinate requirements and procedures between two agencies, as contemplated in the Act. The Act states, once in connection with the Task Force and once in connection with the Secretary, that the Department should avoid, to the maximum extent practicable, duplicating similar activities undertaken by EPA. The legislative history makes note of the strides that EPA has made in the matters of asbestos detection and removal and states that the Act is not intended to interfere with the current activities of EPA in these matters.

Since EPA not only has published guidance documents on asbestos detection but, also, was in the process of publishing its own proposed regulation on that subject, and since both the Act and the legislative history contemplate coordination between the Department and EPA, it seemed only reasonable that the Secretary initially rely on EPA's technical and scientific expertise.

As indicated, the Task Force has been reviewing those procedures as part of the regulations document and has made recommendations to the Secretary regarding their adoption. Because EPA's regulations are not yet final however, EPA's proposed procedures—along with any modifications made by EPA and the Secretary in consultation with the Task Force—are now adopted as the Secretary's procedures in this section. Therefore, all citations to the proposed EPA regulations have been deleted from these final regulations. Instead, reference is made in this section to Appendix A, in which the procedures adopted from EPA are reprinted in full as the Secretary's procedures. When EPA publishes final regulations, the Secretary, in consultation with the Task Force will consider what, if any, changes in the Secretary's procedures are appropriate.

§ 230.41 What are the safety measures for conducting an asbestos detection project?

Comment. One commenter inquired from what source the Secretary derived the safety measures in this section.

Response. Those measures were taken from recommendations by EPA as reflected in that agency's guidance documents on asbestos detection.

Comment. One commenter felt that the enumerated safety measures in this section should be made mandatory, since the Act requires the Secretary to establish safety measures for the detection program and requires that grantees comply with those measures.

Response. The regulations have been changed. In the NPRM the Secretary was reluctant to adopt the enumerated safety measures recommended by EPA since various jurisdictions may have adopted other and equally effective measures for the safety of workers conducting asbestos detection projects. The section now reads: "A grantee under the LEA Asbestos Detection Program shall comply with the best available safety measures for conducting its asbestos detection project. A grantee is considered by the Secretary to be in compliance with this section if that grantee adheres to the following safety measures: * * *." (Also, the Task Force recommended that paragraph (e)—"The material should be sprayed with a light mist of water to prevent fiber release during sampling"—be omitted since it may not be an effective safety measure.

§ 230.42 How does a grantee evaluate the likelihood of leakage of asbestos fibers?

Comment. One commenter pointed out that the algorithm method of determining the likelihood of leakage is under question, even by members of the Task Force. The commenter inquired how the Secretary will proceed if the algorithm is changed by EPA or repudiated by the Task Force.

Response. The regulations have been changed. The Task Force reviewed the Asbestos Exposure Assessment Algorithm developed by the EPA that appeared as Appendix A to the proposed regulations and was generally satisfied with it. However, members of the Task Force expressed a preference for a less rigid system for guiding school districts in evaluating the health risks associated with the likelihood of release of asbestos fibers. Therefore, the Task Force suggested a number of changes to the original document, including substituting the term "guidance system" for "algorithm." The revised document, entitled "Guidance System for Assessing Exposure to Asbestos," is found in Appendix B of these regulations, with an introduction explaining the major changes made in the original algorithm.

§ 230.43 What standards does a grantee apply in determining the qualifications of a contractor to carry out an asbestos detection project?

Comments. One commenter made the following comments:

1. The standards a grantee uses for determining the qualifications of a contractor to carry out a detection project—knowledge and familiarity with EPA procedures—are too lenient. They should include the ability, manpower, and equipment to carry out these procedures.

2. The regulations should state who conducted the Asbestos Analytic Laboratory Proficiency Program referred to in § 230.43(c)(2).

3. Are the results of the Analytic Proficiency Program currently available? Also, why aren't those materials included in the information a State must distribute to its LEAs under § 231.71?

Responses. 1. Paragraphs (a) and (b) of this section have been changed and now read, as paragraphs (b) (1) and (2): "* * * the contractor's knowledge of an ability to comply with the procedures * * *." Paragraph (c)(1) has been changed and now reads, as paragraph (b)(3)(i): "* * * the contractor's knowledge of and ability to comply with the analytic techniques * * *."

2. Paragraph (c)(2) has been changed and now reads, as paragraph (b)(3)(ii): "In addition, the Secretary encourages the grantee to consult the results of the Asbestos Analytic Laboratory Proficiency Program developed by EPA. * * *."

3. No change has been made. The results of this program are currently available. Requiring that those materials be included in the information a State must distribute to its LEAs under § 231.71 would be going beyond the requirements of the Act and result in increased burdens on the States. As noted in this section, those materials will be made available to the States upon request, and the States may distribute them to their LEAs.

Comment. One commenter suggested that this section be eliminated since grantees have the resources to conduct the detection projects themselves.

Response. The regulations have been changed. In many instances a grantee may have the resources to conduct some or all of the activities under the detection project. However, there may be a number of grantees with limited resources that would prefer to rely on the expertise of a contractor to carry out those activities. Section 230.43 has been changed to make it clear that a grantee is by no means obligated to select a contractor to carry out the detection project.

Comments. Two commenters suggested that the rules should state the minimum qualifications necessary for a grantee LEA to conduct a detection project, particularly in applying the algorithm. They suggested that the regulations should require some sort of formal instruction in the use of the algorithm. One commenter recommended that SEAs should be required to review and audit their LEAs to determine if they are meeting the minimum qualifications.

Response. No change has been made. The Secretary feels that a grantee is able to determine from the information provided in these regulations and the guidance materials prepared by EPA whether it is capable of conducting the detection project itself or whether it should rely on the expertise of a contractor. The Secretary is not inclined to impose on LEAs and SEAs additional requirements and minimum standards not imposed by the Act. However, an SEA is encouraged to conduct workshops or seminars for its LEAs on how to conduct the detection projects, and the Secretary will make available at the SEA's request helpful materials. The SEA, on its own, may choose to audit or review its LEAs to ensure their compliance with the required procedures.

§ 230.45 What are the procedures for containing or removing asbestos materials?

Comment. One commenter felt that LEAs receiving loans for the control program should not have to adhere to the strict standards in this section but, rather, should be given broad flexibility in deciding when and to what extent to institute corrective procedures.

Response. No change has been made. The Act requires the Secretary to establish, by regulation, procedures for containing and removing asbestos in school buildings. Those procedures, for the most part, have been adopted from EPA guidelines that have proved successful in the past. Furthermore, the Asbestos Task Force, which is charged with reviewing those guidelines, is satisfied that the corrective procedures are based on sound scientific principles for eliminating health hazards associated with asbestos.

Comment. One commenter questioned the stringency of provisions in Appendix C and suggested that ED allow less restrictive practices if the party conducting an asbestos control project employs low-pressure encapsulation or enclosure without disturbance of the asbestos-containing materials.

Response. The regulations have been changed. Section 230.45 now indicates that the procedures outlined in Appendix C are recommended guidelines, rather than requirements, in the case of asbestos control projects that involve containment and present no significant risk of releasing friable materials into the air. These procedures represent the best information currently available on controlling the release of fibers from friable materials containing asbestos. They were developed to protect workers and control contamination during remedial operations.

The Secretary and EPA recommend stringent work practices even in the case of containment because even low-pressure spraying of a sealant will release fibers in elevated concentrations. In addition, reports from contractors have noted that friable surfaces, when heavy with a sealant, often separate from their substrates. Stringent working conditions are recommended in the face of such possibilities.

§ 230.46 What are the procedures for replacing building materials and restoring school buildings?

Comment. One commenter was of the opinion that replacement and restoration are two very different types of activities, and, therefore, the procedures for each of those activities should not be the same. Also, the commenter felt that the procedures seem to be the barest minimum and are too vague to provide any guidance to LEAs.

Response. No change has been made. The Secretary recognizes that replacement and restoration are two different, albeit related, activities. However, the procedures established in paragraphs (a) and (b) of this section are equally applicable to both replacement and restoration. The standards set for restoration and replacement are indeed general. The Department has a policy against excessively detailed or unnecessary regulations. The Secretary is not aware of any particular abuses or improper practices that require more specific regulations than those proposed. If and when the need for more prescriptive rules is demonstrated, the Secretary will amend the regulations.

§ 230.47 What standards does a recipient of a loan apply in determining the qualifications of a contractor to carry out an asbestos control project?

Comments. One commenter made the following comments: 1. The EPA emission standards and the worker protection standards of the Occupational Health and Safety Hazards Administration that are cross-referenced in paragraphs (a) (1) and (2) of this section should be reprinted in full.

2. Are the EPA National Emission Standards referenced in paragraph (a)(1) of this section intended to apply to public buildings?

3. Why was the decision made to hold contractors to the OSHA standards in paragraph (a)(2) of this section since those standards were written to apply to asbestos manufacturing and workplace situations?

4. Paragraph (a)(3)(i) of this section should be consistent with the preceding paragraphs to refer to knowledge of and *ability to comply with*, rather than knowledge of and *familiarity*.

5. Are the training materials and instructional aids referred to in paragraph (a)(3)(iii) of this section already available?

6. The standard for selecting a contractor for replacement or restoration activities in paragraph (b) of this section is too lenient.

Responses. 1. The EPA and OSHA standards referenced in paragraphs (a)(1) and (2) have not been reprinted as appendices to these regulations, because Federal Register regulations do not permit combining regulations of several agencies in one document.

2. Yes. The EPA National Emission Standards referenced in paragraph (a)(1) of this section are intended to apply to public buildings.

3. The legislative history makes clear that the Act is not meant to interfere with the efforts that have already been made by other agencies to set standards for asbestos control. Therefore, the Secretary has agreed that OSHA should have the prime authority to set worker protection standards and that the OSHA regulations apply to contractors who undertake to contain or remove asbestos. The Task Force has reviewed the OSHA standards and generally is satisfied with them. The representative from OSHA who sits on the Task Force indicated at the first Task Force meeting that OSHA would try to take a second look at some of its standards to make sure they reflect the most currently accepted thinking on worker protection in asbestos control situations.

4. Paragraph (a)(3)(i) has been changed to read: "Knowledge of and ability to comply with the containment and removal practices * * *."

5. Yes. The training materials and instructional aids referred to in paragraph (a)(3)(iii) of this section are available.

6. No change has been made. See response to comment for § 230.46 concerning the procedures for replacement and restoration.

Comment. One commenter asked several questions: Is there a standard of protection that a contractor must meet for workers on corrective projects? Are there standards for environmental protection in removing and disposing of asbestos? If so, will those standards be used to determine compliance or eligibility for funding?

Response. These regulations provide that, before an LEA can be considered eligible for a loan to conduct its asbestos control project, it must submit an application that meets certain requirements. If an applicant intends to hire a contractor, the application must contain a description of the methods to be used by the applicant to conduct the control project *in conformity with* § 230.47, the standards for determining the qualifications of a contractor. Those standards include the contractor's knowledge of and ability to comply with the EPA National Emission Standards (which include procedures to prevent emissions of asbestos materials in the air) and the OSHA Asbestos Regulations (which contain standards for the protection of private contractors engaged in asbestos-related activities).

A qualified contractor must also, according to § 230.47, have knowledge of and ability to comply with the containment and removal practices in Appendix C of these regulations. That appendix includes a description of methods to protect the worker.

§ 230.50 What are the rules for repayment of a loan?

Comment. One commenter noted that there is no mention in this section that the loans are interest-free.

Response. This section has been changed to read: "The following provisions apply to an interest-free loan to an LEA * * *."

§ 230.60 What report must a grantee submit?

Comment. Several commenters felt that a grantee LEA should be required to submit to its SEA a copy of the report the LEA must submit to the Secretary describing its detection project.

Response. No change has been made. The Secretary has no inclination to impose on grantee LEAs requirements in addition to those mandated by the Act. However, the Secretary will make available to an SEA on request copies of reports that the Secretary receives from the LEAs. An SEA, on its own, may wish to require or request from its LEAs copies of those reports.

§ 231.2 Who is eligible for a grant under the SEA Asbestos Detection Program?

Comment. One commenter asked if an SEA can receive a grant under the SEA Asbestos Detection Program if it does not currently have an "on-going" budget line specifically covering that program under the Act.

Response. According to the Act, an SEA is eligible for a grant under the SEA Asbestos Detection Program if it has made or is making grants to its LEAs to conduct asbestos detection projects. Although the SEA need not have a specific budget line covering this program, it must be able in its post-grant report (§ 231.50) to give a detailed account of the funds it has provided its LEAs to conduct asbestos detection projects.

§ 231.31 In what circumstances may the Secretary award a grant greater than 50 percent?

Comment. One commenter noted that the criteria in this section are so much broader than the related criteria for LEAs in § 230.33.

Response. No change has been made. The factors for making a determination of an LEA's financial need are much easier to specify than those for making the same determination with regard to an SEA. Furthermore, most of the factors listed in § 230.33 are not applicable to an SEA. Since the number of SEAs in the country is so much smaller than the number of LEAs, and since few SEAs will likely claim fiscal need, the Secretary feels it more reasonable to make those determinations on a case-by-case basis. This approach allows an SEA maximum latitude to demonstrate its need for an increased award.

§ 231.50 What report must a grantee submit?

Comment. One commenter noted that paragraphs (a) and (b)(1) of this section seem to require an accounting of *all* State funds granted to LEAs to assist them in conducting their detection projects. The commenter was of the opinion that those paragraphs should require an accounting only of the *Federal* funds granted to SEAs to reimburse them for the grants they made to their LEAs.

Response. No change has been made. It is the intention that the report required from an SEA grantee include an account of not just the federally reimbursed funds, but, rather, of all State funds granted to its LEAs for their detection projects. This is to ensure that the amount awarded the SEA does not exceed the Federal share of any LEA asbestos detection project in that State, as explained in § 231.30(b).

§ 231.70 What must a State plan contain?

Comments. One commenter made the following comments: 1. Since the regulations will not be final before the State plans are required, will States be held accountable for complying with the proposed guidelines? If not, what guidelines are the States expected to follow in submitting their plans?

2. The Act requires an SEA in its State plan to describe the contents of the information the State is required to distribute to its LEAs, in addition to any other information the State desires to distribute (Section 4(a)(2)). Paragraph (b)(1) of the proposed regulations, however, requires only that the State plan describe the information distributed to the LEAs that is *in addition* to the information the State is required to distribute.

Responses. 1. No change has been made. For the most part, the proposed regulations on the State plan mirrored the statutory requirements, which themselves provide adequate guidance to SEAs in preparing their State plans. SEAs are required by the Act to have submitted their State plans by December 15, 1980. An SEA that submitted its State plan before the publication of these final regulations will have an opportunity to amend its plan in accordance with the

amended § 231.70(b)(1), but will be held accountable for meeting only the statutory requirements.

2. Paragraph (b)(1) has been changed and now reads: "Describes the content of the information required in § 231.71(a) and any additional information the State considers desirable to distribute to its LEAs * * *"

Comment. Several commenters expressed concern that there are insufficient State funds available to implement the required activities under the State plan and to take care of administrative costs incurred in conducting the SEA Asbestos Detection Program.

Response. No change has been made. While the Secretary is sympathetic with the concerns of those commenters, the Congress has already spoken on this subject in the Act. The Act does not authorize the appropriation of any Federal funds to be used toward fulfilling the requirements of the State plan; States must use their own funds to meet those requirements. Also, the Act does not provide for any Federal funds to be used to carry out the State's administrative responsibilities under the SEA Asbestos Detection Program.

Comments. One commenter felt that the "SEA"—not the "State" as referred to in this section—should be the entity that distributes the necessary information and maintains the required records. Another commenter felt that the term "designates" in paragraph (d)(1) is misleading, since SEAs have no authority to assign responsibilities, such as submitting reports to the Secretary, to other State agencies.

Response. No change has been made. This section tracks the language of the Act, which requires the State—not necessarily the SEA—to carry out many of the responsibilities under the State plan. The use of the term "designate" in paragraph (d)(1)—also a statutory term—is not meant to imply that an SEA always has the authority to assign responsibilities to other agencies. Rather, this paragraph allows an SEA the option of identifying another agency, presumably with the agreement of that agency, that is to be responsible for submitting the required reports to the Secretary.

Comment. Several commenters suggested that, for purposes of the Secretary's determination that an LEA is in need of an increased award, this section should require the State plan to include factors used by the State to determine fiscal need of its LEAs.

Response. No change has been made. The Secretary does not want to impose on a State requirements in addition to those mandated by the Act. However, since this section lists only the information that a State plan *must* include, an SEA is free to provide in its State plan whatever additional information it considers helpful to the Secretary.

Comment. Several commenters suggested that the Secretary should provide a form to assist the SEAs in preparing their State plans.

Response. No change has been made. Since there is no prescribed form for the State plan, an SEA is free to prepare its State plan in whatever format it finds most convenient. The Secretary feels that a prescribed form would limit an SEA's flexibility in this regard.

§ 231.71 What information must a State distribute to its LEAs?

Comments. One commenter made the following comments: 1. Regarding paragraph (a)(4) of this section, how far along is the Task Force in developing materials on health hazards, and how will the materials be worked into the States' information program? Also, if the Task Force has not completed this task by next March, are there any other relevant documents prepared by the Department, EPA or another group that the States could use to fulfill this requirement?

2. Regarding paragraph (b) of this section, a State, in order to comply fully with the Act, would also have to distribute to its LEAs a copy of the EPA proposed regulations regarding detection standards that are cross-referenced in the Department's regulations.

3. How will the Task Force's education and technical assistance program be tied in to the information that States are required to distribute under § 231.71? The regulations should mention the future availability of this information.

Responses. 1. No change has been made. The Task Force is in the process of compiling materials on the health hazards associated with exposure to asbestos. These materials will be made available on request for States to distribute, if they so desire, to their LEAs. If the Task Force has not completed compiling these materials before March 15, 1980, a State will be considered to be in compliance with paragraph (a)(4) if it distributes to its LEAs copies of the relevant portions of the preamble to EPA's proposed regulations that document the health hazards associated with exposure to asbestos fibers (45 FR 61966, and 61969 through 61971, September 17, 1980). The Secretary, however, encourages the States to distribute to their LEAs any other available materials on asbestos-related health hazards.

2. Since these regulations have been changed to include the texts of the relevant EPA proposed regulations in the appendices, distribution of the Education Department's regulations is all that is necessary to comply with the law.

3. No change has been made. Any information compiled by the Task Force will be made available on request for States to distribute, if they so desire, to their LEAs. Since these materials are being compiled and, thus, are not yet available, the Secretary feels that a reference in the regulations to their future availability would not at this time be of particular benefit to the States. Omission of this reference is in line with the Secretary's general policy to avoid in regulations prescriptive and descriptive information that would not provide helpful and timely guidance to the reader.

§ 231.72 What records must a State maintain?

Comments. One commenter made the following comments: 1. Paragraph (a)(2) of this section differs from the Act in that it requires recordkeeping of *friable* building materials only.

2. Paragraph (a)(3)(iv) of this section incorrectly refers to conditions that existed prior to *replacement* activities, since the Act refers to conditions that existed prior to containment or removal.

3. Regarding paragraph (b) of this section, if EPA decides not to require every school district to fill out a particular recordkeeping form, how will the Department proceed?

Responses. 1. No change has been made. See response no. 1 to comments for § 230.10 concerning the use of the term "friable."

2. Paragraph (a)(3)(iv) has been changed and now reads: "The repairs * * * before the LEA conducted any of the activities listed in paragraphs (a)(3) (i) and (ii) of this section."

3. If EPA's requirement that LEAs fill out a particular recordkeeping form is eliminated or substantially altered in EPA's final regulations, or if EPA has not yet produced final regulations, States will still have to comply with paragraphs (a) (1) and (2). Paragraph (b) has been changed, however, to provide for the possibility that at some future time EPA may promulgate final regulations that would require LEAs to record the same information SEAs are required to maintain in paragraphs (a) (1) and (2).

Comments. One commenter raised the question whether the requirement on a State to *maintain* records also included

the requirement to *obtain* records, and another commenter suggested revising the section to include the term "obtain."

Response. No change has been made. Since both the statutory language and the legislative history use the term "maintain," the regulations also use that term. However, it is obvious that if a State does not have in its possession the records that it is required to maintain, it must obtain them.

Comment. One commenter asked whether there is a date by which a State must have the records on file.

Response. The Act does not mandate a date. However, in describing in its State plan the procedures it will use to maintain records, a State may wish to set a target date by which it believes it can set up the required recordkeeping system on its LEAs.

Comments. One commenter inquired how long a State must maintain these records. Two commenters suggested that the section require a State to maintain *permanent* records.

Response. No change has been made. Neither the Act nor the legislative history gives an indication of the exact length of time a State must maintain the records. However, the legislative history notes that a file would be necessary if an LEA were to do remodeling or renovation in the future. Bearing this in mind, the Secretary recommends that an SEA, in preparing its State plan, set a reasonable length of time during which it intends to maintain the records.

Comments. Several commenters felt that requiring States to maintain records as described in this section imposed excessive burdens on the States. One commenter suggested the regulations should provide that a State that is aware of the location of an LEA's asbestos files shall be deemed to comply with this section. One commenter suggested that an LEA be required to forward to the SEA a summary of the information recorded from each of the school buildings in the LEA. Another commenter felt that those records should be sent directly from the LEAs to the Secretary.

Response. No change has been made. The requirement that a State maintain records on the asbestos activities of its LEAs was imposed by the Congress. The Secretary has no authority to alter this requirement. Nevertheless, the Secretary has made every effort within the confines of the Act to lessen the record-keeping burdens on the States. For example, the regulations do not require that a State maintain a file on each school building in the State, but, rather, that the State maintain records on each of its LEAs.

Therefore, nothing prevents a State from requiring or requesting each of its LEAs to obtain the necessary information on each of the school buildings in that LEA and to forward that information to the State. Furthermore, paragraph (b) of this section would lessen the burdens on States if EPA should at some future time require LEAs to maintain records on the same information.

Comment. One commenter asked if nonpublic schools are deemed to be under the jurisdiction of the State for purposes of this section.

Response. Since the Act defines "LEA" to include the governing authority of a nonprofit school, states are required to maintain records on the private schools if they are in any way under the jurisdiction of the State.

General

Comments. One commenter asked two questions: Why is there no provision in the regulations pertaining to Section 8 of the Act, which provides that recipients of grants or loans shall permit the United States to sue on their behalf? Also, why is there no provision in the regulations pertaining to section 9 of the Act, which prohibits SEAs and LEAs that receive assistance from discriminating against employees who have brought attention to an asbestos problem?

Response. No change has been made. As explained previously, these regulations were written primarily to guide an LEA and SEA in the grant and loan application process, and to assist an SEA in the development of its State plan. Thus, any provisions in the Act that do not bear on the application and State plan procedures (such as sections 8 and 9) are not repeated or referenced in these regulations on the theory that, initially at least, they would have no particular benefit to an LEA or SEA. This decision is in line with the general policy of the Department to exclude unnecessary material from its regulatory documents.

Comments. One commenter was concerned that the proposed regulations require school administrators to make technical decisions—on inspecting, sampling, and the competence of contractors—that are outside the professional capacities of those officials. Since officials must rely on the expertise of laboratories to analyze samples accurately and must trust in the competence of contractors to contain or remove asbestos properly, the commenter recommends that EPA develop a plan to help school officials ensure the quality of analysis and of contractors throughout the country.

Response. No change has been made. The Secretary and EPA recognize the burden on school administrators, and EPA has taken measures to enable administrators to identify qualified laboratories and contractors.

EPA has developed materials to provide guidance for the analysis of samples. Standards for analysis were published in "Interim Method for the Determination of Asbestiform Minerals in Bulk Insulation Samples." EPA has distributed that publication to 100 participating laboratories.

In addition, EPA has developed a program to identify laboratories capable of performing the analysis. EPA distributed samples to 75 laboratories that claimed expertise in analysis, compared their results with reference analyses, and compiled a list of laboratories that successfully identified the asbestos content of those samples.

EPA is making this list available to the public via the toll-free EPA assistance line (800) 424–9065 (in Washington, D.C. 554–1404). EPA is planning to expand the list of competent laboratories and will publish its findings as soon as they are available.

A description of the methodology used in evaluating laboratories is available in the publication "Asbestos-Containing Materials in School Buildings: Bulk Sample Analysis Quality Assurance Program" (EPA 560/13–80–23). This is also available through the toll-free information line. EPA has also published the document "Asbestos-Containing Materials in School Buildings: Guidance for Asbestos Analytical Programs" (EPA 560/13–80–017). This document provides local school officials with guidance for implementing an analytical program that will, at reasonable cost, provide the information necessary to identify and assess hazards and, if officials choose to remedy hazards, to decide which remedial measures are appropriate.

The Secretary and EPA are similarly concerned about the quality of contractors for abatement. EPA has published "Asbestos-Containing Materials in School Buildings: A Guidance Document," part I and part II, which contains guidance on techniques for containment or removal of hazardous materials in order to enable administrators to assess contracts and monitor operations.

The Secretary and EPA have also developed "Procedures for Containing and Removing Building Materials Containing Asbestos," attached as Appendix C to the regulations. These are specifications for corrective measures, and represent the best information currently available on

containing or eliminating hazards posed by friable materials containing asbestos.

EPA is currently developing additional guidance for encapsulation and removal. This will be published as soon as it is complete. EPA has also trained regional asbestos coordinators in the practices EPA recommends so they can assist local officials in each region.

The Secretary and EPA do not feel that it is appropriate for Federal officials to monitor contractors that carry out remedial operations. By providing local school officials with information and specifications, sponsoring regional asbestos coordinators, and maintaining the toll-free technical assistance information line, EPA furnishes local school administrators with the resources to make accurate assessments of contractors.

Comments. 1. One commenter suggested that schools be required to analyze the materials used in boiler and pipe coverings so that if those coverings contain asbestos, they can be treated appropriately. The commenter recommended that school officials be required to sample and analyze suspect boiler and pipe coverings when renovation or demolition is contemplated.

2. The commenter also indicated that brake shoes and pads used in school automotive shops contain asbestos and pointed out that blowing dust out of brake drums and wheel assemblies with an air hose and resurfacing brake shoes on grinding equipment release fibers into the air. Therefore, the commenter recommended that EPA and ED consider requiring schools to acquire appropriate asbestos containment equipment and train shop teachers to reduce exposure.

Responses. 1. No change has been made. The Secretary and EPA have determined that all types of friable building materials containing asbestos can pose hazards to health. The Secretary intends that its regulations apply to boiler and pipe coverings, as well as to materials applied to ceilings and walls. Section 230.10 of the regulations requires that local educational agencies inspect school buildings "to detect friable building materials," whether on pipes, discarded in a crawl space, or on a ceiling.

2. No changes have been made. The purpose of the Act is to detect and contain or remove asbestos used in the fixed structure of school buildings. The Secretary and EPA are aware of the hazards posed by dust released in automotive shops and EPA has developed a program independent of these rules to address them. Along with the Consumer Product Safety Commission, EPA is considering controlling the use of asbestos in brakes through rulemaking announced in its Advanced Notice of Proposed Rulemaking published in the Federal Register on October 17, 1979.

In the interim, while the rules are being developed, EPA is promoting a program, jointly sponsored with the Occupational Safety and Health Administration (OSHA), to alert mechanics to reduce risks. The program consists of (1) distributing educational pamphlets to people exposed to dust generated in brakes, (2) loaning audio-visual materials to interested groups, and (3) providing training manuals to instructors of automobile repair courses. The program will be aimed at automotive shops in a variety of settings, including schools. EPA expects this educational program to be in operation by mid-1981.

For further information about the Advance Notice published on October 17, 1980, please contact Mr. Peter Principe Chief, Minerals Groups, Chemical Control Division, EPA (202) 755–8023. For further information concerning the educational program, please contact Mr. Albert Colli, Chemical Control Division, EPA (202) 755–8023.

Comments. 1. One commenter pointed out that, based on the experience of State officials who used the guidance system, persons should receive training before using the algorithm. The commenter suggested that States be required to schedule training sessions for LEA personnel.

2. The commenter also suggested that the regulations require persons taking bulk samples to be equipped with an approved respirator while sampling, and to take precautions to avoid contamination of clothing.

Responses. 1. No change has been made. Training would be useful, but the Secretary does not require it. However, EPA has trained the regional asbestos coordinators in the use of the best methods currently available and encourages local officials to refer to those asbestos coordinators.

2. A change has been made. A note has been added, after § 230.41 of the regulations, to indicate that the Secretary recommends the use of respiratory protection when persons take bulk samples.

Part XV

Department of Education

Refugee Education Assistance Act; Proposed Regulations

DEPARTMENT OF EDUCATION

34 CFR Part 540

General Education Assistance for Cuban and Haitian Refugee Children Program

AGENCY: Department of Education.

ACTION: Notice of Proposed Rulemaking.

SUMMARY: The Secretary of Education proposes new regulations to implement the General Education Assistance for Cuban and Haitian Refugee Children Program under the authority of Title II of the Refugee Education Assistance Act of 1980 (Pub. L. 96–422). This program assists local educational agencies in meeting the costs of providing basic educational services to Cuban and Haitian refugee children enrolled in public and secondary schools within their jurisdictions.

DATES: Comments must be received on or before March 17, 1981.

ADDRESSES: Comments should be addressed to Dr. Josue M. Gonzalez, U.S. Department of Education, 400 Maryland Avenue, S.W., (421 Reporters Building), Washington, D.C. 20202.

FOR FURTHER INFORMATION CONTACT: Mr. James Lockhart (202) 472–7177.

SUPPLEMENTAL INFORMATION: The Refugee Education Assistance Act of 1980 (Pub. L. 96–422), signed into law on October 10, 1980, authorizes a new three-year program of grants to States for the purpose of assisting school districts in meeting the general and special educational needs of Cuban and Haitian refugee children (including entrant children) who have entered the United States on or after November 1, 1979 and Indochinese refugee children who have entered the United States on or after January 1, 1979. These proposed regulations implement Title II of the Act, which authorizes grants to States based on the numbers of eligible Cuban and Haitian refugee children enrolled in public elementary and secondary schools in school districts in the States for the purpose of providing basic educational services for those children.

Funds under this program are distributed to States on a formula basis, with each State entitled by law to receive $450 per eligible child. The amount of a grant award to a State and the amount of a subgrant to a school district would be ratably reduced if the appropriation for this program in a given year is not sufficient to provide $450 per eligible child. In addition, the amount which a State is entitled to receive under this program is reduced if the State is entitled to receive funds under formula grant program that makes assistance available to the State based on the refugee, parolee, or asylee status of the children to be served under this program.

The amount which a State is entitled to receive will be based on a count of eligible children in the State taken on a date specified by the Secretary in a notice published in the **Federal Register.** To allow for a substantial and disproportionate increase in the enrollment of eligible children that may occur after the award of grants, the Secretary proposes in these regulations (§ 540.20) to provide an opportunity for States with increased enrollments to present evidence of the increases. Where funds are available, the Secretary may then provide additional assistance to States that report increases. A State that receives additional assistance would then increase the amount of subgrants to LEAs based on the increased enrollments of eligible children. An equal amount would be provided for each new child reported. Under no circumstances would the Secretary reduce the award in a particular year to a State on the basis of decreased enrollment of eligible children during that year.

To minimize the reporting burden on States and school districts eligible for assistance under the various Department of Education (ED) programs that authorize support for educational services for refugee and entrant children, (Transition Program for Refugee Children, 34 CFR Part 538; Educational Services for Cuban and Haitian Entrant Children, 34 CFR Part 539; and Impact Assistance for Refugee Children, 34 CFR Part 541), the Secretary expects to require only one count of eligible refugee and entrant children that identifies whether the children of Indochinese, Cuban and Haitian, or other origin, and the recency of their arrival in the United States (in years). The Secretary believes this counting and reporting format will provide reasonable estimates of children eligible for assistance under the various programs and will simplify the reporting and administrative responsibilities and requirements for States and school districts.

Invitation to Comment:

Interested persons are invited to submit comments and recommendations regarding these proposed regulations. Written comments and recommendations may be sent to the address given at the beginning of this preamble. All comments received on or before the 60th day after publication of this document will be considered in the development of the final regulations.

All comments submitted in response to these proposed regulations will be available for public inspection, during and after the comment period, in Room 421, Reporters Building, 7th and D Streets, S.W., Washington, D.C. between the hours of 8:30 a.m. and 4:00 p.m., Monday through Friday of each week except Federal holidays.

Citation of Legal Authority:

A citation of statutory of other legal authority is placed in parentheses on the line following each substantive provision of these proposed regulations.

(Catalog of Federal Domestic Assistance Number not assigned yet)

Dated: January 12, 1981.

The Secretary proposes to add a new Part 540 to Title 34 of the Code of Federal Regulations to read as follows:

Part 540—General Education Assistance for Cuban and Haitian Refugee Children Program

Subpart A—General

Sec.

540.1 What is the General Education Assistance for Cuban and Haitian Refugee Children Program?
540.2 Who is eligible to apply for financial assistance?
540.3 What regulations apply to this program?
540.4 What definitions apply to this program?

Subpart B—How Does a State Apply for a Grant?

540.10 What documents does the State submit to receive a grant?
540.11 How is the number of eligible children determined?
540.12 When does a State submit its application?

Subpart C—How Is a Grant Made to a State?

540.20 How does the Secretary provide for a substantial and disproportionate increase in the enrollment of eligible children that may occur after a grant has been made?

Subpart D—How Does a Local Educational Agency Apply to the State for a Subgrant?

540.30 What documents must an applicant submit to receive a subgrant?
540.31 When does an applicant submit its application for a subgrant?

Subpart E—How Is a Subgrant Made to an Applicant?

540.40 How is the amount of a subgrant determined?
540.41 When is the amount of a subgrant increased?

Subpart F—What Conditions Must Be Met by the State and its Subgrantees?

540.50 What are the restrictions on administrative costs for a State and its subgrantees?

Subpart A—General

§ 540.1 What is the General Education Assistance for Cuban and Haitian Refugee Children Program?

This program assists local educational agencies (LEAs) in providing basic educational services to Cuban and Haitian refugee children enrolled in public elementary and secondary schools within their jurisdictions.

(Sections 201(a) and 202(a) of the Refugee Education Assistance Act of 1980)

§ 540.2 Who is eligible to apply for financial assistance?

(a) A State educational agency (SEA) may apply for a grant to assist LEAs in its State in providing basic educational services to Cuban and Haitian refugee children enrolled in public elementary and secondary schools in its State.

(b) An LEA or a consortium of LEAs may apply to the SEA for a subgrant to provide basic educational services to Cuban and Haitian refugee children enrolled in public elementary and secondary schools within its jurisdiction.

(Section 201(a) of the Refugee Education Assistance Act of 1980)

§ 540.3 What regulations apply to this program?

The following regulations apply to this program:

(a) The regulations in this part 539.

(b) The Education Department General Administrative Regulations (EDGAR) 34 CFR Parts 74, 76, 77, and 78, except—

(1) Section 76.101 (The general State application); and

(2) Section 76.103 (Three-year State plans).

(20 U.S.C. 3474(a))

§ 540.4 What definitions apply to this program?

(a) The following definitions in EDGAR (34 CFR Part 77) apply to these regulations: Applicant; Application; Award; EDGAR; Elementary; Local educational agency; Project; Secondary school; Secretary; State; and State educational agency.

(b) The following definitions are specific to these regulations:

"Act" means the Refugee Education Assistance Act of 1980.

"Cuban and Haitian refugee children" means aliens who have fled from Cuba or Haiti and who—

(1) On or before November 1, 1979—

(i) Have been admitted into the United States as refugees under Section 207 of the Immigration and Nationality Act;

(ii) Have been paroled into the United States by the Attorney General under Section 212(d)(5) of such Act; or

(iii) Are applicants for asylum, or have been granted asylum, in the United States; or

(2) Are Cuban or Haitian entrants (status pending) who entered the United States on or after November 1, 1979. Any child described in this subparagraph (2) is considered to maintain that status for purposes of this part regardless of any subsequent change in status under any other law.

"Eligible children" means Cuban and Haitian refugee children enrolled in public elementary and secondary schools.

(Section 101 of the Refugee Education Assistance Act of 1980)

Subpart B—How Does a State Apply for a Grant?

§ 540.10 What documents does the State submit to receive a grant?

To receive a grant, an SEA shall submit to the Secretary an application containing the following:

(a) A count of the number of eligible children in the State, as required in § 540.11;

(b) A program plan that includes—

(1) A description of the SEA's method of counting children eligible for assistance under this program;

(2) A brief description of the SEA's plan for administering, monitoring, and evaluating the program.

(c) The following assurances:

(1) An assurance that the SEA will distribute funds among the LEAs in the State in accordance with the provisions in § 540.41.

(2) An assurance that the SEA will not disapprove in whole or in part an application submitted by an LEA for a subgrant without first affording the LEA a hearing according to the provisions in EDGAR (34 CFR 76.104).

(Section 202(a) of the Refugee Education Assistance Act of 1980; 20 U.S.C. 3474(a))

§ 540.11 How is the number of eligible children determined?

On a date specified by the Secretary through a notice published in the **Federal Register**, an SEA shall count the number of eligible children in its State.

(20 U.S.C. 3474(a))

§ 540.12 When does a State submit its application?

To be eligible for funds, an SEA must transmit its application in accordance with an application notice published in the **Federal Register** that establishes a deadline for the transmittal of State applications.

(20 U.S.C. 3474(a))

Subpart C—How is a Grant Made to a State?

§ 540.20 How does the Secretary provide for a substantial and disproportionate increase in the enrollment of eligible children that may occur after a grant has been made?

(a)(1) If the Secretary determines that there has been a substantial and disproportionate increase in enrollment of eligible children, the Secretary may provide SEAs an opportunity to submit evidence of the increase of the nmber of eligible children enrolled in schools in the State.

(2) Through a notice published in the **Federal Register**, the Secretary invites SEAs with increased enrollments of eligible children to submit a recount of the number of eligible children enrolled in schools in the State, according to the provisions in § 540.11.

(b) The Secretary may provide additional assistance to an SEA based on the increase in the number of eligible children in the State if—

(1) Funds are available, and;

(2) The SEA submits a plan outlining how the additional funds would be spent to provide services for those children.

(c) The Secretary does not decrease the amount of an award during that year to an SEA where there is a decrease in the enrollment of eligible children.

(Sections 103(b) and 201 (b) and (c) of the Refugee Education Assistance Act and 20 U.S.C. 3474(a))

Subpart D—How Does a Local Educational Agency Apply to the State for a Subgrant?

§ 540.30 What documents must an applicant submit to receive a subgrant?

To receive a subgrant, an LEA or a consortium of LEAs shall submit to the SEA an application containing the following information:

(a) A count of the number of eligible children in its jurisdiction, as required in § 540.11.

(b) A brief description of the educational services to be provided for the eligible children.

(20 U.S.C. 3474(a))

§ 540.31 When does an applicant submit its application for a subgrant?

An SEA shall establish a deadline for receipt of applications for subgrants in any fiscal year that funds are available under this program.

(20 U.S.C. 3474(a))

Subpart E—How Is a Subgrant Made to an Applicant?

§ 540.40 How is the amount of a subgrant determined?

(a) To determine the amount of a subgrant, the SEA—

(1) Subtracts from the SEA's award, the costs budgeted for the administration of the SEA grant award (these costs may not exceed one percent of the SEA award);

(2) Divides the remainder by the total number of eligible children to be served by LEAs in its State under subgrants under the program; and

(3) Multiplies that dividend by the number of eligible children to be served under the subgrant.

(Sections 104 and 201(b)(1) of the Refugee Education Assistance Act of 1980)

§ 540.41 When is the amount of a subgrant increased?

(a) If an SEA receives additional assistance under § 540.24, the SEA shall increase the amount of a subgrant to an LEA, based on the number of new eligible children to be served under the subgrant.

(b) In distributing funds to subgrantees under this paragraph, the SEA shall provide an equal amount for each new child reported.

(Sections 104 and 201 (b) and (c) of the Refugee Education Assistance Act of 1980)

Subpart F—What Conditions Must Be Met by the State and its Subgrantees?

§ 540.50 What are the restrictions on administrative costs for a State and its subgrantees?

An SEA and each subgrantee are limited to an administrative cost of one percent of the total amount of funds that each receives under the program.

(Section 104 of the Refugee Education Assistance Act of 1980)

[FR Doc. 81-1619 Filed 1-15-81; 8:45 am]
BILLING CODE 4000-01-M

34 CFR Part 541

Impact Assistance for Refugee Children Program

AGENCY: Department of Education.

ACTION: Notice of Proposed Rulemaking.

SUMMARY: The Secretary of Education proposes new regulations to implement the Impact Assistance for Refugee Children Program under the authority of Title III of the Refugee Education Assistance Act of 1980 (Pub. L. 96–422). This program assists local educational agencies, which have experienced substantial increases in the enrollment of Cuban, Haitian, and Indochinese refugee children, in meeting the costs of providing educational services to those children.

DATE: Comments must be received on or before March 17, 1981.

ADDRESSES: Comments should be addressed to Dr. Josue Gonzalez, U.S. Department of Education, 400 Maryland Avenue, S.W., (421 Reporters Building), Washington, D.C., 20202.

FOR FURTHER INFORMATION CONTACT: Mr. James Lockhart, (202) 472–7177.

SUPPLEMENTAL INFORMATION: The Refugee Education Assistance Act of 1980 (Pub. L. 96–422), signed into law on October 10, 1980, authorizes a new three-year program of grants to States for the purpose of assisting school districts in meeting the general and special educational needs of Cuban and Haitian refugee children (including entrant children) who have entered the United States on or after November 1, 1979 and Indochinese refugee children who have entered the United States on or after January 1, 1979. These proposed regulations implement Title III of the Act, which authorizes grants to States, based on the numbers of eligible Cuban, Haitian, and Indochinese refugee children enrolled in elementary or secondary public schools under the jurisdiction of, or in elementary or secondary nonpublic schools within the district served by, school districts that meet the eligibility threshold established in the legislation. To be eligible for a subgrant, a school district's enrollment of Cuban, Haitian, and Indochinese refugee children must be at least 500 students or five percent of the total student enrollment, whichever number is smaller. Eligible school districts may apply to the State for a subgrant to serve those refugee children.

Activities eligible for assistance under this program include the provision of educational services designed to improve the English language skills of the refugee children and to assist the

children in achieving and maintaining a satisfactory level of academic performance. Funds may also be used for inservice training of education personnel that work with these refugee children and may cover basic costs associated with instruction that the school district has incurred due to the influx of the refugee children. Section 541.10 of the proposed regulations describes in detail the activities eligible for support under this program.

The amount which a State is entitled to receive will be based on a count of Cuban, Haitian, and Indochinese refugee children enrolled in schools in the eligible school districts in the State, taken on a date specified by the Secretary in a notice published in the Federal Register.

Funds are distributed through grants to States and subgrants to school districts on the basis of the formula described in Section 301(b)(1) of the Act, which makes funds available to school district. More money is provided for children who have been enrolled in schools in a school district for a shorter period of time. School districts should, therefore, strive to maintain accurate records on the enrollment of the Cuban, Haitian, and Indochinese refugee children.

To allow for a substantial and disproportionate increase in the enrollment of eligible Cuban, Haitian, and Indochinese refugee children that may occur after the award of grants, the Secretary proposes in these regulations (§ 541.30) to provide an opportunity for States with increased enrollments to present evidence of the increases. Where funds are available, the Secretary may provide additional assistance to States that report increases. In addition, assistance may be provided to a newly eligible school district that was previously ineligible for assistance because of low concentration of eligible children. A State that receives additional assistance would then increase the amounts of subgrants to school districts based on the increased enrollment of eligible children. Under no circumstances would the Secretary reduce the award in a particular year to a State on the basis of decreased enrollment of eligible children during that year.

If the appropriation for this program in a given year is insufficient to provide the full amounts to which a State is entitled, the amounts of grant awards to States and the amounts of subgrants to school districts would be ratably reduced. In addition, the amount which a State is entitled to receive under this program shall be reduced if the State is entitled to receive funds under another formula grant program that makes assistance available to the State because of significant concentrations of Cuban, Haitian, and Indochinese refugee children in the State. However, the level of funding which a State is entitled to receive under this program will not be reduced because of funds made available under the Transition Program for Refugee Children or under the Educational Services for Cuban and Haitian Entrant Children Program.

To minimize the reporting burden on States and school districts eligible for assistance under the various Department of Education (ED) programs that authorize support for educational services for refugee and entrant children (Transition Program for Refugee Children, 34 CFR Part 538; Educational Services for Cuban and Haitian Entrant Children, 34 CFR Part 539; and General Education Assistance for Cuban and Haitian Refugee Children, 34 CFR Part 540), the Secretary expects to require only one annual count of eligible refugee and entrant children that identifies whether the children are of Indochinese, Cuban or Haitian, or other origin, and the recency of their arrival in the United States (in years). The Secretary believes this counting and reporting format will provide reasonable estimates of children eligible for assistance under the various programs and will simplify the reporting and administrative responsibilities and requirements for SEAs and LEAs.

Invitation to Comment: Interested persons are invited to submit comments and recommendations regarding the proposed regulations. Written comments and recommendations may be sent to the address given at the beginning of this preamble. All comments received on or before the 60th day after publication of this document will be considered in the development of the final regulations.

All comments submitted in reponse to these proposed regulations will be available for public inspection, during and after the comment period, in Room 421, Reporters Building, 7th and D Streets, S.W., Washington, D.C., between the hours of 8:30 a.m. and 4:00 p.m., Monday through Friday of each week except Federal holidays.

Citation of Legal Authority: A citation of statutory or other legal authority is placed in parentheses on the line following each substantive provision of these proposed regulations.

(Catalog of Federal Domestic Assistance Number not assigned yet)

Dated: January 12, 1981.

Shirley M. Hufstedler

Secretary of Education.

The Secretary proposes to add a new Part 541 to Title 34 of the Code of Federal Regulations to read as follows:

PART 541—IMPACT ASSISTANCE FOR REFUGEE CHILDREN PROGRAM

Subpart A—General

Sec.

541.1 What is the Impact Assistance for Refugee Children Program?
541.2 Who is eligible to apply for financial assistance?
541.3 What regulations apply to this program?
541.4 What definitions apply to this program?

Subpart B—What Activities May Be Supported Under this Program?

541.10 What activities are eligible for support?

Subpart C—How Does a State Apply for a Grant?

541.20 What documents does the State submit to receive a grant?
541.21 How is the number of children eligible for services determined?
541.22 To what extent must a State provide services to eligible children enrolled in nonpublic schools?
541.23 When does a State submit its application?

Subpart D—How Is a Grant Made to a State?

541.30 How does the Secretary provide for a substantial and disproportionate increase in the enrollment of eligible children that may occur after a grant has been made?

Subpart E—How Does a Local Educational Agency Apply to the State for a Subgrant?

541.40 What documents must an applicant submit to receive a subgrant?
541.41 When does an applicant submit its application for a subgrant?

Subpart F—How Is a Subgrant Made to an Applicant?

541.50 How is the amount of a subgrant determined?
541.51 When is the amount of a subgrant increased?

Subpart G—What Conditions Must Be Met by a State and Its Subgrantees?

541.60 What are the restrictions on administrative costs for a State and its subgrantees?

Subpart A—General

§ 541.1 What is the Impact Assistance for Refugee Children Program?

This program provides assistance to local educational agencies (LEAs) which have experienced substantial increases in the enrollment of Cuban, Haitian, or Indochinese refugee children in elementary or secondary public and private schools within their districts.

(Section 301(a) of the Refugee Education Assistance Act of 1980)

§ 541.2 Who is eligible to apply for financial assistance?

(a) A State educational agency (SEA) may apply for a grant to assist LEAs in its State that are eligible under paragraph (b) of this section in meeting the costs of providing basic and supplementary educational services for Cuban, Haitian, and Indochinese refugee children.

(b)(1) An LEA that meets either of the following requirements may apply to the SEA for a subgrant.

(i) *Concentration.* There are at least 500 Cuban, Haitian, or Indochinese refugee children who are enrolled in elementary or secondary public schools under the LEA's jurisdiction or in elementary or secondary nonpublic schools within the districts served by the LEA.

(ii) *Proportion.* The enrollment of Cuban, Haitian, or Indochinese refugee children in the schools described in paragraph (b)(1)(i) of this section comprises at least 5 percent of the total student enrollment in those schools.

(2) For the purposes of determining eligibility to apply under paragraph (b)(1)(i) or (ii) of this section, an LEA counts the number of eligible children who are enrolled in elementary or secondary public schools under the LEA's jurisdiction or elementary or secondary nonpublic schools within the districts served by the LEA.

(Section 301(b)(2) of the Refugee Education Assistance Act of 1980)

§ 541.3 What regulations apply to this program?

The following regulations apply to this program:

(a) The regulations in this part 541.

(b) The Education Department General Administrative Regulations (EDGAR) 34 CFR Parts 74, 76, 77, and 78, except—

(1) Section 76.101 (The general State application); and

(2) Section 76.103 (Three-year State plans).

(20 U.S.C. 3474(a))

§ 541.4 What definitions apply to this program?

(a) The following definitions in EDGAR (34 CFR Part 77) apply to these regulations:

Applicant
Application
Award
EDGAR
Elementary school
Local educational agency
Secondary school
Secretary
State
State educational agency

(20 U.S.C. 2854)

(b) The following definitions are specific to these regulations:

"Act" means the Refugee Education Assistance Act of 1980.

"Cuban and Haitian refugee children" means aliens who have fled from Cuba or Haiti and who—

(1) On or after November 1, 1979—

(i) Have been admitted into the United States as refugees under Section 207 of the Immigration and Nationality Act;

(ii) Have been paroled into the United States by the Attorney General under Section 212(d)(5) of such Act; or

(iii) Are applicants for asylum, or have been granted asylum, in the United States; or

(2) Are Cuban or Haitian entrants (status pending) who entered the United States on or after November 1, 1979.

Any child described in this subparagraph (2) is considered to maintain that status for purposes of this part regardless of any subsequent change in status under any other law.

"Elementary or secondary nonpublic schools"—

(1) Means schools that—

(i) Comply with the compulsory education laws of the State; and

(ii) Are exempt from taxation under Section 501(c)(3) of the Internal Revenue Code of 1954; and

(2) Includes the term "private school" used in EDGAR (34 CFR 76.650–76.662).

"Eligible children" means Cuban, Haitian, or Indochinese refugee children who are enrolled in public elementary or secondary schools under the jurisdiction of an LEA or who are enrolled in elementary and secondary nonpublic schools within the districts served by an LEA that is eligible to apply for assistance under this program.

"Indochinese refugee children" means aliens who have fled from Cambodia, Vietnam, or Loas, and, on or after January 1, 1979—

(1) Have been admitted into the United States as refugees under Section 207 of the Immigration and Nationality Act;

(2) Have been paroled into the United States by the Attorney General under Section 212(d)(5) of the Immigration and Nationality Act; or

(3) Are applicants for asylum, or have been granted asylum in the United States.

(Sections 101(1)(B) and 101(4) of the Refugee Education Assistance Act of 1980)

Subpart B—What Activities May Be Supported Under This Program?

§ 541.10 What activities are eligible for support?

Funds under this program may be used to meet the costs of providing the following educational services for eligible children:

(a) Supplementary educational services necessary to enable eligible children to achieve a satisfactory level of performance. These services include, but are not limited to, the provisions of—

(1) English language instruction;

(2) Other bilingual education services; and

(3) Special materials and supplies.

(b) Basic instructional services that may be directly attributed to the presence of eligible children. Allowable costs related to the provision of these services include, but are not limited to,—

(1) The costs of additional classroom supplies;

(2) Additional overhead costs;

(3) Additional construction costs;

(4) Additional costs for the acquisition and rental of space; and

(5) Additional transportation costs.

(c) Special inservice training for education personnel to enable them to provide more effectively the basic and supplementary educational services described in paragraphs (a) and (b) of this section.

(Section 302 of the Refugee Education Assistance Act of 1980)

Subpart C—How Does a State Apply for a Grant?

§ 541.20 What documents does the State submit to receive a grant?

To receive a grant, an SEA shall submit to the Secretary an application containing the following:

(a) A count or estimate as required in § 541.21 of the number of eligible children in the State.

(b) A program plan that includes—

(1) A description of the SEA's method of counting children eligible for assistance under this program;

(2) A brief description of the services to be provided for those children; and

(3) A brief description of the SEA's plan for administering, monitoring, and evaluating the program.

(c) The following assurances:

(i) An assurance that funds under this program will be used to meet the costs of providing the supplementary educational services described in § 541.10.

(ii) An assurance that the SEA will distribute funds among LEAs in the State according to the provisions in § 541.50.

(iii) An assurance that the SEA will not disapprove in whole or in part an application submitted by an LEA for a subgrant without first affording the LEA a hearing according to the provisions in EDGAR (34 CFR 76.401(d)).

(iv) An assurance that the SEA will provice educational services for children eligible for services who are enrolled in elementary and secondary private schools in the State, according to the provisions in EDGAR (34 CFR 76.650–76.662).

(v) The certification required in EDGAR (34 CFR 76.104).

(Section 303(a) of the Refugee Education Assistance Act of 1980; 20 U.S.C. 3474(a))

§ 541.21 How is the number of children eligible for services determined?

(a) For the purposes of this section, the term "schools in the LEA" means elementary or secondary schools under the jurisdiction of an LEA and elementary and secondary nonpublic schools within districts served by an LEA.

(b) On a date specified by the Secretary through a notice published in the **Federal Register**, an SEA makes a count of the number of eligible children enrolled in schools in the LEAs in its State to determine which LEAs meet the eligibility requirement in § 541.2(b).

(c)(1) For each LEA that meets the eligibility requirement, an SEA reports in its application the total number of Cuban, Haitian, and Indochinese refugee children enrolled in schools in the LEA.

(2) An SEA reports its count in the following manner:

(i) An SEA applying for a grant in fiscal year (FY) 1981 reports the number of eligible children in each LEA.

(ii) An SEA applying for a grant in FY 1982 identifies in its count the number of eligible children in each LEA—

(A) Who were first enrolled in schools in the LEA during FY 1982; and

(B) Those who were enrolled in schools in the LEA in FY 1981.

(iii) An SEA applying for a grant in FY 1983 identifies in its count of the number of eligible children in each LEA—

(A) Those children who were first enrolled in schools in the LEA during FY 1983;

(B) Those children who first enrolled in schools in the LEA during FY 1982; and

(C) Those children who were enrolled in schools in the LEA in FY 1981.

(Sections 301 (b)(1), (b)(2), and (c) of the Refugee Education Assistance Act of 1980)

§ 541.22 To what extent must a State provide services to eligible children enrolled in nonpublic schools?

(a)(1) The SEA shall provide—through subgrants to LEAs, through contracts or cooperative arrangements with public and nonprofit agencies, organizations, and institutions, or through direct services—opportunities for eligible children enrolled in nonpublic schools to receive educational services under this program.

(2) The requirements which must be met by an SEA with respect to eligible children enrolled in nonpublic schools are set forth in EDGAR (34 CFR 76.651–76.662).

(b) If a State is prohibited by law from providing educational services for eligible children enrolled in elementary and secondary nonpublic schools, as required in Section 303(a)(6) of the Act, or if the Secretary determines that an LEA has failed or is unwilling to provide for the participation on an equitable basis of children enrolled in such schools, the Secretary may waive such requirements and arrange for the provision of services to meet the requirements of the Act.

(Sections 303(a)(6) and 304(b) of the Refugee Education Assistance Act of 1980; 20 U.S.C. 3474(a))

§ 541.23 When does a State submit its application?

To be eligible for funds, an SEA must transmit its application in accordance with an application notice published in the **Federal Register** that establishes a deadline for the receipt of State applications.

(20 U.S.C. 3474(a))

Subpart D—How Is a Grant Made to a State?

§ 541.30 How does the Secretary provide for a substantial and disproportionate increase in the enrollment of eligible children that may occur after a grant has been made?

(a)(1) If the Secretary determines that there has been a substantial and disproportionate increase in the enrollment of eligible children, the Secretary may prove SEAs an opportunity to submit evidence of the increase of the number of eligible children enrolled in schools in the State.

(2) Through a notice published in the **Federal Register**, the Secretary invites SEAs with increased enrollments of eligible children to submit a recount of the number of eligible children enrolled in schools in the State according to the provision in § 541.21.

(b) The Secretary may provide additional assistance to an SEA based

on the increase in the number of eligible children in the State, if—

(1) Funds are available; and

(2) The SEA submits a plan outlining how the additional funds would be spent to provide services for those children.

(c) The Secretary does not decrease the amount of an award during that year to an SEA where there is a decrease in the enrollment of eligible children.

(Sections 301(b) and (c) of the Refugee Education Assistance Act of 1980 and U.S.C. 3474(a))

Subpart E—How Does a Local Educational Agency Apply to the State for a Subgrant?

§ 541.40 What documents must an applicant submit to receive a subgrant?

To receive a subgrant, an LEA that meets the eligibility requirements in § 541.2(b) shall submit to the SEA an application containing the following:

(a) A count of the number of eligible children who are enrolled in elementary or secondary public schools under the LEA's jurisdiction or elementary or secondary nonpublic schools within the districts served by the LEA;

(b) A brief description of the educational services to be provided for the eligible children; and

(c) The information required in EDGAR [34 CFR 76.656], pertaining to the participation of students enrolled in private schools.

(20 U.S.C. 3474(a))

§ 541.41 When does an applicant submit its application for a subgrant?

An SEA shall establish a deadline for receipt of applications for subgrants in any fiscal year that funds are available under this program.

(20 U.S.C. 3474(a))

Subpart F—How Is a Subgrant Made to an Applicant?

§ 541.50 How is the amount of a subgrant determined?

(a) In determining the amounts of subgrants to LEAs, the SEA—

(1) Subtracts from the SEA's award, the costs budgeted for the administration of the SEA grant award (these costs may not exceed one percent of the SEA award);

(2) Divides the remainder of the award into subgrants for LEAs in its State based on application of the appropriate formula in Section 301(b)(1) of the Act.

(Sections 102(b)(1), 104 and 301(b)(1) of the Refuge Education Assistance Act of 1980)

§ 541.51 When is the amount of a subgrant increased?

(a) If an SEA receives additional assistance under § 541.30, the SEA shall increase the amounts of the subgrants to LEAs based on the number of new eligible children under each subgrant.

(b) In distributing funds to subgrantees, the SEA—

(1) Determines the amounts that each child is entitled to receive based on application of the appropriate formula in Section 301(b)(1) of the Act;

(2) Ratably reduces these amounts, if necessary, to bring the total amount of the increases to subgrantees to an amount within the increase received by the SEA.

(Sections 102(b)(1), 104, and 301(b)(1) and (c) of the Refuge Education Assistance Act of 1980).

Subpart G—What Conditions Must Be Met by a State and its Subgrantees?

§ 541.60 What are the restrictions on administrative costs for a State and its subgrantees?

An SEA and a subgrantee are each limited to an administrative cost of one percent of the total amount of funds that it receives under the program.

(Section 104 of the Refugee Education Assistance Act of 1980)

Department of Labor

Employment and Training Administration

Labor Certification Process for the Temporary Employment of Aliens in Agriculture: Adverse Effect Wage Rate Methodology

DEPARTMENT OF LABOR

Employment and Training Administration

20 CFR Part 655

Labor Certification Process for the Temporary Employment of Aliens in Agriculture: Adverse Effect Wage Rate Methodology

AGENCY: Employment and Training Administration, Labor.

ACTION: Final rule.

SUMMARY: The Employment and Training Administration (ETA) of the Department of Labor (DOL) is establishing a new methodology for computing the agricultural adverse effect wage rate (AEWR), that is, the minimum wage rate which DOL has determined must be offered and paid by the employers proposing to employ nonimmigrant alien agricultural workers in the United States. The new methodology would set a single national rate governing the admission of foreign temporary workers admitted to perform agricultural employment, principally cultivation and harvesting of crops, anywhere in the United States.

A separate and distinct methodology for sheepherding historically has been used. No change is made in that methodology other than updating the data base and rounding the figure to the nearest dollar rather than to the nearest five dollars as was past practice. No change is made for logging employment, which has been governed by the prevailing wage rates for the occupation in the area of intended employment.

EFFECTIVE DATE: This amendment is effective with respect to applications for temporary alien labor certification received for processing on or after February 17, 1981.

FOR FURTHER INFORMATION CONTACT: Mr. Kenneth D. Bell, Office of Technical Support, United States Employment Service, Telephone: 202-376-6297.

SUPPLEMENTARY INFORMATION:

Introduction

The Employment and Training Administration (ETA) of the Department of Labor (DOL) is amending its regulations at 20 CFR 655.207, to establish a new methodology for computing the adverse effect wage rate for the temporary employment of nonimmigrant aliens in agricultural occupations. DOL's regulations for the certification of temporary employment of nonimmigrant aliens are issued pursuant to the Immigration and Naturalization Service (INS) regulations at 8 CFR 214.2(h)(3)(i), set forth in pertinent part below:

> Either a certification from the Secretary of Labor or his designated representative stating that qualified persons in the United States are not available and that the employment of the beneficiary will not adversely affect the wages and working conditions of workers in the United States similarly employed, or a notice that such certification cannot be made, shall be attached to every nonimmigrant visa petition to accord an alien a classification under section 101(a)(15)(H)(ii) of the [Immigration and Nationality] Act [8 U.S.C. 1101(a)(15)(H)(ii)].

Temporary Alien Employment Certification Process

Whether to grant or deny a nonimmigrant visa petition under 8 U.S.C. 1101(a)(15)(H)(ii) and 1184 is solely the decision of INS. It is INS policy, however, as expressed in its above-quoted regulation, that, before INS will grant or deny such a visa, it first requests DOL to advise INS with respect to two issues:

(a) Whether there are a sufficient number of able, willing, and qualified U.S. workers available to do the work proposed to be done by the alien; and

(b) Whether the employment of the alien will adversely affect the wages and working conditions of similarly employed U.S. workers.

If DOL determines that there are not able, willing, qualified, and available U.S. workers, and that the employment of the alien will not adversely affect similarly employed U.S. workers, DOL advises INS of these findings, by issuing a temporary labor certification. The employer proposing to use the alien for temporary work then attaches the certification as part of the alien's visa petition, pursuant to 8 CFR 214.2(h)(3)(i). INS then considers the "H-2" visa petition submitted by the employer on behalf of the alien(s).

If DOL cannot make one or both of the above findings, DOL so advises INS. DOL may be unable to make the two required findings for any of one or more reasons, including, but not limited to:

(a) The employer seeking the temporary labor certification on behalf of the alien has not submitted a proper application, or has not followed the proper procedural steps.

(b) The employer has not submitted sufficient evidence of attempts to obtain available U.S. workers; and/or the employer has not submitted sufficient evidence that the wages and working conditions which the employer is offering will not adversely affect the wages and working conditions of similarly employed U.S. workers; and thus the employer has not met its burden of proof under section 291 of the Immigration and Nationality Act (INA) [8 U.S.C. 1361]:

> Whenever any person makes application for a visa or any other document required for entry, or makes application for admission, or otherwise attempts to enter the United States, the burden of proof shall be upon such person to establish that he is eligible to receive such visa or such document, or is not subject to exclusion under any provision of this Act * * *.

(c) DOL through its own knowledge and experience, has found that U.S. workers are available and/or that an adverse effect on similarly employed U.S. workers will result, and the employer has not met the burden of rebutting DOL's finding or findings.

Department of Labor Regulations

DOL has published regulations at 20 CFR Part 655, Subpart C, governing the labor certification process for the temporary employment of nonimmigrant aliens in the United States in agricultural and logging occupations. Part 655 was promulgated pursuant to the INS regulations at 8 CFR 214.2(h)(3)(i), quoted above.

The regulations in 20 CFR Part 655, Subpart C, set forth the factfinding process resulting in the granting or denial of a temporary alien agricultural labor certification. They describe the potential of the Federal-State system of public employment offices (established pursuant to the Wagner-Peyser Act, 29 U.S.C. 49 *et seq.*) for assisting employers in finding available U.S. workers, and how this process is utilized by DOL as a basis of information for the certification determination. See also 20 CFR Parts 602, 621, 651, 654, and 656-658.

Part 655, Subpart C, also sets forth the responsibilities of employers who desire to employ nonimmigrant aliens in temporary agricultural and logging jobs. Such employers are required to demonstrate that they have attempted to recruit U.S. workers through advertising, through the Federal-State job service system, and by other specified means. The purpose is to assure an adequate test of the availability of U.S. workers to perform the work, and to insure that aliens are not admitted for employment under conditions adversely affecting the wages and working conditions of similarly employed U.S. workers.

Adverse Effect Wage Rates

So that the importation of temporary nonimmigrant alien agricultural workers will not adversely affect the wages of similarly employed U.S. workers, DOL has since 1964 computed and published

adverse effect wage rates (AEWRs).[1] See, *e.g.*, 29 FR 19101, 19102 (December 30, 1964); 32 FR 4569, 4571 (March 28, 1967); 35 FR 12394–12395 (August 4, 1970); and 43 FR 10306, 10317 (March 10, 1978). The AEWR is the minimum wage rate that agricultural employers seeking temporary nonimmigrant alien workers are required to offer to and pay their U.S. and alien workers.

AEWRs apply only to those employers who are seeking certification to import temporary foreign labor into the United States. Employers applying for temporary labor certifications also must agree to comply with all employment-related laws. 20 CFR 655.203(b); see also 8 CFR 214.1(h)(3)(i). If the employment is covered by a higher wage standard applicable under any Federal, State, or local minimum wage law, the employer must comply with that law. See, *e.g.*, 29 U.S.C. 206(a). If the prevailing wage for the occupation in the labor market is higher, the employer must offer and pay that wage. Thus, a worker in employment under the temporary alien labor certification program must be compensated at the highest of the applicable wage rates, whether that highest rate is the AEWR, the prevailing wage, or the Federal, State, or local statutory minimum wage.

The purpose of an AEWR, as described by the Fifth Circuit U.S. Court of Appeals, is "to neutralize any 'adverse effect' resultant from the influx of temporary foreign workers." It is a "method of avoiding wage deflation." *Williams* v. *Usery*, 531 F. 2d 305, 306 (5th Cir. 1976), *cert. denied*, 429 U.S. 1000; see *Florida Sugar Cane League* v. *Usery*, 531 F. 2d 305 (5th Cir. 1976); see also *Limoneira Co.* v. *Wirtz*, 225 F. Supp. 961 (S.D. Cal. 1963), *aff'd*, 327 F. 2d 499 (9th Cir. 1964).

The U.S. Court of Appeals for the First Circuit has recognized that the AEWR is a minimum and neither forbids employers from offering more, nor employees from seeking more. See *Flecha* v. *Quiros*, 567 F.2d 1154, 1156 (1st Cir. 1977). However, that court recognized two competing statutory purposes, quoting from a Third Circuit decision:

> The common purposes are to assure [employers] an adequate labor force on the one hand and to protect the jobs of citizens on the other. Any statutory scheme with these two purposes must inevitably strike a balance between the two goals. Clearly, citizen-workers would best be protected and assured high wages if no aliens were allowed to enter. Conversely, elimination of all restrictions upon entry would most effectively provide employers with an ample labor force. *Rogers* v. *Larson*, 3 Cir. 1977, 563 F.2d 617, 626.

The First Circuit then capsulized the purpose of the statute and regulations as "to provide a manageable scheme * * * that is fair to both sides." 567 F.2d at 1156. Thus, the AEWR computation methodology must recognize the need to balance the goals of supplying an adequate labor force and protecting the jobs of citizens.

The current AEWR methodology is published at 20 CFR 655.207 (1980). However, based on requests for rulemaking received from farmworker groups and the Department's experience in the temporary labor certification program over the past 15 years, and on comments received from the public in writing and at recent public hearings, DOL has concluded that the current AEWR methodology has not successfully achieved the purpose of preventing wage deflation of similarly employed U.S. workers, occasioned by the presence of significant numbers of nonimmigrant alien workers. This adverse effect has reduced the number of U.S. workers available for employment in agriculture. Therefore, DOL is revising the methodology, as described below, in furtherance of the statutory objective of preserving U.S. jobs for U.S. workers. See *Elton Orchards, Inc.* v. *Brennan*, 508 F.2d 493, 500 (1st Cir. 1974).

Development of Final Rule

I. Necessity to Change Methodology

Before 1968, AEWRs were established at the State level and modified periodically. Since 1968, these rates have been indexed to changes in the previous season's annual average hourly wages of livestock and field hands in each State as estimated by the U.S. Department of Agriculture. (USDA).[2]

AEWR wages currently apply directly to the approximately 500 agricultural employers using temporary foreign workers, out of a total of over 700,000 agricultural employers nationwide. The rates are guaranteed to about 18,000 workers out of total harvest seasonal workforce of over 1.3 million.[3] The AEWR workers are typically paid piece rates and work in hand-picked crops. The largest agricultural users of nonimmigrant aliens admitted on H–2 visas (so-called "H–2 workers") are the East Coast apple growers (6,552 H–2 workers certified by DOL for 1979) and Florida sugarcane producers (8,530 H–2 workers certified by DOL for 1979).

In re-examining the methodology used since 1968, DOL found that fixed base annual adjustment approach for determining AEWRs resulted in AEWRs that were based neither on prevailing wage levels nor on relevant labor markets. Pegging AEWRs to annual changes in wage series indexed to a low base has led to AEWRs computed substantially below prevailing wages and sometimes even below the Fair Labor Standards Act minimum wage.[4] See 29 U.S.C. 206(a)(1). As a result, the traditional methodology was found to be an ineffective tool for testing the availability of domestic workers and in neutralizing adverse wage effects for U.S. farmworkers.

Specifically: a. Significant variations in AEWRs had developed between States using H–2 alien farmworkers (so-called "user States") and those not using such workers, with rates in States using H–2 alien farmworkers generally well below those not using such workers.

b. This led to significant distortions in agricultural wages between user and nonuser States. Relative growth rates in wages were also lower in States using H–2 alien farmworkers.

c. Within the same crop, variations in average wage levels had developed between user and nonuser States.

d. Piece rates in areas which heavily use H–2 alien farmworkers had remained unchanged for long periods and actually declined substantially in real terms.

In addition to the shortcomings noted above, it is particularly important to change the methodology at this time, to avoid the loss to H–2 aliens of jobs which currently go to U.S. workers. As the FLSA minimum wage (which applies to many agricultural workers) increases and approaches the level of the AEWR, the H–2 aliens become more economically attractive to the growers. Thus, the existing methodology poses grave risks in the next two or three years for the continued loss of jobs for U.S. workers.

These factors led DOL to re-evaluate the existing methodology. DOL realized

[1] Congress recognized some years before 1964 that the Department of Labor had the authority to set adverse effect rates. H. Rept. 274 (on H.R. 2010), 87th Cong., 1st Sess. (1961) at 9. Similar language appeared in the Senate debate on H.R. 2010. H.R. 2010 was enacted as Public Law 87–345. 75 Stat. 761 (October 3, 1961).

[2] The USDA data had been published each February in the USDA publication *Farm Labor*. However, publication of combined field and livestock worker data was discontinued after 1979, but was prepared by USDA specifically for DOL use in 1980. *Farm Labor* is published by the Crop Reporting Board, of the Economics, Statistics, & Cooperatives Service, USDA, Washington, D.C. 20250.

[3] Various sources indicate that virtually all of the H–2 alien workers are hired for harvest season jobs.

[4] Even if computed below the FLSA minimum wage, the AEWR would never be set below that wage. See 20 CFR § 655.207(e) (1980).

that any solution which tended to correct these distortions would, by definition, have an impact on H–2 growers. After a series of six public hearings (see 44 FR 59890 (October 16, 1979)), DOL proposed a new methodology for establishing an AEWR. 45 FR 15914 (March 11, 1980). The proposal is outlined below. After several extensions, the comment period closed on July 14, 1980. 45 FR 29854 (May 6, 1980). During the comment period, several problems were raised by the public commenters, which led to this re-evaluation of the initially-proposed AEWR formula. DOL considered each comment in designing the final rule. Because of the large number of written comments received (307 from 29 States, including 210 comments from the State of Virginia alone), DOL contracted with Ruttenberg, Friedman, Kilgallon, Gutchess & Associates, Inc., to assist DOL in organizing and summarizing the comments. Selected portions of Ruttenberg's summary are excerpted in the *Appendix* to this document.

II. Designing an Appropriate Regulation; Comments on Proposed Rule

The AEWR should be designed to mirror, to the extent possible, rates that would be determined by competitive domestic labor market forces. Thus, the wage-setting methodology should parallel the piece-rates actually paid during the harvest season for those hand-picked crops where H–2 temporary workers dominate; but it should take into account the fact that wages are currently depressed for crops and areas which make heavy use of alien workers. It should also compensate for the labor cost differential between domestic and alien farmworkers (currently about 15 percent) that results from social security and unemployment insurance tax requirements for U.S. workers. See, *e.g.*, 26 U.S.C. 3306(c)(1)(B) and (18). Finally, the AEWR methodology should reflect the structure of domestic agricultural labor markets for hand-picked crops.

While agricultural labor markets for seasonal, labor-intensive crops have a local component, an interstate character to these markets emerges in the presence of migratory workers that move from State-to-State and crop-to-crop. This interstate labor supply source would tend to equalize seasonal farm wages across local labor markets in the absence of regulation.

The fixed base annual adjustment approach, as noted above, reflects neither prevailing wage levels nor the interstate movement of farmworkers and thus perpetuates artificial variations in wage rates among user and non-user States. It is based on arbitrarily established State wage bases indexed to changes in previous season rates not closely related to harvest activity.

The methodology proposed in March 1980 would have set a single AEWR for all States based on a historical relationship between the average hourly earnings of piece-rate paid hired workers in agriculture and the average hourly wages paid private nonfarm workers during the previous year. This relationship, established through a regression model, would predict farmworkers' wages for the upcoming harvest season.

The March 1980 proposed approach more accurately reflects agricultural labor market conditions than the fixed base annual adjustment methodology. It would have eliminated noncompetitive interstate wage differentials that have led to distortions in labor costs between user and nonuser States. The proposed rule thus would have afforded a fairer test of labor availability and more effective protection of the wages of similarly employed agricultural workers. That proposed methodology also would have directly linked the AEWR to prevailing hourly wages for piece-rate paid hired farmworkers, the group most affected by the importation of temporary alien workers.[5] Finally, the proposed rule would have established a single AEWR which is easy to administer and does not call for additional data collection.

While the March 1980 proposal was clearly superior to the methodology used since 1968, it raised several new problems. These problems were suggested by many of the commenters responding to the proposed rule. First, the proposed methodology carried higher initial costs for impacted growers estimated at $2.72 million in 1980. While these overall costs are not significant when applied industry-wide, they hide relatively large increases for certain crops that use H–2 labor. Labor cost increases for growers using H–2 workers, under the March 1980 proposal, are estimated at 25.8 percent for tobacco, 19.6 percent for citrus, and 16.2 percent for apples. These larger initial cost increases reflect in part the movement from a wage determination based on the past year's wages to one based on projected wages for the upcoming harvest season. The large cost increases in some crops also stem from much lower prevailing wages and AEWRs. In addition to these direct costs, there was concern over the likelihood of spillovers or induced wage effects into other agricultural labor markets that could add unnecessarily to the costs of the proposal.

Secondly, the regression methodology, while based on sound mathematics, was criticized by some commenters as needlessly complex and confusing to the industry. Other commenters raised questions of statistical accuracy, given the limited nature of the data available at the present time.

Finally, while alleging that the current AEWR methodology incorrectly treated each State as a separate labor market, some commenters suggested that labor markets are better characterized as regional rather than national. The proposed methodology implied a national scope to such labor markets, which would operate to eliminate regional wage differentials in the absence of regulation. However, if legitimate regional wage variations exist, *i.e.*, regional labor markets, multiple AEWRs that follow existing labor market contours might better approximate competitive conditions in the absence of H–2 workers. Since this criticism focuses most directly on the generic approach of setting a single AEWR, rather than on any specific formula, DOL carefully reviewed the structure of agricultural labor markets, as discussed below.

III. The Structure of Agricultural Labor Markets

The seasonality of labor demand and skill requirements define the nature and scope of individual agricultural labor markets. With the mechanization of most agricultural production, the principal crops currently using seasonal labor are fruit and vegetable crops, and (to a lesser extent) tobacco. These crops exhibit an intensive need for labor during the heaviest season. These hand-picked crops also display few skill requirements, in contrast to the highly mechanized forage operations. Thus, livestock operations, as one example, have relatively stable employment requirements.

These characteristics determine the structure of agricultural labor markets. Year-round farm activities will tend to be met by full-time farmworkers, while seasonal labor-intensive crops give rise to casual, seasonal and migratory farmworkers to meet peak demand requirements. An interstate character to labor markets for certain crops emerges in the presence of migrant workers who move to job opportunities away from their home location when sufficient local workers are not available. However,

[5] However, the prevailing rate refers to yearly averages and not harvest season wages (which are higher). Also, the initially proposed AEWR did not address the issue of added compensation for the payroll tax savings associated with hiring H–2 temporary workers. See, *e.g.*, 26 U.S.C. 3306(c)(1)(B) and (18), cited above.

labor mobility is not perfect; there is also evidence of segmentation across certain crops (particularly, highly mechanized operations) and non-crop agricultural activities.

The majority of hired farmworkers are employed on a casual or seasonal basis. Casual workers are defined as those working less than 25 days on farms and seasonal workers are those working 25 to 149 days. Most of these workers are local residents. USDA data (1977) show the local casual farmworkers comprise about 38 percent of the hired farm workforce and non-migrant seasonals represent an additional 32 percent. Together these groups performed only 30 percent of the total person-days worked in 1977. Many of the local casual and seasonal workers are students and homemakers who work in the fields for several weeks or a month each year during peak harvest periods.

Only limited statistics exist on the current migrant farmworker population. The most recent USDA estimate (1977) indicates about 191,000 migrant workers, or seven percent of the U.S. agricultural labor force. This represents a 50-percent drop in the number of persons performing migrant farmwork since 1960. However, most of this decline occurred during 1960–69. Since 1970, the migrant farmworker population has remained relatively stable at about 200,000. Nearly half of the migrant workers in 1977 were employed in farm jobs that were over 500 miles from their home base and about 20 percent traveled distances in excess of 1500 miles. While migrant farmworkers are not a numerically large group, they work more days than nonmigrants and are heavily concentrated in the seasonal, labor-intensive fruit and vegetable crops.

To account for this interstate movement of farmworkers in the AEWR methodology, labor market boundaries must be established based on migratory travel patterns. The March 1980 proposed methodology would have set a single nationwide AEWR, implicitly assuming a national labor market. Some commenters suggested that there are three regional migratory streams—a Pacific Coast stream with a home base in Southern California; a Mid-Continent stream that begins in the Rio Grande region of Texas; and an Atlantic stream that starts in Florida flowing up the Eastern Seaboard. These commenters rely upon information published by the Public Health Service in 1965. However, more recent data suggest that this simple three-stream pattern may no longer apply.

For example, recent USDA data (1977) reveals that the Southwest standard Federal region (which includes Texas) is the largest home base, representing 37 percent of migrant farmworkers. The Southeast (with Florida) and the lower Pacific Coast region (with Southern California) follow with 14 percent each. These correspond to the three regional home bases described by the Public Health Service in 1965. However, a survey of migrant programs and DOL Employment Services conducted by the Legal Services Corporation in 1977 shows a wide dispersion of States of origin. While this survey supports the USDA results of large home bases in Texas, Florida, and California, more than half the States were represented as home bases for migrants.

The Legal Services Corporation found further evidence of the increasing complexity of patterns of movement in the preceding and succeeding interstate destinations of migrant workers for each State. While some heavy migrational flows do follow the traditional patterns, the wide diversity of interstate movements is also evident. This data clearly shows the increasing fragmentation of historical migratory streams.

Other evidence also points to a breakdown of traditional flow patterns. DOL's State-by-State data on peak month employment activity fail to show a steady progression of employment from May to September across neighboring States up the East Coast. While based solely on the number of workers appearing in adjacent areas according to some hypothetical flow sequence, this data raises serious questions about the current validity of traditional migrant circles. The 1977 survey documented numerous cases of Florida migrants in Washington and Puerto Rican and Florida migrants in California. Conversely, California migrants were regularly found in New Jersey.

The relative importance of structural trends in explaining the breakdown of the simple, three-stream migratory concept strongly suggests that this dispersion represents a permanent change in agricultural markets resulting in a national agricultural labor market structure for H–2 crops.

IV. Description of Final Rule

Since agricultural labor markets for H–2 crops are national in scope, the final rule retains the proposed single nationwide AEWR concept. However, instead of predicting upcoming season wages, the methodology in the final rule uses last year's USDA annual average hourly wage for piece-rate paid hired agricultural workers, phased in over a three-year period. This methodology would be easy to understand and administer because the AEWR would be tied exclusively to prevailing wages in the agricultural sector and would not rely on a regression model linked to nonfarm wages.

Setting the AEWR at last year's annual average hourly wage rate for piece-rate paid hired farmworkers will reduce substantially the cost impact of setting a single nationwide AEWR. In addition, a three-step phase-in will further reduce this cost impact by allowing H–2 growers to adjust to the proposed increase over a three-year period.

This final rule improves the wage levels for the U.S. and alien workers while showing substantial employer savings over the proposed rule, with estimated direct costs for H–2 growers in 1980 (had the final rule been in effect for the 1980 harvest season) of only $3,651.00 compared with $2,720,000.00 under the initial proposal. When compared with the March 1980 initial proposal, costs for impacted growers are lowered by over 77 percent during the phase-in period, and in 1981 will be an estimated $288,027 compared with $2,910,291 under the initial proposal. See Table I, *infra.*

This approach also reduces substantially the direct cost increases for individual crops. Labor costs increases would be under one percent in tobacco. Apple and citrus growers would have experienced no labor cost increase in 1980 had the rate been in effect for the entire 1980 harvest season. No added costs are foreseen for sugar cane (about half the agricultural H–2 workers are employed in sugar cane harvesting, where wages have been above the applicable AEWR since at least 1976).

While these cost estimates refer only to the direct economic impact of establishing a single nationwide AEWR, potential spillover effects are expected to be limited by such factors as (1) a lower AEWR resulting from the use of previous season wages phased in over a three-year period; (2) the small number of workers to whom this final rule applies relative to the labor force; and (3) partial segmentation of agricultural labor markets based on skill needs and seasonality of demand.

V. Direct Cost Estimates

This section compares the projected *direct* cost impacts for H–2 growers of the initially proposed rule and the final rule. These costs are also compared with those calculated under the current methodology. Although the new formula will not go into effect for a full year until the 1981 harvest season, the cost

estimates on which this rule was based were prepared for the period 1980–1983. In making these estimates, DOL used data on labor force in prevailing wages by crops for 1979 which were the most recent data available when these estimates were prepared.

To derive the 1980 cost estimates, DOL has assumed that the 1979 levels of H–2 employment (both domestic and alien workers employed by impacted growers) by crop activity continued in 1980. Prevailing hourly wages for these crops in H–2 States were projected forward to 1980 using the average annual growth rate in USDA average hourly wages for piece-rate hired agricultural workers for the period 1974–1979, which is 9.6 percent. Projected hourly wages in 1980 by crop were then compared to the relevant AEWRs (either State or national) to obtain estimates of the costs added by these proposals for changing the AEWR methodology over those under the current methodology.

A. *Proposed Rule Costs.* As stated above, under the March 1980 proposed rule, the AEWR would have been set at $4.51 per hour in all H–2 workers user States in 1980. The overall direct cost increase would have been estimated at a modest $2.72 million nationwide for all crop activities in 1980. However, the aggregate cost estimate obscures relatively large increases for certain crops that use H–2 labor. Estimated labor cost increases resulting from the initial proposal would have been 25.8 percent for tobacco, 16.2 percent for apples, and 19.6 percent for citrus. These large cost increases reflect in part the movement from a wage determination based on prior year wages to one based on projected wages for the upcoming harvest season. The large cost increases in some crops also stem from much lower prevailing wages and AEWRs.

B. *Final Rule Phase-in Costs.* Establishing a nationwide AEWR based on last year's annual average hourly wage rate for piece-rate paid hired agricultural workers, phased in over a three-year period, would produce substantial cost savings for impacted growers relative to the initial proposal. To calculate the four-year cost of this approach, DOL predicted the 1982 United States annual average hourly wages of piece-rate paid hired farmworkers which, under the rule, would become the 1983 AEWR. This rate was calculated by using the actual average 1979 wages of $4.07 (as determined by the USDA) and the 9.6 percent average annual increase in this wage series over the 1974–1979 period.[6] By 1983, 100 percent of the 1982 United States annual average hourly earnings of piece-rate paid hired farmworkers would become the 1983 AEWR under the final rule.

The estimated cost of this phase-in approach depends on the 1979 baseline selected from which to extrapolate interim AEWR's until reaching an estimated $5.36 in 1983. If DOL uses the average 1979 H–2 user state AEWR of $3.10, calculated under the current methodology,[7] as the baseline for 1979 and the estimated $5.36 for the 1983 end period of the phase-in, a straight-line phase-in methodology would produce intermediate AEWRs of approximately 90 percent the USDA rate for 1980 ($3.67), approximately 95 percent for 1981 ($4.23), and approximately 98 percent for 1982 ($4.80). If DOL had chosen to apply the new methodology in the final rule without a phase-in, the AEWRs would be estimated to be $4.07 for 1980, $4.46 for 1981 and $4.89 for 1982. If DOL had chosen to apply the methodology initially proposed in the March 11, 1980, document, the AEWRs would be estimated to be $4.51 for 1980, $4.89 for 1981, $5.32 for 1982, and $5.77 for 1983.

Cost estimates for the phase-in approach adopted in this final rule are presented in Table I below. The final rule shows substantial cost savings, with projected direct costs in 1980 of only $3,651.00 compared with $2.72 million, and in 1983, of $1.41 million compared with $3.10 million. When compared with the proposal, annual costs spread out over the four-year period for impacted growers are reduced by over 77 percent under the final rule, averaging $651,695.00 per year. See Table I, *infra*.

This final rule establishes a nationwide AEWR based on the previous year's annual average hourly wage for piece-rate paid hired farmworkers nationwide, and both avoids imposing a double increase in the first year and reduces substantially the direct cost increases for individual crops. Labor costs increases for tobacco growers would be limited to under one percent. Apple and citrus growers are expected to experience no cost increases in 1980 under the final rule.

While these estimates do not account for any wage spillover to non H–2 growers or other indirect effects in local labor markets, these secondary effects are expected to be limited, as noted earlier.

[6] Alternatively, DOL could predict average hourly earnings of piece-rate hired farmworkers for 1982 from the estimated parameters in the regression methodology used in the initial proposal to establish the 1980 AEWR. For this projection, production worker earnings were assumed to increase at 7.6 percent, the average annual increase in production worker earnings over the 1973–1979 period. These calculations would produce a similar AEWR for 1983 of $5.32. However, DOL has based the cost estimates on the approach likely to be used by DOL to set interim AEWRs during the phase-in period.

[7] The average AEWR is calculated as the unweighted mean of the relevant State AEWRs.

Table I.—*Estimated Additional Cost of Implementing Previous Season AEWR by Major Crops Using Alien Labor in 1980 to 1983 With a 3-Year Phase-in (1980–1983)* [1]

Crop	Net cost added by $3.67 AEWR in 1980 [2]	Cost added $4.23 AEWR in 1982 [2]	Cost added $4.80 AEWR in 1982 [2]	Cost added $5.36 AEWR in 1983 [2]
Apples	0	0	$427,319	$772,689
Sugarcane	0	0	0	0
Tobacco	$3,651	$227,843	309,553	375,482
Citrus	0	60,184	166,549	243,410
Peaches/pears	0	0	2,776	17,324
Peaches	0	0	0	0
Estimated added cost of final rule	3,651	288,027	906,197	1,408,905
Estimated added cost of initial proposal [3]	2,717,544	2,910,291	3,028,695	3,071,608

[1] A linear technique was applied to extrapolate predicted AEWR's for 1980, 1981, and 1982, using the unweighted average 1979 AEWR under the current methodology for 1979 and the predicted AEWR of $5.36 for 1983. This Table should *not* be taken to indicate that the *actual* AEWR's will equal these estimates.

[2] Estimated added costs under the current methodology were not netted out for 1981, 1982, and 1983. The $3.67, $4.23, $4.80, and $5.36 AEWR's are approximately 90 percent, 94 percent, 98 percent, and 100 percent of the estimated United States annual average hourly wage rates of piece-rate paid hired farmworkers for the years 1979–82, respectively. However, based on data published in the USDA publication *Farm Labor* on February 21, 1980, the 1979 average was $4.07, 90 percent of which would be $3.66, or $0.01 *less* than the 1980 AEWR used in the cost estimate.

[3] The regression model of the initial proposal predicted AEWR's of $4.51 for 1980, $4.89 for 1981, $5.32 for 1982, and $5.77 for 1983.

VI. Piece rates

As in the proposed rule, piece rates for workers under the final rule would be examined annually. Growers requesting temporary nonimmigrant alien workers would submit to ETA (or

to a State job service agency designated by ETA) data on their previous year's employment and earnings, and on the piece rate paid to workers in the applicable crop activity.

Using the data, the employer would be required to calculate new piece rates for the coming season. The employer would be required to adjust the previous year's piece rate(s) upward by the same percentage as the increase in the hourly AEWR for the coming season, provided, however, that the employer first would be required to demonstrate that the previous season's piece rate was adequate to yield the previous season's AEWR, based upon the employer's average worker's production in that activity in that season.

Thus, if the previous season's hourly AEWR was $4.00 and the coming season's hourly AEWR would be $4.40 (a 10% increase), an employer whose average harvester picked 8 bushels per hour last season at a piece rate of $.50 per bushel would have to offer and pay its workers $.55 per bushel for that activity in the coming season.

However, if the employer's average worker picked only 7 bushels per hour in the previous season, at a piece rate of $.50 per bushel that worker would have earned only $3.50 per hour (absent make-up pay), $.50 per hour less than the hourly AEWR for that season. To earn last year's hourly AEWR, at a production rate of 7 bushels per hour, that average harvester should have been paid a piece rate of $.571 per bushel ($.571 piece rate = $4.00 AEWR divided by 7 bu./hr. average production). In that situation, the employer must offer and pay to its workers in the coming season a piece rate based upon what the previous season's piece rate should have been ($.571 per bushel), increased by the same percentage as the increase in the hourly AEWR (10%). Thus, the employer's piece rate in the coming season would have to be $.628 per bushel (110% of $.571 per bushel).

Each worker who earns less than the hourly AEWR at the applicable piece rate would have to be paid make-up pay, to bring his/her hourly earnings up to the season's hourly AEWR.

The employer would be required to offer and to pay to workers at least that adjusted piece rate for the growing season, so that the wages of similarly employed U.S. workers will not be adversely affected by the employment of the aliens. If a grower pays separate rates for different activities in the same crop (*e.g.*, spot picking vs. stripping fruit trees) or separate rates for different crops, then piece rates shall be adjusted independently for each activity.

If, during a pay period, any individual worker did not earn at least the AEWR for the number of hours he/she worked, the employer would have to pay that worker the piece rate earned, plus the difference, to achieve the AEWR for the number of hours worked. When this occurs, the employer would be required to notify the local job service office that makeup pay has been provided to the worker(s). The grower may be audited by DOL to ensure the piece rate actually is generating the AEWR for the average worker.

Where an employer has no historical data available from which an adjusted piece rate may be computed (*i.e.*, where the employer is growing a crop for the first time), and the employer elects to use a piece-rate system, the employer will be required to establish a piece rate reasonably expected to generate the AEWR, for inclusion in the job order for U.S. workers. The employer's specific methodology for establishing a piece rate resulting in the AEWR for such a crop would have to be submitted in writing to the ETA Regional Administrator for approval. DOL may then audit the employer to ensure that the piece rate is actually generating the AEWR. "DOL" has been substituted to indicate that the auditing agency may be a DOL auditing agency other than ETA giving DOL a greater degree of flexibility in utilizing its resources.

If another grower or growers produce the same crop in the area of employment, the employer producing the crop for the first time may base its piece rate on the average hourly earnings and production of workers employed in that crop activity in the area of intended employment. The State job service would determine what those average hourly earnings are, through its in-season wage surveys or its collected prevailing wage information.

VII. Sheepherding Employment

Sheepherding employment has been included as farm work covered by 20 CFR Part 655, Subpart C, since the promulgation of the subpart. See 43 FR 10307 (March 10, 1978). Because of the unique nature of the hours and the work involved in sheepherding, it would be inappropriate to set an hourly AEWR for that occupation. The final rule continues the practice of setting a monthly wage for range sheepherding, which must be guaranteed to the worker unless the local prevailing wage for such work is higher. As in past years, the monthly AEWR will be changed annually by the average percentage change in the USDA-determined hourly wage rates (set forth in each February issue of *Farm Labor*), for livestock farm workers in the eleven Western States where the aliens historically have been employed.

The base rate will be the 1980 AEWR, which was $523.00 per month.* The wage is rounded off to the nearest $1.00. The 1980 rate has been substituted for the 1979 rate, since that new data became available after the development of the proposed rule. The new data result in no greater costs to the employers.

VIII. Logging Employment

The current methodology for wages in logging employment is unchanged in the final rule, because loggers' wages have equalled or exceeded the annual average hourly wages of nonagricultural production workers. The AEWR for logging is the prevailing wage for the occupation in the area of intended employment.

Development of Final Rule

The final rule was prepared under the direction and control of Mr. David O. Williams, Administrator, United States Employment Service, Employment and Training Administration, United States Department of Labor, Washington, D.C.

Regulatory Impact

The rule affects only those agricultural employers who request certification to employ nonimmigrant alien workers, and has less impact than specified in DOL's criteria, so that the effect of the proposed regulation is not so major as to require the preparation of a regulatory analysis. See 44 FR 5576 (January 26, 1979).

Catalog of Federal Domestic Assistance Number

This program is listed in the *Catalog of Federal Domestic Assistance* at Number 17.202, "Certification of Foreign Workers for Agricultural and Logging Employment".

Final Rule

Accordingly, § 655.207 of Part 655 of Chapter V of Title 20, Code of Federal Regulations, is revised to read as follows:

§ 655.207 Adverse effect rates.

(a) *Scope.* This section sets forth the methodology by which the adverse effect rates are computed for agricultural employment and for logging employment.

(b) *Agriculture.* For all agricultural employment in the United States (except

*Employers were required to pay the higher prevailing rates in 1980 in Nevada ($525.00) and California ($550.00).

sheepherding), the hourly adverse effect rate shall be the previous calendar year's United States annual average hourly wage rate for "piece-rate paid hired farmworkers". This annual average hourly rate is determined by the United States Department of Agriculture (USDA) and is published in the USDA publication *Farm Labor* in the February following the calendar year reported. For agricultural employment (except sheepherding), the single adverse effect rate applicable nationwide shall be:

(1) 90 percent of the 1979 USDA rate, for the period from the effective date of this regulation through March 31, 1981;

(2) 95 percent of the 1980 USDA rate, for the period from April 1, 1981, through March 31, 1982;

(3) 98 percent of the 1981 USDA rate, for the period from April 1, 1982, through March 31, 1983; and

(4) 100 percent of the previous calendar year's USDA rate, for each 12-month period beginning April 1, 1983, and April 1 of each calendar year thereafter.

(c) *Logging and sheepherding.* (1) For logging employment, the adverse effect rate shall be the prevailing wage rate in the area of intended employment.

(2) For sheepherding employment, the monthly adverse effect rate for each year shall be computed and set by adjusting the prior year's sheepherding adverse effect rate by the average percentage change (from the second year previous to the prior year) in the U.S. Department of Agriculture hourly wage rates for livestock farm workers for the following States: Arizona, California, Colorado, Idaho, Oregon, Nevada, Montana, Texas, Utah, Washington, and Wyoming. The base adverse effect rate for sheepherding, which is the rate that must be paid in the season beginning in 1980, is $523.00 per month. The rate shall be rounded off to the nearest $1.00.

(d) *Piece rate adjustments.* (1)(i) In any year in which the applicable hourly adverse effect rate is increased, the employer shall increase the piece rate for such activity by the same percentage as the increase in the hourly adverse effect rate over the previous season's adverse effect rate. Before calculating the increase in the piece rate, the employer first must adjust the previous season's piece rate upward to a point where the employer's average worker in that activity would have made hourly earnings equal to that season's adverse effect rate (absent make-up pay described in paragraph (e) of this section).

(ii) If a grower pays separate rates for different activities in the same crop (*e.g.*, spot picking vs. stripping) or separate rates for different crops, then piece rates shall be adjusted independently for each activity.

(2) Where an employer has no historical data available from which an adjusted piece rate may be computed (*i.e.*, where the employer is growing a crop for the first time), the employer will be required to establish a piece rate reasonably expected to generate the adverse effect rate. The employer's specific methodology for establishing a piece rate resulting in the adverse effect rate for such a crop would have to be submitted in writing to the RA for approval. The Department of Labor (DOL) then may audit the employer to ensure that the piece rate is actually generating the adverse effect rate. If another grower or growers produce the same crop in the area of employment, the employer producing the corp for the first time would base its piece rate on the average hourly earnings and production of workers employed in that crop activity in the area of intended employment. The State job service shall determine what those average hourly earnings are, through its in-season wage surveys or its collected prevailing wage information.

(e) *Make-up pay.* If, during a pay period, any individual worker working for the employer did not earn at least the adverse effect rate for the number of hours the worker worked, the employer shall pay that worker the piece rate earned, plus the difference, to achieve the adverse effect rate for the number of hours worked (see § 655.202(b) (9) (ii) of this Part). When this occurs, the employer shall notify the local job service office that makeup pay has been provided to the worker(s). The grower may be audited by DOL to ensure that the piece rate is actually generating the adverse effect rate for the employer's average worker.

(f) *Minimum and prevailing wage rates.* Notwithstanding any other provision of this Subpart, an employer seeking labor certification(s) or to whom labor certifications have been granted must offer and pay to its workers a wage no lower than the highest of the adverse effect rate, the prevailing wage for the occupation in the area of intended employment, or the Federal, State, or local statutory minimum wage applicable to the occupation.

(g) *Publication.* The Administrator annually shall publish in the **Federal Register** a notice announcing the adverse effect rates computed pursuant to paragraphs (b) and (c)(2) of this section.

(Immigration and Nationality Act, (8 U.S.C. 1101, 1184(c)); 8 CFR 214.2(h)(3)(i); (5 U.S.C. 301))

Signed at Washington, D.C. this 13th day of January, 1981.

Ray Marshall,

Secretary of Labor.

Appendix

Note.—This Appendix will not appear in the Code of Federal Regulations.

The following are selected excerpts from the report prepared by Ruttenberg, Friedman, Kilgallon, Gutchess & Associates, Inc., for the U.S. Employment Service, summarizing the comments received from the public in response to the March 11, 1980 proposed rule (see 45 FR 15914):

I. Overview of Public Comments Received

* * * * *

Commenters

A total of 307 individuals submitted written comments to the Department of Labor on the proposed methodology. More than three-fourths were employers or employer representatives. Over one-tenth were worker representatives. Other commentors included elected officials, representatives of a state Employment Service and other state agencies, members of private nonprofit organizations, and persons with other or unidentified affiliations.

A preponderance of commentors, over two thirds, were Virginians, apparently reflecting a letter-writing campaign mounted by the tobacco growers' association there. The remainder were from 28 other states.

Tobacco was the crop activity with which commentors were most frequently associated, with over 30 percent identifying themselves in this way. Another large response came from persons associated with apples, who comprised 14 percent of the commentors. One hundred commentors were placed for purposes of this report in the category of "general agriculture" because they indicated an involvement in agriculture but not in a specific crop(s). Smaller numbers of commentors represented sugar, vegetables, citrus, logging, and fruit other than apples. For the remaining commentors, a crop activity was either not applicable or not identifiable.

Positions on Proposed Methodology

Public comments received by the Labor Department tended to be of two general kinds. In the first group were the majority of comments, which were directed to the methodology itself. These usually offered criticisms or endorsements of the technique by which the Labor Department proposed to set the AEWR, sometimes suggesting modifications or alternative methodologies. In some cases, the commentors focused narrowly on the proposed 1980 wage rate of $4.51, which the Labor Department announced would result from the proposed methodology, without addressing the technique by which it was computed. All of these comments on issues raised by the proposed methodology are discussed and analyzed in Section II of this paper.

* * * * *

Persons commenting on the methodology tended to be critical of the proposal, with relatively few indicating that it satisfied them completely. A total of 257 commentors expressed generally negative positions on the methodology; 39 expressed generally positive positions; 7 rejected the concept of an AEWR methodology entirely; and 4 wrote only to ask for an extended comment period. Of those whose comments were considered "generally positive," some nevertheless criticized aspects of the methodology; similarly, some "generally negative" comments indicated acceptance of portions of the proposal. One of the positive comments was conditional upon effective monitoring and enforcement to protect workers.

Fifty-seven commentors suggested modifications of or alternatives to the proposed methodology. These are analyzed in the discussion of issues in Section II, and are briefly mentioned below:

- There were 30 commentors who advocated using the federal minimum wage, either

Alone,

In combination with the area's prevailing wage rate,

In combination with the state or local minimum wage,

In combination with the state or local minimum wage, whichever was the highest, unless the Labor Department determined the prevailing rate was necessary to offset the adverse effect of H–2 workers in the area, or

As a base rate to which a certain percentage would be added.

- The pre-1968 AEWR methodology, setting rates by state and crop, was advocated by seven commentors.
- One individual proposed setting local crop-by-crop rates, adjusted to compensate for the depressant effect of H–2s in the area and for the tax advantages enjoyed by H–2 employers.
- Three persons recommended setting the AEWR state-by-state without regard to crop as is presently done.
- Two additional letter writers offered detailed proposals for an AEWR set state-by-state, with no state's AEWR to be lower than a national rate.
- Setting regional AEWRs was recommended by one commentor.
- Another commentor suggested use of the prevailing wage rate in an area.
- A methodology utilizing adjustments of the employer's basic (but not abnormal) piece rate was offered by one letter writer.

Relying upon the forces of supply and demand to set the rate was put forth by another commentor.

- Nine persons recommended setting the AEWR at $6.50 an hour, the average nonagricultural production workers wage rate.
- One letter writer suggested that the AEWR be applied to the workforce of the employer rather than to each individual worker.

Congressional and White House Letters

The Department of Labor also received 41 letters from representatives of Congress and White House staff. The White House letters and most of the Congressional ones forwarded correspondence on the AEWR methodology from constituents. Most of these constituents had also separately submitted comments directly to the Department of Labor.

The Congressional and White House correspondence came from 18 states: California, Connecticut, Florida, Idaho, Illinois, Maine, Maryland, Massachusetts, New Hampshire, New York, North Carolina, Oregon, South Carolina, Texas, Vermont, Virginia, Washington, and West Virginia.

In addition to forwarding constituent correspondence, some Members of Congress wrote to express a particular point of view or to request extension of the comment period. Ten Congressional commentors were opposed to the proposed methodology, with seven citing the proposed methodology's impact on wage levels, two opposing a single national rate, two disagreeing with the farm-nonfarm wage relationship, and one discussing the issue of available domestic farmworkers.

II. Comments on the Proposed Methodology

This section discusses the specific comments submitted to the Labor Department on the proposed AEWR methodology, as well as alternative methodologies suggested.

For purposes of this report and analysis, comments have been examined in relation to 10 principal issues which are involved in the setting of the adverse effect rate. These issues are:

Use of a single national rate
Application of a relationship between farm and nonfarm wages
The setting of adverse effect piece rates
Use of average piece-rate earnings data
Impact of the AEWR on wage levels
Make-up pay requirement
Ease of use and comprehension
Administration and enforcement
Timing of publication of the AEWR

Methodology for logging and sheepherding

Each of these principal issues is discussed in turn. Comments for and against the methodology are described.

Issue: Single national rate

Fifty-one of those commenting on the proposed methodology directed their remarks to the establishment of a single national adverse effect wage rate—a feature that is in contrast to the present system of setting separate AEWRs for each user state. Twenty-one persons were generally positive toward a single national rate, and 30 were generally negative.

Arguments for

Support for a single national rate came almost exclusively from farmworkers and their representatives, although worker opinions on this point were not unanimous. Proponents believed that a single national rate would more accurately reflect the interstate nature of the workforce and the competitive market forces that affect agricultural employment. Some commended the proposal for recognizing that American workers can and do cross state lines to obtain employment.

A representative of a nonpartisan, private nonprofit organization commented that by establishing AEWR comparability among states, the single national rate would strike a better balance between the needs of employers to obtain labor and the needs of workers to avoid wage deflation and exploitation. "The present haphazard pattern of geographically based AEWRs does not accomplish either of these ends," he said.

Another argument given in favor of the single rate was that it would end confusion that presently exists as to the AEWR level that applies in a particular locale.

Several worker representatives voiced acceptance of a single national rate but said their preference would have been a rate set by crop and location, capable of reflecting higher regional or local wage levels. This concern was evident among commentors from California and New York State, where the average earnings of piece-rate-paid agricultural workers are higher than the national average. (In California, where farmworkers have made wage gains through collective bargaining, piece-rate-paid farmworkers earned an average of $5.42 per hour in 1979, according to one letter writer, and the 1980 level was of course expected to be higher.) Most (though not all) of these commentors believed, however, that workers in their areas would be protected against wage depression by the provisions of § 655.207(f) of the proposed methodology, which requires employers to offer and pay the prevailing wage for the occupation in the area of intended employment if it is higher than the adverse effect wage rate. With this protection, as one worker representative put it, "we can live with a national rate." Another said he could accept one national rate "as an initial benchmark" but asked DOL to hold open the possibility of regional adjustments if experience with a national rate indicates a need.

Two worker advocates who supported the methodology as proposed nevertheless offered alternative methodologies which they would have preferred:

One recommended setting a separate AEWR for each federal region, based on the relationship between regional earnings of nonfarm production workers and piece-rate-paid hired farmworkers. In no case would the regional AEWR be permitted to be less than the corresponding national rate similarly computed. This method would have the advantage of eliminating any regional wage depression; it would not be confusing to employers or workers; and it would utilize data by region which is presently available, its proponent stated.

The other recommended calculating local crop-by-crop piece rates as follows:

1. Use data gathered by the Employment Service on Form 232, regarding piece rates in certain crops which are used in determining whether clearance orders offer prevailing wages and working conditions.

2. Find the "top rate" paid to local domestic workers by crop—i.e., the wage that is at the 90th percentile of local wages.

3. Adjust the top rate to correct for the depressant effect of any H–2 workers in the area. This would be done by increasing the top rate in proportion to the penetration of the labor market by H–2 workers—e.g., a 0.5 percent increase in the top rate for each 1 percent of market penetration.

4. Use DOL's proposed methodology for projecting next season's rates.

5. Increase the anticipated piece rate by 10 percent to offset the tax advantages of H–2 workers.

6. A similar methodology should be followed to compute hourly rates.

A number of worker representatives called attention to what they felt were inequities of the present state-by-state AEWRs, which they believed would be corrected by a single national rate. The lowest adverse effect wage rates, some pointed out, have often occurred in states where wages (presumably nonagricultural wages) are highest. This has meant exploitation of foreign workers at low wages, they contended, and has discouraged domestic workers from accepting agricultural jobs in which they cannot earn a living wage.

Some worker representatives said they supported a national rate because it would require growers with low average wages to increase their wage rates. One commented that the single rate would uniformly protect not only U.S. workers but also employers, who would not face competition from others paying lower wages.

Arguments against

Those opposed to a single national wage rate usually objected to it because it would fail to take into account the differences between states, regions, crops, or harvesting conditions. A few rejected the Labor Department's assertion that agriculture utilizes a national workforce. Opposition was voiced mainly by employers and their representatives, but worker representatives also raised objections—particularly with regard to the depressant effect of a single national rate in high-wage areas.

A worker representative claimed the national rate could have a "devastating effect" in California where wages and working conditions generally exceed the national average. While acknowledging that the methodology would require growers to pay the prevailing wage if it exceeds the AEWR, this commentor asserted that the national AEWR would still have the effect of putting a ceiling on wages which would prevent the natural rise resulting from normal economic interaction.

Several commentors cited the varying degree of difficulty in harvesting different crops as justification for setting adverse effect wage rates by crop. Harvesting conditions also need to be considered in setting the wage, some said—e.g., the size of the crop per tree.

An employer representative from North Carolina offered data which he said supported his view that agriculture does not utilize a national workforce: Out of 145,000 farmworkers in North Carolina in 1978, 85,000 were family workers and 60,000 were hired workers. As family workers, the majority were not part of a mobile, interstate, or national workforce, he asserted. Therefore, wages in other areas of the U.S. have little if any influence on wages paid in North Carolina, where the wage rate is a function of the work to be done and the availability of local labor.

An employer advocate recommended that DOL develop an AEWR for his state

of New Hampshire specifically, using only New Hampshire wages as a base and excluding nonfarm wages.

An alternative methodology utilizing the prevailing hourly wage for the crop and location was suggested by one employer representative. Where piece rates are paid, he recommended that the AEWR would be no less than the prevailing hourly wage or the applicable federal or state minimum wage, whichever was higher.

Another commentor similarly urged the use of the prevailing wage as the AEWR where wages were expressed in hourly rates. But where the wage is expressed as a piece rate, he asserted that "the federal minimum wage is the only appropriate adverse effect hourly wage rate." The minimum wage is simple, widely understood, and commonly accepted by both employer and employee, he stated. Furthermore, Congress has determined that that wage is sufficient to protect the interests of workers.

Still another methodology proposed as an alternative to a single national rate was as follows:

1. Determine what percentage of foreign workers employed in specific jobs in an area will have an adverse effect on U.S. workers. "We suggest that where foreign workers constitute less than 10 percent of the jobs in specific employment in a specific area it would be reasonable to expect no adverse effect, since it has always cost employers more to employ temporary foreign workers than to employ domestic workers under the H(ii) program."

2. Set the AEWR at the highest of the federal, state, or local minimum wage, except where the Labor Department determines that there will be an adverse effect on U.S. workers because foreign workers will exceed the level set in the first step, above. In such cases, the prevailing wage should be the AEWR.

3. Where the prevailing wage is determined to be necessary, set the AEWR as was done prior to 1968: Make crop-by-crop, area-by-area wage surveys to set a prevailing wage, and adjust this annually for actual economic and market conditions.

Another alternative methodology proposed by this commentor would be for employers to submit a statement of wages or piece rates paid in the previous year, and the wages and benefits planned for the coming year. Employers would have to show evidence that wages would approximate the prevailing wage of the crop and area.

Several growers' organizations recommended setting the AEWR by state on the basis of the U.S. Department of Agriculture's state-by-state data on average hourly earnings of field workers (or field and livestock workers, some said). This relates more closely to the wages being paid in the areas in which H–2 certification is sought, in their opinion. One of these commentors said this data should be used as follows to set the AEWR:

1. Compute a state-by-state AEWR each year by adjusting the previous year's field and livestock worker hourly average rate, as determined by USDA for that state, by the average percentage change in the rate during each of the five preceding years.

2. DOL would use the same formula to calculate an adjusted rate for the nation. If a state's adjusted field and livestock worker rate fell below the national rate, the state would have to use the national rate.

The commentor claimed this procedure would be "self-correcting" and would not compound errors in the AEWR from year to year. It would also recognize workers' geographical and occupational mobility.

Another commentor elaborated on a similar state-by-state methodology:

1. Use USDA annual average hourly wage data for field workers, both by state and nationally.

2. One-year projections should be made by state each year, based on a simple average of the percentage increase over the past five years applied to the prior year's actual field worker hourly rate (not to the prior year's AEWR).

3. If the rate for any state, after this adjustment, fell below the nationally adjusted rate, that state would use the national rate as its AEWR. But the annual increase in any state would be limited to 150 percent of the percentage change in the national rate. (This, according to the commentor, would result in a "self-correcting" formula which would not compound aberrations in the prior year's AEWR.)

4. If the new AEWR, set in this way, is lower than the rate under the old methodology, the old AEWR would be increased at a rate of 50 percent of the actual percentage increase in field workers' earnings over the five year period, until it caught up to the rate computed by this new approach.

* * * * *

Issue: Application of Relationship Between Farm and Nonfarm Wages

Twenty-seven persons discussed the proposed methodology's application of the relationship between farm and nonfarm wages as a means of predicting the AEWR for the coming year. Nine of these generally favored this feature of the methodology, and 18 were generally opposed to it.

Arguments for

Several persons, mainly worker representatives, endorsed the Labor Department's rationale for establishing a relationship between farm and nonfarm wages for purposes of setting the adverse effect wage rate. One applauded the methodology's "recognition that farm earnings are affected by the same forces that impact on other sectors of the economy and the earnings of laborers in those sectors" and "that farm and nonfarm earnings are not independent of each other."

A few supporters said they would prefer to link the AEWR even more closely to nonagricultural wages but could accept this methodology. Among these were several representatives of organized labor who said the rate should be based upon wages paid to production workers alone and not related to the current U.S. farmworker wage rate at all, because farmworker wage rates have been historically depressed. Low farm wages simply prove that farmworkers have been discriminated against in the past and were treated as "second-class citizens" in labor legislation such as the lower federal minimum wage in agriculture, one said. Rather than penalize farmworkers for their past low wages, these organized labor representatives reasoned, the AEWR should be set at the $6.50-an-hour average wage rate of nonfarmworkers. At this wage rate, American workers could be found to fill the jobs and the need for foreign workers would be averted.

Endorsing a link to nonfarm wage rates, one organized labor spokeman stated that when Secretary of Labor Willard Wirtz commented on the first DOL regulations for importing foreign labor in 1964, he anticipated that their entry would be "greatly reduced or hopefully eliminated."

Instead, more alien workers entered the U.S. in 1979 than in 1978, with 80,000 entering over the last five years, the commentor said. At the same time, there have been an average of seven million persons aged 16 or over unemployed in the U.S. With domestic unemployment so high, it appears questionable to import labor at $2.00-an-hour less than the average wage paid to production and nonsupervisory workers in nonagricultural industries, he said.

Arguments Against

Those opposed to this aspect of the methodology came from two polar camps: Some felt the formula's farm-

nonfarm wage relationship inflated the AEWR too much, and the others felt it kept the AEWR from rising high enough.

Employers and their representatives comprised the first group. Many of these asserted it is illegal to include nonagricultural wages in the AEWR formula. They contended that the Immigration and Nationality Act and INS regulations seek to prevent an adverse effect on workers "similarly employed." Nonagricultural workers, they argued, are not employed "similarly" to those agricultural workers whom the adverse effect wage rate seeks to protect. Their earnings therefore are not relevant to a determination of adverse effect * * *.

Another argument voiced by employer representatives was the lack of reliable evidence of a relationship between farm and nonfarm earnings. The two sectors are influenced by different factors, they said. "While there may be a demonstrable relationship between the two to date, there is no assurance it will continue," one employer representative wrote. "Nonagricultural workers' earnings, tied to union contracts in many instances, will not jibe with the economics of agricultural endeavors."

Nor are the farm and nonfarm sectors related through the relative movements of wages, an employer representative argued. Industrial workers will not leave their urban homes to become farmworkers, and farmworkers do not move regularly from country to city in response to fluctuating wage rates.

Other employer representatives argued that production workers are more highly skilled than agricultural workers and therefore command a higher wage rate. A comparison of farm and nonfarm wages ignores the differences in education and abilities required in the two sectors. The inclusion of these skilled production workers' wages in the formula distorts the AEWR, they said. In this vein, one commenter suggested that if nonfarm workers' earnings are considered in calculating the AEWR, only entry-level wages should be used and overtime pay should be omitted, along with workers' earnings in industries that have hefty collective bargaining agreements. Earnings of workers employed in industries operating in a limited competitive business environment should also be excluded, this commentor said.

In the second group of opponents to this feature of the methodology were worker representatives. They felt that the formula will maintain the historical disparity between agricultural and nonagricultural wages, so farm wages can never catch up. One commented that the methodology "insufficiently emphasizes the competitive market" by relying too heavily on an "asserted correlation" between farm and nonfarm earnings.

* * * * *

Issue: Setting adverse effect piece rates

Twenty-one people commented on the setting of adverse effect piece rates. Six responded positively and fifteen negatively.

Arguments for

Worker representatives were in favor of the Department of Labor setting adverse effect piece rates. They noted that as the hourly adverse effect wage rate was increased in past years, piece rates remained fairly stable. The growers adjusted the piece rate minimums upward, expecting farmworkers to produce more quickly or be fired. Thus, farmworkers paid on a piece rate basis did not experience increases in earnings as the hourly adverse effect wage rate was raised. One worker representative expressed approval of the requirement that each employer should make an initial adjustment in his/her piece rates from last season such that the employer's average worker would have earned the hourly AEWR without makeup pay.

Another worker representative endorsed the annual adjustment of piece rates but offered an additional suggestion. This involved setting the adverse effect piece rate to produce either the hourly adverse effect wage rate or the "90th percentile rate" for farmworkers in the area of intended employment, whichever was higher.

Yet a third worker representative was concerned with cases in which an employer paid piece rates in past years higher that the proposed adverse effect wage rate. To clarify the issue, he suggested that language be added preventing employers from decreasing an existing piece rate which is higher than the AEWR and preventing employers from allowing these higher piece rates to remain stagnant while the AEWR increases.

Arguments Against

Many growers were concerned about the possibility of an abnormally high piece rate serving as their base which would put them at a disadvantage with their competitors forever. An apple grower with lightly loaded trees, either due to their youth or poor weather conditions, must pay higher piece rates for picking. As the trees mature and in years with better weather, the grower would ordinarily be able to pay a relatively lower piece rate. From the employer's viewpoint, this would not be the case under the Department of Labor's methodology.

An employer representative therefore recommended that paragraph (d) be revised to provide that piece rates which reflect abnormal or unusual conditions shall not be the basis for future years' adverse effect piece rates.

Other employers believed that piece rates should be left to the determination of the grower. According to many, only the farmer is knowledgeable enough concerning crop size, tree size, etc. to set piece rates. As long as the piece rates are locally competitive and produce wages above the federal minimum, a commentor felt the Department of Labor should not make an "unwarranted intrusion" into a grower's business operations. Another employer believed it was unfair to require set annual increases in piece rates if his workers' average piece rate earnings were greater than the national average.

Some letter writers pointed out that H–2 workers are already protected through the hourly adverse effect wage rate and make-up pay. In Florida, an employer representative wrote, piece rates have kept pace with increases in the hourly adverse effect wage rate in order to maintain workers incentive.

* * * * *

Issue: Use of Average Piece-Rate Earnings Data

Of the 10 individuals who commented on the use of average piece-rate data in the proposed methodology, 1 was in favor and 9 were in opposition.

Arguments for

The current methodology for computation of the adverse effect wage rate is based upon annual average wage rates of all field and livestock workers combined. However, the U.S. Department of Agriculture (USDA) has stopped compiling data for the combined worker category; only separate figures are available for field workers and for livestock workers.

Due to this change in the current methodology's data base and the determination by the Department of Labor that another data base is more appropriate, the proposed methodology partly relies upon the USDA national average hourly earnings of piece-rate-paid hired workers in agriculture. The incorporation of piece rates into the methodology recognizes that most agricultural jobs for which H–2 workers are employed are paid on a piece-rate basis.

This proposed change was termed its "principal strength," according to one farmworker advocate. Use of piece-rate

earnings data was considered to be more realistic and a shift that "farmworker advocates have been urging for years."

Arguments Against

Opponents pointed out that the proposed use of piece-rate data contradicts the Department of Labor's earlier position with regard to this data base. According to one employer representative, the Department of Labor believed the field and livestock worker figures preferable to the piece-rate data base because the latter included packing-house workers, machine operators, and supervisors. The commentor contended that the presence of piece-rate-paid crew foremen and harvest equipment operators inflates the piece-rate data base by about 10 percent. Rather than abandoning the field and livestock wage concept entirely, this letter writer suggests using just the field workers' hourly average earnings. This field worker category was believed to be a very relevant comparison, more so than the diverse piece-rate-paid hired farmworker group.

Several employer representatives noted that the AEWR under the proposed methodology would, in effect, be a new minimum wage. This guaranteed wage, imposed by regulation rather than legislation, would be almost 50 percent higher than the federal minimum wage for agricultural workers. It would be derived from average wages, meaning some people earned more and others less, but would serve as a guaranteed floor for each agricultural worker in the H–2 program. For these reasons, a number of employer representatives recommended that the AEWR should simply be the federal minimum wage, or the highest of the federal or state minimum wage; some commentors suggested it be set at the federal minimum wage plus some percentage.

Worker representatives tended to view the AEWR as a ceiling rather than a minimum rate, however. To try to avoid placing an artificially low ceiling on wages in determining the availability of workers, the ceiling should be the highest prevailing wage rate in the nation for agricultural work, in the view of one commentor. Consequently, he favored the Department of Labor's regulation which states that if the prevailing wage rate in a given location were above the adverse effect wage rate, employers wishing to use H–2 workers should pay both domestic and foreign workers the prevailing wage rate.

Rather than applying the adverse effect wage rate to each worker, an employer representative suggested its application to an employer's workforce such that, on average, his employees earned a piece-rate equivalent to the adverse effect wage rate. The commentor recommended that the period for determining the average workforce wage should be long enough so that temporary crop factors do not require abnormally high make-up pay.

A worker representative proposed that greater than average earnings should form the basis of the adverse effect wage rate. For example, the AEWR might be derived from hourly earnings or piece rates in the peak season, i.e., the quarter of greatest agricultural employment in each state.

* * * * *

Issue: Impact on wage levels

A large number of letter-writers—293—commented on the impact of the proposed methodology on farmworkers' wage levels. As calculated by the Department of Labor, the 1980 AEWR under this new system would have been $4.51 per hour. Sixteen commentors took positions in favor of the methodology's impact on worker wage levels. The remaining 177—two-thirds of whom were Virginia employers—objected to the methodology's impact on wage levels. It should be noted that many of the negative comments being counted in this category were presented as objections to *any* increase in the AEWR and did not relate specifically to the methodology being proposed.

Arguments for

As would be expected, proponents of this aspect of the methodology were primarily worker representatives. The old AEWR was too low to encourage growers to recruit domestic workers or to attract U.S. workers to harvesting jobs, in their view. By increasing the AEWR, it was felt that employers would be given more incentive to seek U.S. rather than foreign workers. At the same time, U.S. workers would benefit from the improved wages. The increase was not deemed excessive; even at $4.51 an hour, it would give an average sugarcane farmworker in Louisiana less than $6,800 a year, according to one commentor (apparently assuming a full year's work cutting cane).

Supporters tried to anticipate opponents' arguments by asserting that the new AEWR would produce a negligible inflationary effect. One person stated that the proposed rate is less inflationary than the national average pay increases of farmworkers in recent years. No direct correlation exists between the farm labor price and prices paid by consumers, said a representative of a nonpartisan, private nonprofit organization. "As farmers have said for many years, their portion of the ultimate purchase price is minuscule compared to that part charged by middlemen," this commentor asserted. This, he said, is especially true of sugar prices, where the major influences are internationally controlled price fluctuations and the effect of U.S. government subsidies.

Some worker advocates expressed reservations about the impact on wages, although they considered this methodology an improvement over the existing one. "Any AEWR places an artificial ceiling on potential wages to farmworkers and inhibits the ability of farmworkers to negotiate the most optimum wage possible for their labor," one cautioned. The proposed methodology will still depress wages and reduce the number of U.S. workers available, another said. One supporter recommended that U.S. agricultural policy should recognize the rights of farmworkers to an adequate and decent living; compensate them for the variables inherent in agricultural work, such as the uncertainty of wages, hours, and working conditions; and recognize their contributions to the agriculture industry. These persons nevertheless supported the methodology as "a step in the right direction," as one put it.

Arguments against

Nearly all the negative comments concerning the impact on wage rates came from employers and employer representatives, with a few representatives of rural business joining in.

A large number of Virginia tobacco growers protested that the wage increase would exceed employers' ability to pay and would "put us out of business."

Many commentors expressed opposition to any increase over the federal minimum wage, or to any increase opposition over the existing AEWR level, but offered no criticisms of the specific methodology by which the rate was derived.

Numerous employers and their representatives viewed the proposed AEWR as inflationary. It would hurt farmers at a time when their costs would be passed on to consumers. Others said farmers are unable to pass on increased costs as other businesses can since tobacco companies and large growers dictate the crop prices.

Some employers objected to the "ripple effect" or "domino effect" of the higher wage. They expected the higher rate would cause other farm laborers to demand higher pay. The result, they

believed, would be that non-criteria employers would have to raise their wages to compete for workers. In addition, criteria employers would have to raise the wages of packers, office workers, and others in non-H–2 occupations. The area's minimum wage would effectively become the AEWR, $4.51.

A number of employer representatives believed the proposed AEWR would violate the guidelines of the Council on Wage and Price Stability. A representative of the Florida sugarcane growers stated that the $4.51 AEWR as proposed for 1980 would be creating wage increases ranging from a low of 19 percent in Florida to a high of 55.52 percent in Massachusetts and Rhode Island. This, he claimed, would violate the wage and price guidelines, which allow increases of just 7.5 to 9.5 percent.

Many employer representatives raised the issue of wage comparability with other workers. Free room and transportation (which H–2 employers must provide) plus the minimum wage "are already more than many U.S. workers are earning," one said. A Virginia grower commented that local factory workers in his area earn less than the proposed AEWR of $4.51; another said $4.51 would exceed the $3.01 rate of local farmworkers in the tobacco industry as well as the prevailing wage rate in rural Virginia.

The comparability issue was also a concern of two nonagricultural workers who commented on the proposed AEWR. "Why should an alien make more per hour than I do?" was one letter writer's comment.

Some employers raised the issue of productivity in objecting to the proposed wage level. The unskilled domestic workers being hired cannot work productively enough to earn the higher wage, in their view. Employers should be able to pay less during periods of lower productivity.

One employer felt the higher wage would contribute to "economic disruption and unemployment" by luring lower-paid nonagricultural workers away from their jobs to take seasonal farm jobs at $4.51 an hour; after the harvest ended, these workers would go on unemployment where their benefits would nearly equal their present earnings, he claimed.

* * * * *

Issue: Make-up pay

Of the five people who commented on the provisions for make-up pay, four supported the proposal and one objected to it.

Arguments for

Supporters embraced the make-up pay provisions as an endorsement of the concept of the adverse effect wage rate as a guaranteed earnings floor for the entire work force.

Some of the supporters urged that the make-up pay provisions be strictly enforced. Employers must also be monitored carefully to assure there are no firings of less productive workers.

Arguments Against

The employer who commented on make-up pay warned that if the difference between workers' piece-rate earnings and the AEWR is too great, employers will have to fire a greater percentage of workers.

* * * * *

Issue: Ease of Use, Comprehension

Six persons commented on the ease of use of the proposal methodology. One of these felt it would be readily comprehended by employers and workers. Five felt it would be too complicated or confusing to be easily understood.

Arguments for

A worker representative indicated that the single national rate would be less confusing than the present state-by-state methodology. It would be more easily understood, and hence, compliance would be more effectively assured, he stated.

Arguments Against

Several commentors called for a more complete explanation of the proposed formula for determining the AEWR. It is not enough, one employer representative declared, for the Labor Department simply to say "there is a relation between farm and nonfarm rates and that relationship generates an AEWR of $4.51 for 1980." He called for an explanation of that relationship. A worker representative urged that Section 655.207(b) of the proposed regulations "so vague that probably only the Department (of Labor) will ever know that figure was derived."

An employer representative recommended, instead of the regression equation, a simple averaging of the past five years' average wage data. The difference in results, he claimed, would be insignificant, but it would be comprehensible "to the regulators and to those being regulated."

One grower said the complexity of the methodology would frustrate small farmers' efforts to apply for H–2 certification; they would be forced to go out of business and "convert their land to development."

* * * * *

Issue: Administration and Enforcement

Six commentors addressed the issue of how the AEWR will be administered and enforced by the Labor Department. Three endorsed the methodology's provisions for enforcement; one opposed them; and two rejected them as inadequate.

Arguments for

Approval was expressed by worker representatives for paragraph (d) of the methodology, authorizing ETA audits for employers' piece rates. Workers groups emphasized the need for careful monitoring of employers regarding piece rates, make-up pay, and productivity firings. Without close monitoring, these commentors felt, it would be easy for employers to pay less than the required piece rate and to circumvent the make-up pay requirement by firing less productive workers.

Arguments Against

Both employer and worker representatives expressed concern about the capability of the Labor Department to operate, monitor, and enforce such a complex and large program. On the employer side, concern was voiced that the Employment and Training Administration has insufficient staff to undertake the administration of such a program, and objections were raised to the expanded bureaucracy its implementation would entail. With the proposed piece-rate adjustments, DOL will be forever mediating piece-rate disputes, one said. On the worker side, ETA's reliance on wage and productivity data supplied by growers was characterized by one commentor as "akin to relying on the fox to guard the chicken coop." This letter writer also noted that the transient nature of these farmworkers necessitates prompt enforcement; otherwise workers will have moved on and will not benefit from corrective action.

The following recommendations were proposed by a worker representative:

To assure that growers adjust their adverse effect piece rates in accordance with DOL's regulations.

1. Employers should be required to submit to DOL, within 20 days after DOL publishes the new AEWR, a written statement showing the employer's piece-rate adjustment. The statement would show:

a. The percentage change in the piece rate, based on the percentage in the hourly AEWR.

b. How the grower determined whether an initial adjustment was necessary to bring last season's average worker up to the AEWR without make-up pay.

2. DOL should review the employer's pay and productivity records to verify that the required piece rates have been made.

To assure that employers pay the proper piece rates and make-up pay:

1. Before beginning work, employers should be required to give workers a written statement explaining the adverse effect wage rate.

2. Employers should be required to keep daily records of hours and productivity for each worker. A copy would be given to each worker at the end of the day showing:

Hours worked
Producitivity
Piece-rate earnings
Make-up pay, if any
Gross earning
Deductions

3. Employers should be required to file the pay and productivity records with DOL at the end of each pay period. DOL would review the records, monitor employers on-site, and conduct audits to assure compliance. In their reports, employers would be required to make a statement as to whether make-up pay was or was not required and paid.

To insure against productivity firings:

1. H–2 growers should not be permitted to fire domestic workers without first giving notice in writing to the appropriate DOL representative.

2. DOL should review each situation to determine if the worker is making "reasonable efforts to produce."

* * * * *

Issue: Timing of publication

Only one commentor directly addressed the issue of the timing of publication of the coming season's adverse effect wage rate. This representative of sugarcane growers recommended that the Labor Department should publish the AEWR no later than March 1, to be effective June 1 of each year. He noted that this would be early enough to prevent last minute confusion about wages in the sugar harvest, which begins in early August.

* * * * *

Issue: Methodologies for logging and sheepherding

Of the two individuals who remarked on the methodologies for logging and sheepherding, both were negative toward the proposal.

Arguments For

None.

Arguments Against

A representative of fruit growers objected to the unique treatment of logging and sheepherding compared with the rest of the agricultural sector. The letter writer contended that production workers' earnings should be used in calculating an adverse effect wage rate for logging and sheepherding if they were used for the remainder of agriculture. In addition, the Department of Labor violated its nationwide approach in the case of logging and sheepherding by limiting their adverse effect wage rate determination to the area of intended employment, according to the commentor.

A logging worker representative was opposed to continuing the use of the prevailing wage rate as it is currently calculated to set the logging AEWR. It was felt that the 40 and 51 percent rules which are used to establish prevailing rates tend to fix the prevailing wage rate in the mid-range of surveyed wages, enabling employers who paid in the upper ranges to offer lower wages the next year and still be eligible for foreign labor, as well as artificially inhibiting the normal rise in wage rates. In addition, the prevailing wage rate is a full year out-of-date even before being implemented. Consequently, the writer concluded that the current methodology "guarantees an adverse effect on domestic loggers' wages."

As an alternative to continuing the current methodology, the commentor made two suggestions. To determine the prevailing wage rate a 90 percent rule should be applied: that is, array the actual wage rates paid in ascending order along with the number of workers who received the corresponding rate; cumulate the number of workers starting at the lowest wage rates until 90 percent of the workers surveyed are reached; the corresponding rate at this point should be derived by way of "a percentage formula based upon the demonstrated historical relationship between the national average of wages paid in logging and those paid to production workers in the private nonfarm economy during the previous year."

The letter writer disputed the Department of Labor's contention that loggers' wages equal or exceed the "annual hourly earnings" of nonfarm production workers. Since loggers are paid a piece rate, they are not paid for down time due to equipment breakdown or traveling time between the camp and cutting location, for example. The equipment rental fee that loggers do receive rarely covers their equipment costs in full, and the fee is received only during the months the loggers can find work while their payments extend throughout the year.

The logging worker representative noted that the adverse effect wage rate should continue to be applied to an employer's entire workforce, as the new methodology would do. Permitting less than 100 percent of the workforce to be covered (a possibility the Labor Department raised for discussion at last year's regional hearings) would not comply with the intent of the law which was designed to protect all domestic workers. It would also add to the Department of Labor's monitoring workload to assure compliance, the commentor noted.

A final point made by the representative dealt with whether loggers were being denied an hourly adverse effect wage rate since the rate in logging is based upon the prevailing (piece) rate. If this is the case, the farmworker representative objected. An hourly adverse effect wage rate above the prevailing piece rate wage is needed for loggers "to protect them from frequent breakdown in their expensive equipment. Also, woodsmen working with Canadian H–2's are often placed in poor cutting areas while Canadians receive better chances. An hourly wage would be some hedge against this kind of discrimination." Lastly, the commentor wrote that without an hourly wage woodsmen would not be protected while they developed the requisite skills, thus, they would be discouraged from entering and remaining in the labor market which is contrary to the intent of the H–2 program.

Department of Health and Human Services

Social Security Administration

Disability Insurance and Supplemental Security Income; Determinations of Disability

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Social Security Administration

20 CFR Parts 404 and 416

Disability Insurance and Supplemental Security Income; Determinations of Disability

AGENCY: Social Security Administration, HHS.

ACTION: Proposed rule.

SUMMARY: These regulations for administering the disability determination function implement section 304 of Pub. L. 96–265 (the "Social Security Disability Amendments of 1980") which amends section 221 of the Social Security Act.

The disability determination function is now carried out by the States and the Federal Government under negotiated agreements between the Social Security Administration (SSA) and States. The law provides that, effective June 1, 1981, disability determinations will be made by the State agencies in compliance with regulations containing performance standards and other administrative requirements and procedures relating to the disability determination function. States will have the option of turning the function over to the Federal Government if they do not wish to make disability determinations and the Federal Government has the authority to partially or wholly assume the disability determination function of any State that does not meet the prescribed minimum performance standards.

The proposed regulations specify the responsibilities of the Secretary and the States in administering the disability program. They prescribe standards for accuracy of performance and processing time that State agencies must meet in making disability determinations, and provide the administrative requirements and procedures SSA and the State agencies will follow in carrying out the disability determination function. Provisions are included specifying how SSA or a State may terminate the State agency's performance of this function.

The primary purpose of these regulations is to improve the quality of State agency performance in following our adjudicative criteria and to improve the timeliness of disability determinations. These regulations will afford the States maximum practicable management flexibility in meeting objectives.

DATES: We will consider your comments if we receive them no later than March 17, 1981.

ADDRESSES: Send your written comments to the Commissioner of Social Security, Department of Health and Human Services, P.O. Box 1585, Baltimore, Maryland 21203. You may see copies of all comments we receive at the Washington Inquiries Section, Office of Governmental Affairs, Social Security Administration, Department of Health and Human Services, Room 1212, Switzer Building, 330 C Street, S.W., Washington, D.C. 20201.

FOR FURTHER INFORMATION CONTACT: Harry J. Short or William J. Ziegler, Legal Assistants, Office of Regulations, Social Security Administration, 6401 Security Boulevard, Baltimore, Maryland 21235, telephone 301–594–7337 or 301–594–7415.

SUPPLEMENTARY INFORMATION:

Federal-State Structure Before Public Law 96–265

The disability programs under title II and title XVI of the Social Security Act (The Act) are administered under a Federal-State mechanism having its origins in the disability freeze provisions of the 1954 Amendments to the Act. At that time, Congress specified that determinations of disability should be made by State agencies under agreement with the Secretary. Wherever possible the State rehabilitation agency was to be the contracting agency to encourage rehabilitation contacts by disabled persons and to take advantage of the medical and vocational expertise of those agencies.

Negotiated agreements are currently in effect for 54 State agencies for making disability determinations for claimants applying for disability benefits under title II and title XVI of the Act. The agreements cover all the States plus the District of Columbia, Puerto Rico, and Guam; in South Carolina there are separate agencies for the blind and the disabled.

Under these agreements the State agencies, on behalf of the Secretary of Health and Human Services, make determinations of disability on the basis of standards and guides issued by SSA. SSA pays 100 percent of the costs incurred by the States in performing this function. The State agency function includes obtaining medical and vocational evidence from the applicant and his or her medical treatment sources, and where necessary, arranging for one or more examinations of the applicant by a medical specialist. Each determination of disability is made by a team consisting of a lay disability examiner and a physician on the State agency staff.

Section 221(a) of the Act provided that the determination of whether a person was disabled, and when a disability began and ended, would be made by a State agency under an agreement between the State and the Secretary and that, for purposes of the Act, determinations by the State are determinations of the Secretary. Section 1633(a) of the Act authorized the Secretary to make the same arrangements for title XVI purposes. Section 221(c) provided that the Secretary, on her own motion, could reverse the State's determination that a person was disabled, or could determine that a disability began later or ended earlier than the State had determined. In other important respects, the Act generally limited the Secretary's authority to make disability determinations. By precluding the Secretary from reaching a more favorable finding on a disability issue in reviewed cases, it gave the State what amounted to final authority in many cases for determining which applicants were disabled and, consequently, to a large extent how the SSA program was administered.

In 1978, the General Accounting Office (GAO) at the request of the Honorable James A. Burke, Chairman, Subcommittee on Social Security of the Committee on Ways and Means, U.S. House of Representatives, studied the effectiveness of SSA's management of the disability determination process of State agencies. GAO issued a report criticizing the quality and uniformity of the disability determination process. GAO recommended that SSA adopt a stronger and more active management role and that SSA revise the Federal-State agreements to clearly define the responsibilities of each party consistent with a uniform disability determination process. Papers prepared by the staff of the Subcommittee on Social Security for the use of the Committee on Ways and Means also recommended stronger Federal control.

The Federal-State model agreement was therefore revised. The revised model agreement reflected SSA's intentions to administer the program through standards, to take a lead role in assuring uniform training of State agency personnel, and to deal with those State practices that over the years had become impediments to effective administration.

SSA tried to get all the States to enter into the new agreement during the summer and fall of 1978, but considerable resistance was encountered. The revisions in the agreement were viewed by various State

ficials and organizations as interfering ith traditional State prerogatives to nage their own affairs. This concern reflected in the fact that only 21 of 54 ate agencies signed the new reement.

UB. L. 96-265—SECTION 304

eneral

Congress amended the Act to increase e Secretary's ability to influence State rformance. The Secretary is required establish, by regulation, whatever ndards of performance and ministrative requirements and ocedures she considers necessary for e States to follow to insure effective d uniform administration of the SSA ability programs. Section 221(a), ended by Pub. L. 96-265, provides at beginning June 1981, disability terminations will be made by the ate unless it notifies the Secretary, in riting, of its wishes to no longer make e determinations, and if the Secretary s not found that the State has failed to ke determinations consistent with ndards to be prescribed by the cretary. Section 221(c) authorizes the cretary to review State terminations and, based on the view, to make findings as to whether a rson is or is not disabled and, if abled, whether the disability began an earlier or later date or ended on earlier or later date than that termined by the State.

The amendments also provide that a ate which wishes to discontinue king disability determinations or, is und to be failing to make disability terminations as prescribed by ndards, must continue to make the terminations for at least 180 more ys. The Secretary is required to make e disability determinations thereafter. e Secretary is further required to velop and initiate a plan for the rtial or complete assumption of a ate's disability determination function such a step becomes necessary. The an must provide for the continuation the disability determination function d for the protection of any affected ate employees. The Secretary must ve preference to capable State ployees in filling appropriate ployment positions, and may not sume a State's function until the State s made a fair and equitable rangement to protect the rights of splaced State personnel (with some nited exceptions) not utilized by the cretary. (The Secretary of Labor will termine if this has been done.) The cretary is directed to advise the ngress of any amendments of Federal law and regulations needed to carry out the plan.

The amendments also place responsibility upon the Secretary to provide for the continued effective operation of the disability program in the event of the non-participation of one or more States. This is to be done with only limited time to prepare for the State's non-participation and the need to assure protection of the employment rights of the displaced State personnel before the Secretary can assume the State's function.

Specific Provisions of the Law Subject to Regulations

Pub. L. 96-265 eliminates the system of negotiated agreements between the Secretary and the States and requires the Secretary to establish, through regulations, the procedures and performance standards for the State disability determination function in whatever detail appears appropriate.

The law gives the Secretary broad discretion to determine, for example, what matters to regulate, in how much detail to regulate them, and whether to regulate or to issue "other written guidelines." The Secreatary may regulate such matters as:

- The administrative structure and the relationship between various units of the State agency;
- The physical location of, and relationship among, agency staff units and other organizations performing tasks for the State agency;
- Standards for the availability to applicants and beneficiaries of facilities for making disability determinations;
- State agency performance criteria, including the rate of accuracy of decisions and the time periods within which determinations must be made;
- The procedures for and the scope of review by the Secretary and, as she finds appropriate, by the State, of its performance in individual cases and classes of cases;
- Rules governing access of appropriate Federal officials to State offices and to State records relating to its administration of the disability determination function;
- Fiscal control procedures that the State agency may be required to adopt; and
- The submission of reports and other data, in such form and at such time as the Secretary may require, concerning the State agency's activities relating to the disability determination function.

Congressional Concerns

In its deliberation during the development of Pub. L. 96-265, Congress was aware of the problems in the existing Federal-State structure. It felt that significant improvement in Federal management and control was necessary and that the amendments would strengthen the Federal role in how disability determinations are made in the State agenices.

Congress recognized the possibility that under Pub. L. 96-265 some States may decide not to participate under the program, or that the Secretary may determine that a State is not complying with the regulatory requirements promulgated under this legislation. It was concerned that there be adequate procedures to establish Federal administration if State administration ended for either reason. Two issues were of particular concern: the potential disruption of the ongoing determination process which could create hardship for disability applicants, and the positions of the State employees involved.

Congress concluded that the Department did not appear to have any extensive planning for Federal assumption of the State agencies' functions. Therefore, to stimulate planning for such a contingency, Pub. L. 96-265 required that the Secretary submit to Congress a detailed plan of how the Secretary expects to assume the functions and operations of a State disability determination function should it become necessary. The plan is to assume the uninterrupted operation of the disability determination process, including the utilization of the best-qualified personnel to carry out this function. Congress also recommended that the Department give consideration to establishing conditions of employment so that the best-qualified State employees would not be substantially disadvantaged in transferring to Federal employment, in the event that a State quits or is terminated for poor performance.

Basic Considerations for Assuming State Functions

If a State chooses to stop making disability determinations, or if the Secretary finds it necessary to assume the function because a State fails to meet the standards, several legislated requirements and responsibilities will govern the Secretary's action.

A. *Requirements.*

Pub. L. 96-265 imposes four conditions on the Secretary's assumption of the disability determination function. These are:

1. The Secretary must assume the disability determination function no earlier than 180 days after a finding that the State is substantially failing to make disability determinations consistent with regulations or after receipt of a

State's notice of its intentions to stop making disability determinations;

2. The Secretary's assumption must be made without any interruption in services to the residents of the State;

3. The Secretary must (with some very limited exceptions) give hiring preference to State agency employees who are capable of performing duties in the disability determination process for the Secretary; and

4. The Secretary may not assume a State's function until after the Secretary of Labor has determined that the State has made fair an equitable arrangements under applicable law to protect the interests of those State agency employees who will be displaced from their employment on account of the Secretary's assumption and who will not be hired by the Secretary.

B. *Responsibilities.*

When the Secretary has determined that a State agency's function must be terminated or when a State decides to stop making disability determinations, the Secretary of HHS, the State, and the Secretary of Labor must fulfill certain responsibilities.

1. The Secretary of HHS's responsibilities are to:

a. Begin making disability determinations no sooner than 180 days after notice that a State agency's disability determination function will end;

b. Develop and initiate procedures to give hiring preference to State agency employees who are capable of performing duties in the disability determination process; and

c. Insure that the Secretary of Labor has determined that the State has made fair and equitable arrangements for any State agency employees who will be displaced by the assumption and who will not be hired by the Secretary.

2. The terminating State's responsibilities are to:

a. Continue making disability determinations for not less than 180 days after a termination notice, or until the Secretary has fulfilled his or her responsibilities; and

b. Make fair and equitable arrangements to protect the interests of State agency employees who will not be hired by SSA. Employees' interests must be protected in accordance with applicable Federal, State, and local statutes.

3. The Secretary of Labor's responsibility is to determine that the State has made fair and equitable arrangements for protecting State personnel.

State Involvement in Development of the Regulations

In January 1980, SSA convened a two-day work group meeting of SSA central and regional office and State personnel to give us their views on developing the performance standards required by the disability bill. This work group developed some tentative guides for such performance standards.

During the summer of 1980, SSA invited to the headquarters in Baltimore, all of the DDS administrators, and in a series of four meetings, plans for issuing regulations under Public Law 96-265 were discussed. These were meetings in which the DDS administrators had an opportunity to comment on the general direction of our plans and to offer specific suggestions for the scope of the regulation. The reactions of these State administrators were considered in developing the regulations, and a number of significant changes resulted from their recommendations.

Our Basic Implementation Approach

It is our intention to use these regulations and the statutory authority derived from Pub. L. 96-265 to improve the overall administration and delivery of the disability program. We will accomplish these improvements by:

1. Setting a targeted level of performance that we will work to attain in the future.

2. Creating a system of intermediate goals to serve as stepping stones to progress towards our targeted level of performance;

3. Establishing a threshold level clearly defining the lowest level of acceptable performance by a State agency;

4. Setting forth those actions that we will take to make sure unacceptable performance does not continue; and,

5. Establishing administrative requirements that will provide the States with management flexibility, establishing the framework for the Federal-State partnership, and at the same time, allow us to retain our program stewardship responsibilities.

The proposed regulations use standards as the mechanism to "drive" the disability determination process towards continued improvement.

We will specify the outcome expected. We will carefully monitor the States' disability determination process in terms of performance accuracy and processing time. The States will have control over management of their operation as long as performance is adequate under the standards which we set.

If a State's performance becomes unacceptable, these regulations provide for Federal involvement in the State's activities in making disability determinations for the purpose of improving the State's performance. We have a responsibility under the law for seeing that the disability programs are efficiently and equitably administered. If, even after our assistance, a State's performance is not adequate, we will take action to take over the disability program from the State.

While we are proposing regulations to establish national standards for performance accuracy and processing time, we will continue to assure the fiscal integrity of the States' operations through the budget process. Individual State budgets will continute to be negotiated on the regional level. The objective of negotiations is to determine a level of funding within available resources that will be perceived by Federal and State officials as sufficient to meet standards and stated goals. The negotiated budget is an integral part of the decision of setting goals. States will be expected to meet standards and goals within the negotiated budget.

The Target Level

We have developed target levels for State agency combined title II and title XVI initial accuracy, title II intitial processing time, and title XVI processing time. The values selected for the target levels represent a difficult challenge but are designed to reflect what we believe to be a level of performance and service delivery that we should constantly strive to attain.

Intermediate Goals for State Performance Between the Target and Threshold Levels

We will establish intermediate performance goals between the threshold standards and the target standards in order to assure continued movement towards our targeted level of performance. Our regional offices will annually negotiate a new set of individual State agency goals to help them move from the current levels of performance to target levels. Failure to meet these intermediate goals will not be cause for considering a State to be substantially failing to comply with the regulations. However, such failure will be a matter of concern to us and may result in our requesting the State to take corrective action and possibly offering technical assistance.

e Threshold Levels

We are also establishing threshold els for State agency performance curacy and processing time. These are nimum acceptable levels for mbined title II and title XVI initial formance accuracy, title II initial ocessing time, and title XVI initial ocessing time. We established the eshold levels for processing time and formance accuracy by using the tional mean and applying a asurement of one standard deviation m the mean. (A standard deviation is athematical way of measuring the riability of items around an average.) ta from the fiscal year ending ptember 30, 1979 was used to tablish the levels. Falling below these eshold levels will be unacceptable d will mandate appropriate action on r part to improve the situation. These tions are set forth in §§ 404.1650 and 6.1050

We will reexamine the threshold els annually, but we will not make nges or modifications automatically. tead, any decision to adjust the vailing threshold standards will be de based on current State formance, procedural changes, tems modifications and resources. In making any changes in the eshold levels we will continue to use mean and standard deviation proach. In §§ 404.1640 through 4.1650 and in §§ 416.1040 through 6.1050, we explain how the threshold ndards are used by us in evaluating te performance.

termining Performance Accuracy

"Performance accuracy" refers to the liability of State agency adjudication. determining a national standard for te agency performance accuracy for rposes of section 304, we consider not ly whether disability decisions are ht or wrong for payment, but also ether the claims have all the desired idence and whether all factors ntributing to a sound decision were nsidered. Accordingly, the percentage cases that can be processed without ing returned to the State agency for rther development or for correction of cisions based on evidence in the file presents the State agency's formance accuracy rate. The State ency's original decision is not anged in the majority of cases that are turned for additional development. rors in performance accuracy entified by the quality assurance stem should not be interpreted as clusively reflecting decisions that ther incorrectly deny or award benefit yments. Since the quality assurance system measures factors that have the potential for impacting decisions as well as the correctness of the decision, the rate of incorrect decisions is significantly lower than what is reflected in the standards cited in these regulations. Nevertheless, we believe we must measure accuracy using a higher standard than correct decisions.

Our most current data indicates that with a national level of performance accuracy of about 93 percent the rate of correct decisions is approximately 97 percent. Since decisional accuracy is tied to performance accuracy, the system we are establishing to use goals and standards to improve performance will also improve decisional accuracy. We estimate that our target level of 97 percent performance accuracy will yield a decisional accuracy rate of 99 percent.

Performance Accuracy Threshold Level

The national performance accuracy threshold level was established using fiscal year 1979 State-by-State title II and title XVI performance accuracy rates for disability determinations at the initial (first) level of adjudication. These data were obtained from the Disability Quality Assurance System. A combined title II and title XVI national mean and standard deviation were calculated together. Separate calculations were not made for each title as they were for processing time. The national mean was formulated using the individual State agency fiscal year 1979 performance accuracy rates. The title II initial performance accuracy rates and the title XVI initial performance accuracy rates were statistically weighted by workload size for each individual State agency. A national mean was then computed for combined title II and title XVI initial performance accuracy. The combined title II and title XVI initial performance accuracy national mean for fiscal year 1979 resulted in a rate of 92.5 percent. The standard deviation was calculated and resulted in a rate of 1.9 percent.

The threshold level for State agency performance accuracy has been established at one standard deviation below the national combined title II and title XVI initial performance accuracy mean. This threshold level was set after considering historical trends in State agency performance accuracy, past performance, and statistical theory. In addition, the selection of the threshold level was dependent upon our staffing and fiscal capacities for providing necessary technical and management assistance to State agencies whose performance is likely to fall below the threshold levels. Applying the one standard deviation measurement to the fiscal year 1979 national combined title II and title XVI performance accuracy mean, the threshold is 90.6 percent for combined title II and title XVI initial performance accuracy.

Determining Processing Time

State agency processing time for title II initial disability claims is the average number of days from the time the State agency receives the claim until the determination is put into the Social Security Administration Case Control System (SSACCS). Saturdays, Sundays, and holidays are counted.

State agency processing time for title XVI initial disability claims is the average number of days from release of the claim by the social security district office to the State agency until the determination by the State agency is put into the Supplemental Security Income Case Control System (SSICCS). Saturdays, Sundays and holidays are counted.

Determining Processing Time Threshold Levels

Processing time threshold levels were formulated using fiscal year 1979 State-aby-State title II and title XVI mean processing time data for disability determinations at the initial (first) level of adjudication.These data were obtained from the Social Security Administration Case Control System (SSACCS) for title II and the Supplemental Security Income Control System (SSICCS) for title XVI. National means and standard deviations were calculated separately for title II and title XVI from these data. The national means were calculated using two steps.

First, the fiscal year 1979 mean processing time was established for each State agency by taking the average of the 12 monthly State agency processing time means. Then, the average of the individual State agency means was calculated to produce the national mean. This two-step process was applied separately to title II data and on title XVI data and resulted in the following national means:

Title II initial processing time—43.2 days.

Title XVI initial processing time—54.3 days.

The standard deviations for initial title II and title XVI fiscal year 1979 processing time data were calculated using established statistical techniques and resulted in the following:

Title II initial processing time—6.3 days.

Title XVI initial processing time—7.6 days.

The threshold levels for State agency processing time have been set at 1 standard deviation above the fiscal year

1979 national mean processing time. This decision was based on past State agency processing time, historical trends in State agency processing time, and statistical theory. In addition to mathematical and statistical considerations, the 1 standard deviation level was established based on our fiscal and staffing capabilities for providing necessary technical and management assistance to State agencies whose performance is likely to fall below the threshold levels. Applying the 1 standard deviation measurement to the fiscal year 1979 national processing time means, the thresholds are as follows:

Title II initial procesing time—49.5 days.

Title XVI initial processing time—57.9 days.

The title XVI processing time threshold was reduced by 4 days to account for a computer systems modification which was activated in May 1979. This change stopped the measurement of State agency processing time when a State agency presumptive disability determination was put into SSICCS, rather than when the final decision was made. (A finding of presumptive disability is made before obtaining the evidence needed for a final determination when there is a high degree of probability of disability on the basis of the evidence available at the time.) After extensive study, it was determined that this modification lowered State agency title XVI initial mean processing time by 4 days on the average.

Target Levels and Intermediate Goals

Target levels represent the highest level of performance and service delivery presently achievable. They will, by their very nature, challenge nearly all agencies to improve. Each State each year is expected to make progress toward the target. The extent of progress will be negotiated annually on the regional level as part of the State agency budget process.

Other than the annually negotiated goal, there is no time frame for meeting the target. States will always be constrained by workloads, availability and competency of staff, and available money.

Technical and Management Assistance

We will do ongoing monitoring to evaluate State agency performance of combined title II and title XVI initial performance accuracy, of title II initial processing time, and title XVI initial processing time. The monitoring will allow us to determine whether a State agency will receive either mandatory or optional technical and management assistance. A State agency will receive mandatory assistance if it fails to meet two of three established threshold levels (one being accuracy) for two consecutive quarters. Failure to meet any one of the threshold levels for 2 consecutive quarters may result in mandated technical assistance.

A State agency will receive optional technical and management assistance when our regular monitoring reveals State agency performance has significantly declined although not so low as to require mandatory assistance. We will offer optional assistance at our discretion based on our available resources. The technical and management assistance we will give a State agency is explained in §§ 404.1661 and 416.1061.

"Substantial Failure"

If a State agency substantially fails to make disability determinations consistent with the Secretary's regulations and other written guidelines, Pub. L. 96–265 requires the Secretary (after giving the State notice and an opportunity for a hearing) to make the disability determinations.

Our approach will be to closely monitor and evaluate State agency performance of title II and XVI performance accuracy, title II processing time, and title XVI processing time. If a State agency is falling below 2 of the 3 threshold levels (one of which must be accuracy) for 2 consecutive quarters, we will provide technical and management assistance to the State agency for up to 12 months. After the assistance period, the State agency will have a 3-month adjustment period. After the adjustment period, if the State agency again falls below 2 of the 3 threshold levels (one being accuracy) in 2 consecutive quarters, during the next 12 months, we will notify the State that the State agency is in danger of being found to be in substantial failure and give the State an opportunity for a hearing. If it is found that the State substantially failed to comply with the regulations and written guidelines, the Secretary must take over the disability determination function. We explain "substantial failure" in more detail in §§ 404.1670 through 404.1675 and in §§ 416.1070 through 416.1075.

Right to Hearing

We will notify a State that we are proposing to terminate its performance of the disability determination function if it is substantially failing to make disability determinations consistent with our regulations. The State will have an opportunity for a hearing before any termination. The hearing will be conducted as described in §§ 404.1680 through 404.1682 and in §§ 416.1080 through 416.1082.

Administrative Requirements and Procedures

Basically, our implementation approach is to specify certain performance results and let the States perform through their best management procedures with minimum Federal involvement as long as their performance is acceptable.

Accordingly, we are regulating administrative areas only to the extent necessary to insure effective stewardship of the disability program. This is a significant shift in our administrative relationship with the States under the agreements. We explain administrative requirements and procedures in §§ 404.1620 and through 404.1633 and in §§ 416.1020 through 416.1033. Specifically, here is what we are proposing to do, and not do, in the regulations with respect to the various administrative areas that have to be addressed.

Adjudication

The State will make disability determinations in initial, reconsideration, and continuing eligibility cases under the various provisions of the Act.

A State disability examiner (lay) and physician team will make these determinations. However, we do not propose regulating the types of positions to be established beyond the adjudication team.

In making determinations, the State will use our forms and procedures and adhere to the policies we may require to insure uniform and effective administration of the disability program throughout the United States.

However, we are not proposing to regulate the internal case flow procedures except where they appear to contribute to unacceptable performance by a State.

Organization

The State will be expected to provide an organizational structure, sufficient qualified personnel, and medical consultative services that will result in timely processing and accurate decisionmaking of disability claims. We will not impose requirements, either through regulation or other directive, for a specific organizational structure unless State performance approaches unacceptable levels. We also do not propose to regulate the place in the State hierarchy of the State agency, or the relation of the State agency to other

components in State government. The State will be responsible for producing an accurate and timely disability decision.

Personnel

In general, the State will be responsible for establishing positions, recruitment, selection, tenure, compensation, and staff development policies. The State will insure an acceptable level of competency of all employees through selection, ongoing training and staff development. However, we will provide technical training materials. We will become further involved only when State performance approaches unacceptable levels, or where the State requires complex instructional or training materials or the capacity of the State to deliver adequate training is in doubt. The State will make personnel available to attend meetings or conferences as may be necessary for furthering the purpose of the disability programs. The State must comply with equal employment opportunity directives in making disability determinations as specified in executive orders or the Code of Federal Regulations.

To the extent that Federal funding is available, the State will contribute to the processing of disability claims by avoiding, to the extent feasible and permissible under State law, personnel freezes, restrictions against overtime work, or other curtailment of facilities or activities.

Facilities

To the extent that Federal funding is available, the State will provide space, equipment, supplies and other services as will contribute to the timely and accurate processing of disability claims. The State will determine the locations where disability determinations are to be made. However, the State will provide the Secretary with access to the premises for the purpose of inspecting the work and activities required by these regulations. We will always give the State reasonable notice of the times of our visits.

Medical and Other Purchased Services

The State will determine the rates of payment to be used in arranging for medical or other examinations necessary to make determinations of disability. These rates should be designed to aid in the procurement of needed services but may not exceed the highest rate paid by Federal or other agencies in the State for the same or a similar type of service. The State will maintain documentation to support the rates of payment it uses.

Records and Reports

The State will furnish schedules, financial and cost reports, and other reports relating to the administration of the disability program that we may require. Records relating to the work being performed under these regulations will be retained by the State for a period of time specified by us. We will have access to these records for purposes of monitoring, research and development and audit.

Research and Demonstration Projects

We will request State participation in federally funded research and demonstration projects to assess the effectiveness of the disability program and to ascertain the effect of program policy changes. Where we determine that participation is necessary for the project to be complete, e.g., to provide national uniformity in a claims process, State participation will be mandatory.

Fiscal

We will provide the State with funds in advance or by way of reimbursement for necessary costs incurred by the State in making disability determinations under these regulations. The State will submit estimates of anticipated costs for the periods, and at the time and in the manner we may request. After considering all pertinent information, we will notify the State of the amount which will be made available to it for the period, as well as what anticipated costs are being approved. The State will not incur or make expenditures for the period for items which we do not approve, or in excess of the amount we certify as available.

After the close of a period for which funds have been certified to the State, the State will submit a certified report of its actual expenditures. We will inform the State by audit whether expenditures were necessary and proper under standards in effect at the time expenditures were made or incurred. The standards may be found in subpart 1–15.7 of part 1–15 of the Federal Procurement Regulations (41 CFR 1–15.7) and in the Disability Insurance section of the Program Operations Manual System (POMS).

Any monies we pay to the State which are used for purposes not within the scope of these regulations will be paid back to the Treasury of the United States.

Considerations in Developing Standards

Performance Standards

Our primary considerations are related to fostering improvement in the adjudication process. In developing performance threshold levels, we took a middle of the road approach. We considered setting the threshold higher, but rejected it as imposing an unrealistic demand on States in the beginning stages of our changed relationship to the States. We also considered setting the threshold low, but dropped the option as doing little more than reinforcing the status quo. Our middle of the road approach will mean providing technical assistance to possibly 13 States with 2 of them likely to be in substantial failure.

Administrative Standards

Again our approach is moderate. We have elected to regulate only to the extent necessary to insure the Secretary's responsible stewardship and foster effective and uniform administration of the program. The proposed regulations on travel, training, access, records and reports, fiscal, and research and demonstration projects are examples in point.

We decided not to regulate specifically in more areas as inconsistent with our objective of giving the States management flexibility. On the other hand, we opted against regulating less specifically as failing to carry out our statutory mandate to assure effective and uniform administration of the disability insurance program throughout the United States.

Conclusion

We believe that these regulations will improve the quality of State agency performance and insure that claimants throughout the country are judged under national standards and procedures while preserving the basic Federal-State structure. However, we are publishing these amendments now only as proposals. They will not become effective as regulations unless they are adopted and published again in the **Federal Register** as final regulations. Although the policies, procedures, and rules which we are proposing have been developed over a long period of time with participation of the States and others, we are planning to continue an outreach effort during the comment period so as to obtain the widest practicable responses from the public, including the disabled.

The purpose of this notice is to give the public an opportunity to participate in the rulemaking process before the adoption of the final rules.

While we have already met with State agency administrators, certain agency directors, and representatives of other organizations, we would still like to get any additional views they may have.

We would also like to have the views of other people who are interested in the administration of the title II and title XVI disability programs. We welcome comments from State employees, especially other administrators, disability examiners, and medical consultants. We also believe that comments from employee unions, legal advocacy groups, and other organizations and associations concerned with the title II and title XVI disability programs will be most helpful to us. Since these proposed regulations are intended ultimately to benefit those members of the public who file disability claims, the general public has siginificant interest in regulations designed to serve it. Therefore, we will carefully consider any comments we receive from private citizens as well as from representatives of organizations.

The proposed amendments are issued under the authority contained in sections 205, 221, 1102, 1614 and 1631 of the Social Security Act, as amended; 53 Stat. 1368, as amended; 66 Stat. 1081, as amended; 49 Stat. 647, as amended; 86 Stat. 1471; 86 Stat. 1475; 42 U.S.C. 405, 421, 1302, 1382c, and 1383.

(Catalog of Federal Domestic Assistance, Program No. 13.802, Disability Insurance; No. 13.807, Supplemental Security Income Program.)

Dated: November 10, 1980.

William J. Driver,

Commissioner of Social Security.

Approved: January 9, 1981.

Patricia Roberts Harris,

Secretary of Health and Human Services.

PART 404—FEDERAL OLD-AGE, SURVIVORS, AND DISABILITY INSURANCE (1950-)

Part 404 of Chapter 111 of Title 20 of the Code of Federal Regulations is amended as follows:

1. Section 404.1502 is revised to read as follows:

§ 404.1502 General definitions and terms for his subpart.

As used in the subpart—

"Secretary" means the Secretary of Health and Human Services.

"State agency" means that agency of a State which has been designated by the State to carry out the disability determination function.

"We" or "us" refers to either the Social Security Administration or the State agency making the disability or blindness determination.

"You" refers to the person who has applied for benefits or for a period of disability or is receiving benefits based on disability or blindness.

2. Section 404.1503 is revised to read as follows:

§ 404.1503 Who makes disability and blindness determinations.

(a) *State agencies.* State agencies make disability and blindness determinations for the Secretary for most persons living in the State. State agencies make these disability and blindness determinations under regulations containing performance standards and other administrative requirements relating to the disability and blindness determination function. States have the option of turning the function over to the Federal Government if they no longer want to make disability determinations. Also, the Secretary may take the function away from any State which has substantially failed to make disability and blindness determinations in accordance with these regulations. Subpart Q of this Part contains the rules the States must follow in making disability and blindness determinations.

(b) *Social Security Administration.* The Social Security Administration will make disability and blindness determinations for the Secretary for—

(1) Any person living in a State which is not making for the Secretary any disability and blindness determinations or which is not making those determinations for the class of claimants to which that person belongs; and

(2) Any person living outside the United States.

(c) *What determinations are authorized.* The Secretary has authorized the State agencies and the Social Security Administration to make determinations about—

(1) Whether you are disabled or blind;

(2) The date your disability or blindness began; and

(3) The date your disability or blindness stopped.

(d) *Review of State Agency determinations.* On review of a State agency determination or redetermination of disability or blindness we may find that—

(1) You are, or are not, disabled or blind, regardless of what the State agency found;

(2) Your disability or blindness began earlier or later than the date found by the State agency; and

(3) Your disability or blindness stopped earlier or later than the date found by the State agency.

§§ 404.1601–404.1610 (Subpart Q) [Redesignated as §§ 404.2001–404.2010 (Subpart U)]

3. The headings and text of §§ 404.1601–404.1610 (Subpart Q) are redesignated as §§ 404.2001—404.2010 (Subpart U) respectively. The heading for Subpart U is "Representative Payee". (A proposed revision of present Subpart Q has been published in the Federal Register. These regulations will be redesignated when adopted as final).

4. A new Subpart Q is added to Part 404 to read as follows:

Subpart Q—Determinations of Disability

General Provisions

Sec.

404.1601 Purpose and scope.
404.1602 Definitions.
404.1603 Basic responsibilities for us and the State.

Responsibilities for Performing the Disability Determination Function

404.1610 How a State notifies us that it wishes to perform the disability determination function.
404.1611 How we notify a State whether it may perform the disability determination function.
404.1613 Disability determinations the State makes.
404.1614 Responsibilities for obtaining evidence to make disability determinations.
404.1615 Making disability determinations.
404.1618 Notifying claimants of the disability determination.

Administrative Responsibilities and Requirements

404.1620 Organization.
404.1621 Personnel.
404.1622 Training.
404.1623 Facilities.
404.1624 Medical and other purchased services.
404.1625 Records and reports.
404.1626 Fiscal.
404.1627 Audits.
404.1628 Property.
404.1629 Participation in research and demonstration projects.
404.1630 Coordination with other agencies.
404.1631 Confidentiality of information and records.
404.1632 Other Federal laws and regulations.
404.1633 Policies and operating instructions.

Performance Standards

404.1640 General.
404.1641 Standards of performance.
404.1642 Processing time standard.
404.1643 Performance accuracy standard.
404.1644 How and when we determine whether the processing time standards are met.
404.1645 How and when we determine whether the performance accuracy standard is met.
404.1650 If a State agency is not meeting the standards.

Technical and Management Assistance

404.1660 When we will provide assistance.
404.1661 What assistance we will provide.

Substantial Failure

404.1670 General.

404.1671 Good cause for not meeting the established threshold levels.
404.1675 Finding of substantial failure.

Hearings and Appeals

404.1680 Notice of right to hearing on proposed finding of substantial failure.
404.1681 Disputes on fiscal matters.
404.1682 Who conducts the hearings.
404.1683 Hearings and appeals process.

Assumption of Disability Determination Function

404.1690 Assumption when we make a finding of substantial failure.
404.1691 Assumption when State no longer wishes to perform the disability determination function.
404.1692 Protection of State employees.
404.1693 Limitation on State expenditures after notice.
404.1694 Final accounting by the State.

Authority: Issued under secs. 205, 221 and 1102 of the Social Security Act, as amended: 53 Stat. 1368, as amended; 68 Stat. 1081, as amended; 49 Stat. 647, as amended; 42 U.S.C. 405, 421 and 1302.

Subpart Q—Determinations of Disability

General Provision

§ 404.1601 Purpose and scope.

This subpart describes the standards of performance and administrative requirements and procedures for States making determinations of disability for the Secretary under title II of the Act. It also establishes the Secretary's responsibilities in carrying out the disability determination function.

(a) Sections 404.1601–404.1603 describe the purpose of the regulations and the meaning of terms frequently used in the regulations. They also briefly set forth the responsibilities of the Secretary and the States covered in detail in other sections.

(b) Sections 404.1610–404.1618 describe the Secretary's and the State's responsibilities in performing the disability determination function.

(c) Sections 404.1620–404.1633 describe the administrative responsibilities and requirements of the States. The corresponding role of the Secretary is also set out.

(d) Sections 404.1640–404.1650 describe the performance accuracy and processing time standards for measuring State agency performance.

(e) Sections 404.1660–404.1661 describe when and what kind of assistance the Secretary will provide State agencies to help them improve performance.

(f) Sections 404.1670–404.1675 describe the level of performance below which the Secretary will consider a State agency to be substantially failing to make disability determinations consistent with the regulations and other written guidelines and the resulting action the Secretary will take.

(g) Sections 404.1680–404.1682 describe the rules for resolving disputes concerning fiscal issues and providing hearings when we propose to find that a State is in substantial failure.

(h) Sections 404.1690–404.1694 describe when and what action the Secretary will take and what action the State will be expected to take if the Secretary assumes the disability determination function from a State agency.

§ 404.1602 Definitions.

For purposes of this subpart:

"Act" means the Social Security Act, as amended.

"Class or classes of cases" means the categories into which disability claims are divided according to their characteristics.

"Determination of disability" or "disability determination" means one or more of the following decisions:

(a) Whether or not a person is under a disability;

(b) The date a person's disability began; or

(c) The date a person's disability ended.

"Disability" means "disability" or "blindness" as defined in sections 216(i) and 223 of the Act or as defined in title IV of the Federal Mine Safety and Health Act of 1977, as amended.

"Disability determination function" means making determinations as to disability and carrying out related administrative and other responsibilities.

"Disability program" means, as appropriate, the Federal programs for providing disability insurance benefits under title II of the Act and disability benefits under title IV of the Federal Mine Safety and Health Act of 1977, as amended.

"Initial" means the first level of disability adjudication.

"Other written guidelines" means the policies, procedures, guides, and operating instructions in the Disability Insurance section of the Program Operations Manual System that are not designated as advisory or discretionary.

"Regulations" means regulations in this subpart issued under §§ 205(a), 221 and 1102 of the Act, unless otherwise indicated.

"Secretary" means the Secretary of the Department of Health and Human Services or the Secretary's delegate.

"State" means any of the 50 States of the United States, the Commonwealth of Puerto Rico, the District of Columbia, or Guam. It includes the State agency.

"State agency" means that agency of a State which has been designated by the State to carry out the disability determination function.

"We", "us," and "our" refers to the Social Security Administration (SSA) or the Secretary, as appropriate.

§ 404.1603 Basic responsibilities for us and the State.

(a) *General.* We will work with the State to provide and maintain an effective system for processing claims of those who apply for and who are receiving benefits under the disability program. We will provide program standards, leadership, and oversight. We do not intend to become involved in the State's ongoing management of the program except as is necessary and in accordance with these regulations. The State will comply with our regulations and other written guidelines.

(b) *Our responsibilities.* We will:

(1) Periodically review the regulations and other written guidlines to determine whether they insure effective and uniform administration of the disability program. To the extent feasible, we will consult with and take into consideration the experience of the States in issuing regulations and guidelines necessary to insure effective and uniform administration of the disability program;

(2) Provide training materials or in some instances conduct or specify training, see § 404.1622;

(3) Provide funds to the State agency for the necessary cost of performing the disability determination function, see § 404.1626;

(4) Monitor and evaluate the performance of the State agency under the established standards, see §§404.1644 and 404.1645; and

(5) Maintain liaison with the medical profession nationally and with national organizations and agencies whose interests or activities may affect the disability program.

(c) *Responsibilities of the State.* The State will:

(1) Provide management needed to insure that the State agency carries out the disability determination function so that disability determinations are made accurately and promptly;

(2) Provide an organizational structure, adequate facilities, qualified personnel, and medical consultant services (§§ 404.1620–404.1624);

(3) Furnish reports and records relating to the administration of the disability program (§ 404.1625);

(4) Submit budgets (§ 404.1626);

(5) Cooperate with audits (§ 404.1627);

(6) Insure that all applicants for and recipients of disability benefits are treated equally and courteously;

(7) Be responsible for property used for disability program purposes (§ 404.1628);

(8) Take part in the research and demonstration projects (§ 404.1629);

(9) Coordinate with other agencies (§ 404.1630);

(10) Safeguard the records created by the State in performing the disability determination function (§ 404.1631);

(11) Comply with other provisions of the Federal law and regulations that apply to the State in performing the disability determination function;

(12) Comply with other written guidelines (§ 404.1633);

(13) Maintain liaison with the medical profession and organizations that may facilitate performing the disability determination function; and

(14) Assist us in other ways that we determine may promote the objectives of effective and uniform administration.

Responsibilities For Performing the Disability Determination Function

§ 404.1610 How a State notifies us that it wishes to perform the disability determination function.

(a) *Deemed notice.* Any State that has in effect as of June 1, 1981, an agreement with us to make disability determinations will be deemed to have given us notice that it wishes to perform the disability determination function, in lieu of continuing the agreement in effect after June 1, 1981.

(b) *Written notice.* After June 1, 1981, a State not making disability determinations that wishes to perform the disability determination function under these regulations must notify us in writing. The notice must be from an official authorized to act for the State for this purpose. The State will provide an opinion from the State's Attorney General verifying the authority of the official who sent the notice to act for the State.

§ 404.1611 How we notify a State whether it may perform the disability determination function.

(a) If a State notifies us in writing that it wishes to perform the disability determination function, we will notify the State in writing whether or not it may perform the function. The State will begin performing the disability determination function beginning with the month we and the State agree upon.

(b) If we have previously found that a State agency has substantially failed to make disability determinations in accordance with the law or these regulations and other written guidelines or if the State has previously notified us in writing that it does not wish to make disability determinations, the notice will advise the State whether the State agency may again make the disability determinations and, if so, the date and the conditions under which the State may again make them.

§ 404.1613 Disability determinations the State makes.

(a) *General rule.* A State agency will make determinations of disability with respect to all persons in the State except those individuals whose cases are in a class specifically excluded by our written guidelines. A determination of disability made by the State is the determination of the Secretary.

(b) *New classes of cases.* Where any new class or classes of cases arise requiring determinations of disability, we will determine the conditions under which a State may choose not to make the disability determinations. We will provide the State with the necessary funding to do the additional work.

(c) *Temporary transfer of classes of cases.* We will make disability determinations for classes of cases temporarily transferred to us by the State agency if the State agency asks us to do so and we agree. The State agency will make written arrangements with us which will specify the period of time and the class or classes of cases we will do.

§ 404.1614 Responsibilities for obtaining evidence to make disability determinations.

(a) The State agency will secure from the claimant or other sources any evidence it needs to make a disability determination.

(b) We will secure from the claimant or other special arrangement sources, any evidence we can obtain as adequately and more readily than the State agency. We will furnish the evidence to the State agency for use in making a disability determination.

(c) At our request, the State agency will obtain and furnish medical or other evidence and provide assistance as may be necessary for us to carry out our responsibilities—

(1) For making disability determinations in those classes of cases described in the written guidelines for which the State agency does not make the determination; or

(2) Under international agreements with respect to social security benefits payable under section 223 of the Act.

§ 404.1615 Making disability determinations.

(a) When making a disability determination, the State agency will apply subpart P, Part 404 of our regulations.

(b) The State agency will make disability determinations based only on the medical and nonmedical evidence in its files.

(c) Disability determinations will be made by a State agency medical consultant and another person qualified to interpret and evaluate medical reports and other evidence relating to the claimant's physical or mental impairments and as necessary to determine the capacities of the claimant to perform substantial gainful activity. (See § 404.1572 of this part for what we mean by "substantial gainful activity".)

(d) The State agency will certify each determination of disability to us on forms we provide.

(e) The State agency will furnish us with all the evidence it considered in making its determination.

§ 404.1618 Notifying claimants of the disability determination.

The State agency will prepare denial notices in accordance with subpart J of this Part whenever it makes a disability determination which is wholly or partly unfavorable to the claimant.

Administrative Responsibilities and Requirements

§ 404.1620 Organization.

(a) The State will provide the organizational structure, sufficient qualified personnel and medical consultant services to insure disability determinations are made accurately and promptly. We may impose specific organizational requirements on the State, but only if a State's performance approaches the threshold level described in §§ 404.1641–404.1650.

(b) The State is responsible for making accurate and prompt disability determinations.

§ 404.1621 Personnel.

(a) *Equal Employment Opportunity.* The State will comply with all applicable Federal statutes, executive orders and regulations concerned with equal employment opportunities.

(b) *Selection, tenure, and compensation.* The State agency will, except as may be inconsistent with paragraph (a) of this section, adhere to applicable State approved personnel standards in the selection, tenure, and compensation of any individual employed in the disability program.

(c) *Travel.* The State will make personnel available to attend meetings or workshops as may be sponsored or approved by us for furthering the purposes of the disability program.

(d) *Restrictions.* Subject to appropriate Federal funding, the State will, to the best of its ability, facilitate the processing of disability claims by avoiding personnel freezes, restrictions

ainst overtime work, or curtailment of cilities or activities.

04.1622 Training.

The State will insure that all mployees have an acceptable level of mpetence. We will provide training d other instructional materials to cilitate basic and advanced technical oficiency of disability staff in order to sure uniformity and effectiveness in e administration of the disability ogram. We will conduct or specify ining, as appropriate, but only if:

(a) a State agency's performance proaches unacceptable levels; or

(b) the material required for the ining is complex or the capacity of e State to deliver the training is in ubt and uniformity of the training is sential.

04.1623 Facilities.

(a) *Space, equipment, supplies, and her services.* Subject to appropriate deral funding, the State will provide equate space, equipment, supplies, d other services to facilitate making curate and prompt disability terminations.

(b) *Location of facilities.* Subject to propriate Federal funding, the State ll determine the location where the sability determination function is to be rformed so that disability terminations are made accurately and mptly.

(c) *Access.* The State will permit us ess to the premises where the sability determination function is rformed for the purposes of inspecting e work and activities required by the gulations and assuring compliance th pertinent Federal statutes and gulations. We will contact the State d give reasonable prior notice of the es and purposes of any visit.

04.1624 Medical and other purchased rvices.

The State will determine the rates of yment to be used for purchasing dical or other services necessary to ke determinations of disability. The es may not exceed the highest rate id by Federal or other agencies in the le for the same or similar type of rvice. The State will maintain cumentation to support the rates of yment it uses.

04.1625 Records and reports.

(a) The State will establish and intain the records and furnish the hedules, financial, cost, and other ports relating to the administration of disability programs as we may quire.

(b) The State will permit us and the mptroller General of the United States (including duly authorized representatives) access to and the right to examine records relating to the work which the State performs under these regulations. These records will be retained by the State for the periods of time specified for retention of records in the Federal Procurement Regulations (41 CFR Parts 1–20).

§ 404.1626 Fiscal.

(a) We will give the State funds, in advance or by way of reimbursement, for necessary costs in making disability determinations under these regulations. Necessary costs mean direct as well as indirect costs as defined in title 41 CFR subpart 1–15.7 and in Federal Management Circular 74–4, as amended or superseded.

(b) The State will submit estimates of anticipated costs in the form of a budget at the time and in the manner we require.

(c) We will notify the State of the amount which will be made available to it as well as what anticipated costs are being approved.

(d) The State may not incur or make expenditures for items of cost not approved by us or in excess of the amount we make available to the State.

(e) After the close of a period for which funds have been made available to the State, the State will submit a report of its actual expenditures. We will give the State an audit report showing whether the expenditures were consistent with cost principles described in subpart 1–15.7 of part 1–15 of the Federal Procurement Regulations (41 CFR 1–15.7) and in written guidelines in effect at the time the expenditures were made or incurred.

(f) Any monies paid to the State which are used for purposes not within the scope of these regulations will be paid back to the Treasury of the United States.

§ 404.1627 Audits.

As soon as practicable after the close of each budgetary period, or at other times as necessary, the books of account and records in each State pertaining to the administration of the disability program under the Act will be audited by our Inspector General's office. These audits are conducted to determine whether the expenditures were made for the purpose intended and in amounts necessary for the proper and efficient administration of the disability program. The State will make every effort to act upon and resolve any items questioned in an audit.

(a) *Questioned items.* Expenditures of State agencies will be audited on the basis of cost principles and written guidelines in effect at the time the expenditures were made or incurred. Both the State and the State agency will be informed and given a full explanation of any questioned items. They will be given reasonable time to explain questioned items or expenditures. Any explanation furnished by the State or State agency will be given full consideration before a final determination is made on questioned items in the audit report.

(b) *State appeal of audit determinations.* The appropriate SSA regional commissioner will notify the State of his or her determination on the audit report. If the State disagrees with that determination, the State may request reconsideration in writing within 30 days of the date of the regional commissioner's notice of the determination. The written request may be made, through the Associate Commissioner, Office of Operational Policy and Procedures, to the Commissioner of Social Security, Room 900 Altmeyer Building, 6401 Security Boulevard, Baltimore, Maryland 21235. The Commissioner will make a determination and notify the State of that decision in writing no later than 45 days from the date of the State's appeal. The decision by the Commissioner will be final and conclusive upon the State unless the State appeals that decision in writing within 30 days of the date of the decision by the Commissioner to the Department of Health and Human Services Departmental Grant Appeals Board (the Board). See § 404.1680.

§ 404.1628 Property.

The State will have title to equipment purchased for disability program purposes. The State will be responsible for maintaining all property it acquires or which we furnish to it for performing the disability determination function. The State will identify the equipment by labeling and by inventory and will credit the SSA account with the fair market value of disposed property.

§ 404.1629 Participation in research and demonstration projects.

We will invite State participation in federally funded research and demonstration projects to assess the effectiveness of the disability program and to ascertain the effect of program policy changes. Where we determine that State participation is necessary for the project to be complete, for example, to provide national uniformity in a claims process, State participation is mandatory.

§ 404.1630 Coordination with other agencies.

(a) The State will establish cooperative working relationships with other agencies concerned with serving the disabled and, insofar as practicable, use their services, facilities, and records to:

(1) Assist the State in developing evidence and making determinations of disability; and

(2) Insure that referral of disabled or blind persons for rehabilitation services will be carried out effectively.

(b) The State may pay these agencies for the services, facilities, or records they provide. The State will include these costs in its estimates of anticipated costs and reports of actual expenditures.

§ 404.1631 Confidentiality of information and records.

The State will comply with the confidentiality of information and records requirements described in 20 CFR Part 401 and pertinent written guidelines (see § 404.1633).

§ 404.1632 Other Fedral laws and regulations.

The State will comply with the provisions of other Federal laws and regulations that directly affect its responsibilities in carrying out the disability determination function; for example, Treasury Department regulations on letters of credit (31 CFR Part 205).

§ 404.1633 Policies and operating instructions.

(a) We will provide the State agency with written guidelines necessary for it to carry out its responsibilities in performing the disability determination function.

(b) The State agency making determinations of disability will comply with the written guidelines in the Disability Insurance section of the Program Operations Manual System. This manual will also include certain policies, procedures, guides and operating instructions designated as advisory or discretionary.

(c) A representative group of State agencies will be given an opportunity to participate in formulating disability program policies that have an affect on their role in carrying out the disability determination function. State agencies will also be given an opportunity to comment before changes are made in written guidelines unless delay in issuing a change may impair service to the public.

Performance Standards

§ 404.1640 General

The following sections provide the procedures and guidelines we use to determine whether the State agency meets established national performance standards. We use these performance standards to help assure effective and uniform administration of our disability programs throughout the United States and to measure whether each State agency's performance of the disability determination function is acceptable. Also, the standards are designed to improve overall State agency performance in the disability determination process. We measure the State agency performance in two areas—processing time and performance accuracy.

§ 404.1641 Standards of performance.

(a) *General.* The performance standards include both a target level of performance and a threshold level of performance for the State agency. The target level represents a level of performance that we and the States will work to attain in the future. The threshold level is the minimum acceptable level of performance. Performance below the threshold level will be the basis for the Secretary's taking from the State agency partial or complete responsibility for performing the disability determination function. intermediate State agency goals are designed to help each State agency move from its current performance levels to the target levels.

(b) *The target level.* The target level is the optimum level of performance. There are three targets—one for combined title II and title XVI initial performance accuracy, one for title II initial processing time, and one for title XVI initial processing time.

(c) *The threshold level.* The threshold level is the minimum acceptable level of performance. There are three thresholds—one for combined title II and title XVI initial performance accuracy, one for title II initial processing time, and for title XVI initial processing time.

(d) *Intermediate goals.* Intermediate goals are levels of performance between the threshold levels and the target levels established by negotiation between SSA's regional commissioner and each State agency. The intermediate goals are stepping stones designed to help the State agencies reach the target levels. Failure to meet these goals is not a cause for considering the State agency to be substantially failing to comply with the performance standards. However, failure to meet the intermediate goals may result in consultation and an offer of optional technical and management assistance depending on the availability of SSA resources.

§ 404.1642 Processing time standards.

(a) *General.* Title II processing time refers to the average number of days (including Saturday, Sunday and holidays) it takes a State agency to process an initial disability claim from the day it is received in the State agency until the day it is released by the State agency. Title XVI processing time refers to the average number of days (including Saturday, Sunday and holidays) from release of the initial disability claim by the SSA district office until systems input of the disability determination.

(b) *Target levels.* The processing time target levels are:

(1) 37 days for title II initial claims.

(2) 43 days for title XVI initial claims.

(c) *Threshold levels.* The processing time threshold levels are:

(1) 49.5 days for title II initial claims.

(2) 57.9 days for title XVI initial claims.

§ 404.1643 Performance accuracy standard.

(a) *General.* Performance accuracy refers to the percentage of cases that do not have to be returned to State agencies for further development or correction of decisions based on evidence in the files and as such represents the reliability of State agency adjudication. The definition of performance accuracy includes the measurement of factors that have a potential for affecting a decision, as well as the correctness of the decision. For example, if a particular item of medical evidence should have been in the file but was not included, even though its inclusion does not change the result in the case, that is a performance error. Performance accuracy, therefore, is a higher standard than decisional accuracy. As a result, the percentage of correct decisions is significantly higher than what is reflected in the error rate established by SSA's quality assurance system.

(b) *Target level.* The State agency initial performance accuracy target level for combined title II and title XVI cases is 97 percent with a corresponding decision accuracy rate of 99 percent.

(c) *Intermediate Goals.* These goals will be negotiated annually between SSA's regional commissioner and the State and should be used as stepping stones to progress towards our targeted level of performance.

(d) *Threshold levels.* The State agency ial performance accuracy threshold el for combined title II and title XVI es is 90.6 percent.

4.1644 How and when we determine ther the processing time standards are

(e) *How we determine processing es.* For all initial title II cases, we culate the mean number of days cluding Saturday, Sunday and days) from the time the case folder ceived in the State agency until it is ased to us by the State agency. For ial title XVI cases, we calculate a an number of days (including urday, Sunday and holidays) from release of the case folder by the ial security district office until tems input of the disability rmination.

(b) *Frequency of review.* Title II cessing times and title XVI cessing times are monitored arately on a quarterly basis. The rmination as to whether or not the cessing time thresholds have been is made at the end of each quarter h year. Quarterly State-by-State an processing times are compared h the threshold levels for both title II title XVI.

4.1645 How and when we determine ther the performance accuracy ndard is met.

(a) *How we determine performance uracy.* We determine a State ncy's performance accuracy rate on basis of decision and documentation ors identified in our review of the ple cases.

(b) *Frequency of review.* Title II and XVI initial performance accuracy monitored together on a quarterly s. The determinations as to whether performance accuracy threshold has n met is made at the end of each rter each year. Quarterly State-by- te combined initial performance uracy rates are compared to the blished threshold level.

4.1650 If a State agency is not eting the standards.

a State agency falls below 2 of the 3 blished threshold levels (one of ch must be performance accuracy) 2 or more consecutive quarters, we notify the State agency in writing it is not meeting the standards. lowing our notification we will as n as practicable provide the State ncy appropriate technical and agement assistance described in 404.1660 and 404.1661 of these ulations for a period of up to 12 nths.

Technical and Management Assistance

§ 404.1660 When we will provide assistance.

(a) *General.* We will maintain a regular monitoring program to evaluate State agency performance of combined title II and title XVI initial performance accuracy, title II initial processing time and title XVI initial processing time. This regular monitoring program will allow us to determine the type of technical and management assistance a State agency may need to improve its performance. In addition, the results of this monitoring will show whether we will give a State agency mandatory or optional technical and management assistance.

(b) *Mandatory assistance.* (1) We will provide a State agency mandatory technical and management assistance if it fails to meet two of three threshold levels (one being performance accuracy) for two consecutive quarters. These levels are—

(i) Combined title II and title XVI initial performance accuracy—90.6 percent

(ii) Title II initial processing time—49.5 days

(iii) Title XVI initial processing time—57.9 days

(2) Failure to meet any one of the threshold levels for two consecutive quarters may result in mandated technical assistance.

(c) *Optional assistance.* We may offer a State agency technical and management assistance when regular monitoring reveals that performance has significantly declined or that intermediate goals have not been met. We will offer this technical and management assistance at our discretion based on available resources.

§ 404.1661 What assistance we will provide.

We will initiate a program of technical and management assistance in order to improve performance in those State agencies where it has been determined that such help is necessary. This program will include any or all of the following—

(a) An onsite review of cases processed by the State agency emphasizing adherence to written guidelines.

(b) A fiscal and administrative management review (FAMR) to:

(1) Identify particular aspects of State agency operations which can receive immediate help and thus improve performance accuracy or processing time; and

(2) Develop a long-range plan based on the FAMR results to help the State agency prevent its performance from falling below the threshold levels in the future.

(c) A request that necessary administrative measures be implemented (e.g., filling staffing vacancies, using overtime, assisting with training activities, etc.).

(d) Provisions for Federal personnel to perform onsite reviews, conduct training, or perform other functions needed to improve performance.

(e) Provisions for fiscal aid to allow for overtime, temporary hiring of additional staff, etc., above the authorized budget.

Substantial Failure

§ 404.1670 General.

After a State agency falls below 2 of 3 established threshold levels, one being performance accuracy, for 2 consecutive quarters, and after the mandatory technical and management assistance period, we will give the State agency a 3-month adjustment period. During this 3-month period we will not require the State agency to meet the threshold levels. Following the adjustment period, if the State agency again falls below 2 of 3 threshold levels, one being performance accuracy, in 2 consecutive quarters during the next 12 months, we will notify the State that we proposed to find the State agency to be in substantial failure and advise it that it may request a hearing on that issue. After giving the State notice and an opportunity for a hearing, if we find that a State agency has substantially failed to make disability determinations consistent with the regulations and other written guidelines, we will assume partial or complete responsibility for performing the disability determination function after we have complied with § 404.1690 and § 404.1692.

§ 404.1671 Good cause for not meeting the established threshold levels.

If we find that a State agency did not meet the threshold levels because of factors beyond its control, we will not find the State agency to be in substantial failure. Some of the factors we will consider are:

(a) Disasters such as fire, flood, or civil disorder, that—

(1) Require the diversion of significant personnel normally assigned the disability determination function, or

(2) Destroyed or delayed access to significant records needed to make accurate disability determinations;

(b) Strikes of State agency staff or other government or private personnel necessary to the performance of the disability determination function; or

(c) Sudden and unanticipated workload changes which result from changes in Federal law, regulation, or written guidelines, systems modifications or systems malfunctions, or rapid, unpredictable caseload growth for a 6-month period or longer.

§ 404.1675 Finding of substantial failure.

A finding of substantial failure with respect to a State may not be made unless and until the State is afforded an opportunity for a hearing.

Hearings and Appeals

§ 404.1680 Notice of right to hearing on proposed finding of substantial failure.

If, following the mandatory technical and management assistance period and the 3-month adjustment period, a State agency again falls below 2 of 3 threshold levels (one being performance accuracy) in 2 consecutive quarters in the succeeding 12 months, we will notify the State in writing that we will find the State agency in substantial failure unless the State asks for a hearing within 30 days from the date of the notice. The notice will identify the threshold levels that were not met by the State agency, the period during which the thresholds were not met, and the accuracy and processing time levels attained by the State agency during this period. If a hearing is not requested, the State agency will be found in substantial failure and we will implement our plans to assume the disability determination function.

§ 404.1681 Disputes on fiscal matters.

Disputes concerning fiscal issues will be resolved in proceedings before the Grant Appeals Board if the issue cannot be resolved between us and the State. (See § 404.1627.)

§ 404.1682 Who conducts the hearings.

If a hearing is required, it will be conducted by the Health and Human Services Departmental Grant Appeals Board (the Board).

§ 404.1623 Hearings and appeals process.

The rules for hearings and appeals before the Board are provided in 45 CFR Part 16. The following terms used in those rules have the following meanings for purposes of this subpart:

(a) "Grantee" includes the State involved in making disability determinations.

(b) "Grant" includes the performance of the disability determination function by a State agency as provided in this subpart.

(c) "Termination" includes the assumption by us of the disability determination function from a State agency as provided in this subpart.

Assumption of Disability Determination Function

§ 404.1690 Assumption when we make a finding of substantial failure.

(a) *Notice to State.* When we find that substantial failure exists, we will notify the State in writing that we will assume reponsibility for performing the disability determination function from the State agency, whether the assumption will be partial or complete, and the date on which the assumption will be effective.

(b) *Effective date of assumption.* The date of any partial or complete assumption of the disability determination function from a State agency may not be earlier than 180 days after our finding of substantial failure, and not before compliance with the requirements of § 404.1692.

§ 404.1691 Assumption when State no longer wishes to perform the disability determination function.

(a) *Notice to the Secretary.* If a State no longer wishes to perform the disability determination function, it will notify us in writing. The notice must be from an official authorized to act for the State for this purpose. The State will provide an opinion from the State's Attorney General verifying the authority of the official who gave the notice.

(b) *Effective date of assumption.* The State agency will continue to perform whatever activities of the disability determination function it is performing at the time the notice referred to in paragraph (a) of this section is given for not less than 180 days or, if later, until we have complied with the requirements of § 404.1692. For example, if the State is not making disability determinations (because we previously assumed responsibility for making them) but is performing other activities related to the disability determination function at the time it gives notice, the State will continue to do these activities until the requirements of this paragraph are met. Thereafter, we will assume complete responsibility for peforming the disability determination function.

§ 404.1692. Protection of State employees.

(a) *Hiring preference.* We will develop and initiate procedures to implement a plan to partially or completely assume the disability determination function from the State agency under § 404.1690 or § 404.1691, as appropriate. Except for the State agency's administrator, deputy administrator, or assistant administrator (or his equivalent), we will give employees of the State agency who a capable of performing duties in the disability determination function preference over any other persons in filling positions with us for which the are qualified. We may also give a preference in hiring to the State agen administrator, deputy administrator, assistant administrator (or his equivalent). We will establish a syst for determining the hiring priority an the affected State agency employees those instances where we are not hir all of them.

(b) *Determination by Secretary of Labor.* We will not assume responsibility for performing the disability determination function fro State until the Secretary of Labor determines that the State has made fa and equitable arrangements under applicable Federal, State and local la to protect the interests of employees who will be displaced from their employment because of the assumpti and who we will not hire.

§ 404.1693 Limitation on State expenditures after notice.

The State agency may not, after it receives the notice referred to in § 404.1690, or gives the notice referre in § 404.1691, make any new commitments to spend funds allocate to it for performing the disability determination function without the approval of the appropriate SSA regional commissioner. The State will make every effort to close out as soo possible all existing commitments tha relate to performing the disability determination function.

§ 404.1694 Final accounting by the Stat

The State will submit its final claim to us as soon as possible, but in no event later than 1 year from the effect date of our assumption of the disabili determination function unless we gra an extension of time. When the final claim(s) is submitted, a final accounti will be made by the State of any fund paid to the State under § 404.1626 wh have not been spent or committed pri to the effective date of our assumptio of the disability determination functi

PART 416—SUPPLEMENTAL SECURITY INCOME FOR THE AGED, BLIND, AND DISABLED

Part 416 of Chapter 111 of Title 20 o the Code of Federal Regulations is amended as follows:

1. Section 416.902 is revised to read follows:

§ 416.902 General definitions and terms for this subpart.

As used in the subpart——

"Secretary" means the Secretary of Health and Human Services.

"State agency" means the agency of a State which has been designated by the State to carry out the disability determination function.

"We" or "us" refers to either the Social Security Administration or the State agency making the disability or blindness determination.

"You" refers to the person who has applied for or is receiving benefits based on disability or blindness.

2. Section 416.903 is revised to read as follows:

§ 416.903 Who makes disability and blindness determinations.

(a) *State agencies.* State agencies make disability and blindness determinations for the Secretary for most persons living in the State. State agencies make these disability and blindness determinations under regulations containing performance standards and other administrative requirements relating to the disability and blindness determination function. States have the option of turning the function over to the Federal Government if they no longer want to make disability determinations. Also, the Secretary may take the function away from any State which has substantially failed to make disability and blindness determinations in accordance with these regulations. Subpart J of this Part contains the rules the States must follow in making disability and blindness determinations.

(b) *Social Security Administration.* The Social Security Administration will make disability and blindness determinations for the Secretary for—

(1) Any person living in a State which is not making for the Secretary any disability and blindness determinations or which is not making those determinations for the class of claimants to which that person belongs; and

(2) Any person living outside the United States.

(c) *What determinations are authorized.* The Secretary has authorized the State agencies and the Social Security Administration to make determinations about—

(1) Whether you are disabled or blind;

(2) The date your disability or blindness began; and

(3) The date your disability or blindness stopped.

(d) *Review of State Agency determinations.* On review of a State agency determination or redetermination of disability or blindness we may find that—

(1) You are, or are not, disabled or blind, regardless of what the State agency found;

(2) Your disability or blindness began earlier or later than the date found by the State agency; and

(3) Your disability or blindness stoped earlier or later than the date found by the State agency.

§§ 416.1001–416.1078 [Redesignated as §§416.1801–416.1878 (Subpart R)]

3. The section headings and the text of §§ 416.1001–416.1078 are redesignated as §§ 416.1801–416.1878 (Subpart R). The title of Subpart R is "Relationship".

4. A new Subpart J is added to Part 416 to read as follows:

Subpart J—Determinations of Disability

General Provisions

Sec.

416.1001 Purpose and scope.
416.1002 Definitions.
416.1003 Basic responsibilities for us and the State.

Responsibilities for Performing the Disability Determination Function

416.1010 How a State notifies us that it wishes to perform the disability determination function.
416.1011 How we notify a State whether it may perform the disability determination function.
416.1013 Disability determinations the State makes.
416.1014 Responsibilities for obtaining evidence to make disability determinations.
416.1015 Making disability determinations.
416.1018 Notifying claimants of the disability determination.

Administrative Responsibilities and Requirements

416.1020 Organization.
416.1021 Personnel.
416.1022 Training.
416.1023 Facilities.
416.1024 Medical and other purchased services.
416.1025 Records and reports.
416.1026 Fiscal.
416.1027 Audits.
416.1028 Property.
416.1029 Participation in research and demonstration projects.
416.1030 Coordination with other agencies.
416.1031 Confidentiality of information and records.
416.1032 Other Federal laws and regulations.
416.1033 Policies and operating instructions.

Performance Standards

416.1040 General.
416.1041 Standards of performance.
416.1042 Processing time standard.
416.1043 Performance accuracy standard.
416.1044 How and when we determine whether the processing time standards are met.
416.1045 How and when we determine whether the performance accuracy standard is met.
416.1050 If a State agency is not meeting the standards.

Technical and Management Assistance

Sec.

416.1060 When we will provide assistance.
416.1061 What assistance we will provide.

Substantial Failure

416.1070 General.
416.1071 Good cause for not meeting the established threshold levels.
416.1075 Finding of substantial failure.

Hearings and Appeals

416.1080 Notice of right to hearing on proposed finding of substantial failure.
416.1081 Disputes on fiscal matters.
416.1082 Who conducts the hearings.
416.1083 Hearings and appeals process.

Assumption of Disability Determination Function

416.1090 Assumption when we make a finding of substantial failure.
416.1091 Assumption when State no longer wishes to perform the disability determination function.
416.1092 Protection of State employees.
416.1093 Limitation on State expenditures after notice.
416.1094 Final accounting by the State.

Authority: Issued under secs. 1102, 1614, and 1631 of the Social Security Act, as amended; 49 Stat. 647, as amended; 86 Stat. 1471, as amended by 88 Stat. 52; 86 Stat. 1475; 42 U.S.C. 1302, 1382c, and 1383.

Subpart O—Determinations of Disability

General Provisions

§ 416.1001 Purpose and scope.

This subpart describes the standards of performance and administrative requirements and procedures for States making determinations of disability for the Secretary under title XVI of the Act. It also establishes the Secretary's responsibilities in carrying out the disability determination function.

(a) Sections 416.1001–416.1003 describe the purpose of the regulations and the meaning of terms frequently used in the regulations. They also briefly set forth the responsibilities of the Secretary and the States covered in detail in other sections.

(b) Sections 416.1010–416.1018 describe the Secretary's and the State's responsibilities in performing the disability determination function.

(c) Sections 416.1020–416.1033 describe the administrative responsibilities and requirements of the States. The corresponding role of the Secretary is also set out.

(d) Sections 416.1040–416.1050 describe the performance accuracy and processing time standards for measuring State agency performance.

(e) Sections 416.1060–416.1061 describe when and what kind of assistance the Secretary will provide State agencies to help them improve performance.

(f) Sections 416.1070–416.1075 describe the level of performance below which the Secretary will consider a State agency to be substantially failing to make disability determinations consistent with the regulations and other written guidelines and the resulting action the Secretary will take.

(g) Sections 416.1080–416.1082 describe the rules for resolving disputes concerning fiscal issues and providing hearings when we propose to find that a State is in substantial failure.

(h) Sections 416.1090–416.1094 describe when and what action the Secretary will take and what action the State will be expected to take if the Secretary assumes the disability determination function from a State agency.

§ 416.1002 Definitions.

For purposes of this subpart:

"Act" means the Social Security Act, as amended.

"Class or classes of cases" means the categories into which disability claims are divided according to their characteristics.

"Determination of disability" or "disability determination" means one or more of the following decisions:

(a) Whether or not a person is under a disability;

(b) The date a person's disability began; or

(c) The date a person's disability ended.

"Disability" means "disability" or "blindness" as defined in sections 1614(a) (2) and (3) of the Act.

"Disability determination function" means making determinations as to disability or blindness and carrying out related administrative and other responsibilities.

"Disability program" means the Federal program for providing supplemental security income benefits for the blind and disabled under title XVI of the Act, as amended.

"Initial" means the first level of disability or blindness adjudication.

"Other written guidelines" means the policies, procedures, guides, and operating instructions in the Disability Insurance section of the Program Operations Manual System that are not designated as advisory or discretionary.

"Regulations" means regulations in this subpart issued under §§ 1102, 1631(c) and 1633(a) of the Act, unless otherwise indicated.

"Secretary" means the Secretary of the Department of Health and Human Services or the Secretary's delegate.

"State" means any of the 50 States of the United States and the District of Columbia. It includes the State agency.

"State agency" means that agency of a State which has been designated by the State to carry out the disability determination function.

"We", "us," and "our" refers to the Social Security Administration (SSA) or the Secretary, as appropriate.

§ 416.1003 Basic responsibilities for us and the State.

(a) *General.* We will work with the State to provide and maintain an effective system for processing claims of those who apply for and who are receiving benefits under the disability program. We will provide program standards, leadership, and oversight. We do not intend to become involved in the State's ongoing management of the program except as is necessary and in accordance with these regulations. The State will comply with our regulations and other written guidelines.

(b) *Our responsibilities.* We will:

(1) Periodically review the regulations and other written guidelines to determine whether they insure effective and uniform administration of the disability program. To the extent feasible, we will consult with and take into consideration the experience of the States in issuing regulations and guidelines necessary to insure effective and uniform administration of the disability program;

(2) Provide training materials or in some instances conduct or specify training (see § 416.1022);

(3) Provide funds to the State agency for the necessary cost of performing the disability determination function, (see § 416.1026);

(4) Monitor and evaluate the performance of the State agency under the establishment standards (see §§ 416.1044 and 416.1045); and

(5) Maintain liaison with the medical profession nationally and with national organizations and agencies whose interests or activities may affect the disability program.

(c) *Responsibilities of the State.* The State will:

(1) Provide management needed to insure that the State agency carries out the disability determination function so that disability determinations are made accurately and promptly;

(2) Provide an organizational structure, adequate facilities, qualified personnel, and medical consultant services (§§ 416.1020–416.1024);

(3) Furnish reports and records relating to the administration of the disability program (§ 416.1025);

(4) Submit budgets (§ 416.1026);

(5) Cooperate with audits (§ 416.1027);

(6) Insure that all applicants for and recipients of disability benefits are treated equally and courteously;

(7) Be responsible for property used for disability program purposes (§ 416.1028);

(8) Take part in the research and demonstration projects (§ 416.1029);

(9) Coordinate with other agencies (§ 416.1030);

(10) Safeguard the records created by the State in performing the disability determination function (§ 416.1031);

(11) Comply with other provisions of the Federal law and regulations that apply to the State in performing the disability determination function;

(12) Comply with other written guidelines (§ 416.1033);

(13) Maintain liaison with the medical profession and organizations that may facilitate performing the disability determination function; and

(14) Assist us in other ways that we determine may promote the objectives of effective and uniform administration.

Responsibilities for Performing the Disability Determination Function

§ 416.1010 How a State notifies us that it wishes to perform the disability determination function.

(a) *Deemed notice.* Any State that has in effect as of June 1, 1981, an agreement with us to make disability determinations will be deemed to have given us notice that it wishes to perform the disability determination function, in lieu of continuing the agreement in effect after June 1, 1981.

(b) *Written notice.* After June 1, 1981, a State not making disability determinations that wishes to perform the disability determination function under these regulations must notify us in writing. The notice must be from an official authorized to act for the State for this purpose. The State will provide an opinion from the State's Attorney General verifying the authority of the official who sent the notice to act for the State.

§ 416.1011 How we notify a State whether it may perform the disability determination function.

(a) If a State notifies us in writing that it wishes to perform the disability determination function, we will notify the State in writing whether or not it may perform the function. The State will begin performing the disability determination function beginning with the month we and the State agree upon.

(b) If we have previously found that a State agency has substantially failed to make disability determinations in accordance with the law or these regulations and other written guidelines

or if the State has previously notified us in writing that it does not wish to make disability determinations, the notice will advise the State whether the State agency may again make the disability determinations and, if so, the date and the conditions under which the State may again make them.

§ 416.1013 Disability determinations the State makes.

(a) *General rule.* A State agency will make determinations of disability with respect to all persons in the State except those individuals whose cases are in a class specifically excluded by our written guidelines. A determination of disability made by the State is the determination of the Secretary.

(b) *New classes of cases.* Where any new class or classes of cases arise requiring determinations of disability, we will determine the conditions under which a State may choose not to make the disability determinations. We will provide the State with the necessary funding to do the additional work.

(c) *Temporary transfer of classes of cases.* We will make disability determinations for classes of cases temporarily transferred to us by the State agency if the State agency asks us to do so and we agree. The State agency will make written arrangements with us which will specify the period of time and the class or classes of cases we will do.

§ 416.1014 Responsibilities for obtaining evidence to make disability determinations.

(a) The State agency will secure from the claimant or other sources any evidence it needs to make a disability determination.

(b) We will secure from the claimant or other special arrangement sources, any evidence we can obtain as adequately and more readily than the State agency. We will furnish the evidence to the State agency for use in making a disability determination.

(c) At our request, the State agency will obtain and furnish medical or other evidence and provide assistance as may be necessary for us to carry out our responsibility for making disability determinations in those classes of cases described in the written guidelines for which the State agency does not make the determination.

§ 416.1015 Making disability determinations.

(a) When making a disability determination, the State agency will apply subpart I, Part 416 of our regulations.

(b) The State agency will make disability determinations based only on the medical and nonmedical evidence in its files.

(c) Disability determinations will be made by a State agency medical consultant and another person qualified to interpret and evaluate medical reports and other evidence relating to the claimant's physical or mental impairments and as necessary to determine the capacities of the claimant to perform substantial gainful activity. (See § 416.1072 of this part for what we mean by "substantial gainful activity".)

(d) The State agency will certify each determination of disability to us on forms we provide.

(e) The State agency will furnish us with all the evidence it considered in making its determination.

§ 416.1018 Notifying claimant of the disability determination.

The State agency will prepare denial notices in accordance with subpart N of this Part whenever it makes a disability determination which is wholly or partly unfavorable to the claimant.

Administrative Responsibilities and Requirements

§ 416.1020 Organization.

(a) The State will provide the organizational structure, sufficient qualified personnel and medical consultant services to insure disability determinations are made accurately and promptly. We may impose specific organizational requirements on the State, but only if a State's performance approaches the threshold level described in §§ 416.1041–416.1050.

(b) The State is responsible for making accurate and prompt disability determinations.

§ 416.1021 Personnel.

(a) *Equal Employment Opportunity.* The State will comply with all applicable Federal statutes, executive orders and regulations concerned with equal employment opportunities.

(b) *Selection, tenure, and compensation.* The State agency will, except as may be inconsistent with paragraph (a) of this section, adhere to applicable State approved personnel standards in the selection, tenure, and compensation of any individual employed in th disability program.

(c) *Travel.* The State will make personnel available to attend meetings or workshops as may be sponsored or approved by us for furthering the purposes of the disability program.

(d) *Restrictions.* Subject to appropriate Federal funding, the State will, to the best of its ability, facilitate the processing of disability claims by avoiding personnel freezes, restrictions against overtime work, or curtailment of facilities or activities.

§ 416.1022 Training.

The State will insure that all employees have an acceptable level of competence. We will provide training and other instructional materials to facilitate basic and advanced technical proficiency of disability staff in order to insure uniformity and effectiveness in the administration of the disability program. We will conduct or specify training, as appropriate but only if:

(a) a State agency's performance approaches unacceptable levels or

(b) the material required for the training is complex or the capacity of the State to deliver the training is in doubt and uniformity of the training is essential.

§ 416.1023 Facilities.

(a) *Space, equipment, supplies, and other services.* Subject to appropriate Federal funding, the State will provide adequate space, equipment, supplies, and other services to facilitate making accurate and prompt disability determinations.

(b) *Location of facilities.* Subject to appropriate Federal funding, the State will determine the location where the disability determination function is to be performed so that disability determinations are made accurately and promptly.

(c) *Access.* The State will permit us access to the premises where the disability determination function is performed for the purposes of inspecting the work and activities required by the regulations and assuring compliance with pertinent Federal statutes and regulations. We will contact the State and give reasonable prior notice of the times and purposes of any visit.

§ 416.1024 Medical and other purchased services.

The State will determine the rates of payment to be used for purchasing medical or other services necessary to make determinations of disability. The rates may not exceed the highest rate paid by Federal or other agencies in the State for the same or similar type of service. The State will maintain documentation to support the rates of payment it uses.

§ 416.1025 Records and reports.

(a) The State will establish and maintain the records and furnish the schedules, financial, cost, and other reports relating to the administration of the disability programs as we may require.

(b) The State will permit us and the Comptroller General of the United

States (including duly authorized representatives) access to and the right to examine records relating to the work which the State performs under these regulations. These records will be retained by the State for the periods of time specified for retention of records in the Federal Procurement Regulations (41 CFR parts 1–20).

§ 416.1026 Fiscal.

(a) We will give the State funds, in advance or by way of reimbursement, for necessary costs in making disability determinations under these regulations. Necessary costs mean direct as well as indirect costs as defined in title 41 CFR subpart 1–15.7 and in Federal Management Circular 74–4, as amended or superseded.

(b) The State will submit estimates of anticipated costs in the form of a budget at the time and in the manner we require.

(c) We will notice the State of the amount which will be made available to it as well as what anticipated costs are being approved.

(d) The State may not incur or make expenditures for items of cost not approved by us or in excess of the amount we make available to the State.

(e) After the close of a period for which funds have been made available to the State, the State will submit a report of its actual expenditures. We will give the State an audit report showing whether the expenditures were consistent with cost principles described in subpart 1–15.7 of part 1–15 of the Federal Procurement Regulations (41 CFR 1–15.7) and in written guidelines in effect at the time the expenditures were made or incurred.

(f) Any monies paid to the State which are used for purposes not within the scope of these regulations will be paid back to the Treasury of the United States.

§ 416.1027 Audits.

As soon as practicable after the close of each budgetary period, or at other times as necessary, the books of account and records in each State pertaining to the administration of the diability program under the Act will be audited by our Inspector General's office. There audits are conducted to determine whether the expenditures were made for the purposes intended and in amounts necessary for the proper and efficient administration of the disability program. The State will make every effort to act upon and resolve any items questioned in an audit.

(a) *Questioned items.* Expenditures of State agencies will be audited on the basis of cost principles and written guidelines in effect at the time the expenditures were made or incurred. Both the State and the State agency will be informed and given a full explanation of any questioned items. They will be given reasonable time to explain questioned items or expenditures. Any explanation furnished by the State or State agency will be given full consideration before a final determination is made on questioned items in the audit report.

(b) *State appeal of audit determinations.* The appropriate SSA regional commissioner will notify the State of his or her determination on the audit report. If the State disagrees with that determination, the State may request reconsideration in writing within 30 days of the date of the regional commissioner's notice of the determination. The written request may be made, through the Associate Commissioner, Office of Operational Policy and Procedures, to the Commissioner of Social Security, Room 900 Altmeyer Building, 6401 Security Boulevard, Baltimore, Maryland 21235. The Commissioner will make a determination and notify the State of that decision in writing no later that 45 days from the date of the State's appeal. The decision by the Commissioner will be final and conclusive upon the State unless the State appeals that decision in writing within 30 days of the date of the decision by the Commissioner to the Department of Health and Human Services Departmental Grant Appeals Board (the Board). See § 416.1080.

§ 416.1028 Property.

The State will have title to equipment purchased for disability program purposes. The State will be responsible for maintaining all property it acquires or which we furnish to it for performing the disability determination function. The State will identify the equipment by labeling and by inventory and will credit the SSA account with the fair market value of disposed property.

§ 416.1029 Participation in research and demonstration projects.

We will invite State participation in federally funded research and demonstration projects to assess the effectiveness of the disability program and to ascertain the effect of program policy changes. Where we determine that State participation is necessary for the project to be complete, for example, to provide national uniformity in a claims process, State participation is mandatory.

§ 416.1030 Coordination with other agencies.

(a) The State will establish cooperative working relationships with other agencies concerned with serving the disabled and, insofar as practicable, use their services, facilities, and records to:

(1) Assist the State in developing evidence and making determinations of disability; and

(2) Insure that referral of disabled or blind persons for rehabilitation services will be carried out effectively.

(b) The State may pay these agencies for the services, facilities, or records they provide. The State will include these costs in its estimates of anticipated costs and reports of actual expenditures.

§ 416.1031 Confidentiality of information and records.

The State will comply with the confidentiality of information and records requirements described in 20 CFR Part 401 and pertinent written guidelines (see § 416.1033).

§ 416.1032 Other Federal laws and regulations.

The State will comply with the provisions of other Federal laws and regulations that directly affect its responsibilities in carrying out the disability determination function; for example, Treasury Department regulations on letters of credit (31 CFR Part 205).

§ 416.1033 Policies and operating instructions.

(a) We will provide the State agency with written guidelines necessary for it to carry out its responsibilites in performing the disability determination function.

(b) The State agency making determinations of disability will comply with the written guidelines in the Disability Insurance section of the Program Operations Manual System. This manual will also include certain policies, procedures, guides and operating instructions designated as advisory or discretionary.

(c) A representative group of State agencies will be given an opportunity to particpate in formulating disability program policies that have an effect on their role in carrying out the disability determination function. State agencies will also be given an opportunity to comment before changes are made in written guidelines unless delay in issuing a change may impair service to the public.

Performance Standards

§ 416.1040 General

The following sections provide the procedures and guidelines we use to determine whether the State agency meets established national performance standards. We use these performance standards to help assure effective and uniform administration of our disability programs throughout the United States and to measure whether each State agency's performance of the disability determination function is acceptable. Also, the standards are designed to improve overall State agency performance in the disability determination process. We measure the State agency performance in two areas—processing time and performance accuracy.

§ 416.1041 Standards of performance.

(a) *General.* The performance standards include both a target level of performance and a threshold level of performance for the State agency. The target level represents a level of performance that we and the States will work to attain in the future. The threshold level is the minimum acceptable level of performance. Performance below the threshold level will be the basis for the Secretary's taking from the State agency partial or complete responsibility for performing the disability determination function. Intermediate State agency goals are designed to help each State agency move from its current performance levels to the target levels.

(b) *The target level.* The target level is the optimum level of performance. There are three targets—one for combined title II and title XVI initial performance accuracy, one for title II initial processing time, and for title XVI initial processing time.

(c) *The threshold level.* The threshold level is the minimum acceptable level of performance. There are three thresholds—one for combined title II and title XVI initial performance accuracy, one for title II initial processing time, and one for title XVI initial processing time.

(d) *Intermediate goals.* Intermediate goals are levels of performance between the threshold levels and the target levels established by negotiation between SSA's regional commissioner and each State agency. The intermediate goals are stepping stones designed to help the State agencies reach the target levels. Failure to meet these goals is not a cause for considering the State agency to be substantially failing to comply with the performance standards. However, failure to meet the intermediate goals may result in consultation and an offer of optional technical and management assistance depending on the availability of SSA resources.

§ 416.1042 Processing time standards.

(a) *General.* Title II processing time refers to the average number of days (including Saturday, Sunday and holidays) it takes a State agency to process an initial disability claim from the day it is received in the State agency until the day it is released by the State agency. Title XVI processing time refers to the average number of days (including Saturday, Sunday and holidays) from release of the initial disability claim by the SSA district office until systems input of the disability determination.

(b) *Target levels.* The processing time target levels are:

(1) 37 days for title II initial claims.

(2) 43 days for title XVI initial claims.

(c) *Threshold levels.* The processing time threshold levels are:

(1) 49.5 days for title II initial claims.

(2) 57.9 days for title XVI initial claims.

§ 416.1043 Performance accuracy standard.

(a) *General.* Performance accuracy refers to the percentage of cases that do not have to be returned to State agencies for further development or correction of decisions based on evidence in the files and as such represents the reliability of State agency adjudication. The definition of performance accuracy includes the measurement of factors that have a potential for affecting a decision, as well as the correctness of the decision. For example, if a particular item of medical evidence should have been in the file but was not included, even though its inclusion does not change the result in the case, that is a performance error. Performance accuracy, therefore, is a higher standard than decisional accuracy. As a result, the percentage of correct decisions is significantly higher than what is reflected in the error rate established by SSA's quality assurance system.

(b) *Target level.* The State agency initial performance accuracy target level for combined title II and title XVI cases is 97 percent with a corresponding decision accuracy rate of 99 percent.

(c) *Intermediate Goals.* These goals will be negotiated annually between SSA's regional commissioner and the State and should be used as stepping stones to progress towards our targeted level of performance.

(d) *Threshold levels.* The State agency initial performance accuracy threshold level for combined title II and title XVI cases is 90.6 percent.

§ 416.1044 How and when we determine whether the processing time standards are met.

(a) *How we determine processing times.* For all initial title II cases, we calculate the mean number of days (including Saturday, Sunday and holidays) from the time the case folder is received in the State agency until it is released to us by the State agency. For initial title XVI cases, we calculate a mean number of days (including Saturday, Sunday and holidays) from the release of the case folder by the social security district office until systems input of the disability determination.

(b) *Frequency of review.* Title II processing times and title XVI processing times are monitored separately on a quarterly basis. The determination as to whether or not the processing time thresholds have been met is made at the end of each quarter each year. Quarterly State-by-State mean processing times are compared with the threshold levels for both title II and title XVI.

§ 416.1045 How and when we determine whether the performance accuracy standard is met.

(a) *How we determine performance accuracy.* We determine a State agency's performance accuracy rate on the basis of decision and documentation errors identified in our review of the sample cases.

(b) *Frequency of review.* Title II and title XVI initial performance accuracy are monitored together on a quarterly basis. The determinations as to whether the performance accuracy threshold has been met is made at the end of each quarter each year. Quarterly State-by-State combined initial performance accuracy rates are compared to the established threshold level.

§ 416.1050 If a State agency is not meeting the standards.

If a State agency falls below 2 of the 3 established threshold levels (one of which must be performance accuracy) for 2 or more consecutive quarters, we will notify the State agency in writing that it is not meeting the standards. Following our notification we will as soon as practicable provide the State agency appropriate technical and management assistance described in §§ 416.1060 and 416.1061 of these regulations for a period of up to 12 months.

Technical and Management Assistance

§ 416.1060 When we will provide assistance.

(a) *General.* We will maintain a regular monitoring program to evaluate State agency performance of combined title II and title XVI initial performance accuracy, title II initial processing time and title XVI initial processing time. This regular monitoring program will allow us to determine the type of technical and management assistance a State agency may need to improve its performance. In addition, the results of this monitoring will show whether we will give a State agency mandatory or optional technical and management assistance.

(b) *Mandatory assistance.* (1) We will provide a State agency mandatory technical and management assistance if it fails to meet two of three threshold levels (one being performance accuracy) for two consecutive quarters. These levels are—

(i) Combined title II and title XVI initial performance accuracy—90.6 percent.

(ii) Title II initial processing time—49.5 days.

(iii) Title XVI initial processing time—57.9 days.

(2) Failure to meet any one of the threshold levels for two consecutive quarters may result in mandated technical assistance.

(c) *Optional assistance.* We may offer a State agency technical and management assistance when regular monitoring reveals that performance has significantly declined or that intermediate goals have not been met. We will offer this technical and management assistance at our discretion based on available resources.

§ 416.1061 What assistance we will provide.

We will initiate a program of technical and management assistance in order to improve performance in those State agencies where it has been determined that such help is necessary. This program will include any or all of the following—

(a) An onsite review of cases processed by the State agency emphasizing adherence to written guidelines.

(b) A fiscal and administrative management review (FAMR) to:

(1) Identify particular aspects of State agency operations which can receive immediate help and thus improve performance accuracy or processing time; and

(2) Develop a long-range plan based on the FAMR results to help the State agency prevent its performance from falling below the threshold levels in the future.

(c) A request that necessary administrative measures be implemented (e.g., filling staffing vacancies, using overtime, assisting with training activities, etc.).

(d) Provisions for Federal personnel to perform onsite reviews, conduct training, or perform other functions needed to improve performance.

(e) Provisions for fiscal aid to allow for overtime, temporary hiring of additional staff, etc., above the authorized budget.

Substantial Failure

§ 416.1070 General.

After a State agency falls below 2 of 3 established threshold levels, one being performance accuracy, for 2 consecutive quarters, and after the mandatory technical and management assistance period, we will give the State agency a 3-month adjustment period. During this 3-month period we will not require the State agency to meet the threshold levels. Following the adjustment period, if the State agency again falls below 2 of 3 threshold levels, one being performance accuracy, in 2 consecutive quarters during the next 12 months, we will notify the State that we propose to find the State agency to be in substantial failure and advise it that it may request a hearing of that issue. After giving the State notice and an opportunity for a hearing, if we find that a State agency has substantially failed to make disability determinations consistent with the regulations and other written guidelines, we will assume partial or complete responsibility for performing the disability determination function after we have complied with § 416.1090 and § 416.1092

§ 416.1071 Good cause for not meeting the established threshold levels.

If we find that a State agency did not meet the threshold levels because of factors beyond its control, we will not find the State agency to be in substantial failure. Some of the factors we will consider are:

(a) Disasters such as fire, flood, or civil disorder, that—

(1) Require the diversion of significant personnel normally assigned the disability determination function, or

(2) Destroyed or delayed access to significant records needed to make accurate disability determinations;

(b) Strikes of State agency staff or other government or private personnel necessary to the performance of the disability determination function; or

(c) Sudden and unanticipated workload changes which result from changes in Federal law, regulation, or written guidelines, systems modifications or systems malfunctions, or rapid, unpredictable caseload growth for a 6-month period or longer.

§ 416.1075 Finding of substantial failure.

A finding of substantial failure with respect to a State may not be made unless and until the State is afforded an opportunity for a hearing.

Hearings and Appeals

§ 416.1080 Notice of right to hearing on proposed finding of substantial failure.

If, following the mandatory technical and management assistance period and the 3-month adjustment period, a State agency again falls below 2 of 3 threshold levels (one being performance accuracy) in 2 consecutive quarters in the succeeding 12 months, we will notify the State in writing that we will find the State agency in substantial failure unless the State asks for a hearing within 30 days from the date of the notice. The notice will identify the threshold levels that were not met by the State agency, the period during which the thresholds were not met, and the accuracy and processing time levels attained by the State agency during this period. If a hearing is not requested, the State agency will be found in substantial failure and we will implement our plans to assume the disability determination function.

§ 416.1081 Disputes on fiscal matters.

Disputes concerning fiscal issues will be resolved in proceedings before the Grant Appeals Board if the issue cannot be resolved between us and the State. (See § 416.1027.)

§ 416.1082 Who conducts the hearings.

If a hearing is required, it will be conducted by the Health and Human Services Departmental Grant Appeals Board (the Board).

§ 416.1083 Hearings and appeals process.

The rules for hearings and appeals before the Board are provided in 45 CFR Part 16. The following terms used in those rules have the following meanings for purposes of this subpart:

(a) "Grantee" includes the State involved in making disability determinations.

(b) "Grant" includes the performance of the disability determination function by a State agency as provided in this subpart.

(c) "Termination" includes the assumption by us of the disability

determination function from a State agency as provided in this subpart.

Assumption of Disability Determination Function

§ 416.1090 Assumption when we make a finding of substantial failure.

(a) *Notice to State.* When we find that substantial failure exists, we will notify the State in writing that we will assume responsibility for performing the disability determination function from the State agency, whether the assumption will be partial or complete, and the date on which the assumption will be effective.

(b) *Effective date of assumption.* The date of any partial or complete assumption of the disability determination function from a State agency may not be earlier than 180 days after our finding of substantial failure, and not before compliance with the requirements of § 416.1092.

§ 416.1091 Assumption when State no longer wishes to perform the disability determination function.

(a) *Notice to the Secretary.* If a State no longer wishes to perform the disability determination function, it will notify us in writing. The notice must be from an official authorized to act for the State for this purpose. The State will provide an opinion from the State's Attorney General verifying the authority of the official who gave the notice.

(b) *Effective date of assumption.* The State agency will continue to perform whatever activities of the disability determination function it is performing at the time the notice referred to in paragraph (a) of this section is given for not less than 180 days or, if later, until we have complied with the requirements of § 416.1092. For example, if the State is not making disability determinations (because we previously assumed responsibility for making them) but is performing other activities related to the disability determination function at the time it gives notice, the State will continue to do these activities until the requirements of this paragraph are met. Thereafter, we will assume complete responsibility for performing the disability determination function.

§ 416.1092 Protection of State employees.

(a) *Hiring preference.* We will develop and initiate procedures to implement a plan to partially or completely assume the disability determination function from the State agency under § 416.1090 or § 416.1091, as appropriate. Except for the State agency's administrator, deputy administrator, or assistant administrator (or his equivalent), we will give employees of the State agency who are capable of performing duties in the disability determination function preference over any other persons in filling positions with us for which they are qualified. We may also give a preference in hiring to the State agency's administrator, deputy administrator, or assistant administrator (or his equivalent). We will establish a system for determining the hiring priority among the affected State agency employees in those instances where we are not hiring all of them.

(b) *Determination by Secretary of Labor.* We will not assume responsibility for performing the disability determination function from a State until the Secretary of Labor determines that the State has made fair and equitable arrangements under applicable Federal, State and local law to protect the interests of employees who will be displaced from their employment because of the assumption and who we will not hire.

§ 416.1093 Limitation on State expenditures after notice.

The State agency may not, after it receives the notice referred to in § 416.1090, or gives the notice referred to in § 416.1091, make any new commitments to spend funds allocated to it for performing the disability determination function without the approval of the appropriate SSA regional commissioner. The State will make every effort to close out as soon as possible all existing commitments that relate to performing the disability determination function.

§ 416.1094 Final accounting by the State.

The State will submit its final claims to us as soon as possible, but in no event later than 1 year from the effective date of our assumption of the disability determination function unless we grant an extension of time. When the final claim(s) is submitted, a final accounting will be made by the State of any funds paid to the State under § 416.1026 which have not been spent or committed prior to the effective date of our assumption of the disability determination function.

Part XVIII

Department of Education

Arts in Education Program; Final Regulations Announcement of Applications for Noncompeting Continuation Award

DEPARTMENT OF EDUCATION

34 CFR Part 753

Arts in Education Program

AGENCY: Department of Education.

ACTION: Final regulations.

SUMMARY: The Secretary of Education issues final regulations for the Arts in Education Act of 1978. These regulations replace the final regulations that were issued for the Act on April 3, 1980. They delete requirements that each project include cost sharing by the grantee, address at least four art forms, and have an advisory committee representative of community resources. Other changes are also made. These revised regulations are substantially shorter and less prescriptive than the earlier regulations. These regulations are redesignated from 45 CFR Part 161c to 34 CFR Part 753, and all section numbers are renumbered accordingly.

EFFECTIVE DATE: These regulations are expected to take effect 45 days after they are transmitted to Congress. Regulations are transmitted to Congress several days before they are published in the Federal Register. The effective date is changed by statute if Congress takes certain adjournments. If you wish to know the effective date of these regulations, call or write the Department of Education contact person.

FOR FURTHER INFORMATION CONTACT: Harold Arberg, Director, of Arts and Humanities Staff, U.S. Department of Education, Room 3728 Donohoe Building, Washington, D.C. 20202. Telephone: (202) 472–7793.

SUPPLEMENTARY INFORMATION: A notice of proposed rulemaking (NPRM) for the Arts in Education Act, published in the Federal Register on September 22, 1980 (45 FR 62856) contained background information on policy changes in the program and how the regulations are intended to work and invited public comment. The NPRM proposed to replace the final regulations issued on April 3, 1980 (45 FR 22742) as the result of the Secretary's conclusion that the purposes of the Act could be best achieved by shortening and simplifying the program regulations in response to the concerns raised. Most of the public responses support the proposed changes that have been made in these regulations. Some commenters requested clarification of allowable expenses. Several suggested specific changes in the regulations. A majority of the respondents commented on the three major changes proposed—deletion of the cost-sharing, "four arts," and advisory committee requirements. Many addressed the Secretary's discretionary authority to assign points to specific funding priorities. Several commented on the proposed inclusion of geographic and programmatic diversity, and a number expressed a desire that the evaluation process include separate points for the States' review of local applications. Several of the commenters expressed the desire to return to former programmatic policy, i.e., "seed money" for SEAs and LEAs. Comments that resulted in alterations to the proposed regulations are discussed in paragraph A below; other comments requiring clarification or explanation follow in paragraph B.

A. Comments Resulting in Changes

§ 753.4 Definition of "rural or small community."

Comment. Several respondents expressed a concern that the proposed definition might exclude a typical applicant who may not fall within either the rural or the urban category under the proposed definitions.

Response. The definition has been modified to cover any applicant not included in the State or urban categories.

§ 753.11 What are the requirements regarding cooperation?

Comment. Several respondents opposed the requirement for intensive collaboration on the basis that they believed fewer programs would be funded and less money would be available directly to the SEAs and LEAs. Others favored this approach, which they felt would lead to more local involvement of resources and talent and would have more lasting impact. One commenter felt the regulations should be more specific on how the collaboration among agencies should be accomplished. Another commenter noted that the authorizing statute does not specifically require such arrangements.

Response. Section 753.11 has been deleted in order to remove any requirement concerning collaboration. However, collaboration is considered an important factor bearing on the quality of an application. The criterion in § 753.31(g) addresses it. School-community cooperation encourages maximum use of community resources and reduction of competing applications for scarce funds from the same community. This has been an important element of the Arts in Education Program since its inception. The issue of the number and size of awards is not addressed in these regulations but it may be addressed in the annual application notice in the light of available appropriations.

§ 753.22 What are the requirements for State review of local applications?

Comment. One commenter expressed concern that § 753.22(a) and former § 753.22(b) could be interpreted as requiring States to have a State advisory council, when this is not required by the authorizing statute. Several commenters felt that the State Alliance for Arts Education Committee should serve this function. Many expressed a need for a governing body of some type.

Response. Section 753.22(a) has been amended to specify the Alliance for Arts Education Committee as an example of a State advisory council. Section 753.22(b) has been deleted to clarify that a State is not required to establish or designate an advisory council.

§ 753.30 How does the Secretary evaluate an application?

Comment. One commenter questioned the scope and rationale of § 753.30 (§ 161c.32(c) of the NPRM) concerning projects within the priorities of other agencies.

Response. The provision has been amended to clarify that the Secretary may decline to fund a project that comes within the priority of another Federal agency. The rationale is to avoid duplication and promote coordination with other Federal activities that support related purposes, so that taxpayers' funds are spent most efficiently.

§ 753.31 What selection criteria does the Secretary use?

Comment. One commenter stated that the law does not specify that projects must be innovative or new, nor does it require that they be comprehensive or that material be disseminated.

Response. The criterion related to new or innovative approaches, methods, and materials is necessary to comply with the purpose of title III, section 301 of the Education Amendments of 1978. The Arts in Education program will carry out projects that emphasize new or innovative approaches, methods, or materials. There is no longer a specific criterion on dissemination. The criterion regarding "comprehensive" projects has been modified to allow for more flexibility. As amended, it allows the Secretary, in judging the quality of an application, to consider whether the major arts are integrated into the curriculum. Dance, music, theater, and the visual arts are mentioned only as examples of the major arts. The criterion reflects research that shows that the

combination of multiple arts in an integrated program has the most effective impact on the overall elementary and secondary school curriculum.

§ 753.32 Are priorities for funding established?

Comment. Many respondents wanted to know how the Secretary will decide which of the designated funding areas should receive priority and how the public would be notified of priority decisions. One commenter asked what the rationale was for selecting these areas. Several expressed concern that the Secretary could override reviewers' or States' evaluations. Two States, one city, and one public school system favored the discretionary authority if it were used to make their agencies the priority for bonus points.

Response. These provisions have been amended to clarify how the funding categories would work, in accordance with the concerns expressed in the comments. The categories collectively encompass all eligible projects at the State or local level. They are designed to insure a fair competition between State-level, urban, and rural applications.

§ 753.33 What is the length of a project period?

Comment. Several respondents were interested in the regulations as they pertain to continuation awards. One expressed concern that school-community cooperation was a determining factor.

Response. The subject criterion on school-community collaboration with regard to continuation awards has been deleted. Coordination and cooperation are a criterion for all new awards, and it is unnecessary to have a separate criterion on this subject related to continuation awards.

§ 753.40 What are the limitations on costs?

Comment. One commenter asked if stipends to teachers for in-service training would be allowed.

Response. The word, "stipends," is misleading and has been deleted. Payments are allowable to teachers for in-service training.

Comment. One commenter asked why equipment is limited to 5% of the project costs.

Response. The 5% limitation has been deleted in the interest of greater program flexibility.

B. Response to Other Comments

The following comments did not result in changes in the regulations, either because the comments requested provisions beyond the authority of the Act or concerned matters already addressed in the regulations. Commenters are referred to the proposed regulations, which present the basis and rationale for changes from previous regulations. Only comments considered to raise regulatory issues are discussed below.

§ 753.10 What are the required elements of an arts in education project?

Comment. One commenter felt that the language in § 753.10(a) should include vocation-oriented institutions.

Response. While the Act contains no limit on non-profit institutions that are eligible, the purpose of the Act is to integrate the arts into elementary and secondary school curricula. The regulations reflect these statutory provisions.

Comment. One-third of the respondents desired modification of § 753.10(b). Many felt that at least two of the arts should be required to avoid dependence on one teacher or administrator and to strengthen the curriculum as an aid to learning.

Response. Section 753.31(h) provides that in making a judgment as to the best applications, the Secretary may consider the degree to which the major arts are integrated into the regular curriculum. However, § 753.10 has not been amended to require a particular number of the arts in a project. The statute does not contain this requirement, and Congress objected to the provision in previous regulations requiring four major art forms in each project.

§ 753.22 What are the requirements for State review of local applications?

Comment. Several respondents wanted separate points to be assigned in the award process to State comments or rankings of local applications.

Response. State comments bearing on the published criteria will be carefully considered by the Secretary. However, the Secretary does not wish to prejudice or exclude an applicant from a State that may not have a specific mechanism in place to evaluate these applications, or that may choose not to evaluate them. No specific procedure is prescribed for State review.

§ 753.31 What selection criteria does the Secretary use?

Comment. One commenter argued that the geographic distribution criterion pits State against local applicants from the same State.

Response. The regulations contain no specific limit on the number of applications that may be funded in a particular State. However, it is appropriate for the Secretary to consider geographic distribution in awarding limited funds. If a disproportionate number of applications were funded in particular States or regions, to the neglect of other parts of the country, this could detract from the national purposes of the Act.

Comment. Some commenters argued that deletion of the cost-sharing requirement may weaken local support of the project and result in increased competition for funds.

Response. Section 753.31(i) contains a criterion that allows the Secretary, in selecting the best applications, to consider the strength of local commitment and stability of the program following the Federal funding period. However, to avoid being overly prescriptive, the cost-sharing requirement has been deleted.

Comment. Many respondents believed that the deletion of the advisory committee requirement might weaken the project, make it less responsive to community needs and resources, and provide less collaboration among organizations involved. One believed that collaboration can weaken or dilute as well as strengthen.

Response. Section 753.31(g)(1) includes a criterion that allows the Secretary, in selecting the best applications, to consider coordination and collaboration. A specific method or strategy is not prescribed. § 753.11 has been deleted, and § 753.31(g) no longer provides for an advisory committee.

Comment. One respondent requested that the regulations clarify how the elderly are to be included in the project (§ 753.31 (a) and (b)). Another commenter applauded the spirit of equal opportunity in the proposed regulations.

Response. These provisions are derived from Department-wide criteria contained in the Education Department General Administrative Regulations (EDGAR). They would apply to the extent appropriate to a particular project. In elementary and secondary projects, the elderly might be included, for example, in in-service training or technical assistance activities.

Comment. One commenter urged that Congress intended private school children to be included in all programs for public school children under Title III of the Elementary and Secondary Education Act, and not only those controlled by SEAs and LEAs.

Response. These comments pertain to Department-wide provisions derived from EDGAR. The comments will be considered in any future amendments to EDGAR.

§ 753.32 Are priorities for funding established?

Comment. One respondent wanted a special category of grants to small urban systems.

Response. The change in the definition of "rural or small community" under § 753.4 clarifies that small urban systems are eligible to apply under the rural or small community category. See Subpart D, § 753.32, for how the Secretary will establish categories for funding.

§ 753.40 What are the limitations on cost?

Comment. One commenter asked that the regulations clarify the wording in § 753.40(a)(2) on unallowable expenses.

Response. The wording, "Salaries of regular, full-time instructional personnel" refers to teachers' salaries for regular classroom instruction. Payments may be made to part-time or substitute teachers or to regular teachers on released time to attend in-service training or to perform other project-related functions.

Citation of Legal Authority

A citation of statutory or other legal authority has been placed in parentheses on the line following each provision.

Dated: January 12, 1981.

Shirley M. Hufstedler,

Secretary of Education.

(Catalog of Federal Domestic Assistance No. 84.084, Arts Education Program)

The Secretary of Education amends Title 34 of the Code of Federal Regulations by adding a new Part 753 reading as follows:

PART 753—ARTS IN EDUCATION PROGRAM

Subpart A—General

Sec.

753.1 Arts in Education Program.
753.2 Eligible parties.
753.3 Regulations that apply to this program.
753.4 Definitions.

Subpart B—What Kinds of Activities Does the Secretary Assist Under This Program?

753.10 What are the required elements of an arts in education project?

Subpart C—How Does One Apply for a Grant?

753.20 What limitations apply to applicants?
753.21 What are the application requirements?
753.22 What are the requirements for State review of local applications?

Subpart D—How Is a Grant Made?

753.30 How does the Secretary evaluate an application?
753.31 What selection criteria does the Secretary use?
753.32 Are priorities for funding established?
753.33 What is the length of a project period?

Subpart E—What Conditions Must Be Met by a Grantee?

753.40 What are the limitations on costs?

Authority: Part C, Title III of the Elementary and Secondary Education Act of 1965, as amended by the Education Amendments of 1978, Pub. L. 95–561, 92 Stat. 2212 (20 U.S.C. 2961).

Subpart A—General

§ 753.1 Arts in education program.

The Arts in Education Program assists in establishing, conducting or improving programs in which the arts are an integral part of elementary and secondary school curricula.

(20 U.S.C. 2962)

§ 753.2 Eligible parties.

(a) State educational agencies (SEAs), local educational agencies (LEAs), and public or private nonprofit agencies, organizations, and institutions are eligible to apply for grants.

(b) Agencies, organizations, and institutions may include, but are not limited to, libraries, museums, theaters, arts councils and centers, colleges and universities, performing arts groups, and parent, youth, and civic organizations.

(20 U.S.C. 2942, 2962)

§ 753.3 Regulations that apply to this program.

The following regulations apply to grants under the Arts in Education Program:

(a) The Education Department General Administrative Regulations (EDGAR) in 34 CFR Part 75 (Direct Grant Programs) and 34 CFR Part 77 (General); and

(b) The regulations in this Part 753.

(20 U.S.C. 1221e-3, 2962)

§ 753.4 Definitions.

In addition to the definitions in 34 CFR Part 77 of EDGAR, the following definitions apply in these regulations:

"Arts" includes, but is not limited to, music, dance, drama, folk art, creative writing, architecture and allied fields, painting, sculpture, photography, graphic and craft arts, industrial design, costume and fashion design, motion pictures, television, radio, and tape and sound recording; the presentation, performance, execution, and exhibition of these art forms; and the study and application of the arts to the human environment.

(20 U.S.C. 2961, 952(b), Pub. L. 89–209)

"Rural or small community" means a geographic area other than a State.

"Urban or large community" means a standard metropolitan statistical area (the area in and around a city of fifty thousand inhabitants or more as defined by the Office of Management and Budget).

(20 U.S.C. 2962, 3207)

Subpart B—What Kinds of Activities Does the Secretary Assist Under This Program?

§ 753.10 What are the required elements of an arts in education project?

The Secretary assists an arts in education project only if it is designed to—

(a) Integrate one or more of the arts into the regular educational curricula of the schools served; and

(b) Provide opportunities for all students in the schools served to acquire skills and understanding in and through arts media.

(20 U.S.C. 2961, 2962)

Subpart C—How Does One Apply for a Grant?

§ 753.20 What limitations apply to applicants?

The Secretary approves no more than one project application from an applicant in a fiscal year, whether or not the application is filed jointly with that of other applicants.

(20 U.S.C. 1221e-3, 2962)

§ 753.21 What are the application requirements?

An applicant must demonstrate, on the application form furnished by the Secretary, that the proposed project meets the requirements of the Act and applicable regulations. An applicant should address each funding criterion.

Cross references:
EDGAR § 75.127–129 (Group applications).
EDGAR § 75.138–141 (Open meeting).
§ 302(b) of the ESEA, EDGAR § 75.650 (Participation of students in private schools).

(20 U.S.C. 1221e-3, 2962)

§ 753.22 What are the requirements for State review of local applications?

(a) The SEA, working with the State arts education advisory committee (such as the Alliance for Arts Education Committee), if any, may review and comment on local applications.

(b) The local applicant must send a copy of its application to the SEA, at the same time it sends the application to the Secretary. The application must show that a copy was sent to the SEA.

(c) To ensure that its comments are considered in the application review, an

SEA should send its comments to the Secretary no later than 30 days after the closing date for receipt of applications.

(20 U.S.C. 1221e-3, 2962)

Subpart D—How Is a Grant Made?

§ 753.30 How does the Secretary evaluate an application?

(a) The Secretary evaluates an application on the basis of the criteria in § 753.31.

(b) The Secretary awards up to 100 possible points for these criteria.

(c) The maximum possible score for each complete criterion is indicated in parentheses.

(d) The Secretary may decline to approve applications that are within the funding priorities of other Federal agencies.

(20 U.S.C. 2962)

§ 753.31 What selection criteria does the Secretary use?

(a) *Plan of Operation.* (10 points)

(1) The Secretary reviews each application for information that shows the quality of the plan of operation for the project.

(2) The Secretary looks for information that shows—

(i) High quality in the design of the project;

(ii) An effective plan of management that insures proper and efficient administration of the project;

(iii) A clear description of how the objectives of the project relate to the purpose of the program;

(iv) The way the applicant plans to use its resources and personnel to achieve each objective;

(v) A clear description of how the applicant will provide equal access and treatment for eligible project participants who are members of groups that have been traditionally underrepresented, such as members of racial or ethnic minority groups, women, handicapped persons, and the elderly.

(vi) If the applicant is a State or local educational agency, how the applicant will provide an opportunity for the participation of children in private schools.

(b) *Quality of key personnel.* (7 points)

(1) The Secretary reviews each application for information that shows the quality of key personnel the applicant plans to use on the project.

(2) The Secretary looks for information that shows—

(i) The qualifications of the project director (if one is to be used);

(ii) The qualifications of each of the other key personnel to be used in the project;

(iii) The time that each person referred to in paragraphs (b)(2)(i) and (ii) of this section plans to commit to the project; and

(iv) The extent to which the applicant, as part of its nondiscriminatory employment practices, encourages applications for employment from persons who are members of groups that have been traditionally underrepresented, such as members of racial or ethnic minority groups, women, handicapped persons, and the elderly.

(3) To determine the qualifications of a person, the Secretary considers evidence of past experience and training, in fields related to the objectives of the project, as well as other information that the applicant provides.

(c) *Budget and cost effectiveness.* (5 points)

(1) The Secretary reviews each application for information that shows that the project has an adequate budget and is cost effective.

(2) The Secretary looks for information that shows—

(i) The budget for the project is adequate to support the project activities; and

(ii) Costs are reasonable in relation to the objectives of the project.

(d) *Evaluation plan.* (5 points)

(1) The Secretary reviews each application for information that shows the quality of the evaluation plan for the project. (See 34 CFR 75.590—Evaluation by the grantee.)

(2) The Secretary looks for information that shows methods of evaluation that are appropriate for the project and, to the extent possible, are objective and produce data that are quantifiable.

(e) *Adequacy of resources.* (3 points)

(1) The Secretary reviews each application for information that shows that the applicant plans to devote adequate resources to the project.

(2) The Secretary looks for information that shows—

(i) The facilities that the applicant plans to use are adequate; and

(ii) The equipment and supplies that the applicant plans to use are adequate.

(f) *Needs assessment.* (5 points)

The Secretary reviews each application for information that shows the extent to which the applicant—

(1) Identifies and analyzes, objectively and comprehensively, the need for arts education programs in the area to be served; and

(2) Establishes clear and measurable objectives that relate to the identified needs.

(g) *Coordination and collaboration.* (15 points)

(1) The quality of the applicant's plan to mobilize and coordinate activities of all agencies, organizations, and institutions involved. In judging this criterion, the Secretary considers the applicant's description of how and why each entity is cooperating in the project.

(2) The consistency with plans and activities previously carried out in arts education including the State plan for arts education, if any.

(3) The extent to which the applicant has developed and will employ effective methods, throughout the project period, for continuing consultation with the groups involved.

(h) *Arts integration.* (10 points)

The extent to which the project is designed to integrate the major arts (for example, dance, music, theater, and the visual arts) into the regular educational program of the schools served.

(i) *Commitment.* (15 points)

The extent to which the applicant's activities to make the arts an integral part of the elementary and secondary school curricula are likely to continue and expand when Federal assistance for the project ends.

(j) *Results.* (15 points)

(1) The extent to which the project is likely to result in new or innovative approaches, methods, or materials designed to achieve the purpose of the Act; and

(2) The likelihood that the materials to be developed by the project would be useful and effective for other potential users.

(k) *Special needs.* (10 points)

The extent to which the project is designed to serve the special needs of the handicapped, gifted, and underprivileged.

(l) *Diversity—geographic and programmatic.* To ensure geographic and programmatic diversity, the Secretary may add up to 10 points to the score of an application that will contribute to—

(1) An equitable geographic distribution of arts education programs throughout the United States in both urban and rural areas; and

(2) A variety in types of projects funded that collectively demonstrate diverse approaches to arts education.

(20 U.S.C. 2962)

§ 753.32 Are priorities for funding established?

(a) The Secretary funds projects in the following categories:

(1) State-wide projects;

(2) Urban or large community projects; and

(3) Rural or small community projects.

(b)(1) The Secretary decides annually how many grants to award in each category based on:

(i) The number of applications in each category;

(ii) The relative quality of the applications; and

(iii) The Secretary's goal to achieve a reasonable balance among projects funded in these categories.

(2) Through advance notice in the **Federal Register**, the Secretary may announce the distribution by category of previously funded projects eligible for non-competing continuation and its effect on new awards under paragraph (b)(1)(iii) of this section.

(20 U.S.C. 2962)

§ 753.33 What is the length of a project period?

(a) The Secretary usually approves a project for a maximum of three years. The budget period is twelve months.

(b) In deciding whether or not to make a continuation award within the approved project period, the Secretary considers the factors in § 75.253 of EDGAR.

(20 U.S.C. 1221e–3, 2962)

Subpart E—What Conditions Must Be Met by a Grantee?

§ 753.40 What are the limitations on costs?

(a) A grantee may not use federal funds for—

(1) Direct student financial aid; or

(2) Salaries for regular, full-time instructional personnel.

(b) A grantee may use up to ten percent of total project costs for outside evaluation of the project.

(20 U.S.C. 2962)

[FR Doc. 81-1685 Filed 1-15-81; 8:45 am]

BILLING CODE 4000-01-M

DEPARTMENT OF EDUCATION

Arts in Education Program

AGENCY: Department of Education.

ACTION: Application notice.

Applications are invited for noncompeting continuation projects under the Arts in Education Program.

Authority for this program is contained in Part C of Title III of the Elementary and Secondary Education Act of 1965, as amended by Pub. L. 95–561.

(20 U.S.C. 2961)

This program awards grants to State educational agencies (SEAs), local educational agencies (LEAs) and other public or private nonprofit agencies, organizations, and institutions.

The purpose of the awards is to establish or conduct programs in which the arts are an integral part of elementary and secondary school curricula.

Closing Date for Transmittal of Applications: To be assured of consideration for continued funding, an application for a noncompeting continuation award should be mailed or hand delivered by April 1, 1981.

Applications Delivered by Mail: An application for a noncompeting continuation award sent by mail must be addressed to the U.S. Department of Education, Application Control Center, Attention: 84.084, Washington, D.C. 20202.

An applicant must show proof of mailing consisting of one of the following:

(1) A legibly dated U.S. Postal Service postmark.

(2) A legible mail receipt with the date of mailing stamped by the U.S. Postal Service.

(3) A dated shipping label, invoice, or receipt from a commercial carrier."

(4) Any other proof of mailing acceptable to the Secretary of Education.

If an application is sent through the U.S. Postal Service, the Secretary does not accept either of the following as proof of mailing: (1) A private metered postmark, or (2) a mail receipt that is not dated by the U.S. Postal Service.

An applicant should note that the U.S. Postal Service does not uniformly provide a dated postmark. Before relying on this method, an applicant should check with its local post office.

An applicant is encouraged to use registered or at least first class mail. Each late applicant will be notified that its application will not be considered.

Applications Delivered by Hand: An application that is hand-delivered must be taken to the U.S. Department of Education, Application Control Center, Room 5673, Regional Office Building 3, 7th and D Streets, SW., Washington, D.C.

The Application Control Center will accept a hand-delivered application between 8:00 a.m. and 4:30 p.m. (Washington, D.C. time) daily, except Saturdays, Sundays, and Federal holidays.

Available Funds: It is estimated that $750,000 of FY 1981 funds will be available for continuation of 15 projects at the continuation level requested in the initial application. This estimate does not bind the U.S. Department of Education except as may be required by the applicable statute and regulations.

Application Forms: Application forms and program information packages may be obtained by writing to the Arts and Humanities Staff, U.S. Department of Education (Room 3728, Donohoe Building), 400 Maryland Avenue, SW., Washington, D.C. 20202.

Applications must be prepared and submitted in accordane with the regulations, instructions, and forms included in the program information package. The Secretary urges that applicants not submit information that is not requested.

Applicable Regulations: The following regulations apply under this program.

(a) Final regulations governing the Arts Education Program (34 CFR Part 753) published in this issue of the **Federal Register**.

(b) The Education Department General Administrative Regulations (EDGAR) redesignated in the **Federal Register** as 34 CFR Parts 75 (Direct Grant Programs) and 77 (General) on November 21, 1980 (45 FR 77368).

(c) The Administration of Grants Regulations in 34 CFR 74 published in the **Federal Register** on May 9, 1980 (45 FR 30856).

Further Information: For further information, contact the Arts and Humanities Staff, U.S. Department of Education (Room 3728, Donohoe Building), 400 Maryland Avenue, SW., Washington, D.C. 20202. Telephone (202) 472–7793.

Environmental Protection Agency

Identification and Listing of Hazardous Waste; Final Rule and Temporary Suspension of Interim Final Rule

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 261

[SWH-FRL 1627-3]

Hazardous Waste Management System; Identification and Listing of Hazardous Waste

AGENCY: U.S. Environmental Protection Agency.

ACTION: Final rule and temporary suspension of interim final rule.

SUMMARY: In response to public comment, the Environmental Protection Agency (EPA) today is finalizing the listings of thirteen hazardous wastes from specific sources that were proposed or promulgated in interim final form in the **Federal Register** on July 16, 1980 (45 FR 47832–47836). In addition EPA is deleting two wastes from its interim final hazardous waste list, and is deferring action on and suspending the effectiveness of nine wastes listed in interim final form on July 16, 1980, as well as deferring action on one waste that was proposed on that date.

EPA is also amending Appendix VII of this Part by finalizing the toxic constituents of concern for each listed waste promulgated today.

DATES: Effective dates: Waste listings promulgated in interim final form on July 16, 1980, which are finalized today, become effective on January 16, 1981. Waste listings which were proposed on July 16, 1980, and which are finalized today, become effective on July 16, 1981.

See supplementary information for further details.

ADDRESSES: The public docket for this regulation is located in Room 2711, U.S. Environmental Protection Agency, 401 M Street SW., Washington, D.C. 20460, and is available for viewing from 9:00 a.m. to 4:00 p.m., Monday through Friday, excluding holidays.

FOR FURTHER INFORMATION CONTACT: Dr. Judith S. Bellin, Office of Solid Waste (WH-565), U.S. Environmental Protection Agency, 401 M Street SW., Washington, D.C. 20460, (202) 755-9187.

SUPPLEMENTARY INFORMATION: Before discussing the substance of today's action, the Agency wishes to state clearly the regulatory obligations which result from it.

I. Compliance Dates for Regulatory Obligations

A. Notification

1. Finalized Waste Listings Promulgated in Interim Final Form on July 16, 1980.

Persons who generate, transport, treat, store, or dispose of any hazardous waste listed in interim final form on July 16, 1980 which waste listing is now being finalized, are not required to notify EPA as a result of today's action. Wastes in this category are hazardous wastes K071, K073, K083, K084, K085, K086, and K087. We do not consider today's action to be a revision of the Section 3001 regulations within the meaning of Section 3010(b). All such persons, of course, should have already notified EPA by or before October 16, 1980.

2. Finalized Waste Listings Which Were Proposed on July 16, 1980.

Persons who generate, transport, treat, store, or dispose of wastes which were proposed for listing on July 16, 1980 which are being finalized today—hazardous wastes K101–K106—are not required to notify so long as they previously have notified the Agency that they handle a hazardous waste and have received an I.D. number. Persons who have not previously notified EPA and who generate or handle these wastes must now notify EPA of their activities under Section 3010 no later than April 16, 1981. Notification instructions are set forth in 45 FR 12746 (February 26, 1980).[1]

B. Other Compliance Dates

Beginning on January 16, 1981, persons handling wastes listed in final form in § 261.32, which listings were promulgated in interim final form on July 16, 1980, must comply with all applicable standards for hazardous waste generators, transporters, and owners or operators of hazardous waste management facilities set forth in 40 CFR Parts 262 through 266 and 122 through 124.

Beginning on July 16, 1981, persons handling wastes listed in final form in § 261.32 which were proposed for inclusion on July 16, 1980, must comply with all applicable standards for hazardous waste generators, transporters, and owners or operators of hazardous waste management facilities set forth in 40 CFR Parts 262 through 266 and 122 through 124.

The owners or operators of all existing hazardous waste management facilities which treat, store or dispose of wastes listed in these regulations which were proposed for inclusion on July 16, 1980, and who wish to qualify for interim status under Section 3005(e) of RCRA, must file a notification by April 16, 1981 unless they have notified previously (as described in A. 2. above), and must file a permit application by July 16, 1981 (see 40 CFR 122.23(a) (1) and (2)).

Owners or operators of facilities who have qualified for interim status and wish to manage wastes listed in the final regulations which were proposed for listing on July 16, 1980 must submit an amended permit application by July 16, 1981 (see 40 CFR 122.23(c)(1)). Owners or operators of facilities with interim status who do not comply with these requirements are precluded from managing these wastes after July 16, 1981.

Table I summarizes the Agency's action on each waste stream discussed in the July 16 **Federal Register** notice, and gives the effective date of each final regulation.

[1] Our authority for this action is the recent amendment to Section 3010(a) of RCRA contained in the Solid Waste Disposal Act Amendments of 1980 (Pub. L. 96-452 (October 21, 1980)), which amendment leaves the requirement for notification following revision of the Section 3001 regulations to the discretion of the Administrator.

Table I.—*Summary of the Agency's Disposition of Each Waste Stream Listed in Interim Final Form or Proposed for Listing on July 16, 1980*

EPA hazardous waste No.	Hazardous waste	Effective date and disposition
	§ 261.31 Hazardous Waste From Nonspecific Sources	
F017	Paint residues or sludges from industrial painting in the mechanical and electrical products industry.	Suspended temporarily.
F018	Wastewater treatment sludge from industrial painting in the mechancial and electrical products industry.	Suspended temporarily.

Table I.—*Summary of the Agency's Disposition of Each Waste Stream Listed in Interim Final Form or Proposed for Listing on July 16, 1980* —**Continued**

EPA hazardous waste No.	Hazardous waste	Effective date and disposition
	§ 261.32 Hazardous Waste From Specific Sources	
K071	Brine purification muds from the mercury cell process in chlorine production, where separately prepurified brine is not used.	Jan. 16, 1981.
K106	Wastewater treatment sludge from the mercury cell process in chlorine production.	(6 months after publication.)
K073	Chlorinated hydrocarbon wastes from the purification step of the diaphragm cell process using graphite anodes in chlorine production.	Jan. 16, 1981.
K074	Wastewater treatment sludges from the production of TiO_2 pigment using chromium bearing ores by the chloride process.	Deleted (see 45 FR 72034, Oct. 30, 1980).
K078	Solvent cleaning wastes from equipment and tank cleaning from paint manufacturing.	Suspended temporarily.
K079	Water or caustic cleaning wastes from equipment and tank cleaning from paint manufacturing.	Suspended temporarily.
K081	Wastewater treatment sludges from paint manufacturing	Suspended temporarily.
K082	Emission control dust or sludge from paint manufacturing	Suspended temporarily.
K083	Distillation bottoms from aniline production	Jan. 16, 1981.
K103	Process residues from aniline extraction from the production of aniline.	(6 months after publication.)
K104	Combined wastewater streams generated from nitrobenzene/aniline production.	(6 months after publication.)
K084	Wastewater treatment sludges generated during the production of veterinary pharmaceuticals from arsenic or organo-arsenic compounds.	Jan. 16, 1981.
K101	Distillation tar residues from the distillation of aniline compounds in the production of veterinary pharmaceuticals from arsenic or organo-arsenic compounds.	(6 months after publication.)
K102	Residue from the use of activated carbon for decolorization in the production of veterinary pharmaceuticals from arsenic or organo-arsenic compounds.	(6 months after publication.)
K085	Distillation or fractionation column bottoms from the production of chlorobenzenes.	Jan. 16, 1981.
K105	Separated aqueous stream from the reactor product washing step in the production of chlorobenzenes.	(6 months after publication.)
K086	Solvent washes and sludges, caustic washes and sludges, or water washes and sludges from cleaning tubs and equipment used in the formulation of ink from pigments, driers, soaps, and stabilizers containing chromium and lead.	Jan. 16, 1981.
K087	Decanter tank tar sludge from coking operations	Jan. 16, 1981.
K088	Spent potliners from primary aluminum production	Suspended temporarily.
K090	Emission control dust or sludge from ferrochromium-silicon production.	Suspended temporarily.
K091	Emission control dust or sludge from ferrochromium production	Suspended temporarily.
K092	Emission control dust or sludge from ferromanganese production	Deleted.
(Proposed)	Emission control dust from gray and ductile iron foundry cupola furnaces.	Deferred.

II. Finalization of §§ 261.31 and 261.32 Hazardous Waste Lists

On July 16, 1980, EPA amended Subpart D of Part 261 by adding eighteen wastes to EPA's hazardous waste list (§§ 261.31 and 261.32, 45 FR 47833–47834). These lists were published in interim final form to allow the public an opportunity to comment on additional data the Agency had collected on these wastes since the close of the initial public comment period on the proposed Subtitle C regulations (43 FR 58957–58959, December 18, 1978).

At the same time, the Agency also proposed for comment seven additional hazardous waste listings (45 FR 47835–47836, July 16, 1980). All of these wastes were identified by the Agency in the course of developing the necessary technical data to support the July 16, 1980, interim final hazardous waste list.

The Agency received a number of comments on both the interim final and proposed hazardous waste listings. We have evaluated these comments carefully and responded in detail in the respective listing background documents. We are setting forth in this preamble our disposition of the listings published in interim final and proposed form on July 16, 1980, summarizing the basis for our actions as to each of these listings. We also are responding to comments criticizing the Agency's decision to defer temporarily the listing of wastes from the woven fabric dyeing and finishing industry.

A. Wastes for Which No Comments Were Received and No Changes Were Made to the Hazardous Waste Listings or to the Respective Background Documents

No comments were received on four of the hazardous waste listings published on July 16, 1980. In addition, the Agency is not making any substantive changes to either the hazardous waste listings or to the respective background documents as a result of its evaluation of these listings. Included in this category are certain wastes from the production of veterinary pharmaceuticals (EPA Hazardous Waste Nos. K084, K101 and K102), and wastes from ink formulation (EPA Hazardous Waste No. K086). We therefore are promulgating all of these listings as final regulations.

B. Waste for Which No Comments Were Received and No Changes Were Made to the Hazardous Waste Listing or Respective Background Document, But Final Implementation Has Been Temporarily Suspended

The Agency also received no comment on the hazardous waste listing of "spent potliners from primary aluminum production" (EPA Hazardous Waste No. K088). The Agency has no doubt that this waste should be listed as a hazardous waste, since it contains high concentrations of cyanide and has been involved in damage incidents. The lack of comment on the listing reflects further consensus that these wastes are indeed hazardous. However, the waste is excluded temporarily from control under Subtitle C under § 261.4(b) of the regulations. This provision implements Section 7 of the recently enacted Solid Waste Disposal Act Amendments of 1980 (Pub. L. 94–482, October 21, 1980), and states that solid wastes from the extraction, beneficiation and processing of ores and minerals (including coal) are excluded from regulation under Subtitle C of RCRA. For the time being, the Agency interprets the language of this exclusion to include solid wastes generated during the smelting and refining of ores and minerals, and so would exclude the waste streams from primary aluminum production. (See 45 FR 76618–76620 (November 19, 1980)). After reviewing the applicable legislative history and receiving public comment, the Agency may amend this exclusion to bring this waste (and others already promulgated) back under Subtitle C control.

C. Wastes for Which Comments Were Received But No Changes Were Made to the Hazardous Waste Listings

The Agency received comments disputing the hazardousness of, or challenging aspects of the Agency's rationale for listing, certain wastes from the production of chlorine (EPA Hazardous Waste No. K073), aniline/nitrobenzene (EPA Hazardous Waste Nos. K083, K103 and K104), and coking operations (EPA Hazardous Waste No. K087). In evaluating these comments, the Agency did not agree with the substantive criticisms, and did not modify the listing descriptions or the

constituents which form the basis for listing the waste. The applicable background documents have been revised to respond to each comment.

D. Wastes for Which Comments Were Received Which Resulted in Modifications to the Hazardous Waste Listing Descriptions, or to the Applicable Background Documents

Comments were also submitted on hazardous wastes K085 and K105 (chlorobenzene production), and K071 and K106 (wastes from chlorine production by the mercury cell process). EPA has carefully reviewed these comments and has concluded that the listing description or the basis for listing should be changed, or the respective background document should be changed. The amended hazardous waste listings or background documents are discussed below, together with the reason for EPA's determination. More detailed discussion of the reasons underlying the respective dispositions is contained in the applicable background documents.

(1) *Wastes from the Production of Chlorobenzenes (EPA Hazardous Waste Nos. K085 and K105).*

(a) In listing the separate aqueous stream from the reactor product washing step in the production of chlorobenzenes, (K085) phenol, 2-chlorophenol and 2,4-dichlorophenol were included as toxic constituents of concern. After reviewing the comments, we believe that these constituents should not be so listed because they do not occur in this waste stream in concentrations sufficient to cause concern, even if the wastes were mismanaged. The background document has been changed, and Appendix VII has been revised to reflect this determination. However, we believe the waste stream to be hazardous because it contains benzene (a carcinogen), certain chlorinated benzenes, and the carcinogen 2,4,6-trichlorophenol in potentially harmful concentrations, as explained more fully in the listing background document.

(b) In response to a comment received from one manufacturer of chlorobenzenes, we have changed the listing description for the aqueous waste (K105) to indicate that the listed aqueous waste stream may result from some continuous processes, as well as from batch processes.

(c) One comment questioned whether distillation residues from chlorobenzene production (in this case, hexachlorobenzene production) were still intended to be listed when the hexachlorobenzene was then used as a reactant in the production of pentachloronitrobenzene, rather than sold as a product. The distillation residues are indeed a listed hazardous waste in this case. The end usage of the hexachlorobenzene is irrelevant to the potential of the listed waste stream to cause harm. Therefore, any waste stream meeting the listing description contained in § 261.31 or § 261.32 is covered by the listing regardless of the end disposition of the material being produced.

(2) Wastes from Chlorine Production via the Mercury Cell Process (EPA Hazardous Waste Nos. K071 and K106).

Several commenters argued that data used by the Agency in support of the listings was outdated and therefore did not accurately reflect the hazardousness of the wastes listed. In reviewing the data submitted by the commenters, the Agency agrees that the data was old, and therefore has revised the background document to reflect the more recent information. The background document was revised in order to reflect new data on siting, production capacity, source of raw materials, concentration of mercury in these wastes and volume of wastes generated. The new data still indicates, however, that these wastes contain significant concentrations of mercury (a very toxic constituent), and are generated in substantial quantities. Furthermore, these wastes are reliably believed to have caused substantial damage in actual waste management practice, and therefore should be listed as hazardous wastes. A more detailed discussion of the comments received are available in the listing background document.

E. Wastes for Which Comments Were Received Which Resulted in the Deletion of the Wastes from the Hazardous Waste List

Two of the wastes listed in interim final form on July 16, 1980, were deleted from the list as a result of industry comment. Our basis for removing these wastes are discussed below. It must be emphasized, however, that it is still the responsibility of all generators of these wastes to determine whether they exhibit any of the characteristics of hazardous waste in Subpart C of Part 261.

(1) Emission control dust/sludge from the production of ferromanganese (EPA Hazardous Waste No. K092).

The Ferroalloys Association submitted EP leachate analyses from these ferromanganese production wastes which indicate that the extracts from these wastes do not contain significant concentrations of either chromium or lead, the waste constituents of concern. The Agency has, therefore, determined that emission control dust/sludge from ferromanganese production should not be listed as a hazardous waste.

(2) *Wastewater treatment sludges from the production of TiO_2 pigment using chromium-bearing ores by the chloride process (EPA Hazardous Waste No. K074).*

On October 30, 1980 (45 FR 72037), the Agency published as a final rule an amendment to § 261.32 which removed this waste stream from the list of hazardous wastes since it derives from a trivalent chromium-based process and contains trivalent chromium exclusively or nearly exclusively.

F. Wastes for Which Comments were Received and a Final Determination was Deferred

(1) *Emission control dust or sludge from ferrochrome and ferrochrome-silicon production (EPA Hazardous Waste Nos. K090 and K091).*

These wastes are presently excluded from Subtitle C coverage due to the mining waste exclusion contained in § 261.4. However, the Agency also has some substantive doubts about whether these waste streams should be listed.

The Ferroalloys Association submitted extensive data which indicates that the EP extract from these wastes contains insignificant concentrations of lead. The Agency has therefore determined that lead should be deleted as a toxic constituent of concern in these wastes. In this same set of comments, however, the concentration of total chromium in the extracts of many of the sampled wastes was well above the limit set in § 261.24 (5 mg/l). There is real uncertainty, however, as to the valence state of the chromium in these wastes. Since the Agency has indicated that hexavalent chromium is the species of regulatory concern (45 FR 72029, October 30, 1980), we believe that additional data is needed. The Ferroalloys Association has agreed to conduct a sampling and analysis effort to determine whether significant levels of total chromium, hexavalent chromium, and manganese appear in the extract from ferrochrome and ferrochromium-silicon wastes. Manganese is of concern because its presence can result in the oxidation of trivalent chromium. After this data is received, the Agency will make a final decision on whether to list these wastes. This decision is expected to be made in the Spring of 1981.

(2) *Wastes from Gray and Ductile Iron Foundries (proposed listings).*

Over the past eighteen months the Agency has proposed for listing a

number of wastes from both gray and ductile iron foundries, namely lead bearing wastewater treatment sludges from gray iron foundries, and emission control dust from gray and ductile iron foundry cupola furnaces (see discussion in 45 FR 47835, July 16, 1980). These wastes were proposed for listing since they were shown in certain cases to contain or release significant concentrations of the toxic metals lead or cadmium. However, as a result of industry comment, the Agency undertook further study of these wastes, beginning last summer, to determine their hazardousness. The report of this study is expected to be available for public comment in the near future. After evaluating this data and the public comments received, the Agency will consider the hazards posed by various wastes from foundry operations. We are, accordingly, deferring final action on these wastes. (All of these wastes are hazardous, of course, if they exhibit any of the characteristics of hazardous waste, and generators of these wastes are obligated to make this determination.)

(3) *Wastes From the Use and Manufacture of Paints (EPA Hazardous Waste Nos. F017, F018, K078, K079, K081, and K082).*

Many comments were received from various trade organizations and interested individuals, who objected to the listing of these paint wastes.

In general, most commenters criticized the waste listings as overly broad, resulting in regulation of both hazardous and non-hazardous paint wastes. In re-evaluating the data, the Agency agrees that further study of these wastes is needed before a final listing can be promulgated. We anticipate that our re-examination of paint wastes will be completed by the Spring of 1981. The Agency therefore has decided to suspend temporarily the interim final listings of these paint wastes. Paint wastes which exhibit any of the hazardous waste characteristics remain subject to Subtitle C controls.

G. Response to Comments Criticising the Agency's Decision to Defer Temporarily Listings of Waste Streams from the Woven Fabric Dyeing and Finishing Industry

The Agency indicated in the preamble to the July 16, interim final regulations that it was deferring temporarily listing of wastewater treatment sludges from the woven fabric dyeing and finishing industry (45 FR at 47832–47833).

One commenter objected to this decision, arguing that the Agency had improperly relied on EP protocol test data to evaluate the migratory potential of organic contaminants in these wastes. The commenter further stated that there is no documentation for the Agency's determination that chromium (which had been cited as a waste constituent of concern) is used in the manufacturing process in insignificant amounts. The commenter also felt that data submitted by industry sufficiently supports listing of these wastes as hazardous.

The Agency agrees with the commenter that the EP test may not be an appropriate measure of the potential for migration of all organic contaminants. Therefore, in evaluating the potential mobility of organic contaminants in textile waste, the Agency did not nor will it rely on the EP test to determine the potential mobility of possible organic waste constituents. In evaluating all the data currently in its possession, the Agency believes that it does not have sufficient data to assess the potential hazard to human health and the environment that would be presented by these wastes if improperly managed. The Agency, however, is still very concerned with the potential hazards that may be presented by these wastes, and therefore still intends to study further the wastes generated by the textile industry, paying particular attention to the many toxic organic constituents used in the production process such as dyes and pigments derived from benzidine, *o*-dianisidine, *o*-tolidine, and 3,3'-dichlorobenzidine, as well as acrylonitrile, trichlorobenzene, bis-(2-ethyl hexylphthalate), flame retardants and other additives.

With respect to the commenter's concern as to the lack of documentation on the use of chromium compounds in the textiles industry, the Agency not only was provided this information by industry, but possessed corroborating data in its own files. However, the Agency will reevaluate this information when further studying these wastes.

III. Finalization of Appendix VII to Part 261

Appendix VII to Part 261 sets forth the hazardous constituents for which each of the wastes in §§ 261.31 and 261.32 are listed. This appendix has been amended to reflect changes made in the underlying listings, and is being finalized in this revised form.

IV. Economic, Environmental and Regulatory Impacts

In accordance with Executive Order 11821, as amended by Executive Order 11949 and Executive Order 12044, EPA has prepared an Economic Impact Analysis of the hazardous waste program promulgated on May 19, 1980. The net effect of today's action reduces the overall cost, economic impact, and reporting and recording impact of EPA's hazardous waste management regulations, since the overall scope of Subtitle C jurisdiction is being reduced. Since this action will decrease the regulatory impact of the Subtitle C regulatory program, we have not prepared a new Economic Impact Analysis or Regulatory Analysis. The Agency has also voluntarily prepared an Environmental Impact Statement on the program under the National Environmental Policy Act, 42 U.S.C. 4321 et seq.

(Sec. 3001 of the Resource Conservation and Recovery Act)

Dated: January 13, 1981.

Douglas M. Costle,

Administrator.

For the reasons and as set out in the preamble, 40 CFR Part 261 is amended as follows:

1. The authority citation for Part 261 reads as follows:

Authority: Secs. 1006, 2002(a), 3001, and 3002 of the Solid Waste Disposal Act, as amended by the Resource Conservation and Recovery Act of 1976, as amended (42 U.S.C. 6905, 6912, 6921 and 6922).

2. Revise § 261.31 to read as follows:

§ 261.31 Hazardous waste from nonspecific sources.

Industry and EPA hazardous waste No.	Hazardous waste	Hazard code
Generic:		
F001	The following spent halogenated solvents used in degreasing: tetrachloroethylene, trichloroethylene, methylene chloride, 1,1,1-trichloroethane, carbon tetrachloride, and chlorinated fluorocarbons; and sludges from the recovery of these solvents in degreasing operations.	(T)
F002	The following spent halogenated solvents: tetrachloroethylene, methylene chloride, trichloroethylene, 1,1,1-trichloroethane, chlorobenzene, 1,1,2-trichloro-1,2,2-trifluoroethane, ortho-dichlorobenzene, and trichlorofluoromethane; and the still bottoms from the recovery of these solvents.	(T)
F003	The following spent non-halogenated solvents: xylene, acetone, ethyl acetate, ethyl benzene, ethyl ether, methyl isobutyl ketone, n-butyl alcohol, cyclohexanone, and methanol; and the still bottoms from the recovery of these solvents.	(I)
F004	The following spent non-halogenated solvents: cresols and cresylic acid, and nitrobenzene; and the still bottoms from the recovery of these solvents.	(T)

Industry and EPA hazardous waste No.	Hazardous waste	Hazard code
F005	The following spent non-halogenated solvents: toluene, methyl ethyl ketone, carbon disulfide, isobutanol, and pyridine; and the still bottoms from the recovery of these solvents.	(I, T)
F006	Wastewater treatment sludges from electroplating operations except from the following processes: (1) sulfuric acid anodizing of aluminum; (2) tin plating on carbon steel; (3) zinc plating (segregated basis) on carbon steel; (4) aluminum or zinc-aluminum plating on carbon steel; (5) cleaning/stripping associated with tin, zinc and aluminum plating on carbon steel; and (6) chemical etching and milling of aluminum.	(T)
F019	Wastewater treatment sludges from the chemical conversion coating of aluminum	(T)
F007	Spent cyanide plating bath solutions from electroplating operations (except for precious metals electroplating spent cyanide plating bath solutions).	(R, T)
F008	Plating bath sludges from the bottom of plating baths from electroplating operations where cyanides are used in the process (except for precious metals electroplating plating bath sludges).	(R, T)
F009	Spent stripping and cleaning bath solutions from electroplating operations where cyanides are used in the process (except for precious metals electroplating spent stripping and cleaning bath solutions).	(R, T)
F010	Quenching bath sludge from oil baths from metal heat treating operations where cyanides are used in the process (except for precious metals heat-treating quenching bath sludges).	(R, T)
F011	Spent cyanide solutions from salt bath pot cleaning from metal heat treating operations (except for precious metals heat treating spent cyanide solutions from salt bath pot cleaning).	(R, T)
F012	Quenching wastewater treatment sludges from metal heat treating operations where cyanides are used in the process (except for precious metals heat treating quenching wastewater treatment sludges).	(T)
F014	Cyanidation wastewater treatment tailing pond sediment from mineral metals recovery operations	(T)
F015	Spent cyanide bath solutions from mineral metals recovery operations	(R, T)

3. Revise § 261.32 to read as follows:

§ 261.32 Hazardous waste from specific sources.

Industry and EPA hazardous waste No.	Hazardous waste	Hazard code
Wood Preservation:		
K001	Bottom sediment sludge from the treatment of wastewaters from wood preserving processes that use creosote and/or pentachlorophenol	(T)
Inorganic Pigments:		
K002	Wastewater treatment sludge from the production of chrome yellow and orange pigments	(T)
K003	Wastewater treatment sludge from the production of molybdate orange pigments	(T)
K004	Wastewater treatment sludge from the production of zinc yellow pigments	(T)
K005	Wastewater treatment sludge from the production of chrome green pigments	(T)
K006	Wastewater treatment sludge from the production of chrome oxide green pigments (anhydrous and hydrated)	(T)
K007	Wastewater treatment sludge from the production of iron blue pigments	(T)
K008	Oven residue from the production of chrome oxide green pigments	(T)
Organic Chemicals:		
K009	Distillation bottoms from the production of acetaldehyde from ethylene	(T)
K010	Distillation side cuts from the production of acetaldehyde from ethylene	(T)
K011	Bottom stream from the wastewater stripper in the production of acrylonitrile	(R, T)
K013	Bottom stream from the acetonitrile column in the production of acrylonitrile	(R, T)
K014	Bottoms from the acetonitrile purification column in the production of acrylonitrile	(T)
K015	Still bottoms from the distillation of benzyl chloride	(T)
K016	Heavy ends or distillation residues from the production of carbon tetrachloride	(T)
K017	Heavy ends (still bottoms) from the purification column in the production of epichlorohydrin	(T)
K018	Heavy ends from the fractionation column in ethyl chloride production	(T)
K019	Heavy ends from the distillation of ethylene dichloride in ethylene dichloride production	(T)
K020	Heavy ends from the distillation of vinyl chloride in vinyl chloride monomer production	(T)
K021	Aqueous spent antimony catalyst waste from fluoromethanes production	(T)
K022	Distillation bottom tars from the production of phenol/acetone from cumene	(T)
K023	Distillation light ends from the production of phthalic anhydride from naphthalene	(T)
K024	Distillation bottoms from the production of phthalic anhydride from naphthalene	(T)
K093	Distillation light ends from the production of phthalic anhydride from ortho-xylene	(T)
K094	Distillation bottoms from the production of phthalic anhydride from ortho-xylene	(T)
K025	Distillation bottoms from the production of nitrobenzene by the nitration of benzene	(T)
K026	Stripping still tails from the production of methy ethyl pyridines	(T)
K027	Centrifuge and distillation residues from toluene diisocyanate production	(R, T)
K028	Spent catalyst from the hydrochlorinator reactor in the production of 1,1,1-trichloroethane	(T)
K029	Waste from the product steam stripper in the production of 1,1,1-trichloroethane	(T)
K095	Distillation bottoms from the production of 1,1,1-trichloroethane	(T)
K096	Heavy ends from the heavy ends column from the production of 1,1,1-trichloroethane	(T)
K030	Column bottoms or heavy ends from the combined production of trichloroethylene and perchloroethylene	(T)
K083	Distillation bottoms from aniline production	(T)
K103	Process residues from aniline extraction from the production of aniline	(T)
K104	Combined wastewater streams generated from nitrobenzene/aniline production	(T)
K085	Distillation or fractionation column bottoms from the production of chlorobenzenes	(T)
K105	Separated aqueous stream from the reactor product washing step in the production of chlorobenzenes	(T)
Inorganic Chemicals:		
K071	Brine purification muds from the mercury cell process in chlorine production, where separately prepurified brine is not used	(T)
K073	Chlorinated hydrocarbon waste from the purification step of the diaphragm cell process using graphite anodes in chlorine production	(T)
K106	Wastewater treatment sludge from the mercury cell process in chlorine production	(T)
Pesticides:		
K031	By-product salts generated in the production of MSMA and cacodylic acid	(T)
K032	Wastewater treatment sludge from the production of chlordane	(T)
K033	Wastewater and scrub water from the chlorination of cyclopentadiene in the production of chlordane	(T)
K034	Filter solids from the filtration of hexachlorocyclopentadiene in the production of chlordane	(T)
K097	Vacuum stripper discharge from the chlordane chlorinator in the production of chlordane	(T)
K035	Wastewater treatment sludges generated in the production of creosote	(T)
K036	Still bottoms from toluene reclamation distillation in the production of disulfoton	(T)
K037	Wastewater treatment sludges from the production of disulfoton	(T)
K038	Wastewater from the washing and stripping of phorate production	(T)
K039	Filter cake from the filtration of diethylphosphorodithioic acid in the production of phorate	(T)
K040	Wastewater treatment sludge from the production of phorate	(T)

Industry and EPA hazardous waste No.	Hazardous waste	Hazard code
K041	Wastewater treatment sludge from the production of toxaphene	(T)
K098	Untreated process wastewater from the production of toxaphene	(T)
K042	Heavy ends or distillation residues from the distillation of tetrachlorobenzene in the production of 2,4,5-T	(T)
K043	2,6-Dichlorophenol waste from the production of 2,4-D	(T)
K099	Untreated wastewater from the production of 2,4-D	(T)
Explosives:		
K044	Wastewater treatment sludges from the manufacturing and processing of explosives	(R)
K045	Spent carbon from the treatment of wastewater containing explosives	(R)
K046	Wastewater treatment sludges from the manufacturing, formulation and loading of lead-based initiating compounds	(T)
K047	Pink/red water from TNT operations	(R)
Petroleum Refining:		
K048	Dissolved air flotation (DAF) float from the petroleum refining industry	(T)
K049	Slop oil emulsion solids from the petroleum refining industry	(T)
K050	Heat exchanger bundle cleaning sludge from the petroleum refining industry	(T)
K051	API separator sludge from the petroleum refining industry	(T)
K052	Tank bottoms (leaded) from the petroleum refining industry	(T)
Iron and Steel:		
K061	Emission control dust/sludge from the primary production of steel in electric furnaces	(T)
K062	Spent pickle liquor from steel finishing operations	(C, T)
Primary Copper:		
K064	Acid plant blowdown slurry/sludge resulting from the thickening of blowdown slurry from primary copper production	(T)
Primary Lead:		
K065	Surface impoundment solids contained in and dredged from surface impoundments at primary lead smelting facilities	(T)
Primary Zinc:		
K066	Sludge from treatment of process wastewater and/or acid plant blowdown from primary zinc production	(T)
K067	Electrolytic anode slimes/sludges from primary zinc production	(T)
K068	Cadmium plant leachate residue (iron oxide) from primary zinc production	(T)
Secondary Lead:		
K069	Emission control dust/sludge from secondary lead smelting	(T)
K100	Waste leaching solution from acid leaching of emission control dust/sludge from secondary lead smelting	(T)
Veterinary Pharmaceuticals:		
K084	Wastewater treatment sludges generated during the production of veterinary pharmaceuticals from arsenic or organo-arsenic compounds	(T)
K101	Distillation tar residues from the distillation of aniline-based compounds in the production of veterinary pharmaceuticals from arsenic or organo-arsenic compounds.	(T)
K102	Residue from the use of activated carbon for decolorization in the production of veterinary pharmaceuticals from arsenic or organo-arsenic compounds.	(T)
Ink Formulation:		
K086	Solvent washes and sludges, caustic washes and sludges, or water washes and sludges from cleaning tubs and equipment used in the formulation of ink from pigments, driers, soaps, and stabilizers containing chromium and lead.	(T)
Coking:		
K060	Ammonia still lime sludge from coking operations	(T)
K087	Decanter tank tar sluge from coking operations	(T)

Part 261, Appendix [Amended]

4. Revise Appendix VII to Part 261 to read as follows:

Appendix VII—Basis for Listing Hazardous Waste

EPA hazardous waste No.	Hazardous constituents for which listed
F001	Tetrachloroethylene, methylene chloride trichloroethylene, 1,1,1-trichloroethane, carbon tetrachloride, chlorinated fluorocarbons.
F002	Tetrachloroethylene, methylene chloride, trichloroethylene, 1,1,1-trichloroethane, chlorobenzene, 1,1,2-trichloro-1,2,2-trifluoroethane, ortho-dichlorobenzene, trichlorofluoromethane.
F003	N.A.
F004	Cresols and cresylic acid, nitrobenzene.
F005	Toluene, methyl ethyl ketone, carbon disulfide, isobutanol, pyridine.
F006	Cadmium, hexavalent chromium, nickel, cyanide (complexed).
F007	Cyanide (salts).
F008	Cyanide (salts).
F009	Cyanide (salts).
F010	Cyanide (salts).
F011	Cyanide (salts).
F012	Cyanide (complexed).
F014	Cyanide (complexed).
F015	Cyanide (salts).
F019	Hexavalent chromium, cyanide (complexed).
K001	Pentachlorophenol, phenol, 2-chlorophenol, p-chloro-m-cresol, 2,4-dimethylphenyl, 2,4-dinitrophenol, trichlorophenols, tetrachlorophenols, 2,4-dinitrophenol, creosote, chrysene, naphthalene, fluoranthene, benzo(b)fluoranthene, benzo(a)pyrene, indeno(1,2,3-cd)pyrene, benz(a)anthracene, dibenz(a)anthracene, acenaphthalene.
K002	Hexavalent chromium, lead
K003	Hexavalent chromium, lead.
K004	Hexavalent chromium.
K005	Hexavalent chromium, lead.
K006	Hexavalent chromium.
K007	Cyanide (complexed), hexavalent chromium.
K008	Hexavalent chromium.
K009	Chloroform, formaldehyde, methylene chloride, methyl chloride, paraldehyde, formic acid.
K010	Chloroform, formaldehyde, methylene chloride, methyl chloride, paraldehyde, formic acid, chloroacetaldehyde.
K011	Acrylonitrile, acetonitrile, hydrocyanic acid.
K013	Hydrocyanic acid, acrylonitrile, acetonitrile.
K014	Acetonitrile, acrylamide.
K015	Benzyl chloride, chlorobenzene, toluene, benzotrichloride.
K016	Hexachlorobenzene, hexachlorobutadiene, carbon tetrachloride, hexachloroethane, perchloroethylene.
K017	Epichlorohydrin, chloroethers [bis(chloromethyl) ether and bis (2-chloroethyl) ethers], trichloropropane, dichloropropanols.
K018	1,2-dichloroethane, trichloroethylene, hexachlorobutadiene, hexachlorobenzene.
K019	Ethylene dichloride, 1,1,1-trichloroethane, 1,1,2-trichloroethane, tetrachloroethanes (1,1,2,2-tetrachloroethane and 1,1,1,2-tetrachloroethane), trichloroethylene, tetrachloroethylene, carbon tetrachloride, chloroform, vinyl chloride, vinylidene chloride.
K020	Ethylene dichloride, 1,1,1-trichloroethane, 1,1,2-trichloroethane, tetrachloroethanes (1,1,2,2-tetrachloroethane and 1,1,1,2-tetrachloroethane), trichloroethylene, tetrachloroethylene, carbon tetrachloride, chloroform, vinyl chloride, vinylidene chloride.
K021	Antimony, carbon tetrachloride, chloroform.
K022	Phenol, tars (polycyclic aromatic hydrocarbons).
K023	Phthalic anhydride, maleic anhydride.
K024	Phthalic anhydride, 1,4-naphthoquinone.
K025	Meta-dinitrobenzene, 2,4-dinitrotoluene.
K026	Paraldehyde, pyridines, 2-picoline.
K027	Toluene diisocyanate, toluene-2, 4-diamine.
K028	1,1,1--trichloroethane, vinyl chloride.
K029	1,2-dichloroethane, 1,1,1-trichloroethane, vinyl chloride, vinylidene chloride, chloroform.
K030	Hexachlorobenzene, hexachlorobutadiene, hexachloroethane, 1,1,1,2-tetrachloroethane, 1,1,2,2-tetrachloroethane, ethylene dichloride.
K031	Arsenic.
K032	Hexachlorocyclopentadiene.
K033	Hexachlorocyclopentadiene.
K034	Hexachlorocyclopentadiene.
K035	Creosote, chrysene, naphthalene, fluoranthene benzo(b) fluoranthene, benzo(a)pyrene, indeno(1,2,3-cd) pyrene, benzo(a)anthrecene, dibenzo(a)anthracene, acenaphthalene.
K036	Toluene, phosphorodithioic and phosphoro-thioic acid esters.
K037	Toluene, phosphorodithioic and phosphoro-thioic acid esters.
K038	Phorate, formaldehyde, phosphorodithioic and phosphorothioic acid esters.
K039	Phosphorodithioic and phosphorothioic acid esters.
K040	Phorate, formaldehyde, phosphorodithioic and phosphorothioic acid esters.
K041	Toxaphene.
K042	Hexachlorobenzene, ortho-dichlorobenzene.
K043	2,4-dichlorophenol, 2,6-dichlorophenol, 2,4,6-trichlorophenol.
K044	N.A.
K045	N.A.
K046	Lead.

Appendix VII—Basis for Listing Hazardous Waste—Continued

EPA hazardous waste No.	Hazardous constituents for which listed
K047	N.A.
K048	Hexavalent chromium, lead.
K049	Hexavalent chromium, lead.
K050	Hexavalent chromium.
K051	Hexavalent chromium, lead.
K052	Lead.
K060	Cyanide, napthalene, phenolic compounds, arsenic.
K061	Hexavalent chromium, lead, cadmium.
K062	Hexavalent chromium, lead.
K064	Lead, cadmium.
K065	Lead, cadmium.
K066	Lead, cadmium.
K067	Lead, cadmium.
K068	Lead, cadmium.
K069	Hexavalent chromium, lead, cadmium.
K071	Mercury.
K073	Chloroform, carbon tetrachloride, hexachloroethane, trichloroethane, tetrachloroethylene, dichloroethylene, 1,1,2,2-tetrachloroethane.
K083	Aniline, diphenylamine, nitrobenzene, phenylenediamine.
K084	Arsenic.
K085	Benzene, dichlorobenzenes, trichlorobenzenes, tetrachlorobenzenes, pentachlorobenzene, hexachlorobenzene, benzyl chloride.
K086	Lead, hexavalent chromium.
K087	Phenol, naphthalene.
K093	Phthalic anhydride, maleic anhydride.
K094	Phthalic anhydride.
K095	1,1,2-trichloroethane, 1,1,1,2-tetrachloroethane, 1,1,2,2-tetrachloroethane.
K096	1,2-dichloroethane, 1,1,1-trichloroethane, 1,1,2-trichloroethane.
K097	Chlordane, heptachlor.
K098	Toxaphene.
K099	2,4-dichlorophenol, 2,4,6-trichlorophenol.
K100	Hexavalent chromium, lead, cadmium.
K101	Arsenic.
K102	Arsenic.
K103	Aniline, nitrobenzene, phenylenediamine.
K104	Aniline, benzene, diphenylamine, nitrobenzene, phenylenediamine.
K105	Benzene, monochlorobenzene, dichlorobenzenes, 2,4,6-trichlorophenol.
K106	Mercury.

N.A.—Waste is hazardous because it fails the test for the characteristic of ignitability, corrosivity, or reactivity.

[Amdt. No. 165]

Food Stamp Program; Work Registration and Job Search

AGENCY: Food and Nutrition Service, USDA.

ACTION: Final rule.

SUMMARY: The Food Stamp Act of 1977 requires that those food stamp participants who must register for employment must also search for employment on their own. This final rule provides procedures for participants to actively search for employment. Also, this final rule clearly delineates the roles of State welfare agencies, State employment security agencies (SESAs), and food stamp participants alike in order to effect a work registration/job search system that will aid in carrying out the intent of the Act that able-bodied participants seek and find gainful employment. The Department of Agriculture (USDA) proposed regulations on this subject in the **Federal Register** of August 8, 1980 (45 FR 53067). Since the Act requires these rules to be jointly issued with the Department of Labor (DOL), the provisions of this final rule, as well as current work registration provisions, will be published at a later date by the Department of Labor.

EFFECTIVE DATE: January 16, 1981 to be fully implemented no later than the first of the month following 120 days from date of publication.

FOR FURTHER INFORMATION CONTACT: Larry R. Carnes, Chief, Policy and Regulations Section, Program Standards Branch, Program Development Division, Family Nutrition Programs, Food and Nutrition Service, USDA, Washington, D.C. 20250; telephone (202) 447–9075; or Michele Casey, Chief, Food Stamp Unit, Office of Work Incentive Programs, Employment and Training Administration, U.S. Department of Labor, Washington, D.C. 20313; telephone (202) 376–7589. The Final Impact Statement describing the options considered in developing this final rule and the impact of implementing each option is available on request from Mr. Carnes.

SUPPLEMENTARY INFORMATION:

Classification

This final action has been reviewed under USDA procedures established in Secretary's Memorandum 1955 to implement Executive Order 12044, and has been classified not significant.

Introduction

The Food Stamp Act of 1977 (Pub. L. 95–113, 91 Stat. 958, September 29, 1977) authorized the Secretary of Agriculture to require certain members of food stamp households to register for work, inquire about employment, and report the results of that inquiry (Section 6(d)(1) of the Act). On August 8, 1980 the Departments of Agriculture and Labor published in the **Federal Register** a proposed rule on this subject inviting comments from the public (45 FR 53066). The Departments received 166 comment letters. The majority of the commenters were public interest groups, State employment agencies, and State and local welfare agencies. Six FNS Regional Offices, two DOL Regional Offices, one Indian Tribal organization, one Federal Government office, and several individual citizens also commented. This preamble discusses changes made as a result of those comments. Also discussed are provisions which were of major concern to the commenters, but which have not been changed. Therefore, it may be necessary for the reader to refer to the August 8, 1980 proposed rulemaking for a complete understanding of the basis and purpose of this final rule.

Forty-two of the commenters expressed general support for the rule and for the idea of job search (27 individuals, 7 State agencies, 5 local agencies, and 3 public interest groups). Twenty-five commenters opposed the rule as being vague, cumbersome, punitive or insufficiently sensitive to local conditions (8 individuals, 2 State agencies, 2 local agencies, 9 public interest groups, and 4 State employment agencies). Almost all commenters addressed specific provisions in the rulemaking. In revising the proposed regulations to take these commenters into account, the Department has somewhat restructured the final rule.

Work Registration

Persons required to register. The Departments received few comments on § 273.7(a). The comments received indicated some confusion over whether each household member must personally register for work. Current regulations (§ 273.1(f)) provide a means by which another household member or an authorized representative designated by the household can make application for the program on behalf of the household head (or spouse). Since application for the program includes completion of work registration forms, the current provisions governing "authorized representatives" in the application process shall also apply in the case of making registration for work. Paragraphs (a) and (f) of § 273.1 have been amended to clarify that a household member or authorized representative may complete work registration forms for other household members. Clarification is also added that registrants who move from the area and enter a new SESA jurisdiction must reregister. (If the registrant moves but remains within the SESA office jurisdiction, the State agency would notify SESA of the change of address, but deregistration and reregistration would not occur.)

Other commenters requested changes in the procedures of registration, such as requiring only certified participants to register or allowing up to one month for reregistration. The Food Stamp Act does not permit these changes. Work registration, under Section 6(d) of the Act, is a prerequisite of participation.

Exemptions from work registration. Many commenters requested additions to the proposed list of persons exempted from registration in § 273.7(b)—e.g., all applicants for unemployment insurance (UI) benefits, pregnant women, migrants, and persons not likely to be placed in jobs, among others. The list of people exempt from work registration cannot be expanded. Doing this would counter Congressional intent that all able-bodied Food Stamp Program participants, except those specified in the 1977 Act, be subject to work requirements. Therefore, no additional exemptions have been granted.

Substitutions for food stamp work registration. Current rules (§ 273.7(k)) allow State agencies to substitute State or local work requirements imposed on GA households, and those PA households not subject to WIN work requirements, for food stamp work registration in certain instances. If work requirements in these other programs are at least equivalent to the food stamp work requirements, then an additional food stamp work registration is not required. However, if a recipient fails, without good cause, to comply with a work requirement in one of these other programs that is equivalent to a food stamp work requirement, then the recipient's household is disqualified from the Food Stamp Program just as when the food stamp work requirements are not complied with.

Section 273.7(k) has been revised to apply this same approach to participants

enrolled in refugee resettlement programs, such as the Indochinese Refugee Assistance Program (IRAP), which have work registration requirements at least equivalent to Food Stamp Program requirements and which FNS approves as substitutable. These refugee programs provide special services designed to enhance employment opportunities, and are especially suited to merging refugees into the work force and minimizing their need for public assistance.

This provision will avoid the need for duplicate work registration under the refugee program and the Food Stamp Program, thereby increasing efficiency and avoiding unnecessary paperwork and administrative costs. This substitution of IRAP registration for food stamp registration will be allowed only to the extent that the IRAP requirements are comparable to those of the Food Stamp Program. For instance, individuals will not necessarily be exempt from food stamp work registration because they are exempt under IRAP. Different rules concerning age, language, medical or social characteristics may cause a person to be exempt under IRAP. Unless that person were also exempt under current food stamp regulations, food stamp work registration would be required.

Verification of work registration exemptions. Upon the recommendation of numerous commenters, the proposed procedures for verifying exemptions from work registration have been revised. The proposed regulations called for verification of WIN participation through the SESA. It was pointed out that such verification would likely be available from a participant's PA file. When this is the case, a food stamp worker would have either direct access to the file or access to the participant's PA caseworkers. Therefore, the final rule (§ 273.7(b)(1)) has been changed to allow the State agency to verify WIN participation through whatever means the State agency finds most advantageous. Section 273.7(b)(1) has also been revised to clarify the student exemption for the few students remaining eligible for food stamps.

Reporting loss of an exemption for work registration. The proposed rule specified conditions for reporting the loss of a work registration exemption to the food stamp office (§ 273.7(b)(2)). Participating households had to report their changed circumstances (other than loss of an exemption due to a change in age), in person, by mail, by telephone, or via another household member. Household members who reported a change in person had to register when they visited the food stamp office. Others had ten days in which to register. The comments included allowing thirty days to report these changes; allowing the participant to register at recertification; allowing all participants to mail in the work registration forms, and allowing no participants to register by mail.

This provision has been rewritten in the final rule. A participant must report the loss of exemption when it results from any change that must already be reported under current provisions noted in 7 CFR 273.12(a). Examples are loss of employment that produces a change in income of more than $25 a month, or departure of a household member who is the sole dependent child of an otherwise nonexempt household member. These persons must register for work unless they are otherwise exempt. Others who lose their exemptions for reasons not required to be reported between certifications, such as a change in age or physical condition, will register at recertification. This is in keeping with current policy on work registration and does not add to reporting requirements. At the same time, it ensures that those who leave employment will register promptly.

State Agency Responsibilities

Comments on this topic, primarily from State agencies and SESA's, discussed the role of the State agency in developing the State Work Registration Plan and the requirements of the work registration form. Issues regarding the work registration form are discussed below. Issues addressed in the plan are discussed under the State Employment Agency Responsibilities portion of this preamble. With regard to the registration form, § 273.7(c) of the proposed rule did not define "identifiable work registration form." Many definitions were suggested. A common element of the comments was that an identifiable form should require only limited information. Many commenters also asked that food stamp caseworkers annotate the forms to identify participants who would be exempt from job search (See 7 CFR 273.7(f)(1)(ii)(c) of this rulemaking and the discussion of job search categorization in this preamble).

These comments have been taken into account in re-writing paragraph 273.7(c). The final rule stipulates that an identifiable form need include only the following: the household member's name, address, telephone number, Social Security number (or other identifying number), the expiration date of the certification period, an indication of exemption from job search, and any other information that is agreed to by the State agency and SESA.

The commenters varied widely in their suggestions about when the State agency should report information to the SESA. The proposed rule required the State agency to send the work registration form to the SESA within five days of the date of certification. Alternate time limits ranged from same-day forwarding to transmitting the form within ninety days. The longer periods of time were to be used to avoid the processing of participants who were in the program for only a short period of time.

The five day time limit for submitting work registration forms to the SESA has been retained. If the work registration and job search provisions are to be as effective as possible, it is necessary that contact between SESA and the participant take place at the earliest possible time. Therefore, there should be no undue delay in the submission of the form.

The proposed regulation also provided for the State agency to notify the SESA within five days when work registrants become exempt or are no longer certified for food stamps. Two changes have been made in this provision, § 273.7(c)(3). Some commenters pointed out that requiring a report to SESA within five days would result in the de-registration of persons who failed to timely reapply for food stamps, but who evidently do reapply. Such persons would then have to be re-registered for work. This would create added work for State agencies and for SESA, as persons were de-registered and re-registered. Other State agencies commented that the maximum 5-day time limit was administratively impossible for them to meet. One State agency commented that it could not quickly distinguish between those households that had left the Program and those that simply submitted late applications for recertification. The final rule (§ 273.7(c)) has been amended to provide that a reasonable timeframe shall be established through mutual agreement of the State agency and SESA's. In no event, however, shall the time limit established exceed thirty days from the date the change becomes known to the State agency.

Those two time limits, five days to submit work registration forms and up to thirty days to de-register household members, should not be construed as a means of improperly prolonging an individual's status as a work registrant. Persons who become exempt or leave the Program are no longer subject to the work registration requirement. Any delay in submitting the paperwork for

de-registration does not affect an individual's entitlement to an exemption. Permitting the time limit to be as long as thirty days should help to reduce the need for re-registration.

Paragraph 273.7(c)(3) has also been revised to require the State agency to inform the SESA when a household moves from the project area. As discussed under the heading *persons required to register*, moving to a new project area that is in a new SESA jurisdiction requires a new registration. To avoid confusion and duplication, it is necessary that the names of those who move be taken off the SESA's Employment Service Automated Reporting System (ESARS) until they register again. The paragraph also states when a registrant moves (either within the project area or to a new project area) but remains within the same SESA jurisdiction, the State agency shall notify SESA of the registrant's change of address.

State Employment Security Agency (SESA) Responsibilities

The majority of comments received on this portion of the proposed rule (§ 273.7(d)) were from State Employment Security Agencies. The commenters expressed concern regarding whether sufficient funds will be available to enable them to carry out the provisions of these regulations. Some commenters suggested that the regulations be more specific on the way funds will be allocated.

The requirements of these regulations are issued on the assumption that sufficient funds will be provided to the Department of Labor. Specific funding levels are dependent upon appropriations; arrangements are handled through an interagency letter of agreement. The Interagency Agreement will make clear that the responsibility of the Department of Labor to perform work registration and job search activities pursuant to the Food Stamp Act of 1977 does not extend beyond the funds made available for such purposes. Section 273.7(d) has been revised in the final rule to clarify the funding process.

Work Registration Plan. Many commenters addressed the matter of the Work Registration Plan. Questions were raised regarding the contents of the plan; responsibility for writing, reviewing and approving it; where the plan will be available for public inspection and monitoring the State agency's compliance with the plan. Paragraph (d) of § 273.7 has been rewritten to clarify that the SESA will have the primary responsibility for drafting the plan, although the State agency is a full partner in it. Part of the plan will be the agreements between the State agency and SESA at the State and local levels as to how each party will fulfill its respective requirements. This agreement will contain the specific procedures the agencies will use to deal with one another.

Although the Department of Labor's regional office will have primary responsibility for approval of the Plan, the Plan will be submitted to the FNS Regional office for review and comment. The final rule also contains a provision that the State agency and the SESA will review their plan yearly and make any necessary changes. This is seen as an appropriate way to take into account changes in the resources each agency has to meet its requirements. The yearly review will also be a means of correcting any problems that have arisen due to changes in the labor market, conflicting demands on the two agencies, and changes in the Food Stamp Program. In addition, the Plan will be available for public inspection at State agency headquarters.

There were many comments on the interviewing responsibilities and procedures of the SESA. The paragraph dealing with scheduling interviews (§ 273.7(d)(2)(ii)) has been clarified to allow the State agency to schedule a participant's appointment with the SESA, subject to the SESA's approval. The proposed rule called for the SESA to conduct the initial assessment interview within two weeks of the date it receives a participant's work registration form. While we continue to expect that the two week standard will be met in most cases, we do recognize that SESA's may not always be able to meet the standard. SESA's are responsible for providing employment services to a variety of clients, including WIN participants and UI claimants. In the event a local area were hit by a strike, a layoff, or the closing of a major factory, the SESA could not be expected to meet both that emergency and the normal requirements of its regular work. Therefore, the final rule states that the initial assessment interview will normally take place within two weeks.

There was some confusion over what services the SESA would provide to work registrants. The proposed rule listed a number of these services: referrals, counseling, testing and training. In addition, the SESA would provide job market information to registrants. We did not intend to imply that all registrants will receive all these services. Rather, registrants will receive the services which are most appropriate for them, as would any persons seeking the SESA's assistance in finding a job.

Many commenters opposed the automatic entry of registrants into the ESARS (§ 273.7(d)(2)). These commenters wanted certain households excluded from ESARS: registrants who have requested fair hearings, registrants whose nonexempt status is being questioned by SESA, and all registrants until the initial assessment interview is held. These suggestions have not been adopted, since ESARS is the main recordkeeping instrument of work registration. SESA's will be reimbursed by the Department of Labor according to the number of household members registered and the number placed in jobs. ESARS will maintain the records necessary to justify these reimbursements. It is ESARS which will maintain information on all work registrants for purposes of referral to jobs, something separate from the job search provision's assessment interview. Even a household member who requests a fair hearing must be retained in ESARS, since that household member will remain registered and subject to the work registration requirements.

Because the Food Stamp Program has specific standards for providing bilingual services there were many comments received on this subject. The final rules do not apply the food stamp bilingual standards to SESA's. The food stamp standards (7 CFR 272.4) were designed specifically for food stamp offices to provide services to households that are eligible for food stamps. The SESA's, which serve a broader target population and have different service areas, have their own bilingual standards. These standards are based upon the needs of SESA clients, and should provide bilingual services to a large number of food stamp participants in need of these services. In any event, no households will be penalized for their inability to speak English.

Job Search Provisions

The majority of interested parties commenting on this portion of the proposed regulations (§ 273.7(e)) were public interest groups and SESA's (Section 273.3(e) of the proposed rule is redesignated as § 273.7(f) in the final rule.)

Public interest groups mainly recommended exemptions from job search for certain individuals, or groups of individuals. State employment agencies wanted more flexibility in handling job searches. State welfare agencies and State employment agencies alike expressed a general concern of the applicability of the job search regulations when the registrant's

household was certified for short periods of time (one and two months).

Length of Job Search Period, Number of Job Contacts, and Number of Follow-up Interviews. Under the Food Stamp Act of 1977, persons required to register for work must do so every six months. The proposed regulations specified that within the six-month registration period persons considered job-ready would search for employment for 8 weeks.

Two principal issues arose regarding the job search period. Several commenters recommended that the job search period be changed to eight weeks in a year to conform with Public Law 96-258 (the 1980 amendments to the Social Security Act). The provisions of Public Law 96-258 were signed into law only shortly before publication of the proposed rules in the **Federal Register**, and had not been considered in developing the proposed rules. P.L. 96-258 represented the first time Congress has spoken to what it regards as an appropriate duration for job search in a public assistance program.

Public Law 96-258 amended the Social Security Act to provide that persons must search for employment as a condition of eligibility for benefits under the Aid to Families With Dependent Children (AFDC) Program. The length of the job search period for AFDC's Work Incentive Program (WIN) was mandated in that law to be no more than eight weeks in a year.

This law is particularly significant to the development of these final rules because of the requirement in section 6 of the Food Stamp Act of 1977 that food stamp work requirements be patterned on WIN requirements "to the maximum extent practicable."

A second issue that arose concerned how to handle work registrants who either become exempt from work registration for a period of time or leave the Food Stamp Program altogether for a period, but who subsequently become food stamp work registrants again several months later. Persons who have intermittent employment can easily fit into such a category. Under the proposed rules, the SESA would have had to monitor and keep records on the exact portions of the eight week requirement served each time such a person was a work registrant to determine how much of the requirement still existed if the person became a registrant again within the six month period. Given that large numbers of work registrants have short food stamp certification periods, and that a number of these persons may go on and off the program as short-term employment ends and then begins again, the tracking requirements could prove a significant problem for SESAs.

The final rules address both of these issues. The rules specify that registrants shall be subject to the eight week job search requirement each time they are newly added to ESARS (which occurs after losing a work registration exemption or reentering the Food Stamp Program after a period of absence), or each twelve months, whichever occurs first. This modification both reduces paperwork and administrative burdens on SESA's while providing for consistency with the WIN requirements to the degree practicable.

This approach can result in more job search activity for persons who, during the course of a year, leave and then return to the Food Stamp Program due to periods of intermittent employment. Such persons are generally job-ready and may resume employnent more quickly if active job search activity is undertaken. On the other hand, the SESA may determine that an immediate resumption of job search activity may not be productive and can modify the job search requirements accordingly. In order to maintain a maximum level of cost effectiveness and to target SESA resources where they will be most productive, the rules allow the SESA to take into account the amount of job search a registrant has already undertaken during the year, and the likely impact of additional job search activity, in assigning new job search requirements.

Persons who remain continuously on the program (and remain continuously in ESARS) would not be subject to a new eight week job search requirement at the time of their routine semi-annual reregistration. Such persons could, of course, have some or all of their annual eight week job search requirement still to serve at the time of their reregistration.

The final rules also allow the SESA some flexibility in determining how the eight week job search period would be applied. A single continuous eight week period would be simple to administer, but might not always expose participants to the labor market at the time that jobs are most readily available. Accordingly, the final rules allow SESA to divide the eight week job search into two separate blocks of time. For example, if the SESA determined that two one month job search periods spaced six months apart were most appropriate for a particular registrant, the SESA could implement the requirement in this fashion. In addition, the SESA could suspend a job search period and then resume it later if factory closings or other circumstances made it likely that the job search period would be more productive at a subsequent point in time.

Some State employment agencies raised concerns about requiring from 8 to 24 job contacts, as had been proposed. These agencies preferred more flexibility in these areas. Some employment agencies commented that in some small towns and rural areas, there were an insufficient number of employers to justify the number of job contacts. These agencies stated that if employers who list jobs with SESA's were flooded with contacts by large numbers of recipients rather than by a smaller number of applicants carefully screened by SESA, that these employers might cease listing jobs with SESA. If that occurred, fewer recipients would end up being placed and the purpose of the work requirements would be thwarted.

The rules were not intended to subject employers to an unnecessary stream of applicants. At the same time, this problem should generally be limited to rural areas with few employers. These areas also contain only a small portion of the food stamp caseload. The final rules resolve this problem by removing the requirement for a minimum number of contacts, so that the SESA can take into account local employment conditions. The upper limit of 24 contacts has been retained.

Some commenters asked that the number of required contacts be derived through a mathematical formula based on the local unemployment rate. This would be administratively impractical since unemployment rates fluctuate frequently. It would not account for registrants' varying circumstances and would not necessarily guarantee equity. This suggestion has not been adopted.

Job Search Categorization. Comments received on this section of the proposed job search provisions were mainly from public interest groups. One concern was that the proposed language specifying what circumstances would result in a registrant being determined non-job ready (Category II) was too vague. These commenters asked for more precise definitions of "transportation difficulties", "family problems", "intermittent medical problems", etc. The commenters also recommended that lack of education or training, language difficulties, and mental or emotional problems should be added to the general criteria for determining Category II registrants.

With the exception of problems posed when registrants do not speak English, the Departments determined that these additional circumstances should not be added as criteria resulting in a

classification as "non-job ready." These additional circumstances do not warrant an across-the-board (as opposed to a case-by-case) application that necessarily results in a non-job ready classification.

The final rules do, however, include language difficulties among the criteria used to determine a registrant's job search categorization. This does not mean that non-English speaking persons are necessarily placed in Category II or III. There are many areas of the country in which a non-English speaking person can readily communicate with potential employers. This criterion only applies where language actually is a barrier to gaining employment.

Several organizations working with migrant farmworkers, as well as some State employment agencies and a religious organization, recommended including migrant and seasonal farmworkers in Category III. The final rules adopt this recommendation, but only for those households away from their home base and moving with the work stream. Persons traveling hundreds or thousands of miles with the migrant stream are clearly engaging in a job search of their own. A requirement for formal contact and reporting to SESA would burden both these households and SESA offices while not serving to increase chances of employment. Lack of transportation and long distances in the rural areas where instream migrants reside would often, in themselves, qualify these persons for Category III status.

Searching for other work could also adversely affect a migrant family's housing situation, if the family is living in housing provided by a grower during a slow work period.

In order to implement this provision efficiently, the final rules require State agencies to note migrant status on the work registration form before forwarding it to the SESA office. This will avoid placing burdens on both SESA and migrants that would result if migrants were called in for an assessment interview just to classify them in Category III.

The work registration section of the final rules also provides clarification sought by some commenters on when migrants must register for work. The rules specify that migrants who are under contract or similar agreement to begin full-time employment within 30 days are considered exempt from work registration, while migrants who do not have such a work agreement and are not otherwise exempt must register.

Many commenters also sought an exemption for persons where the unemployment rate is above a specified percentage or above the national average. This recommendation has not been accepted. Its adoption could mean exemption of a significant number of persons in high unemployment areas, even though there may be some potential employers in the areas. In addition, this recommendation would be difficult to administer as the formula would have to be adjusted when unemployment rates fluctuated.

Failure to Comply

A number of commenters urged that the noncomplying member, rather than the entire household, be disqualified if the work registration or job search requirements are not complied with. The Food Stamp Act of 1977 is explicit in its disqualification of the entire household and this provision remains in the final rule.

Some public interest organizations commented that a representative from the State employment agency should be required to attend fair hearings involving a SESA determination of noncompliance with work requirements.

The Departments agree that SESA should be represented at fair hearings. However, § 273.7(g)(1) clarifies that such representation normally need not be in person. The regulations permit representation of SESA by phone. The number of food stamp offices in many areas are greater than the number of SESA offices. A requirement for a SESA representative to appear in person could require SESA officials to travel long distances at some expense. There may be unusual circumstances where the hearing official determines at the hearing, after examining the case and pursuant to a request by the household for SESA to be represented in person, that a proper decision cannot be reached unless a SESA representative is present in person at the hearing. In such circumstances, the hearing would be adjourned and rescheduled for a later time at which SESA could be represented in person. The number of cases in which a hearing official finds it necessary to make such a determination should be very small, and there should be no appreciable impact on SESA's from this provision.

The Program's general fair hearing regulations provide recipients the right to confront and cross-examine adverse witnesses. The purpose of the new provision is to maintain this important procedural right where the recipient believes its use to be necessary in the presentation of its case, and the hearing official determines that a factual issue exists regarding matters peculiarly within the knowledge of SESA and that fairness requires that the recipient be given the right to confront the SESA representative face to face. At the same time, the rule will minimize unnecessary expenditures of time and funds where the presence of a SESA representative at the hearing would serve no useful purpose.

Some commenters asked for clarification on whether a household could appeal any action by SESA through the State agency fair hearing process. A number of commenters sought assurance that any action affecting a household's participation in the program could be appealed.

The Food Stamp Act of 1977 and regulations issued to implement it specify that a household is entitled to a fair hearing to appeal any action by the State agency that may adversely affect a household's participation. This is a basic due process right. Therefore, any action by SESA that results in a State agency action which the household wishes to contest may be appealed through a fair hearing.

However, the appeal is taken in response to the State agency action. The fair hearing cannot be requested prior to notification to the State agency by SESA of a registrant's failure to comply, because the State agency has not itself acted at that point. When SESA informs the State agency of a failure to comply and the State agency acts to disqualify the household, the household may request a fair hearing. The decision of the hearing official would be binding on both the State agency and SESA. It could result in a reversal of a SESA determination in some cases (such as a SESA decision to place a registrant in a particular job search category or a SESA determinaton that a registrant had not made the requisite number of job contacts).

Registrants may secure more rapid action through a SESA review of a SESA determination such as a job search classification. This may serve to resolve some disputes quickly and reduce the number of instances in which formal fair hearing are needed.

Determining Good Cause

Commenters generally supported this portion of the proposed rule (§ 273.7(h)), and it remains essentially unchanged. Clarification is added to indicate that inability to speak or write English could in certain instances constitute good cause if such inability was responsible for the noncompliance. (Section 273.7(h) of the proposed rule is redesignated as § 273.7(m) in this final rule.)

Ending Disqualification

The proposed rules (§ 273.7(i)) specified that if a household member

fails to appear at SESA for an assessment or follow-up interview or fails to make the required number of job search contacts, the entire household is disqualified. The proposed rules maintained the disqualification regardless of whether the noncomplying household member subsequently took the action he or she had failed to take before. In other words, no "cure" provision was provided under which the disqualification would end if the noncomplaint member appeared for an interview or completed the required job search contacts.

A number of commenters objected to this policy, arguing that a "cure" provision should be provided, especially since the entire household and not just the noncomplying member is disqualified. However, the Departments believe that lack of a cure provision makes these requirements more effective and gives them more enforcement power.

Therefore, these comments have not been adopted. Households containing a member who fails to comply with the requirements of appearing for an interview or completing the requisite number of job contacts shall be barred from the program for the full duration of the disqualification period unless the noncompliant member becomes exempt from the work requirements during this time.

A number of commenters also suggested modification of procedues governing disqualification of a household containing a member who has voluntarily quit a job. The Commenters felt that if the household member who quit the job subsequently resumed employment during the disqualification period, the disqualification should end at that point. However, the Departments believe that Congress intended that the voluntary quit disqualification period not be subject to being shortened for any reason and have not made this change.

The final rules do clarify what happens if the composition of a disqualified household changes. (Section 273.7(i) of the proposed rule is redesignatd as § 273.7(h) in this final rule.)

Accordingly 7 CFR Parts 272 and 273 are amended as follows:

PART 272—REQUIREMENTS FOR PARTICIPATING STATE AGENCIES

7 CFR Part 272 is being amended as follows:

1. In § 272.1, a new paragraph (26) is added to paragraph (g) in numerical order to read as follows:

§ 272.1 General terms and conditions.

* * * * *

(g) *Implementation.* * * *

* * * * *

(26) *Amendment No. 165.* State welfare agencies and State employment agencies shall implement the provisions of amendment 165 no later than the first of the month following 120 days from publication of amendment 165 in the **Federal Register** as follows:

(i) Both agencies shall begin immediately to develop the work registration plan and agreements discussed in § 273.7(c) and (d) of amendment 165. The plan and agreements must be approved and implemented within the 120 day timeframe established for implementation of all provisions of the final rule.

(ii) The provisions of amendment 165 shall be applied to households at the time of initial application, recertification, or reregistration, beginning no later than the first of the month following 120 days from publication of the amendment.

* * * * *

PART 273—CERTIFICATION OF ELIGIBLE HOUSEHOLDS

7 CFR Part 273 is being amended as follows:

2. In § 273.1(f), paragraph (1)(i) is revised as follows:

§ 273.1 Application processing.

* * * * *

(f) * * *

(1) * * *

(i) *Making application for the program.* When the head of the household or the spouse cannot make application, another household member may apply or an adult nonhousehold member may be designated as the authorized representative for that purpose. The head of the household or the spouse should prepare or review the application whenever possible, even though another household member or the authorized representative will actually be interviewed. In conjunction with these provisions, another household member, or the household's authorized representative, may complete work registration forms for those household members required to register for work. The State agency shall inform the household that the household will be held liable for any overissuance which results from erroneous information given by the authorized representative, except as provided in § 273.11(e)(6). Adults who are non-household members may be designated as authorized representatives for certification purposes only under the following conditions:

(A) The authorized representative has been designated in writing by the head of the household, or the spouse, or another responsible member of the household; and

(B) The authorized representative is an adult who is sufficiently aware of relevant household circumstances.

* * * * *

3. In § 273.7, paragraph (a) is revised to read as follows:

§ 273.7 Work registration requirements.

(a) *Persons required to register.* The State agency shall determine which household members are required to register for employment. Each household member who is not exempt by paragraph (b)(1) of this section shall be registered for employment at the time of application, and once every six months after initial registration, as a condition of eligibility. Registrants who move out of a project area shall reregister at their new location unless the registrant's new address is within the same SESA jurisdiction (in which case the State agency shall notify SESA of the registrant's change in address). Under the provisions of § 273.1(f)(1), the registration form need not be completed by the member required to register.

* * * * *

4. In § 273.7(b), the number "(1)" is added after the word *"registration"*, in the heading, and before the word "The". Paragraphs (b)(1) through (b)(9) are redesignated as paragraphs (b)(1)(i) through (b)(1)(ix), respectively. Newly redesignated paragraphs (b)(1)(iii), (b)(1)(vi), (b)(1)(viii) and (b)(1)(ix) are revised, and a new paragraph (b)(2) is added. The revisions and addition read as follows:

* * * * *

(b) *Exemptions from work registration.*

(1) * * *

(iii) A household member subject to and participating in the work incentive program (WIN) under Title IV of the Social Security Act. If the exemption claimed is questionable, the State agency shall be responsible for verifying the exemption.

* * * * *

(vi) A person is in receipt of unemployment compensation. A person who has applied for, but has not yet begun to receive, unemployment compensation shall also be exempt if that person was required to register for work with the SESA as part of the unemployment compensation application process. If the exemption claimed is questionable, the State

agency shall be responsible for verifying the exemption with the appropriate office of the SESA.

* * * * *

(viii) A person who is employed or self-employed and working a minimum of 30 hours weekly or receiving weekly earnings at least equal to the Federal minimum wage multiplied by 30 hours. This shall include migrant and seasonal farmworkers who are under contract or similar agreement with an employer or crew chief to begin employment within 30 days (although this shall not prevent individuals from seeking additional services from SESA). For work registration purposes, a person residing in certain designated areas of Alaska, as specified in § 274.10(e), who subsistence hunts and/or fishes a minimum of 30 hours weekly shall be considered exempt as self-employed.

(ix) A student enrolled at least half time in any recognized school, training program, or institution of higher education. A student enrolled in a school, training program or institution of higher education shall remain exempt during normal periods of class attendance, vacation and recess, unless the student graduates, is suspended or expelled, drops out, or does not intend to register for the next normal school term (excluding summer school). Persons who are not enrolled at least half time or who experience a break in enrollment status due to graduation, expulsion, or suspension, or who drop out or otherwise do not intend to return to school, shall not be considered students for the purpose of qualifying for this exemption.

(2)(i) Persons losing exemption status due to any change in circumstances that is subject to the reporting requirements of § 273.12 (such as a loss of employment that also results in a loss in income of more than $25 a month, or departure from the household of the sole dependent child for whom an otherwise nonexempt household member was caring) shall register for employment when the change is reported. If the change is reported in person by the household member required to register, the person shall complete the work registration form at the time the change is reported, unless this is not possible, in which case the household member shall return the form to the State agency within 10 days. If the change is reported in person by a household member other than the member required to register, the person reporting the change may complete the form at the time the change is being reported or deliver the form to the member required to register. If the change is reported by phone or through the mail, the State agency shall be responsible for providing the participant with a work registration form. Participants shall be responsible for returning the form to the State agency within 10 calendar days from either the date the form was handed to the household member reporting the change in person, or the date the State agency mailed the form. If the household fails to return the form, the State agency shall issue a notice of adverse action stating that the household is being terminated, but that the household can avoid termination by returning the form.

(ii) Those persons who lose their exemption due to a change in circumstances that is not subject to the reporting requirements of § 273.12 shall register for employment at their household's next recertification.

* * * * *

5. In § 273.7, paragraph (c), Voluntary quit, is redesignated as (n) and a new paragraph (c) is added. Additionally, in the newly designated paragraph (n)(3), the reference to § 273.7(g) is changed to refer to § 273.7(m). The addition reads as follows:

* * * * *

(c) *State agency responsibilities.* (1) The State agency shall participate with the SESA in the development of a State Work Registration Plan and in annually reviewing and updating the plan, as prescribed under paragraph (d) of this section. The Plan/agreements (including annual updates) shall be submitted to the FNS Regional Office for review and comment. The Plan and agreements shall be available for public inspection at the State agency headquarters.

(2) Upon reaching a determination that an applicant or a member of the applicant's household is required to register, the State agency shall explain to the applicant the work registration and job search requirements, his or her rights and responsibilities, and the consequences of failure to comply. The State agency shall provide work registration forms to the applicant for each household member required to register for employment, and permit the applicant to complete the form for those members in accordance with paragraph (a) of this section. Household members are considered to have registered when an identifiable work registration form is submitted to the State agency. An identifiable form shall contain those items necessary for partial entry into the Employment Service Automated Reporting System (ESARS): the applicant's name, address, phone number, social security number (or some other identifying number when a social security number is not available), the expiration date of the household's certification period, an indication of exemption from job search, and any other information agreed upon by the State agency and SESA in their operating agreements. The State agency and SESA must agree before any information in the last category can be specifically required. If the registrant is an instream migrant and seasonal farmworker, or if the State agency knows that the registrant would otherwise be exempt from job search under the provisions of paragraph (f)(1)(ii)(c) of this section, the State agency shall also indicate this on the registration form. The State agency shall not forward work registration forms to SESA until the household is certified, so that SESA will not have to expend unnecessary efforts on applicants who are subsequently denied rather than certified for food stamps. No later than five days after the date of household certification, the State agency shall forward the completed work registration form to the SESA having jurisdiction over the area where the registrant resides.

(3) The State agency shall be responsible for notifying the appropriate SESA of those work registrants who become exempt from the work registration requirement subsequent to registration, are no longer certified for participation in the Program, or move from the area. Such notification shall be provided to the SESA within a reasonable timeframe established and agreed on by both agencies, but not to exceed 30 days from the date the change becomes known to the State agency. The State agency shall also notify SESA promptly of a change in address if the State agency becomes aware that a work registrant has moved from one location to another within the same SESA jurisdiction.

* * * * *

6. In § 273.7, paragraph (d), which was previously reserved for *Job Search*, is used for a new paragraph, *State Employment Security Agency (SESA) responsibilities*, to read as follows:

* * * * *

(d) *State Employment Security Agency (SESA) responsibilities.* (1) *Funding.* Each SESA shall participate in the work registration and job search activities for food stamp registrants to the extent that the funds necessary for proper and efficient administration are made available. Each year the Employment and Training Administration of the Department of Labor and FNS will negotiate funding levels based on available appropriations and on agreed upon projections of

workload levels and the types of services to be provided. These funding levels will be included in an interagency agreement between the U.S. Department of Agriculture and the Department of Labor regarding the administration and operation of the work registration provisions of the Food Stamp Act of 1977.

(2) *Development of Plans/agreements.* The SESA shall have primary responsibility for developing with the State agency a Work Registration Plan. The Plan shall set forth workload projections, staffing, and other information requested by the Departments. It shall also include the specific operational agreements developed by the State agency and the SESA at the State and local levels in meeting the requirements of this section. Such plan and agreements shall be annually reviewed by the State agency and the SESA and updated as appropriate. Additionally, the Plans/agreements (including annual updates) shall be submitted to the DOL Regional Office for review and approval.

(3) *Other responsibilities.* Following receipt of the work registration form from the State agency the SESA shall be responsible for taking the following actions:

(i) Entering the information from the work registration form into the Employment Service Automated Reporting System (ESARS).

(ii) Scheduling work registrants for interview appointments with the exception that those persons who would be exempt from job search, as defined in § 273.7(f)(1)(ii)(c) of this section, shall not be required to report for such an interview. The SESA shall send the registrant a letter informing the registrant of the date of the interview, that appearance for an interview at SESA is a condition of participation in the food stamp program, and how the registrant can contact SESA to reschedule the interview if necessary. Such interview shall normally be scheduled to occur within 2 weeks of the date the work registration form reaches the SESA. If the work registrant fails to appear for the first interview and has not contacted SESA in advance to reschedule the initial interview, the SESA shall send a second letter scheduling another interview to occur within the next two weeks. This letter shall inform the registrant of the date of the rescheduled interview, explain to the registrant that this is SESA's last attempt to schedule the interview and the consequences of failing to appear for the rescheduled interview appointment without good cause, and the procedures for the household to contact the SESA if the rescheduled interview cannot be attended by the work registrant for good cause. SESA and the State agency may establish alternative methods for scheduling or rescheduling interviews (such as allowing the State agency to schedule a participant's appointment with the SESA) so long as the registrant is contacted and afforded an opportunity to reschedule a missed interview and the time frames established above are met.

(iii) Interviewing work registrants for potential job placement. At the time of the interview, the SESA will complete the work registration form if needed information on the work registrant's past experience or skills is missing. The SESA shall attempt to match the work registrant with an available job opening. If the work registrant has specific counselling or testing needs, the services shall be provided in the same manner in which they are provided to all persons seeking employment assistance through the SESA. If the SESA finds that the work registrant has training needs, and knows of services such as CETA or the Job Corps which could meet these needs, the work registrant shall be directed to those services, if available. SESA will provide the work registrant with job market information (such as a list of available job opportunities) and referrals to available employment in the same manner that such services are provided to all persons seeking employment assistance through the SESA.

(iv) If the State agency has required an individual to register for work and the SESA disagrees, the SESA shall request the State agency to reconsider its determination. The State agency's response will be accepted by the SESA as final. If the State agency reverses its decision or does not respond to the request within 30 days, the SESA shall inactivate the registrant from ESARS.

(v) Establishing and maintaining the job search requirements established in § 273.7(f) of this section, administering the job search requirement, and assisting the work registrant in conducting his or her job search.

(vi) Attempting to match work registrants with available job openings at the time of the work registrant's initial and subsequent visits to the SESA and on a continuing basis.

(vii) Reporting to the State agency both on work registrants who fail to comply, without good cause, with either the job search requirements established in § 273.8(f) or the additional work requirements established in § 273.7(e), and on those registrants who obtain employment. The SESA shall notify the State agency within five working days of the date such information becomes known to the SESA.

7. In § 273.7, paragraph (g) is redesignated as paragraph (m); paragraph (f), Failure to comply, is redesignated as paragraph (g) and is revised. A new paragraph (f), *Job Search*, is added. The revision and addition read as follows:

* * * * *

(f) *Job Search.* Persons required to register for work shall be subject to the appropriate job search requirements discussed below. The appropriate requirement shall be established at the time of the initial assessment interview with SESA and at each subsequent interview. If it is known, or the SESA determines from available information that the work registrant would be exempt from actively engaging in a job search based on the criteria established in paragraph (f)(1) (ii)(c) of this section, no assessment interview will be required. Failure to comply with the job search requirements, without good cause, shall result in household disqualification as established in paragraph (g) of this section.

(1) *Job Search Assignment.* (i) During the initial assessment interview, the SESA shall determine the job search category of each work registrant. The SESA shall provide to each registrant written notification regarding his or her job search requirements, procedures to be followed, and the consequences of failure to comply.

(ii) Based on the capabilities and characteristics of the participant, including his or her age, physical condition, ability or inability to speak English, current enrollment in job training programs, and recent employment history, as well as the job market situation in the area, the SESA shall put each work registrant into one of the followng categories:

(A) *Category I—Job ready.* Those work registrants that have no apparent substantial barriers to employment.

(B) *Category II—Non-job ready.* Those work registrants with substantial barriers to employment, e.g., medical, transportation, language, or family problems, that alone or in conjunction with adverse labor market conditions, would make them difficult to place. Transportation problems shall include the unavailability on a regular basis of either private or public transportation or the minimum financial resources necessary to obtain available public transportation. Job attached persons, e.g., those on temporary layoff or those expecting to return to work within 60 day, shall be placed in this category for 60 days from the date of initial

registration. At the end of the 60 days period, job attached persons, if still unemployed, may be recategorized as appropriate.

(C) *Category III—Exempt.* Those work registrants for whom a job search is determined to be impractical, specifically including those individuals residing an unreasonable distance from the appropriate SESA office or potential employers (a distance shall be considered unreasonable if the round trip exceeds 2 hours by reasonably available public or private transportation), and migrant and seasonal farmworkers away from their home base and following the work stream. SESA's must insure that migrant and seasonal farmworkers are offered all services described in Subpart B of 20 CFR Part 653. The SESA determination of exempt status shall be made at the time the work registration form is received from the State agency to preclude the need of such persons to travel to the SESA for an assessment interview, unless it is impossible for the SESA to determine exempt status from the form for a particular registrant. The SESA office should be able to determine from the form those work registrants who are exempt because of distance, as the registrant's address is contained on the form. In addition, State agencies are required to note the status of instream migrant or seasonal farmworkers on the form, and also to indicate on the form whenever the State agency knows that an exemption would apply for any other reason. FNS and the Department of Labor may also jointly establish general exemptions for residents of certain areas or certain groups if, due to geographic or economic characteristics or similar reasons, application of the job search requirements is determined impracticable. For example, exemptions could be provided for residents of all or part of an Indian reservation where there are few job opportunities within reasonable distance, or for an area with an extremely high unemployment rate and a virtual absence of employment opportunities. Requests for such general exemptions may originate with the local or State level SESA or State agency, or from other knowledgeable sources (such as an Indian tribal organization).

(2) *Requirements.* (i) Persons classified as Category I shall be subject to and must comply with the job search requirements discussed below for a period of eight weeks each time they are entered into ESARS (which occurs after losing a work registration exemption or reentering the food stamp program after a period of absence), or each twelve months, whichever occurs sooner. The SESA office may require either that the eight week period be one continuous period, or that it be divided into two separate job search periods that total eight weeks. For example, the SESA office might require a registrant to undertake two four-week job searches, with the second period following six months after the first. The SESA may schedule the job search period(s) at the time(s) it believes the job search would be most effective, taking into account job market conditions and the registrant's skills and experience. SESA may shorten or suspend the job search period if economic or personal circumstances warrant. The SESA could suspend a job search period and then resume it later if factory closings or other circumstances made it likely that the job search period would be more productive at a subsequent time. Registrants who remain continuously on the program are not subject to a new job search requirement at the time of semi-annual routine re-registration. These requirements are effective for 12 months starting with the month of initial registration and remain in effect until a registrant's information is removed from ESARS (inactivated), or the 12 months expire, whichever occurs first. Once a registrant is removed from ESARS, any new entry for that registrant into ESARS constitutes a new 12 month timeframe and a new job search activity of up to 8 weeks. If SESA is aware that a registrant has been entered into ESARS more than once in a 12-month period, the SESA shall consider the registrant's previous job search activity during the 12-month period, and the anticipated impact of additional job search, in determining the registrant's new job search requirements. Registrants subject to the job search requirements must take the following actions:

(A) Contact, as required by SESA, up to twenty-four prospective employers during the eight-week period. If the job search period is shortened, the number of required job contacts shall be reduced on a pro-rata basis, to the maximum extent practicable. A referral by SESA to an employer shall be considered a job contact for Food Stamp Program purposes, provided the registrant presents himself/herself to the employer as described in paragraph (f)(4) of this section.

(B) Twice during the eight-week job search period, report at a prescheduled time to the SESA on the result of all job contacts. If the eight-week job search activity is divided into two separate periods, SESA may require the registrant to report once during each period of job search activity. Job contacts shall be reported in written form as discussed in paragraph (f)(5) of this section. At the time of each subsequent interview, as discussed in paragraph (f)(5), the SESA will be responsible for reviewing its files to determine if current referral possibilities exist.

(ii) Work registrants classified as Category II will not be assigned any specific job search activity. Job attached persons who have not returned to their jobs or otherwise become exempt from the work registration requirement may be called in for reassessment at the end of sixty days. Other persons may be called in by the SESA during the six-month registration period. During subsequent interviews, job files will be reviewed for potential referrals, and the job search categorization of such individuals will be reassessed.

(iii) Work registrants classified as Category III will not be required to fulfill job search requirements until such time as that classification as Category III is no longer applicable and the work registrant is reclassified into an active job search category.

(3) *Follow-up activities.* (i) At the time of the initial assessment interview with the work registrant, the SESA will establish a schedule for two follow-up interviews over the job search period for Category I registrants. SESA may reduce the number of follow-up interviews to one for Category I registrants when the job search period and number of job contacts are reduced. Such schedules shall be documented and provided in written form to the work registrant. Category II registrants will be informed that they may be contacted either within the six-month registration period or in 60 days if they are job attached. If the work registrant fails to report for the follow-up interview for any reason, and has not contacted SESA in advance to reschedule the interview, the SESA shall contact the work registrant by letter to schedule another interview within the next two weeks. The letter shall inform the registrant of the date of the rescheduled interview, explain to the registrant the consequences of failing to appear for the rescheduled interview without good cause, and provide procedures for contacting the SESA if the rescheduled interview cannot be attended by the work registrant for good cause. If the work registrant fails to report to the rescheduled intervjew, without good cause, the State agency shall be notified of the failure within five working days of the date of the failure. Follow-up interviews will normally consist of in-person interviews at the SESA office, but SESA may make alternate arrangements where necessary

(for example, SESA could conduct a follow-up interview by telephone and direct the registrant to mail its report on job contacts to SESA if roads are impassable due to snow).

(ii) At the time of each follow-up interview, the SESA shall review the job contacts made by the work registrant, review job listings for potential referrals, and assist the work registrant in establishing his or her future plans for seeking employment.

(4) *Job contact.* To qualify as a job contact, two conditions must be met. First, the work registrant must present himself or herself to a prospective employer as available for work. Second, the prospective employer must ordinarily employ persons in areas of work that meet the suitability requirements discussed in paragraph (i) of this section and for which the work registrant is reasonably qualified by means of experience, training or ability. Depending upon the position being sought, the job contact requirement may be fulfilled by either a personal visit to the prospective employer or another method of application which is considered by the SESA to be generally accepted practice. The work registrant cannot contact the same employer in subsequent weeks unless the initial contact indicated that vacancies in suitable job positions may soon exist.

(5) *Reporting Job Contacts.* (i) Job contacts shall be reported in writing in a manner prescribed by the SESA. At the time of the initial interview with the SESA, the work registrant shall be told about the manner of reporting. While such reporting will not require the employer's written confirmation of the job contact, the work registrant shall be required to sign the written documentation to attest to its validity. The written report shall be submitted to the SESA at the time of the work registrant's follow-up interviews.

(ii) The work registrant shall be responsible for providing the SESA, upon reasonable request, any additional information regarding job contacts.

(iii) At the end of the job search period, the SESA shall determine if the work registrant has completed the assigned number of job contacts. If the work registrant was assigned a continuous job search period of less than 8 weeks, the registrant shall have two additional weeks to complete any missed contacts. If the work registrant was assigned a single continuous 8-week job search period, no additional time shall be allowed unless the SESA fails to accept, for reasons such as suitability or manner of contact, a job contact(s) reported by the registrant. In such instances, the work registrant shall be allowed an additional two weeks to make-up the disallowed contact(s). Persons failing to complete the required number of job contacts with good cause shall be excused from completion of the job search requirements.

(6) *SESA review.* If a work registrant believes that a SESA determination is improper, review of the determination may be obtained from a designated SESA official not involved in the original determination. For example, if the work registrant believes he or she has been improperly assigned to a job search category or assigned an improper number of job search contacts, or that an action which should have been counted as a contact was not, a review may be obtained. This would also apply to a SESA determination that noncompliance was not for good cause.

(g) *Failure to comply.* If the State agency is informed by the SESA that a household member has refused or failed without good cause to comply with the requirements of this section, the entire household shall be ineligible to participate as provided in this paragraph. Such ineligibility shall continue until either the member complies with the requirement in paragraph (h) of this section, or the member becomes exempt, or for 2 months, whichever occurs earlier. Prior to informing the State agency of the registrant's noncompliance, the SESA shall be responsible for contacting the work registrant to determine if good cause existed, as discussed in paragraph (h) of this section. Within 10 days after the SESA provides notification of the work registrant's failure to comply with the requirements of this section, the State agency shall provide the household with a notice of adverse action, as specified in § 273.13. Such notification shall contain the proposed period of disqualification and shall specify that the household may reapply at the end of the disqualification period. Information shall also be included with the notification on the procedures and requirements contained in paragraph (h) of this section. The disqualification period shall begin with the first month following the expiration of the adverse notice period, unless a fair hearing is requested. Each household has a right to a fair hearing to appeal a denial, reduction, or termination of benefits due to a determination of nonexempt status, or a SESA determination of failure to comply with the work registration and job search requirements of this section. The household can appeal SESA actions such as the job search category assigned, the number of job search contacts required, SESA refusal to accept an action as a job search contact, or SESA refusal to make a finding of good cause, if the household believes that a finding that the household has failed to comply has resulted from improper decisions on these matters. If a fair hearing is scheduled, the State agency shall provide the SESA sufficient advance notice to either permit the attendance of a SESA representative or ensure that a SESA representative will be available for questioning over the phone during the hearing. SESA shall be available to participate in the hearing through one of these means. The availability of a SESA representative for questioning over the phone shall be sufficient, unless the hearing official determines at the hearing (after examining the facts of the case and pursuant to a request for such a ruling by the household) that, taking into account the nature of the issues in dispute and the nature and importance of the evidence to be given by the SESA representative, fairness requires that the household be given an opportunity to confront the SESA representative in person. Such a determination should be necessary in only a very small number of cases. If such a determination is made, the hearing shall be adjourned, and rescheduled for a time at which the SESA representative is able to attend. In such an event, the timeframes prescribed by § 273.15(c) for State agencies to render fair hearing decisions shall be extended for as many days as elapse between the original fair hearing and the rescheduled fair hearing. A household shall be allowed to examine its SESA casefile at a reasonable time before the date of the fair hearing, except for confidential information (which may include test results) that SESA determines should be protected from release. Information not released to a household may not be used by the State agency or SESA at the fair hearing. The results of the State agency fair hearing shall be binding on both the State and SESA.

* * * * *

8. In § 273.7, paragraph (h) is amended by numbering the introductory paragraph as (h)(1), deleting existing paragraph (h)(2), redesignating existing paragraphs (h)(1), (h)(3), (h)(4), (h)(5), and (h)(6) as (h)(1)(i), (h)(1)(ii), (h)(1)(iii), (h)(1)(iv), and (h)(1)(v), respectively. Newly designated paragraphs (h)(1), (h)(1)(iv), and (h)(1)(v) are revised, and new paragraph (h)(2) is added. The revisions and additions read as follows:

* * * * *

(h) *Ending disqualification.* (1) Following the end of the 2-mounth disqualification period for

noncompliance with the work registration and/or job search provisions prescribed under paragraphs (a), (e), or (f) of this section, a household may resume participation in the program if it applies again and is determined eligible. Eligibility may be reestablished during a disqualification period and the household shall (if otherwise eligible) be permitted to resume participation if the member who caused the disqualification becomes exempt from the work requirement, is no longer a member of the household (although any new household containing this member shall be subject to disqualification for the remainder of the disqualification period), or the member complies as follows: * * *

(iv) Refusal to accept a bona fide offer of suitable employment to which referred by the SESA—acceptance of the employment if still available to the participant, or securing other employment which yields earnings per week equivalent to the refused job, or securing employment of at least 30 hours per week with weekly earnings equal to the Federal minimum wage multiplied by 30 hours.

(v) Refusal to continue suitable employment to which referred by the SESA—returning to this employment, if still available to the participant, or securing any other employment which yields earnings per week equivalent to the refused job, or securing any other employment of at least 30 hours per week or securing employment of less than 30 hours per week but with weekly earnings equal to the Federal minimum wage multiplied by 30 hours.

(2) Persons failing to comply initially with the job search requirements, i.e., the assessment interview, follow-up interviews, and job contacts, are provided with a second opportunity to comply by the procedures established in paragraph (f) of this section. If the work registrant fails to comply on the second opportunity, without good cause, and such failure results in disqualification, the disqualification of the household containing the work registrant may be ended only if the person who caused the disqualification becomes exempt from the work registration requirements or is no longer a member of the household (although any new household containing this person shall be subject to disqualification for the remainder of the disqualification period), or at the end of two months, whichever occurs earlier. This means, for example, that if the noncomplaint household member secures full-time employment and thereby becomes exempt from the work registration requirement before the two month disqualification period is over, the disqualification would end at that point.

* * * * *

9. In § 273.7, the heading of paragraph (k) and paragraph (k)(1) are revised to read as follows:

* * * * *

(k) *Registration of certain PA, GA, and refugee households.* (1) State agencies may request approval from FNS to substitute State or local procedures for work registration for PA households not subject to the WIN registration requirements or for GA households. Work requirements imposed on refugees participating in refugee resettlement programs including but not limited to the Indochinese Refugee Assistance Program may also be substituted, with FNS approval. To receive approval, it must be demonstrated that:

(i) The work registration procedures are at least equivalent to food stamp work registration requirements;

(ii) Registrants' activities are monitored so that appropriate sanctions as required by these regulations will be applied. However, if additional work requirements (beyond those required under this section) are placed on household members, a household's food stamp benefits shall not be denied for the failure of a household member to comply with a requirement that exceeds the requirements of this section. For example, if a State rule requires individuals to register for work through age 65, any individual 60 years of age or older who fails to comply shall not be denied food stamp benefits as a result of that failure;

(iii) All household members which are not exempt under paragraph (b)(1) are either registered for work under such Federal, State or local programs as described in this paragraph, or are registered for work as provided in paragraph (a) of this section.

* * * * *

10. In § 273.7, the newly redesignated paragraph (m), *Determining Good Cause*, (formerly paragraph (g)) is revised to read as follows:

* * * * *

(m) *Determining good cause.* The SESA shall be responsible for determining good cause in those instances where the work registrant has failed to comply with the additional work registration and job search requirements of this section. The State agency shall determine good cause in these cases where an applicant has voluntarily quit a job. The SESA and the State agency shall consider the facts and circumstances, including information submitted by the household member involved and the employer. Good cause shall include circumstances beyond the member's control, such as, but not limited to, illness, illness of another household member requiring the presence of the member, a household emergency, or the unavailability of transportation. Problems caused by inability of the work registrant to speak or write English could constitute good cause (for example, a registrant who could not read English would have good cause for not appearing for a SESA interview if the appointment notice was written only in English).

Note.—The reporting and recordkeeping requirements contained in this rule are being submitted for approval by the Office of Management and Budget (OMB) in accordance with the Federal Reports Act of 1942. The reporting and recordkeeping requirements may be subject to revision prior to implementation if the requirements as presently formulated are not approved without change by OMB.

(91 Stat. 958, as amended (7 U.S.C. 2011–2027)).

Part XXI

Department of Health and Human Services

Food and Drug Administration

Proposed Revision of Reclassification Procedures To Determine That Licensed Biological Products Are Safe, Effective, and Not Misbranded Under Prescribed, Recommended, or Suggested Conditions of Use

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

21 CFR Part 601

[Docket No. 80N-0523]

Reclassification Procedures to Determine That Licensed Biological Products are Safe, Effective, and Not Misbranded Under Prescribed, Recommended, or Suggested Conditions of Use; Proposed Revision

AGENCY: Food and Drug Administration.

ACTION: Proposed rule.

SUMMARY: The Food and Drug Administration (FDA) proposes to revise the existing regulations governing the review and classification of biological products and issue new regulations to reclassify Category IIIA biological products as either safe, effective, and not misbranded (Category I), or unsafe, ineffective, or misbranded (Category II). The agency further proposes to permit interim marketing pending completion of clinical studies of any biological product reclassifed into Category II for which there is a compelling medical need and no suitable alternative therapeutic, prophylactic, or diagnostic agent.

DATES: Comments by March 17, 1981; if a final rule based on this proposal is issued, the agency proposes that it become effective on the date of publication.

ADDRESS: Written comments to the Dockets Management Branch (formerly the Hearing Clerk's office) (HFA-305), Food and Drug Administration, Rm. 4-62, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: Albert Rothschild, Bureau of Biologics (HFB-620), Food and Drug Administration, 5600 Fishers Lane, Rockville, MD 20857, 301-443-1306.

SUPPLEMENTARY INFORMATION:

I. General Background

In the **Federal Register** of February 13, 1973 (38 FR 4319), the Commissioner of Food and Drugs promulgated § 601.25 (21 CFR 601.25) which established procedures for the review of all biological products license prior to July, 1972. The propose of the biologics review was to determine whether the licenses for the biological products reviewed met contemporary standards of safety, purity, and potency (the statutory standard for licensing biological products under section 351 of the Public Health Service Act (42 U.S.C. 262)). The biologics review was also intended to determine whether the biological products reviewed are effective for their labeled uses and therefore not misbranded within the meaning of section 502(a) of the Federal Food, Drug, and Cosmetic Act (the act) (21 U.S.C. 352(a)).

Under § 601.25, the Commissioner assigned responsibility for the initial review of all biological products licensed prior to 1972 to six independent advisory review panels consisting of non-FDA qualified experts. Each of the advisory review panels was assigned to review a specific category of biological products. These panel assignments were published in the **Federal Register** of June 19, 1974 (39 FR 21176). The six categories of biological products to which the panels were assigned are: (1) Bacterial vaccines and bacterial antigens with "no U.S. standards of potency," (2) bacterial vaccines and toxoids with "U.S. standards of potency," (3) viral and rickettsial vaccines, (4) allergenic extracts, (5) skin test antigens, and (6) blood and blood derivatives.

Each panel was charged with preparing an advisory report to the commissioner which was to: (1) Evaluate the safety and effectiveness of the biological product; (2) review the labeling of the biological product; and (3) advise the Commissioner on which biological products under review are safe, effective, and not misbranded. See § 601.25(e).

Each advisory review panel report is to include a statement classifying products into one of the three following categories:

1. Category I: Biological products determined by the panel to be safe, effective, and not misbranded. The panel's statement may include any condition relating to active components, labeling, tests required prior to release of batches, product standards, or other conditions necessary or appropriate for their safety and effectiveness. See § 601.25(e)(1).

2. Category II: Biological products determined by the panel to be unsafe, ineffective, or misbranded. See § 601.25(e)(2).

3. Category III: Biological products determined by the panel not to fall within either Category I or II because the available data are insufficient for classification and further testing is therefore required. See § 601.25(e)(3). These products fall into two subcategories:

a. Category IIIA: Biological products recommended for continued licensing, manufacturing, and marketing while questions raised concerning the products are being resolved by further study. This recommendation is based on an assessment of the present evidence of safety and effectiveness of the product and the potential benefits and risks likely to result from the continued use of the product for a limited period of time.

b. Category IIIB: Biological products that a panel recommends should not be marketed and should not be licensed for general use while further studies are undertaken.

After reviewing the conclusions and recommendations of an advisory review panel, FDA publishes a proposed order in the **Federal Register** containing: (1) A statement designating the biological products reviewed into Category I, II, IIIA or IIIB; (2) a statement of the conditions under which Category IIIA biological products can continue to be marketed; and (3) the complete panel report to FDA. See § 601.25(f). After reviewing comments addressed to the proposed order, the agency publishes a final order. See § 601.25(g).

The current status of the biologics review is as follows:

1. The Commissioner's final order on the report of the Panel on Review of Bacterial Vaccines and Bacterial Antigens with "no U.S. Standards of Potency" was published in the Federal **Register** of January 5, 1979 (44 FR 1544) and placed eight products in Category IIIA because of questions about their effectiveness (not safety). Of those eight Category IIIA products, only two are being marketed. The licenses for other products classified in Category IIIA by this panel have been revoked at the manufacturer's request. The testing recommended by the panel is under way for those Category IIIA products being marketed.

2. The Commissioner's final order on the report of the Skin Test Antigens Panel was published in the Federal **Register** of July 10, 1979 (44 FR 40284) and placed five biological products in Category IIIA because of questions about their effectiveness (not safety). Of those five Category IIIA products, only three are being marketed. The licenses for those other products classified in Category IIIA have been revoked at the manufacturers' request. The testing recommended by the panel is under way for those Category IIIA products being marketed.

3. FDA's proposed order on the report of the Panel on Review of Viral and Rickettsial Vaccines was published in the **Federal Register** of April 15, 1980 (45 FR 25652). In that proposal, five products were classified in Category IIIA. Only one of those five products was being marketed when the panel submitted its report and, in any event, all five product

licenses are now revoked at the manufacturers' request. See 21 CFR 601.5(b)(2).

4. The agency has yet to issue proposed orders for the reports of the Panels on Review of Bacterial Vaccines and Toxoids with "U.S. Standards of Potency" and the Review of Blood and Blood Derivatives. These Panels have submitted their final reports to FDA and these reports recommended that a small number of products reviewed by these Panels be placed in Category IIIA. (Copies of these reports have been placed on file with FDA's Dockets Management Branch.) FDA plans to issue proposed orders based on these panel reports prior to issuance of any final rule for reclassification of Category IIIA products.

5. The agency expects that the report of the Panel on Review of Allergenic Extracts will be completed in the near future. Discussions of the Panel at both open and closed sessions, and the Panel minutes indicate that the vast majority of allergenic products—more than 6,000 specific company products (about 1,800 generic products) were reviewed—will be placed in what is now designated as Category IIIA.

II. Health Research Group Petition to Eliminate Category IIIA

On February 19, 1980, Sidney Wolfe, M.D., Director of the Public Citizen Health Research Group (HRG), a consumer research and advocacy organization concerned with the safety and efficacy of drugs, filed a petition under 21 CFR 10.30 requesting that FDA begin procedures to remove from the market all biological products which have not been shown to be effective. (A copy of the HRG petition has been placed on file with FDA's Dockets Management Branch.) The petitioner expressed the opinion that the marketing of such products is inconsistent with two decisions of the United States District Court for the District of Columbia, *American Public Health Association* v. *Veneman*, 349 F. Supp. 1311 (D.D.C. 1972) and *Cutler* v. *Kennedy*, 475 F. Supp. 838 (D.D.C. 1979). Specifically, HRG requested that the Category IIIA designation of the biologics review be eliminated. In addition, HRG contended that biological products are subject to the new drug provisions of the act and that the standard for determining their effectiveness was that prescribed for new drugs, namely, "substantial evidence" consisting of "adequate and well-controlled clinical investigations * * *." 21 U.S.C. 355(e).

The Commissioner responded to the HRG petition on August 19, 1980. (A copy of the Commissioner's response has been placed on file with FDA's Dockets Management Branch.) In his response, the Commissioner stated that "While I do not agree with the petitioner's arguments as to the applicable law, I have nevertheless tentatively decided to amend the regulations governing the biologics review (21 CFR 601.25) and, as appropriate, establish new procedural regulations, in order to eliminate the Category IIIA designation and to proceed to either reaffirm or initiate proceedings to revoke affected licenses."

By letter dated August 26, 1980, HRG contended that the Commissioner's August 19, 1980 response was incomplete because it did not contain an explanation of why the agency had been unable to reach a final decision on the petition. The HRG letter further asserted that biological products are subject to the new drug provisions of the act, 21 U.S.C. 355.

In a response dated September 18, 1980, the Commissioner explained that the agency's August 19, 1980 response was appropriately denominated "tentative" because FDA had not made a final decision as to which procedures would be used to eliminate Category IIIA. (A copy of the Commissioner's September 18, 1980 response has been placed on file with FDA's Dockets Management Branch.)

The Commissioner's response also rejected HRG's legal argument that the new drug provisions of the act apply to biological products. The Commissioner explained that FDA regulations make clear that biological products have never been subject to the new drug provisions of the act. See 21 CFR 310.4 (1980). The Commissioner's response further stated that:

> While the agency has affirmed many times that biological products are drugs within the meaning of the act, they are not subject to the new drug provisions. Rather, biological products have been regulated for nearly 80 years under the Biologics Control Act of 1902, recodified in 1944 as § 351 of the Public Health Service Act, 42 U.S.C. 262. Like new drugs, biological products must be licensed before they can be marketed. However, the critiera for marketing biological products under § 351 of the Public Health Service Act are that they have been shown to be safe, pure, and potent. These differ from the statutory criteria for new drugs under the Federal Food, Drug, and Cosmetic Act. While it is clear that as drugs biological products are misbranded if they are not effective for their labeled uses, and that the applicable statutory requirement for potency in the Public Health Service Act has been interpreted as requiring that a product be effective, the specific statutory criteria governing new drugs, "adequate and well-controlled clinical studies," have not been applied to biological drugs. Compare 21 CFR 600.3(s) with 21 CFR Part 314.

Finally, the response stated that FDA would propose amendments to the biologics review regulations and/or new procedural regulations, as necessary, to eliminate the Category IIIA designation by or before December 31, 1980.

III. The Procedures For Reclassification of Category IIIA Biological Products into Category I or II

The Category IIIA designation reflects a determination that there are doubts about whether the data are sufficient to support an action by the agency to revoke a license and that, based on an assessment of the present evidence of safety and effectiveness of a product, the potential benefits outweigh the potential risks likely to result from continued use of a product for a limited period of time. See § 601.25(f)(3). The Category IIIA designation does not, however, reflect a finding that the biologics license for a product should be withdrawn because it does not meet the statutory standard for approval of a biologics license. To eliminate Category IIIA, the data for each Category IIIA biological product will therefore need to be reviewed again to determine whether the product should be classified in Category I or II. FDA believes that there may be products now classified in Category IIIA that can and should be reclassified into Category II and removed from the marketplace. FDA is therefore proposing to eliminate the Category IIIA designation from § 601.25 (by deleting § 601.25(e)(3), (f)(3) and (h)), and to establish procedures for the review and reclassification of all Category IIIA products. These procedures are analogous to the procedures established in § 601.25 for the 1972 biologics review (described above).

Under the proposed procedures, panels of non-FDA qualified experts would submit to the Commissioner a report containing the panel's conclusions and recommendations as to whether the Category IIIA products reviewed should be placed in Category I or II. The deliberations of the panels would be governed by § 601.25(c) and their final reports by § 601.25(e). (Sections 601.25 (c) and (d) govern the deliberations of the existing panels involved in the 1972 biologics review.)

The procedure for the Commissioner's consideration of panel recommendations and the issuance of proposed and final orders would be the same as the procedures currently followed as part of the biologics review. See § 601.25 (f) and (g).

As part of the reclassification process, the advisory review panels could recommend that a biological product reclassified into Category II should remain on the market pending the completion of further clinical studies, if the panel finds that there is a compelling medical need and no suitable alternative therapeutic, prophylactic, or diagnostic agent for the product. This determination would involve consideration of the seriousness of the condition the product is intended to treat, prevent, or diagnose and the likelihood that, based on existing data, the effectiveness of the product can eventually be established by further testing and new test development. After consideration of the recommendations, FDA would include in the proposed order designating all reclassified Category I or II products, a proposal agreeing or disagreeing with the panel's recommendations. After consideration of comments on the proposal, FDA would publish a final order. Following issuance of a final order, FDA would issue notices of opportunity for hearing proposing to revoke the licenses of those Category II products for which interim marketing is not permitted.

The agency strongly emphasizes that the proposed provision for interim marketing of certain medically necessary Category II biological products is quite different from Category IIIA. Category IIIA is a broad classification that permits the continued marketing of products even though those products might not be a medical necessity or might be intended to treat a condition for which there is suitable alternative therapy. Thus, many, if not all, of the products which have been classified in Category IIIA may well fail to meet the strict criteria the agency is establishing for the continued marketing of a product under Category II pending further testing. Indeed, the agency is hopeful that it will not need to invoke this provision. However, the agency also believes that it is in the best interests of the public to allow interim marketing of biological products that are medically necessary and for which there is no suitable alternative therapy pending the completion of clinical studies.

FDA believes that it has legal authority to permit the continued marketing pending testing of Category II products that meet these criteria. FDA is eliminating Category IIIA for policy reasons and not because of any lack of legal authority. FDA does not believe that the cases relied on by HRG preclude the continued marketing of medically necessary biological products even though those products have been found not to meet the statutory standard for approval of a biologics license.

The first case, *American Public Health Association* v. *Veneman*, 349 F. Supp. 311 (D.D.C. 1972), involved a challenge to FDA's administration of section 505 of the act. The Court held that once FDA concluded that a drug did not meet the threshold statutory standard for approval of a new drug application, FDA was required to begin procedures to remove the product from the market. *Id.* at 1315. The Court based its holding on the following:

> [T]he statute states unequivocably that the Secretary shall * * * withdraw approval of an application with respect to any drug under this section if the Secretary finds * * * that there is a lack of substantial evidence that the drug will have the effect it purports or is represented to have under the conditions of use prescribed * * * 21 U.S.C. 355 * * *.
>
> * * * * *
>
> Thus, it could not be clearer that the Secretary *must* begin the procedures to withdraw a drug when he concludes that there is no substantial evidence of effectiveness.
>
> *Id.* at 1315. (Emphasis in original.)

The action FDA proposes to take in this document is distinguishable from *Veneman* because there is no statutory provision similar to section 505 of the act that applies to biological products. The Public Health Service Act does not mandate the revocation of licenses upon specific conditions, but rather provides that biologics licenses "shall be issued, suspended, and revoked as prescribed by regulations * * *." 42 U.S.C. 262(d). Thus, Congress gave FDA discretion to determine when and in what manner licenses should be revoked.

The regulations governing the revocation of a license provide that the Commissioner shall notify a licensee of its intention to revoke a license if the Commissioner concludes that the licensed product is not safe and effective for all of its intended uses or it is misbranded with respect to any such use. See 21 CFR 601.5(b)(6). The regulations further provide that:

> * * * the notification required in this paragraph shall provide a reasonable period for the licensee to demonstrate or achieve compliance with requirements of this chapter, before proceedings will be instituted for the revocation of a license. * * *
>
> 21 CFR 601.5(b)(6).

Thus, the statutory and regulatory scheme for revocation of biologics licenses is quite different from the statutory scheme for withdrawal of new drug applications and the former scheme authorizes the interim marketing of a biological product pending the completion of testing designed to demonstrate that the product meets statutory standards for licensing.

The *Veneman* case is also distinguishable because it involved drugs marketed under new drug applications approved prior to 1962 when the effectiveness requirement was added to section 505. Those drugs, therefore, had never been administratively determined to meet the "substantial evidence" standard of effectiveness. In marked contrast, all of the biological products subject to the biologics review have been found by FDA to be safe, pure, and potent, the standard set by the Public Health Service Act.

Even if the holding in *Veneman* did apply to the biologics review, it does not prohibit FDA from permitting the continued marketing of a limited category of medically necessary durgs pending the completion of clinical studies. The Court in *Veneman* did not declare the review scheme illegal, but rather prepared a timetable for compliance. The Court's order included the provision that "[a] limited number of drugs may remain on the market pending completion of scientific studies to determine effectiveness where there is a compelling justification of the medical need for the drug." Reported in Kleinfeld, Kaplan, and Weitzman, "Federal Food, Drug, and Cosmetic Act 1969–1974" at 549. Thus, the *Veneman* case fully supports the action FDA proposes to take with respect to biological products for which there is a medical need and no suitable alternative therapy.

In a subsequent judicial decision, *Hoffman-La Roche, Inc.* v. *Weinberger*, 425 F. Supp. 890 (D.D.C. 1975), Judge June Green followed the precedent set in the *Veneman* decision. In *Hoffman-La Roche*, Judge Green invalidated an FDA policy that allowed manufacturers of certain new drugs that had been found to be effective by the National Academy of Sciences/National Research Council to be marketed upon submission, but before approval of a new drug application. Following issuance of this decision, FDA argued that the language of the Court's decision could be construed to prohibit FDA's established use of the new drug procedures to require a holder of a new drug application (NDA) to perform further testing on a drug by initiating proceedings to withdraw approval of the NDA under section 505(e) of the act. FDA contended that the Court's decision might require FDA to effectuate removal from the marketplace of such drugs—even though medically necessary—in advance of completion of studies. In

response to this argument, Judge Green issued a supplementary order (No. 75–0270, filed Nov. 7, 1975) providing that:

> * * * nothing * * * shall prevent defendants, upon making * * * a determination that prescription new drugs in the following categories are medically necessary, from allowing such drugs to continue to be marketed pending completion of scientific studies required for an evaluation of their safety and effectiveness: (a) Drugs covered by approved new drug applications with respect to which new information causes defendants to initiate proceedings to withdraw approvals of applications pursuant to provisions of 21 U.S.C. 355(e) * * *.

(A copy of Judge Green's order has been placed on file with FDA's Dockets Management Branch.)

Judge Green thus allowed FDA to permit continued marketing of medically necessary drugs pending the completion of clinical studies, even though proceedings had been initiated to withdraw approval of the drug's new drug application under section 505(e) of the act.

The second case relied on by HRG, *Cutler* v. *Kennedy*, 475 F. Supp. 838 (D.D.C. 1979), is also inapposite. The *Cutler* case involved FDA's OTC drug review. The Court declared unlawful a procedure by which FDA permitted the continued marketing of drugs requiring further testing (OTC Category III). However, most of the OTC drugs marketed after 1962 had been marketed without a license or an approved NDA. Judge Sirica placed great reliance on the fact that there was no previous administrative determination that the Category III OTC drugs met the applicable statutory standard:

> The Commissioner's OTC regulations formally authorize the continued marketing of Category III drug products in the absence of an administrative determination that those products are today generally recognized by experts as safe and effective. This flies in the face of the statutory scheme.
>
> 475 F. Supp. at 854.

Biological products, on the other hand, have already been administratively determined to have met the statutory criteria of the Public Health Service Act.

Moreover, the Category III OTC drug designation does not involve a finding that those drugs were medically necessary. Category III for OTC drugs is therefore distinguishable from the interim marketing provisions proposed here as well as the provisions involved in the *Veneman* and *Hoffman-La Roche* cases.

FDA believes that it has authority to permit the interim marketing pending the completion of clinical studies of biological products reclassified from Category IIIA to Category II if those products are medically necessary and meet the other proposed criteria.

IV. Proposed Revision of the Regulatory Standard for Reclassification of Category IIIA Products

The regulations governing the 1972 biologics review contained a standard for determining the effectiveness of the products reviewed. See § 601.25(d)(2). FDA proposes to use the same regulatory standard for reclassification of Category IIIA biologics. FDA has, however, in preparing the proposal, reexamined this standard to determine if it can be better defined to facilitate the reclassification process. FDA believes that while the standard is adequate, some explanation of the special problems that must be dealth with in establishing the effectiveness of certain biological products would be helpful. These problems are particularly acute with allergenic extracts and these products will be used in providing examples.

The Public Health Service act requires that to be licensed a biological product must be shown to be safe, pure, and potent (42 U.S.C. 262). Although there is no specific requirement that biological products be shown to be effective, the requirement that biological products be shown to be potent has been interpreted to include the concept of effectiveness. The term "potency" is defined in 21 CFR 600.3(s) to mean the specific ability or capacity of a product, as indicated by appropriate laboratory tests or by adequately controlled clinical data obtained through the administration of the product in the manner intended, to obtain a given result. This definition of potency is reflected in the effectiveness standard for the 1972 biologics review. See 21 CFR 601.25(d)(2). Section 601.25(d)(2) provides that "adequate and well-controlled studies" need not exist where such studies are "not reasonably applicable to the biological product or essential to the validity of the investigation, and that an alternative method of investigation is adequate to substantiate effectiveness."

The agency believes that the evaluation of allergenics presents scientific problems that may often require the acceptance of alternative methods of testing to substantiate effectiveness. The first problem in the testing of allergenics is that in many instances it is difficult to determine the cause of causes of alleregic symptoms (e.g., sneezing or other respiratiory symptoms, blistering or rashes, or indigestion). The substances that can cause allergies are almost without number. Inhaled substances include tree, weed, and grass pollens, house and factory dust, mold spores, and animal danders (skin or hair shed by domestic animals). Allergic symptoms can also be caused by drugs and foods. A person may be allergic to more than one allergen and it may be diffiicult to determine the identity of all the allergens causing that person's allergic symptoms. This can complicate the testing of an allergenic product because, if the persons being tested are allergic to allergens other than the allergen being tested, the allergic symptoms may continue even though the tested allergenic may be effective. These factors can make the classical assessment of effectiveness by an "adequate and well-controlled clinical trial" (as defined in 21 CFR 314.111(a)(5)) impractical or impossible for particular allergenics.

Other factors that can complicate the testing of allergenics are variables such as seasonality, geography, spontaneous remission and the variability of the disease itself. These problems are especially difficult in testing pollen allergies because pollen production is seasonal, and will vary depending on geographic location. The amount of pollen production can also be affected by the amount of sun, rain, and wind. These latter factors can not only affect the total pollen production for a given year, but also the amount of pollen in the air at any particular time. As a result, an allergenic being tested may appear to be effective when in fact the improvement is due to a reduction in the amount of pollen in the air.

Another problem relates to current limitations in the state of the art as applicable to allergenics. In the case of many, perhaps most, of the allergenic extracts it is not possible with existing technology to identify and quantitate all active ingredients.

FDA recognizes that as the state-of-the-art progresses, the licensing standard can become more exacting. However, given the current state-of-the-art of biologics testing, it may not be feasible or practical to require all allergenic products to meet the "adequate and well-controlled studies" standard. Of course, even if such studies are not feasible, allergenics must nevertheless be shown to be safe, pure, and potent by suitable alternative testing methods. The proposed effectiveness standard provides that, for such a method to be acceptable, there must be a previously accepted correlation between data generated by use of the alternative testing method and clinical effectiveness.

FDA believes that there may be suitable alternative testing methods to

establish that many allergencis meet the statutory requirements for continued licensing. The use of such alternative methods as skin reaction tests,[1] RAST (radioallergosorbent technique) tests [2] and other appropriate assays in vitro or in experimental animals may be adequate to substantiate effectiveness where such data can be correlated with clinical effectiveness. The assessment of short ragweed and insect venom allergens provide examples. Each of these allergenics has been proven effective by well-controlled clinical trials and, for each, effectiveness has been shown to correlate with skin reaction test response, RAST activity and potency as determined by various in vitro assays of product ingredients. The advisory review panels used in the reclassification process and FDA will make full use of appropriate data provided by alternative methods in making accurate determinations as to whether the product under review should be placed in Category I or II.

The agency is not now expressing any final conclusions as to which, if any, allergenics or other biological products cannot be feasibly tested in an adequate and well-controlled study and whether the correlation between data derived from alternative methods is sufficient to substantiate a conclusion that the license for any particular product cannot be revoked. These decisions will be made in the course of the reclassification process.

V. Implementation of Reclassification Procedures

If this reclassification proposal is issued in final form, the reclassification process would begin immediately upon issuance of a final rule. The agency recognizes that the 1972 biologics review process will probably not be completed when a final rule is issued. The agency nevertheless plans to reclassify all Category IIIA products upon issuance of a final rule, even if those products are not the subject of final orders. Thus, this proposal provides that products classified in Category IIIA by either advisory review panel reports, proposed orders, or final orders shall, at the time this proposal is final, be immediately submitted to the advisory review panels responsible for reclassification of Category IIIA biological products.

[1] A skin reaction test involves injecting a diluted amount of each individual allergenic under the skin on the patient's arm or back. A small raised red area will develop at the test site in an allergic person.

[2] The RAST test uses samples of a patient's blood to determine the extent of IGE (a class of blood proteins responsible for skin sensitizing anti-bodies) production in response to a particular allergen.

Specifically, the reclassification panels would receive for review all Category IIIA products identified in FDA's (1) final order on Skin Test Antigens and Bacterial Vaccines and Antigens with "no U.S. Standards of Potency"; (2) proposed orders on Blood and Blood Derivatives and bacterial Vaccines and antigens with "U.S. Standards of Potency"; and (3) the final report of the Allergenics Review Panel. (All products classified in Categories I, II, and IIIB in these documents would be reviewed by FDA in accordance with the existing biologics review regulations (§ 601.25).)

This procedure will expedite the reclassification process. Moreover, since the reclassification process will include notice and comment procedures the public will have an adequate opportunity to comment upon the reclassification of those biological products that have not been subject to notice and comment procedures under the existing biologics review procedures.

VI. Conclusion

After consideration of all comments received in response to this notice of proposed rulemaking, the agency will decide whether to publish a final regulation in the Federal Register establishing the reclassification procedures.

The agency has determined pursuant to 21 CFR 25.24(d)(10) (proposed December 11, 1979; 44 FR 71742) that this proposed action is of a type that does not individually or cumulatively have a significant impact on the human environment. Therefore, neither an environmental assessment nor an environmental impact statement is required.

Therefore, under the Federal Food, Drug, and Cosmetic Act (secs. 201, 502, 701, 52 Stat. 1040-1042 as amended, 1050-1051 as amended, 1055-1056 as amended by 70 Stat. 919 and 72 Stat 948 (21 U.S.C. 321, 352, 371)), the Public Health Service Act (sec. 351, 58 Stat. 702 as amended (42 U.S.C. 262)), and the Administrative Procedure Act (secs. 4, 10, 60 Stat. 238 and 243 as amended; 5 U.S.C. 553, 702, 703, 704) and under authority delegated to the Commissioner of Food and Drugs (21 CFR 5.1), it is proposed that Part 601 be amended as follows:

§ 601.25 [Amended]

1. In § 601.25 *Review procedures to determine that licensed biological products are safe, effective, and not misbranded under prescribed, recommended, or suggested conditions of use* by removing paragraphs (e)(3), (f)(3), and (h).

2. By adding a new § 601.26 to read as follows:

§ 601.26 Reclassification procedures to determine that licensed biological products are safe, effective, and not misbranded under prescribed, recommended, or suggested conditions of use.

This regulation establishes procedures for the reclassification of all biological products that have been classified into category IIIA. A Category IIIA biological product is one for which an advisory review panel has recommended under § 601.25(e)(3):[1] the Commissioner has proposed under § 601.25(f)(3):[1] or the Commissioner has finally decided under § 601.25(g) that available data are insufficient to determine whether the product license should be revoked or affirmed and which may be marketed pending the completion of further testing. All of these Category IIIA products will either be reclassified into Category I (safe, effective, and not misbranded) or Category II (unsafe, ineffective, or misbranded) in accordance with the procedures set forth below.

(a) *Advisory review panels.* The Commissioner of Food and Drugs shall appoint advisory review panels and use existing advisory review panels to (1) evaluate the safety and effectiveness of all Category IIIA biological products; (2) to review the labeling of such products; and (3) to advise the Commissioner on which Category IIIA biological products are safe, effective, and not misbranded. These advisory review panels will be established in accordance with procedures set forth in § 601.25(a).

(b) *Deliberations of advisory review panels.* The deliberations of advisory review panels will be conducted in accordance with § 601.25(d).

(c) *Advisory review panel report to the Commissioner.* An advisory review panel shall submit to the Commissioner of Food and Drugs a report containing the panel's conclusions and recommendations with respect to the biological products falling within the category of products reviewed by the panel. The panel report shall include:

(1) A statement designating the biological products in the category under review in accordance with either § 601.25(e)(1) or § 601.25(e)(2).

(2) A statement identifying those biological products designated under § 601.25(e)(2) that the panel recommends should remain on the market pending completion of further testing because there is a compelling medical need and no suitable alternative therapeutic.

[1] Although § 601.25(e)(3) and (f)(3) is proposed for deletion, it is referenced here and will be the text of a footnote to the final regulation.

prophylactic, or diagnostic agent for the product. In making this recommendation, the panel shall take into account the seriousness of the condition intended to be treated, prevented, or diagnosed by the product and the likelihood that, based upon existing data, the effectiveness of the product can eventually be established by further testing and new test development. The report shall also recommend with as much specificity as possible the type of further testing and new test development required and the time period within which it might reasonably be concluded.

(d) *Proposed order.* After reviewing the conclusions and recommendations of the advisory review panels, the Commissioner of Food and Drugs shall publish in the **Federal Register** a proposed order containing statements designating each biological product reviewed in accordance with § 601.25(e)(1) and (2) and the full panel report or reports in accordance with § 601.25(f)(2). The proposed order shall further identify those biological products designated under § 601.26(c)(2) that the Commissioner proposes should be permitted to remain on the market pending completion of further testing because there is a compelling medical need and no suitable alternative therapeutic, prophylactic, or diagnostic agent for the product. In making this proposal, the Commissioner shall take into account the seriousness of the condition to be treated, prevented, or diagnosed by the product and the likelihood that, based upon existing data, the effectiveness of the product can eventually be established by further testing and new test development.

(e) *Final order.* After reviewing the comments on the proposed order, the Commissioner of Food and Drugs shall publish in the **Federal Register** a final order on the matters covered in the proposed order. Where the Commissioner determines that there is a compelling medical need and no suitable alternative therapeutic, prophylactic, or diagnostic agent for any biological product, the final order shall provide that the product license for that biological product will not be revoked, but will remain in effect on an interim basis while the data necessary to support its continued marketing are being obtained for evaluation by the Food and Drug Administration. The tests necessary to resolve whatever effectiveness questions exist shall be described.

(f) *Additional studies and labeling.* (1) Within 30 days following publication of the final order, each licensee for a biological product designated as requiring further study to justify continued marketing on an interim basis, pursuant to paragraph (e) of this section, shall satisfy the Commissioner of Food and Drugs in writing that studies adequate and appropriate to resolve the questions raised about the product have been undertaken, or the Federal Government may undertake the studies. The Commissioner may extend this 30-day period if necessary, either to review and act on proposed protocols or upon indication from the licensee that the studies will commence at a specified reasonable time. If no such commitment is made, or adequate and appropriate studies are not undertaken, the product license or licenses shall be revoked.

(2) A progress report shall be filed on the studies every January 1 and July 1 until completion. If the progress report is inadequate or if the Commissioner of Food and Drugs concludes that the studies are not being pursued promptly and diligently, or if interim results indicate the product is not a medical necessity, the product license or licenses shall be revoked.

(3) Promptly upon completion of the studies undertaken on the product, the Commissioner of Food and Drugs will review all available data and will either retain or revoke the product license or licenses involved. In making this review the Commissioner may again consult the advisory review panel which prepared the report on the product, or other advisory committees, professional organizations, or experts. The Commissioner shall take such action by notice published in the **Federal Register.**

(4) Labeling and promotional material for those biological products requiring additional studies shall bear a box statement in the following format:

> Based on a review by the Panel on Review of (*insert name of appropriate panel*) and other information, the Food and Drug Administration has directed that further investigation be conducted before this product is determined to be fully effective for labeled indication(s).

(5) A written informed consent shall be obtained from participants in any additional studies required under paragraph (f)(1) of this section, explaining the nature of the product and the investigation. The explanation shall consist of such disclosure and be made so that intelligent and informed consent be given and that a clear opportunity to refuse is presented.

(g) *Court appeal.* The final order(s) published pursuant to paragraph (e) of this section, constitute final agency action from which appeal lies to the courts. The Food and Drug Administration will request consolidation of all appeals in a single court. Upon court appeal, the Commissioner of Food and Drugs may, at the Commissioner's discretion, stay the effective date for part or all of the final order or notice, pending appeal and final court adjudication.

Interested persons may, on or before March 17, 1981, submit to the Dockets Management Branch (formerly the Hearing Clerk's office) (HFA–305), Food and Drug Administration, Rm. 4–62, 5600 Fishers Lane, Rockville, MD 20857, written comments regarding this proposal. Four copies of any comments shall be submitted, except that individual may submit single copies of comments. The comments are to be identified with the docket number found in brackets in the heading of this document. Received comments may be seen in the office above between 9 a.m. and 4 p.m., Monday through Friday.

In accordance with Executive Order 12044, as amended by Executive Order 12221, the economic effects of this proposal have been carefully analyzed, and it has been determined that the proposed rulemaking does not involve major economic consequences as defined by that order.

In addition, the agency has determined that the proposed rule should only affect a small number of small entities as defined by the Regulatory Flexibility Act (Pub. L. 96–354). FDA therefore certifies that the proposed rule, if promulgated, will not have a significant economic impact on a substantial number of small entities.

Dated: January 13, 1981.

Jere E. Goyan,

Commissioner of Food and Drugs.

Food and Nutrition Service

Food Stamp Program, 1980 Amendments to the Food Stamp Act of 1977; Policy Interpretations, Miscellaneous Technical Amendments

DEPARTMENT OF AGRICULTURE

Food and Nutrition Service

7 CFR Parts 271, 272, 273, 274, 278

[Amdt. No. 189]

Food Stamp Program; 1980 Amendments to the Food Stamp Act of 1977; Policy Interpretations, Miscellaneous Technical Amendments

AGENCY: Food and Nutrition Service, USDA.

ACTION: Proposed rulemaking.

SUMMARY: This rulemaking contains proposed regulations for the Food Stamp Program to implement certain segments of the 1980 amendments to the Food Stamp Act of 1977. Included in this rulemaking are provisions of the Act on: certifying residents of Shelters for battered women and children; referring illegal aliens to the Immigration and Naturalization Service (INS); prorating income and counting resources of ineligible aliens; making fraud determination hearings optional; and eliminating depreciation as a cost of doing business for self-employed households.

In addition to these newly enacted provisions, a series of policy interpretations and technical amendments are incorporated in this rulemaking to clarify provisions published on October 17, 1978 and also to certain provisions of the 1977 Act. A number of the policy interpretations were included in a proposed rulemaking published on December 26, 1979. These interpretations and technical amendments cover numerous aspects of program operations, including bilingual services, certification processing standards, treatment of income, and claims processing requirements.

DATES: Comments must be received by March 17, 1981 to be assured of consideration.

ADDRESS: Comments should be submitted to Alberta C. Frost, Deputy Administrator for Family Nutrition Programs, Food and Nutrition Service, USDA, Washington, D.C. 20250. All written comments will be available for public inspection at the office of the Food and Nutrition Service during regular business hours (8:30 a.m. to 5:00 p.m. Monday through Friday) at Room 678, 500 12th Street, SW., Washington, D.C.

FOR FURTHER INFORMATION CONTACT: Larry R. Carnes, Chief, Policy and Regulations Section, Program Standards Branch, Program Development Division, Family Nutrition Programs, Food and Nutrition Service, United States Department of Agriculture, Washington, D.C. 20250; 202-447-9075. A draft Impact Analysis describing the options considered in developing this proposed rule is available from the above address.

SUPPLEMENTARY INFORMATION: This proposed action has been reviewed under USDA procedures established in Secretary's Memorandum 1955 to implement Executive Order 12044 and has been classified "not significant."

The proposal has been reviewed with regard to the requirements of Pub. L. 96-354, 94 Stat. 1164, Sept. 19, 1980. Robert Greenstein, Administrator of the Food and Nutrition Service, has certified that the proposal does not have a significant economic impact on a substantial number of small entities. The proposal would implement several provisions of Pub. L. 96-249 which affect food stamp certification issues. Examples are requirements to count the income and resources of ineligible aliens, to report persons determined to be illegal aliens to the Immigration and Naturalization Service, and to allow persons residing in battered women's shelters to receive food stamps. These provisions do not represent major changes in certification policy and should have no significant impact on State or county agency workload, staffing needs, or paperwork. The provisions allowing persons residing in battered women's shelters to receive food stamps affects only persons in those shelters which provide meals to their residents. There are not a large number of such shelters, and a substantial number of small entities will not be affected by this provision. Where this is in effect, it will be to increase the shelter's resources. The proposed rule also contains provisions to clarify the application of a provision of the Food Stamp Act of 1977 that General Assistance payments may not be reduced because of food stamps. This will not have an impact on a substantial number of small governments as the Department is aware of few if any jurisdictions not already in compliance.

1980 AMENDMENTS TO THE FOOD STAMP ACT

Pub. L. 96-249, 958 Stat. 357, May 26, 1980, was enacted to amend the Food Stamp Act of 1977, Pub. L. 95-113, Stat. 958, Sept. 28, 1977, as previously amended. This rulemaking contains proposed regulations implementing the following statutory provisions. Section 101 of the new law exempts shelters or battered women and children from being considered institutions, and therefore permitting shelter residents who are otherwise eligible to receive food stamps. Section 118 of the 1980 amendments to the Food Stamp Act requires the reporting of illegal aliens to the Immigration and Naturalization Service (INS) as well as prorating the income and counting the resources of ineligible aliens who would otherwise be household members. This would eliminate windfall benefits to a household in which an ineligible alien was the major breadwinner. Section 109 makes the administrative fraud hearing system a State option in order to avoid duplicative systems if States have an effective fraud prosecution system. Additionally, the Conference Committee Report (H.R. Rep. No. 96-957, 96th Cong., 2nd Sess. (1980) p. 29) indicates that the Committee intended that the Secretary no longer permit depreciation as an allowable cost of doing business for self-employed households. This rulemaking proposes such a change in program policy.

Regulations implementing other provisions of the 1980 Amendments were published on July 8, 1980 (45 FR 46036). These included restrictions on participation of students, changes in the resources provisions and exclusion of certain energy assistance payments as income and resources. Regulations for certain remaining provisions including new requirements on the use of photo identification, 74% federal financial participation in the development and design of new computer systems, enhanced ability for State agencies and FNS to match wage and unemployment compensation data, and provisions for monthly reporting and retrospective accounting and enhanced funding are currently in preparation. Still other provisions of the law have an effective date of October 1, 1981 and will not be published until 1981. These concern changes in the current medical, shelter, and dependent care deductions.

Shelters for Battered Women and Children

Section 5(a) of the 1977 Food Stamp Act limits participation in the program to individuals and groups of individuals constituting households and section 3(i) of the Act excludes from the definition of household those people who reside in an institution. However, section 3(i) also exempts federally subsidized housing for the elderly and drug addict/alcoholic treatment centers from being considered as institutions. Certain group living arrangements certified under Section 1616(e) of the Social Security Act, as amended, were additionally exempted by the 1979 Amendments to the Food Stamp Act of 1977 (Pub. L. 96-58, 93 Stat. 389, August 14, 1979; 45 FR 23288, April 4, 1980.) The 1980 Amendments

expanded this exemption to include shelters for battered women and children which provide meals to their residents. Residents of such shelters that do not provide meals may already participate (if otherwise eligible) because under program regulations at 7 CFR 273.1(e) they are not considered as residing in institutions. This position was published in the Federal Register on December 26, 1979. (Policy Interpretation Response Number 80-5, 44 FR 76329.)

This proposed rulemaking incorporates the statutory change with regard to shelters for battered women and their children and introduces some special procedures for handling shelter residents. Those shelter residents who were previously eligible under existing regulations will continue to be eligible. However, in order for residents to be eligible for these special procedures the facility would need to meet the proposed definition of a shelter for battered women and children. This definition is discussed in detail below. Upon final publication of this rule, shelters with residents that are already permitted to participate should contact their local project area office to determine if they qualify under the new definition. This would ensure prompt certification of eligible residents under the proposed procedures.

Statutorily Required Changes

Shelters for battered women differ from other exempt institutions. Treatment centers and group living arrangements have authorizing agencies within the State, are limited to those facilities listed in certain statutes, and have residents that are incapacitated in some way. None of these characteristics necessarily apply to a shelter for battered women or its residents. Therefore, the Department believes that some criteria need to be proposed to identify such shelters.

The statute and the legislative history specify that a shelter must be public or private non-profit and exclusively serve battered women and their children Pub. L. 96-249, § 101; H.R. Rep. No. 96-788, 96th Cong., 2nd Sess. (1980), pp. 148-149. The Department proposes that if a facility, such as a YWCA, serves persons other than battered women and their children, it must have a wing or rooms set aside on a long-term basis to shelter such women. This definition would be added to § 271.2. The Department also proposes that the shelter must be a residence, not just a meeting place or meal provider in order to prevent participation by facilities that are not truly providing shelter; i.e., a temporary place to live, not just a place to eat (§ 271.2 and § 273.1). The Department proposes to allow shelters serving meals to accept coupons from its residents in payment, to set forth FNS' responsibility for authorizing shelters to redeem coupons through wholesalers and to prohibit shelters from redeeming coupons directly through banks (§ 274.10 and 278.2). This last prohibition is currently applicable to all such exempt institutions and is designed to prevent the potential abuse of redeeming coupons for cash and using the cash for purposes other than food purchases.

Before a shelter can be considered exempt under the proposed rule, the State agency or FNS must determine if it meets the regulatory definition. As mentioned earlier, shelters with residents already participating in the Food Stamp Program would contact the State agency for such a determination so that their residents are certified without delay under the special procedures. In addition, shelters that are not currently participating, either because they are classified as institutions or for any other reason, should contact their local project area offices for a determination. Shelters wishing to redeem coupons through wholesalers may contact FNS for authorization; this authorization will substitute for a State agency determination. Local project areas would maintain a list of shelters meeting the definition. This will expedite certification of eligible residents. FNS will provide the names of any shelters it authorizes to redeem coupons through wholesalers to the State agency for dissemination to the local project areas.

Special Procedures Regarding Household Concept and Application Processing

The Conference Report on the 1980 Amendments states that residents of shelters for battered women and children shall "* * * be considered for eligibility as individual (parent/child) units, rather than considered as part of a single household consisting of all shelter residents." See H.R. Rep. No. 96-957, 96th Cong., 2nd Sess., p. 11. The Department is proposing that residents of shelters be certified as individual units only (§ 273.1). A single woman or a woman with her children would be considered an individual household rather than part of a group of shelter residents. This limitation is made both in response to the legislative history and to ease the transition of residents from the shelter and is similar to the requirement that residents of drug addict/alcoholic treatment centers always apply as one-person households. Because of the short stay of most residents, it would be advantageous to certify the women/children as a household to make on-going certification simpler. Upon leaving the shelter the women/children would have ready access to their coupon allotment rather than trying to divide the allotment between the household members remaining in the shelter and those leaving. Residents of those shelters not meeting the definition may continue to be certified based on their own household composition, like any other applicants.

Under these regulations, the shelter would *not* automatically act as the authorized representative, unlike the procedures regarding addict/alcoholic treatment centers and some group living arrangements. The woman would apply on behalf of herself and her children, although she may name an authorized representative. She may, of course, name a shelter staff member or volunteer. This procedure may be necessary in cases where a woman and her children would be endangered if they left the shelter. In such cases a woman may be unable to appoint an authorized representative of her choice. State agencies should provide such persons with a home visit or telephone interview. The availability of these alternatives should be explained to the shelter and to shelter residents who inquire about applying.

Resources

The Department proposes that any resources jointly held with the former houshold be considered inaccessible to the shelter residents in order to be responsive to the special needs of women who have been abused and to expedite handling of the cases (§ 273.8). Because a woman could be in danger if she tried to obtain her share, for example, of a bank account and because of the high probability of her resources being under the statutory maximum of $1,500, the Department believes this provision is both needed and not very costly. This proposal should also speed-up processing of the case as the inaccessibility of the resources would not have to be determined.

Expedited Service

The Department is proposing that the shorter 2 or 3 day standard for expedited service already provided for in the regulations apply to shelter residents eligible for expedited service (§ 273.2). This is in lieu of the 7 day service standard which is used for residents of treatment centers and group living arrangements. Relatively few shelters routinely provide meals as do treatment centers or group living arrangements. Shelter residents apply as

individuals. Therefore, the extended limit in effect for other facilities would not adequately meet the food needs of shelter residents.

Residents Who Have Left Households Already Participating in the Program

It is possible that some applicants from the battered women's shelters may come from an already participating food stamp household. Normal program rules would deny program benefits to these women until a notice of adverse action could be issued to their former household and its allotment reduced. However, such a procedure would work severe hardship on these women and children. Therefore, the Department is proposing that the State agency determine the eligibility of women and children in shelters based on their current circumstances as a separate household, regardless of their past participation (§ 273.11). Applicants from battered women's shelters would be allowed to participate as a separate household while the former household continues to participate under notice of adverse action or notice of expiration procedures. This approach cannot be used more than once a month. Under the proposed rules a battered woman leaves a participating houshold and enters a shelter, returns to the household, and then returns to a shelter for the second time in one month, she may receive food stamps for only one of the times she enters a shelter.

These special provisions would apply only to residents of battered women's shelters, and not to other persons who leave a participating household during a certification period. The Department believes the legislation contemplates special rules for only residents of these shelters.

Also, the provision would apply only to women leaving the household containing the person who had abused them (§ 273.13). This limits use of the provision to those shelter residents who were actually forced to leave their prior place of residence. The Department is interested in public comment on this provision and in any alternative methods of meeting the needs of battered women without imposing complex administrative rules on state agencies. The Department is also interested in how State agencies are currently handling separated households when the participating members apply on their own behalf.

Coupon Use and Redemption

Provisions on coupons use and redemption which are found in § 274.10(d), and § 278.1(g) would be revised and a new paragraph would be added to § 278.2(g) as conforming amendments. As mentioned earlier, residents of shelters would be permitted to use their coupons to purchase meals prepared for them at the shelter. In addition, a provision outlining FNS' responsibility for authorizing the shelters to redeem coupons through wholesalers would be added. This authorization would be based on the proposed definition of an exempt shelter and, where granted by FNS, would relieve the State from any responsibilities for determining if the shelter met the proposed definition. Shelters, like other exempt institutions, would be prohibited from redeeming coupons directly through banks.

A significant issue which may affect many residents of these shelters concerns the use of coupons. Residents often stay in a shelter for a short period of time. As a result, the shelter might provide them with only a few meals. Current regulations forbid retailers to accept loose $5 or $10 coupons without book covers (§ 278.2(c)). Without a special provision, shelters would be forced to accept loose $5 or $10 coupons which could not be redeemed at retailers, or to redeem them at wholesalers. Unlike other, larger facilities, shelters may be small operations for which volume purchases from wholesalers are impractical. One way to address this problem would be to issue a specialy annotated identification card to each shelter wishing to redeem loose $5 of $10 coupons, and to allow these shelters to redeem the loose coupons at retailers. However, authorizing only shelters for battered women and their children to redeem loose coupons could be seen as discriminating against group living arrangements and drug treatment centers. Most of the residents of these other facilities remain for longer periods of time, but some may be short-term residents. Short-term residents of any facility would benefit from the use of loose $5 and $10 coupons. Further, current FNS publications instruct retailers to refuse loose coupons, and there is a likelihood that retailers will become confused over who may and may not redeem loose coupons. This confusion could weaken the ban on redeeming loose coupons at retailers, a ban designed to discourage the use of illegally obtained coupons. In addition, a change in policy, even for a small group of participants, will require a costly change in FNS's publications and instructions. A final problem concerns the issuance of ID cards. Whether this special card would be an annotated State card or a specially issued FNS card, the card would be an additional complication.

A second option is not to prescribe any special procedures, and not to permit shelters to redeem loose coupons.

The Department recognizes the costs, benefits and problems associated with each of these two approaches and especially seeks comments on how to resolve this isssue.

Whether this special card would be an annotated State card or a specially issued FNS card, the card would be an additional complication.

A second option is not to prescribe any special procedures, and not to permit shelters to redeem loose coupons.

The Department recognizes the costs, benefits and problems associated with each of these two approaches and especially seeks comments on how to resolve this issue.

A few minor revisions are also proposed to the drug addict/alcoholic treatment center and group living arrangement provisions in § 273.11(e) and (f). The changes in the provisions on treatment centers and group living arrangements require the facility to return to the local food stamp office any unused coupons not provided to departing residents. This resolves the problem, discovered in audits, that some facilities retain coupons of departing residents. Additional clarifications are made in the area of handling allotments for departing residents.

Reporting Illegal Aliens

Section 118 of Pub. L. 96–249 requires that the State agency report to the Immigration and Naturalization Service (INS) when certification personnel determine that any household member is ineligible to receive food stamps because that member is present in the U.S. in violation of the Immigration and Nationality Act.

In the Food Stamp Certification Handbook that was in effect under the 1964 Food Stamp Act, FNS (FS). 732–1, certification workers were instructed in section 2208.9 that: "If in the application process, it becomes known to the State agency that an alien has entered or remained in the United States illegally and INS (Immigration and Naturalization Service) has not declined deportation action, such alien shall be promptly brought to the attention of the FNS district office for appropriate action." See H.R. Rep. No. 95–464, 95th Cong., 1st Sess., 1977, p. 586. This provision was incorporated into State handbooks and was administered nationwide.

This provision of the FNS Handbook was subsequently withdrawn as a result of a consent decree in *Rodriquez*

v.Texas Department of Public Welfare, Civ. Action No. A-76-CA-57 (W.D. Tex. Mar. 31, 1976), a legal challenge based on the privacy restrictions of section 10(e) of the 1964 Food Stamp Act, Pub. L. 88-525, 78 Stat. 706 (1964), as amended. Moreover, section 11(e)(8) of the Food Stamp Act of 1977 specifies that a State agency shall not use or disclose information obtained from applicant households to persons not directly connected with the administration or enforcement of the Food Stamp Act or its regulations. Current regulations prohibit contact with INS by certification personnel without written consent by the household (§ 273.2(f)(1)(ii)(d)).

Section 118 of the 1980 amendments amends Section 11(e) to require "* * * the immediate reporting to the Immigration and Naturalization Service by the State agency of a determination by personnel responsible for the certification or recertification of households that any member of a household is ineligible to receive food stamps because that member is present in the United States in violation of the Immigration and Nationality Act."

The House Committee report contains considerable discussion (H.R. Rep. No. 96-788, pp. 134-138) of how the Department should implement this provision. The Committee Report specifies that an alien should be reported to INS only when food stamp certification workers are able to make a determination that the alien is present in the United States in violation of immigration laws. The Committee Report states that "[b]ecause under the laws of this country, an illegal alien or person 'known to be an alien in the United States in violation of the Immigration and Nationality Act' * * * is only known to have such status when he or she is found in this country and is known to have a final order of deportation outstanding against him or her * * * the Department may wish to incorporate this restriction in its regulations governing the reporting requirement." H.R. Rep. No. 96-788, pp. 135-136. This approach is also suggested by the legislation history to Pub. L. 96-68, the Departments of State, Justice and related agencies Appropriations Act of 1980, which calls for defining persons known to be illegal aliens as persons concerning whom "a final judicial determination as to the client's residency status has been reached" 125 Cong. Rec. § 12.286 (1980).

The Department found the question of how to determine that an applicant or participant is an illegal alien a particularly difficult issue. These proposed regulations attempt to set forth clearly defined statements to govern reporting requirements to INS. The Department is very interested in comment on this issue.

Under these proposals, State agencies would report to INS when, (1) the applicant or the household's authorized representative admits that illegal aliens are present in the household; (2) forged INS documents are presented by the household during the application or recertification process; or (3) a formal order of deportation is presented by the household during the application or recertification process.

These standards do not permit reporting to INS based on mere suspicion or prejudice. Firm evidence that a household member is illegally in the U.S. would be required. This procedure should facilitate the work of INS by not subjecting it to large numbers of reports that are not substantiated by evidence.

While the House Committee report suggested, but did not require, limiting the definition of an illegal alien to a person with a formal order of deportation, the Report is unequivocal in its directive that food stamp offices must "rely solely upon facts appearing on the face of the household's application form or revealed by the household in the course of the requisite interview * * * directly demonstrating illegal status * * * The worker could not undertake to investigate the matter on his own or attempt to ferret out further facts by going beyond the ordinary verification process * * *", H.R. Rep. No. 96-788, p. 136.

The Committee Report further notes that in 1977 Congress eliminated food stamp eligibility for many legal aliens, and that a determination that an alien is ineligible for food stamps does not constitute a determination that the alien is here illegally. The Report directs that food stamp personnel not devote time (beyond what is necessary in the certification process to determine eligibility) to the work that properly falls within the sphere of INS, H.R. Rep. No. 96-788, pp. 135-136.

Only if, in the process of determining food stamp eligibility, it is determined that an alien applicant is here illegally, may a food stamp office report the alien to INS. The Committee Report makes clear that a person who declines to be evaluated for food stamp eligibility as an ineligible alien shall not be reported to INS, H.R. Rep. No. 96-788, p. 136. The caseworker would be under no obligation to require the alien to clarify his status (although inquiry might need to be made into the alien's income and resources if other household members remain eligible for food stamps). The proposed regulations reflect these directives.

The Department is also proposing a review beyond the caseworker level of the determination of illegal alien status prior to any referral to INS. Such a review would be aimed at ensuring uniformity of practice and at ensuring that sufficient evidence exists to warrant a determination that an alien's status is illegal. The review would be conducted by a State agency official not involved in the initial determination. The Department strongly encourages State agencies to designate particular persons to review referrals to INS, and to provide training to such persons in the applicable immigration laws.

In view of the complexity of the immigration laws, the House Committee Report directs the Department to exclude worker failure to report illegal aliens as an error from measurement by the quailty control system. This is reflected in these proposed regulations.

The Department would like to note that other than in those situations where a determination has been made that an applicant or participant is an illegal alien, current regulations prohibiting a State agency from contacting INS without the household's written consent would remain unchanged.

Income and Resources of Ineligible Aliens

Section 115 of Pub. L. 96-249 provides that the income (less a prorata share) and resources of an ineligible alien are to be attributed to the Food Stamp household of which such a person would otherwise be a member.

The Food Stamp Act of 1977 excluded the income and resources of ineligible aliens from consideration in determining the eligibility and allotment entitlement of a household. Under this provision it was possible for substantial amounts of actually available to a household income and resources to be disregarded in determining household eligibility.

In an effort to target benefits more narrowly, Section 115 of the 1980 Amendments mandate the Department to treat the income and resources of ineligible aliens in the same manner as that of disqualified individuals. Resources which would otherwise be considered household resources were they not owned by an ineligible alien shall continue to be counted as household resources in the same manner as if they were owned by a household member. For example, a vehicle used to produce earned income which is owned by an ineligible alien who would otherwise be a household member

would continue to be treated as an exempt vehicle.

Optional Fraud Hearings

Section 109 of Pub. L. 96–249 amends Section 6(b) of the 1977 Act to make an administrative fraud hearing system a State option. The State agency is, therefore, given the option of pursuing suspected fraud through an administrative fraud hearing and/or through prosecution. However, the legislative history states that the Secretary may require a State agency to establish a fraud hearing system if the State is not promptly, actively, and seriously handling civil or criminal fraud cases. (H.R. Rep. No. 96–788, 115).

The Department proposes that § 273.16(d) be revised to require that a State have an administrative fraud hearing system *unless* the State agency has an agreement with the State's Attorney and/or county prosecutors to ensure the prompt prosecution of appropriate cases. This agreement would list any criteria set by the prosecutor for accepting cases for prosecution at either level and delineate how and under what circumstances cases would be accepted and possibly prosecuted.

The State agency would demonstrate to FNS that such an agreement is in effect prior to deleting the administrative fraud hearing system. The agreement is in lieu of setting specific standards, such as a rate of successful prosecutions that must equal or exceed that of successful fraud hearings or some other quantifiable measure. The Department does not have sufficient data to establish such quantifiable measures and in many instances the success rate on prosecutions is out of the State agency's control. A strict tolerance level of this sort would also be too inflexible and would not allow States enough of an opportunity to attempt to use prosecutions rather than a fraud hearing system.

Self-Employment—Depreciation as a cost of doing business

The regulations implementing the 1977 Act included a provision allowing depreciation as a cost of doing business for self-employed households (§ 273.11(a)(4)(ii)). This was done in compliance with the legislative history, H.R. Rep. No. 95–464, p. 25. The Conference Report accompanying the 1980 Amendments suggests that the Secretary delete depreciation, H.R. Rep. No. 96–957, p. 29. Allowing such costs when determining net self-employment income results in an exemption of mounts not constituting "actual costs" to the household; households are, in a sense, given a deduction in advance for the cost of capital goods which is otherwise not allowed. Appropriate changes are being proposed to § 273.11(a) to correspond to the Conference Report's suggestion.

Policy Interpretations

Introduction

Since the publication on October 17, 1978 of final rules implementing the Food Stamp Act of 1977, the Food and Nutrition Service has responded to over 600 policy inquiries with the intention of interpreting, clarifying and correcting the regulations for the benefit of food stamp clients and their representatives, State agencies and FNS regional offices.

On December 28, 1979, FNS published a notice in the **Federal Register** (44 FR 76329) proposing a system for informing State agencies and the interested public of changes and clarifications in the Food Stamp Program policy. This Policy Interpretation Response System (PIRS) describes four categories into which policy inquiries will be placed: inquiries requiring rulemaking, inquiries requiring interpretation of the Food Stamp Act or regulations of major importance and general applicability, inquiries requiring interpretations or clarification of the Act or regulations of a limited nature or applying to a particular group of households, and inquiries which can be answered by direct reference to the Act or regulations which apply to one household. Previously, inquiries in all four categories were answered by policy memoranda. Under PIRS, the first type of inquiry will be answered by rulemaking, the second type by notice in the **Federal Register**, the third type by policy memoranda indexed in the *FNS Index of Records* and the fourth type by FNS regional offices' responses. This proposed rulemaking responds to inquiries in the first category, those which require changes in the food stamp regulations. The rules discussed in this section have come about as a result of implementing the PIRS.

Earned Income Received by Non-Household Members

Section 273.11(d) of the current regulations discusses how State agencies should handle deductible expenses incurred jointly by household members and non-members. The regulations instruct State agencies to prorate such expenses as rent billed to a non-member but paid partly by the household, if the State agency cannot otherwise assign a portion of the expense to the household. The regulations do not currently discuss how to handle earned income which is received in the same way.

As an example, a household of six members may have four who work with an ineligibile alien, but the ineligible alien receives the wages of all five workers. The Department proposes that the State agency attempt to determine the amount earned by each household member and non-member and count the household's portion as earned income (§ 273.11(d)). The employer might be able to verify the amount earned by each person, even though for everyone's convenience, only one paycheck was issued. If the State agency could not assign the earned income in this way, the agency would prorate the income to all of those intended to receive it, to the five workers in the example, and count the wages of the household members. In this case, that State agency would count four-fifths of the wages as earned income to the household.

The Department proposes to prorate only earned income under this provision. Unearned income received in this way, such as an assistance grant received by a household for the benefit of a third party, is already covered by the regulations (§ 273.9). Therefore, it is anticipated this provision will affect only a few households. Mainly, these will be households working in agriculture, such as migrants who are frequently paid as groups rather than as individuals. This proposed procedure of prorating earned income is similar to the procedure used in determining the income of a household with a disqualified member, as required by § 273.11(c). The Department believes that this already existing procedure is the fairest way to determine household income under these questionable circumstances.

Verification of Citizenship

The regulations which detail the Program's verificafion requirements currently allow participation for two months by household members with questionable but unverified citizenship (§ 273.2(p)(2)(ii)(B)). Elsewhere the regulations allow some households to move from one project area to another and have their certification continued (§ 273.19(a)). Currently the regulations do not provide a mechanism for the two project areas to keep tract of the two-month period of conditional participation so as to terminate the certification of such persons after the second month. The Department proposes to require the old project area to enter information about this aspect of a case on form FNS–286, Certification of Transfer of Household Benefits. The Department further proposes that the

new project area terminate the certification of such individuals if verification has not been provided to either project area by the end of the second month (§ 273.19(b) and (c)). Prior to issuing a notice of adverse action or terminating the certification of such persons, the new project area shall attempt to contact the old project area to confirm that verification had not been provided in the intervening time. These proposals do not impose any additional burden on participants and simply shift the burden of adjusting the certification from the old project area to the new one.

Technical Amendments

Introduction

On October 17, 1978 (43 FR 47846), the Department published final rules that implemented major portions of the Food Stamp Act of 1977. Based on an ongoing analysis of program operations and rules, several sections of these regulations were identified as needing modifications to correct oversights or to clarify the October 17 rulemaking. Therefore, on June 8, 1979, the Department published Miscellaneous and Technical Amendments to address these problems. The State agencies have now worked with this new program for approximately two years and other items have been identified as requiring clarification. This segment of the rulemaking addresses these items.

Drug and Alcoholic Treatment Centers on Reservations

Section 3(i) of the 1977 Food Stamp Act, as amended, and its implementing regulations (7 CFR 273.1), prohibit anyone residing in an institution from constituting a household for Program purposes. However, residents of drug or alcoholic treatment programs as defined by section 3(f) of the Act and § 271.2 of the regulations are not to be considered residents of institutions.

The current statutory and regulatory definitions of such treatment programs require them to be certified by the State agency responsible for their administration. This certification is performed pursuant to Pub. L. 91–616, "Comprehensive Alcohol Abuse and Alcoholism Prevention, Treatment and Rehabilitation Act of 1970" and Pub. L. 92–255, "Drug Abuse Office and Treatment of 1972." FNS has learned that many Indian reservation based alcoholism programs are not State certified due to various agreements between the States and the reservations within their jurisdictions. However, the Indian alcoholism programs were originally Pub. L. 91–616 programs, funded by the National Institute on Alcohol Abuse and Alcoholism (NIAAA). Pursuant to a Memorandum of Agreement Between NIAAA and the Indian Health Service (IHS), dated May 5, 1978 and Modified October 29, 1980, these programs are being transferred from NIAAA to IHS as they meet specified transfer criteria. Many Indian alcoholism programs cannot seek State certification, yet there appears to be no reason why these programs should be denied the participation granted to non-reservation based programs. Therefore, the Department is proposing amendments to § 271.2, *Definitions* and paragraphs § 278.1(e), *Approval of Retail Stores and Wholesale Food Concerns*. These amendments would permit the Program participation of sponsored NIAAA or IHS sponsored reservation based treatment center residents.

Availability of Program Regulations, State Plans and Procedures

Current regulations mandate that all State agencies and local project areas maintain Federal regulations and procedures, State plans and the State handbook (manual) for public inspection (§ 272.1(d)). The Department is proposing that the regulations be altered: (1) To delete the requirement that State plans and Federal procedures be maintained in each project area, and (2) to delete the requirement that Federal regulations be maintained in project areas other than large project areas as defined under the Performance Reporting System regulations (project areas with caseloads of more than 7,000). State handbooks would still be required to be available in all local offices. Federal regulations and procedures and State plans would be available at State agency headquarters.

The Department is proposing this change for several reasons. Many local project area offices fail to receive on a timely basis copies of State plan amendments and Federal regulations and procedures, and may have incomplete records of these materials. Secondly, even if a food stamp office has copies of all the Federal regulations and procedures, it is often difficult, because of heavy workloads, for a staff person to find the time to update this material continually. Due to the large number of changes in Federal regulations, a significant amount of work is involved in ensuring that a complete compilation of current regulations, with all the latest changes inserted in the proper places, exists at all points in time. As a result, many project areas are not maintaining current regulations, and regulations that are not current are of limited use. Moreover, local offices generally do not use Federal regulations in making eligibility determinations. They use the state handbook.

State handbooks are generally the policy vehicle for the administration of the Program at the local level. Each is approved, then periodically reviewed by FNS. The Department is committed to having current and accurate State handbooks available in each certification office. If, through the Federal monitoring system handbooks are found to be misinterpreting or lacking regulations pertinents to a State, corrective action is required. State handbooks may also contain more precise information concerning application processing issues for specific locations than do the Federal regulations. The Federal regulations may contain options not relevant to a particular State.

If a client or member of the public requests access to Federal guidelines at a local office, the handbook should contain the informaiton desired if it is accurate and up-to-date. Generally, the Federal regulations and procedures are used less to resolve such questions at the local level than are State handbooks. Nevertheless, the Department recognizes that Federal regulations can serve some important functions at the local level. They may be of use in preparing for fair hearings or implementing fair hearing decisions. In addition, it is possible for a State handbook to be out of date or imprecise in an area that may be illuminated by examining the Federal regulations.

The Department has sought to balance these concerns by requiring that the regulations be available at a minimum of one location in large project areas, but not in other project areas. Large project areas have far more clients and hence more use of the regulations is likely. They also have more staff. In all cases, the regulations would be available at the State level, and the State handbook would be available in all local offices.

The Department is especially interested in comment on this matter.

Bilingual Services

The bilingual services standards set forth in § 272.4(c), require that the initial determination of bilingual needs be accomplished within specified time frames so that the bilingual provisions would be implemented uniformly and concurrently nationwide.

The Department is aware tha the need for bilingual services may change over time. The Department proposes to amend § 272.4(c)(6) to make clear that the need to meet the bilingual services

standards in an ongoing obligation. The Department proposes to require a redetermination of bilingual needs at least once every ten years, or more frequently if either the State agency or FNS determine that such a redetermination is needed in a particular area due to significant demographic changes.

Processing Requirements

It has been suggested that since the Food Distribution Program's regulations state "the household, if it wishes, may be accompanied to the interview by anyone of its choice" (§ 283.7(a) (50, 44 FR 35936, June 19, 1979)), a sentence should be added to the food stamp regulations stating the same. The proposed rule would adopt this suggested by amending § 273.2(e)(i).

30 Day Standard Processing

Section 11(e)(3) of the Food Stamp Act of 1977 mandates that State agencies provide eligible households an opportunity to participate as soon as possible but no later than 30 days after an application is filed. There were several inquiries about whether the day of application was included in the 30-day standard. The Department's intent was not to include the day of application in the standard. In other words, the first day of the 30-day standard for counting purposes is the day after the day of application. The Department is proposing language to emphasize this point.

Alien Status

The Department is proposing a technical amendment to the provisions setting forth requirements for alien eligibility for the Program (§ 273.2(f)(i)(ii) and 273.4(a)). This revision is required to conform with recent changes in the Immigration and Nationality Act (INA) required by the passage of the Refugee Act of 1980 (Pub. L. 96–212, 94 Stat. 108, 3/17/80). This revision to the INA provides permanent provisions in the law for the admission of aliens, defines refugee and formalizes the practice of admitting refugees under the asylum provisions.

Treatment of Payments to Yakima and Mescalero Apache Tribes

Pub. L. 95–433, 92 Stat. 1047, Oct. 10, 1978, provides for payments to members of the Yakima and Mescalero Apache Indians by the Indian Claims Commission. Under the language of the law both Federal and federally-assisted programs are prohibited from considering the judgment funds as income or resources when determining eligibility for assistance. These funds include those paid on a per capita basis and those held in trust for the benefit of tribal members. The Department proposes to revise § 273.8(e) "Exclusion from resources" and § 273.9(e) "Income exclusions" to reflect this provision.

Treatment of Social Security Payments to Eligible Students

Section 5(d) of the Food Stamp Act provides that scholarships, grants, veterans' educational benefits and similar educational benefit payments shall be excluded from income to the extent the payment is used for tuition and mandatory fees at institutions of higher education. The Department proposes to amend the regulations to clarify that the portion of social security educational benefits used for tutition and mandatory fees is excluded under this provision (§ 273.9(c)). These benefits are provided under certain conditions to students between 18 and 22 years old whose parents are deceased, or are disabled or retired and receiving Social Security benefits. There is no solid basis for distinguishing Social Security educational benefits from other sorts of student support payments (such as veterans educational benefits). The portion of these benefits going for tuition and fees should be excluded.

Since recently published food stamp regulations (45 FR 46040, July 8, 1980) eliminated many students from the Program, the number of eligible students affected by this clarification concerning Social Security benefits is expected to be small.

Treatment of VISTA Payments

Since the publication of the October 17, 1978 regulations several changes have taken place in Title I, II and III of the Volunteer Service Act of 1973, as amended. The Department proposes to update the references made to these programs in 7 CFR 273.9. Title II programs ACE and SCORE are being deleted since they are no longer being administered by ACTION, but instead were transferred to the Small Business Administration. Title II now includes RSVP, Foster Grandparents, Older American Community Service Program and Senior Companion Program. Currently Title I programs include VISTA, University Year for Action, National Student Volunteer Programs and a new program added in 1980, Urban Crime Prevention Program. Specifying the programs in question will benefit eligibility staff and facilitate accurate eligibility decisions.

In addition, a clarification is being added concerning the treatment of the subsistence allowance received from Title I programs (VISTA) as earned income. Regulations now state that persons who were not receiving public assistance or food stamps at the time they joined VISTA or other Title I programs will have these volunteer payments included as earned income. Wording is being added clarifying that since these payments are treated as earned income, they are subject to the 20% earned income deduction. This represents no change from current policy. These payments are provided in return for work performed in the VISTA or other Title I programs, and persons receiving these payments may incur work related expenses in performing this work.

Change Reporting Requirements for Applicants and Households with Fluctuating Income

The Department proposes to amend § 273.2 which requires households to report certain changes in income. Currently, households are required to report changes in the source of income, and gross monthly income changes exceeding $25, with some exceptions. While this requirement causes no confusion in those instances when income either does not change or changes in a way which can be anticipated, the requirement is not clear with regard to fluctuating income. This lack of clarity has led to disputes over the utility of quality control reviews in measuring the accuracy of food stamp benefit level determinations. The confusion about what households have been required to report may best be explained by an example. If a household reported weekly earnings of $100, $150, $175 and $200 in a month, it might be certified as having $670 in total gross income (the four weekly amounts averaged to $156 and converted by 4.3 to $670 monthly gross income). What should such a household report? One interpretation is that the household must report changes of more than $25 in the gross income, any amount above $695 or below $645. Another interpretation would have required reporting changes of more than $25 above the highest paycheck (more than $225) or below the lowest (under $75). A third interpretation would require the household to report any change of more than $25 measured from the average itself. In the example, that would mean reporting the receipt of only a paycheck greater than $181 or less than $131.

The above three interpretations were considered, along with three others: To give households with fluctuating income certification periods of no more than three months; to require State agencies to anticipate specific monthly income amounts; or to require households with

fluctuating incomes to report changes in the sources of income, the rate at which the income is received (the hourly or piece-work rates, for example), and changes between part-time and full-time employment status—instead of reporting changes in monthly income exceeding $25 a month.

The Department proposes to require households with fluctuating income to report changes in the source of income, in the wage rate of fluctuating income, and changes between full-time and part-time employment—rather than changes of more than $25 a month. (There would be no change in the reporting requirements for households who do not have fluctuating incomes). By requiring clients to report these changes, the Department and State agencies would be as responsive to changes as they would be under the first option. Error in household income is more frequently attributable to changes in basic employment status, such as converting from unemployed to employed or part-time to full-time employment, than fluctuations in the hours worked. The reporting of permanent changes in wage rates would allow State agencies to more exactly match benefits to household's long term circumstances.

Under this option, households would report permanent changes in their circumstances. These would be changes that would affect future month's income and not sporadic changes, which are of little value in an anticipatory system. Because only permanent changes would be reported and, the handling of changes by clients and caseworkers would be less susceptible to error. A client would have a better understanding of what would have to be reported; a caseworker would know the exact effect of the change on future income. To simplify reporting, over-time work, if done frequently, would already have been projected in the average. Finally, this option would allow clients to comply without keeping track of a particular income figure (figures) and would be the easiest option for State agencies to monitor.

The Department recognizes that this proposal poses some issues of its own, such as the need to have a different set of income reporting requirements for households with fluctuating income than for other households. Determining the reporting requirements for households with fluctuating income is a difficult task, and no entirely satisfactory solution exists. The Department is especially anxious to receive comments on this proposal.

Current regulations do not provide for the reporting of changes by households which have filed food stamp applications but have not yet been certified. Both section 6(c) of the Food Stamp Act of 1977 and § 273.12(a)(1) of the current regulations require only participating or certified households to report. The Department proposes to correct this omission by requiring applying households to report changes which have occurred since the filing of the application at the food stamp interview. Applicants and eligibility workers would discuss such changes when attempting to anticipate future circumstances. The Department further proposes that households report changes that occur between a food stamp interview and actual eligibility determination within ten days after being certified. This procedure will avoid imposing an unnecessary burden on households not yet participating in the program, yet will not allow important changes to go unreported. Allowing such households ten days after being certified the report is consistent with current reporting requirements.

Disqualification of Authorized Representatives

Current regulations permit a responsible household member to designate an authorized representative to act on the household's behalf when no responsible household member is able to do so (§ 273.1(f)). Authorized representatives may make application for the program, obtain the coupons and use the coupons to purchase food for the household's consumption. The household is held liable for any overissuance which results from erroneous information given by the authorized representative.

In a few cases, however, it has been determined that an authorized representative has knowingly given false information to the State agency without the household's knowledge. The Department proposes that in cases where the State agency can substantiate that such misrepresentation has occurred the State agency has the power to disqualify the authorized representative for up to one year from acting for the certified household in question and for all other households that he/she might be authorized to represent (§ 273.1(f)(4)(iii)). The households and the authorized representative will be notified of this determination in writing thirty days prior to the date of disqualification. The thirty days option was chosen over ten days to give the affected households more time to select another authorized representative. The notification would include the proposed action, the reason for the action, the right of the household and authorized representative to request a fair hearing, the telephone number and if possible, the name of the person to contact for additional information.

Claims Processing

The Department proposes to alter some of the claims provisions in § 273.18. These proposed changes may enable State agencies to recover a larger portion of non-fraud overissuance and enable States to more efficiently conduct fraud hearings. One of the amendments would permit households which have received an overissuance of coupons to repay those claims with coupons in lieu of cash.

Under the 1964 Food Stamp Act, households in certain situations could repay overissuances with coupons. There were problems encountered, however, with some caseworkers coercing clients into using a portion of their needed food stamp allotment to pay back claims. In some cases this action was deemed detrimental to household members since they were then unable to obtain enough food for the entire issuance period. For the protection of households, the option of accepting coupons in lieu of cash was omitted from the October 17, 1978 regulations.

However, prohibiting the use of coupons for repayment turns out to produce problems of its own. This prohibition can cause hardships on families that prefer that method of repayment. For example, a household certified to receive $50 worth of coupons monthly, but which receives $500 instead because of a keypunch error must, according to current regulations, repay the overissuance in cash. This repayment requirement would cause a hardship on the household.

In addition, some State agencies believe that non-fraud claims collection will increase if clients are allowed to repay with food stamp coupons. The Department is therefore proposing to allow repayment of non-fraud claims with coupons (§ 273.18(e)(1)(iii)). However, the Department emphasizes that repayment with coupons is to be strictly a household option, and that no coercion may be used by the State agency in recovery efforts.

The second aspect of change in the regulations regarding claim processing would increase the $35 initial limit for processing fraud and non-fraud claims. This limit also applies to the amount involved in initiating fraud hearings which lead to fraud overissuance recovery. It has been determined that in nearly all instances the costs associated with overissuance recovery significantly exceed the $35 limit and the consequent amount recovered. It is presently

estimated that an administrative fraud hearing costs between $200 and $400. Nonetheless, a State agency is required to initiate fraud hearing procedures if a client is alleged to have committed food stamp fraud resulting in at least a $35 overissuance. A recent survey indicated that the same situation is true with costs associated with non-fraud collection activities. Most State agencies spend much more money in administrative costs and staff time pursuing a non-fraud claim of $35 than will be collected. Based on these cost factors, the Department proposes to raise the limit to $100 or whatever lesser amount is determined cost effective by the State agency (§ 273.18(d) and § 273.18(6)(3)(i)(A)). The Department realizes that the sole criterion is not cost effectiveness when handling fraud claims collection; also considered is the deterrent effect collection activities have on reducing program fraud and abuse. This issue was taken into consideration when arriving at the $100 limit by giving State agencies the option of decreasing this figure if a lower amount is deemed appropriate.

Also proposed is a requirement that multiple overissuances having a combined total exceeding $100, or the minimum limit set by the State agency (within a twelve-month period) be processed in the same manner as a single overissuance of an equal amount. In the event that a State agency does not initiate collection on a claim below the initial limit, the agency may later offset the claim against a future restoration of lost benefits. However, the Department is retaining the current time limit of one year for establishing non-fraud claims.

Nonfraud Claims Demand Letter

The proposed regulation would also delete from § 273.18(b)(3)(ii) the requirement that a non-fraud demand letter contain the statement that household eligibility or benefits will not be affected if a household falls behind in making payments or is unable to pay the claim. This change is proposed in response to views expressed by some State agencies and officials of the Office of Inspector General that removal of the statement from the demand letter may increase claims collections. It should be noted that this proposal does not permit benefits actually to be terminated or reduced if a household is unable to pay a non-fraud claim.

Section 273.18(e)(2)(iv) which allows for termination or reduction of benefits with regard to nonpayment of a fraud claim, but does not permit such an action in the case of nonpayment of a non-fraud claim, would remain intact.

These claim processing changes are intended to make recovery efforts more efficient in application.

Destruction of Coupons

Current regulations require that prior to any destruction of improperly manufactured or mutilated coupons valued at more than $200 per coupon issuer or bulk storage point per month, the State agency must request permission from FNS (§ 274.8(b)(3)). It has been noted that the current practice is an excessive economic burden due to traveling costs and need for FNS staff to be present at the destruction site. The Department requested comments from Regional offices concerning the $200 limitation. All offices that responded supported raising the $200 ceiling because it is not cost effective and because most States have mutilated coupons in excess of the $200. The Department, therefore, proposes that the limit be raised to $500 per coupon issuer or bulk storage point per month, since according to the survey, most State agency coupon destruction rates fall below this figure.

Implementation

The Department proposes that State agencies implement these regulations on the first day of the month 120 days after it publishes them in a final rulemaking. These 120 days should provide sufficient time to amend State food stamp handbooks and forms, make any necessary changes in data processing systems and administrative procedures, train eligibility workers and inform food stamp recipients and the general public.

Accordingly, the Department proposes to amend Parts 271, 272, 273, 274, and 278 as follows:

PART 271—GENERAL INFORMATION AND DEFINITIONS

1. In § 271.2, the definitions of "drug addiction or alcoholic treatment and rehabilitation program," "eligible foods," "retail food store", and "Shelters for Battered Women and Children" are added in alphabetical order. The additions read as follows:

§ 271.2 Definitions.

* * * * *

"Drug addiction or alcoholic treatment and rehabilitation program" means any drug addiction or alcoholic treatment and rehabilitation program conducted by a private nonprofit organization or institution which is certified by the State agency or agencies designated by the Governor as responsible for the administration of the State's programs for alcoholics and drug addicts pursuant to Pub. L. 91-616, "Comprehensive Alcohol Abuse and Alcoholism Prevention Treatment and Rehabilitation Act of 1970" and Pub. L. 92-255, "Drug Abuse Office and Treatment Act of 1972" as providing treatment that can lead to the rehabilitation of drug addicts or alcoholics. If an alcoholic treatment and rehabilitation program is located on an Indian reservation and the State does not certify or license reservation-based centers, approval to participate may be granted if the requirements of paragraphs (a), (b), and (d)(1) of § 278.1 are met and the program either is funded by the National Institute on Alcohol Abuse and Alcoholism (NIAAA) pursuant to Pub. L. 91-616 or was so funded and has subsequently been transferred to Indian Health Service (IHS) funding.

* * * * *

"Elgible foods" means (1) any food or food product intended for human consumption except alcoholic beverages, tobacco, and hot foods and hot-food products prepared for immediate consumption; (2) seeds and plants to grow foods for the personal consumption of eligible households; (3) meals prepared and delivered by an authorized meal delivery service to households eligible to use coupons to purchase delivered meals or meals served by a communal dining facility for the elderly, for SSI households or both, to households eligible to use coupons for communal dining; (4) meals prepared and served by an authorized drug addict or alcoholic treatment and rehabilitation center to households eligible to use coupons to purchase those meals; (5) meals prepared and served by an authorized group living arrangement facility to residents who are blind or disabled recipients of benefits under title II or title XVI of the Social Security Act; (6) meals prepared by and served by an authorized shelter for battered women and children to its residents; and (7) in the case of certain areas of Alaska where access to food stores is extremely difficult and the households rely on hunting and fishing for subsistence, equipment for the purpose of procuring food for eligible households, including nets, lines, hooks, fishing rods, harpoons, knives, and other equipment necessary for subsistence hunting and fishing, but not equipment for the purpose of transportation, clothing or shelter, nor firearms, ammunition or other explosives.

* * * * *

"Retail food store" means (1) an establishment or recognized department of an establishment, or a house-to-house trade, route, whose eligible food sales

volume is more than 50 percent staple food items for home preparation and consumption; (2) public or private communal dining facilities and meal delivery services; drug addict or alcoholic treatment and rehabilitation programs; public or private nonprofit group living arrangements; or shelters for battered women and children; (3) any store selling equipment for procuring food by hunting and fishing to eligible households in Alaska, as specified in the definition of eligible food; (4) any private nonprofit cooperative food purchasing venture, including those whose members pay for food prior to receipt of the food; and (5) a farmers' market.

* * * * *

"Shelter for Battered Women and Children" means a public or private nonprofit residential facility that serves battered women and their children. If such a facility serves other individuals, a portion of the facility must be set aside on a long-term basis to serve only battered women and children.

* * * * *

PART 272—REQUIREMENTS FOR PARTICIPATING STATE AGENCIES

2. In § 272.1, paragraphs (a) and (b) are revised; paragraphs (c) through (g) are redesignated as (d) through (h) and a new paragraph (c) is added; newly redesignated paragraph (e)(2) is revised; and a new subparagraph (27) is added to the newly redesignated paragraph (h). The changes are as follows:

§ 272.1 General terms and conditions.

(a) *Coupons as income.* The value of the food stamp allotment provided any eligible household shall not be considered income or resources for any purpose under any Federal, State, or local laws including, but not limited to, laws on taxation, welfare, and public assistance programs.

(b) *No aid reduction.* No participating State or political subdivision shall decrease the assistance paid directly to an individual or individuals because of receipt of a coupon allotment. Per diem payments to an exempt institution made expressly for a particular individual or individuals shall also be considered direct payments. Block grants or other types of funding provided to a drug or alcoholic treatment center, a shelter for battered women and children or group home for the disabled are not considered direct assistance and, therefore, are not subject to this reduction prohibition. A decrease in benefits for the purpose of the food stamp program shall be any actual reduction in an established benefit level because of the receipt of food stamp benefits.

(1) An established benefit level is one that has been established by a specific legislative mandate prescribing either a specific benefit level or a formula resulting in a specific level, a judicial determination as to the appropriate benefit level, or simple use of a given benefit level in the absence of a legislative or judicial prescription. Illegal reductions include but are not limited to the following situations:

(i) State or local assistance benefits are reduced because food stamp benefits are counted as income or resources in determining GA eligibility or benefits levels.

(ii) Persons who are members of households eligible for or participating in the food stamp program are, as a class, given lower benefits than other recipients. Violations in this category could occur in any of a number of ways. Counties which provide a single total GA grant with no specific amount allocated for food, rent, etc. could reduce the overall GA payment, or counties which calculate the total GA grant by adding separate components for food, rent, etc. could reduce the amount of the food component for a GA participant who is eligible for or receives food stamps. A violation could also occur if the county gives participants who do not receive or are not eligible for food stamps greater GA benefits than are given to food stamp participants or eligibles.

(iii) The jurisdiction operating the State or local program specifically includes food stamp benefits as part of its benefit standard. In such circumstances, the payment is less than the benefit standard because food stamp benefits are being used to make up part of the standard.

(iv) The overall State or local benefit standard has been reduced, or the food component of the standard has been reduced, since inception of the food stamp program in the jurisdiction because of the availability of food stamps. For example, if the food stamp program were instituted in a jurisdiction and the jurisdiction subsequently reduced its GA grant, or the food component of grant, because of the availability of food stamp benefits, such action would, in the view of FNS, constitute an illegal reduction.

(v) A jurisdiction has reduced its benefits standard or the food component of the grant due to the elimination of the food stamp purchase requirement. If the jurisdiction previously included the cost of the food stamp purchase requirement (or the cost of a voucher in this amount) in its overall benefit standard, or in the food component of the benefit standard, and has reduced the benefit standard or the food component of the standard by this amount since the elimination of the purchase requirement, such action would, in the view of FNS, constitute an illegal reduction.

(2) The institution of a reduction in grant levels or in the food component of the grant does not automatically mean the reduction is illegal. For example, if budget reductions resulted in a reduction of the overall GA allowance, no violation would occur: *Provided,* That the food allowance is not reduced disproportionately, and provided that no part of the reduction is due to the availability of food stamps.

(3) The following situations do not constitute illegal reductions in State or local benefits in the view of FNS.

(i) Grants or food allowances are low but have not been reduced since inception of the food stamp program. Mere failure to increase benefits to allow for inflation would not, of itself, constitute a violation.

(ii) The food component of the State or local grant is less than the Thrifty Food Plan, unless the benefit program has a food standard that is equal to or greater than the Thrifty Food Plan.

(iii) Despite the availability of studies showing that food needs are higher than the food allowance, the jurisdiction has not adopted a recommended increase for reasons other than the availability of food stamps (e.g., lack of funds).

(c) *State Agency Liability.* The State agency shall be liable for any overissuances resulting from violations as outlined in paragraphs (a) and (b) of this section.

* * * * *

(e) *Information available to the public.* * * *

(2) Federal regulations, Federal procedures embodied in FNS Notices and policy memos, and State Plans of Operation (including specific planning documents such as Outreach and Corrective Action Plans) shall be available upon request for examination by members of the public during office hours at the State agency headquarters as well as at FNS Regional and National offices. The State agency handbook will be available for examination upon request at each local certification office within each project area as well as at the State agency headquarters and FNS Regional and National offices. Federal regulations shall also be available for examination upon request in at least one office in each large project area as defined in § 275.5 (project areas with a monthly caseload of more than 7,000).

(h) *Implementation.* * * *

(27) *Amendment 189.* State agencies shall implement these regulations on the first day of the month 120 days after publication.

3. In § 272.4, a sentence is added to the end of paragraph (c)(6).

§ 272.4 Program administration and personnel requirements.

* * * * *

(c) *Bilingual requirements.* * * *

(6) * * * The State Agency shall re-evaluate the need for bilingual services at least once every ten years, or more frequently if the State agency or FNS determines that a more frequent re-evaluation is necessary due to significant demographic changes in an area. The methodology for such a re-evaluation and subsequent State agency action on the results of the re-evaluation may be subject to approval by FNS.

* * * * *

PART 273—CERTIFICATION OF ELIGIBLE HOUSEHOLDS

4. In § 273.1:

(1) Paragraph (7) of paragraph (b) is revised;

(2) The introductory paragraph (e) is revised and a new subparagraph (4) is added to subparagraph (e);

(3) The 3rd sentence of paragraph (f)(1)(i) and the last sentence of paragraph (f)(4)(iii) are revised.

The revisions and additions read:

§ 273.1 Household concept.

* * * * *

(b) *Nonhousehold members.* * * *

(7) *Disqualified individuals.* Individuals disqualified for fraud, as set forth in § 273.16, or persons disqualified for failure to obtain a social security number, as set forth in § 273.6, or ineligible aliens as set forth in § 273.4.

* * * * *

(e) *Residents of institutions.* Individuals shall be considered residents of an institution when the institution provides them with the majority (at least 50% of three meals daily) of their meals as part of the institution's normal services. Residents of institutions are not eligible for participation in the program, with the following exceptions:

* * * * *

(4) Women or women with their children temporarily residing in a shelter for battered women and children as defined in § 271.2. Such persons temporarily residing in shelters for battered women and children shall be considered individual household units for the purposes of applying for and participating in the Program.

* * * * *

(f) *Authorized representatives* * * *

(1) * * *

(i) *Making application for the program.*

* * * The State agency shall inform the household that the household will be held liable for any overissuance which results from erroneous information given by the authorized representative, except as provided in § 273.11(e)(6) and § 273.16(a). * * *

* * * * *

(4) * * *

(iii) * * * State agencies which have substantiated that an authorized representative has misrepresented a household's circumstances and has knowingly provided false information pertaining to the household, or has made improper use of coupons, may disqualify that authorized representative from participating as an authorized representative in the Food Stamp Program for up to one year. The State agency shall send written notification to the affected households and the authorized representative thirty days prior to the date of disqualification. The notification shall include: The proposed action; the reason for the proposed action; the household and authorized representative's right to request a fair hearing; the telephone number of the office and if possible, the name of the person to contact for additional information.

* * * * *

5. In § 273.2:

(1) A new sentence is added after the second sentence in paragraph (e)(1);

(2) A new sentence is added to the end of paragraph (f)(1)(ii)(B); and paragraphs (f)(1)(ii)(C), (f)(1)(ii)(E), (f)(1)(ii)(F), and (f)(2)(ii)(B) are revised;

(3) The first sentence of paragraph (g)(1) is revised;

(4) The introductory text of paragraph (h) is revised; the first sentence of paragraph (h)(1)(i)(D) is revised; the third and fourth sentences of paragraph (h)(2)(i)(A) are revised; the second sentence of paragraph (h)(3)(i) is revised, and the third sentence of paragraph (h)(4)(iii) is revised; and

(5) A new subdivision (v) is added to paragraph (i)(3).

The revisions and additions read:

§ 273.2 Application processing.

* * * * *

(e) *Interviews.*

(1) * * * The applicant may bring any person he or she chooses to the interview. * * *

* * * * *

(f) *Verification.* * * *

(1) *Mandatory verification.* * * *

(ii) *Alien status.*

* * * * *

(B) * * * However, delays for delivering these cards are lengthy so an interim document is provided to new immigrants, Form I–181–B. This form is given at the time of adjustment of status to lawful permanent residence. It is imprinted with the stamped annotation, "Processed for I–551, Temporary Evidence of Lawful Admission for Permanent Residence."

(C) Aliens in the categories specified in § 273.4(a)(4) through (a)(6) shall present an INS form I–94—"Arrival—Departure Record". The State agency shall accept the INS form I–94 as verification of eligible alien status only if the form is annotated with section 203(a)(7), 207, 208, 212(d)(5) or 243(h) of the Immigration and Nationality Act. The form may also be annotated with one of the following terms: Refugee, parolee, paroled, conditional entry or entrant, or asylum. An INS form I–94 annotated with the letters (A) through (L) shall be considered verification of ineligible alien status unless the alien can provide other documentation from INS which indicates that the alien is eligible. If the INS form I–94 does not bear any of the above annotations and the alien has no other verification of alien classification in his or her possession, the State agency shall advise the alien to submit Form G–641, Application for Verification of Information from Immigration and Naturalization Service Records. This form when properly annotated at the bottom by an INS representative and delivered directly to a State agency office, may be accepted as evidence of lawful admission for permanent residence or parole for humanitarian reasons. The alien shall also be advised that classification under section 203(a)(7), 207, 208, 212(d)(5), or 243(h) of the Immigration and Nationality Act shall result in eligible status; that the alien may be eligible if acceptable verification is obtained; and that the alien may contact INS as stated previously, or otherwise obtain the necessary verification or, if the alien wishes and signs a written consent, that the State agency will contact INS to obtain clarification of the alien's status.

* * * * *

(E) If the proper INS documentation is not available, the alien may state the reason and submit other conclusive verification. The State agency shall accept other forms of documentation or corroboration from INS that the alien is classified pursuant to section 101(a)(15), 101(a)(20), 203(a)(7), 207, 208, 212(d)(5), 243, or 249 of the Immigration and

Nationality Act, or other conclusive evidence such as a court order stating that deportation has been withheld pursuant to section 243(h) of the Immigration and Nationality Act.

(F) While awaiting acceptable verification, the alien whose status is questionable shall be ineligible, but the eligibility of the remaining members (if any) of the household shall be determined in accordance with the procedures in § 273.11(c). If the alien does not wish to contact INS, the household shall be given the option of withdrawing its application or participating without that member.

* * * * *

(2) *Verification of questionable information.** * *

(ii) *Citizenship.** * *

(B) The member whose citizenship is in question shall be allowed to participate for 2 months pending verification of citizenship, if the household is otherwise eligible and efforts are being made to obtain the necessary verification. If verification has not been obtained within 2 months, the member whose citizenship is in question shall be ineligible and that member's income and resources shall be considered available to any remaining household members as set forth in § 273.11(c).

* * * * *

(g) *Normal processing standard*—(1) *Thirty-day processing.* The State agency shall provide eligible households that complete the initial application process an opportunity to participate as soon as possible, but not later than 30 calendar days following the date the application was filed.* * *

* * * * *

(h) *Delays in processing.* If that State agency does not determine a household's eligibility and provide an opportunity to participate within 30 days following the date the application was filed, the State agency shall take the following action:

(1) *Determining cause.** * *

(i)* * *

(D) For households that have failed to appear for an interview, the State agency must have attempted to reschedule the initial interview within 30 days following the date the application was filed. * * *

* * * * *

(2) *Delays caused by the household.*

(i) * * *

(A) * * * However, if a notice of denial is sent and the household takes the required action within 60 days following the date the application was filed, the State agency shall reopen the case without requiring a new application. No further action by the State agency is required after the notice of denial or pending status is sent if the household failed to take the required action within 60 days following the date the application was filed, or the State agency chooses the option of holding the application pending for only 30 days following the date of the initial request for the particular verification that was missing, and the household fails to provide the necessary verification by this 30th day.

* * * * *

(3) *Delays caused by the State agency.*

(i) * * * The State agency shall not deny the application if it caused the delay, but shall instead notify the household by the 30th day following the date the application was filed that its application is being held pending. * * *

* * * * *

(4) *Delays beyond 60 days.* * * *

(iii) * * * A notice of denial need not be sent if the notice of pending status informed the household that it would have to file a new application if verification was not received within 30 days following the date of the initial request. * * *

* * * * *

(i) *Expedited service.* * * *

(3) *Processing standards.* * * *

(v) *Residents of Shelters for Battered Women and Children.* Residents of shelters for battered women and children who are otherwise entitled to expedited service shall be handled in accordance with the time limits in subparagraph (3)(i) of this action.

* * * * *

6. Section 273.3 is revised to read as follows:

§ 273.3 Residency.

Households must be living in the project areas in which they file applications for participation unless the State agency has made arrangements, in accordance with the provisions of § 272.5, to allow particular households to file applications for participation in nearby specified project areas. Unless an individual is a resident of a shelter for battered women and children as defined in § 271.2 and was a member of a household containing the person who had abused him or her, he or she shall not participate as a member of more than one household or in more than one project area, in any month. Residents of shelters for battered women and children shall be handled in accordance with § 273.11(g). The State agency shall not impose any durational residency requirements. A fixed residence is not required; for example, migrant campsites satisfy the residency requirement. Nor shall residency require an intent to reside permanently in the State or project area. Persons in a project area solely for vacation purposes shall not be considered residents.

7. Section 273.4 is revised as follows:

§ 273.4 Citizenship and alien status.

(a) *Citizens and eligible aliens.* State agencies shall prohibit participation in the program by any person who is not a resident of the United States and one of the following:

(1) A United States citizen.

(2) An alien lawfully admitted for permanent residence as an immigrant as defined in sections 101(a)(15) and 101(a)(20) of the Immigration and Nationality Act.

(3) An alien who entered the United States prior to June 30, 1948, or some later date as required by law, and has continuously maintained residency in the United States since then, and is not ineligible for citizenship, but is considered to be lawfully admitted for permanent residence as a result of an exercise of discretion by the Attorney General pursuant to section 249 of the Immigration and Nationality Act.

(4) An alien who qualified for conditional entry because of persecution on account of race, religion, or political opinion or because of being uprooted by a catastrophic natural calamity pursuant to section 203(a)(7), 207, or 208 of the Immigration and Nationality Act.

(5) An alien lawfully present in the United States as a result of an exercise of discretion by the Attorney General for emergent reasons or reasons deemed strictly in the public interest pursuant to section 212(d)(5) of the Immigration and Nationality Act, or as a result of a grant of parole by the Attorney General.

(6) An alien living within the United States for whom the Attorney General has withheld deportation pursuant to section 243 of the Immigration and Nationality Act because of the judgement of the Attorney General that the alien would otherwise be subject to persecution on account of race, religion, or political opinion.

(b) *Ineligible aliens.* Aliens other than those described above shall not be eligible to participate in the program as a member of any household. Among those excluded are alien visitors, tourists, diplomats and students who enter the United States temporarily with no intention of abandoning their residence in a foreign country.

(c) *Income and resources.* The income and resources of an ineligible alien who would be considered a member of a household if he or she did not have ineligible alien status shall be

considered in determining eligibility or level of benefits of the household, as specified in § 273.11(c).

(d) *Awaiting verification.* If verification of eligible alien status as required by § 273.2(f) is not provided on a timely basis, the eligibility of the remaining household members shall be determined. The alien whose status is unverified shall be treated as a disqualified member, and the eligibility of the remaining household members determined in accordance with § 273.11(c). If verification of eligible alien status is subsequently received, the State agency shall act on the information as a reported change in household membership in accordance with timeliness standards in § 273.12.

(e) *Reporting illegal aliens.* The State agency shall immediately inform the local INS office whenever personnel responsible for the certification or recertification of households determine that any member of a household is ineligible to receive food stamps because the member is present in the United States in violation of the Immigration and Nationality Act. Because many aliens who are legally present in the U.S. are not eligible for food stamps, State Agencies are cautioned that a determination that a person is an ineligible alien is not equivalent to a determination that a person is an illegal alien. Any decision to report a household member to INS shall be reviewed by State Agency personnel unconnected with the initial determination. State Agencies are encouraged to designate a particular individual to conduct such a review and to provide training in the appropriate laws to reduce the possibility of an erroneous reporting decision.

(1) A determination that a person is an illegal alien shall be based solely upon information obtained from the household (and not from a third party source) during the course of the application or interview. The State agency shall focus solely on information necessary to the certification process. A report to INS shall be based on solid evidence. The State agency shall document in the household casefile the basis for any report to INS.

(2) A determination that a person is an illegal alien shall be based only on:

(i) Admissions by the applicant or another household member (or the household's authorized representative) that illegal aliens are present in the Household;

(ii) INS documents presented by the household during the application or recertification process that are determined to be forged; or

(iii) A formal order of deportation presented by the household during the application or recertification process.

(3) Absence of documentation, or inability or refusal to provide documentation of alien status shall not be grounds for reporting to INS. When a household indicates inability or unwillingness to provide documentation of alien status for any household member, that member shall be classified as an ineligible alien. When a person indicates inability or unwillingness to provide documentation of alien status, the State agency shall not continue efforts to obtain that documentation. In such cases, if the State agency does not already have sufficient documentation to require a report to INS, the state agency shall not contact INS.

(4) Failure to report an illegal alien to INS shall not be considered a QC error or assessed as an administrative deficiency.

8. In § 273.8, paragraph (d) is amended by removing the third sentence and substituting two new sentences in its place; new paragraphs (e)(11)(x) and (e)(12) are added; paragraphs (h)(1)(iii), (h)(1)(vi), (h)(3)(iii) are revised, paragraphs (i)(1) and (i)(2)(iii) are revised; and paragraph (j) is revised; as follows:

§ 273.8 Resource eligibility standards.

* * * * *

(d) * * * The resource shall be considered totally inaccessible to the household (or to the ineligible alien or disqualified person whose resources are being considered available to the household) if the resource cannot practically be subdivided and the household's access to the value of the resource is dependent on the agreement of a joint owner who refuses to comply. Resources shall be considered inaccessible to persons residing in shelters for battered women and children, as defined in § 271.1, if the resources are jointly owned by such persons and by members of their former household.

* * * * *

(e) * * *

(11) * * *

(x) Payments received by the Confederated Tribes and bands of the Yakima Indian Nation and the Apache Tribe of the Mescalero Reservation from the Indian Claims Commission as designated under Pub. L. 94–433, Section 2.

(12) Where an exclusion applies because of use of a resource by or for a household member, the exclusion shall also apply when the resource is being used by or for an ineligible alien or disqualified person whose resources are being counted as part of the household's resources. For example, work related equipment essential to the employment of an ineligible alien or disqualified person shall be excluded (in accordance with paragraph (e)(5) of this section), as shall one burial plot per ineligible alien or disqualified household member (in accordance with paragraph (e)(2) of this section).

* * * * *

(h) *Handling of licensed vehicles.*

* * *

(1) * * *

(iii) Necessary for long distance travel, other than daily commuting, that is essential to the employment of a household member (or ineligible alien or disqualified person whose resources are being considered available to the household), for example, the vehicle of a traveling sales person or a migrant farmworker following the work stream.

* * * * *

(vi) Necessary to transport a physically disabled household member (or ineligible alien or disqualified person whose resources are being considered available to the household) regardless of the purpose of such transportation (limited to one vehicle per physically disabled person). A vehicle necessary to transport a physically disabled person need not have special equipment or be used primarily by the physically disabled person. The exclusion in paragraph (h)(1) (i) through (v) of this section will apply when the vehicle is not in use because of temporary unemployment, such as when a taxi driver is ill and cannot work, or when a fishing boat is frozen in and cannot be used.

* * * * *

(3) * * *

(iii) Any other vehicle used to transport household members (or an ineligible alien or disqualified household member whose resources are being considered available to the household) to and from employment or to and from training or education which is preparatory to employment, or to seek employment in compliance with the job search criteria. A vehicle customarily used to commute to and from employment shall be covered by this equity exclusion during temporary periods of unemployment. The equity value of licensed vehicles not covered by this exclusion, and of unlicensed vehicles not excluded by paragraphs (e)(3), (4), and (5) of this section, shall be attributed toward the household's resource level.

* * * * *

(i) *Transfer of resources.* (1) At the time of application, households shall be

asked to provide information regarding any resources which any household member (or ineligible alien or disqualified person whose resources are being considered available to the household) has transferred within the 3-month period immediately preceding the date of application. * * *

(2) * * *

(iii) Resources which are transferred between members of the same household (including ineligible aliens or disqualified persons whose resources are being considered available to the household); and (iv) resources which are transferred for reasons other than qualifying or attempting to qualify for food stamp benefits, for example, a parent placing funds into a educational trust fund described in paragraph (e) (8) of this section.

* * * * *

(j) *Resources of nonhousehold members.* The resources of nonhousehold members, defined in § 273.1(b), shall not be counted as available to the household unless the member is disqualifed from the program for fraud in accordance with § 273.16 or for failing to comply with the requirement to provide an SSN in accordance with § 273.6, or is an ineligible alien who would be considered a household member if not for his or her ineligible alien status.

* * * * *

9. In § 273.9, paragraph (iv) is added to paragraph (b)(1); the first sentence of paragraph (b)(3) is revised; the first sentence of (c)(3) is revised, paragraph (c)(10)(iii) is revised, and a new subdivision (ix) is added to (c)(10).

The addition and revisions read as follows:

§ 273.9 Income and deductions.

* * * * *

(b) *Definition of income.* * * *

(1) * * *

(iv) Payments under Title I (VISTA, University Year for Action, etc.) of the Domestic Volunteer Service Act of 1973 (Pub. L. 93–113) as amended, shall be considered earned income and subject to the 20 percent earned income deduction, excluding payments made to those households specified in paragraph (c)(1)(iii) of this section.

* * * * *

(3) The earned or unearned income of an individual disqualified from the household for fraud in accordance with § 273.16, for failing to comply with the requirement to provide an SSN in accordance with § 273.6, or for being an ineligible alien in accordance with § 273.4, shall continue to be counted as income, less a prorata share for the individual. Procedures for calculating this prorata share are described in § 273.11(c). * * *

(c) *Income exclusions.* * * *

(3) Education loans on which payment is deferred, grants, scholarships, fellowships, veterans' education benefits, Social Security student benefits, and the like to the extent that they are used for tuition and mandatory school fees at an institution of higher education, including correspondence schools at that level, or a school at any level for the physically or mentally handicapped. * * *

* * * * *

(10) * * *

(iii) Any payment to volunteers under Title II (RSVP, Foster Grandparents and others) of the Domestic Volunteer Services Act of 1973 (Pub. L. 93–113) as amended. Payments under Title I (VISTA, University Year for Action, Urban Crime Prevention Program and others) to volunteers shall be excluded for those individuals receiving food stamps or public assistance at the time they joined the Title I program, except that households which were receiving an income exclusion for a VISTA or other Title I subsistence allowance at the time of conversion to the Food Stamp Act of 1977 shall continue to receive an income exclusion for VISTA for the length of their volunteer contract in effect at the time of conversion. Temporary interruptions in food stamp participation shall not alter the exclusion once an initial determination has been made. New applicants who are not receiving public assistance or food stamps at the time they joined VISTA shall have these volunteer payments included as earned income.

* * * * *

(ix) Payments by the Indian Claims Commission to the Confederated Tribes and Bands of the Yakima Indian Nation or the Apache Tribe of the Mescalero Reservation (Pub. L. 95–443).

* * * * *

10. In § 273.11;

(1) The last sentence of paragraph (a)(2)(ii) is revised; paragraph (a)(4)(ii) is removed; (a)(4)(iii) is redesignated as (a)(4)(ii); and a new paragraph (D) is added to the newly redesignated (a)(4)(ii);

(2) The introductory text of paragraph (c), and paragraphs (c)(5)(i), and (c)(5)(ii) are revised and a new paragraph (iii) is added to (c)(5);

(3) The first sentence of the introductory language for paragraph (d) is revised and a new sentence is added at the end of the introductory language of paragraph (d); and new paragraphs (d)(1) and (d)(2) are added.

(4) Paragraph (e)(5) is revised;

(5) Paragraphs (f)(5)(i) and (ii) are revised and a new paragraph (iii) is added to paragraph (f)(5);

(6) Paragraphs (g)(1) and (g)(2) are redesignated as (h)(1) and (h)(2) respectively and a new paragraph (g) is added.

The changes read as follows:

§ 273.11 Action on households with special circumstances.

* * * * *

(a) *Self-employment income.* * * *

(2) *Determining monthly income from self-employment.* * * *

(ii) * * * The cost of producing the self-employment income shall be calculated by anticipating the monthly allowable costs of producing the self-employment income.

* * * * *

(4) *Allowable costs of producing self-employment income:* * * *

(ii) * * *

(D) Depreciation.

* * * * *

(c) *Treatment of income and resources of disqualified members.* Individual household members may be disqualified for fraud, or for failure to obtain, or refusal to provide, an SSN, or for being an ineligible alien. During the period of time a household member is disqualified, the eligibility and benefit level of any remaining household members shall be determined as follows:

* * * * *

(5) *Reduction or termination of benefits within the certification period.* When an individual is disqualified within the household's certification period, the State agency shall determine the eligibility or ineligibility of the remaining household members based, as much as possible, on information in the case file.

(i) *Fraud disqualification.* If a household's benefits are reduced or terminated within the certification period because one of its members has been disqualified for fraud, the State agency shall notify the remaining members of their eligibility and benefit level at the same time the disqualified member is notified of his or her disqualification. The household is not entitled to a notice of adverse action but may request a fair hearing to contest the reduction or termination of benefits.

(ii) *SSN disqualification.* If a household's benefits are reduced or terminated within the certification period because one or more of its members required to provide an SSN is being disqualified for failure to meet the SSN requirement the State agency shall

issue a notice of adverse action in accordance with § 273.13(a)(2), which informs the household that the individual without an SSN is being disqualified, the reason for the disqualification, the eligibility and benefit level of the remaining members, and the actions the household must take to end the disqualification.

(iii) *Ineligible alien disqualification.* If a household's benefits are reduced or terminated within the certification period because one or more of its members is being disqualified as an ineligible alien, the State agency shall issue a notice of adverse action, in accordance with § 273.13(a)(2), which informs the household that the alien is being disqualified, the reason for the disqualification, the eligibility and benefit level of the remaining members, and the actions the household must take to end the disqualification.

(d) *Treatment of income and resources of other nonhousehold members.* For those nonhousehold members that have not been disqualified such as ineligible students or SSI recipients in cash-out States, the income and resources of the nonhousehold member shall not be considered available to the household. * * * When the earned income of one or more household members and the earned income of a non-household member are combined into one wage, the income of the household members shall be determined as follows:

(1) If the household's share can be identified, the State agency shall count that portion due to the household as earned income.

(2) If the household's share cannot be identified the State agency shall prorate the earned income among all those whom it was intended to cover and count that portion prorated to the household.

* * * * *

(e) *Residents of drug/alcoholic treatment and rehabilitation* * * *

(5)(i) When the household leaves the center, the center shall provide the resident household with its ID card and any untransacted ATP cards. The household, not the center, shall be allowed to negotiate any untransacted HIR cards. The departing household shall also receive its full allotment if already issued and if no coupons have been spent on behalf of that individual household. These procedures are applicable at any time during the month. However, if the coupons have already been issued and any portion spent on behalf of the individual, and the household leaves the treatment and rehabilitation program prior to the 16th day of the month, the treatment center shall provide the household with one half of its monthly coupon allotment. If the household leaves after the 16th day of the month and the coupons have already been issued and used, the household does not receive any coupons.

(ii) Once the household leaves the treatment center, the center is no longer allowed to act as that household's authorized representative. The center, if possible, shall provide the household with a change report form to report to the State agency the individual's new address and other circumstances after leaving the center and shall advise the household to return the form to the appropriate office of the State agency within 10 days.

(iii) The treatment center shall return to the State agency any coupons not provided to departing residents at the end of each month. These returned coupons shall include those not provided to departing residents because they left after the 16th of the month or they left prior to the 16th and the center was unable to provide the individual with the coupons.

* * * * *

(f) *Residents of group living arrangements who receive benefits under title II or title XVI of the Social Security Act.* * * *

(5)(i) When the household leaves the facility, the group living arrangement, either acting as an authorized representative or retaining use of the coupons on behalf of the residents (regardless of the method of application), shall provide residents with their ID cards (if applicable) and any untransacted ATP cards. The household, not the group living arrangement, shall be allowed to negotiate any untransacted HIR cards. Also, the departing household shall receive its full allotment if issued and if no coupons have been spent on behalf of that individual household. These procedures are applicable at any time during the month. However, if the coupons have already been issued and any portion spent on behalf of the individual, and the household leaves the group living arrangement prior to the 16th day of the month, the facility shall provide the household with its ID card (if applicable) and one-half of its monthly coupon allotment. If the household leaves after the 16th day of the month and the coupons have already been issued and used, the household does not receive any coupons. If a group of residents have been certified as one household and have returned the coupons to the facility to use, the departing residents shall be given a prorata share of one half of the coupon allotment if leaving prior to the 16th day of the month, and shall be instructed to obtain ID cards or written authorizations to use the coupons from the local office.

(ii) Once the resident leaves, the group living arrangement no longer acts as his/her authorized representative. The group living arrangement, if possible, shall provide the household with a change report form to report to the State agency the individual's new address and other circumstances after leaving the group living arrangement and shall advise the household to return the form to the appropriate office of the State agency within 10 days.

(iii) The group living arrangement shall return to the State agency any coupons not provided to departing residents at the end of each month. These returned coupons shall include those not provided to departing residents because they left after the 16th or before the 16th and the facility was unable to provide them with the coupons.

* * * * *

(g) *Shelters for Battered Women and Children.* (1) Prior to certifying its residents under this paragraph, the State agency shall verify that the shelter for battered women and children meets the definition in § 271.2. Shelters having FNS authorization to redeem at wholesalers shall be considered as meeting the definition and the State agency is not required to do further verification. Shelters should contact their local project area office to determine if they meet the definition in § 271.2. The local project area shall maintain a list of shelters meeting the definition to insure prompt certification of eligible residents following the special procedures outlined below.

(2) Many shelter residents have recently left a household containing the person who has abused them. Their former household may be certified for participation in the Program, and its certification may be based on a household size that includes the women and children who have just left. Shelter residents who are included in other certified households may nevertheless apply for and (if otherwise eligible) participate in the Program as separate households if the other certified household which includes them is the household containing the person who subjected them to abuse. Shelter residents who are included in other certified households may receive an additional allotment as a separate household only once a month.

(3) Shelter residents who apply as separate households shall be certified solely on the basis of the income and resources currently available to them and the expenses for which they are currently responsible. They shall be certified without regard to the income, resources, and expenses of their former household. Jointy held resources are considered inaccessible in accordance with § 273.8. Room payments to the shelter shall be considered as shelter expenses.

(4) Any shelter residents eligible for expedited service shall be handled in accordance with § 273.2(i).

(5) The former household of shelter residents shall be provided a notice of expiration in accordance with § 273.14(b) and Policy Interpretation 79–108.

* * * * *

11. In § 273.12, paragraphs (a)(1)(i) and (a)(2) are revised as follows:

§ 273.12 Reporting changes.

(a) *Household responsibility to report.*

(1) Certified and applicant households are required to report the following changes in circumstances:

(i) Changes in income:

(A) Households with fluctuating income shall report changes in the source or in the wage rate of fluctuating income and changes in the full or part-time employment status of household members with fluctuating income;

(B) Households without fluctuating income shall report changes in the sources of income or in the amount of gross, monthly, non-fluctuating income of more than $25;

(C) Households shall not be required to report changes in the public assistance grant, or in the general assistance grant in project areas where GA and food stamp cases are jointly processed in accord with § 273.2(j)(2). Since the State agency has prior knowledge of all changes in the public assistance grant and these general assistance grants, action shall be taken on the State agency information;

* * * * *

(2) Certified households shall report changes within 10 days of the date the change becomes known to the household. Applicant households that have not yet been certified when the change occurs shall report changes at the certification interview or, for changes occurring after the interview but before the eligibility determination, within 10 days after the date of the determination. Optional procedures for reporting changes are contained in § 273.12(f) for households in States with FNS-approved forms for jointly reporting food stamp and public assistance changes and food stamp and general assistance changes.

* * * * *

§ 273.16 [Amended]

12. In § 273.16, paragraph (d) is revised to read as follows:

* * * * *

(d) *Administrative disqualification.* State agencies shall establish procedures for conducting fraud hearings which must conform with the procedures outlined in this section. In addition States may also pursue alleged fraud cases through prosecution. FNS shall permit a State to delete its administrative fraud hearing system if the State agency has entered into an agreement with the State's attorney general's office or where necessary, county prosecutors. The agreement shall provide that prosecution will be pursued in cases where appropriate. This agreement shall inlude information on how, and under what circumstances, cases will be accepted for possible prosecution and any other criteria set by the prosecutor for accepting cases for prosecution, such as a minimum amount of fraudulent overissuance. An administrative fraud hearing or referral for prosecution action shall be initiated by the State agency whenever the State agency has documented evidence substantiating that a currently certified household member has committed one or more acts of fraud as defined in paragraph (b) of this section and the State agency believes the household member should be disqualified. Such cases may include those in which the State agency believed the facts of the individual case do not warrant civil or criminal prosecution through the appropriate court system. Other cases may be those previously referred for prosecution but for which prosecution was declined by the appropriate legal authority. The State agency may initiate an administrative fraud hearing regardless of the current eligibility of the individual. The disqualification period for nonparticipants at the time of the fair hearing decision shall be deferred until the individual applies for and is determined eligible for program benefits. Fraud hearings need not be conducted if the amount the State agency contends has been fraudulently obtained is less than $100 or if the value of the coupons used to obtain ineligible items is under $100, or a less amount of suspected fraud can be pursued if it is cost effective to the State agency. The administrative fraud hearing may be conducted regardless of whether other legal action is planned against the household member. FNS may require a State agency to establish an administrative fraud hearing system if it determines that the State agency is not promptly or actively pursuing suspected fraud claims through the courts.

* * * * *

13. In § 273.18, paragraph (b)(3)(i)(A) is revised; paragraph (b)(3)(ii) is revised; and new subdivision (iii) is added to paragraph (e)(1).

The revision and addition read as follows:

§ 273.18 Claims against households.

(b) *Nonfraud Claims.* * * *

(3) *Collecting nonfraud claims.*

(i) * * *

(A) The total amount of the nonfraud claim is less than $100 or whatever lesser amount is deemed cost effective by the State agency. State agencies shall accept voluntary payments by households for overissuances of less than the established amount set by the State agency, although these losses need not be pursued through demand letters. State agencies are encouraged, however, to advise households orally or in writing of claims in amounts under the designate sum and advise the household that the State agency may offset the amount of the claim against any future restoration of lost benefits accrued by them. The household shall also be informed that if it disagrees with the State agency over the claim or its amount, the household has the right to a fair hearing. State agencies shall keep records of all overissuances even if collection procedures are not initiated. At such time that multiple overissuances for a household total $100 or more within a 12-month period, then State agencies shall proceed with collection activities as described in subparagraph (3)(ii) of this paragraph. Households shall be informed of this policy.

* * * * *

(ii) State agencies shall initiate collection action by sending the household a written demand letter, designed by FNS, which informs the household of the amount owed, the reason for the claim, the period of time the claim covers, any offsetting that was done to reduce claims, how the household may pay the claim, and the household's right to a fair hearing if the household disagrees with the State agency's determination. FNS may grant deviations from the designed letter under conditions specified in § 273.2(b). If the household pays the claim, payments shall be accepted and submitted to FNS in accordance with the procedures outlined in paragraphs (e) and (f) of this section. If the household

does not respond to the first demand letter, additional demand letters shall be sent at reasonable intervals such as 30 days, until the household has responded by paying or agreeing to pay the claim, or until the criteria for suspending collection action, as specified in paragraph (b)(4) of this section, have been met. The State agency may postpone collection action on nonfraud claims in cases where an overissuance is being referred for possible prosecution or for a fraud hearing and the State agency is advised in writing that collection action will prejudice the case.

* * * * *

(e) *Methods of collecting payments.*

(1) * * *

(iii) *Coupons for repayment.* The State agency shall accept food stamp coupons as partial or full payment of a nonfraud claim if the household prefers to use this method of repayment. Choice of this option is entirely up to the household and no household shall be required or pressured to pay a nonfraud claim with coupons.

* * * * *

14. In § 273.19, two new sentences are added to the end of paragraph (b) and a new subparagraph (5) is added to (c). The additions read as follows:

§ 273.19 Sixty day continuation of certification.

* * * * *

(b) *Former project area.* * * * Using form FNS-286, Item 15, the former project area shall inform the new project area of any member whose citizenship is questionable but who is participating in accordance with § 273.2(f)(2)(ii)(B). The form shall also show the last month that a member may participate without vertification of citizenship.

(c) *New project area.* * * *

(5) If the household was certified in accordance with § 273.2(f)(2)(ii)(B), and the member whose citizenship is in question has not verified that citizenship, the State agency shall act in accordance with that § 273.2(f)(2)(ii)(B).

* * * * *

PART 274—ISSUANCE AND USE OF FOOD COUPONS

15. In § 274.8, paragraphs (b)(1)(i) and (b)(3) are revised and read as follows:

§ 274.8 State agency reporting and destruction of unusable coupons.

* * * * *

(b) *Destruction of unusable coupons.* * * *

(1) * * *

(i) It has been determined that the value of coupons does not exceed $500.00 per coupon issuer or bulk storage point for any month; and

* * * * *

(3) If the value of the coupons to be destroyed exceeds $500.00 per coupon issuer or bulk storage point per month, the State agency shall request FNS approval prior to any destruction of the coupons.

* * * * *

16. In § 274.10, a new sentence is added to the end of paragraph (d) to read as follows:

§ 274.10 Use or redemption of coupons by eligible households.

* * * * *

(d) *Residents of certain institution.* * * * Eligible residents of a group living arrangement, acting on their own behalf, may use coupons issued to them to purchase meals prepared especially for them at a group living arrangement. Residents of shelters for battered women and children may also use their coupons to purchase meals prepared especially for them at such shelters.

* * * * *

PART 278—PARTICIPATION OF RETAIL FOOD STORES, WHOLESALE FOOD CONCERNS AND BANKS

17. In § 278.1, a new sentence is added after the first sentence in paragraph (e); paragraphs (g) through (m) are redesignated as (h) through (n) and a new paragraph (g) is added. The revisions and additions read as follows:

§ 278.1 Approval of retail food stores and wholesale food concerns.

* * * * *

(e) *Treatment programs.* * * * If an alcoholic treatment and rehabilitation program is located on an Indian reservation and the State does not certify or license reservation-based centers, approval to participate may be granted if the requirements of paragraphs (a), (b), and (d)(1) of this section are met and the program either is funded by the National Institute on Alcohol Abuse and Alcoholism (NIAAA) pursuant to Pub. L. 91-616 or was so funded and has subsequently been transferred to Indian Health Service (IHS) funding. * * *

* * * * *

(g) *Shelters for battered women and children.* FNS shall authorize shelters for battered women and children at retail food stores to redeem coupons directly through wholesalers. The shelter must be public or private nonprofit, as defined in paragraph (d)(1) of this section, and meet the requirements of paragraphs (a) and (b) of this section. Shelters which also serve other groups of individuals must have a portion of the facility set aside on a long-term basis to shelter battered women and their children. Also required is that the shelter be a residence which serves meals or provides food to its residents.

* * * * *

18. In § 278.2, paragraph (g) is revised as follows:

§ 278.2 Participation of retail food stores.

* * * * *

(g) *Redeeming coupons.* Authorized retail food stores may exchange coupons in accordance with this part for face value upon presentation through the banking system or through a wholesale food concern to accept coupons from that retailer. Authorized drug addict or alcoholic treatment and rehabilitation programs, group living arrangements, and shelters for battered women and children may present coupons for redemption through authorized wholesale food concerns. A drug addict or alcoholic treatment center, group living arrangement, or shelter for battered women and children may purchase food in authorized retail food stores as the authorized representative of its participating households. Authorized drug addict and alcoholic treatment and rehabilitation programs, group living arrangements, and shelters for battered women and children shall not present coupons directly to a bank for redemption.
