OSHA anticipates that employers and employees will carefully and conscientiously carry out the provisions of this standard. However, even if only 50% of employees receive protection, there will be a reduction of 381,000 cases of impairment at equilibrium. This is still a very substantial benefit.

The OSHA estimates are based on the methodology of CPA, the exposure estimates of BBN and the scientific data contained in the record. OSHA has utilized its judgment based on the record to choose what it believes are the better methodologies, assumptions and data and has updated the estimates to take into account more recent, publicly available population data. Therefore, as discussed below, OSHA believes that its estimates improve upon the earlier estimates.

The Supreme Court in *Industrial Union Department, AFL–CIO* v. *American Petroleum Institute*, 65 L. Ed. 2d 1010, 100 S. Ct. 2844 (July 2, 1980) indicated that in promulgating a standard dealing with toxic materials or harmful physical agents, the Act "requires the Secretary to find, as a

threshold matter, that the toxic substance or harmful physical agent in question poses a significant health risk in the workplace and that a new lower standard is therefore reasonably necessary or appropriate to provide safe or healthful employment." (slip op., p. 5.).

The record in this proceeding clearly demonstrates and OSHA therefore concludes that all these tests have been met. OSHA finds that employee exposure to noise at existing workplace levels poses a significant health risk in the workplace. Even assuming full compliance with the current occupational noise exposure standard, some employees face a significant risk of material impairment of hearing. Accordingly a new and more protective standard is reasonably necessary and appropriate to provide healthful employment. Indeed OSHA would reach this same conclusion even if the risk of hearing impairment had been substantially less than is the case.

These conclusions have been reached without reliance on the further benefits of reduced absenteeism, improved workplace safety, and reduced extra-auditory health effects also resulting from the standard. But, of course, those benefits provide additional justification for the standard.

Finally, workplace noise, and the resulting occupationally related hearing loss, is perhaps the most widespread hazard faced by workers. As Leonard Woodcock, then President of the United Auto Workers stated, "noise is probably the most pervasive of the many job hazards which our members face today. We have had no health and safety problem about which our members complain more" (Tr. p. 1388).

The hearing conservation standard will go a substantial way towards alleviating the worst aspect of the hazard, hearing loss, though it will not achieve the ideal solution, eliminating the hazard at its source. The Agency finds that eliminating noise exposure utilizing engineering controls would create substantial additional benefits of reduced discomfort and more effective hearing conservation.

The existing level of risk in absolute numbers and the amount of risk reduced by this standard is great. Clearly, even if the level of risk were lower and the reduction of risk were not as great, OSHA would still be able to make a valid threshold finding of significant risk. While in this instance detailed data were available to estimate the hearing impairment benefits of this noise regulation, it should be recognized that in many circumstances much less evidence will be available, especially for relatively new substances which may create life threatening risks. As the Supreme Court noted, OSHA may make a finding of significant risk even when much less evidence is available upon which to base such judgments. "OSHA is not required to support its findings that significant risk exists with anything approaching scientific certainty . . . this provision requires a reviewing court to give OSHA some leeway where its findings must be made on the frontiers of scientific knowledge . . ." (slip op., p. 45).

The rest of this section sets forth, in depth, the basis for OSHA's estimates of hearing impairment and analyzes the relevant portions of the record. To make its estimates as current and exact as possible, OSHA made use of some publicly available census and labor statistics data, such as employment by SIC code, which is not physically in the noise record. The limited amount of data in this category that has been utilized is not controversial and is publicly available.

It is relatively complicated to present data on the number of noise-related cases of hearing impairment because it occurs at varying ages and lasts a varying number of years before death. The approach selected here is the "snapshot" approach. This estimates in a given year, the absolute number of cases of impairments existing if there were no regulation, the number eliminated by the standard or an alternative, and the number of impairments remaining. It is not appropriate to add the number of impairments in the 10th year to those in the 20th year, for example, since that would double-count the persons who were impaired in both years. On the other hand, the actual number of impaired individuals over periods of time greater than a year are greater than the number present in a given year. Over time persons die and then are subtracted from the totals while others enter into the totals for the first time.

For example, OSHA estimated that hearing conservation programs for all employees exposed above 85 dB would prevent 696,000 material hearing impairments in the 30th year and 799,000 in the 40th year. The total number of individuals saved from impairment by these programs during the decade is less than the sum of 696,000 + 799,000, because some individuals lived through that period and would have been counted as saved from impairment at each of those timepoints. On the other hand, the number of individuals saved from impairment prior to the 40th year is much greater than 799,000 since many who will be saved from impairment by these programs will die before the 40th year and were therefore not counted in the 40th year totals. OSHA has also presented data on the number of person-years of hearing impairment prevented. This data does not present the same problems, but does not indicate how many individuals will suffer impairment.

Much of the data presented is for the equilibrium year. Hearing impairment develops gradually over time from the accumulation of noise the employee is subject to in each year of employment. In addition, hearing impairment once developed lasts beyond age 65 and through the entire time of retirement until death. Clearly hearing impairment is a substantial loss to retired persons as well. Many people live well into their 80's. (For example, the average life expectancy of males at age 65 is 14 years and females 19 years. Of course a substantial portion of the population lives longer than these averages.) Therefore, the full effects of hearing conservation programs will not be achieved until the entire population has been replaced by a population who have spent their entire working lives covered by these programs. This does not occur for at least 70 years, the time from age 18 until when most retirees have died by age 88. However, benefits are also presented at the 10th, 20th, 30th and 40th years after the implementation of hearing conservation programs. It can be seen that by the 30th year, about ¾ of the number of employees who will ultimately be protected will receive the full benefits of hearing conservation programs.

Introduction

Workers will derive substantial benefits from the hearing conservation amendment. The primary benefit of the amendment will be a sizable reduction in the incidence of occupational hearing impairment for U.S. workers. This reduction will substantially improve the health and quality of life of these workers. In addition, there will be possible declines in the number of workplace accidents and in the incidence of cardiovascular disease following the implementation of the amendment. The hearing conservation amendment will also create financial benefits stemming from reductions in worker absenteeism and medical costs, which will partially offset the costs of the amendment. Employers will profit by the decline in workers' absences, while workers will benefit from the reduction in medical costs. Consumers and taxpayers as a whole will gain from a reduction in the societal subsidy to medical costs. These financial benefits

furnish additional support for the amendment.

Occupational hearing loss damages the social relationships of impaired workers by hindering their ability to communicate with other workers, their families, and their friends. OSHA's hearing conservation amendment, by substantially reducing the incidence of occupational hearing loss, will improve the quality of life for these individuals since they will no longer need to endure the difficulties and hardships experienced by those who associate with impaired workers. These improvements are also benefits of this amendment.

In addition, other indirect benefits will occur. For example, audiometric testing will indicate that there are workers with non-occupationally caused hearing difficulties, thereby enabling their referral to otologists for treatment. (For an example, see Ex. 321–1, p. 2.) Monitoring will provide information on workplace noise levels that may be used by workers and their union representatives in collective bargaining negotiations concerning work conditions. However, these informational benefits are not easily quantified, and the following discussion will focus on the benefits resulting from the increased use of personal hearing protectors as required by the amendment.

The hearing conservation amendment will also lead to a more equitable distribution of the costs and benefits of industrial production. Currently, one undesirable side effect of industrial production is the loss of hearing ability among a substantial number of workers. Although workers bear this cost of industrial production, the benefits of this production are shared by firms, stockholders, and consumers, as well as by workers. One traditional principle of distributional equity is that those who benefit from an activity should share in its costs. In order to prevent occupational hearing loss, implementation of the hearing conservation amendment will impose compliance costs on firms. Depending on the particular economic circumstances of these firms, these costs may be passed on to consumers or borne by stockholders. In both cases, most workers will no longer bear the cost of occupational hearing loss, while those who share the benefits of industrial production will share the costs of preventing that loss.

Moreover, the benefits of the reduced incidence of occupational hearing loss will be experienced to a greater extent by poorer and lesser educated workers who often have little choice except to work in the noisiest and least healthful jobs. Evidence derived from a U.S. Public Health Service Survey shows that for every age group, those of lower educational attainment have a higher risk of hearing impairment than those with higher levels of education (Center for Policy Alternatives, "Some Considerations," Ex. 138A, 3–2 to 3–3). Thus, the reduced incidence of occupational hearing impairment will more than proportionately benefit those with fewer material resources.

In this section, the various benefits of the hearing conservation amendment are discussed. The primary benefit of the amendment—the prevention of occupational hearing impairment—is treated extensively by including first, an examination of the major studies in the record, second, a description of OSHA's methodology for updating the estimates of the benefits and third, a presentation of the results of OSHA's calculations. Several other effects of the amendment, including improved workplace safety, and possible reductions in cardiovascular illness, absenteeism, medical costs, and workers' compensation payments, are also discussed. Finally, although the current record lacks the information needed for a final evaluation, two possible benefits are analyzed: reduced annoyance and improved productivity.

Material Impairment of Hearing Prevented

Previous Estimates

Four major studies present in the record estimate the number of hearing impairments that would be prevented by an OSHA standard regulating occupational noise exposure. Although each has certain inadequacies, taken together they reveal that occupational noise >85 dB impairs a substantial number of workers. Based on these studies and OSHA's own calculations and analysis, presented below, the Agency has concluded that regulatory action is necessary.

Bolt, Beranek, and Newman, Inc. (BBN), a consulting firm under contract to OSHA, prepared a report entitled "Impact of Noise Control at the Workplace" (Ex. 7), which was dated January 1, 1974. They estimated, based on "informal discussions with industry spokesmen", their extensive experience conducting noise surveys, and 1973 employment data, that 8,524,000 workers (59.3 percent of the 14,382,000 production workers in 19 two-digit industries) were exposed to noise levels > 85 dB, while 3,755,000 workers (26.1 percent) were exposed to levels > 90 dB (BBN, Ex. 7, p. C–2). For demonstration purposes they assumed that 30 percent of production workers were exposed to levels > 90 dB and an additional 40 percent were exposed between 85 and 90 dB. (Ex. 7, p. D–3). Then using the risk data of Baughn, they calculated that maximum compliance with a 90 dB Permissible Exposure Limit (PEL), which they referred to as "the present standard," would reduce the number handicapped at retirement by 700,000 (25 dB fence at 500, 1000, and 2000 Hz); and that compliance with an 85 dB PEL would reduce this number by an additional 770,000.

This study formed the basis for BBN's testimony at the 1975 hearings. After those hearings, OSHA contracted with BBN for a more extensive study of workplace noise and the impact of 85 and 90 dB PEL's. The resulting study, entitled "Economic Impact Analysis of Proposed Noise Control Regulation" (Ex. 192), was released by OSHA in 1976. In it, BBN estimated that 4,468,400 workers (34.5 percent of the 12,939,300 production workers in the 19 industries studied) were exposed to noise levels > 85 dB, while 2,393,200 workers (19.3 percent) were exposed to levels > 90 dB (BBN, Ex. 192, p. 2–7).

Using dose-response relationships for noise exposure and hearing impairment developed by Baughn and the team of Burns and Robinson, BBN estimated the number of hearing impairments that would occur under a number of alternative regulations, definitions of material impairment, and assumptions concerning job mobility. They estimated that after implementation of a 90 dB PEL, between 86,400 and 875,100 workers would still be impaired (25 dB fence at 500, 1000, and 2000 Hz) while an 85 dB PEL would reduce this to between 44,400 and 631,200. Therefore, the additional impairments prevented by an 85 dB PEL would be between 42,000 and 243,900 (BBN, Ex. 192, p. 2–35). (The range of estimates was due to the use of two measures of the risk of impairment: the Burns and Robinson data for the lower bound and the Baughn data for the upper bound.)

In addition, BBN made estimates of the benefits of requiring hearing protector use in combination with the 90 and 85 dB PEL's. They did this using three different assumptions concerning hearing protector use. First, that all workers required would wear hearing protectors and three-fourths of them would wear them correctly. Second, that three-fourths of the workers required to do so would wear hearing protectors and three-fourths of them would wear their hearing protectors correctly. Third, that one-half of the workers required to

do so would wear hearing protectors and one-half of them would wear them correctly. In all cases, correct use of hearing protectors was assumed to yield a 30 dB attenuation.

Using these assumptions, BBN calculated that a 90 dB PEL for engineering controls, with hearing protector use for those exposed above 85 dB, would leave between 10,800 and 324,200 impairments after 20 years of exposure if everyone who required hearing protectors wore them. The number of impairments remaining in the workforce was larger under the second and third assumptions. For these two assumptions, the estimates of impairments remaining in the population were between 30,000 and 488,400 impairments (second assumption), and 32,900 and 634,900 impairments (third assumption) (BBN, Ex. 192, p. 2–35). Compared to the effects of a 90 dB PEL, the use of hearing protectors by those exposed above 85 dB was therefore estimated to prevent at least an additional 53,500 to 75,600 impairments (lower bound estimate based on the Burns and Robinson data) or an additional 240,200 to 550,900 impairments (upper bound estimate based on the Baughn data).

The estimates provided by BBN require updating for several reasons. First, the production work force of 12,939,300 for the 19 industries studied by BBN was based on employment data for 1975. Second, BBN calculated the benefits of noise control assuming a workforce composed entirely of 20-year-olds who would be exposed to noise for 20 years. This inaccurately depicts the effects of noise on a real work force that also contains older workers and retirees who have been exposed for more than 20 years. Third, in most cases, the number of hearing impairments was calculated for hearing thresholds greater than or equal to a 25 dB average of 500, 1000, and 2000 Hz. For reasons discussed in the Health Effects section, OSHA believes that this combination of frequencies is not the most appropriate measure of material hearing impairment and that a 25 dB average of hearing threshold levels at the frequencies of 1000, 2000, and 3000 Hz is preferable.

A third benefits estimate was performed by the Center for Policy Alternatives (CPA) under contract to the Environmental Protection Agency (EPA). Entitled "Some Considerations in Choosing an Occupational Noise Exposure Regulation," it was presented at the first hearings. Using the risk data of Baughn throughout their report, CPA estimated that present noise exposures (based on the estimates in BBN's first report and assuming no job mobility) would lead to 1,649,000 impairments (25 dB at 500, 1000, and 2000 Hz) after 40 years of exposure. They calculated that if noise exposures for all workers above 90 dB were brought down to 90 dB, the number of impairments could be reduced to 1,106,000, while if all exposures above 85 dB were brought down to 85 dB, the number of impairments could be reduced to 710,000 (CPA, Ex. 138A, p. 2–28). Thus a 90 dB PEL could prevent 543,000 hearing impairments while an 85 dB PEL could prevent an additional 396,000 impairments.

A fourth estimate of the impairments prevented by the proposed noise regulation that was submitted to the record and subjected to examination at the 1976 hearings was also performed by CPA under contract to EPA. ("Economic/Social Impact of Occupational Noise Exposure Regulations," Ex. 232). This report continued the earlier research CPA had performed for EPA (Ex. 138A). The noise exposure profile used in the second CPA report was based on the same raw exposure data that BBN had collected for their second report (Ex. 192), although the data were modified by CPA. CPA estimated that after the establishment of equilibrium, compliance with a 90 dB PEL would prevent 770,000 workers from impairment (25 dB fence at 500, 1000, and 2000 Hz) while an 85 dB PEL would prevent 1,350,000 impairments (CPA, Ex. 232, p. 5p7). Thus the additional impairments prevented by the 85 dB PEL would total 580,000.

For various reasons the CPA estimates also require updating. First, the estimates were based on 1974 employment levels rather than on the latest available data. Second, although CPA used an age distribution of the exposed population, they excluded retirees and did not distinguish between men and women. OSHA has determined that these calculations should include future retirees because they will also benefit from hearing conservation programs. In addition the calculations must distinguish between men and women because of the presbycusis differences between the sexes. Third, CPA used the frequencies 500, 1000, and 2000 Hz instead of the more appropriate 1000, 2000, and 3000 Hz. Fourth, the CPA study discussed the benefits of engineering control strategies to reduce noise levels to 90 and 85 dB, but not the benefits of hearing conservation programs that require the issuance and use of hearing protectors.

OSHA's Methodology

In order to improve upon the estimates of BBN and CPA, OSHA has decided to revise and update the calculation of the benefits of the hearing conservation amendment. The principal benefit of the hearing conservation amendment will be to prevent occupational hearing impairments through the inter-related aspects of effective hearing conservation programs. For example, monitoring provides information on the need for hearing protection and the type of protectors required. The use of these hearing protectors will reduce worker exposures. Training sessions will instruct workers in properly fitting, maintaining, and using hearing protectors. Audiometric testing detects temporary and permanent shifts in hearing ability, thereby detecting workers who are susceptible to hearing loss, identifying workers who may be wearing their hearing protectors improperly, and motivating those who would not otherwise wear them.

OSHA's estimates of the benefits of hearing conservation programs were calculated by comparing the number of hearing impairments that would occur if no hearing conservation programs exist with the number that will occur after they are established. The methodology used to estimate the benefits is derived from the studies summarized above as well as from other evidence contained in the record. Specifically, OSHA has determined that the methodology of the CPA report is more appropriate than the simpler methodology followed by BBN. BBN's methodology was based on a hypothetical work force composed of 20-year-olds, while CPA's methodology used the actual age distribution of the noise-exposed population. OSHA's calculations do, however, use the noise exposure distribution developed by BBN since it is the best available evidence on occupational noise exposures.

The benefits of preventing hearing impairment are described here by presenting (1) the number of persons prevented by hearing conservation programs from incurring material impairment of hearing after the full effects of these programs are realized, (2) the number of persons prevented from incurring material impairment of hearing at years selected from the interim time period before the full effects are realized, and (3) the accumulated person-years of impairment prevented over that time period.

People in the *current* workforce will only gain a limited benefit from the hearing conservation programs

established by this hearing conservation amendment since many of these workers have already suffered noise-induced hearing loss. The full benefits of the amendment will be realized only by workers who spend their entire working lives covered by its provisions. It will take a number of years for the current worker population to be completely replaced by people who have been covered by hearing conservation programs for all of their working lives. Over time, the number of people prevented from incurring a material impairment will rise until an equilibrium is reached after the entire pre-hearing conservation work force has been replaced. With the continued provision of hearing protectors and hearing conservation programs, this equilibrium level of impairments prevented should continue for the years following the establishment of equilibrium.

Although the benefits of preventing occupational hearing impairment are not fully realized until equilibrium is reached, benefits will accrue during the period prior to equilibrium. As the years advance, the number of workers prevented, at any one time, from having a material impairment of hearing will increase. In order to describe this progression, the number of material impairments prevented during the 10th, 20th, 30th, and 40th years following implementation were calculated and are referred to as the interim benefits of the hearing conservation programs.

These first two descriptions, the number of impairments prevented at equilibrium and the number prevented at 4 interim years, provide only views of the benefits at particular time points. These "snapshot" views fail to capture the differences in the number of impairment-free years each person has enjoyed. For example, the number of impairments prevented at the 40th interim year will include some people who have been free from impairment for 40 years, as well as some people free from impairment for as short as 1 year. In fact, as time passes after implementation, the average number of impairment-free years per impairment prevented increases.

In order to describe this pattern, OSHA has calculated the accumulated number of person-years of impairment prevented over the interim time period. The number of person-years of impairment prevented is derived by multiplying the number of impairments prevented by the number of years each individual was kept free from impairment. For example, 2 people prevented from incurring a material impairment of hearing for 10 years apiece equals 20 person-years of impairment prevented. This would also be equal to 1 person for 20 years or 4 people for 5 years.

The accumulated person-years of impairment prevented were estimated from the interim benefits using the procedures suggested and used by CPA (Ex. 232, p. B–21), and described in Appendix A of OSHA's Final Regulatory Analysis. Estimates of the accumulated number of person-years of impairment prevented were calculated for 10, 20, 30, 40, and 70 years after the implementation of hearing conservation programs. Seventy years was chosen to approximate the length of time required for equilibrium to be reached. Since these calculations were based on a population that included retirees, and since many retirees live well into their 80's, it will take at least 70 years for people in the existing workforce, who have spent some of their working lives without the benefits of hearing conservation programs, to be replaced by people who have had those benefits.

Noise Exposure Distribution. These updated hearing impairment calculations are based on the same set of 19 industries and the same noise exposure data used by BBN for their second study of the proposed regulation. (CPA used the same set of industries, but modified the exposure data.) BBN, in their economic impact analysis, presented a noise exposure distribution based on surveys of 68 different establishments in 19 two-digit standard industrial classification (SIC) industries. The industries selected by BBN were the ones believed to contain most of the noisy workplaces in the U.S. (BBN, Ex. 192, p. 2–1). These industries and the number of production workers in them during 1979 are listed in Table 3.

Note.—That the total number of workers in these industries today is about 2 million greater than BBN's 1976 estimate.

The selection of industries and establishments was based on BBN's extensive experience with industrial noise and its control. During the survey, BBN estimated the number of workers exposed to various noise levels within 5 dB ranges. Because of uncertainty in the classification of workers by exposure level, BBN adjusted the raw data by distributing one-fourth of the workers in each 5 dB range to the next highest 5 dB range and one-fourth to the next lowest 5 dB range. Although CPA judged this adjustment to be inappropriate (See Ex. 232, p. B–4), OSHA has retained it because BBN was more familiar with the raw data and its peculiarities.

Table 3.—*Industries Studied*

SIC code [1]	Industry title [1]	Production workers [2] (thousands)
20	Food	1,176.2
21	Tobacco	52.5
22	Textiles	777.0
23	Apparel	1,122.2
24	Lumber and wood	646.3
25	Furniture and fixtures	398.0
26	Paper	541.5
27	Printing and publishing	702.2
28	Chemicals	636.9
29	Petroleum and coal	139.7
30	Rubber and plastics	801.1
31	Leather	207.4
32	Stone, clay, and glass	560.5
33	Primary metals	978.3
34	Fabricated metals	1,305.9
35	Machinery, except electrical	1,816.2
36	Electrical machinery	1,378.6
37	Transportation equipment	1,404.2
49	Utilities	659.3
Total		14,904.0

[1] Executive Office of the President, Office of Management and Budget, *Standard Industrial Classification Manual*, 1972.
[2] Average number of production workers in 1979.

Source: U.S. Department of Labor, Bureau of Labor Statistics, *Employment and Earnings*, 27, (March 1980): 58–66, Table B-2.

These exposure estimates, which were published in the 1976 BBN report (BBN, Ex. 192, pp. 2–4 and 2–7) and discussed at the hearings, have been recalculated to correct minor errors in the original profile. Thus, the noise exposure profile used here differs slightly from the profile published by BBN as Table 2.1 of their report. These differences are small—no more than one-half of one percentage point for any 5 dB exposure range. This recalculation has also corrected the inconsistency of Tables 2.1 and 2.2 of the 1976 BBN report (BBN, Ex. 192, pp. 2–4 and 2–7). Except for the total percentage exposed above 85 dB, the exposure profile used here is consistent with BBN's Table 2.2. The total percentage above 85 dB differs by only one-tenth of one percentage point. (See also Table 11 in the Cost of Compliance section below.) Table 4 presents the corrected noise exposure distribution for the 19 industries.

Table 4.—*Noise Exposure Distribution*

Exposure Level (db)	Percent
Less than 80	46.88
80–85	18.74
85–90	15.06
90–95	10.98
95–100	5.47
100+	2.87
Total	100.00

Source: Bolt, Beranek, and Newman. This is a corrected version of Table 2.1 from "Economic Impact of Proposed Noise Control Regulation," Ex. 192, p. 2-4.

OSHA has chosen to use the BBN exposure estimates because they remain the most comprehensive and detailed estimates of occupational noise exposures in U.S. industry. Although these estimates were briefly criticized at the hearings (see Hearing Transcript,

Sept. 21, 1976, pp. 139–43; Sept. 22, 1976, pp. 237–42, 360–1) as well as in the post-hearing comments (Ex. 279–8, pp. 37–8, 69–72), no one came forward with another set of exposure estimates that includes both the full range of industries and the detailed exposure levels of the BBN estimates. The American Road Builders Association (Ex. 186B) and the Motor Vehicle Manufacturing Association (Ex. 242D) presented estimates limited to the specific industries in which their member companies operate. Evidence, based on samples drawn from a wider range of industries, is included in surveys by Hearing Conservation Noise Control (Ex. 240B) and NIOSH (Ex. 321–14B and Ex. 321–14D). These surveys present the number of workers exposed above either 90 or 85 dB but do not provide a detailed classification of employees by 5 dB exposure level ranges as do the BBN estimates. This classification is necessary for the matching of the exposure distribution with the risk matrices to estimate the number of hearing impairments prevented by hearing conservation programs.

OSHA has concluded that three simplifying assumptions were necessary in order to use the BBN noise exposure distribution to estimate the number of hearing impairments prevented. First, that BBN's noise exposure distribution adequately describes the occupational noise environment in the 19 industries studied, and that the 19 industries encompass all substantial occupational noise exposure. Second, that the noise exposure distribution and the size of the work force in the 19 industries will remain unchanged for the 70-year period used to calculate benefits. If there are changes in the noise distribution and the size of the work force which increase the number of persons exposed to harmful noise levels, this assumption will lead to an understatement of the number of hearing impairments prevented. On the other hand, if these changes decrease the number of persons exposed, then there will be an overstatement of the number of impairments prevented. Third, in industries with fluctuating noise levels, it was assumed that a 5 dB exchange rate adequately represents time-weighted exposure levels. The BBN data are based on a 5 dB exchange rate. The CPA report argued that these data should be adjusted to take into account a 3 dB exchange rate (CPA, Ex. 232, p. B–5).

The exchange rate or the "doubling rate" is a way of either averaging or comparing exposure levels and durations. Under a 5 dB exchange rate, for a 5 dB increase in the exposure level the exposure duration must be halved to obtain an equivalent time-weighted exposure. Thus, 8 hours of exposure to a level of 90 dB is equal to 4 hours at 95 dB. Similarly, under a 3 dB rate, an increase of 3 dB necessitates halving the duration—e.g., 8 hours at 90 dB equals 4 hours at 93 dB. Since OSHA is currently retaining the 5dB exchange rate used in 29 CFR 1910.95, and since the procedure used by CPA to adjust the BBN data does not appear to be based on actual exposure data, the Agency did not adjust the noise exposure distribution to account for a 3 dB exchange rate. This adjustment would have increased the effective exposure level of the work force and would have increased the estimated number of hearing impairments. By not performing this adjustment, OSHA may be understating the number of hearing impairments prevented by the final amendment.

Fences. The methodology used to estimate the number of people suffering impairments of hearing continues the standard practice of drawing fences to demarcate "normal" from "materially impaired" and then calculating the number of persons with hearing abilities worse than the level of that fence. An important issue is the choice of appropriate fences, both in terms of the levels used as well as the frequencies to be examined or averaged. BBN did most of their calculations using a 25 dB average of hearing threshold levels at the frequencies of 500, 1000, and 2000 Hz. However, BBN also examined the effects of choosing other levels, 15 and 35 dB, as well as an average of the frequencies of 1000, 2000, and 3000 Hz (BBN, Ex. 192, pp. 2–27, 2–28). CPA correctly pointed out that the effect of noise on a population of workers is to cause a change from one population distribution to another. They state:

> Essentially the entire population of workers has worse hearing because of the influence of noise. Those which, without noise, might have had excellent hearing are shifted so that they have less than excellent hearing. Those which without noise, would have had only fair or poor hearing have their hearing handicaps increased. (CPA, Ex. 232, p. 5–2)

Thus, the usual practice of drawing a single fence does not adequately describe the shift of the entire distribution of workers. Therefore, CPA suggested that a series of fences be employed (CPA, Ex. 232, p. 5–3). There were many other comments submitted to the record concerning the choice of appropriate fences, both for the determination of the number of workers suffering material impairment as well as for workers' compensation purposes. (For a discussion of these comments, see the Health Effects Section.) After a thorough review of these comments, OSHA has concluded that the number of hearing impairments prevented by the final amendment should be measured using the fences of 15, 25, and 40 dB. These fences are defined as the average of a person's hearing threshold levels for the frequencies 1000, 2000, and 3000 Hz. As described in the discussion on health effects, these frequencies were chosen as those most appropriate to describe the ability of persons to understand human speech under everyday conditions. The levels were chosen to describe the number of persons with various degrees of hearing loss: mild hearing loss, material impairment, and moderate to severe impairment.

Dose-Response Relationship. A person's hearing ability can be estimated by analyzing two components: the loss in hearing ability due to noise and the loss in hearing ability due to the effects of aging (presbycusis). The following discussion will focus on these two components, presenting OSHA's arguments concerning the best available and most appropriate evidence for each.

The change in hearing ability due to noise exposure is measured in terms of the permanent decibel shift in hearing thresholds caused by noise. This change, the amount of lost hearing ability, is more commonly called the Noise-Induced Permanent Threshold Shift or NIPTS. An examination of the hearing loss studies cited in the Health Effects section reveals a fair degree of consistency in their basic findings concerning the amount of NIPTS caused by various combinations of exposure levels and durations. One way to incorporate all of the information in these studies is to average the results. Col. Daniel Johnson has recommended such an approach (Ex. 17, p. 2) and EPA has applied it to the data of Baughn, Burns and Robinson, and Passchier-Vermeer both for establishing criteria for noise regulation (Ex. 26–3) and for identifying safe levels of noise exposure (Ex. 30, p. C–5). Recently Col. Johnson published a variety of calculations, based on averaging the data of Burns and Robinson (referred to only as "Robinson" by Johnson) and Passchier-Vermeer (Ex. 310).

OSHA has chosen to use the studies of Burns and Robinson and Passchier-Vermeer because of the completeness of their data for describing the NIPTS at frequencies from 500 to 6000 Hz for various population percentiles, noise levels, and exposure durations. Baughn's data (Ex. 11) were not available for individual frequencies, thus preventing

the averaging of hearing threshold levels at 1000, 2000, and 3000 Hz. The NIOSH data (Ex. 26–2) were limited to exposures of 85, 90, and 95 dB, thus preventing the estimation of hearing loss for exposures to 80 and 100 dB.

OSHA has determined that the results of the Burns and Robinson and Passchier-Vermeer studies can be strengthened by averaging the NIPTS values from each. Because Johnson's recent publication, *Derivation of Presbycusis and Noise Induced Permanent Threshold Shift* (Ex. 310), provides a convenient presentation of this data, OSHA has used it as the basis for the calculation of the number of occupational hearing impairments. Table A.7 in Appendix A of OSHA's Final Regulatory Analysis presents the NIPTS values, derived from the Johnson publication, which were used by OSHA.

The second component that determines a person's hearing ability is calculated by observing the hearing ability of a "normal" population, and making adjustments to account for the effects of aging (presbycusis) on hearing ability. For this study, OSHA has used a presbycusis base developed by Johnson from the data of the U.S. Public Health Survey conducted in 1960–62. In this survey, 6,672 persons aged 18–79, drawn from the civilian, non-institutional population of the U.S., were given audiometric examinations. Thus, the survey gives a detailed picture of the actual hearing ability of the U.S. population. Other researchers, most notably Burns and Robinson, have screened their populations quite severely in order to eliminate all individuals who have been exposed to gunfire, or had ear disease, or other ear abnormalities. These screening techniques were designed to create a population that is otologically "normal."

But the actual work force is not otologically "normal." Some workers have been exposed to gunfire, both from sport shooting and from service in the armed forces. Other workers have or have had ear disease or other ear abnormalities. OSHA has therefore decided that the presbycusis base to use in calculating the number of hearing impairments in the work force should reflect, as closely as possible, the real world hearing ability of the U.S. population. The Public Health Survey represents the best available description of this hearing ability. An examination of the aging curves in Baughn (Ex. 12, p. 26) and Berger, Royster, and Thomas (Ex. 266A, pp. 42, 43, and 57) reveals that the data of the Public Health Survey are consistent with other major presbycusis bases.

The two components, the NIPTS and the presbycusis, may then be added together to find the total hearing loss for populations of given ages and sexes exposed to specified levels and durations (See Johnson's discussion, Ex. 310, p. 16). Johnson has provided a convenient computer program (Ex. 310, pp. 43–47) which was used to generate dose-response relationships. A simple linear interpolation was used to match the exposure distribution with these dose-response relationships to create the risk matrices (Tables A.9, A.10, A.11 in Appendix A of OSHA's Final Regulatory Analysis) used in the calculation of the number of hearing impairments.

Hearing Protector Use and Attenuation. Under the current noise standard, hearing protector use is mandatory for workers exposed above the PEL (90 dB TWA) where there are no feasible engineering or administrative controls. Under the amendment hearing protectors must also be provided to all workers exposed to noise levels between 85 and 90 dB, but of these workers only those who have experienced a significant threshold shift are required to wear hearing protectors. It is impossible to project accurately the number of workers exposed to noise between 85 and 90 dB who would voluntarily choose or be required to wear hearing protectors, but it is probable that the annual audiometric test will identify, by showing significant threshold shifts, the employees most vulnerable to occupational hearing loss. These employees will then be required to use hearing protectors, which should prevent most of them from incurring a material impairment of hearing. Thus, the following calculations are based on the assumption that following the implementation of this amendment, all workers who are vulnerable to occupational hearing loss will wear hearing protectors when exposed to noise >85 dB.

The CPA report did not present any assumptions concerning hearing protector use or attenuation. BBN assumed for correct usage, an attenuation value of 30 dB (BBN, Ex. 192, p. 2–34). As the following studies indicate, this is an attenuation that is generally achieved only in laboratory settings.

In a NIOSH-sponsored study (*A Field Investigation of Noise Reduction Afforded by Insert-Type Hearing Protectors*, Ex. 308), a team of researchers investigated the attenuation received by workers using various types of hearing protectors in actual industrial settings. The three earplugs tested had median attenuation values of 7.5, 10.0, and 12.8 dB (Ex. 308, p. 26). Padilla's study revealed an overall mean attenuation of 12 dB at 500 Hz for the earplugs he tested. He estimated that this was equal to approximately 7 dB over the frequencies 125–8000 Hz. ("Ear Plug Performance in Industrial Field Conditions," Ex. 301, p. 34). Regan found mean attenuation values of 25.11 and 19.74 dB for two types of earplugs and 33.04 dB for one type of earmuff (*Real Ear Attenuation of Ear Protective Devices Worn in Industry*, Ex. 300A, pp. 67–71). In addition, Berger presents information from the National Acoustic Laboratories (Australia) for four different earplugs. For these earplugs, the Noise Reduction Rating with a correction of two standard deviations ranged from 0–14 dB, while with a correction of one standard deviation the range was 9–19 dB ("Laboratory Estimates of the Real World Performance of Hearing Protectors," Ex. 321–35E).

The results of these studies reveal, for the earplugs tested, a mean attenuation of approximately 10–15 dB in industrial settings. It is reasonable to assume that the training and audiometric testing provisions of the hearing conservation amendment will improve industrial hearing conservation programs to at least maintain the upper bound of this average attenuation range. Moreover, those exposed to very loud workplace noise can use earmuffs or a combination of earmuffs and earplugs. These two options appear to have a higher attenuation rating than the earplugs tested in the studies mentioned. Accordingly, for the purposes of these calculations, OSHA has concluded that a reasonable assumption is that workers using personal hearing protection will receive an attenuation of 15 dB.

Mobility. The OSHA calculations were based on the assumption that workers do not move between jobs with harmful noise exposures and jobs without such exposures. Both BBN and CPA generally assumed such mobility to calculate the number of material hearing impairments. However, they used different procedures and assumptions concerning the effect of mobility on the number of material impairments in the population and the number that would benefit from reduced occupational noise exposure. BBN's calculations suggest that assuming mobility reduces the number of additional workers protected by controlling noise levels to 85 dB. (BBN, Ex. 192, Table 2.11, p. 2–30). CPA, on the other hand, argued that an assumption of mobility dramatically increases both the estimated number of

material impairments in the pre-regulation population and the number of impairments that would be prevented by regulatory action (Ex. 232, p. 5–8. See also discussion at the hearings by CPA: Hearing Transcript, Oct. 8, 1976, pp. 2286–92, 2343–9, 2354–8 and BBN's reply in their Post-Hearing Comments, Ex. 278, pp. 60–65).

Occupational mobility has two separate, contradictory effects. First, mobility from jobs with harmful noise exposures to jobs without such exposures means that each individual worker will be exposed to harmful levels of noise for a shorter length of time because he or she will not have spent an entire lifetime exposed to harmful levels of occupational noise. This shortened duration of exposure lowers a worker's chance of suffering an occupational hearing impairment as well as the amount of lost hearing ability, and thus would tend to reduce the number of impairments in the entire population. The second effect of mobility, however, is to increase the population exposed to harmful noise levels, even though for shorter periods of time. This increase in the population at risk will tend to increase the number of occupational hearing impairments.

CPA has calculated that, on the average, workers hold three different jobs during their lifetimes. If one assumes that during one of these jobs they will be exposed to harmful occupational noise levels and that the other two jobs have no such noise exposure, then the total population at risk will be increased threefold. (The noise exposure distribution indicates that approximately one-third of the jobs in the 19 industries have noise exposures >85 dB; while two-thirds have exposures less than this. See Table 4.) In order for there to be no difference in the estimated number of hearing impairments when comparing the assumptions of mobility and no mobility, this threefold increase in the number of workers must be matched by a two-thirds decrease for each worker in the percentage risk of crossing a fence. If the decrease is less than two-thirds, then mobility will increase the number of impairments. If it is more than two-thirds, then mobility will decrease the number of impairments.

CPA calculated, using the equal energy rule (the 3 dB exchange rate), equivalent lifetime exposure levels for workers holding one job with harmful noise exposures and two jobs without such exposures during a working lifetime. This calculation reveals that the maximum reduction in a worker's lifetime exposure level with an assumption of three jobs per worker is about 5 dB for exposures >90 dB, 4 dB for exposures of 85–90 dB, and 3 dB for exposures of 80–85 dB (CPA, Ex. 232, Table B–6, p. B–14). An examination of the risk matrices (Tables A.9, A.10, A.11 in Appendix A of OSHA's Final Regulatory Analysis) shows that these reductions in lifetime exposure levels lead to a decrease of less than two-thirds in the percentage risk. Therefore, the decrease in the percentage risk is more than matched by the increase in the population at risk due to mobility. Thus, even though an individual's risk of impairment declines from the shortened exposure duration, the increase in the number of persons at risk leads to an increase in the total number of impairments in the population.

Accordingly, the Agency concurs with the judgment of CPA that an assumption of mobility will increase the estimated number of material impairments in the noise-exposed population and therefore will increase the estimated number of impairments prevented by the regulation. As CPA also argued, this effect occurs whenever workers move between jobs with and jobs without harmful noise levels and is intensified by increasing the assumed number of jobs per worker (CPA, Ex. 232, p. 5–8). This effect follows from the shape of the dose-response curve for noise, which is such that the first exposure to noise is more damaging than successive increments of exposure (Hearing Transcript, Oct. 8, 1976, p. 2357).

However, the current record does not contain sufficient information on the current pattern of occupational mobility for the industries under study to enable OSHA to update the hearing impairment calculations using a specific mobility rate. Therefore, OSHA has assumed that no mobility occurs. Since such mobility does take place, this assumption will lead to an understatement of the estimated number of material impairments in the population as well as to an understatement of the number of hearing impairments prevented by the final hearing conservation amendment.

Results of OSHA's Calculations

Occupational hearing impairment is a function of age, sex, exposure level, and exposure duration. OSHA's methodology for calculating the number of material impairments incorporates these functional relationships.

The six basic steps used to calculate the number of material impairments prevented by the hearing conservation amendment were:

1. Develop an age distribution,
2. Develop an age by exposure level distribution,
3. Adjust exposure levels for the use of hearing protectors,
4. Develop a sex distribution and combine with the age by exposure level distribution,
5. Calculate the number of hearing impairments from all causes,
6. Determine the number of occupational hearing impairments.

These six steps, as well as the procedure used to estimate the interim benefits of the regulation, are described in detail in Appendix A of OSHA's Final Regulatory Analysis. It should be noted that OSHA's procedure uses an age distribution that includes retired workers, as well as incorporating a distribution of the work force by sex, thus improving upon two deficiencies of previous studies.

The benefits of the hearing conservation amendment will accrue primarily to future populations of workers, slowly reducing the number of material impairments in these populations until an equilibrium is reached. The results of these calculations show that 1,060,000 individuals currently have crossed a 25 dB fence (1000, 2000, and 3000 Hz) due to occupational noise. Hearing conservation programs are expected to reduce this number to 848,000 persons 10 years after implementation; 583,000 in 20 years; 364,000 in 30 years; 261,000 in 40 years; and 162,000 at equilibrium (See Appendix A of OSHA's Final Regulatory Analysis, Table A.15). In each of these years, the number of hearing impairments which would have existed in the absence of hearing conservation programs remains constant at 1,060,000.[2] Consequently, the number of hearing impairments prevented by hearing conservation programs can be calculated by subtracting the number that will exist in any of the years from the 1,060,000 impairments that would have existed. Hearing conservation programs, therefore, are expected to reduce the number of hearing impairments (25 dB fence) by at least 212,000 in the 10th year after implementation; 477,000 in the 20th year; 696,000 in the 30th year; 799,000 for the 40th year; and 898,000 at equilibrium (See Table 5). The reduction of 898,000 impairments at any one time after the establishment of equilibrium represents 84.7 percent of the occupational impairments that would have occurred without hearing conservation programs.

In addition, OSHA has calculated the number of individuals with hearing impairments at any one time after the

[2] This is based on the assumption of a constant size for the work force exposed to noise, as discussed above.

establishment of equilibrium for two other fences—15 dB and 40 dB at 1000, 2000, and 3000 Hz. These calculations reveal that without hearing conservation programs, 1,624,000 people will be across a 15 dB fence, and 473,000 will be across the 40 dB fence due to occupational noise exposure. Hearing conservation programs for those exposed to levels >85 dB are expected to reduce this to 321,000 across the 15 dB fence, and 59,000 across the 40 dB fence (Table A.13 of OSHA's Final Regulatory Analysis). Thus after the establishment of equilibrium, these programs can be expected to reduce the number of persons across the fences by 1,303,000 for the 15 dB fence, and 412,000 for the 40 dB fence (See Table 5), reductions of 80.2 percent, and 87.1 percent, respectively.

Table 5.—*Hearing Impairments Prevented by the Hearing Conservation Amendment*

	Years after implementation				Equilibrium
	10	20	30	40	
Number of impairments prevented:					
15 dB Fence					1,303,000
25 dB Fence	212,000	477,000	696,000	799,000	898,000
40 dB Fence					412,000
Accumulated person-years of impairment prevented:					
25 dB Fence	1,060,000	4,505,000	10,370,000	17,848,000	43,300,000

Source: OSHA, Office of Regulatory Analysis

Finally, the number of person-years of impairment prevented can be calculated. (The procedure used follows that of CPA, Ex. 232, and is described in Appendix A of OSHA's Final Regulatory Analysis.) In the 70 years following implementation of the amendment, the total accumulated person-years of prevented impairment is 43.3 million. The pattern of this accumulation is presented in Table 5.

Two conclusions follow from these data: First, without hearing conservation programs, a large number of workers will suffer hearing impairment and reduced hearing ability. Therefore, OSHA has determined that workers who are exposed to occupational noise >85 dB (TWA) face a significant risk of material impairment. Second, hearing conservation programs for all workers exposed to >85 dB (TWA) will substantially reduce that risk.

Full Compliance Assumptions

In keeping with past practice concerning the preparation of economic analyses of OSHA regulations, full compliance with the hearing conservation amendment, including 100 percent usage of hearing protectors, has been assumed. For a variety of reasons, this may not occur. Many workers cannot or will not wear hearing protectors. Workers with irregularly shaped or infected ear canals cannot wear ear inserts. Similarly, persons needing to wear either prescription or safety glasses often cannot wear ear muffs because the frames of the glasses will break the seal the muff makes around the ear. More often, hearing protectors will not be worn because they are uncomfortable. Workers have complained about headaches, claustrophobia, and general discomfort from the use of ear protectors. In addition, the use of earplugs may lead to ear infections, especially in dirty workplaces.

Full compliance with this amendment will have substantial benefits. Partial compliance will also provide benefits, although not to the same extent. Moreover, the estimated attenuation of 15 dB after regulation may also be an overestimate of the benefit achieved from the use of hearing protectors. In order to provide this attenuation, hearing protectors must be fitted carefully, worn properly, maintained conscientiously, and replaced in a timely fashion. As illustrated in Table 6, if all workers who are required to do so wear hearing protectors, if they receive a 15 dB attenuation, and if they wear their hearing protection every day that they are exposed to noise, then the total pool of material hearing impairment from occupational causes (at equilibrium) will be reduced by 898,000 persons. If only 10 dB of attenuation is achieved, the number of material impairments prevented falls to 759,000. However, if only 50 percent of workers exposed above 85 dB receive 10 dB attenuation and the remaining 50 percent do not wear ear protection, then the reduction in the number of impairments declines to 381,000. The effectiveness of hearing conservation programs is therefore very dependent on the attenuation that hearing protectors provide and their daily use by all workers.

Table 6.—*Sensitivity Analysis for Assumptions on Hearing Protector Use and Attenuation*

Assumption	Number of occupational impairments prevented[1]
100% of workers required[2] wear hearing protectors and receive 15 dB attenuation	898,000
100% of workers required[2] wear hearing protectors and receive 10 dB attenuation	759,000
50% of workers required[2] wear hearing protectors and receive 10 dB attenuation	381,000
No hearing protector use	0

[1] Hearing threshold levels >25 dB average of 1000, 2000, and 3000 Hz. Data are for equilibrium.
[2] All workers exposed to levels >90 dB after feasible engineering and administrative controls have been implemented and all workers exposed >85 dB who have shown a permanent significant threshold shift.

Source: OSHA, Office of Regulatory Analysis.

These calculations of the number of impairments prevented are also based on the assumption that workers exposed above 85 dB do not currently use hearing protectors. However, the current OSHA standard for noise does require the use of hearing protectors by workers exposed to levels above the PEL of 90 dB (TWA) and the establishment by each employer of a "continuing, effective hearing conservation program" for these employees (29 CFR 1910.95(b)(3)). Moreover, there is evidence in the record to suggest that some employees currently do wear hearing protection and that some companies have established hearing conservation programs. (The BBN exposure estimates were based solely on the use of non-use of engineering controls. The use or personal hearing protectors was not factored into their estimates.)

But the effectiveness of these programs and the length of time they have been in operation is less clear. Submissions by Newport News Shipbuilding (Ex. 131), Dupont (Ex. 273A), and Burlington Industries (Ex. 175) describe hearing conservation programs for three large companies that appear to be effective. But one cannot reasonably conclude that all companies with workers exposed to levels greater than 90 dB are maintaining such programs. A NIOSH study revealed that only 29 percent of the manufacturing respondents had such programs, while another 20.1 percent were planning such programs. Most of those without

programs or plans claimed no noise problems (Ex. 321–14B, p. B–3). This study also included the testing of equipment used by 65 companies with hearing conservation programs. These tests revealed that 80 percent of these companies were not in compliance with at least one of the then existing ANSI specifications for audiometers and audiometric test booths (Ex. 321–14B, p. 55).

Based on data from NIOSH's National Occupational Hazard Survey (Ex. 321–14D), it is reasonable to conclude that up to 20 percent of those exposed to greater than 90 dB currently wear hearing protectors. The lack of adequate audiometric testing, monitoring, and training activities, however, make it less likely that a 15 dB attenuation would be achieved. A more reasonable estimate of the current attenuation would be 10 dB, which is the lower bound of the average attenuation range revealed in several studies on the real world attenuation of hearing protectors. (See discussion above.) OSHA has calculated, using the procedures and assumptions detailed in this section and in Appendix A of OSHA's Final Regulatory Analysis, that the effect of this current hearing protector use would ultimately be a reduction of 120,000 material impairments (25 dB fence) from the 1,060,000 that would continue to exist at any one time in the absence of hearing protector use.

OSHA anticipates that fully effective hearing conservation programs for all workers exposed to levels greater than 85 dB would prevent 898,000 impairments after the entire population has worked with hearing conservation programs in effect. Thus, the incremental or additional benefits due to the hearing conservation amendment will be the difference between these benefits and the 120,000 impairments expected to be prevented by existing programs. The final hearing conservation amendment, therefore, is estimated to prevent 778,000 material impairments over and above the number expected to be prevented by current hearing conservation programs. (These 778,000 impairments prevented consist both of workers exposed to levels >90 dB who are not currently receiving hearing protection as well as those exposed between 85 and 90 dB who will benefit from hearing conservation programs for the first time.)

This discussion on the benefits of preventing hearing impairment has shown that there are substantial benefits to be gained from reducing workplace noise exposure by 15 dB for those exposed above 85 dB. It was assumed in this discussion that the reduction of noise exposures would be achieved through the use of personal hearing protectors. However, that reduction could also be achieved by engineering controls, including the redesign of machinery and the construction of baffles to impede the transmission of sound energy. Engineering controls provide more consistent and dependable protection to worker hearing than personal hearing protectors and are still preferred by OSHA.

Improved Workplace Safety

A second benefit of the hearing conservation amendment is improved workplace safety. The presence of untreated workplace noise can increase the number of accidents because (1) noise can mask warning signals or shouts, and (2) noise exposure might lead to inattentiveness and fatigue, both of which may precipitate accidents. Edith Gulian's summary of studies in the European literature revealed no clear consensus on the relationship between noise and accidents. One study found no relationship, while two others concluded that noise may have contributed to accidents (Gulian, Ex. 97, p. 60). Two other studies in the record, by examining the job safety records of workers before and after the institution of hearing conservation programs, showed a statistically significant reduction in the number of accidents and injuries occurring after the initiation of hearing conservation programs.

Schmidt, Royster, and Pearson (Ex. 321–22F) studied a cotton yarn plant where a hearing conservation program requiring the use of hearing protectors was instituted in 1972. Using a statistical technique by which each worker serves as his or her own control, the researchers compared the mean number of injuries in the 4-year period prior to the hearing conservation program to the 4-year period following institution of the hearing conservation program for two groups of employees exposed to noise levels of 92–96 dB. The results showed a statistically significant reduction in reported injuries.[3] For one group, the reduction in the mean injury rate was from 0.4 to 0.2 injuries per year, or by about 50 percent; for the other group, the reduction was from 0.5 to 0.3 injuries per year, or by about 40 percent (Schmidt, et al., Ex. 321–22F, p. 22).

A second study was performed by the Raytheon Service Company under contract to NIOSH (Ex. 26–11). The researchers studied the records of a boiler fabrication plant for the 2-year period before the initiation of a hearing conservation program and the 2-year period after program initiation. The results of this study showed a statistically significant [4] reduction in the number of accidents among workers exposed to noise levels >95 dB after the initiation of the hearing conservation program. The median frequency of accidents was reduced from 3.8 to 2.3 accidents per worker per year, or by 39.5 percent (Raytheon, Ex. 26–11, pp. 3–5 to 3–6).

Information from the Bureau of Labor Statistics shows that annually there are about 2,474,000 reported occupational injuries in the 19 industries in this noise study, of which about 1,052,900 are lost workday cases (Bureau of Labor Statistics, *Occupational Injuries and Illnesses in 1978: Summary*, March 1980, Report 586, Table 3, pp. 12–13). If these accidents are distributed evenly among all workers in these industries without regard to noise exposure, then approximately 851,000 total cases and 362,000 lost workday cases could occur each year for those exposed above 85 dB (TWA) [2,474,000 injuries × 34.4 percent (workers exposed>85 dB)=851,056; 1,052,900 lost workday cases × 34.4 percent=362,198]. Similarly, there are 477,000 total cases and 203,000 lost workday cases among those exposed above 90 dB (TWA) [2,474,000 injuries × 19.3 percent=477,482; 1,052,900 lost workday cases x 19.3 percent=203,210]. The Schmidt, Royster, and Pearson study, and the Raytheon study together reveal that the initiation of hearing conservation programs may reduce this yearly toll of accidents.

The reduction in the number of accidents, beside improving the quality of worker lives, may also provide financial benefits to employers by reducing the costs of accidents. These costs include administrative and legal fees, safety administration, damage to equipment, loss of productivity, supplements to workers' compensation payments, and lost income due to inefficiency of replacement personnel. Robert Sharkey, Safety Administrator for Alcoa, estimates that these costs total $14,000 per lost-workday case. (See Peter J. Sheridan, "What Are Accidents Really Costing You?" *Occupational Hazards*, March 1979, pp. 41–43.)

Extra-Auditory Health Benefits

As described in the Health Effects section, there is a wealth of evidence suggesting a link between noise

[3] Statistical significance refers to the probability or confidence, based on laws of probability and statistics, that the decline in the number of accidents was not due solely to chance. In this case, the confidence level was 99.9 percent.

[4] 99 percent confidence level.

exposure and ill effects, including cardiovascular, respiratory, allergenic, musculo-skeletal, and glandular disorders. However, because precise dose-response relationships have not yet been developed OSHA has not attempted to quantify these benefits. One example does reveal the magnitude of the occurrence of cardiac disease in the U.S. today. The current rate for deaths due to heart disease for those between 45 and 64 years old is 536.7 per 100,000 (Bureau of the Census, *Statistical Abstract of the United States*, 1979, p. 77, Table 111). If this rate applies to the 4,984,000 workers aged 45–64 in the 19 industries, then approximately 27,000 will die of heart disease annually. By reducing noise exposure, the hearing conservation amendment may help to prevent some of these premature deaths.

Reduced Absenteeism

The reduction in noise exposures due to hearing protector use should reduce the number of noise-induced illnesses and could also lead to better worker attitudes towards their jobs, thus improving both attendance records and job performance. In both cases, employers, firms, and consumers would benefit from increased output and reduced costs. The Raytheon study (Raytheon, Ex. 26–11) found that the median number of absences for the group exposed to >95 dB fell by 12.4 days per year after initiation of a hearing conservation program. This was a reduction of about 83 percent from the preconservation program level of absences (Raytheon, Ex. 26–11, p. 3–177).

Several studies of the economic impact of the proposed regulation placed a monetary value on the expected reduction in absenteeism. CPA, in their first study, assumed a reduction in absenteeism of 1 day per year per worker exposed over 85 dB. This was calculated to provide an estimated benefit of $2 billion per year (CPA, "Some Considerations," Ex. 138A, p. 2–55). In their second study, CPA used a more complex methodology based on information from the Raytheon report concerning the reduction in the average number of days absent. CPA calculated the value of lost production based on lower and upper bounds—i.e., average production worker wages and value added per production worker. Based on 1975 dollars, CPA estimated that the value of improved worker attendance for an 85 dB PEL would be between $341.04 million and $1.2484 billion per year (CPA, "Economic/Social Impact," Ex. 232, p. 5–28). A third estimate of the value of absenteeism savings was performed by the Council on Wage and Price Stability (COWPS). Although not based on any empirical studies, COWPS assumed that an 85 dB PEL would reduce absenteeism by 1 day for those previously exposed to 85–90 dB and by 2 days for those exposed above 90 dB. COWPS calculated the savings by multiplying the number of person-days saved by the average daily wages of manufacturing workers, including an estimate of the costs for turnover and new worker training. Finally, COWPS concluded that controlling noise exposures to 85 dB would produce a benefit of $271.7 million per year (COWPS, Ex. 206, p. 19).

After a review of these estimates, OSHA has concluded that the best estimates are provided by the methodology used by CPA in their September 1976 report, which was based on information from the Raytheon study. OSHA has chosen to reestimate the absenteeism benefits by updating the CPA calculations for the increase in the size in the labor force and changes in wage rates since 1976. For this update, OSHA has used only the wage rate to estimate the value of production lost from absenteeism. These calculations, which assume that hearing conservation programs will reduce exposures to below 85 dB for those exposed at 90 dB and above, follow the CPA methodology. First the total number of worker-days of absenteeism prevented were calculated by using the number of workers exposed to noise >90 dB and the number of days of absenteeism saved according to the CPA presentation of the Raytheon data (See CPA, Ex. 232, p. 5–25). The equation used was: 1.243 million workers exposed >95 dB × 3.9 days saved per worker + 1.636 million workers exposed to 90–95 dB × 1.55 days saved per worker = 7.384 million worker-days saved. The value of the production gain from reduced absenteeism was then estimated using the 1979 average wage rate in the 19 industries (See *Employment and Earnings*, 27, 3, March 1980, Table C–2.). Thus, 7.384 million worker-days saved × 8 hours per day × $6.76 per hour = $399.3 million. This gain of about $400 million per year from reduced absenteeism will benefit employers by partially offsetting the costs of hearing conservation programs and feasible engineering and administrative controls.

Reduced Medical Costs

Workers, and also society, indirectly through third party medical payments, will benefit financially through reduced medical costs. Although in most cases noise-induced hearing loss is untreatable and irreversible, there still is a drain on medical resources—principally professional time—used to reach those diagnoses. In addition, there is the purchase of prescribed hearing aids in the minority of cases for which hearing aids can help, as well as the hearing aids purchased by workers vainly hoping for a cure. In all three cases, social resources are consumed. The prevention of occupational hearing impairments will free those resources for other uses.

Ideally, the magnitude of this loss could be quantified. However, the current noise record does not include either estimates of this loss or information from which estimates could be calculated. Because of this lack of information, OSHA has not attempted to quantify these savings, although preventing 898,000 hearing impairments should lead to a substantial reduction in medical costs.

Reduced Workers' Compensation Payments

Two estimates of the anticipated reduction in workers' compensation payments for occupational hearing loss are contained in the record. BBN estimated that the *additional* workers' compensation liability saved by reducing noise exposures to 85 dB would be $16.097 million (BBN, Ex. 192, p. 2–38). This is the additional savings, comparing a 90 dB with an 85 dB PEL, not the total reduction expected from the implementation of hearing conservation programs. CPA made an estimate of the *total* potential workers' compensation payments that a noise regulation might save. They calculated that the present value of the stream of potential savings for an 85 dB PEL over the next 40 years would be $530 million (CPA, Ex. 232, p. 5–34).

But any of these estimates is speculative since hearing impairment is often not compensated. Over 70 percent of manufacturing workers in the U.S. live in states that pay few or no hearing impairment claims (EPA, *Occupational Hearing Loss: Workers' Compensation under State and Federal Programs*, Ex. 321–16C, p. viii). EPA estimates that in 1977, 6,095 claims totalling approximately $13 million were paid for occupational hearing loss. This figure could change considerably in the future because the number of claims filed has been increasing dramatically (EPA, Ex. 321–16C, pp. 14–15).

It has been pointed out that an estimate of reduced workers' compensation payments cannot be directly added to the other benefits described in this section. As COWPS testified:

Although a reduction in workmen's compensation payments is a benefit to employers who no longer have to pay workmen's compensation premiums, it represents an almost equal and offsetting cost to workers who no longer receive such payments. (COWPS, Ex. 208, pp. 7–8)

In other words, workers' compensation payments are transfer payments from employers to impaired workers. The true social cost is the incidence of occupational hearing impairment and the various other ill effects of noise; the true social benefit is the reduction in the number of hearing impairments and ill effects.

Annoyance

Several of the studies in the record quantified the benefit of reduced annoyance from noise exposures. (See CPA, "Some Considerations," Ex. 138A, pp. 2–55 to 2–59; Smith *The Occupational Safety and Health Act*, Ex. 261A, pp. 46–52; COWPS, Ex. 208, pp. 17–18.) Although these calculations provide interesting information, they primarily apply to the benefits of using engineering controls to reduce noise exposures. The use of hearing protectors to achieve noise reductions will not create the full value of these benefits, because hearing protectors also create disutilities, especially worker discomfort, for those who must wear them. Thus, the benefits of less annoyance due to lowered noise levels are likely to be considerably reduced by this disutility although there are no data in the record enabling OSHA to make a more precise determination.

Worker Productivity

The hearing conservation amendment may also improve the productivity of workers exposed to high levels of noise. There are two possible mechanisms for this: (1) through improvements in conscious worker attitudes towards their jobs, and (2) through subconscious reductions in psychological and physiological stress. The hearing conservation amendment will improve the quality of worker lives by preventing occupational hearing loss and by reducing the incidence of other noise-induced illnesses. These improvements in the quality of life may improve worker attitudes towards their jobs, thus leading to increases in the quantity and the quality of goods and services they produce. The reduction of noise exposures through the issuance and use of hearing protectors may also improve worker performance even if it does not improve conscious worker morale. In particular, workers may still hold the same attitudes towards their jobs, but may be more productive because of a reduction in the subconscious psychological and physiological stress experienced by workers exposed to workplace noise.

In both cases, employers, workers, and consumers would benefit financially. The increased production and improved product quality would benefit employers by offsetting, at least partially, the cost of the amendment. To the extent that the increases in output and improvements in quality increase the productivity of labor inputs, workers could be able to gain improvements in wages and fringe benefits. Finally, consumers would benefit from the increase in the quantity and quality of output. This increase would enable them to purchase an increased quantity at existing prices or continue to purchase the existing quantity but at reduced prices.

Thus, one can reasonably believe that reductions in noise exposure with the use of hearing protectors could, through improved worker morale and reduced subconscious stress, improve worker productivity and lead to financial benefits for employers, workers, and consumers. However, the empirical literature summarized in submissions to the noise record does not provide enough data to confirm or reject this.

In their criteria document on occupational exposure to noise, NIOSH reviewed some of the literature on the effect of noise on job performance (NIOSH, *Criteria for a Recommended Standard*, Ex. 1). NIOSH discovered that the effect of noise appears to be quite variable depending on the type of noise, the nature of the job, and the attitudes of the person affected. It also appeared that impulsive noise (recurring bursts of noise of high intensity) and intermittent noise (on and off exposures) create greater performance losses than continuous noise. The nature of the job is also important—jobs which require "unremitting attention" or "which place extreme mental demands on the employee" appear to be the most vulnerable to decrements in employee performance under noise exposures. For simple, repetitive tasks, performance may be enhanced by the presence of low to moderate levels of noise. Finally, it appears that certain attitudes and personality factors influence the effect noise has on task performance. Tense, anxious individuals, as well as those already dissatisfied with their jobs may be less able to perform productively under noisy conditions than other persons (NIOSH, *Criteria for a Recommended Standard*, Ex. 1, pp. IV–13 to IV–16).

EPA and Edith Gulian drew similar conclusions from their reviews of the literature. EPA concluded that continuous noise levels above 90 dB can impair job performance for "noise sensitive tasks," such as vigilance, information gathering, and analytical tasks. Noise levels of less than 90 dB can be disruptive, especially if the noise is composed of high frequencies, or if it is "intermittent, unexpected, or uncontrollable." The amount of this disruption is a function of the nature of the task, and the psychological and physiological state of the individual. The studies surveyed showed that noise does not usually affect the total quantity which a person produces, but may increase the variability of the work rate and reduce the accuracy of the work (EPA, *Public Health and Welfare Criteria for Noise*, Ex. 31, pp. 8–1 to 8–7). Gulian's survey of the European literature found several studies which indicated increased production with reduced noise exposures, but concluded that the literature was inconclusive on the effects when noise levels were lower than 100 dB, although under certain conditions lower levels have shown adverse effects on productivity (Gulian, Ex. 97, pp. 18–20).

Many of these studies involved testing the ability of persons to perform certain experimental tasks under laboratory conditions and not actual jobs under industrial working conditions. Moreover, the studies mentioned above investigated primarily the effects of noise on performance. They did not examine what effect the issuance and use of hearing protectors might have on job performance.

One study that did examine the effect of hearing protectors indicates that the issuance and use of hearing protectors may have an adverse effect on productivity. This study, by L. R. Hartley (cited by CPA, "Some Considerations," Ex. 138A, pp. 2–45 to 2–46), examined the ability of test subjects to perform a laboratory task under four conditions: quiet, quiet while wearing hearing protectors, noisy, and noisy while wearing hearing protectors. Under quiet conditions, subjects were exposed to broad-band noise at a C-weighted sound level of 70 dB; for noisy conditions exposures were at a C-weighted sound level of 95 dB. The researcher used two measures of subject performance—the number of gaps (pauses of 1½ seconds) and errors. The results revealed that without hearing protectors, exposure to noisy conditions increased both the number of gaps and the number of errors compared to the quiet conditions. When the subjects were exposed to conditions of quiet, the use of hearing protectors increased the number of gaps and

errors. Finally, under noise conditions, the use of hearing protectors decreased the number of gaps, but increased the number of errors. CPA concluded their discussion of this study by suggesting that these results:

> . . . tend to give added support to the preference of OSHA, NIOSH, and EPA for engineering solutions to noise, rather than personal ear protection. The widely-observed resistance of workers to the discomfort and annoyance of at least some ear protectors increases the probability that their imposition may sometimes have negative effects on the quality, if not the quantity of industrially-produced goods (CPA, "Some Considerations," p. 2-46).

A final determination of the effect of noise and hearing protector use on productivity awaits the completion of further research. Therefore, OSHA has not based its justification of the hearing conservation amendment on possible gains in worker productivity.

Conclusion

In this section, the benefits of the hearing conservation amendment were delineated and discussed. The primary benefit will, of course, be a substantial reduction in the incidence of occupational hearing impairment in the population exposed to workplace noise. The additional benefits to be gained include improved workplace safety, reduced absenteeism, reduced medical costs, and a possible reduction in cardiovascular and certain other illness. The range of health, safety, and financial benefits, and the magnitude of their favorable impact on the quality of life for U.S. workers serve to justify this amendment.

V. Cost and Feasibility Considerations

Summary and Conclusions

The following three sections analyze in depth the costs of the final standard, its economic feasibility and its technical feasibility. This subsection briefly summarizes that analysis.

The cost of the hearing conservation amendment will average $53 per year for each of the 5.1 million employees estimated to be covered by the amendment. This comes to $270 million in total annual costs for the 19 sectors of the economy (2-digit SIC codes) which have significant noise exposures. Approximately $15.7 million is already being spent on hearing conservation programs, so the additional costs generated by the standard are $254.3 million. As explained in the cost section, OSHA believes these costs are somewhat overestimated because of the methodology used.

The industry with the largest compliance costs is lumber and wood with annual costs of $30.9 million. Other industries with annual costs between $20 and $25 million are printing and publishing, primary metals, fabricated metals, machinery except electric, and utilities. The food and textile industries have costs of $17 million. No other industry has costs over $13 million per year.

The only other comprehensive cost estimates were submitted by BBN. They estimated a cost of $65 per employee included in hearing conservation programs. Certain changes in the standard, as well as the use of more timely cost data, account for the differences between the BBN and OSHA estimates.

The section on economic impact discusses in detail the impacts of the costs of the standard. These impacts are small. If the total costs of the regulation are passed on to consumers, prices would increase 0.0148%. Even in the segment most impacted, lumber and wood, prices would increase only 0.0776%.

Even in the unlikely event that firms would be forced to absorb the costs of the amendment, these costs represent only 0.1932% of the profits of the 19 industries. It should be noted that even in the industry most affected, lumber and wood, costs represent slightly under 1% of profits. It is inappropriate to present the increased price and decreased profit data as cumulative when analyzing impacts. The two maximum effects will not occur simultaneously. The greater the increase in prices, the smaller the reduction in profits. Similarly, the greater the reduction in profits, the smaller the increase in prices. The price and profit impacts are both likely to be less than the maximums presented here.

Section 6(b)(5) of the Occupational Safety and Health Act requires standards to be feasible and this includes economic as well as technical considerations. The D.C. Circuit explored this requirement in *Industrial Union Dept., AFL-CIO v. Hodgson*, 499 F.2d 467 (1975). It states,

> There can be no question that OSHA represents a decision to require safeguards for the health of employees even if such measures substantially increase production costs. This is not, however, the same thing as saying that Congress intended to require immediate implementation of all protective measures technologically achievable without regard for their economic impact. To the contrary, it would comport with common usage to say that a standard that is prohibitively expensive is not "feasible." . . . practical considerations can temper protective requirements. Congress does not appear to have intended to protect employees by putting their employers out of business—either by requiring protective devices unavailable under existing technology or by making financial viability generally impossible.
>
> This qualification is not intended to provide a route by which recalcitrant employers or industries may avoid the reforms contemplated by the Act. Standards may be economically feasible even though, from the standpoint of employers, they are financially burdensome and affect profit margins adversely. Nor does the concept of economic feasibility necessarily guarantee the continued existence of individual employers. It would appear to be consistent with the purposes of the Act to envisage the economic demise of an employer who has lagged behind the rest of the industry in protecting the health and safety of employees and is consequently financially unable to comply with new standards as quickly as other employers. As the effect becomes more widespread within an industry, the problem of economic feasibility becomes more pressing. (pp. 447-8).

As shown in the economic impact section, the cost impacts of the final hearing conservation amendment will not lead to economic dislocation. The costs are tiny relative to sales (averaging 0.0148%) and small relative to profits.

The worst case is 1% of profits while the average is 0.2%. In reality the costs as a percentage of profits will be less because some costs will be passed forward to consumers. These costs are easily affordable and no economic disruption or anything approaching it will be caused in any industry. Even employers who have a high percentage of employees affected by the amendment should be able to afford the $53 per employee cost. Therefore OSHA finds that the standard is without doubt economically feasible.

Technological feasibility is analyzed in the resource availability section. No difficult engineering problems, or indeed any engineering problems, are created by the standard. The hearing protection devices are already available on the market. The measuring and testing equipment needed (dosimeters, audiometers, etc.) is also available for purchase. In those areas where short-term production may not be adequate to meet immediate demand, a 2-year delayed starting date is provided by the standard. There also are adequate numbers of trained personnel, audiologists, physicians, etc., to meet the needs of employers resulting from the standard.

OSHA therefore finds the hearing conservation amendment is clearly technologically feasible.

VI. Costs of Compliance

Introduction

Many industry groups strongly recommended to OSHA that hearing conservation programs are a cost-effective and affordable means of reducing noise induced hearing impairment among workers. Bolt Beranek and Newman, (BBN), in their 1976 report for OSHA, ("Economic Impact Analysis of Proposed Noise Control Regulation," Ex. 192) estimated that the hearing conservation provisions of the proposed standard would cost the manufacturing and utilities sectors of the U.S. economy a total of $289.3 million per year in 1975 prices. This amounted to an annual cost of $65 per worker included in the program. The monitoring, recordkeeping, and associated tasks were estimated at $155.2 million annually, (p. 3–9) and were based on the assumption that a typical plant had 50 production workers and could be surveyed by a noise engineer for $600. The annual cost for audiometric testing was calculated at $20 per production worker for $89.1 million, and hearing protectors were estimated at $10 per worker for a total of $45 million per year (Ex. 192, p. 3–33). None of these cost estimates were adjusted to reflect the existence of hearing conservation programs already established by industry.

The BBN estimates of these provisions were not widely criticized. However, certain differences between the proposed standard and the final rule, as well as the availability of more timely cost data, have convinced OSHA to update these estimates of the expected compliance costs. The current estimation procedures, which are based on a thorough review and analysis of the entire record, are presented below for each major provision of the final regulation (Appendix B of OSHA's Final Regulatory Analysis provides the detailed caculations for a sample SIC industry). Overall these new calculations show that the total annual cost of the regulation will average about $53 for each of the 5.1 million workers estimated to be covered by the hearing conservation amendment. Thus, the total cost of complying with all of the provisions of the amendment are estimated at about $270 million a year. After accounting for some of the compliance activities already taking place, OSHA estimates that the new compliance costs will not exceed about $254.3 million a year and most likely will fall well below this amount (see Table 7).

Table 7.—*Estimated New Annual Compliance Costs of the Hearing Conservation Amendment*

Monitoring	$73,731,000
Audiometric Testing	87,199,000
Hearing Protectors	46,534,000
Training	40,029,000
Warning Signs	1,795,000
Recordkeeping	6,033,000
Total	254,321,000

Monitoring

The proposed standard directed employers to monitor worker exposure to noise on an annual basis. The final amendment will be less costly because in most cases, it requires monitoring to be performed only every other year. Although the final hearing conservation amendment requires that a new representative exposure be obtained whenever there is a charge in noise levels that would render the employee's hearing protection inadequate, in practice, the general availability of hearing protectors rated to reduce high noise levels should make these occurrences infrequent.

A number of consultants have submitted documents to the record listing their fees for noise measurement services. For example, Exhibit 319 B–8 lists $440 plus expenses as the daily change for a noise engineer and $360 plus expenses as the daily fee for a technician. Exhibit 319 B–11 indicates fees from $250 to $350 for an engineer and from $180 to $240 for a technician, while Exhibit 319 B–16 reported between $229 and $465 plus expenses for an engineer and between $175 and $255 plus expenses for a noise technician. The average of these daily fees is about $362 for an engineer and $262 for a technician. Travel expenses will vary according to each firm's location relative to the consultant. However, as the demand for these services grows, economies of scale will operate to reduce costs below current market charges. For example, the expanded market for consultant services within a region will stimulate the supply of monitoring consultants in the area, thereby minimizing travel expenses. Also, noise engineers should find it increasingly profitable to combine resources with audiometric testing firms to provide industrial clients with a complete range of hearing conservation services. A growing number of firms already market these comprehensive consulting programs (Ex. 305; 319 B–12), and this one-stop approach to satisfying monitoring, testing and training requirements should substantially reduce the costs of these services over time.

Based on its survey experience, OSHA has estimated the average time it would take noise experts to take measurements in plants of varying sizes. Table 8 shows OSHA's estimate of the cost of hiring a noise consultant, based on the daily fee of $362 for an engineer, $262 for a technician, and a $50 average travel expense.

Table 8.—*Cost of Monitoring by Consultant*

Number of employees measured	Days in the field		Days in office—		Cost
	Engineer	Technician	Engineer		
1 to 10	1				$412
11 to 20	1		.5		593
21 to 40	1	1	.5		855
41 to 60	1.5	2	.5		1,298
61 to 80	2	2	1		1,660
81 to 100	2.5	3	1.5		2,284
101 to 120	2	4	2		2,548
121 to 140	2	5	2		2,806

Source: OSHA, Office of Regulatory Analysis.

The monitoring provision of the amendment requires the reporting of representative exposures of all workers exposed to a time weighted average (TWA) of noise above 85 dB, rather than an actual measurement of each such employee. Thus, a measure of the exposure of one employee may be used to represent similarly exposed employees. Since the data shown in Table 8 correspond to measured workers (as opposed to others who are represented by the measured workers), an estimate of the number of employees who would be individually measured is necessary to assess the total monitoring cost. However, there is no data base available to identify statistically the determinants of the number of employees who would actually have to be measured according to the final rule. This number will vary due to the nature of the industrial process and the diversity of the work areas and tasks. For instance, in workplaces where noise levels are fairly uniform throughout the shop, fewer employees will need to be monitored than in workplaces where the noise exposure vary extensively among workers. Nevertheless, it can be assumed that, in general, the percent of the work force to be measured would vary inversely with the size of the plant. (See Ex. 309, p. 35, Table 3.1 for an example of how the percentage of workers to be sampled within a group of similarly exposed workers might decline as the group grows larger.) Table 9 gives estimates of the percentage of employees who would have to be measured individually to provide representative exposures of workplace noise for all exposed workers. These estimates were developed by OSHA.

based on its broad experience with noise surveys for numerous industrial establishments, and are consistent with the final monitoring requirement as they are predicted on a sampling strategy designed to place employees within 5 dB ranges.

Table 9.—*Percent of Employees Measured To Provide Representative Exposures*

Number of employees	Employees measured (percent)
1 to 19	100
20 to 49	60
50 to 99	50
100 to 249	40
250 and over	30

To refine the estimate of the cost of using consulting services to conduct industrial noise measurements, it was necessary to construct a statistical distribution of the number of production workers in manufacturing establishments of different sizes. The U.S. Bureau of the Census provides 1977 data on the total number of employees in five establishment size categories (*County Business Patterns*, CBP–77–1). The conversion of this size distribution from total employees to one limited to production workers was accomplished by combining these data with information from the U.S. Bureau of Labor Statistics (BLS) (*Employment and Earnings*, 1909–1978) to obtain a 15-year average ratio of the number of production workers to the total number of employees. When multiplied by the 1977 Census estimates of total employment by industry and establishment size, this procedure yields estimates of 1977 production worker employment by industry and establishment size. These data are shown in Table 10.

OSHA believes that the best estimates of the total number of workers affected by this hearing conservation program are obtained from the BBN data on the percentage of workers exposed to various levels of noise in those industrial sectors which include most manufacturing and public utility firms (Ex. 192, p. 2–7). BBN's industry-wide estimates, as presented in Table 11, were developed from surveys of 68 firms representing 19 two-digit SIC categories, were based on years of extensive experience and expertise in noise control surveys, and were the most comprehensive and detailed noise exposure estimates submitted to the record. Thus, they remain the best source of data on TWA exposures in typical noisy industrial surroundings.

Source: Bolt, Beranek, and Newman. "Economic Impact Analysis of Proposed Noise Control Regulation," (Ex. 192, p. 9-7; and BBN worksheets).

Technically, representative exposures are only required for workers with a TWA exposure to noise of 85 dB or above. However, it seems probable that many employees exposed to noise below a TWA of 85 dB would be surveyed also. This is because, at least initially, employers would not know which workers were exposed to 85 dB without monitoring representatives of most of the workers stationed in fairly noisy work areas. Consequently, all workers exposed above a TWA of 80 dB were assumed to be surveyed for cost estimation purposes despite the fact that, as employers become more knowledgeable about the exposures, this adjustment will overestimate monitoring costs.

Therefore, the number of measurements for each establishment size category in each SIC industry studied can be estimated by the following equation:

[1] $M = (PM/100)(PW/E)(N)$

where:

M = the number of measurements
PM = the percent of workers actually measured (Table 9)
PW = the number of production workers (Table 10)
E = the number of establishments (Table 10)
N = the percentage of workers exposed to >80 dB (Table 11)

This formula simply multiplies: (the percent of workers that the sampling strategy would require to be actually measured) × (the average number of production workers per establishment) × (the percentage of workers exposed to >80 dB). When the number of measurements for each establishment size are matched to estimates of the corresponding consultant charge (Table 8) this provides estimates of the average cost for a firm using a noise consultant. Since monitoring will usually be required biennially, the annual consultant cost is one-half of the values listed in Table 8.

However, employers may elect to monitor with in-houe personnel. An acceptable dosimeter, readout and calibrator, such as described in Exhibit 319 A-7, costs $1,230. The standard capital recovery formula with a 10 percent interest rate and a 10-year equipment lifetime gives an annualized capital cost of about $200. Periodic calibration costs could add another $60 a year. In addition, it might take an employer about an hour per measured employee to select representative workers, make daily calibrations of the dosimeter, and place and remove the dosimeters from the individual workers. Since this task may be performed by the employer or by supervisory employees earning more than the average industry production worker wage, an average cost of $10 per hour was used to account for the time required to complete this task. Thus, the average annual cost for each establishment can be calculated as $260 + ($10 × the number of measured workers/2 years). The resulting values imply that monitoring would usually be done by in-house staff only in the largest plants where the average cost of $755 [5] is substantially below the $1,142 [6] average consultant cost. However, for the smallest establishments, the annual consultant fee of $206 is significantly less than the cost of developing an in-house program by purchasing the required equipment.

Alternatively, sound level meters and calibrators may be purchased for $810 (Ex. 319 A–7). Since these meters are expected to last at least 10 years (Ex. 319 A–7; Ex. 319 A–72), a 10 percent interest rate yields an annualized equipment cost of $99.27. Biennial calibration would add an additional $30 per year (Ex. 319 A–7). However, the time employers would need to make TWA exposure measurements with a sound level meter would often exceed the time required using a dosimeter because sound level meter measurements often require following employees through various phases of the work process. For this reason, the following calculations assume the use of dosimeters for in-house monitoring.

It was assumed that employers would select the least expensive mode of complying with the provision. Therefore, for each SIC sector, multiplying the number of establishments in each size class by the average consultant cost where consultant services would be more efficient (generally the first three or four establishment size categories), and the average in-house cost using dosimeters for the larger size categories where in-houe programs are more efficient, provides an estimate of the industry's monitoring cost. Summing these costs over all the SIC's gives total costs of $78,427,000 to initiate monitoring programs in all establishments in the studied industries.

However, many firms already have extensive monitoring programs. Although precise estimates are not available, a survey of hearing conservation programs conducted by The National Institute for Occupational Safety and Health (NIOSH) (Ex. 321-14B) evaluated responses from 1,410 manufacturing firms (p. 7). Twenty-nine percent stated that their firm had a program concerned with hearing conservation (p. B–3), and 90 percent of those firms, or 26 percent of the respondents, reported that they currently monitor workplace noise (p. B–7). Since the survey sample was heavily weighted with firms of over 100 employees, the results may apply primarily to these larger firms. Table 10 indicates that there are about 33,775 establishments with more than 100 employees in the industries studied. Based on the NIOSH study, it is reasonable to conclude that 26 percent of the firms with more than 100 employees already have monitoring programs. Thus, the new annual cost of this monitoring provision falls to about $73,731,000 for the 19 SIC sectors (See Appendix B in OSHA's Final Regulatory Analysis for a detailed example of the computational procedure).

Even more important, however, is the implausibility of the assumption that every single establishment in the industries studied would have workers exposed to a TWA of 85 dB or greater. The only large-scale survey that presents estimates of the number of plants with noise levels above 85 dB is the National Occupational Hazard Survey (NOHS) prepared by the NIOSH (Ex. 321–14D). The Center of Policy Alternatives (CPA), Massachusetts Institute of Technology, presented a preliminary summary of these data, stating that "NIOSH has collected extensive data on noise exposures in workplaces representative of American industry . . ." (Ex. 138A, p. 2–6). Since NIOSH directed its staff to note "Any continuous *noise* in worker's normal environment equal to or exceeding 85 dBA . . ., regardless of exposure

[5] $260 + (10 × M/2) = $755, where M is defined as in equation (1) and equals, on average, (.30 × 8,287,626/13,285 × .531) which is 99.

[6] Table 8 indicates that the consultants fee for measuring 99 workers was estimated at $2,284. If performed biennually, the annual cost is $1,142.

duration. . . ." (NOHS, vol. 1, p. 15), it is clear that these estimates of the number of noisy firms would exeed projections made on a TWA basis. Table 12 displays the results of this survey, which indicate that only about 49 percent of the plants in the studied industries have workers exposed to noise levels of 85 dB or greater as measured by NOHS. If this survey is accurate, the monitoring costs estimated above are substantially overstated.

Table 12.—*Number of Plants With Continuous Noise Above 85dB in the National Occupational Hazard Survey*

Moreover, the current record does not adequately indicate the widespread current or future availability of rental markets for dosimeters or sound level meters. An informal telephone survey reveals that even the relatively more expensive dosimeters can generally be leased for under $100 per month. On a biennial basis this is less than $50 per year for most of the 311,094 establishments in the industries studied, for a total yearly equipment charge of only $15.6 million. Alternatively, some firms will share noise monitoring meters rather than purchase them. Thus, the true new monitoring costs attributable to this hearing conservation amendment may be substantially below OSHA's $73.7 million estimate which was based solely on data in the noise record.

BBN's economic impact analysis (Ex. 192, p. 3–9) projected annual costs of $155.2 million for the proposed monitoring provision. This estimate overstates the cost of the final provision for several reasons. First, the BBN analysis was based on the proposed requirement for annual monitoring, whereas the final rule will generally require only biennial monitoring. Second, BBN's methodology assumed that all industrial firms employed 50 production workers and would hire noise consultants to conduct the monitoring requirements. OSHA has determined that larger firms will find it substantially more economical to obtain noise measuring instruments and to perform the monitoring themselves. Third, BBN's estimate includes the cost of recordkeeping which OSHA treats as a separate cost category. Fourth, the BBN estimates do not reflect the current monitoring activities which are already taking place. OSHA believes that these factors taken together more than offset the price increases which may have occurred since BBN's 1976 report and consequently account for the divergent estimates.

Audiometric Testing

An analysis of the record indicates that the cost of audiometric testing will vary with the size of the establishment. Very small plants are likely to send production workers who require testing to a clinic or doctor. Somewhat larger plants will contract with audiometric testing firms for the actual exam and review. Still larger plants will find it cost effective to purchase the equipment for audiometric testing, to train the industrial nurse or safety director to give the test, and to use an outside firm of doctor to review the audiograms. The largest firms will perform the entire service in-house.

Commercial specialists who evaluate worker's hearing have submitted the following per employee costs for audiometric testing, review and reporting: $7.50 to $10.65 (Ex. 317); $10.00 (Ex. 319 B–6); $3.00 or less for more than 100 (Ex. 319 B–12); $7.00 to $20.00 (Ex. 319 B–5); and $12.00 (Ex. 293). These firms generally provide this service by transporting an audiometric test booth in a mobile van directly to the commercial establishment that has contracted for the testing. Employees of the smallest firms, however, will often be sent to a clinic or doctor's office to be tested. These fees will vary greatly and some are rather high (Ex. 2C–71–3, p. 50 reported $20). However, many clinic or physician fees should ultimately be comparable to those charged by mobile units because (1) negotiated fees are a traditional practice in industrial medicine, (2) employers of small firms may group together to gain scale economies, and (3) stationary medical facilities do not bear the substantial transportation costs borne by the operators of mobile vans. (For example, the Washington Speech and Hearing Society currently charges $120 plus $10 per exam for their central mobile unit but only $7.50 per test at their facility.)

Because the current market for audiometric services is small relative to the demand that would follow the promulgation of this regulation, it is not possible to make precise estimates of the cost to all firms that would purchase these services. However, in order to estimate the regulatory cost, it is reasonable to assume that the average firm sending workers to a clinic would lose about 2 hours in lost production time plus about $15 per worker for test fees and travel expenses. For firms large enough to take advantage of mobile units, the estimated lost production time per worker would be about one-half hour, and the submissions cited above imply an average test fee of about $12.00.

For large firms, in-house programs will be substantially less expensive. A comment to the Advisory Committee (Ex. 102, Sec. 9, p. 15) estimated the cost of providing audiometric testing programs for firms with 200, 300, and 500 employees at about $6.00, $5.00, and $4.00 per audiogram, respectively. Numerous submissions in the record itemize the specific components of these costs. For example, audiometric test booths sell for about $1,700 (Ex. 319 A–44; Ex. 319 A–51; Ex. 2C–71–3, p. 47), and installation could add about $300. Audiometer price quotes average about $500 (Ex. 319 A–51; Ex. 319 A–53; Ex. 319 A–60; Ex. 319 A–62; Ex. 319 A–66; Ex. 319 A–67) and are expected to operate for 10 years (Ex. 319 A–90; Ex. 319 A–60). The calibration procedures require a coupler which costs about $130 (Ex. 319 A–16; Ex. 319 A–11) and a sound level meter with an octave filter set which costs about $1,000. The operator's certification course is good for 5 years and costs $250 plus 3 days of an employee's time (Ex. 319 B–4) which amounts to $240 at $10 per hour. The cost of calibrating the audiometer could be another $100 every other year (Ex. 102, Sec. 9, p. 16). Thus, the total capital outlay is about $4,200. Assuming that the test booths last for 20 years, the other equipment lasts for 10 years, the certification course is given every 5 years, and the interest charge is 10 percent, the total annualized cost amounts to about $650.

Since one exam takes about 10 minutes of time (Ex. 306–J5C, p. 9; Ex. 319 B–6), approximately 48 workers can be tested by a technician earning a daily rate of about $80. Thus, the cost to the firm of the technician's time amounts to $1.67 per worker tested. The cost of

reviewing audiograms and reporting the findings is also dependent upon whether this service is contracted out or done in-house. Contractor fees for reviewing audiograms are reported at $2.25, $2.50, $3.00, and $4.00 per audiogram (Ex. 317; Ex. 319 B–12), whereas the in-house review by a physician or audiologist was estimated to cost only $0.25 each (Ex. 102, sec. 9, Audiometric Testing, p. 16). Thus, using $2.50 as a reasonable average cost to review the audigram, a typical cost for administering the tests as well as reviewing the audiograms would amount to $4.17 per unit ($1.67 + $2.50). Finally, a cost for one-half hour of lost production for each worker during the test procedure adds an additional one-half of the hourly wage per worker tested. In summary, the annual cost of the in-house audiometric program is estimated at about $650 per establishment for equipment and certification-related charges, and about $4.17 plus one-half of the industry hourly wage for each employee tested.

The Can Manufacturers Institute, Inc., (Ex. 2C–71–3, p. 50) stated that it would become cost-effective for a firm to develop its own audiometric testing capability when the number of audiograms it required reached about 100 per year. Dr. W. G. Thomas, (Ex. 102, sec. 9) put the break-even point between in-house and contracted audiometric testing at about 300 employees. To estimate the number of firms that would develop their own testing facilities, it is appropriate to use the Table 10 estimates of the number of production workers in the five establishment size categories for the 19 industries studied. The data in Table 10 imply that if the BBN estimate of 34.4 percent of production workers exposed to a TWA >85 dB remains constant across establishment sizes, the average number of workers per establishment in the hearing conservation program will be less than 2 employees for the smallest size category and 9, 21, 46, and 213 employees, respectively, in the larger establishment size categories.

It is likely that workers in the two smallest establishment size classes (1–19, and 20–49 employees) would travel to facilities outside the firm to take the audiometric exam. As explained above, the estimated annual cost for these establishments in each SIC sector would be the number of workers exposed to noise at or above a TWA of 85 dB × (2 hours at the industry hourly wage + $15 per test). For workers in the third and fourth largest size categories (50–99, 100–249 employees), the best assumption is that hearing conservation firms with mobile vans will service the employees. Since each employee would miss only about a half-hour or work time, the annual cost per industry for these intermediate-sized firms is the number of workers exposed to noise at or above a TWA of 85 dB × (.5 hours at the industry hourly wage + $12 per test).

Most firms in the over 250 employee size group would choose in-house audiometric programs. The annual cost for these firms, as detailed above, is estimated at ($650 × the number of establishments) + [the number of workers exposed to a TWA of 85 dB or greater in these establishments × ($4.17 + .5 hours at the industry hourly wage)].

The data needed to complete the above calculations include the percent of workers exposed to a TWA of >85 dB as shown in Table 11, the number of production workers and plants by establishment size in each industry as presented in Table 10, and the 1979 industry average hourly wage as reported by BLS (*Employment and Earnings*, March 1980). However, workers employed for less than 120 days with one firm are exempt from this provision. Employment data from the BLS as well as submissions to the record (Ex. 14–279; Ex. 14–512) indicate that SIC's 20 and 21 hire a substantial number of seasonal employees. In fact, the 1979 BLS average monthly employment estimate would fall by 17,100 and 1,400 in SIC's 20 and 21, respectively, if employment in each industry's 120-day peak employment period were adjusted downward to the level of the following month. The data from Table 10 were revised to reflect this exemption in order to estimate the cost of audiometric testing. Temporary workers in other industries will also take advantage of the exclusion, but the lack of appropriate data have prevented further adjustments to these calculations.

In addition to the annual audiogram, some workers will need to be retested during the year owing to threshold shifts, operator errors, or inconsistent test results. A number of workers will exhibit temporary threshold shifts if they are tested toward the end of the workday after being exposed to excessive noise. Wearing effective and properly inserted hearing protectors prior to the test would lower the incidence of temporary threshold shifts, whereas testing at the start of the day would substantially eliminate their detection. The number of permanent threshold shifts recorded will depend upon the intensity of the noise exposures, the worker turnover rates, and the effectiveness of the hearing protectors. In addition, the requirement for a recheck is waived if the annual test is conducted after 14 hours free from workplace noise. If as many as 20 percent of the workers require rechecks, the overall cost of audiometric testing would total $92,352,000 or about $18 per worker tested.

This discussion has assumed that no audiometric testing is currently provided. The noise record, however, indicates that many industrial establishments already offer audiometric testing to their employees. For example, a survey by the Forging Industry Association revealed that 82 percent of the 151 member firms responding do periodic testing, (Ex. 321–25), while Table 90 of the NOHS (Ex. 321–14D) shows that in their sample, 40 percent of the manufacturing workers exposed to continuous noise above 85 dB received audiometric exams. Table 13 of this same exhibit indicates that primarily the largest-sized establishments provide this service for their workers. Still another NIOSH hearing conservation survey shows that annual and biannual audiometric tests account for about 23 percent and 13 percent, respectivey, of current industry testing programs, with retesting periods in other programs ranging from 6 months to every 5 years (Ex. 321–14B, p. 30). For cost estimating purposes, it seems reasonable to assume that on average, these tests are already provided on a biennial basis to 40 percent, or on an annual basis to 20 percent of the workers in plants with more than 250 employees. Since the number of establishments providing these services is unknown, an accurate accounting of the costs already accepted by industry is not possible. Reducing only the labor-related cost of the largest firms by 20 percent to reflect current practice brings the total cost of this provision to $87,199,000 a year (See Appendix B in OSHA's Final Regualtory Analysis for an example of the calculations). This estimate is not significantly different from BBN's 1976 estimate of 89.1 million even though BBN did not adjust their data to acknowledge current programs and simply used a $20 per worker cost (Ex. 192, p. 3–33).

Hearing Protectors

Hearing protectors used in industry include ear muffs, disposable ear plugs, molded plugs, and custom-molded plugs. Unfortunately, there is no survey information on the percentage of workers who wear each type of protector. In hot, humid environments, workers are likely to choose plugs. It is probable that plugs will be chosen in more than a majority of instances as

they are often associated with a lesser degree of discomfort.

Substantial data on the price of ear protectors have been collected for the record. For example, disposable foam ear plugs can be purchased for $0.15 a pair (Ex. 319 A–41) and are reusable. If employees use two pair a week, the yearly cost is $15.00. Disposable non-foam ear plugs cost only from $0.06 to $0.07 a pair (Ex. 319 A–30; Ex. 319 A–37). For a new set of plugs each day, these costs would average about $16.50 a year per employee. Molded ear plug prices are quoted at about $1.50 (Ex. 319 A–30; Ex. 319 A–37), and would cost $6.00 a year if workers used 4 pair per year. Custom molded plugs can be purchased in a kit that makes up to 50 pair of ear plugs at $3.10 a pair (Ex. 319 A–35). These plugs, with minimum care, will last 2 or 3 years (Ex. 319 A–36). Ear muff prices are listed at $9.50 (Ex. 319 A–30), $7.60 (Ex. 319 A–31), and $8.40 (Ex. 319 A–37). The estimated cost of about $10 per year per employee reported by the Industrial Fasteners Institute (Tr. 1611), Bethlehem Steel Corporation (Ex. 145), and BBN (Ex. 192, p. 3–33) appear consistent with these rates. Based on a cost of $10 per year per employee, if hearing protectors were provided to all employees exposed to noise at or above a TWA of 85 dB, the cost of this provision would be $51,296,000.

The NIOSH NOHS survey also indicates that about 20 percent of the workers exposed to continuous noise at or above 85 dB are subject to attempts to reduce exposures (See Vol. III, Table 51). Moreover, the data in Table 90 of the NOHS study show that hearing protectors are almost always the method selected to accomplish this reduction. Since the data show that 20 percent of the workers exposed above 85 dB are provided hearing protectors, this implies that more than 20 percent of those exposed above 90 dB have them. This is because it is probable that most of the current worker use of hearing protectors takes place among workers whose exposures exceed 90 dB. However, if we assume that just 20 percent of the workers exposed to noise above a TWA of 90 dB are already supplied with hearing protectors, the total cost of this provision is $45,534,000. This may be an overestimate of the cost to the extent that not all workers exposed between 85 and 90 dB are required to use the hearing protectors.

Training Program

The major cost elements for the training program will be the cost of the production lost while the workers are being trained, and the cost for the individuals providing the training. Because the training session may last about an hour, the cost for production time lost while training takes place can be estimated by multiplying the industry average hourly wage times the number of workers trained. The cost for the people conducting the training will vary with the size of the establishment. The data from Tables 10 and 11 imply that establishments with under 100 employees average less than 21 workers exposed to noise at or above a TWA of 85 dB. A training program consisting of one hour per year per establishment seems appropriate for these size classes. For establishments with more than 100 employees, it is reasonable to assume that one individual could train 30 people in one session.

Consequently, the cost of training can be estimated at (the average production worker hourly wage × the number of workers exposed to noise > a TWA of 85 dB) + (the number of establishements with less than 100 employees × the cost of providing one hour of training) + (the number of exployees exposed at >85 dB in establishments larger than 100 employees divided by 30 workers per session × the cost of providing one hour of training). If we assume that the cost for the person providing the training is $10 an hour, the cost estimating equation for each SIC is:

$$\$Tr = (W)(PW)(P) + \$10\,e + \$10/30\,(PWE)(P)$$

were:

$Tr = the cost of training
W = the hourly production worker wage
PW = the number of production workers (Table 10)
P = the fraction of workers exposed to >85 dB (Table 11)
e = the number of establishments with less than 100 employees (Table 10)
PWE = the number of production workers in establishments with over 100 employees (Table 10)

Summing over all SIC's, the total cost of training for the 19 industry sectors is estimated at $40,029,000. Although a number of comments described well organized training programs already in operation (Ex. 307, J2C, p. 11; Ex. 147C, p. 335; Ex. 147A, p. 6), and it is likely that many firms do some training, no estimates were available of the total number of such programs currently in existence. Therefore, the above estimate for the cost of this regulatory provision is overstated by the extent that industry already provides this instruction.

Warning Signs

The cost for noise warning signs will vary with the plant layout and the number of entrances into the noisy area. Signs are available for slightly over a dollar (Bilsom International, Inc., Product Order Form, etc.). If, on the average, one sign accommodates ten workers and takes 15 minutes to install, the cost to a firm for placing one sign would be about $3.50 at a $10 hourly wage, and the total cost of the provision would be $1,795,000. Although OSHA's calculations treat this estimate as an annual cost, it is probable that most signs will last for considerably longer than one year.

Recordkeeping

Updating records of noise exposure should take no longer than 10 minutes per worker measured. This amounts to 5 minutes per worker per year. Recordkeeping of audiograms, could also take about 5 minutes per employee per year. The cost of this lost work time would equal 1/6 of an hour × the industry hourly wage × the number of workers exposed to noise at a TWA of >85 dB.

In addition, recordkeeping of periodic calibration of audiometers could take 20 minutes per year. If every establishment with over 250 employees in the SIC's studied maintained an audiometer, the total cost for the activity would be 2/6 of an hour × the industry hourly wage × the number of establishments. It can reasonably be assumed that most firms that market hearing conservation services already keep these records so that their additional costs would be negligible. Thus, the total recordkeeping costs are estimated to amount to $6,033,000.

Conclusion

Overall, the above calculations show that the annual cost of compliance with all of the provisions of this regulation would amount to about $53 for each of the more than five million workers protected by the program. The total cost of hearing conservation programs, as measured in current dollars, is about $270 million a year. After adjustment for some of the compliance activities already taking place, the total new costs fall to $254 million per year.

OSHA's estimates do not appear inconsistent with industry statements. For example, testimony from the Industrial Fasteners Institute implies an annual cost of $50 per employee (Tr. 1611, 1612), and the American Boiler Manufacturers Association commented that $35 per production worker is a conservative estimate (Tr. 1573). Dupont stated that its comprehensive program cost the firm between $10 and $20 per worker per year (Ex. 306–J5c). Moreover, a study submitted by the American Textile Manufacturers Institute estimated an annual cost of $14.16 per

employee (Ex. 275 B, Attachment I). BBN offered the only industry-wide calculation. However, as described above, their cost estimate of $65 per worker does not reflect significant changes from the proposal to the final rule.

Table 13 displays the new compliance costs attributable to this amendment as estimated by OSHA for each industry sector. To the extent that many establishments in the industries studied are not affected by noise, or already comply with most of the requirements, or that rental equipment is easily available for monitoring purposes, actual costs would be substantially below the estimates provided.

Table 13.—*Estimated New Annual Compliance Cost of Hearing Conservation Amendment*

SIC	Industry	Estimated cost
20	Food	$17,319,440
21	Tobacco	224,058
22	Textiles	17,756,670
23	Apparel	6,134,562

VII. Economic Impact

Introduction

The cost of the hearing conservation amendment will generate a series of economic effects on those industries that expose their employees to significant amounts of noise. It is difficult to forecast precisely the magnitude of the specific impacts that will occur because they depend in part upon decisions by individual employers on how best to respond to the costs of the amendment. However, the economic framework within which the decisions will be made can be described, and the potential range of subsequent impacts can be identified. For example, compliance costs will exert upward pressure on the prices of the products produced in those industries. Conversely, profits and employment may decline if sales cannot be maintained at the higher price levels. However, the analysis presented below indicates that the economically adverse effects of the program will be exceedingly small compared to each industry's ability to finance them. Moreover, it is shown that the most severe of these impacts will hardly influence the various financial indexes used to assess each industry's economic well-being.

The anaylsis that follows is based upon the assumption that the cost of production in each affected industry will rise by the full extent of the compliance costs as estimated in the previous section. However, even if these compliance cost estimates are approximately correct, it is probable that the accounting ledgers of the impacted industries will not reflect the full burden of these costs. In fact, studies cited in the Benefits section above support the view that the amendment may cause significant cost savings due to decreased rates of industrial accidents, absenteeism, and worker's compensation premiums. To the extent that dollar outlays for these business expenses are reduced following the implementation of the amendment, the net regulatory cost to industry will diminish. However, to demonstrate conclusively the economic feasibility of the amendment, this section does not adjust the above compliance cost estimates for these potentially important cost reductions.

Price Impact

Economic reasoning indicates that firms will attempt to pass on higher production costs by increasing the selling price of their products. If an industry faces a perfectly inelastic demand for its output, the manufacturers would shift the entire cost of complying with the amendment to their customers through a price increase without a contraction of industry sales. This market condition, however, is seldom the case. On the other hand, if the industry supply curve is perfectly elastic, product prices will rise by the full amount of the cost increase, but industry output will fall to the extent that sales are inversely related to price. Except for over very long time periods, this industry response would also be considered unusual.

In general, firms will try to pass on cost increases by raising product prices, and consumers will respond by reducing their purchases of the industry's products. Most firms, therefore, will find that they cannot quickly recoup all of their profits through price hikes, but must settle for price increases allowing less than a full cost passthrough. If firms could pass on their entire cost increase, however, the maximum expected price rise can be calculated by dividing the estimated compliance cost for each industry by the sales of that industry, and expressing the result as a percentage. Table 14 presents the percentage price increase that would be attributable to the amendment if the entire cost is passed on solely and exclusively in the form of price increases.

Table 14.—*Maximum Price Increase*

(In millions of dollars)

SIC	Industry	Estimated cost of amendment	1979 total shipments	Maximum price increase (percent)
20	Food	$17.32	$234,628	0.0074
21	Tobacco	0.22	12,173	.0018
22	Textiles	17.76	46,992	.0378
23	Apparel	6.13	[2] 40,060	.0153
24	Lumber and wood	30.86	[1] 39,781	.0776
25	Furniture and fixtures	6.12	[1] 16,853	.0363
26	Paper	9.08	66,033	.0136
27	Printing and publishing	22.28	[1] 49,527	.0450
28	Chemicals	10.94	149,181	.0073
29	Petroleum and coal	4.46	134,041	.0033

36	Electrical machinery	6.84	110,713	.0062
37	Transportation equipment	12.91	194,461	.0066
49	Utilities	22.31	[1] 117,024	.0191
	Total	254.32	1,719,402	.0148

[1] Data for 1977. See U.S. Department of Commerce, Bureau of the Census, *Preliminary Report, 1977 Census of Manufactures*, Table 2, p. 4-23.

[2] Revenues from sales to customers for electric power and gas utilities. See U.S. Department of Commerce, *Survey of Current Business* (July 1960): S-23. This figure slightly understates total revenues for the entire SIC 49 because it does not include revenues from sanitary services.

Source: OSHA, Office of Regulatory Analysis. U.S. Department of Commerce, *Survey of Current Business* (July 1960): S-4.

The table shows that the overall impact of the proposed amendment, if all of the costs were passed on, would be to increase prices by 0.01 percent, i.e. one hundredth of a percent in the 19 industrial sectors studied. This clearly implies a negligible change to any of the nation's more aggregated price index series. While there is variation among industries, in only a few cases are the estimated price increases greater than a few hundredths of a percent. The largest increase in price, 0.078 percent, is recorded for the lumber and wood sector, an industry estimated to have over 94 percent of its production workers exposed to noise levels above 85 dB. However, even this price increase is of such a small magnitude that its effect would be hardly noticeable among all of the other cyclical factors affecting the industry product prices.

Financial Impact

The discussion above illustrates the impact on prices if the costs of the amendment were shifted entirely to industry customers through higher prices. Alternatively, the entries in Table 15 show the impact upon profits if the costs were solely and exclusively absorbed from profits. The percentage decrease in profits was calculated by dividing the cost of the amendment for each industry by its estimated 1979 profit level. Table 15 indicates that even in the highly unlikely event of no price change, overall profits would decrease by only 0.19 percent. Profits would fall by under 1 percent in all industry sectors, and in the great majority of cases, the anticipated decline is less than one-half of one percent. Moreover, to the extent that output prices rise at all, profits will fall by a smaller amount than listed. Thus, even these fractional values must be considered estimates of the maximum reduction in industry profits.

Table 15.—*Maximum Profit Reduction*

[In millions of dollars]

SIC	Industry	Estimated cost of amendment	1979 pre-tax profits	Profit reduction (percent)
20	Food	$17.32	$10,061	0.1718
21	Tobacco	0.22	2,237	.0098
22	Textiles	17.76	2,291	.7752
23	Apparel	6.13	[1] 2,033	.3015
24	Lumber and wood	30.66	[2] 3,140	.9628
25	Furniture and fixtures	6.12	[2] 883	.6931
26	Paper	9.08	4,814	.1886
27	Printing and publishing	22.28	6,077	.3666
28	Chemicals	10.94	13,372	.0818
29	Petroleum and coal	4.45	25,239	.0176

37	Transportation equipment	12.91	8,665	.1490
49	Utilities	22.31	[3] 7,138	.3126
	Total	254.32	131,609	.1932

[1] The *Quarterly Financial Report* aggregates income for "Other Nondurables" (SIC's 23 and 31). The pre-tax income of $2,660 million was allocated to the respective SIC's on the basis of the 1976 Internal Revenue Service (IRS) data. The IRS survey gives 75.84 percent, of "Net Income (less deficit)" to SIC 23 and 24.16 percent to SIC 31. See Internal Revenue Service, *Preliminary Report, Statistics of Income—1976, Corporation Income Tax Returns*, (Washington, D.C., 1979), p. 6.

[2] The *Quarterly Financial Report* lists income for "Other Durable Manufacturing Products" which is composed of SIC's 24, 25, and 39. The pre-tax income of $5,934 million was also allocated on the basis of the 1976 IRS data (see [1] above). The distribution was 52.91 percent for SIC 24, 14.88 percent for SIC 25, and 32.21 percent for SIC 39. Since 39 was not included in this study, the profits from that industry are excluded from this table.

[3] This amount is also based upon the 1976 IRS data (see [1] above). The 1976 profit rate was calculated by dividing Net Income (less deficit) by total receipts. This profit rate, 6.1 percent, was then multiplied by the total 1979 revenues presented in Table 14.

Source: OSHA, Office of Regulatory Analysis. U.S. Federal Trade Commission, *Quarterly Financial Report*, First Quarter 1980, pp. 19–53.

The ability of the affected industries to raise sufficient compliance funds through normal commercial channels is another relevant consideration. Table 16 presents several financial indicators for U.S. manufacturing industries as presented in the *Quarterly Financial Reports* published by the U.S. Federal Trade Commission. The three indicators—cash on hand, outstanding short term loans, and net working capital—have been chosen because each helps to establish the ability of an industry to finance the costs of the amendment. Comparing the magnitude of these variables to the volume of required funds indicates whether the dollar outlays would be disruptive to the traditional financial operations of the affected industries.

Table 16 shows that for the 19 industries studied, the cost of the amendment is only about 0.6 percent of current cash on hand. The table also indicates that for those industries where data are available, compliance costs average only about 0.7 percent of the short-term debt, and 0.1 percent of the net working capital. Although some industry-to-industry variation exists, none of these ratios is above 2.66 percent. This clearly demonstrates that the cost of compliance will be small relative to each industry's ability to comply with the regulation. On this basis, the record indicates that the regulatory burden would not be an undue financial hardship for each of these sectors.

Table 16.—Compliance Cost as a Percent of Selected Financial Indicators (1979)

SIC	Industry	Cost as a percent of cash on hand	Cost as a percent of short-term loans	Cost as a percent of net working capital
20	Food	0.57	0.37	0.09
21	Tobacco	.12	.10	.01
22	Textiles	2.40	2.32	.23
31	Leather	.58 [1]	.34 [1]	.06 [1]
23	Apparel	.58 [1]	.34 [1]	.06 [1]
24	Lumber and wood	2.66 [2]	NA	NA
25	Furniture and fixtures	2.66 [2]	NA	NA
26	Paper	.60	1.92	.12
27	Printing and publishing	1.04	2.61	.26
28	Chemicals	.33	.68	.04
29	Petroleum and coal	.08	.15	.03
30	Rubber and plastics	.99	.65	.11
32	Stone, clay, glass	.58	1.59	.11
33	Primary metals	1.04	1.13	.14
34	Fabricated metals	.99	1.04	.15
35	Machinery, except electrical	.62	.57	.08
36	Electrical machinery	.18	.36	.03
37	Transportation equipment	.21	.84	.06
49	Utilities	[3] .66	NA	NA
	Total	.60	[4] .70	[4] .10

[1] FTC reports only aggregated data for the non-durables group which consists of SIC's 23 and 31.

[2] FTC reports aggregated data of $2,105 million for the Durables group consisting of SIC's 24, 25, and 39. This value was allocated according to IRS data indicating that SIC 24 had 50 percent and SIC 25 about 16 percent of the "Cash" balances reported by firms in these industries in 1975. See U.S. Department of the Treasury, Internal Revenue Service, *Source Book, Statistics of Income—1975, Corporation Income Tax Returns* (Washington, D.C., 1979), p. 52.

[3] "Cash" as defined by the IRS for tax purposes, and thus not strictly comparable to the FTC definition. See IRS, *ibid*, p. 52.

[4] Excludes SIC's 24, 25, and 49.

Other Sectors

The 19 industrial sectors for which detailed feasibility data were presented above include almost all manufacturing and utility industries. These sectors were initially selected by BBN (see their "Economic Impact Analysis of Proposed Noise Control Regulation," Ex. 192 p. 2-1) because they were believed to be the areas under OSHA's jurisdiction which were most likely to have occupational noise problems. However, industrial noise may also be found in some service-oriented industries. Nevertheless, there is no reason to believe that firms in other industries could not also provide adequate hearing conservation programs for the estimated average cost of $53 per exposed worker. Therefore, there is no reason to expect other major adverse economic impacts.

In addition, the industries covered by OSHA's vertical standards for the maritime industries may also be affected by this hearing conservation amendment. These industries include shipbuilding, ship repair, shipbreaking, and longshoring. Shipbuilding and ship repair are included in SIC 37 (Transportation Equipment) for which cost estimates were presented above. Shipbreaking (or the disassembly of ships) and longshoring are included in SIC 44 (Water Transportation) which was not among the 19 two-digit SIC's studied by OSHA. According to the Bureau of Labor Statistics, in 1979, there were 225,300 total employees in SIC 44.[7] Using the $53 per worker cost, even if all of these employees are exposed to noise

[7] U.S. Department of Labor, Bureau of Labor Statistics, *Employment and Earnings*, 27 (March 1980): 83.

levels >85 dB (TWA), the total cost of the hearing conservation amendment for this industry would be $11.9 million. Since this amounts to less than 0.2 percent of total business receipts and only 2.1 percent of net income,[8] it is clear that the hearing conservation amendment would have a minor economic impact on this industry. Moreover, this estimated cost and economic impact are substantially overstated because the total employment figure used includes white collar workers as well as those production workers who are exposed to noise levels below 85 dB (TWA). Since, for the most part, the number of workers exposed to severe noise in the nonmanufacturing sectors is small compared to the number in heavy manufacturing, it is even less probable that compliance costs in these industries would be the cause of major economic disruption.

Small business

OSHA has always attempted to minimize the regulatory burden on small business as long as it would not jeopardize worker safety and health. To conform with this practice, as well as to comply with the spirit of the Regulatory Flexibility Act, the Agency has made a concerted effort to analyze the special problems that small business might face in complying with this amendment. (The requirement for a Regulatory Flexibility Analysis applies only to proposed regulations issued after January 1, 1981, not to final regulations issued after that date.) Where possible, the proposed regulation was modified to ameliorate potential hardships. For example, the requirement for monitoring may affect smaller businesses disproportionately because they will often rely on consultants, whereas it is easier for larger firms to develop an in-house monitoring capability. After analyzing the record, OSHA drafted the present provision to allow the obligation to recur every other year in most situations, rather than at least annually as was originally proposed. Also, the proposal required that a worker repeat the audiometric exam if a significant threshold shift was detected. The final amendment deletes this requirement for workers who were tested after 14 hours away from workplace noise. Although it may not be practicable for large firms to schedule morning tests for all of their exposed workers, small businesses should be able to take full advantage of this exemption.

Despite these efforts, small business firms may find compliance more of a burden than large firms. Table 10 in the Cost of Compliance section shows that there are only 1–19 employees in almost two-thirds of the 311,094 establishments in those industries primarily affected by noise. The table implies that a firm classified in this size group hires an average of five production workers. Based on the BBN exposure data (see Table 11) an average of 34.4 percent, or only about 2 workers, would be exposed to noise at or above 85 dB in these small establishments.

Small firms will often find ways to reduce monitoring costs by working together to share equipment or by renting monitoring equipment to measure noise exposures. However, following the cost estimation procedures developed above, if these firms do hire consultants to satisfy their monitoring requirements, the annual monitoring cost would average $206 per firm. Using BLS data to calculate a weighted average hourly earnings of $6.76 for production workers in these industries, the estimated cost of sending two workers for audiometric testing is $68 per year. Annual costs for these small firms to provide training and hearing protectors come to about $24 and $20 respectively, while costs for recordkeeping and the posting of signs add $6.00 per firm. Thus, compliance costs for establishments in the smallest size category may average about $324 per year.

Costs of this magnitude are obviously significant to the smallest firms. However, except for the most marginal of these establishments, they are not likely to affect the economic viability of an otherwise profitable operation. Moreover, these costs may be substantially offset by the potential financial benefits of reduced worker absenteeism and workplace accidents. In addition, OSHA offers free onsite consultation in every state, funded under Section 7(c)(1) of the OSHA Act. This service is delivered by State governments or private sector contractors using trained and qualified professional staff. To the extent that these resources allow, OSHA will make a special effort to respond to requests from employers for professional advice and assistance. Also, OSHA is in the process of developing printed pamphlets that will assist employers in providing appropriate training to their workers. The availability of these additional resources should significantly enhance the ability of small business to comply with the provisions of the hearing conservation amendment.

[8] In 1974, receipts for SIC 44 totalled $6,959,289,000 while net income was $570,287,000. See U.S. Department of the Treasury, Internal Revenue Service, *Statistics of Income—1974, Corporation Income Tax Returns*, (Washington, D.C., 1976), p. 12.

VIII. Resource Availability

For the compliance activities of the hearing conservation amendment to be feasible, industry must have the specialized equipment and personnel essential to an acceptable program. As documented in the following paragraphs, the noise record indicates that industry need not develop new technologies to implement hearing conservation programs since the equipment required by the new rule is already being manufactured and sold to industrial purchasers.

A substantive issue that remains to be addressed, however, is the general accessibility of the necessary human and material resources. An assessment of the present availability of equipment and personnel would be useful but it would not provide a realistic indication of the future availability of these resources following the promulgation of the amendment. In the absence of a detailed requirement for hearing conservation programs, many employers have not felt obligated to protect workers from hearing loss. As a result, there has been little incentive for manufacturers to step up the production of appropriate equipment. Similarly, the number of properly trained hearing professionals has been limited by the demand for their services. As industry begins to implement the hearing conservation activities mandated under this rule, it is anticipated that the supply of these resources would rapidly expand to satisfy the new requirements.

Monitoring

The feasibility of the monitoring provision, which requires the determination of a representative noise exposure for each worker exposed to an 8 hour TWA of 85 dB or more, depends on the availability of appropriate instrumentation for firms performing in-house monitoring or of qualified monitoring consultants for firms that choose not to obtain the necessary noise measuring equipment. Comments to the noise record indicate that currently at least 6,000 dosimeters are manufactured each year (Ex. 319 A–1; Ex. 319 A–7; Ex. 319 A–12; Ex. 319 A–20; Ex. 319 A–69; Ex. 319 A–72). Although not all of these dosimeters meet the specifications of the final rule, some appear to comply with the amendment by meeting the range and lower threshold requirements as well as the specifications of ANSI § 1.25–1978 (Ex. 319 A–8; and OSHA telephone survey to dosimeter manufacturers). Kampernan (Ex. 321–32) has tested one of these instruments

and found that it meets a test OSHA believes to be more rigorous than the one this amendment requires. Other manufacturers should also have little difficulty building units that comply with the amendment as the technology is available to both domestic and foreign firms. In addition, there are at least 5,300 sound level meters manufactured each year that can be used to measure worker exposures (Ex. 319 A–1; Ex. 319 A–7; Ex. 319 A–12; Ex. 319 A–72).

The analysis described in the Cost of Compliance section concludes that only the larger industrial establishments are likely to purchase monitoring equipment. In the 19 industrial sectors studied, there are less than 34,000 establishments with over 100 employees (see table 10). It is not known how many of these firms already possess acceptable monitoring instruments. However, the rates of production listed above for units that will last a number of years imply that a substantial amount of equipment is already available. Further, because many of the smaller establishments will opt to rent or share equipment, each instrument will frequently be used by numerous employers.

The significant increase in the demand for monitoring instruments which will follow the implementation of the hearing conservation programs will provide a sharp stimulus to their production. Of the 12 companies currently manufacturing dosimeters, only 2 manufactured acoustical measurement equipment prior to the passage of the 1969 noise standard. Since that time, the remaining companies either expanded their product lines to include sound level meters and dosimeters or were established in response to the anticipated demand for noise measurement equipment. In similar fashion, existing manufacturers and new firms will be able to supply dosimeters and sound level meters to meet the new demand. To provide adequate time for this increased scale of production, OSHA is allowing a 2-year period before the more stringent specification requirements for dosimeters become effective.

In addition, the widespread occurrence of industrial noise has fostered the establishment of numerous acoustical consulting firms that will be available to accommodate those employers who choose to rely on specialized acoustical technicians to measure worker exposures (Ex. 319 B–8; Ex. 319 B–9; Ex. 319 B–11; Ex. 319 B–15). Audiometric testing firms also frequently offer monitoring services (Ex. 319 B–9; Ex. 319 B–12; Ex. 305; Ex. 321–7). This approach is acceptable as long as employers ensure that the consultants use qualified personnel and appropriate equipment and that they follow the requirements of the amendment. Each consulting firm can provide monitoring services to numerous industrial clients as the surveys do not always require a substantial degree of technical expertise (especially where dosimeters are used), and the smaller establishments can be surveyed in no more than one day (see Table 8). Although the record does not indicate the number of consulting firms that currently have the capability to conduct noise measurement surveys, the capacity of such firms would be expected to expand accordingly if the current supply of these services proves to be insufficient.

Audiometric Testing

The data developed in the cost of compliance section indicate that there will be about 5,126,000 workers in audiometric testing programs. The amendment requires that an otolaryngologist, an audiologist, or in their absence, a qualified physician oversee each program. In addition, the audiometric examination must be administered by one of these professionals or a certified technician trained in a course that contains material equivalent to that approved by the Council for Accreditation in Occupational Hearing Conservation, or The Guidelines of the Inter-Society Committee on Audiometric Technician Training.

In 1975, the American Speech and Hearing Association (ASHA) reported that course work in industrial hearing conservation was offered by 100 university and college programs. The ASHA estimated that there were 3,500 audiologists at that time and that this number would probably double in the next five years. (Ex. 15–30, p. 4). Indeed, by 1980, the American Speech-Language-Hearing Association (ASLHA) reported that there were currently 6,052 audiologists who are members of ASLHA, another 2,000 who are licensed, and an additional 1,600 students who were about to receive masters' or doctoral degrees (Ex. 319 B-7). Thus, within the near future, there will be about 9,652 audiologists who can supervise audiometric programs. Although it is unlikely since many firms will have a medical doctor to oversee the program, if only these audiologists supervised audiometric testing for all 5,126,000 workers, they would see an average of 531 workers each. The number of workers tested per audiologist, therefore, is about 2 per day, which is clearly a manageable task.

In addition to audiologists, otolaryngologists and other qualified physicians can oversee audiometric testing programs. The American Council of Otolaryngology (ACO) estimated that there were almost 5,000 practicing otolaryngologists in 1973 (Ex. 321–5, p. 17). According to the ACO, by 1985 there will be a surplus of 253 otolarynogologists (Ex. 321–5, p. 94). Moreover, in 1977 there were 382,000 professionally active M.D.'s in the U.S. (Statistical Abstract of the U.S., 1979, p. 106), and a major study recently submitted to the U.S. Department of Health and Human Services concludes that the U.S. will have an oversupply of 70,000 physicians by 1990 (Report of the Graduate Medical Education National Advisory Committee, Vol. I, GMENAC Summary Report, Sept. 1980, p. 3).

Currently, the Council for Accreditation in Occupational Hearing Conservation (CAOHC) indicates that they have certified about 6,700 audiometric technicians (Ex. 319 B–4), and there are about 700 course directors approved by the CAOHC to provide training for 20–30 technicians per course. If each course director teaches only one course per year to 20 people, this represents an additional 14,000 technicians. Thus, within a year, about 21,000 technicians could be available to perform audiometric tests, which averages to about one technician per 244 workers. However, many technicians have received training and certification by institutions and professionals other than the CAOHC, and audiologists and physicians other than those certified as instructors by the CAOHC will be able to train additional technicians. Thus, the supply of technicians is likely to be even larger than the 21,000 estimated here.

As explained in the previous section on the cost of compliance, about 829,000 workers will receive audiometric tests supervised by physicians or audiologists at clinics and in private practices. The 253 excess otolaryngologists that the ACO predicted to be available in 1985, alone, could provide 1,170,000 office visits (Ex. 321–5, p. 94). Thus, there is no indication that the total supply of otolaryngologists, audiologists, and physicians could not meet this demand.

About 1,447,000 workers were estimated to receive audiometric tests from mobile vans which can travel to virtually any plant facility. At a testing rate of 48 persons per day (Ex. 319 B–8 suggests 56 per 8-hour day), the workers could be tested in 180 days by 167 mobile vans. The use of these vans is already a common practice for many hearing conservation firms. Although the

number of vans presently equipped to provide audiometric services was not submitted to the record, it is reasonable to expect that the existing audiometric firms, along with new firms entering the market will be able to supply these mobile services.

Approximately 2,850,000 workers were estimated to have their hearing tested at in-house programs in 13,285 of the largest industrial establishments. Many of these firms already offer audiometric tests to their employees. Moreover, additional audiometric technicians can be readily trained by sending employees at each facility to an appropriate institution for training. Thus, it is unlikely that these large firms will have difficulty finding appropriately qualified personnel.

In general, the trained personnel are widely disseminated throughout the nation. For example, there are about 2.1 otolaryngologists per 100,000 people in the U.S., with a range from 1.7 in the east south central region to 2.5 in the pacific region (Ex. 321–5, p. 21). By federal geographical region, the distribution of audiologists listed on the ASLHA mailing list ranges from 285 ASLHA audiologists in Region 8 to 1,186 ASLHA audiologists in Region 5. Nevertheless, one objection raised against audiometric testing was that some commercial activities, such as logging operations, would not be accessible to qualified personnel (Ex. 14–264; Ex. 14–260). However, OSHA believes the record shows that in almost all cases, the widespread availability of professional and technical personnel supplying mobile audiometric services should be adequate for even outlying industrial sites.

The major equipment required to perform audiometric examinations are audiometers and audiometric test booths. Based on 2,000 hours of use per year and a 10-minute examination period, each audiometer can potentially be used to provide 12,000 tests. If the audiometers are operated at only half this rate, it would take about 1,000 audiometers to test 5,126,000 workers. The current production of this equipment, each unit of which is expected to operate for about 10 years, is at least 5000 per year. (Ex. 319 A–51; Ex. 319 A–60; Ex. 319 A–64; Ex. 319 A–67). Moreover, all of the manufacturers who commented indicated that they could meet an increased demand, and it is likely that most of the existing audiometers currently used by industry are acceptable under the amendment.

There are three major manufacturers of audiometric test booths in the U.S. Although there is no information in the record about the number of units produced each year, manufacturers could increase their production fairly rapidly by adding second and third shifts if the current supply proves to be inadequate to meet an increased demand. In addition, other firms could expand into this area. However, some users of audiometric test booths may have difficulty complying with the maximum octave band sound pressure levels allowed in the booth during audiometric testing. This may be particularly difficult in the 500 Hz octave band. In an effort to alleviate this difficulty, OSHA has chosen to use 27 dB as the maximum sound pressure level in the 500 Hz octave band rather than the more stringent level of 21.5 dB specified in the ANSI S3.1–1977 standard. Although there is evidence on the record that the levels specified by ANSI S3.1–1977, with the adjustment at 500 Hz, can be met during industrial audiometry (Ex. 266A, p. 73; Ex. 295), some users may have to relocate their booths to a quieter location in order to comply with this provision. Since only the largest industrial establishments will develop in-house audiometric facilities, quieter enclosed areas should be generally available. Nevertheless, barrier walls could be constructed or double-walled booths purchased where a problem persists. Since this part of the requirement does not become effective until 2 years after the effective date of the amendment, most users should have sufficient time to make the necessary adjustments.

Other Provisions

The resources required to comply with the use of hearing protectors, training, the posting of warning signs, and the keeping of records will not be difficult for companies to find. The general availability of hearing protectors is amply demonstrated by the list of 175 models of hearing protectors from 46 different manufacturers or suppliers published by NIOSH in 1975 (Ex. 321–14A). Training materials, warning signs, and record forms also can be readily purchased from many safety supply houses.

IX. Additional Matters

It has been shown that this standard will result in a significant reduction of a significant risk of hearing impairment. Indeed, even assuming full compliance with the present hearing conservation requirements set forth in § 1910.95(b)(3), the new standard is reasonably necessary and appropriate to reduce a significant risk, in that it will result in 38,000 fewer cases after 10 years, 143,000 after 30 years, and 189,000 at equilibrium. It has also been shown that the costs of the standard, $53 per employee covered, and the total new costs, averaging 0.0148% of sales and less than .2% of profits, are economically feasible and that the amendment is technologically feasible. Hearing impairment reduces a worker's effectiveness on the job, makes life much more difficult and when noise-induced, is essentially nonreversible and cannot be cured through use of hearing aids. OSHA has issued this standard because of these reasons and findings. Thus, in accordance with the Agency's traditional interpretation of Sections 3(8) and 6(b)(5) of the Act, and its legislative history, the Secretary is issuing this standard to reduce a significant risk of material impairment.

OSHA rejects the view that the Agency should weigh costs and benefits in issuing this standard. OSHA believes such a course would contravene its statutory mandate. We note, however, that the question of whether OSHA must balance costs and benefits is presently pending before the Supreme Court in *American Textile Mfgs. Institute, Inc.* v. *Marshall*, U.S. Nos 79–1429, 79–1583. If required to do so as a formal finding, OSHA would find that the prevention of a year of hearing impairment is worth many times more than the cost of this standard in preventing that impairment. Losses of workplace effectiveness, inability to hear safety warnings on the job, inability to communicate with family and friends, and inability to enjoy many of the benefits of a media oriented society are very real and very substantial losses, even if exceedingly difficult to quantify in dollars. The basis for this alternative cost-benefit finding are contained in the Final Regulatory Analysis (Section VII) which contains several evaluations of the comparison between costs and benefits. That discussion is incorporated here by reference. However, we briefly summarize it below.

Some of the financial savings created by this amendment, such as reductions in absenteeism and worker's compensation payments have been estimated above. However, the value of preventing the serious hardship of hearing impairment, though large, cannot be quantified in dollars.

The data available in the noise record are much more extensive than can normally be expected to be available in the health area. It is possible to make a reasonable estimate that hearing conservation programs over the next 70 years will prevent 43.3 million person-years of hearing impairment at a cost of $436 per year of hearing impairment

prevented (discounting neither costs nor benefits).

OSHA has placed a detailed numerical analysis of the benefits of the standard in the preamble because the data available permits it. But in most cases of health regulation, such detailed analysis cannot be done because data are not available. As the Supreme Court pointed out, the inability to do such detailed analysis does not inhibit the agency from issuing appropriate regulations (*I.U.D v. API, supra,* slip. op. p. 45).

As discussed above, this standard creates massive benefits, has a low cost per employee covered and creates no feasibility problems. In fact, it would even be appropriate for health and safety regulations to be issued and fully justified by the OSH Act though the reduction in risk were much less and the economic impact greater.

X. Environmental Impact

On February 19, 1974 OSHA announced in the **Federal Register** its intention to prepare an Environmental Impact Statement assessing the impact of a standard that would be proposed for occupational noise exposure (See 39 FR 6119). Information was solicited from the public on a variety of environmentally related issues including possible environmental impacts of the recommended standard and any irreversible commitments of resources which would be involved if the standard should be implemented.

A draft Enviornmental Impact Statement was made available to the public on June 16, 1975 (40 FR 25525) and environmental impact was specifically an issue at the first hearing held in 1975. Approximately 29 comments were received on the environmental impact of the proposal.

A Final Environmental Impact Statement has been prepared in accordance with the Council on Environmental Quality (CEQ) Guidelines (40 CFR § 1500 et seq.) and the Department of Labor's regulations setting out procedures to be used by Department of Labor agencies to insure compliance with the National Environmental Policy Act (29 CFR Part 11). The Final Environmental Impact Statement concluded that the hearing conservation amendment will beneficially impact the workplace environment by reducing both the incidence and the degree of hearing loss among workers. The incidence of other adverse health effects associated with noise exposure may also be reduced. In addition, the environment outside the workplace should not be significantly affected.

The Final Environmental Impact Statement discussed a number of alternatives including:

(1) Revision of the permissible exposure level for noise.

(2) Initiation of a hearing conservation program at 85 dB.

(3) Initiation of a hearing conservation program at 80 dB, and 90 dB.

(4) Revision of the monitoring, testing, and training provisions in the proposal.

(5) No regulatory action.

The alternative which would be the most preferable environmentally is the one which would result in the greatest reduction in hearing loss and other adverse non-auditory health effects associated with noise exposure in the workplace without resulting in any significant adverse environmental impact. Theoretically at least the most preferable alternative would have been to revise the permissible exposure level downward; this would have the effect of protecting more employees from suffering material impairments of hearing and of lessening the severity of the impairments that might be suffered anyway. At the other end of the continuum was the alternative of no regulatory action. This would result in approximately 5.4% of employees and retirees (940,000) suffering material impairments of hearing due to occupational noise exposure. The Agency felt that more information was needed before it could make a decision to reduce the permissible exposure level. The decision as to the appropriate permissible exposure level was deferred pending the acquisition and evaluation of the necessary data.

Various alternative monitoring, testing and training provisions were generally considered. Many of these were suggested by interested persons in comments and were discussed at the rulemaking hearing. For example, the appropriate frequency of monitoring and audiometric testing was the subject of somewhat varying opinions. While it is not possible to isolate the contribution of any particular element to the overall efficacy of an employee hearing conservation program, OSHA has endeavored to select a combination of provisions which together will provide adequate protection to employees while minimizing the burden on employers. The hearing conservation program prescribed in the final standard is consistent with the advice and recommendations of numerous experts in the field of hearing conservation.

Initiation of hearing conservation programs at employee exposure levels of both 90 dB and 80 dB was also considered. Initiation of a hearing conservation program at 90 dB was rejected because it was not considered adequate to reduce the significant risk of material impairment faced by many employees at this level. Implementation of this alternative, even assuming perfect compliance, would still result in approximately 351,00 occupationally-exposed persons suffering material impairment of hearing. Initiation of a hearing conservation program for all employees exposed to 80 dB, although it would have provided a substantial reduction in the number of hearing impairments resulting from noise exposure, was deferred. Lowering the initiation level for hearing conservation programs to 80 dB would greatly increase the number of workers and establishments included in these programs. This would increase the demand for the various resources needed to implement effective hearing conservation programs including individuals trained in the evaluation of hearing and persons trained in conducting audiometric examinations, as well as increase the demand for the equipment and supplies used in such programs. The current record does not contain enough information to enable OSHA to determine if the resources available are adequate to meet this increased demand.

After considering the various alternatives the Agency decided to mandate hearing conservation programs when workers are exposed to TWAs of 85 dB. This is an environmentally pragmatic decision and should result in preventing 898,000 persons from suffering a material impairment of hearing as a result of occupational noise exposure. This represents an additional 778,000 material impairments over the estimated number of material impairments that are being prevented by hearing conservation programs currently in effect.

The alternative selected by the Agency will not eliminate all environmental harm due to occupational noise exposure since some persons will continue to suffer material impairment of hearing even after implementation of the hearing conservation program required by the amendment. However it was chosen by the Agency because it will extend the benefits of hearing conservation programs to approximately 5.1 million U.S. workers while the Agency resolves various feasibility issues surrounding the permissible exposure level and priority of various methods of compliance. By its action in promulgating the hearing conservation amendment, the Agency has taken all practicable means to minimize

environmental harm within these feasibility constraints.

This action will help to preserve the nation's human resources by protecting workers from occupational noise exposure. It has been designed to minimize the irretrievable commitments of human and physical resources needed in order to implement hearing conservation programs.

Summary and Explanation of the Standard

Exposure Monitoring

Noise monitoring is necessary for the following reasons:

(1) to identify employees who should be given audiometric tests and the other benefits of the hearing conservation program;

(2) to identify those employees for whom hearing protection is mandatory under the provisions of this amendment;

(3) to determine the amount of attenuation that hearing protectors need to provide; and

(4) to instruct both employers and employees in the degree of the noise hazard.

The monitoring requirements of this amendment are imposed pursuant to section 6(b)(7) of the Act, which mandates that standards promulgated under section 6(b) shall, where appropriate, "provide for monitoring or measuring of employee explosure at such locations and intervals, and in such a manner as may be necessary for the protection of employees." In this amendment the word "measurement" is used to mean the quantification of an employee's noise exposure. Monitoring refers to a program that includes calibration, measurement, and calculation of dose or noise exposure. Although the current standard requires noise exposures to be controlled to within specific limits, it does not explicitly require the collection of personal noise exposure data. This amendment makes monitoring requirements explicit for purposes of the hearing conservation program.

Briefly, the amendment requires employers initially to determine if any employee's exposure equals or exceeds a TWA of 85 dB. This determination must be based on the employer's good faith inquiry into any factors which would tend to indicate that noise exposures in the workplace are in the vicinity of an 8 hour TWA of 85 dB. Factors meriting a positive determination include any employee complaints about noise, any difficulties in communication at a distance of about 2 feet, or any measurements made with a sound level meter or dosimeter. If the employer's determination indicates any employees are or may be exposed to a TWA at or above 85 dB, then employers must obtain noise exposure measurements which are representative of all such employees.

This initial determination/monitoring cycle must be repeated every 2 years. Of course, the employer may, at his own option, skip the initial determination procedure entirely, and simply measure employee exposures.

Where employees have a TWA of 85 dB or more, measurements must be made at least every 2 years. Measurements must also be taken within 60 days of any change in process, equipment, or personnel assignment which increases employee exposure to the extent that some employees may be newly exposed to a TWA of 85 dB or above, or increases exposure to the extent that any personal protective equipment being used no longer provides enough attenuation. Rather than measure every worker, in such cases, employers have the option of measuring the exposure of only one member of an employee group so long as the other members are engaged in a similar kind of work and are reasonably expected to have approximately the same noise exposure. In this case the employer must select for measurement the employee in the group whom he reasonably believes has the highest exposure. The exposure of the measured employee is then attributed to the other members of the group. Measurements of new employees must be taken (or exposures must be attributed to them) within 60 days of their exposures to a TWA of 85 dB or above. Workers must be notified of their exposures in writing within 21 days of the measurement.

Expression of Noise Exposure

In the proposal, an employee's noise exposure was expressed in terms of a fraction of allowable exposure or dose, often expressed as a percentage. Noise dose is a measure of the total noise to which an employee is exposed during a workshift. It is measured directly by a noise dosimeter or it can be computed from sound levels and the amount of time of exposure to each level. In this amendment, the concept of an "8-hour time-weighted average sound level," abbreviated TWA, is used as an alternative descriptor of noise exposure. The TWA as a single numerical value is the sound level which, if experienced continuously for an 8-hour workshift, would lead to the same noise dose as was measured or calculated, even if the duration was shorter or longer than 8-hours. Since noise exposure levels vary throughout the day in most industrial establishments, the TWA represents the integration of these levels (according to the 5-dB exchange rate), referenced to a duration of 8 hours and an exposure level of 90 dB. OSHA believes that since TWA is an exposure level expressed in decibels, it may be more easily understood by workers, management, the public, and others who are not familiar with the field of acoustics. To summarize, for purposes of the hearing conservation amendment, a dose of 0.5, or 50 percent, is equal to a TWA of 85 dB, computed in accordance with Appendix A of the amended noise standard.[9]

Since noise dose and TWA are equivalent in that one can be calculated from the other, since there does not appear to be much possibility of confusion between the two terms, and since one or the other may be preferred under different circumstances, both terms are defined in this amendment and either may be used by employers. Table A–1 in Appendix A has been added as a convenience so that where the value of one descriptor is known, the value of the other may easily be found.

There were relatively few comments in the record that addressed the issue of whether to describe noise exposure in terms of dose to TWA. There were, however, some instances where witnesses and commenters seemed to confuse noise *levels* with noise *exposures* (for example Ex. 14–96, p. 1; Ex. 14–79 p.

(1) OSHA wishes to clarify the fact that both "dose" and "8-hour, time-weighted, average sound level" are descriptors of employee noise *exposure*. Noise levels are addressed by this amendment only to the extent that they are experienced by employees. Even then, it is the time integration of noise levels that is of importance.

When To Implement the Program

The hearing conservation program must be implemented when any employee's noise exposure equals or exceeds an 8-hour TWA of 85 dB,[10] or when the dose equals or exceeds 50 percent (0.5). The final standard requires the initiation of a hearing conservation program at this point because as explained earlier, a substantial

[9] Technically TWA is not a true average, either arithmetic or exponential, since it represents a theoretical value derived from an accumulated dose. To be more precise, TWA should stand for "time-weighted accumulation." However, the Agency has chosen to use the word "average" so as to be consistent with other OSHA standards, such as the asbestos standard (29 CFR 1910.1001) and the acrylonitrile standard (29 CFR 1910.1045), as well as to be more easily understood.

[10] Unless otherwise noted, where the term TWA is used in the preamble an 8-hour duration is assumed.

percentage of the population whose exposures exceed this level over a working lifetime will incur noise-induced hearing loss constituting material impairment unless preventive measures are applied. This is similar to setting an "action level" of 85 dB. Setting an action level for noise monitoring at approximately one-half the permissible exposure level (PEL) is consistent with other OSHA health standards (for example the standards on Arsenic (29 CFR 1910.1018) and Acrylonitrile (29 CFR 1910.1045)). This is done primarily because of uncertainties that can affect the employer's measuring program. The employer may not be absolutely certain that the day on which he or she measures is representative of the employee's actual exposure throughout the year. Therefore, requiring noise exposure measurements and other elements of the hearing conservation program at an action level the PEL safeguards employers against exceeding the permissible level, as well as identifies the more susceptible workers so that steps may be taken to protect their hearing. Many comments in the record supported initiating noise monitoring at a TWA of 85 dB (Ex. 162, p. 48; Ex. 189–6, p. 25; Ex. 114, p. 5; Ex. 23, p. 4; Ex. 2B, p. 6; Ex. 2C–126, p. 1). In fact, many people who opposed a PEL of 85 dB supported the idea of initiating monitoring and audiometric testing at 85 dB (Ex. 114, pp. 4–5; Ex. 175, pp. 10–11).

Dose Computation

The amendment requires noise dose to be computed in accordance with Table G–16a and the formula $D=100\ C/T$. In cases where the measured levels are not specified in the table, noise dose may be computed using the equation given in the footnote to Table G–16a.

The sound levels to be included in the calculation of the noise dose, whether one uses a sound level meter or a dosimeter, extend from 80 to 130 dB. A-weighted sound levels are assumed throughout the standard and preamble unless otherwise specified. The term "dBA" is not used because it is technically incorrect to do so. (It is the sound level that is weighted, not the decibel). According to acoustician Dr. Robert W. Young (Ex. 2C–121, p. 1) "The decibel is not A-weighted. The quantity . . . is A-weighted sound level (dB)."

Noise dose is relatively simple to compute when the sound level is constant throughout the workshift. The dose in percent, D, is given by $D=100\ C/T$, where C is the total length of the workshift in hours and T is the reference duration corresponding to the measured sound level L, as given in Table G–16a of the amendment.

For example, consider a worker who is exposed to a continuous sound level of 96 dB for a 7-hour workshift. As specified in Table G–16a, the reference duration for 96 dB is 3.5 hours. Entering this reference duration into the previous formula: $D=100(7/3.5)=100(2)=200\%$. Two hundred percent is the dose for a 7-hour day's exposure to 96 dB.

When the employee's noise exposure level fluctuates, or consists of two or more levels, the total noise dose is computed as follows: $D=100(C_1/T_1+C_2/T_2+\ldots+C_n/T_n)$, where C_n represents the total time of exposure at a specific level, and T_n represents the reference duration for that level given in Table G–16a or by the equation in the footnote to that table.

For example, if a worker is exposed for 5 hours to 85 dB, 2 hours to 87 dB, 15 minutes (0.25 hour) at 95 dB, and 45 minutes (0.75 hour) at 97 dB, the total noise dose would be:

$D=100\ (5/16+2/12.1+.25/4+.75/3)$
$D=100\ (0.31+0.17+0.06+0.25)$
$D=100\ (0.79)=79\%.$

The 8-hour time-weighted average sound level (TWA) can be computed from the employee's dose by use of the formula: $TWA=16.61\ \log_{10}(D/100)+90$ where the dose, D, is given in percent. Conversely, the dose may be computed from TWA using: $D=100\times 10^{(TWA-90)/16.61}$.

Values of TWA corresponding to various doses are tabulated in Appendix A, II. For the two examples given above, the TWA for a dose of 200 percent is approximately 95 dB, and that for a dose of 79 percent is approximately 88 dB. Since Table A–2 in Appendix A does not provide values above a dose of 999 percent or above a TWA of 106.6 dB, the formula must be used to convert from dose to TWA, or from TWA to dose in cases where exposures exceed these values.

Note that TWA is the sound level that would produce a given noise dose if an employee were exposed to that sound level continuously *over an 8-hour workday. This is true regardless of the length of the actual workshift.* OSHA requires the initiation of monitoring at a noise dose of 0.5, or 50 percent. This corresponds to a TWA of 85 dB. It is important to understand that the exposure is to be averaged over 8 hours. Thus, if an employee only works for 5 or 6 hours, the exposure can be higher during those hours than if the employee works for 8 hours. For example, for purposes of the hearing conservation amendment a 4-hour workday at a steady sound level of 90 dB, an 8-hour workday at 85 dB, and a 12-hour workday at 82 dB all correspond to a noise dose of 50 percent and to a TWA of 85 dB.

Table G–16a is essentially the same as the table presented in the proposal except that levels above 115 dB and below 85 dB are included so as to help clarify the fact that they are to be included in the determination of noise dose.

There are several reasons for the extension of Table G–16a. The current standard does not permit exposures above 115 dB, regardless of duration. This provision was not intended to preclude such levels, where they actually exist, from being included in the computation of an employee's actual total exposure. Indeed, it would be patently unreasonable to exclude the highest levels which are the most damaging (Kamperman, Ex. 321–32, p. 1; Ex. 321–21E, p. 5). The extension of the table above that level has been done to make explicit the requirement that, for purposes of the hearing conservation program, exposures above 115 are to be included in the dose. This is important so that where noise exposure levels exceed 115 dB, the actual exposures above that level are assessed accurately, so that employees will know that they need to select hearing protection with maximum attenuation capabilities, and to take steps to ensure that protectors are effectively fitted and worn. To avoid giving the impression that levels above 115 dB are permitted, values above that level in Table 16a have been added in italics.

Similarly, Table G–16a gives values below 85 dB so that such levels also can be included in the dose for purposes of the hearing conservation program. These values are primarily relevant for those employees with workshifts longer than 8 hours. To ensure that exposure measurements taken with a dosimeter are equivalent to those obtained using a standard sound level meter, and to those in Table G–16a, an operating range of 80 to 120 dB is required for dosimeters. The upper limit of 120 dB ensures that levels above 115 are included in the dose. The lower limit of 80 dB is consistent with accepted measuring techniques for dosimeters. It is generally accepted that the lower threshold of a dosimeter should be 5 dB below the level for which measurements are being taken. Evidence in the record supports this requirement.

Dr. George C. Maling, Jr., representing the Institute of Noise Control Engineering, commented that selection of the same level as the point at which integration (or accumulation of noise dose) begins may lead to serious measurement errors. He recommended setting the threshold 3 to 5 dB below the lowest "action point" (Ex. 14–334, p. 2).

Kenneth Eldred, as Chairman of the ANSI Sound Level Meter Standards Working Group, also supported this concept. He stated that should a sound level of 85 dB for 8 hours trigger the hearing conservation program, there might be considerable measurement error unless the threshold level of the dosimeter is required to be at a lower level, such as 80 dB (Ex. 321–19, p. 2). For example, with continuous noise levels that fluctuate between 84 dB and 86 dB, instruments with lower thresholds of 84.5 dB, 84.8 dB, or 85 dB could read anything from zero percent to more than 100 percent dose in exactly the same noise conditions. Setting the threshold well below 85 dB would prevent this confusing situation, and would ensure that the appropriate employees receive the benefits of the hearing conservation program.

There were some comments during the hearings that by initiating the hearing conservation program at a TWA of 85 dB, OSHA was, in effect, lowering the permissible exposure limit, thereby making new requirements for engineering controls (Ex. 14–341, p. 1; Ex. 14–288, p. 2). However, the Agency has made it clear throughout this preamble that the PEL remains unchanged at this time, and that an action level of 85 dB, calculated as set forth in the amendment, is an appropriate action level to trigger monitoring and other hearing conservation measures. The lower threshold of 80 dB for measurements merely facilitates the proper identification of employees to be included in the hearing conservation program, and does not change the requirements for engineering controls.

Monitoring Requirements

The proposal stated that employers have an obligation to determine if any employee is exposed to a daily noise dose of 0.5 or above (50 percent or above). The American Trucking Association (Ex. 14–878, p. 3) suggested that the proposal gave insufficient guidance on when monitoring is required. In order to ensure that monitoring will be conducted when necessary, OSHA has stated conditions upon which employers must base their determinations.

In order to comply with this amendment employers must determine whether or not they need to monitor workers' noise exposures. The initial determination is based on any information, observation, calculations, or exposure measurements that indicate exposures are or may be at or above 85 dB. This includes personal noise exposure surveys, area noise surveys, and other information such as manufacturer's information about noise emitted from specific machines. The employer must also consider other factors which may tend to suggest noise exposures at or above a TWA of 85 dB. Such factors include employee complaints about noise, indications that employees are losing their hearing, or are finding that normal conversvation between two people is very difficult when those attempting to communicate are facing each other in the work area at a distance of 2 feet (Ex. 1, Table 5; Ex. 31, Fig. 6–1). Employers shall make this determination at least every two years so as to identify any new employees in need of periodic noise monitoring.

The Agency received a number of comments favoring an initial determination as a practical approach to monitoring. Dr. Robert Benson, representing the American Iron and Steel Institute (Ex. 64–10, p. 11), stated that a preliminary screening method should be used to determine whether or not extensive measurements must be applied. S.E. Cyc for the Timken Co. (Ex. 14–978, p. 3) suggested that employers establish "noise centers" where noise samples could be made on a regular basis to see if certain areas need further investigation. The Evaporated Milk Association (Ex. 14–295, p. 2) suggested that Type III sound level meters could be used to make cursory measurements for such determinations. OSHA agrees that all of these methods could be appropriate.

John J. Ahern of General Motors Corp. (Ex. 14–883, pp. 8–9), as well as H. Grady Gatlin of the Air Transport Association (Ex. 14–860, p. 3), recommended area monitoring as a way to estimate employee exposure. Area monitoring is a good way to determine the need for further monitoring, and it is useful for planning engineering control strategies. However, since employees move around within the workplace, and since area measurements are not made at the worker's ear, area monitoring is not sufficient to describe actual worker exposures. Area monitoring would constitute compliance with the requirement for an initial determination, but not with the actual monitoring requirement.

It is intended that the initial determination direct the employer's attention to the workplace noise exposures. Because of the ubiquity of noise, it is contemplated that all employers covered by the standard will have to make initial determinations, yet only a small fraction of them will actually have to monitor their employees' noise exposures. The initial determination is essentially a screening device which balances the need to protect employees by measuring their exposures against the undue burden on employers if the standard were to require measurement of every employee's exposure. Such a requirement would result in the monitoring of many employees who do not have significant noise exposures. The final standard does not require the initial determination to be written. While it is thought that a written initial determination might force the employer to focus more on the rationale for deciding not to monitor, it was felt that in this case imposing such a requirement would result in an extremely large amount of paperwork due to the ubiquity of noise. It should be noted, however, that initial determinations which are incorrect do not protect an employer from a citation for failure to monitor employee exposures. There is little to gain from incorrect initial determinations and it is expected that initial determinations will be carefully done.

The proposed standard required annual monitoring. However, some commenters suggested less frequent monitoring. The J.I. Case Company (Ex. 189–1, p. 3) suggested every 2 years, and John Stenmark of the American Iron and Steel Institute recommended every 3 years (Ex. 2C–126, p. 4). In the final amendment the proposed annual monitoring requirement has been relaxed to every 2 years. The Agency believes that monitoring every 2 years is sufficient, as long as additional monitoring is conducted whenever the employer has reason to believe that employees' exposures may have increased so that those not in the hearing conservation program would need to be included or that the attenuation provided by hearing protectors already in use is insufficient. Therefore the amendment requires employers to remonitor whenever there is an increase in the level or time of exposure sufficient to render an employee's hearing protectors inadequate. Monitoring more often than every 2 years will probably be unnecessary in industries where production processes change relatively little.

Some commenters opposed a requirement for periodic monitoring at all, especially in conditions where noise levels tend to be uniform over long periods of time. Groups such as the Air Transport Association (Ex. 142, p. 4–5), the American Iron and Steel Institute (Ex. 64–4, p. 3–4), and the Can Manufacturers Institute (Ex. 14–862, p.

12) believed that periodic monitoring was unnecessary unless there was a significant change in production process.

After considering these arguments OSHA has, in this amendment, required periodic monitoring for all industries, where initial determinations indicate exposures may equal or exceed a TWA of 85 dB, but has substantially reduced the frequency of the required monitoring. Periodic monitoring is necessary because noise levels tend to increase as equipment ages and wears, and in the absence of actual measurement employers are often unaware of these changes. Changes in noise level may cause workers whose exposures have been below a TWA of 85 dB to exceed that level, and therefore these workers would need the benefits of the hearing conservation program. Workers who have been exposed to a TWA between 85 and 90 dB may exceed the permissible exposure limit (PEL) and at this point the employer has an obligation to implement feasible engineering controls (or hearing protection whenever engineering controls are infeasible). Workers exposed above the PEL and whose exposures have increased may need additional hearing protection, such as an earplug with greater attenuation, or a change in type of protector. In addition, periodic monitoring is expected to serve an informational purpose since the amendment requires employers to inform employees of their exposures. Therefore workers will be reminded of the nature and extent of their exposures and will be better motivated to participate cooperatively in the hearing conservation program, and to wear properly fitted hearing protectors. (Ex. 147C, p. 335).

The monitoring procedure outlined in the final standard requires that once every 2 years the employer make an initial determination as to whether any of the employees may be exposed to a TWA of 85 dB. Even in the case of a negative initial determination, a new initial determination must be conducted every 2 years. If the initial determination is positive, then the employer must determine actual exposure through measurement.

In order to minimize the employer's burden while affording adequate protection to employees, the final amendment allows employers to measure fewer than all noise-exposed employees. The employer must select a group of employees who are engaged in a similar kind of work, and whose noise exposures are expected to be similar. The employer must then select for monitoring the worker within this group whom he or she reasonably believes has the highest noise exposure. When this employee has been monitored, his or her noise exposure is attributed to and written on the record of each member of the group. If the employer finds that the monitored employee's noise exposure is so high that it does not accurately reflect the exposure of other members of the group the employer may, of course, divide the group into smaller subgroups and pick an employee within that subgroup to monitor. This employee's exposure may be attributed to the rest of the employees in the subgroup. Of course nothing in the amendment prevents the employer from monitoring the exposures of all employees.

The proposal required additional monitoring with 30 days of any change or modification of equipment or process, or other workplace or work practice modifications affecting the noise level. There was considerable debate about this requirement. Some companies, such as the Outboard Marine Corporation, (Ex. 14–242, p. 4), pointed out that noise levels in their facilities were constantly changing from day to day. Others agreed (Air Transport Association, Ex. 14–860, Attach 2, p. 3; National Concrete Masonry Association, Ex. 14–247, p. 4; Oklahoma General Contractors, Ex. 14–306, p. 1) and stated that remonitoring should not have to occur unless there was a "significant" or "substantial" change in exposure levels. The Can Manufacturers Institute (Ex. 14–862, p. 12) equated a "significant increase" with an increase in level of 5 dB or greater. Many witnesses supported the 30–day "grace period" in which to remonitor when a significant change had occurred (Ex. 14–287, p. 2; Ex. 14–306, p. 1), but some recommended longer periods. Bill Johnson, representing Keystone Steel and Wire (Ex. 14–232, p. 1), suggested that 30 days was insufficent due to limited personnel and time constraints. William Hughes, representing the Composite Can and Tube Institute (Ex. 14–984, p. 4), supported monitoring within 90 days of a change in process so that employers could be sure that new conditions were not temporary, and that they had stabilized.

In response to these arguments the Agency has relaxed the proposed requirements for additional measurements. OSHA agrees that it is unreasonable and unnecessary for purposes of deciding who should be included in the hearing conservation program to require employers to remonitor with *any* change in exposure level since work environments will often change from day to day. The Agency does not intend employers to have to monitor workers' exposures continuously, but to monitor whenever changes in exposures are sufficiently great to require new hearing protectors or, for those employees who are not already in the hearing conservation program, to require training, audiometric testing, and the availability of hearing protectors. To minimize the need for interim monitoring, employers should take the periodic noise measurements on days when workplace conditions are noisiest, and plan the hearing conservation program accordingly. Due to potential feasibility problems, the time period for interim monitoring has been lengthened to 60 days. The Agency recognizes that employers who use consultants may have a scheduling problem and thus has provided this longer period. However, employers are urged to remonitor sooner than 60 days whenever possible, in order to minimize the time during which employees might be subjected to higher noise exposures without adequate protection.

This option of representative sampling is consistent with many comments in the record, and was generally supported by General Motors and Alcoa. Mr. Ahern of General Motors Corporation (Ex. 14–883, pp. 8–9) said that monitoring every employee was costly and unnecessary. Mr. Cyc. (Ex. 14–978, p. 3) suggested that employers could sample the noise exposures of certain groups of employees in an area and use the average of those samples. Thomas Bonney of Alcoa Corporation (Ex. 14–969, p. 2) suggested that monitoring a representative sample of employees be allowed when noise dosimeters are used. The draft California Noise Standard (Ex. 321–50A, pp. 5–6) recommended the following: "Where several employees work at the same job, the daily noise dose may be measured for a representative sample of employees and the highest noise dose thus determined shall be considered representative of all such employees in the group." OSHA believes that the provisions of the final standard are responsive to these suggestions and that a method such as this effectively reduces the monitoring burden but still provides adequate protection for employees.

The proposal did not explicitly provide how soon a new employee should be monitored. The Agency recognizes a need for such an explicit requirement so as to identify employees who need audiometric testing and ear protection. If employers wait until the regular biannual monitoring employees might not be identified for up to two years. Therefore the amendment

requires new employees to be monitored within 60 days of their first exposure to noise at or above a TWA of 85 dB.

The need for actually monitoring new employee exposures would depend upon the circumstances. If the new employee replaces an employee who did the same job, the old employee's noise exposure measurement may represent the new employee's measurement until the next biannual monitoring. If the new employee is assigned to a work activity for which employee exposure measurements have been made, that exposure would then be attributed to the new employee. If the new employee does not replace anyone, and does not become part of a group with a measured representative, the employer must do an initial determination and, where the determination is positive, must measure the exposure of the new employee. In either case the new employee must be apprised of his or her noise exposure, (which is actually the representative noise exposure) within 21 days of the determination.

Initial monitoring of all employees exposed to a TWA above 85 dB shall be completed within 180 days after the effective date of the amendment. This extra time has been provided because the Agency recognizes that a great many employees will need to be monitored. Although many employers already possess noise measuring equipment, and have an ongoing monitoring program, most of the 2 million employees exposed to TWAs between 85 and 90 dB (Ex. 192, pp. 2–7) will not have been monitored previously. Those employers who have not monitored before will need to purchase or rent equipment, or engage consultants to perform the monitoring. It is felt that this extra time, when added to the delayed effective date of the standard, will not result in an undue burden on employers or tax available equipment and services. Initially OSHA will accept previous monitoring results done within the past two years if they are done in accordance with this amendment.

Employee Notification

The hearing conservation amendment requires employers to notify workers of their noise exposure individually and in writing within 21 days of the monitoring. Each worker shall be notified of his or her own exposure, or of the exposure of the measured employee who represents the group.

The proposal required the employer to notify employees within 5 days of the time the employer discovers overexposure. Comments to the hearing record generally favored longer time periods because of administrative difficulties (Ex. 105, p. 8; Ex. 145, Comments p. 5; Ex. 14–215, p. 3; Ex. 14–223, p. 8; Ex. 14–308, p. 4). Therefore the Agency has relaxed the requirement to 21 days from the time of monitoring. It is the Agency's belief that the additional time will minimize administrative difficulties without significantly lessening employee protection. For example, in the event that a consultant takes the measurements the longer period will allow for communications between the consultant and the employer. Also, this period should allow the employer sufficient time to include the written notice in the employee's pay envelope. Periods longer than 21 days are not satisfactory since employees need to know the nature and extent of the hazard as quickly as possible in order to carry out their responsibilities in the prevention of adverse effects. The grace period now extends from the time of the monitoring rather than the time the employer discovers "overexposure" so as to discourage long delays or lapses of communication between employers and their technical staffs or consultants.

The proposal required employees whose exposures exceeded the prescribed noise levels to be notified "of such excessive exposure." Employers were required to keep a record of each employee's noise dose, which would be accessible to the employee. The proposal did not specifically require that employers notify employees of their actual exposures, but the accessibility of the record partly fulfilled that function. The final amendment modifies this requirement in that the employer must notify each employee of his or her actual exposure, or of the exposure of the employee who is representative of his or her exposure.

The amendment clarifies the proposal's requirement for employee notification since it is important for workers to know more than merely whether or not they are overexposed. This is especially true for purposes of a hearing conservation program where much of the burden of protection falls on the employee. By informing workers of their actual exposures, employees will have a better understanding of the extent of the hazard, and in many cases will be better motivated to wear their hearing protectors effectively. A worker who is told that his or her TWA is 103 dB will have a better sense of the need for protection than will a worker who is only told that he or she is exposed above the permissible level (90 dB) or the action level (85 dB). Since the field use of hearing protectors shows significantly lower average attenuation values than laboratory tests would indicate (Ex. 308, p. 27; Ex. 301, p. 35; Ex. 300A, p. 91), and since the worker is the only one who can know on a continuous basis whether the protector fits snugly, it is very important that the worker be properly apprised of the hazard.

Method and Accuracy of Measurement

In order to evaluate employee noise exposure accurately, OSHA has established specific requirements for instruments and techniques to be employed in measuring noise. In some instances the amendment requires that measuring instruments adhere to, and calibrations be performed according to, consensus standards developed by the American National Standards Institute (ANSI). In other instances the amendment specifies exactly the steps that employers must follow in order to meet a certain requirement. These specifications are considered necessary in order to standardize and evaluate the measurement results.

By specifying minimum requirements for noise measuring instruments the Agency believes that it will better identify those workers needing audiometric testing and will help ensure that those workers requiring hearing protectors because of a significant threshold shift will be given protectors with proper attenuation to afford them adequate protection. Other elements of the program are also dependent upon accurate noise measuring instruments, namely measurements of sound levels inside audiometric test rooms, audiometer calibration, and the calculation of hearing protector attenuation. Moreover, it should be noted that these specifications merely provide a floor, or a minimum level of compliance. Employers are always free to use instruments that are more precise or more sophisticated than the ones specified in the amendment.

The use of consensus standards, such as those of ANSI, is supported by section 6(b)(8) of the Occupational Safety and Health Act, which calls for the Secretary of Labor to explain the reasons why any rule adopted by OSHA differs from any existing national consensus standard. Although the Agency recognizes that ANSI standards are revised periodically, the amendment refers to specific standards by number and year. In the event that a referenced ANSI standard is revised, the Agency will consider proposing a revision to the noise standard whenever the Agency believe that the revision is necessary and feasible for industry.

The hearing conservation amendment permits noise exposure measurements to be made either with a noise dosimeter or a sound level meter. Sound level

meters must meet the Type 2 requirements of the American National Standard Specification for Sound Level Meters (ANSI S1.4–1971) (R1976)), and they must be set to the A-weighting network and the "slow" meter response. An appropriate sampling strategy must be used in order to measure accurately the employee noise exposure. Appendix B has been provided to advise employers of an acceptable strategy. Appendix B is intended as a guideline; reasonable alternatives that will ensure sufficient numbers of measurements for the range of sound levels encountered may also be used. All sound levels between 80 dB and 130 dB must be included, as specified in Table G–16a, in computing noise dose or TWA from measured sound levels.

The amendment also permits the use of dosimeters to measure the noise exposure of employees. The use of dosimeters is preferred in situations where there is a significant component of impulse noise, because the dosimeter can integrate all noise levels automatically, whereas individuals who use a sound level meter and a stopwatch are likely to miss certain transient sounds. Therefore, in situations where there is a significant impulse noise component, a dosimeter can be expected to result in more accurate exposure data than can be obtained using a sound level meter. It is also important to note that, in most industrial settings where the noise levels are not constant, the use of a dosimeter will be less burdensome than the use of a sound level meter. Nevertheless, employers have the option of using a sound level meter providing it is used in a manner which, like the procedures suggested in Appendix B, ensures the maximum accuracy.

Two years after the effective date of this amendment dosimeters must meet the requirements for Class 2A–90/80–5 according to the American National Standard Specifications for Personal Noise Dosimeters (ANSI S1.25–1978) (Ex. 313). "Class 2" corresponds to Type 2 tolerances of ANSI S1.4–1971 for sound level meters; "A" refers to the A-weighting network; "90" refers to the 90 dB level at which an 8-hour exposure yields 100 percent of the allowable dose; 80 refers to the lower cutoff or threshold below which the dosimeter does not respond, and "5" refers to the exchange rate between noise level and duration. Dosimeters must have an "operating range," as defined in ANSI S1.25–1978, from 80 to at least 120 dB, and in addition they must meet the requirements of section 7.5 of ANSI S1.25–1978 for a test signal at an average sound level of 90 dB, when the signal has a "crest factor," also as defined in ANSI S1.25–1978, of 30 dB.

Crest factor is the ratio of the peak sound pressure to the average sound over a specific time period. The "crest factor capability" of an instrument indicates the maximum crest factor for which the instrument meets specified tolerances. Since section 7.5 of the ANSI standard requires a crest factor of approximately 10 dB above the upper limit of the operating range (which must be at least 120 dB), such instruments will be capable of including short-duration sounds up to 130 dB in the integration. The final standard requires that dosimeters meet an additional test beyond that required by section 7.5 of the ANSI dosimeter standard. The additional test using a signal with a 90-dB average sound level and a 30-dB crest factor has been included to ensure the proper integration of short duration sounds having peak levels that are considerably higher than the average sound level. Because not all existing dosimeters can be adjusted to meet these specifications, the requirement for a lower threshold of 80 dB and a crest factor capability of 30 dB are not mandatory for 2 years. Until that time, employers may conduct monitoring with existing dosimeters using a lower threshold setting as low as the instrument permits. In addition, during this interim period dosimeters without a crest factor capability of 30 dB may be used.

The proposal permitted the use of dosimeters with accuracy and precision equivalent to that of a sound level meter, but specific performance requirements were not given, chiefly because no performance standard existed at that time. This led the Can Manufacturers Institute to point out (Ex. 14–962, p. 13) that dosimeter performance was suspect in the absence of a performance standard.

In 1978 the Acoustical Society of America completed and published an American National Standard Specification for Personal Noise Dosimeters, ANSI S1.25–1978 (Ex. 313). The standard was submitted to the public record, and the public was invited to comment on it. There were no adverse comments on the document. The existence of this concensus standard greatly facilitates the specification of noise dosimeter performance for use in conjunction with this amendment.

Considerable general support for the use of dosimeters is found in the record (Ex. 2A, p. 252, 9–25–73; Ex. 14–969, p. 2; Ex. 14–952, p. 2; Ex. 2C–117–1, p. 4; Ex. 14–247, p. 4; Ex. 315, p. 3730; Ex. 316, 40760). Dr. Floyd Van Atta (Ex. 2A, p. 2,5–9–73) pointed out the advantages of dosimeters when sound levels vary throughout the workshift. There is also specific support in the record for incorporation of the performance requirements of ANSI S1.25–1978 (Ex. 321–15, p. 3; Ex. 321–17, pp. 1, 2; Ex. 321–19, p. 1).

The American National Standard Specification for Personal Noise Dosimeters, S1.25–1978 (Ex. 313, p. 4) in itself, does not sufficiently define dosimeter performance since several operational parameters are left for the user to define. For example, the operating range can be quite different for purposes of community noise as opposed to industrial noise measurement, (such as 40–90 dB or 80–130 dB respectively). For measurements to be made in conjunction with this amendment, a Class 2A–90/80–5 dosimeter is required; this corresponds to the accuracy requirements of a Type 2 sound level meter, and to A-weighted response, and thus is consistent with the performance requirements for a sound level meter in the proposal. Similarly, the 90–dB level for 100 percent dose and the 5–dB exchange rate are consistent with the proposal. The class designation defines tolerances, frequency weighting, criterion sound level (meaning the 100 percent dose level), threshold level, and exchange rate. It is also necessary to designate the operating range—the range between the threshold level and an upper sound level within which the dosimeter operates within stated tolerances.

Noise dosimeters designed in the past few years, and particularly those designed since S1.25–1978 became available, have an operating range that extends, at least, from 90 to 115 dB if those dosimeters were intended for monitoring compliance with 29 CFR 1910.95 (a) (Ex. 319A–8, p. 22; Ex. 319A–2, p. 2).

The proposed standard did not specify a lower threshold. However, the 80–dB requirement is included in the amendment to permit reliable measurement of noise doses down to 50 percent (a TWA of 85 dB).

There are several suggestions in the record that support upper limits for dosimeters that are well in excess of 115 dB. The draft California noise standard (Ex. 321–50A, p. 6) recommends an upper limit of at least 130 dB. Mr. Eldred, as chairman of the working group that is responsible for the ANSI standards for both sound level meters and dosimeters, suggests (Ex. 321–19, p. 3) an upper limit "in the region of 115 to 140 dB." Col. Johnson introduced (Ex. 321–21E, p. 1) a draft ANSI standard on the effect on human hearing of intense (impulse or

impact) noise, that considers average A-weighted sound levels of up to 142 dB. Kamperman (Ex. 321–32, p. 1) advocated a dynamic response from 80 dB to "greater than 140 dB and preferably greater than 150 dB."

OSHA has considered all of the factors and recommendations cited above. Because of the known adverse effects of high-level noise on human hearing, it would be very desirable to require dosimeters to integrate sound levels accurately up to 140 dB or higher. However, an informal survey of dosimeter manufacturers indicated that many of the instruments currently on the market could not easily be modified to operate accurately over a dynamic range from 80 to 140 dB. In order not to rule out the use of existing dosimeter designs, OSHA has decided to require dosimeters that meet the performance requirements of ANSI S1.25–1978 only over an operating range from 80 to 120 dB. (As discussed above, a dosimeter that accurately integrates average sound levels up to 120 dB should be able to handle peak instantaneous sound levels up to approximately 130 dB.) In the purchase of new dosimeters, employers are encouraged to consider instruments that have a larger operating range than that which is required by this amendment. OSHA intends to follow closely the availability of instruments having a larger operating range (e.g., 80 to 140 or 150 dB) and will consider amending the standard to require a larger operating range when such instruments become more readily available.

T. A. Rockwell (Ex. 321–47, p. 1) correctly pointed out that noise dose will, in some cases, be significantly higher when impulses are included in the calculation. He contrasts sound level meter measurements using the "fast" response mode with those using the "slow" response mode. By using the "fast" mode one is able to ignore the contribution of impulses and report only the level of the background noise.[11] The hearing conservation amendment requires that noise exposures be measured with a standard sound level meter set to the slow response or a dosimeter with a crest factor capability of at least 30 dB.

[11] The current standard indicates that employee exposure should be measured with a standard sound level meter "at slow response." Thus the PEL under 29 CFR 1910.95(a) is, by definition, that total amount of noise that is reflected by measurement with a standard sound level meter set to the slow response. A recent revision of the Industrial Hygiene Field Operations Manual directing compliance officers to use the "fast" mode to measure noise where there is both continuous and impulse noise present is clearly at variance with the present standard and is being deleted.

Use of this instrumentation will, as Mr. Rockwell asserts, include the impulsive component of the total noise exposure in the calculation of the dose. This result is intended. As stated above (see discussion of impulse noise), for purposes of determining which employees should be included in the hearing conservation program it is important to consider the employees' total noise exposure: continuous, intermittent, and impulsive. The dosimeter specified in the final standard is capable of integrating impulse noise accurately into the total dose. Appendix B provides guidance to employers on an appropriate sampling strategy when using a sound level meter to measure exposure even where impulse noise is present.

John Stenmark, for the American Iron and Steel Institute (Ex. 321–15, p. 2) and Mr. Kamperman (Ex. 296, p. 1) suggested that public hearings be held to permit consideration of the exposure requirements for impulse noise. As discussed above, the final decision has not been made on the PEL, which includes the exchange rate and any specific requirements for impulse noise. Until that time, the Agency does see the necessity of including impulses in the computation of dose for purposes of the hearing conservation program.

The evidence submitted to the record supports OSHA's conviction that impulsive noise must not be ignored—that it is as harmful to hearing as continuous noise of equivalent sound energy, and that it is especially harmful when it is combined with high levels of continuous noise. Dr. Van Lee (Ex. 294, p. 1) points out that the superposition of impulsive or impact noise is very common in industrial noise environments. Dr. Lee recommends extending Table G–16 to include the computation of impulsive noise. The evidence also supports the conclusion that instrumentation that will include impulses in the noise dose is currently available. Kamperman (Ex. 321–32, p. 2) found that several units of one dosimeter model could meet a fairly rigorous test to incorporate the energy from impulses. Although he conducted the test on one model only, he stated that engineers employed by other manufacturers believed that his "dynamic response test requirement was reasonable and meaningful although they had not actually performed the test on (their) dosimeters."

In the present amendment, the total noise dose must include intermittent and impulsive contributions, as well as continuous sound levels. Instrumentation requirements must be consistent with this intent and therefore noise dosimeters and sound level meters must be capable of handling intermittent and impulsive signals with proper accuracy. Although the scope of the American National Standard Specification for Personal Noise Dosimeters, S1.25–1978, states that this standard is not intended for use with noises that are "predominantly" impulsive, the Agency recognizes, based on its experience, that most industrial impulses are superimposed on a background of continuous noise, and therefore, would not be considered *predominantly* impulsive. However, there are many industrial situations where impulses exceed the continuous background noise by more than a few decibels. Therefore, there is a need for instrumentation with crest factor capability sufficient to measure these impulses. Since such a test is not available in ANSI S1.25–1978, this amendment includes a crest factor test that is conducted according to the method described in section 7.5 of the ANSI standard. This test is necessary to ensure that dosimeters used to measure employee exposure meet the needs of the standard.

Section 7.5 of ANSI S1.25 requires that the dosimeter respond with an accuracy of ±1.5 dB to a tone burst having a crest factor of approximately 3 (which, being a ratio, translates to approximately 10 dB). For a dosimeter with an operating range of 80 to 120 dB, this test signal would be applied at an average level corresponding to 85 dB and also at 119 dB. Such a test should assure that the instrument functions properly for an average sound level of 85 dB with instantaneous peak levels up to 95 dB and for an average level of 119 dB with peaks up to 129 dB. For many instrument designs, these tests would assure proper operation for an average level of 85 dB with peak levels up to 129 dB, thus yielding reliable readings for continuous sound levels with high crest factors due to impulsive content. However, some dosimeter designs could result in an instrument that could not record a rapidly increasing sound level (such as that commonly associated with impulse noise), thus resulting in erroneously low dose readings, or an instrument that could not record the rapid decrease in sound level after an impulsive event and therefore would yield erroneously high doses. To preclude such possibilities, OSHA has added an additional test using a test method from the ANSI standard. The Agency is requiring a dosimeter that is capable of performing the function required by the standard:

namely, the integration of sound levels from 80 to 130 dB. Thus, the amendment requires that the test included in Section 7.5 of S1.25–1978 also be carried out with a signal corresponding to an average sound level of 90 dB but having a crest factor of 30 (approximately 30 dB). The instrument reading must be correct to within ±1.5 dB, which is the tolerance stated by the ANSI standard. OSHA anticipates that most instrument manufacturers will conduct the test and specify in their brochures whether the instrument meets it. According to Kamperman (Ex. 321–32, p. 2) there is currently available at least one dosimeter that meets a similar test which OSHA believes is more stringent than the test which is being required herein.

Although there are some instruments currently available that meet the new provisions, (e.g. Ex. 319A–8, p. 22), there are others where adjustments would have to be made, and still others that would not be usable for compliance with this amendment after the end of the 2-year period. OSHA advises employers who already own noise dosimeters to consult the specifications and, if necessary, the distributor or manufacturer, to learn the extent to which their dosimeter complies with the new regulations. The amendment allows employers up to 2 years in which to check their existing instruments, have them adjusted if appropriate, or obtain new ones. The Agency has provided this 2-year grace period also for the sake of manufacturers, who may need to alter the design of their instrument and manufacture new models.

There were some comments in the record that questioned the accuracy and reliability of noise dosimeter measurements (Ex. 14–46, pp. 1–3; Ex. 14–161, p. 3; Ex. 14–978, p. 3; Ex. 321–15, pp. 3, 4; Ex. 321–28A, section 18, pp. 1, 2). Stenmark cited a number of articles that describe in detail the problems of erroneous results from noise exposure evaluations using personal dosimeters (Ex. 321–15, pp. 3, 4). However, all but one of these articles were published before 1978, the date of the ANSI dosimeter standard. In fact, two of the authors cited were members of the ANSI work group that drafted the dosimeter standard. The introduction to ANSI S1.25 states that the standard should "help minimize variations between results obtained with various makes and models . . . (of dosimeters)" (Ex. 313, p. 1). Moreover, the employer has the option of using sound level meters to measure employee noise exposure, although, where noise levels fluctuate, they are admittedly more difficult to use. In addition, NIOSH made a strong case for the use of dosimeters, which will be discussed below.

OSHA believes that some of the problems experienced in the past may have been due to the fact that different models of dosimeters had slightly different lower thresholds, crest factors, and ranges. The Agency has determined that OSHA's new requirements for the 80-dB lower threshold and the 30-dB crest factor capability should minimize discrepancies among these instruments.

The DuPont Company expressed a number of concerns about the use of dosimeters (Ex. 321–28A, Section 18, pp. 1, 2). Among their concerns was the fact that dosimeters are not identical to sound level meters in such respects as meter ballistics, microphonics, and system diffraction characteristics. Naturally the two instruments are different in some ways because the dosimeter carries out a function automatically that must be done by the measurer when a sound level meter is used. Also the dosimeter is worn on the body of the individual whose exposure is to be measured, whereas the sound level meter is carried by the measurer. Therefore, the measurement locations would be slightly different with respect to the sound source. OSHA does not believe that these kinds of differences should cause significant differences in measurement results, so long as measurements with each instrument are taken properly.

DuPont was also concerned (Ex. 321–28A, Section 18, p. 1) that none of the existing hearing loss criteria are based on studies correlating dosimeter measurements with audiometric test results. Only sound level meters were used. OSHA believes that this fact should not detract from the use of dosimeters for compliance purposes since dosimeters and sound level meters are expected to produce the same results when properly used. Moreover, record evidence indicates that the company already uses dosimeters as part of their hearing conservation program (Ex. 306, Section J2B, p. 4). The company manufactures and sells dosimeters as well, claiming that their product "is designed to accurately measure and record personal noise exposure . . ." (Ex. 319, A–21, cover).

Many of the concerns about the use of dosimeters have been addressed by NIOSH in its "Findings of Fact on Use of Noise Dosimeters" (43 FR 3729 (1978)] (Ex. 315). NIOSH supported the use of dosimeters for making noise exposure measurements in coal mines. On the basis of evidence presented at its hearing, and on other available information, NIOSH made certain significant findings, which are summarized below:

1. Field and laboratory comparisons of personal noise dosimeters with other noise survey instruments or systems meeting ANSI S1.4–1971 tolerances for Type I or Type II instruments, indicate that noise dosimeters will yield comparable results to these other noise measurement instruments.

2. Inadvertent and extraneous noise may be integrated by personal noise dosimeters, thus, affecting dosimeter readings; however, this problem can be minimized by spot checking of noise levels with sound level meters, or by full-shift observation of the measurement by a "qualified" person.

3. Instrument errors (including calibrator error) are less than 1 dB, and these errors combined with other possible errors associated with microphone placement and calibration drift will be withing the ±2 dBA tolerance permitted by the Mining Enforcement and Safety Administration for purposes of citing noise violations (Ex. 315, pp. 3730, 3731).

OSHA recognizes that some people will prefer to use a sound level meter and a timing device, rather than a noise dosimeter, to determine employee noise dose. For continuous sound levels and relatively immobile workers, this is an acceptable procedure. Hess, Reed, Jensen, and Jokel (Ex. 303, p. 717) report that careful sampling techniques used in conjunction with a sound level meter can yield noise exposure data with an accuracy that approaches that of a dosimeter. However, such techniques, which involve following a worker around with a sound level meter held near his ear, taking many measurements, and making involved calculations, may necessitate expertise and time that many employers will not want to provide.

If a sound level meter is used, an appropriate sampling strategy must be used in order to determine the noise dose with adequate accuracy (Ex. 303, pp. 718–719). Appendix B has been provided to advise employers of an acceptable strategy. Since Appendix B is intended as a guideline, reasonable alternatives may be used. The number of necessary measurements will depend primarily upon the range of sound levels. In most circumstances, the greater the range, the more measurements will be needed. It is the employer's obligation to assure that the sampling procedure is adequate. The sampling procedure detailed in Appendix B is a simplification of a procedure developed by Hess, Reed, Jensen, and Jokel (Ex. 303). Except for the inclusion of impulsive sounds, Appendix B is similar to the sound level meter measurement method found in the proposed revision to the ISO standard 1999 (Ex. 321–43, pp. 11–20).

It has been stated (Ex. 321–47, pp. 1–2) that in certain conditions a noise dosimeter overestimates the noise dose relative to that which would be obtained using a sound level meter and timing device. OSHA believes that this situation should not occur for the following reasons: A dosimeter essentially consists of a sound level meter followed by a circuit that integrates the proper function of the A-weighted sound level. When only a sound level meter is used, sufficient data as to the temporal distribution of sound levels must be taken so as to enable the integration to be done numerically. Assuming that each instrument performs accurately and that the microphone positions are the same, the noise dose obtained with a dosimeter and that obtained using a sound level meter and a timing device should agree when the daily noise exposure is the result of several essentially constant sound levels, each experienced for an easily determined duration. OSHA has observed this kind of agreement in its compliance experience. In such cases, the noise dose can easily be obtained with a sound level meter using Table G–16a and the procedures given in Appendix A, I. However, if the sound level varies over a range of more than a few decibels and, particularly, if the sound level undergoes rather rapid excursions due to intermittent or impulse noises, it can be very difficult to obtain accurate noise doses using a sound level meter and a timing device. If the sound level is fluctuating more or less randomly, without sudden rapid excursions, a sampling strategy and calculation procedure such as that described in Appendix B can result in reliable determinations of noise dose.

OSHA therefore concludes that a properly calibrated dosimeter reads the correct dose but that the use of a sound level meter, for intermittent noise or noise with significant impluse content, may lead to an *underestimate* of the correct dose.

Microphone Placement

There are three popular methods for positioning a microphone to monitor noise:

(1) The microphone (typically on a dosimeter) is located near one of the employee's ears (on the shoulder), usually occupying that position for the entire workday.

(2) The microphone is maintained near the employee's head, with the measuring instrument (typically a sound level meter) usually held by an individual who follows the employee during a portion of the workshift.

(3) The microphone is placed at a fixed location in the workplace.

OSHA requires that the microphone be placed according to either Method 1 or Method 2. As mentioned earlier in this preamble, Method 3, area monitoring, cannot be used to determine personal exposure. While Method 3 may be useful for planning engineering control strategies, area monitoring alone is not sufficient to assess employees' personal exposure. Workers move around too much for this method to be accurate.

The use of either Method 1 or Method 2 requires consideration as to whether or not it is necessary to specify more precisely the actual microphone location and orientation. The NIOSH criteria document (Ex. 1, pp. 1–5) required measurement at the "appropriate head position," and the Advisory Committee (Ex. 2B, p. 1) required the microphone to be located at the point that most closely approximates the noise levels at the employee's head. The proposal required the noise to be measured at the employee's point of exposure. Comments in the record suggested a more specific location and microphone orientation than was stated in the proposal. One, for example (Ex. 2C–72, p. 1), wanted the microphone placed on the head using a free-field microphone and a random incidence corrector with the axis of the microphone perpendicular to the floor. Another (Ex. 14–231, p. 2) stated that the microphone should be positioned 12–18 inches from the head. The American Speech and Hearing Association (Ex. 2C–14, p. 3) recommended that a free-field microphone and random incidence corrector be used, and that the microphone be held at various angles of incidence and an average taken. Other comments called for OSHA to specify a standardized microphone position (for example, Ex. 186, p. 5).

In the noise exposure standard for surface and underground coal mines, (30 CFR Part 70 and Part 71; 43 FR 40760–40762 (1978)) (Ex. 316, p. 40761), the Department of Labor's Mine Safety and Health Administration (MSHA) requires dosimeter microphones to be positioned as follows:

> For the miner whose noise exposure is under consideration, noise exposure measurements shall be made with the personal noise dosimeter microphone located at the top of the shoulder, midway between the neck and the end of the shoulder with the microphone pointing in a vertical upward direction. . . .

MSHA's standard shows a diagram to facilitate compliance with the requirement. The standard's preamble justifies the requirement by citing studies that show the importance of exact and standardized microphone positioning for "limiting measurement errors associated with body baffle and absorption effects."

OSHA agrees that uniform placement of the dosimeter microphone is good measurement practice in order to minimize error. However, the Agency is aware that different kinds of microphones need to be placed at different angles of incidence with respect to the sound source. Also, the advent of newer, smaller microphones (½ inch and ¼ inch in diameter) may tend to reduce errors caused by microphone directionality, and positioning may become less critical. Miniaturization of dosimeters in the future may lead to their placement on the ear or on the top of the head (positioned on a helmet or a headband). OSHA does not want to preclude the development of more advantageous positioning techniques by requiring microphone placement only on the shoulder. However, the Agency does recognize the need for uniformity of placement of most 1-inch microphones. Therefore, unless the dosimeter manufacturer specifies otherwise, the Agency strongly recommends positioning the 1-inch microphone midway between the neck and the end of the shoulder with the microphone pointing vertically upward, as required by MSHA. In order to retain some flexibility to respond to technological advances, the amendment only requires the dosimeter microphone to be placed somewhere on the employee's shoulder or head.

In addition, because of the diversity of working situations, OSHA has decided not to specify an exact location for the microphone of the sound level meter. Instead the amendment only requires employers to position the sound level meter microphone not less than 2 inches nor more than 2 feet from the worker's ear. Care must be taken to be close enough so that the measurements are representative of what the worker actually hears, but not so close that the body acts as a baffle or a reflector. Again, OSHA advises the employer to follow the manufacturer's instructions concerning the microphone's angle of incidence with respect to the sound source.

There was some discussion in the record as to whether measurements should be made with or without the worker present. The Institute of Noise Control Engineering (Ex. 14–334, p. 2) stated that the measurements should be made without the worker. The proposal was unclear on this point but could be

interpreted to mean either with or without the worker present.

Whenever an object (a worker) is placed in a sound field, it distorts the field to some extent and the measured sound level will be different from that which would be measured if the object were not there. Measuring the noise in the worker's absence may be preferred for the development of engineering solutions to the noise problem of a particular machine. However, since actual exposure takes place in the worker's presence, OSHA requires measuring the noise in the presence of the worker for purposes of the hearing conservation amendment.

Calibration

To check the calibration of a sound level meter or noise dosimeter an acoustical calibrator, of known frequency and sound pressure level output, is connected to the sound measuring instrument, and a test is made at least at a single frequency and sound level. The appropriate controls, such as amplifier gain, on the instrument are then adjusted, if necessary, so that the instrument reads correctly, within certain tolerances, for that test signal. This procedure is often called "field calibration."

The proposal required such calibration before and after each day's use. Also, the MSHA amendments to 30 CFR Part 70 state that dosimeters "shall be acoustically calibrated in accordance with the manufacturer's instructions before and after each shift on which the meter is used" (Ex. 316, p. 40761). There was some discussion in the record of the proposal's requirement for daily field calibration.

Some commentors, such as the International Paper Company (Ex. 14–345, p. 2) and the California Manufacturer's Association (Ex. 14–169, p. 2) believed that daily field calibration would take too long. Others such as Clayton Ruyle of Aerospace Industries Association of America, (Ex. 105A, p. 7) said that it was impractical to calibrate a dosimeter before and after daily use. However, OSHA's requirement was supported in comments by Dr. Bruce Karrh on behalf of the American Occupational Medicine Association (Ex. 321–34A, p. 1), and the Motor Vehicle Manufacturers Association (Ex. 2C–1, p. 6). Washington Occupational Health Associates, Inc. (Ex. 321–49, p. 1) stated: "We encourage the application of uniform calibration procedures which will work to the advantage of all parties involved." It has been the experience of OSHA personnel that field calibration of a sound level meter can be done in a matter of seconds, and that a dosimeter can be calibrated in a few minutes.

The Agency has determined that the advantages of daily field calibration warrant any inconvenience that might be experienced. Such calibrations are necessary to assure any degree of accuracy or uniformity in employee noise exposure measurements, which are a crucial and integral part of the entire hearing conservation program. Therefore, the amendment requires that an acoustical calibrator shall be used to verify the calibration of all equipment used to measure employee noise exposure prior to and after each day's measurements. In establishing this requirement OSHA believes that:

1. the accuracy of the instrument will be less subject to question when it is field calibrated at least before and after each day's measurement;

2. if meter/dosimeter performance does drift over the time between field calibrations, only one day's data will be lost;

3. it is good acoustical practice to check instrument performance as often as practical.

Although the amendment does not require calibration *immediately* prior to and following each day's use, it is good measurement practice to calibrate as close as possible to the time of instrument use.

In the broadest technical sense, the "calibration" of noise-measuring equipment involves precise evaluation of instrument performance relative to the specified ideal performance. Such calibration is a complex procedure that should be carried out in a sophisticated laboratory with specialized facilities by skilled people knowledgeable in acoustics and electronics. The amendment requires that instruments used to measure employee noise exposure—the noise dosimeter and the sound level meter—conform to ANSI S1.25–1978 for noise dosimeters, or ANSI S1.4–1971 for sound level meters. In order to ensure that instruments continue to meet the ANSI standard, it may be necessary for them to be calibrated in a laboratory.

The amendment does not specify how often the laboratory calibration should take place. Prudent practice requires that instruments, should be kept well maintained, that the manufacturer's instructions concerning maintenance and upkeep should be carefully followed, and that instruments should be carefully tested at appropriate intervals by the manufacturer or by a qualified laboratory to ascertain that their performance meets specifications. The intervals between laboratory calibration would depend upon the amount of usage. Based on the Agency's estimates of the frequency of monitoring according to the size and type of the company, OSHA estimates that employers will send noise measuring equipment for laboratory calibration approximately every 2 years. Instruments that are used often, or are inadvertently bumped or dropped, should be calibrated more frequently, as should instruments that require frequent and extensive adjustment as a result of the field calibration.

NIOSH presents support for this type of requirement in its "Findings of Fact on Use of Noise Dosimeters" (43 FR 3729 (1978)) (Ex. 315, p. 3730).

Most failures are attributable to microphone interferences resulting in an inability of the instrument to achieve calibration tolerances. Thus, there is a need for annual recalibration of personal noise dosimeters including as a minimum frequency response testing and visual inspection of the microphone for any foreign matter or defects.

Another Federal agency, the U.S. Department of Transportation, Federal Highway Administration, recommends that "The Equipment should be checked annually by its manufacturers or other certified laboratory to verify its accuracy." (Ex. 321–42A), p. 7).

Although the proposed standard was silent on the subject, OSHA agrees with MSHA, NIOSH, and the Department of Transportation, on the merits of periodic recalibration of noise-measuring instruments. However, the Agency does not require that these tests be conducted at any particular time interval because the appropriate intervals between calibrations are highly dependent upon instrument usage. Some businesses will use the instruments only occasionally, and store them in between uses. These instruments may maintain their calibration for longer periods of time if they are cared for according to the manufacturer's instruction.

Although the proposal required acoustical calibrations to be accurate to within plus or minus 1 dB, the amendment has not made this 1–dB precision and accuracy mandatory. However, a draft American National Standard Specification for the Performance and Use of Acoustical Calibrations has been prepared (Ex. 321–17B), and when this standard is issued, employers are encouraged to use acoustical calibrators that conform to it.

Audiometric Testing Program

Audiometric testing is an integral part of hearing conservation. Since the hearing loss process tends to occur gradually, a worker often does not realize that he or she is developing a hearing loss until quite a bit of damage

has occurred. Because noise-induced permanent threshold shift is not reversible, it is very important to identify it as early as possible in order to prevent further deterioration. If if is not identified, the hearing loss will continue and the resulting impairment will be even more debilitating. Audiometric testing, to identify employees who are losing their hearing and to try to prevent further hearing loss, is therefore necessary to reduce the risk of material impairment.

Not only does audiometric testing establish a baseline and a continuing record of hearing acuity, but it provides the employer a tool with which to educate employees about the importance of hearing conservation (Ex. 2A, p. 1–101 8–9–73). It also provides workers with information about their hearing acuity and the need for protection. A well run audiometric testing program will document the extent to which the entire hearing conservation program is effective.

In the words of Dr. John Fletcher, professor at the University of Tennessee Medical School:

> Another essential in hearing conservation programs is monitoring audiograms. To restate the obvious, these are periodic hearing tests after the worker has begun work or after he has started this program. These are important because they give us some feedback about the effectiveness of the program. They are necessary, we need that effectiveness. (Tr. 210).

Dr. Norman Righthand went on to say:

> The effectiveness of an industrial hearing conservation program is dependent upon proper assessment by audiometric testing. The accuracy of such testing is a function of many factors, including the training and experience of the audiometric technician, background noise levels, and the cooperation and attention of the persons being tested. Of equal importance is the state of calibration of the audiometer. (Ex. 281, attach 1, p. 1).

This amendment requires testing of employees who are exposed to an 8-hour time-weighted average sound level of 85 dB (or equivalently a dose of 50 percent) or more. Baseline audiometric tests must be administered, then retests must be performed annually. Employees who experience significant shifts of hearing thresholds with respect to the baseline test must be retested within 60 days. Baseline and retest audiograms must be preceded by at least 14 hours free from workplace noise. Follow-up procedures are required in cases where a significant threshold shift is permanent. Medical or audiological referral is required in caes where the test results are ambiguous, or where medical problems are suspected. Requirements for personnel, audiometric testing, follow-up procedures, audiometric test rooms, test frequencies, instrument specifications and calibration are specified. These requirements are addressed in the following paragraphs.

Personnel

The hearing conervation amendment requires that certain functions be performed by a licensed or certified audiologist or otolaryngologist, or in the absence of one of these specialists, a qualified physician. This professional is responsible for administering the audiometric tests or supervising the conduct of the tests by technicians, for ensuring that the audiometer is properly calibrated and that the tests are conducted in a room that is sufficiently quiet, and for reviewing audiograms, making a determination as to whether a hearing loss is work related, and determining the need to refer employees for further evaluation. Under certain circumstances employees will need to be evaluated more thoroughly than can be done on-site. Sometimes resources may not be available through the industrial audiometric program, and employees must be sent to a physician or an audiology clinic in the community. For example, although the supervising professional may be an audiologist, he or she may determine that the employee needs an otological evaluation by a physician. On the other hand, the professional supervisor may be an otolaryngologist, who may determine that the employee needs further audiological evaluation in a facility where more sophisticated audiological equipment is available.

The proposed standard did not require that an audiologist or otolaryngologist supervise the program. A wide range of opinion about this issue was expressed. Some recommended that licensed or certified otologists or audiologists supervise audiometric testing as opposed to technicians (Ex. 14-172, p. 2; Ex. 14–68, p. 4; Ex. 14–243, p. 4; Ex. 129, p. 4; Ex. 147, p. 7; Ex. 81A, p. 9). Others who regarded audiometric testing as a medical program said that only a physician should supervise (Ex. 14–158, p. 1; Ex. 2C–113, p. 1; Ex. 2A, p. 154, 5–30–73). Dr. Robert McLauchlin, of the American Speech and Hearing Association (ASHA) recommended that only audiologists supervise audiometric testing because of their extensive knowledge of audiometric testing (Ex. 2C–83, p. 3).

Either licensed or certified audiologists or otolaryngologists should supervise the audiometric testing program since these professionals are highly trained in hearing loss and are familiar with audiometric protocol. Individuals who are knowledgeable of audiometric configurations and the associated causes, are in the best position to assess the validity of audiograms and the need for medical referral, and to assess work relatedness by interpreting the results of the audiometric test. Although other physicians also may supervise the audiometric testing, it is recommended that audiologists and otolaryngologists be used because they are likely to be more knowledgeable of audiometric procedures and the patterns of hearing loss.

The amendment requires that these individuals review the audiograms to determine the existence of threshold shifts and to determine whether the shifts are due to occupational noise exposure. Since many large companies and consulting firms may wish to computerize the audiometric test results, the supervising professional does not need to review actual audiograms, so long as a professional is involved in preparing the computer program. In this way the professional will be able to determine what kinds of audiograms need to be identified for review, and review the results on a selective basis. For example, audiograms that show large losses at 500 Hz, or audiograms where there is a substantial difference in hearing thresholds between ears may need to be reviewed, as well as audiograms that show significant threshold shift, as defined below.

OSHA advises employers to see that the audiometric testing program is well supervised by either an audiologist or otolaryngologist, although the professional does not need to be present at the time of testing. Although technicians may actually conduct the audiometric tests, they must be under the direction of the professional who is responsible for the proper conduct of the tests, and the calibration of equipment. In cases where the validity of the audiogram is in question, or when problems of a medical nature are suspected, the professional must decide whether another test, or referral is necessary. Examples of cases where medical referral would be appropriate are audiograms that show large differences in hearing thresholds between the two ears, or predominantly low-frequency hearing losses. Examples of cases where retesting would be indicated would be unusual hearing loss configurations, thresholds that are not repeatable, and invalid results on self-recording audiometers. Another good use of the audiologist, otolaryngologist, or other qualified physician supervising

the testing would be in the training and counseling of employees with significant hearing threshold shifts, because they will be able to answer employee questions.

The hearing conservation amendment requires that appropriate professionals or trained audiometric technicians administer the audiometric tests. This is similar to the proposal's requirement for certified audiometric technicians or individuals with at least equivalent training and experience. There was some discussion in the record concerning the qualifications of the person actually administering the test. Most commenters, such as Dr. McLauchlin (Ex. 129, p. 4) and others (Ex. 2C–22, p. 1 and attach., p. 2; Ex. 2C–31–1, p. 2; Ex. 2A, 157, 5–30–73, Ex. 2B, p. 6) stated that the tests should be conducted by physicians, audiologists, or trained audiometric technicians. OSHA's decision to require appropriate professionals or trained audiometric technicians to administer the tests is consistent with the proposal and the above comments. While OSHA believes that the quality of testing should be as professional as possible, the Agency recognizes that a well-trained technician can do a satisfactory job. Aside from the actual test procedures, the tester must recognize when the audiometer is not working properly and know what to do about it, and should be familiar with the proper testing conditions. The tester must be able to check the functional operation of the audiometer, although he or she is not necessarily required to perform an acoustical calibration.

Employers must be able to show that technicians are competent in the administration of hearing tests and in the care and use of audiometers. One of the best ways for technicians to achieve this competence is to successfully complete a course that is especially designed for the training and certification of audiometric technicians. Such courses usually will include sessions in the anatomy and physiology of the ear, the hearing mechanism, causes of hearing problems, different types of audiometric configurations, care and use of the audiometer, daily checking of the audiometer's functioning, administration of valid audiometric tests, selection and fitting of ear protection, and recordkeeping. These topics are covered by courses that are specified by the Council of Accreditation of Occupational Hearing Conservation (CAOHC) (1619 Chestnut Ave., Haddon Heights, N.J. 08035) (Ex. 319–B4) or the Guidelines of the Inter-Society Committee on Audiometric Technician Training, (see American Industrial Hygiene Association Journal, Vol. 27: 303, May–June 1966) (Ex. 4, p. 37775). The Agency recognizes that more extensive training courses are available, and therefore, that the CAOHC and Inter-Society courses should be considered minimum curricula. The Agency strongly advises that technicians be given a refresher course at least every 5 years. The frequency of retraining necessary would be dependent upon the degree of supervision provided by audiologists or otolaryngologists, with technicians who are more closely supervised needing less retraining. Professionals with advanced degrees, such as audiologists and physicians, need not be certified as technicians.

The Agency advises (but does not require) that an otoscopic examination be conducted before audiometry as well as before the fitting of hearing protectors. This examination can be conducted by a professional supervisor or a trained technician. This practice, suggested by Dr. Thomas (Ex. 102 sec. 9 pp. 28–29), is helpful to ensure that the ear canal is not blocked with excessive wax which would preclude accurate results on the hearing test and accurate fitting of hearing protectors.

Employees To Be Included in the Program

All employees who are exposed to an 8-hour time-weighted average sound level of 85 dB or greater must be included in the audiometric test program, except for those who work less than 4 months (120 days) for one employer. This 120-day delay means the length of time from the start to the termination of employment; it is not variable or dependent upon duration of exposure, that is, the number of days or hours within the 4-month period actually worked. All employees who are subject to the noise standard, including those engaged in part-time work for less than 35 hours a week, as well as temporary workers who work for a given employer for more than 4 months are required to be tested if their TWAs exceed 85 dB.

There was considerable concern over the proposal's requirement to test within 90 days, which would have required the audiometric testing of all seasonal employees (the Larsen Company, Ex. 2C–8, p. 1; the Michigan Canners and Freezers Association, Ex. 14–279, p. 1; the American Frozen Food Institute, Ex. 14–512, p. 2; and other organizations (Ex. 2C–11–1, pp. 2–4; Ex. 2C–15, p. 3; Ex. 14–867, p. 2; Ex. 15–36, p. 2; Ex. 164, p. 3; Ex. 188–4, pp. 1–2)). Commenters stated that audiometric testing for seasonal employees would not be useful or protective, because these workers are located at several job sites in a season or over the year which makes monitoring their hearing very difficult. The decision in the final amendment to allow 120 days for the baseline audiogram is in response, at least in part, to the comments and objections raised by the above groups.

The Agency believes that allowing employers 4 months in which to perform the baseline audiogram, will have the effect of excluding most temporary and seasonal employees. OSHA has allowed the 4-month period, at least in part, as an administrative convenience so that employers who use distant consulting services for audiometric testing need only schedule the mobile van three times a year or less. Also, the Agency believes that it would be fruitless to require a testing program for workers who move from job to job because follow-up testing would be difficult or impossible.

However, OSHA does not believe these workers should be unprotected merely by virtue of the relatively short tenure of their employment. Therefore, all workers exposed to a TWA of 85 dB or above must be offered a variety of personal protective equipment and encouraged to use it, and must be educated in the hazards of noise.

Audiometric Testing

Audiometric testing consists of measuring an individual's hearing level at various frequencies in both ears. An audiogram, which is a graph showing hearing sensitivity at each frequency, provides a record of the status of that individual's hearing. When new audiograms are compared to previous audiograms, a picture of an individual's hearing sensitivity over the course of years emerges. It is important that employers observe all of the standard's requirements concerning the various components of the testing program to ensure that the test results are valid and can be compared in a meaningful manner.

There are three types of audiograms. The first is the baseline against which all other audiograms will be compared. The second is the annual audiogram, which serves to identify individuals who are developing hearing loss, and to track the effectiveness of hearing protectors and other hearing conservation measures. The third is the retest audiogram, which is required when there appears to be a significant threshold shift, or if there is any doubt about the accuracy of an audiogram.

Baseline Audiograms

The baseline audiogram is extremely important since it is the reference

against which future audiograms are compared in order to determine the extent to which an employee's hearing is deteriorating. If the baseline audiometric test is not conducted properly, it will not reflect the employee's true thresholds, and any real changes between baseline and future tests may be masked. For example, if the baseline audiogram is not taken after at least 14 hours of relative quiet, it may include some temporary threshold shift (Ex. 102, sec. 9, p. 5; Tr. 2340–2341), and hearing thresholds would be somewhat inflated. Consequently, differences between the baseline and subsequent annual audiograms would appear to be less than if the baseline had been accurate. This process would mask the true amount of hearing loss. Therefore, employers must follow the requirements of the amendment to ensure the accuracy of the baseline audiogram. OSHA requires that workers must have been away from workplace noise for at least 14 hours before the baseline audiometric test is conducted so that the baseline will accurately reflect the employee's hearing thresholds.

The hearing conservation amendment requires baseline audiograms to be established for new employees within 4 months of an employee's first exposure to noise at or above a TWA of 85 dB. The proposal required baseline audiograms to be established within 90 days for all employees. NIOSH (Ex. 1, p. I-5) and Dr. Larry Royster (Ex. 102, sec. 4, p. 12) suggested that less time be allowed before the baseline. As explained above, OSHA has chosen the 4-month grace period, which gives employers an opportunity to exclude seasonal employees. OSHA has determined that to delay audiometric testing of employees longer than 4 months, as suggested by the American Frozen Food Institute (Ex. 164, pp. 3–4) and General Foods Corporation (Ex. 2C–105, p. 2) would not be appropriate since employees might begin to incur hearing loss. To safeguard the purity of the baseline audiogram as much as possible, employers are advised to encourage all employees exposed to a TWA at or of 85 dB to wear hearing protectors until the baseline test has been performed. (All employees exposed over the PEL must already be wearing ear protectors, if engineering and administrative controls are not sufficient to reduce their exposure). Employers are encouraged to conduct pre-employment baseline audiogram where possible. Both employers as well as employees may benefit in the long run from this practice. Early testing would probably provide the employer with a more accurate indication of the effectiveness of the hearing conservation program. Early testing also will identify, at a stage where there can be no question, individuals whose hearing losses are not attributable to noise exposures within that particular workplace.

For employees presently exposed to a TWA of 85 dB or above a baseline audiogram must be obtained within 1 year of the effective date of this amendment. The Agency has allowed this amount of time because many employers will be initiating hearing conservation programs for the first time, and will need additional time to make preparations. Employers whose audiometric testing programs already meet the requirements of this standard may use audiograms taken before the effective date of the amendment to fulfill this requirement.

There are two circumstances recognized in the amendment in which the baseline audiogram must be revised. This is a change from the proposal, which had no provision for revising the baseline. Comments submitted by Dr. Royster (Ex. 321–22D, pp. 5, 47; Ex. 321–22E, p. 40), and by R. V. Durham, director of Health and Safety for the International Brotherhood of Teamsters (Ex. 81A, p. 1), discussed cases where subsequent audiograms reveal better thresholds than the original baseline. It was suggested that this might be due to a "learning effect" where an individual becomes slightly more skillful at taking the test. Or it can be caused by a reduction in temporary threshold shift due to the beneficial effects of hearing protection. The amendment requires that when a subsequent audiogram shows improved thresholds in at least two test frequencies with respect to the baseline, this later audiogram becomes the new baseline audiogram, and subsequent audiograms must be compared to it. The Agency believes that the audiogram with improved thresholds must more closely resemble an employee's true, non-noise-exposed baseline, and that significant threshold shifts would be detected that might otherwise have been overlooked by using this audiogram from as the revised baseline. Of course the old baseline audiogram must be retained, according to the recordkeeping requirements to be discussed later in the preamble.

Where the retest or annual audiogram is considered to be free of TTS, e.g., when it is conducted after 14 hours free from noise, the audiogram may show a deterioration in thresholds with respect to the baseline due to the harmful effects of noise exposure. If the change in threshold is "significant" (as defined in the amendment and discussed later in this section) the audiogram with the reduced thresholds shall become the baseline audiogram and subsequent audiograms will be compared to it. This provision is in response to a number of comments, which pointed out the futility of identifying the same significant threshold shift year after year, even though the hearing loss may have stabilized, an unintended result of the way the proposal was worded (Ex. 317, p. 3; Ex. 321–1, p. 2; Ex. 321–24A, p. 9; Ex. 321–38, p. 3). Revising the baseline each time a new significant threshold shift occurs should prevent this problem.

Annual Audiograms

The annual audiometric test has a number of purposes. It detects shifts in hearing level, indicates the need for followup procedures identifies employees who are particularly susceptible to noise-induced hearing loss, monitors the effectiveness of hearing protectors, and detects medical problems.

OSHA proposed that employers test their employees' hearing annually. Dr. McLauchlin (Ex. 2A, p. 1–101, 8–9–73), the Architectural Woodwork Institute (Ex. 127, p. 2), and many other organizations and witnesses supported annual testing (Ex. 2C–2, p. 2; Ex. 2C–31–1, p. 2; Ex. 81, p. 9; Ex. 14–166, p. 1; Ex. 102, sec. 4, p. 12; Ex. 29–2, p. 3; Ex. 110, p. 3; Ex. 321–50, p. 9). NIOSH (Ex. 1, p. I–6) and some others (Ex. 130, p. 5; Tr. 2138) favored testing every 2 years since it was postulated that a period of this length is needed to identify shifts that are truly significant.

OSHA has chosen to retain the annual audiometric test requirement because of the potential seriousness of the hearing damage that can occur within a 2-year period. For employees exposed to high levels of noise, a 2-year period between audiograms might allow too much hearing loss to occur before identifying the loss and taking remedial steps. Annual audiometric tests can aid employers and workers in detecting temporary threshold shifts before they become permanent, and they can also detect minor threshold shifts before they become significant. In both cases increased awareness of the hazard reflected by the audiometric test results will lead to more prompt protective action, and as a result more hearing will be saved.

The proposal required that all audiograms be conducted after 14 hours of quiet. This provision has been modified in the final rule to allow annual audiograms to be taken anytime during the workshift. This is consistent with the recommendation of Jeffrey

Morrill, President of Impact Hearing Conservation, Inc. (Ex. 293, p. 1), and may result in increased employee protection in that audiograms taken during the workshift are likely to show TTS. Since TTS is a harbinger of permanent threshold shift (Ex. 188–27, sec. 11, attach., p. 730), it is an important symptom or warning sign, and protective measures can then be taken before the change in threshold becomes permanent. Some employers may find this procedure more convenient than testing before the beginning of the workshift. Employers are encouraged to conduct annual audiometric tests during the workshift since the early identification of TTS can result in the prevention of permanent hearing loss.

Retest Audiograms

In cases where the annual audiogram reveals a significant threshold shift, the employee must be retested within 60 days. The retest must be performed after at least 14 hours free from workplace noise. The purpose of the retest after 14 hours of relative quiet is to determine the extent to which the significant threshold shift is permanent. Hearing protection and educational steps may be taken to prevent a temporary loss from becoming permanent, and to prevent a permanent loss from progressing. Also, the Agency recommends that a medical history be taken at the time of the retest. This may be in the form of a simple questionnaire that should contain questions relevant to the employee's work and auditory history. The purpose of the history is to aid the professional reviewer in making determinations of work relatedness, and the need for medical or audiological referral.

Although NIOSH (Ex. 1, p. I–6) had recommended a retest within 60 days, the Advisory Committee (Ex. 2B, p. 8) and the proposal required the retest within 30 days. However, OSHA received some negative comments on the 30-day retest provision. Individuals such as Dr. J. Ronald Bailey of North Carolina State University (Ex. 2C–33, p. 6) recommended a period of 60 days within which to retest employees. Companies such as the International Paper Co. (Ex. 14–344, p. 3) maintained that a 30-day retest period is impractical since it creates a hardship for employers who must rely on mobile audiometric test vans, which may not always be available. OSHA had decided that 60 days is an appropriate period within which to require retests. Professionals who must review the audiograms, might not be available within a shorter time frame; time would therefore be needed to send the audiograms to the professional, have them reviewed, and then reschedule the mobile van for any necessary retests. While some employers may choose to send employees to a local hospital or audiology clinic instead of rescheduling a mobile van, this may not always be possible in small towns or rural locations. In any event, to provide the employer maximum flexibility, 60 days are allowed for the retest audiogram.

A retest audiogram is not required if the annual audiogram is conducted after 14 hours free from workplace noise, because recovery from TTS would have occurred and the threshold shift can be presumed to be permanent under these circumstances. Although the Agency recommends the two-stage procedure, OSHA does not require annual testing during the workshift and retest in the event of significant threshold shift in order to distinguish temporary shifts from permanent shifts, since scheduling large numbers of retests may pose a feasibility problem in some cases, and employers may choose to perform all audiometric tests before the workshift. Employers may be able to use this two stage approach by scheduling the retest for the next morning before workers are exposed to noise.

Significant Threshold Shift

A definition and an understanding of what OSHA considers to be a significant shift of hearing threshold is very important in the proper implementation of the amendment's requirements. Without such a definition workers and employers are unable to know the seriousness of the noise-induced hearing loss.

Identifying a threshold shift as significant means that it is outside the range of audiometric error (±5dB), and it is serious enough to warrant prompt attention because it is a precursor to material impairment of hearing. When threshold shifts are significant, employers must provide and fit hearing protection, and take other remedial actions depending upon whether or not the shift is permanent.

The definition of the term "significant" is critical to the effective operation of the hearing conservation program. If the definition is too stringent, spurious threshold shifts may occur and workers will be identified because of audiometer or technician error. If the definition is not stringent enough, workers will be allowed to lose too much hearing before protective actions are taken. Correctly identifying significant threshold shifts of hearing is particularly important for workers who have already begun to lose their hearing, so that the progression may be stopped before the hearing loss becomes handicapping.

OSHA's proposed standard defined significant threshold shift as an average shift of more than 10 dB at the frequencies 2000, 3000, and 4000 Hz in either ear, relative to the baseline audiogram. These frequencies were selected with the understanding that hearing loss occurs earliest and most severly in the higher audiometric frequencies.

However, a number of witnesses criticized the leniency of the proposal's definition of significant threshold shift. The Environmental Protection Agency (Ex. 9, pp. 37, 41, 51; Ex. 5, p. 43802) and others (Ex. 51, pp. 10–11; Ex. 80, p. 2; Ex. 82, attach 1, p. 2) pointed out that under certain circumstances the proposal's definition would allow shifts of up to 30 dB at single frequencies.

According to Dr. McLauchlin:

> Workers should be identified when the first signs of noise induced threshold shift occur. With a more rigid criteria the risk of allowing workers to develop compensable hearing impairments is lessened. Further, a more stringent interpretation of "significant threshold shift" provides more adequate means for evaluating the performance of ear protective devices. (Ex. 129, p. 3).

Support for a more stringent definition of significant threshold shift is provided in the NIOSH Criteria Document (Ex. 1, p. I–6), which defined it as a shift that equals or exceeds 10 dB at 500, 1000, 2000, or 3000 Hz, or 15 dB at 4000 or 6000 Hz when that audiogram is compared to the most recent age-corrected audiogram. Some commentors such as John R. Franks of the Department of Audiology and Speech Services, Purdue University (Ex. 14–68, p. 3), and Donna Dickman, director of the Industrial Hearing Conservation Program at the Washington Hearing and Speech Society (Ex. 14–320, p. 2), suggested a very stringent definition, which was a 10–dB shift at any frequency from 500 to 4000 Hz. The Armstrong Rubber Company (Ex. 14–50, p. 1), Dupont Company (Ex. 308, sec. J2C, p. 8), and others (Ex. 2B, pp. 7–8; Ex. 14–289, p. 4), suggested more stringent threshold shift criteria (10 dB) at the lower frequencies of 500, 1000 and 2000 Hz, and larger values (up to 25 dB) at the higher frequencies of 3000, 4000 and 6000 Hz.

The Agency has chosen to use the more protective approach suggested by McLauchlin, Dickman, and Franks for workers who already have a hearing loss, while allowing a less stringent criterion for those with normal hearing. Thus, the amendment's definition of significant threshold shift reflects a "sliding scale" approach, with the amount of hearing loss constituting a

significant threshold shift becoming smaller as the worker's hearing loss becomes greater. The use of a "sliding scale" for determining hearing loss was the result of suggestions to OSHA (Ex. 2B, pp. 7–8; Ex. 14–289, p. 4; Ex. 48, p. 16; Ex. 321–38, p. 2; Ex. 317, pp. 3–4) from various audiologists and others who were concerned about workers who have a pre-existing hearing loss or workers who have already demonstrated threshold shifts. Also, the Advisory Committee recognized the need for such an approach (Ex. 2B, pp. 7–8), by recommending a more stringent definition of significant threshold shift for employees whose hearing levels at any test frequency were worse than 25 dB.

Thus, the amendment requires that for employees whose hearing is within 25 dB of audiometric zero and who have not previously suffered a significant threshold shift, the significant threshold shift criterion is a fairly lenient one—a 20–dB shift at any frequency. For employees who have lost some hearing (more than 25 dB at any test frequency), the criterion is more strict—10 dB or greater at 1000 and 2000 Hz, 15 dB at 3000 and 4000 Hz, and 20 dB at 6000 Hz. For employees who already have a mild to moderate hearing loss (worse than 25 dB *average* at 1000, 2000, and 3000 Hz) or who have previously incurred a significant threshold shift, the criterion is a nore stringent 10 dB at any test frequency.

OSHA believes that this more complex definition of significant threshold shift will be more efficient, and more protective. Identification of spurious threshold shifts would be minimized by a fairly lenient (20–dB) criterion for workers whose hearing was within normal limits. Yet workers whose hearing had begun to deteriorate, in other words, those with less hearing left to lose, would be watched more closely as a result of the stricter criteria. In these cases employers would need to take protective measures. Making the criteria more stringent for workers who have lost some hearing would minimize the possibility of allowing progressive deterioration to go unnoticed in workers who change jobs frequently and may have constantly worsening baseline audiograms against which annual audiograms are compared.

Unlike the proposal, the amendment includes 1000 Hz in the definition of significant threshold shift because of its importance in the undertanding of speech, and the amendment also includes 6000 Hz in the definition because of its importance as an early indicator of noise-induced hearing loss. The amendment addresses each frequency separately instead of averaging them so as to avoid the situation where a worker might lose up to 30 dB at one frequency before the shift is considered "significant".

Like the proposal, the final hearing conservation amendment excludes the 500 Hz frequency form the definition of significant threshold shift. OSHA agrees with certain industrial audiologists (Ex. 317, p. 4), that the 500 Hz frequency does not need to be included in the criteria for significant threshold shift because hearing at 500 Hz is the last and least affected of any of the test frequencies (500 through 6000 Hz) as a result of noise exposure. By the time the hearing level at 500 Hz has shifted, all of the higher frequencies will have been affected more severely, and the worker would have suffered considerable hearing loss. Noise-induced hearing loss at 500 Hz alone is very unlikely to occur, even in workers who are exposed to predominantly low-frequency noise.

Aging

The hearing conservation amendment permits the application of an age (presbycusis) correction to the audiometric test results in order to discount the results of aging in determining whether a significant threshold shift has occurred. When applying an age correction, the most recent audiogram is corrected according to the procedures outlined in Appendix F. In this appendix, OSHA has adopted the procedures and the age correction tables used by NIOSH in the criteria document (Ex. 1, pp. I–14 to I–17).

Although the proposal does not address the issue, the record contains a substantial number of comments recommending the use of an age correction, many of which stated that hearing loss can occur from aging, nonoccupational noise, and other factors, and such hearing loss should not be considered part of a significant threshold shift within the context of the OSHA standard (Ex. 14–110, p. 2; Ex. 14–150, p. 2; Ex. 14–160, p. 2; Ex. 14–188, p. 1; Ex. 14–200, p. 1; Ex. 14–215, p. 3; Ex. 14–248, p. 3). Lawrence Hodge of the J. I. Case Company told OSHA that an analysis of approximately 40,000 audiograms from over 10,000 employees revealed that the proposed criterion for significant threshold shift was not appropriate without addressing presbycusis. He urged OSHA to adjust audiograms accordingly (Ex. 321–24A, p. 1).

The NIOSH criteria document (Ex. 1, pp. I–14 to I–17, III–6) recommended adjusting the baseline audiogram for hearing loss that occurs naturally due to the aging process. The adjusted baseline could then be subtracted from the most recent annual audiogram in order to determine whether or not a significant threshold shift had occurred. If employers wish to correct for aging, the amendment directs them to make the adjustment to the annual audiogram rather than to the baseline, so that the baseline will not be changed (and remain changed) by mistake. The NIOSH presbycusis values are similar to those of other well known presbycusis data bases. Although there may be slight variations at individual frequencies, the NIOSH values are generally consistent with other presbycusis data such as the U.S. Public Health Service data, and those used by Robinson and Burns, and by Passchier-Vermeer (found in "Derivation of Presbycusis and Noise Induced Permanent Threshold Shift (NIPTS) To Be Used for the Basis of a Standard on the Effects of Noise on Hearing", (Ex. 310, p. 31)). It is the differences in hearing level between age groups that actually form the age corrections.

OSHA is responding to employer's concerns that if a stringent significant threshold shift criterion is not coupled with an age correction, many people would be referred unnecessarily for follow-up. Employers need not use these corrections if they choose not to.

The Agency recognizes that many workers will be exposed to nonoccupational noise that could result in some amount of hearing loss. Most presbycusis data bases include some amount of nonoccupational hearing loss, although these populations usually are screened to avoid such cases to the extent possible. It would not be appropriate to include more than a small value for nonoccupational hearing loss in the age correction since these noise exposures vary greatly among individuals.

Follow-Up Procedures

When a significant threshold shift has been identified, the employee must be provided with and required to wear adequate hearing protection and be trained in how to use and care for this protection. If the threshold shift is shown to be temporary as a result of a retest audiogram, employees exposed to TWAs between 85 and 90 dB may discontinue the use of the hearing protection. However, OSHA advises such employees to continue to wear protectors as the fact that they have suffered TTS may indicate an increased susceptibility to noise. If the threshold shift is found to be permanent, employers must require workers to wear hearing protection. Workers exhibiting

significant threshold shift have shown an increased susceptibility to noise; the permissible exposure limit is not sufficiently protective for them, and additional measures, such as ear protectors are needed to protect these individuals. In addition, the worker must be informed in writing of a permanent, significant threshold shift within 21 calendar days of the determination. Although the proposal did not require that notification be made in writing, Durham (Ex. 321–18, pp. 2–3), and those who prepared the draft California noise standard (Ex. 321–50, p. 9) recommended it. Durham stated that workers should be notified in writing "to prevent any misunderstandings or ambiguities . . ." (Ex. 321–18, pp. 2–3). A period of 21 days was chosen in order to give the professional reviewer time to interpret the test results and review previous audiograms. A period of 21 days should allow the employer the convenience of enclosing the notice with the employee's paycheck.

So as to make the notification more meaningful to employees Dr. McLauchlin (Ex. 2A, p. 103, 8–9–73) and others (Ex. 2C–83, p. 4; Ex. 81A, p. 8) urged that OSHA require employees to be informed of their hearing levels at the time of audiometric testing. Dr. Thomas (Ex. 102, sec. 9, p. 31) asserted that "this is the best time for a good individualized education program on a one-to-one basis and companies which fail to take advantage of this time are missing an excellent opportunity." At this time the employees are interested in their test results and can be shown a graphic display of their hearing sensitivity. Workers should be informed at the time of testing of *any* change in hearing level that is discovered, even if the threshold shift is not yet "significant." However, the Agency does not require this procedure in the final amendment because the individual giving the test may not have the employee's previous records available at the time.

The company must refer the employee for an audiological or otological examination under certain circumstances. The determination for this referral will usually be made on the advice of the professional reviewer. Follow-up examinations were not required by the proposal. However, the Agency agrees with suggestions from interested persons that such examinations are necessary under certain limited conditions. Employees must be referred under the following circumstances:

a. Sometimes an employee is unable to take a hearing test on a self-recording audiometer. He or she may not understand the directions, or may not be able to produce an audiogram that meets the requirement in section (ii)(E) of Appendix C, that at least six tracings or excursions must be made at each frequency for the audiogram to be considered valid. Fewer tracings would be indicative of very slow or uncertain responses, and the determination of hearing threshold would be questionable. Since the standard requires a valid audiogram, the test would have to be administered on a manual audiometer in order to obtain a valid audiogram for such an employee (Ex. 102, sec. 9; Ex. 321–1, pp. 2–3). If a manual audiometer is not available to the employer, the employee must be sent to a clinical audiologist or otolaryngologist for further testing.

b. In other cases the employee may not respond reliably to a test given on a manual audiometer (Ex. 321, p. 3). In such cases the employee must be retested. This may happen in situations where the employee has a language problem and has not understood the directions, or where an employee may have tinnitus (ringing sounds in the ears) that can interfere with taking the test, or occasionally where an employee may exaggerate the hearing loss. If upon retesting satisfactory results are not obtained, the employee must be referred to a clinical audiologist or an otolaryngologist for a diagnostic evaluation.

c. The supervising professional may feel that the audiogram is valid, but may suspect that the loss is due to a nonoccupational cause (such as ear infection or illness) (Ex. 321–1, p. 2); these suspicions may be based on an audiogram that reveals large amounts of low frequency hearing loss, large hearing threshold differences between ears, or some other audiometric configuration that is not typical of noise-induced hearing loss. Unless the employer is willing to enter the hearing loss as work related on the OSHA Form 200, the employee must be sent to an otolaryngologist or audiologist for further evaluation to attempt to ascertain whether the hearing loss is occupationally related.

OSHA recognizes that noise-induced hearing loss may not always be due to occupational exposure. Many people raised this point at the hearing (E. 14–160, p. 2; Ex. 14–188, p. 1; Ex. 14–248, p. 3; Ex. 144, pp. 2–3). However, since this amendment covers workers who are occupationally exposed to significant amounts of noise, the occupational loss can be expected to be the dominating component in most cases. Even though people may hunt or engage in noisy hobbies, most workers' NIPTS will be work related because the average person spends infinitely more time on a routine basis at work than in recreational activities.

d. A problem may arise where the employer or the supervising professional suspects that hearing protectors are either causing or aggravating an irritation or infection of the ear canal. The symptoms may include pain upon insertion of the ear plug, visible irritation of the ear canal, or draining ear, etc. The possibility of such conditions was reported by labor union witnesses (Tr. 2026–2027; Ex. 79, p. 7; Ex. 88, p. 7; Ex. 73, attach 4, p. 1). In this case the employer must refer the worker for an otological examination so that medical treatment will enable the worker to wear ear protectors comfortably and without any adverse medical consequences.

In some circumstances a medical pathology of the ear may be suspected that is clearly unrelated to the wearing of ear protectors. Examples could be infection or irritation prior to the fitting and wearing of protectors, or an otoscopically abnormal ear drum related to a cold or allergy. Regardless of the amount or kind of hearing loss, if the employer feels that an employee needs medical treatment, the employee should be informed of the need. In these cases the amendment does not require medical or audiological referral, but employers are advised to inform workers of the need for examination or treatment. (Ex. 321–1, p. 1).

Quiet periods

The amendment requires 14 hours free from workplace noise prior to conducting baseline and retest audiograms. Ear protection is not permitted as a substitute for this quiet period.

The proposed standard specified that audiometric tests (of any kind) must be preceded by at least 14 hours during which there was no exposure to workplace sound levels in excess of 80 dB. The requirement could be met by wearing hearing protectors.

OSHA received many comments favorable to requiring a quiet period prior to taking audiograms (Ex. 2A, pp. 51–54, 5–31–73; Tr. 2340–2341; Ex. 321–34, p. 2; Ex. 321–51, p. 10). Since the baseline and retest audiograms must not be influenced by temporary threshold shift, some time away from noise is necessary in order to allow the ear to recover. Therefore, baseline and retest audiograms will have to be conducted before the workshift. Morrill (Ex. 293, p. 1) supported the option of the using hearing protectors under controlled

conditions to achieve the necessary quiet period. The draft California noise standard (Ex. 312–50, p. 10) also included this option. However, this amendment does not permit the use of hearing protections to fulfill the 14-hour quiet requirement since studies have shown (Ex. 300, p. 2; Ex. 300A, p. 91; Ex. 308, p. 27) that common fitting and wearing practices can greatly reduce hearing protector effectiveness. This reduction in effectiveness would contribute to the risk of contaminating the baseline and retest audiograms by temporary threshold shift, so that neither would reflect the emplyee's true hearing threshold levels.

The proposal specified a maximum workplace noise exposure level of 80 dB immediately preceding the baseline audiogram. The amendment does not specify any maximum noise exposure level for the 14-hour quiet period, since employers cannot be responsible for their employees' noise exposures away from work, if employees are in the hearing conservation program to begin with, their workplace noise levels would not meet an 80–dB exposure level without the use of hearing protectors, and therefore the testing would have to be performed before work. Employers should explain to workers why the audiometric tests must be performed after 14 hours of quiet and counsel them that it is in their best interest to avoid recreational noise exposures before baseline or retest audiometric tests.

There was some dispute about the appropriate length of quiet time necessary before the baseline and retest audiograms. The New York State Department of Labor (Ex. 2C–118, p. 2) recommended 48 hours, while most others stated that 14 hours was sufficient (Ex. 2B, p. 6; Ex. 321–34, p. 2; Tr. 2340; Ex. 2A, p. 51, 5–31–73,). While OSHA recognizes that workers with greater exposures will need longer periods of time to recover from TTS than will those who are exposed to more moderate levels, it has also been shown that the major portion of TTS disappears in the first few hours after cessation of exposure (Ex. 279, 11–6, pp. 987–990; Ex. 29, pp. 288–289; Ex. 183–27, sec. 11, p. 735). However, since it is not possible to specify an appropriate recovery time for each individual, OSHA has selected 14 hours as the most appropriate and protective period that is practical. The Agency recognized that some employees exposed to high levels of noise currently are wearing hearing protectors, and therefore they should have minimal TTS if the protectors are being worn properly. Since it is very difficult for employers to know if the ear protectors are being worn properly, and since it is very important for the baseline audiogram to be free of TTS, the amendment requires all employees to be away from workplace noise for at least 14 hours before the baseline and retest audiograms are taken.

The Agency has chosen the 14-hour period as an administrative convenience, since there are usually at least that many hours between the end of an employee's workshift and the beginning of the next shift. Employers who are unable to meet the 14-hour minimum quiet period between shifts (due to overtime or irregular schedules) may prefer to schedule the baseline or retest audiogram before work on the first day of the work week.

Audiometric Test Frequencies

This amendment requires that pure tone air conduction audiometric tests be performed for each ear at the frequencies 500, 1000, 2000, 3000, 4000, and 6000 Hz. This is consistent with the proposal, the NIOSH criteria document (Ex. 1, p. I–6) and the Advisory Committee (Ex. 2B, p. 6) recommendations.

While 500 Hz is not included in the definition of significant threshold shift, this frequency still is included among the required test frequencies in order to provide a more complete audiometric profile. The hearing threshold level at 500 Hz can be very helpful in assessing the validity of the audiogram as a whole since an unusual loss at this frequency can signal the need for a retest. Also, OSHA believes that the hearing threshold level at this frequency can provide important information about the health of employees, even though it is usually the last of the test frequencies to be affected by noise. Hearing loss at 500 Hz may be indicative of job related conductive hearing loss, which could possibly result from an adverse reaction to hearing protection, or from upper respiratory infections due to inhalation of irritating dust. Dr. Gene Del Polito of the American Speech-Language-Hearing Association explained why testing should include 500 Hz:

> 500 Hertz can add information that is useful in detecting most medical problems affecting the function of the outer and middle ears. Detecting these problems by way of hearing measurement could provide an additional measure for assuring the safety and health of the worker. Also, industrial accidents resulting in trauma to the auditory mechanism, such as punctured eardrums or disarticulated ossicles, may affect hearing more in the low frequency range than in the higher frequencies. (Ex. 291, pp. 1–2).

Dr. Joseph Sataloff (Ex. 2A, pp. 35–36, 5–10–73)) recommended the inclusion of 8000 Hz in the required audiometric test frequencies in order to more clearly delineate the characteristic noise-induced "notch," (where hearing levels at 8000 Hz are sometimes less severe than at 4000 or 6000 Hz). A number of comments to the Advisory Committee recommended against any requirement to test at 8000 Hz (Ex. 2C–41, p. 1; Ex. 2C–42, p. 1; Ex. 2C–46, p. 1; Ex. 2C–51, p. 1; Ex. 2C–52, p. 1). OSHA did not accept Dr. Sataloff's recommendation for two reasons. First, the calibration of 8000 Hz is often less stable than it is for other frequencies, and spurious results are likely to occur. Also, there are some audiometers that are incapable of testing at 8000 Hz, and the inclusion of this frequency would preclude their use under this amendment.

Audiometer Specifications

The amendment calls for equipment that meets the specifications of, and is maintained and used in accordance with the American National Standard Specification for Audiometers (ANSI S3.6—1969). Since the ANSI standard does not contain requirements for pulsed-tone and self-recording audiometers these requirements are found in Appendix C of the amendment. (Pulsed-tone and self-recording audiometers interrupt the tone signal automatically, whereas with other audiometers the interruption is performed manually). The requirements in Appendix C are essentially unchanged from those of the proposal.

The ANSI standard contains performance specifications for audiometers. It also contains calibration requirements, and specifications for audiometric zero with respect to sound pressure level at the different test frequencies. OSHA understands that microprocessor audiometers, which computerize the audiometric test are increasingly used by consultants and large companies. They are allowed by this amendment so long as they meet the performance specifications of ANSI S3.6–1969.

The proposal required that audiometers meet the specifications of ANSI S3.6–1969. There was some discussion in the record about the use of older audiometers that fail to meet the 1969 standard, but instead were calibrated to an earlier zero reference level established by the American Standard Association in 1951. Comments by Stenmark (Ex. 2C–134, p. 1) and Edwin Toothman (Ex. 145, attach 1, p. 8) expressed the opinion that industry should be allowed to continue to use existing audiometers conforming to the 1951 standard. Others, such as the American Speech and Hearing

Association (Ex. 129, attach 1, p. 2), the Environmental Defense Fund (Ex. 2C–125–1, p. 7), the Motor Vehicle Manufacturers Association (Ex. 2C–1, p. 9) and the Advisory Committee (Ex. 2B, pp. 8–9) supported adherence to the 1969 standard.

There is an average difference of 10 dB between the 1951 and the 1969 audiometric zero reference levels, the 1969 levels being lower (closer to 0 dB sound pressure level). Because the differences between the older and newer standards vary according to frequency (for example 9.5 dB at 1000 Hz and 5.5 dB at 4000 Hz), allowing both zero reference levels to be used would make it very difficult to compare an individual's audiograms that had been performed on different audiometers. It would also be very confusing for anyone wishing to assess the effectiveness of a hearing conservation program, especially since the criteria for significant threshold shift would have to be adjusted for each frequency. Since the 1969 ANSI standard has been in effect for 11 years, and since OSHA has estimated the average life of an audiometer to be about 10 years (Ex. 319A–60, p. 1; Ex. 319A–90, p. 1), the Agency assumes that there are very few audiometers in existence that are calibrated to the 1951 zero reference level. To the extent that audiometers calibrated to the 1951 zero reference level are still in use, some probably can be recalibrated to the 1969 zero reference level (Ex. 306, p. J5C–3). Therefore, the amendment requires that audiometers be calibrated to the zero reference level specified in ANSI S3.6–1969.

There was some discussion about the use of less common audiometric features, such as sweep-frequency and pulsed-tone types. Comments favored the proposal's requirements for discrete-frequency (as opposed to sweep-frequency) audiometers where the tone is presented in octave or half-octave intervals (Ex. 1, p. I–7; Ex. 2C–1, p. 9). Comments also supported the proposals's requirement that with pulsed-tone audiometers, the on-time of the test tone is at least 200 milliseconds (Ex. 1, p. I–7; Ex. 2C–1, p. 9). There was consensus that self-recording audiometers should be allowed in addition to the manual type. (Ex. 1, p. I–7; Ex. 2B, p. 9; Ex. 48, p. 12; Ex. 102, sec. 9, pp. 25–26, 51; Ex. 306, p. J1C–11; Ex. 2C–26, p. 2; Ex. 2C–30, p. 1; Ex. 2C–125–1, pp. 7–8).

NIOSH (Ex. 1, p. I–7) and the Advisory Committee (Ex. 2B, p. 9) recommended and the proposal required that self-recording audiometers should be subject to the requirements found in Appendix C. These requirements are necessary to ensure the validity of audiograms taken with self-recording audiometers.

Audiometer Rooms

Background sound levels in audiometer rooms must be quiet enough to permit valid measurements of audiometric thresholds. Too much noise can "mask" or artificially shift a subject's hearing threshold level. In other words, the tone would have to be significantly louder before the person could distinguish it from the background noise, making it seem as though the individual hears less well than he or she actually does. While this is not a good practice for any type of hearing test, it is especially serious with respect to the baseline audiogram. For example, a worker might enter a company with hearing as good as 0 dB at 1000 Hz. But background noise could mask this worker's hearing level at 1000 Hz by 15 dB, and cause the baseline to read 15 dB rather than 0 dB hearing level. In subsequent years the worker might actually lose some ability to hear at various frequencies, including 1000 Hz. Not until the worker had already lost more than 15 dB of hearing would any changes begin to show up on the audiogram. Then, the worker would have to have a hearing level of 35 dB (signifying a loss of 20 dB more), before the shift would be considered significant, under the amendment, and protective actions would be taken.

The Agency has determined that background levels in audiometer test rooms should be quiet enough to allow threshold testing to 0 dB hearing level. This is especially important in order to describe accurately the hearing levels of individuals who enter the workforce with hearing as good as 0 dB. According to the DuPont Company (Ex. 306, sect. J1C, pp. 8–9) "most young subjects will have extremely good hearing and will respond to the tone while the hearing dial is still at 0 dB threshold. In these cases it is good practice to obtain . . . responses . . . at these low levels." "Screening" audiometry, (merely registering positive responses at a specific level across frequencies) does not satisfy the requirements of this regulation because actual thresholds, and therefore valid threshold shifts, cannot be identified by this process. Baseline and periodic audiograms should reflect testing to the lowest audible level. These views have also been supported by industrial audiologists (Ex. 317, p. 2; Ex. 319B–2, p. 1; Ex. 319B—3, p. 3), and constitute good industrial audiometric practice, necessary to preserve workers' hearing.

In the proposed standard OSHA required that background levels in audiometric test rooms levels not exceed the following:

40 dB at 500 Hz
40 dB at 1000 Hz
47 dB at 2000 Hz
57 dB at 4000 Hz
62 dB at 8000 Hz

These levels, referenced to 0 dB sound pressure level, were taken from the American National Standard, Criteria for Background Noise in Audiometer Rooms, S3.1–1960.

The amendment retains the background levels specified in the proposal (as Table D–2 of Appendix D) for 2 years, and then imposes a more stringent background noise requirement for audiometric test rooms. After 2 years, background levels shall not exceed the following.

27 dB at 500 Hz
30 dB at 1000 Hz
35 dB at 2000 Hz
42 dB at 4000 Hz
41 dB at 8000 Hz

So that the professional reviewer will know that testing has been conducted in sufficiently quiet conditions, employers must record on employees' audiograms whether the test room meets the requirements of Table D–1 or Table D–2.

These background levels (with the exception of the 27-dB level at 500 Hz) are specified in the American National Standard for Permissible Ambient Noise During Audiometric Testing, S3.1–1977. This standard was submitted to the record as Exhibit 312 and public comment was invited on it (see 45 FR 26366, 4/18/80).

OSHA has required the more stringent background levels in audiometric test rooms which are outlined above to be as consistent as possible with the newer ANSI standard. In previous years, the older (1960) ANSI standard for background levels was presumed to be sufficient for allowing threshold testing to audiometric zero, based on the 1951 audiometric zero (ANSI S3.1–1960, p. 7). However, as mentioned above, audiometric zero was changed (made more stringent) in 1969, and therefore the old ANSI standard for background levels was no longer stringent enough to allow threshold testing to 0 dB. ANSI began revising the standard for background levels, but the new standard was not published until 1977. It is logical for this amendment to require the more stringent background levels so that workers may be tested to the 1969 0-dB hearing threshold level, which is now the nationally accepted norm for

audiometric zero. (In fact, the proposal required the use of audiometers meeting the ANSI S3.6–1969 standard, which includes the 1969 zero reference level).

Although the 1977 ANSI standard for background levels specifies a maximum level of 21.5 dB at the 500-Hz frequency, OSHA has modified this requirement to 27 dB. This change was based in part on a number of recent submissions to the record by audiometric booth manufacturers, employers, and industrial audiologists, who maintained that they were unable to meet the new ANSI requirement of 21.5 dB at 500 Hz with existing equipment (Ex. 287, p. 2, Attach. 1, p. 1, Attach. 3, p. 1; Ex. 291, p. 2; Ex. 295, p. 1, Ex. 319–B1; Ex. 319–B2, pp. 1, 2; Ex. 321–15, pp. 1, 2). Alan Eckel, president of Noise Control Products and Materials Association (Ex. 287, p. 2) stated that ANSI S3.1–1977 was "a clinical research standard and . . . not intended for industrial hearing conservation purposes." However, there is no such distinction made by the ANSI standard (Ex. 312). While the ANSI standard maintains that the exclusion of all ambient noise is not necessary, the levels in the standard will permit measurement of hearing threshold levels as low as those specified in ANSI S3.6–1969, (as explained above) (Ex. 312, p. 1).

Also, the Agency realizes that since 500 Hz is not included in the definition of significant threshold shift, audiometric precision at this frequency is not as important as it is at the other test frequencies. However, is not appropriate to allow background noise up to 40 dB at 500 Hz, (as allowed by the older ANSI standard) since this amount of noise would be capable of masking thresholds at 1000 Hz. The decision to allow a sound pressure level of 27 dB is based on a study by Dr. James Jerger (Ex. 321–20, p. 387), which shows that background levels at 500 Hz may be raised approximately 5 dB without interfering with threshold testing at 1000 Hz.

William Vanke (Ex. 285, p. 2) referred to the statement in ANSI S3.1–1977 (Ex. 312, p. 1) to the effect that some testing programs may be met by measurements at test signal sound pressure levels higher than 0 dB referenced to ANSI S3.6–1969. The objectives of the audiometric testing program required by OSHA can be met by slightly higher levels at 500 Hz, but they cannot be met at higher levels for the test frequencies 1000 through 6000 Hz because these frequencies are used in the definition of significant threshold shift. Testing to 0 dB hearing threshold level is critical to the proper characterization of hearing level for persons with acute hearing, so as to correctly identify significant threshold shift, with the goal of preventing material impairment of hearing.

The amendment does not incorporate the entirety of ANSI S3.1–1977 by reference since the octave band levels at 500 through 8000 Hz stated above are the only ones necessary for the amendment's audiometric testing requirements (frequencies such as 125, 250, and 750 Hz are not included since testing is not required at these frequencies). Also, the amendment has rounded the levels stated in the ANSI standard to the next highest whole number, (e.g., at 1000 Hz the amendment requires 30 dB instead of 29.5 dB). Since the remainder of the ANSI standard consists mainly of appendices, which are not actually part of the standard, only the pertinent allowable levels as modified are included in the final standard.

Although the amendment does not require testing at 8000 Hz, (nor did the proposal), this frequency is included instead of 6000 Hz in the requirements for background sound levels. This is because ordinary sound level meters are not capable of measuring sound pressure levels for the octave band surrounding 6000 Hz. Therefore OSHA has listed the levels to permit testing at the 6000-Hz frequency even though they must be measured with the octave band filter set for 8000 Hz. This procedure was assumed in the proposal, since a 62-dB maximum level was required for audiometric testing at 6000 Hz, although the 8000 Hz frequency was specified for measurement with the sound level meter. The same rationale applies to the 41-dB maximum level to be measured at 8000 Hz setting after the initial 2-year period. Since most background noise tends to be predominantly low frequency, and also since high frequency sound is more efficiently attenuated by typical audiometric test booths (Ex. 312, p. 7), the amendment's requirement for maximum levels of high frequency noise are not expected to pose a feasibilty problem.

Since some employers or consultants may need to retrofit their present audiometer rooms, (Ex. 319B–2, p. 2) or move them to a quieter location, the Agency has allowed them 2 years in which to make these changes. There may be cases where employers need to purchase new test booths, but OSHA believes that these cases will be rare because of the modification of allowable background noise made at 500 Hz.

Quieter booths of the double-walled variety are available but they should not usually be necessary since most factories have some kind of office space, where background noise levels are relatively low. Because none of the comments in the record mentioned difficulties at frequencies above 500 Hz, OSHA concludes that the 1977 ANSI requirements at these frequencies do not present significant problems. Measurements of background levels submitted by audiologist Sue Riggs (Ex. 295, p. 1 and Attachment) indicated some difficulties at 500 Hz, but the 1977 ANSI levels were met at other frequencies. Alan Eckel of Eckel Industries stated that "almost all audiometric booths currently used in industrial hearing conservation programs meet the requirements of the new ANSI standard at 1000 Hz and above. The lower frequencies are difficult to achieve". (Ex. 319 B–1, p. 1).

Measurements by Riggs (Ex. 295, Attachment) indicated that the 27-dB levels at 500 Hz could be met in many of the cases she cited, although the 21.5-dB level specified in ANSI S1.3–1977 could not. Reports by Berger et al. (Ex. 266A, p. 38) and NIOSH (Ex. 28–2, p. 23), showed that the 27-dB level usually was met in the conditions in which these investigators tested. The mobile audiometric van used by Burns and Robinson had a mean attenuation of 79 dB at 500 Hz from outside the vehicle to inside the booth (Ex. 12, p. 71), which when added to the 27-dB allowable level at 500 Hz, must have provided ample attenuation for any ordinary circumstances.

Audiometer Calibration

This amendment requires three types of audiometer calibration. First, the functional calibration of the audiometer must be checked before each day's use. Second, the audiometer's calibration must be checked acoustically with a sound level meter and earphone coupler at least every year. Finally, the audiometer must receive an exhaustive calibration at least every 2 years. In the first two instances the word "calibration" refers to a procedure by which the audiometer is checked to make sure that it is producing the correct level of pure tones at specific frequencies, and that the signals are free from distortion or unwanted sounds, which might lead to invalid audiograms. In the third type of calibration the instrument is thoroughly checked, and adjusted if necessary, so that it meets the ANSI specifications described below. In most cases this type of calibration must be performed in a laboratory or at the manufacturer's factory.

So as to ensure accurate audiograms, OSHA advises employers to measure the background sound pressure levels in

audiometric test rooms periodically. Since the sound levels inside the room are greatly dependent upon the sound levels outside, employers should measure the room levels whenever there is an increase in outside sound levels that might adversely affect compliance with Appendix D. For example, Dr. Thomas (Ex. 102, Sect. 9, pp. 53–56) recommends making these measurements whenever a test room is relocated, or when noisy equipment is moved into the area of the test room.

Audiometer calibration is necessary in order to obtain valid audiograms, which in turn are critical since changes in hearing level initiate a number of different actions. There were many comments in the record supporting required audiometer calibrations. According to William Reich of Gen Rad Corporation, "An accurate and reliable audiometric testing program involves more than the simple purchase of a good audiometer. Periodic calibrations are an essential part of the audiometer program . . ." (Ex. 281, attach. 2, p. 86, Electro-Acoustic Audiometer Calibration). There are several studies that show that audiometers can often malfunction, and this malfunctioning can be undetected by the individual who is using the instrument (Ex. 321–51A, Ex. 281, attach. 2, p. 86). As a consequence, the audiograms that have been produced are of questionable accuracy and value. According to a study by Thomas, Preslar, Summers, and Stewart (Ex. 321–51A, p. 328), of 98 audiometers checked, none was "in condition to do satisfactorily the testing for which it was manufactured. The most frequent defect was incorrect sound level output." This study and also a study performed by the U.S. Air Force School of Aerospace Medicine (Ex. 281, attach., p. 86) indicate that a high percentage (50 percent to 100 percent) of audiometers failed to perform according to ANSI requirements when these instruments were left uncalibrated. It is for these reasons that calibration is mandatory.

The hearing conservation amendment requires that the functional operation of the audiometer be checked before each day's use. The process involves testing a person whose hearing levels are stable and do not exceed 25 dB at any test frequency. This person may be the tester himself or herself, or any other person with normal hearing. The process also includes checking the general function of the audiometer for unwanted sounds, such as clicks, static, and distortion. This functional check is quite simple, and can be done in a few minutes. If the test reveals significant deviations (greater than 5 dB), in hearing level from the subject's known audiogram or unwanted or distorted sounds, a more thorough calibration is warranted. In this case OSHA requires an acoustic calibration. In order to be sure that the audiometer's output is deviating rather than the subject's hearing level (the subject may have a headcold), the tester is advised to test additional subjects (with known stable hearing levels that do not exceed 25 dB). If these subjects confirm the deviation, use of this audiometer for testing must be discontinued until a periodic or exhaustive calibration can be performed since all of the audiograms taken that day would be suspect.

The proposal also required that the functional operation of the audiometer be checked prior to each period of use to ensure that it was in proper operating order. In addition, the proposal required a "biological" calibration at least once a month, which consisted of testing a person having known, stable audiometric thresholds. If the results of the biological calibration indicated hearing level differences greater than 5 dB, the audiometer was to be subjected to a "periodic" calibration. In the final amendment the Agency has combined the functional check and the biological calibration into the same requirement, to be performed before each day's use of the audiometer. This approach has been taken because it is extremely important to ensure that the audiometer produces correct sound pressure levels each time it is used. The process of testing one person's hearing can be done quickly, especially if the individual performing the test tests himself or herself.

This type of calibration check was supported by comments and articles submitted to the record. Even a new audiometer from the factory can lose its calibration especially if it was bumped in transit, and a functional check before each day's use would alert the operator to any malfunctions that might invalidate the test results (Ex. 102, sec. 9, p. 55–56; Ex. 306, p. J5C–8). This type of calibration appears to be accepted audiological practice, and was recommended in many comments to the record (Ex. 2C–14, p. 4; Ex. 2C–31–1, p. 2; Ex. 48, p. 14; Ex. 58, p. 2; Ex. 159, p. 6; Ex. 281, attach p. 2, p. 88; Ex. 306, pp. J5C–6, J1C–4, J1C–12).

Like the proposal, the amendment requires an acoustic calibration at least once a year, in order to check the audiometer's output with calibrated measuring equipment. This calibration is specified in Appendix E, and must be performed with a sound level meter and octave-band filter set, and a National Bureau of Standards 9–A coupler. The amendment's requirements are the same as those of the proposal, except that the listening test and the functional check are not included since they must now be performed before each day's use. The name has been changed from "periodic" to "acoustic" to more accurately characterize this particular calibration.

The amendment's requirements for acoustic calibration are given in Section 4.1.4.3 of ANSI § 3.6–1969, but the actual calibration procedures are given more explicitly in Appendix E, as they were in the proposal. Also, Appendix E gives reference sound pressure levels for both the Telephonics TDH–39 and TDH–49 earphones, which are in popular use today. (Reference levels for the TDH–49 earphone were not included in ANSI § 3.6–1969).

For the acoustic calibration, measurements must be taken acoustically at a reading of 70 dB on the audiometer's hearing threshold dial at all test frequencies (500, 1000, 2000, 3000, 4000, and 6000 Hz). Measurements must then be taken at the 1000-Hz frequency in decreasing steps of 10 dB from 70 dB to 10 dB hearing level. These latter measurements may be taken acoustically with the sound level meter or electrically with a voltmeter. The purpose of these measurements is to check the sound pressure level output at all frequencies, and to check the linearity of the attenuator, to make sure that the audiometer is producing the correct sound pressure level output at all hearing levels. Appendix E gives the following tolerances, which also are stayed in Section 4.1.4.3 of ANSI § 3.6–1969:

3 dB at 500 through 3000 Hz
4 dB at 4000 Hz
5 dB at 6000 Hz

Whenever the audiometric output deviates by more than the above levels, OSHA advises an exhaustive calibration. Until such time as the exhaustive calibration is performed, deviations that exceed these tolerances should be posted on the audiometer, so that the operator can correct the audiograms accordingly. When manual audiometers are used, deviations of 3 or 4 dB should be rounded to 5 dB when adjusting the audiogram. The amendment advises, but does not require an exhaustive calibration when small tolerances are exceeded, because posting deviations and correcting audiograms should serve as a satisfactory interim measure. However, when the deviations exceed 10 dB, an exhaustive calibration is mandatory.

This portion of the amendment reflects a slight departure from the proposal, which specified additional

listening checks. The amendment limits the requirement to an assessment of sound pressure level output, since sound pressure level output is the audiometric function most frequently found to be incorrect (Ex. 321–51A, p. 326).

Comments in the hearing record supported a periodic calibration and some even specified its performance quarterly (Ex. 2C–14, p. 4; Ex. 2C–31–1, p. 2; Ex. 46, p. 14). Since not all audiometers will be in constant service and since an acoustic calibration will be triggered by a functional check that shows the necessity of further calibration, the Agency believes that a regular acoustic calibration once a year should be sufficiently frequent to assure accuracy.

The hearing conservation amendment requires an exhaustive calibration every 2 years. The content of the requirement is essentially the same as that which appeared in the proposal, although the interval between calibrations has been shortened from 5 to 2 years. This calibration will usually be performed in a laboratory or by the audiometer manufacturer because of the need for specialized equipment. (Calibration of frequencies below 500 Hz and above 6000 Hz may be omitted since they are not required test frequencies). During this calibration the audiometer is actually adjusted so that it conforms to the following sections of ANSI § 3.6–1969:

Section 4.1.2 Accuracy of Tone Frequencies. The purpose of the test is to make sure that the audiometer will actually produce tones at the frequency stated on the audiometer dial. For example, the tone should be 2000 Hz, not 2100 Hz or 1900Hz.

Section 4.1.3 Purity of Tones. In this test the audiometer is checked to make sure that harmonics of the test frequencies are not present to the extent that a test subject might respond to the harmonic rather than to the test tone.

Section 4.1.4.3 Accuracy of Sound Pressure Level. In this test the audiometer's sound pressure level output is checked in a similar manner as it is on the acoustic calibration. Reference threshold levels should be appropriate to the type of earphone, as mentioned above.

Section 4.4.1 Sound from Test Earphone. The purpose of this test is to ensure that the earphone will not emit any sound other than the test tone, which might affect the subject's threshold.

Section 4.4.2 Sound from Second Earphone. This test guards against any sound from the nontest earphone, which might affect the subject's threshold.

Section 4.4.3 Other Unwanted Sound. This test guards against any sound from the audiometer itself, which might furnish a clue to the subject being tested, thereby affecting the subject's threshold.

Section 4.5 Tone Switch. The purpose of this test is to ensure that the tone has an adequate rise and decay time, and that operation of the switch does not produce audible transient sounds or extraneous frequencies, which could influence the subject's threshold determination.

The proposal required an exhaustive calibration every 5 years. The amendment requires that the exhaustive calibration be performed every 2 years. Many comments in the hearing record supported an exhaustive (or factory) calibration every year (Dr. Righthand, Ex. 281, Attach. p. 91; Air Force Regulation Ex. 48, p. 13; Dr. Thomas, Ex. 102, Sec. 9, p. 56). Although the DuPont Company calls its yearly calibration an "acoustic" calibration, their requirements are similar to the exhaustive calibration specified in the amendment. The Company states: "This calibration shall check both frequency and intensity at each setting, rise time and overshoot and electrical and mechanical integrity." (Ex. 306, p. J5C–5). A Draft International Standard (Ex. 321–39, p. 3) suggests an exhaustive calibration every 2 years. The NIOSH criteria document (Ex. 1, p. I–19), the Advisory Committee (Ex. 2B, p. 12), and the draft California noise standard (Ex. 321–50, p. 15) supported the 5-year period between exhaustive calibrations.

Since the validity of the audiogram is highly dependent upon the calibration of the audiometer, OSHA believes that 5 years is too long an interval between exhaustive calibrations. Even though employers may find in the acoustic calibration that the sound pressure level output is correct, other malfunctions may occur, such as inaccurate tone frequencies or harmonic distortion. These malfunctions could occur without the knowledge of the operator because they can be too difficult to detect. A shorter interval is all the more important because the exhaustive calibration is advised but not required when an acoustic calibration indicates that the audiometer is up to 10 dB out of calibration. Audiometers that are not used very often (such as only a few days a year) should not need to be thoroughly calibrated more often than every 2 years. However, employers are urged to send their audiometers for exhaustive calibration more frequently when they are heavily used, or when, as a result of periodic calibration, it becomes apparent that they slip out of calibration fairly easily.

The amendment requires employers to record the date of the most recent acoustic or exhaustive calibration on employees' audiograms. This requirement will aid professional reviewers in making the determination that the tests have been conducted with properly calibrated equipment. In addition, employers must make complete calibration records available to professional reviewers, so that the reviewers will have better knowledge of actual function of the audiometer.

Hearing Protectors

The hearing conservation amendment requires employers to make hearing protectors available to all workers whose exposures equal or exceed an 8-hour time-weighted average sound level of 85 dB. When the PEL is exceeded, and employers are unable to reduce exposures through the use of engineering or administrative controls, hearing protectors must be provided and worn, as required by the current noise standard, 29 CFR 1910.95(b)(1). In addition, employers must assure that hearing protectors are provided to and worn by employees exposed to a TWA of 85 dB or greater if their audiograms have indicated a permanent significant threshold shift. Although workers who have not yet received a baseline audiogram are not required to wear protectors if their TWAs are between 85 and 90 dB employers are advised to encourage them to do so.

Employers must provide workers with a choice of hearing protectors. Employers are advised to give workers a choice between at least one type of ear plug and one type of ear muff (preferably more) since individuals may be much more comfortable in one type of protection than in the other. Ear protectors shall be supplied at the employer's expense. The employer is responsible for the proper initial fitting of hearing protection, and for regularly supervising its use to make sure that employees are wearing the protectors, and that they are worn correctly.

Employers must select hearing protectors that attenuate or reduce employee noise exposure at least to the PEL, and for employees who have suffered a significant threshold shift, to a TWA of 85 dB or below. Under the present standard, 29 CFR 1910.95(b)(1), an employee must wear hearing protection whenever his or her exposure exceeds the PEL and engineering controls are infeasible, in the process of being installed, or will not reduce the employee's exposure to within the PEL. The final hearing conservation

amendment requires an additional group of employees to wear hearing protection: those exposed to TWAs of 85 dB or above if they suffer a significant threshold shift of hearing level.

The results of four recent studies indicate that the way hearing protectors are worn in real life conditions significantly reduces the manufacturer's stated estimates of attenuation (Ex. 301, p. 35; Ex. 308, pp. 1, 2; Ex. 321–14C, p. 5; Ex. 321–35E, abstract). NIOSH found that the attenuation achieved in the field was only about one-third of the attenuation achieved in the laboratory (Ex. 308, p. iii). Therefore, employers are advised to underestimate hearing protector attenuation by a few decibels when selecting protectors for employers. (This underestimate may have the effect of slightly overprotecting the employee.)

A given hearing protector must always be suitable for the frequency distribution of the noise environment in which it is to be worn. Therefore employers must estimate hearing protector attenuation for each employee's noise exposure conditions in order to be sure that the attenuation provided will be adequate. Methods for estimating hearing protector attenuation are described, and instructions for their use are given in Appendix G: *Methods for Estimating the Adequacy of Hearing Protector Attenuation.* This appendix is mandatory.

As discussed above in the section on exposure monitoring, the employer must remonitor whenever there is a change in working conditions that may cause an employee's hearing protector attenuation to be insufficient. After monitoring, the employer must re-evaluate the attenuation of the hearing protector being used and provide new protectors as necessary. These measurements could be taken as a result of either a bi-annual monitoring or monitoring due to a change in noise conditions.

The proposal required hearing protectors to be provided to and used by employees exposed to a TWA between 85 and 90 dB if their audiograms showed a significant threshold shift. OSHA has retained this very important requirement since these workers have demonstrated susceptibility to noise exposure (Ex. 310, p. 25; Ex. 5, pp. 43804, 43805; Ex. 138A, p. 1–4) and wearing hearing protectors may help prevent further hearing loss (Ex. 231, p. 11; Ex. 321–53D, p. 3; Tr. 2246; Tr. 755).

Unlike the proposed standard, the amendment also requires employers to make protectors *available* to all employees exposed to a TWA above 85 dB on a voluntary basis. The fundamental reason for this requirement is the fact that hearing loss can occur above 85 dB, as was explained earlier. A significant percentage of workers exposed to 85 dB over a working lifetime will suffer material impairment of hearing (Ex. 138A, p. I–4; Ex. 5, p. 43805; Ex. 189–5, p. 6; Ex. 86, p. 33). These workers should not have to incur significant threshold shifts or any work related diminution of hearing, for that matter, before they have access to hearing protection. Workers should be able to wear protection voluntarily, even where the use of hearing protection is not mandatory. This is fully consistent with the purposes of the Occupational Safety and Health Act (see section 2(b)(1) and 2(b)(4) of the Act).

Generally the amendment does not make the wearing of hearing protectors mandatory until exposure levels exceed the PEL since the permissible exposure level listed in 29 CFR 1910.95(a), Table G–16 has not been changed. This requirement is contained in the present noise standard and the amendment does nothing to change it. Moreover, workers sometimes find hearing protectors particularly oppressive at the more moderate exposure levels where they can cause interference with speech communication to be more noticeable. (More speech communication is likely to occur in moderate levels, especially if the noise is intermittent, allowing speech to take place in the quiet intervals (Ex. 321–35G, p. 3; Ex. 231, p. 12).) Therefore the Agency has decided to require employers to provide ear protectors to employees exposed between 85 and 90 dB, but not to make the use of these devices mandatory for those employees without significant threshold shift until the PEL is exceeded. Since the Agency recognizes that many employees dislike hearing protectors, mandatory use of protectors has been limited to those cases where they are absolutely necessary.

Acceptability of Hearing Protectors

A major issue that was addressed in the record is worker refusal to wear ear plugs because they cause discomfort (Ex. 75–5, p. 22; Ex. 321–45A, pp. 1, 11; Ex. 94, p. 9). Complaints about ear muffs included headaches, claustrophobia, excessive warmth, perspiration, interference with safety glasses and hardhats, and bulk in and around the ear (Tr. 576, 603, Tr. 1371; Ex. 94, p. 9; Ex. 2C–16B, p. 25). Hearing protectors also have been criticized because their effectiveness is so heavily dependent upon individual worker's compliance, rather than on the more consistent protection afforded by engineering controls (Tr. 794). The use of hearing protectors can be more difficult to supervise because their effectiveness depends upon many people (all employees who wear them) rather than on one or two machines (Tr. 1465). Also, supervision is difficult because it is impossible to know whether a hearing protector is being effectively worn just by looking at each employee. Finally, some stated that hearing protectors can be unacceptable for hygienic reasons (i.e., they lead to ear infections) (Ex. 79, p. 7; Ex. 94, p. 9; Ex. 88, p. 7; Tr. 2026–2027).

Leonard Woodcock, former president of the United Auto Workers Union, revealed many potential problems with ear protection:

> The effect of using ear protection shifts the burden and responsibility for compliance from the employer to employee. Ear protection is uncomfortable and irritating. Some workers easily get ear infections or drainage problems from wearing them.
>
> Moreover, experience teaches us that management often selectively enforces the wearing of ear protection. (Ex. 79, p. 7).

Joseph Hafkenschiel of the Communication Workers of America went on to say that:

> Personal protective equipment, cannot be regarded . . . as anything more than an interim control measure. Even in these temporary situations, many people cannot wear this type of protection because of medical problems of the ear. Other individuals find the effective deafness enforced by ear protectors psychologically distrubing. Finally, ear protection may mask shouts or signals and, thus, contribute to industrial accidents. (Ex. 82, p. 8).

In response to these problems many commentors pointed out the necessity to fit hearing protectors correctly and to allow for personal preference in order to assure comfort and acceptance (Tr. 3463–3464; Ex. 14–245, p. 2; Ex. 308, p. 1; Ex. 321–14A, p. 2; Ex. 321–14B, p. 2; Ex. 14–894, sec. 3, p. 6; Ex. 75–2, p. 123; Ex. 321–34A, p. 2; Ex. 321–53D, p. 3). Workers who develop ear infections or have significant amounts of wax in the ears should use muffs, if possible, instead of insert type hearing protectors (Ex. 102, sec. 8, p. 15; Tr. 1803, 1805).

In a program developed for the North Carolina Department of Labor (Ex. 2C–16B, pp. IV–6, 7), Dr. Royster provided an example of a program which emphasized that workers should be able to receive help when protectors are not satisfactory. A supervisor, a nurse, or even a health and safety committee can provide guidance "on the job." OSHA believes that if, after a trial period, (Ex. 75–2, p. 122) the discomfort associated with the use of a particular hearing protector is so great that it cannot be worn successfully, then an alternative protector should be used. The company

must make a concerted effort to find the right protector for each worker—one that offers the appropriate amount of attenuation, is accepted in terms of comfort, and is *used* by the employee. The Agency requires workers to wear hearing protectors as part of the total hearing conservation program. If the protectors do not fit properly will not provide the estimated amount of protection.

There are several reasons why OSHA mandates that employers provide a variety of protectors (Ex. 147C, pp. 336–337). Plant conditions such as dust, temperature, and humidity can cause one type of protector to be more suitable than another (Ex. 102, sec. 5, p. 18). For example, ear plugs can be more comfortable in a hot, humid environment, than ear muffs. Also, individual ear canals come in all shapes and sizes. For people with unusually shaped ear canals, fitting may be difficult, and commonly-used insert protectors may be very uncomfortable (Ex. 2C–16B, p. V–3).

In a survey of industrial hearing conservation programs NIOSH found that:

> Another factor which seemed to affect the willingness of the employee to wear ear protectors was the variety of items offered to him. Many companies supplied a wide range of personal ear protector devices and permitted the employee a trial period to select the one he liked. (Ex. 321–14B, p. 2).

This finding was also supported by Dr. M. Thomas Summar (Ex. 147C, p. 335) and others (Ex. 321–14A, p. 2; Ex. 321–14B, p. 2; Tr. 3464; Ex. 321–34A, p. 2).

Another aspect of worker rejection of ear protectors is safety. The United Auto Workers, for example (Ex. 79, p. 8; Ex. 94, p. 10; Ex. 91C, p. 3), stated that hearing protectors create unsafe conditions in the workplace by reducing the audibility of shouts and warning signals. It is possible that a worker might not hear noises that indicate that machinery is malfunctioning. The Environmental Protection Agency (Ex. 231, p. 12) pointed out that hearing protectors can impede speech communication, especially in situations where the noise is highly intermittent, or in cases where the wearer has a high-frequency hearing loss. Interference with speech communication can cause a safety hazard. This issue is complex, since, in some situations protectors can actually improve hearing of speech in noisy backgrounds (Ex. 14–295, p. 1; Ex. 14–886, p. 1; Ex. 14–907, p. 21). On the basis of this evidence, OSHA concludes that although hearing protectors may in some circumstances pose a safety hazard, this is insufficient reason to abandon their use when workers are exposed to potentially damaging levels of noise and there are no other feasible means of reducing the noise exposure.

There is also some evidence that protectors provide other advantages beyond protection against NIPTS. Studies by the Raytheon Company (Ex. 26–11, p. 5–2) and another by Schmidt, Royster, and Pearson (Ex. 321–22, p. 27) showed that after the institution of a hearing protector program not only was hearing loss reduced, but lower injury rates and higher attendance rates were observed.

Administrative and Financial Responsibility

Another important issue that was raised at the hearings was the placement of administrative responsibility for this part of the program. The American Newspaper Publishers Association (Ex. 14–268, p. 2) and others (Ex. 14–173, p. 2; Ex. 14–290, p. 2; Ex. 14–276, p. 2) stated that it should be the worker's responsibility to use ear protectors. Going one step further, the Air Transport Association of America (Ex. 144, p. 10), and Dr. Raymond J. LeZak (Ex. 14–276, p. 2) felt that each worker should decide whether or not to use protection. Based on this reasoning, if the employee is not diligent in the use of protection, then any hearing loss that is incurred cannot be blamed on the company.

The Occupational Safety and Health Act does not include the concept of "assumption of risk" which would permit workers to decide which rules merit compliance. On the contrary, the Act requires employees to comply with all rules and employers have the responsibility of enforcing all of OSHA's requirements.

The proposal did not specify who should bear the expense of hearing protectors. Some comments in the record, such as those submitted by the Environmental Protection Agency (Ex. 9, p. 5) and others (Ex. 321–18, p. 2; Ex. 321–50A, p. 8; Ex. 103A, p. 4), recommended that ear protectors be provided at the employer's expense. For example, R. V. Durham, director of the Safety and Health Department of the International Brotherhood of Teamsters stated:

> A point we must raise, the burden of cost for personal ear protective devices, is one that is vital although often overlooked. Labor and most employers recognize the reponsibility of the employer to provide a safe and healthful working environment for its employees. Where, in certain circumstances, personal protective equipment is necessary to afford such an environment, it is again almost universally accepted that its purchase is the responsibility of the employer. If personal ear protective devices are necessary to the success of a hearing conservation program, it is vital that the employer provide appropriate ear protectors and maintain control over the proper issuance, maintenance, and use.
>
> An employer's attempt to require its employees to purchase their own personal ear protective devices would cause resentment among the workers and clearly demonstrate to them the lack of commitment on the part of their employer in preventing hearing loss. Such a requirement would discourage the use of ear protective devices and would create an adversarial atmosphere in regard to the hearing conservation program. Finally, requiring workers to buy their own hearing protective devices risks losing the necessary control over the organized and consistent selection, issuance, maintenance, and use of such equipment (Ex. 321–18, pp. 1–2).

On the basis of arguments such as the above, and because ear protectors are vital to the prevention of noise-induced hearing loss, the Agency has determined that employers must bear the expense of providing employees with hearing protectors, incuding the cost of replacing protectors that wear out.

Hearing protectors do wear out, and lose some of their ability to attenuate noise. Malleable inserts eventually become inflexible and unable to attenuate properly. Premolded plugs also can lose their elasticity, and custom molded plugs may shrink. Ear muffs also wear out eventually—the soft seals surrounding the ear cup can become inflexible, and the headband can lose its tension. Employers must replace all types of protectors as often as necessary so as to ensure the necessary amount of attenuation. Certain types of protectors, such as disposable plugs, may need to be replaced daily.

Dr. Royster mentioned that workers might damage or lose their protectors or just want an extra set, presumably to take home (Ex. 2C–16B, pp. IV–3, IV–6). The final standard's requirement that the employer pay for hearing protectors does not go this far. The Agency believes that employers should not have to pay for an unlimited supply of protectors or replace protectors lost due to employee negligence. The issue of how many replacement protectors to supply is up to the individual company as it is with other necessary work items, such as tools. However, if the employer refuses to replace worn out ear protectors, the employer may be subject to citation. On the other hand, the employer should not have to bear the expense if an employee has been irresponsible.

The Agency is aware that many industrialists are concerned about being held responsible for nonoccupationally-

induced hearing loss (Ex. 14–8, p. 2; Ex. 14–86, p. 1 and Ex. 14–288, pp. 3–4). To the extent that an employee's noisy hobby can contribute to noise-induced hearing loss, wearing protectors at home should diminish the loss. Therefore, OSHA suggests that employers urge workers to use protectors at home during noisy activities.

Attenuation

The value of hearing protectors lies in their ability to attenuate or reduce the noise that reaches the ear. Although the proposed standard did not specify requirements for estimating hearing protector attenuation, adequate attenuation is fundamental to worker protection, and for this reason it was suggested that OSHA make its requirements explicit (Ex. 1, pp I–11 through I–13, III–7, III–8; Ex. 2B, pp. 13–15).

The amendment requires employers to evaluate the effectiveness of particular ear protectors in specific noise environments, since the capabilities of the protectors need to be matched to the characteristics of the noise. For example, workers who are exposed to predominantly low-frequency noise levels of approximately 100 dB may need protectors that provide more attenuation in the low frequencies than those needed by workers who are exposed to predominantly high-frequency noise of the same A-weighted level.

Since hearing protectors generally provide greater attenuation in the high frequencies than in the low frequencies, (see Ex. 321–14A, pp. 4–16) and since industrial noise tends to be predominantly low-frequency, (Ex. 26–2, pp. 34–35; Ex. 266A, pp. 77–78) it is important to assess the relative contribution of low-frequency noise in order to select an appropriate hearing protector. As explained in the Introduction, the sound level meter's C-weighting network does not discriminate against (filter out) low-frequency noise, whereas the A-weighting network discriminates strongly against low-frequency noise. Thus, taking the difference between C-weighted and A-weighted sound levels is a simple method of assessing the relative contribution of low frequencies in a given noise spectrum. This method was advocated in a study submitted by DuPont Company (Ex. 188–27, part 4, p. 447) in which Dr. R. Waugh pointed out that the same ear protector could provide 20 dB more attenuation of noise with one frequency spectrum than with another. Dr. Waugh recommended selecting ear protectors according to the difference obtained by subtracting the A-weighted noise level from the C-weighted level.

NIOSH and EPA also found the difference between C-weighted and A-weighted noise levels to be useful for purposes of hearing protector selection (Ex. 321–14A, p. 28; Ex. 314, p. 561B). OSHA also recognizes the value of this approach, and recommends a method that incorporates it, which is EPA's Noise Reduction Rating (NRR) (Ex. 314). EPA requires all manufacturers of hearing protectors to label the package with the appropriate NRR for that protector. The regulation, 40 CFR Part 211, became effective Sept. 27, 1980 (44 FR 56130, 1979).

Appendix G requires the use of the NRR or one of three NIOSH methods. OSHA recommends the NRR since it is simple to use, and it appears to have been reasonably and thoughtfully developed (see NIOSH Ex. 321–14A, and EPA Ex. 314). The NRR concept has been adopted by another Federal agency (the EPA), and the NRR will appear on the label of all hearing protectors manufactured in the United States. Once the NRR of a protector is known, the employer needs to relate the NRR (or a reduction factor determined by one of the NIOSH methods), to an individual worker's exposure to assess the adequacy of the hearing protector for that individual.

Use of the NRR to predict the sound level at the ear drum is dependent upon knowledge of the C-weighted sound level to which the worker is exposed. The NRR is to be subtracted from the C-weighted sound level in the employee's environment. Since sound levels usually fluctuate throughout the day, it is necessary to obtain a C-weighted TWA so that employers can estimate the A-weighted sound level under the protector. The simplest and most efficient way to accomplish this would be to obtain a C-weighted noise dose with a dosimeter. Since contemporary dosimeters do not have C-weighting networks, this method will not be possible unless or until such dosimeters are manufactured and marketed. However, such a method has been included in Appendix G in the event that dosimeters with C-weighting networks become available. In the meantime employers may use the guidelines in Appendix B to calculate C-weighted noise dose, or they may make a correction to the A-weighted dose or TWA to allow for the uncertainty of not knowing the C-weighted exposure level.

OSHA has selected a 7 dB correction factor for cases where the difference between the C-weighted and A-weighted TWA is not known. This correction factor was suggested by NIOSH for use when information about the spectral distribution of a worker's noise environment was not available. However, the NIOSH report stated that a certain amount of caution should be exercised in using this method in workplaces where the difference between C-weighted and A-weighted sound levels might be greater than 7-dB (Ex. 321–14A, p. 31). Thus, when employers are aware of significant amounts of low-frequency noise, they are advised to take C-weighted measurements to make sure that the 7 dB correction factor is sufficient. To make the correction, 7 dB is subtracted from the NRR, and the remaining NRR value is subtracted from the A-weighted TWA in order to estimate the A-weighted sound level under the ear protector. When dosimeters are used, dose must be converted to TWA before the subtraction can be made. Appendix A, II. provides tables with which this conversion can easily be made.

As an alternative, employers may actually measure the employee's C-weighted exposure levels. They are advised to take these measurements whenever the noise is predominantly low-frequency, or whenever exposure levels are fairly high (i.e., above 95 dB). Employers should use temporal sampling procedures such as those described in Appendix B, but they may not need to take as many samples. If employers already have taken the required number of A-weighted measurements with a sound level meter, it is usually necessary only to take a few C-weighted measurements in order to obtain a good estimate of the average C-weighted sound level in each time segment. If employers have not already taken A-weighted measurements with a sound level meter, (in other words if they have used an A-weighted dosimeter), more measurements may be necessary in order to obtain a good estimate of the C-weighted TWA. Then the 8-hour time-weighted average of each segment's C-weighted sound levels must be computed using Figure B–5 in Appendix B and Table G–16a, or an equivalent method. Finally, the NRR is subtracted from the C-weighted TWA to obtain the estimated A-weighted TWA under the employee's ear protector. OSHA has not specified the exact number of measurements needed in order to estimate the level under the ear protector. However, the Agency believes that employers should attempt to assess the C-weighted exposure levels as accurately as possible.

In some instances employers may choose to use a method other than the NRR. For example, an employer may

want to use a protector that is not manufactured in the United States, or a protector that for some reason does not bear the NRR label on the package. Or the noise may have an unusual spectrum, which the employer wants to evaluate by octave-band analysis. In these cases employers may use any of the three methods developed by NIOSH described in the "List of Personal Hearing Protectors and Attenuation Data," by Kroes, Fleming and Lempert, HEW Publication No. 76-120, 1975 (Ex. 321-14A). The NIOSH method #1 is the most complex, but is likely to be the most accurate method since it uses the largest amount of information from the frequency spectrum of the worker's environment.[12] It requires data for each octave band. As with the use of the NRR, employers should be careful to take enough measurements so that a representative sample is obtained for each identified time segment. When using the NIOSH methods the reduction factor, or "R" factor needs to be calculated. Since this "R" factor is already included in the NRR, use of the NRR should be more convenient. Also, OSHA recommends the NRR for the sake of uniformity as well as for simplicity.

Elliot Berger, manager of Acoustical Engineering at the E-A-R Corporation, noted that the real world performance of hearing protectors is significantly overrated by the manufacturer's laboratory data, reflected by the NRR (Ex. 321-35, p. 1). Mr. Berger noted that the NRR incorporates certain corrections that are intended to ensure that 98 percent of the population who "correctly" wear the device in 98 percent of the industrial noise environments will achieve the protection indicated by the NRR (Ex. 321-35D, p. 3). However, Berger cited studies by NIOSH (Ex. 308), Padilla (Ex. 301), Regan (Ex. 300A), and the National Acoustic Laboratory of Australia (Ex. 321-35F), which show that the NRR value is not usually realized in actual use. This occurs because the NRR does not make allowances for improper fitting, for unusually shaped ear canals, or for highly unusual noise spectra.

OSHA recognizes that the NRR is based on laboratory data taken according to standardized procedures in standardized conditions (Ex. 311). At the time of testing the plugs and muffs are new, and they are fitted carefully. Unfortunately, hearing protectors are used in conditions that are less favorable than laboratories. Field tests have revealed that workers receive far less attenuation from several types of earplugs than is predicted by the laboratory test methods. A NIOSH report, for example, found that "half of the workers tested were receiving less than one-third of the potential attenuation of the hearing protectors in terms of noise reduction in dBA" (Ex. 308, p. iii). The report attributed the reduced protection to workers wearing the wrong size plugs and inserting their plugs improperly. In a similar study, Padilla (Ex. 301, p. 35) also concluded that the average earplug was worn incorrectly and suggested a test by which employers could monitor the attenuation of plugs in field use.

A study submitted by Dr. Donald Regan also found that devices worn in the occupational setting showed significantly less attenuation than the manufacturers estimated. Dr. Regan concludes: "The results of this investigation emphasize the 'false sense of safety' that management, industrial consultants, and particularly the individual who is wearing the device is assuming, if they conclude they are being adequately protected from the possibility of hearing loss." (Ex. 300A, p. 91).

As a result of this information OSHA urges employers to use extra caution in the initial selection and fitting of ear protectors so that protectors will fit comfortably, yet snugly, and so that workers will be skilled in refitting and caring for them.

Fitting

The fitting of hearing protectors must be done very carefully. Workers shall be trained in the care and fitting of the protectors, and employers must supervise their use.

Suggestions for proper fitting procedures were offered to the hearing record. Dr. Harold R. Imbus, medical director of Burlington Industries stated:

> It is often little understood that ear canal size can vary on the same individual. We have often found it necessary to use two different sizes of plugs in order to get the proper fit in each ear. We instruct the employee to return to the nurse's office immediately should any unusual soreness develop, because a refitting with a different type of plug may be necessary. (Tr. 3463-3464).

According to Dr. Royster:

> It is not sufficient to simply make available ear protection; the company must make sure that the fitting is done by someone trained in the issuing of ear protectors. This individual, nurse, technician, etc., should be under the supervision of the company doctor, local doctor, (or) audiologist. (Ex. 2C-16B, p. 27).

There was a great deal of comment recommending that trained persons fit hearing protective devices, especially if the protector is custom molded (Ex. 2C-16B, p. 27; Ex. 58, p. 3; Ex. 321-28A-2, p. 12; Ex. 75-5, p. 24). The Agency believes that any trained person, such as most nurses and technicians, will be able to fit ear protection adequately, so long as training on the subject has been included in their short courses, and they are well acquainted with the relevant audiological and/or industrial hygiene literature.

If proper precautions are taken, and if workers and management approach the problem in a spirit of cooperation, noise induced hearing loss should be greatly reduced. Comment and testimony by Dr. Karrh of DuPont Corp. (Tr. 2237; Ex. 306, p. 1), Dr. Sataloff (Ex. 321-53, pp. 5-6), Dr. von Gierke (Tr. 755), and Dr. Kryter (Tr. 794), indicated that well managed hearing protector programs can be extremely effective in conserving workers' hearing. However, employers should not lose sight of the fact that the current standard, 29 CFR 1910.95 (a), requires them to control noise by engineering or administrative means whenever feasible. True cooperation between labor and management is most likely to occur when workers know that management is making every attempt to eliminate the hazard, and that personal protective equipment is a temporary rather than a long term solution.

Observation of Monitoring

Section 8(c)(3) of the Occupational Safety and Health Act requires OSHA to issue regulations for keeping records on employee exposures to toxic materials or harmful physical agents, "which are required to be monitored or measured under section 6." The Act goes on to say, "Such regulations shall provide employees or their representatives with an opportunity to observe such monitoring and measuring, and to have access to the records thereof." Since the hearing conservation amendment requires some monitoring of employee noise exposure, the amendment requires employers to provide workers with an opportunity to observe the process of noise exposure monitoring. The Agency believes that workers who observe the monitoring of their exposures will gain insight into the nature and extent of the noise hazard, and will become more involved in the hearing conservation program. This involvement should increase the motivation for the proper use of ear protection, and thereby increase the effectiveness of the program.

The hearing conservation amendment requires employers to provide monitored

[12] NIOSH developed two additional methods. NIOSH method #2 is very similar to the NRR and method #3 is similar to the NRR plus correction factor, which is described above.

employees or their representatives an opportunity to observe any noise exposure measurements that are conducted for compliance with the amendment. Employees may desire to have someone else observe the monitoring, such as a union health and safety representative. Under certain circumstances, an outside professional may be allowed to observe. Although employers are not obligated to notify workers of the intention to monitor in advance, the Agency recommends that they do so whenever possible.

Without interfering with the monitoring, observers are entitled to receive an explanation of the procedures, observe all the steps related to the noise measurements (with the exception of any calculations made away from the workplace), and record the results.

OSHA received some coments objecting to the observation of monitoring provisions in the proposal. For example, John Harris of the J. I. Case Company (Tr. 2611), stated that observation of monitoring would not prevent occupational hearing loss, but on the contrary would take time, manpower, and money away from the hearing conservation efforts. However, many commenters favored the concept of employee observation. Mr. Ahern of General Motors Corp. (Ex. 14–883, p. 10) said, "We recognize of course, that under 8(c)(3) of the Occupational Safety and Health Act an employee or his duly authorized representative has the right to observe monitoring under certain circumstances." Mr. Bonney of Alcoa (Ex. 14–969, p. 2) stated that "under the OSH Act employees were given the right to observe measuring or monitoring. We certainly cannot take exception to this."

Most of the objections implied that the requirements would be burdensome or disruptive. In response to these comments OSHA has made certain changes to the proposed standard that should make the requirements somewhat easier for employers to implement.

The proposal required employers to give written notice of scheduled monitoring at least 3 days before the event was to occur by posting a notice to this effect in a place regularly visited by employees. One reason why the Agency had proposed this requirement was that in certain circumstances the employees might have a desire to have someone with knowledge of noise measurement present to obseve the monitoring. However, such a person might not be on the premises and it might take some time to get there. The proposal also allowed employers to require employees to give written notification of their intent to observe the monitoring. This was an attempt to eliminate any disruption that might ensue in the event that a number of employees decided spontaneously to exercise their right to observe the monitoring.

Many commenters objected to the requirement for advance notification. Seymour Epstein of the Aluminum Association stated:

> We cannot take exception to the employees' right to observe monitoring. However, we strongly object to the requirement for posting notice of opportunity to observe the monitoring at least three working days before this is scheduled to occur and listing the time and place where the monitoring will occur. We feel this is unrealistic, will unnecessarily restrict the activities of industrial hygienists in the plant and will place an undue burden on their efforts. (Ex. 14–952, p. 2)

Mr. Harris (Tr. 2613) agreed, and described the conditions that might make advance notification impractical or even impossible: changes in production, breakdowns, shutdowns, failures of measurement equipment, or other such factors might suddenly alter the monitoring schedule. Other commenters suggested that only one day's advance notification should suffice (Ex. 14–169, p. 2; Ex. 59, p. 5; Ex. 14–290, p. 5).

On the basis of the argument presented by Mr. Harris and others, OSHA has decided that advance notification might be difficult for some employers. Therefore the Agency recommends rather than requires advance notice. In addition, the Agency recognizes that such requirements as posting advance notice and allowing the employer to require a response in writing from employees may constitute unnecessary paperwork, and employers may need to retain some flexibility in how best to inform employees of monitoring plans. OSHA does believe that it is helpful for workers or their representatives to know about the monitoring in advance so that they may plan their schedules accordingly.

A number of comments suggested that the observation provisions would be disruptive to the production process and to the monitoring itself.

Mr. Cornell of the Gypsum Association (Tr. 2664) suggested that all workers might exercise their rights to observe, and in that case no one would be available to operate the machinery in question. David Anderson of the Bethlehem Steel Corp. (Ex. 14–347, p. 3) suggested that employees might actually interfere with the monitoring process by stopping work. M. V. Truss of the Vulcan Materials Co. (Ex. 14–58, p. 3) believed that if employees stopped work and watched the monitoring it would be too expensive for the company. For these reasons some industry spokesman suggested that only employee representatives (and not employees) be allowed to observe the monitoring process (Ex. 14–58, p. 3; Ex. 14–290, p. 4).

The Agency understands that in some circumstances a cessation of work might cause the noise levels to change, and it would not be in the interest of either the worker or the employer to take measurements under conditions that did not reflect the employee's true exposure. For reasons such as these, the amendment (as did the proposal) specifies that observation shall be permitted so long as it does not interfere with the monitoring process.

OSHA does not expect that employee observation of monitoring will be disruptive of the production process or the monitoring itself. While the precise method in which this employee right is exercised will vary from workplace to workplace, it is expected that, in most cases, employees will select a single representative to act as an observer. This observer will receive the explanation of the process, observe the calibration of equipment, its placement, and the actual sampling, and report to other employees. The observer may also record the results of the monitoring. It has been OSHA's experience in the context of other health standards that the observation of monitoring by a representative employee successfully implements this provision without undue disruption. In any event, the employee right to observe monitoring must be tempered with "standard of reasonableness," and observation which seriously disrupts production or the sampling itself is not permitted.

Training Program

Section 6(b)(7) of the Occupational Safety and Health Act indicates that standards shall prescribe appropriate forms of warning to insure that employees are apprised of all hazards to which they are exposed. The final standard requires that employers provide workers whose exposures equal or exceed a TWA of 85 dB with a training program that explains the purposes and major components of the hearing conservation program. As part of employee training, the employer also has the responsibility of making certain materials and information, such as the hearing conservation amendment, available to employees.

The proposal required employers to train workers initially in the use of hearing protectors, and to reinstruct employees in the use of hearing

protectors whenever employees incurred a significant threshold shift in hearing. Also the requirement for warning signs and for notification of exposure, which were included in the proposal, are considered elements of worker training. The amendment retains and clarifies these provisions (see discussion under specific subject headings). In addition, the final rule includes a separate training section with more detailed guidance than was found in the proposal. Employees must be trained according to these new requirements at least once a year, so that they will be reminded on a regular basis of the hazardous effects of noise, and the respective roles of management and workers in preventing these effects. Annual audiometric tests should be an opportune time to conduct such training programs.

It should be noted that the entire training program does not have to be accomplished at one session. For example, employers who have safety meetings biweekly may wish to work some elements of the training requirements into general safety meetings. Workers may have been given a brief overview before starting a job, with supplementary information provided later. It is not the intention of this amendment to impose a rigid and formal training program on employers. Rather, the amendment gathers in one place all of the elements deemed necessary for a good training program and allows the employer maximum flexibility in deciding how best to impart the information to the noise-exposed workers.

The new training requirements are in direct response to the many comments in the record emphasizing the importance of training and education to the success of the hearing conservation program (Ex. 75–10, p. 3, Ex. 102, Attach. 4, pp. 4–6, and Attach. 5, p. 3; Ex. 321–1, Attach. 1, p. 3; Ex. 75, p. 11; Ex. 75–2, p. 125; Ex. 306, pp. 2–3 and p. J 2 C; Ex. 307, p. 1; Ex. 2C–16A, p. 6; Ex. 305, p. 7; Ex. 147C, p. 335; Ex. 147A, p. 6; Tr. 3269, 3140; Tr. 3504–3505; Tr. 2528–2529). For example, an article submitted by Dr. M. Thomas Summar (Ex. 147A, p. 4) states that, "Personal counseling with employees and visits to work areas are necessary and important parts of the program. Some of these visits coincide with the yearly monitoring hearing tests . . . ." C. Edward Scott and Dr. Royster (Ex. 102, p. 12) maintain that "continuing education should be used as a means for improving the quality of the program whenever it is found necessary."

Although the amendment does not dictate the content of employers' training programs, certain subject areas must be included. First, workers must be informed of the requirements of the noise standard and the hearing conservation amendment. So that they are aware of the extent of the hazard, workers must be told about the effects of noise on hearing. Workers must be told to report any symptoms of TTS, such as not being able to hear very well after the end of the workshift. This is so that employers can identify TTS and implement prompt protective measures. Workers must also be told about other effects, such as speech and signal masking, which may cause a safety hazard.

So that employees can better understand the nature of their own particular noise exposures, the training program must include a discussion of specific machinery at the job site that causes hazardous exposures, including information on any noise control compliance plan in effect. An integral part of the training program is a complete discussion of hearing protectors, the advantages and disadvantages of various types, and clear instructions on the selection, fitting, use, and care of the protectors. Finally, so that employees are motivated to take the hearing test and to refrain from non-occupational noise exposure before baseline and recheck audiograms, the program must include an explanation of the purpose of audiometric testing, and of the test procedure.

Employers must post a copy of the standard and amendment in a location where employee notices are customarily posted, and they must make a copy of the standard and amendment available to employees exposed to a TWA of 85 dB or above, if they should ask for it. This requirement gives workers an opportunity to be fully informed of specific aspects of the amendment, and should provide workers with access to this information in cases where they might be afraid or reluctant to ask management for a copy. Employers must also provide these employees with any informational materials supplied by OSHA, which are meant to be distributed to affected employees. Lastly, employers must provide copies of their training materials to OSHA if they are requested to do so. This is intended to provide an objective check of compliance with the requirements of this section of the amendment.

Many comments to the record supported the concept of training programs, and emphasized the importance of motivating employees to play an active role in the hearing conservation program. As Dr. Karrh of DuPont pointed out:

> Our experience has shown that maximum effectiveness of hearing conservation results when employees understand the reasons for the program and cooperate and take initiative in its implementation and conduct on a daily basis. This cooperation is accomplished by educating them regarding the potential effects of exposure to high noise levels whether encountered at work or during leisure hours. (Ex. 306, p. 3).

Training programs are also important at the supervisory level. Personnel who conduct the training program must be well versed in all aspects of the company's hearing conservation program, so that they are prepared to answer employees' questions (Ex. 102, Sec. 5, pp. 9, 27–29). Involvement of first-line supervisors would be particularly effective. As stated by Scott and Royster, "the success of the hearing conservation program in each working area will in the end depend upon the willingness of the local supervisor to support the program and enforce its requirements." (Ex. 102, Sec. 5, p. 9). DuPont and several other companies have demonstrated that imagination, discipline, and commitment from the highest levels of management are qualities that will promote successful programs (Ex. 75–5, p. 21; Ex. 75, p. 122; Ex. 307, p. 1; Ex. 102, Sec. 5, pp. 10, 15). Simply informing workers to use hearing protectors so they "won't go deaf" is not enough.

Morrill (Ex. 305, p. 7) stressed the importance of worker education in overcoming workers' objections to wearing hearing protectors. A number of comments indicated that workers are reluctant to appear weak or riduculous as a result of wearing personal protection (Ex. 321–13C, p. 738; Ex. 75–7, p. 20; Ex. 75–5, p. 22; Ex. 75–12, p. 24). According to Dr. Roger Maas (Ex. 75–2, p. 2) "Supervisors must sell employees on the need and value of hearing protection devices. When employees understand what the protective measure if for, it will be accepted because the employee realizes it is for his own good." Labor leadership, such as union health and safety committees, can also play an active, supportive role in answering on-the-job questions, seeing that their members are fitted satisfactorily, and encouraging workers to wear protectors.

Employers are advised to use audiologists, otolaryngologists, or industrial hygienists to aid in the training of employees. They are not required to do so because these personnel may not always be available. However, the instructor should be capable of addressing any questions on

the technical, procedural, or health aspects of hearing conservation. Also, the instructor should be well versed in all aspects of hearing protectors since employees are likely to have many questions on the subject. One person does not have to perform all of the training. Different aspects of the training may be done by a variety of people with knowledge of various aspects of the hearing conservation program.

The employer is free to structure the training program any way he or she pleases as long as it contains the specific topics discussed above. Several commenters (Ex. 102, Attach. 3, p. 5, and Attach. 4, pp. 6, 12; Ex. 2C–16B, p. 17; Ex. 75–2, p. 125; Ex. 75–3, p. 6; Ex. 75–10, p. 3) offered suggestions. They recommended that companies (and also unions) regularly distribute informative literature to employees, provide periodic audiovisual presentations, hang posters and use bulletin board displays, and put articles on noise hazards and hearing protection in the company or union magazine. Audiovisual materials can often be obtained from Federal and State health agencies, insurance companies, trade union and professional associations, hearing protector and audiometric equipment suppliers, educational institutions, individual medical practioners, and audiological consulting firms.

To summarize, good training means clear content, well presented by an informed and sympathetic person, who is willing to spend the time and effort to motivate employees to participate actively in the hearing conservation program. The final element is the behavior, and implicitly the attitude, of management. According to Dr. Thomas, who submitted extensive materials to the record:

> Several companies have gone to considerable expense in developing and implementing a hearing conservation program only to end up with what can properly be called s second rate program. Why? . . . Lack of support by top management . . . Why spend several thousand dollars implementing the program if MR. BIG is going to walk through the plant without wearing his protective equipment. Even if the amount of exposure expected is insignificant the attitude given is what counts. MR. BIG, regardless of his position in the company, must also abide by the rules and by example educate the employees. (Ex. 2C–16, pp. IV–5).

Warning Signs

The proposal required that clearly worded warning signs be posted at the entrances to or on the periphery of areas where employees' exposures exceed the prescribed limits. These signs were to be large enough so as to be easily read by employees working in this area. The warning sign was to indicate that the area ia a high noise area, and it was to specify the protective actions (usually ear protectors) that are necessary.

The final standard requires warning signs in those areas where exposures equal or exceed a TWA of 85 dB. This represents the action level for the intitiation of the hearing conservation programs, and it is consistent with the concept to have warning signs in such environments.

Most entries to the hearing record favored the use of warning signs (Ex. 105, p. 8; Ex. 132, p. 6; Ex. 58, p. 2; Ex. 2C–1, p. 11 and 12; Ex. 2C–125–1, p. 9; Ex. 14–984, p. 6). Some commenters believed that the requirements for notification of exposure and posting of warning signs were redundant (Ex. 14–346, p. 4; Ex. 14–333, p. 5). The Agency believes that the requirement is not redundant with the notification of employee exposure because exposure notification occurs approximately every two years, while the warning sign presents a constant reminder that a hazard exists, and that protective action may be needed.

Certain witnesses, such as Dr. Ward (Ex. 64–6, pp. 1–2), brought up the fact that warning signs are necessarily stationary and describe noise *levels*, whereas OSHA regulates noise *exposures* for workers who move around. OSHA recognizes this problem. For this reason OSHA advises employers to post signs in areas where employees' noise exposures regularly rather than occasionally meet or exceed 85 dB. Also, the Agency is aware that not all workers who are exposed to a TWA above 85 dB are required to wear hearing protectors. Therefore the Agency advises employers to specify mandatory ear protectors on the sign in locations where employees' noise exposures are routinely above 90 dB, and in areas where employee's exposures are between 85 and 90 dB employers may specify that hearing protectors are advised, or may be needed.

Some comments recommended that OSHA put specific wording for signs into the regulation (Ex. 1, p. I–9; Ex. 48, p. 9; Ex. 110, p. 4), or provide examples of clearly worded signs (Ex. 14–152, p. 4). Although the Agency believes that employers should be free to devise their own wording, the following examples are suggested:

In work areas where employee exposure routinely exceed a TWA of 90 dB:

```
WARNING

HAZARDOUS NOISE AREA

Hearing Protection

Required
```

In work areas where employee exposures routinely exceed a TWA between 85 and 90 dB:

```
WARNING

HAZARDOUS NOISE AREA

Hearing Protection

May be Necessary
```

OSHA has not prescribed the specific wording for the warning signs. It is desirable to retain as much flexibility as possible so that employers may devise signs that are appropriate to the specific workplace environment.

Recordkeeping

Section 8(c)(1) of the Occupational Safety and Health Act gives OSHA the authority to require employers to maintain records that are: "Necessary or appropriate for the enforcement of this Act, or for developing information regarding the cause and prevention of occupational accidents and illnesses." Section 8(c)(3) requires OSHA to "issue regulations requiring employers to maintain accurate records of employee exposures to potentially toxic materials or harmful physical agents which are required to be monitored or measured under section 6."

The hearing conservation amendment requires that records of noise exposure measurements, audiometric testing and audiometer calibration be maintained. These recordkeeping requirements have been approved by the Office of Management and Budget (Approval No. 44–R 1622).

Noise exposure records require the date, location, and results of the measurements, including the number of measurements made when sound level meters are used. Although the latter requirement did not appear in the proposal, this provision provides further clarification of the proposal's requirement that the employer keep an accurate record of all noise exposure measurements. The number of sound level meter measurements is required to be recorded in order to show that the sampling procedures have been sufficient to give a reasonable estimate of the TWA for the range of noise levels encountered. The final rule also requires a description of the equipment used and the date of the most recent laboratory-type calibration. The name and job classification must be recorded for each employee measured, and for any other employees represented by the measured employee. Although not specified in the proposal, an entry for job classification (or job title) has been added so that employers and employees may see the important connection between job location and magnitude of exposure. The requirement to record the social security number has been eliminated as unnecessary paperwork unless the employer desires to keep it. Records of noise exposure monitoring must be kept for at least 2 years. This represents a relaxation of the proposal's requirement, which was to keep noise exposure records for at least 5 years. Since the employee's most recent noise exposure must be recorded on the audiometric test record, OSHA feels that it is unnecessary to keep records of noise exposure monitoring for longer than 2 years, after which they may be replaced by new monitoring records.

Records of audiometric tests must include the employee's name and job classification. They must also include the date of the audiometric test, the examiner's name and qualifications, the make and model of the audiometer, and the date of the last acoustic or exhaustive audiometer calibration. These requirements are essentially the same as those of the proposal, except for the inclusion of job classification and the deletion of social security number for the reasons stated above. The Agency has added a requirement to record the employee's most recent noise exposure (or that of the employee's representative) on the audiogram record. This will aid employers and professional reviewers in making important associations between noise exposure and hearing loss, and will permit monitoring records to be disposed of at an earlier date. Also, the amendment requires that employers indicate on the audiometric test record whether the background noise levels in the audiometer room met the levels specified on Table D–1 or Table D–2 in Appendix D. This information will be very useful to the professional reviewer, who needs to know that the audiometric test was carried out in sufficiently quiet conditions. As required in the proposal, audiometric test records must be retained for the duration of employment plus 5 years.

OSHA recommends that employers record the type of hearing protector selected, its attenuation (usually the NRR), and the procedure used to determine its attenuation, which involves identifying the method selected from Appendix G. This entry, coupled with the exposure measurement, would be useful to employers and professional reviewers in assessing the adequacy of hearing protection. However, OSHA has not made this provision a requirement because employers must provide workers with a variety of ear protectors, and workers may want to use certain protectors on a trail basis. The Agency does not want to restrict the flexibility with which employers offer and employees choose their hearing protection by requiring employers to record the make of protector before the final choice is made.

The requirements for keeping records of audiometer calibration are the same as those specified by the proposal. The record must include information on the type of calibration, whether an acoustic or exhaustive calibration, and the date the calibration was performed. The record must also include the numerical results of the acoustical calibration, which are the results of the measurements taken. These records will provide employers and professional reviewers with evidence of the proper functioning of the audiometer, and any steps that were taken to correct improper functioning. As required in the proposal, they must be kept for a minimum of 5 years.

Although the proposal did not contain this requirement, employees must record measurements of the background sound pressure levels in the audiometric test room and the date of these measurements. The Agency believes that this information must be recorded because it is critical to the requirement that valid audiograms be made. Sound pressure level measurements of audiometric test rooms must be kept at least 5 years.

OSHA has included a new requirement for the transfer of records in case an employer should cease to do business. If a new employer takes over the business the old employer must transfer the records to the new employer. This provision, which is added to safeguard the records, also is found in other OSHA standards.

Discussion in the hearing record centered on the usefulness of keeping records, the impact of recordkeeping on the affected businesses, the retention period, access to records, and recordkeeping procedures.

Some commenters questioned the usefulness of keeping records. M. V. Truss, Director of Engineering at the Vulcan Material Company (Ex. 14–58, p. 2) was joined by others (Ex. 14–86, p. 2; Ex. 14–35, p. 1) in saying that disruptive paper work would seem to outweigh any theoretical benefits. Others maintained that recordkeeping requirements have no bearing on the reduction of noise levels or on hearing loss (Ex. 14–129, p. 3; Ex. 14–190, p. 1; Ex. 14–246, p. 5; Ex. 14–791, pp. 1–2). Carroll Rogers Jr., President of the Feldspar Corporation (Ex. 14–28, p. 1), was among those who believed that the provisions would be too burdensome, especially for small business (Ex. 14–72, p. 1; Ex. 14–117, p. 1; Ex. 14–201, p. 1; Ex. 14–215, p. 4; Ex. 14–266, p. 2; Ex. 14–292, pp. 2–3).

OSHA understands that recordkeeping can be problematic; however, without this requirement the effectiveness of the amendment would be impaired. Professional reviewers need to make sure that the audiometric tests were carried out under proper conditions and that audiograms reflect employees' true hearing levels. Records are educational for employees because they enable employees to assess the continuing status of their hearing. In addition, they provide employers with a way of assessing the success or failure of the hearing conservation program.

Some industry spokesmen suggested that records should not have to be kept for short-term employees. The National Association of Manufacturers (Ex. 14–864, p. 20), and the Beet Sugar Development Foundation and the United States Beet Sugar Association (Ex. 14–867, p. 3, p. 34) suggested that records should only be kept for employees who have worked continuously for more than 180 days, whereas the National Canners Association (Ex. 188–4, p. 6) suggested 120 days. The Can Manufacturers Institute (Ex. 14–862, p. 23) thought that employees should have worked at least 1 year before records should be kept. Although no recordkeeping exemptions have been specified, OSHA believes that short-term employees should not present a significant recordkeeping problem. Audiometric testing of short-term workers is not required unless they remain at work longer than 4 months.

Since employers must monitor new employees within 60 days of exposure to a TWA of 85 dB or greater, they may have to keep noise exposure records of short-term employees. In most cases, as explained earlier, a new employee will assume a position occupied by a former employee, and therefore the former employee's noise exposure will be attributed to the new employee. Making and retaining the same information for the new employee should not be a difficult matter. Also, since the amendment permits employers to monitor representative employees rather than all employees, this procedure should reduce the recordkeeping burden in many cases. Employers may choose to write the exposure level, names, and jobs of the represented employees all on one record. Employers must, however, record the most recent exposure measurement on each individual's audiometric test record.

Following the recommendation of the Advisory Committee (Ex. 2 B, p. 17) the proposal required noise exposure measurements to be maintained for 5 years, audiometric records to be maintained for 5 years. Many comments to the record discussed this issue. Some, such as these of Dr. Ward (Ex. 64–9, p. 5), Robert Richards of the Consumers Power Company (Ex. 14–332, p. 5), and others (Ex. 14–348, p. 3, Ex. 14–329, p. 3), indicated that the proposed record retention periods were too long and too costly. Edwin Hood of the Shipbuilders Council of America (AC 53–1, p. 3) suggested that the employer determine the length of the retention period but that all records be kept for at least 5 years. On the other hand, Frank Fitzsimmons of the International Brotherhood of Teamsters (Ex. 81A, p. 9) advocated a longer retention period for exposure records, stating that exposure records should be kept for the same amount of time as audiometric records so that the relationship between noise exposure and hearing loss can be reviewed. NIOSH recommended a 10-year retention period for records of exposure monitoring, 20 years for audiometric records, and 20 years for audiometric calibration records. NIOSH's recommendations were supported by Raelyn Janssen of the Environmental Defense Fund (AC 125–1, p. 11) and by Dr. J. Ronald Bailey, Assistant Professor of Mechanical Engineering at the North Carolina State University (AC 33, p. 10). Dr. Victor Gladstone, Assistant Professor of Audiology at Towson State College (AC 31, p. 3) concurred with NIOSH, but recommended that if an employee remained in the same employment for a period longer than 20 years, audiometric records should be kept for the duration of employment.

OSHA has considered these recommendations and agrees with Mr. Fitzsimmons that both noise exposure measurements and audiometric test records should be retained at least for the duration of employment to enable employers and professional reviewers to follow the employee's audiometric thresholds in relation to the employee's noise exposure levels. This procedure has been accomplished (and simplified) by the requirement to record the employee's latest noise exposure level on the audiometric test record. OSHA believes that it is not necessary to keep the details of the noise measurements, such as a description of the equipment and the date of calibration, longer than 2 years, at which time they may be replaced by new measurements. However, the Agency does see the value in keeping audiometric test records *and* the employee's exposure levels for the duration of employment plus 5 years in order to ascertain the employee's sensitivity to noise exposure, and to judge the effectiveness of the hearing conservation program.

A minimum of 5 years was selected for the retention of audiometric calibration records and records of the sound pressure levels in audiometric test rooms. These durations are necessary so that employers and professional reviewers may be assured that a series of audiograms was carried out under proper test conditions.

Requirements for access to records are essentially the same as those of the proposal, with the exception that the proposal required employers to furnish copies of audiometric data upon *written* request by employees. The amendment specifies written requests only when employees designate another person to receive the records. The Agency does not believe that written requests are necessary for direct employee access to either noise monitoring or audiometric test records. The amendment requires employers to make records available, upon request, to the Assistant Secretary of Labor and his or her respective authorized representatives, including compliance officers. Copies of records must be made available to affected (noise-exposed) employees and former employees. If an employee or former employee should present a written request, employers must also furnish the records to any person designated by the employee, such as a physician, lawyer, or union representative. Since employees are granted access to their records, OSHA advises them to take copies with them when they leave their jobs.

OSHA's standard entitled "Access to Employee Exposure and Medical Records" (29 CFR 1910.20 (d)(i) and (ii)) requires that employee medical records be preserved and maintained for at least the duration of employment plus 30 years, that exposure records be preserved and maintained for at least 30 years, and that calibration records (which would be covered by section (d) (ii) (A), "background data") be retained for 1 year. However, the standard provides that it may be superseded by other health standards that require longer or shorter retention periods. According to the standard's preamble, the reason for the 30-year or longer retention period was the long latency periods associated with certain occupational diseases. The Agency recognizes, however, that specific substances or agents may merit longer or shorter record retention periods, in which case an individual standard's recordkeeping requirements would supersede those of 29 CFR 1910.20. This provision in the access standard is appropriate since each health standard is based on rulemaking evidence specific to the substance or agent being regulated (45 FR 35270). Since the hearing conservation amendment has undergone the rulemaking procedure on issues that are specific to noise, some provisions in the amendment are different from those in the access standard.

OSHA believes that it is unnecessary to require retention of noise exposure and audiometric test records for periods as long as 30 years. In the event that some companies and consulting firms wish to computerize these records and retain them indefinitely, the Agency would encourage this practice. However, the latency for noise-induced hearing loss is not nearly as long as it is for certain other occupational diseases, such as cancer. Although the onset of noise-induced hearing loss is gradual, its progress is not expected to continue after cessation of exposure. Therefore a long record-retention period would not aid in the diagnosis of a condition, or in the identification of a hazard that is not already recognized.

The standard also requires that employees, their designated representatives, the Assistant Secretary for Occupational Safety and Health shall have access to all records required to be maintained. In general, the employer is obliged to provide access to such records at a reasonable time, place and manner. Specifics regarding the

provision of such access are found at 29 CFR 1910.20 and 29 CFR 1913.10.

It is the Agency's belief that providing employees with access to the records is a necessary component of the hearing conservation program. Such access will serve to educate employees as to the state of their hearing and the effectiveness of the program, and will encourage their conscientious participation in it. The information in the records will be invaluable to the Assistant Secretary in the enforcement of the amendment and will be useful in research into the effects of occupational noise exposure. The Director of NIOSH will also be primarily interested in the records for research purposes.

A number of commenters, such as Moyer B. Edwards of the Alabama By-Products Corporation (Ex. 14–972, p. 6), recommended restricting access to records to the employee's physician or other medical representative (Ex. 145, p. 5). Others (Ex. 233, p. 1; Ex. 14–900, p. 9; Ex. 14–965, p. 6; Ex. 14–890, p. 5) believed that because of the technical nature of the data, lay readers might misinterpret their files. Douglass Bracket of the Southern Furniture Manufacturers Association (Ex. 14–918, p. 17) and others (Ex. 14–345, p. 4) contended that records only should be made available for some justifiable reason. Lockheed-California Company (Ex. 14–312, p. 2) suggested that records should be available for exposure studies only. Some were concerned that employee access to records might result in "misuse of records" in worker compensation cases (Ex. 14–66, p. 2; Ex. 14–107, p. 1; Ex. 14–233, p. 1; Ex. 14–262, p. 3; Ex. 14–333, p. 6), and some suggested that workers might "harass" employers after they see their records (Ex. 14–107, p. 1; Ex. 14–233, p. 1; Ex. 14–262, p. 3; Ex. 14–332, p. 5). OSHA believes that proper training and education of employees should prevent misinterpretations or "misuse" of noise exposure or audiometric data. The Agency agrees with the many witnesses who stated that informed workers are better motivated and able to protect themselves, and to effectively participate in the total hearing conservation program (Ex. 305, p. 7; Ex. 306, p. J2c–11; Ex. 321–1, Section 2, p. 3; Ex. 307, p. 1; Tr. 2907). Access to their own noise exposure and audiometric test results is a necessary step in the development of informed workers.

XII. Authority

This document was prepared under the direction of Eula Bingham, Assistant Secretary for Occupational Safety and Health, 200 Constitution Avenue, N.W., Washington D.C. 20210.

Pursuant to sections 6(b) and 8(c) of the Occupational Safety and Health Act of 1970 (84 Stat. 1593, 1599, 29 U.S.C. 655, 657), Secretary of Labor's Order No. 8–76 (41 FR 25059), and 29 CFR Part 1911, Part 1910 of Title 29, Code of Federal Regulations is hereby amended by deleting paragraph (b)(3) of § 1910.95 and adding to § 1910.95 requirements for a hearing conservation program in new paragraphs (c) through (s) plus Appendices A through I.

The provision of the current occupational noise standard requiring employers who have employees exposed over the permissible exposure level to implement a continuing, effective hearing conservation program (§ 1910.95(b)(3)) will remain in effect until the new paragraphs contained in this document actually go into effect. Should the new paragraphs be stayed, judicially or administratively, or should the new paragraphs not sustain legal challenge under section 6(f) of the Act, paragraph (b)(3) of § 1910.95 will remain in effect.

Any petitions for administrative reconsideration of this amendment or for an administrative stay pending judicial review must be filed with the Assistant Secretary of Labor for Occupational Safety and Health within 45 days of the publication of this amendment in the Federal Register. Any petitions filed after this date will be considered to be untimely filed. This requirement is considered essential to permit the Agency to give full consideration to any petition filed and respond in advance of the effective date of the amendment.

Signed at Washington, D.C. this 8th day of January, 1981.

Eula Bingham,

Assistant Secretary of Labor.

1. Paragraph (b)(3) of § 1910.95 is removed.

2. Section 1910.95 is amended by adding new paragraphs (c) through (s) and Appendix A through I to read as follows:

§ 1910.95 Occupational noise exposure.

* * * * *

(c) *Hearing conservation program.* The employer shall administer a continuing, effective hearing conservation program, as described in paragraphs (c) through (s) of this section whenever employee noise exposures equal or exceed an 8-hour time-weighted average sound level (TWA) of 85 decibels measured on the A scale or, equivalently, a dose of fifty percent. For purposes of the hearing conservation program, employee noise exposures shall be computed in accordance with Appendix A and Table G–16a, and without regard to any attenuation provided by the use of personal protective equipment.

(d) *Initial determination.* (1) Each employer shall determine if any employee's exposure may equal or exceed an 8-hour time-weighted average of 85 decibels (dB) measured on the A scale. This determination shall be based on all information, observations, or calculations which indicate that employee noise exposures may be at or above that level, including the following:

(i) Any employee exposure measurements which have been taken;

(ii) Any employee complaints which may be attributable to noise exposure;

(iii) Any difficulties in understanding normal conversation in the workplace when the speaker and the listener face each other at a distance of two feet.

(2) This initial determination shall be repeated at least every two years and within sixty days of a change in production, processes, equipment, controls, or personnel which may result in new noise exposures at or above a time-weighted average of 85 decibels.

(e) *Monitoring.* (1) When any information in the initial determination conducted pursuant to paragraph (d) of this section indicates that any employee's exposure may equal or exceed an 8-hour time-weighted average of 85 decibels, the employer shall within 60 days obtain individual or representative exposure measurements for all employees who may be exposed at or above that level.

(2) In cases where a group of employees is engaged in a similar kind of work and has approximately the same noise exposure, the employer may, in lieu of measuring the exposure of each employee, measure only one member of the group. In these cases, the employer shall select for monitoring the employee who is reasonably believed to have the greatest exposure and shall attribute the selected employee's exposure measurement to all employees in the group.

(3) Monitoring of employee noise exposures shall be repeated:

(i) Every two years unless an initial determination conducted pursuant to paragraph (d)(2) of this section or actual exposure measurements indicate that employees are not exposed to a time-weighted average of 85 decibels or greater; and

(ii) Within sixty days of a change in production, processes, equipment, controls, or personnel which may render the attenuation provided by hearing protectors in use inadequate to meet the requirements of paragraph (m) of this section.

(f) *Employee notification.* (1) Within 21 days of monitoring, the employer shall notify, in writing, each employee exposed at or above a time-weighted average of 85 decibels of the results of the monitoring.

(2) Each employee shall be notified of that employee's measured exposure or the representative exposure that is attributed to that employee.

(3) New employees shall be notified of their measured exposure or the exposure attributed to them within sixty days of their first exposure at or above a time-weighted average of 85 decibels.

(g) *Method of measurement.* (1) All employee exposure measurements required by paragraph (e) of this section shall be obtained by the use of noise dosimeters which comply with the provisions of paragraph (g)(1)(i) of this section or sound level meters which comply with the provisions of paragraph (g)(1)(ii) of this section.

(i) *Dosimeters.* Dosimeters shall meet the Class 2A–90/80–5 requirements of the American National Standard Specification for Personal Noise Dosimeters, S1.25–1978, with an operating range of at least 80 dB to 120 dB. Dosimeters shall also meet the performance requirements of Section 7.5 of ANSI S1.25–1978 for a test signal at an average A-weighted sound level of 90 dB having a crest factor of 30 dB.

(ii) *Sound level meters.* Sound level meters shall meet the Type II requirements of the American National Standard Specification for Sound Level Meters, S1.4–1971 (R1976).

(2) Exposure measurements shall accurately reflect employee exposures and shall be conducted in the following manner:

(i) *Dosimeters.* The microphone of the dosimeter shall be placed on the employee's shoulder or head.

(ii) *Sound level meters.* (*a*) Sound level meters shall be set to the A scale, slow response.

(*b*) All continuous, intermittent and impulsive sound levels from 80 dB to 130 dB shall be integrated into the computation of time-weighted average.

(*c*) The employer shall use an appropriate sampling strategy to ensure that accurate results are obtained. The employer may use the sampling procedures given in Appendix B: *Temporal Sampling Procedures for Use with a Sound Level Meter,* which are provided as guidelines for compliance with this provision.

(*d*) The microphone of a sound level meter shall be positioned not less that two inches nor more than two feet from the worker's ear.

(h) *Calibration of monitoring equipment.* Dosimeters and sound level meters used to monitor employee noise exposure shall be calibrated as follows:

(1) Before and after each day's measurements, an acoustical calibrator shall be used to verify the accuracy of the measuring equipment.

(2) Whenever acoustical calibration and manual adjustments of the measuring equipment cannot verify the accuracy of the measuring instrument, laboratory calibration shall be performed to ensure conformance with the requirements of ANSI S1.25–1978 or S1.4–1971, as appropriate.

(i) *Observation of monitoring.* (1) The employer shall provide affected employees or their representatives with an opportunity to observe any measurements of employee noise exposure which are conducted pursuant to paragraph (e) of this section.

(2) Without interfering with the monitoring procedures, the observer shall be entitled to:

(i) Receive an explanation of the measurement procedures;

(ii) Observe all steps related to the noise exposure measurements performed at the place of exposure; and

(iii) Record the results obtained.

(j) *Audiometric testing program.* (1) The employer shall establish and maintain an audiometric testing program as provided in this paragraph by making audiometric testing available to all employees whose exposures equal or exceed an 8-hour time-weighted average of 85 decibels.

(2) The program shall be provided at no cost to employees.

(3) Audiometric tests shall be performed by a licensed or certified audiologist, otolaryngologist, or other qualified physician, or by a person who is certified by the Council of Accreditation in Occupational Hearing Conservation, or by an audiometric technician who has satisfactorily demonstrated competence in administering audiometric examinations, obtaining valid audiograms, and properly using, maintaining and calibrating audiometers. A technician who performs audiometric tests must be responsible to an audiologist, otolaryngologist or qualified physician.

(4) All audiograms obtained pursuant to this section shall meet the requirements of Appendix C: *Audiometric Measuring Instruments.*

(5) *Baseline audiogram.* (i) Within 4 months of an employee's first exposure to noise at or above a time-weighted average of 85 decibels, the employer shall establish for each employee so exposed a valid baseline audiogram against which subsequent audiograms can be compared.

(ii) Testing to establish a baseline audiogram shall be preceded by at least 14 hours without exposure to workplace noise.

(*a*) Hearing protectors shall not be used as a substitute for the requirement that baseline audiograms be preceded by 14 hours without exposure to workplace noise.

(*b*) The employer shall notify employees of the need to avoid high levels of non-occupational noise exposure during this 14-hour period.

(6) *Annual audiogram.* (i) At least annually after obtaining the baseline audiogram, the employer shall obtain a new audiogram for each employee exposed at or above a time-weighted average of 85 decibels.

(ii) Annual audiometric testing may be conducted at any time during the workshift.

(7) *Evaluation of audiogram.* (i) Each employee's annual audiogram shall be compared to that employee's baseline audiogram to determine if the audiogram is valid and if a significant threshold shift, as defined in paragraph (j)(10) of this section, has occurred.

(ii) Such evaluation shall be performed by an audiologist, otolaryngologist, or qualified physician. The employer shall provide to the person performing this evaluation the following information:

(*a*) A copy of the requirements for hearing conservation as set forth in paragraphs (c) through (r) of this section;

(*b*) The baseline audiogram and most recent audiogram of the employee to be evaluated;

(*c*) Measurements of background sound pressure levels in the audiometric test room as required in Appendix D: *Audiometric Test Rooms.*

(*d*) Records of audiometer calibrations required by paragraph (k)(5) of this section.

(iii) The audiologist, otolaryngologist, or qualified physician shall also review the audiograms to determine whether any significant threshold shift is work related or whether there is need for further evaluation.

(iv) If the comparison of the audiograms reveals a significant threshold shift as defined in paragraph (j)(10) of this section, a retest to obtain a new audiogram shall be performed within 60 days to determine if the shift is permanent.

(*a*) Retesting shall be preceded by at least 14 hours without exposure to workplace noise.

(*b*) Hearing protectors shall not be used as a substitute for the requirement that retesting be preceded by at least 14 hours without exposure to workplace noise.

(c) Retesting is not required if the annual audiogram was obtained after 14 hours without exposure to workplace noise. In this case the significant threshold shift revealed by the annual audiogram shall be considered permanent.

(d) If retesting also reveals a significant threshold shift as defined in paragraph (j)(10) of this section, the significant threshold shift shall be considered permanent.

(8) *Follow-up procedures.* If a comparison of the annual audiogram to the baseline audiogram indicates a significant threshold shift as defined in paragraph (j)(10) of this section, the employer shall ensure that the following steps are taken:

(i) Employees not using hearing protectors shall be fitted with hearing protectors, trained in their use and care, and required to use them.

(ii) Employees already using hearing protectors shall be refitted and retrained in the use of hearing protectors and provided with hearing protectors offering greater attenuation if necessary.

(iii) If retesting of an employee reveals that the significant threshold shift is not permanent, the use of hearing protectors by that employee may be discontinued, unless the employee is required to wear hearing protectors pursuant to paragraph (b)(1) of this section.

(iv) If a significant threshold shift has been determined to be permanent on the basis of a retest audiogram or an annual audiogram conducted after 14 hours without exposure to workplace noise, the employer shall:

(a) Inform the employee in writing, within 21 days of the determination, of the existence of a permanent significant threshold shift;

(b) Refer the employee for a clinical audiological evaluation or an otological examination, as appropriate, if additional testing is necessary to determine the cause of the permanent significant threshold shift, or if the employer suspects that a medical pathology of the ear (as defined in Appendix I) is caused or aggravated by the wearing of hearing protectors;

(c) Inform the employee of the need for an otological examination if a medical pathology of the ear which is unrelated to the use of hearing protectors is suspected; and

(d) Record the existence of the permanent significant threshold shift on the OSHA Form 200 when the audiologist, otolaryngologist or qualified physician who reviews the audiogram determines that the shift is work related.

(9) *Revised baseline.* An annual or retest audiogram shall be substituted for the baseline audiogram under the following circumstances:

(i) Where the annual or retest audiogram reveals a permanent significant threshold shift as defined in paragraph (j)(10) of this section; or

(ii) Where the annual or retest audiogram reveals improved hearing thresholds with respect to the baseline at two or more test frequencies.

(10) *Significant threshold shift.* As used in this section, a significant threshold shift is:

(i) A change in hearing threshold relative to the baseline audiogram of 20 dB or greater at any test frequency other than 500 Hz in either ear, if no previous audiograms have thresholds that exceed 25 dB with reference to audiometric zero as specified by American National Standard S3.6–1969; or

(ii) A change in hearing threshold relative to the baseline audiogram of 10 dB or greater at 1000 or 2000 Hz, 15 dB at 3000 or 4000 Hz, or 20 dB at 6000 Hz, in either ear, if any previous audiogram has one or more thresholds that exceed 25 dB with reference to audiometric zero; or

(iii) A change in hearing threshold relative to the baseline audiogram of 10 dB or greater at any test frequency other than 500 Hz in either ear, if any previous audiogram has thresholds exceeding an average of 25 dB with reference to audiometric zero at the frequencies 1000, 2000, and 3000 Hz; or

(iv) A change in hearing threshold relative to the baseline audiogram of 10 dB or greater at any test frequency other than 500 Hz in either ear, if the employee has previously suffered one or more permanent significant threshold shifts.

(v) In determining whether a significant threshold shift has occurred, allowance may be made for the contribution of aging (presbycusis) to the change in hearing level by correcting the annual or retest audiogram according to the procedure described in Appendix F: *Calculation and Application of Age Correction to Audiograms.*

(k) *Audiometric test requirements.* (1) Audiometric tests shall be pure tone, air conduction, hearing threshold examinations, with test frequencies including as a minimum 500, 1000, 2000, 3000, 4000, and 6000 Hz. Tests at each frequency shall be taken separately for each ear.

(2) Audiometric tests shall be conducted with equipment that meets the specifications of, and is maintained and used in accordance with, American National Standard Specification for Audiometers, S3.6–1969.

(3) Pulsed-tone and self-recording audiometers, if used, shall meet the requirements specified in Appendix C: *Audiometric Measuring Instruments.*

(4) Audiometric examinations shall be administered in a room meeting the requirements listed in Appendix D: *Audiometric Test Rooms.*

(5) *Audiometer calibration.* (i) The functional operation of the audiometer shall be checked before each day's use by testing a person with known, stable hearing thresholds, and by listening to the audiometer's output to make sure that the output is free from distorted or unwanted sounds. Deviations of more than 5 dB shall require an acoustic calibration.

(ii) Audiometer calibration shall be checked acoustically at least annually in accordance with Appendix E: *Acoustic Calibration of Audiometers.* Test frequencies below 500 Hz and above 6000 Hz may be omitted from this check. Deviations of more than 10 dB necessitate an exhaustive calibration.

(iii) An exhaustive calibration shall be performed at least every two years in accordance with sections 4.1.2; 4.1.3; 4.1.4.3; 4.4.1; 4.4.2; 4.4.3; and 4.5 of the American National Standard Specification for Audiometers, S3.6–1969. Test frequencies below 500 Hz may be omitted from this calibration.

(l) *Hearing protectors.* (1) Employers shall make hearing protectors available to all employees exposed to a time-weighted average of 85 decibels or greater at no cost to the employees. Hearing protectors shall be replaced as necessary.

(2) Employers shall ensure that hearing protectors are worn by all employees:

(i) Who are exposed to a time-weighted average of 85 decibels or greater and who have experienced a permanent significant threshold shift; or

(ii) Who are required by paragraph (b)(1) of this section to wear personal protective equipment.

(3) Employees shall be given the opportunity to select their hearing protectors from a variety of suitable hearing protectors provided by the employer.

(4) The employer shall provide training in the use and care of all hearing protectors provided to employees.

(5) The employer shall ensure proper initial fitting and supervise the correct use of all hearing protectors.

(m) *Hearing protector attenuation.* (1) The employer shall evaluate hearing protector attenuation for the specific noise environments in which the protector will be used by one of the methods described in Appendix G:

Methods for Estimating the Adequacy of Hearing Protector Attenuation.

(2) Hearing protectors must attenuate employee exposure at least to a time-weighted average of 90 decibels as required by paragraph (b) of this section.

(3) For employees who have experienced a significant threshold shift, hearing protectors must attenuate employee exposures to a time-weighted average of 85 decibels or below.

(4) The adequacy of hearing protector attenuation shall be re-evaluated whenever employee noise exposures increase to the extent that the hearing protectors provided may no longer provide adequate attenuation. The employer shall provide more effective hearing protectors where necessary.

(n) *Training program.* (1) The employer shall institute a training program for all employees who are exposed to noise at or above a TWA of 85 dB, and shall ensure employee participation in such program.

(2) The training program shall be repeated annually for each employee included in the hearing conservation program. Information provided in the training program shall be updated to be consistent with changes in protective equipment and work processes.

(3) The employer shall ensure that each employee is informed of the following:

(i) The contents of the noise standard including the hearing conservation program;

(ii) The effects of noise on hearing;

(iii) Specific machinery at the jobsite that could produce hazardous noise exposures;

(iv) The role of engineering and administrative controls in the reduction of noise exposure;

(v) The contents of any noise control compliance plan in effect;

(vi) The purpose of hearing protectors, the advantages, disadvantages, and attenuation of various types, and instructions on selection, fitting, use, and care; and

(vii) The purpose of audiometric testing, and an explanation of the test procedures.

(o) *Access to information and training materials.* (1) The employer shall make available to affected employees or their representatives copies of this standard and shall also post a copy in the workplace.

(2) The employer shall provide to affected employees any informational materials pertaining to this standard that are supplied to the employer by the Assistant Secretary.

(3) The employer shall provide, upon request, all materials related to the employer's training and education program pertaining to this standard to the Assistant Secretary and the Director.

(p) *Warning signs.* (1) Signs shall be posted at entrances to or on the periphery of all well-defined work areas in which employees may be exposed at or above a TWA of 85 dB.

(2) Warning signs shall clearly indicate that the area is a high noise area and shall indicate that hearing protectors may be required.

(q) *Recordkeeping.* (1) *Exposure measurements.* (i) The employer shall maintain an accurate record of all employee exposure measurements required by paragraph (e) of this section.

(ii) This exposure record shall include:

(*a*) Name and job classification of the employee measured and of all other employees whose exposure the measurement represents;

(*b*) The date, location and result of each measurement taken, and the number of measurements where sound level meters are used;

(*c*) A descripton of the noise measurement equipment used and the date of it last laboratory calibration.

(2) *Audiometric tests.* (i) The employer shall retain all employee audiograms obtained pursuant to paragraph (j) of this section;

(ii) This record shall include:

(*a*) Name and job classification of the employee;

(*b*) Date of the audiogram;

(*c*) The examiner's name and qualifications;

(*d*) Manufacturer and model of the audiometer;

(*e*) Date of the last acoustic or exhaustive calibration of the audiometer;

(*f*) Employee's most recent noise exposure assessment;

(*g*) Statement of whether the sound pressure levels in the test room in which the audiogram was taken meet the levels specified in Table D–1 or Table D–2 of Appendix D: *Audiometric Test Rooms.*

(3) *Audiometric test rooms.* (i) The employer shall maintain accurate records of the measurements of the background sound pressure levels in audiometric test rooms.

(ii) This record shall include:

(*a*) Background sound pressure level measurements at each of the following octave bands: 500, 1000, 2000, 4000, and 8000 Hz; and

(*b*) Date of measurement.

(4) *Calibration of audiometers.* (i) The employer shall maintain accurate records of all acoustical and exhaustive calibrations of audiometers required to be made pursuant to paragraph (k) of this section;

(ii) This record shall include:

(*a*) Type of calibration:

(*b*) Date performed; and

(*c*) Numerical results of the acoustical calibration.

(5) *Record retention.* The employer shall retain records required in this paragraph (q) for at least the following periods:

(i) Noise exposure measurement records shall be retained for 2 years.

(ii) Audiometric test records shall be retained for the duration of the affected employee's employment plus 5 years.

(iii) Records of background sound pressure levels in audiometric test rooms shall be retained for a period of 5 years.

(iv) Records of audiometer calibrations shall be retained for a period of 5 years.

(6) *Access to records.* All records required by this section shall be provided upon request to employees, former employees, representatives designated by the individual employee and the Assistant Secretary. The provisions of 29 CFR 1910.20(a)–(e) and (g)–(i) apply to access to records under this section.

(7) *Transfer of records.* If the employer ceases to do business, the employer shall transfer to the successor employer all records required to be maintained by this section, and the successor employer shall retain them for the remainder of the period prescribed in paragraph (q)(5) of this section.

(r) *Appendices.* (1) Appendices A, C, D, E, G, and I to this section are incorporated as part of this section and the contents of these Appendices are mandatory.

(2) Appendices B, F and H to this section are informational and are not intended to create any additional obligations not otherwise imposed or to detract from any existing obligations.

(s) *Effective dates.* (1) Paragraphs (c)–(r) of this section shall become effective April 15, 1981 unless otherwise noted below.

(2) Initial determinations and subsequent monitoring conducted pursuant to paragraphs (d) and (e) of this section shall be completed by October 15, 1981.

(3) Baseline audiograms required by paragraph (j) of this section shall be completed by April 15, 1982.

(4) In lieu of Table D–1 of Appendix D, background sound pressure levels in audiometric test rooms may conform to Table D–2 of Appendix D until April 15, 1983. After April 15, 1983, background sound pressure levels in audiometric test rooms shall comply with Table D–1 of Appendix D.

(5) Dosimeters used for employee exposure monitoring conducted pursuant to paragraph (e) of this section shall meet the requirements of paragraph (g)(1)(i) of this section by April 15, 1983.

Appendix A: Noise Exposure Computation

This Appendix is Mandatory

I. Computation of Employee Noise Exposure

(1) Noise dose is computed using Table G–16a as follows:

(i) When the sound level, L, is constant over the entire work shift, the noise dose, D, in percent, is given by: $D=100\ C/T$ where C is the total length of the work day, in hours, and T is the reference duration corresponding to the measured sound level, L, as given in Table G–16a or by the formula shown as a footnote to that table.

(ii) When the workshift noise exposure is composed of two or more periods of noise at different levels, the total noise dose over the work day is given by: $D=100\ (C_1/T_1+C_2/T_2+\ \ldots\ +C_nT_n)$, where C_n indicates the total time of exposure at a specific noise level, and T_n indicates the reference duration for that level as given by Table G–16a.

(2) The eight-hour time-weighted average sound level (TWA), in decibels, may be computed from the dose, in percent, by means of the formula: $TWA=16.61\ \log_{10}\ (D/100)+90$. For an eight-hour workshift with the noise level constant over the entire shift, the TWA is equal to the measured sound level.

(3) A table relating dose and TWA is given in Section II.

Table G–16a

A-weighted sound level, L (decibel)	Reference duration, T (hour)
80	32
81	27.9
82	24.3
83	21.1
84	18.4
85	16
86	13.9
87	12.1
88	10.6
89	9.2
90	8
91	7.0
92	6.2
93	5.3
94	4.6
95	4
96	3.5
97	3.0
98	2.6
99	2.3
100	2
101	1.7
102	1.5
103	1.4
104	1.3
105	1
106	0.87
107	0.76
108	0.66
109	0.57
110	0.5
111	0.44
112	0.38
113	0.33
114	0.29
115	0.25
116	0.22
117	0.19
118	0.16
119	0.14
120	0.125
121	0.11
122	0.095
123	0.082
124	0.072
125	0.063
126	0.054
127	0.047
128	0.041
129	0.036
130	0.031

In the above table the reference duration, T, is computed by

$$T=\frac{8}{2^{(L-90)/5}}$$

where L is the measured A-weighted sound level.

II. Conversion Between "Dose" and "8-Hour Time-Weighted Average" Sound Level

Compliance with paragraphs (c)–(r) of this regulation is determined by the amount of exposure to noise in the workplace. The amount of such exposure is usually measured with an audiodosimeter which gives a readout in terms of "dose." In order to better understand the requirements of the amendment, dosimeter readings can be converted to an "8-hour time-weighted average (TWA) sound level".

In order to convert the reading of a dosimeter into TWA, see Table A–1, below. This table applies to dosimeters that are set by the manufacturer to calculate dose or percent exposure according to the relationships in Table G–16a. So, for example, a dose of 91 percent over an eight hour day results in a TWA of 89.3 dB, and, a dose of 50 percent corresponds to a TWA of 85 dB.

If the dose as read on the dosimeter is less than or greater than the values found in Table A–1, the TWA may be calculated by using the formula: $TWA=16.61\ \log_{10}\ (D/100)+90$ where TWA=8-hour time-weighted average sound level and D=accumulated dose in percent exposure.

Table A–1.—*Conversion From "Percent Noise Exposure" or "Dose" to "8-Hour Time-Weighted Average Sound Level" (TWA)*

Dose or percent noise exposure	TWA

Appendix B: Temporal Sampling Procedures for Use With a Sound Level Meter

This Appendix Is Non-Mandatory

Two basic types of equipment permitted are to measure noise exposure for the purposes of paragraphs (c) through (r) of 29 CFR 1910.95: the noise dosimeter and the sound level meter. The sampling procedure for using a sound level meter described below is intended to yield accuracy comparable to that obtained by using a dosimeter meeting the requirements of paragraph (g)(1)(i) of 29 CFR 1910.95. This accuracy will only be possible when the sampled sound levels are truly representative of the total exposure. 1. Based on the nature of the workplace operations to which the employee is exposed, identify each time period for which the noise exposure is to be determined.

This identification is done by dividing the entire workday into a number of time segments, each having workplace operations where the noise environment is relatively uniform. The noise may vary with time in each time segment but except for periodic variations in sound level associated with the cyclic nature of specific machinery, there is no reason to expect consistently different sound levels in one part of this time segment as opposed to another part.

For example, in a machine shop a worker may spend the early part of the day preparing his particular machine for production and the remainder of the day actually running it. The sound level at the worker's location might exceed 80 dB during the setting up process because of nearby machines already in operation. When his own machine is running, the sound level to which he is exposed could be much greater. During each period the sound levels vary in a characteristic manner. Each of these two time periods (see Figure B–1) would be an identified time segment during which measurements should be made.

As another example, consider a factory where intermittent noise due to operation of a particular machine is superimposed on a fairly steady background noise, so that the sound level varies with time as shown in Figure B–2. The total time that the machine is on can be considered to be one time segment and the total time that the machine is off would be another time segment. The procedure described in Section 2, below, can be used in conjunction with such intermittent noise provided that the times spent in each operating cycle are sufficiently long that the duration of each on-cycle or off-cycle can be easily measured.

As a third example, consider a situation where impulsive sounds due, for example, to mechanical impacts are superimposed on continuous noise as indicated in Figure B–3. The total time that the impulses are well in excess of the general ambient noise can be considered as one time segment and the remainder of the time as another time segment. The procedure described in Section 3, below, can be used in conjunction with impulsive noises or very short bursts of noise.

2. For each time segment for which the noise is essentially continuous, determine the average sound level in the following manner:

(a) Carry out any necessary calibration to ensure proper and accurate operation of the sound level meter.

(b) Set the controls of the sound level meter for A-weighted SLOW response.

(c) Adjust the controls of the sound level meter so that the higest sound level readings that occur during the time segment will be readable on the meter scale.

(d) With the microphone located in the desired position, read the sound level at intervals and place a checkmark in the appropriate box on the data sheet (Figure B–4). The sound levels should be read to the nearest decibel. The readings may be made at any time interval of 5 seconds or longer. The readings should be instantaneous, i.e., the person taking the data should glance at the indicator of the sound level meter and read it "on the fly" rather than look for maximum or minimum levels or wait for fairly steady levels. If the noise-producing operation is cyclic, care should be taken to avoid reading sound levels at consistent times relative to the cycles in sound level; this may require taking observations at random, rather than at regular time intervals.

(e) If the time interval is not sufficiently long to take 25 readings at intervals of 5 seconds or longer, readings should be taken at 5-second intervals throughout the entire time period and steps (f), (g), and (h) may be omitted.

(f) If, after 25 sound level readings have been taken, the total range of sound levels does not exceed 3 dB, the highest reading obtained may be taken as the effective sound level, and steps (g), (h), and (i) may be omitted.

(g) If, after 25 readings have been taken, the total range of sound levels exceeds 3 dB, the total number of readings that are required is estimated as follows:

(1) On the data sheet (Figure B–4), count down four checkmarks from the top. Draw a horizontal arrow (as shown in the example on Figure B–6) from the ordinate scale marked "A-weighted sound level" to the center of the row in which the fourth checkmark appears.

(2) Count up four checkmarks from the bottom and draw an arrow in line with the center of the row in which the fourth checkmark appears.

(3) Take the difference, in decibels, between the two sound levels (rows) so identified. This is the "spread of levels" to be used below. If the spread of levels from the fourth lowest to the fourth highest exceeds 12 decibels, the identified time segment should be

divided into two or more smaller time segments such that the spread of levels in *each* time segment will not exceed 12 decibels. If this is not possible, the use of a sound level meter to determine the noise exposure is probably not advisable and a noise dosimeter should be used. (However, see Section 3, below, for circumstances under which transient or impulsive noises may be ignored).

(4) Locate the estimated duration of the time segment on the ordinate scale to the far left on the data sheet. Draw a straight line from this point to the point where the upper arrow (step (1) above) intersects the scale labeled "A-weighted sound level." Draw a second straight line from the point labeled 8 hr on the time segment scale through the intersection of the first line with the "pivot line" located midway between the two scales, extend it to the sound level scale and then draw a horizontal arrow to the right to find the "adjusted upper level."

(5) The total number of sound level readings required is given by the table at the bottom of the worksheet. The columns in this table correspond to different values of the spread of levels (from the fourth lowest to the fourth highest). The three rows correspond, respectively, to the adjusted upper level being less than 85 decibels, between 85 and 90 decibels, and greater than 90 decibels.

(h) If the "adjusted upper level" is less than 80 decibels, the contribution due to the particular time segment may be ignored and no further measurements or calculations for that time segment are required.

(i) If the required number of sound level meter readings is equal to 25, no further sound levels need be read. If the required number is greater than 25, take additional measurements, in accordance with (d), above, until the total number of readings, including the 25 original readings, exceeds the required number. (The checkmarks can be added onto the original data sheet).

(j) Compute the effective sound level using the worksheet (Figure B–5) as follows:

(1) Enter the number of counts per sound level (frequency of occurrence) in Column B. Add them to get Sum B.

(2) Multiply the counts in Column B by the number in Column C and enter the results in Column D.

(3) Add all values in Column D to determine Sum D.

(4) Divide Sum D by Sum B.

(5) Locate the value in Column C that is approximately equal to Sum D/Sum B. The corresponding value in Column A is equal to the effective sound level.

Note.—It may be desirable to use a (pre-programmed) calculator to carry out these steps rather than to use the worksheet. This is quite acceptable so long as the calculation procedure is checked to ensure correctness.

(k) Proceed to carry out steps (a) through (g) as necessary for any other identified time segments.

3. When impulsive noise or short bursts of continuous noise result in large (e.g., 10 decibels or more) increases of short duration in the sound level, care must be taken to determine properly the effective duration of the higher noise level. When such discrete events occur, with a resultant time variation of sound levels such as that shown in Figure B–3, the following procedure may be followed:

(a) Carry out steps (a), (b), and (c) of Section 2, above.

(b) With the microphone located in the desired position, read the *maximum* sound level indicated on the sound level meter during occurrence of one of the discrete events of interest and place a checkmark in the appropriate box on a data sheet (Figure B–4). The maximum sound levels should be read to the nearest decibel.

(c) Repeat step 3(b) for 25 readings of the maximum sound level.

(d) Compute the maximum effective sound level for these 25 readings using the worksheet (Figure B–5) and the procedures described in Section 2(j), above.

(e) Calculate the sound level that is 6 decibels less than the maximum effective sound level determined in step 3(d); this is designated as the "6-decibel down level."

(f) Determine the effective duration of a transient event as follows: For a minimum of 10 events, use a stop watch or other timing device to measure the time that the sound level is greater than the "6-decibel down level" that was determined in step 3(e). This can be done by noting the 6-decibel down level on the sound level meter and then, for at least 10 events, starting the stop watch when the sound level increases to the 6-decibel down level, allowing the stop watch to run while the sound level is above the 6-decibel down level, and stopping the watch when the sound level falls below the 6-decibel down level. The effective duration of a single event is the arithmetic average of at least 10 durations thereby obtained, rounded up to the next larger integer second.

(g) The duration of the time segment for all similar single events is simply the number of such events multiplied by the effective duration of a single event.

(h) Follow the procedures described in Section 2(g) to determine the total required number of sound level meter readings, using the duration of the time segment as determined in step 3(g) to enter the left-hand scale of the data sheet (Figure B–4).

(i) If the "adjusted upper level" is less than 80 decibels, the contribution due to the particular time segment may be ignored and no further measurements or calculations for that time segment are required.

(j) If the required number of sound level meter readings is equal to 25, no further readings of the maximum sound level need be taken. If the required number of readings is greater than 25, take additional measurements, in accordance with 3(b), above, until the total number of readings, including the 25 original readings, exceeds the required number.

(k) Compute the effective sound level, using the worksheet (Figure B–5) and the procedure described in Section 2(j), above.

4. The average sound levels thus determined, and the durations for each time segment, should be entered into Table G–16a to compute the total noise dose, and subsequently the 8-hour time-weighted average sound level according to the procedures required by 29 CFR 1910.95(c).

Example for Continuous Noise

(a) Twenty-five sound levels are measured and entered on a data sheet with the results shown in Figure B–6.

(b) Counting down four checkmarks from the top, the number corresponding to the row in which the fourth checkmark appears is 97 decibels. An arrow is placed in line with that row and a dot is drawn where the tail of the arrow intersects the scale labeled "A-weighted sound level."

(c) The duration of the time segment is estimated as 5 hours; a corresponding dot is placed on the (left-hand) time scale on the data sheet.

(d) A straight line is drawn connecting the dot at 5 hours on the time scale and the dot at 97 dB on the sound level scale. A dot is placed where this line intersects the "pivot line" that is parallel to and midway between the two scales.

(e) A straight line (shown dashed in Figure B–6) is drawn from the mark at 8 hours on the time scale through the dot on the pivot line and extended to intersect the sound level meter scale. An arrow (also shown dashed) is drawn from this intersection point to the right—the "adjusted upper level" is found to lie between 93 and 94 decibels.

(f) Counting up four checkmarks from the botton of the worksheet, the number corresponding to the row in which the fourth checkmark appears is 92 dB.

(g) The difference between this lower level and the (unadjusted) upper level is 5 decibels; from the table at the bottom of the worksheet, it is found that at least 75 sound level readings are required.

(h) Fifty additional sound levels are read and entered onto the data sheet with the results show in Figure B–7; the number of checkmarks in each row is summed and entered in the right hand column.

(i) The sums from the data sheet are transferred to a worksheet and the required calculations are carried out as shown in Figure B–8; the resultant average sound level for the selected time period is found to be 95 dB.

Example for Impulsive Noise

(a) Twenty-five maximum sound levels are measured and entered on a data sheet with the results shown in Figure B–9.

(b) The sums from this data sheet are transferred to a worksheet as shown in Figure B–10 and the required calculations are carried out. The resultant maximum effective sound level for these impulsive events is found to be 103 dB.

(c) The "6-decibel down level" is thus 97 decibels. Using a stop watch, the time that the sound level exceeds 97 decibels is measured for 10 events; the average effective duration is found to be 3.4 seconds, which is rounded up to 4 seconds.

(d) It is estimated that there are approximately 50 such events during a typical workshift. Thus the duration of the time segment is estimated to be 200 seconds (or 3.3 minutes).

(e) A dot is placed on the time axis on the worksheet at 3.3 minutes and a dot is placed on the sound level axis at 103 decibels. A straight line is drawn between these two dots and a dot is placed where that line intersects the pivot line. A second line (shown dashed in Figure B–9) is drawn from the mark at 8 hours on the time axis through the mark on the pivot line. It is seen that this line would intersect the sound level scale at a location well below 80 decibels. Thus the noise exposure due to the 50 impulse sounds can be ignored and no further measurements or calculations are required. (Note: If the adjusted level had exceeded 80 decibels, the remaining procedure for the impulsive noises would have been the same as for the continuous noise example given above.)

BILLING CODE 4510-26-C

Appendix C: Audiometric Measuring Instruments

This Appendix is Mandatory

1. In the event that pulsed-tone audiometers are used, they shall have a tone on-time of at least 200 milliseconds.

2. Self-recording audiometers shall comply with the following requirements:

(A) The chart upon which the audiogram is traced shall have lines at positions corresponding to all multiples of 10 dB hearing level within the intensity range spanned by the audiometer. The lines shall be equally spaced and shall be separated by at least 1/4 inch. Additional increments are optional. The audiogram pen tracings shall not exceed 2 dB in width.

(B) It shall be possible to set the stylus manually at the 10-dB increment lines for calibration purposes.

(C) The slewing rate for the audiometer attenuator shall not be more than 6 dB/sec except that an initial slewing rate greater than 6 dB/sec is permitted at the beginning of each new test frequency, but only until the second subject response.

(D) The audiometer shall remain at each required test frequency for 30 seconds (±3 seconds). The audiogram shall be clearly marked at each change of frequency and the actual frequency change of the audiometer shall not deviate from the frequency boundaries marked on the audiogram by more than ±3 seconds.

(E) It must be possible at each test frequency to place a horizontal line segment parallel to the time axis on the audiogram, such that the audiometric tracing crosses the line segment at least six times at that test frequency. At each test frequency the threshold shall be the average of the midpoints of the tracing excursions.

Appendix D: Audiometric Test Rooms

This Appendix is Mandatory

After April 15, 1983, rooms used for audiometric testing shall not have background sound pressure levels exceeding those in Table D–1 when measured by equipment conforming at least to the Type 2 requirements of American National Standard Specification for Sound Level Meters, S1.4–1971 (R1976), and to the Class II requirements of American National Standard Specification for Octave, Half-Octave, and Third-Octave Band Filter Sets, S1.11–1971 (R1976). Table D–2 may be used until April 15, 1983.

Table D–1.—*Maximum Allowable Octave-Band Sound Pressure Levels for Audiometric Test Rooms*

Octave-band center frequency (Hz)	500	1000	2000	4000	8000
Sound pressure level (dB)	27	30	35	42	41

Table D–2.—*Maximum Allowable Octave-Band Sound Pressure Levels for Audiometric Test Rooms (May be used in lieu of Table D–1 until Apr. 15, 1983)*

Octave-band center frequency (Hz)	500	1000	2000	4000	8000
Sound pressure level (dB)	40	40	47	57	62

Appendix E: Acoustic Calibration of Audiometers

This Appendix is Mandatory

Audiometer calibration shall be checked acoustically, at least annually, according to the procedures described in this Appendix. The equipment necessary to perform these measurements is a sound level meter, octave-band filter set, and a National Bureau of Standards 9A coupler. In making these measurements, the accuracy of the calibrating equipment shall be sufficient to determine that the audiometer is within the tolerances permitted by American National Standard Specification for Audiometers, S3.6–1969.

(1) *Sound Pressure Output Check*

A. Place the earphone coupler over the microphone of the sound level meter and place the earphone on the coupler.

B. Set the audiometer's hearing threshold level (HTL) dial to 70 dB.

C. Measure the sound pressure level of the tones at each test frequency from 500 Hz through 6000 Hz for each earphone.

D. At each frequency the readout on the sound level meter should correspond to the levels in Table E–1 or Table E–2, as appropriate, for the type of earphone, in the column entitled "sound level meter reading."

(2) *Linearity Check*

A. With the earphone in place, set the frequency to 1000 Hz and the HTL dial on the audiometer to 70 dB.

B. Measure the sound levels in the coupler at each 10-dB decrement from 70 dB to 10 dB, noting the sound level meter reading at each setting.

C. For each 10-dB decrement on the audiometer the sound level meter should indicate a corresponding 10 dB decrease.

D. This measurement may be made electrically with a voltmeter connected to the earphone terminals.

(3) *Tolerances*

When any of the measured sound levels deviate from the levels in Table E–1 or Table E–2 by ± 3 dB at any test frequency between 500 and 3000 Hz, 4 dB at 4000 Hz, or 5 dB at 6000 Hz, an exhaustive calibration is advised. An exhaustive calibration is required if the deviations are greater than 10 dB at any test frequency.

Table E–1.—*Reference Threshold Levels for Telephonics—TDH–39 Earphones*

Frequency, Hz	Reference threshold level for TDH–39 earphones, dB	Sound level meter reading, dB
500	11.5	81.5
1000	7	77
2000	9	79
3000	10	80
4000	9.5	79.5
6000	15.5	85.5

Table E–2.—*Reference Threshold Levels for Telephonics—TDH–49 Earphones*

Frequency, Hz	Reference threshold level for TDH–39 earphones, dB	Sound level meter reading, dB
500	13.5	83.5
1000	7.5	77.5
2000	11	81.0
3000	9.5	79.5
4000	10.5	80.5
6000	13.5	83.5

Appendix F: Calculations and Application of Age Corrections to Audiograms

This Appendix is Non-Mandatory

In determining whether a significant threshold shift has occurred, allowance may be made for the contribution of aging to the change in hearing level by adjusting the most recent audiogram. If the employer chooses to adjust the audiogram, the employer shall follow the procedure described below. This procedure and the age correction tables were developed by the National Institute for Occupational Safety and Health in the criteria document entitled "Criteria for a Recommended Standard . . . Occupational Exposure to Noise," (HSM)–11001).

For each audiometric test frequency:

(i) Determine from Table F–1 or F–2 the age correction values for the employee by:

(A) finding the age at which the most recent audiogram was taken and recording the corresponding values of age corrections at 1000 Hz through 6000 Hz;

(B) finding the age at which the baseline audiogram was taken and recording the corresponding values of

age corrections at 1000 Hz through 6000 Hz.

(ii) Subtract the values found in step (i)(A) from the value found in step (i)(B).

(iii) The differences calculated in step (ii) represented that portion of the change in hearing that may be due to aging.

Example: Employee is a 32-year-old male. The audiometric history for his right ear is shown in decibels below.

Employee's age	Audiometric test frequency (Hz)				
	1000	2000	3000	4000	6000
26	10	5	5	10	5
*27	0	0	0	5	5
28	0	0	0	10	5
29	5	0	5	15	5
30	0	5	10	20	10
31	5	10	20	15	15
*32	5	10	10	25	20

The audiogram at age 27 is considered the baseline since it shows the best hearing threshold levels. Asterisks have been used to identify the baseline and most recent audiogram. A threshold shift of 20 dB exists at 4000 Hz between the audiograms taken at ages 27 and 32. (The threshold shift is computed by subtracting the hearing threshold at age 27, which was 5, from the hearing threshold at age 32, which is 25). A retest audiogram has confirmed this shift. The contribution of aging to this change in hearing may be estimated in the following manner:

Go to Table F–1 and find the age correction values (in dB) for 4000 Hz at age 27 and age 32.

	Frequency (Hz)				
	1000	2000	3000	4000	6000
Age 32	6	5	7	10	14
Age 27	5	4	6	7	11
Difference	1	1	1	3	3

The difference represents the amount of hearing loss that may be attributed to aging in the time period between the baseline audiogram and the most recent audiogram. In this example, the difference at 4000 Hz is 3 dB. This value is subtracted from the hearing level at 4000 Hz, which in the most recent audiogram is 25, yielding 22 after adjustment. Then the hearing threshold in the baseline audiogram at 4000 Hz (5) is subtracted from the adjusted annual audiogram hearing threshold at 4000 Hz (22). Thus the age-corrected threshold shift would be 17 dB (as opposed to a threshold shift of 20 dB without age correction).

Table F–1.—*Age Correction Values in Decibels for Males*

Years	Audiometric Test Frequencies (Hz)				
	1000	2000	3000	4000	6000

Appendix G: Methods for Estimating the Adequacy of Hearing Protector Attenuation

This Appendix is Mandatory

For employees who have experienced a significant threshold shift, hearing protector attenuation must be sufficient to reduce employee exposure to a TWA of 85 dB. Employers must select one of the following methods by which to estimate the adequacy of hearing protector attenuation.

The most convenient method is the Noise Reduction Rating (NRR) developed by the Environmental Protection Agency (EPA). According to EPA regulation, the NRR must be shown on the hearing protector package. The NRR is then related to an individual worker's noise environment in order to assess the adequacy of the attenuation of a given hearing protector. This Appendix describes four methods of using the NRR to determine whether a particular hearing protector provides adequate protection within a given exposure environment. Selection among the four procedures is dependent upon the employer's noise measuring instruments.

Instead of using the NRR, employers may evaluate the adequacy of hearing protector attenuation by using one of the three methods developed by the National Institute for Occupational Safety and Health (NIOSH), which are described in the "List of Personal Hearing Protectors and Attenuation Data," HEW Publication No. 76–120, 1975, pages 21–37. These methods are known as NIOSH methods #1, #2 and #3. The NRR described below is a simplification of NIOSH method #2. The most complex method is NIOSH method #1, which is probably the most accurate method since it uses the largest amount of spectral information from the individual employee's noise environment. As in the case of the NRR method described below, if one of the NIOSH methods is used, the selected method must be applied to an individual's noise environment to assess the adequacy of the attenuation. Employers should be careful to take a sufficient number of measurements in order to achieve a representative sample for each time segment.

Note.—The employer must remember that calculated attenuation values reflect realistic values only to the extent that the protectors are properly fitted and worn.

When using the NRR to assess hearing protector adequacy, one of the following methods must be used:

(i) When using a dosimeter that is capable of C-weighted measurements:

(A) Obtain the employee's C-weighted dose for the entire workshift, and convert to TWA (see Appendix A, II).

(B) Subtract the NRR from the C-weighted TWA to obtain the estimated A-weighted TWA under the ear protector.

(ii) When using a dosimeter that is not capable of C-weighted measurements, the following method may be used:

(A) Convert the A-weighted dose to TWA (see Appendix A).

(B) Subtract 7 dB from the NRR.

(C) Subtract the remainder from the A-weighted TWA to obtain the estimated A-weighted TWA under the ear protector.

(iii) When using a sound level meter set to the A-weighting network:

(A) Obtain the employee's A-weighted TWA in accordance with a procedure such as the one recommended in Appendix B.

(B) Subtract 7 dB from the NRR, and subtract the remainder from the A-weighted TWA to obtain the estimated A-weighted TWA under the ear protector.

(iv) When using a sound level meter set on the C-weighting network:

(A) Obtain a representative sample of the C-weighted sound levels in the employee's environment for each identified time segment.[1]

(B) If there is more than one identified time segment, compute the 8-hour time-weighted average of the C-weighted sound levels using Figure B–5 and Table G–16a or an equivalent method.

(C) Subtract the NRR from the C-weighted average sound level to obtain the estimated A-weighted TWA under the ear protector.

Appendix H: Availability of Referenced Documents

Paragraphs (c) through (s) of 29 CFR 1910.95 and the accompanying appendices contain provisions which incorporate publications by reference. Generally, the publications provide criteria for instruments to be used in monitoring and audiometric testing. These criteria are intended to be mandatory when so indicated in the applicable paragraphs of Section 1910.95 and appendices.

It should be noted that OSHA does not require that employers purchase a copy of the referenced publications. Employers, however, may desire to obtain a copy of the referenced publications for their own information.

The designation of the paragraph of the standard in which the referenced publications appear, the titles of the publications, and the availability of the publications are as follows:

Paragraph designation	Referenced publication	Available from—
§ 1910.95(g)(1)(i)	"Specification for Personal Noise Dosimeters," ANSI S1.25–1978, (ASA 25–1978).	Back Numbers Department, Dept. STD, American Institute of Physics 333 E. 45th St., New York, NY 10017; American National Standards Institute, Inc., 1430 Broadway, New York, N.Y. 10018.
§ 1910.95(g)(1)(ii)	"Specification for Sound Level Meters," S1.4–1971 (R 1976).	American National Standards Institute, Inc., 1430 Broadway, New York, NY 10018.
§ 1910.95(k)(2), appendix E	"Specifications for Audiometers," S3.6–1969.	American National Standards Institute, Inc., 1430 Broadway, New York, NY 10018.
Appendix D	"Specification for Octve, Half-Octave and Third-Octave Band Filter Sets," S1.11–1971 (R1976).	Back Numbers Department, Dept. STD, American Institute of Physics 333 E. 45th St., New York, NY 10017; American National Standards Institute, Inc., 1430 Broadway, New York, N.Y. 10018.
Appendix G	"List of Personal Hearing Protectors and Attenuation Data," HEW Pub. No. 76–120, 1975.	Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20404.

The referenced publications (or a microfiche of the publications) are available for review at many universities and public libraries throughout the country. These publications may also be examined at the OSHA Technical Data Center, Room N2439, United States Department of Labor, 200 Constitution Avenue N.W., Washington, D.C. 20210, (202) 523–9700 or at any OSHA Regional Office (see telephone directories under United States Government—Labor Department).

Appendix I: Definitions

These definitions apply to the following terms as used in paragraphs (c) through (r) of 29 CFR 1910.95.

Audiogram—A chart, graph, or table resulting from an audiometric test showing an individual's hearing threshold levels as a function of frequency.

Audiologist—A professional, specializing in the study and habilitation of hearing, who is certified by the American Speech, Hearing, and Language Association or licensed by a state board of examiners.

Baseline audiogram—The audiogram against which future audiograms are compared.

Crest factor—Absolute value of the ratio of the peak value and the root-mean-square value measured over a specified time interval where both values are measured in reference to the arithmetic mean value of the wave.

Criterion sound level—A sound level of 90 decibels.

Decibel (dB)—Unit of measurement of sound level.

Hertz (Hz)—Unit of measurement of frequency, numerically equal to cycles per second.

Medical pathology—A disorder or disease. For purposes of this regulation, a condition or disease affecting the ear, which should be treated by a physician specialist.

Noise dose—The ratio, expressed as a percentage, of (1) the time integral, over a stated time or event, of the 0.6 power of the measured SLOW exponential time-averaged, squared A-weighted sound pressure and (2) the product of the criterion duration (8 hours) and the 0.6 power of the squared sound pressure corresponding to the criterion sound level (90 dB).

Noise dosimeter—An instrument that integrates a function of sound pressure over a period of time in such a manner that it directly indicates a noise dose.

Otolaryngologist—A physician specializing in diagnosis and treatment of disorders of the ear, nose and throat.

Representative exposure—Measurements of an employee's noise dose or 8-hour time-weighted average sound level that the employers deems to be representative of the exposures of other employees in the workplace.

Sound level—Ten times the common logarithm of the ratio of the square of the measured A-weighted sound pressure to the square of the standard reference pressure of 20 micropascals. Unit: decibels (dB). For use with this regulation, SLOW time response, in accordance with ANSI S1.4–1971 (R1976), is required.

Sound level meter—An instrument for the measurement of sound level.

Time-weighted average sound level—That sound level, which if constant over an 8-hour exposure, would result in the same noise dose as is measured.

(Sec. 4, 6, 8, 84 Stat. 1592, 1593, 1599, (29 U.S.C. 653, 655, 657); Secretary of Labor's Order No. 8–76 (41 FR 25059); 29 CFR Part 1911)

[FR Doc. 81–1283 Filed 1–13–81; 12:00 pm]

BILLING CODE 4510–26–M

[1] Time segments should be identified according to a procedure such as the one recommended in Appendix B, but the same number of measurements may not be necessary to achieve a representative sample.

Part IV

Department of Labor

Occupational Safety and Health Administration

Marine Terminals; Notice of Proposed Rulemaking

DEPARTMENT OF LABOR

Occupational Safety and Health Administration

29 CFR Parts 1910 and 1918a

[Docket No. S-506]

Marine Terminals; Proposed Rulemaking

AGENCY: Occupational Safety and Health Administration Department of Labor.

ACTION: Proposed standard.

SUMMARY: The Occupational Safety and Health Administration (OSHA) is proposing to add a new part, 29 CFR Part 1918a, safety and health regulations for marine terminals.

The proposed standards covers cargo handling and related activites at marine terminals and addresses the safety and health hazards associated with the shoreside portion of the marine cargo-handling industry. Marine cargo-handling operations that take place aboard vessels will continue to be regulated under 29 CFR Part 1918, the safety and health regulations for longshoring.

This proposed rule is a vertical standard, i.e., one which applies to this industry exclusively and is designed specifically to address the hazards associated with marine cargo-handling ashore. However, certain sections and subparts of Part 1910, the general industry standards, would continue to apply to marine terminals and have been incorporated by reference in the vertical standard. The new Part 1918a would apply exclusively to marine terminals, except for those provisions of Part 1910 referenced in the new Part.

This proposal contains requirements for marine terminal operations, cargo handling gear and equipment, personal protective equipment, operations such as welding and spray painting, and specialized terminals such as container terminals and menhaden facilities. The water transportation services industry, which is largely comprised of the marine cargo-handling industry, has an occupational injury incidence more than twice the average rate of industries in the private sector, and a severity rate seven times as great. The principal hazards addressed by this proposal are injuries and accidents associated with hoisting gear, hazardous atmospheres, materials handling, powered industrial vehicles, ship's gear, vehicle and pedestrian traffic, and other marine cargo-handling operations.

DATES: Written comments and any requests for a hearing must be postmarked on or before May 15, 1981.

ADDRESS: Written comments and requests for a hearing should be submitted to the Docket Officer, Docket No. S-506, Occupational Safety and Health Administration, Room S 6212, U.S. Department of Labor, Washington, D.C. 20210, (202) 523-7894.

FOR FURTHER INFORMATION CONTACT: Mr. Basil Needham, acting director, Office of Maritime Safety Standards, Occupational safety and Health administration, U.S. Department of Labor, 200 Constitution Avenue, NW., room N3471, Washington, D.C. 20210, Telephone: (202) 523-7234.

SUPPLEMENTARY INFORMATION:

I. History.

Due to the alarming number and serious nature of the accidents and injuries in the marine cargo-handling industry, Congress amended the Longshoremen's and Harbor Workers' Compensation Act (LHWCA) (44 Stat. 1424; 33 U.S.C. 901 et seq.) in 1958 to provide maritime employees with a safe work environment. The amendments (P.L. 85-742, 72 Stat. 835) significantly strengthened Section 41 of the LHWCA (44 Stat. 1444; 33 U.S.C. 941) by requiring employers covered by the Act to "furnish, maintain and use" equipment and to establish safe working conditions in accordance with regulations promulgated by the secretary of Labor. Two years later, the Labor Standards Bureau (LSB) of the Department of Labor (DOL) issued the first set of safety and health regulations for longshoring activites as 29 CFR Part 9 (25 FR 1565). These standards were amended on several occasions between 1960 and 1971. Since 1971, there have been no substantive changes in these provisions. However, these regulations only covered longshorign activities taking place aboard vessels.

Passage of the Occupational Safety and Health Act (the Act) (84 Stat. 1580; 29 U.S.C. 650 et seq.) by Congress in 1970 enabled the Federal government to become directly involved with commercial shoreside cargo-handling operations in marine terminals. Section 6(a) of the act (84 Stat. 1593; 29 U.S.C. 655) authorized the Secretary of Labor to adopt established Federal standards issued under other statutes, including LHWCA, as occupational safety and health standards under the Act. Accordingly, the Secretary adopted the existing longshoring regulations as OSHA regulations and recodified these rules as 29 CFR Part 1918 (39 FR 22074, June 19, 1974). Since the Act comprehensively covered all private employments, the longshoring standards also applied to shoreside cargo handling operations. (See 29 CFR 1910.16.)

In addition, in accordance with established policy codified at 29 CFR 1910.5(c)(2), OSHA has applied its general industry regulations to shoreside activities not covered by its older longshoring rules. Citations have also been frequently issued under Section 5(a)(1) (the General Duty Clause) of the Act (84 Stat. 1593, 29 U.S.C. 654) (Ex. 22), since some serious hazards are not addressed either by requirements in Part 1910 or Part 1918.

The attempt to apply and to enforce provisions from different standards to shoreside activities has encouraged a fragmentary approach to compliance activity, has produced much misunderstanding and dissension, and has not provided adequate employee protection. As a result, several groups have requested that OSHA "make the industry whole" by consolidating all the regulations applicable to the marine terminal portion of the cargo-handling industry into a comprehensive set of regulations parallel to those for the shipboard portion of the operation. OSHA believes that a marine terminal standard tailored specifically to the hazards and circumstances of this industry, written in simplified and more understandable language, is clearly needed.

II. Background of the Proposal.

In the early 1960's, OSHA's predecessor agency, the Bureau of Labor Standards, played an important role in developing an American National Standards Institute (ANSI) marine terminal standard (ANSI MH9) to assist the industry in its voluntary efforts at accident prevention. When completed, however, this consensus standard left many gaps in safety coverage, and it was somewhat out of date by 1971. A new ANSI MH9 committee was established after the advent of OSHA, and in 1972 this group developed a revised ANSI marine terminal standard, Safety Requirements for Marine Terminal Operations, ANSI MH9.1. OSHA had intended to adopt this new ANSI revision under Section 6(a) of the Act; however, the Agency did not do so because the standard was considered incomplete and because the legal authority to adopt such national consensus standards expired in April 1973. OSHA then began to develop its own marine terminal standard, using ANSI MH9.1, State standards, other available data, and staff experience and research as starting points.

Subsequently, the Assistant Secretary of Labor for OSHA appointed an ad hoc Standards Advisory Committee (SAC) to review the Agency's draft marine terminal document and to make appropriate recommendations. (A list of committee members and their affiliations appears in the front of the volume of committee recommendations, which has been entered in the record (Ex. 2)). The first meetings of the SAC took place in June 1974, and its period of service terminated in March 1975. Staff work then resumed, with review and consideration of the transcripts of committee meetings and recommendations, and further revision in response to the committee's comments.

All available material and data have since been given careful review, in particular the issues raised by the SAC and accident and injury data related to marine terminal operations. OSHA has also continued to monitor industry trends, such as the increasing use of intermodal containers, and coverage for hazards associated with these relatively recent industry developments has been incorporated into the proposal.

Any specific final recommendations made by the SAC on provisions of the draft marine terminal proposal are discussed in the Summary and Explanation section of this preamble, in connection with the relevant provisions of the proposal; references to Advisory Committee discussions that were inconclusive and did not result in a specific recommendation have not been included in this preamble. However, transcripts of the Committee's deliberations and a copy of their recommendations are in the rulemaking record (Ex. 2–12).

This proposed standard was written to enhance the safety of dock workers, to address the specific hazards associated with the marine terminal industry, and to encourage voluntary compliance by employers and employees. To achieve these goals, the proposal has been written in straightforward, performance-based language, which has allowed OSHA to reduce the volume of these proposed regulations to ⅙ that of the existing rules that currently apply to marine terminals. In addition, in an effort to keep the employer's compliance costs to the lowest level consonant with employee safety, the proposed standard makes extensive use of the "grandfather clause" or phase-in concept. This practice will reduce to a minimum the amount of equipment that must either be replaced or retrofitted to comply with the standard's provisions. Another method of reducing costs and avoiding regulatory rigidity is the proposal's use of a range rather than a specific figure, for design or construction specifications. For example, rather than specifying that guardrails must be 36 inches high, the proposal permits railing height to fall within a range which experience and ergonomic research have determined to be appropriate and safe. Finally, OSHA has worked closely with the U.S. Coast Guard throughout the development of this proposal, to ensure that the proposed requirements complement and do not conflict with that agency's regulatory efforts in the marine terminal environment. Section 4(b)(1) of the Act (84 Stat. 1592, 29 U.S.C. 653) preempts OSHA jurisdiction in areas in "which other Federal agencies . . . exercise statutory authority to prescribe or enforce standards or regulations affecting occupational safety or health." Thus, in marine terminals, OSHA's jurisdiction does not apply to those working conditions as to which the Coast Guard has exercised its statutory authority to promulgate standards affecting occupational safety and health.

The shortened forms listed below are used throughout this preamble to refer to the following sources: Standards Advisory Committee—SAC; American National Standards Institute, Safety Requirements for Marine Terminals—ANSI MH9.1; OSHA's safety and health regulations for longshoring—Part 1918; OSHA's general industry standards—Part 1910; and exhibits in the rulemaking record—Ex. .

III. Marine Terminal Hazards

The work environment at a marine terminal exposes maritime employees to a greater risk of injury than is true for workers in most other industries. In terms of number of injuries per worker and of lost workdays per worker, cargo-handling operations in American ports represent some of the most dangerous activities in American industry. A simple comparison of injury incidence and accident severity rate between the marine terminal industry and the industrial average for the private sector will illustrate the hazardous nature of the work performed along the waterways of this country.

Examination of accident data compiled by the U.S. Bureau of Labor Statistics (BLS) up to 1978 reveals that the injury incidence for marine cargo-handling operations is more than twice that of the national average. More specifically, BLS found an average injury incidence for the private industrial sector of 9.2 injuries per 100 full-time workers, while the rate for water transportation services (SIC 446, made up in large part by the marine cargo-handling industry) was 21.5 per 100 employees (Ex. 18).

Even more disturbing are the comparative BLS figures on accident severity. The severity rate, computed on the basis of lost workdays per worker, was seven times greater for maritime employees than the national average. Though only 62.1 workdays were lost on the average to occupational injury (per 100 full-time workers), those industries supplying water transportation services suffered losses of 454 lost workdays per 100 workers (Ex. 18). Even when compared to the accident severity rate of a high hazard industry such as construction, the accident figures for cargo handling operations are still significant and unsettling. The lost workday incidence rate for construction was only 108.1 days per 100 workers, leaving the maritime industry with an accident severity rate four times greater than that of construction (Ex. 18).

The particular hazards encountered at marine terminals are as varied as the cargoes that move through terminal gates. Technological advances in waterborne trade such as the development of container ships, roll on-roll off (Ro-Ro) vessels and "lighter aboard ship" (LASH) barges have eliminated many hazards, but created new ones. In an effort to pinpoint the major types of maritime accidents, OSHA contacted Cooper and Company of Stanford, Connecticut to study this problem. The company surveyed approximately 7,000 injury reports (Employer's First Notice of Injury or Illness) for 1974, and issued a report in 1975 which listed, by percentage, the 20 leading types of accidents associated with longshoring activities (Ex. 52):

	Percentage
Slip/Trip on Dock Deck	15.7
Stress/Strain, Lifting/Carrying	6.4
Caught Between Load/Object	6.1
Hit by Lashing Gear	5.6
Hit by Load/Draft	5.4
Foreign Body in Eye	4.7
Hit by Falling Cargo	4.6
Hurt Handling Drums	4.4
Cut on Cargo	4.1
Hit by Dunnage	4.1
Foot Through Dunnage/Cargo	3.3
Hit by Industrial Truck	3.3
Sensitivity to Cargo/Fumes	3.1
Slipped on Ladder	2.9
Step on Nails	2.6
Cut on Hook	2.5
Hit by Falling Object	2.5
Hit by Sling/Bridle	2.2
Hit by Rolling Pipe/Steel	2.2
Hurt Avoiding Accident	1.7

Additionally, the Agency sought to determine the types of accidents that generated the greatest cost, in terms of dollars expended for medical and

compensation purposes. To make this determination, OSHA relied on a study performed by the Liberty Mutual Insurance Company. This study, published in the February 1978 edition of American Seaport Magazine, reported that Liberty Mutual reviewed 297 "high cost" accidents occurring in the marine cargo-handling industry. The insurance company found that more than 69 percent of the total costs and 66 percent of the total number of cases surveyed fell within two broad classes of accidents, "falls" and "struck by falling objects." To more firmly underline this point, Liberty Mutual (Ex. 60) reproduced this accident data in the following tabular form:

Stevedoring Operations—A Review of 297 High Cost Accidents

(Figures in parentheses equal percentage)

	Number of accidents	Cost of accidents
Falls	115 (39)	$1,985,800 (37.6)
Struck by falling objects	80 (27)	1,665,200 (31.6)
All others	102 (34)	1,629,400 (30.8)
Total number	297	
Total cost		5,258,400

From the above: 66 percent of the total number and 69.2 percent of the total cost were from "Falls" and "Struck by falling objects."

Falls

Types of falls	No. of cases	Total cost[1]	Average cost[1]
Fell to working surface	40	$405,000	$10,800
Fell between cargo	22	436,500	19,900
Fell from ship's ladders/portable ladders	16	438,400	27,400
Fell to lower level	16	241,900	14,700
Fell from piled cargo, piled dunnage, piled hatch boards, etc.	14	342,000	24,400
Fell from forklift trucks and other similar equipment	7	121,800	17,300

[1]Medical and compensation costs.

Struck by Falling Objects

Type of object	No. of cases	Total cost[1]	Average cost[1]
Cargo (from drafts, stacked cargo, or while manually handling)	55	$1,282,302	$23,314
Hatch gear	10		
Empty pallets	4		
Parts from gear failure	3	382,898	15,316
Dunnage	3		
Other	5		

[1]Medical and compensation costs.

Agency review of some of its recent accident data confirmed Liberty Mutual's finding regarding the existence of "falls" and "struck by objects" as major accident categories in the maritime environment. Accident figures for longshoring activities in the Port of New York (Ex. 29) during the first six months of 1980 revealed that out of a total of 1,256 reported accidents, 289 were attributed to "slips, trips and falls," and 119 consisted of instances where employees were struck by falling cargo. Moreover, another 247 accidents occurred as a result of employees being struck by or against drafts, or by other objects being handled. Another major source of injury was operation of mobile equipment (168 accidents). Additionally foot injuries (122) represented almost 10 percent of the total number of injuries for this six-month period (Ex. 29). An OSHA survey of the West Coast accident experience for marine cargo handling operations during this same period found that out of a total of 2,643 reported accidents, falls accounted for 684 injuries and "struck by or against" accidents numbered 711. Injuries associated with the operation of mobile equipment totaled 204, while foot injuries (348) formed 13.2 percent of the total West Coast accident figure (Ex. 30).

Another way the Agency chose to focus on the major sources of maritime accidents for rulemaking purposes was to examine the fatal maritime accidents reported to OSHA during the period July 1972–April 1980. A brief summary of ten of the more than 180 fatal accidents reviewed is provided below, along with a reference to the relevant provision in the proposal (Ex. 80–90).

New York, New York—December 1973

An employee inspecting a container gantry crane was thrown from his position atop a trolleying drum house, when the entire trolley apparatus traveled past the out reach stops of the crane. The employee struck the container spreader in his fall, and though quickly pulled from the water, never regained consciousness (See § 1918a.45(g)(6)).

Everett, Massachusetts—August 1974

A worker engaged in a welding operation adjacent to a set of large rollers was drawn into an eight inch space between the rollers and was crushed. No provision had been made to lock out the electric power that activiated this equipment. The power was accidentally turned on, resulting in this employee's death (See § 1918a.151(b)(7)).

Tampa, Florida—May 1975

An employee suffocated in tons of citrus pellets, when he attempted to clear the flow of a jam within a silo without benefit of a safety harness and lifeline. The jam suddenly cleared and the worker was swept under twenty feet of the bulk cargo. On the sport rescuers were helpless and watched him disappear under the cargo (See § 1918a.49(i)(3)).

Miami, Florida—September, 1975

A terminal worker accidentally fell into an opening atop a hopper car filled with corn grain. the opening was unguarded, facilitating easy entry, and the employee died, asphyxiated by the cargo (See § 1918a.49(c)).

Port Newark, New Jersey—March, 1976

The driver of a large fork lift (stacker) struck a yard tractor at a cross aisle where visibility was obstructed by container stows. The driver of the yard tractor was operating on the wrong side of a two-lane thoroughfare (See § 1918a.44(d)) and neither driver was required to sound a warning or stop at the cross aisle, despite poor visibility (See § 1918a.43(b)(8) and § 1918a.44(e)). The driver of the yard tractor was thrown from his vehicle and killed.

Baltimore, Maryland—March, 1976

Two employees were killed and another seriously injured when two large rail mounted container gantry cranes were pushed down their tracks by strong winds. Wind warnings were issued prior to the accident. There were intermittent gusts of 40 and 50 mph throughout the four hour period prior to the accident. Audible wind warning alarms had been made inoperable. No policy existed at the port for discontinuing operations at a specific wind velocity. The cranes were swept off the end of the apron and into the adjacent waters (See § 1918a.45(g)).

San Juan, Puerto Rico—October, 1976

A checker was crushed to death when a yard tractor driver accidentally hit the tractor's accelerator pedal. The checker was noting marks at the rear of a mounted container that was in a truck line. The yard tractor that struck him was waiting immediately behind the container (See § 1918a.71(i)).

San Juan, Puerto Rico—March, 1977

While containers were being unloaded from a vessel by a crane the crane's cargo fall broke and a loaded container fell striking three longshoremen below. The crane had exceeded its operable rating and the container was overloaded (See § 1918a.45(b)(2) and § 1918a.71(f)).

St. Louis, Missouri—February, 1980

A terminal worker was killed when he fell 6 feet from an unguarded platform above a hopper. The employee was controlling the flow of fertilizer through

the hopper when he lost his balance and fell over the open edge (See § 1918a.49(b)).

Port Elizabeth, New Jersey—June, 1980

Three rail mounted container gantry cranes were swept down their tracks by high winds. weather alerts and high wind warnings were issued as early as four hours before the incident. Upon investigation, the Agency learned that much of the equipment needed to secure the cranes had fallen into disrepair and was not serviceable (See § 1918a.45(g)).

As noted above, these accidents form only a fraction of the accident data surveyed and represent only a small protion of the hazards that this proposal addresses. However, it is possible that OSHA may not have surveyed all the relevent classes of accidents that occur at marine terminals, and therefore may not have provided protection in the proposal from all major hazards present at a terminal. OSHA is therefore solicitous of any accident information relevant to the hazards found at a terminal especially if it relates to one of the provisions in the proposed standard.

The available data on accidents and injuries in marine terminals indicate that terminal employees are exposed to a significant risk of injury in the workplace. OSHA therefore believes that a marine terminal standard is reasonably necessary for the protection of these employees from a wide range of workplace hazards.

(A) Vertical vs. Horizontal Standards

This proposed marine terminal standard is drafted in a format that will allow it to stand by itself, i.e., to be a "vertical" standard (one that applies to this industry exclusively and in lieu of any other OSHA standard); in a few areas of coverage specified in the proposal's scope section, OSHA's general industry standards are incorporated by reference. In general, vertical standards encourage voluntary compliance because they are directed to the particular problems of the industry, and because they only contain provisions that are appropriate to the industry in question. On the other hand, since many industries covered by OSHA do in fact use the same or similar equipment and processes, and therefore have employees who are exposed to the same hazards, it is usually a more efficient use of the Agency's resources to develop "horizontal" standards (those applying to more than one industry). It is also more efficient to train field personnel in general safety programs tailored to the horizontal general industry standards than to train field staff in individual programs designed for specific industries.

The Standards Advisory Committee discussed the merits of vertical versus horizontal standards at some length. The committee recommended that some provisions of OSHA's general industry standards continue to apply in marine terminals, but the group also recommended that a vertical standard be written to apply to those aspects "that are unique to Marine Terminal Facilities" (Ex. 2:ia). However, OSHA has subsequently received several letters (Ex. 58), many from former members of the SAC, urging the Agency to adopt a predominantly vertical marine terminal standard and testifying to the difficulty and confusion associated with trying to comply with two sets of standards (Parts 1910 and 1918).

In many respects, marine cargo handling is a single operation, despite the fact that it has both ashore and afloat segments. Both segments of the marine cargo-handling industry employ longshoremen, both use many of the same types of equipment, and both require many of the same operational procedures. The line between cargo handling aboard a vessel and such work ashore has traditionally and for regulatory purposes been drawn "at the foot of the gangway." In practice, however, loading or discharging cargo from a vessel is one continuous operation which cannot logically be divided into two distinct functions. For example, regardless of whether fork lifts are used in the hold of a ship or inside a terminal, whether ship's gear or house fall gear is used to hoist cargo, or whether vessel cranes or shore cranes perform the lift, the tasks to be done, the hazards to be addressed, the workers involved, and the type of equipment to be used are essentially the same. The fact that cargo handlers involved in both shipside and shoreside aspects of the operation use the same distinctive terms, such as dunnage, burtoning gear, recoopering, stowage, and apron, attests to the common tradition and the unitary nature of the marine cargo-handling industry.

Despite this commonality, however, there are substantial differences between the work environments of longshoremen on board ship and those working ashore. For example, shipboard conditions vary greatly among particular ships, and the restricted spaces and close clearances typical of work aboard ship exacerbate many of the hazards commonly associated with cargo-handling. The equipment and machinery used to handle cargo aboard ship also differ somewhat from those used ashore. For example, vessel cranes and hoisting gear ususally have lower rated capacities than their shore-based counterparts. In addition, there are significantly fewer powered industrial trucks aboard ships than in terminals. Further, certain equipment frequently used in cargo-handling at marine terminals, such as railcars, conveyors, chutes, and hoppers, is not found aboard vessels. These differences in shipboard and shoreside work environments are substantial enough to warrant careful consideration of the hazards unique to each aspect of the industry and have led OSHA to propose this marine terminal standard as a document distinct from, but complementary to, the Agency's longshoring standard. Ultimately, appropriate changes in part 1918 will be proposed to make it consistent with the marine terminal standard.

The entire marine cargo-handling environment, both shipside and shoreside, is also unique in several respects, especially in comparison to other industries. For example, longshoremen must continually work in the harsh environment of the waterfront, which requires exposure both to work-related hazards, such as falling cargo, and to environmental hazards, such as drowning and working around machinery in high winds. Additionally, dock workers perform some of the same high-hazard tasks, and confront many of the same heavy-industry hazards, as those typically associated with the construction industry. Examples of such hazards include falls, crushing and caught-in injuries, and traffic accidents, which are common in container terminals. Cargo handling and construction work are also both seasonal and weather-dependent, and both industries have a high proportion of part-time and transient employees. Longshoremen are also likely to be exposed more frequently and often for longer periods to certain hazardous work situations, such as work in restricted spaces and hazardous atmospheres, than would be the case for many workers in general industry. The excessive occupational injury and illness incidence for the marine cargo-handling industry, more than twice the national private sector average, testifies to the hazardous nature of longshoring (Ex.18: 62, 69). The Hazard section of the preamble above, describes in greater detail the accidents and injuries to which longshoremen are subject.

After careful consideration of the advantages and disadvantages of vertical and horizontal standards,

OSHA had decided to propose a vertical standard for this high-hazard and large-workforce industry. The Agency believes that only this type of regulation will eliminate redundant and conflicting coverage, reduce the confusion caused by the existing dual coverage, be tailored specifically to the unique problems of marine terminals, and address adequately the hazards peculiar to this industry. OSHA also has a vertical standard for the consrtuction industry (29 CFR part 1926), another particularly hazardous industry with a large workforce (the average occupational injury and illness incidence per 100 full-time construction workers is nearly twice the average for workers in the private sector as a whole).

Proposed Part 1918a references those provisions of Part 1910 that would continue to apply to shoreside cargo handling, but is otherwise self-contained in its coverage of marine terminals.

OSHA particularly welcomes comments both as to the merits and the limitations of a vertical standard for marine terminals. In addition, OSHA would appreciate information about the appropriateness of developing detailed coverage under the vertical marine terminal standard for certain operations and types of equipment, such as abrasive blasting and scaffolds, which under this proposal would continue to be covered under the general industry standards.

(B) Performance vs. Specification Standards

Another issue raised during the development of this proposal concerned performances versus specification standards. A performance-based standard identifies a hazard and the level of control required to protect against the hazard, without specifying the precise means of achieving such control, while a specification standard stipulates design and construction crietria to be met to achieve a particular safety objective. For example, a specification standard often requires specific sizes, materials, or types of equipment, and thus allows little or no variation or innovation. OSHA has received many comments in the past about standards that have forced employers to move, retrofit, or replace existing equipment in order to comply with an inflexible specification requirement. This lack of flexibility fails to take the adequacy of many existing facilities into account and discourages design and use innovations. Although enforceability is enhanced by specification standards, they may be unduly restrictive; on the other hand, a performance standard may be too broad to be meaningful. The present general industry standards (29 CFR Part 1910) are primarily specification standards, while the longshoring standards (29 CFR Part 1918) take a predominantly performance approach.

In keeping with OSHA's commitment to clarity, brevity, flexibility, and practicality, and to encourage employers to comply voluntarily, this marine terminal proposal has adopted the performance approach except in those cases in which employee safety would be enhanced by more specific requirements. OSHA has followed this approach in other recent standards (see Fire Protection final rule, 45 FR 60656, September 12, 1980). The Agency is interested in receiving substantive comments from persons who feel that certain of the proposed provisions would benefit either from a greater degree of specification or from a more goal-oriented approach.

(1) *Review of general industry standards for marine terminal applicability.*

The shift in emphasis from specification to performance-based standards, coupled with the Agency's earlier decision to establish a vertical standard for this industry, made it necessary to review the requirements of Part 1910 for applicability to marine terminals. After an extensive examination of the pertinent provisions of Part 1910, OSHA decided that it would not be appropriate to include a large number of these provisions in the marine terminal proposal. The guidelines used to determine which general industry rules to exclude are explained below.

Among the types of provisions in Part 1910 that OSHA chose not to propose for marine terminal application where those directed primarily at the manufacturer (design or construction specifications), and other rules of Part 1910 addressed to industrial or environmental conditions not present at marine terminals. Also, regulatory actions taken in the past by the United States Coast Guard as to certain working conditions in the area of waterfront safety preempt the Agency from exercising its authority as to these working conditions under § 4(b)(1) of the Act.

Pursuant to its statutory mandate under the Port and Waterways Safety Act (33 U.S.C. § 1221 et seq.) to provide rules for the promotion of waterfront safety, the Coast Guard promulgated a series of regulations that set out in detail the practices to be observed by employers to protect against the hazards of fire (see 33 CFR Part 126). Since the Coast Guard has already taken regulatory action as to these working conditions affecting safety and health in which it possesses primary statutory authority, OSHA cannot also regulate in the area. Section 4(b)(1) of the Occupational Safety and Health Act (29 U.S.C. 653(b)(1)) provides that nothing in the Act "shall apply to working conditions of employees with respect to which other Federal agencies . . . exercise statutory authority to prescribe or enforce standards or regulations affecting occupational safety or health." Accordingly, OSHA's general industry fire protection regulations at Subpart L of Part 1910 could not be incorporated into this proposal.

It should be noted that the Coast Guard issued an advance notice of proposed rulemaking (43 FR 15108) on April 10, 1978, which outlined plans to significantly expand and update the Coast Guard's coverage of fire protection on the waterfront. When the Coast Guard has proposed and then promulgated these fire protection rules, they will apply in marine terminals and will further enhance employee safety.

Many provisions of Part 1910 could not be adopted in this proposal, for practical reasons. Provisions from the general industry standards that deal with equipment or processes not used at marine terminals are not included. For example, § 1910.213 requires that employers provide guarding on a large variety of woodworking machinery. However, many of the machines covered by this section, such as jointers, tenoning machines and veneer cutters, are not found at marine terminals, and therefore do not need to be addressed by this proposal. Consequently, OSHA saw no need to include paragraphs (j) through (q) of § 1910.213 in the proposed standard. In addition, certain provisions on spray painting in the general industry standard, such as the rules covering use of electrostatic hand spraying equipment (§ 1910.107(i)) and the use of drying, curing or fusion units (§ 1910.107(j)), were not made part of this proposal because these types of spray painting equipment are not found at marine terminals. Further, three parts of paragraph (f)(2) of § 1910.184 were left out of the proposal, since the slings and grommets covered are to small to be used in cargo handling operations at marine terminals.

Certain other specification provisions of the general industry standards were not adopted in the proposal because technological innovation has made them obsolete. For example, § 1910.184(h)(3)(ii), which sets the

requisite number of tucks for eye splices made in synthetic rope, has not been adopted because the production of new types of synthetic rope has made these requirements outdated. The provisions of this general industry rule can only be applied safely to those few types of synthetic rope specifically addressed by this rule, because the properties of the new varieties of synthetic rope on the market differ from those of the types of rope covered in § 1910.184(h)(3)(ii). Due to such technological advances in the manufacture of synthetic rope, OSHA believes that the rope manufacturer's recommendations provide a greater measure of safety than the general industry requirement, and the marine terminal proposal therefore mandates the use of these recommendations. Additionally, the Agency has decided not to include the tables from § 1910.184 listing the rated lifting capacities of wire and fiber rope (see Tables N–184–3, to N–184–10; N–184–16 to N–184–19). Again, these tables only contain ratings for certain types of wire and fiber rope. They do not cover new types of wire and fiber rope developed since the standard was promulgated.

The number of outdated provisions of Part 1910 that are not being proposed for marine terminals is small in comparison to the number of provisions not included in the proposal because they are design or contruction specifications. In their place, OSHA has proposed performance standards aimed at providing equivalent safety but simultaneously providing the employer with greater flexibility in choosing means of compliance. Several examples of the use of performance standards in place of design or specification requirements are included in the proposal's section on machine guarding, § 1918a.151. For instance, the proposal does not include the general industry design description of hoods and spreaders for hand-fed ripsaws (§ 1910.213(c)(1) and (2)). Instead, though the proposal specifically requires hoods and spreaders, it also contains a general performance rule requiring the employer to ensure that these saws are guarded to keep employees clear of any danger zone (§ 1918a.151(b)(1); (c)(1) and (2)).

Similarly, the marine terminal proposal does not incorporate the lengthy general industry requirements governing the use of certain types of powered industrial trucks in hazardous atmospheres. Instead the proposed standard provides that work in a hazardous atmosphere be performed only by powered industrial trucks approved by a nationally recognized testing laboratory for use in that atmosphere (compare § 1910.178(b) with § 1918a.43(d)). The rigid general industry specification covering construction of ladder cages has been replaced by a proposed provision that simply states that cages be of rigid construction to prevent an employee from falling through or dislodging the cage (compare § 1910.27(d)(1)(i) with § 1918a.119(e)(5)(i). Another example of substituting performance rules for specification standards concerns strength requirements for guardrails. Section 1910.23 contains specific measurements that wood, pipe and structural steel stair railings must meet to comply with the standard, while the proposal simply states that a stair railing must be capable of withstanding a force of at least 200 pounds applied in any direction (compare § 1910.23(e)(3)(i) through (iii) with § 1918a.112(e)(1)).

The preceding examples of general industry provisions that are not included in this proposed standard do not comprise an exhaustive list of the provisions that have not been incorporated in this proposal for marine terminals. However, OSHA believes this discussion and these examples will illustrate the principles which were followed in reviewing Part 1910 provisions for applicability in the marine terminal environment.

In general, the format and substance of this proposal reflect OSHA's efforts to eliminate needless regulations and to simplify and update others. To achieve these goals with regard to this proposed standard, OSHA has adopted a performance approach to drafting new rules and to revising existing ones. Staff review of Part 1910 convinced the Agency that many general industry provisions could be left out of the marine terminal proposal without reducing the level of protection now provided to longshoremen by these rules. Furthermore, OSHA believes that some of the lengthy, detailed and complex specification-based general industry regulations can be greatly simplified by substituting performance language for existing provisions. By not including some Part 1910 provisions and by modifying others, the Agency has sought both to streamline and to strengthen the safety requirements proposed for marine terminals. Where provisions from the general industry standards have been judged appropriate and applicable to the marine terminal environment they have been adapted to meet the marine terminal industry's specific safety and health requirements.

Certain sections of this proposed standard, such as those pertaining to cranes, have also been based principally on provisions in 29 CFR Part 1918 (longshoring), while other requirements, such as those for welding, have been based primarily on related provisions of 29 CFR Part 1915 (Ship Repairing), Part 1916 (Shipbuilding), and Part 1917 (Shipbreaking); these standards, and certain provisions of the ANSI MH9.1 consensus standard, were used as the basis for certain provisions of the proposal because they were more specifically directed at the hazards of this industry than were the relevant requirements of the general industry standards.

Intersted parties are requested to submit any information related to the coverage of this proposed marine terminal standard. For example, are specific hazards adequately addressed in the proposal? Are dock workers exposed to safety and health hazards which this proposal does not cover? Have extraneous provisions been included in the proposal? Are there any areas of general industry coverage that have not been included in the proposal that should be? OSHA would particularly appreciate information on these issues.

Although many proposed requirements are based on provisions of the longshoring standard (Part 1918), they may vary somewhat in content or language from the parallel longshoring requirements because the longshoring rules have not been updated or substantively revised since 1971. However, OSHA intends to revise these rules in the near future. After the marine terminal standard (Part 1918a) is promulgated as a final rule and revisions to the longshoring standard (Part 1918) have been proposed and promulgated, employers and employees will be able to turn to these parallel standards to find compatible provisions applicable to the ashore and afloat segments of the marine cargo-handling industry.

V. Summary and Explanation of the Proposal

Section 1918a.1 Scope and applicability. Proposed § 1918a.1 outlines the scope and applicability of the marine terminal proposal, Part 1918a. The proposed standard would apply to container, menhaden, roll-on—roll-off, LPG, LNG, general cargo, and liquid and dry bulk terminals, including those at ocean ports and facilities located on the inland waterways. It would also apply to areas devoted entirely to the storage and handling of bulk liquids, such as petroleum, wine, coconut oil, castor oil, or paraffin, or associated packaged liquid products or gases such as drums of lubricating oil or compressed gas cylinders. The proposal

contains no additional provisions directed solely at operations in grain elevator terminals, although such terminals would be covered by an applicable provisions, such as those for electrical equipment and power trucks, of this marine terminal standard after it has been proposed and promulgated. OSHA is currently developing a proposed general industry safety and health regulation for grain-handling facilities. Applicable provisions of the general industry grain-handling standard are expected to be proposed for inclusion in these marine terminal regulations in the future.

The proposed standard would not apply to construction activities at marine terminals, which are regulated under the Agency's construction safety and health regulations (29 CFR Part 1926).

In addition, pursuant to § 4(b)(1) of the Act (84 Stat. 1952, 29 U.S.C. 653), the proposed standard would not apply to working conditions of employees in marine terminals with respect to which the United States Coast Guard or the Office of Pipeline Safety Regulation of the Materials Transportation Bureau, Department of Transportation exercises statutory authority to prescribe or enforce standards or regulations affecting occupational safety and health. The Office of Pipeline Safety has responsibility for regulating safety and health matters relating to interstate pipelines, while the Coast Guard has traditionally had the responsibility in marine terminals for maintaining port security (including fire protection and such operations as welding and hot work) under 33 CFR Part 126; for the handling and storage of hazardous materials as defined in 49 CFR Part 172; and the handling of explosives and dangerous commodities, under 46 CFR Part 146. Among facilities designated in the Coast Guard regulations (33 CFR Part 126) are the 15 liquid petroleum gas (LPG) and liquid natural gas (LNG) terminals presently in operation in the United States.

Certain subparts and provisions of OSHA'a general industry standards (29 CFR Part 1910) would remain in effect in a marine terminal facility after the final marine terminal standard is published as a vertical standard. OSHA's electrical safety and health regulations for general industry (Subpart S) would continue in effect in marine terminals after promulgation of a final marine terminal standard, as would the Agency's noise standard (§ 1910.95). Where referenced in the marine terminal code, the toxic and hazardous substances rules for general industry, Subpart Z, also would apply. Similarly, any commercial divers performing minor inspection, salvage, or repair tasks at marine terminals, such as voyage repairs or piling inspections, would continue to be covered under OSHA's safety and health regulations for commercial diving operations (Subpart T).

In addition, as proposed paragraph (a)(2)(v) states, the scaffold section of the general industry standards (§ 1910.28) would continue to apply in marine terminals. A recent statistical estimate suggests that as many as 32,000 work-related falls from scaffolds occur each year in the United States (Ex. 59: Table 1). Although it is not possible to separate these data into marine terminal as opposed to general industry and construction cases, some of these injuries undoubtedly occurred in marine terminals. Although scaffolds are not used frequently in terminals, they are occasionally needed to perform minor repair tasks or chores such as window washing. At present, OSHA is developing construction and general industry rules for scaffolds, in connection with the Agency's planned overall revision of the walking and working surface standards in Subpart D of Part 1910 and Subparts L and M of Part 1926. The Agency intends to evaluate data and comments on scaffolds received in the course of that rulemaking, and information obtained in response to this marine terminal proposal, to determine appropriate requirements for scaffolds used in marine terminals. Provisions determined to be suitable to protect employees working on scaffolds in marine terminals would then be proposed for inclusion in the marine terminal standard.

OSHA particularly welcomes comment on the suitability of the current general industry scaffold standards (§ 1910.28), which are presently being applied, for the marine terminal environment. For example, are all of the types of scaffolds covered in Part 1910 used in terminals? What tasks are commonly performed on a scaffold in a terminal? Do terminal employees perform these jobs, or does the terminal owner usually contract such work out? What are the heights at which scaffolds are positioned? What types of fall protection do workers in a terminal use when on a scaffold? In addition, OSHA is interested in receiving any case reports or injury statistics related to marine terminal accidents involving the use of scaffolds.

Proposed paragraph (a)(2)(vi) proposes that abrasive blasting operations conducted in marine terminals also continue to be covered by the relevant requirements of the general industry standards (§ 1910.94(a)). As with scaffolds, OSHA is interested in receiving comment on the appropriateness of this coverage to the marine terminal situation. The Agency is aware that most terminals do not perform abrasive blasting; however, this process is performed in some terminals to prepare surfaces for spray painting or other treatment. Employees exposed to abrasive blasting inhale respirable particles of the sand or material used as the abrasive and the material being blasted, and are at risk of developing silicosis or other pneumoconiotic diseases as a result of this exposure. For example, if a mineral grit, such as "Black Beauty," a by-product of copper smelting, is used as the abrasive agent, chromium and beryllium dust and fumes are released, exposing workers in the vicinity to the toxic fumes of these metals. OSHA has issued a field directive requiring atmospheric monitoring when Black Beauty is used as the abrasive agent (Ex. 62).

OSHA is presently revising the general industry abrasive blasting standards, and comment received in the course of that rulemaking, in addition to information obtained in response to this marine terminal proposal, will be evaluated for suitability of application to marine terminals. Provisions determined to be appropriate to abrasive blasting operations in this environment would then be proposed for inclusion in the final marine terminal standard. OSHA invites comment on the adequacy and appropriateness of the current general industry abrasive blasting rules (§ 1910.94(a)) for marine terminals. The Agency would also welcome data on the number of marine terminal abrasive blasting operations, the size of the affected workforce, the abrasives used, and the composition of the materials most commonly blasted. In addition, any information on abrasive blasting-related occupational illness and disease among marine terminal wokers would help OSHA to develop this section of the final rule.

Section 1918a.2 Definitions. Section 1918a.2 includes definitions of terms used in more than one section of the standard; terms used only once are defined where they appear in the text. As defined, the term marine terminals would not include manufacturing and production operations which have their own docking facilities and are located within the marine terminal area. Examples of such operations are sugar refining plants, cement plants and

smelters. These facilities are principally concerned with manufacturing rather than cargo handling, and would therefore continue to be regulated under the general industry rather than the marine terminal standards.

In keeping with OSHA's shift to performance language to encourage voluntary compliance and to permit greater flexibility, the proposal applies the "danger zone" concept to the guarding of conveyors (see § 1918a.48) and machines (see § 1918a.151). As defined in the proposal, a danger zone is any place in or about a machine or piece of equipment where an employee may be struck by or caught between moving parts, caught between moving and stationary objects or parts of the machine, caught between the material and a moving part of the machine, burned by hot surfaces or exposed to electric shock.

OSHA has adopted the danger zone approach in preference to including individual provisions requiring guarding for each type of hazard, e.g., nip points, shear lines, gears, sprockets, and transfer mechanisms. The difficulty with attempting to specify every hazardous part or area is that some hazards may be overlooked in the standard, leaving a gap in employee protection. An advantage of using the danger zone concept is that it permits employers to use their judgment about which machine parts or areas at or near a machine do in fact expose employees to workplace hazards. For example, although an unguarded nip point near an employee's work station presents a significant caught-in hazard, a nip point located 10 feet above the working surface presents no such hazard. Similarly, the unguarded edge of a belt conveyor at which, for example, assembly workers are stationed would constitute a danger zone, while an edge on an unattended overland conveyor would not present a hazard to employees.

OSHA welcomes comments on this proposed danger zone concept. For example, does it cover all the hazards associated with moving machine parts and conveyors? Are there individual hazards that should be addressed separately in the proposal?

Subpart B—Marine Terminal Operations

Section 1918a.11 Housekeeping. Subpart B deals with characteristic operations associated with marine terminals, such as cargo handling, line handling, and work in hazardous atmospheres.

Section 1918a.11(a) contains general housekeeping provisions that are based essentially on requirements in § 1918.91 and on sections 3.1.12 and 3.1.13 of ANSI MH9.1 and which accord with SAC recommendations (Ex. 2: 13i) on this topic. The provisions in this section are designed to prevent tripping and falling accidents, injuries caused by sharp objects such as nails, and struck-by accidents caused by falling objects. Paragraph (b) is similar to § 1918.43(a)(1) and is included because some vessels still use hatch beams and covers, and this equipment is occasionally placed ashore in the terminal. Proposed paragraph (c) is a housekeeping precaution that is designed to ensure that employees have unobstructed access to vehicles, buildings, and vessels at all times.

Section 1918a.12 Slippery conditions. Section 1918a.12 contains a performance requirement stipulating that employers eliminate walking-and-working surface hazards at work stations and walkways, both inside and outside the terminal's structures. Examples of these hazards are slippery floors caused by spilled liquids or by oil leaking from equipment, and icy surfaces on piers or aprons. Means of eliminating these hazards might include applying sawdust or other absorbent material to the slippery area, cleaning up spills entirely, or applying sand or salt. ANSI MH9.1 (section 3.1.16) is more detailed in its coverage of this topic than the proposed requirement, which uses a more performance-based approach. The proposed provision's language reflects the fact that weather conditions, for example, may make it impossible for an employer to keep all terminal walking and working surfaces completely slip-free at all times. This would be particularly difficult to accomplish in outdoor areas exposed to the marine environment. However, since recent estimates (Ex. 59: Table 1) indicate that falls on the same level account for approximately 9% of all occupational injuries, the importance of efforts to eliminate slip and fall hazards cannot be overemphasized.

Section 1918a.13 Slinging. Slinging cargo is addressed in proposed § 1918a.13, and the provisions are based essentially on equivalent regulations in Part 1918 and section 8.3.1 of the MH9.1. Paragraph (a) is based on §§ 1918.82(a) and 1918.81(a), and requires that drafts (loads of cargo) be built or hoisted in a way that will prevent the cargo from falling during hoisting; particular ways of achieving this goal are not specified. The proposed provision also stipulates that drafts be safely slung before hoisting, and that any loose protruding pieces be removed to prevent employee injury. Examples of means that might be used to comply are restraining logs in bunks and banding or tying the topmost tier of the draft. Methods of hoisting that reduce the risk of the draft slipping during the lift are, for example, lifting the draft squarely in the middle of the draft, and taking care not to "jerk" the winch mechanism. This provision is not intended to apply to the preliminary hoisting of cargo, such as the small amount of lifting involved in "breaking out" (hoisting cargo a few inches to allow slings or other gear to be passed under the load).

Proposed paragraph (b), based on § 1918.81(e), allows baled cargo to be lifted by straps only if the straps are strong enough to support the weight of the bale and only if a minimum of two hooks, each placed in a separate strap, is used to provide an additional safety factor should a band or strap break or a hook disengage during hoisting.

In paragraph (c), OSHA is proposing a newly developed provision restricting the means of hoisting bundles of certain types of cargo. For example, some types of cargo, such as pig iron, dunnage, or copper ingots, should not be hoisted by straps that are not intended for hoisting use; unless the bands, straps, or ties are designed for hoisting and are strong enough to support the load, a means such as slings must be used to contain these loads during hoisting.

Proposed paragraph (d) is also a newly developed provision, and it deals with the hazards associated with hoisting unitized loads, which have come into widespread use in the last decade. Finished lumber, bales of wood pulp, and paper products bound together are among the drafts most commonly unitized. The handling gear for hoisting these often bulky and heavy loads is usually specifically designed for the load in question. However, in the absence of any regulatory requirement, OSHA and its predecessor agency (and several agencies of foreign governments) have occasionally determined that the particular means of unitization and handling are safe by witnessing an on-site trial deliberately conducted under adverse working conditions. In such cases, approval has been granted on an individual basis. The provisions proposed in paragraph (e) simply place these procedures on a firmer regulatory basis. The testing process must be certified by an agency accredited under Part 1919, to ensure impartiality. The provisions in paragraph (e) do not require that each load or unit from a shipment be tested, but they are intended to apply to particular types of unitized loads and to a particular means of handling them. The suitability and

safety of each type of load and each means of hoisting would only need to be established and documented once.

Proposed paragraph (f) stipulates that unitized loads with seriously damaged banding or strapping be handled by whatever special and additional means, such as slings, may be necessary to ensure the safety of employees below.

Paragraph (g) proposes that case hooks only be used to hoist cases specifically intended to be used with these hooks. This rule is not intended to prohibit "breaking out" of cargo, i.e., lifting it a few inches to pass slings or other gear beneath the load, but is intended to guard against accidents that may occur if types of packaging unsuited to handling with case hooks are hoisted by this means. Cases intended for handling with hooks have stencilled marks indicating where the hooks are to go, and these cases are intended to be used for one lift only. A similar provision is found in § 1918.81(d).

Proposed paragraph (h) is based on § 1918.81(f) and requires that ropes (tag lines) be used to guide loads requiring manual guidance, to prevent the load from injuring employees. This provision would only apply to special types of lifts, for example hoisting a 30-foot-long crate that must be maneuvered with ropes to keep it from striking against a structure and breaking. The provision also stipulates that any guide ropes used be long enough to aid in directing the load.

Paragraph (i) is a cross-reference to a proposed provision covering the handling of intermodal containers.

Section 1918a.14 Stacking of cargo and pallets. Proposed § 1918a.14 stipulates that cargo and pallets stacked in tiers be placed so they will not slide or collapse; MH9.1 contains a similar requirement (section 4.2.9.5); the equivalent provision for shipboard application appears at § 1918.83(a) but is restricted to cargo because pallets stacked high enough to be a hazard are rarely found on board ship. The proposed provision essentially agrees with the recommendation of the SAC (Ex. 2: 83i); it is not intended to imply that cargo or pallets need to be stacked so securely that they will be able to withstand a major impact, such as being hit by a vehicle.

Section 1918a.15 Coopering. The proposed section on repair of damaged or leaking cargo packaging (coopering) (§ 1918a.15) provides that packaging repair activities be performed in a manner that is not hazardous to coopering employees, but it does not restrict this work to particular locations because it is not always possible to move damaged cargo to a special repair site. Examples of cargo and cargo packaging which would be difficult or impossible to move to a special repair area are sacks of coffee beans and barrels of nails. The proposed requirement does not prohibit coopering in place as long as the employees doing the repair work are not exposed to vehicle traffic, overhead loads, or other hazards.

Section 1918a.16 Line handling. Section 1918a.16 covers line handling, a topic also addressed by ANSI MH9.1 (section 3.14). The proposed provisions ensure a safe walkway for linemen required to handle heavy mooring lines along the water edge of the terminal area, and in cases where the walkway between the vessel's berth and a terminal structure (stringpiece or apron) is too narrow, the proposal requires a grab rail or grab line for linemen to grasp. Another provision directed at the same hazard, falling into the water and drowning, appears at proposed § 1918a.95(c).

Section 1918a.17 Railroad facilities. Railroad facilities and operations at marine terminals are addressed in § 1918a.17; no other OSHA standard specifically covers these facilities, although section 3.12.3 of MH9.1 does. Proposed paragraph (a) prohibits employees working in a railcar that has a defective and unsafe floor; if the floor is rusted out or otherwise unsafe, a steel plate or other means of supplemental flooring would have to be supplied before work continues.

Proposed paragraph (b) is intended to avoid the injuries that might occur if employees walk between or climb through railcars on the way to or from their work stations; section 3.12.4 of ANSI MH9.1 addresses the same hazard. This provision does not apply to walking between standing railcars that are more than 10 feet apart on the same track, because OSHA believes this distance is sufficient to ensure that no employee will be caught between two cars if one of the cars moves. OSHA would welcome accident data or other information concerning the adequacy of this distance for employee protection.

Paragraph (c) ensures that no employees are accidentally left in a railcar at the close of works; a similar provision appears at section 3.12.5 of ANSI MH9.1. For example, an employee cleaning a tank car may accidentally be locked up in the car overnight, with the tank secured, and be killed by toxic fumes or lack of oxygen.

Accidental railcar movement is addressed in proposed paragraph (d), and the provision agrees essentially with section 3.12.6 of ANSI MH9.1. Inadvertent movement of a car could injure employees working in or around the car; an example of means of preventing railcar movement is chocks.

The Advisory Committee recommended (Ex. 2: 51i) a "blue flag" requirement (a warning flag placed to notify railcar operators that men are working between two cars). OSHA has adopted this recommendation, although the color of the warning flag is not specified, in proposed paragraph (e) because workers in, on, or under a railcar are exposed to serious injury if an engine or car hits the car in which they are working. OSHA welcomes data about the hazards of working in this situation and information about other alternate means, such as derails, which might be used to provide equivalent protection against this hazard.

The next proposed provision, paragraph (f), requires material protruding from railcars to be removed or repositioned before cars are moved, to prevent projections from hitting employees walking or working near the cars.

In paragraph (g), OSHA addresses the potential for injury associated with the uncontrolled and unanticipated movement of unpowered railcars (a practice colloquially known as "humping" railcars) in areas where employees are walking, driving, or working. The proposed provision is not intended to apply to railcars being moved by locomotives, car pullers, winches or by other controlled and suitable means or to prohibit car-dumping operations in a bulk terminal. The requirement would apply, however, when a shift engine is used to push a railcar and then stops, sending the car rolling down the track. The SAC committee made two recommendations on this matter (Ex. 2: 52i): That only "positive means" be used to move unpowered cars, and that railcars without engines not be moved unless "provisions are made to safely control the movement. . . ." The proposed requirement incorporates these suggestions and would provide the employee protection envisaged by these recommendations.

Freight car doors, addressed by proposed paragraphs (h), (i) and (j), may cause accidents. For example, damaged car doors may fall on workers trying to open them or a worker opening a car door may be crushed by a stream of cargo that has shifted against the door during transit. In addition, if the forks of a fork lift truck are used to pry open a car door, the wheels of the truck may become wedged between the railcar and the platform, or the door of the car may fall on the truck driver. Section 3.13 of ANSI MH9.1 prohibits using power

trucks to open or close jammed railcar doors, but OSHA believes that industrial trucks fitted with specially designed door-opening attachments can perform this operation safely. The proposal does stipulate, however, that power trucks that do not have such attachments may not be used to open jammed doors; in such cases, car door openers are required to be fitted to the doors of the car. Proposed paragraph (i) also requires drivers to stand clear while freight car doors are being opened, to avoid being hit by falling cargo. OSHA has issued an interpretation for general industry on the use of acceptable attachments for opening freight car doors (Ex. 25).

Proposed paragraph (k) requires that employees leave flat cars and gondolas when loads are being moved overhead; employees are needed in the railcars to do such things as hook up drafts and land and stow cargo, but having them leave the cars during actual overhead hoisting should prevent many serious crushing and falling injuries. Another provision of the proposal (§ 1918a.71(g)(2)) also prohibits standing or walking under suspended containers. Proposed paragraph (k) also requires the end gates on the railcar to be secured so that an employee leaning against a gate will not fall off the railcar.

In paragraph (l), OSHA is proposing a new provision that requires the operator of the railcar dump mechanism used in handling high-volume bulk cargo (such as coal) to have an unobstructed view of the cars being dumped, to avoid dumping cars that have employees in them or dumping material on employees working near the cars.

Proposed paragraph (m) requires hand switches that are recessed to be enclosed with a cover or other device to provide a level working surface for vehicles and employees engaged in cargo handling on the apron. Section 3.12 of MH9.1 recommends identical coverage.

Warning signs to protect employees from being hit by a railcar are addressed in proposed paragraphs (n) and (o). The first provision requires signs to give employes warning of potential railcar movement at such places as blind corners, doorways opening directly onto the tracks, or at any other place where an employee might accidentally step in front of a moving railcar because it is not possible to see the tracks adequately. ANSI MH9.1 addresses this potential hazard in a similar way in section 3.12.1.

Proposed paragraph (o) requires warning signs to alert employees of insufficient clearance (less than 2 feet) between a railcar and another object, structure or the water; this requirement would prevent an employee from being crushed or from falling into the water.

Section 1918a.18 Log handling. Section 1918a.18 covers log handling cargo operations; it is based on the Washington state standard (WAC 296–56–520, (Ex. 3:45)) and was developed with the assistance of the staff of the Washington Division of Safety, Department of Labor and Industries. Much of the cargo handled in Pacific Northwest ports consists of outbound logs, although other ports also handle cargo of this type. The SAC recommended adoption of the provisions in this section (Ex. 2:143i, 144i).

Paragraph (a) proposes that log containers (bunks) have rounded corners and parts to prevent damage to slings, which could, in turn, cause a load to fall. Proposed paragraph (b) requires that logs be prevented from rolling off the sides of vehicles and striking nearby employees; binders or lashings might be used for this purpose.

The next proposed provision, (c), stipulates that at least two slings (or other gear intended for the purpose) be used to handle logs to prevent them from sliding or slipping from the sling during hoisting. Proposed paragraph (d) prohibits stacking of more than one tier of logs, to prevent the hazard caused by spreading and rolling logs that have been improperly stacked. The same hazard is addressed by proposed paragraph (e), which requires that logs be adequately supported to prevent spreading during hoisting.

Section 1918a.19 Movement of barges and railcars. Section 1918a.19, which covers the movement of barges and railcars in marine terminal areas, is similar in intent to the requirements appearing at § 1918.84(c) and at section 3.12.8 of ANSI MH9.1. The proposed provision prohibits using runners and rigging from vessel cargo booms, cranes, derricks, or other unsuitable equipment to move barges or railcars, and parallels the protection against this hazard provided in the longshoring standard. The proposal, however, extends the prohibition to shore cranes and other shore-based equipment. The proposed requirement is intended to prevent the widespread practice of moving barges and cars by hooking them to the ship's cargo gear or to vessel or shore-based cranes, a practice which can lead to the crane capsizing because large and improper stresses are imposed on the boom at angles for which the equipment was not designed, or which may structurally damage the crane or derrick, causing subsequent failure.

Section 1918a.20 Interference with communications. Cargo handling is a complex operation requiring close cooperation and effective communication among supervisory personnel, operators, and other workers. Section 1918a.20 requires that high noise levels, such as those that might be caused by scaling the sides of vessels, not be permitted to interfere with the communication essential to safe cargo handling; this paragraph is based on a similar provision from § 1918.95(a).

Section 1918a.21 Open fires. A prohibition against any open fire in a marine terminal (§ 1918a.21) has been incorporated into the proposal on the recommendation of the SAC (Ex. 2:15i); some committee members felt that any open fire, including a fire in a drum and used to warm employees' hands, represented a significant safety hazard in the marine terminal environment. OSHA invites specific comment on fire hazards in terminals, to aid the Agency in preparing the final rule on this topic. For example, would restricting open fires to designated areas provide adequate employee protection against unwanted fires?

Section 1918a.22 Hazardous cargo. Section 1918a.22 deals with the subject of hazardous cargo, and is based on OSHA's general industry coverage of atmospheric contaminants, and the Coast Guard (Department of Transportation) Hazardous Materials Tables. As defined in proposed § 1918a.2(p), any substance covered in Subpart Z of OSHA's general industry rules or included in the Hazardous Materials Table or Hazardous Materials Regulations of the Coast Guard, Department of Transportation (49 CFR Part 172) would be considered hazardous cargo. In addition, any substance not specifically described by name in the table or regulations of 49 CFR Part 172 noted above, but which would be categorized as hazardous in 49 CFR Part 172, e.g., a combustible liquid or an explosive material, would also be considered hazardous cargo. This category of hazardous materials has been included in the proposal to ensure that hazardous chemicals and substances that were developed or determined to be hazardous after publication of the lists in Subpart Z and 49 CFR Part 172 will be handled in a manner that will protect employees from harmful exposure. The proliferation of new chemicals and combinations makes the inclusion of this additional safeguard essential.

It is important to note, however, that although any substance included in the proposed definition of "hazardous" has

the potential to cause harm, specific circumstances vary, depending on the toxicity of the substance involved, the duration of the exposure, and the susceptibility of the individual exposed. In the case of hazardous cargo moving in trade, these circumstances occur rarely and only by accident, because cargo of this type is contained in sealed and intact packaging, which prevents employee exposure entirely. It is only when such packaging leaks or breaks that hazardous exposures can occur. The precautions for handling hazardous cargo included in the proposal are intended to prevent such occurrences if at all possible and to protect employees from harmful effects when they do occasionally occur. Examples of such potentially hazardous cargo are chlorine, hydrochloric acid, asbestos and many other chemicals.

Proposed paragraph (a) requires the employer to determine the nature of the hazardous cargo to be handled and then to inform employees both of any potential hazards and special precautions required to handle the cargo and the proper methods for cleaning up any leaks or spills.

Proposed paragraph (b) requires that hazardous cargo be handled by methods that will prevent damage to the container, to minimize the risk of employee exposure. Examples of appropriate precautions might be nets or lashings.

Paragraph (c) proposes precautions to be taken to reduce exposure to hazardous substances that have leaked or spilled from containers. For example, if leaks or spills occur, employers are required to clear the danger area of personnel other than those engaged in the cleanup operations, to provide appropriate protective and cleanup equipment, and to instruct employees in the proper method of cleaning and disposing of the hazardous substance. The provisions in proposed § 1918a.22 are similar to provisions 8.2.1, 8.2.2., and 8.2.3 of ANSI MH9.1, and to material recommended by the SAC (Ex. 2:140i–141i).

Section 1918a.23 Hazardous atmospheres and substances. Proposed § 1918a.23, Hazardous atmospheres and substances, is designed to provide protection from atmospheric hazards which are not specifically addressed in other proposed sections. The Advisory Committee recommended (Ex. 2: 56i) that this section of the draft standard not be included in the proposal. Instead, the SAC recommended including a single section covering all hazardous atmospheres in confined spaces. This recommendation was not adopted because OSHA believes that atmospheric hazards should be addressed wherever they occur in the terminal environment, regardless of the type of space in which they occur. Accordingly, this proposed section is intended to apply to vehicles, tanks, rooms and other spaces, to contaminants such as the vast array of hazardous chemicals carried as marine cargo, and to oxygen-deficient atmospheres occurring in any marine terminal situation. The substances, types of terminals, and operations specifically excluded in paragraph (a) are addressed individually in other sections of the proposal.

In the final standard, OSHA is considering incorporating the requirements from proposed §§ 1918a.23, 1918a.24, and 1918a.25 into a single section covering all types of hazardous atmospheres found in marine terminals. This consolidation would eliminate many redundant provisions, and would appear to offer equivalent employee protection. OSHA welcomes comments on the advantages and disadvantages of covering hazardous atmospheres in a single, rather than in separate, sections.

Paragraph (b) is generally based on § 1918.86 of the maritime regulations, although it has been adapted to apply to shoreside conditions. It requires that any necessary testing to determine whether a hazardous atmosphere exists be conducted by a properly equipped person designated by the employer, and that records of test results be kept for a minimum of 30 days, in accordance with a SAC recommendation (Ex. 2: 56ii).

The proposed provision appearing at (c) stipulates that in situations where mechanical ventilation is required to maintain an adequate and safe atmosphere, atmospheric tests be conducted as often necessary to ensure that the atmosphere is below permissible levels for the chemical involved.

Paragraph (d) addresses entry into hazardous atmospheres. The proposed requirements specify that only a designated and properly equipped and instructed person be allowed to enter a hazardous atmosphere, which might be necessary in a rescue attempt or to clean up after a spill. This section of the proposal also requires that prepared and equipped standby observers monitor the activity of any employees in spaces containing hazardous atmospheres, and that no ignition sources be permitted in such spaces. The importanct of training both workers and standbys involved in entry and work in hazardous atmospheres cannot be overstated. Accidents in these situations are often fatal and multiple, involving both workers and rescuers (Ex. 24).

The requirements in proposed paragraph (d)(4) recognize that atmospheres containing oxygen levels of less than 19.5% are inadequater for performing hard work; humans breathing oxygen-deficient atmospheres are unable to perform strenuous exercise or even to sustain a moderate level of exertion. Cleaning a tank car in a terminal is an example of work in an atmosphere that might be oxygen-deficient. The proposed 19.5% level is consistent with Coast Guard requirements (Ex. 65). OSHA's existing maritime regulations (29 CFR Parts 1915, 1916, 1917, and 1918) allow a minimum of 16.5% oxygen, but these provisions are presently under review and will be changed in the near future.

Although proposed paragraph (e) addresses a subject, asbestos, already covered by Subpart Z of the general industry regulations (29 CFR Part 1910), the Advisory Committee recommended (Ex. 2: 132i) inclusion of a provision dealing with the proper method of cleaning asbestos spills, a suggestion with which OSHA concurs. In practice, asbestos-containing cargo is almost never moved in trade in anything but heavily protected, sealed and intact packaging. However, the proposed requirements would provide employee protection in the event of asbestos spills.

Section 1918a.24 Carbon monoxide. Section 1918a.24 addresses carbon monoxide, a common hazard which is also dealt with in § 1918.93(a) of the longshoring regulations and in ANSI MH9.1 (section 3.18). Proposed paragraph (a) specifieds maximum carbon monoxide levels of 50 ppm as a time-weighted average, with a 75 ppm ceiling level. These levels agree with those of the Coast Guard (46 CFR Section 35.70–20(d)), and OSHA general industry standards (Supart Z of Part 1910), but OSHA's existing longshoring regulations (§ 1918.93(a)) allow a 100 ppm ceiling; the Agency plans to propose reduction of this figure to 75 ppm when Part 1918 is revised in the near future.

Proposed paragraph (b) contains a performance requirement and is intended to provide worker protection while allowing employers to test at intervals determined by the particular situation. For example, most transit sheds and other similar structures in marine terminals have high ceilings and numerous openings, so that maintaining a safe atmosphere generally poses no difficulty. However, since many vehicles may operate in these spaces simultaneously and not all spaces have

good ventilation, the employer should be prepared to monitor such work areas. Refrigerated and similar confined spaces that have very limited natural ventilation would require almost constant testing and additional ventilation to protect employees adequately. Enclosed highway vehicles or railcars in which an operating internal combustion engine is working might also develop a sufficient carbon monoxide level to be hazardous to an employee working in the car. OSHA is particularly interested in receiving comments giving other examples of marine terminal work situations in which hazardous carbon monoxide levels occur.

Proposed paragraph (c) requires that only designated persons using NIOSH-certified carbon monoxide measuring instruments make these tests, to ensure accurate testing and interpretation of the results. The tests required in this section should be made in the specific area where employees are working, to avoid misleading results such as may occur when samples are drawn from sources distant from the employee exposure area. The last paragraph in this section specifies that records of all tests required in this section be maintained for 30 days.

Section 1918a.25 Fumigants, pesticides, insecticides, and hazardous preservatives. Section 1918a.25, Fumigants, pesticides, insecticides, and hazardous preservatives, is directed to the atmospheric contamination associated with the use of these substances. Cargo that is frequently fumigated includes grain, tobacco, cotton, and other agricultural products; exposure to fumigating agents may cause severe illness or even death, depending on the toxicity of the agent, the level of exposure, and the susceptibility of the individual exposed.

Proposed paragraph (a) states that employers must ensure that only equipped and designated employees enter a space if cargo has been stored, handled, or treated in the space with one of these substances.

Proposed paragraph (b) specifies that tests to determine concentrations of chemicals be appropriate for the specific hazard or hazards involved, be conducted by persons designated by the employer, and be performed as often as necessary to protect employees. The recordkeeping provision that applies to this section appears at proposed paragraph (c) and requires that records of tests be kept for a minimum of 30 days. Provision (d) stipulates that only designated persons be permitted to apply chemicals to cargo; the Environmental Protection Agency (EPA) and several state agencies presently require that persons applying fumigants have EPA or state approval, which would be deemed to meet this requirement.

Paragraph (e) makes clear that only designated persons who have been instructed about the hazard and the applicable precautions and who know how to use the appropriate protective and emergency equipment are permitted to enter a space containing a hazardous atmosphere; further, persons entering must be protected both by respiratory and emergency equipment meeting the requirements of Subpart E of this part, and equipped and prepared standby observers must monitor employee activity within the space.

In paragraph (f), OSHA proposes that danger signs identifying hazards and precautions and providing emergency treatment instructions be posted in any area in which a pesticide, fumigant or hazardous preservative has created a hazardous atmosphere. This proposed provision is in keeping with modern safety and health practices and OSHA's efforts to increase the level of employee awareness of specific workplace hazards.

Section 1918a.26 First aid and lifesaving facilities. Proposed § 1918a.26 treats the subject of first aid and lifesaving facilities and is based primarily on § 1918.96 of the longshoring regulations and section 8.10 of ANSI MH9.1. The SAC recommended that employers be required to "keep related records of occupational diseases" (Ex.2:156ai), a recommendation not adopted because OSHA's existing medical recordkeeping requirements (29 CFR Part 1904) are more specific and more comprehensive than those recommended by the Committee.

Paragraph (a) stipulates that employees be instructed to report all work-related injuries to their employers; this proposed provision is designed to improve on-site treatment of occupational injuries and accidents, and simultaneously to reduce worker morbidity and lost workdays in this high-hazard work environment. Accurate employee reporting also aids in increasing the responsiveness of accident prevention programs to particular workplace hazards.

In proposed paragraph (b), OSHA defines the employer's responsibilities to provide first aid; the requirement is based on § 1918.96(a) of the longshoring regulations and is more extensive than the parallel general industry provisions (§ 1910.151). The proposal states that the employer must keep a first aid kit at the site where work is being performed, and must additionally ensure that a person holding a current first aid certificate is at the terminal. No particular first aid course or approving agency is designated, so long as the certificate is issued by a responsible organization which requires successful completion of a course as evidence of qualification. An example of an acceptable organization is the American Red Cross. Employees qualified at levels above that of first aid, for example as paramedics, would be deemed to satisfy this requirement without a first aid certificate.

First aid kits must be weatherproof if they will be exposed to the weather, and each sterile item must be sealed individually. Individual items and, in some cases, sizes are specified; burn dressing is not required, as it is in the longshoring standard, because medical opinion now advises against its use. This proposed list of items, intended as a minimal requirement, would in many cases be augmented by items appropriate to the particular environment or type of work involved. Except for the deletion from the list of burn dressing and the addition of first aid dressing, the proposed list is identical to the one in § 1918.96(b) and section 8.10.2 of ANSI MH9.1.

Paragraph (d), which covers stretchers, parallels a similar requirement for shipboard use (§ 1918.96(d)), but does not specify the number or type of stretchers required, as section 8.10.3 of ANSI MH9.1 does. OSHA believes that a "readily accessible" stretcher (available within five minutes) and blanket will provide adequate employee protection. The requirement that the stretcher be permanently equipped with bridles for hoisting, which are essential when hoisting employees from a vessel, has been retained for the marine terminal environment because employees may occasionally have to be hoisted, for example over the side of a gondola car or from a crane.

The next paragraph, (e), proposes that a phone or equivalent means, i.e., radio, be available for emergency use; adoption of this language was recommended by the SAC (Ex.2:157i), and is intended to allow greater flexibility, without compromising safety, than is provided by a similar rule appearing at section 8.10.4 of the ANSI MH9.1 standard, which allows only a telephone. The expression "readily available" means within a three-to-five minute period.

Liferings and ladders to prevent employees from drowning are addressed in paragraph (f), which requires that both items of safety equipment be available within 200 feet of each waterside work area. A ladder is

necessary to allow an employee who has fallen into the water to climb back up to the dock or to be rescued. The proposed requirement recognizes that cargo is not worked along many sections of frontage and there is no threat to worker safety in these areas. All active frontage work areas would be equipped, under the proposed provision, with ladders and rings within 200 feet of any such area. Section 1918.96(e) of the longshoring regulations contains similar coverage. Ninety feet of lifeline must be attached to each U.S. Coast Guard approved lifering, a requirement based on an equivalent provision in § 1918.96(e) and on the Coast Guard rules. In addition, any employee working on a bridge or structure leading from the terminal to a distant vessel berthing installation is required to wear a work vest to prevent drowning in case he falls into the water. These berthing installations are isolated from the main terminal area, sometimes by as much as one mile, and immediate rescue might therefore not be possible.

Section 1918a.27 Personnel. Section 1918a. 27 addresses personnel qualifications. Proposed paragraph (a) is directed to the hazards associated with power-operated hoisting equipment, conveyors, or vehicles, including industrial trucks, and requires that all employees, except supervised trainees, be familiar with signs, signals, and operating instructions before operating such equipment or giving signals to the operators of hoisting machinery. This rule is based on § 1918.97(a) and is similar to paragraph 8.9 of ANSI MH9.1. The SAC recommended (Ex. 2:155i) adding "and recognized as competent by the employer" after "trained and experienced employees," a recommendation which OSHA has not adopted because it is the training and experience which are essential to safe operation; any training recognized by a responsible group or organization would therefore be deemed to meet this requirement.

In paragraph (a)(2), OSHA proposes requiring all machinery operators assigned after the final standard's effective date to pass a practical on-the-job operating examination and to be instructed by the employer in standard operating procedures. This provision is designed to upgrade the training and experience levels of equipment operators without requiring licensing or formal training. OSHA supports and encourages joint labor-management training efforts, which have often sponsored such courses in the past. The specific content of the practical examination and the topics of the training course are left to the employer's discretion.

Proposed paragraph (a)(3) is very similar to § 1918.97(b), and provides that employees with medical conditions that could be incapacitating not operate powered machinery. It is intended to protect both the employee with the medical disability and other employees working with that employee. The draft version of this requirement reviewed by the SAC allowed employees with disabilities to operate power-operated equipment, provided they were annually certified by a physician as fit for such employment; the Advisory Committee recommended deletion of this waiver requirement (Ex.2:156i), a recommendation that has subsequently been adopted in the proposal. The type of medical condition addressed by this proposed provision is one which could be suddenly incapacitating, such as serious heart disease, seizure disorder, or insulin-dependent diabetes. OSHA believes that employees with a history of such a serious medical condition should not operate powered equipment.

Paragraph (b) is a newly developed provision similar in intent to a requirement that has appeared in a labor-management contract for this industry (Ex. 27: 4). The proposed rule, which requires that supervisors be trained in accident prevention, would only apply to supervisors of more than five employees. It is designed to increase awareness of hazards and methods of accident prevention at the supervisory level, and thus indirectly at all levels of the work force. The requirement allows a phase-in period, to permit supervisors time to acquire such training. However, after the delayed effective date specified in this paragraph (two years from the final standard's effective date), newly assigned supervisors would be required to take such a course within three months of assignment. The training required would include, in addition to instructions in matters specifically pertaining to the operation to be supervised, instruction in those topics specified in proposed paragraph (b)(2). An earlier SAC version of this requirement stipulated that supervisors have "documentary evidence of satisfactory completion of a 30-hour training course in accident prevention"; the majority recommendation of the committee (Ex. 2: 156i) was that the 30-hour specification be deleted. OSHA believes that accident prevention training is the key to reducing workplace accidents, but agrees with the Committee's judgment that the precise length of the training course does not need to be specified. Since this provision is not based on a similar requirement in any existing maritime regulation, OSHA particularly seeks comments and any relevant information on this matter. The Agency would also welcome suggestions for topics that should be included in the training course.

Subpart C—Cargo Handling Gear and Equipment

Section 1918a.41 House falls. This subpart of the standard is devoted to the gear, machinery, and equipment used to handle cargo. The first proposed section, § 1918a.41, concerns house falls used with ship's gear in union purchase cargo-handling (using cargo runners from the ship and the terminal's hoisting equipment together), a subject not addressed in the present longshoring regulations (although section 4.1 of the ANSI MH9.1 does cover house falls). House fall gear includes spans and supporting members, winches, blocks, and standing and running rigging attached to a terminal facility and used in conjunction with the vessel's gear to load or unload cargo. This provision has been included because, although the use of conventional ship's gear and house falls has declined drastically in recent years, these rigging arrangements are still used at some locations (especially at inland terminals) and are often poorly maintained. Proposed paragraph (a) requires that span beams be secured to prevent them from falling. The next provision, (b), states that safe means of access to the house fall block must be provided for employees working with such rigging arrangements. The specific means is not specified, but fixed ladder and personnel guarding provisions specified in other sections of this document (§§ 1918a.112 and 1918a.120) would also apply here, if these means of providing access are chosen.

In paragraph (c), OSHA requires a visual inspection of loose gear used in house falls before each day's use. House fall gear is often located in difficult to reach places, and maintenance is therefore easy to overlook. The provision also prohibits the use of defective loose gear.

Section 1918a.42 Miscellaneous auxiliary gear. Section 1918a.42, Miscellaneous auxiliary gear, deals with several types of cargo-handling equipment, such as ropes, shackles, slings, and pallets. Each type of equipment is addressed separately. Proposed paragraph (a) covers loose gear, such as slings, chains, bridles, blocks, and hooks; provision (a)(1) requires that loose gear be inspected before use, not be used if defective, and be stored or placed to avoid being

damaged. Paragraph (a)(2) requires that loose gear be inspected visually during use to detect defects in the gear. Defective gear may not be used, and hooks, shackles, and similar gear must be discarded if distorted, because it is not possible to repair damage of this type without permanently damaging the gear itself. The proposed provisions in paragraph (a) derive from § 1918.61(a) and § 1918.66(c), but have been modified for shoreside application; they are also consistent with industry practice and with rules 302 and 331 of the 1979 revision of the Pacific Coast Marine Safety Code (Ex. 20: 13, 17). They are designed to ensure that defects in the gear, which could, for example, cause the load to be dropped, are detected and appropriately dealt with.

Paragraph (b) proposes the adoption of a new approach to the rating of wire rope and wire rope slings; the existing longshoring regulations (§ 1918.63) and other OSHA regulations (for example, § 1910.184(f)(1), Slings) provide tables listing wire rope ratings, which are to be used in preference to the manufacturer's rating for the rope in question. The present proposal does not include these rating tables, because rope manufacturers provide ratings for their products; ropes of the same size, material and construction but made by different manufacturers or in different countries may have different ratings, and the tables in the existing regulations do not cover many of the ropes presently in use in marine terminals. The proposal requires that the employer ascertain and have available the manufacturer's ratings for all wire rope and wire rope slings obtained after the date noted in the proposed standard. This provision also requires that manufacturer's ratings not be exceeded and that a safety factor of at least five be maintained for the common sizes of running wire used in falls, purchases, or light load slings; this is in accordance with a similar provision in § 1918.63(a).

Proposed paragraph (b) goes on to specify situations in which wire rope safety factors of five do not have to be maintained: in specialized equipment such as cranes that are designed to be used with lesser safety factors; in standing rigging applications such as guys on a house fall mast; and in heavy lifts and other purposes where rope with a safety factor of five would be impractical but for which the employer can demonstrate equivalent safety. These exceptions are necessary in these applications, for example in mobile cranes, where the Society of Automotive Engineers Standard SAE J959 has established a safety factor of three for standing wire and three and one-half for running wire, or in heavy lift applications where a safety factor of five cannot be achieved and the method of handling (slowly and without shock loads) ensures safety. Large-capacity cranes are not designed to carry wire rope with a safety factor of five, because the rope would be too large and too heavy for the crane to lift. In standing wire uses, such as guys, a lesser safety factor is also adequate.

Proposed provision (b)(2) prohibits any wire rope or sling from being used with any of the defects listed, and is a revision of § 1918.63(e)(4) of the longshoring regulations. The proposed requirements are essentially consistent with similar provisions of § 1910.184(f)(5), and some, ((b)(2)(i), (ii), and (iii)), are identical to those of the general industry standards. Proposed items (b)(2) (v) and (vi) are new provisions necessary to ensure safe use of wire rope; any strand or wire slippage in end attachments is a clear indication of rope wear, and more than one broken wire within an inch or so of an end attachment indicates impending fatigue failure.

Proposed paragraph (b)(3) is modified somewhat from a similar provision in § 1918.63(b). It stipulates that ends of splices, if covered, be covered so that the covering can be removed to determine the condition of the splices, and that methods used to blunt ends not damage the wire itself.

The proposed paragraph dealing with wire rope clips, (b)(4), is based on a provision in the longshoring regulations, § 1918.63(c), except that the proposal requires that the manufacturer's use recommendations be followed, and that Table C–1 be used for "U" bolt clips only in the absence of the manufacturer's recommendations. As noted above, this method is preferable to relying on manufacturers' ratings and recommendations in this instance because a single table cannot address all the types of clips now available for use in marine terminals, and because manufacturers provide use recommendations with their products. However, Table C–1 has been brought up to date and expanded to include clip requirements for ropes of one-half inch (or less) in diameter, which are now in common use. Requirements for spacing of clips for ropes smaller than one-half inch have not been included since those for one-half inch rope are suitable for lesser sizes as well.

Proposed provision (b)(5) prohibits securing wire rope by means of knots, and has been adapted from a similar requirement in the longshoring regulations, § 1918.63(d). Knots cannot be used to secure wire rope because this means of securing may reduce the rope's strength capability by as much as 50%. The proper working of a wire rope "machine" depends on the inner core and the outer lays working in unison, which cannot occur when the rope is bent.

Proposed paragraphs (b)(6), (7), and (8) apply to wire rope eyes and eye splices, and are essentially based on provisions 1918.63(e)(3), 1918.63(e)(1), and 1918.63(e)(2) of the longshoring regulations, respectively. Proposed paragraph (b)(6) prohibits the use of wire rope clips or knots to form eyes in bridles, slings, bull wires, or single parts used for hoisting, but is not meant to apply to standing rigging applications, such as guys, or to eyes used with lashings for cargo or dead ends of multipart purchases, where clips may be used. The proposed requirements for tucks in eye splices in paragraph (b)(7) are traditional, and similar rules appear in seamanship texts and other standard sources (Ex. 66: 570). Proposed paragraph (b)(8) also reflects standard industry practice, and is identical to the section on the same topic in the existing longshoring regulations.

Proposed paragraph (c) covers natural fiber rope, and follows the proposal's approach of relying on manufacturers' ratings, rather than tables, for rated capacities of rope. Though no requirement on splices similar to proposed provision (c)(2) is included in the existing longshoring regulations, the proposal reflects current industry practice and is identical to the requirement in § 1910.184(h)(3)(i).

Synthetic rope is addressed in proposed paragraph (d); reliance on manufacturers' ratings is particularly important with this type of rope because it is made of a variety of combinations of synthetic materials, each with different capabilities, ratings, and use recommendations. There are several publications dealing with synthetic ropes (Ex. 37, 38) and the various characteristics of each type. For example, nylon has the largest amount of stretch and is therefore inappropriate for hoisting, and some materials cannot be used around a drum because they will melt when stressed in this manner. No specific requirements are given for splices because such matters are covered by the manufacturer's recommendations. The general industry standard does not cover synthetic rope except that used in slings (§ 1910.184(h)).

Proposed paragraph (d)(2) is similar to § 1918.62(b). The formula and directions for substituting synthetic rope for manila rope less than three inches in circumference were devised by the rope

industry for the Bureau of Labor Standards, the American Bureau of Shipping, and the U.S. Coast Guard (Ex. 23: 5; Ex. 5: 18; Ex. 36: 5–9). This provision also appears in section 4.2.5 of ANSI MH9.1, and is the standard for the American Bureau of Shipping and the U.S. Coast Guard.

Proposed paragraph (e) defines the conditions requiring synthetic and natural fiber rope to be removed from service because continued use would be hazardous; this provision derives from and is compatible with § 1910.184(h)95), and also reflects current industry practice.

The proposed requirement for thimbles (paragraph (f)), which protect rope from excessive wear when it is attached to a ring or similar device, is newly developed and does not appear in Parts 1910 or 1918. It stipulates that properly fitting thimbles must be used when a rope is permanently secured to an attachment. Rope used in a temporary configuration, for example in a pendant, would not be required to be protected by a thimble.

The proposed provision addressed to synthetic web slings (paragraph (g)) was drafted after consideration of the applicability of § 1910.184(i) to the marine terminal setting; the increasing use of synthetic web slings makes requirements such as these necessary for safety. Paragraph (g)(1) is broader than the equivalent provision in the general industry standards (§ 1910.184(i)) because preslung cargo arriving in U.S. ports in international trade is occasionally bound by synthetic web slings which, though adequate, are not always marked with the manufacturer's rated capacities. Allowing sling ratings to be ascertained from the manufacturer would permit shippers or carriers to obtain ratings and thus to continue to use unmarked slings. Provision (g)(2) lists conditions under which synthetic web slings must be retired from service, and is identical to § 1910.184(i)(9), except for the additional disqualifying defect, "damage to fitting," that has been included in the proposed list. A damaged fitting may damage the sling to which it is attached or it may itself fail.

Proposed paragraph (g)(3) prohibits repair and reuse of synthetic web slings, because there is no method of repairing these devices without damaging them structurally.

In paragraph (g)(4), OSHA proposes that these slings only be used in accordance with manufacturer's use recommendations, which specify under which conditions slings of this type may be used. For example, nylon slings may not be used around acids, phenolics, or fumes, and web slings with aluminum fittings may not be used near caustic liquids.

Fittings are required by proposed paragraph (g)(5) to be smooth to prevent tearing of the sling, and they must also have rated capacities equal to that of the sling so the fittings will not fail under load.

Chains and chain slings used in hoisting applications are addressed in proposed paragraph (h), and the requirements essentially parallel those of the existing longshoring regulations (§ 1918.64). These provisions also require employers to depend on manufacturer's ratings rather than complex tables for rated capacities and use recommendations, and further state that these ratings must be available at the terminal.

Proposed paragraph (h)(2) prohibits using proof coil steel chain (common or hardware chain), or other chain not intended for hoisting, for slinging or hoisting purposes. Chain of this type is not strong enough for this use and would fail under load.

Paragraph (h)(3) states the inspection requirements for chains used in hoisting, and is based on similar provisions in the existing longshoring regulations (§ 1918.64 (b), (c), and (d)), which will be made identical to the proposed provisions when the longshoring rules are revised. Proposed paragraphs (i) and (ii) require visual inspection, by designated employees, of sling chains and their end fastenings before each day's use, and during use as necessary, to ensure that they have no operational defects.

A more thorough quarterly inspection of chains is required in proposed paragraph (h)(3)(iii). The month of the thorough inspection must be indicated by appropriate means, such as painting a link; using a tag to indicate that the chain has been inspected is usually unsatisfactory, because the tag often tears off during a lift. Proposed paragraph (h)(3)(iv) requires that any chain showing the maximum allowable wear at any point of the link, as specified in Table C–2, be withdrawn from service. In addition, paragraph (v) states that any sling showing an increase of more than five percent in a measured section or having a bent, twisted or damaged link or a raised scarf or defective weld must be removed from service. Damage of these types significantly reduces the strength of the chain.

Proposed paragraph (h)(4) concerns repairing chains and returning them to service, and is similar to the coverage of the same topic in the longshoring regulations (§ 1918.64(e)), except for the addition of requirements that proof tests not conducted by the manufacturer be certified by an agency accredited under Part 1919 of this chapter, and that test results be available at the terminal. Requiring certification will ensure that chains are inspected and tested at regular intervals.

Proposed provision (h)(5) goes beyond the equivalent provision of the longshoring regulations (§ 1918.64(f)) because it requires wrought iron chains in constand use to be annealed or normalized at least every six months, whether or not the manufacturer so recommends; the present rules only require annealing if the manufacturer has recommended it. Both normalizing and annealing involve heating, which restores the metal to its original strength. The proposed rule also requires that certificates attesting to this treatment be available at the terminal. Wrought iron chains for hoisting have not been manufactured for many years, but some chains made of this material are still in use, particularly on the inland waterways. The final proposed requirement of this paragraph prohibits annealing of alloy chains, which do not require such treatment and might be seriously damaged by the process.

The first two proposed provisions of paragraph (h)(6) are identical in effect to those of § 1918.64(g); they prohibit hoisting with chains that are kinked, knotted, bolted, or wired, because these actions stress the chain excessively and may thus damage it. The final proposed requirement in paragraph (h)(6) is intended to prevent the use of makeshift links or fasteners in cargo hoisting; this topic is not currently addressed in the longshoring regulations, but will be covered when Part 1918 is revised in the future. Makeshift gear arrangements may not withstand the weight of the loads hoisted in cargo handling operations.

Proposed paragraph (h)(7) requires hooks, rings, links, and attachments on sling chains to have rated capacities at least equal to those of the chains to which they are attached; this provision would prevent loading a sling with a heavier load than the sling attachments could bear. This requirement is very similar to a provision appearing at § 1910.184(e)(2).

Proposed paragraph (h)(8) stipulates that it must be possible to identify the size, grade, and rated capacity of chain slings from marks or other identification on the sling; this information needs to be readily available to ensure that slings are only used as the manufacturer intended. The provision is similar to that in § 1910.184(e)(1), but this topic is not

presently addressed in the longshoring regulations.

Shackles are dealt with in paragraph (i), and the first proposed provision adopts the approach favored in the proposal for other hoisting gear, that of relying on the manufacturer's ratings in preference to using a table (in this case, Table C-3) to determine the safe working loads for shackles of various sizes. This table should only be used in situations in which it is not possible to determine the manufacturer's ratings for the shackles in use. The table is intended for mild steel shackles. Most shackles in use today are made of steel alloy that are of higher quality than mild steel, and steel alloy shackles should be used with the appropriate ratings for such alloys. The equivalent longshoring regulation (§ 1918.65) relies primarily on a table to determine minimum safe working loads. Proposed paragraph (i)(2) stipulates that screw pin shackles used aloft (except in cargo hook assemblies) have moused or otherwise secured pins so that the pin cannot come loose. Shackles used in cargo hook assemblies that are not used aloft are accessible during handling, so their pins can be tightened easily and do not have to be additionally secured.

The next proposed paragraph, (j)(1), applies to hooks (excluding hand hooks), and again requires conformance with the manufacturer's rated capacities. In addition, hooks obtained after the date specified in this proposal would have to be tested as part of the certification process outlined in § 1918a.51(c)(6). Proposed paragraph (j)(2) requires hooks that are bent or sprung to be discarded; these deformations are evidence of permanent damage that cannot be repaired. The next two proposed provisions, (j)(3) and (j)(4), require case hook teeth to be in good condition to facilitate grasping and clamp-type plate hook jaws to be sound (for the same reason). Paragraphs (j)(2) through (j)(4) are based on the longshoring regulations (see § 1918.66(b), (c), (d), (e)). A proposed provision requiring loads to be applied to the throat of the hook has also been included in the proposal because loading the point overstresses and bends the hook.

Some provisions of paragraph (k), which addresses pallets, are similar to provisions in ANSI MH9.1 (section 4.2.9) and the longshoring regulations (§ 1918.67). The principle hazard of hoisting a load on a damaged pallet is that the pallet may give way while the load is suspended, causing cargo to fall on employees below. The first proposed provision, (k)(1), requires that pallets be made and maintained to carry loads safely; all fastenings on reusable pallets must therefore be of a type, such as bolts and nuts, drive screws, or helically threaded nails, that will hold securely. Proposed paragraph (k)(2) is a newly developed requirement stipulating that damaged pallets be removed from active work areas, marked as damaged, and stored away from the work site; this rule is intended to ensure that damaged pallets are not accidentally used to hoist cargo.

Proposed paragraph (k)(3) is based on § 1918.67(b), but has been expanded in recognition of the fact that wing-type pallets may occasionally have to be hoisted by means other than bar bridles; so long as these means are suitable for the load, pallet, and other pertinent conditions and provide equivalent safety, they may be used. The prohibition against hoisting lip or wing-type pallets by wire slings alone is included because this practice places employees working beneath the load at great risk, since these slings may cause the pallet to buckle and drop the load.

Loaded pallets that are visibly defective may not be hoisted, according to the proposed rule in paragraph (k)(4), until they have been placed on a second pallet that is acceptable, or are handled by other means, such as a sling, providing equivalent safety. This provision is similar to a requirement at § 1918.67(c).

Proposed paragraph (k)(5) has been shortened but is substantively identical to § 1918.67(d) of the longshoring regulations; the bridles for handling pallets of the types specified must be designed specifically for this use, in order to fit and lift these pallets securely.

The next provision, (k)(6), requires pallets not in use to be stacked or positioned in a manner that will prevent them from falling on employees or otherwise creating a hazard; the SAC recommended the proposed wording (Ex. 2:83i). The final provision proposed in this paragraph, (k)(7), prohibits the reuse of disposable pallets intended to be used for one-way transit only; these pallets are not sturdy enough to withstand repeated use.

Section 1918a.43 Powered Industrial Trucks. Section 1918a.43 contains the proposed requirements for powered industrial trucks used in marine terminals. This section was drafted after consideration of the general industry standards (Part 1910), the longshoring standards (Part 1918), the relevant ANSI standard (Ex. 67), the recommendations of the Advisory Committee, and the results of other staff research. The provisions in this section are intended to address employee hazards associated with the use of powered industrial trucks in a marine terminal; however, many of the provisions dealing with powered industrial trucks that appear in the various source documents are not directly related to employee safety and health, are unnecessarily detailed, or are design or construction specifications addressed to the manufacture, and these have therefore not been adopted for this proposal. OSHA invites comment on the adequacy of the coverage of the proposed provisions for hazards related to powered industrial trucks in the terminal environment.

Paragraph (a) delineates the scope and application of the section; the proposed provisions apply to every type of material-handling vehicle, except over-the-road vehicles, used in a marine terminal. Over-the-road vehicles are not included because these vehicles are covered by Department of Transportation regulations.

Proposed paragraph (b) prohibits an employer from modifying or adding parts to powered industrial trucks if the alteration would affect the vehicle's capacity or safe operation, unless the employer has obtained written approval either from the manufacturer or from a professional engineer before the alteration is made. The engineer must additionally have had experience with the equipment to be altered and must have consulted the manufacturer of the equipment. The instruction plates, tags, or decals on the altered equipment must be changed to reflect the new rated capacity and any changes in operating and maintenance procedures. This proposed requirement allows greater flexibility than the equivalent provision of the general industry standards (§ 1910.178(a)(4)), which only permits modifications approved by the equipment manufacturer. The types of modification to which this provision is addressed include the addition of counterweights or specialized devices, such as attachments for handling rolls of paper.

Proposed paragraph (b)(2) prohibits unauthorized riding on powered industrial trucks; however, when the employer authorizes riding, a safe arrangement, such as a seat or platform, must be provided. Section 5.1.8 of ANSI MH 9.1 also prohibits unauthorized riding; § 1910.178(m)(3) of the general industry standards is identical in intent to the proposed provision. Employees riding on industrial trucks are in danger of falling from the vehicle unless stable and secure seating is provided.

The proposed requirements for unattended industrial trucks are based on provisions in the general industry standards, § 1910.178(m)(5), and the

longshoring regulations, § 1918.73(j). They require that unattended vehicles be left with the load-engaging means, such as the fork or scoop, in the lowered position, the controls in neutral, and the brakes set. The final proposed requirement in this paragraph mandates blocking or curbing of wheels if a truck is left on an incline, as does § 1910.178(m)(7); this precaution is the usual practice throughout industry, and is intended to prevent the uncontrolled rolling of trucks.

Proposed provision (b)(4) prohibits the operation of powered industrial trucks inside a highway vehicle or railcar that has any visible structural damage, such as a floor that has rusted through, which might adversely affect employee safety. Railcars and other vehicles very often have unsafe floors. The usual temporary method of making these floors usable is to install a metal plate, a practice specifically required by Rule 1218 of the Pacific Coast Marine Safety Code (Ex. 20), by paragraph 3, Part V of the New York Shipping Association—International Longshoremen's Association's Joint Maritime Safety Code (Ex. 19) by paragraph 1910.184(m)(7) of the general industry standards and by section 5.2.10 of MH9.1.

The requirement proposed in paragraph (b)(5) requires that rated capacities be visible to the truck's operator so that overloads can be avoided.

As stipulated in proposed paragraph (b)(6), only stable and safely arranged loads weighing no more than the amount specified by the vehicle's rated capacity may be carried. This rule is based essentially on § 1918.73(f)(3) of the longshoring regulations and is similar to section 5.1.6.1 of ANSI MH9.1, but it goes beyond these provisions to address the stability and arrangement of the load; §§ 1910.178(o)(1) and 1910.178(o)(2) of the general industry standards deal with this topic in the same manner. An industrial truck may tip over, drop the load, or go out of control if it is either overloaded or if the load is not securely arranged and positioned so that the weight is properly distributed.

Three work practices that are important to industrial truck safety are proposed in paragraphs (b)(7), (b)(8), and (b)(9); these derive from equivalent requirements in the general industry rules (§ 1910.178). The first provision states that drivers must ascend and descend inclines slowly, to prevent the loaded truck from careening out of control or tipping over. A significant source of vehicle-pedestrian and vehicle-vehicle accidents is addressed in the second provision, which requires drivers to slow down and give warning of their approach at blind intersections and other places where visibility is limited.

The third work practice provision proposes that loads which would interfere significantly with the driver's view if carried in front of the driver, e.g., on the forks, be carried with the load trailing, i.e., with the truck moving in reverse.

Steering knobs, which were common before the advent of power steering, are prohibited by proposed requirement (b)(10) because they do not provide effective steering control and can themselves cause injury to the driver if the wheel spins. They are also prohibited for seated drivers in § 1918.73(i)(2), and ANSI MH9.1 (section 5.1.5) recommends against their use entirely.

Paragraph (b)(11) requires industrial trucks with cargo-lifting devices that reach across the load to lift from the far side (beyond the operator's view) to be fitted with mirrors or devices that will permit the operator to see the loading process clearly. The SAC recommended a similar requirement (Ex.2: 87ai), and MH9.1 contains a similar requirement (section 5.1.10.3). No similar rule appears in other OSHA regulations. The proposed rule would apply principally to large, specialized handling vehicles such as piggy packers that hoist containers or trailers by reaching across them and grasping them on the far side; most such vehicles are located in intermodal container-handling yards. OSHA would appreciate the views of interested parties on this proposed provision. For example, should OSHA also require that an employee on the ground supervise these lifting operations unless the operator has an unobstructed view at all times?

Paragraph (c) concerns the maintenance and repair of powered industrial trucks, which are essential to safe vehicle operation. The first proposed provision, (c)(1), states that only designated persons may perform repairs on these vehicles; it is similar to the general industry rule at § 1910.178(q)(1). The provision is intended to prevent unqualified or unauthorized persons from performing maintenance work on powered industrial trucks, a practice that may cause accidents.

The proposed requirement ((c)(2)) dealing with disconnecting the battery during electrical system repair (except when the power must be on to test or repair the system) is almost identical to the requirement at § 1910.178(q)(4), but would allow systems that must be energized during "troubleshooting" or servicing to have batteries connected only during these operations. The proposed procedure would protect employees from electric shock during repair work.

The next provision, (c)(3), proposes that replacement parts whose function might affect operational safety be equivalent in strength or performance capability to the original parts which they replace; this rule derives from a provision at § 1910.178(q)(5) and is designed to ensure that vehicles and components of their lifting apparatus are maintained and repaired in a manner that will preserve their original strength capabilities.

The proposed requirement in paragraphs (c)(4) governing brake systems on powered industrial trucks used in marine terminals has been developed specifically for this industry because failures of these systems may cause accidents. There is no equivalent provison in the general industry or MH9.1 standards, although both of these standards contain general repair and safety device provisions.

The proposed provisions in paragraph (c)(5) require that vehicles be maintained in proper working order and be checked by an authorized person each day of use, and that any safety device, such as a horn or sprocket or overhead guard, be in place and operable during use, unless specifically exempted (see paragraph (e)(iv) of this section). The last requirement in this paragraph stipulates that no truck having a fuel system leak or any other defect affecting safety, such as failing brakes, may be operated. Requirements in this paragraph are based essentially on similar provisions in the longshoring regulations (§ 1918.73(a)), ANSI MH9.1 (section 5.1), and in Part 1910 (§ 1910.178(p) (1) and (4)), and are intended to preserve the operational safety of industrial vehicles and to protect their drivers and other employees from injuries.

Paragraph (c)(6) would require that records of the daily truck inspection be kept at the terminal for at least thirty days, so that the equipment's maintenance and repair history is available at the terminal.

Truck repairs involving the fuel or ignition systems are required by proposed paragraph (c)(7) to be performed away from active work areas and in locations equipped with fire extinguishers or other protection against unwanted workplace fires. The general industry standards have a similar rule (§ 1910.178(q)(3)).

Paragraph (d) concerns power-operated industrial trucks approved for use in hazardous atmospheres. The first

proposed requirement defines "approved" as it is used in this section, i.e., approved by a nationally recognized testing laboratory for use in a particular hazardous atmosphere. According to the proposal, trucks used in such atmospheres are required to be approved except where U.S. Coast Guard regulations (33 CFR 126.15) apply; any approved vehicle must bear a label or identifying mark indicating testing laboratory approval. This topic is covered in great detail in § 1910.178 of the general industry standards; however, OSHA has concluded that in the marine terminal context, it is sufficient to state that power-operated industrial trucks used in hazardous atmospheres be approved for use in the particular hazardous atmosphere. (Classifications of hazardous locations are set forth in Subpart S of Part 1910.)

Fork lift trucks, a particularly hazardous class of powered industrial trucks, are addressed in paragraph (e). The proposed requirements appearing at (e)(1) are essentially similar to those in § 1918.73(b) and deal with overhead guards on fork lifts. The first proposed provision, (e)(1)(i), differs from the existing longshoring requirement in that overhead guards would only be required in situations in which falling loads present a hazard to the truck operator, since many tasks in a terminal are performed in open areas free of overhead hazards, such as suspended loads. The proposal also mandates that the guard be strong enough to protect against the sort of objects likely to fall against it; a guard strong enough to withstand the full impact of a capacity load would be so heavy that it would interfere with the vehicle's stability. This provision is almost identical to one appearing in the general industry standards at §>1910.178(m)(9). The proposed provisions at (e)(1)(iii) prohibit guards from obstructing the operator's view and require any openings in the guard to be smaller than any unit of cargo being handled.

Proposed paragraph (e)(1)(ii) requires guards to be built so that failure of the truck's mast tilting mechanism will not dislodge the guard; this requirement is similar in intent to paragraph (b)(4) of § 1918.73 of the longshoring regulations and section 5.1.1.4 of ANSI MH9.1. The overhead guard provision at (e)(1)(iv) states that any guard required by this paragraph may only be removed when work cannot be conducted with the guard in place, such as in areas of low clearance where the truck's operator is in no danger of hitting overhead obstructions or of being hit by falling objects; this proposed requirement parallels the rule at § 1918.73(b)(5). Paragraph (e)(1)(v) would require overhead guards to be large enough to extend over the operator during all truck operations, including forward tilt.

Paragraph (e)(2) addresses load backrest extensions, and is based on § 1910.178(e)(2) of the general industry standards. The proposal requires a load backrest extension if the fork lift operator might be exposed to a backward-falling load. This equipment would only be necessary for high lifts, in which the load is higher than the truck's mast. This subject is also covered in section 5.1.2 of MH9.1, although none of the detailed ANSI design requirements for extensions have been included in the proposal because these extensions are stock items.

Forks and their attachments and extensions are covered in paragraph (e)(3)(i), which is a similar but stronger version of a longshoring provision (§ 1918.73(e)). The proposed requirement adds that this equipment may only be used to perform the tasks for which it was intended by the manufacture; improper use of the forks (for example, to pry open a railcar or cargo door) may result in overturning the vehicle, dropping the load, or in causing other hazards. Proposed paragraph (e)(3)(ii) prohibits transporting employees on the forks of these vehicles, an extremely hazardous practice that has caused serious falls and other injuries (Ex. 49).

The proposed requirement concerning counterweights, (e)(4), states that these weights must be secured so that they will not fall. It does not require that they be permanently attached to the vehicle as long as they are secured sufficiently to prevent them from falling during vehicle movement. This provision has been drafted for this proposal and no similar requirement appears in the longshoring regulations.

The capacities and weights of fork lift trucks addressed in paragraph (e)(5). The first proposed provision, (e)(5)(i), requires employers to observe the rated capacities, with and without counterweights, of these vehicles. Rated capacities and vehicle weights (with and without counterweight) must be marked on the vehicle and be visible to the operator. Vehicle weights must be marked because cranes and ship's gear are often used to hoist these trucks, and if the capacity of the hoisting equipment is exceeded it may fail. This provision combines several requirements from § 1918.73(f) of the longshoring regulations, and the subject is also addressed in paragraph 5.1.6 of ANSI MH9.1.

The second provision of this paragraph, (e)(5)(ii), re-states the proposed requirement in (e)(5)(i) for the situation in which more than one fork lift is used to lift a load. (Two or more fork lifts are sometimes required to work together to lift a particularly bulky piece of cargo.) The proposed requires trucks working in unison not to lift a load exceeding the total combined lifting capacity of all the trucks lifting the load; exceeding this capacity could cause the vehicle or vehicles to tip over. The longshoring regulations contain the same provision (§ 1918.73(f)(4)), as does ANSI MH9.1 (section 5.1.6.2).

The practice of lifting employees on the forks of fork lift trucks is covered in proposed paragraph (e)(6). Provision (i) prohibits employees being lifted on the forks of the vehicle or on a pallet or load being hoisted on the forks. However, proposed paragraph (e)(6)(ii) would permit employees to be lifted on the forks only if a suitable platform is secured to the forks or lifting carriage. The platform would be required to have a railing meeting the requirements of § 1918a.112(c) and to be fitted with a toeboard if tools beng carried by employees might fall on employees below. The platform floor must also be skid resistant. Additionally, employees on the platform must have an emergency shut-off switch or other means of shutting off the power to the truck if they control elevation of the lifting carriage, and they must also be protected from moving truck parts and from overhead falling hazards. Unless the employees on the platform control the lift, the fork lift operator must remain at the controls at all times, and a final proposed provision allows only minor adjustment in truck position while employees are elevated on a platform. The proposed precautions for lifting employees on a platform attached to the forks or lifting carriage are compatible with requirements on the the same subject in § 1910.178(m)(12) of the general industry standards and in section 5.1.9 of ANSI MH9.1. However, the proposed provisions go considerably beyond the requirements of the OSHA general industry standards because the misuse if fork lifts to hoist personnel is reported to have caused accidents since these regulations were first developed (Ex. 49).

Paragraph (f) of proposed § 1918a.43 deals with bulk-cargo-moving industrial trucks such as front end loaders and is based on § 1918.73(c) of the longshoring regulations. Provisions of this paragraph require an operator's guard on crawler-type cargo-moving vehicles used in situations where the operator may be struck by an overhead projection or be hit by falling objects. Any guard

required, and its attachments, must be strong enough to withstand a load equal the pull necessary to deform the machine's draw bar.

Straddle trucks, not at present specifically addressed by any OSHA regulation, are covered in proposed paragraph (g). Operators mounting or dismounting from these trucks are sometimes exposed to contact with moving drive chains or other nip points. Provision (g)(1) proposes that straddle trucks have a permanent means of access, such as a ladder, equipped with any handholds necessary to ensure operator safety, and the proposed requirements of paragraph (g)(2) specify guarding of moving parts. Another source of straddle-truck accidents is addressed in proposed paragraph (g)(2)(ii), which requires personnel-deflecting guards around the leading edges of front and rear wheels when the truck is near employees, unless the truck has such protection built in. The final provision in this paragraph proposes that straddle truck operators have devices to ensure the greatest visibility possible in all directions, to avoid vehicle collision and pedestrian accidents. ANSI MH9.1 addresses these straddle truck hazards in a similar way (section 5.1.10).

Trailer-spotting tractors, also known as fifth wheels, hustlers, and by other names, are addressed in proposed paragraph (h); this topic is not presently covered by any specific OSHA regulation or by ANSI MH9.1. Trailor-spotting tractors are vehicles used exclusively and extensively within terminals to haul intermodal containers mounted on chassis; these vehicles are not covered by highway regulations. They are often not equipped with adequate handholds or adequate means of access to the fifth wheel, both of which are necessary to protect employees engaging and disengaging chassis. Secure access is addressed in paragraph (h)(1).The next proposed provision, (h)(2), stipulates that the rear windows of trailer-spotting tractor cabs be safety glass or regular glass protected by means such as screen, to avoid having the glass shattered and the driver injured by a flying brake hose.

Section 1918a.44 General rules applicable to vehicles. Section 1918a.44, covers general rules applicable to vehicles. It applies to material handing vehicles used in marine terminals, except for those matters, addressed in paragraphs (c) and (m), falling under ther jurisdiction of the Department of Transportation; examples of vehicles not covered by the proposed requirements are highway vehicles, intermodal containers on chassis, buses, and automobiles.

Paragraph (b) proposes that all private vehicles (except those carrying cargo) must park in designated areas that are not simultaneously being used for storage and parking. This proposed provision is similar to a requirement in section 5.2 of ANSI MH9.1. It is directed at accidents involving private vehicles and cargo-handling vehicles, such as the fatal accident in Houston caused by a private car colliding at night with a container chassis that had been parked in the terminal parking lot (Ex. 68). The SAC recommended that the provision prohibit using any terminal parking area for cargo storage (Ex.2: 98i), but OSHA believes that the language of the proposal allows more flexibility and achieves equivalent safety by limiting the prohibition to concurrent parking and storage use.

Proposed paragraph (c) addresses the hazard of uncontrolled trailer movement that would result from disconnecting a tractor from its trailer before the trailer's road wheels have been completely immobilized, for example by chocks. Front end support (such as that supplied by landing gear or a jack) mut also be supplied for the trailer, if support is necessary to prevent the trailer from tipping when a vehicle enters it to load or unload. The rear end of the trailer must also be supported (for example by a dock lock-on mechanism or a jack) if the trailer is of the less common type that could tip when a vehicle enters it from the rear. Both ANSI MH9.1 (section 5.2.3.) and the general industry standards (§ 1910.178(m)(7)) have similar provisions for front end support. However, the proposed requirement for rear end support is newly developed. One of the most common loading dock accidents occurs when a lift truck entering a trailer falls into the space between the trailer and the dock because the trailer has "crept" forward or tipped on end. The proposed requirements should prevent these and many other loading dock accidents.

Proposed paragraph (d) requires employers to ensure that operators of motor vehicles in a terminal observe the posted speed limits and any other traffic signs; the intent of this proposed requirement is identical to that of section 5.2.6 of ANSI MH9.1 and § 1910.178(n)(l) of the general industry standards.

Paragraph (e) proposes the posting of stop signs at blind intersections and at exits and entrances where visibility is limited, unless traffic signals, mirrors, or other means of eliminating the collision hazard are provided. Section 1910.178(n)(4) partially addresses the same hazard, as does section 5.2.7 of ANSI MH9.1. As noted above, vehicle accidents have become the most common type of accident in marine terminals.

The proposed rules in paragraph (f) mandating the establishment of vehicle routes, traffic rules, and parking areas within a terminal have been stated in performance language to be adaptable to the variety of conditions existing at container terminals. The specific means of achieving this level of traffic control is left to the employer's discretion, but the importance of these practices to employee safety cannot be overestimated.

Drivers of vehicles are required by proposed paragraph (g) to honk their horns to warn pedestrians of the approach of the vehicle, and vehicular traffic lanes crossed by employees or used for pedestrian passage must be equipped with signs or other means of warning drivers that pedestrians may be in the lane, according to proposed paragraph (h). The ANSI provision (section 3.22.8) on the same topic is almost identical to these provisions.

The hazards of areas such as check-in/check-out lines, which require both emplyees and vehicles to be present in the same area during the course of routine work assignments, are addressed in paragraphs (i) and (j). For example, employees checking the load on one vehicle might be hit by another container-carrying tractor moving into place in the check-out line. The first provision requires signs to be posted to warn drivers, while the next rule mandates a distance of at least 20 feet between the first two vehicles in a check-in or check-out line. The SAC recommendation (Ex.2: 63i) could be interpreted as requiring 15 feet between any two trucks, but it is only necessary to maintain this clearance between the first two vehicles because employees only work at the rear of the first vehicle, which then moves out of the terminal while the next vehicle moves up to be checked. Proposed paragraph (k) would prevent injuries caused by free-rolling vehicles left with their motors running.

Proposed paragraph (l)(1) states that a secure ramp must be provided for employees and vehicles to use to load or unload a vehicle whose end is elevated, and also requires the vehicle's wheels to be chocked or a dock lock-on device to be used to prevent accidents caused by inadvertent movement of the vehicle during loading or unloading; ANSI MH9.1 has a similar requirement (section 5.2.9).

Any ramp used is required by paragraph (l)(2) to have a safety factor

of four for any load being carried across the ramp.

The floors of highway vehicles, addressed in proposed paragraph (m), are required to be safe for employees and vehicles working in them, a requirement similar to an earlier proposed provision applying to railcar floors. Trailer and over-the-road vehicle floors are often rusted through or are uneven; metal plates can be used as supplemental flooring in many of these instances. Provisions in both the general industry standards (§ 1910.178(m)(7)) and ANSI MH9.1 (section 5.2.10) are directed to the same hazard.

Paragraph (N) proposes that cargo such as pipes, logs, or other products that could spread and roll, thus endangering employees working nearby, be secured against movement. Means of complying with this requirement might be lashing the cargo as a unit or placing it in a restraining device. The proposed provision would apply to flatbed trucks, platform containers and other conveyances without sides, and is included in accordance with a suggestion of the SAC (Ex.2: 99i). The ANSI MH9.1 (section 5.2.11) contains a similar requirement, although it applies to flatbed trucks only.

The proposed requirement that vehicles used to transport personnel in marine terminals be kept in good working order, with functional safety devices (paragraph (o)), has significant accident prevention value. Failure of the brake system, for example, could be caused by faulty maintenance procedures. The proposed provision derives from a requirement in the longshoring regulations (§ 1918.73(a)), but has been broadened beyond automobiles to include any vehicle used to transport personnel.

The final paragraph in § 1918a.44 proposes precautions to be taken during servicing of multi-piece rim wheels in the marine terminal environment. The proposed requirements in this section conform to those of the general industry standard for multi-piece rim wheels (§ 1910.177) recently published by OSHA (45 FR 6706, January 29, 1980). The principal hazard associated with the servicing of wheels of this type is the possibility of an employee being struck by a wheel component thrown from an inflated wheel during an explosive separation. These provisions apply only to servicing of tube-type vehicle tires that are mounted on multi-piece rims; paragraph (p)(2) defines a multi-piece rim. The hazards associated with servicing these rims are well documented and are discussed in the preamble to the general industry rule.

Proposed paragraph (p)(3) addresses employee training and competence in multi-piece rim servicing procedures, the most important element in any safety program designed to reduce the hazards associated with these wheel rims. Proposed requirements (p)(3)(ii)(A) through (G) detail the skills an employee must demonstrate to satisfy the competence qualification. Compliance with these requirements should greatly reduce or eliminate multi-piece rim accidents in terminals, because the greatest number of injuries have been shown to be caused by improper mounting procedures, use of damaged parts, and tire overinflation (45 FR 6707, January 29, 1980).

Employers are required by proposed paragraph (p)(4) to ensure that the servicing procedures included in provisions (p)(4)(i) through (p)(4)(ix) are observed when multi-piece rims are being serviced. These procedures are substantively identical to those in the general industry rule.

Paragraph (p)(5) requires that a chart containing the Department of Transportation, National Highway Traffic Safety Administration's instruction on the topic and appropriate for the types of wheels being serviced in the terminal be available, at the terminal, in addition to a current rim manual with the manufacturer's instructions for the wheels being serviced.

Restraining devices to be used when multi-piece rims are being inflated are dealt with in proposed paragraph (p)(6). These devices are essential to employee safety if the rim separates explosively from the wheel. The type of restraining device is not specified in the proposed provision, and a device would meet the requirement as long as it constrains rim components effectively. The proposed requirement at (p)(6)(ii) states that these devices must be kept in proper working order so that they remain capable of performing their function. The final proposed provisions in this paragraph, (p)(7) and (p)(8), require inflation hoses to have a clip-on chucks and be sufficiently long so employees can stay clear of the danger area during inflation, and also prohibit the use of any servicing tools not specifically recommended in the rim manual required in (p)(5). Finally, only those wheel components that are interchangeable accordingly to the chart or manual specified in proposed paragraph (p)(8)(ii) may be used interchangeably.

Section 1918a.45 Cranes and derricks. Proposed § 1918a.45 deals with cranes and derricks which are in use in the marine terminal environment.

The use of cranes and derricks is increasing on the waterfronts of the United States, and crane accidents are frequent (Ex. 43). A study of mobile crane accidents in construction, conducted by the Construction Safety Association of Ontario, showed that one-fifth of all fatal construction accidents involve cranes (Ex. 28: 2, 3). Of these accidents 23% involved rigging failure, 53% resulted from inadequate or improper securing or handling of loads, 12% were caused by overloading of the crane, boom collapse or crane overturning, and 6% involved operator error. OSHA statistics do not identify crane accidents that have occurred in marine terminals, but the Bureau of Labor Standards, OSHA's predecessor, did analyze and tabulate crane accidents on the waterfront (Ex. 43). This analysis showed that crane accidents were increasing with the increase in the use of this type of equipment in cargo-handling operations. OSHA welcomes any additional data on crane injuries and accidents associated with the use of cranes in marine terminals.

Many of the provisions in this section of the proposal are based on similar requirements in the longshoring regulations and many have been developed on the basis of staff research and after consideration of the Advisory Committee's coments on this subject. The final SAC recommendation (Ex. 2: 100i) urged OSHA to evaluate coverage of cranes and derricks in the general industry standards (§§ 1910.179, 1910.180, and 1910.181), and to consider applicable provisions from the longshoring standards as well. The crane and derrick regulations in the proposal are the result of any analysis of these standards of applicability, appropriateness, and adequacy in the marine terminal environment. As a consequence, the proposal addresses every type of crane currently used in a terminal facility; the coverage of this topic in the general industry standards only applies to a few of the types of cranes used in a marine terminal. Further, many of the extensive and stringent cerfication requirements for cranes used in the maritime industries (see 29 CFR Part 1919) have been incorporated into this proposal; many of these provisions, for example those for inspections, are more rigorous than similar provisions in the general industry standards.

Proposed paragraph (a)(1) specifically lists types of cranes covered by this section. The type of crane specified in (a)(1)(vi) has been defined to distinguish it from an ordinary straddle truck; for

the purposes of this proposal any straddle-type unit capable of straddling two or more intermodal containers is sufficiently large to be classified as a crane. Straddle trucks that only have the capability of lifting one container are not classified as cranes because they cannot lift the container high enough to endanger employees below.

Overhead bridge cranes are also addressed in this proposed section, although they are not covered in the existing longshoring regulations because there were few cranes of this type being used in maritime applications at the time these rules were promulgated. Since then, however, the use of this type of crane has increased, and there have been several serious accidents involving runaway bridge cranes in marine terminals (Ex. 34).

Paragraph (a)(2) proposes to exclude equipment adapted from industrial trucks; this type of modified equipment is also not classified as a crane in section 1918.3(r)(5)(i) of the longshoring regulations. A further example of equipment not classified as a crane or derrick is a chain hoist, which would therefore also not be included in the scope of this section.

Proposed paragraph (b)(1) addresses ratings for cranes and derricks other than bridge cranes, and is based essentially on § 1918a.74(a)(2) of Part 1918. It requires that cranes be equipped with a rating chart visible to the operator and containing all the manufacturer's capacity ratings, such as operating radii for all permissible boom lengths and jib lengths. This information is needed by the operator to ensure that lifts are within the crane's capacity. ANSI MH9.1 (section 5.3.1.) contains a similar requirement.

Proposed paragraph (b)(2) is similar to the provision at § 1918.74(a)(5) of the longshoring regulations, and requires employers to observe the appropriate rated working load limits. The next proposed provision, (b)(3), prohibits employers from increasing load ratings unless the manufacturer of the crane has approved the increase. Since a crane's rated capacity determines the weight of the load that can be hoisted, the rating can only be increased after careful analysis of the crane's design characteristics and subsequent structural alteration of the crane. If the manufacturer's services are not available, the proposal requires the employer to obtain an engineering design analysis, performed or approved by the agency certificating the equipment under Part 1919, to ensure that increasing the designated working loads will not capsize the crane or be otherwise hazardous. The paragraph's final proposed provision requires that any structural changes to equipment necessitated by increasing the ratings be performed before the equipment is returned to service. Examples of changes that would affect a crane's rating are using a different boom or wire of a different size. The requirements are similar to but more extensive than those in the certification standard (29 CFR 1919.77).

Radius indicators or boom angle indicators visible from the operator's station are required on certain cranes by the proposed rule that appears in paragraph (c); the longshoring regulations contain a similar provision, (§ 1918.74(a)(3)), as does ANSI MH9.1 (section 5.3.21). Indicating devices of this type are essential in cases where the weight of the load that can be hoisted safely varies with the radius or angle of the boom.

Proposed paragraph (d) prohibits placing sideloading stresses upon the boom, for example by using a crane to pull railcars or drag (bull) cargo. This provision recognizes that it is not always possible to avoid a small amount of sideloading but that to exert a significant degree of sideloading is to invite boom failure or other disaster. Both the longshoring regulations and ANSI MH9.1 contain similar prohibitions (§ 1918.74(a)(7) and section 5.3.20, respectively). OSHA would appreciate comments defining or specifying the amount of sideloading that presents a hazard to employees working on or near the crane under various working conditions, and information about the kinds of operations in which sideloading is likely to be a problem. Suggestions for work practices that would prevent sideloading, such as positioning the load directly beneath the hoisting mechanism, would also be appreciated.

The next proposed provision, (d)(2), forbids operation of a crane or derrick that has a functional defect that might affect the safety of the operation adversely. Examples of such defects are damage to the boom, boom cord, or lacing or to the wire rope. Rules directed at the same hazard appear at § 1918.74(a)(8) of the longshoring regulations, section 5.3 20 of ANSI MH9.1, Rule 1428 of the 1979 Pacific Coast Marine Safety Code, and the 1970 Joint New York Maritime Safety Code (paragraph 12, Part 1) (Ex. 20; 19).

The guards addressed in proposed paragraph (e)(1) would protect employees from contact with moving machine parts such as gears and chain or belt drives; equivalent requirements appear in ANSI MH9.1 (section 5.3 17.6), § 1910.181(j)(1)(i) of the general industry standards, and in a more general manner for shipboard use in § 1918.53(a)(1) of the longshoring rules. Caught-in-and-between accidents involving nip and shear points are common around any unguarded moving machine parts, and the proposed requirement is designed to prevent these injuries. The general industry requirements stipulate that the guards used must be strong enough to withstand the weight of a 200-pound load; the proposal states this requirement in more performance-oriented language.

Proposed provision (e)(2) requires crane hoisting hooks to be latched or otherwise secured so that the load cannot accidentally disengage. This requirement has evolved from a precaution originally directed at ship's burtoning gear (two fixed booms, each with a fall, attached to a common hook) and was meant to apply in situations when, for example, auxiliary gear such as an empty bridle was used with a rapidly moving ship's hook. Cranes designed for use ashore, such as mobile cranes, which have devices such as latches on their hooks, are becoming increasingly common in the marine terminal setting.

The next proposed provision, (f)(1), directs either that operating controls be marked or that a diagram indicating control functions be posted at the operator's station; this rule is designed to reduce the hazards caused by lack of familiarity with equipment. It is not uncommon in this industry for operators to be assigned to particular cranes or types of cranes with which they are not familiar, a practice that may contribute to operator error, especially in an emergency. The language of this requirement is based on that of § 1918.74(a)(2) of the longshoring rules and section 5.3.1 of ANSI MH9.1.

The controls on derrick and cranes are required by proposed paragraph (f)(1)(ii) to be self-centering so that they will return to the "off" position if the operator accidentally releases the control. This provision would become effective one year after Part 1918a becomes effective, to allow employers sufficient lead time to modify the controls or other equipment.

Crane boom stops are addressed in proposed paragraph (f)(2); no similar requirement appears in the existing longshoring regulations, because at the time these rules were promulgated there were relatively few cranes on the waterfront that needed boom stops. Since that time, however, the increased use of cranes of the types that should have these stops has led OSHA to propose this requirement; ANSI MH9.1

contains a similar provision (section 5.3.5). It would also eliminate the possibility of the crane operating at angles too great for safe lifting. The proposed requirement excludes cranes already "fitted with operable automatic limiting devices," such as some types of portal cranes. There is some debate about the effectiveness and practicality of certain types of boom stops, and OSHA welcomes any pertinent information on this topic that will aid in drafting the final rule.

Proposed paragraph (f)(2)(ii) requires the crane's purchase block to be secured so that it will not interfere with the whip line, which is used in hauling operations.

Foot pedal controls on cranes and derricks are required by proposed paragraph (f)(3) to have non-skid surfaces to prevent the operator's foot from slipping off the pedal during operation; section 5.3.7 of ANSI MH9.1 contains a similar requirement.

Means of access to cranes and derricks are addressed in paragraph (f)(4); this proposed requirement is similar to coverage of the same topic in ANSI MH9.1 (section 5.3.12). The first provision, (f)(4), requires that ladders, stairways, or other suitable and safe means of access be provided so that employees working on or operating the crane can reach their work stations safely. Footwalks are required by proposed paragraph (f)(4)(i) to be rigid and capable of supporting a load of 100 pound per square foot.

Requirements for vertical ladders more than 20 feet high are proposed in the next paragraph, ((f)(4)(ii)); these devices are required to comply with any applicable strength, safety device, or landing platform specifications for fixed ladders proposed in §1918a.119 of this document.

Proposed paragraph (f)(4)(iii) stipulates that stairways on cranes have rigid handrails meeting the requirements of proposed §1918a.112(c)(1). The next provision, (f)(4)(iv), is designed to warn employees emerging from ladders or stairways at a level immediately below the crane's rotating house from being hit by the house. This proposed requirement has been newly developed for this marine terminal proposal. It is not intended to apply to moving machine parts such as gears and chains, already addressed by paragraph (e)(1) of this section.

The requirements proposed in paragraph (f)(5) concern the crane operator's station. The first requirement is similar to a provision in ANSI MH9.1 (section 5.3.13). It requires that the operator have a clear view of the load (or signalman, if one is involved in the operation), so that the coordination and control required to conduct crane operations safely can be maintained. The ANSI requirement specifies that the operator also be able to see the boom, but this requirement has not been proposed because the operator cannot see the boom with some types of cranes, for example with some level-luffing cranes. Any glass used in the cab of a crane or derrick is required to be safety plate glass, a precaution necessary to prevent employee injury if the cab window is broken. Plate glass is specified because laminated glass may distort the viewing image. The SAC recommended a prohibition against storing objects in the cab in a manner that would interfere with the operator's view or safe operation of the equipment (EX. 2: 103i); this recommendation is embodied in the final requirement proposed in paragraph (f)(5), and is similar to the provisions at §1910.180(i)(3)(i) and §1910.181(j)(6)(i).

Counterweights or ballast are addressed in paragraph (f)(6) of the proposal, and which is based on similar provisions of section 5.3.14 of ANSI MH9.1 and §1918.74(a)(6) of the longshoring regulations. The proposed requirement states that the manufacturer's or the design specifications pertaining to type, amount, location, and securing of ballast or counterweights must be observed, to ensure safe hoisting of loads. Accidents may be caused by the use of substitute, unsecured, additional, or improperly located ballast.

Outriggers, which increase equipment stability, are required by proposed paragraph (f)(7) to be used in accordance with design or manufacturer's specifications. The requirements proposed for floats and outrigger supports are similar to provisions in the general industry standards (§1910.180(h)(3)(ix)) and the ANSI MH9.1 (section 5.3.15); these proposed provisions, which also reflect current industry practice, are designed to ensure that outriggers are on a firm foundation while loads are being hoisted.

Proposed paragraph (f)(8) stipulates that exhaust gases from cranes discharge away from employee work stations, to avoid exposing workers to carbon monoxide and other noxious fumes. A requirement directed at the same hazard appears in ANSI MH9.1 (section 5.3.9) and in the 1979 Pacific Coast Marine Safety Code (Rule 1432) (Ex. 20).

The proposed provision addressing electrical hazards associated with cranes, (f)(9), requires guarding or an equally effective method of protecting workers exposed to energized electrical parts in the course of their work; this precaution would not apply to electrical equipment that must be energized to perform inspection, "troubleshooting," or maintenance operations. No similar provision appears in the longshoring rules or in ANSI MH9.1, but a somewhat similar requirement does appear in §1910.179(g)(2)(i).

Requiring a portable fire extinguisher on or near the cab of each crane or derrick is proposed by paragraph (f)(10); this precaution would allow the crane operator, for example, to put out an electrical fire in the cab. This provision reflects routine practice, and similar rules appear in ANSI MH9.1 (section 5.3.4), the general industry standards (§ 1910.180(i)(5)), and the International Longshoremen's Association-New York Shipping Association Joint Maritime Safety Code (1970)(Ex. 19: 52). U.S. Coast Guard regulations do not mandate fire extinguishers on all cranes in marine terminals. Extinguishers using carbon tetrachloride or chlorobromomethane, which produce toxic fumes, are prohibited.

The proposed wire-rope-on-drum provision ((f)(11)) is similar to a rule in the longshoring standard (§ 1918.52(c)(2)), but has been adapted to equipment used in marine terminals; several rules in § 1910.179(h)(2) are also similar in intent to the proposed provision, as is section 4.7.5 of the International Labour Organization Code of Practice, Safety and Health in Dock Work (Ex. 33). The precautions stipulated are designed to guarantee that sufficient and properly fastened rope remains on the drum to ensure that the rope does not slip off the drum.

Proposed paragraph (f)(12) relates to boom section assembly and disassembly, and has been newly developed because mobile crane accidents caused by failure to block the boom are very common throughout industry. In the past 22 years, for example, 30 workers in Florida alone have been killed by falling boom sections that were not blocked during assembly or disassembly (Ex. 41).

Crane and derrick brakes are covered in proposed paragraph (f)(13). Each hoisting unit is required to have at least two means of braking, one of which must directly affect the drive shaft (or other reducing gear component), which controls the hoist mechanism. Each of the brakes required must be capable of holding 1½ times the crane's rated load. ANSI MH9.1 (section 5.3.6) contains similar requirements.

The proposed requirements that appear in paragraph (g) apply to rail-mounted cranes other than those of the locomotive type. Paragraph (g)(1)

identifies specific types of cranes falling within the scope of this paragraph; overhead and gantry cranes, both of which are types of bridge cranes, are covered, as are portal cranes, which are revolving cranes with elevatable booms.

Paragraph (g)(2) requires the rated load to be marked clearly in the cab and on each side of any bridge crane; ratings must be legible from ground or floor level to be visible to all employees involved in the hoisting operation.

Wind-indicating devices, which are the subject of some controversy in the industry, are addressed in proposed paragraph (g)(3). The first provision, (g)(3)(i), requires all rail-mounted cranes (except locomotive cranes) to be individually fitted with an operable wind-indicating device. The anemometer or similar device must be set to give warning and shutdown indications appropriate to the particular crane to which it is attached. There have been many serious accidents involving cranes running away in high winds, including two fatalities (Ex. 34).

Although there is some difference of opinion in the industry over the proper location of these devices, there is no argument about the necessity for wind indicators on rail-mounted cranes. There have been many wind-related accidents involving cranes of these types, particularly the large, specialized container-handling cranes, which have more sail area than other cranes. Portal cranes have been blown the length of their tracks and fallen into the water, causing catastrophic losses. OSHA has decided, on the basis of staff research, accident records, and other evidence, that all rail-mounted cranes should be individually fitted with anemometers. A wind-indicating device mounted on a building at the work site would not be an acceptable alternative, because a device so located might not accurately reflect wind conditions prevailing at the crane's location. Wind conditions may vary widely from one site to another and be affected by altitude, buildings and other factors. The ANSI MH9.1 provision (5.3.17) directed at the same hazard simply states "Rail-mounted, portal, gantry, semi-gantry, and all other bridge-type cranes located outside of structures shall be equipped with anemometers or wind indicators in good working condition." A requirement for a wind-indicating device also appears at § 1910.179(b)(4) of the general industry standards, but its application is restricted to "outdoor storage bridges" only, and would not cover container cranes and other types of cranes found in marine terminals.

Proposed paragraph (g)(3)(ii) sets performance requirements for wind-indicating devices. These devices are required to provide both a continuous readout of wind speed and a visible or audible alert when wind speed reaches a predetermined warning or partial shutdown velocity (the warning speed), which may not exceed the crane manufacturer's recommendations for warning or partial shutdown. Another warning is required when the wind velocity reaches that speed established by the manufacturer as requiring crane shutdown and securing (the shutdown speed). Again, this speed may not exceed the manufacturer's recommended wind-velocity limit for operation of the particular crane. Both warning and shutdown wind velocities vary, depending on the crane in question. For example, some cranes must shut down when the wind reaches 35 mph, while others can operate safely at 50 mph. The proposed requirements are essential if cranes are to be adequately controlled in working conditions involving high winds.

The readout and alarm required by paragraph (g)(3)(iii) must be located in the cab to be seen and heard by the crane operator.

Proposed paragraph (g)(3)(iv) concerns posting of instructions to be followed when wind indicators show warning or shutdown velocities. Instructions must be posted in the cabs of rail-mounted cranes, and employees must comply with these instructions. Any necessary directions for coordinating the activity of more than one crane in high-wind situations must be included in the posted instructions; an example of such a situation would be two cranes working on the same track.

Means of preventing rail-mounted crane movement must be used when the wind has reached the warning velocity, according to the proposed requirement in paragraph (g)(4)(i). The preliminary steps to be taken include stopping the crane from gantrying, removing any parts of the crane that are overhanging the vessel being worked and stationing the crane so that it can be secured quickly if the wind speed continues to increase. Are there situations (for example, when the wind prevents hoisting of the boom or when the crane's boom is not articulated) when the crane cannot be moved clear of the vessel? What additional precautions should be taken in such situations?

The proposed requirement in paragraph (g)(4)(ii) specifies that each crane be secured; using all available means, when the wind reaches the predetermined shutdown speed for the particular crane in question. The most common method of securing a rail-mounted crane is the use of uniformly spaced securing points positioned alongside the crane's tracks, but rail clamps, typhoon chains, and wires and cables are also sometimes used. All available means should be used to secure a crane, because even when all means are used, it is still sometimes impossible to hold a crane in high winds. The ANSI MH9.1 standard also contains provisions directed at runaway cranes (section 5.3.17).

In paragraph (g)(5), OSHA proposes that employers monitor local weather conditions so that they will have advance warning of high wind conditions. Subscribing to local weather reporting services or listening to NOAA weather broadcasts should greatly increase storm warning times and thus reduce the number of wind-related marine terminal injuries and fatalities.

Stops and bumpers are addressed in proposed paragraph (g)(6); the provisions proposed in the paragraph are similar to but less detailed than those in sections 5.3.17.1 and 5.3.17.2 of ANSI MH9.1 or in §§ 1910.179(e)(2) and (e)(3) of the general industry standards. As proposed, either stops or bumpers are required ((g)(6)(i)) on all rail-mounted cranes; stops are used on the truck's tracks and are designed to limit the movement of the bridge or trolley, and bumpers are used on the trolley's tracks to reduce the force of impact, thus decreasing the likelihood of employee injury and equipment damage. As proposed, any stop designed to operate by engaging the tread of a wheel must be at least equal in height to the radius of the wheel engaged, to ensure effectiveness of the device.

Proposed paragraph (g)(6)(ii) requires bumpers or other devices on the adjacent ends of all cranes or trolleys used on the same runway or bridge with other cranes or trolleys. Examples of means other than bumpers that would prevent crane collision are automatic electronic controls or sensing devices. OSHA's general industry crane standard (§ 1910.179(e)(2)(i)) has a similar requirement (Ex. 42).

Although crane and trolley stops and bumpers are effective in reducing the hazards associate with runaway cranes or with two cranes colliding, no stop or bumper can eliminate these hazards entirely. For example, the most effective bumper available is designed to eliminate impact damage only for a crane traveling without load at 20% of rated load speed (Ex. 35: 26), conditions which would clearly be exceeded in many emergency situations. Similarly, no stop device or system of stops will hold a rail-mounted crane that is already in motion or has not been secured before high winds occur. The

limitations of stops and bumpers underscore the importance of the crane wind-indicating devices required in this section of the proposal.

Paragraph (g)(7) proposes that when employees may be in the vicinity of the tracks, crane trucks must be equipped with means, such as sweeps, to deflect employees from the track when the crane approaches. A similar requirement appears in the general industry regulations, § 1910.179(e)(4), and in ANSI MH9.1 (section 5.3.17.3). This provision, in conjunction with the proposed requirement at (g)(9) should ensure that employees on the track will have adequate warning of and protection from the movement of a traveling crane.

To ensure safe employee passage between a crane and another structure, proposed paragraph (g)(8) requires a minimum clearance of 3 feet for the area to be used by employees for passage. No similar requirement appears in the general industry standards or the ANSI MH9.1 standards, but the often limited working spaces typical of marine terminals warrant is inclusion in this proposal

Each rail-mounted crane is required by proposed paragraph (g)(9) to have a warning device to alert employees in the crane's path that the crane is traveling toward them. This proposed requirement may be met by using either an audible or a visible warning device, such as a gong or light. The provision should not be interpreted to mean that a warning should be sounded continuously when a crane is traveling, because such a warning would soon cease to be effective. For maximum effect, the warning device is to be used only when employees are in danger of being hit by the crane. The equivalent general industry requirement, § 1910.179(i), applies only to overhead and gantry cranes and does not cover portal cranes, which are very common on the waterfront.

The proposed rule in paragraph (g)(10) deals with communication between the cab and the base of rail-mounted cranes, and is intended to ensure that effective communication is available between the operator, who is often far away from the ground, and employees at the base of the crane. Any effective means of achieving this communication, other than hand signals, may be used. Neither the general industry standards nor ANSI MH9.1 has a similar requirement.

The proposed requirement in paragraph (h) is directed to the stability of locomotive cranes; it stipulates that outriggers be used during hoisting operations unless the force of the load being hoisted is distributed so that it is not carried by the crane truck's springs, which might cause the crane to collapse. An equivalent provision appears at § 1910.180(h)(3)(xi) of the general industry standards.

The requirements proposed in paragraph (i) relate to general crane operations; most of these provisions are similar to coverage of the same topics in the longshoring regulations, the ANSI MH9.1, and the general industry standards.

The first proposed provision, (i)(1), is directed to the hazardous but sometimes necessary practice of using two cranes working in unison to hoist a large and heavy load. To be preformed safely, this type of operation requires close coordination and supervision, and the requirement that one person be designated to direct the operation and instruct all involved personnel is designed to ensure the necessary level of supervisory control and skill. This proposed requirement parallels the rule in § 1910.180(h)(3)(xii) of the general industry standards.

The proposed rule ((i)(2)) requiring guarding of areas accessible to employees within the swing radius of the body of a revolving crane is based on provisions in the longshoring regulations (§§ 1918.55 and 1918.74(c)). These provisions were originally promulgated in response to fatal accidents in which employees were caught between a part of the crane and another structure or between parts of the crane itself (Ex. 43). A SAC recommendation (Rec Vol 103i) supported inclusion of this provision; the OSHA proposed rule has gone beyond the committee's recommendation to include the language "or between parts of the crane" and to specify that the means of guarding be physical, which would prohibit the use of signs only. Examples of means of guarding that might be used are sawhorses and boards, roping off, or extending wires from the crane chassis. A similar provision appears in section 5.3.16 of ANSI MH9.1.

The hazards addressed in proposed paragraph (i)(3) are also covered by provisions in ANSI MH9.1 (section 5.3.11) and the general industry standards (§ 1910.180(h)(3)(xiii)). Since both the boom and the hook of a crane may swing during travel from one job site to another, the proposal requires that they be properly secured during transit, except in those situations specifically noted in the proposed requirement. When the boom is secured to a dolly, it cannot slew, and when the operator is turning the house, he has control of the crane's movement.

The appropriate precautions to be taken when a crane is left unattended between shifts are specified in proposed paragraph (i)(4). No similar requirements appear in the general industry standards (except for a requirement that operators remain at the controls while loads are suspended (§ 1910.180(h)(4)(i)) ANSI MH9.1 or the existing longshoring rules. Hôwever, the hazards of unattended cranes, such as crane runaway in high winds or falling of a load left suspended, are addressed at least minimally in the following industry developed and consensus standards: Mobile Hydraulic Crane Standards, Standard No. 2, Power Crane and Shovel Association (paragraph 8.3.3.8); Mobile Power Crane and Excavator standards, Standard No.1, Power Crane and Shovel Association (Paragraph 8.3.8.8); and the ANSI B30.5–1968, Crawler, Locomotive and Truck Cranes (section 5.3.1.3 f) (Ex. 91). As proposed, the standard provides that unattended cranes may not be left with suspended loads (except as noted) and must have clutches disengaged, power sources turned off, wheels blocked or otherwise secured against travel, and boom lowered and secured. These precautions are designed to designed employee injuries caused by uncontrolled crane travel, falling loads, and swinging booms. OSHA particularly welcomes comments on appropriate precautions to be taken when a crane is left unattended; for example, are there situations in which it is not feasible to take the proposed precautions? If these precautions are not taken, what alternative measures would be appropriate?

Although the next paragraph, (i)(5), addresses a hazard, crane operation near power lines, that is rarely encountered in the marine terminal setting, the seriousness of the hazard requires the proposed regulatory coverage. The general industry and construction standards contain nearly identical provisions (§ 1910.180(j)(1) and § 1926.550(a)(15)). The proposed requirements specify that, unless electric power lines are deenergized and grounded or an insulating barrier independent of the crane or derrick has been erected to prevent contact, cranes may only be operated near electric lines if they maintain the clearances specified in provisions (i)(5)(i) (A), (B), and (C). These minimum overhead clearances are essential if electrocutions caused by parts of the crane hitting power lines, which have been common throughout construction and general industry (Ex. 28:2), are to be prevented. The proposed clearances are identical to those in the general industry standard.

Proposed paragraphs (i)(5) (ii) and (iii) address boom guards and energized lines, respectively, and both provisions are nearly identical to rules in the general industry standards (§ 1910.181(j)(5) (ii) and (iv)). Although proposed paragraph (i)(5)(ii) permits the use of boom guards or proximity warning devices, these devices do not offer adequate employee protection against electric shock and may therefore not be used in lieu of maintaining the overhead clearances specified above. Proposed paragraph (i)(5)(iii), which also reflects industry practice, requires the employer to assume that electric lines are energized until he has contacted the agency responsible for the line (which is usually a utility company) and until that agency has indicated that the line has been deenergized, as required by proposed paragraph (i)(5)(iii). A similar requirement appears in the general industry regulations (§ 1910.180(j)(2)).

The requirements grouped under proposed paragraph (j) concern precautions to protect employees being hoisted by a crane, for example when employees are being placed on the top of intermodal containers. The same topic is covered in OSHA's ship repairing and shipbuilding regulations (§ 1915.41(a)(9) and § 1916.41(a)(9)).

The first two proposed provisions, (j)(1) (i) and (ii), stipulate that employees may only be hoisted by a crane or derrick load hoisting apparatus if a protected platform or boatswain's chain is used. Proposed paragraphs (j)(1)(ii) (A)–(F) list the requirements any platform used to hoist employees must meet; these include proposed specifications for platform and load weights, safety factors, anchoring, access doors, and overhead protection.

The proposed provision dealing with wedge and socket attachments, (j)(1)(ii)(F), prohibits the use of these attachments to hoist employees unless the line is doubled back and secured by a clamp, which will prevent slippage. The proposed requirements at (j) (2) and (3) are concerned with hoist mechanism control and immobilization of variable-radius booms during hoisting of personnel; these precautions ensure that the operator has positive control and that the boom does not rotate or extend accidentally. Without power-down capability, the action of the brake would be the only protection against the load slipping on the way down.

Proposed paragraphs (j) (4) and (5) both deal with devices used to hoist employees by crane or derrick. The first proposed requirement stipulates that unless a net approximately 5 feet in height surrounds the sides of the lifting platform, all employees being hoisted must be protected against falling by a safety belt or by a harness and lifeline, attached either to the hoist mechanism of the crane or to the lifting device itself. In addition, it is proposed that platforms or other employee hoisting devices be inspected before each day's use and be removed from service if defective.

The provisions proposed in (j) (6), (7), and (8), which also reflect current industry practice, are designed to ensure employee safety during personnel hoisting operations. The first of these proposed requirements would ensure effective communication, by means such as visual or voice contact or by means of hand signals, between the employees being hoisted and the crane operator (or signalman, if one is involved in the operation). The next provision requires crane operators to remain at the controls continuously during employee hoisting operations (a similar requirement applicable to any load being hoisted appears at § 1910.180(h)(4)(i) of the general industry standards).

The proposed rule at paragraph (j)(6) prohibits crane travel during the interval when employees are being hoisted, to reduce the amount of crane motion during this operation to a minimum; in situations in which crane travel is unavoidable, for example, when transferring employees into position, the crane may make minor movements while employees are elevated if all other proposed personnel hoisting requirements have been met.

The final proposed provision in paragraph (j) is addressed to the use of intermodal container spreaders to lift employees on and off containers. A personnel platform that could be used for this purpose was first devised by a U.S. steamship operator and stevedoring firm in the 1960's, and since then the use of this device has spread widely. The requirements proposed in (j)(9) offer protection against falls while personnel are being hoisted in this manner, and the final statement in this paragraph proposes that the provisions of paragraphs (j)(1)(i), (j)(1)(ii)(A), (j)(1)(ii)(B), (j)(1)(ii)(E), (j)(4) and (j)(8) not apply when intermodal container spreaders, rather than hoisting platforms, are used to hoist employees. These four proposed requirements are unnecessary when spreaders are used, because spreaders are stable, strong and secure, and are only used in situations where there are no overhead hazards; i.e., no suspended drafts.

Routine crane and derrick inspections are covered in proposed paragraphs (k)(1) through (k)(4); provisions that are similar in intent to proposed paragraphs (k)(3) and (k)(1) appear in the existing longshoring regulations (§§ 1918.74(a)(8) and 1918.61(a), respectively), and extensive crane and derrick inspection requirements are found in the general industry standards (§ 1910.179(j); § 1910.180(d); § 1910.181(d)). The proposal would allow only designated persons to perform inspections or repairs on cranes or derricks, and any defects in functional operating components found during inspection would be required to be reported to the employer. In turn, the employer must inform the operator of any defects, which would then have to be repaired before further use of the equipment.

The final provision in this paragraph, (k)(4), proposes that a record of required monthly inspections be maintained for at least six months, so that maintenance personnel will have access to the equipment's service and repair history. OSHA would appreciate receiving comments and information about the need for the monthly inspections called for in proposed paragraph (k)(2), particularly in view of the stringent existing crane certification requirements for annual and daily inspections (§ 1919.15(c)).

Section 1918a.46 Crane load devices. Proposed § 1918a.46 covers crane load devices and is an updating of § 1918.74(a)(9) of the existing longshoring rules. Regulations governing load-indicating devices were first incorporated in the maritime rules in 1971, because cranes used in the marine environment must often operate in more critical situations and under harsher conditions than generally prevail elsewhere. For example, in stevedoring, cargo is being hoisted into and out of vessel holds and the hoisting equipment is therefore subject to more shock loading, impact damage, and sideloading stress than equipment used in open spaces.

Since promulagation of the maritime rules in 1960, however, some load devices have been reported to be less sturdy and less reliable than originally thought; in addition, the serviceability and accuracy of these devices have been shown to be highly dependent on the quality of the maintenance performed on the device itself and on the crane to which it is attached. For example, a load-indicating device that relies on factors affected by sheave friction (such as tension on the wire) will not operate properly if the sheaves present more than the proper amount of friction. Lack of success in using these devices has led many people in the marine industry to recommend that load-indicating devices not be required in the proposal or in any future marine

terminal rule. However, OSHA believes that, given proper maintenance procedures, these devices provide significant protection for employees working with cranes. There are no available statistics attesting directly to the effectiveness of load-indicating devices, but other countries, such as Great Britain and Germany, and organizations such as the International Labour Organization (Code of Practice, Safety and Health in Dock Work, 1977) (Ex. 32: 63, 64) have required or recommended these devices for several years. It has been suggested (Ex. 28: 4, 5) that the required use of such devices is responsible for the smaller percentage of crane capsizing accidents in Great Britain (25% of all crane accidents) compared to the United States and Canada (35%). Neither the OSHA construction standards nor the general industry standards require these devices. OSHA would appreciate any information or statistics, including accident reports, that would be helpful in addressing this topic in the final standard for marine terminals.

The first proposed rule ((a)) of the crane load device section requires each crane to have means of determining or limiting the loads hoisted; the exceptioms to this proposed requirement are stated in paragraphs (a)(1) through (a)(4). Cranes using a clamshell or bucket to handle bulk cargo or those using a magnet or similar hoisting device (other than a hook, spreader or sling) are exempted from the load device requirement because the dimensions or physical characteristics of a bucket or magnet limit the size of the load so drastically that it is impossible to overload the crane. The proposed provision goes beyond the exemption in § 1918.74(a)(9)(viii)(*b*), which is allowed only "while handling bulk commodities or cargoes by means of clamshell bucket or magnet," because there are other commodities and other hoisting configurations which similiarly pose no threat of overload. Similarly, cranes used exclusively to handle hose-handled products, such as bulk liquids, are excluded because no loaded hose weighs enough to present on overload hazard. Determining accurately, the weight of a load to be hoisted is often essential if overloading accidents are to be prevented. An example of a load whose weight is otherwise impossible to determine is a lift consisting of water-soaked logs, a common type of cargo in West Coast ports. In addition, the weights painted on steel ingots and loaded intermodal containers are often incorrect.

Proposed paragraph (a)(3) would permit employers to dispense with a load device if they can demonstrate that a crane will not be used to handle loads beyond the crane's load ratings at any working radius; this provision represents a rewording of the requirement in § 1918.74(a)(9)(viii)(*d*) of the maritime regulations. As proposed, an employer could demonstrate that a particular crane never exceeds its rated loads by making the pertinent cargo manifest, stow plan, or bill of lading available. This proposed requirement would ensure that the crane's load rating is not exceeded.

The final exemption, stated at paragraph (a)(4), is substantively identical to the provision appearing at § 1918.74(a)(9)(viiii)(*a*) of the longshoring regulations, and proposes that trolley-equipped container-handling cranes need not have had load devices, if they are in compliance with the rules proposed in § 1918a.71(b), (c), (d), and (e) of this Part for determining container and load weight, or if lifts are made with a lifting beam supplied by the manufacturer. Proposed paragraph (a)(4) should not be interpreted as permitting a crane fitted with a weighing device to be used to weigh a load, a hazardous practice which may involve lifting loads of unknown and perhaps excessive weight. Some employers have installed weighing devices that provide an actual readout in the cab of the weight of every load, but OSHA does not propose that such a readout be required because the load should be weighed before it is hoisted. Compliance with this proposed provision is required in addition to the requirements proposed in § 1918a.71(a) through (e), which require a weighing scale to be used.

Proposed paragraph (b) specifies the requirements to be met by whatever load-indicating or load-limiting device is chosen by the employer to comply with proposed paragraph (a); the criteria are essentially the same as those in the maritime regulations (§ 1918.74(a)(9)(ii)). Proposed paragraph (b)(1) is appropriate in the case of cranes with elevatable variable radius booms, and permits employers to use any means of indicating load weight directly, except a hook scale or a dynamometer, which are not sufficiently accurate for this use; this option would require operators to use weight indications together with crane ratings, where this is appropriate, to ensure that the hoisting operation is within a safe range. The proposed alternative outlined in paragraph (b)(2) would permit the use of a load-moment device, computer, or other equipment or system that automatically indicates that the rated load is being approached or has been reached or exceeded, and the last proposed provision, (b)(3), would allow employers to equip their cranes with a limit switch or other device that shuts off power to prevent overloading.

Performance requirements for crane overload or load-indicating devices are addressed in proposed paragraph (c); these provisions loosely parallel those in § 1918.74(a)(9). The first proposed provision requires any device used to have a range compatible with the range of the crane. The accuracy ranges required for load-indicating devices are specified in proposed paragraph (c)(2), and are based on the standards used by manufacturers of these devices and set forth in Society of Automotive Engineers standard J376 (Ex. 39: 1, 2). Since the state of the art for these devices is such that the specified accuracy cannot be attained at the extremes of the crane's ratings, the proposal requires a means of warning the crane operator when the load falls within these extreme and inaccurate ranges.

Limit switches or equivalent devices must meet the accuracy requirements proposed in paragraph (c)(3), and the rule in proposed paragraph (c)(4) requires any load-indicating load-limiting device to meet the performance requirements at temperatures ranging from −22° F to +122° F, which would include those commonly encountered in the marine terminal environment.

Proposed paragraph (d) requires load-indicating devices to be checked before each day's use unless the device manufacturer has certified that the device will meet the performance requirements of paragraph (c) for a specified and unexpired period of time, and there is a record of this certification at the terminal.

In cases where the load-indicating device itself forms part of the weight-bearing structure, as is the case when a load cell is used, proposed paragraph (e) states that the device's strength factor may not be the limiting strength factor of the crane to which the device is fitted. A similar requirement appears at § 1918.74(a)(9)(iv) of the longshoring standards. Any load-indicating readout or device labeling is required by proposed paragraph (f) to be compatible with or convertible to the measures used on the crane rating chart, which is essential if indications and chart are to be used together safely and effectively. The provisions in this paragraph are similar in intent to those in § 1918.74(a)(9)(v) of the longshoring regulations.

In paragraph (g), OSHA proposes that manufacturer's installation, maintenance, and use instructions be

followed for cranes and load-indicating devices; the effectiveness of these devices is heavily dependent on proper maintenance of both crane and device.

Proposed paragraph (h) is directed to devices that use radius or boom angle as a factor in determining load capacity; the provisions specify the accuracy ranges required for these devices. As proposed, a chart would be required if conversion from angular to linear measure (or vice versa) is necessary. Similar requirements may be found in the maritime rules (§ 1918.74(a)(9)(vii)).

In paragraph (i), OSHA proposes performance tests for load devices and requires installations to be tested when initially fitted, at intervals recommended by the manufacturer, when an inaccuracy is noticed, and when surveys are required by certification procedures. The performance test must be in accordance with manufacturer's instructions (if these are available), and must include testing of all functions. Performance test for load-indicating devices are not addressed in the longshoring rules or in the general industry standards, but they are recommended in SAE J376 standard (Ex. 39: 3, 4).

Test records are covered in paragraph (j), which proposes that records of the most recently conducted performance test be maintained for each load device. Such a record would be required to note the accuracy of the device and any recalibration that was required to restore accuracy.

Section 1918a.47 Winches. Both fixed and portable winches are covered in proposed § 1918.47; the provisions in this section closely parallel the recommendations of the ad hoc Advisory Committee (Rec Vol 117i). The first proposed provision requires moving winch parts to be guarded to protect employees from being drawn into the winch; bars or another type of guard over the drum would meet this requirement. A similar provision appears at § 1918.53(a)(1) of the longshoring industry standards. All winches are required by proposed paragraph (b) to have stop controls that can be easily identified and reached by the operator in an emergency. Both the ANSI marine terminal standard (section 5.4) and the longshoring rules (§ 1918.70(b)) address the proper securing of portable winches to prevent shifting during use. However, proposed paragraph (c) permits greater flexibility than these rules by allowing a winch to be moved during use if necessary and by recognizing that it may not be possible to immobilize a portable winch entirely. For example, some portable winches, such as specialized winches on tracks, are designed to move within prescribed limits during use. Proposed provision (d) requires limit stop switches on portable winches, a safety feature that might have prevented a serious winch accident that occurred in a bulk-handling terminal (Ex. 21). The final provision, (e) proposes that the wire-rope-on-drum requirements from the crane and derrick section of the proposal (§ 1918a.45(f)(11)) also apply to winches, to ensure that a safe length of rope remains on the drum.

Section 1918a.48 Conveyors. The proposed requirements in § 1918a.48 cover conveyors used in marine terminals. Although OSHA has no conveyor accident data specifically related to marine terminal conveyor injuries and fatalities, conveyors are known to account for nearly 1% of all lost-workday injuries, on a national basis (Ex. 74: 1-3). The great majority of these injuries are caught-in-and-between injuries, a large number of which result in amputations (Ex. 46: 47). This degree of risk requires that every effort be made to provide protection to employees who work with and around conveyors; OSHA would be grateful for information related to the kinds of conveyors found in marine terminals, the types of material conveyed, the number of employees exposed, and any relevant accident and injury data.

The provisions in paragraph (a) propose that all danger zones associated with conveyors be guarded to ensure employee protection; there is at present no general coverage of conveyors in OSHA's general industry standards. Moving parts, such as nip and shear points and transfer mechanisms, would be required to be guarded, as would screw conveyors, areas beneath counterweights, walkways beneath overhead conveyors, and any other danger zone. The second provision, (a)(2), proposes that employers provide an elevated walkway with a guardrail for the use of employees who must cross over a moving conveyor. It also stipulates that spill guards, casings or other methods be used when necessary to protect employees walking under operating overhead conveyors.

Rollers or wheels on gravity conveyors are required by proposed paragraph (b) to be secured in position to keep them from jumping or falling out of the frame; this requirement is similar to a provision in the ANSI MH9.1 standard (section 5.5.2) and the longshoring rules (§ 1918.68(d)), and uses language recommended by the SAC (Rec Vol 117i).

Gravity roller conveyor sections are required by proposed paragraph (c) to be firmly placed and secured, to prevent material on the conveying medium itself from falling off and injuring employees. Both the ANSI MH9.1 standard (section 5.5.2) and the maritime regulations (§ 1918.68(c)) address the same hazard.

A means of braking or slowing objects arriving at the delivery end of a conveyor must be provided, according to proposed paragraph (d)(1), if employees at the transfer points might be injured by material piling up and spilling off the conveyor. An example of a method that might be used is applying an abrasive surface at the end of the conveyor. Section 1918.68(f) of the longshoring regulations and section 5.5.3 of the ANSI marine terminal document contain similar provisions. A further proposed requirement addressing conveyor brakes stipulates that electrically released brakes must engage automatically if the power supply to the conveyor fails or if the control returns to the stop position, to prevent the load from rolling or falling backward on the conveying medium; the parallel ANSI provision appears at section 5.5.3 of the marine terminal standard.

Portable conveyor stability is addressed in paragraph (e) and in the ANSI MH9.1 standard (section 5.5.3); portable conveyors that can be positioned and used at different elevations must also be held at the operating level by a locking device or other means such as wedging a block in the positioning mechanism. Portable conveyors that have toppled over have caused several accidents and injuries (Ex. 73: 3-49, 3-50, 3-51).

Proposed paragraph (f) deals with emergency stop devices at work stations of employees working along a conveyor or at fixed loading or discharge points; the equivalent ANSI MH9.1 provision (section 5.5.4) prohibits operators from leaving the conveyor's controls while the conveyor is in motion. OSHA has not included this latter requirement because the Agency believes that the remotely controlled and extensive conveyors for which such a rule would be appropriate are not generally found in marine terminals. OSHA invites comments on the use of these conveyors in marine terminals.

A requirement mandating a warning (which may be either visible or audible) unless employees are clear of the conveyor before start-up is proposed in paragraph (g), and reflects a recommendation of the Advisory Committee (Ex. 2:118i). A similar provision was included in the ANSI conveyor standard (B20.1-1976). This provision is intended to prevent accidents caused by the unexpected activation of the conveyor; for example, employees standing next to a vertical

conveyor might be struck by a bucket if the conveyor started without warning.

A general housekeeping requirement is proposed in paragraph (h), which states that areas around conveyor loading and discharge points must be kept free of obstructions while employees are working. Section 5.5.7 of ANSI MH9.1 deals with the same hazards, which include falling over boxes, overexertion caused by lifting objects improperly in a cramped space, and being struck by falling objects.

Conveyor maintenance, sevicing and repair are covered by the requirements in paragraph (i), which are essentially the same as those at section 5.5.8 of ANSI MH9.1. OSHA has recently studied reports of several conveyor accidents in general industry in great detail, and has determined that injuries and fatalities related to the failure to deactivate and lock out the power supply to the conveyor while repairs or maintenance is being performed or while employees are attempting to unjam a stopped conveyor may account for as many as 25% of all conveyor-related injuries (Ex. 75: 216). Although the data on which this estimate is based cannot be separated into marine terminal vs. general industry cases, OSHA believes that they are valid for conveyors used in terminals as well.

The first provision requires deactivation, followed by locking out, of the power source to any conveyor being repaired or serviced except that such a conveyor may be operated briefly for testing or "troubleshooting" purposes, for example to jog the belt. The second proposed rule in this paragraph, (i)(2), stipulates that the conveyor's starting device be locked before any employee attempts to remove any object overloading or jamming the conveyor. This provision would prevent employees attempting to unblock the conveyor from being injured by the accidental reactivation of the conveying medium. Unjamming injuries may occur in several ways: the probe used to unjam the conveyor may itself become a lethal projectile when the conveyor suddenly starts up, or the unexpected reactivation may catch the employee off guard, causing him to be pulled into the conveyor.

The miscellaneous conveyor safety practices proposed in paragraph (j) carry forward requirements found in ANSI MH9.1 (section 5.5.9) and in the ANSI conveyor standard (B20.1–1976). These provisions state that only persons designated by the employer may operate, repair, or maintain conveyors. They also prohibit riding, walking, or climbing on conveyors or their components, and require safety devices and overload switches to be in place and functional when the conveyor is used. The prohibition against employees riding the conveying medium has been included on the recommendation of the SAC (Ex. 2:120 i), and would deal with a source of conveyor accidents (Ex. 73: 250).

Section 1918a.49 Spouts, chutes, hoppers, bins, and associated equipment. Proposed § 1918a.49 deals with bulk-loading spouts, chutes, hoppers, bins and associated gear and equipment. Chutes and spouts are used to carry such material as grain, coal, scrap steel, and sugar; there have been several reported fatalities (Ex. 48) caused by the failure of chutes and spout rigging, which is often located so high above the ground that close inspection is difficult. OSHA proposes to require certification of this gear for marine terminals under Part 1919 because of the number of accidents and injuries associated with it. The inspection requirement in proposed paragraph (a) is essential because the equipment used to handle bulk commodities frequently escapes the kind of scrutiny directed to other cargo-handling gear, with disastrous results if the rigging or gear fails. The cross-reference calls attention to the certification requirement for this type of equipment.

The next proposed requirement, paragraph (b), states that instantaneous and direct communication must be available between the shipboard work station at the discharge end of a loading spout or chute and the position in the terminal from which the flow of cargo is controlled. The Advisory Committee recommended inclusion of this provision (Ex. 2:120 i) because of the many instances when it has been necessary to stop the flow immediately to prevent employees from being hit by the conveyed material, for example when the flow has been obstructed temporarily, causing cargo to overflow the chute. The Agency intends to propose a similar requirement in the longshoring regulations in the future.

Means of preventing employees from falling into chutes and hoppers are addressed in proposed paragraph (c). Openings to chutes and hoppers are required to be guarded, for example by hinged covers or other devices, such as a railing, to prevent fall injuries. Paragraph (d) requires employers to provide a safe walkway and means of reaching the hopper for employees working on a hopper. Guardrails are required if the conditions stipulated in § 1918a.112, the proposed section on guarding of edges, are present. The ANSI MH9.1 standard protects against the same hazard (section 5.7).

Chutes used to carry materials that could fall on employees are required by proposed paragraph (e) to have sideboards to contain the material carried, a provision based on § 1918.68(b) of the longshoring regulations and similar to a requirement in section 5.5.1 of ANSI MH9.1. The proposed provisions in paragraphs (f) and (g) are intended to prevent fast-moving bulk cargo from overflowing the chute and injuring employees, and to ensure that chutes are adequately anchored so that they will not themselves be a hazard to employees working near them. Similar coverage is provided in the longshoring rules (§ 1918.68) and in ANSI MH9.1 (sections 5.5.1, 5.5.2, and 5.5.3).

In paragraphs (h), (i), and (j), OSHA proposes requirements to protect employees working around bulk commodities, such as sugar, sand, cement, grain, and coal, that are stored in bins. The principal hazards of working around bulk cargo in bins are asphyxiation and exposure to hazardous atmospheres, which occur, for example, when an employee is buried in moving grain or is overcome by pesticide fumes while performing such tasks as reinstating the flow of the cargo or cleaning the bin.

Proposed paragraph (h)(1) requires the person controlling cargo flow into the bin to be made aware that another employee is entering an empty bin. Paragraph (h)(2) states that the power supply to the conveyor or spout carrying the cargo must be locked out after the power has been shut off. The provisions in proposed paragraphs (i) provide coverage for the hazards of working in a bin filled with a bulk commodity. In addition to requirements similar to those in paragraphs (h)(1) and (h)(2), employees entering a bin containing a commodity must be additionally protected both by a lifeline and harness and by an appropriately equipped standby stationed outside the bin. The severity of the hazards associated with fumigants, pesticides, and shifting bulk material makes these precautions essential to employee safety.

Guarding of bin top openings is required by the proposed provision in paragraph (j); railings, hinged covers, and gratings are examples of means of complying with this provision.

Paragraph (k) provides that chutes and hoppers be repaired only by designated persons.

The requirements proposed in paragraph (1) cover power shovels, which are often used with hoppers to discharge or distribute commodities

such as grain, coal, or sugar. The inspection called for in the first provision is designed to reduce the number of injuries caused by defective rigging and shovel components. Operational defects that might interfere with safe operation of the shovel or associated gear are reasons for withdrawing the equipment from service according to proposed paragraph (1)(2). The final provision pertaining to power shovels requires the power to be shut off and locked out, the belt to be stopped and the hopper to be closed before employees attempt to adjust the position or parts of the shovel or rigging.

Section 1918a.50 Certification of marine terminal material handling devices. Certification of material handling devices used in marine terminals is covered in § 1918a.50; this topic is presently regulated in §§ 1918.13 and 1918.14 of the longshoring standards. Certification of material handling equipment is based on the International Labour Organization (ILO) Convention no. 32 and the ILO's Associated Code of Practice, Safety and Health in Dock Work (1977), which requires signatory nations to have minimum certification requirements for cranes, ship's gear, loose gear and other equipment. Certification requirements call for inspection and testing of cranes and ship's gear used ashore as well as aboard, and one-time testing of wire rope (by sample lot) and loose gear such as shackles, swivels, and hooks. Although the U.S. is not a signatory nation, it adheres to the convention's certification provisions. Certificating agencies accredited or approved by OSHA perform the certification in the U.S. for equipment used ashore. OSHA also recognizes the certification authority of two states, California and Washington.

Certification is intended to ensure that material handling equipment is maintained properly so that it will be capable of handling loads safely. Since 1960, the Department of Labor has required certification of ship's gear for foreign and U.S. vessels not inspected by the Coast Guard, and the Coast Guard has required certification of Coast Guard inspected vessels since 1963. Certification requirements were extended to shoreside material handling equipment in 1970. The certification requirements in this section of the proposal are not expected to affect much marine terminal equipment because most cranes and other similar assembled units will already have been certificated under the existing certification regulations.

Proposed paragraph (a) sets forth the scope and conditions under which this section applies; as noted in paragraphs (c)(1) through (c)(6), certification requirements apply to cranes and derricks, bulk cargo spouts and suckers, vertical pocket and bucket conveyors, house fall cargo-handling gear, certain types of special gear, and wire rope and loose gear.

Certification must be performed in accordance with the standards of Part 1919 of 29 CFR or by a duly authorized state agency, as described in proposed paragraph (b).

Details of the tests and documentation required are provided in proposed paragraphs (c)(1) through (c)(6); many of these provisions parallel requirements in the longshoring regulations. The proposed rule for cranes and derricks is based on material in §§ 1918.13 and 1918.14. The proposed provision in § 1918a.51(c)(2) applies certification procedures to bulk cargo spouts and suckers; the collapse of these devices has caused several reported fatal accidents in the past (Ex. 48). A similar requirement appears in the longshoring rules (§ 1918.13(d)).

Vertical and bucket conveyors, other than those in grain elevator structures, must be inspected annually, according to proposed paragraph (c)(3). This is a newly developed provision recommended by the SAC (Ex. 2: 121 ia). Examples of terminal conveyors that would fall under the scope of this proposed rule are banana and sugar conveyors used to load and unload vessels. There may be other permanently installed vertical conveyors, such as bulk cement handling equipment, which should be exempted from coverage by the standard because their operation does not require the presence of employees. OSHA would particularly welcome information on the numbers and types of conveyors meeting this condition, and the Agency is also interested in comments relating to the scope of this provision.

House fall cargo-handling gear must be tested as a unit, as specified in paragraph (c)(4); there is no similar Part 1918 coverage, although both the ANSI MH9.1 and the longshoring rules require inspection and keeping of inspection records for this gear. Because this type of gear is falling into disuse, inspection and maintenance procedures have often been overlooked. The proposed rule would ensure that this equipment and its supporting structures meet certification requirements. The Advisory Committee recommended inclusion of this provision (Ex. 2: 121 ia).

Special stevedoring gear used ashore must be certificated in accordance with the proposed provisions in paragraphs (c)(5)(i) through (c)(5)(iii). Similar requirements for gear used aboard vessels are found in the longshoring rules (§1918.61(b)); however, extending this coverage to the shore side of the operation should reduce the number of accidents caused by improperly maintained specially rigged gear. Proposed paragraph (c)(5)(ii) requires spreaders that are not part of ship's gear to be certificated. In the past, spreaders consistently used with a particular crane have been certificated in connection with the crane's unit proof test, while spreaders not so used have been considered special stevedoring gear and have therefore been tested only in accordance with the pertinent longshoring requirement (§1918.61(b)). Spreaders are often exchanged among different cranes, and in the past only those used with container cranes have been tested. This proposed provision will not affect much equipment because many employers have had these spreaders certificated, although they were not required by law to do so.

Loose gear and wire rope purchased or obtained after the date specified in proposed paragraph (c)(6) and used in material handling must also be tested and certificated. A certificate obtained at purchase stating that the rope has been tested by sample lot would meet this requirement. The provision is intended to apply only to wire rope and loose gear used in material handling applications, where failure of the rope could be disastrous, and would not apply to rope used in less critical situations, such as for lashings or railings.

The proposed provision in paragraph (d), which is similar to rules in the longshoring regulations (§1918.13(e) and (f)), has been included to ensure that equipment that is partially disassembled and then reassembled in a new configuration, such as a mobile crane, is not considered a new piece of equipment requiring new certification procedures. Examples of equipment routinely used in difference configurations are cranes used alternately with a long and a short boom, or those used with various hoisting mechanisms, such as magnets, clam shells, and hooks. The requirement proposed at paragraph (e) seeks to avoid duplication of certification surveys by not requiring re-certification when certificated equipment is moved to another jurisdiction, for example, when a crane certificated in Washington moves to Oregon. A nearly identical

requirement is included in the longshoring rules (§1918.13(f)).

Proposed paragraph (e) draws attention to the fact that certification procedures are no substitute for routine maintenance and inspection; the language is identical to that of §1918.13(h) of the existing longshoring regulations.

The proposed provisions in paragraph (g)(1) and (2) state clearly the intervals allowed between required certification surveys; these requirements have been included because there has been some confusion in the past about these dates. For example, some employers have had equipment inspected twice in one year: once for the annual survey and once for the quadrennial survey. However, no annual survey is required in the year in which a quadrennial survey is performed. The requirement in proposed paragraph (g)(2) states that equipment which has not been in use for 6 months or more (and has therefore probably not been properly maintained) must have the more thorough certification survey required of equipment entering service.

Loose gear such as shackles and swivels is required by the rule in proposed paragraph (h) to be marked after it has been tested if it is to be used in a hoisting application. OHSA intends to add an equivalent provision to the shipboard (longshoring) regulations in the future, as has been done in the maritime regulations of other nations; a similar provision appears in section 6.7 of the ANSI MH9.1 standard.

Single sheave blocks used in hoisting are presently covered by the certification requirements of §1919.21(b); the proposal (paragraph (h)) would simpy extend these and other certification requirements to equipment used ashore. Unlike multiple sheave blocks, single sheave blocks have two safe working loads, depending on the method of use, and marking could therefore be critical to safety. The requirements proposed in this paragraph have been limited to newly obtained equipment because of the difficulties involved in marking and certificating all existing units of loose gear. These proposed provisions will ensure the use of tested equipment in cargo handling by requiring that identifying marks of the testing be traceable to related certification documents, which must be available at the terminal.

Cargo-handling equipment exempted from the certification requirements is listed in proposed paragraphs (i)(1) and (i)(2); the list of equipment exempted in the proposal includes equipment excluded from certification coverage in ANSI MH 9.1 (section 6.8). However, the ANSI standard also excludes vertical pocket conveyors, such as banana legs, which are used in terminals. Cranes used exclusively to hoist personnel, such as cherry pickers, are also excluded in MH9.1. The proposal requires certification of straddle trucks which are large enough to be considered cranes rather than industrial trucks. OSHA believes that any industrial truck sufficiently large to hoist two intermodal containers should be treated for regulatory purposes as a crane. The list of equipment excluded from Part 1918 certification requirements (§ 1918.3(r)) is almost identical to the ANSI MH9.1 list, except that the longshoring regulations do not mention bridge cranes, which are not used aboard ship. These cranes ar included in the proposal. Most cargo-handling equipment in marine terminals that is not required by the proposal to be certificated is used in activities that do not expose employees to hazardous situations, such as ore loading at facilities that are largely unattended, or in operations involving modified industrial trucks that cannot lift a large load to a height that would endanger employees below. Restricting the exemption of bulk coal-loading facilities to equipment not of the types illustrated in Figures II–I through II–22 of proposed Appendix II and to equipment that does not use the types of booms or spans shown in these illustrations makes the proposal's certification requirement more stringent than the parallel provision in the longshoring rules. Although specialized car dumpers and equipment used only at high-volume coal-loading facilities would not have to be certificated, other more versatile and less specialized equipment which is not used primarily in coal-loading operations would have to be certificated.

Section 1918a.51 Hand tools. Hand tools used in marine terminal operations are covered in proposed § 1918a.51, which is based on similar provisions in the longshoring regulations (§ 1918.72 (a) and (b)). Employers are required by the proposed rule in paragraphs (a) to provide employees with hand tools that are properly maintained and in safe condition. Examples of defects that would affect a tool's safety are loose handles and mushroomed heads.

Portable electric hand tools are addressed in proposed paragraph (b)(1), which is essentially identical to coverage of the same hazards in the longshoring regulations (§ 1918a.72(b), but is more stringent than that in the general industry standards (§ 1910.243(a)(2)(ii)). OSHA has received petitions (Ex. 92) from power tool manufacturers requesting that a requirement similar to the one in paragraph (b)(1) be deleted from the shipyard regulations. However, the Agency believes that an off switch and operates independent of hand pressure offers substantilly less protection to employees because the tool can continue to operate even after it has fallen or been dropped, and it can also easily be turned on accidentally.

The requirement proposed at paragraph (b)(2) is intended to protect employees from being cut while using a portable powered circular saw. It requires adequate guarding of the blade, and is similar to coverage in § 1910.243(a)(1).

The proposed rule in paragraph (c) applies to tools used to cut metal banding or strapping around cargo and requires that cutting tools be used for this purpose. Performing this operation with improper tools, such as a claw hammer, may cause accidents if employees performing the cutting or standing nearby are struck by a flying metal strap. No similar rule appears in the OSHA general industry or longshoring standards, nor is the topic addressed in ANSI MH9.1

Subpart D—Specialized Terminals

Subpart D of the proposal covers specialized marine terminals, such as those devoted to intermodal containers and roll-on roll-off operations, and terminals handling menhaden fishing vessels. The provisions in each section would apply, in addition to any other appropriate provisions in Part 1918a, to operations and equipment in the particular terminals addressed in each of those sections.

Section 1918a.71 Terminals handling intermodal containers or roll-on roll-off vehicles. Proposed 1918a.71 covers marine terminals handling intermodal containers or devoted to roll-on roll-off operations. A roll-on and roll-off operation is one in which a wheeled vehicle (such as a truck or container on chassis) is pushed, towed, or driven aboard a vessel, which then carries these vehicles in ocean trade. These terminals are addressed separately in the proposal because the proliferation of container-handling facilities and the rapid development of containerized cargo-handling techniques, which eliminate much of the manual and mechanical handling of cargo, have been reflected in a change in the types of accidents occurring at these terminals. Traffic accidents are now the most frequent kind of accident in specialized facilities of this type, in contrast to accidents such as struck-by and caught-in injuries that are associated with traditional break-bulk cargo handling.

This section is therefore addressed principally to traffic hazards and accidents specifically associated with container handling. The section of ANSI MH9.1. (section 3.22) dealing with container terminals is more extensive and more detailed in regard to traffic control provisions, but is not as comprehensive as the proposal's coverage of container handling.

The provisions proposed in paragraphs (a) through (f) have been written in simplified and performance-based language, but are based substantively on paragraphs (a) through (b)(6) of § 1918a.85 of the longshoring regulations. These requirements are directed at one of the principal operational difficulties and safety hazards associated with containerized cargo, that of accurately determining the weight of a container and its contents. Misjudging this weight can lead to cranes capsizing and dropping loads, and other types of accidents.

Container and load weights must be marked in pounds, to prevent mishandling in U.S. ports, but they may also bear metric equivalents. These proposed requirements specify a means that may be used to calculate the container's gross weight in cases where the terminal has no weighing scale.

Proposed paragraph (d) exempts open-top containers carrying only vehicles or gas cylinders from the gross weight requirement, because no container of this type can be loaded with enough cylinders or vehicles to present an overload hazard.

Weights of inbound containers from foreign ports may be established either by calculation, weighing, or using the bill of lading, cargo stow plan, or ship's manifest (proposed paragraph (e)).

The final container-weight provision, paragraph (f), prohibits lifting any container that weighs more than the hoisting equipment's rating will permit.

The proposed requirements in paragraphs (g) and (h) are directed at pedestrian hazards that occur in busy terminals, at which employees are engaged in many different tasks involving many types of powered equipment. Many terminals already have designated pedestrian areas, as required in proposed paragraph (g), but the number of traffic accidents in terminals of this type (Ex. 45) makes the establishment of pedestrian and vehicle routes essential in all such facilities.

A member of the Advisory Committee recommended (Rec Vol 62i) that employees be prohibited from walking beneath suspended containers, a requirement similar to provisions in the general industry standards (§§ 1910.179(h)(3)(vi) and 1910.180(h)(3)(b)(vi)), and in ANSI MH9.1 (section 3.22.2). The ANSI provision prohibits hoisting containers over pedestrian aisles "unless suitable precautionary measures are taken." Containers are occasionally dropped accidentally, for example when the locking mechanism releases in mid-air. Proposed paragraph (g)(2) requires employees to stand clear while containers are suspended or being hoisted overhead. OSHA would appreciate information about the operational difficulties, costs, and benefits that can be anticipated as a result of compliance with this requirement. For example, does this provision reflect current practice in intermodal container terminals? What kinds of warnings, if any, should be required?

Employees required to work around container-handling equipment or near a traffic lane must have high-visibility vests or other clothing offering equivalent protection, so that vehicle operators can see them easily (paragraph (h)). There is no similar ANSI or Part 1918 coverage.

Proposed requirements governing the handling of intermodal containers are included in paragraphs (i)(1) through (i)(3); these precautions are necessary because improper handling of containers may cause structural damage to the containers, leading to serious accidents. There are almost three million intermodal containers, which are owned by companies from different countries, moving in world trade; these units are of many types but are built to the requirements of ANSI NH5.4–1972/ISO TC–104 document (Ex. 64), which also establishes the means by which containers of particular designs are to be hoisted.

The proposed provisions at paragraph (i) outline the methods to be used to hoist containers in specific situations (except when the container has been damaged so that special means, such as appropriately used slings, are necessary). The instructions specified in detail in paragraphs (i)(1) conform to those in the ANSI/ISO standard (Ex. 64), and are included because, when used with properly loaded and undamaged containers, these techniques reduce the hazards associated with container handling. Neither the longshoring regulations, which were published before the ISO standard, nor the ANSI marine terminal standard deals with container hoisting in detail. Procedures for hoisting containers from top and bottom fittings appear at proposed paragraphs (i)(1) (i) and (ii), respectively.

The provision proposed at paragraph (i)(1)(iii) prohibits hoisting containers from above or from one side only, unless either the container is designed to be handled in this manner. This proposed requirement would allow hoisting of 20-foot-long containers by fork lift trucks if the containers are fitted with suitably maintained fork lift pockets. The final requirement proposed in this paragraph, (i)(1)(iv), is intended to cover specialized containers and to allow flexibility for technological advances in container design, a rapidly developing field.

Container spreaders that have lanyards to activate the releasing device are covered in paragraph (i)(2)(i); this equipment is used principally in break-bulk terminals. The proposed provision prohibits the use of lanyard-triggered releasing devices unless the employer can ensure that the lanyard will not snag on an object, accidentally triggering release of a container; such an accident occurred in a marine terminal in Seattle (Ex. 69).

A similar hazard is addressed in proposed paragraph (i)(2)(ii), which deals with twistlock securing systems on container spreaders. If these systems are not properly maintained, they may release a suspended container in mid-air.

Proposed paragraph (i)(3) requires that containers be secured while they are being transported in the terminal. Failure to secure containers adequately has caused several accidents in the past. For example, unsecured containers have fallen from chassis when the vehicle turned the corner too sharply (Ex. 70).

The proposed requirements in paragraphs (j)(1) and (j)(2) are intended to avoid accidents that occur when employees handle seriously damaged intermodal containers. The first provision proposes that containers received in the terminal be inspected before they are handled further, to determine whether they have sustained damage during transit that would make them hazardous for employees to handle. A similar requirement, limited to outbound containers, appears in section 8.1.2.2 of ANSI MH9.1, and the same hazard is addressed by § 1918.85(d) of the longshoring rules. Any container found to have a defect, such as a damaged fitting, that might affect safe use is required by proposed paragraph (j)(2) to be removed from service, identified as unsafe, and kept from use until the defects have been repaired. The Part 1918 requirement (§ 1918.85(d)) is directed to the same hazard, and ANSI MH9.1 also contains a similar provision (section 3.22.9).

Section 1918a.72 Grain elevator terminals [Reserved]. Section 1918a.72

of the proposal has been reserved at this stage of the rulemaking because OSHA is currently developing a standard applying to both safety and health hazards associated with grain-handling facilities. Provisions developed for OSHA's general industry grain-handling facilities proposal that are also applicable to grain elevators at marine terminals will be proposed as additions to the marine terminal standard in the future. After public comment and evaluation of the evidence received in connection with the general industry rulemaking, OSHA intends to propose the incorporation of safety and health coverage specifically tailored to marine terminal grain elevators into this section. Until then, grain elevators at marine terminals would be covered by the applicable requirements in the other subparts of Part 1918a, and would not have additional requirements prescribed for them as "Specialized Terminals" (§ 1918a.71).

Section 1918a.73 Terminal facilities handling menhaden and similar species of fish. Proposed § 1918.73 contains rules applicable to terminal facilities that handle menhaden and similar fish. Menhaden is a term applied to several species of trash fish. The menhaden fishing industry operates on the Atlantic and Gulf coasts, and there is a smaller and similar operation on the West coast. In volume of catch, the menhaden industry forms the largest part of the U.S. fishing industry. Products made from menhaden and similar species of fish include fertilizer, pet food, and fish oil. The material in this section of the proposal was developed in conjunction with the National Fish Meal and Oil Association and in response to reports of several fatalities at menhaden facilities that were caused by exposure to hydrogen sulfide, which is produced by rotting fish (Ex. 44). Parallel coverage for shipboard application will be added to the existing Part 1918 regulations when these are revised in the future. There are approximately 25 facilities devoted exclusively to menhaden handling in this country; most of these already comply with the safety practices outlined in this section. The MH9.1 standard contains detailed coverage of menhaden-related hazards.

To protect employees from exposure to hazardous levels of hydrogen sulfide, the provisions proposed in paragraph (b)(1) require adequate ventilation of brailwater storage tanks. Brailwater is recirculated into the boat's hold to wash out the menhaden. Unless other effective methods of removing hazardous levels of hydrogen sulfide are used, storage tanks must be drained completely after daily use. The proposed requirements in paragraph (b)(2), which require draining, rinsing, and atmospheric testing of tanks, are designed to protect employees from hazardous exposure to hydrogen sulfide or to an oxygen-deficient atmosphere, hazards commonly associated with a confined space such as a closed brailwater tank, in which hydrogen sulfide or other noxious atmosphere has displaced the available oxygen.

Tests to establish that atmospheric levels are safe may only be conducted by designated persons using equipment appropriate for testing in these situations, according to proposed paragraph (b)(3). Hoses and pipelines conveying used brailwater must be drained and left open to the air at the end of each day's use (paragraph (c)), to allow any hydrogen sulfide fumes to dissipate.

Respiratory protective equipment must be appropriate for protection against hydrogen sulfide and oxygen deficiency, and must be immediately available at the terminal, according to the provisions proposed in paragraph (d). Provisions addressed to rescue attempts in dock tanks are also proposed in this paragraph. Employees entering a tank must wear lifelines and harnesses and be equipped with the appropriate respiratory protective equipment. Two similarly equipped standbys must also be stationed outside the tank. Confined space accidents often cause the death of the employee working in the tank and other employees trying to effect rescue (Ex. 24). The rescuers are usually overcome because they fail to don the proper respiratory equipment and instead spontaneously rush into the space to help, and are then themselves overcome.

The provisions in proposed paragraphs (e) and (f) require informed supervisory personnel, familiar with the dangers of hydrogen sulfide and oxygen-deficient atmospheres and the precautions and equipment for reducing or eliminating these hazards, to be present whenever brailwater is being discharged from a vessel. This provision is intended to provide the necessary level of supervisory control to deal effectively with this hazard. These personnel will perform any procedures, such as testing to make sure that used brailwater is safe to be recirculated into the hold (where employees will be working), that are necessary to protect employees from hazardous exposures. Brailwater can be treated to remove contaminants and then re-used. The ANSI marine terminal consensus standard (section 3.23) contains similar coverage but also includes provisions pertaining to conditions aboard vessels, coverage more appropriately located in the longshoring regulations.

Subpart E—Personal Protection

Subpart E of the proposal is concerned with personal protective equipment designed for eye, respiratory, head, and foot protection. In keeping with recent OSHA Policy (see the standard for occupational exposure to acrylonitrile, 43 FR 45762, October 3, 1978), the proposal requires any protective equipment mandated by the standard to be provided to employees without charge.

Section 1918a.91 Eye protection. The proposed provisions relating to eye protection are nearly identical to those of ANSI MH9.1 (section 7.1) and the existing longshoring rules (§ 1918.101), except that the proposal adds a cross-reference to the more extensive eye protection required against radiant energy by proposed § 1918a.152(h).

Section 1918a.92 Respiratory protection. The SAC recommended (Ex. 2:124aii) that respiratory protective equipment be used in accordance with the requirements set forth in 30 CFR Part 11, a suggestion with which OSHA concurs; the present longshoring regulations require respiratory equipment to be approved by the U.S. Bureau of Mines, but this function is now exercised by the Mine Safety and Health Administration and the National Institute for Occupational Safety and Health.

Many of the provisions in the proposed respiratory protection section are almost identical to coverage directed to the same hazards in the longshoring regulations (§ 1918.102); proposed paragraphs (a) through (j) derive from these rules, which are also compatible with similar requirements in § 1910.134 of the general industry standards. The proposed provisions in paragraph (j), are designed to ensure that proper aid is available whenever an employee is exposed to a hazardous atmosphere, whether or not the atmosphere is immediately hazardous to life and regardless of the type of respirator worn. The capability of the respirator and the degree of standby protection required vary with the level of hazard involved. For example, a canister-type gas mask might be used in an atmosphere containing a low concentration of ammonia, but self-contained breathing apparatus might be required for an oxygen-deficient atmosphere.

Section 1918a.93 Head protection. The head protection provisions proposed in § 1918a.93 differ somewhat

from present Part 1918 coverage (§ 1918.105) of this topic and from similar rules in the general industry standards (§ 1910.135). The present longshoring provision requires all employees on board vessels to be protected by hard hats. OSHA recognizes that some work situations in marine terminals do not expose employees to potential head injury; the proposal therefore only requires hard hats to be worn by employees exposed to potential head injury. This proposed provision follows the recommendation of the SAC (Ex. 2:127i).

Section 1918a.94 Foot protection. The foot protection section of the proposal (§ 1918a.94) differs from similar coverage in the existing maritime rules by requiring employers to ensure that their employees wear safety shoes in situations where they might be needed; the longshoring standard (§ 1918.104) only requires that employers make foot protection available to employees. The equivalent provision of the ANSI marine terminal standard (section 7.4) prohibits employees who are not wearing adequate footwear from working, but is otherwise similar to the proposal's treatment of the topic. The SAC also recommended (Ex. 2:128i) protection against foot injuries, which are common in cargo handling. At present, some ports, such as Philadelphia, provide employees with safety shoes but do not attempt to ensure that they are worn. OSHA would appreciate receiving information on current practice, foot injury incidence, and any related cost information.

Section 1918a.95 Other protective measures. Section 1918a.95 deals with other protective measures required in certain work situations. The proposed protective clothing provisions (paragraphs (a)(1) and (2)) are similar to rules in the maritime regulations (§ 1918.103) and the ANSI MH9.1 (section 7.6); these practices are already widely used throughout the industry. The proposed requirement that employers provide special protective clothing is not intended to apply to such standard items of clothing as work gloves; an example of a task requiring special protective clothing such as hoods or aprons would be handling leaking cargo packaging or cleaning a caustic tank.

Protective creams or ointments appropriate as barriers against the substance being handled are required whenever the substance involved demands this form of protection. The ANSI marine terminal standard contains a similar provision (section 7.5), but the existing longshoring regulations do not address this hazard. Examples of the types of exposure that might require protective ointment or cream are leaking containers of mildly corrosive or irritating substances. In general, however, barrier creams provide only minimal protection against cutaneous hazards, and gloves or indirect handling methods are more effective and are usually used in these situations.

Proposed paragraph (c)(1) requires employees such as line handlers, who may be pulled into the water in the course of their work, to be provided with personal flotation devices; no similar provision appears in the ANSI standard. The weight, pull, and cumbersome nature of the lines being handled all combine to make protection against drowning necessary; it is not unusual for a mooring line to pull an employee into the water. The remainder of the requirements in proposed paragraph (c) are standard practice in the industry; similar provisions appear in the longshoring rules (§ 1918.106).

Proper eye washing and any other appropriate emergency washing facilities are required by proposed paragraph (d) if employees are exposed to hazardous substances, such as any liquid acid that requires flushing if it contacts the eye. Parallel provisions appear in the general industry rules (§ 1910.151(c)) and in ANSI MH9.1 (section 7.7).

Subpart F—Terminal Facilities

Section 1918a.111 Maintenance and load limits. Hazards associated primarily with the structural features of marine terminals are addressed by the provisions of proposed Subpart F. Section 1918a.111 deals with maintenance of walking and working surfaces and their structural integrity, requiring load limits to be posted and observed to prevent excessive loads from damaging floor surfaces in cargo areas. This requirement is not meant to apply to areas in a terminal such as offices or storage lockers, which are not used for cargo-handling and would therefore not be subject to overloading. Both the general industry standards (§ 1910.22(d)) and the ANSI standard (section 3.1.1) contain provisions designed to protect employees and machinery from the hazards of unsafe floors; however, the proposal differs from the general industry standard in that it limits these requirements to active cargo areas.

Section 1918a.112 Guarding of edges. The various types of protection for employee hazards associated with open sides and edges covered in proposed § 1918a.112 include curbs, railings and toeboards. This section of the proposal is written primarily in performance language.

To protect vehicles and their operators from falling off an apron or bulkhead edge, curbs (bull rails) 10 inches in height must be provided ((a)(1)). Paragraph (a)(2) indicates that this protection is not required at loading docks, platforms and skids where cargo is moved by vehicles. The ANSI standard contains provisions directed at the same hazards (sections 3.1.4, 3.1.5, 3.1.6, and 3.1.7).

Protection against falls in situations where employees might fall more than 4 feet or into the water is addressed in proposed paragraph (b), which requires guardrails except in those circumstances specified in (b)(2)(i)–(iv). The SAC recommended guardrails at edges in cases where the fall distance was 4 feet or more (Ex. 2: 11i). The exceptions listed in paragraph (b) apply to work places, such as loading docks; to equipment, such as railroad rolling stock (covered by other Federal agencies); and to waterside edges used for cargo handling. Since falls from elevations account for as many as 340,000 work-related injuries annually (Ex. 59: 5), the importance of fall protection for employees cannot be overemphasized.

Guardrails used to protect marine terminal employees must meet the strength requirements and be positioned as specified in proposed paragraph (c), but the material used in guardrail construction is left to the employer's discretion. Flexible railings, a common feature in the marine industry, may be used if they are sturdy enough to offer adequate protection. The proposed provision also allows existing guardrails, which are often between 36 and 42 inches high, to continue to be used because they offer adequate employee protection, and replacing all such guardrails would be prohibitively costly. New guardrails are required to be between 40 and 44 inches high, a range permitting the use of guardrails in a variety of building situations. A recent ergonomic research report provides evidence for this range in guardrail height (Ex. 13: 49); this range provides the optimal protection for the greatest number of employees. ANSI coverage of the same topic (MH9.1, section 3.1.9) differs from that of the proposal because it does not take the height of existing guardrails into consideration, does not deal with flexible railings, and is restrictive in terms of construction materials.

Toeboards to protect employees from objects falling from overhead are covered in proposed paragraph (d); this provision also allows flexibility in design, material, and application by

requiring protection only in situations where objects such as tools might fall on employees below and by leaving the material and construction requirements of the toeboard unspecified. The ANSI marine terminal requirement stipulates a height of 4 inches for toeboards (section 3.1.9), but the proposal recognizes that the finished size of 4-inch lumber is closer to 3½ inches than to 4, and additionally that a drainage space may contribute to overall toeboard height.

Stairway railings and handrails are addressed in proposed paragraph (e); the provision in paragrpah (e)(1) allows a greater range in acceptable railing height (from 32 to 36 inches) than similar coverage in the general industry standards (§ 1910.23(e)(2)), to permit most existing railings to remain in place. Any railing used must be in good repair and free of splinters and sharp edges (paragraph (f)). The ANSI MH9.1 does not cover railings in terminals.

Section 1918a.113 Clearance heights. The clearance height provision in § 1918a.113 addresses an obvious hazard, that of employees hiting their heads or being injured when a vehicle hits an overhead obstruction, and uses language almost identical to that found in ANSI MH9.1 (section 3.4).

Section 1918a.114 Cargo doors. Cargo doors have been a source of accidents in marine terminals in the past. The requirements in proposed § 1918a.114 cover the three general types of cargo doors found in terminal facilities: those that are mechanically operated, sliding horizontal doors, and tackle-operated doors. The ANSI MH9.1 standard provides nearly identical coverage of these hazards (section 3.3).

Mechanically operated cargo doors operate by means of counterweights, which can themselves be hazards unless they are enclosed or otherwise guarded (paragraph (a)(1)). Proposed paragraph (a)(2) prohibits using cranes or lift trucks to open doors of this type. Using a lift truck to pry open a cargo door could easily cause the truck to topple, and using a crane for this purpose would impose an excessive sideloading stress. During cargo door repair, however, cranes and lift trucks may be used if precautions such as roping off or barricading the repair area are taken to protect employees. Doors opened only partially, for example for ventilation purposes, must be blocked or otherwise secured in this position so that they do not fall on employees working beneath or near them.

Lifting tackle used to move tackle-operated cargo doors must have shackles or other equally secure connections, such as a moused hook, to ensure that the door does not fall on employees. The lifting gear must have a safety factor of five, as recommended by the SAC (Ex. 2: 15i), to ensure that it is of adequate size and strength to hold the door. Means of holding these doors securely in both the open and closed positions are also required ((b)(3)). The ANSI standard contains two provisions (sections 3.3.2.3 and 3.3.2.4) dealing with inspection and maintenance that have been simplified and stated in performance terms in the proposal (paragraphs (b)(4)) and (b)(5)).

Horizontal sliding doors are hazardous if their rollers come out of their overhead tracks, or if they swing, as might happen in a strong wind. These dangers are addressed in proposed paragraph (c) of this section.

Section 1918a.115 Cargo-landing surfaces. Aprons (the open portions of a terminal facility immediately adjacent to a vessel berth and used to transfer cargo directly between the terminal and a vessel) must provide adequate space to allow necessary work to be performed without undue restriction of movement (proposed § 1918a.115). The hazards of working in too narrow or too restricted a space include falling into the water, overexertion, and being hit by cargo. In addition, cramped working conditions force cargo handlers to work beneath suspended loads, an extremely hazardous practice. No similar requirement appears in the ANSI consensus standard.

Section 1918a.116 Platforms and skids. The platform and skid secton of the proposal (§ 1918a.116) is intended to provide protection against falling both for employees working cargo from the platform or skid and for those working below. The provisions proposed in paragraphs (a) and (b) call for guardrails or other means of protection (such as nets) on the side edges of platforms, and require nets between second story platforms and the vessel being worked.

The requirements proposed in paragraph (c) stipulate that platforms and skids be properly maintained, have their working loads marked on or near them, and have a minimum safety factor of five. Coverage of this topic in the ANSI marine terminal standard (section 3.5) is essentially the same as the proposal. The SAC recommended (Ex. 2: 16i) adoption of similar language covering platform attachments. However, the proposal's performance requirement stipulating that platforms and skids be maintained properly and be capable of handling loads would require that platform attachments be adequate to support the loads being handled.

Section 1918a.117 Elevators and escalators. Elevators and escalators are addressed in proposed § 1918a.117; definitions of these terms appear in paragraphs (a) and (b). The general industry standards do not cover elevators or escalators, and there are elevators in use which are not covered by state or local inspection requirements, including some at waterfront facilities. The General Duty Clause (§ 5(a)(1)) of the OSH Act has often been used to cite employers for hazardous conditions associated with elevators (Ex. 71), although it is not possible to separate these citations into marine terminal, as opposed to general industry, categories. Escalators have been included in the proposal's coverage because there are some escalators in terminals that are used to move cargo, such as ship's stores, in addition to people, and these escalators may not be inspected as frequently as necessary to ensure employee safety.

The SAC recommended (Ex. 2: 17i) that escalators had elevators in marine terminals be certificated as an alternative to the thorough inspections required in proposed paragraph (e), but OSHA has not adopted this approach because most elevators are adequately inspected, and certification would require a new specially trained group of inspectors within the certificating agency. The language in proposed paragraph (e) recognizes that the designated person performing the annual inspection (and perhaps also the monthly inspection) may not be a marine terminal employee but a local government employee, insurance inspector, or employee of a service firm that provides inspection services. Evidence of the latest inspections must be posted, although earlier inspection records are not required to be retained; this provision is intended to reduce recordkeeping to the minimum level consonant with safety.

The requirements proposed in paragraphs (c), (f), and (g) cover load limits and other factors that might affect safe operation of manually operated elevators and those that do not have interlocking doors. The ANSI MH9.1 standard's coverage of elevators is similar in intent but uses language, such as "inspections shall be carried out by persons expert in the field," that OSHA has not proposed.

The proposed provision in paragraph (h) required adequate protection, such as doors, gates, or other barricades, to ensure that employees do not fall down the shaft of elevators that do not have full shaft door closings. The barrier must be in place at every landing except the one at which the elevator is positioned.

No similar provision appears in ANSI MH9.1.

Section 1918a.118 Manlifts. The section of the proposal devoted to manlifts, § 1918a.118, has been developed to apply specifically to manlifts used in marine terminals. The proposed provisions are compatible with but not identical to those on the same subject appearing in the ANSI marine terminal document (MH9.1) or the general industry standards (§ 1910.68). Several examples of manlift fatality case reports, received by OSHA in connection with another rulemaking but typical of manlift accidents anywhere, have been included in the marine terminal rulemaking record (Ex. 74); falls and crushing injuries are common in manlift accidents. The proposed section has been written to allow, to the extent possible, the continued use of existing installations, and to give the employer the widest possible latitude, consistent with employee safety, in implementing the various requirements.

Proposed paragraph (a) outlines a detailed inspection procedure for all manlift parts and related features essential to the safe operation of these devices. Inspection records, monthly and annual, must be kept for one year and be available in the terminal if they are not posted near the manlift (paragraph (b)). This provision is in keeping with the Agency's efforts to reduce recordkeeping requirements to the lowest level consistent with safe practice.

The emergency stop device proposed in paragraph (c), which would be accessible from any position on the lift, would permit an employee to stop the manlift at any point. Manlift instructions (proposed paragraph (d)) would acquaint employees with safe manlift procedures.

The proposed provisions in paragraphs (e), (f), and (g) deal with means of preventing employees on manlifts from being injured in the space above and below the manlift and the top and bottom floors of the facility housing the manlift; signs and lights are examples of such means. Accident reports of cases of employees being pinned either by a step off the manlift or between the lift and the ceiling are included in the record (Ex. 47). The automatic stop device proposed in paragraph (g) would prevent the same type of injury by stopping the manlift automatically any time an employee passed the top landing without getting off. Manlifts installed after the effective date of this standard would be required to have additional stop devices as backup.

Each step on a manlift is required (proposed paragraph (h)) to have a corresponding handhold, to provide the necessary security for employees mounting or riding the lift.

Accessible and secured emergency ladders running the entire length of the manlift must be positioned so that any employee riding the lift can leave it in an emergency (proposed paragraph (i)). This precaution, which is standard industry practice, is essential because a breakdown of the lift might, for example, leave an employee stranded 50 feet off the floor.

Landings, including emergency landings, are addressed in proposed paragraph (j), which requires that they be maintained free of obstructions and specifies that new manlifts (those built after the effective date of the standard) which have landings at intervals of 50 feet or more must have emergency landings every 25 feet or less. Landings must be guarded by an effective means of fall protection; the particular form of protection, which might be gates, railings, or mazes, is left to the employer's discretion. The final paragraph in the manlift section, proposed paragraph (k), stipulates that guards to guide (such as cone guides) and protect employees ascending on the lift be installed at each floor opening to prevent employees from hitting their heads or being knocked off the lift.

Manlifts are required by proposed provision (1) to be equipped, maintained, and used in accordance with the manufacturer's instructions. This requirement would, for example, require belts to be properly sized for the manlift configuration, handholds and steps to be uniformly spaced, and manlift components to have strength characteristics adequate for the application in which they are used.

The provisions proposed in paragraphs (m) and (n) are intended to ensure that no employee riding a manlift will be pulled into the bottom pulley or crushed between the top landing and the ceiling of the building containing the manlift. Brakes to hold the manlift when it is stopped are addressed in the final provision, paragraph (o), in this proposed section.

The proposal's coverage of manlifts is compatible with that of ANSI MH9.1 (section 3.7) but goes beyond it by requiring certain safety features such as warning signs and lights, emergency stop devices, and emergency ladders, and by enumerating safety features to be inspected. Section 1910.68 of the general industry standards contains an extensive series of detailed provisions relating to manlifts; those pertinent to employee safety in the marine terminal setting have been included, in performance language, in the proposed requirements.

Section 1918a.119 Fixed ladders. Proposed § 1918a.119 covers fixed ladders, a subject presently covered by §1910.27 of the general industry standards (Subpart D, Walking and Working Surfaces) but not addressed in ANSI MH9.1. In 1976, OSHA published a Request for Information asking for comments on the material in Subpart D of 1910 (41 FR 17102, April 23, 1976), which included questions about the requirements for fixed ladders, stairways, platforms, and other work surfaces. Many commenters responding to the notice recommended that OSHA adopt a performance-oriented approach to this subject matter whenever possible (Ex. 77). The proposed fixed ladder section uses the performance approach in many cases.

In addition, the proposal strives to make those specifications that are necessary for compliance as flexible and practical as is consistent with employee safety. For example, the proposal specifies an acceptable range, rather than a single size, for some ladder requirements (such as rung spacing), and in other cases (such as rail width or distance between ladder and structure), the proposal only stipulates the minimum dimension for particular ladder features. These minimum measurements offer adequate employee protection, even though they may not provide the extra degree of employee comfort and convenience offered by equipment built to more ample specifications. OSHA believes that requiring the minimum safe size, strength factor, or distance rather than the corresponding ideal measurements for these features will permit employers considerably more flexibility in compliance and will also allow sound and adequate equipment to continue to be used without the expense of replacement or retrofitting.

This proposed section does not apply to portable ladders, which are covered in another section of the proposal (§ 1918a.120); to ladders permanently affixed to vehicles of the types specified in (a)(1), which are covered by other Federal agencies; to climbing devices associated with tanks and towers, such as step bolts, which are not considered ladders; to ladders built into or attached to scaffold framing; or to certain special-purpose ladders.

Ladder defects are covered in proposed paragraph (c), which prohibits the use of ladders with defects affecting safe use, such as broken rungs or loose side rails. The second provision in this paragraph mandates that a ladder

repair, for example a rung replacement, provide a strength factor equivalent to that of the original ladder part.

The requirements in proposed paragraph (d) specify various ladder dimensions that are essential to the safety of employees using these devices. Paragraphs (d)(1)(i) and (d)(1)(ii) state the strength requirements for existing ladders (200 pounds applied over a 3½ inch width at the rung's center) and for newly built ladders (250 pounds similarly applied).

Rung spacing, from the center of one rung to the center of the next rung, is required by proposed paragraph (d)(2)(i) to fall within the 9 to 16½ inch range; however, after the effective date, newly installed ladders would be required to have spacing within the 10 to 14 inch range, which has been determined (Ex. 16) to provide maximum climbing ease and safety.

The proposal contains two requirements directed at the width of fixed ladder rungs: one for existing ladders, and one applicable to ladders installed after the effective date of the final standard. The first proposed provision, (d)(3)(i), permits ladders already installed to have a width of 10 inches between stiles (side rails), although newly installed ladders would be required by proposed paragraph (d)(3)(ii) to have a minimum rung width of 12 inches, in keeping with new research data on climbing safety (Ex. 17).

The distance between the center of the rung and the nearest physical object behind the ladder, such as a wall or building, is proposed in paragraph (d)(4) to be a minimum of 7 inches for all fixed ladders installed after the standard's effective date, but previously implaced ladders may continue to be used if this clearance is at least 4 inches. In future installations where physical limitations restrict the space available so drastically that a 7-inch clearance between the structure to which the ladder is attached and the rung cannot be achieved, the distance may be no less than 4 inches.

The proposed 7-inch clearance will allow enough distance so that the arch, rather than the ball, of the climber's foot will contact the rung, which reduces the amount of torque, and therefore effort, that must be exerted by the lower leg muscles (Ex. 17: 21). In addition, this clearance permits the climber's weight to be more evenly distributed over the arch of the climber's foot, further reducing strain and fatigue (Ex. 17: 21).

As proposed in provision (d)(5), the minimum clearance between an ascending ladder climber and any obstruction, such as a ceiling, light fixture, or wall is 24 inches, to permit passage of the climber. However, although a space of 24 inches allows enough room for the ladder user to avoid hitting hanging obstructions, the proposal requires a deflection device, such as a cone or bevel guard, to ensure that the climber is guided safely through a floor or landing opening without hitting the head.

To facilitate the climber's access to the surface above the top of the ladder, paragraph (d)(6) proposes that the ladder's stiles extend at least 3 feet above the landing surface, except where grab rails or bars provide a secure grip to aid in climbing off the ladder.

The proposed requirement addressed to ladder pitch ((d)(7)) prohibits the use of ladders positioned at a greater-than-90-degree backward slant to the horizontal, which would require a climber to climb with the back of his body, rather than the front, closer to the ground. This posture would require the climber to hang from the rungs of the ladder instead of being supported by the rungs.

Fall protection for climbers of fixed ladders is addressed in proposed paragraph (e). Although there are few ladders of great height in marine terminals, some do exist. Ladder fall protection devices may be grouped into three categories: cages, wells, and safety devices. Cages and wells provdie protection by enclosing the climber and limiting the distance of the potential fall by means of platforms. Safety devices generally involve the use of a pole and auxiliary equipment, such as a friction or hydraulic brake device and lifebelts and lanyards. The proposal considers each of these types of fall devices effective means of fall protection, although there is some evidence that fall arrest mechanisms, such as the safety devices mentioned above, may be more effective in an emergency than cage-type restraining devices, because the action of the safety devices is entirely independent of the climber's performance under stress (Ex. 72). OSHA would appreciate receiving any information about the relative merits of these respective protective devices, to aid the Agency in developing the final rule.

In paragraph (e)(1), OSHA proposes that all fixed ladders greater than 20 feet in height be provide with fall protection devices. This height agrees with the fall protection height requirement in the general industry standards (§1910.27(d)(1)(ii)).

Proposed paragraph (e)(2) states that when a fixed ladder more than 30 feet in height is equipped with a cage or well, unless the climber is additionally protected by a ladder safety device such as a lifebelt and lanyard, the ladder must be built of sections no more than 30 feet in height. Each ladder section must be offset horizontally from the section above and below it, and must also contain at least one landing platform fitted with guardrails. These features are designed to limit the distance a climber may fall, and the platform could also be used as a rest platform, if necessary.

The proposed requirement in paragraph (e)(2)(iv) is a grandfather provision which permits existing hinged platforms to be used in lieu of offset sections and landing platforms on ladders installed before the standard's effective date. Hinged platforms are not permitted in newly installed ladder cages or wells because they require the climber to bend down both to lift them from above during descent and to replace them after use during ascent. This bending maneuver is both "awkward and hazardous," according to a recent study of ladder safety factors (Ex. 17: 112). OSHA seeks information on the hazards of hinged platforms, and the extent of their use in marine terminals.

As proposed in paragraph (e)(3), rest platforms equipped with guardrails on all open sides must be supplied at intervals of 150 feet or less on all fixed ladders which use the safety device method of fall protection. The platform as proposed would provide sufficient room for a climber to stand. However, OSHA is aware that a platform with enough room for emergency sitting (minimum platform dimensions 18 inches in depth; by 26 inches in width) would offer even greater employee protection, by permitting an exhausted climber to rest his legs and feet more effectively (Ex 17: 52). OHSA is considering increasing the minimum platform dimensions to allow for emergency sitting, and would appreciate comments and suggestions pertaining to the effectiveness and feasibility of such rest platforms.

In paragraph (e)(4), OSHA proposes requirements designed to ensure that ladder safety devices are designed, installed, and maintained to ensure their effectiveness. Installation, maintenance, and repair should be performed in accordance with the recommendations of the manufacturer of the device; the distance between the point of attachment of the climber's safety belt and the carrier must fall in the range between 8 and 12 inches, a distance recommended in a recent research report on this topic (Ex. 16).

Ladder cages or wells installed after the standard's effective date are

required by proposed paragraph (e)(5) to be made of sufficiently rigid material to prevent a falling climber from either dislodging or breaking through the enclosure. In addition, cages and wells must have inner surfaces that are free of snags or other protrusions that might injure the ladder user, and both cages and wells are required to extend high enough above landings and close enough to the ground to protect employees during any portion of the ascent and descent that might be hazardous.

In paragraph (e)(6), OHSA proposes that all ladders on radio towers, other communication and utitlity towers, and on poles and other high structures such as stacks and chimneys meet the requirements of paragraph (e) after the effective date of the final standard. At present, many of these structures are not equipped with either ladders or step bolts, and employees are often required to use the tower's sturctural members as climbing devices. The proposal would offer employees climbing these high structures the same degree of fall protection afforded to climbers of fixed ladders, by mandating that employers provide safety devices, cages, or wells when the height of the structure exceeds 20 feet. Many of these facilities do not have fixed ladders, although some are equipped with step bolts or individual rung ladders, in which case safety devices would have to be used instead of cages or wells.

In proposed paragraph (f), OSHA addresses individual rung ladders, which are cast mortared, or otherwise secured directly to walls or other vertical or inclined surfaces, and which have no side rails. The load rating and rung spacing and width requirements parallel or exceed those proposed for existing fixed ladders. For example, proposed provision (f)(3) stipulates that the ends of the rungs of these ladders be offset, enclosed, or equipped with stops, to prevent the climber's foot from slipping from the rung. Since individual rung ladders have no stiles (side rails), these additional precautions against slipping are essential for safe ascent and descent. The final proposed requirement in this paragraph states that the rungs of ladders of this type must be free of sharp edges, which might injure or perhaps even trip a climber.

Section 1918a.120 Portable ladders. In § 1918a.120, OHSA proposes requirements for portable ladders, whether of wood, metal, or reinforced plastic construction, and including job-made ladders (ladders made on the site to the specific requirements of a job and not intended for use elsewhere). This section of the proposal also makes use of the phase-in concept, by specifying more stringent criteria for ladders obtained or built after the standard's effective date.

The load rating and rung spacing provisions are identical to those for existing fixed ladders, except that proprosed paragraph (b)(4) requires that rung width increase in proportion to the ladder's length of climb, a construction feature designed to impart greater strength and stability to long portable ladders.

Proposed paragraph (c) requires all manufactured portable ladders to bear lables indicating that they meet the construction requirements of the appropriate ANSI portable ladder consensus standard, which specifies load ratings, strength factors, spacing, and other requirements.

Job-made portable ladders used after the effective date of the final standard are required by proposed paragraph (d) to meet the ANSI A14.1–1975 spacing and loading specifications for manufactured portable ladders.

In paragraph (e), OSHA proposes maintenance and inspection requirements for all portable ladders, whether manufactured or job made. The defects outlined in paragraph(e)(1) are all sufficiently damaging to interfere with the structural integrity of the ladder, and the presence of any such defect would be cause to remove the ladder from the worksite or to lable is as unusable by tagging if stored on the premises. The inspection required by proposed paragraph (e)(2) would consist of a brief visual inspection to ensure that the ladder has no significant defect. The proposed provision would also require such an inspection after a ladder had been subjected to impact or other unusual stress.

Procedures for safe use of ladders are covered in proposed paragraph (f). The proposed requirements appearing at paragraphs (f)(1) through (f)(6) prohibit using ladders in unsafe ways; they may not be formed by securing a rung (cleat) across a single rail, which cannot provide adequate strength or support, nor may ladders be used in a horizontal position as a walking or working surface. Proposed paragraph (f)(3) is designed to protect climbers on ladders that are made of materials that would conduct electricity from being injured by electric shock, and proposed requirement (f)(4) prohibits tying, bolting, or otherwise securing separate sections from different multi-sectional ladders together or attaching single ladders to each other to achieve greater height. No temporary or improvised method of securing such separate climbing devices together can be guaranteed to provide adequate employee protection.

Proposed paragraph (f)(5) prohibits using self-supporting (free standing) portable ladders as straight ladders. Self-supporting ladders are not designed to be used at the pitch that would be necessary if they were leaned against a building.

The provision proposed in paragraph (f)(6) prohibits portable ladders that are not self supporting, i.e., those that depend on a structure for support, from being used as climbing devices at heights beyond the highest support point, even though the ladder may extend beyond that point. Climbing on and upsupported section of such a ladder could cause the ladder to slip or tip.

The requirement that ladders extend at least 3 feet above the upper level supporting the ladder (proposed paragraph (f)(7)) will ensure that employees climbing on or off the ladder have a secure rail to grasp, unless other handholds are available to offer equivalent gripping surfaces.

In paragraphs (f)(8) and (f)(9), OSHA is proposing that all ladders used be positioned on a level and secure surface and be equipped with slip-resistant bases, e.g., safety "shoes" or spikes. Further, ladders must be secured at top and bottom to prevent slipping. In addition, proposed paragraph (f)(10) requires ladders to be positioned out of the way of doors opening out toward the ladder, which could cause the ladder to slip and fall; in addition, ladders would have to be placed clear of projecting objects, such as window sills and protruding nails, which could injure an employee on the ladder.

Section 1918a.121 Fixed stairways. In proposed § 1918a.121, OSHA specifies requirements for fixed stairways. The term fixed stairway includes all stairs, indoors and out, except fire escape stairways, articulated stairways, or stairs built into a piece of machinery, such as a crane.

The dimensional characteristics specified in proposed paragraph (b) confrom to dimensions for stairways recommended in recent research on this topic (Ex. 17:150–176; Ex. 16). There is evidence that irregular spacing of stairway treads, risers and nosings "correlated highly with accident incidence" (Ex. 17:150). For this reason, the proposal requires uniform spacing of these features for fixed stairs installed after the standard's effective date.

Hand railings are required by proposed paragraph (b)(3) for all fixed stairs with length of climb greater that four steps. The absence of railings on

stairways also correlates highly with accident incidence, according to recent research (Ex. 17:150). Railings are required to have the strength characteristics and design features of permanently installed guardrails, since both types of railings perform essentially the same protective function.

Proposed paragraph (c) addresses stairways built in restricted spaces; these are required to have performance capabilties that will ensure adequate employee protection, but are permitted greater flexibility than that for fixed stairways in less restricted spaces. For example, tread depth may be as narrow as 4 inches because the stairs are without risers and therefore permit the climber's foot to extend into the open space behind the back of the tread. The final proposed requirement in the fixed stairway section states that employers must maintain such stairways in safe condition. For example, stairs must be kept free of tripping and slipping hazards, and railings must be kept free of sharp edges and be properly secured.

Section 1918a.122 Spiral stairways Spiral stairways, found frequently aboard ship and occasionally in marine terminals, are covered in proposed § 1918a.122. There is no coverage of this topic in either the general industry standards or the ANSI marine terminal consensus standard. The minimum requirements for spiral stairways are shown in Figure F–1; they conform to those for existing or restricted fixed stairways in proposed § 1918a.121(c), except for allowances made for the triangular form of spiral staircase treads. Since these stairways are open on at least one side, proposed paragraph (b)(4) stipulates that at least one baluster be provided for each step (if balusters are used), to protect against a user slipping through between the railing and the step.

Clearance above the uppermost step must be a minimum of 6 feet 6 inches, to allow a person to stand after ascending, according to proposed paragraph (b)(5); the requirement proposed in paragraph (c) requires employers to keep stairways of this type in sound condition and free of all hazards.

Section 1918a.123 Employee exits. In general, marine terminals are liberally equipped with exits, such as cargo doors, because they are used for vehicle and cargo traffic. However, to ensure that adequate and well-marked employee exits are available, particularly for emergency use, OSHA proposes the requirements in § 1918a.123. The proposed individual provisions address such matters as exit signs, market exit paths, and good housekeeping, all essential to protect employees in emergencies requiring escape. The minimum width specified in proposed paragraph (d) is sufficient to use of the exit by one person at a time. OSHA believes this minimum exit width is adequate because terminals have so many doors and windows that could be used for emergency egress; information demonstrating support or lack of support for this proposed requirement would be appreciated.

Section 1918a.124 Illumination. In § 1918a.124, OSHA proposes a minimum average light level of 10 foot-candles for active work areas in marine terminals. Although most terminals have light levels at or above this value, at least in cargo-handling areas, some do not. OSHA is considering increasing the required light level in the final rule to 20 foot-candles for active work areas, to conform to the level recommended both for active storage yards and for freight piers in the ANSI standard for illumination, ANSI A11.1–1973, Practice for Industrial Lighting.

OSHA believes this illumination level may be necessary to permit employees in cargo handling and other particularly hazardous work operations to see, and thus avoid, serious hazards. These hazards include tripping and falling over obstructions and being struck by falling objects. Since OSHA believes that areas where the work being performed is less hazardous, such as storage areas and transit sheds, require a lesser illumination level to protect employees, these areas are required in the proposal to have a minimum average light intensity of 5 foot-candles. This latter figure also accords with ANSIs recommendation for active shipping area surrounds (Ex. 61).

The proposed requirement states that illumination levels must be measured at the working or walking surface; as in other measurements of occupational exposure, for example, air samples, the place at which the measurement is taken is of the utmost importance to its validity. Since it is crucial to safety that employees be able to see the walking and working surface in use, the proposal requires that the assessment of light intensity be made at that level.The ANSI MH9.1 (section 3.15) also links amount of light required to degree of hazard involved. Its illumination requirement states:

> . . . all places where persons are employed, including regular passageways to or through a wharf, pier, or any other part of a marine terminal facility, or to and from a vessel, shall be lighted with such adequacy that employees are able to perform assigned duties safely; the amount of light being dependent on and suitable for the type and degree of activity in the specific area.

OSHA is interested in receiving comments about safe illumination levels in various terminal areas and operations. For example, are there work situations other than cargo-handling that require an average light intensity of 10 foot-candles to be performed safely? Do all walking areas, including parking lots, require an illumination level of 5 foot-candles? Are there specific jobs that require a lighting level greater than the proposed requirement for active work areas?

Section 1918a.125 Passage between levels and across openings. In § 1918a.125, OSHA proposes coverage for devices such as ramps, dockboards (car or bridge plates), or other temporary forms of surfacing, such as steel plates. These work surfaces are particularly hazardous because they are not a permanent part of any structure, and because they are subjected to heavy loads and rough use.

Proposed paragraph (a) provides that employees whose work requires them to drive or carry material across an opening or to move from one level to another have a safe means of crossing from one level or surface to another. Dockboards, also known as car or bridge plates, are used primarily to load or discharge cargo from the terminal's loading dock to a trailer or other vehicle by means of fork lift trucks, which go back and forth across the dockboard from the loading dock into the trailer. Ramps are used principally to provide vehicle access to vessels.

The provisions proposed in paragraph (b) address significant hazards associated with these temporary work surfaces. As with other equipment designed for material handling, these devices must be plainly marked with their rated capacities, to prevent collapse caused by overloading. If the rating is not marked directly on the device, which is sometimes the case with dockboards, the rating must be available at the terminal. The adequacy of the means by which these devices are secured to the loading dock, vessel, or other surface is critical to the safe transit of vehicles across them. Accidents involving slipping dockboards are common; a frequent accident sequence involves a fork lift being thrown into the open space between platform and trailer because the dockboard has slipped and fallen into the void. There are several kinds of anchoring and anti-slip devices for securing dockboards in place. In addition, sufficient overlap must be provided to ensure proper contact between the two edges; if the platform or loading surface slopes or is not level,

the edges cannot be lined up and the dockboard cannot be adequately secured.

The means of safe handling addressed in proposed paragraph (b)(5) would vary according to the surface in question and the equipment available. For example, ramps can be safely handled by fork lifts if the ramps are equipped with fork loops or lugs, and dockboards are often equipped with handles or handholds for carrying. The proposed requirements for ramps and dockboards are compatible with those in the general industry standards (§ 1910.30) and the longshoring regulations (§§ 1918.23 and 1918.24).

Guardrails to protect employees from falling are proposed in the requirement at (b)(7) for situations where the dockboard or ramp slopes or where employees might fall more than 4 feet. Fall protection for vehicles using these temporary surfaces is addressed in proposed paragraph (b)(8), which states that dockboards and ramps must have sideboards or, for example, be turned up at right angles on their open sides so that trucks cannot fall over the edge.

In proposed paragraph (c), steel plates or other temporary surfaces used to facilitate vehicle movement are required to be secured so that vehicles or other objects cannot dislodge the plate, which could cause the truck to overturn or the load to topple.

Section 1918a.126 Guarding temporary hazards. Areas in the terminal that may present tripping and falling hazards are addressed in proposed § 1918a.126. Examples of such areas are broken pavement, ditches, holes in the surface of the pier, and chuck holes in traffic areas. Employers may use any effective means of protecting employees from being injured by tripping or falling over or into these hazardous areas; ropes, barricades and temporary railings are examples of appropriate protection. In addition to providing a physical barrier, employers must ensure that such areas are adequately lighted so that employees can avoid the hazard. The ANSI MH9.1 (section 3.1.7) also addresses temporary surface conditions that may be hazardous to employees.

Section 1918a.127 River banks. The proposed provision in § 1918a.127 is intended to apply to conditions on the inland waterways rather than at ocean ports. Along rivers where the water level changes drastically, such as along the Ohio and Mississippi rivers, it is not uncommon for cargo-handling operations to be conducted directly from the bank of the river, without a pier or apron to use as a working surface.

Employees working at such sites need to be protected from falling or being pulled into the water, particularly since these rivers flow very swiftly. There have been several incidents of cargo handlers drowning in these circumstances (Ex. 76). The proposed requirement calls for two types of protection: personal flotation devices for each employee, and guarding of the perimeter of the working area, between the land and the water. Employers might use temporary railings, roping off, or other physical barricades to accomplish the goal of employee protection. The related ANSI provision (section 3.1.8) only requires temporary guarding of the work area perimeter. OSHA believes that requiring flotation devices in these situations is justified by the number of drownings that have occurred.

Section 1918a.128 Sanitation. The requirements proposed in § 1918a.128 address washing and toilet facilities, drinking water, safe eating areas, and garbage disposal, all matters which affect employee health and comfort. The proposal provides coverage for temporary sanitary facilities as well as permanent installations, because cargo is occasionally handled directly from a river bank, and temporary facilities would be used in such a situation.

The requirement proposed at paragraph (c) prohibits employees from eating or drinking in storage or handling areas used for hazardous materials. It is not uncommon for employees, for example, to sit on a pile of hazardous cargo while eating lunch, a practice that might lead to ingestion of some of the hazardous material. The general industry standard contains similar coverage to protect employees against ingestion of toxic materials (§ 1910.141(g)(4)).

The longshoring regulations have rules similar to those in this section (§ 1918.94(a) and (b)) covering drinking water and garbage disposal, and ANSI MH9.1 (section 8.11.2) also addresses requirements for drinking water.

Section 1918a.129 Signs and marking. Signs to alert employees of hazards and to provide essential information are addressed in § 1918a.129. To achieve their purpose, signs are required to be legible and easy to understand, containing either a key word or a more detailed description of the hazard, such as "Railroad Crossing" or "High Voltage."

All marine terminals would be required to have, as a minimum, signs identifying the location of first aid facilities, telephones, fire exits, firefighting and emergency equipment (such as respiratory protective equipment), and a sign listing telephone numbers of the nearest hospital and other sources of emergency aid.

In addition, employers would be required to post danger signs to warn employees of imminent danger, such as electric shock, and to provide caution signs to warn employees of the presence of a potentially hazardous situation. Other sections of the proposal also require employers to post safety instruction signs, such as those designating smoking areas, and traffic signs. The ANSI standard also contains provisions concerning signs (section 8.12).

Subpart G—Related Terminal Operations and Equipment

The material in this proposed subpart addresses certain equipment, such as saws, abrasive wheels, and other fixed machinery, and specialized operations, such as welding and spray painting, that are used or performed in marine terminals. The equipment and operations involve support functions conducted principally to maintain or repair equipment used in connection with the terminal's primary purpose, cargo handling. Many types of machines found in general industry are not used in terminals, and the proposal's guarding and protection requirements are therefore much less extensive than those of OSHA's general industry standards.

Section 1918a.151 Machine guarding. Guarding of fixed machinery is addressed in § 1918a.151. Guarding may involve physical barriers used at the point of operation, or guarding by location, which means positioning the hazardous area, for example a nip point, beyond the reach of employees. The could be done either by using equipment designed so that the nip point is completely enclosed, for example by casting, or located beyond the reach of any employee's work station.

Proposed requirements for all fixed machines are covered in paragraph (b). The first provision proposes that all danger zones (§ 1918a.2(g)) be guarded; this requirement is stated in performance terms, to allow employers flexibility in choosing a method of guarding that is appropriate for the machine in question and the conditions of use.

Proposed paragraph (b)(2) requires a local exhaust system to protect employees performing tasks that produce dangerous quantities of dust or flying chips, as would occur, for example, in fixed saw operations.

The requirement proposed at paragraph (b)(3) to secure fixed machinery is designed to protect employees both from being hurt by a blade or other part of the machine when

the machine shifts, and from being hit by the machine itself as it falls.

The power cut-off device required by proposed paragraph (b)(4) would permit the operator to turn off the machine in a potentially hazardous or emergency situation.

Machines designed to operate at different speeds could seriously injure the operator if they shift speeds without warning during machine operation; the belt-locking device required by proposed paragraph (b)(5) would prevent any unintentional change in speed.

In proposed paragraph (b)(6), motors are required to be constructed so that any loss of power will automatically turn the machine off, to prevent operator injury caused by unexpected restart when the power supply comes back on.

The lockout requirement in proposed paragraph (b)(7) is designed to prevent the severe and frequent injuries caused by the accidental reactivation of machines that have not been properly turned off and locked out before employees work on them. OSHA is presently developing a general lockout standard for machines and equipment used in general industry, and preliminary data indicate that injuries related to the failure to lock out machines may account for as many as one percent of all occupational injuries. Although these statistics pertain to general industry cases, there is no reasonable basis to conclude that marine terminal experience with the same types of machines would be significantly different.

The provisions proposed at paragraphs (b)(8) and (b)(9) would ensure that machines and equipment used in the terminal are maintained in accordance with the manufacturer's instructions, and that maintenance and repair are performed only by designated employees. Maintenance is perhaps even more important in the harsh weather conditions of the terminal environment than in less severe conditions, although it is essential to the safe operation of all industrial machinery.

The final requirement proposed in paragraph (b) prohibits use of any equipment with a defect that would interfere with safe operation; the intent of this provision is to protect operators of machinery and employees working near equipment from being injured by machine malfunction or failure.

In paragraphs (c), (d), (e), and (f), OSHA proposes coverage for the hazards associated with the operation of industrial saws. These hazards include being cut by the saw's blade, and being hit by flying pieces of the material being cut. Accordingly, most of the requirements in these paragraphs relate to machine guarding. For example, proposed requirements (c)(1), (d)(1), (d)(4), (e)(1), and (f)(1) all pertain to guarding of the blades of the type of saw involved.

The provision proposed in paragraph (c)(2) requires spreaders on handfed ripsaws and table saws; these devices hold the cut in the material open, and thus prevent the feedstock from squeezing and jamming the blade.

Non-kickback fingers or dogs are required by proposed paragraphs (c)(3) and (e)(2); these devices hold the material being cut so that it will not be picked up by the saw's action and thrown at the operator. The work practice proposed in paragraph (e)(5) is also intended to ensure that the saw is used in a manner that will offer resistance to the saw's action, to prevent the operator's hands from being caught in the blade.

The devices required in proposed paragraphs (d)(2) and (e)(4) would prevent the saw from rebounding abruptly after use, which might break the blade, and would also ensure that the blade returns to the rest position, away from the operator's hands. Steps to prevent the saw from swinging into the operator's range are proposed in paragraphs (d)(3) and (e)(3), and brakes which would stop the saw are covered in proposed requirement (f)(2). The final proposed provision for saws requires band saws to have a tension control device to maintain the proper tension on the blade, so that material will not catch and be thrown at the operator.

In paragraph (g), OSHA proposes requirements for abrasive wheels and equipment used to grind and sharpen tools and other objects.

The most common accident associated with abrasive wheels is one in which the operator is struck by a piece of the wheel when the wheel breaks. For this reason, most of the requirements proposed in this paragraph deal with guarding or are related to guarding. For example, proposed provision (g)(4) requires that work rests be used; these devices are designed to hold the tool being ground so that the operator's hand will not contact the wheel. Similarly, the requirements proposed in paragraphs (g)(5), (g)(6), and (g)(7) are intended to prevent conditions that might cause the wheel to shatter, thus injuring the operator or others in the vicinity.

Proposed paragraph (h) contains guarding provisions for moving machine parts, such as gears, sprockets, and belt chains; whether the guarding is point of operation guarding or guarding by location is left to the employer's discretion.

Section 1918a.152 Welding, cutting, and heating (hot work). The provisions in this section of the proposal are compatible both with the hot work requirements in OSHA's shipyard regulations (29 CFR Part 1915) and with the Agency's general industry hot work requirements (§ 1910.252). Fire and electric shock are the principal hazards associated with any type of hot work. Hot work is used in the marine terminal principally to perform routine maintenance and repair tasks, such as rebuilding a damaged intermodal container or repairing a chassis that is no longer properly aligned.

In paragraph (c), OSHA proposes requirements to protect employees from the hazards associated with unwanted fires in the workplace. Unless hot work is performed in designated areas without fire hazards, proposed requirement (c)(2) would require that additional precautions, such as using a fire-proof slag curtain, be taken.

Proposed paragraph (c)(3) ensures that fire extinguishing equipment is at hand wherever hot work is being performed. This equipment must be fully charged and ready for use at all times.

The fire watch proposed in paragraph (c)(4), which is standard industry practice, and is necessary to ensure that no sparks or other fire hazards are left unattended.

Drums and other containers presenting a fire or explosion hazard are required in proposed paragraph (c)(5) to be closed to prevent the escape of dangerous fumes, and empty containers must be removed from the hot work area. The proposed requirements in paragraph (c)(6) are intended to prevent flying slag from starting a fire on the floor below the hot work area or outside the structure in which hot work is being carried on.

Hot work is prohibited in the areas specified in proposed paragraph (c)(7); these areas present extreme fire hazards. For example, bulk sulphur may ignite spontaneously during handling. OSHA also has received many reports of fatal accidents caused by employers welding on tanks containing combustible liquids (ref).

Before heating, proposed paragraph (c)(8)(i) requires inerting or cleaning of tanks or drums that have contained a flammable or combustible substance. These structures must then be tested by the employer to ensure that the atmosphere is free of fire hazards. A relief valve to release the gas built up by heating the drum or tank is required in proposed paragraph (c)(8)(ii), to prevent explosion.

In paragraph (d), OSHA proposes requirements for gas welding and cutting operations, such as hell-arc or oxy-arc welding. The proposed requirements of paragraph (d)(1) specify work practices to be followed to prevent damage to the compressed gas cylinders used to supply the welder's torch. Compressed gas cylinders must be protected from impact, which may cause the pressurized cylinder to explode or to become a lethal projectile.

The requirements in paragraph (d)(2) are addressed to hazards associated with fuel gas use. For example, proposed paragraph (d)(2)(i) is intended to prohibit blocking of cylinder valves, which would interfere with the proper flow of gas.

Cylinder valve regulators, which are spring-loaded and therefore delicate, are addressed by the provisions proposed in paragraphs (d)(2)(ii) through (d)(2)(iv); these work practices are essential to maintaining regulators, which control the pressure level, in safe condition.

The proposed requirements in paragraphs (d)(2) (v) and (vi) are intended to prevent leaking cylinders from presenting a fire hazard to employees near the cylinder.

Hazards associated with fuel gas and oxygen are addressed in proposed paragraph (d)(3). Hoses used to convey these substances must be maintained in optimum condition, to ensure that they do not leak, which would present a fire and explosion hazard. It is essential that hoses supplying oxygen and those supplying fuel gas not be taped together more than is necessary for ease of handling, to reduce the likelihood of fire; however, as proposed provision (d)(3)(ii) notes, they may be taped together for a distance of no more than 4 inches for handling purposes.

Welding torches are addressed in proposed paragraph (d)(4); torches must be carefully maintained to ensure proper flow control. Proposed paragraphs (d)(5) and (d)(6) stipulate additional work practices to be followed to prevent explosions and fires.

Proposed paragraph (e) contains requirements for arc welding and cutting. As with other forms of welding, the primary hazards of arc welding and cutting are fire and explosion. However, arc welders and cutters are also subject to electric shock and to vision impairment caused by exposure to the blinding rays of the arc. The requirements in this paragraph are therefore directed at protecting workers from these dangers. For example, the proposed provisions appearing at paragraphs (e)(1)(ii), (e)(2)(i), and (e)(2)(iv) are designed to ensure that electrode holders, welding cables and connectors, and metal parts are properly insulated to protect against fire and electric shock.

The requirements proposed in paragraphs (e)(1)(i), (e)(2)(i), and (e)(3)(vi) are primarily concerned with the current-carrying capacity of electrode holders, welding cables, and ground connections. If such equipment is not electrically adequate to carry the current required in the welding or cutting operation, employees could be exposed to fire and electric shock.

In paragraphs (e)(2)(ii), (e)(2)(iii), (e)(9), and (e)(10), OSHA is proposing coverage directed largely to the hazard of electric shock. Proposed provision (e)(3)(ii) is intended to prevent explosions, which might occur if, for example, a pipeline carrying fuel gas was used as a ground return circuit. Grounding, which must be adequate to protect employees using electrical tools from being shocked or electrocuted, is addressed in the requirements proposed in paragraphs (e)(3)(iii), (e)(3)(iv), and (e)(3)(v).

The work practices and requirements in proposed provisions (e)(4), (e)(5), (e)(6), (e)(7), (e)(9), and (e)(11) are also directed at protecting the welder or cutter from electric shock and burns. The proposed requirements in paragraphs (e)(8)(i) and (ii) will provide employee protection against blinding by the arc and being burned by the sparks of the arc.

The final provision proposed in this paragraph, (e)(11), requires employers to provide additional protection against the increased risk of electric shock when arc welders and cutters must work in wet or humid conditions. This additional protection could take the form of rubber boots, rubber pads for employees to stand on, or rubber gloves.

The proposed requirements in paragraph (f) are directed to the atmospheric hazards associated with welding, cutting, and heating, processes which liberate fumes that may be harmful to the welder or cutter or to other employees in the vicinity of the hot work. The composition of the fumes liberated depends on the types of fluxes, filler materials, base materials and coatings involved in the process.

Proposed paragraph (f)(1) specifies the types of ventilation required to maintain breathing zone concentrations of atmospheric contaminants below hazardous levels. Either local exhaust ventilation, in the form of hoods that can be positioned near the point of operation, or general ventilation may be used to maintain non-hazardous levels of fumes, vapors, or smoke. The proposed requirement in paragraph (f)(1)(v) prohibits using pure oxygen to cool or ventilate the atmosphere, or to clean clothing to the work area. The provision is directed at the hazard of fire associated with oxygen levels above 23% of the atmosphere; since the oxygen used for welding is pure oxygen, it may cause a serious fire hazard. If it were used to clean a welder's clothing, for example, some of it might collect in the seams, where it could cause the clothing to catch on fire when the welding torch was lit.

In paragraph (f)(2), OSHA proposes requirements for performing hot work in a confined space, such as a tank or boiler. The severely limited natural ventilation, small size, and restricted access typical of confined spaces all contribute to the exacerbation of the respiratory hazards associated with hot work in general. The proposed requirements therefore mandate either mechanical ventilation or the use of appropriate respiratory protective equipment, in which case a standby prepared to perform a rescue must be stationed outside the confined space.

Proposed paragraph (f)(3) addresses the hazards of exposure to the fumes liberated when toxic metals are welded, cut, or heated, or used in the flux or filler. Examples of toxic mentals are lead, cadmium, chromium, zinc, and mercury. The level of employee protection required by the proposal varies with the toxicity of the metal being heated and the ventilation characteristics of the space in which the work is being performed. For example, proposed requirement (f)(3)(iii) requires that both local point-of-operation ventilation and supplied air or self-contained breathing apparatus be used when hot work is performed indoors with a beryllium base or filler metal. Workers exposed to beryllium fumes are subjected to the risk of developing either acute or chronic respiratory beryllium disease.

The provision proposed in paragraph (f)(3)(v) will ensure that employees working in the vicinity of the hot work are also adequately protected from hazardous exposures, by requiring them to wear the same type of personal protective equipment as is worn by the welder or burner.

In paragraph (f)(4), OSHA is proposing coverage for employees exposed to the fumes liberated during inert-gas metal-arc welding. An example of this type of hot work is the use of argon to weld aluminum. The proscription directed to the use of chlorinated solvents within 200 feet of the welder's arc is necessary to protect employees from chlorine gas, which would be liberated if the solvent contacted the sparks of the arc.

The rays produced by this type of hot work are particularly intense and therefore present the risk of impairing the vision of the exposed workers. Filter lenses and filter lens goggles are required by proposed paragraph (f)(4)(ii), to protect against this hazard.

Since inert-gas metal-arc welding produces 5 to 30 times the level of ultraviolet radiation produced in shielded metal-arc welding, proposed paragraph (f)(4)(iii) requires employees to wear protective clothing and equipment to protect them from ultraviolet burns and cutaneous or visual damage.

The final proposed requirement in the inert-gas welding section mandates that employees performing inert-gas metal-arc welding on stainless steel be protected by local ventilation or by supplied air respirators, to prevent exposure to hazardous levels of nitrogen dioxide.

Performing hot work on structures coated with preservatives requires that precautions against both fire and inhalation of toxic fumes be taken. For example, the requirements proposed in paragraph (g) would protect welders required to weld a chassis or container that had been painted with a preservative such as red lead paint or a chromate-containing coating.

Tests to establish the degree of flammability of the preservative coating are required by proposed paragraph (g)(1), and precautions against fire are required by the next provision. Examples of an appropriate precaution would be stripping the coating away from the area to be heated, or applying artificial cooling to the area to reduce the temperature of the surface. Since these perservatives produce toxic fumes when heated, the final proposed provision mandates that exposed employees wear appropriate respiratory protective equipment.

The final paragraph in the proposed hot work section addresses employee protection from the radiant energy produced by any type of welding or cutting. Visual impairments caused by the blinding flashes produced by the welder's torch and the metal being welded are common occurrences among welders. The proposed requirements in paragraphs (h)(1), (2), and (3) will ensure that eye protection, with the filter lenses appropriate to the task, is worn by affected employees.

Section 1918a.153 Spray painting. Spray painting is performed at many marine terminals, although such operations are usually conducted on an infrequent and small-scale basis. Spray painting is done to protect surfaces exposed to the environment from rusting or corroding. For example, chassis and fifth wheels might be spray painted after removal of rust spots or other damage. The principal hazards of spray painting are fire and inhalation of atmospheric contaminants.

The scope of this proposed section is specified in paragraph (a), which states that major spray painting jobs, such as painting the terminal building, and portable spray painting equipment, such as the hand-held equipment used for minor "touch-ups," are not included in the proposal's coverage of spray painting. Major painting jobs are considered construction operations, and would be covered by OSHA's construction regulations (29 CFR Part 1926).

The requirements proposed in this section are grouped according to the location in which the spray painting operation occurs. The requirements appearing in proposed paragraph (c) apply to any painting area, including spray booths, spraying areas, and outdoor spraying operations, while those in proposed paragraph (d) apply only to spraying booths and spraying areas. The provisions in proposed paragraph (e) apply to spray booths exclusively. This "tiering" of requirements corresponds to the degree of hazard associated with spray painting in the various locations. For example, electrical equipment used in an outdoor area would not have to be approved for use in a hazardous location because the natural ventilation outdoors is adequate to keep the atmosphere below flammable or explosive levels. However, electrical equipment in an indoor spraying area would be required by the proposal to be approved for use in a Class I, Division 2 hazardous location, while that used in the enclosed space of a spray booth would have to be approved for a Class I, Division 1 (explosive) atmosphere.

The proposed requirements in paragraph (c) are primarily directed to fire and explosion hazards in all spraying areas, whether indoor or out. For example, paragraph (c)(1) requires that the shut-off valves on spray painting containers or piping be closed when the equipment is not in use, to relieve the pressure on the hoses. Since equipment under pressure may burst, releasing flammable materials into the atmosphere, several proposed provisions are aimed at preventing this hazard (c)(1), (c)(2), and (c)(3). These preventive measures are necessary to ensure that materials used in spray painting operations which have low flash points, such as paints and thinners, do not create fire hazards.

Several paragraphs proposed in paragraph (c) are designed to prevent sparks or static electricity from igniting fumes from the operation; paragraphs (c)(4) and (c)(5) are examples of such provisions. Special precautions for the use of organic peroxides and other dual-component coatings, which are subject to spontaneous combustion, are addressed in proposed paragraph (c)(7).

The requirements in paragraph (d) would apply to indoor spraying areas and spray booths, but do not apply to outdoor spray areas because such areas do not have the equipment covered in this paragraph. For example, outdoor spray areas do not have exhaust ducts and ventilation fans.

Proposed paragraph (d)(1) requires distribution or baffle plates, which are used to ensure an even flow of air and to catch oversprays, to be of non-combustible material and to be so located and designed that accumulations of paint that might be hazardous can be removed frequently and easily.

Filters, used to filter out paint mist to keep atmospheric paint concentration below a hazardous level, are addressed by proposed paragraphs (d)(2), (d)(3), and (d)(4). These requirements are all directed at prevention of fire. Mechanical ventilation of spraying areas is covered in several proposed requirements (d)(5), (d)(6), (d)(7), and (d)(9)). Ventilation is used to maintain the concentration of flammable and combustible vapors and mist from spray painting below flammable levels.

The risk of an electrical spark igniting the atmosphere in a spraying area is substantial unless safeguards are used against sparking. In paragraphs (d)(8), (d)(10) and (d)(12), OSHA proposes requirements to prevent this hazard.

The final paragraph in the spray painting section contains provisions that apply to spray booths, enclosed spaces in which the concentration of fumes and therefore the danger of fire is greater than in a spraying area. Although spray booths are not common in marine terminals, several terminals do have them, and the requirements proposed in paragraph (e) are directed to employee protection in these situations. The proposed requirements mandate that the booths themselves be constructed largely of noncombustible material (e)(1), be separated from other marine terminal operations either by a partition or by a clearance space (e)(2) and (e)(3), and have conductive objects, such as ducts or piping, grounded, to prevent sparking or fire (e)(4)). Spontaneous ignition caused by successively applying materials that are flammable when combined would be prevented by

compliance with proposed paragraph (e)(8).

Section 1918a.154 Compressed air Many industrial processes use compressed air to clean the work area of debris, dust, and chips after work has been completed. Unless employees in the vicinity are properly protected, however, they may be hit by flying chips or debris that is thrown up by the cleaning process. In § 1918a.154, OSHA proposes that exposed employees be protected by chip guarding and by the appropriate personal protective equipment, such as goggles or face shields. This section also prohibits the use of compressed air to clean employees, a practice that can cause an air embolism if air under pressure is forced into the bloodstream through the skin.

Section 1918a.155 Air receivers. Air receivers, tanks used to store compressed air from a compressor, are addressed in proposed § 1918a.155. The hazard associated with this equipment is explosion caused by the excessive buildup of pressure in the receiver. The proposed provisions would guard against this hazard by requiring pressure guages and pressure-relief valves. The proposal would also prohibit the placement of any valves other than relief valves between the receiver and its safety valves, which would prevent the relief device from functioning properly.

Section 1918a.156 Fuel handling and storage. Although the Coast Guard exercises general statutory authority in matters related to fuel handling and storage in marine terminals, the working conditions covered by the provisions proposed in this section are not addressed in the Coast Guard regulations (33 CFR Part 126, 46 CFR Part 146).

The requirements in proposed paragraph (b) concern diesel and gasoline fuel handled at terminals which have their own dispensing pumps to supply industrial tructs and other vehicles used at the terminal. All of the proposed provisions are directed at preventing fires and explosions, the principal hazards associated with liquid fuel handling and storage.

In paragraph (c), OSHA proposes coverage for the safe handling and use of liquefied gas fuels, such as liquefied petroleum gases (LPG) (propane, butane, propylene, and butylene). These gases liquefy under moderate pressure, but convert to the gaseous state when the pressure is relieved. Adequate ventilation is an even greater problem with these fuels than with flammable natural gases, because LP-gas vapors are heavier than air and are therefore more difficult to disperse. Accordingly, two of the proposed provisions are directed at preventing these vapors from accumulating in low-lying areas such as tunnels and pits ((c)(1)(iii), (c)(5)(iii)).

The requirements proposed in paragraph (c)(2) are intended to ensure that LP cylinders and their valves are handled in a manner that will avoid damage to the containers and their fittings. The final provisions in this paragraph, (c)(3), (c)(4), and (c)(5), cover fueling operations, fuel storage, and storage and servicing of LP-powered vehicles, respectively.

Section 1918a.157 Battery charging and changing. The hazards associated with charging and changing electric storage batteries are dealt with in proposed § 1918a.157. Employees performing these tasks are exposed to acid burns from spilled electrolyte, slips and falls caused by spilled battery fluids, electric shock from the charging equipment, and fire and explosion caused by ignition of hydrogen released during the charging process. In addition, employees may overexert themselves if they attempt to lift the batteries or large quantities of electrolyte.

The proposed requirements are directed at the prevention of fire and explosion ((a), (b), (c), (f), (g), (h), (m), (n)); protecting employees from acid burns ((d), (e), (i), and (j)); avoiding electric shock ((k), (l), (n), and (o)); and preventing strains and overexertion injuries ((j)).

Section 1918a.158 Prohibited operations. The proposed standard's final section prohibits certain operations from being conducted during, or in the vicinity of, cargo-handling operations. Spray painting and abrasive blasting both produce exessive levels of noise, which would interfere with the communication of signals necessary to ensure close cooperation during the loading or discharging of cargo. Further, if a draft or part of a draft were to fall and hit the spray painting equipment, hazardous fumes might be released.

Proposed paragraph (b) is intended to protect cargo handlers from the fire hazards associated with welding and burning operations. Unless hot work is necessary to repair equipment being used in the hoisting operation, it should be performed in an area designated for that purpose and distant from the hoisting area, which would provide the requisite level of employee protection.

VI. Regulatory Assessment

The proposed standard covering the operation of marine terminals is not a "major" action as defined by Executive Order No. 12044 (43 FR 12661, March 24, 1978) and by the economic identification criteria contained in Department of Labor Guidelines for improving Government regulations (44 FR 5575, January 26, 1979).

The marine terminal facilities covered by the proposed standard include other industries in addition to those in Standard Industrial Classification (SIC) 4463, Marine Cargo Handling. For example, firms in such industries as petroleum refining, steel production, iron ore and coal mining, cement manufacturing, and others frequently have their own port facilities to serve their shipping needs; these firms would be classified under other SIC's. The economic analysis of the proposed standard therefore includes estimates of compliance costs that are not entirely attributable to SIC 4463.

Centaur Associates, Inc., has prepared an economic assessment for OSHA entitled "Economic Impact Statement/Assessment for the Proposed Marine Terminals Standard" (Ex. 78). This study includes assessments of the technological feasibility of compliance, of the estimated costs of compliance, of the estimated effects upon the prices of goods shipped through marine terminals, of the estimated effects upon labor productivity and employment, and of the expected changes in market structure that can be anticipated upon implementation of the proposed standard.

According to the study, the costs of compliance for the marine cargo handling industry—based upon a "worst case" criterion—is estimated to be no greater than $40.3 million during the first year of compliance and no more than $18.5 million during any succeding year. This falls well short of the Department of Labor's Guidelines establishing criteria for major actions of $50 million in one year in any one industry and $80 million in any two years. With respect to the economy-wide costs of compliance, the total is estimated to be less than $63.8 million during the first year and no greater than $28 million during any succeeding year. These values also clearly fall short of the E.O. guidelines setting a "major" action level of $100 million in one year for the economy as a whole, and $180 million for any two years. The Centaur study concludes that compliance with the proposed standard is both technologically and economically feasible.

With respect to the other general economic assessments of the proposed standard, the study concludes that the effects on prices and the quantity of goods shipped through marine terminals is, in the worst case, only about $0.05 a ton—a negligible charge equal to approximately 0.06 percent of the

average water transportation shipping charges. It also concludes that there would be some minor negative effects upon labor productivity due to the required safety training and the probable changes in certain work practices. However, this productivity loss may be more than offset by the decline in lost work days attributable to the reduction of occupational injuries in marine terminals. The study also concludes that the proposed standard would not have any effect upon employment because of its limited impact on costs, prices, quantities shipped, and labor productivity.

In addition, pursuant to the Regulatory Flexibility Act of 1980 (Pub. L. 96-353, 94 Stat. 1164 (5 U.S.C. 601 et seq.)) the study assessed the impact of the proposed standard upon small businesses. The Centaur study concluded that this proposed standard would not create any new competitive disadvantages in small firms relative to larger firms because the bulk of the costs are directly dependent upon the firm's size and upon the number of its employees. For example, the amount and costs of new lighting required by the proposal would be determined by the size of the marine terminal. The cost of providing safety shoes, the cost of providing supervisory safety instruction, and the cost of per-worker productivity reductions are all determined by the number of employees. Since these items account for the major cost (accounting for about 75% of the total estimated cost of the proposal), the per-ton costs of the proposed standard are expected to be the same for both smaller and larger firms. Thus, the basic market structures of the marine cargo handling and other affected industries would not be changed, and smaller firms would not lose business as a result of promulgation of the standard.

Further, the proposed safety standard is not expected to have environmental effects because the standard is concerned only with working conditions at marine terminals. The proposed standard provides coverage only for matters such as the types of slings to be used, the positioning of safety ladders, and the type of headgear and protective shoes to be worn. These provisions would not have an impact on the quality of the environment, and consequently, there is no need to perform an environmental impact statement for this proposed safety standard.

The economic impact assessment has identified several benefits which will be realized as a result of promulgation of a proposed safety standard for marine terminals. As the Hazard section of the preamble points out, workers at marine terminals are exposed to serious risk of injury. The Bureau of Labor Statistics has found that the Water Transportation Services industry (SIC 446) has the highest hazard index rating of any 3-digit SIC industry. Further it reports the greatest number of workdays lost per 100 workers for any 3-digit SIC industry. The extent and severity of the injury problem in marine terminals are reflected in compensation and medical payments made under the Longshoremen's and Harbor Worker's Compensation Act, which totaled about $200 million in fiscal year 1980. This figure does not include workmen's compensation paid to workers injured at marine terminals owned, for example, by a steel company, an oil refinery firm, or other facility not principally devoted to cargo handling.

Clearly, there is a pervasive injury problem in the shoreside marine cargo handling industry, which the provisions of this standard are designed to ameliorate. The proposed illumination requirement should limit the number of injuries caused by lack of light. The requirement that workers wear safety shoes which meet the ANSI 41.1-1967 specification for a class 75 safety shoe which, according to a Canadian study on the effectiveness of safety shoes (Ex. 79) will prevent 55% of all toe injuries and also substantially lessen the severity of many other toe injuries. Another proposed provision requiring safety training of supervisors should also reduce the level and severity of injuries caused by careless work practices.

Based upon a review of the Centaur study and the proposed standard as a whole, OSHA has determined that this proposed standard is not a "major" action under E.O. 12044 and the Secretary's Guidelines (44 FR 5575, January 26, 1979), and it is not expected to have any adverse effects upon small businesses as set forth in the Regulatory Flexibility Act of 1980.

VII. Public Participation

Interested persons are invited to submit written data, views and arguments with respect to this proposal. These comments must be postmarked on or before May 15, 1981, and submitted in quadruplicate to the Docket Officer, Docket S-506, Room S-6212, Frances Perkins Building, 200 Constitution Avenue, N.W., U.S. Department of Labor, Washington, D.C. 20210 (202) 523-7894. Written submissions must clearly identify the specific provisions of the proposal which are addressed and the position taken with respect to each issue.

The regulatory assessment and the exhibits cited in this document will be available for public inspection and copying at the above address. OSHA invites comment concerning the conclusions reached in the economic impact assessment.

The data, views and arguments that are submitted will be available for public inspection and copying at the above address. All timely submissions received will be made a part of the record of this proceeding.

To assist interested persons in submitting their written comments and data OSHA is scheduling a public meeting during the comment period. The meeting will be held on April 28, 29, and 30, 1981, in the Auditorium, Frances Perkins Building, 200 Constitution Avenue, N.W., U.S. Department of Labor, Washington, D.C. 20210. It will begin at 9:00 A.M. will recess from 12 Noon to 1:00 P.M., and will continue until 5:00 P.M.

The public meeting is intended as an informal forum for interested persons to present their concern orally and to seek clarification of the proposal from representatives of OSHA who will conduct the public meeting.

OSHA requests that any person wishing to make an oral presentation at the meeting notify OSHA in advance. Please identify the person and/or organization intending to make a presentation, telephone number, the amount of time requested for that presentation, and the subject matter and a brief summary of the intended presentation, if possible. This written notice should be sent to Thomas Hall, Room N-3635, OSHA Division of Consumer Affairs, Frances Perkins Building, U.S. Department of Labor, 200 Constitution Avenue, N.W., Washington, D.C. 20210 postmarked no later than April 15, 1981. For further information concerning participation at the meeting, please contact Thomas Hall or Richard Terry at (202) 523-8024. All persons giving advance notice will have time reserved for their oral presentations. Persons wishing to speak who have not filed advance notices are requested to register from 8:30 A.M. to 9:00 A.M. on the morning of the public meeting.

As long as time permits, all persons who wish to be heard will be allowed to speak. However, in the interest of time, persons who have provided advance notice will be given priority.

Detailed minutes of the meeting will be prepared and will be made a part of the record of this rulemaking. Copies of the minutes will be available for inspection at the OSHA Docket Office, Room S-6212, U.S. Department of Labor,

200 Constitution Avenue, N.W., Washington, D.C. 20210.

Pursuant to 29 CFR 1911.11(b) and (c), interested persons may, in addition to filing written submissions and attending the public meeting as provided above, file objections to the proposal and request an informal public hearing with respect thereto in accordance with the following conditions:

(1) The objections must include the name and address of the objector;

(2) The objections must be postmarked on or before May 15, 1981 and submitted to the Docket Office at the above address;

(3) The objections must specify with particularity the provisions of the proposed rule to which objection is taken, and must state the ground therefor;

(4) Each objection must be separatelystated and numbered; and

(5) The objections must be accompanied by a detailed summary of the evidence proposed to be adduced at the requested hearing.

VIII. Authority

This document was prepared under the direction of Eula Bingham, Assistant Secretary of Labor for Occupational Safety and Health, U.S. Department of Labor, Third Street and Constitution Avenue, N.W., Washington, D.C. 20210.

Accordingly, under sections 4(b)(2), 6(b) and 8(c) of the Occupational Safety and Health Act of 1970 (84 Stat. 1592, 1593, 1599, 29 U.S.C. 653, 655, 657, and Section 41 of the Longshoremen's and Harbor Workers' Compensation Act (44 Stat. 1444 as amended; 33 U.S.C. 941), Secretary of Labor's Order No. 8–76 (41 FR 25059), and 29 CFR Part 1911, it is proposed to add Part 1918a to Title 29, Code of Federal Regulations, 29 CFR, and to amend 29 CFR Part 1910.16(a) and (b).

Signed at Washington, D.C. this 9th day of January 1981.

Eula Bingham,

Assistant Secretary of Labor.

1. By amending the title of § 1910.16 to read "Longshoring and Marine Terminals," and by revising paragraph (a) of § 1910.16 and by adding a new paragraph (b)(4) to § 1910.16 as follows:

§ 1910.16 Longshoring and marine terminals

(a) *Adoption and extension of safety and health standards for longshoring* (1) The standards prescribed by Part 1918, Subparts A through J of this title and in effect on April 28, 1971 are adopted as occupational safety and health standards under Section 6(a) of the Act and shall apply, according to the provisions thereof, to any employment and place of employment of every employee engaged in longshoring operations or a related employment aboard a vessel on the navigable waters of the United States.

(2) Part 1918a of this title shall apply exclusively according to the provisions thereof, to employment within a marine terminal, except as provided in paragraph (a)(4) of this section.

(3) The provisions of Part 1918a do not apply to the following:

(i) Facilities used for bulk storage, handling and transfer of flammable and combustible liquids, gases and hazardous cargo to the extent that specific working conditions are regulated by the United States Coast Guard; and

(ii) Facilities subject to the regulations of the Office of Pipeline Safety Regulation of the Materials Transportation Bureau, Department of Transportation, to the extent such regulations apply to specific working conditions.

(4) Part 1910 does not apply to marine terminals except for the following:

(i) Electrical. Subpart S;

(ii) Toxic and hazardous substances. Subpart Z applies where specifically referenced in Part 1918a, except that the requirements of Subpart Z do not apply when a substance or cargo is contained within a sealed, intact means of packaging or containment complying with Department of Transportation or Intergovernmental Maritime Consultative Organization requirements;

(iii) Noise. Subpart G, § 1910.95;

(iv) Commercial diving operations. Subpart T;

(v) Safety requirements for scaffolding. Subpart D, § 1910.28;

(vi) Abrasive blasting. Subpart G, § 1910.94(a); and

(vii) Access to employee exposure and medical records. Subpart C, § 1910.20.

(b) *Definition.* . . .

(4) "Marine terminal" means wharves, bulkheads, quays, piers, docks or other berthing locations and adjacent storage or contiguous areas and structures devoted to receiving, handling, holding, consolidating and loading or delivery of waterborne shipments. The term does not include production or manufacturing areas having their own docking facilities and located at a marine terminal.

2. By adding a new Part 1918a, Marine Terminal Code to 29 CFR as follows:

PART 1918a—MARINE TERMINALS

Subpart A—Scope and Definitions

Sec.

1918a.1 Scope and applicability.
1918a.2 Definitions.

Subpart B—Marine Terminal Operations

1918a.11 Housekeeping.
1918a.12 Slippery conditions.
1918a.13 Slinging.
1918a.14 Stacking of cargo and pallets.
1918a.15 Coopering.
1918a.16 Line handling.
1918a.17 Railroad facilities.
1918a.18 Log handling.
1918a.19 Movement of barges and rail cars.
1918a.20 Interference with communications.
1918a.21 Open fires.
1918a.22 Hazardous cargo.
1918a.23 Hazardous atmospheres, substances.
1918a.24 Carbon monoxide.
1918a.25 Fumigants, pesticides, insecticides and hazardous preservatives.
1918a.26 First aid and lifesaving facilities.
1918a.27 Personnel.

Subpart C—Cargo Handling Gear and Equipment

1918a.41 House falls.
1918a.42 Miscellaneous auxiliary gear.
1918a.43 Powered industrial trucks.
1918a.44 General rules applicable to vehicles.
1918a.45 Cranes and derricks.
1918a.46 Crane load and limit devices.
1918a.47 Winches.
1918a.48 Conveyors.
1918a.49 Spouts, chutes, hoppers, bins, and associated equipment.
1918a.50 Certification of marine terminal material handling devices.
1918a.51 Hand tools.

Subpart D—Specialized Terminals

1918a.71 Terminals handling intermodal container or roll on roll off operations.
1918a.72 Grain elevator terminals.
1918a.73 Terminal facilities handling menhaden and similar species of fish.

Subpart E—Personal Protection

1918a.91 Eye protection.
1918a.92 Respiratory protection.
1918a.93 Head protection.
1918a.94 Foot protection.
1918a.95 Other protective measures.

Subpart F—Terminal Facilities

1918a.111 Maintenance and load limits.
1918a.112 Guarding of edges.
1918a.113 Clearance heights.
1918a.114 Cargo doors.
1918a.115 Cargo landing surfaces.
1918a.116 Platforms and skids.
1918a.117 Elevators and escalators.
1918a.118 Manlifts.
1918a.119 Fixed ladders.
1918a.120 Portable ladders.
1918a.121 Fixed stairways.
1918a.122 Spiral stairways.
1918a.123 Employee exits.
1918a.124 Illumination.
1918a.125 Passage between levels and across openings.
1918a.126 Guarding temporary hazards.
1918a.127 River banks.
1918a.128 Sanitation.
1918a.129 Signs and marking.

Subpart G—Related Terminal Operations and Equipment

1918a.151 Machine guarding.

1918a.152 Welding, cutting and heating (hot work).
1918a.153 Spray painting.
1918a.154 Compressed air.
1918a.155 Air receivers.
1918a.156 Fuel handling and storage.
1918a.157 Battery charging and changing.
1918a.158 Prohibited operations.

Authority: Sec. 6(b), 8(c), 84 Stat. 1593, 1594 (29 U.S.C. 655, 657), Sec. 41, 44 Stat. 1444 (33 U.S.C. 941), Secretary of Labor's Order No. 8, 76 (41 FR 25091), 29 CFR Part 1911.

Subpart A—Scope and Definitions

§ 1918a.1 Scope and applicability.

(a) The regulations of this part apply to employment within a marine terminal as defined in § 1918a.2(u), including the loading, unloading movement or other handling of cargo, ship's stores or gear within the terminal or into or out of any land carrier, holding or consolidation area, or any other activity within and associated with the overall operation and functions of the terminal, such as the use and routine maintenance of facilities and equipment.

(1) The provisions of Part 1918a do not apply to the following:

(i) Facilities used for bulk storage, handling and transfer of flammable and combustible liquids, gases and hazardous cargo to the extent that specific working conditions are regulated by the United States Coast Guard; and

(ii) Facilities subject to the regulations of the Office of Pipeline Safety Regulation of the Materials Transportation Bureau, Department of Transportation, to the extent such regulations apply.

(2) Part 1910 of this Chapter does not apply to marine terminals except for the following provisions:

(i) Electrical. Subpart S;

(ii) Toxic and hazardous substances. Subpart Z applies where specifically referenced in Part 1918a, except that the requirements of Subpart Z do not apply when a substance or cargo is contained within a sealed, intact means of packaging or containment complying with Department of Transportation or Intergovernmental Maritime Consultative Organization requirements;[A-1]

(iii) Noise. Subpart G, § 1910.95;

(iv) Commercial diving operations. Subpart T;

(v) Safety requirements for scaffolding. Subpart D, § 1910.28; and

(vi) Abrasive blasting. Subpart G, § 1910.94(a).

[A-1] The Intergovernmental Martime Consultative Organization publishes the International Maritime Dangerous Goods Code to aid compliance with the international legal requirements of the International Convention for the Safety of Life at Sea, 1960.

§ 1918a.2 Definitions.

(a) "Apron" means that open portion of a marine terminal immediately adjacent to a vessel berth and used in the direct transfer of cargo between the terminal and a vessel.

(b) "Authorized," in reference to an employee's assignment, means authorized by the employer for that purpose.

(c) "Cargo door" (transit shed door) means a door designed to permit transfer of cargo to and from a marine terminal structure.

(d) "Cargo packaging" means any method of containment for shipment, including cases, cartons, crates and sacks, but excluding large units such as intermodal containers, vans or similar devices.

(e) "Confined space" means a space having all of the following characteristics:

(1) Small size;

(2) Severely limited natural ventilation;

(3) Capability to accumulate or contain a hazardous atmosphere;

(4) Exits that are not readily accessible; and

(5) Not designed for continuous human occupancy.

Examples of confined spaces are intermodal tank containers, brailwater tanks and portable tanks.

(f) "Conveyor" means a device designed exclusively for transporting bulk materials, packages or objects in a predetermined path and having fixed or selective points of loading or discharge. The term does not include such devices as industrial trucks, tractors, trailers, tiering machines, cranes, hoists, monorails, power and hand shovels, power scoops, bucket drag lines, platform elevators, moving stairways (escalators) and highway or rail vehicles.

(g) "Danger zone" means any place in or about a machine or piece of equipment where an employee may be struck by or caught between moving parts, caught between moving and stationary objects or parts of the machine, caught between the material and a moving part of the machine, burned by hot surfaces or exposed to electric shock. Examples of danger zones are nip and shear points, shear lines, drive mechanisms, and areas beneath counterweights.

(h) "Designated person" means a person who is recognized by the employer to possess specialized abilities in a specific area and is assigned by the employer to perform a specific task in that area.

(i) "Dock" means a wharf or pier forming all or part of a waterfront facility, including marginal or quayside berthing facilities; not to be confused with "loading dock" as at a transit shed or container freight station, or with the body of water between piers or wharves.

(j) "Dockboard" (bridge plate or car plate) means a device utilized to span the gap between railroad cars, or between railroad cars or highway vehicles and the loading dock or platform. A car plate may be fixed, adjustable, portable, powered or unpowered.

(k) "Enclosed space" means an indoor space, other than a confined space, that may contain or accumulate a hazardous atmosphere due to inadequate natural ventilation. Examples of enclosed spaces are trailers, railcars, and storage rooms.

(l) "Examination," as applied to material handling devices required by this Part to be certificated, means a thorough visual inspection, supplemented by other tests and procedures appropriate to the type of gear or device. For example, crane examinations include testing of all normal operations, such as slewing, topping, and hoisting, followed by inspection of accessory gear such as sheaves and blocks, which are disassembled to ensure that they are in good operating condition.

(m) "Flammable atmosphere" means an atmosphere containing more than 10 percent of the lower flammable limit of a flammable or combustible vapor or dust mixed with air.

(n) "Front-end attachments." (1) As applied to power-operated industrial trucks, means the various devices, such as roll clamps, rotating and sideshifting carriages, magnets, rams, crane arms or booms, load stabilizers, scoops, buckets and dumping bins, attached to the load end for handling lifts as single or multiple units.

(2) As applied to cranes, means various attachments applied to the basic machine for the performance of functions such as lifting, clamshell or magnet services.

(o) "Fumigant" is a substance or mixture of substances which is a gas or is rapidly or progressively transformed to the gaseous state, even though some nogaseous or particulate matter may remain and be dispersed in the treatment space.

(p) "Hazardous cargo, material, substance or atmosphere" means:

(1) Any substance listed in 29 CFR Part 1910, Subpart Z;

(2) Any material in the Hazardous Materials Table and Hazardous Materials Communications Regulations

of the Department of Transportation, 49 CFR Part 172;

(3) Any article not properly described by a name in the Hazardous Materials Table and Hazardous Materials Communications Regulations of the Department of Transportation, 49 CFR Part 172 but which is properly classified under the definition of those categories of dangerous articles given in 49 CFR Part 173; or

(4) Any atmosphere with an oxygen content of less than 19.5%.

(q) "House falls" means spans and supporting members, winches, blocks, and standing and running rigging forming part of a marine terminal and used with a vessel's cargo gear to load or unload by means of married falls.

(r) "Inspection," as applied to material handling devices required by this Part to be certificated, means a complete visual examination of all visible parts of the device.

(s) "Intermodal container" means a reusable cargo container of rigid construction and rectangular configuration, intended to contain one or more articles of cargo or bulk commodities for transportation by water and one or more other transport modes without intermediate cargo handling. The term includes completely enclosed units, open top units, fractional height units, units incorporating liquid or gas tanks and other variations fitting into the container system, remountable or with attached wheels. It does not include cylinders, drums, crates, cases, cartons, packages, sacks, unitized loads or any other form of packaging.

(t) "Loose gear" means removable and replaceable components of equipment or devices which may be used with or as a part of assembled material handling units for purposes such as making connections, changing line direction and multiplying mechanical advantage. Examples are shackles and snatch blocks.

(u) "Marine terminal" means wharves, bulkheads, quays, piers, docks, and other berthing locations and adjacent storage or contiguous areas and structures which are devoted to receiving, handling, holding, consolidation, and loading or delivery of waterborne shipments, including areas devoted to the maintenance of the terminal or equipment. The term does not include production or manufacturing areas having their own docking facilities and located at a marine terminal.

Subpart B—Marine Terminal Operations

§ 1918a.11 Housekeeping.

(a) The employer shall ensure that work areas are kept free of equipment and materials not in use, and clear of debris, projecting nails, strapping and other sharp objects not directly associated with the work in progress.

(b) Hatch beams and covers placed in terminal working areas shall either be stowed in stable piles with beams secured against tipping or falling, or be laid on their sides.

(c) Cargo and material shall not obstruct access to vessels, cranes, vehicles, or buildings.

§ 1918a.12 Slippery conditions.

The employer shall eliminate, to the extent possible, slippery working and walking surfaces in areas used by employees.

§ 1918a.13 Slinging.

(a) The employer shall ensure that drafts are safely slung before hoisting to prevent cargo from falling from the draft. Loose dunnage and debris hanging or protruding from drafts shall be removed.

(b) Bales of cotton, wool, cork, wood pulp, gunny bags or similar articles shall be hoisted only by straps strong enough to support the weight of the bale. At least two hooks, each in a separate strap, shall be used.

(c) When bundles of cargo such as ingots, steel and dunnage are hoisted by bands, strapping or ties, the bands, strapping, or ties shall be strong enough to support the load.

(d) Unitized loads bound by bands or straps may be hoisted by the banding or strapping only if the banding or strapping is designed for hoisting and is strong enough to support the weight of the load. The menans of handling shall not damage the bands or straps.

(e) The employer shall establish by testing in accordance with Part 1919 of this Chapter that the method of handling unitized loads by banding or strapping is suitable for hoisting.

(f) Unitized loads having damaged banding or strapping shall be handled by additional means that will ensure safe handling of the draft.

(g) Case hooks shall be used only with cases designed to be hoisted by these hooks.

(h) Loads requiring continuous manual guidance during handling shall be guided by guide ropes (tag lines) that are long enough to control the load.

(i) Intermodal containers shall be handled in accordance with § 1918a71(g).

§ 1918a.14 Stacking of cargo and pallets.

The employer shall ensure that cargo and pallets stored intiers are stacked to provide stability against sliding and collapse.

§ 1918a.15 Coopering.

The employer shall ensure that the repair or reconditioning of damaged or leaking cargo packaging (coopering) is so located and performed as not to endanger employees.

§ 1918a.16 Line handling. (See also § 1918a.95(c)).

(a) The employer shall ensure that areas used to handle mooring lines are kept free of obstructions.

(b) When stringpiece or apron width is insufficient for safe footing, grab lines or rails shall be installed on the sides of permanent structures. ("Stringpiece" means a narrow walkway between the water edge of a berth and a shed or other structure.)

§ 1918a.17 Railroad facilities.

(a) The employer shall ensure that work is performed in railcars only if floors of the railcars are in safe condition.

(b) A route shall be established to allow employees to pass to and from places of employment without passing under, over or through railcars, or between cars less than 10 feet (3 m) apart on the same track.

(c) The employer shall ensure that no employees remain in railcars after work.

(d) Railcars shall be chocked or otherwise prevented from moving:

(1) While dockboards or carplates are in position; or

(2) While employees are working within railcars or near the tracks at the ends of the cars.

(e) When employees are working in, on, or under a railcar, the employer shall ensure that flags or signs warning that work is in progress are placed no less than 50 feet from any end of the railcar exposed to impact from moving railcars.

(f) Before cars are moved, unsecured and overhanging stakes, wire straps, banding and similar objects shall be removed or placed so as not to create hazards.

(g) Railcars shall be moved only when attached to an engine or other powered vehicle. Free rolling movement of railcars is prohibited.

(h) Only freight car doors in safe condition shall be opened. Before being opened fully, doors shall be opened slightly to ensure that the load has not shifted during transit.

(i) If power trucks are used to open freight car doors, the trucks shall be equipped with door opening

attachments. The employer shall ensure that truck drivers stand clear of the railcar door while it is being opened or closed.

(j) Only railcar door openers or power trucks equipped with door opening attachments shall be used to open jammed doors.

(k) The employer shall ensure that employees do not remain in or on gondolas or flat cars when drafts are being hoisted over the car or landed in the car. End gates, if raised, shall be secured.

(l) Operators of railcar dumps shall have an unrestricted view of dumping operations and shall have emergency means of stopping dump movement.

(m) Recessed railroad switches shall be enclosed to provide a level surface.

(n) Warning signs shall be posted where doorways open onto tracks, at blind corners and at similar places where vision may be restricted.

(o) Warning signs shall be posted if a clearance of less than 24 inches (.61 m) exists between railcars and structures, cargo or waterside edges.

§ 1918a.18 Log handling.

(a) The employer shall ensure that structures (bunks) used to contain logs have rounded corners and structural parts to avoid sling damage.

(b) Two or more binders or equivalently safe means of containment shall remain on logging trucks and railcars to secure logs during movement of the truck or car within the terminal. During unloading, logs shall be prevented from moving while binders are being removed.

(c) Logs shall be hoisted by two slings or by other gear designed for safe hoisting.

(d) Logs placed adjacent to vehicle curbs on the dock shall not be over one tier high unless they are contained in bunks or are stacked or unitized to prevent spreading.

(e) Before logs are slung up from the dock, they shall be stably supported to prevent spreading and to allow passage of slings beneath the load. When bunks or similar retaining devices are used, no log shall be higher than the stanchions or retaining members of the device.

§ 1918a.19 Movement of barges and railcars.

The employer shall ensure that barges and railcars are not moved by cargo runners (running rigging) from vessel cargo booms, cranes or other equipment not suitable for the purpose.

§ 1918a.20 Interference with communications.

The employer shall ensure that noise does not inferfere with the communication of warnings or instructions during cargo-handling operations.

§ 1918a.21 Open fires.

The employer shall ensure that open fires and fires in drums or similar containers are prohibited.

§ 1918a.22 Hazardous cargo.[a-1]

(a) Before cargo handling operations begin, the employer shall ascertain whether any hazardous cargo is to be handled and shall determine the nature of the hazard. The employer shall inform employees of the nature of any hazard and any special precautions to be taken to prevent employee exposure, and shall instruct employees to notify him of any leaks or spills.

(b) Hazardous cargo shall be handled by means such as netting or restraining ropes to prevent damage to the cargo packaging during handling.

(c) If hazardous cargo is spilled or if its packaging leaks, employees shall be removed from the affected area until the employer has ascertained the specific hazards, provided any equipment, clothing and ventilation and fire protection equipment necessary to eliminate or protect against the hazard, and has instructed cleanup employees in a safe method of cleaning up and disposing of a spill and handling and disposing of leaking containers. Actual cleanup or disposal work shall be conducted under the supervision of a designated person.

§ 1918a.23 Hazardous atmospheres and substances.

(a) *Purpose and scope.* This section covers areas in which a hazardous atmosphere or substance may exist, except where one or more of the following sections apply: § 1918a.22 *Hazardous cargo;* § 1918a.24 *Carbon monoxide;* § 1918a.25 *Fumigants, pesticides, insecticides, and hazardous preservatives;* § 1918a.73 *Menhaden terminals;* § 1918a.152 *Welding, cutting, and heating (hot work);* and § 1918a.153 *Spray painting.*.

(b) *Determination of hazard.* (1) When a room, building, vehicle, railcar, or other space contains or has contained a hazardous atmosphere, the employer shall ensure that a designated and appropriately equipped person tests the atmosphere before employee entry to determine whether a hazardous atmosphere exists.

(2) Records of results of any tests required by this section shall be maintained at the terminal for at least thirty (30) days.

(c) *Testing during ventilation.* When mechanical ventilation is used to maintain a safe atmosphere, tests shall be made to ensure that the atmosphere is not hazardous.

(d) *Entry into hazardous atmospheres.* The employer shall ensure that only designated persons enter hazardous atmospheres, in which case the following provisions shall apply:

(1) Persons entering a space containing a hazardous atmosphere shall be protected by respiratory and emergency protective equipment meeting the requirements of Subpart E of this Part;

(2) Persons entering a space containing a hazardous atmosphere shall be instructed in the nature of the hazard, precautions to be taken, and the use of protective and emergency equipment. Standby observers shall be similarly equipped and instructed and shall continuously monitor the activity of employees within such space;

(3) No ignition source shall be permitted in spaces containing flammable atmospheres; and

(4) Persons required to enter flammable atmospheres or those containing less than 19.5% oxygen shall use self-contained breathing apparatus or supplied air respirators drawing air from an uncontaminated source.

(e) *Cleaning of asbestos spills.* When the packaging of asbestos cargo leaks, the employer shall ensure that the spillage is cleaned up by designated employees protected from the harmful effects of asbestos as required by § 1910.1001 of this Chapter.

§ 1918a.24 Carbon monoxide.

(a) *Exposure limits.* The employer shall ensure that the carbon monoxide content of the atmosphere in a room, building, vehicle, railcar, or other enclosed space does not exceed 50 parts per million (0.005%) as an 8-hour time-weighted average (TWA) or 75 parts per million (0.0075%) at any time. Areas with concentrations above these levels shall be considered hazardous and employees entering these areas shall be protected as provided in § 1918a.23(d).

(b) *Testing.* Tests to determine carbon monoxide concentration shall be made when necessary to ensure that employee exposure does not exceed the limits specified in paragraph (a) of this section.

(c) *Instrumentation.* Tests for carbon monoxide concentration shall be made by designated persons using gas detector tube units or other measuring instruments certified by the National

[a-1] The Department of Transportation and the United States Coast Guard apply requirements related to handling, storing and transportation of hazardous cargo (see 33 CFR Part 126, 46 CFR, 49 CFR).

Institute for Occupational Safety and Health under 30 CFR Part 11.

(d) *Records.* A record of the date, time, location and results of carbon monoxide tests shall be available at the terminal for at least thirty (30) days.

§ 1918a.25 Fumigants, pesticides, insecticides and hazardous preservatives.

(a) When cargo in a space is or has been stowed, handled, or treated with a fumigant, pesticide, insecticide, or hazardous preservative, the employer shall determine whether a hazardous atmosphere is present in the space, and shall ensure that only designated employees protected as required in paragraph (e) of this section enter the space if it is hazardous.

(b) Tests to determine the atmospheric concentration of chemicals used to treat cargo shall be:

(1) Appropriate for the hazard involved;

(2) Conducted by designated persons; and

(3) Performed at the intervals necessary to ensure that employee exposure does not exceed the permissible exposure limit for the chemical involved.

(c) Results of any tests shall be available at the terminal for at least thirty (30) days.

(d) Chemicals shall be applied to cargoes only by designated persons.

(e) The employer shall ensure that only designated persons enter hazardous atmospheres, in which case the following provisions apply:

(1) Persons entering a space containing a hazardous atmosphere shall be protected by respiratory and emergency protective equipment meeting the requirements of Subpart E of this part; and

(2) Persons entering a space containing a hazardous atmosphere shall be instructed in the nature of the hazard, precautions to be taken, and the use of protective and emergency equipment. Standby observers shall be similarly equipped and instructed and shall continuously monitor the activity of employees within such a space.

(f) Signs shall be clearly posted where fumigants, pesticides or hazardous preservatives have created a hazardous atmosphere. These signs shall note the danger, identify specific chemical hazards, and give appropriate information and precautions, including instructions for the emergency treatment of employees affected by any chemical in use.

§ 1918a.26 First aid and lifesaving facilities.

(a) Employers shall instruct employees to report every injury, regardless of severity, to the employer.

(b) A first aid kit shall be available at the terminal, and at least one person holding a valid first aid certificate shall be at the terminal when work is in progress.

(c) First aid kits shall be weatherproof and contain individual sealed packages for each item that must be kept sterile. Each kit shall include at least the following items:

Gauze roller bandages, 1 inch and 2 inch (25.4 mm and 50.8 mm);
Gauze compress bandages, 4 inch (101.6 mm);
Adhesive bandage, 1 inch (25.4 mm);
Triangular bandage, 40 inch (101.6 cm);
Ammonia inhalants and ampules;
Antiseptic applicators or swabs;
Eye dressing;
Wire or thin board splints;
Forceps and tourniquet; and
First aid dressing.

(d) Stretchers permanently equipped with bridles for hoisting shall be readily accessible. A blanket shall be available.

(e) Telephone or equivalent means of communication shall be readily available.

(f) A U.S. Coast Guard approved 30-inch (76.2 cm) life ring, with at least 90 feet (27.42 m) of line attached, shall be available at readily accessible points within 200 feet (61 m) of each waterside work area. Employees working on any bridge or structure leading to a detached vessel berthing installation shall wear work vests provided by the employer at no cost to the employee. A readily available portable or permanent ladder giving access to the water shall also be provided within 200 feet (61 m) of such work areas.

§ 1918a.27 Personnel.

(a) *Qualifications of machinery operators.* (1) The employer shall ensure that only trained and experienced employees who understand the signs, notices, operating instructions and signal codes in use operate crains, winches, other power-operated hoisting apparatus, power conveyors or similar devices, or any other power-operated vehicle, or give signals to operators of any hoisting apparatus. Exception: Employees being trained and supervised by a designated person may operate such machinery and give signals to operators during training.

(2) Operators assigned after (*effective date of final standard*) shall pass a practical operating examination and be instructed in established operating practices.

(3) Employees with medical conditions that may impair their ability to operate powered machinery shall not operate a crane, winch, or other power-operated hoisting apparatus or a power-operated vehicle.

(b) *Supervisory accident prevention proficiency.* (1) After (two years after promulgation), supervisors of more than five persons shall possess documentary evidence of satisfactory completion of a course in accident prevention. Employees newly assigned to supervisory duties after that date shall be required to meet the provisions of this paragraph within ninety (90) days of such assignment.

(2) The course shall consist of classroom instruction suited to the particular operations involved and shall include at least the following:

(i) Safety responsibility and authority;

(ii) Elements of accident prevention;

(iii) Attitudes, leadership and motivation;

(iv) Hazards of longshoring, including peculiar local circumstances;

(v) Hazard identification and elimination;

(vi) Applicable regulations; and

(vii) Accident investigation.

Subpart C—Cargo Handling Gear and Equipment

§ 1918a.41 House falls.

(a) The employer shall ensure that span beams are secured to prevent accidental dislodgement.

(b) A safe means of access shall be provided for employees working with house fall blocks.

(c) The employer shall ensure that designated employees inspect chains, links, shackles, swivels, blocks and other loose gear used in house fall operations before each day's use. Defective gear shall not be used.

§ 1918a.42 Miscellaneous auxiliary gear.

(a) *Routine inspection.* (1) At the completion of each use, the employer shall ensure that loose gear such as slings, chains, bridles, blocks and hooks is placed to avoid damage to the gear. Loose gear shall be inspected and any defects corrected before reuse.

(2) Loose stevedoring gear shall be inspected for defects during use.

(3) Defective gear shall not be used. Distorted hooks, shackles or similar gear shall be discarded.

(b) *Wire rope and wire rope slings.* (1) The employer shall ascertain and adhere to the manufacturer's recommended ratings for wire rope and wire rope slings used for hoisting and shall have such ratings available at the terminal. A design safety factor of at least five shall be maintained for the

common sizes of running wire used as falls, in purchases or in such uses as light load slings. Wire rope with a safety factor of less than five may be used only:

(i) In specialized equipment, such as but not limited to cranes, designed to be used with lesser wire rope safety factors;

(ii) In accordance with design factors in standing rigging applications; or

(iii) For heavy lifts or other purposes for which a safety factor of five is impracticable and for which the employer can demonstrate that equivalent safety is ensured.

(2) Wire rope or wire rope slings having any of the following conditions shall not be used:

(i) Ten randomly distributed broken wires in one rope lay or three or more broken wires in one strand in one rope lay;

(ii) Kinking, crushing, bird caging or other damage resulting in distortion of the wire rope structure;

(iii) Evidence of heat damage;

(iv) Excessive wear or corrosion, deformation or other defect in the wire or attachments, including cracks in attachments;

(v) Any indication of strand or wire slippage in end attachments; or

(vi) More than one broken wire in the close vicinity of a socket or swaged fitting.

(3) Protruding ends of strands in splices on slings and bridles shall be covered or blunted. Coverings shall be removable so that splices can be examined. Means used to cover or blunt ends shall not damage the wire.

(4) Where wire rope clips (other than U-bolt clips) are used to form eyes, the employer shall adhere to the manufacturer's recommendations, which shall be available at the terminal. If "U" bolt clips are used and the manufacturer's recommendations are not available, Table C–1 shall be used to determine the number and spacing of clips. "U" bolts shall be applied with the "U" section in contact with the dead end of the rope.

Table C–1

[Number and spacing of u-bolt wire rope clips]

Improved plow steel, rope diameter		Minimum number of clips		Minimum spacing	
Inches	Centimeters	Drop forged	Other material	Inches	Centimeters
½ or less	(1.3)	3	4	3	(7.6)
⅝	(1.6)	3	4	3¾	(9.5)
¾	(1.9)	4	5	4½	(11.4)
⅞	(2.2)	4	5	5¼	(13.3)
1	(2.5)	5	7	6	(15.2)
1⅛	(2.7)	6	7	6¾	(17.1)
1¼	(3.2)	6	8	7½	(18.1)
1⅜	(3.5)	7	8	8¼	(21.0)

Table C–1—Continued

[Number and spacing of u-bolt wire rope clips]

Improved plow steel, rope diameter		Minimum number of clips		Minimum spacing	
Inches	Centimeters	Drop forged	Other material	Inches	Centimeters
1½	(3.8)	7	9	9	(22.9)

(5) Wire rope shall not be secured by knots.

(6) Eyes in wire rope bridles, slings, bull wires, or in single parts used for hoisting shall not be formed by wire rope clips or knots.

(7) Eye splices in wire ropes shall have at least three tucks with a whole strand of the rope and two tucks with one-half of the wire cut from each strand. Other forms of splices or connections which can be shown to be equivalently safe may be used.

(8) Except for eye splices in the ends of wires and for endless rope slings, each wire rope used in hoisting or lowering, or in bulling cargo, shall consist of one continuous piece without knot or splice.

(c) *Natural fiber rope.* (1) The employer shall ascertain the manufacturer's ratings for the specific natural fiber rope used and have such ratings available at the terminal. The manufacturer's ratings shall be adhered to and a minimum design safety factor of five maintained.

(2) Eye splices shall consist of at least three full tucks. Short splices shall consist of at least six full tucks, three on each side of the center line.

(d) *Synthetic rope.* (1) The employer shall adhere to the manufacturer's ratings and use recommendations for the specific synthetic fiber rope use and shall have such ratings available at the terminal.

(2) Unless otherwise recommended by the manufacturer, when synthetic fiber ropes are substituted for manila ropes of less than three inches (7.62 cm) in circumference, the substitute shall be of equal size. Where substituted for manila rope of three inches or more in circumference, the size of the synthetic rope shall be determined from the formula:

$$C = \sqrt{0.6C_s^2 + 0.4C_m^2}$$

where C = the required circumference of the synthetic rope in inches, C_s = the circumference to the nearest one-quarter inch of a synthetic rope having a breaking strength not less than that of the size manila rope that would be required by paragraph (c) of this section, and C_m = the circumference of manila rope in inches which would be required by paragraph (c) of this section. In making such substitution, it shall be ascertained that the inherent characteristics of the synthetic fiber are suitable for hoisting.

(e) *Removal of natural and synthetic rope from service.* Natural and synthetic rope having any of the following defects shall be removed from service:

(1) Abnormal wear;

(2) Powdered fiber between strands;

(3) Sufficient cut or broken fibers to affect the capability of the rope;

(4) Variations in the size or roundness of strands;

(5) Discolorations other than stains not associated with rope damage;

(6) Rotting; or

(7) Distortion or other damage to attached hardware.

(f) *Thimbles.* Properly fitting thimbles shall be used where any rope is secured permanently to a ring, shackle or attachment.

(g) *Synthetic web slings.* (1) Slings and nets or other combinations of more than one piece of synthetic webbing assembled and used as a single unit (synthetic web slings) shall not be used to hoist loads in excess of the sling's rated capacity.

(2) Synthetic web slings shall be removed from service if they exhibit any of the following defects:

(i) Acid or caustic burns;

(ii) Melting or charring of any part of the sling surface;

(iii) Snags, punctures, tears or cuts;

(iv) Borken or worn stitches; or

(v) Distortion or damage to fittings.

(3) Defective synthetic web slings removed from service shall not be repaired and returned to service.

(4) Synthetic web slings shall be used in accordance with the manufacturer's use recommendations, which shall be available at the terminal.

(5) Fittings shall have a breaking strength at least equal to that of the sling to which they are attached and shall be free of sharp edges.

(h) *Chains and chain slings used for hoisting.* (1) The employer shall adhere to the manufacturer's recommended ratings for safe working loads for the sizes of wrought iron and alloy steel chains and chain slings used and shall have such ratings available at the terminal.

(2) Proof coil steel chain, also known as common or hardware chain, and other chain not recommended by the

manufacturer for slinging or hoisting shall not be used for slinging or hoisting.

(3)(i) The employer shall ensure that only designated persons inspect chains used for slinging or hoisting.

(ii) Sling chains, including end fastenings, shall be inspected for visible defects before each day's use and as often as necessary during use to ensure integrity of the sling.

(iii) Thorough inspections of chains in use shall be made quarterly to detect wear, defective welds, deformation or increase in length or stretch. The month of inspection shall be indicated on each chain by color of paint on a link or by other equally effective means.

(iv) Chains shall be removed from service when maximum allowable wear, as indicated in Table C-2, is reached at any point of link.

Table C-2.—*Maximum Allowable Wear at any Point of Link*

Chain size		Maximum allowable wear	
Inches	(cm)	Inches	(cm)
¼ (5/32)	(0.6)	3/64	(0.1)
3/8	(1.0)	3/64	(0.2)
½	(1.3)	5/64	(0.3)
5/8	(1.6)	5/64	(0.4)
¾	(1.9)	3/32	(0.4)
7/8	(2.2)	3 1/64	(0.4)
1	(2.5)	3/32	(0.5)
1 1/8	(2.9)	7/32	(0.6)
1 ¼	(3.2)	¼	(0.6)
1 3/8	(3.5)	9/32	(0.7)
1 ½	(3.8)	5/16	(0.8)
1 5/8	(4.4)	1 1/32	(0.9)

(v) Chain slings shall be removed from service when stretch has increased the length of a measured section by more than five percent; when a link is bent, twisted or otherwise damaged; or when a link has a raised scarf or defective weld.

(4) Chains shall only be repaired under qualified supervision. Links or portions of chain defective under any of the criteria of paragraph (h)(3)(v) of this section shall be replaced with properly dimensioned links or connections of material similar to that of the original chain. Before repaired chains are returned to service, they shall be tested to the proof test load recommended by the manufacturer for the original chain. Tests shall be performed by the manufacturer or shall be certified by an agency accredited for the purpose under Part 1919 of this Chapter. Test certificates shall be available at the terminal.

(5) Wrought iron chains in constant use shall be annealed or normalized at intervals not exceeding six months. Heat treatment certificates shall be available at the terminal. Alloy chains shall not be annealed.

(6) Kinked or knotted chains shall not be used for lifting. Chains shall not be shortened by bolting, wiring or knotting. Makeshift links or fasteners such as wire, bolts or rods shall not be used.

(7) Hooks, rings, links and attachments affixed to sling chains shall have rated capacities at least equal to that of the chains to which they are attached.

(8) Chain slings shall bear identification of size, grade and rated capacity.

(i) *Shackles.* (1) If available, the manufacturer's recommended safe working loads for shackles shall not be exceeded. In the absence of manufacturer's recommendations, Table C-3 shall apply.

Table C-3.—*Safe Working Loads for Shackles*

Material size		Pin diameter		Safe working load in 2,000 lb. tons
Inches	(cm)	Inches	(cm)	
½	(1.3)	5/8	(1.6)	1.4
5/8	(1.6)	¾	(1.9)	2.2
¾	(1.9)	7/8	(2.2)	3.2
7/8	(2.2)	1	(2.5)	4.3
1	(2.5)	1 1/8	(2.9)	5.6
1 1/8	(2.9)	1 ¼	(3.2)	6.7
1 ¼	(3.2)	1 3/8	(3.5)	8.2
1 3/8	(3.5)	1 ½	(3.8)	10.0
1 ½	(3.8)	1 5/8	(4.1)	11.9
1 5/8	(4.4)	2	(5.0)	16.2
2	(5.0)	2 ¼	(5.7)	21.2

(2) Screw pin shackles used aloft in house fall or other gear, except in cargo hook assemblies, shall have their pins moused or be otherwise effectively secured.

(j) *Hooks other than hand books.* (1) The manufacturer's recommended safe working loads for hooks shall not be exceeded. After (*effective date of final standard*) hooks other than hand books shall be tested in accordance with § 1918a.51(c)(6).

(2) Bent or sprung hooks shall be discarded.

(3) Teeth of case hooks shall be maintained in safe condition.

(4) Jaws of patent clamp-type plate hooks shall be maintained in condition to grip plates securely.

(5) Loads shall be applied to the throat of the hook only.

(k) *Pallets.* (1) Pallets shall be made and maintained to safely support and carry loads being handled. Fastenings of reusable pallets shall be bolts and nuts, drive screws (helically threaded nails), annular threaded nails or fastenings of equivalent holding strength.

(2) Damaged pallets shall be removed from active work areas, identified as damaged and stored away from the work area.

(3) Reusable wing or lip-type pallets shall be hoisted by bar bridles or other suitable gear and shall have an overhanging wing or lip of at least three inches (76.2 mm). They shall not be hoisted by wire slings alone.

(4) Loaded pallets that on visual examination do not meet the requirements of this section shall be hoisted only after being placed on pallets meeting such requirements or shall be handled by other means providing equivalent safety.

(5) Bridles for handling flush end or box-type pallets shall be designed to prevent disengagement from the pallet under load.

(6) Pallets shall be stacked or placed to prevent falling, collapsing or otherwise causing a hazard under standard operating conditions.

(7) Disposable pallets intended only for one use shall not be reused for hoisting.

§ 1918a.43 Powered industrial trucks.

(a) *Applicability.* This section applies to every type of powered industrial truck used for material or equipment handling within a marine terminal. It does not apply to over-the-road vehicles.

(b) *General.* (1) The employer shall ensure that modifications, such as adding counterweights, that might affect the vehicle's capacity or safety are not performed without either the manufacturer's prior written approval or the written approval of a professional engineer experienced with the equipment and who has consulted the manufacturer. Capacity, operation and maintenance instruction plates, tags or decals shall be changed to conform to the equipment as modified.

(2) Unauthorized personnel shall not ride on powered industrial trucks. A safe place to ride shall be provided when riding is authorized.

(3) When a powered industrial truck is left unattended, load-engaging means shall be fully lowered, controls neutralized and brakes set. Unless the truck is in view and within 25 feet (7.6 m) of the operator, power shall be shut off. Wheels shall be blocked or curbed if the truck is on an incline.

(4) Powered industrial trucks shall not be operated inside highway vehicles or

railcars having damage which could affect operational safety.

(5) Powered industrial trucks shall be marked with their rated capacities, which shall be visible to the operator.

(6) Only stable and safely arranged loads within the rated capacity of the truck shall be handled.

(7) The employer shall ensure that drivers ascend and descend grades slowly.

(8) The employer shall ensure that drivers slow down and sound the horn at cross aisles and other locations where visibility is obstructed.

(9) If the load obstructs the forward view, the employer shall ensure that the driver travels with the load trailing.

(10) Steering knobs shall not be used.

(11) When powered industrial trucks use cargo lifting devices that have a means of engagement hidden from the operator, mirrors or other means shall be provided to enable the driver to see that the cargo has been engaged.

(c) *Maintenance.* (1) The employer shall ensure that only designated persons perform maintenance and repair.

(2) Batteries shall be disconnected during repairs to the primary electrical system unless power is necessary for testing or repair.

(3) Replacement parts whose performance may affect the vehicle's safety shall be at least equivalent in performance capability to the original parts.

(4) Braking systems or other mechanisms used for braking shall be operable and in safe condition.

(5) Powered industrial trucks shall be maintained in safe working order and shall be inspected by an authorized person on each day of use. Safety devices shall not be removed or made inoperative except as otherwise provided in this section. Trucks with a fuel system leak or any other operational defect shall not be operated.

(6) Records of the daily inspections required in (c)(5) shall be maintained at the terminal for at least thirty (30) days.

(7) Repairs to the fuel or ignition systems of powered industrial trucks shall only be conducted in designated areas equipped to protect employees from fire hazards.

(d) *Approved trucks.* (1) "Approved power-operated industrial truck" means one listed or approved for the intended use by a nationally recognized testing laboratory, e.g., Underwriters Laboratories, Inc.; Factory Mutual Engineering Corporation.

(2) Approved trucks shall bear a label or other identification indicating testing laboratory approval.

(3) When the atmosphere in an area is hazardous and the provisions of United States Coast Guard regulations at 33 CFR 126.15(e) do not apply, only power-operated industrial trucks approved for such locations shall be used.

(e) *Fork lift trucks.* (1) Overhead guards. (i) When operators are exposed to overhead falling hazards, the employer shall ensure that fork lift trucks are equipped with securely attached overhead guards. Guards shall be constructed to protect the operator from being injured by falling boxes, cartons, packages, or similar objects.

(ii) Overhead guards shall not obstruct the operator's view, and openings in the top of the guard shall not exceed six inches (15.2 cm) in one of the two directions, width or length. Larger openings are permitted if no opening allows the smallest unit of cargo being handled to fall through the guard.

(iii) Overhead guards shall be built so that failure of the vehicle's mast tilting mechanism will not displace the guard.

(iv) An overhead guard, otherwise required by this paragraph, may be removed only when it would prevent a truck from entering a work space and if the operator is not exposed to low overhead obstructions in the work space.

(v) Overhead guards shall be large enough to extend over the operator during all truck operations, including forward tilt.

(2) Load backrest extensions. Where necessary to protect the operator, fork lift trucks shall be fitted with a vertical load backrest extension to prevent the load from hitting the mast when the mast is positioned at maximum backward tilt. For this purpose, a "load backrest extension" means a device extending vertically from the fork carriage frame to prevent raised loads from falling backward.

(3) Forks. (i) Forks, fork extensions and other attachments shall be secured so that they cannot be accidentally dislodged, and they shall be used only in accordance with the manufacturer's recommendations.

(ii) The employer shall ensure that employees do not ride on lift truck forks.

(4) Counterweights. Counterweights shall be affixed so that they cannot be dislodged.

(5) Capacities and weights. (i) Fork lift truck rated capacities, with and without removable counterweights, shall not be exceeded. Rated capacities shall be marked on the vehicle and shall be visible to the operator. The vehicle weight, with and without counterweight, shall be similarly marked.

(ii) If loads are lifted by two or more trucks working in unison, the total weight of the load shall not exceed the combined rated lifting capacity of all trucks involved.

(6) Lifting of employees. (i) The employer shall ensure that employees do not stand on the forks of a lift truck or on a pallet or load being lifted on the forks.

(ii) Employees may only be elevated by fork lift trucks when a platform is secured to the lifting carriage or forks. The platform shall meet the following requirements:

(A) The platform shall have a railing complying with § 1918a.112(c).

(B) The platform shall have toeboards complying with § 1918a.112(d) if tools or other objects could fall on employees below.

(C) When the truck has controls which are elevated with the lifting carriage, means shall be provided for employees on the platform to shut off power.

(D) The employer shall ensure that employees on the platform are protected from exposure to moving truck parts.

(E) The employer shall provide overhead protection for employees on the platform when there is danger of falling objects.

(F) The platform floor shall be skid resistant.

(G) The employer shall ensure that the truck operator is at the truck's controls when employees are elevated unless the truck's controls are elevated with the lifting carriage.

(H) While employees are elevated, the truck may be moved only to make minor placement adjustments.

(f) *Bulk cargo-moving vehicles.* (1) Where a seated operator may come into contact with projecting overheads, crawler-type bulk-cargo-moving vehicles that are rider operated shall be equipped with operator's guards.

(2) Guards and their attachment points shall be designed to withstand a load equal to the load that will bend the machine's draw bar.

(g) *Straddle trucks.* (1) Accessibility. Straddle trucks shall have a permanent means of access, including any handholds necessary to ensure safe access to the operator's platform.

(2) *Guarding.* (i) Main sprockets and chains to the wheels shall be guarded as follows:

(A) The upper sprocket shall be enclosed;

(B) The upper half of the lower sprocket shall be enclosed; and

(C) The drive chain shall be enclosed to a height of eight feet (2.6 m) except for that portion at the lower half of the lower sprocket.

(ii) Gears shall be enclosed and revolving parts which may be contacted by the operator shall be guarded.

(iii) When straddle trucks are used in the vicinity of employees, personnel-deflecting guards shall be provided around leading edges of front and rear wheels.

(3) Visibility. Operator visibility shall be provided in all directions by mirrors or equivalent means.

(h) *Trailer-spotting tractors.* (1) Trailer-spotting tractors (fifth wheels) shall be fitted with any hand grabs and footing necessary for safe access to the fifth wheel.

(2) Rear cab windows shall be protected by safety glass or by equivalent means.

§ 1918a.44 General rules applicable to vehicles.[C-1]

(a) The requirements of this section apply to general vehicle use within marine terminals except in cases where the provisions of paragraphs (c) and (m) of this section are preempted by applicable regulations of the Department of Transportation.[C-2]

(b) The employer shall ensure that private vehicle parking in marine terminals is allowed only in designated areas, which shall not be used concurrently for storage.

(c) Trailers shall not be disconnected from tractors at loading docks until the road wheels have been immobilized. The road wheels shall be immobilized from the time the brake system is disconnected until braking is again provided. Supplementary front end support shall be employed as necessary to prevent tipping when a trailer is entered by a material handling vehicle. Rear end support shall be employed if rear wheels are so far forward as to allow tipping when the trailer is entered.

(d) The employer shall ensure that motor vehicle operators comply with any posted speed limits and other traffic control signs or signals, and written traffic instructions.

(e) Stop signs shall be posted at main entrances and exits of structures where visibility is impaired, and at blind intersections, unless direct traffic control or warning mirror systems or equivalent are provided.

(f) Vehicular routes, traffic rules, and parking areas shall be established, identified, and used.

(g) The employer shall ensure that vehicle drivers warn employees in traffic lanes of the vehicle's approach.

(h) Where pedestrians use or cross traffic lanes, pedestrian crossing signs shall be posted to warn vehicle drivers.

(i) Signs indicating pedestrian traffic shall be clearly posted at vehicular check-in and check-out lines and similar locations where employees may be working.

(j) The employer shall ensure that a distance of at least 20 feet (4.6 m) is maintained between any two vehicles in a check-in, check-out, roadability, or vessel loading/discharging line.

(k) The employer shall ensure that no unattended vehicle is left with its engine running.

(l)(1) When the rear of a vehicle is elevated to facilitate loading or discharging, a ramp shall be provided and secured. The employer shall ensure that the vehicle is secured against accidental movement during loading or discharging.

(2) The ramp shall have a safety factor of four for the load being carried.

(m) Only highway vehicle floors in safe condition shall be use.

(n) When flatbed trucks, platform containers or similar conveyances are loaded or discharged and the cargo consists of pipe or other products which could spread or roll to endanger employees, the cargo shall be contained to prevent movement.

(o) Vehicles used to transport employees within a terminal shall be maintained in safe working order and safety devices shall not be removed or made inoperative.

(p) Multi-piece rim wheels. (1) *Scope.* This paragraph applies to the servicing of vehicle wheels containing tube-type tires mounted on multi-piece rims.

(2) *Definition.* "Multi-piece rim" means a vehicle wheel rim consisting of two or more parts, one of which is a (side) locking ring designed to hold the tire on the rim by tension on interlocking components when the tire is inflated, regardless of the relative sizes of the component parts.

(3) *Employee training.* (i) The employer shall ensure that only employees trained in the procedures required in paragraph (p)(4) and who have demonstrated their ability to service multi-piece rim wheels shall be assigned such duties.

(ii) The employer shall ensure that each employee demonstrates his ability to service multi-piece rim wheels, including performance of the following tasks:

(A) Tire demounting (including deflation);

(B) Inspection of wheel components;

(C) Mounting of tires;

(D) Inflation of tires, including use of a restraining device;

(E) Handling of wheels;

(F) Inflation of tires when a wheel is mounted on the vehicle; and

(G) Installation and removal of wheels.

(4) *Servicing procedures.* The employer shall ensure that the following procedures are followed:

(i) Tires shall be completely deflated before demounting by removal of the valve core;

(ii) The valve core shall be removed before the wheel is removed from the axle when:

(A) The tire has been operated underinflated at 80% or less of its recommended pressure; or

(B) There is discernible or suspected damage to the tire or wheel components;

(iii) Mating surfaces shall be free of dirt, surface rust, scale and rubber buildup before mounting;

(iv) Rubber lubricant shall be applied to bead and rim mating surfaces upon wheel assembly and inflation of the tire;

(v) Air pressure shall not exceed 3 psig (0.21 kg/cm^2)when seating the locking ring or rounding out the tube when a tire is being partially inflated without a restraining device;

(vi) While the tire is pressurized, components shall not be struck or forced to correct the seating of side or lock rings;

(vii) There shall not be any contact between an employee or unit of equipment and a restraining device during tire inflation;

(viii) After inflation, tires, rims and rings shall be inspected while within the restraining device to ensure proper seating and locking. If adjustment is necessary the tire shall first be deflated by valve core removal; and

(ix) Before assembly, wheel components shall be inspected, and damaged rim components shall not be reused.

(5) *Charts and manuals.* (i) The employer shall provide a chart containing as a minimum the instructions provided in the United States Department of Transportation, National Highway Traffic Safety Administration (NHTSA) publication "Safety Precautions for Mounting and Demounting Tube-Type Truck/Bus Tires" and "Multi-Piece Rim Wheel Matching Chart," and pertinent to the type(s) of multi-piece rim wheels being serviced. The chart shall be available in the terminal's service area.[C-3]

(ii) A current rim manual containing the manufacturer's instructions for mounting, demounting, maintenance and safety precautions relating to the multi-piece rim wheels being serviced shall be available in the terminal's service area.

(6) *Restraining devices.* (i) Except as otherwise noted, inflation shall be done within a restraining device such as a

[C-1] The United States Coast Guard at 33 CFR 126.15(d) and (e) has additional regulations applicable to vehicles in terminals.

[C-2] Department of Transportation regulations in 49 CFR Part 393, Subpart C-Brakes, address the immobilization of trailer road wheels prior to disconnection of the trailer and until braking is again provided. 49 CFR 393.84 addresses the condition of flooring. These rules apply when the motor carrier is engaged in interstate commerce or in the transport of certain hazardous items wholly within a municipality or the commercial zone thereof....

[C-3] NHTSA charts are available free from General Services Division, National Highway Traffic Safety Administration, Attention: N48-51, 400 Seventh Street, S.W., Washington, D.C. 20590. Industry charts are available upon request from the manufacturer.

cage, rack or other device capable of withstanding the maximum force that would be transferred to it during an explosive wheel separation occurring at 150% of maximum tire specification pressure for the wheels being serviced. The restraining device shall be capable of preventing rim components from being thrown outside the frame of the device for any wheel position within the device. When the wheel assembly is mounted on a vehicle, tires may be inflated without a restraining device only if they have more than 80% of the recommended pressure and if remote control inflation equipment is used and employees are clear of the danger area.

(ii) Restraining devices shall be kept in good repair and be capable of preventing rim components from being thrown outside the device.

(7) *Inflation hoses.* Inflation hoses shall have a manual clip-on chuck with sufficient hose to permit an employee to be clear of the danger area. An in-line, manually operated valve with gauge or a preset pressure regulator shall be used to inflate tires.

(8) *Other equipment.* (i) Only tools recommended in the rim manual for the type of wheel being serviced shall be used to service multi-piece rim wheels.

(ii) Wheel components shall not be interchanged except as provided in the applicable chart or manual.

§ 1918a.45 Cranes and derricks (See also § 1918a.51).

(a) *Coverage.* (1) This section applies to every kind of crane and derrick such as but not limited to:

(i) Crawler, locomotive and truck cranes;

(ii) Overhead and bridge cranes of all types, including steeple-towers, container bridge cranes, ore and coal bridges and other specialized versions;

(iv) Hammerhead tower cranes;

(v) Any crane or derrick used to handle intermodal containers in containerized operations;

(vi) Any mobile straddle-type crane capable of straddling two or more intermodal containers (sixteen feet (4.88 m) in width);

(vii) Any other type of equipment not listed here but performing the functions of a crane or derrick, except as noted in paragraph (a)(2) of this section.

(2) This section does not apply to small industrial truck-type cranes and chain hoists.

(b) *Ratings.* (1) Except for bridge cranes covered by paragraph (g) of this section, the employer shall ensure that cranes and derricks having ratings that vary with boom length, radius (outreach) or other variables are equipped with a durable rating chart visible to the operator, covering the complete range of the manufacturer's (or design) capacity ratings. The rating chart shall include all operating radii (outreach) for all permissible boom lengths and jib lengths as applicable, with and without outriggers, and alternate ratings for optional equipment affecting such ratings. Precautions or warnings specified by the owner or manufacturer shall be included along with the chart.

(2) The manufacturer's (or design) rated loads for the conditions of use shall not be exceeded.

(3) Designated working loads shall not be increased beyond the manufacturer's ratings or original design limitations unless such increase meets with the manufacture's approval. When the manufacturer's services are not available or where the equipment is of foreign manufacture, engineering design analysis performed or approved by the agency certificating the equipment under Part 1919 of this Chapter is required. Any structural changes necessitated by the change in rating shall be carried out.

(c) *Radius indicator.* When the rated load varies with the boom radius, the crane or derrick shall be fitted with a boom angle or radius indicator visible to the operator.

(d) *Prohibited usage.* (1) The employer shall ensure that equipment is not used in a manner that exerts sideloading stresses upon the crane or derrick boom.

(2) No crane or derrick having an operational defect shall be used.

(e) *Protective devices.* (1) The employer shall ensure that guards protect employees from exposed moving parts such as gears, chains and chain sprockets during crane and derrick operations. These guards shall be securely fastened.

(2) Crane hooks shall be latched or otherwise secured to prevent accidental load disengagement.

(f) *General.* (1) Operating controls. (i) Crane and derrick operating controls shall be clearly marked or a chart indicating their function shall be posted at the operator's position.

(ii) After *(one year after effective date),* crane and derrick controls shall be self-centering so that they will automatically move to the "off" position when the operator releases the control.

(2) Booms. (i) Cranes with elevatable booms and without operable automatic limiting devices shall be provided with boom stops if boom elevation can exceed maximum design angles from the horizontal.

(ii) The main purchase block of cranes with extendable booms shall be secured when a whip line is in use.

(3) Foot pedals. Foot pedals shall have a non-skid surface.

(4) Access. Ladders, stairways, stanchions, grab irons, foot steps or equivalent means shall be provided as necessary to ensure safe access to footwalks, cab platforms, the cab and any portion of the superstructure which employees must reach.

(i) Footwalks shall be of rigid construction, and shall be capable of supporting a load of 100 pounds (4.79 kPa) per square foot.

(ii) If more than 20 feet (6.1 m) in height, vertical ladders shall comply with § 1918a.119 (d), (e)(1), (e)(2)(iii), and (e)(2)(iv).

(iii) Stairways on cranes shall be equipped with rigid handrails meeting the requirements of § 1918a.112(c)(1).

(iv) If the top of a ladder or stairway or any portion thereof is located where a moving part of a crane, such as a revolving house, could strike an employee ascending or descending the ladder or stairway, a prominent warning sign shall be posted at the hazardous location on the ladder or stairway.

(5) Operator's station. The cab, controls and mechanisms of the equipment shall be so arranged that the operator has a clear view of the load or signal man, when one is used. Cab glass, when used, shall be safety plate glass or equivalent and good visibility shall be maintained through the glass. Clothing, tools and equipment shall be stored so as not to interfere with access, operation, and the operator's view.

(6) Counterweights or ballast. Cranes shall be operated only with the specified type and amount of ballast or counterweight. Ballast or counterweight shall be located and secured only as provided in the manufacturer's or design specifications, which shall be available at the terminal.

(7) Outriggers. Outriggers shall be used according to the manufacturer's specifications or design data, which shall be available at the terminal. Floats, when used, shall be securely attached to the outriggers. Wood blocks or other support shall be of sufficient size to support the outrigger, free of defects that may affect safety and of sufficient width and length to prevent the crane from shifting or toppling under load.

(8) Exhaust gases. Engine exhaust gases shall be discharged away from areas in which employees are working.

(9) The employer shall ensure that electrical equipment is guarded or maintained to prevent employees from contacting live parts. Designated persons may work on energized equipment if necessary during inspection, maintenance, or repair.

(10) Fire extinguisher. (i) At least one portable fire extinguisher of at least

5-BC rating or equivalent shall be accessible in the cab of the crane or derrick.

(ii) No portable fire extinguisher using carbon tetrachloride or chlorobromomethane extinguishing agents shall be used.

(11) Rope on drums. At least three full turns of rope shall remain on ungrooved drums, and two turns on grooved drums, under all operating conditions. Wire rope shall be secured to drums by clamps, U-bolts, shackles or equivalent means. Fiber rope fastenings are prohibited.

(12) Assembly or disassembly of boom sections. Mobile crane booms being assembled or disassembled on the ground with or without the support of the boom harness shall be blocked to prevent dropping of the boom or boom sections.

(13) Brakes. (i) Each independent hoisting unit of a crane or derrick shall be equipped with two means of braking, one of which shall work directly on the drive shaft or other part of the reducing gear.

(ii) Each brake shall be capable of sustaining 1½ times the crane's rated load.

(g) *Rail-mounted cranes (excluding locomotive types).* (1) For the purposes of this section, rail-mounted cranes include bridge cranes and portal cranes.

(2) Rated load marking. The employer shall ensure that the rated loads of bridge cranes are plainly marked on each side of the crane and in the cab. If there is more than one hoisting unit, each hoist shall have its rated load marked on it or on its load block. Marking shall be legible from the ground level.

(3) Wind-indicating devices. (i) After *(effective date of final standard)* each rail-mounted crane shall be fitted with an operable wind-indicating device.

(ii) Indications. Wind-indicating devices shall provide a visible indication of wind velocity at all time. They shall also provide distinctive visible and audible alerts:

(A) When wind velocity reaches that speed (the warning speed), not exceeding the crane manufacturer's recommendations, at which a warning is to be provided or partial shutdown (such as stopping of crane movement on the rails) is to be accomplished; and

(B) When wind velocity reaches that speed (the shutdown speed), not exceeding the crane manufacturer's recommendations, at which work is to be stopped and the crane secured.

(iii) Location of indications. The indications required by paragraph (g)(3)(ii) of this section shall read out directly in the operator's cab.

(iv) Instructions. The employer shall post operating instructions for wind-indicating devices, including warning and shutdown velocities and the actions to be taken on their indications, in the operator's cab of each crane. The employer shall ensure that operators comply with these instructions. The instructions shall include directions for any coordination necessary when two or more affected cranes are located at the same terminal.

(4) Securing of cranes in high winds. (i) When the wind reaches the crane's warning speed, the employer shall ensure that:

(A) Gantry travel is stopped;

(B) Any portion of the crane spanning or partially spanning a vessel is moved clear of the vessel; and

(C) The crane is positioned for shutdown.

(ii) When the wind reaches the crane's shutdown speed, the employer shall ensure that the crane is secured against travel, using all available means of securing.

(5) The employer shall monitor local weather conditions by subscribing to a weather service or using equally effective means.

(6) Stops and bumpers. (i) The ends of all tracks shall be equipped with stops or bumpers. If a stop engages the tread of the wheel, it shall be of a height not less than the radius of the wheel.

(ii) When more than one crane operates on the same runway or more than one trolley on the same bridge, each crane or trolley shall be equipped with bumpers or equivalent devices at adjacent ends.

(7) Employee exposure to crane movement. When employees may be in the vicinity of the tracks, crane trucks shall be equipped with personnel-deflecting guards.

(8) Pedestrian clearance. If the area is used for employee passage or for work, a minimum clearance of three feet (0.9 m) shall be provided between trucks or the structures of rail-mounted cranes and any other structure or obstruction. When the required clearance is not available on at least one side of the crane's trucks, the area shall not be used and shall be marked and identified.

(9) Warning devices. Rail-mounted cranes shall be equipped with an effective travel warning device which shall be used when employees are in the way of the moving crane.

(10) Communications. Means of communication shall be provided between the operator's cab and the base of the gantry of all rail-mounted cranes. This requirement may be met by telephone, radio, sound-signalling system or other effective method, but not by a hand-signalling system.

(h) *Stabilizing of locomotive cranes.* Loads shall be hoisted by locomotive cranes only if outriggers are in place, unless means are taken to prevent the load being carried by the truck springs of the crane.

(i) *Operations.* (1) Use of cranes together. When two or more cranes hoist a load in unison, the employer shall designate a person to direct the operation and instruct personnel in positioning, rigging of the load and movements to be made.

(2) Guarding of swing radius. Accessible areas within the swing radius of the body of a revolving crane shall be physically guarded during operations to prevent an employee from being caught between the body of the crane and any fixed structure or between parts of the crane.

(3) Securing mobile crane components in transit. The crane's superstructure and boom shall be secured against rotation and carried in line with the direction of travel except when negotiating turns with an operator in the cab or when the boom is supported on a dolly. The empty hook or other attachment shall be secured.

(4) Unattended cranes. The following steps shall be taken before leaving a crane unattended between work periods:

(i) Suspended loads, such as those hoisted by lifting magnets or clamshell buckets, shall be landed unless the storage position or maximum hoisting of the suspended device will provide equivalent safety;

(ii) Clutches shall be disengaged;

(iii) The power supply shall be shut off;

(iv) The crane shall be secured against accidental travel; and

(v) The boom shall be lowered or secured against movement.

(5) Operating near electric power lines. (i) Clearance. Unless electrical distribution and transmitting lines are deenergized and visibly grounded at point of work, or unless insulating barriers not a part of or attachment to the crane have been erected to prevent physical contact with lines, cranes shall be operated near power lines only in accordance with the following:

(A) For lines rated 50 kV or below, minimum clearance between the lines and any part of the crane or load shall be 10 feet (3 m);

(B) For lines rated over 50 kV, minimum clearance between the lines and any part of the crane or load shall be either 10 feet (3 m) plus 0.4 inch (10 mm) for each 1 kV over 50 kV, or twice

the length of the line insulator, but never less than 10 feet; and

(C) In transit with no load and boom lowered, the clearance shall be a minimum of 4 feet (1.2 m).

(ii) Boom guards. Cage-type boom guards, insulating links or proximity warning devices may be used on cranes, but they shall not be used in place of the clearances required by paragraph (i)(5)(i) of this section.

(iii) Determination of energized lines. Any overhead line shall be presumed to be energized until the owner of the line indicates that it is not energized.

(j) *Protection for employees being hoisted.* (1) Except as provided in paragraph (j)(9) of this section, the employer shall ensure that no employee is hoisted by the load hoisting apparatus of a crane or derrick except:

(i) In a boatswain's chair rigged to prevent it from accidental disengagement from the hook or supporting member; or

(ii) On a platform meeting the following requirements:

(A) Enclosed by a railing or other means providing protection equivalent to that described in § 1918a.112(c). If equipped with open railings, the platform shall be fitted with toe boards;

(B) Having a safety factor of four based on ultimate strength;

(C) Bearing a plate or permanent marking indicating maximum load rating, which shall not be exceeded, and the weight of the platform itself;

(D) Equipped with a device to prevent access doors, when used, from opening accidentally;

(E) Equipped with an overhead guard to protect employees from falling objects or other overhead hazards; and

(F) Secured to the load line by means other than wedge and socket attachments, unless the free (bitter) end of the line is secured back to itself by a clamp placed as close above the wedge as possible.

(2) Except in an emergency, the hoisting mechanism of a crane or derrick used to hoist personnel shall operate in power up and power down, with automatic brake application when not hoisting or lowering.

(3) Variable radius booms of a crane or derrick used to hoist personnel shall be so constructed or secured as to prevent accidental boom movement.

(4) Unless the platform used to hoist employees is completely surrounded by a net approximately five feet (1.52 m) in height, each employee hoisted shall be secured by safety belt or harness and lifeline or equivalent device attached to the source of suspension or to the platform used.

(5) Platforms or devices used to hoist employees shall be inspected for defects before each day's use and shall be removed from service if defective.

(6) The employer shall ensure that employees being hoisted remain in continuous sight of and communication with the operator or signalman, if a signalman is used.

(7) The employer shall ensure that the operator remains at the controls when employees are hoisted.

(8) Cranes shall not travel while employees are hoisted, except in an emergency.

(9) When intermodal container spreaders are used to transfer employees to or from the tops of containers, the spreaders shall be equipped with a personnel platform equipped with fixed railings, provided that the railings have one or more openings for access. The openings shall be fitted with a means of closure, such as chains with hooks. Existing railings shall be at least 36 inches (0.91 m) in height. New railings installed after (*effective date of final standard*) shall be 42 inches (1.07 m), plus or minus 3 inches (7.6 cm), in height. The provisions of paragraphs (j)(1)(i), (j)(1)(ii)(A), (j)(1)(ii)(B), (j)(1)(ii)(E), (j)(4), and (j)(8) of this section do not apply when such container spreaders are used.

(k) *Routine inspection.* (1) The employer shall ensure that only designated persons inspect each crane and derrick on each day of use for defects in functional operating components and that any defect found is reported to the employer. The employer shall inform the operator of these findings.

(2) A designated person shall thoroughly inspect all functional components and accessible structural features of each crane or device at monthly intervals.

(3) Any defects found during such inspections shall be corrected before further equipment use. Repairs shall be done only by designated persons.

(4) A record of monthly inspections shall be maintained for six months in or on the crane or derrick or at the terminal.

§ 1918a.46 Crane load and limit devices.

(a) After (*one year after effective date*), the employer shall ensure that every crane has a load-indicating device or a limiting device, except in the following situations:

(1) When handling bulk commodities by means of clamshell or bucket, or in other service not using a hook, spreader or sling to engage the load to be hoisted;

(2) When handling or holding hoses for hose-handled products;

(3) When it can be documented that the crane never handles loads which exceed the crane's load ratings at all actual working radii; or

(4) When trolley-equipped bridge cranes handle:

(i) Containers identified on the manifest as empty or loaded and the lift is in compliance with the provisions of § 1918a.71 (b), (c), (d), and (e); or

(ii) Other lifts by means of a lifting beam supplied by the crane manufacturer.

(b) Crane load or limiting devices shall:

(1) Provide direct indications, by means other than a hook scale or dynamometer, of actual loads hoisted, to be used in conjunction with posted crane ratings;

(2) Automatically indicate in the cab the approach to, reaching, and exceeding or rated loads; or

(3) Prevent an overload by means of a device such as a limit switch or equivalent installation.

(c) *Performance requirements.* (1) Crane load or limiting devices shall have a range compatible with the range of the crane to which they are attached.

(2) For devices other than limit switches or equivalent devices, load indications shall fall in the range between 97% and 110% of actual loads, the 97% value establishing a 3% limit over rated loads. If accuracy requirements cannot be met over a narrow range at the extremes of the rating of the crane, labeling or other visible or audible means shall indicate to the operator the ranges in which accuracy requirements cannot be met.

(3) Accuracy of limit switches or equivalent devices shall be within plus or minus 10% of activating loads.

(4) Load-indicating or limiting devices shall meet required accuracies over ambient temperatures from −22° to +122°F (−30° to +50°C) without external adjustment.

(d) For devices other than limit switches or equivalent devices, it shall be determined before each day's use that the device is operable, unless the device has been certified by the manufacturer to remain operable within the limits specified in paragraph (c) of this section for a specified time, which has not expired.

(e) When elements of the load-indicating or limiting device are located so that their failure could cuase a load to be dropped, the strength of the elements shall not be the limiting strength factor of the crane.

(f)(1) Readout and labeling shall be provided, and shall be compatible or convertible for use with the crane rating

chart. Readout and labeling shall provide:

(i) Units and form of measure;

(ii) Indicating device capacity;

(iii) Operating range within which accuracy requirements are met; and

(iv) Basic operating instructions and precautions.

(2) If the load or limiting device does not measure the load hoisted but affords warning when the load rating is approached or reached, or if it automatically stops the crane when the limit is reached, the crane shall be clearly marked with an identification and description of the device, its operating instructions, and any necessary precautions.

(g) For cranes with load indicating or limiting devices, maintenance, use and installation of the device and maintenance of the crane shall be performed in accordance with manufacturers' recommendations, which shall be available at the terminal.

(h) In installations using radius (in feet or meters) as a factor in operation, the indicated radius or boom angle (in degrees) shall satisfy the following:

(1) If displaying radius, the indications shall be in the range from 97% to 110% of actual radius, establishing allowable "under" indications of 3% of actual radius (overload condition) and allowable "over" indications of 10% of actual radius (underload condition).

(2) If displaying or using boom angle, indications shall be as follows:

(i) For boom angles, measured as the angle between the boom base section's longitudinal axis and the horizontal plane, of 65° or more, indicated angles shall be between ½° more and 1½° less than actual angles.

(ii) For boom angles under 65°, indicated angles shall be from 1° more to 2° less than actual angles.

(iii) When radius is presented in degrees, and feet or meters are required, conversion charts shall be provided.

(i) *Performance tests.* (1). The employer shall ensure that load-indicating devices and limit switches are performance tested, using known weight or fixed anchor procedures, at installation, at manufacturer's recommended intervals, when there are indications of inaccuracy, and at certification surveys.

(2) Tests shall be in accordance with manufacturer's instructions, which shall be available at the terminal, and shall include all functions.

(3) Tests shall use an appropriately configured crane and load rating chart. Tests of limit switches or equivalent devices shall include activation of the limit switch or device.

(j) *Test records.* Signed and dated records of the most recently conducted performance tests shall be available at the terminal and shall include the following:

(1) Crane owner;

(2) Crane manufacturer, model, serial number;

(3) Device manufacturer, model, serial number;

(4) Crane configuration, method of test and test load data; and

(5) Accuracy calculations and whether recalibration was necessary to achieve accuracy.

§ 1918a.47 Winches.

(a) The employer shall ensure that moving winch parts which present caught-in hazardous to employees are guarded.

(b) Winches shall have clearly identifiable and readily accessible stop controls.

(c) Portable winches shall be secured against accidental shifting while in use.

(d) Portable winches shall be fitted with limit switches if employees have access to areas from which it is possible to be drawn into the winch.

(e) The provisions of § 1918a.45(f)(11) shall apply to winches.

§ 1918a.48 Conveyors.

(a) *Guards.* (1) The employer shall ensure that danger zones at or adjacent to conveyors are guarded to protect employees.

(2) An elevated walkway with guardrail or equivalent means of protection shall be provided where employees cross over moving conveyors, and suitable guarding shall be provided when employees pass under moving conveyors.

(b) *Moving parts.* Conveyor rollers and wheels shall be secured in position.

(c) *Positioning.* Gravity conveyor sections shall be firmly placed and secured to prevent them from falling.

(d) *Braking.* (1) Brakes or equivalent means of stopping objects at the delivery end of the conveyor shall be provided.

(2) Conveyors using electrically released brakes shall be constructed so that the brakes cannot be released until power is applied and the brakes are automatically engaged if the power fails or the operating control is returned to the "stop" position.

(e) *Stability.* Portable conveyors shall be stable within their operating ranges. When used at variable fixed levels, the unit shall be secured at the operating level.

(f) *Emergency stop devices.* Emergency stop devices shall be readily accessible to employees at fixed loading, unloading and other conveyor work stations.

(g) *Starting powered conveyors.* The employer shall ensure that powered conveyors are not started until all employees are clear of the conveyor or have been warned that the conveyor is about to start.

(h) *Loading and unloading.* The area around conveyor loading and unloading points shall be kept clear of obstructions during conveyor operations.

(i) *Lockout.* (1) The employer shall ensure that conveyors are stopped and their power sources locked out during maintenance, repair, and servicing, unless power is necessary for testing.

(2) The starting device shall be locked in the stop position before an attempt is made to remove the cause of a jam or overload that has stopped the conveying medium.

(j) *Safe practices.* (1) Only designated persons shall operate, repair or service powered conveyors.

(2) Employers shall ensure that employees stay off operating conveyors.

(3) Conveyors shall be operated only with all overload devices, guards and safety devices in place and operable.

§ 1918a.49 Spouts, chutes, hoppers, bins, and associated equipment.

(a) The employer shall ensure that standing and running rigging and associated gear used as a permanent part of spouts, chutes or similar devices is inspected before each use and is not used if it has any functional defects. (See also § 1918a.51(c)(2) for certification requirements.)

(b) Instantaneous and direct communication shall be provided between the discharge or shipboard control end of loading spouts and chutes and the point in the terminal from which the flow of cargo is controlled.

(c) Chute and hopper openings shall be guarded to prevent employees from falling through them.

(d) When employees are working on hoppers, the hopper shall be equipped with a safe walkway and means of access, and guardrails if required by § 1918a.112.

(e) Chutes shall be equipped with sideboards to protect employees from falling objects.

(f) Chutes shall be firmly placed and secured to prevent them from falling.

(g) Brakes or equivalent means of stopping objects at the delivery end of chutes shall be provided.

(h) Before an employee enters an empty bin, the employer shall ensure that:

(1) Personnel controlling the flow of cargo into the bin have been notified of the entry; and

(2) The power supply to the equipment carrying the cargo to the bin has been turned off and locked out.

(i) Before an employee enters a bin containing a bulk commodity such as coal or sugar, the employer shall ensure that:

(1) Personnel controlling the flow of cargo into the bin have been notified of the entry;

(2) The power supply to the equipment carrying the cargo to the bin has been turned off and locked out;

(3) The employee entering the bin is wearing a lifeline and safety harness; and

(4) A standby attendant equipped to perform a rescue is continuously stationed outside the bin until the employee has left the bin.

(j) Bin top openings shall be covered with gratings or other means of preventing employees from falling into the bin when the cover is removed.

(k) Chutes and hoppers shall be repaired only by designated persons.

(l)(1) Before power shoveling operations begin, the employer shall ensure that a designated person inspects the equipment to be used. The inspection shall include at least the eye bolts, wires, and sheaves.

(2) Power shovels and associated equipment with operational defects shall not be used.

(3) Before adjustments are made to a power shovel, wire, or associated equipment, the power supply to the shovel shall be turned off and locked out, the belt stopped, and the hopper closed.

§ 1918a.50 Certification of marine terminal material handling devices.

(a) Employers shall not use any material handling device listed in paragraph (c) of this section until they have ascertained that the device has been certificated, as evidenced by current and valid documents attesting to compliance with the requirements of paragraph (b) of this section.

(b) The certifications required by paragraph (a) of this section, and further described in paragraph (c) of this section, shall be performed:

(1) In accordance with the standards of Part 1919 of this Chapter, by persons then currently accredited by the Occupational Safety and Health Administration as provided in that Part; or

(2) In accordance with standards established and enforced by the state in which the device is located or by a political subdivision thereof, which have been found by the Secretary to be compatible with the standards of Part 1919 of this Chapter, by persons designated as competent to perform such certification by competent state authority and recognized as such by the Secretary.

(c) The marine terminal material handling devices listed below shall be certificated in the following manner:

(1) Each crane and derrick shall be tested as a unit annually and quadrennially, and shall be inspected annually and examined quadrennially. Certificates of tests, inspections, and examinations shall be available for inspection on the equipment or at the terminal.

(2) Bulk cargo spouts and suckers, together with any portable extensions and rigging or outriggers supporting them vertically, shall be inspected annually. Certificates attesting to the required examination shall be available at the terminal.

(3) Vertical pocket or bucket conveyors such as banana, sugar and grain marine legs (other than those within a grain elevator structure) used within a marine terminal facility shall be inspected annually and examined quadrennially. The quadrennial examination shall include all supporting structures, rigging and mechanical components and observation of all steps of operation. Certificates attesting to the required inspections and examinations shall be available at the terminal.

(4) (i) House fall cargo-handling gear in use shall be tested as a unit and subjected to an examination upon initial certification and every fourth year, and shall be subjected to annual inspections in other years. The unit test shall consist of a proof load to 25% in excess of the rated safe working load. Inspections and examinations shall include all supporting structures and components. Certificates attesting to the required tests, inspections and examinations shall be available at the terminal.

(ii) House fall span beams or other house fall block supports shall be marked with the safe working load, which shall not be exceeded.

(5) Special gear. (i) Special stevedoring gear provided by the employer, the strength of which depends upon components other than commonly used stock items such as shackles, ropes or chains, shall be tested as a unit in accordance with the following table before initially being put into use.

Safe working load	Proof load
Up to 20 short tons	25 percent in excess.
Over 20 to 50 short tons	5 short tons in excess.
Over 50 short tons	10 percent in excess.

(ii) Every spreader not a part of ship's gear and used for hoisting intermodal containers shall be tested to a proof load equal to 25% in excess of its rated capacity. Additionally, any spreader which suffers damage necessitating structural repair shall be retested after repair and before being returned to service.

(iii) Certificates attesting to the required tests shall be available at the terminal.

(6) Wire rope and loose gear obtained after *(effective date of final standard)* and used for material handling shall have been tested and certificated before being placed into use in accordance with the provisions of paragraphs (a), (c) and (d) of § 1919.31 and §§1919.32 through 1919.34 of this Chapter as applicable. Certificates attesting to the required tests, inspections and examinations shall be available at the terminal.

(d) Disassembly and reassembly of equipment necessary for movement from job to job or which does not affect the equipment's ratings will not nullify the validity of the equipment's existing certification.

(e) For equipment certificated in accordance with paragraph (b)(2) of this section and transferred to a job site in another state, the current certification shall remain valid until the next inspection or examination becomes due.

(f) In addition to certification procedures, all certified equipment shall be maintained in accordance with the manufacturer's maintenance procedures.

(g) (1) Every unit of equipment requiring quadrennial certification shall have had such quadrennial certification within the previous 48 months. Equipment requiring annual certification shall have had such annual certification within the previous 12 months, except that no annual certification is required within 12 months after any required quadrennial certification. Annual surveys, inspections or examinations for certification may be accomplished up to one month early without effect on subsequent due dates.

(2) When certificated equipment is out of service for 6 months or more beyond the due date of a certification inspection, an examination equivalent to an initial certification, including unit proof load test, shall be performed before the equipment re-enters service.

(h) The employer shall ensure that loose gear obtained after *(effective date of final standard)* bears a legible mark indicating that it has been tested (see paragraph (c)(6) of this section). Signal sheave blocks shall be marked with safe working loads and proof test loads. Marks relating to testing shall be

identifiable on the related certificates, which shall be available at the terminal.

(i) The certification requirements of this section do not apply to the following equipment:

(1) Industrial trucks and small industrial crane trucks; and

(2) Any straddle truck not capable of straddling two or more intermodal containers (16 feet (4.88m)) in width.

§ 1918a.51 Hand tools.

(a) The employer shall ensure that hand tools used by employees are maintained in safe operating condition.

(b) (1) Hand-held portable electric tools shall be equipped with switches that must be manually held in a closed position to operate the tool.

(2) Portable power-driven circular saws shall be equipped with guards above and below the base plate or shoe. The upper guard shall cover the saw to the depth of the teeth, except for the minimum arc required to permit the base to be tilted for bevel cuts. The lower guard shall cover the saw to the depth of the teeth, except for the minimum arc required to allow proper retraction and contact with the work. When the tool is withdrawn from the work, the lower guard shall automatically and instantly return to the covering position.

(c) Only cutting tools shall be used to cut metal strapping or banding used to secure cargo.

Subpart D—Specialized Terminals

§ 1918a.71 Terminals handling intermodal containers or roll-on roll-off vehicles.

(a) This section shall apply in addition to any applicable requirements of this Part.

(b) The employer shall ensure that every intermodal container is legibly and permanently marked with:

(1) The weight of the container when empty, in pounds;

(2) The maximum cargo weight the container is designed to carry, in pounds; and

(3) The sum of the weight of the container and the cargo, in pounds.

(c) Containers loaded aboard or discharged from any vessel by a shore crane or derrick shall:

(1) If empty, be identified by shipping documents as empty and be so marked; and

(2) If loaded, be marked with their actual gross weight to be legible to the crane or other hoist operator.

(d) Each outbound loaded container, except open vehicle-carrying containers and those designed and used exclusively to carry compressed gases, shall be weighed to determine its actual gross weight. If the terminal has no scales, the actual gross weight may be calculated on the basis of the container's contents and the container's empty weight. The weights used in the calculation shall be posted conspicuously on the container, with the name of the person making the calculation and the date.

(e) The weight of loaded inbound containers from foreign ports shall be determined by weighing, by the method of calculation described in paragraph (d), or by shipping documents.

(f) No container shall be hoisted whose actual gross weight exceeds either the sum of the container's empty weight and the maximum cargo weight the container is designed to carry or the capacity of the crane or device used for hoisting.

(g) (1) Marked and designated areas shall be set aside within a container or roll-on roll-off terminal for passage of employees to and from work areas.

(2) The employer shall ensure that employees stay clear of the area beneath a suspended container.

(h) The employer shall ensure that employees working with container-handling equipment or in the terminal's traffic lanes wear high-visibility vests or equivalent protection.

(i) Except when damage to an intermodal container makes special means of handling necessary, containers shall be handled using lifting fittings or other arrangements suitable and intended for the purpose as set forth in paragraphs (i)(1) through (i)(3):

(1) Intermodal containers of 20 feet (6.1 m) or more in length shall be hoisted as follows:

(i) If hoisted by the top lifting fittings, the lifting forces shall be applied vertically from at least four such fittings.

(ii) If hoisted from bottom fittings, the hoisting connections shall bear on the fittings only, making no other contact with the container. The angles of the four bridle legs shall not be less than 30° to the horizontal in the case of 40 foot (12.2 m) containers, 37° in the case of 30 foot (9.1 m) containers, and 45° in the case of 20 foot (6.1 m) containers.

(iii) Lifting containers by fork lift trucks or by grappling arms from above or from one side shall be done only if the container is designed for this type of handling.

(iv) Other means of hoisting may be used only if the containers and hoisting means are designed for such use.

(2) (i) Intermodal container spreaders using lanyards for activation of releasing devices shall not be used except when there is no possibility of the lanyards accidentally releasing a suspended intermodal container.

(ii) Intermodal container spreader twistlock systems shall be designed and used so that a suspended load cannot accidentally be released.

(3) Intermodal containers moved by flat bed trucks or container chassis shall be secured to prevent dislodgement in transit.

(j) (1) Intermodal containers received shall be inspected for defects in structural members or fittings before further handling.

(2) Any intermodal container found to be unsafe shall be identified as such, promptly removed from service and repaired before being returned to service.

§ 1918a.72 Grain elevator terminals. [Reserved]

§ 1918a.73 Terminal facilities handling menhaden and similar species of fish.

(a) This section shall apply in addition to any applicable requirements of this Part.

(b) (1) The employer shall ensure that tanks in terminal areas used for receiving or storing brailwater for recirculating into vessel holds in discharging operations are open or ventilated to minimize contamination of water circulated to the vessel. Brailwater tanks shall be thoroughly drained upon completion of each day's operations and shall be left open to the air. Drainage is unnecessary when brailwater has been treated to remove hydrogen sulfide-producing contaminants and the efficiency of such treatment has been established.

(2) Before employees enter a dock tank, it shall first be drained, rinsed and tested for hydrogen sulfide and oxygen deficiency. Employees shall not enter the tank when the hydrogen sulfide level exceeds 20 ppm or oxygen content is less that 19.5%.

(3) Tests shall be conducted by designated personnel with suitable test equipment and respiratory protective equipment complying with the provisions of § 1918a.92 of this Part.

(c) Pipelines and hoses on the dock or terminal used for receiving and circulating used brailwater shall be completely drained upon completion of each day's operation and left open to the air.

(d) At least four units of respiratory protective equipment consisting of supplied-air respirators or self-contained breathing apparatus complying with the requirements of § 1918a.92 of this Part shall be available in a suitably labeled cabinet for immediate use in case of emergency caused by oxygen deficiency or hydrogen sulfide. Any employee entering a tank in an emergency shall, in addition to repiratory protective

equipment, wear a lifeline and safety harness to facilitate rescue. At least two other employees, similarly equipped, shall be continuously stationed outside the tank to observe and to provide rescue services.

(e) The plant superintendent and foremen shall be trained and knowledgeable about the hazards of hydrogen sulfide and oxygen deficiency. They shall be trained in the use of appropriate respiratory and other protective equipment, and in rescue procedures. Other supervisory plant personnel shall be informed of these hazards and instructed in the necessary safety measures, including use of respiratory and rescue equipment.

(f) Supervisory personnel shall be on hand at dockside to supervise discharging of brailwater from vessels.

Subpart E—Personal Protection

§ 1918a.91 Eye protection.

(a) (1) When employees perform work hazardous to the eyes, the employer shall provide, at no cost to the employee, eye protection equipment marked or labeled as meeting the manufacturing specifications of American National Standards Practice for Occupational and Educational Eye and Face Protection, ANSI Z87.1–1968, and shall ensure its use.

(2) For employees wearing corrective spectacles, eye protection equipment required by paragraph (a)(1) of this section must be of a type which can be worn over spectacles. Prescription ground safety lenses may be substituted if they provide equivalent protection.

(3) For additional requirements covering eye protection against radiant energy, see § 1918a.152(h).

(b) Eye protection equipment shall be maintained in good condition.

(c) Used eye protection equipment shall be cleaned and disinfected before reissuance to another employee.

§ 1918a.92 Respiratory protection.

(a) The employer shall provide, at no cost to the employee, approved respiratory protective equipment meeting the requirements of 30 CFR Part 11 and shall ensure its use in hazardous atmospheres as defined in § 1918a.2(p).

(b) Respirators are approved for use in hazardous atmospheres only when they are maintained and used in accordance with the requirements for performance and respiratory protection set forth in 30 CFR Part 11.

(c) For protection against nuisance dusts, the employer shall provide, at no cost to the employee, respirators with particulate filters or dust masks meeting the requirements of 30 CFR Part 11, and shall ensure their use.

(d) For protection against pneumoconiosis-producing or toxic dusts, the employer shall provide, at no cost to the employee, respirators meeting the requirements of 30 CFR Part 11, and shall ensure their use.

(e) Respiratory protective equipment shall not be modified.

(f) Respiratory protective equipment shall be inspected before each use. Gas mask canisters and chemical cartidges shall be replaced before the end of their service life. Mechanical filters shall be cleaned and replaced as often as necessary to prevent excessive breathing resistance.

(g) Previously used respiratory protective equipment shall be cleaned and disinfected before reissuance.

(h) Respiratory protective equipment shall be stored in a convenient and clean location.

(i) Employers shall instruct employees using respiratory protective equipment in its uses and limitations.

(j) When an employee enters a hazardous atmosphere, at least one attendant shall stand by with rescue equipment and with respiratory protection approved for the hazard involved.

§ 1918a.93 Head protection.

(a) The employer shall ensure that employees exposed to impact, falling or flying objects, or electric shocks or burns shall wear protective hats, which shall be provided at no cost to the employee.

(b) Protective hats shall bear identifying marks or labels indicating compliance with the manufacturing provisions of American National Standard Safety Requirements for Industrial Head Protection, ANSI Z89.1–1969.

(c) Protective hats previously worn shall be cleaned and disinfected before issuance by the employer to another employee.

§ 1918a.94 Foot protection.

(a) The employer shall ensure that employees exposed to impact, falling objects, or puncture hazards wear safety shoes, which shall be provided by the employer at no cost to the employee.

(b) Protective shoes shall bear identifying marks or labels indicating compliance with the manufacturing provisions of American National Standard for Men's Safety Toe Footwear, ANSI Z41.1–1967.

§ 1918a.95 Other protective measures.

(a) *Protective clothing.* (1) The employer shall provide, at no cost to the employee, protective clothing when ordinary clothing is unsuitable and circumstances necessitate special protective clothing, and shall ensure its use.

(2) Protective clothing previously worn shall be cleaned and disinfected before issuance by the employer to another employee.

(b) *Protective creams or ointments.* The employer shall ensure that employees use protective creams or ointments when skin exposure to a particular substance requires their use.

(c) *Protection against drowning.* (1) the employer shall provide, at no cost to the employee, and shall ensure that employees wear, personal flotation devices for those employees, such as line handlers, who are engaged in work in which they may be pulled into the water.

(2) Personal flotation devices shall be United States Coast Guard approved Type I PFD, Type II PFD, Type III PFD, or Type V PFD, or equivalent, in accordance with 46 CFR 160 (Coast Guard Lifesaving Equipment Specifications) and 33 CFR 175.23 (Coast Guard table of devices equivalent to personal flotation devices).

(3) Personal flotation devices shall be maintained in safe condition and shall be considered unserviceable when damaged so as to affect buoyancy or fastening capability.

(d) *Emergency facilties.* When employees are exposed to hazardous substances which may require emergency bathing, eye washing or other facilities, the employer shall provide such facilities and maintain them in good working order.

Subpart F—Terminal Facilities

§ 1918a.111 Maintenance and load limits.

(a) The employer shall ensure that the structural integrity of docks, piers, wharves, terminals and working surfaces is maintained.

(b) Maximum safe load limits, in pounds per square foot (kilograms per square meter), of floors within buildings and structures shall be conspicuously posted in all cargo areas.

(c) Maximum safe load limits shall not be exceeded.

(d) All walking and working surfaces in the terminal area shall be maintained in good repair.

§ 1918a.112 Guarding of edges.

(a) *Vehicle protection.* (1) The employer shall ensure that vehicle curbs and bull rails at least 10 inches (22.9 cm) in height are provided at the water side of aprons and bulkheads, except where vehicles are prohibited.

(2) The provisions of paragraph (a)(1) of this section also apply at the edge of any fixed level above the common floor area from which vehicles may fall, except at loading docks, platforms and skids where cargo is moved by vehicles.

(b) *Employee protection.* (1) Except as specified in paragraph (b)(2) of this section, guardrails shall be provided at locations where employees are exposed to floor or wall openings or waterside edges, including bridges or gangway-like structures leading to pilings or vessel mooring or berthing installations, which present a hazard of falling more than 4 feet (1.22 m) or into the water.

(2) Guardrails are not required:

(i) At loading platforms and docks;

(ii) At waterside edges used for cargo handling;

(iii) On the working sides of work platforms, skids or similar workplaces; or

(iv) On railroad rolling stock, highway vehicles, intermodal containers or similar equipment.

(3) Where guardrails are impracticable due to machinery requirements or work processes, other equivalently safe means of protecting employees from falling, such as nets, shall be used.

(c) *Criteria for guardrails.* Guardrails shall meet the following criteria:

(1) They shall be capable of withstanding a force of at least 200 pounds (890 N) applied in any direction at mid-span of the top rail (when used), or at the uppermost point if there is no top rail.

(2) If not of solid, baluster, grillwork, slattered or similar construction, guardrails shall consist of top rails and midrails. When used, midrails shall be positioned at approximately half the height of the top rail.

(3) The top surface of guardrails installed before *(effective date of final standard)* shall be at least 36 inches (0.91 m) high. Those installed after *(effective date of final standard)* shall be 42 inches (1.07 m), plus or minus 2 inches (5.1 cm), high.

(4) Any non-rigid railing such as chain or wire rope shall have a maximum sag limit at the mid-point between posts of not more than 6 inches (15.2 cm).

(5) Top rails shall be free of puncture and laceration hazards.

(6) Rail ends shall not overhang to constitute a hazard, but this does not prohibit scrollwork, boxed ends or similar non-hazardous projections.

(d) *Toeboards.* Toeboards shall be provided when employees below could be exposed to falling objects such as tools. Toeboards shall be at least 3½ inches (8.9 cm) in height from top edge to floor level, and be capable of withstanding a force of 50 pounds (220 N) applied in any direction. Drainage clearance under toeboards is permitted.

(e) *Stair railings.* (1) Stair railings shall be capable of withstanding a force of at least 200 pounds (890 N) applied in any direction, and shall be not more than 36 inches (0.9 m) nor less than 32 inches (0.8 m) in height from the upper top rail surface to the tread surface in line with the leading edge of the tread. Railings shall be provided at any stairway having four or more risers, as follows:

(i) For stairways less thanb 44 inches (1.12 m) wide at least one railing; and

(ii) For stairways more than 44 inches (1.12 m) but less than 88 inches (2.24 m) wide, a stair rail or handrail on each side, and if 88 or more inches wide, an additional intermediate handrail.

(f) *Condition.* Railings shall be maintained free of sharp edges and in good repair.

§ 1918a.113 Clearance heights.

The employer shall ensure that the clearance height is prominently posted where the height is insufficient for vehicles and equipment.

§ 1918a.114 Cargo doors.

(a) *Mechanically operated.* (1) The employer shall ensure that cargo door counterweights are guarded.

(2) Lift trucks and cranes shall not be used to move mechanically operated doors except during repair on the doors, in which case ropes or other guarding shall be provided to prevent entry into the area where the door may fall or slide.

(3) Vertically operated doors partially opened for work or ventilation shall be secured to prevent accidental closing.

(b) *Tackle operated.* (1) The door shall be connected to its lifting tackle with shackles or equally secure means.

(2) Lifting bridles and tackles shall have a safety factor of five, based upon maximum anticipated static loading conditions.

(3) Devices shall be provided to hold overhead doors in the open position and to secure them when closed.

(4) Lifting gear and hardware shall be maintained in safe condition.

(5) Lifting ropes, when used, shall be placed out of the work area and off the floor.

(c) *Horizontal sliding.* (1) Horizontal sliding door rollers shall be constructed to prevent the door from jumping from overhead tracks.

(2) The employer shall ensure that sliding doors are secured to prevent them from swinging.

§ 1918a.115 Cargo-landing surfaces.

The employer shall ensure that the working area of an apron used to load or discharge vessels is large enough to permit unobstructed cargo handling.

§ 1918a.116 Platforms and skids.

(a) The employer shall ensure that platforms and skids extending from piers, transit sheds or lofts and used for landing or hooking on drafts shall be provided at the side edges with guardrails meeting the requirements of § 1918a.112(c) or equivalent means, such as nets, to protect employees against falls.

(b) The employer shall ensure that any employee working below a second story platform or skid is protected from falling objects by a net stretched from the platform or skid to the vessel.

(c) The employer shall ensure that platforms and skids are strong enough to bear the loads handled and are maintained in safe condition. Safe working loads, which shall be posted or marked on or adjecent to platforms and skids, shall have a miminum safety factor of five for any part, based upon maximum anticipated static loading conditions and the ultimate strength of the construction material.

(d) The employer shall provide and maintain platform and skid attachments that will prevent accidental movement of the skid or platform.

§ 1918a.117 Elevators and escalators.

(a) "Elevator" means a permanent hoisting and lowering mechanism with a car or platform moving vertically in guides and serving two or more floors of a structure. The term excludes such devices as conveyors, tiering or piling machines, material hoists, skip or furnace hoists, wharf ramps, lift bridges, car lifts and dumpers.

(b) "Escalator" means a power-driven continuous moving stairway principally intended for the use of persons.

(c) The employer shall ensure that no elevator or escalator with any operational defect is used.

(d) Elevator safey devices shall not be overridden or made inoperable.

(e) The employer shall ensure that elavators and escalators are thoroughly inspected at intervals not exceeding one year, and that additional monthly inspections for satisfactory operation are carried out by designated persons. Records of the results of the latest annual and monthly elevator inspections shall be posted in elevators. Records of escalator inspections shall be posted in the vicinity of the escalator or be available at the terminal.

(f) Elevator landing openings shall be provided with doors, gates or equivalent

protection which shall be in place when the elevator is not at that landing. The door, gate, or equivalent device shall prevent employees from falling into the shaft.

(g) The elevator's or escalator's maximum load limits shall be posted and not exceeded. Elevator load limits shall be posted conspicuously both inside and outside of the car.

(h) Elevators shall be operated only by designated persons except for automatic or door interlocking elevators which provide full shaft door closing and automatic car leveling.

§ 1918a.118 Manlifts.

(a) *Inspection.* The employer shall ensure that manlifts are inspected monthly by a designated person. Safety switches shall be checked weekly. Manlifts found to be unsafe shall not be operated until repaired. Inspections shall include at least the following:

Step fastenings;
Rails;
Rail supports and fastenings;
Roller and slides;
Belt and belt tension;
Handholds and fastenings;
Floor landings;
Guardrails;
Lubrication;
Safety switches;
Warning signs and lights;
Illumination;
Drive pulley;
Bottom (boot) pulley and clearance;
Pulley supports;
Motor;
Drive mechanism;
Brake;
Electrical switches;
Vibration and misalignment;
"Skip" on up or down run when mounting the step (indicating worn gears); and
Emergency exit ladders.

(b) *Inspection records.* Inspection records shall be kept for at least one year. The record of the most recent inspection shall be posted in the vicinity of the manlift or in the terminal.

(c) *Emergency stop.* An emergency stop device shall be available within easy reach from any position on the belt.

(d) *Instructions.* Manlift use instructions shall be conspicuously posted.

(e) *Top floor warning sign and light.* An illuminated sign and red light that are visible to the user shall be provided under the top floor opening of the manlift to warn the user to get off at that floor.

(f) *Bottom floor warning sign.* A sign visible to descending passengers shall be provided to warn them to get off at the bottom floor.

(g) *Upper limit stop.* An automatic stop device shall be provided to stop the manlift when a loaded step passes the top landing, except that manlifts installed after *(Effective date of the final standard)* shall have two such devices.

(h) *Handholds and steps.* Each step shall be provided with a corresponding handhold.

(i) *Emergency ladder.* A fixed emergency ladder accessible from any position on the lift and in accordance with the requirements of § 1918a.119(d) shall be provided for the entire run of the manlift.

(j) *Landings.* (1) Clear and unobstructed landing spaces shall be provided at each level. Manlifts constructed after *(effective date of the standard)* and that have a distance of 50 feet (15.24 m) or more between floor landings shall have an emergency landing every 25 feet (7.62 m) or less of manlift travel.

(2) Open sides of emergency landings shall be protected by guardrails.

(3) Floor landing entrances and exits shall be guarded by mazes, self-closing gates, or equivalent devices.

(4) Landings shall be of sufficient size and strength to support 250 pounds (1120 N).

(k) *Floor opening guards.* The ascending sides of manlift floor openings shall be provided with cones or bevel guards to direct the user through the openings.

(l) *Maintenance.* Manlifts shall be equipped, maintained, and used in accordance with the manufacturer's specifications, which shall be available at the terminal.

(m) *Bottom pulley.* (1) The lower pulley shall be supported by the lowest landing.

(2) Sides of the bottom pulley support shall be guarded to prevent contact with the pulley or the steps.

(n) *Top clearance.* A clearance of at least 11 feet (3.3 m) shall be provided between the top landing and the ceiling.

(o) *Brakes.* Manlifts shall be equipped with brakes that are:.

(1) Self-engaging;

(2) Electrically released; and

(3) Capable of stopping and holding the manlift when the descending side is loaded with the maximum rated load.

§ 1918a.119 Fixed ladders.

(a) *Scope and applicability.* This section applies to all fixed ladders except:

(1) Ladders forming an integral part of railway cars, highway carriers, cargo containers or other transportation carrier equipment;

(2) Climbing devices such as step bolts or structural members of tanks and towers;

(3) Ladders built into or vertically attached to tubular scaffold framing; and

(4) Special-purpose ladders, such as fruit-pickers' ladders, shelf ladders, combination step and extension ladders, and library ladders.

(b) *Definitions.* (1) "Cage" (basket guard) means a barrier enclosing or nearly enclosing a ladder's climbing space and fastened to one or both of the ladder's side rails or to another structure.

(2) "Fixed ladder" means a ladder, including individual rung ladders, permanently attached to a structure, building or piece of equipment.

(3) "Ladder safety device" means a support system limiting an employee's drop or fall from the ladder, and which may incorporate friction brakes, lifelines and lanyards, or sliding attachments.

(4) "Well" means a permanent complete enclosure around a fixed ladder, which is attached to the walls of the well.

(c) *Defects.* (1) The employer shall ensure that ladders with broken, split or missing rungs, steps or rails, broken welds or connections, corrosion or wastage or other defect which may affect safe use are removed from service.

(2) Ladder repairs shall provide strength at least equivalent to that of the original ladder.

(d) *Ladder specifications.* (1) Strength and spacing requirements. (i) Existing ladders shall be capable of withstanding without damage a minimum concentrated load, applied uniformly over a 3-½ inch (8.8 cm) width at the rung center, of 200 pounds (890 N).

(ii) Ladders installed after *(effective date of final standard)* shall be capable of withstanding 250 pounds (1120 N) applied as described in paragraph (d)(1)(i) of this section. If used by more than one employee simultaneously, the ladder is a unit shall be capable of simultaneous additional loading in 250 pounds (1120 N) increments for each additional employee, applied to a corresponding number of rungs. The unit shall have a safety factor of four, based on ultimate strength, in the designed service.

(2) (i) Existing ladders shall have rungs evenly spaced from 9 to 16-½ inches (22.9 to 41.9 cm) apart, center to center.

(ii) Ladders installed after *(effective date of final standard)* shall have rungs evenly spaced from 12±2 inches (30±5 cm) apart, center to center.

(3) (i) Existing ladders shall have a width between side rails of at least 10 inches (25.4 cm).

(ii) Ladders installed after *(effective date of final standard)* shall have a width between side rails of at least 12 inches (30.48 cm).

(4) The minimum distance between the rung center line and the nearest permanent object behind the rung shall be 4 inches (10.2 cm), except that in ladders installed after *(effective date of final standard)*, the minimum distance shall be 7 inches (17.8 cm) unless physical limitations make a lesser distance, not less than 4-½ inches (11.5 cm), necessary.

(5) When a ladder passes through an opening or past overhead obstructions, a minimum 24 inch (.61 cm) clearance shall exist between the climbing side and any obstruction. Where this distance is less than 30 inches (0.76 m), a deflection device shall be installed for guidance through the opening.

(6) The side rails of ladders shall extend at least 36 inches (0.91 m) above the top landing surface, unless grab bars or equivalent holds are provided.

(7) The employer shall ensure that ladders whose pitch exceeds 90° to the horizontal (slanting backward on the climbing side) are not used.

(e) *Protection against falls.* (1) Fixed ladders more than 20 feet (6.1 m) in height shall be provided with a cage, well, or ladder safety device.

(2) When a well or cage is used, ladders with length of climb exceeding 30 feet (9.14 cm) shall comply with the following provisions:

(i) The ladder shall consist of multiple sections not exceeding 30 feet (9.14 m) each;

(ii) Except as specified in paragraph (e)(2)(iv) of this section, each section shall be horizontally offset from adjacent sections;

(iii) Except as specified in paragraph (e)(2)(iv) of this section, a landing platform capable of supporting a load of 100 pounds per square foot (4.79 kPa) and fitted with guardrails complying with § 1918a.112(c) shall be provided at least every 30 feet; and

(iv) For ladders installed before *(effective date of standard)*, offset sections and landing platforms are not required if hinged platforms capable of supporting 100 pounds per square foot (4.79 kPa), and which are kept closed except when opened for passage, are within the cage or well at intervals not exceeding 30 feet (9.14 m).

(3) Ladders equipped with ladder safety devices shall have rest platforms:

(i) Capable of supporting a load of 100 pounds per square foot (4.79 kPa);

(ii) Located at intervals of 150 feet (46 m) or less; and

(iii) Protected by guardrails complying with § 1918a.112(c) on three sides.

(4) Where used, ladder safety devices shall:

(i) Be installed and maintained in accordance with the manufacturer's instructions, which shall be available at the terminal;

(ii) Be repaired with replacement parts having performance capability at least equal to that of the original parts;

(iii) Have a connection length between carrier centerlines and safety belts of 10±2 inches (25.4±5.08 cm); and

(iv) Be installed in a manner that does not reduce the ladder's structural capability.

(5) Ladder cages or wells installed after *(effective date of final standard)* shall:

(i) Be of rigid construction that allows unobstructed ladder use but prevents an employee from falling through or dislodging the cage or well by falling against it;

(ii) Have smooth inner surfaces;

(iii) Extend at least 36 inches (0.9 m) above landings; and

(iv) Extend to within 8 feet (2.4 m) above the ground or base.

(6) After *(effective date of final standard)*, ladders on radio, microwave communication, electrical power and similar towers, poles and structures, including stacks and chimneys, shall meet the requirements of this paragraph (e). Ladders used only for firefighting or emergency purposes are exempted from the requirements of this paragraph.

(f) *Individual rung ladders.* Ladders consisting of individual rungs that are attached to walls or conical manhole sections shall:

(1) Be capable of supporting a load of 350 pounds (1557 N) without deformation;

(2) Form a continuous ladder, uniformly spaced vertically from 12 inches to 16 inches (30.5 to 41 cm) apart, with a minimum width of 10 inches (25.4 cm), and projecting at least 4½ inches (1 cm) from the wall;

(3) Be so constructed that an employee's foot cannot slide off the ends; and

(4) Be firmly attached and without sharp edges.

§ 1918a.120 Portable ladders.

(a) *Scope and applicability.* This section applies to all portable ladders including job-made ladders for temporary use, unless otherwise specified.

(b) *Standards for existing manufactured portable ladders.* (1) The employer shall ensure that rungs of manufactured portable ladders obtained before *(effective date of final standard)* are capable of supporting a 200 pound (896 N) load without deformation.

(2) Rungs shall be evenly spaced from 9 to 16½ inches (22.9 to 41.9 cm), center to center.

(3) Rungs shall be continuous members between rails. Each rung of a double-rung ladder (two side rails and a center rail) shall extend the full width of the ladder.

(4) Width between side rails at the base of the ladder shall be at least 15 inches (38 cm) for ladders 10 feet (3.05 m) or less in overall length, and shall increase at least ¼ inch (0.6 cm) for each additional 2 feet (0.61 m) of ladder length.

(c) *Standards for manufactured portable ladders.* The employer shall ensure that portable manufactured ladders obtained after *(effective date of final standard)* bear identifying labels indicating that they meet the appropriate ladder construction requirements of the following standards.

ANSI A14.1–1975 Safety Requirements for Portable Wood Ladders

ANSI A14.2–1972 Safety Requirements for Portable Metal Ladders

ANSI A14.5–1974 Safety Requirements for Portable Reinforced Plastic Ladders

(d) *Standards for job-made portable ladders.* The employer shall ensure that job-made ladders used after *(effective date of final standard)*:

(1) Have a minimum and uniform distance between rungs of 12 inches (30 cm), center to center;

(2) Are capable of supporting a 250 pound (1100 N) load without deformation; and

(3) Have a minimum width between side rails of 15 inches (38 cm) for ladders 10 feet (3.05 m) in height. Width between rails shall increase at least ¼ inch (0.6 cm) for each additional 2 feet (0.61 m) of ladder length.

(e) *Maintenance and inspection.* (1) The employer shall maintain portable ladders in safe condition. Ladders with the following defects shall not be used and either shall be tagged as unusable if kept on the premises or shall be removed from the worksite:

(i) Broken, split or missing rungs, cleats or steps;

(ii) Broken or split side rails;

(iii) Missing or loose bolts, rivets or fastenings;

(iv) Defective ropes; or

(v) Any other structural defect.

(2) Ladders shall be inspected for defects prior to each day's use, and after any occurance, such as a fall, which could damage the ladder.

(f) *Ladder usage.* (1) Ladders made by fastening rungs or devices across a single rail are prohibited.

(2) Ladders shall not be used:
(i) As guys, braces or skids; or
(ii) As platforms, runways or scaffolds.
(3) Metal and wire-reinforced ladders with wooden side rails shall not be used when employees on the ladder might come into contact with electrical conductors.
(4) Individual sections from different multi-sectional ladders or two or more single straight ladders shall not be tied or fastened together to achieve additional length.
(5) Except for combination ladders, self-supporting ladders shall not be used as single straight ladders.
(6) Unless intended for cantilever operation, non-self-supporting ladders shall not be used to climb above the top support point.
(7) Ladders shall extend at least 36 inches (0.91 m) above the upper support level if employees are to leave or mount the ladder at that level, except that where such extension is impractical other equivalent means such as grab bars may be used to provided a hand grip.
(8) The employer shall ensure that ladders are securely positioned on a level and firm base.
(9) Ladders shall be fitted with slip-resistant bases and lashed, blocked or otherwise secured at top or bottom to prevent the ladder from slipping.
(10) Ladders shall be placed so that employees climbing are not exposed to injury from projecting objects or doors that open toward the ladder.

§ 1918a.121. Fixed stairways.

(a) *Definition.* "Fixed stairway" means interior and exterior stairs serving machinery, tanks and equipment, and stairs to or from floors, platforms or pits. The term does not apply to stairs intended for fire exit purposes, to articulated stairs (the angle of which changes with the rise and fall of the base support) or to stairs forming an integral part of machinery.
(b) *New installations.* (1) The employer shall ensure that fixed stairs installed after *(effective date of final standard)* are positioned within the range of 30° to 50° to the horizontal with uniform riser height and tread width throughout each run and be capable of a minimum loading of 100 pounds per square foot (448 N) and a minimum concentrated load of 300 pounds (1344 N) at the center of any treadspan. Riser height shall be from 6 to 7.5 inches (15.2 to 19.0 cm), stair width a minimum of 22 inches (56 cm) between vertical barriers, tread depth a minimum of 12 ±2 inches (30.48 ±5.08 cm), and tread nosing shall be straight leading edges.
(2) Stair landings shall be at least 20 inches (51 cm) in depth. Where doors or gates open on a stairway, a landing platform shall be provided. Door swing shall not reduce effective standing area on the landing to less than 18 inches (45.7 cm) in depth.
(3) Fixed stairs having four or more risers shall have stair railings or handrails complying with § 1918a.112(c)(1).
(4) Railing height from tread surface at the riser face shall be 33 ±3 inches (83.8 ±7.6 cm).
(c) *Restricted areas.* When physical features require stairs steeper than those provided for by paragraph (b)(1) of this section, stairs at angles of 50° to 75° from the horizontal may be used if they:
(1) Are capable of a single concentrated load of 200 pounds (890 N) at the tread center;
(2) Have open treads at least 4 inches (10.2 cm) in depth and 18 inches (45.7 cm) in width with a uniformly spaced vertical rise between treads of 6 to 9.5 inches (15.2 to 24.1 cm); and
(3) Have handrails that meet the requirements of § 1918a.112(c)(1) on both sides and that are not less than 30 inches (76.2 cm) in height from the tread surface at the riser face.
(d) *Maintenance.* The employer shall ensure that fixed stairways are maintained in safe condition and are not obstructed.

§ 1918a.122 Spiral stairways.

(a) *Definition.* "Spiral stairway" means one with closed circular form, uniform sector-shaped treads and a supporting column.
(b) *Requirements.* The employer shall ensure that spiral stairways meet the following requirements:
(1) Stairways shall conform to the minimum dimensions of Figure F-1;

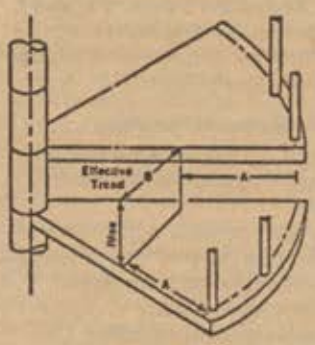

Figure F-1

Spiral Stairway—Minimum Dimensions

	A (half-tread width)	B
Normal use by employees.	11 inches (27.9 cm).	6 inches (15.2 cm).
Limited access	9 inches (22.9 cm).	5 inches (12.7 cm).

(2) Stairway risers shall be uniform and shall range from 6-½ to 10-½ inches (16.5 to 26.7 cm) in height;
(3) Minimum loading capability shall be 100 pounds per square foot (448 N), and minimum tread center concentrated loading shall be 300 pounds (1344 N);
(4) Railings shall conform to the requirements of § 1918a.112(c)(1). A minimum of one baluster, if used, shall be provided per tread. Handrails shall be a minimum of 1¼ inches (3.3 cm) in outside diameter; and
(5) Vertical clearance shall be at least 6 feet, 6 inches (1.98 m) above the top stem.
(c) *Maintenance.* Spiral stairways shall be maintained in safe condition.

§ 1918a.123 Employee exits.

(a) The employer shall ensure that employee exits are marked. Marking consisting of the word "Exit" or other appropriate description shall be clear and easily distinguishable.
(b) If an employee exit is not visible from employees' work stations, directional signs indicating routes to the exit shall be posted.
(c) Exits shall be readily accessible and sufficient in number to provide employees with a convenient means of escape in emergencies. A clear passage to the exit shall be maintained.
(d) The minimum width of any employee exit shall be 28 inches (71.1 cm).

§ 1918a.124 Illumination

Except where the regulations of the United States Coast Guard (33 CFR 126.15(l) and (n), and 33 CFR 154.570) apply, the employer shall ensure that active work areas (for example cargo transfer points) are illuminated at an average minimum light intensity of 10 foot-candles. Other work areas (for example open storage areas) shall be illuminated at an average minimum light intensity of 5 foot-candles. Light intensity shall be measured on a horizontal plane at the work or walking surface.

§ 1918a.125 Passage between levels and across openings.

(a) *Differences in levels.* The employer shall provide safe means of passage between different surface levels and across openings.

(b) *Dockboards (car and bridge plates) and ramps.* Dockboards and ramps shall:

(1) Not be subjected to loads exceeding the manufacture's recommended load rating, which shall be marked on the dockboard or ramp or available at the terminal;

(2) have sufficient edge contact with pier, dock and loading platforms and carriers or vessels to prevent rocking or sliding;

(3) Not be used when loading dock or platform surfaces slope so that substantial contact cannot be maintained;

(4) Be so secured, constructed and used as to prevent the dockboard or ramp from slipping;

(5) Have effective means for safe handling;

(6) Have a safety factor of at least four;

(7) Be equipped with a guardrail meeting the requirements of § 1918a.112(c)(1) if the slope is more than 20 degrees to the horizontal or if employees could fall more than 4 feet (1.2 m);

(8) Be equipped with sideboards or be designed so that trucks are prevented from running over the edge; and

(9) Have slip-resistant surfaces.

(c) *Other temporary surfacing.* When steel plates or similar means are used temporarily to bridge or cover uneven surfaces or tracks, such temporary surfacing shall be secured or built to prevent displacement by vehicle wheels.

§ 1918a.126 Guarding temporary hazards.

The employer shall ensure that ditches, pits, excavations, other subsidence areas, and surface areas in poor repair are guarded by barricades, railings, roping off or by other equally effective means. The employer shall provide sufficient illumination so that employees can see and avoid the hazardous area.

§ 1918a.127 River banks.

(a) This section applies to temporary installations or temporary operations near a river bank.

(b) Where working surfaces at river banks slope so steeply that an employee could slip or fall into the water, the employer shall ensure that the outer perimeter of the working surface is protected by posting or other portable protection such as roping off, and that employees wear a personal flotation device meeting the requirements of § 1918a.95(c).

§ 1918a.128 Sanitation.

(a) *Washing and toilet facilities.* (1) The employer shall provide accessible washing and toilet facilities sufficient for the sanitary requirements of employees. The facilities shall have:

(i) Running water, including hot and cold or tepid water at a minimum of one accessible location (when cargo handling is conducted at locations without permanent facilities, potable water may be provided in lieu of running water);

(ii) Soap;

(iii) Individual hand towels, clean individual sections of continuous toweling or warm air blowers; and

(iv) Fixed or portable toilets in separate compartments with latch-equipped doors. Separate toilet facilities shall be provided for male and female employees except when toilet rooms will be occupied by only one person at a time.

(2) Washing and toilet facilities shall be regularly cleaned and maintained in good order.

(b) *Drinking water.* (1) Potable drinking water shall be accessible to employees at all times.

(2) Portable drinking water containers shall be clean, containing only water and ice, and shall be fitted with covers.

(3) Common drinking cups are prohibited.

(c) *Prohibited eating areas.* The employer shall ensure that employees do not consume food or beverages in areas where hazardous materials are or have been stored or handled.

(d) *Garbage and overboard discharges.* Work shall not be conducted in the immediate vicinity of uncovered garbage or in the way of overboard discharges from the vessel's sanitary lines unless employees are protected from the garbage or discharge by a baffle or splash boards.

§ 1918a.129 Signs and marking.

(a) *General.* (1) The employer shall provide signs that are clearly worded and legible.

(2) Signs shall contain a key word or legend indicating the reason for the sign.

(i) Key words are such words as Danger, Warning, Caution.

(ii) Legends are more specific explanations such as High Voltage, Close Clearance, Pedestrian Crossing.

(b) *Specific.* (1) Every marine terminal shall have conspicuously posted signs as follows:

(i) Locations of first aid facilities;

(ii) Locations of telephones;

(iii) Telephone numbers of the closest ambulance service, hospital or other source of medical attention, police, fire department, and emergency squad (if any); and

(iv) Locations of firefighting and emergency equipment and fire exits.

(2) The employer shall ensure that any imminent danger is designated by a danger sign to warn employees of the immediate hazard.

(3) The employer shall ensure that any area in which any potential hazard is present is designated by a caution sign to warn employees of the hazard.

Subpart G—Related Terminal Operations and Equipment

§ 1918a.151 Machine guarding.

(a) *Definition.* "Guarded" means shielded, fenced, or enclosed by covers, casings, shields, troughs, spillways or railings, or guarded by position or location. Examples of guarding methods are guarding by location (positioning hazards so they are inaccessible to employees) and point of operation guarding (using barrier guards, two-hand triping devices, electronic safety devices, or other such devices).

(b) *General.* (1) The employer shall ensure that danger zones on machines and equipment used by employees are guarded.

(2) During operations that produce chips or dust, the employer shall provide an effective exhaust system at the point of origin of chips and dust.

(3) Fixed machinery shall be secured to prevent shifting.

(4) A power cut-off device for machinery and equipment shall be provided at the operator's working position.

(5) Machines driven by belts and shafting shall be fitted with a belt-locking or equivalent device if the belt can be shifted.

(6) Motors shall be wired to prevent automatic restart after loss of power.

(7) The employer shall ensure that the power supply to machines and equipment is turned off and locked out during repair, adjustment, or servicing.

(8) The employer shall maintain machines and equipment in accordance with the manufacturer's instructions, which shall be available at the terminal.

(9) The employer shall ensure that only designated employees maintain or repair machinery and equipment.

(10) Machines and equipment with operational defects shall not be used.

(c) *Hand-fed circular ripsaws and hand-fed circular crosscut table saws.* Unless fixed or manually adjustable enclosures or guarding provides equivalent protection, the employer

shall ensure that hand-fed circular ripsaws and hand-fed circular crosscut table saws are guarded as follows to keep employees clear of any danger zones:

(1) They shall be equipped with hoods completely enclosing those portions of the saw above the table and the material being cut;

(2) They shall have spreaders to prevent material from squeezing the saw. Spreaders shall be in true alignment with the saw. Spreaders may be removed only during grooving, dadoing, or rabbeting operations, but shall be replaced at the completion of such operations; and

(3) They shall have non-kickback fingers or dogs to oppose the tendency of the saw to pick up material or throw material toward the operator.

(d) *Swing cutoff saws.* (1) The employer shall ensure that swing cutoff saws have hoods completely enclosing the upper half of the saw, the arbor end and the point of operation at all saw positions to protect the operator from material thrown up by the saw. The hood shall automatically cover the lower portion of the blade, so that when the saw returns to the back of the table the hood rises on top of the fence, and when the saw is moved forward the hood drops on top, remaining in contact with the table or the material.

(2) Swing cutoff saws shall have a device to return the saw automatically to the back of the table without rebound. The device shall not be dependent upon rope, cord or springs.

(3) Devices shall be provided to prevent saws from swinging beyond the front or back edges of the table.

(4) Inverted swing cutoff saws shall have hoods covering the part of the saw protruding above the table top or the material being cut. Hoods shall automatically adjust to the thickness of, and remain in contact with, material being cut.

(e) *Radial saws.* Unless fixed or manually adjustable enclosures or guards provide equivalent protection, radial saws shall be guarded as follows:

(1) The upper hood of radial saws shall enclose the upper portion of the blade up to and including the end of the saw arbor and shall protect the operator from being struck by debris. The sides of the lower exposed portion of the blade shall be guarded to the blade diameter by a device automatically adjusting to the thickness of the stock and remaining in contact with the stock. The lower guard may be removed only when the saw is used for bevel cuts;

(2) Radial saws used for ripping shall have non-kickback fingers or dogs on both sides to oppose the thrust or tendency of the saw to pick up materials or throw material toward the operator;

(3) Adjustable stops shall be provided to prevent travel of radial saw blades beyond the table's edge;

(4) Radial saws shall be installed so that the cutting head returns to the starting position without rebound when released; and

(5) The employer shall ensure that employees perform ripping and ploughing against the saw turning direction. Rotation direction and an indication of the end of the saw to be used shall be conspicuously marked on the hood.

(f) *Band saws and band resaws.* (1) Saw blades and band saw wheels shall be enclosed or guarded, except for the working portion of the blade between the bottom of the guide rolls and the table, to protect employees from point-of-operation hazards and flying debris.

(2) The employer shall provide brakes to stop the band saw wheel if the blade breaks.

(3) Band saws shall be equipped with a tension control device to keep the blade taut.

(g) *Abrasive wheels and machinery.* (1) Except as provided in paragraphs (g)(2) and (g)(3) of this section, the employer shall ensure that abrasive wheels are used only on machines having enclosure guards to restrain pieces of grinding wheels and to protect employees if the wheels break. Guards shall be aligned with the wheel, and the strength of fastenings shall be greater than the strength of the guard.

(2) When the work provides equivalent protection, or when the machine is designed as a portable saw, guards may be constructed with the spindle end, nut and outer flange exposed. When the work entirely covers the side of the wheel, the side covers of the guard may be removed.

(3) Guarding is not required:

(i) For wheels used for internal work while the wheel is contained within the work being ground; or

(ii) For mounted wheels 2 inches (5 cm) and smaller in diameter used in portable operations.

(4) Work rests shall be used on fixed grinding machines. Work rests shall be rigidly constructed and adjustable for wheel wear. They shall be adjusted closely to the wheel with a maximum opening of ⅛-inch (3.2 mm) and shall be securely clamped. Adjustment shall not be made while the wheel is in motion.

(5) Grinding wheels shall fit freely on the spindle. The spindle nut shall be tightened only enough to hold the wheel in place.

(6) The employer shall ensure that the grinding machine turns the wheel at a speed that is compatible with the rated speed of the wheel.

(7) Flanges and blotters shall be used only with wheels designed for their use. Flanges shall be of a type ensuring retention of pieces of the wheel in case of breakage.

(8) Abrasive wheels with operational defects shall not be used.

(h) *Rotating parts, drives and connections.* (1) The employer shall ensure that rotating parts, such as gears and pulleys, that are located 8 feet (2.4 m) or less above working surfaces are guarded to prevent employee contact with moving parts.

(2) Belt, rope and chain drives shall be guarded to prevent employees from coming into contact with moving parts.

(3) Gears, sprockets and chains shall be guarded to prevent employees coming into contact with moving parts. This requirement does not apply to manually operated sprockets.

§ 1918a.152 Welding, cutting and heating (hot work).

(a) *Definition.* "Hot work" means riveting, welding, burning or other fire or spark-producing operation.

(b) *General.* (1) The employer shall ensure that welding, cutting and heating are performed only as permitted by this section and by other applicable regulations.

(2) Hot work shall not be performed in a confined space until a designated person has tested the atmosphere and determined that it is not hazardous.

(c) *Fire protection.* (1) To the extent possible, the employer shall ensure that hot work is performed only in designated locations that are free of fire hazards.

Footnote G–1: The United States Coast Guard, at 33 CFR 126.15(c), requires prior permission of the Captain of the Port if welding or other hot work is to be carried out at a facility where dangerous cargoes as defined by 33 CFR 126.07 are located or being handled.

(2) When hot work must be performed in a location that is not free of fire hazards, the employer shall ensure that all necessary precautions are taken to confine heat, sparks and slag so that they cannot contact flammable or combustible material.

(3) Fire extinguishing equipment suitable for the location shall be immediately available and shall be maintained in readiness for use at all times.

(4) Additional employees shall be assigned to guard against fire during hot work and for a sufficient time after completion of work to ensure that no fire hazard remains. The employer shall instruct all employees involved in hot

work operations as to potential fire hazards and the use of firefighting equipment.

(5) Drums and containers which contain or have contained flammable or combustible liquids shall be kept closed. Empty containers shall be removed from the hot work area.

(6) When openings or cracks in flooring cannot be closed, precautions shall be taken so that no employees or flammable or combustible materials on the floor below are exposed to sparks dropping through the floor. Similar precautions shall be taken regarding cracks or holes in walls, open doorways and open or broken windows.

(7) Hot work shall not be performed:

(i) In flammable or potentially flammable atmospheres;

(ii) On or in equipment or tanks that have contained flammable gas or liquid or combustible liquid or dust-producing material, until a designated person has tested the atmosphere and determined that it is not hazardous; or

(iii) Near any area in which exposed readily ignitable materials such as bulk sulphur, baled paper or cotton are stored.

(8)(i) Drums, containers or hollow structures that have contained flammable or combustible substances shall either be filled with water or cleaned, and shall then be ventilated. A designated person shall test the atmosphere and determine that it is not hazardous before hot work is performed on or in such structures.

(ii) Before heat is applied to a drum, container or hollow structure, an opening to release built-up pressure during heat application shall be provided.

(d) *Gas welding and cutting.* (1) Compressed gas cylinders. The employer shall ensure that compressed gas cylinders:

(i) Have valve protection caps in place except when in use, hooked up or secured for movement. Oil shall not be used to lubricate caps;

(ii) Are hoisted only while secured, as on a cradle or pallet, and shall not be hoisted by magnet, choker sling or cylinder caps;

(iii) Are moved only by tilting or rolling on their bottom edges;

(iv) Are secured when moved by vehicle;

(v) Are secured while in use;

(vi) Have valves closed when cylinders are empty, being moved or stored;

(vii) Are secured upright except when hoisted or carried;

(viii) Are not freed when frozen by prying the valves or caps with bars or by hitting the valve with a tool;

(ix) Are not thawed by boiling water;

(x) Are not exposed to sparks, hot slag or flame;

(xi) Are not permitted to become part of electrical circuits or have electrodes struck against them to strike arcs;

(xii) Are not used as rollers or supports;

(xiii) Do not have contents used for purposes not authorized by the supplier;

(xiv) Are not used if damaged or defective;

(xv) Do not have gases mixed within, except by gas suppliers;

(xvi) Are stored so that oxygen cylinders are separated from fuel gas cylinders and combustible materials by a minimum distance of 20 feet (6 m) or a barrier having a fire-resistance rating of 30 minutes; and

(xvii) Do not have objects that might either damage the safety device or obstruct the valve placed on top of the cylinder when in use.

(2) Use of fuel gas. Fuel gas shall be used only as follows:

(i) Before regulators are connected to cylinder valves, the valves shall be opened slightly and closed immediately to clear away dust or dirt. Valves shall not be cracked if gas could reach possible sources of ignition;

(ii) Cylinder valves shall be opened slowly to prevent regulator damage and shall not be opened more than 1½ turns. Any special wrench required for emergency closing shall be positioned on the valve stem during cylinder use. For manifolded or coupled cylinders, at least one wrench shall be immediately available. Nothing shall be placed on top of a cylinder or associated parts when the cylinder is in use;

(iii) Pressure-reducing regulators shall be attached to cylinder valves when cylinders are supplying torches or devices equipped with shut-off valves;

(iv) Cylinder valves shall be closed and gas released from the regulator or manifold before regulators are removed;

(v) Leaking fuel gas cylinder valves shall be closed and the gland nut tightened. If the leak continues, the cylinder shall be tagged, removed from service, and moved to a location where the leak will not be hazardous. If a regulator attached to a valve stops a leak, the cylinder need not be removed from the workplace but may not be used again before it is repaired; and

(vi) If a plug or safety device leaks, the cylinder shall be tagged, removed from service, and moved to a location where the leak will not be hazardous.

(3) Hose. (i) Fuel gas and oxygen hoses shall be easily distinguishable from each other by color or sense of touch. Oxygen and fuel hoses shall not be interchangeable. Hoses having more than one gas passage shall not be used.

(ii) When oxygen and fuel gas hoses are taped together, not more than 4 of each 12 inches (10.2 cm of each 30.5 cm) shall be taped.

(iii) Hose shall be inspected before use. Hose subjected to flashback or showing evidence of severe wear or damage shall be tested to twice the normal working pressure but not less than 200 p.s.i. (1378.96 kPa) before reuse. Defective hose shall not be used.

(iv) Hose couplings shall not unlock or disconnect without rotary motion.

(v) Hose connections shall be clamped or securely fastened to withstand twice the normal working pressure but not less than 300 p.s.i. (2068.44 kPa) without leaking.

(vi) Gas hose storage boxes shall be ventilated.

(4) Torches. (i) Torch tip openings shall only be cleaned with devices designed for that purpose.

(ii) Torches shall be inspected before each use for leaking shut-off valves, hose couplings and tip connections. Torches with such defects shall not be used.

(iii) Torches shall not be lighted from matches, cigarette lighters, other flames or hot work.

(5) Pressure regulators. Pressure regulators, including associated gauges, shall be maintained in safe working order.

(6) Operational precaution. Gas welding equipment shall be maintained free of oil and grease.

(e) *Arc welding and cutting.* (1) Manual electrode holders. (i) The employer shall ensure that only manual electrode holders intended for arc welding and cutting and capable of handling the maximum current required for such welding or cutting are used.

(ii) Current-carrying parts passing through those portions of the holder gripped by the user and through the outer surfaces of the jaws of the holder shall be insulated against the maximum voltage to ground.

(2) Welding cables and connectors. (i) Arc welding and cutting cables shall be insulated, flexible and capable of handling the maximum current required by the operation, taking into account the duty cycles.

(ii) Only cable free from repair or splice for 10 feet (3 m) from the electrode holder shall be used unless insulated connectors or splices with insulating quality equal to that of the cable are provided.

(iii) When a cable other than the lead mentioned in paragraph (e)(2)(ii) of this section wears and exposes bare conductors, the portion exposed may not

be used until it is protected by insulation equivalent in performance capability to the original.

(iv) Insulated connectors of equivalent capacity shall be used for connecting or splicing cable. Cable lugs, where used as connectors, shall provide electical contact. Exposed metal parts shall be insulated.

(3) Ground returns and machine grounding. (i) Ground return cables shall have current-carrying capacity equal to or exceeding the total maximum output capacities of the welding or cutting units served.

(ii) Structures or pipe lines, other than those containing gases or flammable liquids or conduits containing electrical circuits, may be used in the ground return circuit if their current-carrying capacity equals that required by paragraph (e)(3)(i) of this section.

(iii) Structures or pipelines forming a temporary ground return circuit shall have electrical contact at all joints. Arcs, sparks or heat at any point in the circuit shall cause rejection as a ground circuit.

(iv) Structures or pipelines acting continuously as ground return circuits shall have joints bonded and maintained to ensure that no electrolysis or fire hazards exists.

(v) Arc welding and cutting machine frames shall be grounded, either through a third wire in the cable containing the circuit coductor or through a separate wire at the source of the current. Ground circuits shall have resistance low enough to permit sufficient current to flow to cause the fuse or circuit breaker to interrupt the current.

(vi) Ground connections shall be mechanically and electrically adequate to carry the current.

(4) When electrode holders are left unattended, electrodes shall be removed and holders placed to prevent employee injury.

(5) Hot electrode holders shall not be dipped in water.

(6) The employer shall ensure that when arc welders or cutters leave or stop work or when machines are moved, the power supply switch is kept in the open position.

(7) Arc welding or cutting equipment having a functional defect shall not be used.

(8)(i) Arc welding and cutting operations shall be separated from other operations by shields, screens, or curtains to protect employees in the vicinity from the direct rays and sparks of the arc.

(ii) Employees in areas not protected from the arc by screening shall be protected by appropriate filter lenses in accordance with § 1918a.91. When welders are exposed to their own arc or to each other's arc, they shall wear filter lenses complying with the requirements of § 1918a.91.

(9) The control apparatus of arc welding machines shall be enclosed, except for operating wheels, levers, and handles.

(10) Input power terminals, top change devices and live metal parts connected to input circuits shall be enclosed and accessible only by means of insulated tools.

(11) When arc welding is performed in wet or high-humidity conditions, employees shall use additional protection, such as rubber pads or boots, against electric shock.

(f) *Ventilation and employee protection in welding, cutting and heating.* (1) Mechanical ventilation requirements. The employer shall ensure that general mechanical ventilation or local exhaust systems meet the following requirements:

(i) General mechanical ventilation shall maintain vapors, fumes and smoke below a hazardous level.

(ii) Local exhaust ventilation shall consist of movable hoods positioned close to the work and shall be of such capacity and arrangement as to keep breathing zone concentrations below hazardous levels.

(iii) Exhausts from working spaces shall be discharged into the open air, clear of intake air sources;

(iv) Replacement air shall be clean and respirable; and

(v) Oxygen shall not be used for ventilation, cooling or cleaning clothing or work areas.

(2) Hot work in confined spaces. Except as specified in paragraphs (f)(3)(ii) and (f)(3)(iii) of this section, when hot work is performed in a cofined space the employer shall ensure that:

(i) General mechanical or local exhaust ventilation meeting the requirements of paragraph (f)(1) of this section is provided; or

(ii) Employees in the space wear supplied air respirators in accordance with § 1918a.92 and a standby on the outside maintains communication with employees inside the space and is equipped and prepared to provide emergency aid.

(3) Welding, cutting or heating of toxic metals. (i) In confined or enclosed spaces, hot work involving the following metals shall only be performed with general mechanical or local exhaust ventilation that ensures that employees are not exposed to hazardous levels of fumes:

(A) Lead base metals;

(B) Cadmium-bearing filler materials; and

(C) Chromium-bearing metals or metals coated with chromium-bearing materials.

(ii) In confined or enclosed spaces, hot work involving the following metals shall only be performed with local exhaust ventilation meeting the requirements of paragraph (f)(1) of this section or by employees wearing supplied air respirators in accordance with § 1918a.92;

(A) Zinc-bearing base or filler metals or metals coated with zinc-bearing materials;

(B) Metals cotaining lead other than as an impurity, or coated with lead-bearing materials;

(C) Cadmium-bearing or cadmium-coated base metals; and

(D) Metals coated with mercury-bearing materials.

(iii) The employer shall ensure that employees performing hot work in confined or enclosed spaces involving beryllium-containing base or filler metals are protected by local exhaust ventilation and wear supplied air respirators or self-contained breathing apparatus, in accordance with the requirements of § 1918a.92.

(iv) The employer shall ensure that employees performing hot work in the open air that involves any of the metals listed in paragraphs (f)(3)(i) and (f)(3)(ii) of this section are protected by respirators in accordance with the requirements of § 1918a.92, and those working on beryllium-containing base or filler metals are protected by supplied air respirators, in accordance with the requirements of § 1918a.92.

(v) The employer shall ensure that any employee exposed to the same atmosphere as the welder or burner is protected by the same type of respiratory and other protective equipment as that worn by the welder or burner.

(4) Insert-gas metal-arc welding. The employer shall ensure that employees do not engage in and are not exposed to the inert-gas metal-arc welding process unless the following precautions are taken:

(i) Chlorinated solvents shall not be used within 200 feet (61 m) of the exposed arc. Surfaces prepared with chlorinated solvents shall be thoroughly dry before welding is performed on them.

(ii) Employees in areas not protected from the arc by screening shall be protected by appropriate filter lenses in accordance with the requirements of § 1918a.91. When welders are exposed to their own arc or to each other's arc, filter lenses complying with the requirements of § 1918a.91 shall be worn

to protect against flashes and radiant energy.

(iii) Employees exposed to radiation shall have their skin covered completely to prevent ultraviolet burns and damage. Helmets and hand shields shall not have leaks, openings or highly reflective surfaces.

(iv) Inert-gas metal-arc welding on stainless steel shall not be performed unless exposed employees are protected either by local exhaust ventilation or by wearing supplied air respirators.

(g) *Welding, cutting and heating on preservative coatings.* (1) Before hot work is commenced on surfaces covered by a preservative coating of unknown flammability, the employer shall ensure that a test is made by a designated person to determine the coating's flammability. Preservative coatings shall be considered highly flammable when scrapings burn with extreme rapidity.

(2) Appropriate precautions shall be taken to prevent ignition of highly flammable hardened preservative coatings. Highly flammable coatings shall be stripped from the area to be heated. An uncoiled fire hose with fog nozzle, under pressure, shall be immediately available in the hot work area.

(3) Surfaces covered with preservative coatings shall be stripped for at least 4 inches (10.2 cm) from the area of heat application or employees shall be protected by supplied air respirators in accordance with the requirements of § 1918a.92.

(h) *Protection against radiant energy.* (1) The employer shall ensure that employees are protected from radiant energy eye hazards by spectacles, cup goggles, helmets, hand shields or face shields with filter lenses complying with the requirements of § 1918a.91 and this paragraph.

(2) Filter lenses shall have an appropriate shade number, as indicated in Table G–1, for the work performed. Variations of one or two shade numbers are permissible to suit individual preferences.

(3) If filter lenses are used in goggles worn under the helmet, the shade number of the lens in the helmet may be reduced if the sum of the shade numbers of both lenses equals the value shown in Table G–1 for the operation.

Table G–1.—*Filter Lenses for Protection Against Radiant Energy*

Operation	Shade No.

§ 1918a.153 Spray painting

(a) *Scope.* This section covers painting operations connected with maintenance of structures, equipment and gear at the marine terminal and of transient equipment serviced at the terminal. It does not apply to overall painting of the terminal structures under construction, major repair or rebuilding of terminal structures,or portable spraying appartus not used regularly in the same location.

(b) *Definition.* "Spraying area" means any area where flammable vapors, mists or combustible residures, dusts or deposits may be present due to paint spraying operations.

"Spray booth" means a power-ventilated enclosure containing a flammable or combustible paint spraying operation and confining and limiting the escape of paint, vapor and residue by means of an exhaust system.

"Approved" means, for the purpose of this section, that the equipment has been approved for the specified use by an organization such as Factory Mutual Research Corporation or Underwriters Laboratories, Inc.

(c) *Spray painting requirements for indoor and outdoor spraying areas and booths.* (1) Shut-off valves. The employer shall ensure that containers or piping with attached hoses or flexible connections have shut-off valves closed at the connection when not in use.

(2) Pressure-relieving devices. Pumps used to transfer paint supplies shall have automatic pressure-relieving devices.

(3) Inspection before use. Hoses and couplings shall be inspected before use. Hoses showing deterioration, leakage or weakness in the carcass or at the couplings shall be removed from service.

(4) Electrical and other sources of ignition. (i) No open flame or spark producing equipment shall be within 20 feet (6 m) of a spraying area unless it is separated from the spraying area by a fire-retardant partition.

(ii) Hot surfaces shall not be located in spraying areas.

(iii) When combustible residues may accumulate on electrical installations, wiring shall be in rigid conduit or in boxes containing no taps, splices or connections.

(iv) Portable electric lights shall not be used during spraying operations. Lights used during cleaning or repairing operations shall be approved for the location in which they are used.

(5) Containers and piping systems. When transferring flammable or combustible liquids between containers, both containers shall be bonded and grounded.

(6) Operations and maintenance. (i) Spraying shall be performed only in designated spray booths or spraying areas.

(ii) Spraying areas shall be kept as free from combustible residue accumulations as practicable.

(iii) Residue scrapings, debris, rags, and waste shall be removed from the spraying area as they accumulate.

(7) Organic peroxides and other dual-component coatings. Spraying with organic peroxides and other dual-component coatings shall only be conducted in sprinkler-equipped spray booths.

(8) Storage of flammable and combustible liquids. The employer shall ensure that only the quantity of flammable or combusitble liquids required for the operation shall be allowed in the spraying area, and in no case shall the amount exceed a one-day supply.

(9) Smoking precautions. Smoking shall be prohibited and "No Smoking" signs shall be posted in spraying and paint storage areas.

(d) *Additional requirements for spraying areas and spray booths.* (1) The employer shall ensure that distribution or baffle plates are of noncombustible material and are removable or accessible for cleaning. They shall not be located in exhaust ducts.

(2) Any discarded filter shall be removed from the work area or placed in water.

(3) Filters shall not be used when the material being sprayed is highly susceptible to spontaneous heating and ignition.

(4) Filters shall be noncombustible or of an approved type. The same filter shall not be used when spraying with different coating materials if the combination of materials may spontaneously ignite.

(5) Spraying areas shall be mechanically ventilated for removal of flammable and combustible vapor and mist.

(6) Mechanical ventilation shall be in operation during spraying operations and long enough thereafter to exhaust hazardous vapor concentrations.

(7) Rotating fan elements shall be nonsparking or the casing shall consist of or be lined with nonsparking material.

(8) Piping systems conveying flammable or combustible liquids to the spraying booth or area shall be made of metal or bonded and grounded.

(9) Air exhausted from spray operations shall not contaminate makeup air or other ventilation intakes. Exhausted air shall not be recirculated unless it is first cleaned of any hazardous contaminants.

(10) Original closed containers, approved portable tanks, approved safety cans or a piping system shall be used to bring flammable or combustible liquids into spraying areas.

(11) If flammable or combustible liquids are supplied to spray nozzles by positive displacement pumps, the pump discharge line shall have a relief valve discharging either to a pump suction or detached location, or the line shall be equipped with a device to stop the prime mover when discharge pressure exceeds the system's safe operating pressure.

(12) Wiring, motors and equipment in a spray booth shall be of approved explosion-proof type for Class I, group D locations and conform to Subpart S of Part 1910 of this Chapter for Class I, Division 1, Hazardous Locations. Wiring, motors and equipment within 20 feet (6 m) of any interior spraying area and not separated by vapor-tight partitions shall not produce sparks during operation and shall otherwise conform to the requirements of Subpart S of Part 1910 of this Chapter for Class I, Division 2, Hazardous Locations.

(13) Outside electrical lights within 10 feet (3 m) of spraying areas and not separated from the areas by partitions shall be enclosed and protected from damage.

(e) *Additional requirements for spray booths.* (1) The employer shall ensure that spray booths are substantially constructed of noncombustible material and have smooth interior surfaces. Spray booth floors shall be covered with noncombustible material. As an aid to cleaning, paper may be used to cover the floor during painting operations if it is removed after the painting is completed.

(2) Spray booths shall be separated from other operations by at least 3 feet (0.91 m) or by fire-retardant partitions or walls.

(3) A space of at least 3 feet (0.91 m) on all sides of the spray booth shall be maintained free of storage or combustible materials.

(4) Metal parts of spray booths, exhaust ducts, piping and airless high-pressure spray guns and conductive objects being sprayed shall be grounded.

(5) Electric motors driving exhaust fans shall not be located inside booths or ducts.

(6) Belts shall not enter ducts or booths unless the belts are completely enclosed.

(7) Exhaust ducts shall be made of steel, shall have sufficient access doors to permit cleaning, and shall have a minimum clearance of 18 inches (0.46 m) from combustible materials. Any installed dampers shall be fully opened when the ventilating system is operating.

(8) Spray booths shall not be alternately used to spray different types of coating materials if the combination of the materials may spontaneously ignite unless deposits of the first material are removed from the booth and from exhaust ducts before spraying of the second material begins.

§ 1918a.154 Compressed air.

The employer shall ensure that employees are protected by chip guarding and personal protective equipment complying with the provisions of Subpart E of this Part during cleaning with compressed air. Compressed air used for cleaning shall not exceed a pressure of 30 psi. Compressed air shall not be used to clean employees.

§ 1918a.155 Air receivers.

(a) *Application.* This section applies to compressed air receivers and equipment used for operations such as cleaning, drilling, hoisting and chipping. It does not apply to equipment used to convey materials or in such transportation applications as railways, vehicles or cranes.

(b) *Gauges and valves.* (1) The employer shall ensure that air receivers are equipped with indicating pressure gauges and spring-loaded safety valves. Safety valves shall prevent receiver pressure from exceeding 110 percent of the maximum allowable working pressure.

(2) No other valves shall be placed between air receivers and their safety valves.

§ 1918a.156 Fuel handling and storage.

(a) *Applicability.* This section applies to those matters not covered by the Coast Guard requirements in 33 CFR Part 126 and 46 CFR Part 146.

(b) *Liquid fuel.* (1) The employer shall ensure that only designated persons conduct fueling operations. In case of spillage, filler caps shall be replaced and spillage disposed of before engines are started.

(2) Engines shall be stopped and operators shall not be on the equipment during refueling operations.

(3) Smoking and open flames are prohibited in areas used for fueling, fuel storage or enclosed storage of equipment containing fuel.

(4) Equipment shall be refueled only at designated locations.

(5) Liquid fuels not handled by pump shall be handled and transported only in portable containers or equivalent means designed for that purpose. Portable containers shall be metal, have tight closures with screw or spring covers and shall be equipped with spouts or other means to allow pouring without spilling. Leaking containers shall not be used.

(6) Flammable liquids may be dispensed in the open from a tank or from other vehicles equipped for delivering fuel to another vehicle if:

(i) Dispensing hoses do not exceed 50 feet (15.2 m) in length; and

(ii) Any powered dispensing nozzles used are of the automatic-closing type without latch-open devices.

(7) Liquid fuel dispensing devices shall be provided with an easily accessible and clearly identified shut-off device, such as a switch or circuit breaker, to shut off the power in an emergency.

(8) Liquid fuel dispensing devices, such as pumps, shall be mounted either on a concrete island or be otherwise protected against collision damage.

(c) *Liquefied gas fuels.* (1) Fueling locations. (i) The employer shall ensure that liquefied gas powered equipment is fueled only at designated locations.

(ii) Equipment with permanently mounted fuel containers shall be charged outdoors.

(iii) Equipment shall not be fueled or stored near underground entrances, elevator shafts or other places where gas or fumes might accumulate.

(2) Fuel containers. (i) When removable fuel containers are used, the escape of fuel when containers are exchanged shall be minimized by:

(A) Automatic quick-closing (closing in both directions when uncoupled) in fuel lines; or

(B) Closing fuel container valves and allowing engines to run until residual fuel is exhausted.

(ii) Pressure-relief valve openings shall be in continuous contact with the vapor space (top) of the cylinder.

(iii) Fuel containers shall be secured to prevent their being jarred loose, slipping or rotating.

(iv) Containers shall be located to prevent damage to the container. If

located within a compartment, that compartment shall be vented. Containers near the engine or exhaust system shall be shielded against direct heat radiation.

(v) Container installation shall provide the container with at least the vehicle's road clearance under maximum spring deflection, which shall be to the bottom of the container or to the lowest fitting on the container or housing, whichever is lower.

(vi) Valves and connections shall be protected from contact damage. Permanent protection shall be provided for fittings on removable containers.

(vii) Defective containers shall be removed from service.

(3) Fueling operations. (i) To the extent applicable, fueling operations for liquefied gas fuels shall comply with paragraph (b) of this section.

(ii) Using matches or flames to check for leaks is prohibited.

(iii) Containers shall be examined before recharging and again before reuse for the following:

(A) Dents, scrapes and gouges of pressure vessels;

(B) Damage to valves and liquid level gauges;

(C) Debris in relief valves;

(D) Leakage at valves or connections; and

(E) Deterioration or loss of flexible seals in filling or servicing connections.

(4) Fuel storage. (i) Stored fuel containers shall be located to minimize exposure to excessive temperatures and physical damage.

(ii) Containers shall not be stored near inside exits, stairways or areas normally used or intended for egress.

(iii) Outlet valves of containers in storage or transport shall be closed. Relief valves shall connect with vapor spaces.

(5) Vehicle storage and servicing. (i) Liquefied gas fueled vehicles may be stored or serviced inside garages or shops only if there are no fuel system leaks.

(ii) Liquefied gas fueled vehicles under repair shall have container shutoff valves closed unless engine operation is necessary for repairs.

(iii) Liquefied gas fueled vehicles shall not be parked near open flames, sources of ignition or unventilated open pits.

§ 1918a.157 Battery charging and changing.

(a) The employer shall ensure that only designated persons change or charge batteries.

(b) Battery charging and changing shall be performed only in areas designated by the employer.

(c) Smoking and other ignition sources are prohibited in charging areas.

(d) Filler caps shall be in place when batteries are being moved.

(e) Parking brakes shall be applied before batteries are charged or changed.

(f) When a jumper battery is connected to a battery in a vehicle, the ground lead shall connect to ground away from the vehicle's battery. Ignition, lights and accessories on the vehicle shall be turned off before connections are made.

(g) Batteries shall be free of corrosion buildup and cap vent holes shall be open.

(h) Ventilation shall be provided during charging.

(i) Facilites for flushing the eyes, body and work area with water shall be provided where electrolyte is handled except that this requirement does not apply when employees are only checking battery electrolyte levels or adding water.

(j) Carboy tilters or siphons shall be used to handle electrolyte in large containers.

(k) Battery handling equipment which could contact battery terminals or cell connectors shall be insulated or otherwise protected.

(l) Metallic objects shall not be placed on uncovered batteries.

(m) When charging batteries, the vent caps shall be in place.

(n) Chargers shall be turned off when leads are being connected or disconnected.

(o) Installed batteries shall be secured to avoid physical or electrical contact with compartment walls or components.

§ 1918a.158 Prohibited operations.

(a) The employer shall ensure that spray painting and abrasive blasting operations are not conducted in the vicinity of cargo handling operations.

(b) Welding and burning operations shall not be conducted in the vicinity of cargo handling operations unless such hot work is part of the cargo operation.

[FR Doc. 81-1266 Filed 1-15-81; 8:45 am]

BILLING CODE 4510-26

federal register

Friday
January 16, 1981

Part V

Department of Labor

Employment Standards Administration, Wage and Hour Division

Minimum Wages for Federal and Federally Assisted Construction; General Wage Determination Decisions

DEPARTMENT OF LABOR

Employment Standards Administration, Wage and Hour Division

Minimum Wages for Federal and Federally Assisted Construction; General Wage Determination Decisions

General wage determination decisions of the Secretary of Labor specify, in accordance with applicable law and on the basis of information available to the Department of Labor from its study of local wage conditions and from other sources, the basic hourly wage rates and fringe benefit payments which are determined to be prevailing for the described classes of laborers and mechanics employed on construction projects of the character and in the localities specified therein.

The determinations in these decisions of such prevailing rates and fringe benefits have been made by authority of the Secretary of Labor pursuant to the provisions of the Davis-Bacon Act of March 3, 1931, as amended (46 Stat. 1494, as amended, 40 U.S.C. 276a) and of other Federal statutes referred to in 29 CFR 1.1 (including the statutes listed at 36 FR 306 following Secretary of Labor's order No. 24–70) containing provisions for the payment of wages which are dependent upon determination by the Secretary of Labor under the Davis-Bacon Act; and pursuant to the provisions of part 1 of subtitle A of title 29 of Code of Federal Regulations, Procedure for Predetermination of Wage Rates (37 FR 21138) and of Secretary of Labor's Orders 12–71 and 15–71 (36 FR 8755, 8756). The prevailing rates and fringe benefits determined in these decisions shall, in accordance with the provisions of the foregoing statutes, constitute the minimum wages payable on Federal and federally assisted construction projects to laborers and mechanics of the specified classes engaged on contract work of the character and in the localities described therein.

Good cause is hereby found for not utilizing notice and public procedure thereon prior to the issuance of these determinations as prescribed in 5 U.S.C. 553 and not providing for delay in effective date as prescribed in that section, because the necessity to issue construction industry wage determination frequently and in large volume causes procedures to be impractical and contrary to the public interest.

General wage determination decisions are effective from their date of publication in the **Federal Register** without limitation as to time and are to be used in accordance with the provisions of 29 CFR Parts 1 and 5. Accordingly, the applicable decision together with any modifications issued subsequent to its publication date shall be made a part of every contract for performance of the described work within the geographic area indicated as required by an applicable Federal prevailing wage law and 29 CFR, Part 5. The wage rates contained therein shall be the minimum paid under such contract by contractors and subcontractors on the work.

Modifications and Supersedeas Decisions to General Wage Determination Decisions

Modifications and supersedeas decisions to general wage determination decisions are based upon information obtained concerning changes in prevailing hourly wage rates and fringe benefit payments since the decisions were issued.

The determinations of prevailing rates and fringe benefits made in the modifications and supersedeas decisions have been made by authority of the Secretary of Labor pursuant to the provisions of the Davis-Bacon Act of March 3, 1931, as amended (46 Stat. 1494, as amended, 40 U.S.C. 276a) and of other Federal statutes referred to in 29 CFR 1.1 (including the statutes listed at 36 FR 306 following Secretary of Labor's Order No. 24–70) containing provisions for the payment of wages which are dependent upon determination by the Secretary of Labor under the Davis-Bacon Act; and pursuant to the provisions of part 1 of subtitle A of title 29 of Code of Federal Regulations, Procedure for Predetermination of Wage Rates (37 FR 21138) and of Secretary of Labor's orders 13–71 and 15–71 (36 FR 8755, 8756). The prevailing rates and fringe benefits determined in foregoing general wage determination decisions, as hereby modified, and/or superseded shall, in accordance with the provisions of the foregoing statutes, constitute the minimum wages payable on Federal and federally assisted construction projects to laborers and mechanics of the specified classes engaged in contract work of the character and in the localities described therein.

Modifications and supersedeas decisions are effective from their date of publication in the **Federal Register** without limitation as to time and are to be used in accordance with the provisions of 29 CFR Parts 1 and 5.

Any person, organization, or governmental agency having an interest in the wages determined as prevailing is encouraged to submit wage rate information for consideration by the Department. Further information and self-explanatory forms for the purpose of submitting this data may be obtained by writing to the U.S. Department of Labor, Employment Standards Administration, Wage and Hour Division, Office of Government Contract Wage Standards, Division of Government Contract Wage Determinations, Washington, D.C. 20210. The cause for not utilizing the rulemaking procedures prescribed in 5 U.S.C. 553 has been set forth in the original General Determination Decision.

New General Wage Determination Decisions

Maryland: MD81–3002

Modifications to General Wage Determination Decisions

The numbers of the decisions being modified and their dates of publication in the **Federal Register** are listed with each State.

Arkansas:	
AR80–4079	Nov. 7, 1980.
AR80–4080	Oct. 31, 1980.
AR80–4081	Nov. 7, 1980.
AR80–4082	Nov. 7, 1980.
AR80–4083	Oct. 31, 1980.
Massachusetts: MA80–3064	Oct. 31, 1980.
Minnesota: MN80–2068	Dec. 19, 1980.
New York: NY80–3064	Apr. 25, 1980.

Supersedeas Decisions to General Wage Determination Decisions

The numbers of the decisions being superseded and their dates of publication in the **Federal Register** are listed with each State. Supersedeas decision numbers are in parentheses following the numbers of the decisions being superseded.

Maine: ME80–2005 (ME81–3008)	Feb. 22, 1980.

Cancellation of General Wage Determination Decisions

None.

Signed at Washington, D.C. This 9th day of January 1981.

Dorothy P. Come,

Assistant Administrator, Wage and Hour Division.

BILLING CODE 4510-27-M

NEW DECISION

STATE: Maryland COUNTIES: Baltimore, Baltimore City

DECISION NO.: MD81-3002 DATE: Date of Publication

DESCRIPTION OF WORK: Residential Construction consisting of single family houses and garden type apartments up to and including 4 stories

	Basic Hourly Rates	Fringe Benefits Payments			
		H & W	Pensions	Vacation	Education and/or Appr. Tr.
AIR CONDITIONING MECHANIC	6.00				
BRICKLAYERS	9.27				
CARPENTERS	6.78				
CARPET MECHANIC	6.00				
CEMENT MASONS	6.82				
DRY WALL FINISHERS	5.76				
DRY WALL HANGERS	6.50				
ELECTRICIANS	6.23				
INSULATION MECHANICS	7.16				
LABORERS:					
Unskilled	4.71				
Mason Tenders	5.00				
Pipelayers	4.75				
PAINTERS, BRUSH	5.77				
PLUMBERS	7.00				
ROOFERS	6.28				
SHEET METAL WORKERS	5.61				
SOFT FLOOR LAYERS	7.00				
TILE SETTERS	6.79				
TRUCK DRIVERS	5.25				
POWER EQUIPMENT OPERATORS:					
Backhoe	6.03				
Bulldozer	7.50				
Grader	5.93				
Loader	6.11				
Scraper	7.00				

Unlisted classifications needed for work not included within the scope of the classifications listed may be added after award only as provided in the labor standards contract clauses (29 CFR, 5.5 (a)(1)(ii)).

MODIFICATIONS P. 1

DECISION #AR80-4079-Mod. #3
45FR74344-November 7, 1980
Garland, Hot Springs and Clark Counties, Arkansas

CHANGE:	Basic Hourly Rates	Fringe Benefits Payments			
		H & W	Pensions	Vacation	Education and/or Appr. Tr.
BRICKLAYERS-STONEMASONS:					
Garland & Clark Counties	$11.50		.50		
Hot Springs	11.25		.55		.04
IRONWORKERS	11.55	.60	1.05		.06
PAINTERS:					
Brush & roller	8.00

Part VI

Architectural and Transportation Barriers Compliance Board

Minimum Guidelines and Requirements for Accessible Design; Final Rule

ARCHITECTURAL AND TRANSPORTATION BARRIERS COMPLIANCE BOARD

36 CFR Part 1190

Minimum Guidelines and Requirements for Accessible Design

AGENCY: Architectural and Transportation Barriers Compliance Board.

ACTION: Final rule.

SUMMARY: The Architectural and Transportation Barriers Compliance Board hereby issues its minimum guidelines and requirements (guidelines and requirements) for standards for accessibility and usability of Federal and federally funded buildings and facilities by physically handicapped persons. These guidelines and requirements are issued pursuant to the Rehabilitation, Comprehensive Services, and Developmental Disabilities Amendments of 1978 (the 1978 Act), amending the Rehabilitation Act of 1973, Pub. L. 93–112. The guidelines and requirements provide a basis for the issuance of consistent and improved accessibility and usability standards issued by the four Federal standard setting agencies, the General Services Administration, Department of Housing and Urban Development, Department of Defense and United States Postal Service, under the Architectural Barriers Act of 1968, as amended.

EFFECTIVE DATE: January 6, 1981.

FOR FURTHER INFORMATION CONTACT: Larry Allison, Director of Public Information, (202) 245–1591 (voice or TDD); Charles Goldman, General Counsel, (202) 245–1801 (voice or TDD); Karen Smith, Director, Technical Services (202) 472–3237 (voice), (202) 245–1801 (TDD).

SUPPLEMENTARY INFORMATION:

A. Background

Section 502 of the Rehabilitation Act of 1973, Pub. L. 93–112, 29 U.S.C. 792, established the Architectural and Transportation Barriers Compliance Board (ATBCB or Board) as an independent Federal agency to insure compliance with standards issued under the Architectural Barriers Act of 1968 (Pub. L. 90–480) (42 U.S.C. 4151 *et seq.*), as amended. The Board consists of eleven Federal agency members plus eleven members appointed by the President from the general public.[1]

Congress found that compliance with the Architectural Barriers Act had been spotty and that enforcement of accessibility standards[2] was necessary to fulfill the Congressional commitment to afford handicapped individuals the opportunity to move freely and integrate themselves in society. See H.R. Rep. No. 244, 93d Cong., 1st Sess. 23 (1973); S. Rep. No. 318, 93d Cong. 1st Sess. 49 (1973).

Congress expanded the responsibilities of the ATBCB in the 1978 Act. Section 118 of the 1978 Act, amending the Rehabilitation Act of 1973 ((29 U.S.C. 792), sec. 502(b)(7)), requires the Architectural and Transportation Barriers Compliance Board (ATBCB) "to establish minimum guidelines and requirements for standards issued pursuant to the * * * Architectural Barriers Act of 1968." Pub. L. 90–480 as amended (42 U.S.C. 4151 *et seq.*). Based on the minimum guidelines and requirements issued by the ATBCB, four Federal agencies—Department of Defense, General Services Administration, Department of Housing and Urban Development, and the United States Postal Service—are to prescribe standards for the design, construction, and alteration of certain Federal and federally-assisted buildings "to insure, whenever possible, that physically handicapped persons will have ready access to, and use of, such buildings." 42 U.S.C. 4152–4154a. Existing access standards[3] issued by those agencies will be revised to conform to the guidelines and requirements.

Congress recognized the need for consistent application of the Architectural Barriers Act throughout the nation. The Board will exercise strong leadership, provide technical assistance, and work with the agencies setting standards to insure they follow the minimum guidelines and requirements in revising their standards. See S. Rep. No. 890, 95th Cong., 2d Sess. 19 (1978); H.R. Rep. No. 1149, 95th Cong., 2d Sess. (1978); Report by the Comptroller General, *Making Public Buildings Accessible to the Handicapped: More Can Be Done*, B–182030 (1980).

B. Problem of Inaccessibility

> The physically handicapped are citizens of this country—just as others of us are; they pay taxes and contribute to the economy of the country—just as others of us do; they deserve access to their public buildings on an equal basis with the rest of us.

These were the words Senator Edward Bartlett, the Senate sponsor of the bill which became the Architectural Barriers Act, spoke immediately before the passage of the Act. 113 Cong. Rec. 24133 (1968). The Act demonstrates a unanimous Congressional purpose to insure that "certain buildings financed with Federal funds are so designed and constructed as to be accessible to the physically handicapped." Title of Pub. L. 90–480.

In enacting this legislation, Congress intended to afford physically handicapped persons "every opportunity to obtain gainful employment and otherwise enter into the mainstream of American life." Congress found that the Federal government had "literally locked out millions of its citizens from the public buildings which it has * * * financed by not requiring that these buildings be designed and constructed so that people with physical impairments could readily enter and use the facilities of such buildings." S. Rep. No. 538, 90th Cong., 1st Sess. 3 (1967); see also H.R. Rep. No. 1532, 90th Cong., 2d Sess. 2, 3, and 4 (1968).

In a 1975 report examining the implementation of the Architectural Barriers Act the Comptroller General observed:

> Accessibility of public buildings is essential if the handicapped are to have the same rights and opportunities as the able-bodied in obtaining government services and employment outside their homes.

Report by the Comptroller General, *Further Action Needed to Make All Public Buildings Accessible to the Physically Handicapped*, B–182030 (1975).

The history of the Rehabilitation, Comprehensive Services and Developmental Disabilities Amendments of 1978 reflects a continuing congressional awareness of the problems of architectural barriers.

> While a 3- to 6-inch step is no barrier to the vast majority of the population of the United States, it is an insurmountable barrier to someone in a wheelchair. The reality of barriers may only be a passing thing to the able-bodied individual, but it a constant

[1] The agency members are the heads or their designees (Executive Level IV or above) of the Departments of Education; Transportation; Health and Human Services; Housing and Urban Development; Labor; Interior; Justice; Defense; General Services Administration; Veterans Administration; United States Postal Service. The Act requires at least five of the members from the general public to be physically handicapped.

[2] To implement the Board's enforcement mission as set forth in 29 U.S.C. 792(b)(1), through administrative procedures set forth in 36 CFR Part 1150, the ATBCB recently revised its original enforcement rules. 41 FR 55441 (1976) to enhance their readability, reflect the experiences of several years practice and to reflect the amendments in the Rehabilitation Act made by the 1978 Act. 45 FR 78472 (1980).

[3] GSA: 41 CFR 101–19.6, effective September 2, 1969, revised October 14, 1980 (45 FR 67664); HUD: 24 CFR Part 40, effective September 2, 1969; DOD: DOD 4279.1–M "Construction Criteria," June 1, 1978, paragraph 5–6; USPS: Postal Service Contracting Manual, Publication 41, § 18–518.4, 39 CFR 601.100, as amended by handbook RE–4, November 1979.

concern and frustration to the handicapped individual.

S. Rep. No. 890, 95th Cong., 2d Sess. 16 (1978).

The ATBCB views handicapped persons as first class citizens. Disabled persons should not be treated, as one witness testified when the Architectural Barriers Act was pending, as "back door citizens, persons dependent on others to do every day simple things." Hearings on S. 222 Before the Subcomm. on Public Buildings and Grounds of the Senate Committee on Public Works, 90th Cong., 1st Sess. 71 (1967). See also Goffman, *Stigma: Notes on the Management of Spoiled Identity* (1963).

The ATBCB itself is also quite knowledgeable in the problems of inaccessibility. Since the Board's formalized complaint system began in fiscal year 1977, the ATBCB has received hundreds of complaints of inaccessible sites. In 1978–1979, the Board conducted 1000 field reviews, surveying approximately 100 buildings in each of ten cities across the country. In its field reviews and complaint processing, the ATBCB has seen the spectrum of access problems identified in Federal and federally-funded projects. This includes a lack of parking for handicapped persons, inaccessible bathrooms, inaccessible entrances, elevator and other controls that were too high, a lack of tactile identification for blind and visually-impaired persons and a lack of warning systems for deaf and hearing-impaired persons. The ATBCB is aware that the problem of inaccessible buildings and facilities is national in scope.

C. Rulemaking History

On February 22, 1980, the Board published in the **Federal Register** at 45 FR 12167, a Notice of Intent to Issue Proposed Rules. The Notice of Intent to Issue Proposed Rules recited the Board's intent to compile information regarding design specifications and scoping requirements for the proposed minimum guidelines and requirements on accessibility. Comments were solicited for 45 days on the key issues anticipated to be addressed in the Notice of Proposed Rulemaking. One hundred seventeen comments from a cross-section of the public were received. Disabled persons and their advocacy organizations, universities, building industry organizations, and Federal and State agencies submitted comments.

Based on the comments received, Board discussions, and other information available, the Board published on August 18, 1980, in the Federal Register, 45 FR 55010, a Notice of Proposed Rulemaking (NPRM). The NPRM contained the proposed rule, a preamble, and draft regulatory analysis. Public comment on the proposed rule was invited for sixty days. Several issues, relating both to scope and technical matters, were highlighted for public comment.

The ATBCB forwarded nearly 10,000 copies of the NPRM to persons who requested copies or were on the ATBCB mailing list. The ATBCB received a total of 281 comments prior to the closure of the docket on October 17, 1980. All comments postmarked on or before that date were considered. No time extensions were granted. Comments received are available for inspection at 330 C Street, S.W., Room 1014, Washington, D.C. 20202, from 9:00 a.m. to 5:30 p.m., Monday through Friday.

D. Review by Office of Legal Counsel

At its December 12, 1980, meeting the ATBCB decided to take the extraordinary action of submitting its draft final rule to the Office of Legal Counsel (OLC), U.S. Department of Justice, for review prior to final consideration by the Board. The Office of Legal Counsel, in an opinion of December 30, 1980, which is included in the rulemaking docket, advised the Board that the draft final rule, with its detailed provisions, constituted "minimum guidelines and requirements" within the meaning of 29 U.S.C. 792(b)(7).

The ATBCB is within its discretion in establishing specific requirements, including each of certain items, for standards to achieve ready access and use. The Board's authority relating to minimum guidelines and requirements does not extend to regulations governing waivers and modifications as previously proposed in Subpart B. The ATBCB's authority over waivers and modifications is in the enforcement area. 29 U.S.C. 792(b)(1), 36 CFR Part 1150.

OLC considered whether the provisions relating to additions and alterations exceeded the applicable requirements of 42 U.S.C. 4155. OLC concluded that it was lawful to provide that a space be made accessible when alterations of elements within a space together constitute an alteration of the space itself. OLC also recognized the validity of the Board's provisions in the NPRM regarding vertical access. Under the NPRM an alteration of stairs and escalators was treated as an alteration of the building's system for providing vertical access. Nonetheless, as a matter of policy, the Board modified this provision to require accessible vertical access only in more limited circumstances. See discussion below in F. Section-by-Section Analysis. The provisions with respect to additions, 36 CFR 1190.32, were viewed as reasonably treated as new construction, and also found to be legally sufficient.

The Office of Legal Counsel reviewed carefully the provisions relating to alterations, 36 CFR 1190.33(b), which contain the "50% rule" requiring additional work where alterations within a 12 month period exceed 50% of the full and fair cash value. The Office of Legal Counsel felt it was within the ATBCB's mandate under the remedial statute it was implementing to require an accessible route and entrance when a building is being substantially altered. The Office of Legal Counsel did feel the Board proposal to require accessible toilet rooms on each floor in every case in which the alterations cost 50% of the facility's full and fair cash value was overly broad. The rule has been revised.

The Office of Legal Counsel sustained the ATBCB views on the scope of applicability of the Architectural Barriers Act with respect to leased buildings. The statute must be read to include leased buildings within the accessibility requirements of the Act, 42 U.S.C. 4155. This extends to extensions as well as renewals of leases. Buildings under Federal lease, including renewals and extensions, must be accessible.

E. Overview of the Regulation

These minimum guidelines and requirements, the first to be issued by the ATBCB, contain both technical and scoping provisons for the generic (common) elements and features of buildings and facilities. These are the basis for the accessibility and usability standards enforced under Section 502 of the Rehabilitation Act. This will provide a Government-wide basis for a common understanding of accessibility.

The ATBCB guidelines and requirements consist of five major components. Subpart A, General, sets out the purpose, applicability, definitions, relationship of the guidelines and requirements to the Architectural Barriers Act standards, other uses, and effect of State or local law on the guidelines and requirements. Subpart B has been reserved for reasons elaborated below. Other departures from the guidelines and requirements are permitted under specific design exceptions. Subpart C enumerates the scoping and technical provisions applicable to new construction, additions, alterations, and leased buildings. Subpart D contains the technical provisions. Subpart E is reserved for special use provisions applicable to elements or types of buildings, *e.g.*, library stacks, hospitals,

penal institutions, and residential structures.

Throughout the rulemaking process, the ATBCB considered the technical specifications in the proposed and final 1980 revision to the American National Standard Institute (ANSI) standard. ANSI is a private institute in New York City, not connected with the Federal government, that provides a mechanism for creating voluntary consensus standards. In May 1980, subsequent to the issuance of the ATBCB Notice of Intent, the American National Standard Institute published its technical accessibility standard. The 1980 ANSI standard states that scoping provisions are to be developed by administering agencies. ANSI A.117.1 (1980) §§ 2.1, 2.2. The ATBCB believes that a single document including both technical and scoping provisions is most usable in achieving accessibility.

At the beginning of the rulemaking process, the Board was presented with the issue of determining how to utilize the expertise of ANSI while protecting the public interest and ensuring adequate administration and enforcement of the Architectural Barriers Act.

In general, the system of voluntary standards tends to the development of commercially acceptable standards. However, that process is less than ideal from a regulatory perspective. Hamilton, *The role of Nongovernmental Standards in the Development of Mandatory Federal Standards Affecting Safety or Health* ("Hamilton"), 56 Tex. L. Rev. 1446–1447 (1978). The ANSI voluntary standard concensus process is not an open public dialogue process as required by the Administrative Procedure Act, 5 U.S.C. 553. The views of the general public are not solicited and thus not considered. The ATBCB process for developing guidelines and requirements for standards applicable to Federal procurement and grants is consistent with OMB Circular A–119 on the use of voluntary standards. The ATBCB is voluntarily taking cognizance of that circular. However, the voluntary standards techniques has come under Congressional criticism. *Voluntary Industrial Standards in the United States: Report to the Subcommittee on Science, Research and Development of the House Committee on Science and Technology*, 93d Cong., 2d Sess. 88–89 (1974). See also S.Rep. No. 91–1282, 91st Cong., 2d Sess. 6 (1970); H.R. No. 1291, 91st Cong., 2d Sess. 181 (1970).

The ATBCB, while wary of the pitfalls of voluntary consensus standards, is mindful of the significant achievements with respect to ANSI A117.1 (1980). For that reason, the ATBCB, quite properly, considered that work as most significant in shaping the particular provisions and weighed it carefully. See Hamilton, 56 Tex. L. Rev. at 1448. The ATBCB, consistent with its recognition of the practical need for a single document containing both scoping and technical provisions, also developed scoping sections as ANSI suggested. The ATBCB also recognized the significant technical contribution made by the ANSI Standard and has adopted many of its provisions.

F. Section-by-Section Analysis/Major Comments

This section provides a brief review of the comments and changes from the NPRM to the final rule. A final Regulatory Analysis has been prepared which contains an in-depth discussion of the alternatives and issues considered by the ATBCB.

Subpart A contains the General Provisions. The ATBCB has determined that its authority from the 1978 Act is to issue a binding, legislative rule which insures *ready* access and use. See *Batterton v. Frances*, 432 U.S. 416 (1977), *American Telephone and Telegraph Co. v. United States*, 299 U.S. 232 (1936); *National Nutritional Foods Association v. Weinberger*, 512 F.2d 688 (2d Cir. 1975). Also see the Regulatory Analysis containing Issue Papers of December 2, 1980, and April 4, 1980.

In this context 36 CFR 1190.1, Purpose, has remained unchanged.

The dates previously mentioned in proposed 36 CFR 1190.2(b)(2)(ii) (A) and (B) have been deleted to avoid any confusion over the applicability of the guidelines and requirements. The application of the minimum guidelines and requirements is prospective not retroactive in nature. A building designed, constructed, altered or leased after the effective date of an accessibility standard issued under the Architectural Barriers Act must comply with that standard. Utilizing the process set forth in proposed 36 CFR Part 1150, the ATBCB enforces those standards in the buildings and facilities required to comply with the Architectural Barriers Act. See 36 CFR 1150.2(c).

A few of the federal members wanted the ATBCB to clarify that certain categories of acquired buildings were not covered by the Architectural Barriers Act. While the ATBCB has not reviewed in detail the particular program statutes, it recognizes that, as a general rule, buildings purchased or acquired directly by the Government without construction or alteration are not subject to the Architectural Barriers Act. See Regulatory Analysis containing Issue Paper No. 1, April 4, 1980.

The definition section, proposed 36 CFR 1190.3, was the focus of several comments. The definition of entrance has been added. The new definition clarifies that the entrance includes the approach walk, the vertical access leading to the entrance platform, the entrance platform itself, vestibules if provided, the entry door(s) or gate(s), and the hardware on the entry door(s) or gate(s). In some facilities the spaces that house the major activities for which the building or facility is intended, such as office space or transit loading areas, are located above or below ground, with access from the street level to an underground or raised level or levels via escalators or stairs. In those instances, the vertical access is considered an integral part of the entrance, and an elevator, ramp, or lift must be provided to the first of those levels in order for the entrance to comply with this section. With respect to an underground shopping/office area, the entrance platform is the interior platform from which doors lead to offices, stores, or other facilities. For purposes of these guidelines and requirements, the entrance to an underground transit facility includes the approach walk, the vertical access leading from the exterior to the interior platform or platforms, the fare gate or other point of controlled access, and all intervening spaces. The term "platform" is used here in the generic sense of a flat area or landing; it is not limited to the area between or alongside the tracks of a transit station from which transit cars are entered.

The definitions of "modification" and "waiver" have been removed as a result of the Office of Legal Counsel's opinion on Subpart B. Commenters thought the terms "normal maintenance" and "extraordinary repair" should be defined. The ATBCB looks to the standard-setting agencies to more precisely define these terms in the standards to be issued by the agencies under the Architectural Barriers Act, Pub. L. 90–480, as amended. The definition of "Disability" as contained in § 1190.3 is consistent with that utilized under Section 504 of the Rehabilitation Act. The definition of "full and fair cash value" has been changed to include three methods to determine the value of a building: the assessed value as equalized at one hundred percent (100%) valuation; the replacement cost; or the fair market value. The value of a building will be calculated for the estimated date that the work will begin.

Section 1190.4, Issuance of Architectural Barriers Act standards by standard-setting agencies, has been revised slightly from the provisions in

the NPRM. Comments were raised regarding the authority of the Board to enforce its own guidelines and requirements in the event the agencies setting standards under the Architectural Barriers Act fail to issue conforming standards. Proposed 36 CFR 1190.4(d). The Board is hopeful that each agency will issue conforming standards. 36 CFR 1190.4(d). The ATBCB expects that the agencies will act expeditiously, and anticipates that the standards will be published within one year of the effective date of the ATBCB minimum guidelines and requirements.

Section 1190.5, Guidelines: Other uses, is unchanged from the original proposal. The ATBCB provision allowing use of the minimum guidelines and requirements by other governmental and nongovernmental entities does not contradict the mandate of the Architectural Barriers Act standards.

Section 1190.6, Interpretation of guidelines, attracted only minor comment. It is unchanged and contains standard rules of interpretation.

Section 1190.7, Effect of State or local law, notes that the obligation to comply with this part is not affected by any State or local law. The question of the interrelationship of the Federal and State/local standards is one resolved on the basis of principles of preemption.

Section 1190.8, Site conditions, providing that site conditions were not to be used as a justification for noncompliance, was of concern to some commenters. Due to the difficult nature of this subject, it has been reserved for future use. The ATBCB recognizes that certain extreme site and/or climatic conditions, such as permafrost, would justify a waiver or modification by the appropriate head of the agency setting the standard.

Section 1190.9, Severability, is retained unchanged. No comments were received.

Subpart B—Waivers and Modifications: Processed departures, attracted considerable and divergent comments. In view of the nature of the comments on proposed 36 CFR 1190.21, 1190.22, and 1190.23, these sections are grouped together. Several commenters thought the provisions were far too liberal and would lead to excessive relaxation of the standards; others, however, thought the provisions were too restrictive of the rights of agencies setting standards under the Architectural Barriers Act. Some of the Federal agencies also thought those provisions were beyond the scope of the ATBCB's authority in these guidelines and requirements. To resolve the controversy, the Department of Justice, Office of Legal Counsel (OLC), was requested by the Board to review Subpart B. The OLC believes that the Board is not authorized to promulgate regulations in this rule governing waivers and modifications. The ATBCB, as a result, has removed all reference to the Subpart B guidelines and requirements on waivers and modifications and has reserved "Subpart B" for future use. To ensure that all waivers and modifications are based upon findings of fact and are not inconsistent with the provisions of the Architectural Barriers Act and Section 502 of the Rehabilitation Act, the ATBCB will supervise the agencies' determinations of waivers and modifications on a case by case basis through the use of the Board's recently revised enforcement procedures in 36 CFR Part 1150, 45 FR 78472. See Section 502 of the Rehabilitation Act, 29 U.S.C. 792(b)(1). Under these provisions, the Executive Director is free to institute compliance proceedings against any facility where the Executive Director claims that a waiver or modification was granted improperly.

Subpart C—Scope, attracted considerable comment concerning the nature of the guidelines and requirements. Some agencies expressed the view that the guidelines and requirements were all-inclusive in both their technical and scoping provisions. However, it is well established that guidelines may be extremely detailed. See *FMC Corp. v. Train*, 539 F.2d 973 (4th Cir. 1976). Moreover, the scoping provisions should be viewed as minimum guidelines and requirements. Certain minimum items must be provided for a building to be accessible. The quantification of these items is thus appropriate. See *FMC Corp. v. Train*. This approach was found by OLC to be within the Board's statutory authority.

In response to the public comment, however, the ATBCB did reconsider its policy on particular items affecting the extent to which a new building or a facility may be required to be accessible. Several changes were incorporated into 36 CFR 1190.31, Accessible buildings and facilities: New Construction.

In 36 CFR 1190.31(b), Parking and passenger loading zones, the questions considered by the Board included whether parking for disabled persons should be required and what number of parking spaces should be specified by the guidelines and requirements. The ATBCB decided to retain the proposed language requiring that if any parking is provided, parking must be provided for disabled persons. However, compliance with this section is not required if the only parking provided is for official vehicles owned or leased by the government.

The ATBCB also considered carefully the provisions in 36 CFR 1190.31(f), Elevators, especially in terms of its cost implications. The ATBCB has determined that few buildings will be constructed by or on behalf of the United States which will not contain an elevator. The agencies setting standards under the Architectural Barriers Act do not anticipate that this will be a problem. The provisions in the NPRM have been retained.

The provisions relating to the number of entrances, 36 CFR 1190.31(h), attracted considerable comment. The ATBCB considered such factors as the location, number, and costs of entrances. The ATBCB decided that, "At least one entrance to a building or facility shall comply with § 1190.120, *Entrances*. When a building or facility has entrances which normally serve any of the following functions: transportation facilities, passenger loading zones, parking facilities, taxi stands, pubic streets and sidewalks, accessible interior vertical access, then at least one of the entrances serving each such function shall comply with § 1190.120, *Entrances*. When a building or facility has entrances on more than one side then at least one entrance on each side shall comply with § 1190.120, *Entrances*." The ATBCB recognizes that certain extreme topographical conditions may preclude accessibility of a particular entrance.

The ATBCB also weighed carefully the highlighted questions relating to doors. The ATBCB decided that the scoping provisions relating to doors, proposed 36 CFR 1190.31(i), should be revised to provide, in effect, that at each accessible entrance to a building or facility there must be at least one accessible door. Similarly, there must be at least one accessible door to each accesssible space within a building or facility. However, each door that is required by § 1190.50(h), Egress, and each door that is an element of an accessible route shall comply with § 1190.130, Doors. The NPRM had required all doors to be accessible.

The ATBCB considered the question of whether the Board had sufficient research on accessible windows to justify the scoping provisions of § 1190.31(j) in the NPRM. The Board concluded it did not; accordingly the provision has been reserved.

The NPRM highlighted questions concerning the requirements on the location and number of acessible toilet and bathing fixtures. The ATBCB decided to revise proposed 36 CFR

1190.31(k) to provide that each toilet and bathing facility must provide at least one accessible fixture and accessory of each type provided. The Board deleted the provision which required 2% of all fixtures and accessories to be acessible in multiple fixture facilities.

The ATBCB has decided to revise proposed 36 CFR 1190.31(l), Drinking Fountains and Water Coolers, to provide that if only one drinking fountain or water cooler is provided per floor it shall be a two-level fountain or cooler and the lower level must comply with 36 CFR 1190.160. If more than one is provided per floor then approximately 50% (fifty percent) of the drinking fountains and water coolers provided shall comply with 36 CFR 1190.160; the others shall be of the standard height. Commenters pointed out that some people with orthopedic problems cannot bend to use low fountains and suggested that there was a need to require fountains and coolers at two different heights.

Public comments on the proposal relating to the provisions in proposed 36 CFR 1190.31(n), Alarms, were mixed. Certain groups thought the flashing exit signs were acceptable while others did not. The ATBCB has decided to retain the proposed language as it benefits the largest cross-section of the population, including handicapped and able-bodied persons, while not increasing the cost of an alarm system significantly. The term "alarm systems" has been inserted to make this paragraph consistent with § 1190.180, Alarms. The ATBCB also recognizes the need for additional research in this area.

Tactile warnings, 36 CFR 1190.31(o), were carefully considered. Comments received on the NPRM indicated that there continues to be confusion in the use of tactile warnings and informational cues. Until the Board obtains additional research and information on tactile warnings, the Board decided to require tactile warnings only on the hardware of all doors that lead to hazardous areas. Tactile warnings are prohibited on emergency exit doors. The Board decided to reserve the technical section, tactile warnings, 36 CFR 1190.190, until additional research is obtained and therefore has eliminated reference to these provisions in paragraph 1190.31(o).

The ATBCB also considered the highlighted issue of volume controls for telephones in proposed 36 CFR 1190.31(q). However, the Board strongly encourages installation of TDDs, especially in buildings visited by large numbers of people. Several issues relating to telecommunication devices for the deaf (TDD) were also highlighted in the NPRM. A telecommunications device for deaf persons (TDD) is a teletypewriter, or similar keyboard device, attached to a standard telephone by means of an acoustical coupler, and by which two persons can communicate over regular telephone lines by typing their conversation. Although TDDs received strong support from deaf persons and their advocacy organizations, the ATBCB has decided to defer including a requirement for TDDs in Federal and federally-funded buildings until additional information is obtained. The ATBCB has also decided to adopt scoping requirements similar to those in the ANSI standard for volume controls; that is, at least one telephone shall be equipped with a volume control if banks of telephones are provided.

NPRM 36 CFR 1190.31(r), Seating, tables and work surfaces, requested comment on the adequacy of the requirement that 5% of the total fixed or built-in seating tables and work surfaces be required to be accessible. From the limited responses provided on this issue, the ATBCB concluded that its proposal was reasonable.

The question of numbers was also raised in connection with 36 CFR 1190.31(s), Assembly areas. The number of viewing areas in the proposed rule has been retained in the final.

In 36 CFR 1190.31(t), Storage, the Board questioned whether all storage areas should be required to be accessible. The ATBCB concluded that if storage facilities are intended to be provided in accessible space for occupant use, only one storage facility of each type provided must be accessible. Additional storage space which is not accessible is, of course, permissible.

Under 36 CFR 1190.32, Additions, additions are generally to be treated as new construction. This approach was supported by the OLC opinion. The ATBCB had retained the proposed language in 36 CFR 1190.32 (a) and (b) but revised proposed 36 CFR 1190.32 (c) and (d). This change requires that at least one accessible entrance, one accessible route, and one accessible toilet and bathing facility be provided in the existing building if these elements are not provided in the addition. This section, for example, allows a designer the choice of providing an accessible entrance in the new addition or utilizing an existing accessible entrance in the existing building. The designer may also find it practical to create an accessible route and an accessible entrance in the existing building as a more economical solution to the usability and accessibility issue if no entrances are planned in the new addition. If elements, spaces, or common areas are located in the existing building and they are not provided in the addition, consideration should be given to making those elements, spaces, and common areas accessible in the existing building. If the elements in 36 CFR 1190.32(a)(b)(c) were not provided, the addition would be extremely difficult or impossible for a disabled person to use. The revision provides for less access than in the NPRM. However, it effects a balancing of interests, as the comments warranted, to achieve access and use at a reasonable cost.

Proposed 36 CFR 1190.33, Accessible buildings and facilities: Alterations, attracted wide comment. A number of Federal agencies strongly opposed, under any circumstances, the requirement to make more than the altered area accessible.

The NPRM highlighted the issue of where a means of vertical access must be provided. Proposed 36 CFR 1190.33(a)(2). Some comments questioned the ATBCB's authority and policy on this matter. The ATBCB's review of the history of the Architectural Barriers Act demonstrated that it is within the Board's discretion to require that vertical access be provided in the circumstances specified. See Regulatory Analysis containing Issue Paper of December 8, 1980. The language in the NPRM was modified to require the following: "If power-driven vertical access equipment (e.g., escalators) is planned or installed where none existed previously, or if new stairs (other than stairs installed to meet emergency exit requirements) requiring major structural changes are planned or installed where none existed previously, then a means of vertical access shall be provided that complies with § 1190.70 Ramps and curb ramps, § 1190.100, Elevators, or § 1190.110, Platform lifts. It is consistent with the letter and spirit of the Architectural Barriers Act that accessibility shall be incorporated as each part of the facility is altered so that eventually the entire facility will be accessible. The OLC opinion supported this approach.

Under 36 CFR 1190.33(a)(3), formerly (a)(4), the words "portion of" when referring to "space" have been deleted. Commenters noted the difficulty in defining what "portion of" meant.

The NPRM 36 CFR 1190.33 (b) and (c) would have required basic accessibility throughout the building if the alteration involved more than 50% of the value and floor space. After considering the public comment, the Board has revised its rule to eliminate the phasing requirement proposed in 36 CFR 1190.33(a)(3) and to substitute a twelve (12) month time limit

for invocation of the 50% criteria, 36 CFR 1190.33(b). The phasing requirement, commenters noted, would be extremely difficult to monitor. The gross square footage criteria was eliminated because it appears to be misleading. 36 CFR 1190.33(b) requires that certain elements and spaces must be accessible in order to provide the most basic access to and use of a building and that these elements and spaces must be designed and altered to comply with the guidelines and requirements. Without the elements and spaces required by 36 CFR 1190.33(b) (1) (2) and (3)—that is, at least one accessible route, at least one accessible entrance, and at least one accessible toilet facility on each substantially altered floor with a minimum of one accessible toilet facility in each altered building—it would be extremely difficult or impossible for a handicapped person to use a facility even if the facility were otherwise accessible. The number of toilet rooms required to be accessible if no alterations were planned on existing toilet rooms has been decreased from one per floor, altered or not, consistent with the OLC opinion. Moreover, consistent with commenters' suggestion to ease the financial burden of doing the work required by 36 CFR 1190.33(b), exceptions have been added. If the cost of the elements and spaces required by 36 CFR 1190.33(b) exceeds 15% of the total cost of all other alterations, then the agency may elect to implement the required improvements within a five year period and thus reduce the financial impact of a previously unscheduled alteration. Consideration should also be given to providing the accessible elements or spaces enumerated in § 1190.33(b)(6). The ATBCB has excepted from the 50% rule alterations which are limited solely to the electrical, mechanical, or plumbing system and which do not involve the alteration of elements of spaces required to be accessible under Part 1190. This change is consistent with the OLC opinion.

The subject of the applicability of the Architectural Barriers Act to leased buildings, 36 CFR 1190.34, was considered fully. The ATBCB recognizes that Congress amended the Architectural Barriers Act in 1976, Pub. L. 94–541, to cover all buildings leased by the Federal government. Leased buildings are required to be accessible *at the time* the lease is entered into, rather than at a later time when such structures may be altered. The 1976 amendments also extended coverage of the Architectural Barriers Act to unilateral "extensions" of leases as well as bilateral "renewals" of leases. See ATBCB Minutes of Meeting October 31, 1980. The provisions concerning leases were found by OLC to be within the Board's statutory authority.

The ATBCB notes that the language "whenever possible" in the Architectural Barriers Act is a recognition that it may not, under necessarily limited circumstances, be possible to lease accessible space. This may also be true with respect to leases in the more remote areas where accessible space may not be available, or where space is leased for officials servicing natural or human made disasters, e.g., Three Mile Island. The Board, for this reason, has added the following exception to the full accessibility requirements for leased space: "If no space complying with (a) or (b) is available, space as available may be leased provided: (1) The leasing authority certifies that space is unavailable due to the remoteness of the area or that the lease is necessary for officials servicing natural or human-made disasters; and (2) the ATBCB is provided a listing of instances in which this exception is applied, as part of the semi-annual report to Congress." If other deviations from the requirements of § 1190.34 are necessary, these will be made through the waiver or modification process.

Subpart D attracted generally favorable comments.

36 CFR 1190.40, Human data, sets forth basic requirements, *e.g.*, moving wheelchair clearances and reach limitations. Generally the comments were favorable. The section remains as proposed in the NPRM. However, the language for minimum clear width for a single wheelchair has been clarified to provide for a 3'–0" (915mm) except that the clear width may be reduced to 2'–8" (815mm) for a distance not to exceed 2'–0" (610mm) in length at points such as doorways. Other paragraphs have been renumbered.

The provisions in 36 CFR 1190.50, Walks, floors, and accessible routes, are the same as in the NPRM. In general, comments received were favorable to this section. The word "nominal" has been inserted in proposed 36 CFR 1190. 1150(c)(1) and (e)(1) to accommodate the dimensions needed for door stops. No substantive change in the requirement has been made.

The technical provisions relating to parking, proposed 36 CFR 1190.60, Parking and passenger loading zones, remain unchanged except that the section has been revised to include specifications for accessible spaces for side lift vans. Accessible spaces for side lift vans may be used to meet the requirements of 36 CFR 1190.31(b).

The NPRM provisions relating to ramps and curb ramps, proposed 36 CFR 1190.70, were the focus of two decisions. It was decided to retain the language in the NPRM which does not require a standard or uniform location of curb ramps. The ATBCB will seek to work with the Federal Highway Administration to develop uniform requirements for the location of curb ramps which intersect vehicular ways. It was also decided to revise proposed 36 CFR 1190.70(c) to require curb ramps of a width of 3'–0" instead of 4'–0". This was based on the public comment to support 3'–0" and lack of any research data to support a width beyond 3'–0". For clarification, the chart on ramp slope has been revised to make it consistent with the text.

36 CFR 1190.80, Stairs, has been retained as proposed. Some questions were received on the use of open risers and the dimensions of stair treads, but no authority or research was cited by commenters. The ATBCB rule is similar to the ANSI A117.1 (1980) provision except that ANSI allows open risers.

The provisions relating to handrails, proposed 36 CFR 1190.90, have been revised based on the work of the American Society for Testing and Materials. A width measurement instead of a perimeter formula is now provided. An additional paragraph, which commenters noted was in ANSI A117.1 (1980) but not in the NPRM, has been added. A handrail or any wall rail or other surface adjacent to it shall be free of any sharp or abrasive elements.

The provisions applicable to elevators, proposed 36 CFR 1190.100, were the subject of considerable comment, particularly the technical and cost implications of the 4'–0" control panel mounting height. The ATBCB retained the NPRM language to retain 4'–0" for the maximum height and 2'–11" minimum. This is consistent with the Human Data, 36 CFR 1190.40. However, the ATBCB will allow floor buttons to be mounted up to 4'–8" if the 4'–0" height imposes a substantial increase in the cost of the elevator.

A typographical error appearing in the NPRM Figure 10.1 was corrected from four seconds to five seconds. The door widths of elevator cars has been revised from 2'8" to 3'0". The ATBCB recognizes that this may be inconsistent with 36 CFR 1190.40 Human data; however, the wider width is necessary because these are moving doors. A provision, which commenters suggested and is based upon ANSI A117.1 (1980), has been added to allow a maximum clearance of

1¼ inches between the elevator car and floor.

Platform lifts, proposed 36 CFR 1190.110, remains as proposed in the NPRM. Comments were relatively few and noncritical.

The comments concerning entrances were directed at the scoping requirements of 36 CFR 1190.31(h) rather than the technical requirements of proposed 36 CFR 1190.120. This section remains essentially unchanged; however, the definition of "entrance" has been added to § 1190.3, Definitions.

The provisions concerning doors were also the subject of several decisions. Under revised 36 CFR 1190.130(a)(3), if accessible doors are near revolving doors or turnstiles, the accessible doors shall be subject to the same use patterns as the revolving door or turnstile.

In revised 36 CFR 1190.130(c)(i), the ATBCB decided the latch side clearance requirement should be 1'6", through 2'0" is recommended. In proposed 36 CFR 1190.130(c)(2) Figure 2 was selected, consistent with the Human data. The NPRM had proposed alternative figures.

The ATBCB decided to retain the provision in proposed 36 CFR 1190.130(c)(4) relating to doors to acute care patient rooms.

In response to public comment, the ATBCB decided to make an exception to 36 CFR 1190.130(f) to allow hardware used to secure the inactive leaf of a double leaf door without a center mullion to be mounted at any height (as opposed to the 4'0" (1,220 mm) general rule).

The ATBCB, on an issue highlighted in the NPRM, decided to retain the proposed language of 36 CFR 1190.130(g) relating to doors to hazardous areas. The subject of door pressures and door closers was carefully examined. The ATBCB decided to revise 36 CFR 1190.130(h)(2) to delete the force requirements for exterior doors. Comments questioned the state-of-the-art technology and research in this matter. The ATBCB, through the National Bureau of Standards, is actively researching this matter.

The proposed 36 CFR 1190.140, Windows, has been reserved until the Board receives additional research and information on this subject.

The subject of toilets, also addressed in the scoping provisions of Subpart C, also entailed considerations of unisex toilets, 36 CFR 1190.150. The ATBCB has decided, on this highlighted issue, to retain the provision on unisex toilets. Commenters generally favored this requirement but requested that it be clarified that only one water closet and one lavatory be provided in each facility. The unisex facility is especially desirable for severely disabled persons who have attendants of the opposite sex.

The text of proposed 36 CFR 1190.160, drinking fountains and water coolers, was corrected to reflect the dimensions in the figures for clarification of descriptive language.

The question raised by commenters on proposed 36 CFR 1190.170, Controls and operating mechanisms, was whether controls should be required to be operable by one hand, similar to ANSI A117.1 (1980). It was agreed that the guidelines and requirements should reflect the ANSI language and this subsection has been changed accordingly.

The provision in proposed 36 CFR 1190.180, Alarms attracted considerable comment to the effect that devices and procedures need to be developed to provide earlier protection warning for deaf/hearing impaired and blind/visually impaired people. The ATBCB decided to require that visual and auditory alarms operate off the same power source. In proposed 36 CFR 1190.180(c)(3) the frequency requirement has been revised to "*less than* 5 Hz," in response to commenters' suggestions to make this provision similar to ANSI A117.1 (1980). Also, this will lessen the likelihood of epileptic seizures.

The Board has decided to reserve 36 CFR 1190.190, Tactile warnings, until additional research is obtained. The Board determined that there does not appear to be any immediate and critical need for tactile warnings, although tactile warnings might provide some assistance and convenience to those who are not skilled in proper cane techniques. For information concerning the technical specifications for tactile warnings, see ANSI A117.1–1980, Section 4.29.

The ATBCB highlighted for public comment the question of contrasting colors and specific shapes to be used as part of the signage to identify particular elements and spaces in proposed 36 CFR 1190.200. The comments support the ATBCB decision to retain the language of the NPRM and also indicated the utility of further research on these matters.

Another highlighted issue, in proposed 36 CFR 1190.210, was whether the maximum height for an operable part of a public telephone shoud be 4'-0" (1220mm) or 4'-6" (1372mm) high. The matter attracted considerable comment. The ATBCB decided that the human data research supported both 4'-0" maximum height for frontal and diagonal reach approaches and 4'-6" maximum height for side reach. Comments received supported both heights for all telephones. The guidelines and requirements have been modified to provide for both heights. This is consistent with proposed 36 CFR 1190.40, Human data. At least one telephone per bank shall be installed at 4'-0". Reference to TDDs has been deleted from this section.

36 CFR 1190.220, Seating, tables, and work surfaces, has been retained as in the NPRM. The section did not generate adverse comments. The ATBCB provision is similar to that in ANSI A117.1 (1980).

36 CFR 1190.230, Assembly areas, is different from the NPRM. The ATBCB rule will facilitate disabled persons' access by providing seating throughout the entire seating plan. The space for two persons has been expanded to 5'-6" to reflect ANSI requirements and to provide space between the wheelchairs.

Comments on § 1190.240, Storage, were limited and basically supportive. The language of the NPRM has been retained and a drawing added.

Subpart E—Special Building or Facility Types and Elements, continues to be reserved in the final rule, as in the NPRM. This subpart will be developed in future rulemaking. The guidelines and requirements as issued now will form the basis for special use guidelines and requirements which will then be applicable to the development of standards under the Architectural Barriers Act for special building types or special use facilities to the extent that these requirements enumerate elements or spaces that would be required by the Architectural Barriers Act to be accessible to handicapped persons. ATBCB expects to interact with the Federal agencies having expertise in specific areas to develop guidelines for the unique aspects of special use facilities. For example, the Department of Interior will be involved in the development of recommendations for historical buildings and recreational facilities, the Department of Health and Human Services, Department of Defense and Veterans Administration will be consulted on recommendations for hospitals.

The Department of Housing and Urban Development is also cooperating in the development of minimum guidelines and requirements for residential structures to be published later at Subpart E. This section of Subpart E will include specific scoping and technical provisions establishing guidelines and requirements for agencies' standards to be issued under the Architectural Barriers Act for accessibility in residential structures and accessible dwelling units. The guidelines and requirements issued now

are applicable to the development of standards under the Architectural Barriers Act to the extent that these requirements enumerate features, other than when affixed to or within an interior dwelling unit, required by the Architectural Barriers Act to be accessible to handicapped persons. See 24 CFR Part 40. These issues may be reexamined by HUD and the ATBCB as part of the rulemaking relating to the details of accessible residential structures. Such reexamination may result in making specific exceptions for residential structures to the general ATBCB requirements.

G. Future Activities

The ATBCB recognizes that technology and accessibility needs are changing. It intends to regularly review these guidelines and requirements to ensure they incorporate state-of-the-art technology as well as respond to the needs of disabled persons.

The ATBCB, as noted throughout this preamble, will be undertaking research to define and expand the guidelines and requirements. In addition, the ATBCB may undertake research concerning the accessibility needs of handicapped persons. The ATBCB encourages the public to provide the Board with information on new and innovative methods to eliminate barriers.

H. Regulatory Analysis

As an independent Federal agency, the ATBCB is not required to comply with Executive Order 12044; however, a draft regulatory analysis was prepared voluntarily and was published in the **Federal Register** for comment along with the NPRM. The ATBCB has solicited and received the views of the Council on Wage and Price Stability on its final rule and on the materials in the regulatory analysis. Those views are included in the rulemaking docket and are available for inspection at the ATBCB offices. The final regulatory analysis is also available for inspection at the ATBCB offices, 330 "C" Street, SW., Room 1014, Washington, D.C. 20202, from 9:00 a.m. to 5:30 p.m., Monday through Friday. For information on the final regulatory analysis, contact Sally Free, 202/245–1801.

I. National Environmental Policy

A negative environmental declaration prepared pursuant to the National Environmental Policy Act of 1969, as amended, 42 U.S.C. 4232, indicates that the issuance of the minimum guidelines will not have any significant impact on the environment. This document was prepared before the NPRM and remains in the public docket. The ATBCB received no comments indicating any environmental impact of the guidelines and requirements.

J. Effective Date

Pursuant to 5 U.S.C. 553(d), the ATBCB has determined that it is necessary to make these guidelines and requirements effective on the date issued in order to expedite the development and issuance of consistent Federal standards in accordance with the Architectural Barriers Act of 1968.

The Act, at noted above, directs four Federal agencies to "prescribe standards for the design, construction, and alteration of (certain Federal and federally-assisted) buildings" and "to insure whenever possible that physically handicapped persons will have ready access to, and use of, such buildings."

These four Federal agencies, as members of the ATBCB, have been actively involved in the development of these guidelines and requirements. The ATBCB expects the agencies to act expeditiously to issue final revised standards within a reasonable time, which should not exceed one year after the effective date of the minimum guidelines and requirements. There is no reason, therefore, to delay the effective date of this rule. Because these ATBCB minimum guidelines and requirements serve as a basis for the standards set by the four standard setting agencies, the general public is not adversely affected by the effective date being the date of issuance.

However, if the guidelines and requirements effective date is delayed 30 days, the public could be adversely affected because it would, in effect, further delay the issuance of consistent accessibility standards by the four Federal agencies.

K. Conclusion

In consideration of the foregoing, Part 1190 is added to Title 36 of the Code of Federal Regulations as set forth below. The preamble to Part 1190 will be published in the Code of Federal Regulations as Preamble A.

The guidelines and requirements are issued under 29 U.S.C. 792, section 502 of the Rehabilitation Act of 1973, as amended.

Dated: January 6, 1981.

By vote of the Board.

Mason H. Rose V,

Chairperson, Architectural and Transportation Barriers Compliance Board.

Donald Elisburg,

Vice Chairperson, Architectural and Transportation Barriers Compliance Board, Assistant Secretary for Employment Standards, Department of Labor.

PART 1190—MINIMUM GUIDELINES AND REQUIREMENTS FOR ACCESSIBLE DESIGN

Subpart A—General

Sec.
1190.1 Purpose.
1190.2 Applicability: Buildings and facilities subject to guidelines and standards.
1190.3 Definitions.
1190.4 Issuance of Architectural Barriers Act standards by standard-setting agencies.
1190.5 Guidelines: Other uses.
1190.6 Interpretation of guidelines.
1190.7 Effect of State or local law.
1190.8 Site conditions. [Reserved]
1190.9 Severability.

Subpart B [Reserved]

Subpart C—Scope

1190.30 Scope. [Reserved]
1190.31 Accessible buildings and facilities: New construction.
1190.32 Accessible buildings and facilities: Additions.
1190.33 Accessible buildings and facilities: Alterations.
1190.34 Accessible buildings and facilities: Leased.

Subpart D—Technical Provisions

1190.40 Human data.
1190.50 Walks, floors, and accessible routes.
1190.60 Parking and passenger loading zones.
1190.70 Ramps and curb ramps.
1190.80 Stairs.
1190.90 Handrails.
1190.100 Elevators.
1190.110 Platform lifts.
1190.120 Entrances.
1190.130 Doors.
1190.140 Windows. [Reserved]
1190.150 Toilet and bathing facilities.
1190.160 Drinking fountains and water coolers.
1190.170 Controls and operating mechanisms.
1190.180 Alarms.
1190.190 Tactile warnings. [Reserved]
1190.200 Signage.
1190.210 Telephones.
1190.220 Seating, tables, and work surfaces.
1190.230 Assembly areas.
1190.240 Storage.

Subpart E—Special Building or Facility Types or Elements. [Reserved]—Preamble A.

Authority: Sec. 502(b)(7) of the Rehabilitation Act of 1973 (29 U.S.C. 792(b)(7), as amended by the Rehabilitation, Comprehensive Services, and Developmental

Disabilities Amendments of 1978 (Pub. L. 95-602).

Subpart A—General

§ 1190.1 Purpose.

The purpose of this part is to implement Section 502(b)(7) of the Rehabilitation Act of 1973 (29 U.S.C. 792(b)(7)), as amended, which requires the Architectural and Transportation Barriers Compliance Board to establish minimum guidelines and requirements for standards issued under the Architectural Barriers Act of 1968 (42 U.S.C. 4151 *et seq.*), as amended. This part and the standards to be based on it are intended to ensure that certain buildings and facilities financed with Federal funds are so designed, constructed, or altered as to be readily accessible to, and usable by, physically handicapped persons.

§ 1190.2 Applicability: Buildings and facilities subject to guidelines and standards.

(a) *Definitions.* As used in this section, the term:

(1) "Constructed or altered on behalf of the United States" means acquired by the United States through lease-purchase arrangement, constructed or altered for purchase by the United States, or constucted or altered for the use of the United States.

(2) "Primarily for use by able-bodied military personnel" means expected to be occupied, used, or visited principally by military service personnel. Examples of buildings so intended are barracks, officers' quarters, and closed messes.

(3) "Privately owned residential structure" means a single or multi-family dwelling not owned by a unit or subunit of Federal, state, or local government.

(b) *Buildings and facilities covered.* Except as provided in paragraph (c) of this section, the guidelines and requirements, and the standards to be issued by the standard-setting agencies to conform to it, apply to any building or facility—

(1) The intended use for which either—

(i) Will require that such building or facility be accessible to the public, or

(ii) May result in employment or residence therein of physically handicapped persons; and

(2) Which is—

(i) To be constructed or altered by or on behalf of the United States;

(ii) To be leased in whole or in part by the United States;

(iii) To be financed in whole or in part by a grant or loan made by the United States after August 12, 1968, if the building or facility may be subject to standards for design, construction, or alteration issued under the law authorizing the grant or loan; or

(iv) To be constructed under the authority of the National Capital Transportation Act of 1960, the National Capital Transportation Act of 1965, or Title III of the Washington Metropolitan Area Transit Regulation Compact.

(c) *Buildings and facilities not covered.* The guidelines and requirements, and the standards do not apply to—

(1) Any privately owned residential structure, unless it is leased by the Federal government on or after January 1, 1977, for subsidized housing programs; or

(2) Any building or facility on a military installation designed and constructed primarily for use by military personnel.

(3) Although the ATBCB has not reviewed in detail the particular program statutes, it recognizes that, as a general rule, buildings purchased or acquired directly by the Government without construction or alteration are not covered by the Architectural Barriers Act.

(d) *Effective date of standards.* Any covered building or facility, as provided in this section, which is designed, constructed, altered, or leased after the effective date of a standard issued under this guideline which is applicable to the building or facility, shall be designed, constructed, altered, or leased in accordance with the standard. For purposes of this section, any design, construction, alteration or lease for which bids or offers are received before the effective date of the applicable standards, in response to an invitation for bids or requests for proposals, is not subject to the standard.

§ 1190.3 Definitions.

As used in this part, the term:

"ATBCB" means the Architectural and Transportation Barriers Compliance Board.

"Access aisle" means a pedestrian space between elements such as parking spaces, seating, and desks.

"Accessible" means complying with the specifications and requirements of this part and with any applicable standard issued by a standard-setting agency.

"Accessible route" means a continuous unobstructed path connecting accessible elements and spaces in a building or facility and complying with the space and reach requirements of this part. (Interior accessible routes may include but are not limited to corridors, floors, ramps, elevators, lifts, and clear floor space at fixtures. Exterior accessible routes may include but are not limited to parking access aisles, curb ramps, walks, ramps, and lifts.)

"Accessible space" means a space that complies with this part.

"Addition" means an expansion, extension, or increase in the gross floor area of a building or facility.

"Agency" means a Federal department, agency or instrumentality, as defined in sections 551(1) and 701(b)(1) of Title 5, United States Code, or an official authorized to represent an agency.

"Alteration" means any change in a building or facility or its permanent fixtures or equipment. It includes, but is not limited to, remodeling, renovation, rehabilitation, reconstruction, changes or rearrangement in structural parts, and extraordinary repairs. It does not include normal maintenance, reroofing, interior decoration, or changes to mechanical systems.

"Architectural Barriers Act" means the Architectural Barriers Act of 1968, Pub. L. 90-480, as amended, 42 U.S.C. 4151 *et seq.*

"Automatic door" means a door—

(1) Used for human passage and

(2) Equipped with a power-operated mechanism and controls that open and close the door upon receipt of a momentary actuating signal.

"Building or facility" means all or any portion of buildings, structures, equipment, roads, walks, parking lots, parks, sites, or other real property or interest in such property.

"Common areas" means those interior and exterior spaces available for use by all occupants and users of a building or facility, exclusive of any spaces that are made available for the use of a restricted group of people or the use of which is restricted to particular functions.

"Construction" means any erection of a new building or of an addition to an existing building.

"Cross slope" means the slope that is perpendicular to the direction of travel (see "running slope").

"Curb ramp" means a short ramp cutting through a curb or built up to it.

"Disability" means any physiological disorder or condition, cosmetic disfigurement, or anatomical loss affecting one or more of the following bodily systems: Neurological; musculoskeletal; special sense organs; respiratory, including speech organs; cardiovascular; reproductive; digestive; genito-urinary; hemic and lymphatic; skin; and endocrine.

"Egress" or "means of egress" means a continuous and unobstructed way of exit travel from any point in a building or facility to an exterior walk or out of a

fire zone. It includes all intervening rooms, spaces, or elements.

"Element" means an architectural or mechanical component of a building, facility, space, or site, *e.g.*, telephone, curb ramp, door, drinking fountain, seating, water closet.

"Entrance" means any access point to a building or portion of a building or facility used for the purpose of entering. An entrance includes the approach walk, the vertical access leading to the entrance platform, the entrance platform itself, vestibules, if provided, the entry door(s) or gate(s), and the hardware of the entry door(s) or gate(s).

"Essential features" means those elements and spaces that make a building or facility usable by, or serve the needs of, its occupants or users. Essential features include but are not limited to entrances, toilet rooms, and accessible routes. Essential features do not include those spaces that house the major activities for which the building or facility is intended, such as classrooms and offices.

"Exception" means a special provision in this part or in a standard which indicates an acceptable alternative, under specified circumstances, to a requirement stated directly above the exception.

"Executive Director" means the Executive Director of the ATBCB.

"Extraordinary repair" means the replacement or renewal of any element of an existing building or facility for purposes other than normal maintenance.

"Full and fair cash value" is calculated for the estimated date on which work will commence on a project and means—

(1) The assessed valuation of a building or facility as recorded in the assessor's office of the municipality and as equalized at one hundred percent (100%) valuation; or

Note.—The one hundred percent (100%) equalized assessed value shall be based upon the state's most recent determination of the particular city's or town's assessment ratio. Example: Town X has an assessment ratio of forty percent (40%), and the particular building in question is assessed at $200,000.00. To determine the equalized assessed value of this building, divide $200,000.00 by .40, and the equalized assessed value equals $500,000.00.

(2) The replacement cost; or

(3) The fair market value.

"Guidelines, and requirements" means this part.

"Operable part" means a part of equipment or an appliance used to insert or withdraw objects, to activate or deactivate equipment, or to adjust the equipment (*e.g.*, coin slot, push button, handle).

"Physically handicapped person" means any person who has a disability which substantially limits one or more major life activity, including but not limited to such functions as performing manual tasks, walking, seeing, hearing, speaking, breathing, learning, and working.

"Power-assisted door" means a door—

(1) Used for human passage; and

(2) With a mechanism that helps to open the door, or relieve the opening resistance of a door, upon the activation of a switch or a continued force applied to the door itself.

"Ramp" means a walking surface that has a running slope greater than 1:20.

"Running slope" means the slope that is parallel to the direction of travel (see "cross slope").

"Section 502 of the Rehabilitation Act" or "Section 502" means Section 502 of the Rehabilitation Act of 1973, Pub. L. 93-112, 29 U.S.C. 792, as amended.

"Shall" denotes a mandatory requirement.

"Signage" means the display of written, symbolic, tactile, or pictorial information.

"Site" means a parcel of land bounded by a property line or a designated portion of a public right-of-way.

"Site improvements" means landscaping, paving for pedestrian and vehicular ways, outdoor lighting, recreational facilities, and similar site additions.

"Space" means a definable area, *e.g.*, toilet room, hall, assembly area, parking area, entrance, storage room, alcove, courtyard, or lobby.

"Standard" means any standard for accessibility issued under the Architectural Barriers Act.

"Standard-setting agency" means one of the four agencies required to issue standards under the Architectural Barriers Act, *i.e.*, the General Services Administration, the Department of Housing and Urban Development, the Department of Defense, and the United States Postal Service.

"Structural impracticability" means having little likelihood of being accomplished without removing or altering a load-bearing structural member at an increased cost of 50 percent or more of the value of the element of the building or facility involved.

"Tactile" means perceptible through the sense of touch.

"Tactile warning" means a surface texture applied to or built into walking surfaces or other elements to warn visually impaired persons of hazards in the path of travel.

"Walk" means an exterior pathway or space with a prepared surface intended for pedestrian use and having a slope of 1:20 or less. It includes general pedestrian areas such as plazas and courts.

§ 1190.4 Issuance of Architectural Barriers Act standards by standard-setting agencies.

(a) These guidelines and requirements are the minimum requirements for standards issued under the Architectural Barriers Act by the Administrator of General Services, Secretary of Housing and Urban Development, Secretary of Defense, and Postmaster General.

(b) Standards which conform to or exceed the provisions of the guidelines shall be deemed in compliance with the guidelines and requirements.

(c) Each standard-setting agency is encouraged to issue standards which follow the format of these guidelines and requirements. However, standards which differ in format from these guidelines and requirements but are otherwise consistent with the guidelines and requirements shall be deemed in compliance with these guidelines and requirements.

§ 1190.5 Guidelines: Other uses.

The guidelines and requirements may be used by other governmental and nongovernmental entities to make buildings and facilities accessible to, and usable by, physically handicapped persons.

§ 1190.6 Interpretation of guidelines.

(a) These guidelines and requirements shall be liberally construed to carry out the purposes and provisions of the Architectural Barriers Act and Section 502 of the Rehabilitation Act.

(b) Words importing the singular number may extend and be applied to the plural and vice versa. However, unless otherwise specified in the guidelines and requirements, each element or space of a particular building or facility shall comply with the guidelines and requirements.

(c) Use of the imperative mood, *e.g.*, "provide," means the provision is mandatory. This form is being used to avoid wordiness and monotony but means the same as if the word "shall" had been included.

(d) The provisions in the minimum guidelines and requirements are based upon adult dimensions and anthropometrics.

(e) Dimensions that are not marked "minimum" or "maximum" are absolute,

unless otherwise indicated in the text or captions. All dimensions are subject to conventional building tolerances for field conditions.

§ 1190.7 Effect of State or local law.

The obligation to comply with this part is not affected by any State or local law.

§ 1190.8 Site conditions. [Reserved]

§ 1190.9 Severability.

If any section, subsection, paragraph, sentence, clause, or phrase of these guidelines and requirements is declared invalid for any reason, the remaining portions of these guidelines and requirements that are severable from the invalid part shall remain in full force and effect. If a part of these guidelines and requirements is invalid in one or more of its applications, the part shall remain in effect in all valid applications that are severable from the invalid applications.

Subpart B [Reserved]

Subpart C—Scope

§ 1190.30 Scope. [Reserved]

§ 1190.31 Accessible buildings and facilities: New construction.

Except as otherwise provided in Subpart E, all new construction of buildings and facilities shall comply with the following minimum requirements:

(a) *Accessible route.* At least one accessible route shall comply with § 1190.50, Walks, floors, and accessible routes, and shall connect an accessible building entrance with:

(1) Transportation facilities located within the property line of a given site, including passenger loading zones, public transportation facilities, taxi stands, and parking;

(2) Public streets and sidewalks;

(3) Other accessible buildings, facilities, elements, and spaces that are on the same site; and

(4) All accessible spaces, rooms, and elements within the building or facility.

(b) *Parking and passenger loading zones.* If any parking is provided, for employees or visitors, or both, each such parking area shall comply with § 1190.60, Parking and passenger loading zones, and the following table:

Total parking in lot	Required minimum number of accessible spaces
1 to 25	1
26 to 50	2
51 to 75	3
76 to 100	4
101 to 150	5
151 to 200	6
201 to 300	7
301 to 400	8
401 to 500	9
501 to 1000	(1)
Over 1000	(2)

(1) 2 percent of total.
(2) 20 plus 1 for each 100 over 1000.

(1) EXCEPTION: The total number of accessible parking spaces may be distributed among parking lots, if greater accessibility is achieved.

(2) EXCEPTION: This paragraph does not apply to parking provided for official government vehicles owned or leased by the government and used exclusively for government purposes.

If passenger loading zones are provided, at least one passenger loading zone shall comply with § 1190.60, Parking and passenger loading zones. Parking spaces for side lift vans, § 1190.60(c)(2)(a), are accessible parking spaces and may be used to meet the requirements of this paragraph.

(c) *Ramps and curb ramps.* If there is an abrupt level or grade change, if the slope is greater than 1:20, and if no other means of accessible vertical access is provided, a ramp or curb ramp shall be provided. If a ramp or curb ramp is provided, it shall comply with § 1190.70, Ramps and curb ramps.

(d) *Stairs.* Except as provided in paragraph 1190.31(f)(1), stairs connecting levels that are not connected by an elevator shall comply with § 1190.80, Stairs.

(e) *Handrails.* Handrails shall be provided at each ramp and staircase as required in § 1190.70, Ramps and curb ramps, and § 1190.80, Stairs, respectively, and shall comply with § 1190.90, Handrails.

(f) *Elevators.* One passenger elevator complying with § 1190.100, Elevators shall serve each level in all multi-story buildings and facilities. If more than one elevator is provided, each elevator shall comply with § 1190.100, Elevators.

(1) *Exception.* Elevator pits, elevator penthouses, mechanical rooms, piping, or equipment catwalks are excepted from this requirement.

(2) *Exception.* Ramps or platform lifts complying with § 1190.70, Ramps and curb ramps, and § 1190.110, Platform lifts, respectively, may be used in lieu of an elevator.

(g) *Platform lifts.* If the slope is greater than 1:20, and if no other means of accessible vertical access is provided, a platform lift may be provided if there is an abrupt level or grade change. If a platform lift is provided, it shall comply with § 1190.110, Platform lifts.

(h) *Entrances.* At least one entrance to a building or facility shall comply with § 1190.120 Entrances. When a building or facility has entrances which normally serve any of the following functions: transportation facilities; passenger loading zones; parking facilities; taxi stands; public streets and sidewalks; accessible interior vertical access, then at least one of the entrances serving each such functions shall comply with § 1190.120, Entrances. When a building or facility has entrances on more than one exposure, then at least one entrance for each exposure shall comply with § 1190.120, Entrances, unless site conditions preclude accessibility.

(i) *Doors.* (1) At each accessible entrance to a building or facility, at least one door shall comply with § 1190.130, Doors.

(2) For each space within a building or facility, at least one door at each accessible entrance to the accessible space shall comply with § 1190.130, Doors.

(3) Each door required by § 1190.50(h), Egress, shall comply with § 1190.130, Doors.

(4) Each door that is an element of an accessible route shall comply with § 1190.130, Doors.

(j) *Windows.* [Reserved]

(k) *Toilet and bathing facilities.* Each toilet and bathing facility provided shall comply with § 1190.150, Toilet and bathing facilities, and in each such facility where any of the fixtures and accessories specified in § 1190.150 (b) and (c) are provided, at least one accessible fixture and accessory of each type provided shall comply with § 1190.150 (b) and (c). For special use situations, refer to Subpart E, Special Building or Facility Types or Elements.

(l) *Drinking fountains and water coolers.* If drinking fountains or water coolers are provided, approximately 50% of those provided on each floor shall comply with § 1190.160, Drinking fountains and water coolers, and shall be dispersed throughout the floor. If only one drinking fountain or water cooler is provided on any floor, it shall have two levels and the lower level shall comply with § 1190.160.

(m) *Controls and operating mechanisms.* If controls and operating mechanisms are provided, each shall comply with § 1190.170, Controls and operating mechanisms.

(n) *Alarms.* If alarm systems are provided, each shall comply with § 1190.180, Alarms.

(o) *Tactile warnings.* Tactile warnings complying with § 1190.130(g), Doors to hazardous areas, shall be provided on the hardware of all doors that lead to hazardous areas. Tactile warnings shall not be used at emergency exist doors.

(p) *Signage.* (1) The international symbol of accessibility shall comply with paragraph 1190.200(e), Symbol of accessibility, and shall be used at the following locations:

(i) Parking spaces designated as reserved for the physically handicapped;

(ii) Passenger loading zones;

(iii) Accessible entrances;

(iv) Accessible toilet and bathing facilities.

(2) Informational signing, if provided, shall comply with § 1190.200.

(q) *Telephones.* At each location where public telephones are provided, each telephone shall comply with § 1190.210, Telephones. If public telephones are provided in a building or facility, then a reasonable number but always at least one shall be equipped with a volume control.

(r) *Seating, tables, and work surfaces.* If fixed seating, tables, and work surfaces are provided, at least 5 percent of each element shall comply with § 1190.220, Seating, tables, and work surfaces.

(s) *Assembly areas.* If assembly areas are provided, accessible viewing positions shall comply with § 1190.230, Assembly areas, and the following table:

Capacity of assembly	Number of viewing positions
1 to 25	1
26 to 50	2
51 to 75	3
76 to 100	4
101 to 150	5
151 to 200	6
201 to 300	7
301 to 400	8
401 to 500	9
501 to 1000	(1)
Over 1000	(2)

[1] 2 percent of total.
[2] 20 plus 1 for each 100 over 1000.

(t) *Storage.* If storage facilities such as cabinets, shelves, closets and drawers are provided in accessible spaces for occupant use, at least one storage facility of each type provided shall comply with § 1190.240, Storage.

§ 1190.32 Accessible buildings and facilities: Additions.

Each addition to an existing building or facility shall comply with § 1190.31, New construction, except as follows:

(a) *Entrances.* If a new addition to a building or facility does not have an entrance, then at least one entrance in the existing building or facility shall comply with § 1190.120, Entrances.

(b) *Accessible route.* If the only accessible entrance to the addition is located in the existing building or facility, then at least one accessible route shall comply with § 1190.50, Walks, floors, and accessible routes, and shall provide access through the existing building or facility to all rooms, elements, and spaces in the new addition.

(c) *Toilet and bathing facilities.* If there are no toilet rooms and bathing facilities in the addition and these facilities are provided in the existing building, then at least one toilet and bathing facility in the existing building shall comply with § 1190.150, Toilet and bathing facilities.

(d) *Elements, spaces, and common areas.* If elements, spaces, or common areas are located in the existing building and they are not provided in the addition, consideration should be given to making those elements, spaces, and common areas accessible in the existing building.

§ 1190.33 Accessible buildings and facilities: Alterations.

(a) *General.* Alterations to existing buildings or facilities shall comply with the following:

(1) If existing elements, spaces, essential features, or common areas are altered, then each such altered element, space, feature, or area shall comply with the applicable provisions of § 1190.31, Accessible buildings and facilities: New construction.

(2) If power-driven vertical access equipment (*e.g.*, escalator) is planned or installed where none existed previously, or if new stairs (other than stairs installed to meet emergency exit requirements) requiring major structural changes are planned or installed where none existed previously, then a means of accessible vertical access shall be provided that complies with § 1190.70, Ramps and curb ramps; § 1190.100, Elevators; or § 1190.110, Platform lifts.

(3) If alterations of single elements, when considered together, amount to an alteration of a space of a building or facility, the entire space shall be made accessible.

(4) Signage. If an existing building contains some but not all accessible elements and spaces, informational signage complying with § 1190.200, Signage, directing the user to accessible facilities shall be placed at each accessible entrance. Each inaccessible entrance and each inaccessible toilet room shall have signage directing the user to the accessible entrance(s) or toilet room(s).

(b) *Alterations involving more than 50% of the full and fair cash value.* If the total cost of all alterations (including but not limited to electrical, mechanical, plumbing and structural changes) for a building or facility within any twelve (12) month period is 50% or more of the building's full and fair cash value (as defined by § 1190.3), then each element or space that is altered or added shall comply with the applicable provisions of § 1190.31, Accessible buildings and facilities: New construction; and the altered building shall contain:

(1) At least one accessible route complying with § 1190.50, Walks, floors, and accessible routes, and § 1190.33(a);

(2) At least one accessible entrance complying with § 1190.120, Entrances. If additional accessible entrances are altered, then they shall comply with § 1190.33(a)(1); and

(3) The following toilet facilities, whichever number is greater:

(i) At least one toilet facility for each sex in the altered building complying with § 1190.150, Toilet and bathing facilities;

(ii) At least one toilet facility for each sex on each substantially altered floor, where such facilities are provided, complying with § 1190.150, Toilet and bathing facilities.

(4) *Exception.* If the cost of the elements and spaces required by § 1190.33(b)(1), (2), and (3) exceeds 15% of the total cost of all other alterations, then a schedule may be established by the standard-setting and/or funding agency to provide the required improvement within a 5 year period.

(5) *Exception.* If the alteration is limited solely to the electrical, mechanical, or plumbing system and does not involve the alteration of any elements and spaces required to be accessible under this Part 1190 the § 1190.33(b) does not apply.

(6) *Exception.* Consideration shall be given to providing accessible elements and spaces in each altered building or facility complying with:

(i) Section 1190.60, Parking and Passenger Loading Zones;

(ii) Section 1190.160, Drinking fountains and Water Coolers;

(iii) Section 1190.180, Alarms;

(iv) Section 1190.210, Telephones;

(v) Section 1190.220, Seating Tables and Work Surfaces;

(vi) Section 1190.230, Assembly Areas;

(vii) Section 1190.240, Storage.

§ 1190.34 Accessible buildings and facilities: Leased.

(a) Buildings or facilities or portions thereof leased by the Federal government shall comply with the requirements of § 1190.31, New

construction, § 1190.32, Additions, and § 1190.33, Alterations.

(b) If no fully accessible space is available, space may be leased only if the following conditions are met:

(1) At least one accessible route is provided from an accessible entrance complying with § 1190.120, Entrances, to all leased portions of the building or facility and to each essential feature which serves that portion of the building or facility. The accessible route shall comply with the requirements of § 1190.50 Walks, floors, and accessible routes.

(2) Each essential feature of the portion of the building or facility to be leased is accessible and complies with the applicable sections.

(3) Common areas that are approved space needs of the occupant agency serving the portions of the building or facility to be leased are accessible and comply with the applicable section.

(c) *Exception.* If no space complying with paragraph (a) or (b) of this section is available, space as available may be leased, provided—

(1) The leasing authority certifies that space is unavailable due to remoteness of the area or that the lease is necessary for officials servicing natural or human-made disasters; and

(2) The ATBCB is provided a listing of instances in which this exception is applied as part of the semi-annual report to Congress.

(d) Any other deviation from the requirements of § 1190.34 shall be made only through the waiver or modification process.

Subpart D—Technical Provisions

§ 1190.40 Human data.

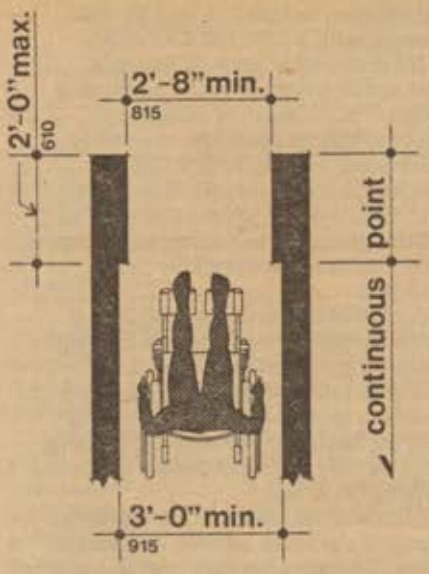
(a) *General.* This section is the basis for clearances and equipment location required by other sections.

(b) *Moving wheelchair clearances.* Provide the clearances for moving wheelchairs as follows:

(1) Minimum clear width for passage of a single wheelchair is 3'0" (915 mm) (fig. 4.1).

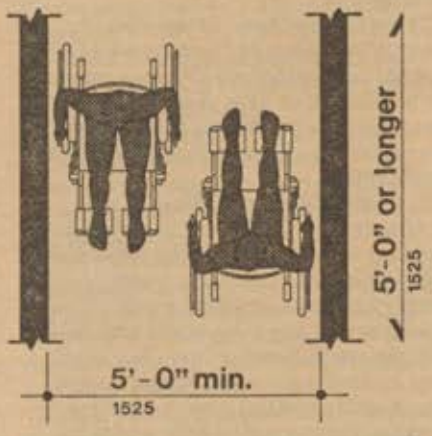
(i) *Exception.* The clear width may be reduced to 2'8" (815 mm) for a distance not to exceed 2'0" (610 mm) in length at points such as doorways (fig. 4.1).

(ii) [Reserved].



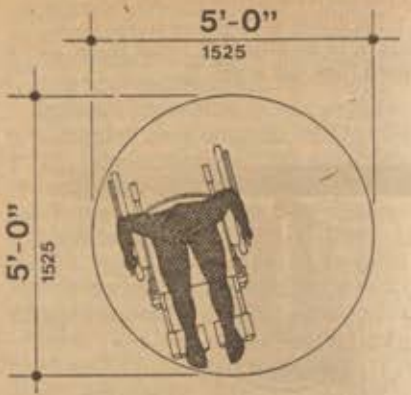
passage 4.1

(2) Minimum clear width for two wheelchairs to pass is 5'0" (1,525 mm) (fig. 4.2).

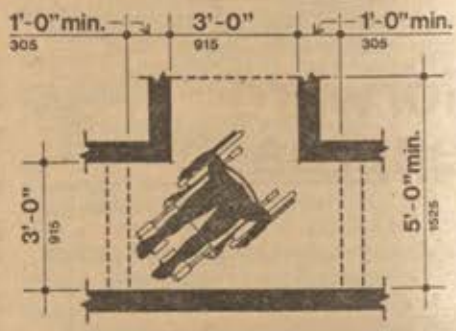


two-way 4.2

(3) Minimum clear space to make a 180 degree turn is 5'0" (1,525 mm) diameter (fig. 4.3) or a T-shaped space that complies with Figure 4.4.



180°/360° 4.3



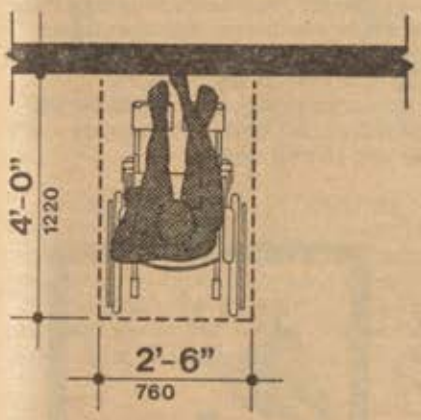
t-turn 4.4

(c) *Clear floor or ground space.* Provide the following clear floor or ground space to accommodate a single, stationary occupied wheelchair:

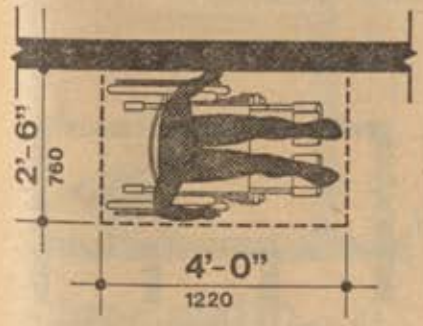
(1) Clear floor or ground space shall be a minimum of 2'6" by 4'0" (760 mm by 1,220 mm) (fig. 4.5).

clear floor or ground space 4.5

(2) Position clear floor or ground space for either forward or parallel approach to an object or element as required (figs. 4.6 and 4.7).



forward approach 4.6

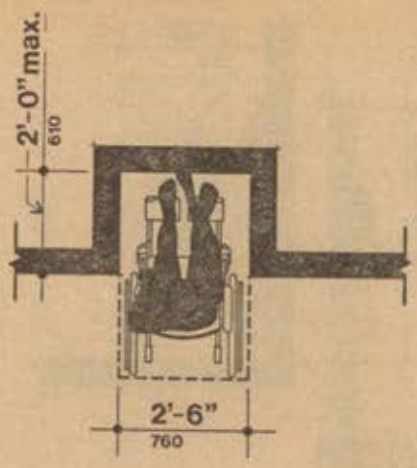


parallel approach 4.7

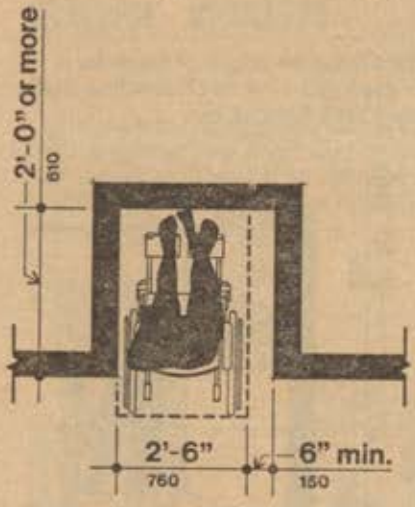
(3) Clear floor or ground space may overlap the clear space required under some objects.

(4) Clear floor or ground space shall adjoin or overlap an accessible route or another clear floor or ground space for at least one full, unobstructed side.

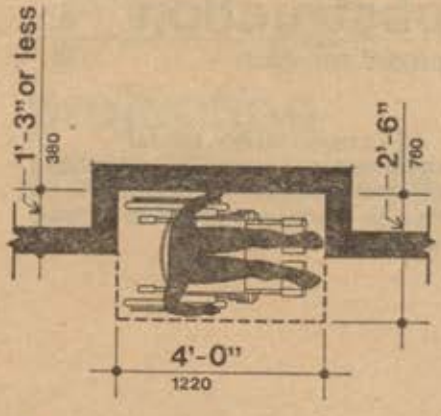
(5) If clear floor or ground space is confined or restricted on all or part of three sides, provide additional maneuvering space adjoining clear floor or ground space as shown in figures 4.8, 4.9, 4.10 and 4.11.



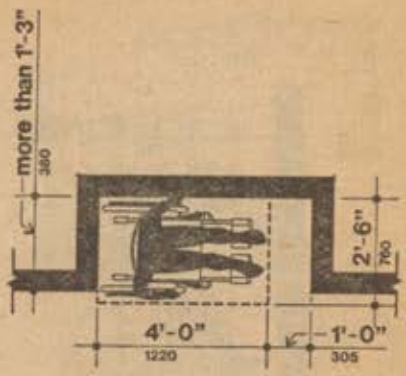
alcove 4.8



alcove 4.9



alcove 4.10



alcove 4.11

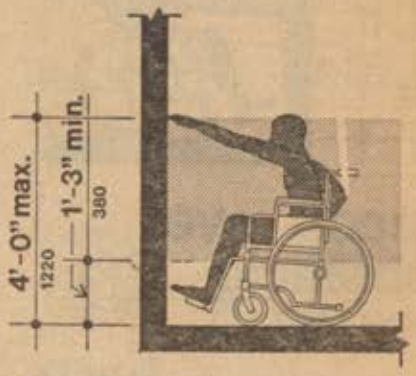
(6) Surfaces of clear floor or ground spaces shall comply with § 1190.50(i), walks, floors, and accessible routes.

(d) *Reach limitations.* Reach limitations are a function of approach in the clear floor or ground space:

(1) Forward reach:

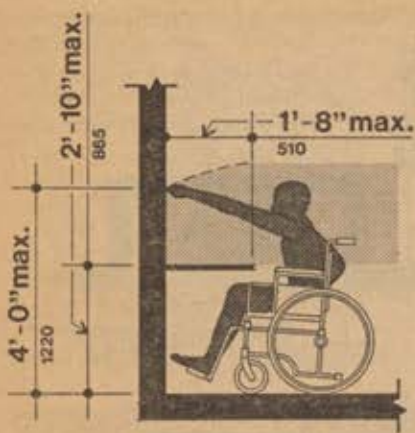
(i) Maximum height of reach for a forward approach shall be 4'0" (1,220 mm) (fig. 4.12).

(ii) Minimum height of reach for a forward approach shall be 1'3" (380 mm) (fig. 4.12).

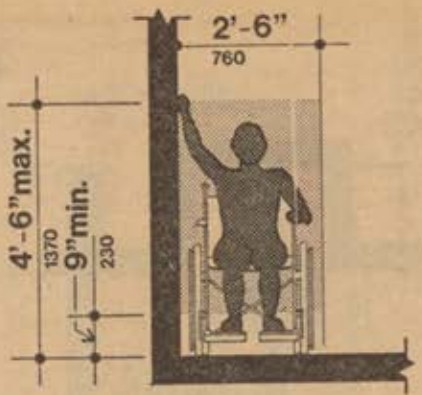


forward reach 4.12

(iii) Maximum height of reach for a forward approach over an obstruction shall comply with figures 4.13 and 4.14.

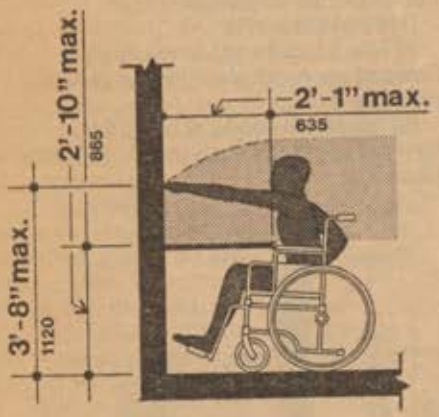


reach over obstacle
forward approach
4. 13

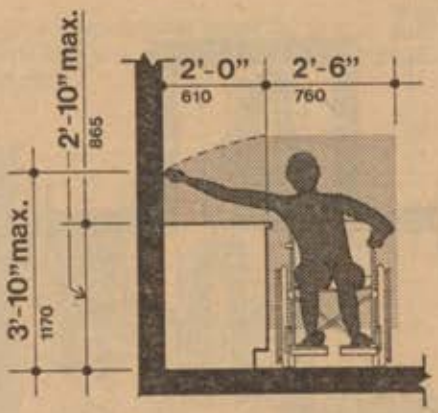


side reach
4. 15

(iii) Maximum height of reach for a side approach over an obstruction shall comply with figure 4.16.



reach over obstacle
forward approach
4. 14



reach over obstruction
parallel approach
4. 16

(2) Side reach (parallel approach):

(i) Maximum height of reach for a side approach shall be 4'6" (1,370 mm) (fig. 4.15).

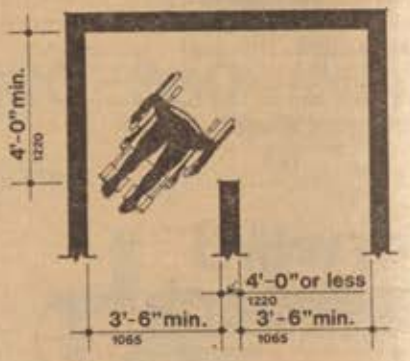
(ii) Minimum height of reach for a side approach shall be 9 inches (230 mm) (fig. 4.15).

(3) To be accessible, special equipment may require measurements different from those provided above and these measurements should be dictated by equipment design.

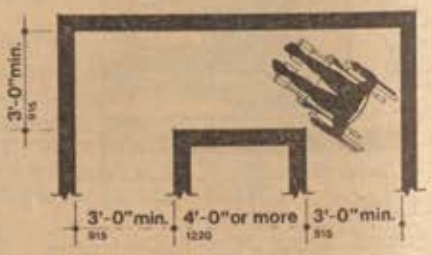
§ 1190.50 Walks, floors, and accessible routes.

(a) *General.* Accessible routes required by Subpart C—Scope shall comply with this section.

(b) *Width.* Provide the minimum clear width for continuous passage and for point passage required by § 1190.40(b)(1) (fig. 4.1). Provide maneuvering clearances as shown in figures 5.1 and 5.2 if the accessible route requires a turn around an obstruction.



turn
maneuvering clearances
5. 1



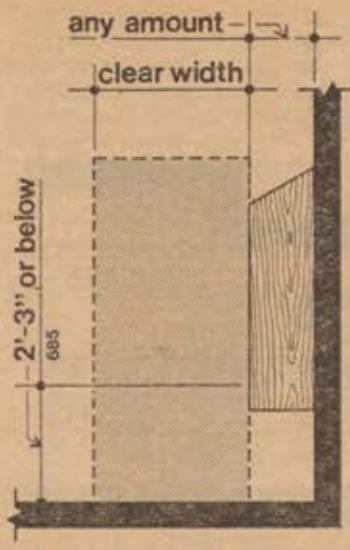
turn
maneuvering clearances
5. 2

(c) *Protruding objects.* No protruding object shall reduce the clear width of an accessible route or maneuvering space below the minimum required by § 1190.40(b)(1) (fig. 5.3).

clear width

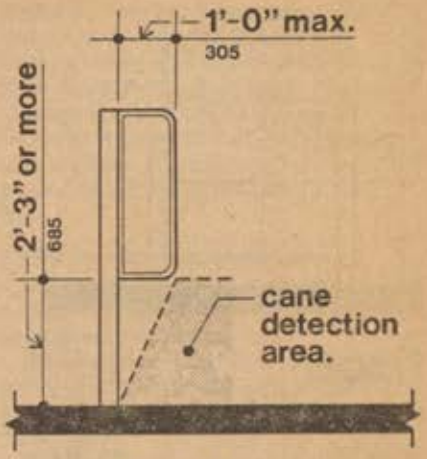
5. 3

(1) Objects less than 2'0" (610 mm) long that are fixed to wall surfaces shall not project into accessible routes more than 4 inches (100 mm) if mounted with their leading edges between 2'3" and 6'8" (685 mm and 2030 mm) (nominal dimension) above finish floor (fig. 5.4).



clear width

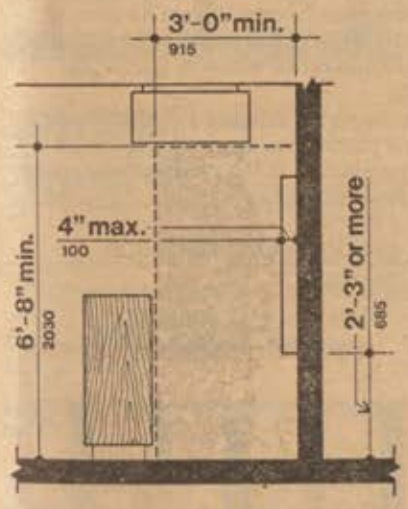
5. 5



projecting object

elevation

5. 7



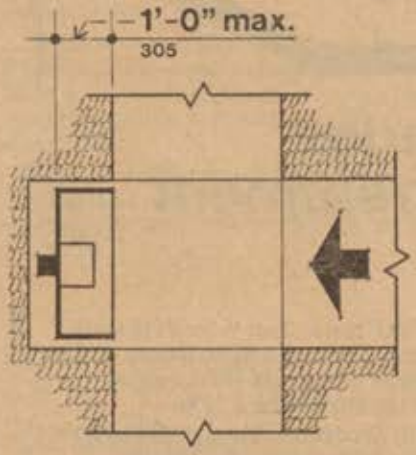
clear width

around object 24" long max.

5. 4

(2) Objects fixed to wall surfaces may project more than 4 inches (100 mm) if mounted with the lower extreme of their leading edge less than 2'3" (685 mm) above the finish floor. These objects shall not project into the required minimum clear width (fig. 5.5).

(3) Free standing objects mounted on posts or pylons may overhang 1'0" (305 mm) maximum from 2'3" to 6'8" (685 mm to 2030 mm) above ground or finished floor surface (figs. 5.6 and 5.7).

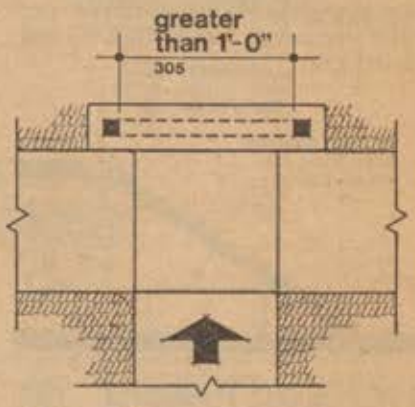


projecting object

plan view

5. 6

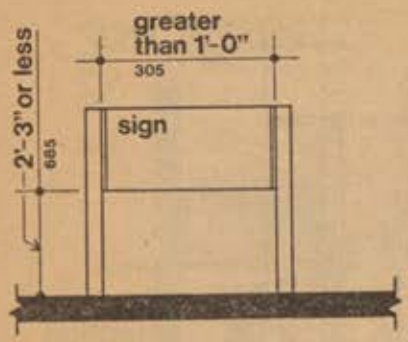
(4) Objects greater than 1'0" (305 mm) wide mounted with their leading edge less than 2'3" (685 mm) may protrude any distance (figs. 5.8 and 5.9).



fixed obstruction

plan view

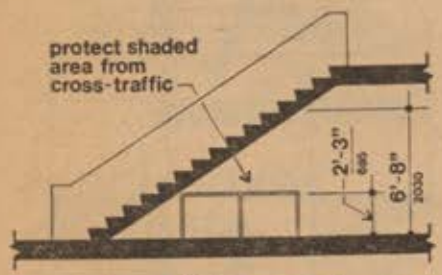
5. 8



fixed obstruction 5.9
elevation

(d) *Passing space.* If an accessible route has less than a 5'0" (1,525 mm) clear width, provide accessible passing spaces at intervals not exceeding 200 ft. (61 mm) unobstructed view. See figures 4.2 and 4.4 for examples of acceptable passing spaces.

(e) *Vertical clearance.* Provide a minimum vertical clearance (headroom) of 6'8" (2,030 mm) throughout accessible routes. If vertical clearance of area adjoining accessible route is reduced to less than 6'8", (nominal dimension) provide a barrier to warn blind or visually-impaired persons (figs. 5.4 and 5.9 and 5.10).

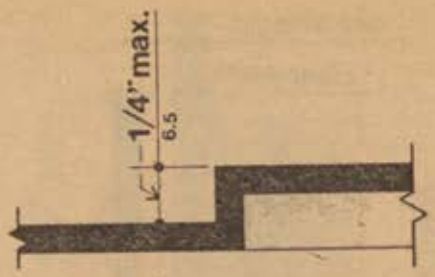


overhead hazard 5.10

(f) *Slope.* Accessible routes with running slopes of 1:20 or greater shall be considered ramps and shall comply with § 1190.70, Ramps and curb ramps. Cross-slopes on accessible routes shall not exceed 1:48 (¼ inch per foot).

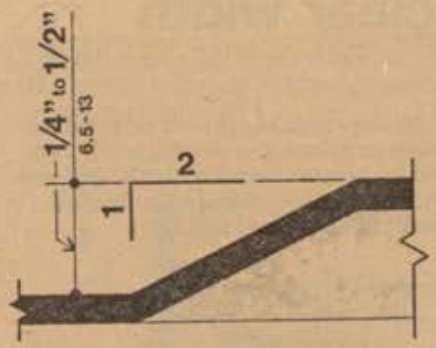
(g) *Changes in level.* All changes in level or grade in accessible routes shall comply with the following:

(1) Up to ¼ inch (6 mm): vertical without edge treatment (fig. 5.11).



edge treatment 5.11

(2) ¼ inch to ½ inch (6 mm to 13 mm): beveled with slope not exceeding 1:2 (fig. 5.12).



edge treatment 5.12

(3) Greater than ½ inch (13 mm): comply with § 1190.70, Ramps and curb ramps; § 1190.100, Elevators; or § 1190.110, Platform Lifts.

(i) *Exception.* Exterior sliding door thresholds may be ¾" (19 mm) maximum if beveled with slope not exceeding 1:2.

(ii) [Reserved]

(4) Stairs shall not be the sole means of vertical access along an accessible route.

(h) *Egress.* Arrange egress so as to be readily accessible from all accessible rooms and spaces. Where fire code provisions require more than one means of egress from any space or room, such means of accessible egress shall also be provided to handicapped persons.

(1) *Exception.* In multiple story buildings and facilities where at-grade egress from each floor is impossible, either of the following is permitted:

(i) The provision of approved fire and smoke partitions within each story creating horizontal exits; or

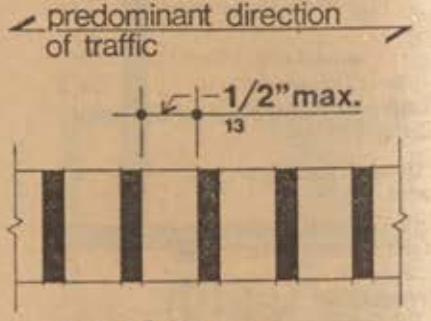
(ii) The provision of areas of refuge within each floor approved by agencies having authority for safety.

(2) [Reserved]

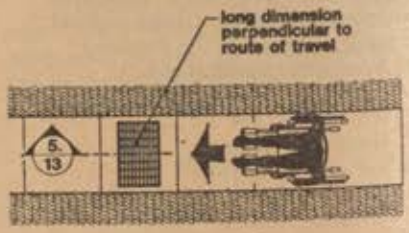
(i) *Ground and floor surfaces*—(1) *Surface Condition.* Surfaces of paving and floors shall be stable, firm, and slip-resistant. Irregular paving and flooring materials that may cause tripping or difficult wheelchair passage because of height differentials are not permitted on accessible routes.

(2) *Drainage.* Design accessible routes so that their surfaces will not collect water. Gratings located in accessible routes shall have openings no greater than ½ inch (13 mm) when measured in the dominant direction of travel (fig. 5.13).

Gratings with elongated openings shall be so placed that the long dimension is perpendicular to the predominant route of travel (fig. 5.14).



section: grating 5.13
detail of fig. 5.14



grating orientation 5.14

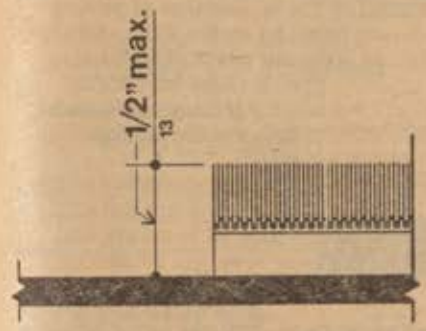
(3) Carpeting. If carpet or carpet tile is used on an accessible ground or floor surface, it shall:

(i) Be securely attached;

(ii) Have a firm cushion or pad or no cushion or pad;

(iii) Have a construction of level loop, textured loop, level cut pile, or level cut/uncut pile;

(iv) Have a maximum combined thickness of pile, cushion, and backing height of ½ inch (13 mm) (Fig. 5.15); and



carpet height 5.15

(v) Exposed edge(s) and trim shall be securely fastened in place and shall comply with paragraph 1190.50(g), Changes in level.

§ 1190.60 Parking and passenger loading zones.

(a) *General.* Parking and passenger loading zones required to be accessible by Subpart C—Scope shall comply with this section.

(b) *Location.* Accessible parking spaces and accessible passenger loading zones shall:

(1) Be the spaces or zones located closest to the nearest accessible entrance on an accessible route; and

(2) If located in a separate building or facility, be on the shortest accessible route to an accessible entrance of the parking facility.

(c) *Accessible parking spaces.* Provide accessible parking spaces (fig. 6.1) that:

(1) Are at least 8'0" (2,440 mm) wide,

(2) Have an adjacent access aisle at least 5'0" (1,525 mm) wide and shall comply with § 1190.50, Walks, floors, and accessible routes;

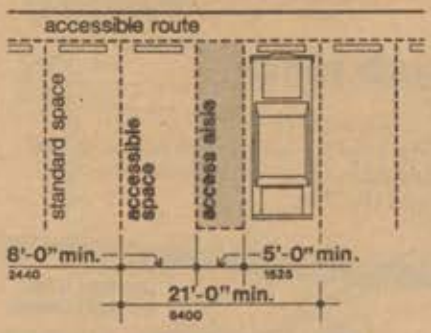
(i) *Exception.* If accessible parking spaces for side lift vans are provided, each shall have an adjacent access aisle at least 8'0" (2,440 mm) wide and shall comply with § 1190.50, Walks, Floors, and Accessible Routes.

(ii) [Reserved].

(3) May share a common access aisle between two parking spaces;

(4) Do not permit parked vehicle overhangs to reduce the clear width of accessible routes; and

(5) Have parking spaces and access aisles with surface slopes not exceeding 1:48 (¼ inch per foot) in all directions.



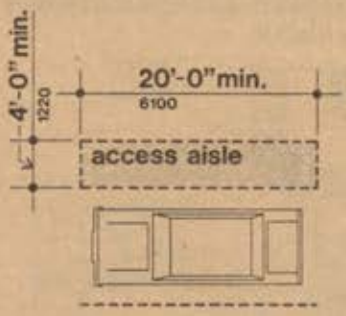
accessible parking 6.1

(d) *Passenger loading zones.* Provide accessible passenger loading zones that:

(1) Have an access aisle at least 4'0" (1,220 mm) wide by 20'0" (6 m) long adjacent, parallel, and level with the vehicle standing space,

(2) Have curb ramps conforming to § 1190.70, Ramps and curb ramps, if there are curbs between the access aisle and other portions of the accessible route; and

(3) Have vehicle standing spaces and access aisles with surface slopes not exceeding 1:48 (¼ inch per foot) in all directions (figure 6.2).



unloading zone 6.2

(e) *Vertical clearance.* Provide minimum vertical clearances of 9'6" (3.45 m) at accessible parking spaces, at accessible passenger loading zones, and along vehicle access routes to such areas from site entrances. (f) *Signage.* Signage reserving accessible parking spaces and identifying passenger loading zones and vehicle access routes shall comply with § 1190.200, Signage. Signage shall incorporate the International Symbol of Accessibility and shall not be obscured by a vehicle parked in the space (figures 20.1 and 20.2).

§ 1190.70 Ramps and curb ramps.

(a) *General.* Ramps and curb ramps required by Subpart C—Scope shall comply with this section.

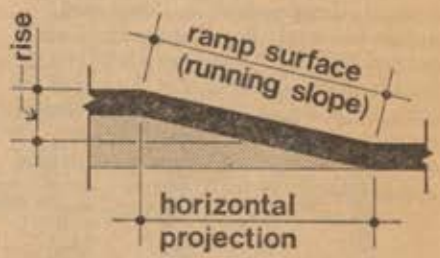
(b) *Slopes and rise.* Provide the least practical slope for any ramp or curb ramp subject to the following maximums:

(1) New Construction requirements:

(i) Maximum running slope shall not exceed 1:12 (8.3%) (fig. 7.1).

(ii) Maximum rise for any run shall not exceed 2'6" (760 mm) (fig. 7.2).

(iii) Maximum slopes of adjoining gutters, road surface, or accessible routes shall not exceed 1:20 and shall comply with § 1190.70(e)(8) (fig. 7.12).



ramp slope 7.1

slope	maximum rise		maximum projection	
	in	mm	ft	m
1:12 to < 1:16	30	760	30	9
1:16 to < 1:20	30	760	40	12
1:20	30	760	50	15

maximum rise & projection 7.2
new construction

(2) Existing construction requirements:

(i) If space limitations prevent compliance with paragraph 1190.70(b)(1), slopes and rises listed in figure 7.3 may be used.

(ii) [Reserved].

slope	maximum rise		maximum projection	
	in	mm	ft	m
1:10 to 1:8	3	75	2	0.6
1:12 to 1:10	6	150	5	1.5

maximum rise & projection

7.3

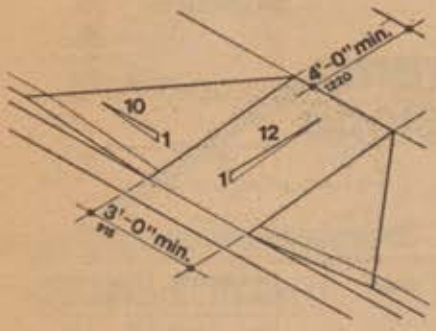
existing construction

(c) *Width.* Ramps and curb ramps shall have a minimum clear width of 3'0" (915 mm) exclusive of edge protection or flared sides.

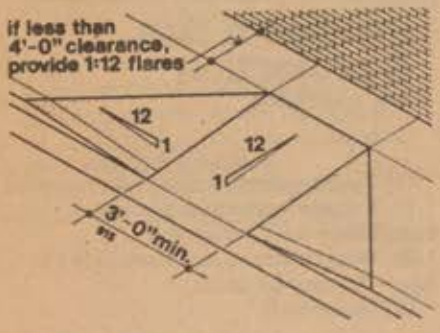
(d) *Cross-slope and surface.* Cross-slope of ramp surfaces shall not exceed 1:48 (¼ inch per foot). Ramp surfaces shall comply with § 1190.50, walks, floors, and accessible routes.

(e) *Curb ramps.* In addition to the requirements of paragraphs 1190.70(a), (b), and (c), curb ramps shall comply with the following requirements:

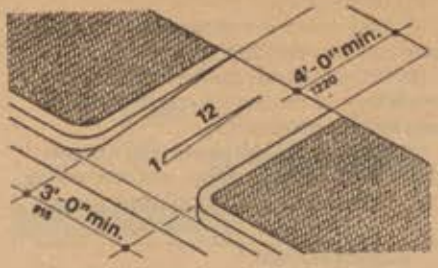
(1) Provide flared sides if ramps are located where pedestrians may walk across the ramp; flared slope shall not exceed 1:10 (fig. 7.4) where a 4'0" (1,220 mm) landing is provided at the top of the curb ramp. If less than 4'0" (1,220 mm) is provided, the flared slope shall not exceed 1:12 (fig. 7.5). Where pedestrians will not normally walk across a ramp, returned curbs may be used (fig. 7.6).



curb ramp 7.4

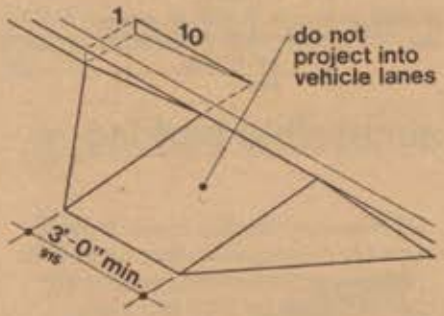


curb ramp 7.5



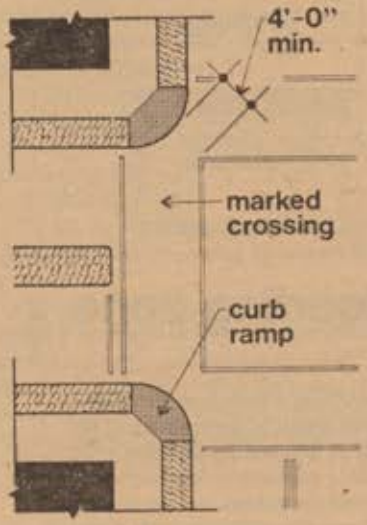
curb ramp 7.6

(2) Locate built-up curb ramps so that they do not project into vehicular traffic lanes (fig. 7.7).

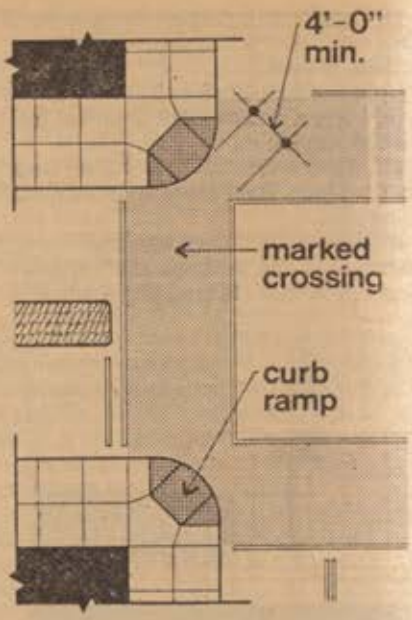


curb ramp 7.7

(3) Diagonal or corner type curb ramps having returned curbs or well defined edges, shall have such edges parallel to the direction of pedestrian flow (fig. 7.8). Diagonal or corner type curb ramps having flared sides shall have at least a 2'0" (610 mm) long segment of straight curb located on each side of the curb ramp and within marked crossings (fig. 7.9).



crossing 7.8

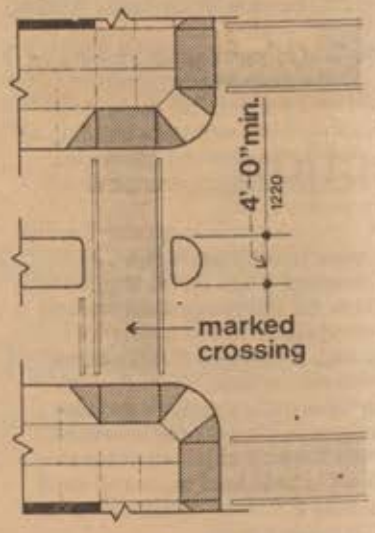


crossing 7.9

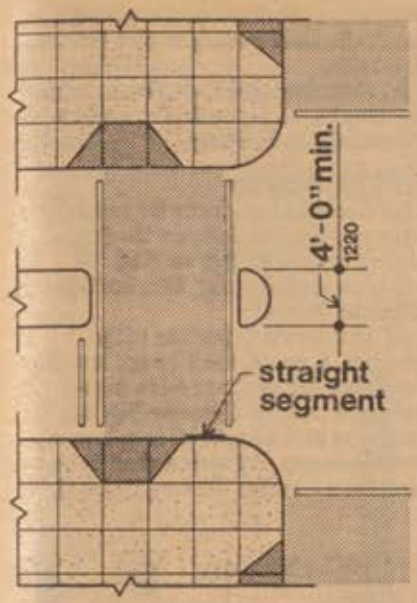
(4) Curb ramp discharge (top and bottom) shall be to a 4'0" (1,220 mm) minimum deep clear space (figs. 7.4 and 7.5). If the marked crossings are provided, locate bottom discharge entirely within marked crossings (figs. 7.8 and 7.9).

(5) Locate curb ramps to prevent blockage of discharge areas by parked vehicles.

(6) Cut any islands through flush with street surfaces or ramp each side to permit crossing. Provide 4'0" (1,220 mm) long rest area (see figs. 7.10 and 7.11).



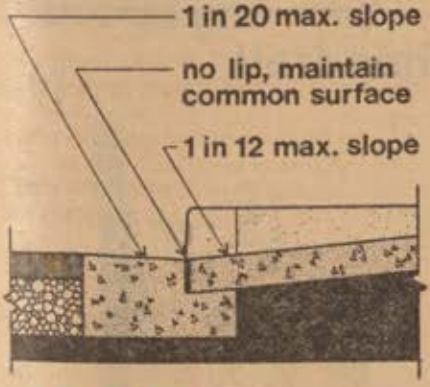
crossing 7.10



crossing 7.11

(7) Curb ramps having less than a 6-inch (150 mm) rise do not require handrails.

(8) Transitions from ramps to walks, gutters, or streets shall be flush and free of abrupt changes (fig. 7.12).



section 7.12

(f) *Ramps.* In addition to the requirements of § 1190.70(a), (b), (c) and (d) provide the following at all ramps:

(1) Provide landings at the top, bottom, and at changes of direction. If ramp runs exceed maximum projection given in figures 7.2 and 7.3, provide intermediate landings. Landings shall:

(i) Have a width which shall be at least as wide as the widest ramp run approaching it.

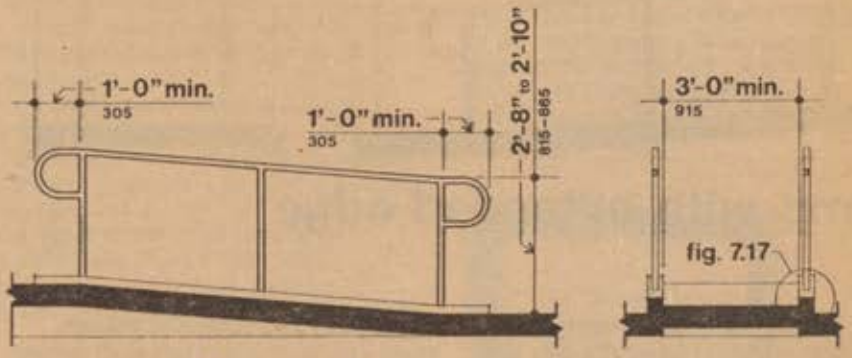
(ii) Have a minimum length of 5'0" (1,525 mm).

(iii) Have a minimum size at direction changes that is 5'0" by 5'0" (1,525 mm by 1,525 mm).

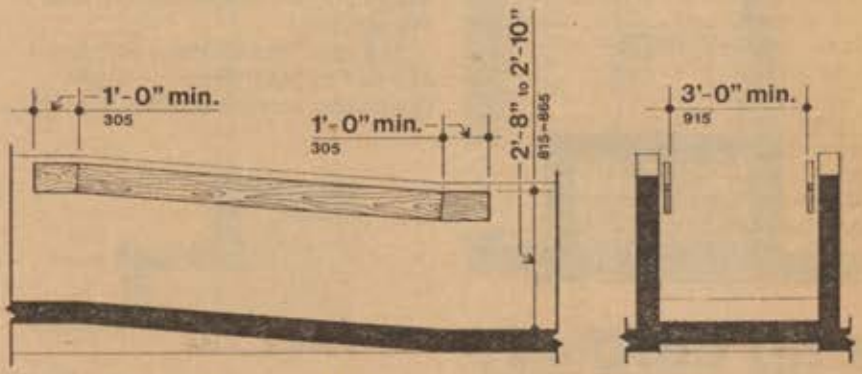
(iv) Shall comply with § 1190.130.

doors, if doors open into them.

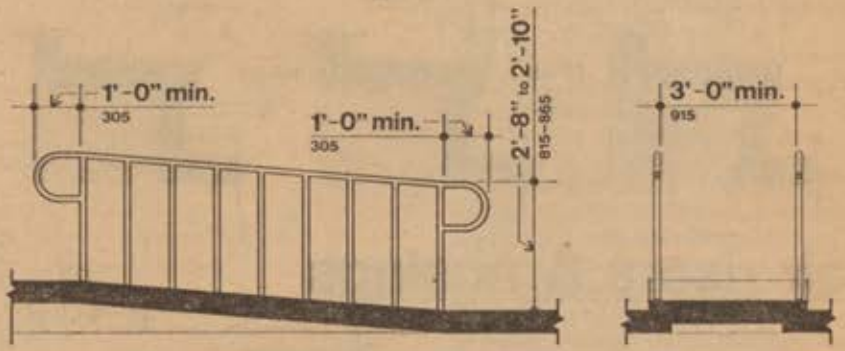
(2) Provide handrails that comply with § 1190.90, handrails, on both sides of any ramp run exceeding a 6-inch (150 mm) rise or a 6'0" (1,830 mm) horizontal projection (figs. 7.13, 7.14, 7.15, and 7.16).



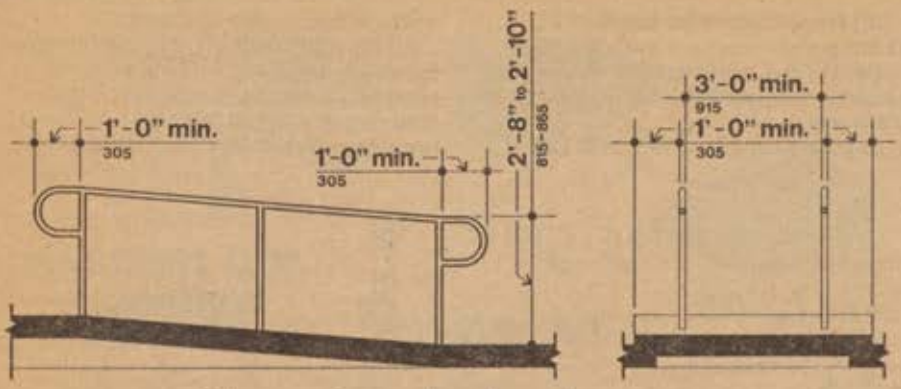
ramp with curb 7.13



ramp with wall 7.14

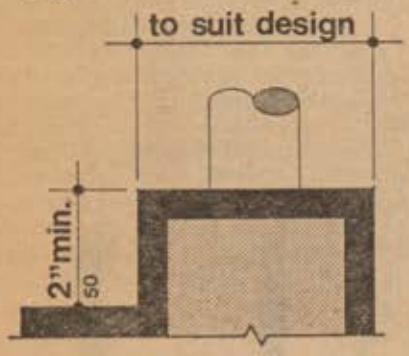


ramp with vertical guard 7.15



ramp with extended edge 7. 16

(3) Provide curbs, walls, vertical guards or projected edges at ramps and landings with drop-offs. Minimum curb height shall be 2 inches (50 mm) (fig. 7.17).



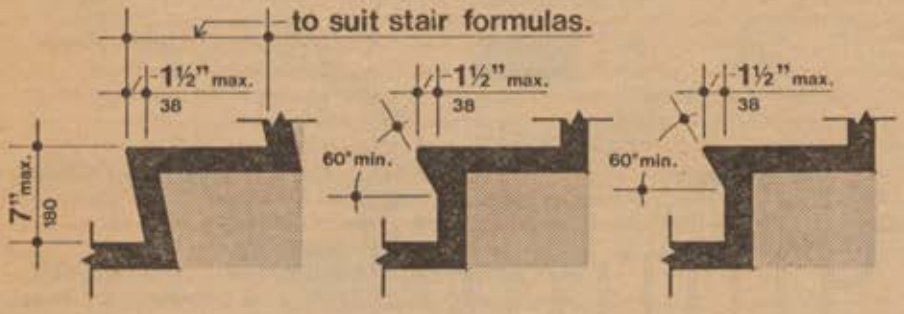
ramp curb 7. 17

(g) *Exterior conditon.* Curb ramps, ramp, and landing surfaces shall comply with paragraph 1190.50(i)(2), drainage.

§ 1190.80 Stairs.

(a) *General.* Stairs required by Subpart C—Scope shall comply with this section.

(b) *Risers.* Provide risers that do not exceed 7 inches (180 mm) in height. Open risers are not permitted (fig. 8.1).



stair risers & nosings 8. 1

(c) *Nosings.* Nosings shall:

(1) Project a maximum of 1½ inches (38 mm);

(2) Have a leading edge with a maximum radius of curvature of ½ inches (13 mm); and

(3) Be formed by risers that are sloped, or shall have undersides of the nosings which form an angle not less than 60 degrees from the horizontal (fig. 8.1).

(d) *Handrails.* Provide continuous handrails at both sides of stairways. Handrails shall comply with § 1190.90, Handrails.

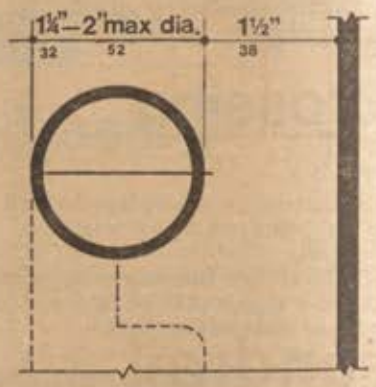
(e) *Exterior conditions.* Stair treads and landing surfaces shall comply with § 1190.50(i)(2), Drainage.

§ 1190.90 Handrails.

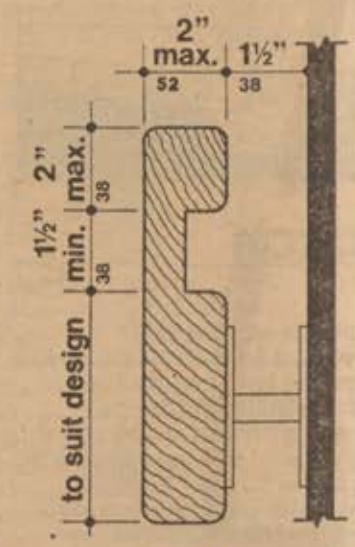
(a) *General.* Handrails for ramps or stairs required by Subpart C—Scope shall comply with this section.

(b) *Size and spacing.* Size and spacing of handrails shall:

(1) The handgrip portion of the handrail, if round, shall be not less than 1¼ inches (32 mm) nor more than 2 inches (50 mm) in diameter (fig. 9.1). If the shape of the handrail is not round, then the larger dimension shall be not more than 2 inches (50 mm) (fig. 9.2).

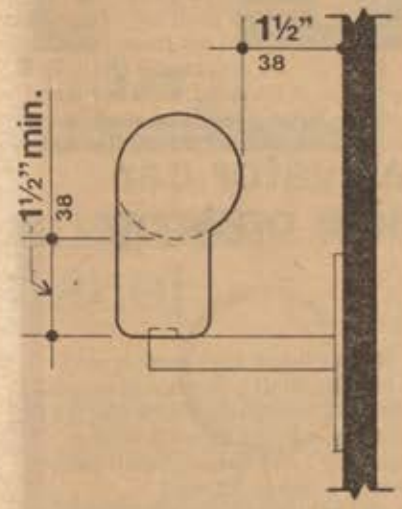


handrail 9. 1

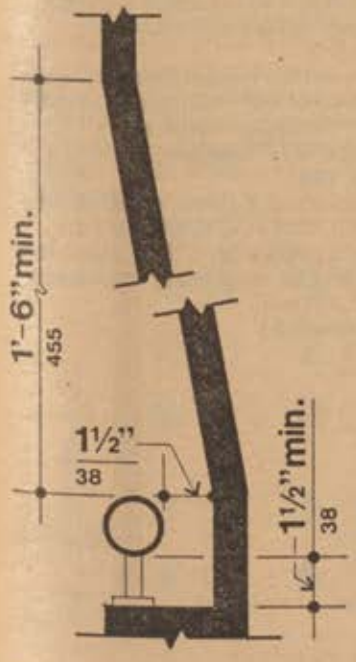


handrail 9. 2

(2) If handrails are mounted adjacent to walls or other surfaces, provide a 1½ inch (38 mm) (minimum/maximum) clear space between the surface and the handrail (figs. 9.1, 9.2, 9.3, and 9.4). The handrail and the surfaces adjacent to the handrail shall be free of any sharp or abrasive elements. Edges shall have minimum radius of ⅛ inch (3 mm). Freestanding rails located farther than 6 inches (150 mm) from wall or other vertical surfaces are not subject to this provision.



handrail 9.3



handrail 9.4

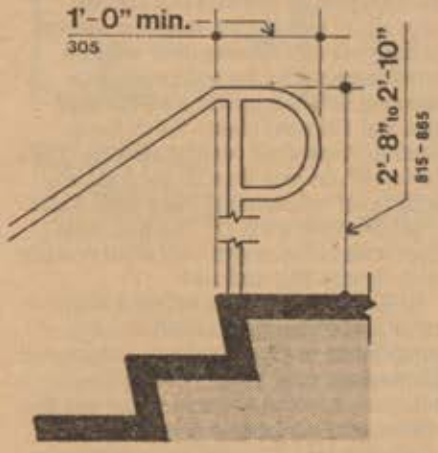
(3) Handrails may be mounted in recesses if the recesses comply with figure 9.4.

(4) On switchbacks or dogleg ramps or stairs, inside handrails shall be continuous.

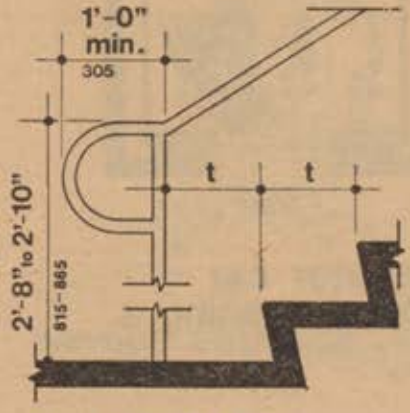
(c) *Handrail projections.* (1) If outside handrails are not continuous, then:

(i) At a ramp landing, handrails shall project parallel with ramp or landing surface for a length of 1'0" (305 mm) beyond the top and bottom of ramp surfaces (figs. 7.13, 7.14, 7.15, and 7.16).

(ii) At a stair landing, handrails shall project at least 1'0" (305 mm) beyond the top riser and at least 1'0" (305 mm) plus the depth of one tread beyond the bottom riser. The 1'0" (305 mm) projection shall in each instance be parallel with the floor (figs. 9.5 and 9.6).



extension handrails 9.5

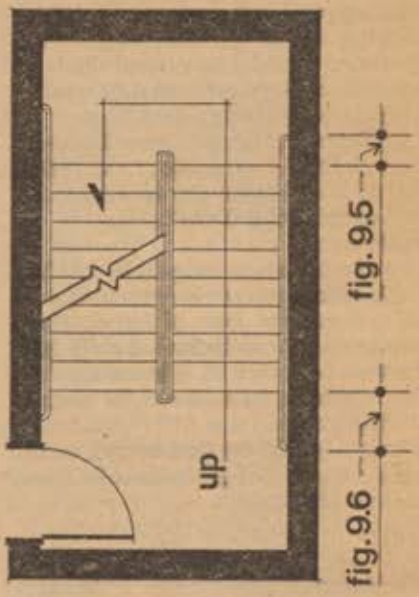


extension handrails 9.6

(iii) *Exception.* Full extension of handrails shall not be required in alterations where such extensions would be hazardous or impossible due to plan configurations.

(2) Gripping surfaces shall not be interrupted with newel posts, balusters, or other obstructions.

(d) *Mounting height.* Mount handrails for accessible stairs and ramps at a height of 2'8" to 2'10" (815 mm to 865 mm) above stair nosing(s) or ramp surface as applicable (see figs. 7.13, 7.14, 7.15, 7.16, 9.6, and 9.7).



stairway 9.7

(e) *Structural strengths.* Handrails, as installed, shall support a minimum momentary concentrated load applied at the top edge of 200 lbs. (91 kg) horizontally and 30 percent of that load vertically downward. Where the railing system is installed in public assembly occupancies, the loading shall be increased 50 percent.

Handrails shall not rotate within their fittings. Handrails of material other than metal shall meet the same structural requirements.

(f) *Hazards.* Ends of freestanding handrails shall be either rounded or returned smoothly to floor or post (see § 1190.50(c), Protruding objects.)

§ 1190.100 Elevators.

(a) *General.* (1) Elevators required by Subpart C—Scope shall comply with this section. For additional information see the *American National Standard Safety Code for Elevators.*

Dumbwaiters, Escalators and Moving Walks, A17.1, and see also National Elevator Industry, Inc. (NEII) *Suggested Minimum Elevator Requirements for the Handicapped.*

(2) Freight elevators shall not be considered as meeting the requirements of this section.

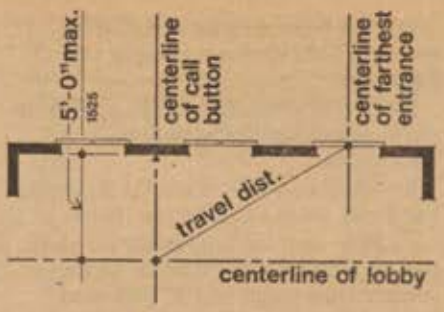
(b) *Operation and leveling.* Elevators shall be automatic and shall be provided with a self-leveling feature that will automatically bring the car to the floor landing within a tolerance of ½ inch (13 mm) under normal loading and unloading conditions. The self-leveling feature shall, within its zone, be entirely automatic and independent of the operating device and shall correct for overtravel or under-travel and shall maintain the car approximately level irrespective of loading conditions.

(c) *Elevator door operation.* Elevator doors shall be a minimum of 3'0" (915 mm) wide and automatic door controls shall comply with the following requirements:

(1) The minimum acceptable time from notification that a car is answering a hall call until the doors of that car start to close shall be as indicated in fig. 10.1. The travel distance shall be established from a point in the center of the corridor or lobby (maximum of 5'0" (1,525 mm)) directly opposite the farthest hall button to the centerline of the farthest hoistway entrance (fig. 10.2).

distance		time
ft	m	sec
0 to 5	1.5	5
10	3	7
15	4.5	10
20	6	13

door timing 10. 1



travel distance 10. 2

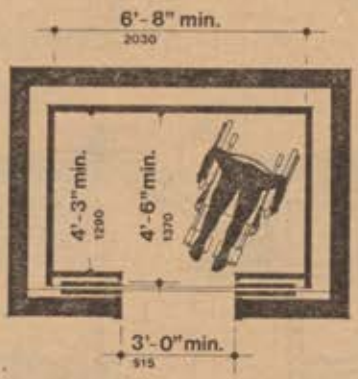
(2) Doors shall remain fully open for a minimum of 5 seconds.

(3) Provide doors with a reopening device which will function to stop and reopen the car door and adjacent hoistway door in case the car door is obstructed while the door is closing. This reopening device shall also be capable of sensing an object or person in the path of a closing door without requiring contact for activation at a nominal height 5 inches and 2'5" (125 mm and 735 mm) above finish floor. Such devices shall remain effective for a period of not less than 20 seconds. For additional information, see ANSI A17.1.

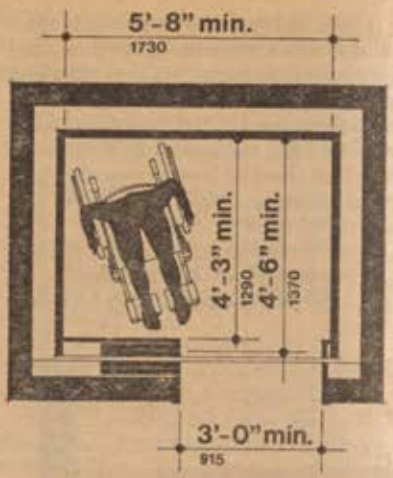
(d) *Elevator cars.* (1) The minimum floor areas of elevator cars shall comply with figures 10.3 and 10.4.

(i) *Exception.* Where existing shaft or structural elements prohibit strict compliance in alteration work, these dimensions may be reduced by the minimum amount necessary, but in no case shall they be less than 4'0" by 4'0" (1,220 mm by 1,220 mm) clear minimum car size.

(ii) [Reserved].



elevator car center opening 10. 3



elevator car side opening 10. 4

(2) Car floors shall comply with § 1190.50, Walks, floors and accessible routes. The clearance between the car platform sill and the edge of any hoistway landing shall be no greater than 1¼ inches (32 mm).

(3) Car controls shall be readily accessible from a wheelchair.

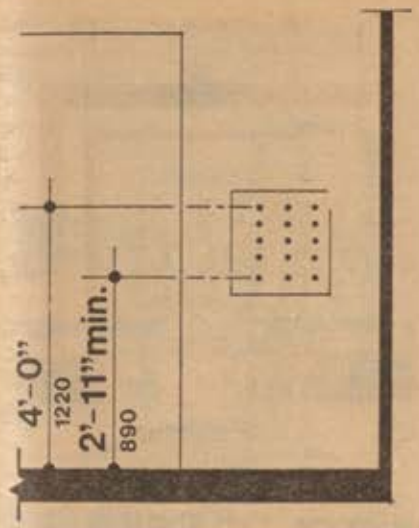
(i) Buttons, exclusive of border, shall have a minimum dimension of ¾ inch (19 mm) and shall be raised or flush with the operating panel.

(ii) Provide a visual signal indicating when each call is registered and answered.

(iii) Mount the highest floor buttons at a maximum of 4'0" (1,220 mm) above the floor and the lowest buttons at a minimum of 2'11" (890 mm) above the floor (fig. 10.5).

(A) *Exception.* If there is a substantial increase in cost as a result of the 4'0" (1,220 mm) requirement, the highest floor buttons may be mounted at a maximum of 4'6" (1,370 mm).

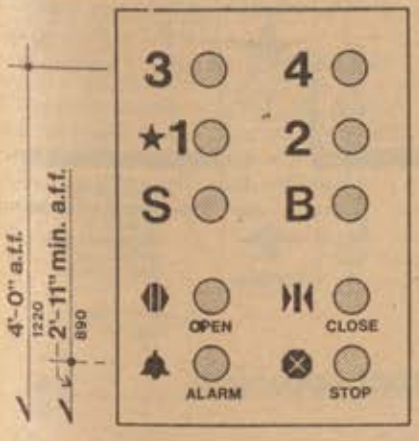
(B) [Reserved.]



control panel 10.5

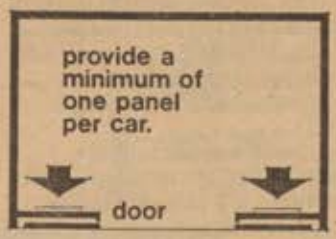
(iv) Group emergency buttons at the bottom of the panel with their centerlines no lower than 2'11" (890 mm).

(v) Designate all control buttons by raised standard alphabet characters for letters, arabic characters for numerals, or standard symbols as shown in figure 10.6. For additional information see ANSI A17.1 and see also NEII *Suggested Minimum Elevator Requirements for the Handicapped.* Place raised designations to the immediate left of the button to which they apply. Permanently attached, applied plates are acceptable. Locate the call button for the main entry floor in the left-most column and designate it with a raised star as shown in figure 10.6.



elevator control panel 10.6

(vi) Locate control panels as shown in figures 10.7 and 10.8.



control locations
center opening 10.7

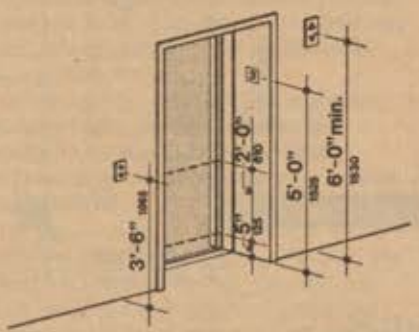
control locations
side opening 10.8

(e) *Door jamb markings.* Provide floor designation markings at each hoistway entrance on both jambs and that comply with the following:

(1) The centerlines of characters shall be located 5'0" (1,525 mm) above finish floor; and

(2) Characters shall be a minimum of 2 inches (50 mm) high and shall comply with § 1190.200, Signage.

(3) Permanently applied plates are acceptable (fig. 10.9).



elevator entrance 10.9

(f) *Lobby call buttons.* (1) Call buttons shall:

(i) Be mounted with centerlines at 3'6" (1.065 mm) above finish floor (fig. 10.9);

(ii) Be a minimum of ¾ inch (19 mm) in diameter;

(iii) Have visual signals indicating when a call is registered and answered;

(iv) Be raised or flush; and

(v) Have the button designating "up" mounted on top.

(2) Objects mounted beneath lobby call buttons shall not project into the elevator lobby more than 4 inches (100 mm).

(g) *Hall lanterns.* Provide an audible and visual signal at each hoistway entrance to indicate car arrival and its travel direction.

(1) Audible signals shall sound once for the up direction and twice for the down direction or shall annunciate the words "up" or "down."

(2) Visual signals shall:

(i) Be mounted with their centerlines a minimum of 6'0" (1,830 mm) above finish floor (fig. 10.9);

(ii) Have a minimum dimension of 2½" (64 mm);

(iii) Distinguish between up and down travel directions; and

(iv) Be visible from the vicinity of call buttons.

(3) In-car lanterns mounted on car door jambs and that comply with § 1190.100(e)(2) are acceptable.

(h) Car position indicator and signal. Provide audible and visual car position indicators within each elevator car as follows:

(1) Audible indicators shall:

(i) Signal as the car passes or stops at each landing. Signal shall exceed the ambient noise level by at least 20 decibels with a frequency below 1,500 Hz; or

(ii) Provide an automatic verbal announcement.

(2) Visual indicators shall:

(i) Be located above the car operating panel or over the car door;

(ii) Visually display the floor number as the car passes or stops at a landing;

(iii) Have characters that are a minimum of ½ inches (13 mm) high and that comply with § 1190.200, Signage, except for § 1190.100(c)(2).

(i) *Illumination levels.* Illuminate car controls, platform, car threshold, and landing sill to a minimum of 5 footcandles.

(j) *Intercommunication systems.* If provided, emergency intercommunication systems shall comply with the following:

(1) Locate the highest operable part of the system no higher than 4'0" (1,220 mm) above car floor;

(2) Identify the system with raised lettering or symbols complying with § 1190.200, Signage;

(3) If system employs a handset, provide a 2'5" (735 mm) cord length;

(4) If system is located in a closed compartment, compartment door hardware shall conform to § 1190.170, Controls, and operating mechanisms;

(5) Provide a momentary contact button to allow hearing-impaired individuals to summon assistance.

§ 1190.110 Platform lifts.

(a) *General.* Platform lifts required by Subpart C—Scope, shall comply with this section.

(b) *Requirements.* Platform lifts shall:

(1) Accommodate an occupied wheelchair within the space provisions of § 1190.40, Human data;

(2) Facilitate unassisted entry and exit from the lift in accordance with the provisions of § 1190.50, Walks, floors, and accessible routes;

(3) Have accessible controls complying with § 1190.170, Controls and operating mechanisms; and

(4) Satisfy safety requirements of the agency having responsibility for safety of the facility.

§ 1190.120 Entrances.

(a) *General.* Entrances required to be accessible by Subpart C—Scope shall comply with § 1190.50, Walks, Floors and Accessible Routes; § 1190.120, Entrances; and § 1190.130, Doors.

(b) *Service entrances.* A service entrance is not to be used as the only accessible entrance unless it is the only entrance to the building or facility.

(c) *Access to elevators.* If elevators are provided, an accessible route shall be provided from an accessible entrance to the elevators.

§ 1190.130 Doors.

(a) *General.* Doors required to be accessible by Subpart C—Scope shall comply with this section.

(1) Gates, including ticket gates, shall comply with this section.

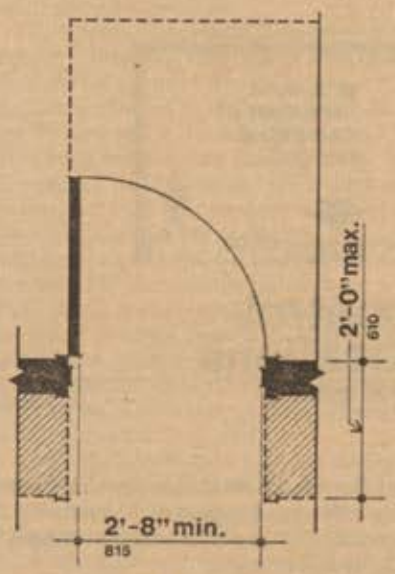
(2) In double-leaf doorways, at least one leaf shall comply with this Section and it shall be the active leaf. Double-leaf automatic doors are excepted from the one leaf provision if both leaves are automatic.

(3) Revolving doors or turnstiles are not accessible doors and shall not be the sole means of access at any accessible entrance or on any accessible route. An accessible door shall be provided immediately adjacent to the turnstile or revolving door and shall be subject to the same use pattern as the turnstile or revolving door.

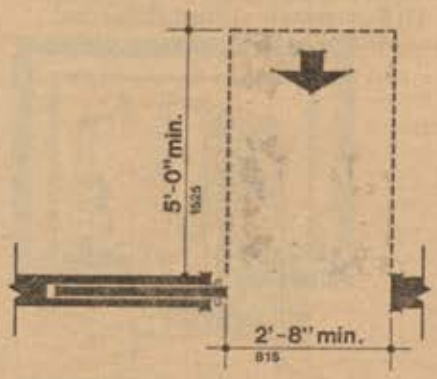
(b) *Clear width.* Provide doorways with clear openings of 2'8" (815 mm) as measured with the door open 90 degrees between the face of the door and the latch side stop (figs. 13.1, 13.2, and 13.3). Openings deeper than 2'0" (610 mm) shall be a minimum of 3'0" (915 mm) wide (fig. 4.1).

(1) *Exception.* If a space and the elements within that space comply with the requirements of § 1190.40, Human Data, and the user does not require full passage into that space, then the opening to that space may be a minimum of 1'8" (510 mm) wide.

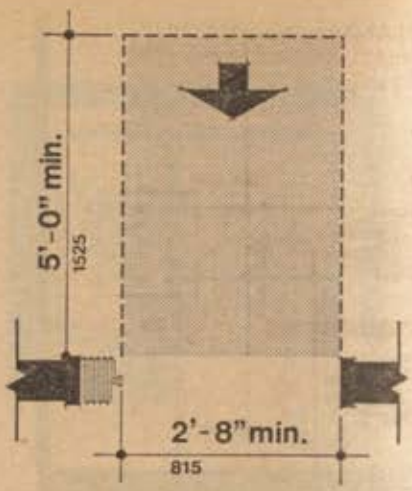
(2) [Reserved]



hinged 13.1



sliding 13.2



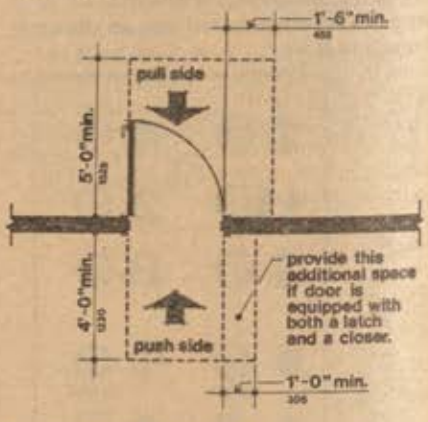
folding 13.3

(c) *Maneuvering space.* Provide the following space at all non-automatic and non-power-assisted doors:

(1) At doors allowing front approach only, maneuvering space shall be as shown in figures 13.2, 13.3, and 13.4. The minimum maneuvering space (*i.e.*, latch side clearance) required for a hinged opening is 1'6" (455 mm), but 2'0" (600 mm) is recommended where space is available.

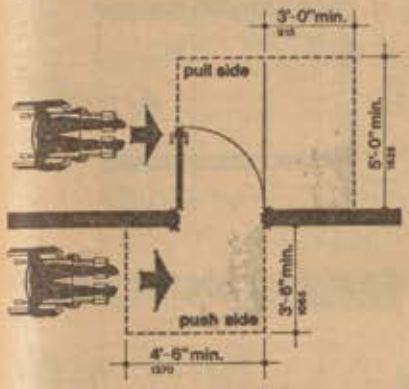
(i) *Exception.* Front approach entry doors to acute care hospital patient bedrooms shall be exempt from the 1'6" (455 mm) requirement of § 1190.130(c)(1) latch side clearance shown in figure 13.4 if the door is at least 3'8" (1,120 mm) wide.

(ii) [Reserved]



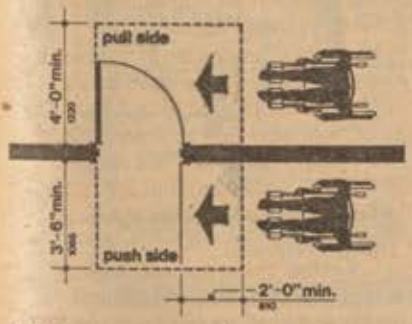
front approach 13.4

(2) At doors allowing hinge side approach only, maneuvering space shall be as shown in figure 13.5.



hinge approach 13.5

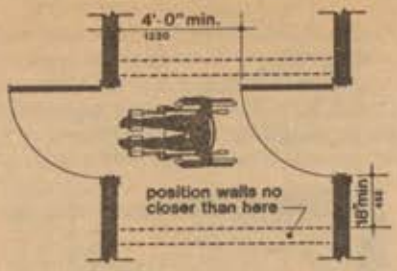
(3) At doors allowing latch side approach only, maneuvering space shall be as shown in figure 13.6.



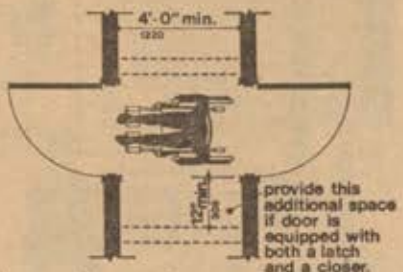
latch approach 13.6

(4) The floor or surface area within the required maneuvering space shall be clear and shall comply with § 1190.50(i), Ground and floor surfaces. It shall have a slope in any direction no greater than 1:48 (¼ inch per foot).

(d) *Doors in series.* Between any two hinged or pivoted doors in series, provide a minimum of 4'0" (1,220 mm) plus the width of any door swinging into the space. Opposing doors shall not swing towards each other, into the intervening space (see figs. 13.7 and 13.8).



doors in series 13.7



doors in series 13.8

(e) *Thresholds.* Raised thresholds, if provided, shall be beveled with a slope not to exceed 1:2 and with heights not exceeding the following:

(1) Exterior sliding doors: ¾ inch (19 mm) maximum.

(2) Other doors: ½ inch (13 mm) maximum. Bevel not required if less than ¼ inch (6 mm).

(f) *Hardware.* Provide handles, pulls, latches, locks and other operating hardware that are easy to grasp with one hand and that do not require twisting of the wrist, tight grasping, or tight pinching to operate. Acceptable designs include, but are not limited to, lever-operated hardware, push-type hardware, and U-shaped handles. Operating hardware shall be exposed and usable from both sides when sliding doors are fully open. Mount no operating hardware higher than 4'0" (1,220 mm) above finish floor.

(1) *Exception.* Mortise and surface mounted bolts used to secure the inactive leaf of a double leaf door without center mullion may be mounted at any height.

(2) [Reserved]

(g) *Doors to hazardous areas.* Provide a textured surface on any door handle, knob, pull, or other piece of operating hardware on doors that lead to areas that may prove hazardous to blind people. Such areas may include, but are not limited to, loading platforms, mechanical equipment rooms, stages, and similar spaces. Textured surfaces may be achieved by knurling, roughening, or applying materials on the hand contact surface. Do not provide textured surfaces on hardware leading to emergency egress or on any doors other than those leading to hazardous areas.

(h) *Closers and opening forces.* (1) Door closers, if provided, shall have a sweep period adjusted so that from a position of 70 degrees open it will take the door a minimum of 5 seconds to reach a point 3 inches (75 mm) from the door jamb, measured from the leading edge of the door.

(2) Maximum pushing or pulling opening forces for doors shall be as follows:

(i) Exterior hinged doors: [Reserved]

(ii) Interior hinged doors: 5 lbs (2.3 Kg)

(iii) Sliding or folding doors: 5 lbs (2.3 Kg)

(iv) Adjust fire doors for the minimum opening and closing forces required by the agency having responsibility for the safety of the facility.

(v) Power-assisted doors: Comply with paragraph 1190.130(g)(2) for closing force. These forces do not apply to forces required to retract or disengage latch bolts or other latching devices.

(i) *Automatic doors.* If automatic pedestrian doors are provided:

(1) They shall not open to back check in less than 5 seconds; and

(2) They shall not require more than 15 lbs (6.8 Kg) to stop door movement;

(3) See the *American National Standard for Power-Operated Pedestrian Doors,* ANSI A156.10 (latest edition) for additional information on the requirements for both standard and custom designed installations. Paragraph 1.1.1 of the ANSI publication contains information on slow opening, low powered automatic pedestrian doors.

§ 1190.140 Windows [Reserved]

§ 1190.150 Toilet and bathing facilities.

(a) *General.* Toilet rooms and bathing facilities required to be accessible by Subpart C—Scope shall comply with this section.

(1) *Exception.* Where alterations to existing facilities make strict compliance with § 1190.150 structurally impracticable, the addition of one

"unisex" toilet per floor containing one water closet and one lavatory that complies with § 1190.150(b) located adjacent to existing facilities will be acceptable in lieu of making existing toilet facilities for each sex accessible.

(2) [Reserved]

(b) *Doors.* Doors to toilet rooms and bathing facilities shall:

(1) Comply with § 1190.130, Doors; and

(2) Not swing into clear floor spaces required at fixtures.

(c) *Clear turning space.* Each accessible toilet room and bathing facility shall have an unobstructed turning space that:

(1) Complies with § 1190.40(b)(3);

(2) Adjoins an accessible route complying with § 1190.50, Walks, floors, and accessible routes; and

(3) May overlap the accessible route and clear floor space at fixture(s).

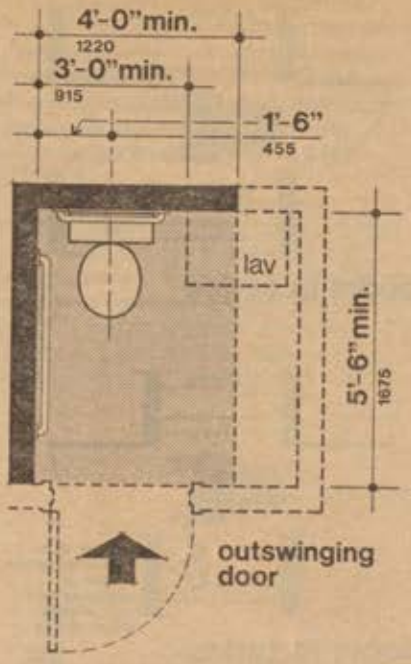
(i) *Exception.* In toilet rooms with one water closet, doors in a clear floor area that is 2'8" by 5'0" (815 mm by 1525 mm) may be provided in lieu of a clear turning space.

(ii) [Reserved]

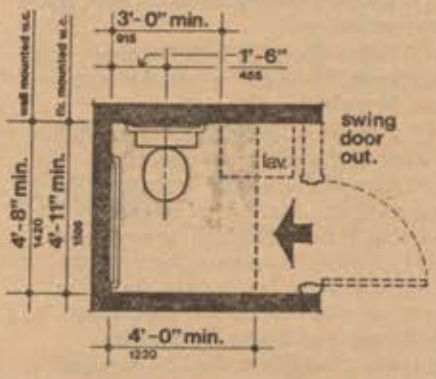
(d) *Signage.* Signage required by Subpart C—Scope that identifies accessible toilet rooms and bathing facilities shall comply with § 1190.200, Signage.

(e) *Toilet fixtures and accessories*—(1) *Water closets.* Accessible water closets shall:

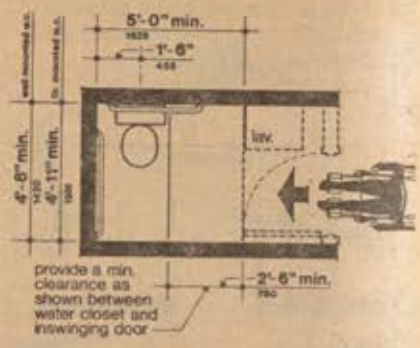
(i) Be provided with clear floor access spaces complying with figures 15.1, 15.2, 15.3 and 15.4 for fixtures not mounted in stalls. Clear floor space may be provided to allow either left-handed or right-handed approach.



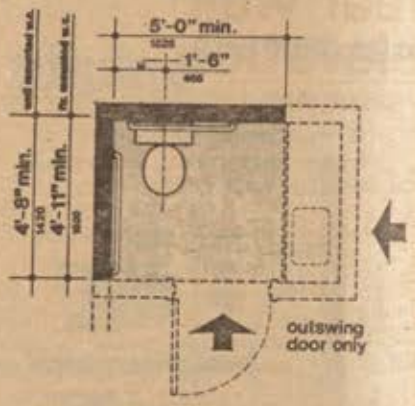
clear floor space
(right-hand approach) 15. 1



clear floor space
(right-hand approach) 15. 2

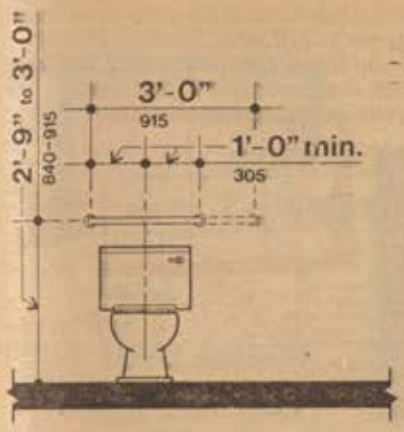


clear floor space
(right-hand approach) 15. 3

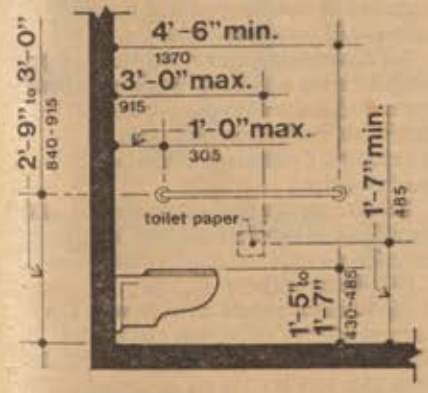


clear floor space
(right-hand approach) 15. 4

(ii) Have top of seats mounted 1'5" to 1'7" (430 mm to 485 mm) above finish floor (see figs. 15.5 and 15.6). Seats shall not be sprung to return to a lifted position when not in use.



rear wall elevation 15.5
without stall



side wall 15.6
without stall or alternate stall

(iii) Have automatic or hand-operated flush controls complying with § 1190.170, Controls and operating mechanisms. Mount controls for use from the wide side of access area and no higher than 3'8" (1,120 mm) above finish floor.

(iv) Have toilet paper dispensers mounted as shown in figure 15.6. Do not use dispensers that control delivery or that do not permit continuous paper flow.

(v) Have grab bars mounted of the length and positioning as shown in figures 15.1, 15.2, 15.3, 15.4, 15.5, and 15.6.

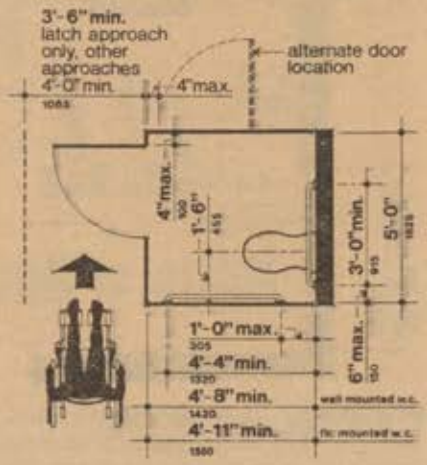
(2) *Toilet stalls.* Accessible toilet stalls shall:

(i) Have a water closet complying with § 1190.150(b)(1); and

(ii) Be of the size and arrangement as shown in figure 15.7. Stall configuration may be reversed for left or right-handed approach.

(A) *Exception.* In instances of alteration work where provision of a standard stall (fig. 15.7) is structurally impractical or plumbing fixture code requirements prevent combining existing stalls to provide space, an alternate stall (fig. 15.8) may be provided in lieu of the standard stall.

(B) [Reserved]



standard stall 15.7
(left-hand approach)

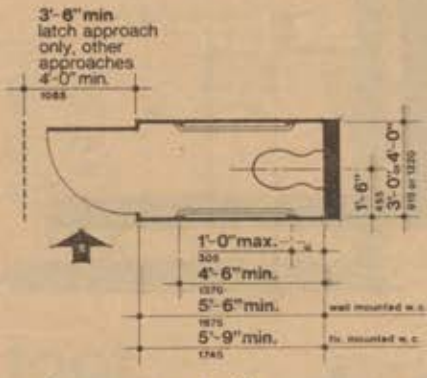
(iii) Have toe clearances at the front partition and at least one side partition of 9 inches (230 mm) above finish floor. If stall depth is greater than 5'0" (1,525 mm), then toe clearance is optional.

(iv) Have doors that comply with § 1190.130, Doors, and that are outswinging; and have the symbol of access affixed to the outside of door.

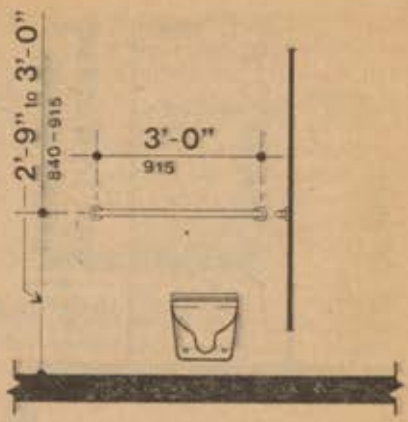
(A) *Exception.* If toilet stall approach is from the latch side of the stall door, clearance between the door side of the stall and any obstruction may be reduced to a minimum of 3'6" (1,065 mm).

(b) [Reserved]

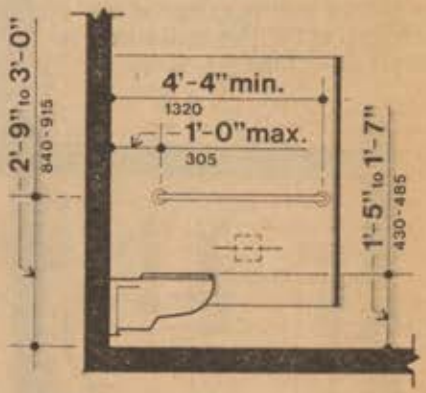
(v) Have grab bars mounted of the length and positioning shown in figures 15.7, 15.8, 15.9, and 15.10



alternate stall 15.8



rear wall elevation 15.9
standard stall



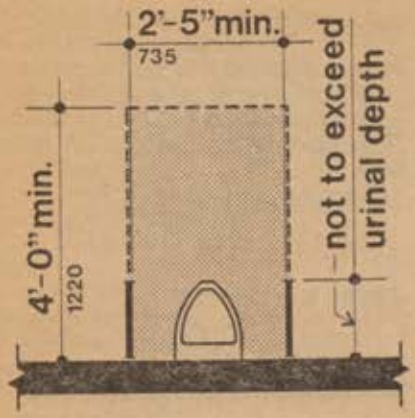
side wall 15.10
standard stall

(3) *Urinals.* Accessible urinals shall:

(i) Have a clear floor space that complies with § 1190.40, Human data.

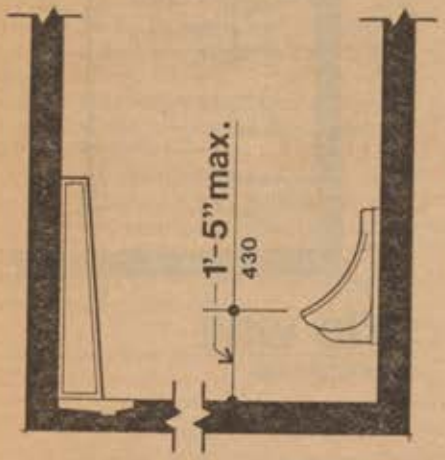
(A) *Exception.* Urinal shields that do not extend beyond the front edge of the urinal rim may be provided with 2'5" (735 mm) clearance between them (fig. 15.11).

(B) [Reserved]



urinal shields 15.11

(ii) Be floor mounted stall type or wall-hung with an elongated rim mounted at 1'5" (430 mm) maximum above finish floor (fig. 15.12).

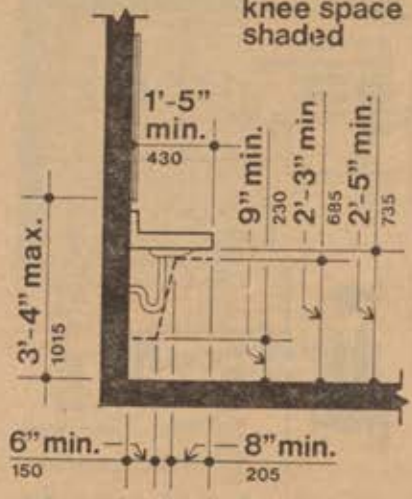


urinals 15.12

(iii) Have automatic or hand-operated controls complying with § 1190.170, Controls and operating mechanisms, and mounted no higher than 3'8" (1,120 mm) above finish floor.

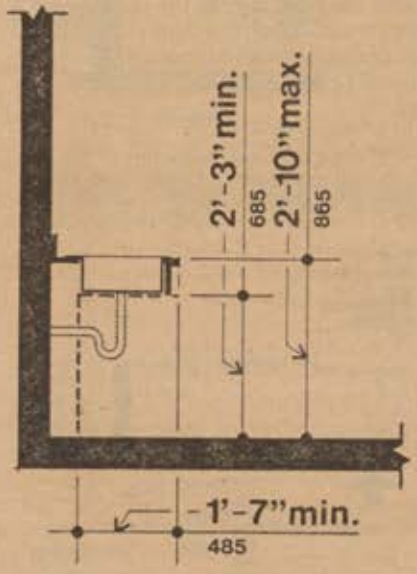
(4) Lavatories and sinks. Lavatories and sinks shall meet the following requirements:

(i) Mount lavatories with the rim or counter surface no higher than 2'10" (865 mm) above finish floor. Provide knee space between bottom of apron and finish floor of at least 2'5" (735 mm) high, 2'6" (760 mm) wide and 1'7" (485 mm) deep (fig. 15.13).



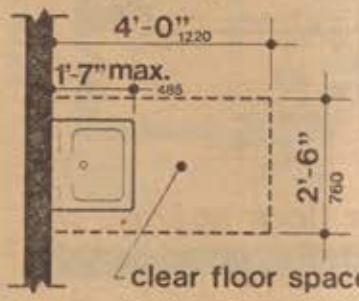
lavatory 15.13

(ii) Mount sinks with the rim or counter surface no higher than 2'10" (865 mm) above finish floor. Provide knee space under the sink of at least 2'3" (685 mm) high, 2'6" (760 mm) wide and 1'7" (485 mm) deep. Sink bowls shall be a maximum of 6½ inches (165 mm) deep (fig. 15.14).



sink 15.14

(iii) Clear floor space permitting front approach shall comply with § 1190.40, Human Data. Clear floor space and knee space shall overlap 1'7" (485 mm) maximum (fig. 15.15).



lavatory 15.15

(iv) Insulate or cover hot water and drain lines. Allow no sharp or abrasive surfaces to remain exposed under accessible lavatories or sinks.

(v) Acceptable faucet control designs include lever-operated, push type, touch-type, and electronically controlled mechanisms that comply with § 1190.170, Controls and operating mechanisms.

(A) *Exception.* Self-closing valves are permitted at lavatories if the faucet remains open for at least 10 seconds.

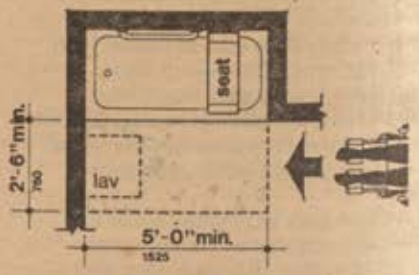
(B) [Reserved]

(5) Mirrors. Mount mirrors with the bottom edge of reflecting surface no higher than 3'4" (1,015 mm) above finish floor (fig. 15.13).

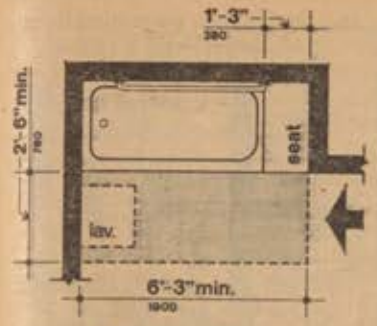
(6) Controls, dispensers, receptacles, or other equipment. Accessible equipment shall comply with § 1190.70, Controls and operating mechanisms.

(f) *Bathing facilities.* Bathtubs or showers shall:

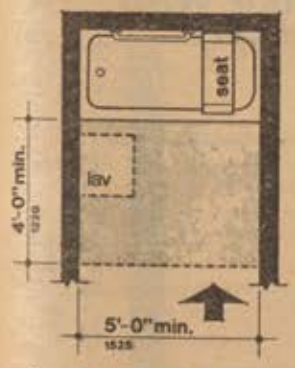
(1) Have clear access space as shown in figures 15.16 to 15.20.



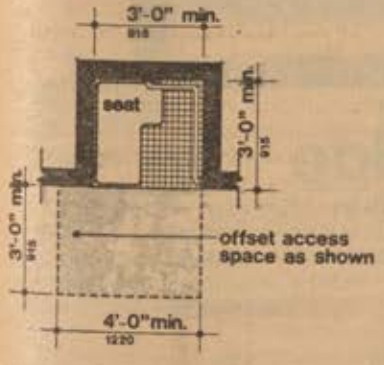
clear floor space with in-tub seat 15.16



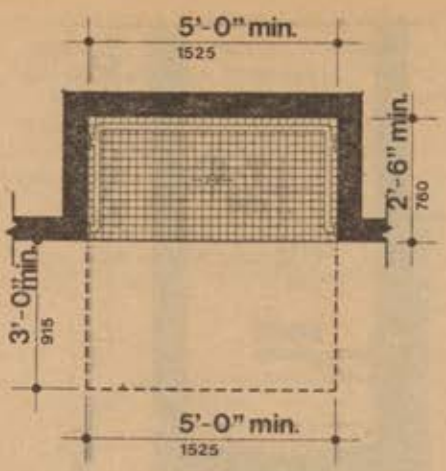
clear floor space
with ledge seat
15.17



clear floor space
with in-tub seat
15.18



transfer stall
15.19



roll-in stall
15.20

(2) Have seats provided as shown in figures 15.16 to 15.19, 15.24 and 15.26 to 15.28. Seats and their attachments shall safely support a 250 lbs (114 Kg) continuous live load without sustaining permanent deflection. Seats shall not move when mounted during use. In-tub sets shall be portable.

(3) Have grab bars mounted of the length and positioning shown in figures 15.16 to 15.32.

(4) Have faucets and controls complying with § 1190.170, Controls and Operating Mechanisms, located as shown in figures 15.21, 15.29, and 15.31.

roll-in shower

(5) Have a shower spray unit with a flexible hose a minimum of 5'0" (1,525 mm) long that is usable as a fixed shower head and as a hand-held shower.

(i) *Exception.* In unmonitored facilities where vandalism is a concern, a fixed shower head mounted at 4'0" (1,220 mm) above the tub bottom may be used in lieu of the hand-held unit.

(ii) [Reserved]

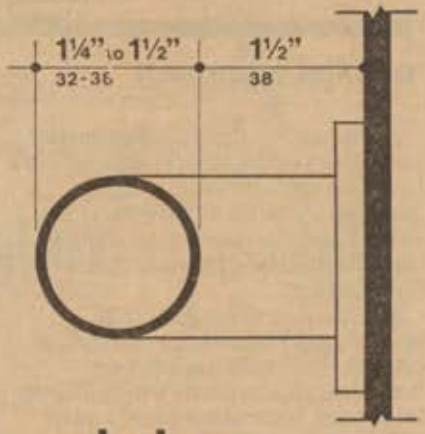
(6) Have enclosures, if provided, that do not obstruct transfer from wheelchairs onto seats or into tubs or access to controls from clear floor spaces. Bathtub enclosures shall not have tracks mounted on the bathtub rims.

(7) Have shower curbs or thresholds no higher than ½ inch (13 mm) beveled.

(g) *Grab bars.* Grab bars for accessible toilet and bathing fixtures shall:

(1) Have a diameter or width of the gripping surfaces that is 1¼ inches to 1½ inches (32 mm to 38 mm).

(2) Have a 1½ inch (38 mm) (maximum/minimum) clear space between the bar and the mounting surface (fig. 15.33).



grab bar 15.33

(3) As installed, support a minimum concentrated load of 250 lb. (114 Kg).

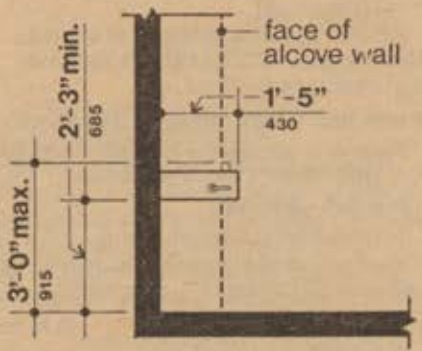
(4) Not rotate in their fittings.

§ 1190.160 Drinking fountains and water coolers.

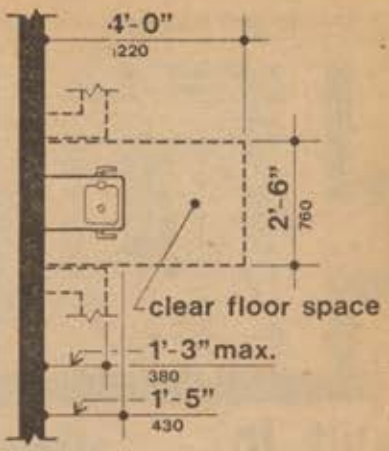
(a) *General.* Drinking fountains and coolers required by Supbart C—Scope shall comply with this section.

(b) *Clearances.* Drinking fountains and water coolers shall have clear floor or ground spaces that comply with § 1190.40, Human data, and shall be:

(1) Cantilevered units with a clear space allowing a forward approach and having a knee space under the unit that is at least 2'3" (685 mm) high, 2'6" (760 mm) wide, and 1'5" (202 mm) deep (figs. 16.1 and 16.2); or

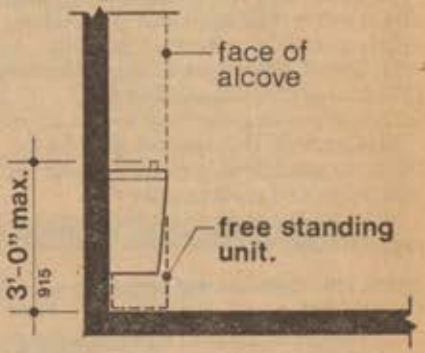


cantilevered 16.1
drinking fountain

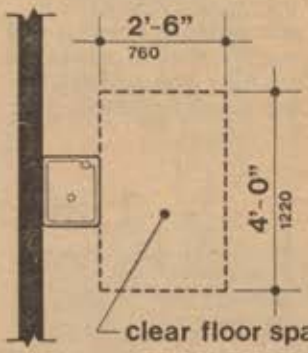


cantilevered 16.2
drinking fountain

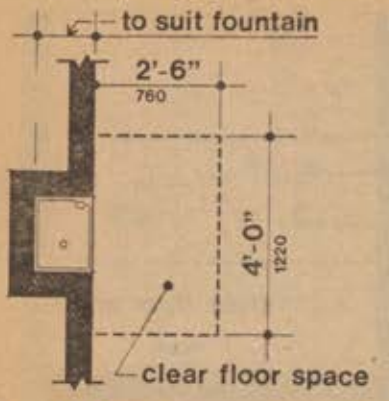
(2) Free-standing or built-in units with a clear space allowing a parrallel approach and not having knee-space (figs. 16.3 and 16.4 and 16.5).



free standing or wall hung 16.3
drinking fountain



free standing or wall hung 16.4
drinking fountain



built in
drinking fountain (16. 5)

(c) *Spouts of drinking fountains and water-coolers.* Spouts shall:

(1) Be mounted no higher than 3'0" (915 mm) above the finish floor, measured to the spout outlet.

(2) Be at the front of the unit and shall direct water flow trajectory parallel or nearly parallel the front of the unit.

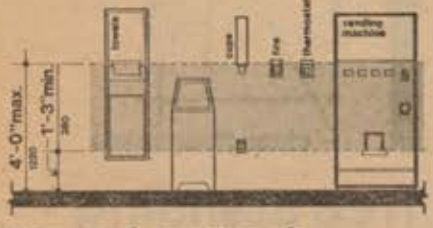
(3) Direct water flow at least 4 inches (100 mm) above the unit basin to facilitate cup or glass insertion.

(d) *Controls.* Unit control shall be front mounted or side mounted near the front edge and shall comply with § 1190.170, Controls and operating mechanisms.

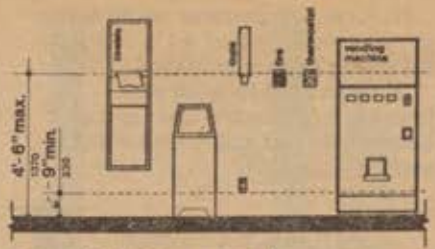
§ 1190.170 Controls and operating mechanisms.

(a) *General.* Controls and operating mechanisms required to be accessible by Subpart C—Scope shall comply with this section.

(b) *Location requirements.* Controls and operating mechanisms shall adjoin clear floor or ground space complying with § 1190.40, Human data. Mount controls and operating mechanisms in compliance with approach direction and reach limitations specified in paragraphs 1190.40(c), Clear floor or ground space, and § 1190.40(d), Reach limitations (figs. 17.1 and 17.2).



forward approach (17. 1)



parallel approach (17. 2)

(c) *Operation.* Controls and operating mechanisms shall be operable with one hand and shall not require tight grasping, pinching, or twisting of the wrist. The force required to activate controls shall be no greater than 5 lbs. of force (2.2 Kg).

(d) *Specialized equipment.* If specialized mechanical, electrical, or process equipment has inherent functional requirements which dictate location or force requirements other than those specified in this section, locate the equipment as dictated by its functional requirements.

§ 1190.180 Alarms.

(a) *General.* Alarm systems required to be accessible by Subpart C—Scope shall comply with this section.

(b) *Audible alarms.* Audible alarms shall produce a sound pressure level that exceeds ambient room or space noise by 15 decibels or any maximum noise level of 30 seconds duration by 5 decibels, whichever is greater.

(c) *Visual and other sensory alarms.* If audible alarms are provided, then in addition, provide a visual alarm device adjacent to or within each exit sign which flashes in conjunction with audible alarms and operates from the same power source. Flash frequency of visual alarms shall be less than 5 Hz.

(1) *Exception.* Specialized systems utilizing advanced technology will be considered on a case-by-case basis.

(2) [Reserved]

(d) *Pull Stations.* Alarm pull stations shall comply with § 1190.170, Controls and operating mechanisms.

§ 1190.190 Tactile Warnings. [Reserved]

Note.—For information on tactile warnings, see ANSI A117-1 (1980), Section 4.29.

§ 1190.200 Signage.

(a) *General.* Information and identification of elements and spaces as required by Subpart C—Scope shall comply with this section.

(1) *Exception.* The provisions of § 1190.200(c) are not mandatory for temporary information on room and space signage.

(2) [Reserved]

(b) *Character proportion and contrast.* Letters and numbers on sign systems shall:

(1) Have a width-to-height ratio of between 3:5 and 1:1.

(2) have a stroke width-to-height ratio of between 1:5 and 1:10.

(3) Contrast in value with their backgrounds, preferably light letters on a dark background.

(4) Have a matte finish on a matte finish background.

(c) *Raised or incised characters.* Provide numbers and letters that are:

(1) Raised or incised from the background surface 1/32 inch (0.8 mm). Also incise or raise symbols and pictographs in this manner.

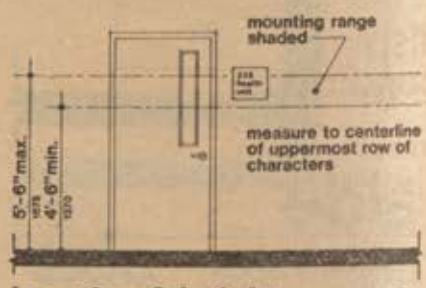
(2) Between 5/8 inch (16 mm) and 2 inches (50 mm) high.

(3) Sans serif with sharply defined edges.

(4) If incised, provided with at least a 1/4 inch (6 mm) stroke width.

(d) *Mounting location and height.* Signage shall be placed in a standardized location throughout a building or facility as follows:

(1) Interior signage shall be located alongside of the door on the latch side and shall be mounted at between 4'6" and 5'6" (1,370 mm and 1,675 mm) above finish floor (fig. 20.1).



location & height (20. 1)

(2) Exterior signage shall be installed at entrances and walks to direct individuals to accessible routes and entrances as required.

(e) *Symbol of accessibility.* Identification of accessible facilities as required by Subpart C—Scope shall be by means of the International Symbol of Accessibility. Display as shown in figures 20.2 and 20.3. Provide symbols of the following minimum dimensions:

Size	Location	Viewing distance
2½ in. (65 mm)	Interior	Up to 30 ft. (9 m).
4 in. (100 mm)	Interior	Greater than 30 ft. (9 m).
4 in. (100 mm)	Exterior	Up to 60 ft. (18 m).
8 in. (200 mm)	Exterior	Greater than 60 ft. (18 m).

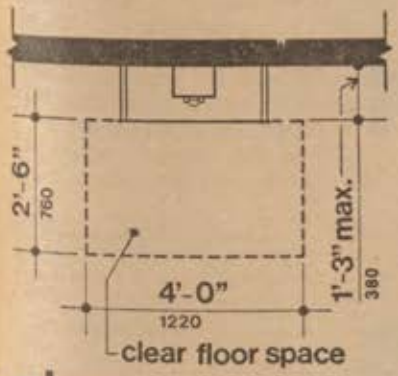
international symbol 20. 2

display conditions 20. 3

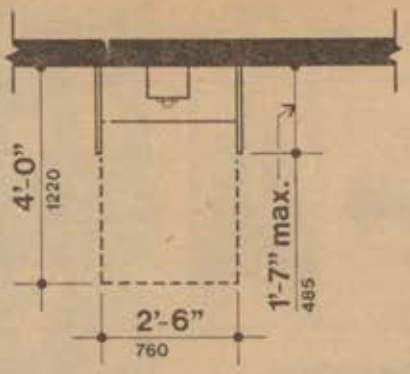
§ 1190.210 **Telephones.**

(a) *General.* Public telephones and related equipment required to be accessible by Subpart C—Scope shall comply with this section.

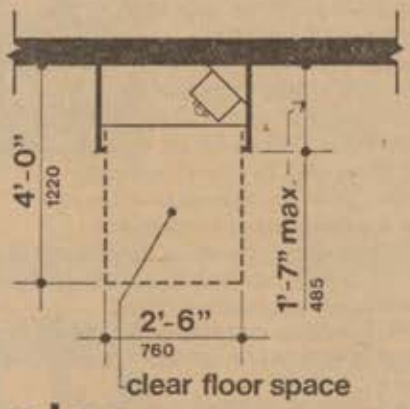
(b) *Clear floor or ground space.* Clear floor or ground spaces that comply with § 1190.40, Human data, shall be provided at each telephone (figs. 21.1, 21.2, and 21.3). These clear spaces shall not be restricted by installation of bases, fixed seats, or enclosures.



plan telephone 21. 1



plan telephone 21. 2



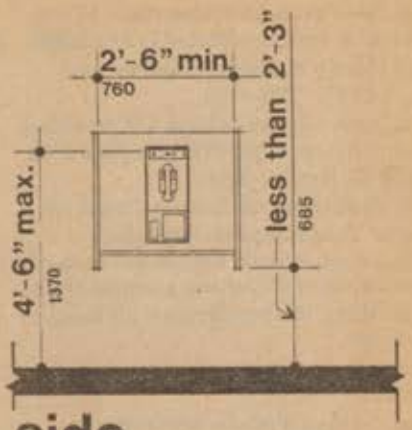
plan telephone 21. 3

(c) *Equipment characteristics.* Telephone equipment shall:

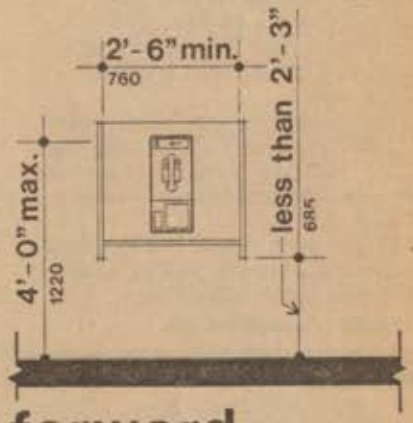
(1) Have the highest operable control, including but not limited to dial and coin slot, located at a maximum of 4'6" (1,370 mm) above finish floor for side reach (fig. 21.4); and 4'0" (1220 mm) for forward and diagonal reach (figs. 21.5 and 21.6).

(i) *Exception.* If banks of telephones are provided, a minimum of one telephone per bank shall have the highest operable control at 4'0" (1220 mm).

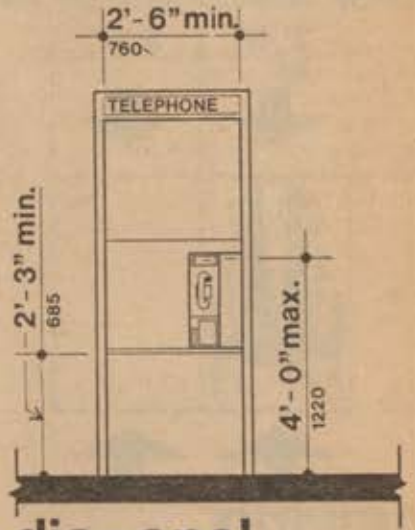
(ii) [Reserved]



side reach telephone 21. 4



forward reach telephone 21. 5



diagonal reach telephone 21. 6

(2) Have push button controls where service by such equipment is available.

(3) Have a minimum handset cord length of 2'5" (735 mm).

(4) Have telephone books, if provided, located in a position that complies with § 1190.40, Human data.

(d) *Equipment for hearing impaired people.* Telephone receivers shall generate a magnetic field in the area of the receiver cap. Volume controls shall be provided in accordance with Subpart C—Scope.

§ 1190.220 Seating, tables, and work surfaces.

(a) *General.* Fixed seating spaces, tables, or work surfaces required to be accessible by Subpart C—Scope shall comply with this section.

(b) *Clearances.* Seating spaces for people in wheelchairs at tables, counters, or work surfaces shall:

(1) Have a clear floor or ground spaces that comply with § 1190.40, Human data.

(2) Have knee spaces that are least 2'3" (685 mm) high, 2'6" (760 mm) wide, and 1'7" (485 mm) deep. Clear access space and knee space may overlap 1'7" (fig. 15.15).

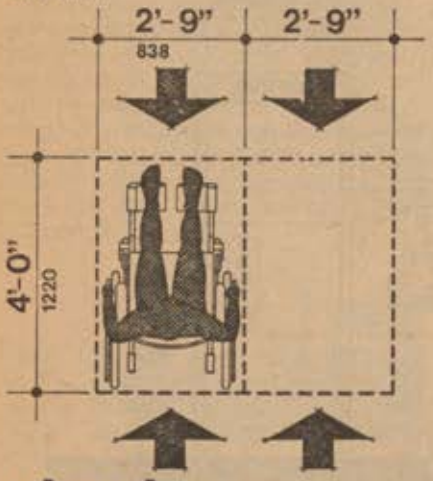
(3) Have table tops or work surfaces mounted between 2'4" to 2'10" (710 mm to 865 mm) above finish floor.

§ 1190.230 Assembly areas.

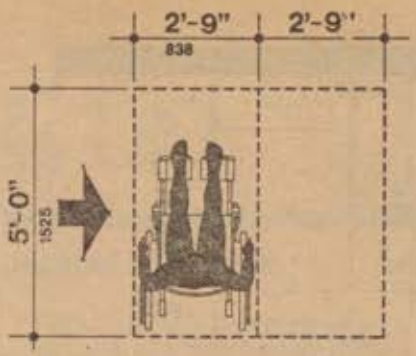
(a) *General.* Assembly areas required to be accessible by Subpart C—Scope shall comply with this section.

(b) *Size and location of viewing positions.* Accessible viewing positions shall:

(1) Provide minimum, level clear floor or ground areas as shown in figures 23.1 and 23.2.



viewing positions 23.1



viewing positions 23.2

(2) Accommodate one occupied wheelchair or one portable seat to accommodate persons with crutches or leg braces.

(3) Be in an adjoining configuration if only two positions are provided. Additional positions may be in single position configurations.

(4) Be an integral part of the seating plan and shall be dispersed throughout the assembly area providing sight lines comparable to those for all seating.

(i) *Exception.* In alteration work where it is structurally impossible to alter seating locations to disperse seating throughout, seating may be located in collected areas as structurally feasible. Seating must adjoin an accessible route that also serves as a means of emergency egress.

(ii) [Reserved]

(5) Adjoin an accessible route of emergency egress as required by paragraph 1190.50(h), Egress.

(6) Have surfaces that comply with § 1190.50(i), Ground and floor surfaces.

(c) *Performing areas.* Provide accessible routes that comply with § 1190.50, Walks, floors, and accessible routes, to performing areas, including but not limited to stages, arena floors, dressing rooms, locker rooms, and other rooms and spaces required for use of the assembly area.

(1) *Exception.* In alteration work where it is structurally impracticable to alter all performing areas to be on an accessible route, at least one of each type shall be made accessible.

(2) [Reserved]

(d) *Listening systems.* Provide assembly areas with a listening system to assist no fewer than two persons with severe hearing loss.

(1) If the listening system serves individual seats, locate such seats within 50 feet (15 m) of the stage or arena. Such locations shall provide a complete view of the stage or arena.

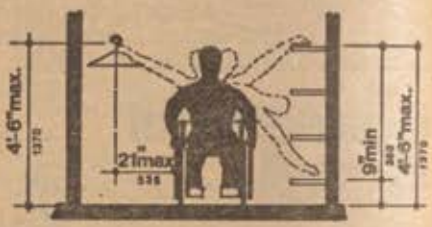
(2) Acceptable types of listening systems include, but are not limited to, audio loops and radio frequency systems.

§ 1190.240 Storage.

(a) *General.* Storage facilities required to be accessible by Subpart C—Scope shall comply with this section.

(1) Provide clear floor or ground spaces that comply with § 1190.40, Human data.

(2) Provide storage spaces and clothes rods that comply with paragraph 1190.40(d), Reach limitations (fig. 24.1).



storage 24.1

(3) Provide accessible hardware that complies with § 1190.170, Controls and operating mechanisms.

(b) [Reserved]

Subpart E—Special Building or Facility Types or Elements. [Reserved]

Part VII

Department of Labor

**Employment Standards Administration
Wage and Hour Division**

Procedures for Predetermination of Wage Rates

DEPARTMENT OF LABOR

Wage and Hour Division

29 CFR Part 1

Procedures for Predetermination of Wage Rates

AGENCY: Wage and Hour Division, Employment Standards Administration, Labor.

ACTION: Final rule.

SUMMARY: The purpose of this document is to provide the final text of Regulations, 29 CFR Part 1, for predetermination of prevailing wage rates under the Davis-Bacon and Related Acts (minimum wages for Federal and federally assisted construction). Under the statute, the definition of wages includes the basic hourly rate of pay plus the rate for contributions or payments for bona fide fringe benefits. The definition of wages in the regulations has been revised to reflect the statutory definition. A new provision has also been added to the regulations to explain the method used to determine prevailing fringe benefits. In addition, there are clarifications regarding the application of wage determinations, modifications, and supersedeas wage determinations, and the necessary corrective action to be taken by contracting agencies when a wage determination which is either inapplicable or contains substantial errors is included in bidding documents and contracts or when a wage determination is omitted from a covered contract.

EFFECTIVE DATE: February 17, 1981.

FOR FURTHER INFORMATION CONTACT: Dorothy P. Come, Assistant Administrator, Wage and Hour Division, Department of Labor, Room S3502, 200 Constitution Ave. NW., Washington, D.C. 20210, Phone: (202) 523-8333.

SUPPLEMENTARY INFORMATION: On December 28, 1979, a proposal was published in the Federal Register (44 FR 77026) to make certain revisions to 29 CFR Part 1, Procedures for Predetermination of Wage Rates under the Davis-Bacon and Related Acts. As stated in the proposal, its purpose was to reexamine and revise the procedures in Part 1 for predetermination of wage rates under the Davis-Bacon and Related Acts.

Interested persons were afforded the opportunity to submit comments to the Wage and Hour Division on or before March 17, 1981. Subsequently, on February 15 and April 1, 1980, notice was given in the Federal Register extending the dates for submission of comments to March 27 and May 27, 1980, respectively. The extensions were granted to afford interested parties additional time to prepare their comments. Comments were received from approximately 128 interested parties, including contracting agencies, contractor associations, contractors, labor unions and organizations, State and local governmental bodies, business organizations, and others. Among those Federal agencies submitting comments were the Department of Defense, the General Services Administration, the Department of Energy, the National Aeronautics and Space Administration, the Logistics Service and the Office of Airport Planning and Programming of the Federal Aviation Administration, and the Department of Housing and Urban Development. Contractor associations and business organizations submitting comments included the Associated General Contractors of America, the Associated Builders and Contractors, Inc., the National Association of Home Builders, the Chamber of Commerce, the National Association of Manufacturers, and the Business Roundtable. Labor unions and organizations commenting on the proposal included the Building and Construction Trades Department of the American Federation of Labor-Congress of Industrial Organizations, whose submission was concurred in full by the center to Protect Workers' Rights and the Laborers International of North America, the International Brotherhood of Electrical Workers, Spokane District Council of Carpenters and the Northeastern Washington-Northern Idaho Building and Construction Trades Council.

While some requests for public hearings were made, it was decided, after careful consideration that, in view of the broad range of responses and issues addressed, such hearings would be redundant.

It has been determined that the amendments to these Regulations do not meet the criteria of Executive Order 12044 and the Department of Labor guidelines (44 FR 5570) for a regulatory analysis.

The following is an analysis of all the principal comments received and the concomitant changes made to the proposed rule. Each submission has been thoroughly reviewed, and each criticism and suggestion has been given careful consideration. For each section and, where appropriate, subsection of the final rule, the analysis contains a description of the major comments and recommendations, the Department's findings as to whether or not suggested changes to the proposed rule would be in accordance with the statutory language and intent of the Davis-Bacon Act, and, the substantive changes herein adopted.

§ 1.2 Definitions.

Subsection 1.2(a)(1) generated a substantial number of comments concerning the Department's current practice of determining the prevailing wage rate on the basis of the wage that is found paid most frequently, provided that the wage must be paid to at least 30 percent of the workers in the classification. This principle has been applied to the determination of prevailing wages since 1935, when the Act was amended to require incorporation into contracts of wage determinations issued by the Secretary of Labor. Several commentators argued that the prevailing wage should be determined from the mathematical average only, while others expressed support for the existing procedure reflected in the proposal. It is our belief that the concept of a "prevailing wage" under the Davis-Bacon Act contemplates a rate actually being paid rather than a mathematically contrived figure that may not be paid to any one individual. Under this concept we believe that a rate of central tendency can be acceptably measured by the arithmetic mode or the value in the data set that occurs most frequently, with a proviso to preclude adoption of a wage rate paid to relatively few people.

Some commentators objected to incorporating fringe benefits in the prevailing wage rate on the basis that "open-shop" or "merit pay" contractors in a given area provide disparate fringe benefit packages while contractors signatory to negotiated agreements provide the same fringe package. Thus, they contend that under the proposed regulations, the fringe benefit packages of organized contractors are more likely to be recognized as prevailing. More frequent comments were directed at the procedure to be adopted for computing fringe benefits rather than with the concept that fringe benefits should be recognized as part of the prevailing wage. These commentators expressed concern primarily with 1) whether the prevailing basic hourly wage rate and prevailing fringe benefits should be separately determined or determined as a package, and 2) the manner of treatment of individuals receiving no fringe benefits.

We believe that the method proposed, in which a prevailing package is determined in the first instance, is in accordance with the terms of the Davis-Bacon Act, which defines "prevailing

wages" as including the basic hourly rate of pay *and* the rate of contributions or costs of fringe benefits. A separate determination is required as a practical matter if the averaging method is used, because of the necessity of separating the fringe benefits from the basic hourly rate in paying overtime premiums; where the plurality package rate is utilized, separation into the wage rate and fringe benefits should be easily accomplished.

Treatment of laborers and mechanics receiving no fringe benefits is implicitly set forth in the proposed regulation. If any single package of wages and fringe benefits is paid with respect to a plurality of the workers constituting at least 30 percent of the classification, that package prevails; thus a prevailing package would include the situation where a plurality of the workers receive the same rate and no fringe benefits. Similarly, if there is no plurality wage and fringe benefit package paid with respect to at least 30 percent of the workers, the fringe benefit rate is the average fringe benefit rate weighted by all laborers and mechanics in the classification—including those receiving no fringe benefits; thus the "zeros" are averaged together with the workers who receive fringe benefits. It should be noted that is our experience that fringe benefits of some kind are currently provided by most contractors. We will be meeting with industry groups and conducting pilot studies, as appropriate, to ensure that full, accurate fringe benefit data are collected.

No changes are made in § 1.2(a)(1).

Numerous adverse comments were received on the second sentence of proposed § 1.2(a)(2) concerning differences in wage rates due solely to the point in time at which the wages are paid. These commentators principally contended that the language was unclear, it incorporated a statistically invalid concept, and it unfairly discriminated in favor of collectively bargained wage rates. A few commentators supported the subsection as proposed. On final consideration, we believe that the update of data may more acceptably be accomplished by means such as expedited surveys, truncating the data submission period, modifying the use of peak week data and other methods. We agree that, as proposed, the second sentence of this subsection does not yield totally dependable statistical data. Therefore, the second sentence of this proposed section is deleted and the first sentence, standing alone, is adopted.

Since no comments were received on § 1.2(c), this subsection is adopted as proposed.

One commentator suggested that § 1.2(d) be changed to reflect that the various Federal-Aid Highway Acts have been revised, codified, and re-enacted as Title 23, United States Code. We agree that it is appropriate to adopt the uniform citation suggested by this commentator. The appropriate deletion and substitution has been made in the final text. This commentator also suggested substituting "state highway agency" for "state highway department" in the text. While this has merit, the language of 23 U.S.C. 113 refers to "highway department of the State"; therefore we do not believe that it is appropriate to adopt the suggested change. Another commentator recommended a greatly expanded definition of "agency". We find no basis in existing law to support such a wide-ranging definition of "agency" and have retained the text with the exception of the changes made in reference to 23 U.S.C. 113.

§ 1.3 Obtaining and compiling wage information.

Several commentators objected to the use of wage rate data obtained from Federally financed or locally financed projects subject to coverage by the Davis-Bacon and Related Acts or State prevailing wage laws. The Act contains no such distinction. Federally and locally financed construction must be included to provide realistic data upon which to base determinations for such construction as highways, sewers, bridges, dams and other public works structures that are rarely, if ever, constructed with private funds.

It was suggested that the Department accept data only from contractors so as to eliminate the possibility of duplication. The evidence collection forms used require the listing of sufficient pertinent project information to enable quick and adequate identification of duplicate data. In keeping with the principles of open government, it is the Department's long standing policy, as codified by the current regulations, to encourage and to offer the opportunity to all interested parties to voluntarily submit wage data, thereby expanding the survey's universe and increasing the validity of the survey.

The concern expressed by some public agencies relating to their expanded role in the collection of data is unfounded. The changes in this section are merely editorial and do not mandate an expansion of their role.

By virtue of Pub. L. 90-495 (1968), Davis-Bacon prevailing wage requirements extend to all Federal-Aid highway systems pursuant to 23 U.S.C. 113. Proposed § 1.3(b)(4), which erred in limiting consultation with State Highway departments to Interstate System projects, has been corrected accordingly.

§ 1.4 Outline of agency construction programs.

Several commentators questioned whether the information required by this section would be actually used by the Department, suggesting the requirement was burdensome.

As is implied by the phrase "to the extent practicable", at the beginning of this section, it is recognized that some agencies by virtue of their contracting practices may not be able to submit a complete listing of proposed construction programs. Thus, the section contemplates the submission only of information already in hand or readily obtainable. Accordingly, the reporting requirement, which is also codified in the current regulations, is not considered to be excessively burdensome to Federal contracting agencies and State highway departments. The data submitted is of considerable value to the Department in scheduling wage surveys and to the various contracting agencies in helping to insure a planned approach to wage surveys which will provide wage determinations on an as-needed basis by the procurement community.

§ 1.5 Procedure for requesting wage determinations.

One commentator suggested that this Department should include 18 basic classifications in all wage determinations due to unfamiliarity with proper classifications by the contracting agencies.

This recommendation cannot be feasibly adopted. Wage data for every classification is not always readily available; thus the proposed change would place an excessive administrative burden on the Department. In addition, this recommendation fails to consider variations in the classifications needed, arising from differences in area practices. Experience has shown that while agency officials requesting rates do not always request the proper classifications, follow-up actions by this Department's personnel and the routine issuance of wage determinations containing classifications not specifically requested have in the vast majority of cases essentially obviated the problem suggested by this commentator.

§ 1.6 Application of wage determinations.

§ 1.6(a)(1). Several commentators have suggested the extension of project

wage determinations from the current 120 days to 180 days. This would allow the routine use of wage determinations that are already almost 6 months old when incorporated in the contract. It is believed that this policy would be contrary to Congressional intent that the wage determination reflect the current prevailing wage in the area, to the extent practicable.

Conversely, we cannot adopt the suggestion of another commentator to summarily reject any request for an extension to an expiring project wage determination where an applicable modification has already been made. The criteria for granting extensions which are set forth in both the current and proposed Regulations (i.e., that the extension is necessary and proper in the public interest to prevent injustice or undue hardship or to avoid serious impairment in the conduct of government business) are deemed to be reasonable and should be maintained. The commentator's suggestions for clarifying language of the criteria for requesting extensions and/or new wage determinations have been carefully reviewed and appropriate changes in this paragraph have been made.

§ *1.6(b) and Appendix C.* Several commentators objected to the codification of All Agency Memorandum Nos. 130 and 131, concerning classification of projects. The principal objections concerned the apparent establishment of nationwide standards without regard to local area practices. The memoranda were intended to be guidelines which would not be applicable where the category of a project in a construction sense is not clear and where a different category is established by area practice. Appendix C has therefore been revised to emphasize the significance of area practice where a legitimate dispute exists concerning the character of a project, and to make it clear that such questions are to be referred to the Wage and Hour Division for a ruling.

One commentator suggested that questions should not be referred to the Wage and Hour Division except at the contracting agency's discretion. Because of the Department's statutory responsibilities regarding wage determinations, and because of our experience with misapplication of wage determinations by agencies as a result of their lack of expertise or otherwise, referral of all disputes to the Department has been found to be necessary. The validity of the Department's current regulation (29 CFR 5.12) requiring such referral has been upheld by the Court of Appeals for the Fifth Circuit in *North Georgia Building and Construction Trades Council* v. *Goldschmidt*, 621 F. 2d 697 (1980).

Several specific comments were received concerning the circumstances in which more than one wage determination is issued for a project. In this connection, these comments requested clarification of the terms "project" and "substantial". These sections of the memoranda have been modified as a result of these comments in an attempt to make clear standards for application of multiple schedules—where the work constitutes 20 percent or more of the total project cost, or where the work at issue is estimated to cost at least $250,000. The dual test of amount of construction and functional relationship between the parts of the project in determining what is "incidental", is apparently confusing and unnecessary, and therefore has been elminated. Additional illustrative examples have been added to clarify the term "project".

A few commentators were of the incorrect view that by publishing the memoranda as an appendix, they were not open to comment. To the contrary, this was not the Department's intention, as indicated by the fact that they were published as a part of the document on which comments were invited. They were published as an appendix only because they were not in traditional regulation form. Similarly, one commentator suggested that the agreement of unions and contractors should be obtained. However, the views of these groups were obtained in the rulemaking process.

Appendix C has been amended in accordance with the discussion above. In addition, changes were made to clarify the memoranda, and to combine them into one coherent inclusive document.

§ 1.6(c). Numerous commentators objected to the proposed revision of the "10 day" rule which would require contracting agencies to accept modifications to wage determinations received less than 10 days before the opening of bids unless the agency finds there is not sufficient time to notify bidders of the modification and to send a report of its findings to the Administrator.

It has been the consistent policy of the Department of Labor that bid solicitations should contain the most recently issued determination of current prevailing wages which can be included, without causing undue disruption of the procurement process. However, experience has shown that in many cases contracting agencies have declined to use wage modifications received less than 10 days before bid opening, even though it may have been possible to notify bidders of the modification prior to bid opening.

In this regard, the courts have held that the current 10-day rule imposes an affirmative obligation on the contracting agencies to make a substantive determination as to whether there is sufficient time to notify bidders of modifications received less than 10 days before bid opening. *(Operating Engineers, Local 627 v. Arthurs*, 355 Supp. 7 (W.D. Okla.), *aff'd*, 480 F. 2d 603 (10th Cir. 1973).) In view of the agencies' present obligation to make a determination as to sufficient time and the Department's considered opinion that the agencies frequently fail to do so, it was decided that the Act could be better implemented by adopting the proposed revision to place greater emphasis on the agencies' obligation in this area. Accordingly, the proposed revision of the 10 day rule is not considered a significant change in these obligations. We are also of the opinion that the notification process can be completed in accordance with the 10-day rule in most cases without undue disruption of the procurement process or inflation of bid prices. Of course, it is recognized that there may be cases where an agency will find that it is not feasible to adopt modifications less than 10 days before bid opening. In such cases, the agency would, prior to bid opening, document its finding of insufficient time and incorporate this finding in the contract file or docket.

Accordingly, while we have considered the objections of some commentators to this reporting requirement, we find that written documentation of the agency's finding of insufficient time is in keepng with sound administrative practices and does not impose an undue paperwork burden upon the agency. The Department has determined that it is appropriate to eliminate the requirement that the report be submitted to the Department, and to adopt one commentators recommendation that the report be in the form of a memo to the contract file and made available to the Administrator upon request. With respect to one commentator's view that the reporting requirement will encourage agencies to adopt modifications rather than make a documented finding of insufficient time, we note that the primary purpose of the reporting requirement is to ensure the utilization of modifications where feasible.

Numerous commentators also opposed the proposed "60 day rule". Under this proposed rule, if a contract

(to which a general wage determination has been applied) has not been awarded within 60 days after bid opening, any modification published prior to bid opening would be effective unless the agency has obtained an extension of the 60 day period from the Administrator.

The Department's obligation to insure that the most current determination of prevailing wages is included in contracts subject to the Davis-Bacon Act is also frustrated by delays which occur in awarding a contract after bid opening. However, it was deemed necessary to adopt a 90 day rather than the proposed 60 day rule to be consonant with the expiration date currently placed on project determinations.

In view of the objections to oral notification of a modification to a wage determination, we have studied the issue further and in consideration of the problems which may arise as a result of misinterpretation of an oral modification notice, we deem it appropriate to provide that written notification of a modification constitutes receipt.

It appears from apparent misinterpretations expressed by several commentators that clarification of § 1.6 with respect to projects financed under the National Housing Act and section 8 of the U.S. Housing Act of 1937 would be appropriate. (The somewhat different application of the rules to such projects is mandated by the statutory schemes of those two acts.) However we believe that the present format of the proposed regulations makes it clear that the 10 day rule applies to competitive procurements under these two acts, and therefore we have made no change in that provision.

With respect to the recommendation of one commentator that the proposed regulations be amended to specify that project and general wage determinations should be modified not less often than every 6 months, it is the Department's considered opinion that due to resource limitations and the lack of sufficient wage data in all cases, this recommendation would not be administratively feasible.

Accordingly, § 1.6(b) as amended is adopted.

§ 1.6(e). Several commenttators objected to § 1.6(e), stating that it improperly gives the Administrator discretionary authority to determine what is a wrong or erronerous wage determination. They argued that this is an impractical, destablizing concept, disruptive to the procurement process. They expressed concern that contractors would be penalized for errors which are not their fault. Three of these commentators also stated that the difference between wrong and erroneous wage determinations needed to be clarified. One commentator stated this subsection would allow this Department unlimited flexibility to circumvent other sections of these regulations. One commentator opposed oral notification, recommending adoption of only written notification.

It is not the Department's intention that a contractor would be penalized by the correction of a wage determination prior to contract award. Rather, it is envisioned that in a competitive procurement, the agency would resolicit the contract with the correct wage determination or permit the contractor to withdraw his bid. In other procurements, the contract price (or amount of Federal assistance) presumably would be adjusted accordingly.

It is clear that the word "wrong" as used in this subsection is used in the sense that the wage determination in the contract is not the wage determination applicable to the contract, such as a highway wage determination being used on a residential project. In contrast, an erroneous wage determination contains errors within the wage determination, such as incorrect wage rates. However, in view of obvious confusion expressed over the distinction between "wrong" and "erroneous", the word "erroneous" has been replaced by "contains substantial errors", thereby also limiting the Department's discretion to withdraw a wage determination. Further, we agree that it is appropriate to withdraw the oral notification provision of this section and to only retain the provision for written notification.

§ 1.6(f). Numerous commentators objected to this subsection, which mandates insertion of a wage determination after contract award where no wage determination has been put in the contract or where the Department of Labor issued an inapplicable wage determination because it was misadvised as to the nature of the project or its location. They argue that the contract awarded would not be the same as the contract for which bids were solicited and it would increase costs and contractor risks. They also stated it places an undue hardship on contractors and contracting agencies by requiring them to correct errors which may have been caused by the Department of Labor. Several commentators stated that it gives the Department of Labor powers beyond those expressed in Reorganization Plan 14 of 1950. Several commentators also noted the inherent difficulties in amending or terminating and resoliciting a contract. Three commentators suggested that, if adopted, this section should clearly provide for the right to appeal any decision by the Administrator ordering the incorporation of a wage decision after contract award to the Comptroller General or the Wage Appeals Board.

Subsection 1.6(f) is necessary to make clear the contracting agency's obligation to correct those situations where it has failed to include any wage determination in a covered contract, or has included an inapplicable wage determination. It is incumbent on this Department to insure that the statutory requirement of the Davis-Bacon Act to include proper wage determination in all covered contracts is met. Contrary to the views of some commentators, the authority for this subsection is derived directly from the statutory language as well as Reorganization Plan 14 of 1950.

We are cognizant of the stated additional cost and risk factors and do not intend that this subsection be a disruptive influence. We have provided that appropriate changes can be accomplished by the contracting agency by whatever means it deems appropriate, which should minimize any disruption to the procurement process, or inequitable cost increases or other problems faced by bidders and contractors. Therefore, subsection 1.6(f) has been adopted with minor word change.

No further amendment of this subsection is warranted with respect to the issue of the right to appeal to the Wage Appeals Board, since such a right already exists.

§ 1.6(g). Some commentators objected to proposed § 1.6(g), because its application may result in increased costs to contractors without providing for reimbursement for these extra costs. We recognize back wage payments may be necessary and we contemplate that contractors would take these into account in requesting funding from the contracting agency.

One commentator suggested that it be mandatory that the wage determination current at the time funding is approved by the agency be applied to the contract as of the funding approval date. This commentator also questioned the legality of the Department's authority to require any retroactive payment of Davis-Bacon wage rates. However, retroactive payment is implicit in the various statutory provisions. The Department's position in this regard is consistent with the recent decision in *North Georgia Building and Construction Trades Council* v. *Goldschmidt*, 621 F 2d 697 (5th Cir. 1980). Assuming this subsection would be finalized, this commentator requested

clarification of what wage determination would be applicable—the one current at the time of contract award or start of construction, at the time of funding approval, or at some point in between. It has been determined that the wage determination in effect at the time of contract award (or at the start of construction where applicable) is appropriate. Thus, when a wage determination is made effective retroactively to the contract award date or start of construction, the rates contained therein will be those prevailing at that earlier time.

§ 1.7 Scope of consideration.

Several commentators stated that the definition of area in § 1.2(b) of this part includes political subdivisions smaller than the county, and our reliance in § 1.7(a) on the county as the normal survey area is not consistent with the intent of the Davis-Bacon Act. They suggest we consider smaller local civil subdivisions within the county as the only basis for making wage determinations. Other commentators suggested we expand the area of consideration to the Standard Metropolitan Statistical Area. Subsection 1.7(a) expresses the actual practice that has been used by this Department in making wage determinations. Experience has demonstrated that the standard, but not inflexible, practice of using the county as the area of consideration is the administratively feasible approach in order to collect meaningful data. In our view, this practice is in accord with the Act. However, smaller civil subdivisions are occasionally used where it is warranted under special circumstances. Similarly, when there is not sufficient data available in individual counties to make an accurate wage determination, we have no choice but to survey surrounding counties.

One commentator requested that the distinction between a "metropolitan county" and a "rural county" be clarified in § 1.7(b). The terms "metropolitan county" and "rural county", as used in subsection 1.7(b), generally coincide with the inclusion or exclusion of a county from a Standard Metropolitan Statistical Area, although other criteria may be considered in a particular case if warranted under the circumstances. We believe that this subsection clearly restricts the conditions under which the Department can use data from such dissimilar counties to make a wage determination. However, we believe that it is also necessary to recognize that in extraordinary circumstances, such as when a specialized project is proposed in a rural county where there has been no similar type construction in the county or in surrounding counties, it may be necessary to obtain wage rate data from metropolitan counties where there have been such projects.

A few commentators objected to the term "in the State" as used in §1.7(c) on the basis that the Davis-Bacon Act speaks of civil subdivisions of the states as being the appropriate area of consideration in making wage determinations. One other commentator suggested that this same term was too restrictive and we should be able to consider wage rate data from adjoining states. It has been our policy that in the unusual case where there is not sufficient current wage rate data available in a county or surrounding counties, we expand the area of consideration. We believe that the use of "in the State" is consistent with our policy, but we do not envision except in the most extraordinary circumstances that data from an entire State would be needed to make a wage determination. In view of the comments, we have added "in surrounding counties" immediately before "in the State" in the text to clarify that when such circumstances arise, the first consideration outside the county will be the surrounding counties.

While some commentators objected to work performed as the criterion for making distinctions between classifications of laborers and mechanics, we regard the statute as requiring that distinctions be based on the classification of work performed rather than on the level of skill. In any given classification individual skill levels will vary from employee to employee and any attempt to measure and issue rates on that basis is administratively impossible and could throw the procurement into complete confusion. Subsection 1.7(d) is adopted with a minor language insert clarifying that the classifications will be issued on wage determinations only where the classification prevails in the area.

§ 1.8 Reconsideration by the Administrator.

All comments received were directed at the amount of time and expense in the form of delays to the start of construction involved in seeking reconsideration of wage determinations.

After due consideration the proposed regulation has been changed to reflect the concerns of the commentators and we have made the Administrator responsible for responding substantatively to the reconsideration request within a 30 day period or to notify the requestor that additional time is necessary.

Appropriate changes to reflect this policy have been made in the regulations.

§ 1.9 Review by the Wage Appeals Board.

Two commentators objected to the elimination of administrative hearings, citing the loss of due process and accountability on the part of Wage and Hour officials. This provision was eliminated because of the lengthy delays incurred by formal administrative hearings, the infrequency of their occurrence, the lack of expertise of administrative law judges, and in the interest of minimizing disruptions to the procurement process.

It is the opinion of the Department that in view of the expertise developed by the Wage Appeals Board through its existing responsibilities under section 1.16 of the current regulations, it is appropriate to eliminate the provision for formal administrative hearings. Because of the provision for appeal to the Board, this can be done without depriving interested parties of their right to due process.

One commentator was of the incorrect view that the proposed regulations limit the authority of the Board to hear an appeal on a portion of a wage determination. The Board has this authority. Additionally, pursuant to 29 CFR Part 7, the Board has the discretion to hear an appeal on all or part of any determination.

One commentator also misinterpreted the proposed regulations to indicate that field surveys would no longer be conducted. However, § 1.3(c) of the proposed regulations states that field surveys may be conducted as necessary to obtain sufficient data upon which to base wage determinations.

Accordingly, the proposed regulation will be adopted.

In addition to the above, there were other comments recommending minor editorial and language changes which we deemed valid, and we have amended the affected sections.

This rule was drafted under the supervision and direction of Donald Elisburg, Assistant Secretary of Labor, Employment Standards Administration, U.S. Department of Labor, 200 Constitution Avenue, NW., Washington, D.C. 20210 (202–523–6191).

Accordingly, 29 CFR Part 1 is revised as set forth below.

Signed at Washington, D.C. this 12th day of January, 1981.

Donald Elisburg,

Assistant Secretary of Labor, Employment Standards Administration.

Authority: 5 U.S.C. 301; R.S. 161, 64 Stat. 1267; Reorganization Plan No. 14 of 1950, 5 U.S.C. Appendix; 29 U.S.C. 259; 40 U.S.C. 276a—276a–7; 40 U.S.C. 276c; and the laws listed in Appendix A of this Part.

§ 1.1 Purpose and scope.

(a) The procedural rules in this part apply under the Davis-Bacon Act (46 Stat. 1494, as amended; 40 U.S.C. 276a—276a–7) and other statutes listed in Appendix A to this part which provide for the payment of minimum wages, including fringe benefits to laborers and mechanics engaged in construction activity under contracts entered into or financed by or with the assistance of agencies of the United States or the District of Columbia, based on determinations by the Secretary of Labor of the wage rates and fringe benefits prevailing for the corresponding classes of laborers and mechanics employed on projects similar to the contract work in the local areas where such work is to be performed. Functions of the Secretary of Labor under these statutes and under Reorganization Plan No. 14 of 1950 (64 Stat. 1267, 5 U.S.C. Appendix), except those assigned to the Wage Appeals Board (see 29 CFR Part 7), have been delegated to the Assistant Secretary of Labor for Employment Standards who in turn has delegated the functions to the Administrator of the Wage and Hour Division, and authorized representatives.

(b) The regulations in this part set forth the procedures for making and applying such determinations of prevailing wage rates and fringe benefits pursuant to the Davis-Bacon Act, each of the other statutes listed in Appendix A, any other Federal statute providing for determinations of such wages by the Secretary of Labor in accordance with the provisions of the Davis-Bacon Act.

(c) Procedures set forth in this part are applicable, unless otherwise indicated, both to general wage determinations published in the Federal Register for contracts in specified localities, and to project wage determinations for use on contract work to be performed on a specific project.

§ 1.2 Definitions.[1]

(a) The term "wages" (and its singular form) has the meaning prescribed in section 1(b) of the Davis-Bacon Act (40 U.S.C. 276a(b)). It includes the basic hourly rate of pay and the rate of contributions or payments made on behalf of the laborers and mechanics for bona fide fringe benefits.

(1) A "wage" shall be deemed to be the "prevailing wage" if it is the wage (hourly rate of pay and fringe benefits) paid to the greatest number of laborers or mechanics in the classification on similar projects in the area during the period in question, *provided* that the wage is paid to at least 30% of those employed in the classification. If the same wage (hourly rate of pay and fringe benefits) is not paid to at least 30% of those employed in the classification during the period in question, the "prevailing wage" shall be deemed to be the average of the basic hourly rates of pay plus the average of the rates of contributions or payments for bona fide fringe benefits, weighted by the total employed in the classification.

(2) In determining the "prevailing wages" at the time of issuance of a wage determination, the Administrator will be guided by paragraph (a)(1) of this section and will consider the types of information listed in § 1.3(b) of this part.

(b) The term "area" in determining wage rates under the Davis-Bacon Act and the prevailing wage provisions of the other statutes listed in Appendix A shall mean the city, town, village, county or other civil subdivision of the State in which the work is to be performed.

(c) The term "Administrator" shall mean the Administrator of the Wage and Hour Division, Employment Standards Administration, U.S. Department of Labor, or authorized representative. In the absence of the Wage-Hour Administrator, the Deputy Administrator of the Wage and Hour Division is designated to act for the Administrator under this part. Except as otherwise provided in this part, the Assistant Administrator for Government Contract Wage Standards is the authorized representative of the Administrator for the performance of functions relating to the making of wage determinations.

(d) The term "agency" shall mean the Federal agency, State highway department under 23 U.S.C. 113, or recipient State or local government under Title 1 of the State and Local Fiscal Assistance Act of 1972.

[1] These definitions are not intended to restrict the meaning of the terms as used in the applicable statutes.

§ 1.3 Obtaining and compiling wage rate information.

For the purpose of making wage rate determinations, the Administrator will conduct a continuing program for the obtaining and compiling of wage rate information.

(a) The Administrator will encourage the voluntary submission of wage rate data by contractors, contractors' associations, labor organizations, public officials and other interested parties, reflecting wage rates paid to laborers and mechanics on various types of construction in the area. The Administrator will also obtain data from agencies on wage rates paid on construction projects under their jurisdiction. The information submitted should reflect not only the wage rates paid a particular classification in an area, but also the type or types of construction on which such rate or rates are paid.

(b) The following types of information will be considered in making wage rate determinations:

(1) Statements showing wage rates paid on projects. Such statements should indicate the names and addresses of contractors, including subcontractors, the locations, approximate costs, dates of construction and types of projects, the number of workers employed in each classification on each project, and the respective wage rates paid such workers.

(2) Signed collective bargaining agreements. The Administrator may request the parties to an agreement to submit statements certifying to its scope and application.

(3) Wage rates determined for public construction by State and local officials pursuant to prevailing wage legislation.

(4) Information furnished by Federal and State agencies. See § 1.5. In making wage rate determinations pursuant to 23 U.S.C. 113, the highway department of the State in which a project in the Federal-Aid highway system is to be performed shall be consulted. Before making a determination of wage rates for such a project the Administrator

shall give due regard to the information thus obtained.

(5) Wage rate data submitted to the Department of Labor by contracting agencies pursuant to 29 CFR 5.5(a)(1)(ii).

(6) Any other information pertinent to the determination of prevailing wage rates.

(c) The Administrator may initially obtain or supplement such information obtained on a voluntary basis by such means, including the holding of hearings, and from any sources determined to be necessary. All information of the types described in § 1.3(b) of this Part, pertinent to the determination of the wages prevailing at the time of issuance of the wage determination, will be evaluated in the light of § 1.2(a) of this Part.

§ 1.4 Outline of agency construction programs.

To the extent practicable, at the beginning of each fiscal year each agency using wage determinations under any of the various statutes listed in Appendix A will furnish the Administrator with a general outline of its proposed construction programs for the coming year indicating the estimated number of projects for which wage determinations will be required, the anticipated types of construction, and the locations of construction. During the fiscal year, each agency will notify the Administrator of any significant changes in its proposed construction programs, as outlined at the beginning of the fiscal year.

§ 1.5 Procedure for requesting wage determinations.

(a)(1) Except as provided in paragraph (b) of this section, the Federal agency shall initially request a wage determination under the Davis-Bacon Act or any of its related prevailing wage statutes by submitting Standard Form 308 to the Department of Labor at this address:

U.S. Department of Labor, Employment Standards Administration, Wage and Hour Division, Branch of Construction Wage Determinations, Washington, D.C. 20210.

The agency shall check only those classifications on the applicable form which will be needed in the performance of the work. Inserting a note such as "entire schedule" or "all applicable classifications" is not sufficient. Additional classifications needed which are not on the form may be typed in the blank spaces or on a separate list and attached to the form. The agency shall not list classifications which can be fitted into classifications on the form, or classifications which are not generally recognized in the area or in the construction industry.

(2) In completing SF-308, the agency shall furnish:

(i) A sufficiently detailed description of the work to indicate the type of construction involved. Additional description or separate attachment, if necessary for identification of type of project, shall be furnished.

(ii) The county (or other civil subdivision) and State in which the proposed project is located.

(3) Such request for a wage determination shall be accompanied by any pertinent wage payment information which may be available. When the requesting agency is a State highway department under the Federal-Aid Highway Acts as codified in 23 U.S.C. 113, such agency shall also include its recommendations as to the wages which are prevailing for each classification of laborers and mechanics on similar construction in the area.

(b) Whenever the wage patterns in a particular area for a particular type of construction are well settled and whenever it may be reasonably anticipated that there will be a large volume of procurement in that area for such a type of construction, the Administrator, upon the request of a Federal agency or in his discretion, may publish a general wage determination in the **Federal Register** when, after consideration of the facts and circumstances involved, the Administrator finds that the applicable statutory standards and those of this part will be met. If there is a general wage determination applicable to the project, the agency may use it without notifying the Department of Labor, provided, that questions concerning its use are referred to the Department of Labor in accordance with § 1.6(b).

(c) The time required for processing requests for wage determinations varies according to the facts and circumstances in each case. An agency should anticipate that such processing in the Department of Labor will take at least 30 days.

§ 1.6 Use and effectiveness of wage determinations.

(a)(1) Project wage determinations initially issued shall be effective for 120 calendar days from the date of such determinations. If such a wage determination is not used in the period of its effectiveness it is void. Accordingly, if it appears that a wage determination may expire between bid opening and contract award (or between initial endorsement under the National Housing Act or the execution of an agreement to enter into a housing assistance payments contract under section 8 of the U.S. Housing Act of 1937, and the start of construction) the agency shall request a new wage determination sufficiently in advance of the bid opening to assure receipt prior thereto. However, when due to unavoidable circumstances a determination expires before award but after bid opening (or before the start of construction, but after initial endorsement under the National Housing Act, or before the start of construction but after the execution of an agreement to enter into a housing assistance payments contract under Section 8 of the U.S. Housing Act of 1937), the head of the agency or his or her designee may request the Administrator to extend the expiration date of the wage determination in the bid specifications instead of issuing a new wage determination. Such request shall be supported by a written finding which shall include a brief statement of the factual support, that the extension of the expiration date of the determination is necessary and proper in the public interest to prevent injustice or undue hardship or to avoid serious impairment in the conduct of Government business. The Administrator will either grant or deny the request for an extension after consideration of all of the circumstances, including an examination to determine if the previously issued rates remain prevailing. If the request for extension is denied, the Administrator will proceed to issue a new wage determination for the project.

(2) General wage determinations issued pursuant to § 1.5(b) and which are published in the **Federal Register**, shall contain no expiration date.

(b) Application of general wage determinations to projects and application of project wage determinations with more than one wage rate schedule shall be in accordance with Appendix C of this part. Any question regarding application of wage rate schedules or the guidelines contained in Appendix C shall be referred to the Administrator for resolution.

(c)(1) Project and general wage determinations may be modified from time to time to keep them current. A modification may specify only the items being changed, or may be in the form of a supersedeas wage determination, which replaces the entire wage determination. Such actions are distinguished from a determination by the Administrator under paragraphs (d), (e) and (f) of this section that an erroneous wage determination has been

issued or that the wrong wage determination or wage rate schedule has been utilized by the agency.

(2)(i) All actions modifying a project wage determination received by the agency before contract award (or the start of construction where there is no contract award) shall be effective except as follows:

(A) In the case of contracts entered into pursuant to competitive bidding procedures, modifications received by the agency less than 10 days before the opening of bids shall be effective unless the agency finds that there is not a reasonable time still available before bid opening, to notify bidders of the modification and a report of the finding is inserted in the contract file. A copy of such report shall be made available to the Administrator upon request. No such report shall be required if the modification is received after bid opening.

(B) In the case of those contracts entered into under the National Housing Act which are not awarded pursuant to competitive bidding procedures, modifications shall be effective if received prior to the beginning of construction or the date the mortgage is initially endorsed, whichever occurs first.

(C) In the case of projects to receive housing assistance payments under section 8 of the U.S. Housing Act of 1937, if there is no contract for the project awarded pursuant to competitive bidding procedures, modifications shall be effective if received prior to the beginning of construction or the date the agreement to enter into a housing assistance payments contract is executed, whichever occurs first.

(ii) Modifications to project wage determinations and supersedeas wage determinations shall not be effective after contract award, or after the beginning of construction, as appropriate.

(iii) Actual written notice of a modification shall constitute receipt.

(3) All actions modifying a general wage determination shall be effective with respect to any project to which the determination applies, if published before contract award (or the start of construction where there is no contract award), except as follows:

(i) In the case of contracts entered into pursuant to competitive bidding procedures, modifications published less than 10 days before the opening of bids shall be effective unless the agency finds that there is not a reasonable time still available before bid opening to notify bidders of the modification and a report of the finding is inserted in the contract file. A copy of such report shall be made available to the Administrator upon request. No such report shall be required if the modification is published after bid opening.

(ii) In the case of those contracts entered into under the National Housing Act which are not awarded pursuant to competitive bidding procedures, modifications shall be effective if published prior to the beginning of construction or the date the mortgage is initially endorsed, whichever occurs first.

(iii) In the case of projects to receive housing assistance payments under section 8 of the U.S. Housing Act of 1937, if there is no contract for the project awarded pursuant to competitive bidding procedures, modifications shall be effective if published prior to the beginning of construction or the date the agreement to enter into a housing assistance payments contract is signed, whichever occurs first.

(iv) If under paragraph (c)(3)(i) of this section the contract has not been awarded within 90 days after bid opening, or if under paragraph (c)(3)(ii) or (iii) of this section construction has not begun within 90 days after initial endorsement or the signing of the agreement to enter into a housing assistance payments contract, any modifications published in the Federal Register prior to award of the contract or the beginning of construction, as appropriate, shall be effective with respect to that contract unless the head of the agency or his or her designee requests and obtains an extension of the 90-day period from the Administrator. Such request shall be supported by a written finding, which shall include a brief statement of the factual support, that the extension is necessary and proper in the public interest to prevent injustice or undue hardship or to avoid serious impairment in the conduct of Government business. The Administrator will either grant or deny the request for an extension after consideration of all the circumstances.

(v) A modification to a general wage determination is "published" within the meaning of this section on the date of publication in the Federal Register, or on the date the agency receives actual written notice of the modification from the Department of Labor, whichever occurs first.

(vi) Modifications or supersedeas wage determinations to an applicable general wage determination published after contract award or after the beginning of construction, as appropriate, shall not be effective.

(d) Upon his/her own initiative or at the request of an agency, the Administrator may correct any wage determination, without regard to paragraph (c) of this section, whenever the Administrator finds such a wage determination contains clerical errors. Such corrections shall be included in any bid specifications containing the wage determination, or in any on-going contract containing the wage determination in question, retroactively to the start of construction.

(e) Written notification by the Department of Labor prior to the award of a contract (or the start of construction under the National Housing Act, under Section 8 of the U.S. Housing Act of 1937, or where there is no contract award) that (1) there is included in the bidding documents or solicitation the wrong wage determination or the wrong schedule or that (2) a wage determination is withdrawn because the Department of Labor has determined that it contains substantial errors (as distinguished from rates which are no longer current), shall be effective immediately without regard to paragraph (c) of this section.

(f) The Administrator may issue a wage determination after contract award or after the beginning of construction if the agency has failed to incorporate a wage determination in a contract required to contain prevailing wage rates determined in accordance with the Davis-Bacon Act, or has used a wage determination which by its terms or the provisions of this part does not apply to the contract. Further, the Administrator may issue a wage determination which shall be applicable to a contract after contract award or after the beginning of construction when it is found that the wrong wage determination has been incorporated in the contract because of an inaccurate description of the project or its location in the agency's request for the wage determination. Under any of the above circumstances, the agency shall incorporate the valid wage determination in the contract specifications retroactively to the date of award, or the beginning of construction, as appropriate. This should be done by whatever means the agency deems appropriate, including, for example, terminating and resoliciting the contract, or amending the contract through supplemental agreement or through change order. Such an amendment or change order may include price adjustments where the agency finds it to be appropriate under its regulations.

(g) If Federal funding or assistance under a statute requiring payment of wages determined in accordance with the Davis-Bacon Act is not approved

prior to contract award or the beginning of construction, as appropriate, the agency shall request a wage determination prior to approval of such funds. Such a wage determination shall be issued based upon the wages and fringe benefits found to be prevailing on the date of award or the beginning of construction (under the National Housing Act, under Section 8 of the U.S. Housing Act of 1937 or where there is no contract award), as appropriate, and shall be incorporated in the contract specifications retroactively to that date, *provided*, that upon the request of the head of the agency in individual cases the Administrator may issue such a wage determination to be effective on the date of approval of Federal funds or assistance whenever the Administrator finds that it is necessary and proper in the public interest to prevent injustice or undue hardship, *provided further* that the Administrator finds no evidence of intent to apply for Federal funding or assistance prior to contract award or the start of construction, as appropriate.

§ 1.7 Scope of consideration.

(a) In making a wage determination, the "area" will normally be the county unless sufficient current wage data (data on wages paid no more than one year prior to the beginning of the survey or the request for a wage determination, as appropriate) is unavailable to make a wage determination.

(b) If there has not been sufficient similar construction within the area in the past year to make a wage determination wages paid on similar construction in surrounding counties may be considered, *provided* that projects in metropolitan counties may not be used as a source of data for a wage determination in a rural county, and projects in rural counties may not be used as a source of data for a wage determination for a metropolitan county, except under extraordinary circumstances where there is not sufficient data available on projects in other rural or metropolitan counties.

(c) If there has not been sufficient similar construction in surrounding counties or in the State in the past year, wages paid on projects completed more than one year prior to the beginning of the survey or the request for a wage determination, as appropriate, may be considered.

(d) Classifications and wage and fringe benefit rates will be issued only for identifiable "classes of laborers and mechanics." Distinctions between classifications are based upon differences in the work performed, not upon skill and supervisory functions. A semi-skilled classification of laborers or helpers, for example, is issued when the classification prevails in the area, provided that the classification as utilized in the area performs a scope of duties which distinguishes it from other classifications in the area. Prevailing wages for apprentices and trainees are not issued on wage determinations, but their use is permitted in accordance with § 5.5(a)(4) of part 5.

§ 1.8 Reconsideration by the Administrator.

Any interested person may seek reconsideration of a wage determination issued under this part or of a decision of the Administrator regarding application of a wage determination. Such a request for reconsideration shall be in writing accompanied by a full statement of the interested person's views and any supporting wage data or other pertinent information. The Administrator will respond within 30 days of receipt thereof, or will notify the requestor within the 30 day period that additional time is necessary.

§ 1.9 Review by Wage Appeals Board.

Any interested person may appeal to the Wage Appeals Board for a review of a wage determination or its application made under this part, after reconsideration by the Administrator has been sought pursuant to § 1.8 and denied. Any such appeal may, in the discretion of the Wage Appeals Board, be received, accepted, and decided in accordance with the provisions of 29 CFR Part 7 and such other procedures as the Board may establish.

Appendix A

Statutes Related to the Davis-Bacon Act Requiring Payment of Wages at Rates Predetermined by the Secretary of Labor

1. The Davis-Bacon Act (secs. 1–7, 46 Stat. 1494, as amended; Pub. L. 74–403, 40 U.S.C. 276a–276a–7).

2. National Housing Act (sec. 212 added to c. 847, 48 Stat. 1246, by sec. 14, 53 Stat. 807; 12 U.S.C. 1715c and repeatedly amended).

3. Housing Act of 1950 (college housing) (amended by Housing Act of 1959 to add labor provisions, 73 Stat. 681; 12 U.S.C. 1749a(f)).

4. Housing Act of 1959 (sec. 401(f) of the Housing Act of 1950 as amended by Pub. L. 86–372, 73 Stat. 681; 12 U.S.C. 1701q(c)(3)).

5. Commercial Fisheries Research and Development Act of 1964 (sec. 7, 78 Stat. 199; 16 U.S.C. 779e(b)).

6. Library Services and Construction Act (sec. 7(a), 78 Stat. 13; 20 U.S.C. 355c(a)(4), as amended).

7. National Technical Institute for the Deaf Act (sec. 5(b)(5), 79 Stat. 126; 20 U.S.C. 684(b)(5)).

8. National Foundation on the Arts and Humanities Act of 1965 (sec. 5(k), 79 Stat. 846 as amended; 20 U.S.C. 954(j)).

9. Elementary and Secondary Education Act of 1965 as amended by Elementary and Secondary and other Education Amendments of 1969 (sec. 423 as added by Pub. L. 91–230, title IV, sec. 401(a)(10), 84 Stat. 169, and renumbered sec. 433, by Pub. L. 92–318; title III, sec. 301(a)(1), 86 Stat. 326; 20 U.S.C. 1232(b)). Under the amendment coverage is extended to all programs administered by the Commissioner of Education.

10. The Federal-Aid Highway Act of 1956 (sec. 108(b), 70 Stat. 378, recodified at 72 Stat. 895; 23 U.S.C. 113 as amended), see particularly the amendments in the Federal-Aid Highway Act of 1963 (Pub. L. 90–495, 82 Stat. 815).

11. Indian Self-Determination and Education Assistance Act (sec. 7, 88 Stat. 2205; 25 U.S.C. 450e).

12. Indian Health Care Improvement Act (sec. 303(b), 90 Stat. 1407; 25 U.S.C. 1633(b)).

13. Rehabilitation Act of 1973 (sec. 306(b)(5), 87 Stat. 384, 29 U.S.C. 776(b)(5)).

14. Comprehensive Employment and Training Act of 1973 (sec. 606, 87 Stat. 880, renumbered sec. 706 by 93 Stat. 1845; 29 U.S.C. 986; also sec. 604, 88 Stat. 1846; 29 U.S.C. 964(b)(3)).

15. State and Local Fiscal Assistance Act of 1972 (sec. 123(a)(6), 86 Stat. 933; 31 U.S.C. 1246(a)(6)).

16. Federal Water Pollution Control Act (sec. 513 of sec. 2, 86 Stat. 894; 33 U.S.C. 1372).

17. Veterans Nursing Home Care Act of 1964 (78 Stat. 502, as amended; 38 U.S.C. 5035(a)(8)).

18. Postal Reorganization Act (sec. 410(b)(4)(C); 84 Stat. 726 as amended; 39 U.S.C. 410(b)(4)(C)).

19. National Visitors Center Facilities Act of 1968 (sec. 110, 32 Stat. 45; 40 U.S.C. 808).

20. Appalachian Regional Development Act of 1965 (sec. 402, 79 Stat. 21; 40 U.S.C. App. 402).

21. Health Services Research, Health Statistics, and Medical Libraries Act of 1974 (sec. 107, see sec. 306(h)(2) thereof, 83 Stat. 370, as amended by 90 Stat. 378; 42 U.S.C. 242m(h)(2)).

22. Hospital Survey and Construction Act, as amended by the Hospital and Medical Facilities Amendments of 1964 (sec. 605(a)(5), 78 Stat. 453; 42 U.S.C. 291e(a)(5)).

23. Health Professions Education Assistance Act (sec. 303(b), 90 Stat. 2254; 42 U.S.C. 293a(g)(1)(C); also sec. 308a, 90 Stat. 2256, 42 U.S.C. 293a(c)(7)).

24. Nurse Training Act of 1964 (sec. 941(a)(1)(C), 89 Stat. 364; 42 U.S.C. 296e(b)(5)).

25. Heart Disease, Cancer, and Stroke Amendments of 1965 (sec. 904, as added by sec. 2, 79 Stat. 928; 42 U.S.C. 299d(b)(4)).

26. Safe Drinking Water Act (sec. 2(a), see sec. 1450e thereof, 88 Stat. 1691; 42 U.S.C. 300j–9(e)).

27. National Health Planning and Resources Act (sec. 4, see sec. 1604(b)(1)(H), 88 Stat. 2261, 42 U.S.C. 300o–3(b)(1)(H)).

28. U.S. Housing Act of 1937, as amended and recodified (88 Stat. 667; 42 U.S.C. 1437j).

29. Demonstration Cities and Metropolitan Development Act of 1966 (secs. 110, 311, 503, 1003, 80 Stat. 1259, 1270, 1277, 1284; 42 U.S.C. 3310; 12 U.S.C. 1715c; 42 U.S.C. 1437j).

30. Slum clearance program: Housing Act of 1949 (sec. 109, 63 Stat. 419, as amended; 42 U.S.C. 1459).

31. Farm housing: Housing Act of 1964 (adds sec. 516(f) to Housing Act of 1949 by sec. 503, 78 Stat. 797; 42 U.S.C. 1486(f)).

32. Housing Act of 1961 (sec. 707, added by sec. 907, 79 Stat. 496, as amended; 42 U.S.C. 1500c–3).

33. Defense Housing and Community Facilities and Services Act of 1951 (sec. 310, 65 Stat. 307; 42 U.S.C. 1592i).

34. Special Health Revenue Sharing Act of 1975 (sec. 303, see sec. 222(a)(5) thereof, 89 Stat. 324; 42 U.S.C. 2689j(a)(5)).

35. Economic Opportunity Act of 1964 (sec. 607, 78 Stat. 532; 42 U.S.C. 2947).

36. Headstart, Economic Opportunity, and Community Partnership Act of 1974 (sec. 11, see sec. 811 thereof, 88 Stat. 2327; 42 U.S.C. 2992a).

37. Housing and Urban Development Act of 1965 (sec. 707, 79 Stat. 492 as amended; 42 U.S.C. 3107).

38. Older Americans Act of 1965 (sec. 502, Pub. L. 89–73, as amended by sec. 501, Pub. L. 93–29; 87 Stat. 50; 42 U.S.C. 3041a(a)(4)).

39. Public Works and Economic Development Act of 1965 (sec. 712, 79 Stat. 575 as amended; 42 U.S.C. 3222).

40. Juvenile Delinquency Prevention Act (sec. 1, 86 Stat. 536; 42 U.S.C. 3884).

41. New Communities Act of 1968 (sec. 410.82 Stat. 516; 42 U.S.C. 3909).

42. Urban Growth and New Community Development Act of 1970. (sec. 727(f), 84 Stat. 1803; 42 U.S.C. 4529).

43. Domestic Volunteer Service Act of 1973 (sec. 406, 87 Stat. 410; 42 U.S.C. 5046).

44. Housing and Community Development Act of 1974 (secs. 110, 802(g), 83 Stat. 649, 724; 42 U.S.C. 5310, 1440(g)).

45. Developmentally Disabled Assistance and Bill of Rights Act (sec. 126(4), 89 Stat. 488; 42 U.S.C. 6042(4); title I, sec. 111, 89 Stat. 491; 42 U.S.C. 6063(b)(19)).

46. National Energy Conservation Policy Act (sec. 312, 92 Stat. 3254; 42 U.S.C. 6371j).

47. Public Works Employment Act of 1976 (sec. 109, 90 Stat. 1001; 42 U.S.C. 6708; also sec. 208, 90 Stat. 1008; 42 U.S.C. 6728).

48. Energy Conservation and Production Act (sec. 45(h), 90 Stat. 1168; 42 U.S.C. 6881(h)).

Appendix B

Boston Region

For the States of Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island, and Vermont:

Assistant Regional Administrator for Wage-Hour, Employment Standards Administration, U.S. Department of Labor, JFK Federal Building, Government Center, Room 1612C, Boston, Massachusetts 02203 (telephone: 617–223–5565).

New York Region

For the States of New Jersey and New York and for the Canal Zone, Puerto Rico, and the Virgin Islands:

Assistant Regional Administrator for Wage-Hour, Employment Standards Administration, U.S. Department of Labor, 1515 Broadway, Room 3300, New York, New York 10036 (telephone: 212–399–5443).

Philadelphia Region

For the States of Delaware, Maryland, Pennsylvania, Virginia, and West Virginia, and the District of Columbia:

Assistant Regional Administrator for Wage-Hour, Employment Standards Administration, U.S. Department of Labor, Gateway Building, Room 15220, 3535 Market Street, Philadelphia, Pennsylvania 19104 (telephone 215–596–1193).

Atlanta Region

For the States of Alabama, Florida, Georgia, Kentucky, Mississippi, North Carolina, South Carolina, and Tennessee:

Assistant Regional Administrator for Wage-Hour, Employment Standards Administration, U.S. Department of Labor, 1371 Peachtree Street, N.E., Room 305, Atlanta, Georgia 30309 (telephone: 404–881–4801).

Chicago Region

For the States of Illinois, Indiana, Michigan, Minnesota, Ohio, and Wisconsin:

Assistant Regional Administrator for Wage-Hour, Employment Standards Administration, U.S. Department of Labor, 230 South Dearborn Street, 8th Floor, Chicago, Illinois 60604 (telephone: 312–353–7249).

Dallas Region

For the States of Arkansas, Louisiana, New Mexico, Oklahoma, and Texas:

Assistant Regional Administrator for Wage-Hour, Employment Standards Administration, U.S. Department of Labor, 555 Griffin Square Building, Young and Griffin Streets, Dallas, Texas 75202 (telephone: 214–767–6891).

Kansas City Region

For the States of Iowa, Kansas, Missouri, and Nebraska:

Assistant Regional Administrator for Wage-Hour, Employment Standards Administration, U.S. Department of Labor, Federal Office Building, Room 2000, 911 Walnut Street, Kansas City, Missouri 64106 (telephone: 816–374–5386).

Denver Region

For the States of Colorado, Montana, North Dakota, South Dakota, Utah, and Wyoming:

Assistant Regional Administrator for Wage-Hour, Employment Standards Administration, U.S. Department of Labor, Federal Office Building, Room 1440, 1961 Stout Street, Denver, Colorado 80294 (telephone: 304–837–4613).

San Francisco Region

For the States of Arizona, California, Hawaii, and Nevada:

Assistant Regional Administrator for Wage-Hour, Employment Standards Administration, U.S. Department of Labor, 450 Golden Gate Avenue, Room 10353, San Francisco, California 94102 (telephone: 415–556–3592).

Seattle Region

For the States of Alaska, Idaho, Oregon, and Washington:

Assistant Regional Administrator for Wage-Hour, Employment Standards Administration, U.S. Department of Labor, Federal Office Building, Room 4141, 909 First Avenue, Seattle, Washington 98174 (telephone: 206–442–1916).

Appendix C

Subject: Application Of The Standard Of Comparison "Projects Of A Character Similar" Under The Davis-Bacon And Related Acts

The purpose of this memorandum is to set forth policies of the Wage and Hour Division with regard to the determination of "projects of a character similar to the contract work" for wage determination purposes. The guidelines contained in the memorandum are to be used by the contracting agencies in selecting the proper schedule(s) of wage rates from the **Federal Register** and in instructing contractors regarding the application of multiple schedules. This memorandum supersedes All Agency Memorandum No. 68 (July 19, 1966), No. 130 (March 17, 1978), and No. 131 (July 14, 1978).

The Davis-Bacon and related Acts require the Secretary of Labor to determine the prevailing wage rates for corresponding classes of laborers and mechanics on projects in the area which are of a "character similar" to the proposed contract work to which the determination will be applied. The Department's Wage Appeals Board in a decision specifically relating to high-rise apartment buildings (WAB Case No. 76–11, dated January 27, 1977) stated:

"The test of whether a project is of a character similar to another project refers to the nature of the project itself in a construction sense, not to whether union or nonunion wages are paid or whether union or nonunion workers are employed. Since the 1935 amendments to the Davis-Bacon Act, the statutory focus has always been on the character of the project itself rather than on who was employed on the project or how much he or she was being paid."

Again, in a decision relating to a water treatment plant project (WAB Case No. 77–

20, dated September 30, 1977), the Board stated: "When it is clear from the nature of the project itself in a construction sense that it is to be categorized as either building, heavy, or highway construction it is not necessary to resort to an area practice survey to determine the appropriate categorization of the project."

Where the proper category of construction is not clear, however, the Board has advised that the wages being paid may be considered to determine the appropriate category of construction, together with other characteristics, such as construction techniques, material and equipment used, and skills called for. WAB Case No. 77–23, dated December 30, 1977.

Generally, construction projects are classified as either Building, Heavy, Highway or Residential.[1] However, separate wage rate schedules are applied where a project includes structures in more than one category and the amount of construction in each category is substantial, either in relation to the overall project (approximately 20 percent or more of total project cost) or in dollar amount (approximately $250,000 or more). Separate schedules are common, for example, for water and sewage treatment plants, which generally include both buildings and non-building structures. On the other hand, water and sewer lines and paving on building projects are generally only incidental to a project, and therefore separate schedules are not ordinarily issued.[2]

Below are descriptions of the four major categories of construction, together with an illustrative list of the kinds of projects which are generally included within each category:

Building Construction

Building construction generally is the construction of sheltered enclosures with walk-in access for the purpose of housing persons, machinery, equipment, or supplies. It includes all construction of such structures, the installation of utilities and the installation of equipment, both above and below grade level, as well as incidental grading, utilities and paving. Additionally, such structures need not be "habitable" to be building construction. The installation of heavy machinery and/or equipment does not generally change the project's character as a building.

Examples

Alterations and additions to buildings
Apartment buildings (5 stories and above)
Arenas (enclosed)
Auditoriums
Automobile parking garages
Banks and financial buildings
Barracks
Churches
City halls
Civic centers
Commercial buildings
Court houses
Detention facilities
Dormitories
Farm buildings
Fire stations
Hospitals
Hotels
Industrial buildings
Institutional buildings
Libraries
Mausoleums
Motels
Museums
Nursing and convalescent facilities
Office buildings
Out-patient clinics
Passenger and freight terminal buildings
Police stations
Post offices
Power plants
Prefabricated buildings
Remodeling buildings
Renovating buildings
Repairing buildings
Restaurants
Schools
Service stations
Shopping centers
Stores
Subway stations
Theaters
Warehouses
Water and sewage treatment plants (buildings only)

Residential Construction

Residential projects for Davis-Bacon purposes are those involving the construction, alteration, or repair of single family houses or apartment buildings of no more than four (4) stories in height. This includes all incidental items such as site work, parking areas, utilities, streets and sidewalks.

Examples

Town or row houses
Apartment buildings (4 stories or less)
Single family houses
Mobile home developments
Multi-family houses
Married student housing

Heavy Construction

Heavy projects are those projects that are not properly classified as either "building", "highway", or "residential". Unlike these classifications, heavy construction is not a homogeneous classification. Because of this catch-all nature, projects within the heavy classification may sometimes be distinguished on the basis of their particular project characteristics, and separate schedules issued. For example, separate schedules may be issued for dredging projects, water and sewer line projects, dams, major bridges, and flood control projects.

Examples

Antenna towers
Bridges (bascule, suspension and spandrel arch bridges; bridges designed for commercial navigation; bridges involving marine construction; and other major bridges)
Breakwaters
Caissons (other than building or highway)
Canals
Channels
Channel cut-offs
Chemical complexes or facilities (other than buildings)
Cofferdams
Coke ovens
Dams
Dikes
Docks
Drainage projects
Dredging projects
Electrification projects (outdoor)
Flood control projects
Industrial incinerators (other than building)
Irrigation projects
Jetties
Kilns
Land drainage (not incidental to other construction)
Land leveling (not incidental to other construction)
Land reclamation
Levees
Locks, waterways
Oil refineries (other than buildings)
Pipe lines
Ponds
Pumping stations (prefabricated drop-in units)
Railroad construction
Reservoirs
Revetments
Sewage collection and disposal lines
Sewers (sanitary, storm, etc.)
Shoreline maintenance
Ski tows
Storage tanks
Swimming pools (outdoor)
Subways (other than stations and buildings)
Tipples
Tunnels
Unsheltered piers and wharves
Viaducts (other than highway)
Water mains
Waterway construction
Water supply lines (not incidental to building)
Water and sewage treatment plants (other than buildings)
Wells

Highway Construction

Highway projects include the construction, alteration or repair of roads, streets,

---

[1] For wage determination purposes, a project generally consists of all construction necessary to complete a facility regardless of the number of contracts involved, so long as all contracts awarded are closely related in purpose, time and place. For example, demolition or site work preparatory to building construction is considered a part of the building project for wage determination purposes. In contrast, because of the extensive size of a rapid rail system or a highway, which is built over a period of years, each segment is considered a separate project. See *MARTA*, WAB Case No. 75–5, dated October 16, 1975. Similarly, a rest area on a highway is considered a separate project.

[2] In certain areas of the country different wage rates are paid for incidental paving and utilities than for the remainder of a building project. Accordingly, in such areas the Wage and Hour Division issues the rates which are paid on such work on building projects. See WAB Case No. 77–19, dated December 30, 1977.

highways, runways, taxiways, alleys, trails, paths, parking areas, and other similar projects not incidental to building or heavy construction.

Examples

Alleys
Base courses
Bituminous treatments
Bridle paths
Concrete pavement
Curbs
Excavation and embankment (for road construction)
Fencing (highway)
Grade crossing elimination (overpasses or underpasses)
Guard rails on highway
Highway signs
Highway bridges (overpasses; underpasses; grade separation)
Medians
Parking lots
Parkways
Resurfacing streets and highways
Roadbeds
Roadways
Runways
Shoulders
Stabilizing courses
Storm sewers incidental to road construction
Street Paving
Surface courses
Taxiways
Trails

Unless the Wage and Hour Division advises otherwise, as set forth below, the descriptions and classifications above are to be utilized by contracting agencies in selecting the appropriate wage schedule from the **Federal Register** and in determining the application of multiple schedules issued by the Wage and Hour Division. The advertised and contract specifications should identify as specifically as possible the structures to which the schedule applies and only the appropriate schedule(s) from the **Federal Register** should be incorporated into the specifications. Where multiple schedules are issued for a project by the Wage and Hour Division, they are to be utilized in the specifications and any applicable instructions regarding their use are to be observed.

To ensure that appropriate schedules are issued by the Wage and Hour Division, contracting agencies are reminded of their responsibility to provide a sufficiently detailed description of the project to enable the Wage and Hour Division to determine the character of the project. If structures in more than one category of construction are involved, such structures should be identified, together with an estimate of the cost of those structures in dollar amounts and in relation to total project cost.

Furthermore, contracting agencies have the authority only in the first instance to designate the appropriate wage schedule(s) from the **Federal Register** and, in the absence of instructions from the Wage and Hour Division, to determine the application of multiple schedules issued by the Wage and Hour Division in project wage determinations. It is recognized that in individual caes or with respect to specific areas of the country, application of these guidelines may not be appropriate, such as where the category of construction is not clear and a definitive area practice has developed. For example, major bridges are ordinarily heavy construction, but have attributes of both heavy and highway construction; accordingly, area practice may be of great significance. Similarly, pumping stations vary greatly in sophistication and construction techniques, requiring close examination.

In any instance where a contracting agency has a question regarding application of the guidelines to a specific case, or where a question is raised by interested parties concerning the appropriate schedule(s) to be applied to a contract, the question is to be referred to the Wage and Hour Division. This referral should include a complete description of the project, any evidence available regarding area practice of wages paid on similar projects, comments by interested parties which may have been submitted to the agency, and the agency's own view.

Agencies are advised that the U.S. Court of Appeals for the Fifth Circuit has ruled that where a party has objected to a Federal agency's application of a general wage determination to a project, the question must be submitted to the Department of Labor pursuant to the regulations, 29 CFR 5.13, and bid opening cannot proceed until the dispute is resolved by the Secretary. *North Georgia Building and Construction Trades, supra.* The Wage and Hour Division will endeavor to cooprate with the contracting agencies in acting expeditiously with a view towards procurement deadlines.

Part VIII

Department of Labor

**Employment Standards Administration
Wage and Hour Division**

Service Contract Act; Labor Standards for Federal Service Contracts; Final Rule

DEPARTMENT OF LABOR

Wage and Hour Division, Employment Standards Administration

29 CFR Part 4

Service Contract Act; Labor Standards for Federal Service Contracts

AGENCY: Wage and Hour Division, Employment Standards Administration, Labor.

ACTION: Final rule.

SUMMARY: This rule revises Regulations, Part 4, Labor Standards for Federal Service Contracts, issued under the Service Contract Act. These regulations represent the first thorough substantive updating and clarification of these regulations since 1968. Most changes are made to reflect longstanding policies, rulings, and interpretations developed in the course of our experience in administering and enforcing the Act over the years. Essentially, this revision codifies these policies, rulings, and interpretations for the information and guidance of various interested parties, including employees and their representatives, contractors or potential contractors and their associations and Federal procurement agencies.

EFFECTIVE DATE: February 17, 1981.

FOR FURTHER INFORMATION CONTACT: Dorothy P. Come, Assistant Administrator, Wage and Hour Division, Employment Standards Administration, U.S. Department of Labor, Room S-3502, 200 Constitution Avenue, N.W., Washington, D.C. 20210, Telephone: 202-523-8333.

SUPPLEMENTARY INFORMATION: On December 28, 1979, a document was published in the **Federal Register** (44 FR 77036) proposing to revise, update, and clarify Regulations, 29 CFR Part 4, so that contracting agencies, contractors or potential contractors, and employees could be more fully apprised of their responsibilities and rights under the Service Contract Act and be provided with a current statement of the policies and interpretations followed by the Department of Labor in administering and enforcing the Act.

Numerous changes, clarifications, and revisions have been made to dispel misunderstandings and confusion that have arisen with respect to some of these policies.

In addition, several changes have been made which address certain concerns expressed by contracting agencies relative to the efficient administration of the Act as it relates to the procurement process. Many editorial and clarifying changes have also been made.

Persons interested in the proposed rulemaking were afforded the opportunity to submit comments to the Wage and Hour Division within 60 days after publication of the proposal in the **Federal Register.** On February 15, April 1, May 23, June 24, July 25, September 26, and October 24, 1980, notice was given in the **Federal Register** extending the time for public comment. The period for comments was terminated on November 24, 1980.

The April 1, 1980 extension was granted in order to allow the comment period for this Part to run concurrently with that for the related procedural rules in Parts 6 and 8 of this Title, published in proposed form on April 22, 1980. The other extensions were granted at the request of various interested parties who needed additional time to prepare their comments.

Overall, comments were received from approximately 450 interested parties, including Members of Congress, contracting agencies, labor unions and organizations, contractor associations, contractors, business organizations, and others.

Among those Federal agencies submitting comments were the Executive Office of the President—Office of Science and Technology Policy, the Department of Defense, the General Services Administration, the Department of Energy, the National Aeronautics and Space Administration, the Department of Agriculture, the Federal Aviation Administration and the Small Business Administration.

Contractor associations and business organizations submitting comments included the Council of Defense and Space Industry Associations, the Computer and Business Equipment Manufacturers Association, the National Council of Technical Service Industries, the National Star Route Mail Carriers' Association, the Scientific Apparatus Makers Association, and the Chamber of Commerce of the United States.

Among the individual firms who commented were Pan American World Airways, Inc., Datapoint Corporation, Northrop Corporation, Xerox Corporation, Trinidad Corporation, McDonald Douglas Corporation, Rockwell International, the Boeing Company, and attorneys representing the Bell and Howell Company, Southern Packaging and Storage Company, Inc., and Chromalloy Metals Tectonics Company.

Labor unions and organizations commenting on the proposal included the American Federation of Labor—Congress of Industrial Organizations (AFL-CIO) and its Department of Economic Research and Department of Professional Employees; and affiliated councils and unions of the AFL-CIO, including the International Brotherhood of Electrical Workers, the International Association of Machinists and Aerospace Workers, the American Federation of Government Employees, the Service Employees International Union, the International Union of Operating Engineers Local No. 3, and the United Brotherhood of Carpenters and Joiners of America, the Washington State Labor Council, the International Woodworkers of America, Seafarers International Union of North America, Laborers' International Union of North America, and the International Alliance of Theatrical Stage Employees and Moving Picture Machine Operators of the United States and Canada—Motion Picture Laboratory Technicians Local 780. Comments were also received from the Center to Protect Workers' Rights and the Contract Loggers Employee Association.

Several general comments were received, usually either in support or opposition to the proposal, while several others requested that public hearings regarding the proposed changes to the Regulations be held and/or requested the preparation of a regulatory analysis.

Since the long extended public comment period has given all interested parties ample opportunity to submit their views, it was decided that public hearings were not necessary.

It has been determined that the amendments to these Regulations do not meet the criteria of Executive Order 12044 and the Department of Labor Guidelines (44 FR 5570) for a regulatory analysis. The revised portions of the regulations essentially clarify interpretations, policies, and procedures, and do not, in any event, cause major cost/price increases.

The following is an analysis of all the principal comments received and a description of the changes made to the proposed rule because of these comments. Each submission has been thoroughly reviewed, and each criticism and suggestion has been given careful consideration. For each section and, where appropriate, subsection of the final rule, the analysis contains a description of the major substantive comments and recommendations, the Department's findings as to whether or not suggested changes to the proposed rule would be in accord with the language and intent of the SCA, and a discussion of the substantive changes adopted, if any. Many minor editorial changes, spelling, and other necessary

typographical corrections have been made.

* * * * *

Section 4.1b(a)—Effective Date of Variance Decisions

The AFL–CIO supported making decisions of substantial variance hearings effective on the date of issuance of an Administrative Law Judge's (ALJ) decision except where the decision results in the restoration of lost wages or fringe benefits, in which case the decision should be retroactive to the beginning of the contract, whereas DOD felt that a contractor should not be required to pay higher rates when a request for a variance hearing under section 4(c) of the Act has been made until the matter is resolved by an Administrative Law Judge. DOD also stated that a decision on substantial variance should not become effective until 10 days or more after the issuance of any new wage determination rather than the date of the ALJ's decision.

As set forth in § 4.163(c), the legislative history makes it clear that collectively bargained wages and fringe benefits must be honored "unless and until" they are found, after a hearing, to be at variance. Thus, the above suggestions cannot be adopted.

DOD also objected to the phrase "for the same location" as requiring successor contractors, regardless of where the service work will be performed, to pay wages and fringe benefits contained in a predecessor's collective bargaining agreement, and recommended using "at" or "in" the same location.

There is nothing in the Act indicating Congressional intent for such a strict limitation on section 4(c) of the Act. This point will be discussed in more detail under § 4.163.

Section 4.1b(b)—Limitations to the Applicability of Section 4(c) of the Act

The AFL–CIO, the Center to Protect Workers' Rights, and a number of other union organizations opposed what they perceived as additional limitations on the application of section 4(c) of the Act in the proposed adoption of different "cut off dates" for receipt of new or changed collective bargaining agreements in the case of negotiated procurements or contract extensions. The unions asserted that these proposed changes deprive workers of benefits which were insured by the 1972 Amendments to the Act.

The National Aeronautics and Space Administration, the Department of Energy, and several contractors argued that the rule for the application of new collective bargaining agreement rates in subparagraph (b)(2) should be tied to receipt of proposals (or best and final proposals), and not to contract award or commencement.

The General Services Administration (GSA) and NASA argued that the "30 day rule" in subparagraph (b)(2) would disrupt the procurement process because there would be legitimate reasons for delaying contract commencement for more than 30 days beyond the award date.

The Army and Air Force Exchange Service (AAFES) recommended a 90 day rule instead of the 30 day rule proposed in (b)(2), in order to allow phase-in procedures, since 60–90 days typically elapse between their contract awards and the contract commencement dates.

The time frame change in § 4.1b(b)(2) essentially moves back the date for recognition of new collective bargaining agreements from the current 10 days prior to the contract commencement, in the case of negotiated procurements, options or extensions, to the date of award—provided that the contract commences within 30 days after the award and that the predecessor contractor and collective bargaining representatives of the predecessor's employees are notified of all applicable procurement action dates, including, for example, commencement of negotiations, date of award and commencement of the contract. Otherwise, the "10 day prior to the commencement" rule becomes operative. While it is recognized that this change may take away 20 days from potential collective bargaining, it is deemed fair and equitable for all concerned, given the possible disruptions to the procurement process by the current 10-day rule. Conversely, tying the effectiveness of new bargaining agreements to the date on which contract proposals are received or the date of contract option, or extending the 30-day period to 90 days as suggested by some agencies, would provide too serve a limitation on the time available for meaningful collective bargaining with an incumbent contractor. For example, receipt of proposals often occurs many months before contract award or commencement.

The Computer and Business Equipment Manufacturers Association (CBEMA) objected to the provision in subparagraph (b)(3) that the limitations on the application of section 4(c) of the Act contained in subparagraphs (b) (1) and (2), concerning new collective bargaining agreement rates, are dependent upon the contracting officer notifying the predecessor contractor and the union of the applicable procurement dates.

This requirement, which has been in the Regulations since 1976, is necessary to give the affected parties fair and adequate notice, so that orderly bargaining may take place.

The Department of Defense recommended language changes in § 4.1b (b)(2) to refer to "contract start of performance" to prevent contractor evasion of the 30 day rule therein. This suggestion will be adopted.

Various commentators pointed out that in order to be effective, subparagraph (b)(3) must be clarified to specify that the incumbent contractor and the collective bargaining representative must be notified 30 days in advance of *all* applicable procurement dates. This subparagraph will be so clarified.

Section 4.4(a)—Notice of Intention To Make a Service Contract (SF–98)

The AFL–CIO; the Center to Protect Workers' Rights; the International Alliance of Theatrical Stage Employees, Local 780; the American Federation of Government Employees; and the International Brotherhood of Electrical Workers commented that the requirement for submitting SF–98s to the Department no less than 90 days prior to solicitation was necessary if DOL is to carry out its wage determination responsibilities more effectively, but suggested that the representatives of employees affected by the issuance of a wage determination (including Federal employees) also be notified.

The Department does not believe that the notification of employees' representatives that an SF–98 has been filed is a necessary or appropriate requirement. Employees are notified of their rights under the contract pursuant to § 4.6(e) in the contract clauses and union representatives are notified of agency procurement actions under § 4.1b (b)(3).

DOD and GSA objected to requiring earlier submissions of SF–98s for procurements which are not recurring and are not known of in advance. GSA noted that the reason for the longer advance time period was to accommodate appeals of wage determinations to the Board of Service Contract Appeals, and stated that it opposes, in spirit, the establishment of a Board because of the ensuing delays and complications which will accrue to the procurement process.

The National Aeronautics and Space Administration; the Department of Energy; the Department of Agriculture (Office of the Secretary, the Office of Operation and Finance, and the Forest

Service); the Naval Surface Weapons Center and the Chamber of Commerce also objected to the 90 day advance notice requirement as impairing the procurement process by increasing lead times for new requirements, thereby necessitating revisions of submitted data and an increase in costs. They argued that earlier submissions would also increase the incidence of changed collective bargaining agreements and would result in corresponding changes in wage determinations required by section 4(c) of the Act. NASA recommends retaining the current 30 day requirement and handling appeals which delay the issuance of a wage determination on a case by case basis.

As indicated above, the purpose of proposing an increase in the lead time for submission of SF–98s from 30 to 90 days was to provide adequate time for the review of wage determinations, if requested. (For the reasons stated in the preamble relating to 29 CFR Part 6, the Board of Service Contract Appeals is not being established, as proposed. Rather, a formal appeals procedure to the Secretary is being substituted.)

However, because of the degree of concern expressed by affected agencies, it has been decided to strike a balance by shortening this lead time to 60 days for submissions in the case of recurring, known procurements but retaining a 30 day submission period for unplanned and/or emergency actions. Appropriate changes will also be made in § 4.4(f).

GSA also took issue with the requirement in § 4.4(a) that agencies submit specific questions concerning the SCA's applicability to individual contracts to DOL, asserting that contracting officers, on advice of agency legal counsel, should retain authority to decide the applicability of the Service Contract Act in individual cases.

Since DOL has the responsibility for resolving questions of labor standards applicability (see the Opinion of the Attorney General, 43 Atty. Gen. Ops. (March 9, 1979)), it is proper to require the agencies to refer such matters for resolution.

Section 4.4(b)(1)

Two industry associations and one firm argued that the "5 employees" provision contained in this subsection should be interpreted as meaning 5 work years.

Because of the fluctuation in, and variety of staffing patterns on service contracts (e.g. a large number of employees used for a short time, a few used over the course of a year, etc.), it is not appropriate to establish any hard and fast rule on how to count the number of service employees, which is used by DOL to determine whether a wage determination is mandatory pursuant to section 10 of the Act. In any event, as required by section 10 and as set forth in § 4.3, DOL intends to issue wage determinations wherever possible, irrespective of whether more or less than 5 service employees will be utilized on a contract.

Section 4.4(f)

The Department of Defense objected to the 90 day rule for submission of SF–98s, and recommended a 30 day submission requirement for nonroutine procurements because of the need to meet emergency situations on a timely basis.

Such accommodation will be made in this subsection, as discussed above under § 4.4(a).

DOD also objected to the requirement that the contracting agency not award a contract with more than 5 service employees without an appropriate wage determination on the grounds that the agency should not have to hold up the award if the Department had not issued a wage determination within a reasonable time.

As noted in this subsection, the requirement that all contracts which involve the use of more than 5 service employees contain a wage determination carries out the mandate in section 10 of the Act and thus cannot be varied. The Department will do its utmost to issue timely wage determinations in response to the timely submissions of SF–98s.

Section 4.4(g)

DOD suggested that the requirement to contact DOL if a solicitation is delayed more than 30 days beyond the date indicated on the SF–98 to determine whether a wage determination is still current be changed to 60 days, in an effort to lessen the potential for unnecessary delays and disruption of the contracting process.

This is a reasonable suggestion, and will be adopted.

The National Aeronautics and Space Administration suggested that an expiration date be set forth in the wage determination in lieu of requiring the contracting agency to contact DOL if the procurement date exceeds the 30 day limitation, which they state is a common occurrence.

Given the large volume of wage determinations issued and revisions made, this is not a viable alternative.

Section 4.5(a)(2)—Inclusion of Revised Wage Determinations

The AFL–CIO; the Center to Protect Workers' Rights; the International Alliance of Theatrical Stage Employees, Local 780; the International Brotherhood of Electrical Workers; and the International Association of Machinists and Aerospace Workers objected to this provision as giving the contracting agencies too much discretion to use or reject revised wage determinations received less than 10 days prior to the date of bid opening in the case of competitive procurements, thereby inviting abuse. In addition, all of these parties recommend requiring the inclusion of an updated wage determination which is received by a contracting agency up to the date of contract commencement in the case of noncompetitive procurements.

NASA, the Army and Air Force Exchange Service (AAFES), the General Services Administration, the Department of Energy, the Computer and Business Equipment Manufacturers Association, and one contractor said the proposal would cause procurement problems by allowing insertion of wage determinations which were not contemplated in the original bidding competition. AAFES stated that a "90 day rule" for negotiated contracts would be preferable to the "30 day rule" proposed in this provision because of the nature of its contracts.

The Department of Defense suggested revising this subsection to substitute the term "contract start of performance" for "contract commencement." This change was adopted for the reasons set forth in § 4.1b(b).

The time frames for insertion of revised wage determinations provided in this section establish a fair and reasonable balance between the competitive aspects of the procurement process and providing for current prevailing wages and fringe benefits which will apply over the ensuing contract term (in most cases, a whole year). The "10 day rule" in the case of competitive procurements has been in the Regulations since 1968. The "30 day rule" in this proposed section replaces the current policy of requiring the inclusion of revised wage determinations up to the date of contract commencement with respect to negotiated (or option) procurement actions. This prior policy led to some serious difficulties. In addition, the new proposal dovetails with § 4.1b(b)(2) as it relates to revised collective bargaining agreements. No change will be made in this section other than the language changes proposed by DOD which are helpful.

Section 4.5(c)—Failure To File SF-98 on a Timely Basis; Erroneous Contracting Agency Determinations of Noncoverage

The Department of Defense (DOD) objected to the requirement that a contract agency either include the Service Contract Act provisions in a contract or cancel or terminate a contract, when DOL finds that the agency erroneously did not apply the Act to that contract. DOD believes that DOL should make allowances for good faith disagreements; it also contends that the court cases cited in this subsection do not indicate that DOL has the authority to require cancellation or termination of the contract.

The General Services Administration (GSA) opposed § 4.5(c)(2) on the ground that the potential for disruption of a contract far outweighs the "benefits" derived from the retroactive inclusion of the Service Contract Act in some situations. GSA argues that if the contract has been substantially performed, the decision whether to amend the contract should be left up to the contracting officer based upon the particular facts in the case, or at least, DOL should take this into consideration.

The Council of Defense and Space Industry Associations and the National Council of Technical Service Industries stated that the procedures in this section do not adequately protect the contractor by failing to require the contracting agency to reimburse the contractor for unanticipated costs.

The AFL-CIO, IATSE, the Center to Protect Workers' Rights, and the International Brotherhood of Electrical Workers all commented in favor of this section, stating that it would help insure the retroactive application of wage determinations to contracts where the agency has omitted the SCA requirements and would prevent employees from losing the protections of the Act.

In the case of a substantially completed contract, the Department of Labor has and will consider whether a contracting agency made a good faith decision not to include the required provisions of the Act in a particular contract and the possible disruptions to a procurement in deciding on remedies in each individual case. Accordingly, we do not believe that any changes in the regulation are justified.

The listed court cases are generally cases in which the courts have required incorporation of contract provisions required by law or considered such provisions to be incorporated as a matter of law. The Department of Labor does not have the authority to require an agency to reimburse a contractor for additional costs resulting from the inclusion of a wage determination or for other related procurement costs. These are matters for resolution within the context of the applicable procurement statutes and regulations and GAO directives. This section of the regulations sets out various possible alternative avenues of relief for the contracting agencies to consider and/or adopt so as to provide for equity to contractors while at the same time properly effectuating the remedial purposes of the SCA.

Section 4.5(d)

NASA and GSA objected to the requirement that agencies call the Department for guidance when an SF-98 has been timely filed but no wage determination has been issued, stating that this imposes delays on the contracting agencies but does not impose similar time limits on the Department. Both parties suggested that when a wage determination is not issued the wage determination applicable to the previous contract should be used or, if there was not a previous determination, the minimum wage standards contained in section 6(a)(1) of the Fair Labor Standards Act should apply.

This subsection is intended to provide an efficient and simplified procedure for the agencies and DOL to use in order to implement the mandatory requirement in section 10 of the Act for the issuance and, obviously, the inclusion of current, prevailing wage determinations in contracts. The failure to include a wage determination or the use of outdated wage determinations would be improper. Finally, this provision conforms to the instructions currently set forth on the reverse side of the SF-98.

Section 4.6(b)(1)—Contract Clauses

The Department of Energy (DOE) noted that the last sentence in this subparagraph does not specify that the length of service of a service employee with a predecessor contractor (which is used in determining wage and fringe benefits entitlements) must also have been performed on a predecessor contract. This section will be so amended.

Pan American World Airways agreed that length of service should be considered for fringe benefit entitlement but not for wage entitlements. However, length of service must be considered where required, as discussed in Subpart D of this title.

Section 4.6(b)(2)—Conforming Procedures

The AFL-CIO, the Center to Protect Workers' Rights, IATSE, and the International Brotherhood of Electrical Workers fully supported the proposed detailed changes in the conforming procedures. They believe that requiring the participation of the affected workers and involving the Department will prevent abuses such as redesigning jobs to evade the established wage determination classes and rates.

The Department of Energy (DOE) objected to the conforming procedures as potentially causing continuous disputes given the multitude of possible job function and responsibility combinations, and objected to the requirement that the contractor explain the conformance to the affected employees.

The Department of Defense objected to the requirement for review of all conformance actions by the Department on the grounds that it places additional burdens on the contracting agency, adds delays and paperwork requirements, and encroaches on the contracting officer's authority.

NASA proposed that new and different conformances procedures be established for contract modifications, options or extensions, new contract awards where there is no predecessor, and awards through recompetition, based upon maintaining a constant arithmetic relationship between the rates for conformed classes and those listed on a wage determination. In all cases, however, it was proposed that only the contracting agency and the Department be involved in the conformance.

The Council of Defense and Space Industry Associations (CODSIA) objected to the requirement for Departmental approval of conformances as interference in the collective bargaining process and as increasing the administrative burden on the Department. CODSIA and NCTSI also objected to the proposed time limits for conformance, and to the placing of the burden for conformance on the contractor. If the contractor "guesses wrong", CODSIA contended, he is subsequently held liable for violations based on the failure to conform rates properly. The Scientific Apparatus Makers Association and a number of contractors made similar observations.

The Computer and Business Equipment Manufacturers Association (CBEMA) and some other commentors asserted that the conforming procedures require either individual bargaining with each employee, which was termed

impractical, or forced collective bargaining contrary to the National Labor Relations Act.

NCTSI also stated that conformance actions should be appealable to the Board of Service Contract Appeals, and that subsequent to the completion of final action, the Department should issue a revised wage determination containing the additional rates in order to reduce subsequent conformance burdens.

The Department has wrestled for many years with this complex problem of conforming wage rates and classifications for contract work for which no wage data is available or about which the Department has not been informed by the agency on the SF-98. The proposed revisions to this procedure are intended to spell out and clarify existing methods. While we believe that the procedure for agreement the interested parties should continue to include the affected employees or their representatives, we intend to study, for possible future use, other alternatives, like the one proposed by NASA. In the meantime, this proposed subsection will be adopted. Moreover, we intend to take administrative steps to issue, to the extent possible, wage rates for all of the occupational classifications requested by the agencies, utilizing statistically valid benchmarks, slotting of jobs, etc. It is also noted that conformance actions will be appealable.

With respect to the proposed DOL review of all conforming actions, this requirement is deemed necessary because of significant past abuses and/or failure to observe the contract conforming requirements, which led to serious, protracted compliance problems when discovered during the course of investigations. However, it will be our policy not to modify agreements reached by the interested parties unless they are determined to be clearly erroneous.

Section 4.6(g)—Recordkeeping

NASA recommended review of the proposed requirement that the contractor's records include the employee's social security number because of the possible impact of the Privacy Act of 1974.

Since this agency computes and disburses wages to employees and taxes to the IRS from withheld funds, this provision is in accord with the Privacy Act.

National Star Route Mail Carrier's Association argued that the suspension of contract payments to a contractor for failing to provide payroll records might be appropriate in cases involving willful withholding of records, but not in situations where records were lost or simply not maintained.

This provision will be applied judiciously, with due regard for the facts in each case.

Section 4.6(i)—Withholding

NCTSI argued that contract fund withholding should be at the discretion of the contracting agency and should not take place in advance of due process hearings.

This policy on withholding is in accord with section 3(a) of the Act. See § 4.187(a) of this Part for an explanation of this matter.

Section 4.6(j)—Inclusion of Contract Clauses in Subcontracts

Several commentors suggested that the Department clarify the requirement that SCA clauses are only required to be inserted in subcontracts which are subject to the Service Contract Act.

Such amendatory language will be added.

Section 4.6(1)(2)—Seniority List

Several firms stated that the requirement to submit an employee seniority list to be used by successor contractors to determine vacation eligibility in certain cases was burdensome. The Computer and Business Equipment Manufacturers Association questioned whether this provision violated the Privacy Act and whether it was proper to require a firm to turn over business information to a competitor.

The National Council of Technical Service Industries (NCTSI) argued that the requirement to submit a list of employees during the last month of contract performance prior to the end of that month is impossible, since such a list could only be estimated at that time and requested this section be revised to require that the list be furnished within 30 days after completion of contract performance.

This proposal basically was made at the suggestion of a number of service contractors who had experienced difficulty in obtaining employee length of service data which is necessary in order for them to determine vacation entitlement amounts based on service with "predecessor" contractors where there is a succeeding contract (§ 4.173). This subsection will greatly assist successor contractors in obtaining this information and thus help insure greater voluntary compliance with the vacation fringe benefit provisions of the Act and wage determinations, as well as eliminating many serious and protracted enforcement problems in this area. NCTSI's suggestion would be unenforceable on a predecessor contractor, since the contract would have been completed, and thus no further contractual remedy would be available. The subsection only requires turning over the seniority list as it exists at the time stated. No valid reason for not adopting this proposal has been advanced.

Section 4.6(m)—Contract Clause: Incorporation of SCA Rulings and Interpretations by Reference

NASA and the Xerox Corporation objected to inclusion by reference of all rulings and interpretations of Part. 4. Xerox thought the contract clauses should stand alone.

Since all bidders and contractors must be governed by the same rules of compliance, it is appropriate that those rules be set forth as a contractual requirement. However, it is obviously not feasible or appropriate to include the entire regulation verbatim in the contract clauses. This provision, in substance, has been in the Regulations since 1968.

Section 4.6(n)—Certification of Eligibility

The AFL-CIO, the Center to Protect Workers' Rights, the Service Employees International Union, the International Association of Machinists and Aerospace Workers, and the International Brotherhood of Electrical Workers supported this provision as preventing fly-by-night contractors from obtaining further contracts after being debarred by merely changing their name or the name of their firm.

Several contractor associations (National Star Route Mail Carriers, CBEMA and NCTSI) objected to contractors being required to certify that each "official" is not debarred on the grounds that it is impossible to know whether each stockholder of a firm, including those with only minor investment, is on the debarred list.

This subsection does not require certification of eligibility with respect to every stockholder, but only those parties or officials with a "substantial interest" as set forth in Section 5 of the Act and as discussed in § 4.188(c).

Section 4.6(o)

The Department of Energy commented that the concept of formalized, approved programs for apprentices and trainees is almost foreign to the service industry and will force higher bids or no bids on Federal service contracts.

This section providing for enrollment in approved training programs in order to pay apprentices, student learners and handicapped workers less than the

applicable prevailing or minimum wage insures that bona fide training opportunities are present. It is our experience that there are many apprenticeship programs for workers in service occupations. This provision has been in the Regulations since 1968 and, to our knowledge, has caused no difficulties.

Section 4.6(p)—Apprenticeship and Training

The AFL–CIO, the Center to Protect Workers' Rights and the International Brotherhood of Electrical Workers generally supported the proposal as contributing to the upgrading and training of service workers but objected to the last sentence allowing "trainee" classifications to be included in wage determinations regardless of whether such "trainees" are enrolled in an approved program, claiming this would encourage contractors to underclassify service workers in order to justify the payment of lower wages. They suggested adding a requirement that trainee rates only be permitted when provided for in a *bona fide* apprenticeship program.

In response to these comments, we have deleted the last sentence of this section.

On the other hand, DOD, NASA, and the Northrop Corporation objected to trainee classifications being allowed only if included in the applicable wage determination on the grounds that many contractors use trainees and proposal's restrictive language would impair affirmative action and equal employment opportunity programs. DOD recommended that the same rules apply to both bona fide apprenticeship and training programs.

We have carefully considered the objections to this subsection. The Bureau of Apprenticeship and Training (and equivalent State agencies) approves apprenticeship programs for a wide variety of those service occupations which lend themselves to indentured skill progressions, and are open to any firm which desires a bona fide program and accommodates equal opportunity considerations. We therefore believe that this section as proposed (which retains the principles embodied in the regulations since 1968—see § 4.6(o)), does not restrict job opportunities in the service contract area, but through the registration/approval process for apprenticeship programs insures bona fide, meaningful training and provides protections necessary to prevent abuses of workers and unfair competitive bidding advantages.

Section 4.10—Substantial Variance Proceedings Under Section 4(c) of the Act

Several commentors, including the AFL–CIO, the Center to Protect Workers' Rights and the IBEW stated that the Act did not intend to require substantial variance proceedings based only on unsubstantiated claims, which cause unnecessary delay and expense. They recommended that this section be amended to require the charging party to present a *prima facie* case before a hearing is convened.

The provision in § 4.10(b)(2) requiring that a showing must be made that "there may be a substantial variance" is sufficient for the Department to eliminate frivolous complaints.

The IBEW and the Center to Protect Workers' Rights asserted that "interested parties" should include only the successor contractor, the contracting agency, and the affected employees or their collective bargaining representatives.

It is our view, however, that other prospective contractors and their representatives are clearly interested parties, and that they should be given the opportunity to participate in the process.

The Department of Defense objected to allowing the parties who are signatories to a bona fide collective bargaining agreement to challenge the agreement as being at variance.

As provided in § 4.10(b)(1), the signatories to a collective bargaining agreement are clearly interested parties under these proceedings, and there is nothing in the Act that indicates it would be inappropriate for them to request a hearing pursuant to this section.

Section 4.11—Arm's Length Proceedings

The AFL–CIO, the Center to Protect Workers' Rights, IATSE, and the IBEW all opposed the establishment of separate proceedings for substantial variance challenges and arm's length challenges. They commented that two separate procedures would result in repetitive litigation and unnecessary delay.

This section recognizes that these issues may, in fact, arise separately. However, where they are both present, §§ 4.10(c), 4.11(d) and Subpart E of 29 CFR Part 6 (§ 6.50) now provide for the consolidation of both issues in one proceeding. In addition, the time limits on requests for both types of hearings will preclude repetitious proceedings.

NASA recommended that other arrangements which would not meet the "arm's length negotiation" test be listed in proposed § 4.11(a), and stated that the test should be the National Labor Relations Board's "good faith bargaining" standard based upon an analysis of all facts in a particular case.

This is an appropriate suggestion and will be adopted in principle. However, since the NLRB and not DOL is the controlling agency on this issue, the changes will reflect this fact.

Section 4.51(b)—Prevailing in the Locality Determinations—Determination of Prevailing Rates

Several commentors, including CBEMA, NCTSI, SAMA, NASA and several individual firms, suggested that wage determinations should contain entry level wage rates and provide for the payment of a range of rates to the various employees within a given classification. These commentors argued that the issuance of a single prevailing wage rate for each classification would disrupt "merit pay" practices within "high technology" industries.

On several prior occasions, the Department by itself and in conjunction with an inter-agency task force has considered the possibility of issuing a rate range type of wage determination. On each occasion the Department concluded that the rate range and similar proposals would be clearly contrary to the statutory scheme and, therefore, would require legislation before such action could be implemented. Although the Department may use various different methods to collect and analyze data for the issuance of wage determinations under the SCA, a basic principle of this Act, as well as the Davis-Bacon Act, is that the prevailing wage rate established for each particular classification is the minimum floor permitted to be paid to *all* employees working in that classification on the Government contract. Nothing in the legislative history of the Act nor in any of the numerous hearings conducted subsequent to the passage of the SCA suggests any Congressional intent to depart from the traditional interpretation that a single prevailing rate must be determined for each classification of workers. In fact, establishment of a wage determination with a rate range would have the practical result of issuing a minimum wage, and not a prevailing wage. This is clearly contrary to the law.

For a further discussion of the circumstances under which the Department issues wage determinations for different levels in an occupational classification, see § 4.152.

Section 4.51(c)—Prevailing in the Locality Determinations—"Due consideration"

The AFL–CIO, the Center to Protect Worker's Rights, and the American Federation of Government Employees objected to the discretion which this section affords the Secretary in giving "due consideration" in the issuance of SCA wage determinations and they suggest that there should be mandatory criteria for applying due consideration. The AFGE recommends that, at a minimum, the Department should give proportional weight to the compensation received by Federal employees when issuing prevailing wage determinations. NASA and the Scientific Apparatus Makers Association on the other hand do not agree that the legislative history indicates that Congress intended to narrow the gap between wages paid to Federal employees and to service employees under SCA.

Although the legislative history of the 1972 Amendments to the Service Contract Act does not specifically define the purpose of the "due consideration" requirements of section 2(a)(5) of the Act, the report of the House Representatives, which accompanied the bill to amend the act did cite a number of serious problems including "a substantial disparity in wages and benefits which has developed between Federal wage board employees and their counterparts employed by service contractors". The purpose of the "due consideration" requirement is more clearly stated in an April 1975 report of the Subcommittee on Labor-Management Relations of the House Committee on Education and Labor entitled "Congressonal Oversight Hearings: The Plight of the Service Worker Revisited".

In addition, the Department has previously considered implementation of a structured scheme for giving "due consideration". In many cases the Department gives due consideration in the manner suggested by AFGE; however, strict adherence to mandatory "due consideration" standards would serve to inhibit the exercise of even limited discretion, which is necessary to avoid anomalies in the wage determinations.

Therefore, no change in this section of the Regulation is warranted.

Section 4.53 Locality Basis of Wage and Fringe Benefit Determinations Where Place of Performance Is Unknown

Numerous commentors objected to the provision in proposed § 4.53(b) allowing the use of a large composite geographic area as the locality basis for devising wage determinations when the place of performance is not known at the time of bid advertising or requests for proposals. Those objecting included the AFL–CIO, the Center to Protect Workers' Rights, IBEW, CODSIA, NCTSI, DOD, NASA, DOE, GSA and several corporations. Many of these commentors cited the decision of the U.S. Court of Appeals in *Southern Packaging and Storage Co., Inc.* v. *United States*, 618 F. 2d 1088 (4th Cir., 1980). Some agency and industry commentors suggested a "two-step" procurement process (i.e., step one would identify the localities of all potential bidders and step two would be the issuance of wage determinations for all potential places of performance for inclusion in the solicitation). Other suggestions included variations of the "two-step" process, using the locality of the incombent contractor as the locality for all successors, and using the locality of the procuring agency or installation as the locality for the purpose of applying wage determinations. Some of the parties also objected to application of section 4(c) of the Act in situations where the location of the successor contractor is unknown at the time of bid solicitation.

While all of the comments on this section have been given careful review and consideration, none of the various suggestions has been sufficiently developed to allow immediate approval. For example, a formal "two-step" procurement process presents some practical administrative problems and would require concomitant changes in the procurement regulations. Accordingly, while the Department is continuing to give serious consideration to some variation of the "two-step" propopsal, it would be premature to reach any final conclusion without further review and opportunity for public and agency comment. This proposed subsection is therefore, being deleted.

In the meantime, the Department is applying the principles set forth in *Southern Packaging* and is examining each procurement on an individual basis when the place of performance is unknown at the time of bid advertising to determine the appropriate locality or localities. This practice is reflected in the final regulation.

With respect to the application of section 4(c) to situations where the place of performance is unknown at the time of bid advertising, the clear language of the Act requires that the provisions of Section 4(c) apply to *all* successor contracts, regardless of place of performance. This issue has been considered on numerous previous occasions including in Congressional oversight hearings in 1974 and 1975 and rulemaking hearings in 1975 and the proposal has been rejected as being contrary to the statute. This is further discussed in the analysis of comments regarding proposed § 4.163(i).

Section 4.55(a) Review and Reconsideration of Wage Determinations—Review by the Administrator

Comments were received from the AFL–CIO, AFGE, and others as to who should be considered "interested parties" with standing to request review of a wage determination by the Administrator. In essence, the commentors were seeking to avoid frivolous requests for review while at the same time being sure that all parties with a bona fide interest had the right to seek review by the Administrator. The Scientific Apparatus Makers Association (SAMA) suggested placing a burden on the petitioner to present a "prima facie" case before the Administrator would accept a request for review. In addition, some industry and agency commentors were concerned about the time frames applicable to requests for review and reconsideration. Some considered the time requirements too restrictive while others felt that additional time limits should be established to insure prompt, timely reviews by the Administrator.

Because a formal wage determination review procedure is being newly established under these Regulations, the Department has made every effort to insure that no interested party is excluded from the process. In the fifteen years since the statute was enacted, the Department has entertained numerous informal requests for reconsideration, but we have never attempted to preclude reconsideration based on the petitioning parties standing or interest in the matter. The Department's objective is the issuance of the most accurate wage determinations possible, and, in order to achieve that goal, we consider all pertinent evidence, regardless of its source. Accordingly, the Department does not support restricting the standing of any possible interested party. With respect to time frames, the Department endeavors to conduct a prompt and expeditious review process; however, since any review is dependent on other aspects of the wage determination process, the establishment of more specific time constraints in this section is not possible.

Section 4.55(b) Review by the Board of Service Contract Appeals

A number of labor organizations opposed the review of wage determinations by an appellate board. These comments will be discussed in conjunction with proposed Part 6 of this title.

Section 4.110 What Contracts Are Covered

The General Services Administration, the Council of Defense and Space Industry Associations, the Computer and Business Equipment Manufacturers Association, the Scientific Apparatus Makers Association, the National Council of Technical Service Industries, the McDonnell Douglas Corporation, the Bell and Howell Company, Xerox Corporation, and Datapoint Corporation objected to SCA coverage of separate bid specifications which are principally for the furnishing of services through the use of service employees, asserting that the "principal purpose" test for coverage under the Act can only be applied to contracts in their entirety. Several of these commentors noted similar objections to other sections of the proposed Regulations delineating SCA coverage of separate bid specifications, such as § 4.132. GSA contended that the term "(and any bid specification therefor)" in section 2(a) of the SCA merely refers to the documents in a solicitation for bids, rather than a separate line item or work requirement within a bid solicitation or a contract as interpreted in the proposed Regulations. Essentially following GSA's line of reasoning, Bell and Howell argued that the SCA should not be applied to GSA Federal Supply Service "schedule" contracts for the furnishing of equipment and what it termed "incidental" services to maintain and repair that equipment.

NCTSI commented that SCA coverage of separate specifications within a contract would create significant administrative problems because of the application of different labor standards obligations.

The legislative history of the SCA contains no definition nor discussion of the term "bid specification" in section 2(a) of the Act. In the absence of such guidance, the Department of Labor has had to interpret this term in the fashion determined to be most consistent with the statutory language and the remedial purposes of the Act. Following these precepts, the Department has held since 1966 that a contract containing a separate bid specification which is principally for the furnishing of services through the use of service employees is subject to the Act regardless of the principal purpose of the other specifications of the contract as a whole. The Department's position that the SCA applies to a separate bid specification within a procurement which also calls for the furnishing of supplies is set forth in § 4.132 of the current Regulations. The position on SCA coverage of separate specifications is also explicity stated in § 4.116(c) of the current Regulations, which codifies SCA coverage of service specifications in contracts which also contain separate specifications for construction work.

Sections 4.116(c) and 4.132 of the current Regulations were formally adopted in 1968 after being published as part of the proposed 29 CFR Part 4 with opportunity for comment. At that time, no procurement agency and only one association expressed objections to the application of the "principal purpose" test to separate service specifications. It should also be pointed out that the Department's position on specifications subject to differing labor standards is clearly reflected in section 12-1002.1 of the Defense Acquisition Regulation which controls Department of Defense procurement. DAR 12-106 and FPR 1-18.701-2 contain a discussion of similar principles.

SCA coverage of separate bid specifications does not extend to incidental services performed under contracts also calling for the furnishing of nonlabor items, but only to requirements calling for substantial and segregable amounts of services, thus avoiding any overlapping of labor standards protections. With respect to the comment by Bell and Howell, it should be pointed out that, according to figures supplied by GSA, the cost, for example, of services performed under maintenance specifications in combined lease/purchase and maintenance contracts for automatic data processing and related equipment alone amounts to several hundred million dollars per year. This volume of work can hardly be characterized as "incidental". To view contracts only in their entirety for the purpose of determining SCA coverage would remove much of the protections intended by the Act.

Accordingly, since no new arguments have been presented as to why this longstanding position should be reversed at this time, we do not believe it appropriate to change any of the provisions in this or other sections of the proposed Regulations delineating SCA coverage of separate bid specifications for services.

Section 4.111 Contracts "To Furnish Services"

The Council of Defense and Space Industry Associations, the Computer and Business Equipment Manufacturers Association, the National Council of Technical Service Industries, the Department of Defense, the Department of Energy, the National Aeronautics and Space Administration, the Rockwell International Corporation, the McDonnell Douglas Corporation, and the Trinidad Corporation all objected to the provision in proposed § 4.111(a) stating that the "principal purpose" test for coverage under the Act applies only in determining whether a contract (or bid specification) is principally for services. These commentors essentially asserted that the proper application of "principal purpose" is threefold: whether a contract is principally for services, is principally performed in the United States, and is principally performed through the use of service employees.

Under section 2(a) of the SCA, the Act applies to (e)very contract (and any bid specification therefor) * * * the principal purpose of which is to furnish services in the United States through the use of service employees." Since the legislative history does not specifically state how the principal purpose language of the Act should be applied, the Department had to decide what construction of the term was intended by the statutory scheme.

In enacting the SCA, Congress evidenced a clear intent to "close the gap" between labor standards protections already in place for workers on construction contracts and supply contracts under the Davis-Bacon Act and the Walsh-Healey Public Contracts Act. See § 4.111(b). The Department, starting in 1966, has adhered to the position that the "principal purpose" test is used only to determine whether a contract is principally for services as opposed to one for supplies or construction activity. Thus, if a contract in the United States is determined to be principally for the purpose of furnishing services, it is subject to the SCA if it is performed "through the use of service employees" as discussed in § 4.113.

No new reasons have been advanced to support a change in this longstanding position which has been set forth in the Regulations since 1968. Such a change would amount to a significant "roll back" in labor standards protections.

Section 4.112 Contracts To Furnish Services "In the United States"

The AFL-CIO and the Seafarers International Union, addressing the

issue of SCA coverage of contracts for services performed on marine vessels, stated that all United States flag vessels are considered United States territory wherever such vessels travel, and recommended that the Regulations be changed to provide coverage even when such vessels enter non-American waters. The AFL–CIO also recommended that the reference to the Outer Continental Shelf Lands Act be replaced with the tests of the Fishery Conservation and Management Act of 1976, which provides for a 200 mile limit.

The definition in section 8(d) of the statute regarding the geographic scope of the Act is explicit, expressly excluding any territory other than those specifically set forth therein. Also, the use of the Outer Continental Shelf Lands Act standard is specifically provided for in the statute. Accordingly, these suggestions cannot be adopted by regulation.

The Computer and Business Equipment Manufacturers Association, DOD, and one firm argued that services performed on a vessel must be principally performed in the United States to be covered by the Service Contract Act.

As discussed in the analysis of 4.110, we do not consider this objection to comport with the Act's principal purpose test.

Section 4.113(a)(2) Contracts To Furnish Services "Through the Use of Service Employees"

The AFL–CIO and the Center to Protect Workers' Rights noted their agreement with the language of § 4.113(a)(2) specifying that the SCA applies to contracts principally for the furnishing of services and under which service employees are used to a significant or substantial extent, terming this provision necessary to protect the rights of service employees and in keeping with the remedial purposes of the Act.

The Computer and Business Equipment Manufacturers Association, the Council of Defense and Space Industry Associations, the Chamber of Commerce, the Scientific Apparatus Makers Association, the General Services Administration, the Department of Defense, the National Aeronautics and Space Administration, and several companies objected to our application of the "principal purpose" test.

All contended that the Congressional intent was that services must be furnished principally by service employees, in order for the Act to apply.

The Department's position on the "principal purpose" test is fully discussed in the analysis of comments under § 4.111. The language of this section has been revised, however, to make it clear that while the Act applies to any service contract in which there are any service employees performing contract work, the Department, under its authority to issue tolerances, does not require application of the Act to situations where the use of service employees is only a minor factor in the performance of the contract. Moreover, in response to comments by NASA and the Chamber of Commerce, we have added a new subparagraph (3)(ii) which sets forth the factors which the Department considers in determining whether the use of service employees is only a minor factor or is significant or substantial.

Numerous Federal agencies, business firms and associations, universities, and law firms objected to the statement in the second paragraph of § 4.113(a)(2) of the Regulations that under the principles discussed in this subsection many contracts for research and development (R & D) are subject to the Act. Those objecting included the Office of Science and Technology Policy of the Executive Office of the President; the Department of Agriculture; the Department of Housing and Urban Development; the Under Secretary of Defense for Research and Engineering; the National Science Foundation; NASA; CODSIA; NCTSI; the Chamber of Commerce; Booz-Allen and Hamilton; ITT Research Institute; the Rand Corporation; Digital Equipment Corporation; Planning Research Corporation; the National Association of College and University Business Officers; Harvard University; Yale University; John Hopkins University; Duke University; the University of Michigan; and the University of California.

Many of these commentors argued that the Department's assertion of SCA coverage of R & D contracts represents a new and unwarranted expansion of the Act's coverage.

In fact, as is clear from a comparison of the present and propsed Regulations, the principle of SCA coverage of R & D contracts has been stated in §§ 4.110–4.113, and in particular, § 4.113(a)(2), since 1968. With the exception of a few minor editorial changes, the current text of that subsection was carried over in total to the proposed § 4.113(a)(2). While a new subparagraph was added, it simply amplifies the principles already contained in the Regulations, and cites R&D as an example of a type of contract which has in the past been subject to the SCA where the usual tests of coverage have been met. Because it has been clear to contracting agencies as well as to the Department of Labor that a large number of R & D contracts fall within any reasonable criteria for coverage by the SCA, many contracting agencies have requested wage determinations for them.

Indeed, R & D contracts are categorized under the DOD procurement regulations as service contracts (DAR 22–101(b)(xxii)). Even statistics compiled by the Office of Management and Budget (Federal Procurement Data System), which our evidence indicates are understated, indicate that 16.39 percent of contracts which have an "R & D" label contain these SCA provisions.

Several commentors also objected to SCA coverage of R & D contracts on the grounds that their principal purpose is the furnishing of research, not services, while others objected because R & D contracts often involve the furnishing of tangible end items such as a prototype, a set of specifications for a product, or a feasibility study in the form of a written report.

As discussed in § 4.111 of the proposed Regulations and the analysis of comments regarding that section, under the statutory scheme, virtually all types of Government contracts not specifically exempted may be subject to the labor standards provisions of the Davis-Bacon Act, and/or the Walsh-Healey Act and/or the Service Contract Act. It must be emphasized that coverage is independent of the designation, nomenclature or characterization of any particular contract under the procurement system of a contracting agency. Thus, while "R & D" is often only a budgetary designation which encompasses a very broad spectrum of contracts, the applicability of the SCA to R & D contracts—as well as to all other types of contracts—depends on whether or not the statutory tests for coverage have been met in each particular case. While numerous R & D contracts have been subject to the SCA because they meet the usual coverage tests for service contracts, SCA is not required to be applied to many other contracts categorized as "R & D" by the procurement agencies, either because service employees are a minor factor in their performance or because the contracts really involve the furnishing of goods or construction to the Government. Thus, for example, a contract to furnish prototypes of a new weapons system would not be covered under the SCA, but rather under the Walsh-Healey Act. Likewise, a contract to build a pilot coal gasification plant would be subject to the Davis-Bacon Act

rather than the SCA. However, as discussed in § 4.131 (a) and (e), the furnishing of such tangible items as written reports does not remove a contract for R & D or other services from the coverage of the SCA, as such items are considered to be of secondary importance to the services which it is the principal purpose of the contract to procure.

Several commentors, notably universities, objected to SCA coverage of R & D contracts for a variety of reasons relating to the belief that SCA wage determinations would cause severe disruptions in the pay systems of universities, some of which are established and controlled by State laws mandating pay levels for all university employees whether employed on Government contracts or not.

The Department recognizes that special problems of compliance with the terms of SCA wage determinations may arise when colleges and universities compete for Government contracts, and every effort will be made to develop wage determinations reflecting the pay practices of such institutions where appropriate.

Some firms commented that many R & D contracts are of the "cost-reimbursement" variety, under which contractors are compensated for all reasonable costs. Thus, it was argued, the SCA should not apply since R & D contractors have no incentive to engage in "wage busting" against service employees, and such employees do not need the protections of the Act.

The Department's position on this matter is that the presence or absence of "wage busting" is not an appropriate basis for determining coverage under the SCA. Adopting this criterion would cause severe administrative problems and require the Department to make arbitrary judgments concerning contractors' pay practices, which the statute does not authorize DOL to do, and the end result would be a patchwork of coverage.

Section 4.114 Subcontractors

The Council of Defense and Space Industry Associations, the Computer and Business Equipment Manufacturers Association, the Scientific Apparatus Makers Association, the National Council of Technical Service Industries, the Department of Energy, the National Aeronautics and Space Administration, and several firms objected to the provision in § 4.114(b) holding prime contractors jointly liable for SCA violations committed by their subcontractors. Some commentors argued that there was no statutory or judicial basis for such a liability to be placed on the prime contractor.

The provision that the prime contractor is liable in the event its subcontractors fail to comply with the Act by breaching the contract clauses, has been in the regulations since their inception, and follows precedent under the Davis-Bacon and Walsh-Healey Acts. (See, for example, Decision of the Armed Services Board of Contract Appeals, A. Jeris, Inc., 67-1 BCA par. 6241, March 22, 1967; Decision of the Comptroller General, B-162034, October 4, 1967; JBL Construction Co. Inc. Decision of the Administrator, CCH Lab. L. Rep., Wages Hours parr. 31,239 September 22, 1978; Ernest Simpson d.b.a. Ernest Simpson Construction Co., Decision of the Administrative Law Judge, 23 WH cases 1064 (1978).)

The Act and the contract clauses require the prime contractor to agree that the prescribed labor standards will be observed with respect to all employees on the contract. Therefore, this is primarily a matter of contract law (privity of contract). Specifically, the principal enforcement remedy in section 3 of the law is the withholding of contract funds in the case of violation. The Government can only withhold funds from the prime contractor, not from a subcontractor. To change this essential policy could invite prime contractors to broker subcontracts to fly-by-night firms, thereby nullifying labor standards protections enforcement of the Act.

Section 4.115 Exemptions and Exceptions

Paragraph (b) of the proposed regulation has been deleted since this section only concerns statutory exemptions, and the Secretary's authority to issue exemptions and variances is discussed elsewhere in § 4.123; therefore this paragraph was deemed unnecessary.

Section 4.116 Contracts for Construction Activity

Local No. 3 of the International Union of Operating Engineers objected to the proposed removal from coverage of construction projects on Guam which are not subject to the Davis-Bacon Act because the geographic scope of the Act does not extend beyond the 50 states and the District of Columbia, asserting that the Department should continue to protect the rights of construction workers in Guam.

We carefully reviewed this matter as a result of questions previously raised, and concluded that it would not be in accord with the law to continue the regulatory policy of asserting that construction contracts become subject to the Service Contract Act solely because such contracts are performed outside the geographic scope of the Davis-Bacon Act.

NASA and GSA objected to the discussion in proposed § 4.116(b) of contracts involving the demolition, removal, and sale of salvage materials as an example of a type of covered service contract not subject to the exemption in section 7(1) of the Act.

This position has been in the Regulations since 1968 and no convincing reasons have been advanced challenging its validity or propriety.

The Council of Defense and Space Industry Associations, the Computer and Business Equipment Manufacturers Association, and the McDonnell Douglas Corporation objected to § 4.116(c) which, in the case of a contract containing requirements for construction and nonconstruction work, limits the application of the exemption in section 7(1) of the Act to those separate specifications or segregable portions of the contract which call for the construction work, and thereby provides for SCA coverage of other contract requirements which are principally for services.

This position has been contained in these Regulations since 1968, as well as in both the Federal Procurement Regulations and the Defense Acquisition Regulations for many years. It also is in accord with the principles contained in §§ 4.110 and 4.132.

Section 4.123 Administrative Limitations, Variances, Tolerances, and Exemptions

The Computer and Business Equipment Manufacturers Association, the Scientific Apparatus Makers Association, and several individual firms recommended the adoption of an exemption for contracts for "commercial product support services". This request had already been submitted to the Department and is not being dealt with in the revision of this Regulation. Our position regarding coverage by the Act of such contracts is discussed under § 4.130.

Section 4.130 Types of Covered Service Contracts Illustrated

GSA objected to the listing of "computer services", as it may be construed to cover some activities arguably not subject to the Act. A large variety of "computer services" are covered by the Act where they are principally for services and involve the use of service employees, as discussed in sections 4.111 and 4.113. Furthermore, such contracts were specifically

mentioned as being covered in the President's statement upon signing the 1972 SCA amendments.

The Computer and Business Equipment Manufacturers Association, SAMA, and a firm contended that the Act should not apply to employees of firms which furnish "commercial product support services," both Government and private sector customers, either because the procurement is not principally for services or because the wage protections provided by the Act are not necessary since marketplace pressures maintain a relatively high level of wages.

The concepts of whether maintenance/repair services are performed on "commercially available" products or by firms which service both the Federal and private sectors are immaterial and irrelevant to SCA coverage.

There is no indication in the statute or the legislative history that contracts for "commercial product support services" are not covered. On the contrary, except for the specific exemptions in section 7, the Act by its express terms applies to "(e)very contract (and any bid specification therefor) * * * the principal purpose of which is to furnish services * * *". Further, the legislative history as discussed in § 4.111(b) also clearly indicates this all encompassing purpose and intent.

The law was enacted "to provide labor standards for the protection of employees of contractors and subcontractors furnishing services to or performing maintenance service for Federal agencies". Congress explained that service contracts were "the only remaining category of Federal contracts to which no labor standards protections apply." See S. Rep. 798, 89th Cong., 1st Sess. 1 (1965); H.R. Rep. No. 948, 89th Cong., 1st Sess. 1 (1965).

Following these guidelines, the Department has, since 1966, consistently held that the maintenance and repair of *all* types of equipment, including ADP equipment, scientific and medical apparatus, office and business machines, and "other high technology" equipment, are covered under the SCA, regardless of whether the equipment is commercially available.

Since almost all services are commercially offered or are in support of commercial products or equipment, from linen supply to automobile and vending machine servicing, any such exemption would, in effect, administratively nullify a significant portion of the Service Contract Act.

NCTSI and Northrop Corporation asserted that the addition of a number of examples to the list represents a significant expansion of the Act's coverage, and includes contracts that are professionally oriented, especially subsection (a)(16), citing electronic equipment maintenance and operation (which is listed in the § 4.130(h) of the current Regulations) and engineering support services.

Such contracts, like other service contracts, are clearly subject to the Act if the criteria in §§ 4.111–4.113 are met, and many "professional" contracts listed are of the type contemplated by the 1972 and 1976 amendments to the Act. For example, during the House debate preceding passage of the 1976 amendments, the Chairman of the Subcommittee on Labor-Management Relations of the Committee on Education and Labor explained that the purpose of those amendments was to clarify Congressional intent that the SCA applies to white collar employees, and specifically mentioned "clerical personnel, office machine operators, and persons engaged in data processing" as employees intended to be covered by the Act. See 122 Cong. Rec. 31575 (1976).

Section 4.131(f) Contracts Under Which the Contractor Receives Tangible Items from the Government in Return for Services—Timber Sales

A significant number of the comments received related to the application of the SCA to so-called "timber sales" contracts as discussed in this proposed subsection. Commentors included Members of Congress, forest industry associations, logging contractor associations, numerous lumber companies, labor organizations, the U.S. Departments of Agriculture and Interior, the Small Business Administration, the U.S. Navy, State and local government bodies, law firms, and individuals. The arguments regarding coverage of timber sales/removal contracts fell into several main categories, as follows:

It is argued that services provided under timber sales contracts are only incidental to the principal purpose of the contract which is the sale of timber by the Government. Some commentors cited the Organic Act of 1897 (16 U.S.C. section 475), which provided that "No national forest shall be established except to improve and protect the forest * * * and to furnish a continuous supply of timber for the use and necessities of citizens of the United States * * *" to support their argument.

The National Forest Management Act of 1976, 16 U.S.C. 1600 *et seq.*, was also cited by the commentors, who asserted that this legislation (which details how national forests are to be managed) has as its main purpose the providing of timber. Further, they stated that nowhere in this legislation was there a suggestion that timber sales contracts were predominantly service oriented or that Congress desired such sales to be included under the Service Contract Act.

The United Brotherhood of Carpenters and Joiners of America, arguing in support of coverage, stated that the National Forest Management Act of 1976 requires that the national forests be maintained by the Forest Service for multiple uses, i.e., "coordination of outdoor recreation, range, timber, watershed, wildlife and wilderness." (Section 6(e)1 of the National Forest Management Act of 1976, 16 U.S.C. 1604). They concluded that the sale of timber by the Forest Service is not undertaken primarily to dispose of Government property, but as part of an overall forest management program.

The Chairman of the Subcommittee on Labor-Management Relations, House Committee on Education and Labor, the Washington State Labor Council (AFL–CIO), the International Woodworkers of America, and the Contract Loggers Association commented in favor of the application of the Act to timber sales. These commentors argued that coverage was necessary to protect the wages and fringe benefits of the forest products industry employees.

It appears that the difficulty is with the terminology "timber sales." Although § 4.116(b) of the existing regulations, promulgated in 1968, sets forth the Department's position that contracts for timber clearing are subject to SCA, proposed §§ 4.130 and 4.131(f) stated for the first time the Department's longstanding interpretation that timber sales contracts *per se* are covered.

In determining the application of the SCA, it is necessary to examine the substance of a contract and its underlying purpose. Thus, as provided in the existing regulations as well as the regulations herein at §§ 4.131 and 4.141, the form of the contract and the fact that a contractor pays the Government under the terms of the contract do not control SCA coverage.

The Department has thoroughly reviewed the various statutes relating to the National Forests, the legislative histories, the regulations and handbooks issued thereunder, sample, timber sales contracts, and related material, in conjunction with the comments.

After this analysis, it is the Department's conclusion that certain contracts for timber sales (as distinguished from service specifications thereunder, discussed below) would not be principally for services and therefore would not be subject to the Act. On the other hand, under contracts styled as

"timber sales" contracts, trees are frequently removed for the purpose of opening up the forest for public use, such as camping; for construction projects, such as roads or reservoirs (covered by the Davis-Bacon Act); because the trees suffer from insect infestations or have been damaged by disasters such as forest fires or volcanic eruptions; or for other forest management purposes. The Department has determined that under such contracts (when not subject to the Davis-Bacon Act), the principal purpose is the furnishing of services, and the contracts are subject to SCA.

It is also apparent from our review of the contracts, that those timber sales contracts which are not principally for services, generally do contain a number of specifications principally for services. These specifications include, for example, the building of temporary roads, firefighting and control, erosion control, slash removal and trimming, and the removal of diseased or injured trees. Pursuant to § 4.132, such specifications are subject to SCA.

In addition to the comments concerning coverage of timber sales contracts, many commentators, including the forest products associations, objected to the recordkeeping requirements which they contend the application of the Act would impose upon the timber products industry, especially with respect to small companies. However, the SCA does not require maintenance of records beyond those already required under the Fair Labor Standards Act (which is applicable to most firms), except that if an employee receives less than the rate on the applicable wage determination for hours spent on commerical work not subject to the Service Contract Act, the employer's records must be segregated to show separately the time spent on contract work. Thus, in the Department's view, no excessive recordkeeping burden exists because of SCA coverage.

Most industry commentors also alleged that the application of SCA to timber sales would be highly inflationary. Wage determinations issued pursuant to the Act only reflect the wages and fringe benefits found to be prevailing in the locality, i.e., those wages and fringe benefits found to be most predominant in the area where the contract work is performed. The Department of Labor knows of no unique features of the timber products industry which would cause the Service Contract Act to have any significant impact upon it.

The National Forest Products Association and several logging companies commented that bonding requirements would be increased by application of the Act, thereby having a harmful effect, especially upon small contractors. However, neither the Service Contract Act nor these regulations require bonding.

Accordingly, § 4.131(f) has been revised to clarify the circumstances in which SCA applies to timber sales contracts.

Section 4.133 Beneficiary of Contract Services

As a result of comments regarding the scope of the contracts which are not subject to the SCA under this provision, the Department issued a new proposal on this section for comment. A final regulation is anticipated in the near future.

Section 4.134 Contracts Outside the Act's Coverage

The General Services Administration (GSA) objected to the provision in § 4.134(b) of the proposed Regulations denoting SCA coverage of service requirements contained in contracts for the lease of building space under certain circumstances. GSA contended that this provision would be contrary to the position expressed in an exchange between Solicitor of Labor Donahue and Senator Prouty during the 1965 Congressional hearings which led to enactment of the SCA, and would have a significant impact on the ability of GSA's Public Building Services to continue leasing building space in its present manner.

We do not agree with GSA's objections. Nothing in the exchange between the then Solicitor and Senator Prouty dealt with specifications in a contract which specifically require certain levels and frequencies of janitorial or other services. Moreover, janitorial workers are among the types of workers to whom Congress specifically intended the Act would apply.

Section 4.152 Employees Subject to Prevailing Compensation Provisions

The National Council or Technical Service Industries, NASA, and the Northrop Corporation commented that position descriptions are seldom attached to wage determinations, and recommended that DOL actually do so in all cases.

The Department will endeavor to supply position descriptions where necessary to inform users of the scope of duties included in a classification. However, as noted in the proposed § 4.152(b), this is not needed for some classifications where the title and duties have commonly understood meanings.

With respect to proposed § 4.152(c), NCTSI, the Scientific Apparatus Makers Association, the Council of Defense and Space Industry Associations, NASA, McDonnell Douglas Corporation, and Northrop asserted that contractors should be allowed to establish lower level classifications, variously described as entry level, trainee, or intermediate level, if no such classifications are listed on an applicable wage determination. Several of these commentors claimed that the prohibition against the use of such lower classifications hampers equal employment opportunity and affirmative action efforts, and is contrary to industry practice.

It would not be appropriate nor in accord with the law to change our longstanding position and adopt any of the recommendations regarding the establishment of lower level subclassifications. Basic to prevailing wage statutes is the principle that the prevailing wage rate be the *minimum* permitted to be paid to *all* covered employees in the classification on the Government contract. There is no indication of any intent by Congress to apply any other principle in the SCA. If Congress had intended anything different, it would have so provided, as it did in the Walsh-Healey Act, which requires that the Secretary determine "the prevailing minimum wages for persons employed on similar work." Thus, House Report No. 948, 89th Cong., 1st Sess. (1965), accompanying the bill as enacted in 1965, states at page 3: "Service employees must be paid no less than *the rate* determined by the Secretary of Labor to be *prevailing* in the locality" (emphasis added). See also S. Rep. No. 798, 89th Cong., 1st Sess. 2 (1965).

Congress was certainly aware that in the thirty years in which the Department of Labor had been issuing wage determinations under the Davis-Bacon Act, the Department had been interpreting that Act as requiring that a single prevailing rate be determined for each classification of workers. The legislative hearings prior to enactment of the SCA in 1965 clearly indicate that the Department would follow Davis-Bacon principles in administering the SCA wage determination functions. In addition, during the numerous oversight hearings conducted subsequent to passage of the Act, Congress has never suggested that the Department of Labor's procedures for determining prevailing rates are contrary to its intent.

Obviously, all contractors have their own individual and differing pay

structures, no one of which would usually be prevailing in a locality. However, the language of section 2(a) of the Act makes it absolutely clear that all service employees performing the duties of a given classification must be paid at least the prevailing wages and fringe benefits listed for that class on the wage determination. Further, a lower rate of pay for such employees cannot be established through the conforming procedures in § 4.6(b)(2) of the Regulations, as those procedures can only be used where the duties of an unlisted class constitute a separate and distinct job category. Appropriate variations have been provided in § 4.6(o) for apprentices, student learners and handicapped workers. Moreover, as discussed in § 4.152(c), a wage determination will list a series of classes within a job classification family (e.g., Technician Classes A, B, and C) where the practice prevails in the industry and where bona fide differences in the work performed exist. In such situations, the lowest level listed is considered to be the entry level and the establishment of a lower level (or intermediate levels) through conformance or otherwise is not permissible. To allow individual contractors to arbitrarily "carve out" any number of subclassifications without restriction in these situations would subvert the statutory intent of the Act to provide *prevailing* labor standards protections for all service employees (nonminority and minority) and to remove wages as a factor in the competitive procurement process. Indeed, to adopt these suggestions would make any wage determination meaningless and in effect nullify the prevailing wage provisions of the Act. The prohibition against "carving out" subclassifications under the SCA has been upheld in numerous administrative proceedings. See *Triple B Builders, Inc.*, Case No. SCA–974, Decision of the Assistant Secretary, March 28, 1970; *Fischer and Associates Technical Consultants, Inc.*, Case No. SCA–662, Decision of the Administrator, August 18, 1978; *Collins Radio Company, et al.*, Case No. SCA–430, May 27, 1976.

Section 4.163(a) Section 4(c) of the Act

The Service Employees International Union, IATSE, the AFL–CIO, the Center to Protect Workers Rights, and the IBEW objected to limiting the obligation of a successor contractor to the wage and fringe benefit provisions of the predecessor contractor's collective bargaining agreement because items excluded under this proposed subsection, such as work rules, and overtime premiums and other economic benefits, are negotiable under collective bargaining pursuant to the National Labor Relations Act. These commentors argued that Congress did not intend to narrowly limit the meaning of wages and fringe benefits under section 4(c) of the SCA so as to exclude these negotiable items, and that successor contractors should be required to observe such provisions called for under the predecessor's collective bargaining agreement.

As set forth in section 2(a)(2) of the Act, only the types of benefits enumerated therein and benefits of a similar nature are considered bona fide fringe benefits for purposes of meeting the compensation requirements of that section as well as the successorship provisions of section 4(c) of the Act. (A discussion of the criteria which must be met in order for any fringe benefit to be considered "bona fide" is contained in § 4.171.) While it is recognized that there are other bona fide fringe benefits, it is clear from section 2(a)(2) that items such as seniority, work rules, guaranteed workweek, overtime premiums, and other collectively bargained provisions of an economic or noneconomic nature which are nof of the type enumerated in section 2(a)(2) are not wages or fringe benefits for purposes of the Act. See *Trinity Services, Inc.* v. *Marshall*, 593 F.2d 1250 (1978). The fact that such items may be negotiated pursuant to the National Labor Relations Act is not material in determining the obligations of successor contractors under section 4(c) of the SCA. Daily or weekly premium overtime compensation benefits are provided by other statutes. (See §§ 4.180 and 4.181.) Accordingly, no change will be made in this section.

Section 4.163(b)

The Department of Energy (DOE), GSA, and NASA commented that this subsection should delineate who is a successor contractor under section 4(c) of the Act and recommended that the traditional National Labor Relations Board tests for determining who is a successor contractor be adopted.

In the 1972 amendments to the Act, Congress carved out a special definition for "successorship" in SCA contracts as a result of the decision in *N.L.R.B.* v. *Burns International Security Services, Inc.*, 406 U.S. 272 (1972), which makes the NLRB definition irrelevant here.

The Computer and Business Equipment Manufacturers Association (CBEMA), the Scientific Apparatus Makers Association (SAMA), and Technicolor Graphic Services, Inc., all objected to section 4(c) obligations being deemed self-executing. SAMA and Technicolor commented that it is the Department of Labor's responsibility to issue determinations specifying the wage and fringe benefit obligations of successor contractors pursuant to section 4(c), and that unless the wages and fringe benefits contained in the predecessor contractor's collective bargaining agreement are reflected in a wage determination issued for the new contract, the successor contractor should not be obligated to pay them.

The statutory language of section 4(c) makes it clear that its provisions are self-executing whether or not all of the wage and fringe benefit requirements of a contractor's collective bargaining agreement are reflected in the wage determination issued for the successor contract. While the Department issues wage determinations for successor contracts accurately reflecting, to the extent possible, all of the wage and fringe benefit requirements, an occasional failure to do so (generally because the necessary data has not been furnished to the Department) cannot eliminate the successor contractor's statutory obligations under section 4(c) of the Act. A footnote notifying all bidders of their obligations in this regard is contained in all wage determinations issued pursuant to section 4(c). Accordingly, no change in this subsection would be appropriate.

Section 4.163(c)

The American Bar Association (ABA) and Rockwell International Corporation objected to the principle that decisions that collectively bargained wage rates and/or fringe benefits are substantially at variance with those prevailing in the locality are not made effective retroactively to the beginning of a contract.

The National Council of Technical Service Industries contended that if a variance proceeding is held, the difference in wages at issue should be held in escrow pending a decision on the matter.

The discussion of the legislative history of the 1972 amendments to the Act in this subsection makes it clear that collectively bargained wages and fringe benefits payable under section 4(c) of the Act must be honored "unless and until" a finding of substantial variance is made. Thus, variance hearing decisions cannot be applied retroactively, nor can an amount of wages or fringe benefits in dispute be held in escrow pending such a decision. However, every effort will be made to insure that variance decisions are rendered on a timely basis, in accordance with the time frames set forth in Regulations, Part 6.

Section 4.163(d)

The Department of Defense took issue with the requirement that sections 2(a) and 4(c) of the SCA must be read in conjunction, contending that the language of section 2(a) of the SCA provides that where a successor contractor has a bona fide collective bargaining agreement at his or her own plant, the contractor can pay employees in accordance with that agreement and be in compliance with the Act without having to observe the terms of a predecessor contractor's collective bargaining agreement pursuant to section 4(c) of the Act.

The legislative history of the 1972 amendments to the SCA, which added both section 2(a) and section 4(c) to the Act, makes it absolutely clear that sections 2(a) and 4(c) must be read in conjunction with each other, and the DOD interpretation on this point is in error.

Section 4.163(e)

The Department of Defense disagreed with the provision in this subsection that a contractor may succeed itself for purposes of the application of section 4(c) of the Act in noncompetitive situations (i.e., contract options or extensions), as well as in cases involving the recompetition of a contract. DOD claimed that, in noncompetitive situations, a contractor will have an incentive to increase collectively bargained wages and fringe benefits when it knows the agency will reimburse the costs of such an increase.

The legislative history of the 1972 amendments and the Act itself contemplate that collectively bargained wages and fringe benefits may increase over time, and such increases should be honored. To adopt DOD's restrictive suggestion would freeze wages for a number of years in the case of multi-year contracts. Section 4(d) of the Act precludes such a result. The "substantial variance" provisions of section 4(c) serve to preclude any abuses of the type foreseen by DOD.

Section 4.163(g)

The General Services Administration, the Department of Energy, and the National Aeronautics and Space Administration objected to the breadth of the provision requiring the payment of wages and fringe benefits provided for in a predecessor contractor's collective bargaining agreement pursuant to section 4(c) of the Act in the case of contract reconfigurations, claiming that in some situations the follow-on-contract may not be subject to the Act, e.g., in the case of a minor use of service employees in a contract for professional services. In effect, it was claimed, the term "identifiable contract work" as used in this subsection narrows the scope of the concept of a successor contract under 4(c) of the Act from one in which substantially the same services are furnished to one in which any single class of service work previously furnished is rendered under the reconfigured contract.

The Department of Defense recommended that a variance or exemption be provided for reconfiguration situations where two contracts are combined and, as a result, two employees working side by side may perform identical work but receive two different rates of pay.

A successor contract must meet the general tests of SCA coverage set forth in section 2(a) of the Act before the provisions of section 4(c) can be applied. Thus, section 4(c) only applies to identifiable portions of a successor contract which is otherwise subject to the Act. The contracting agency must, in the first instance, make a good faith determination as to what constitutes "identifiable contract work", which, it is assumed, would involve more than one class of service employees in the usual case. Furthermore, our experience has shown that "substantially the same services" are furnished in a continuing, reconfigured succeeding contract. The interpretation in question is necessary to prevent contractural reconfigurations from being used to evade or defeat the remedial purposes of section 4(c). It thus would not be appropriate to grant a variation as recommended by DOD.

The National Council of Technical Service Industries argued that the provisions of this subsection create administrative difficulties as the successor contractor would not, it was claimed, receive notification of its wage obligations.

In actual practice, where contract reconfigurations are involved, successor contractors receive notification of their obligations under section 4(c) of the Act through the issuance of appropriate wage determinations by the Department. It should also be noted that the provisions of this subsection have been implemented for several years as a matter of policy, and we are not aware of its having resulted in any administrative difficulties such as those foreseen by NCTSI. Accordingly, no substantive changes will be made in this subsection.

Section 4.163(i)

The American Bar Association, the Council of Defense and Space Industry Associations, the Computer and Business Equipment Manufacturer's Association, the National Council of Technical Service Industries, the Department of Defense, the Department of Energy, the National Aeronautics and Space Administration and Southern Packaging and Storage Co., Inc. objected to the application of section 4(c) of the SCA to successor contractors irrespective of the place of performance by the successor contractor.

Most of these commentors stated that Congress did not intend section 4(c) to apply where there was a change in the place of contract performance between the predecessor and successor contracts, while DOD asserted that section 4(c) should not apply to any contract performed at the contractor's plant (as opposed to a Government facility). Several of these commentors also claimed that this provision would necessitate numerous variance hearings caused by the conflict between "imported" collectively bargained wage rates and wage rates prevailing at the location of the successor contractor, and noted that variance hearings were not intended to correct problems caused by substantial differences between wage rates in different geographic locations.

The attorney for Southern Packaging and Storage Co., Inc. stated that this provision will prevent contractors in low wage areas from bidding on contracts currently performed in high wage areas pursuant to a collective bargaining agreement.

The language of section 4(c) of the SCA contains no provisions restricting its applicability to contracts performed at a Government facility generally or only to those procurements where the location of the successor contractor's place of performance is the same as the predecessor's. No such restriction is contained in the current Regulations, the relevant portions of which were promulgated in 1972.

Proposed revisions to 29 CFR Part 4 published for comment in April 1975, if adopted, would have limited the application of section 4(c) to those successor contracts performed at the same location as the predecessor contract. Subsequent to this proposal, oversight hearings were held by the House Subcommittee on Labor-Management Relations and public hearings were held by the Department of Labor. Congress specifically repudiated such a limitation, noting that:

> The GAO has advanced an interpretation of section 4(c) that it is to be applied only where the same employees and same locality continue under a succeeding contract.* * * The subcommitte rejects this interpretation of section 4(c). No such qualification exists on the face of the statute and nothing in the

legislative history would support the restrictive GAO reading of the successor obligations of section 4(c). (House Subcommittee on Labor-Management Relations, Committee on Education and Labor, *Congressional Oversight Hearings: The Plight of the Service Worker Revisited*, 94th Cong., 1st Sess. 7 (Comm. Print, 1975)).

In those hearings, Congressional intent as to the proper issuance of wage determinations pursuant to section 4(c) of the Act was stated as follows:

> * * * Section 4(c) requires that the wages and fringe benefits, including prospective increases contained in a predecessor's collective bargaining contract, form the basis for the Secretary's determination for successor contracts whether performed at the same site or at a different site. (*Oversight Hearings*, p. 10).

On the basis of those hearings, during which the statute and its legislative history were carefully reviewed, it was decided to withdraw this proposed limitation.

Section 4.163(j)

The DOE objected to the requirement that a successor contractor is obligated to observe the wage rates and fringe benefit provisions of the predecessor contractor's collective bargaining agreement which the Department of Labor failed to include in an applicable wage determination.

As discussed in § 4.163(b), the provisions of section 4(c) of the SCA are self-executing, and thus, the occasional omission of a wage or fringe benefit provision contained in the predecessor contractor's collective bargaining agreement from the wage determination issued for a successor contract cannot relieve the successor contractor of the direct statutory obligation under section 4(c) to observe such provisions.

The National Council of Technical Service Industries and DOE asserted that to follow the requirement that any interpretation of the wage and fringe benefit provisions of the predecessor contractor's collective bargaining agreement must be based on the intent of the parties to that agreement would be difficult. They remarked that intent may not be expressed in the agreement and the parties to the agreement may not be available to provide explanation.

In the majority of cases, the intent of the parties to a predecessor contractor's collective bargaining agreement is clear from the language of the agreement, the wage and fringe benefit provisions thereof are accurately reflected in the wage determination attached to the successor contract, and the successor contractor can rely upon the body of interpretations contained in this subpart. However, in those rare instances where the intent or meaning of a wage or fringe benefit provision in a predecessor contractor's collective bargaining agreement cannot be determined by a successor contractor, the Department of Labor will assist in obtaining interpretative guidance from the parties to that agreement.

Section 4.165 Wage Payments and Fringe Benefits—in General

The National Council of Technical Service Industries, the Computer and Business Equipment Manufacturers Association (CBEMA), and the Scientific Apparatus Makers Association (SAMA) objected to the provision in § 4.165(b) setting a semi-monthly pay period as the longest allowable under the SCA. SAMA stated that this provision may cause problems because many firms calculate fringe benefits on a monthly basis. CBEMA asserted that a requirement to obtain employee approval of a bi-weekly or semi-monthly pay period would contravene section 7 of the National Labor Relations Act by mandating collective bargaining.

The proposal in this subsection to reduce the longest permissible pay period under the Act from monthly to semi-monthly is deemed necessary to insure timely payment of wages to service employees, who are often low paid and do not have the financial resources to cover expenses incurred over an entire month in which they receive no wage payments without suffering undue hardships. This change is also necessary for effective enforcement of the Act to protect against those situations where contractors receive their final payment from the contracting agency before the last payroll comes due and fail to meet that payroll. However, as there may be individual cases where a showing can be made that a monthly payroll period is necessary and can be implemented without adversely affecting the employees, the Administrator will give consideration to specific requests for a waiver from this provision in order to allow a monthly pay period.

This proposed requirement will not restrict a contractor's ability to make fringe benefit contributions to bona fide plans on a monthly basis, as believed by SAMA. As set forth in § 4.175(d)(1), such contributions may be made on any periodic basis which is not less often than quarterly. While we do not believe that employee approval of a bi-weekly or semi-monthly pay period would contravene the National Labor Relations Act we have determined upon further study that it would be appropriate to withdraw the employee approval provision from the final rule and replace it with a provision requiring contractors only to advise employees when such pay periods are used.

The Department of Defense and NCTSI opposed the requirement in § 4.165(c) to pay wage rates contained in an applicable wage determination which are higher than the rates contained in the contractor's collective bargaining agreement.

As discussed in § 4.163(d), an incumbent (successor) contractor may not adhere to the terms of its own collective bargaining agreement where they conflict with the terms of an otherwise applicable prevailing wage determination.

Section 4.169 Wage Payments—Work Subject to Different Rates

The Northrop Corporation argued that lower skilled employees should be allowed to be assigned to work in more highly skilled and highly paid job classifications for training purposes. Northrop recommended that recognition of what was termed a "long established practice" be made by establishing a tolerance allowing a service employee to work in a more highly skilled job classification up to 25 percent of the time without having to be paid the higher wage determination rate for such time.

Section 2(a) of the Act makes it clear that the various classes of service employees must be paid *at least* the established corresponding wage determination rates while performing on a covered contract. It follows from this statutory language and the general principle under the Act that the duties which an employee actually performs govern the rate(s) of pay to which he or she is entitled, and that where a single employee performs work in more than one classification, he or she must be paid at least the corresponding wage determination rate for the time spent performing in each classification. To grant the tolerance suggested by Northrop would be clearly contrary to the statutory intent to protect prevailing wages by allowing contractors to pay less than the applicable wage determination rate for substantial periods of time. Accordingly, no change will be made in this section, which has been in the Regulations since 1968.

Section 4.170 Furnishing fringe benefits or equivalents

The Bell & Howell Company and Editorial Experts, Inc. commented that the Department should not prohibit the cross-crediting of wages and fringe benefits in proposed § 4.170(a).

The statutory language of section 2(a) of the Service Contract Act

differentiates between payments for wages and payments for fringe benefits and does not provide for the cross-crediting of one against another. Consequently, since 1968, the Regulations have prohibited such cross-crediting. However, section 2(a)(2) of the Act and § 4.170(a) of both the current and proposed Regulations provide that contractors may discharge their obligation to furnish specified fringe benefits by making equivalent or differential payments in cash to employees.

Section 4.171 "Bona Fide" Fringe Benefits

The AFL–CIO commented that the definition of a bona fide fringe benefit as provided in this section is too restrictive, asserting that it should not exclude such benefits as supplemental unemployment plans and prepaid legal plans.

While not specifically enumerated in this section, supplemental unemployment plans and prepaid legal plans are considered "bona fide" fringe benefits for purposes of the Act.

The Computer and Business Equipment Manufacturers Association and Pan American World Airways, Inc. commented in opposition to § 4.171(a)(5), which requires that bona fide fringe benefit plans comply with section 401(a) of the Internal Revenue Code. CBEMA stated that section 401(a) of the tax code only relates to stock bonus, pension, and profit sharing plans, and addresses only the tax consequences of employer contributions to such plans, and not whether they provide benefits of value to employees.

Since section 401(a) of the Internal Revenue Code only covers certain types of fringe benefit plans, only plans of the types listed in section 401(a) must meet the requirements of that section. The final rule has been amended accordingly.

CODSIA, CBEMA, and NASA objected to the exclusion in § 4.171(b) of self-insured benefit plans from the definition of bona fide fringe benefits. They commented that many self-insured plans satisfy the requirements of the Employment Retirement Income Security Act of 1974. Rockwell International Corporation, Xerox Corporation, Pan American World Airways, Inc., and Frank B. Hall Consulting Company made similar comments.

The purpose of § 4.171(b) is to preclude those situations (e.g., as in unfunded plans) where monies allegedly allocated by a contractor to provide fringe benefits may be used for other purposes or may be recouped without actually furnishing any benefits. The Department does not intend to prohibit self-insured plans where irrevocable payments are made pursuant to a trust or other funded arrangement and the other conditions of § 4.171 are met. The final Regulations have been amended to clarify this point.

Section 4.173 Meeting Requirements for Vacation Fringe Benefits

The Computer and Business Equipment Manufacturers Association (CBEMA) and Datapoint Corporation took issue with the requirement in § 4.173(a)(1) to consider prior service with a predecessor contractor(s) in computing vacation benefits on the grounds that prior service is often difficult to determine.

Vacation eligibility is often accrued on the basis of length of service with an employer. However, service employees on many Government contracts, who typically perform work at a single Federal facility for several years, in many cases could not gain vacation eligibility with any single employer since employing contractors frequently change, often on an annual basis. In recognition of this characteristic, the Regulations have since 1968 required that service employees receive credit for prior service with a predecessor contractor(s) at the same facility in order to insure that the employees actually receive the prevailing vacation benefits. In addition, as discussed in § 4.173(a), it is necessary to credit employees for prior contract service in order to avoid placing the incumbent contractor at a competitive disadvantage by making it, but not other bidders, liable for vacation benefits based upon length of prior service in performing the contract work.

Subsection 4.6(l)(2) of the Regulations requires that the incumbent contractor provide the contracting officer with a list of all the contractor's employees on the payroll during the last month of contract performance and their anniversary dates. This should eliminate problems in gathering length of service data.

CBEMA asserted that this requirement should not apply in the case of "commercial product support services" on the grounds that such services are generally not performed by "successor" contractors as that term is used under the Act and the Regulations.

The requirement to consider prior service with a predecessor contractor(s) in determining vacation eligibility does not generally apply to contractors furnishing so-called "commercial product support services" under General Services Administration-Federal Supply Service "schedule" contracts because it is almost impossible to trace or identify any specific contract work requirements from a "predecessor" to a "successor" contractor.

The AFL–CIO, the American Federation of Government Employees, and NASA opposed the provision in § 4.173(a)(3) excluding prior service as a Federal employee from being counted toward an employee's eligibility for vacation benefits under the SCA. They argued that this policy discriminates against Federal employees whose jobs are contracted out and is contrary to Federal policy and intent as outlined in OMB Circular A–76.

Employees' prior service on a predecessor service *contract* must be considered by a successor contractor in determining vacation eligibility under this subsection. Since Federal employees have not worked on prior service *contracts*, prior service as a Federal employee need not be considered for this purpose. We do not believe that this provision discourages contractors from hiring former Federal employees whose jobs are contracted out.

NASA, commenting on § 4.173(b)(1), stated that DOL should establish criteria for determining what constitutes a break in service for purposes of eligibility for vacation benefits. Northrop Corporation and NASA requested clarification of the term "temporary layoff" in § 4.173(b)(2). Northrop also sought clarification as to whether a firm's administrative policy or collective bargaining agreement in this area is controlling.

As discussed in § 4.173(b), whether or not there is a break in service is dependent upon all the facts in a particular case, the primary factor being the reason(s) for an employee's absence from work rather than the length of that absence. It would not be practicable to establish more detailed criteria as to what constitutes a break in service or list every possible factual circumstance under which a break would or would not have occurred. Accordingly, the general guidelines and specific examples contained in § 4.173(b)(1) are considered to be sufficient guidance and no amendment is made to the regulation. Questions regarding continuous service for vacation eligibility should be referred to the Department for a determination. In all such cases, the rulings and interpretations of the Department contained in this subpart or issued in accordance with § 4.101(g) of the Regulations will take precedence over a contractor's own administrative policy or collective bargaining agreement. However, where a successor contractor is subject to the wage and

fringe benefit provisions of the predecessor contractor's collective bargaining agreement pursuant to section 4(c) of the Act, the terms of that agreement pertaining to fringe benefit entitlement, including those relating to continuous service for vacation eligibility, are binding upon the successor contractor as provided in § 4.163(j) of the Regulations.

The AFL–CIO and NCTSI commented that the vesting of vacation benefits and the liability therefor should be prorated for portions of years worked, in accordance with what they termed the prevailing practice in private industry and the Federal Government, rather than being based solely on an employee's anniversary date of employment as required under §§ 4.173(c) and (d)(1).

Most SCA wage determinations have provided for employee vesting of vacation fringe benefits and contractor liability therefor on the basis of employee anniversary dates since the Act's inception and have not provided for prorating either vesting or liability. This policy was adopted by the Department after careful consideration of the alternatives and in view of the characteristics of Government service procurement relating to employee length of service and contractor turnover, as discussed above. Under this scheme, employees who continue to provide the same contract services are assured of receiving their full vacation benefits annually without regard to any change in contractors. This longstanding policy does not porvide a windfall or burden for either predecessor or successor contractors, since in most cases the vacation liabilities of both predecessors and contractors even out over time by the random distribution of employee anniversary dates. Although the preamble to the proposed Regulations invited comments on the possible adoption of an accrual (or pro rata) method for providing vacation benefits, no viable plan for doing so has been presented. Accordingly, the current policy will be maintained.

Section 4.174 Meeting Requirements for Holiday Fringe Benefits

The Department of Defense objected to the provision in § 4.174(a)(1) that an employee is entitled to holiday pay if the employee performs any work during the workweek in which a named holiday occurs. DOD recommended that the section be revised to provide for payment of holiday pay only if the employee works the day before and the day after the holiday.

NASA, DOE, CBEMA, and Datapoint Corporation objected to the requirement in § 4.174(b) which provides for the payment of holiday pay to an employee who is hired during the first week of a contract but does not begin work until after the named holiday. This requirement is a limited exception to the general rule that the contractor is not required to compensate a newly hired employee for a holiday occurring prior to hiring of the employee.

CBEMA, DOD and Datapoint objected to the requirement in § 4.174(c)(4) for payment of holiday pay to an employee who works during the holiday workweek but terminates prior to the named holiday.

Because a contractor has the right to assign work in any way it deems appropriate to meet the requirements of the contract, there is the potential for a contractor to avoid the requirements of paying benefits for holidays listed in a wage determination by manipulating work schedules. Thus, the Department has for many years followed the policy which is now codified. An employee is entitled to holiday pay if the employee performs any work during the workweek in which a named holiday occurs, in order to prevent the contractor from gerrymandering work days in order to avoid the payment of holiday fringe benefits to employees. This rule avoids the problems of having to determine whether an employee voluntarily quit or was fired, voluntarily took off the day before or the day after the holiday or was directed to take off by the contractor, etc. The experience of the Department in administering the law has been that the longstanding policies set forth in § 4.174 are equitable and fair to contractors and to the rights of employees.

The requirement in § 4.174(b) to provide benefits for a holiday occurring during the first week of a contract to employees hired during that week but not until after the named holiday is necessary to insure that employees receive their full entitlement to holiday benefits. This specific requirement is also necessary to prevent incumbent contractors who retain their current workforce from being placed at a competitive disadvantage with respect to other prospective contractors who would be newly hiring employees during the first week of a contract. No substantive changes will be made in this section.

Section 4.175 Meeting Requirements for Health, Welfare, and/or Pension Benefits

The Council of Defense and Space Industry Associations, Northrop Corporation, McDonnel Douglas Corporation, and the Seafarers International Union commented that the requirement in § 4.175(a)(2) to make differential payments where a contractor is able to obtain a specified fringe benefit for less than the amount stated on an applicable wage determination eliminates any incentive to obtain the benefit at a lower cost by, for example, negotiating lower premiums with an insurance carrier. Essentially, these commentors recommended that the standard by which compliance with fringe benefit obligations should be measured should be the level of benefits provided, rather than the monetary costs incurred.

As set forth in §§ 4.170 and 4.171 of the current Regulations, the Department has consistently required that fringe benefit compliance be measured by the monetary cost incurred by the contractor in furnishing such benefits. Compliance with fringe benefit requirements on the basis of the level of benefits provided is not practical because of the impossibility of measuring the relative merits and value to individual employees of the multitude of fringe benefit plans, which typically contain substantial variations in the types and amounts of benefits provided. The statutory provision in section 2(a)(2) allowing contractors to substitute *equivalent* fringe benefits and cash payments in lieu of the benefits specified in an applicable wage determination would preclude adoption of a level of benefits standard. No one has developed a feasible method for determining what fringes are prevailing in terms of the level of benefits provided. Thus, there is no means of informing contractors as to how they would comply with a requirement to furnish such benefits. Even if contractors could be so advised, if a given contractor desired a pension plan rather than a health insurance plan, it would be impossible to determine if the level of benefits were equivalent, and thus there would be no way to determine compliance with the Act.

CBEMA expressed concern over the requirement in § 4.175(c) that employees who are excluded from a plan must receive equivalent fringe benefits. In the view of the Department this provision is required by the statutory scheme under which each worker must be paid the prescribed minimum wage and furnished the prescribed fringe benefit or its equivalent. The fringe benefits are stated on the wage determinations as either a specified amount of payments or, in appropriate circumstances, in terms of average cost [see subsection 4.175(b)].

Section 4.187 Recovery of Underpayments

The Datapoint Corporation and the National Star Route Mail Carriers' Association asserted that the definition of "party responsible" in § 4.187(e) could result in imposing personal liability on most management and administrative officials of contractors.

The criteria for determining who is a "party responsible" as set forth in this section are based upon the authoritative administrative and judicial precedents cited therein. These criteria do not necessarily include most officials of a firm found to be in violation, but rather are limited to those who are responsible for controlling the firm, administering the contract or the firm's employment policies or are otherwise responsible for the violations by causing or permitting them to occur.

The Department of Defense (DOD) and the National Council of Technical Service Industries questioned whether the Department's procedures pertaining to disputes regarding violations of the Act in § 4.187(f) may be in conflict with the requirements of the Contract Disputes Act of 1978.

Section 14 of the Contract Disputes Act of 1978 sets forth the specific amendments made by the Congress to existing statutes. Significantly, no change, repeal or amendment, or reference was made to the SCA. Furthermore, Section 6(a) of the Contract Disputes Act states in part that "the authority of this subsection shall not extend to a claim or dispute for penalties or forfeitures *prescribed by statute or regulation which another Federal agency is specifically authorized to administer, settle, or determine*" (emphasis supplied). Therefore, DOL's explicit and exclusive statutory authority to resolve disputes set forth in section 4 of the SCA is unchanged.

In addition, logic dictates that the authority to resolve labor disputes should more properly reside in the agency which has, in addition to the statutory enforcement authority, the prerequisite expertise in administering the law and the regulations necessary to insure the effective and consistent implementation of such labor standards provisions.

This rule was drafted under the supervision and direction of Donald Elisburg, Assistant Secretary of Labor, Employment Standards Administration, U.S. Department of Labor, 200 Constitution Avenue, NW., Washington, D.C. 20210. (202-523-6191).

Accordingly, 29 CFR Part 4 is revised as set forth below.

Signed at Washington, D.C., this 12th day of January 1981.

Donald Elisburg,

Assistant Secretary of Labor, Employment Standards Administration.

PART 4—LABOR STANDARDS FOR FEDERAL SERVICE CONTRACTS

Subpart A—Service Contract Labor Standards Provisions and Procedures

Sec.
4.1 Purpose and scope.
4.1a Definitions and use of terms.

Sec.
4.1b Payment of minimum compensation based on collectively bargained wage rates and fringe benefits applicable to employment under predecessor contract.
4.2 Payment of minimum wage specified in section 6(a)(1) of the Fair Labor Standards Act of 1938 under all service contracts.
4.3 Wage determinations.
4.4 Notice of intention to make a service contract.
4.5 Contract specification of determined minimum wages and fringe benefits.
4.6 Labor standards clauses for Federal service contracts exceeding $2,500.
4.7 Labor standards clause for Federal service contracts not exceeding $2,500.
4.8 Notice of awards.
4.9 [Reserved]
4.10 Substantial variance proceedings under section 4(c) of the Act.
4.11 Arm's-length proceedings.
4.12 Substantial interest proceedings.

Subpart B—Wage Determination Procedures

4.50 Types of wage and fringe benefit determinations.
4.51 Prevailing in the locality determinations.
4.52 Collective bargaining agreement (successorship) determinations.
4.53 Locality basis of wage and fringe benefit determinations.
4.54 Issuance and revision of wage determinations.
4.55 Review and reconsideration of wage determinations.

Subpart C—Application of the McNamara-O'Hara Service Contract Act

Introductory

4.101 Official rulings and interpretations in this subpart.
4.102 Administration of the Act.
4.103 The Act.
4.104 What the Act provides, generally.
4.105 The Act as amended.
4.106 [Reserved]

Agencies Whose Contracts May Be Covered

4.107 Federal contracts.
4.108 District of Columbia contracts.
4.109 [Reserved]

Covered Contracts Generally

4.110 What contracts are covered.
4.111 Contracts "to furnish services".
4.112 Contracts to furnish services "in the United States".
4.113 Contracts to furnish services "through the use of service employees".
4.114 Subcontracts.

Specific Exclusions

4.115 Exemptions and exceptions generally.
4.116 Contracts for construction activity.
4.117 Work subject to requirements of Walsh-Healey Act.
4.118 Contracts for carriage subject to published tariff rates.
4.119 Contracts for services of communications companies.
4.120 Contracts for public utility services.
4.121 Contracts for individual services.
4.122 Contracts for operation of postal contract stations.
4.123 Administrative limitations, variations, tolerances, and exemptions.

Particular Application of Contract Coverage Principles

4.130 Types of covered service contracts illustrated.
4.131 Furnishing services involving more than use of labor.
4.132 Services and other items to be furnished under a single contract.
4.133 Beneficiary of contract services.
4.134 Contracts outside the Act's coverage.
4.135 [Reserved]
4.136 [Reserved]
4.137 [Reserved]
4.138 [Reserved]
4.139 [Reserved]

Determining Amount of Contract

4.140 Significance of contract amount.
4.141 General criteria for measuring amount.
4.142 Contracts in an indefinite amount.

Changes in Contract Coverage

4.143 Effects of changes or extensions of contracts, generally.
4.144 Contract modifications affecting amount.
4.145 Extended term contracts.

Period of Coverage

4.146 Contract obligations after award, generally.
4.147 [Reserved]
4.148 [Reserved]
4.149 [Reserved]

Employees Covered by the Act.

4.150 Employee coverage generally.
4.151 Employees covered by provisions of section 2(a).
4.152 Employees subject to prevailing compensation provisions of sections 2(a) (1) and (2) and 4(c).
4.153 Inapplicability of prevailing compensation provisions to some employees.
4.154 Employees covered by sections 2(a) (3) and (4).
4.155 Employee coverage does not depend on form of employment contract.
4.156 Employees in bona fide executive, administrative, or professional capacity.

Subpart D—Compensation Standards

4.159 General minimum wage.
4.160 Effect of section 6(e) of the Fair Labor Standards Act.
4.161 Minimum monetary wages under contracts exceeding $2,500.

4.162 Fringe benefits under contracts exceeding $2,500.
4.163 Section 4(c) of the Act.
4.164 [Reserved]

Compliance With Compensation Standards

4.165 Wage payments and fringe benefits—in general.
4.166 Wage payments—unit of payment.
4.167 Wage payments—medium of payment
4.168 Wage payments—deductions from wages paid.
4.169 Wage payments—work subject to different rates.
4.170 Furnishing fringe benefits or equivalents.
4.171 "Bona fide" fringe benefits.
4.172 Meeting requirements in particular fringe benefits—in general.
4.173 Meeting requirements for vacation fringe benefits.
4.174 Meeting requirements for holiday fringe benefits.
4.175 Meeting requirements for health, welfare, and/or pension benefits.
4.176 Payment of fringe benefits to temporary and part-time employees.
4.177 Discharging fringe benefit obligations by equivalent means.
4.178 Computation of hours worked.
4.179 Identification of contract work.

Overtime Pay of Covered Employees

4.180 Overtime pay—in general.
4.181 Overtime pay provisions of other Acts.
4.182 Overtime pay of service employees entitled to fringe benefits.

Notice to Employees

4.183 Employees must be notified of compensation required.
4.184 Posting of notice.

Records

4.185 Recordkeeping requirements.
4.186 [Reserved]

Subpart E—Enforcement

4.187 Recovery of underpayments.
4.188 Ineligibility for further contracts when violations occur.
4.189 Administrative proceedings relating to enforcement of labor standards.
4.190 Contract cancellation.
4.191 Complaints and compliance assistance.

Authority: 41 U.S.C. 351, et seq., 79 Stat. 1034, as amended in 86 Stat. 789, 90 Stat. 2358; 41 U.S.C. 38 and 39; and 5 U.S.C. 301.

Subpart A—Service Contract Labor Standards Provisions and Procedures

§ 4.1 Purpose and scope.

This part contains the Department of Labor's rules relating to the administration of the McNamara-O'Hara Service Contract Act of 1965, as amended, referred to hereinafter as the Act. Rules of practice for administrative proceedings under the Act and for the review of wage determinations are contained in Part 6 of this chapter. See Part 1925 of this title for the safety and health standards applicable under the Service Contract Act.

§ 4.1a Definitions and use of terms.

As used in this part, unless otherwise indicated by the context—

(a) "Act," "Service Contract Act," McNamara-O'Hara Act, or "Service Contract Act of 1965" shall mean the Service Contract Act of 1965 as amended by Public Law 92-473, 86 Stat. 789, effective October 9, 1972, Pub. L. 93-57, 87 Stat. 140, effective July 6, 1973, and Pub. L. 94-489, 90 Stat. 2358, effective October 13, 1976 and any subsequent amendments thereto.

(b) "Secretary" includes the Secretary of Labor, the Assistant Secretary of Labor for Employment Standards, and their authorized representatives.

(c) "Administrator" means the Administrator of the Wage and Hour Division, or the authorized representative as set forth in this part. In the absence of the Wage-Hour Administrator, the Deputy Administrator of the Wage and Hour Division is designated to act for the Administrator under this part. Except as otherwise provided in this part, the Assistant Administrator for Government Contract Wage Standards is the authorized representative of the Administrator for the performance of functions relating to the making of wage determinations and the enforcement of the Service Contract Act of 1965, as amended, and this part.

(d) "Office of Government Contract Wage Standards" or "OGCWS" means the organizational unit in the Wage and Hour Division, Employment Standards Administration, to which is assigned the performance of functions of the Secretary under the Service Contract Act of 1965 as amended.

(e) "Contract" includes any contract subject wholly or in part to provisions of the Service Contract Act of 1965 as amended, and any bid specification or subcontract of any tier thereunder. (See §§ 4.107-4.134.)

(f) "Contractor" includes a subcontractor whose subcontract is subject to provisions of the Act. Also, the term "employer" means, and is used interchangeably with, the terms "contractor" and "subcontractor" in various sections in this part. The U.S. Government, its agencies, and instrumentalities are not contractors, subcontractors, employers or joint employers for purposes of compliance with the provisions of the Act.

(g) "Affiliate" or "affiliated person" includes a spouse, child, parent, or other close relative of the contractor or subcontractor; a partner or officer of the contractor or subcontractor; a corporation closely connected with a contractor or subcontractor as a parent, subsidiary, or otherwise; and an officer or agent of such corporation. An affiliation is also deemed to exist where, directly or indirectly, one business concern or individual controls or has the power to control the other or where a third party controls or has the power to control both.

(h) "Wage determination" includes any determination of minimum wage rates or fringe benefits made pursuant to the provisions of sections 2(a) and 4(c) of the Act for application to the employment in a locality of any class or classes of service employees in the performance of any contract in excess of $2,500 which is subject to the provisions of the Service Contract Act of 1965.

§ 4.1b Payment of minimum compensation based on collectively bargained wage rates and fringe benefits applicable to employment under predecessor contract.

(a) Section 4(c) of the Service Contract Act of 1965 as amended provides special minimum wage and fringe benefit requirements applicable to every contractor and subcontractor under a contract which succeeds a contract subject to the Act and under which substantially the same services as under the predecessor contract are furnished for the same location. Section 4(c) provides that no such contractor or subcontractor shall pay any service employee employed on the contract work less than the wages and fringe benefits provided for in a collective bargaining agreement as a result of arms-length negotiations, to which such service employees would have been entitled if they were employed under the predecessor contract, including accrued wages and fringe benefits and any prospective increases in wages and fringe benefits provided for in such collective bargaining agreement. If, however, the Secretary finds after a hearing in accordance with the regulations set forth in § 4.10 of this subpart and Part 6 of this title that in any of the foregoing circumstances such wages and fringe benefits are substantially at variance with those which prevail for service of a character similar in the locality, those wages and/or fringe benefits in such collective bargaining agreement which are found to be substantially at variance shall not apply, and a new wage determination shall be issued.

If the contract has been awarded and work begun prior to a finding that the wages and/or fringe benefits in a collective bargaining agreement are substantially at variance with those prevailing in the locality, the payment obligation of such contractor or subcontractor with respect to the wages and fringe benefits contained in the new

wage determination shall be applicable as of the date of the Administrative Law Judges' decision. (See also § 4.163(c).)

(b) Pursuant to section 4(b) of the Act, the application of section 4(c) is made subject to the following variation in the circumstances and under the conditions described: The wage rates and fringe benefits provided for in any collective bargaining agreement applicable to the performance of work under the predecessor contract which is consummated during the period of performance of such contract shall not be effective for purposes of the successor contract under the provisions of section 4(c) of the Act or under any wage determination implementing such section issued pursuant to section 2(a) of the Act, if—

(1) In the case of a successor contract for which bids have been invited by formal advertising, notice of the terms of such new or changed collective bargaining agreement is received by the contracting agency less than 10 days before the date set for opening of bids, provided that the contracting agency finds that there is not reasonable time still available to notify bidders; or

(2) Notice of the terms of a new or changed collective bargaining agreement is received by the agency after award of a successor contract to be entered into pursuant to negotiations or as a result of the execution of a renewal option or an extension of the initial contract term, provided that the contract start of performance is within 30 days of such award or renewal option or extension. If the contract does not specify a start of performance date which is within 30 days from the award, and/or performance of such procurement does not commence within this 30-day period, any notice of the terms of a new or changed collective bargaining agreement received by the agency not less than 10 days before commencement of the contract will be effective for purposes of the successor contract under section 4(c); and

(3) The limitations in paragraph (b) (1) or (2) of this section shall apply only if the contracting officer has given both the incumbent (predecessor) contractor and his employees' collective bargaining representative written notification at least 30 days in advance of all applicable estimated procurement dates, including issue of bid solicitation, bid opening, date of award, commencement of negotiations, receipt of proposals, or the commencement date of a contract resulting from a negotiation, option, or extension, as the case may be.

§ 4.2 Payment of minimum wage specified in section 6(a)(1) of the Fair Labor Standards Act of 1938 under all service contracts.

Section 2(b)(1) of the Service Contract Act of 1965 provides in effect that, regardless of contract amount, no contractor or subcontractor performing work under any Federal contract the principal purpose of which is to furnish services through the use of service employees shall pay any of his employees engaged in such work less than the minimum wage specified in section 6(a)(1) of the Fair Labor Standards Act of 1938, as amended ($2.65 per hour beginning January 1, 1978, $2.90 per hour beginning January 1, 1979, $3.10 per hour beginning January 1, 1980, and $3.35 per hour after December 31, 1980).

§ 4.3 Wage determinations.

(a) The minimum monetary wages and fringe benefits for service employees which the Act requires to be specified in contracts and bid specifications subject to section 2(a) thereof will be set forth in wage determinations issued by the Administrator. Wage determinations shall be issued as soon as administratively feasible for all contracts subject to section 2(a) of the Act, and will be issued for all contracts entered into under which more than 5 service employees are to be employed.

(b) Such wage determinations will set forth for the various classes of service employees to be employed in furnishing services under such contracts in the appropriate localities, minimum monetary wage rates to be paid and minimum fringe benefits to be furnished them during the periods when they are engaged in the performance of such contracts, including, where appropriate under the Act, provisons for adjustments in such minimum rates and benefits to be placed in effect under such contracts at specified future times. The wage rates and fringe benefits set forth in such wage determinations shall be determined in accordance with the provisions of sections 2(a)(1), (2), and (5), 4(c) and 4(d) of the Act from those prevailing in the locality for such employees, with due consideration of the rates that would be paid for direct Federal employment of any classes of such employees whose wages, if federally employed, would be determined as provided in 5 U.S.C. 5341 or 5 U.S.C. 5332, or from pertinent collective bargaining agreements with respect to the implementation of section 4(c). The wage rates and fringe benefits so determined for any class of service employees to be engaged in furnishing covered contract services in a locality shall be made applicable by contract to all service employees of such class employed to perform such services in the locality under any contract subject to section 2(a) of the Act which is entered into thereafter and before such determination has been rendered obsolete by a withdrawal, modification, or supersedure.

(c) Wage determinations will be available for public inspection during business hours at the Office of Government Contract Wage Standards, Wage and Hour Division, Employment Standards Administration, U.S. Department of Labor, and copies will be made available on request at Regional Offices of the Wage and Hour Division.

§ 4.4 Notice of intention to make a service contract.

(a) For any contract exceeding $2,500 which may be subject to the Act, the contracting agency shall file with the Office of Government Contract Wage Standards, Wage and Hour Division, Employment Standards Administration, Department of Labor, its notice of intention to make a service contract. With respect to recurring or known requirements, such notices shall be filed not less than 60 days (nor more than 120 days, except with the approval of the Wage and Hour Division) prior to (1) any invitation for bids, (2) request for proposals, (3) commencement of negotiations, (4) exercise of option or contract extension, (5) annual anniversary date of a multi-year contract subject to annual fiscal appropriations of the Congress, or (6) each bi-annual anniversary date of a multi-year contract not subject to such annual appropriations, if so authorized by the Wage and Hour Division. (See § 4.4(d).) Notices with regard to solicitations where such planning is not feasible shall be submitted as soon as possible, but not later than 30 days prior to the above contracting actions. Such notice shall be submitted on Standard Form 98, Notice of Intention to Make a Service Contract, and Standard Form 98–A or a statement containing the information in paragraph (b) of this section and shall be completed in accordance with the instruction provided and shall be supplemented by the information required under paragraphs (c) and (d) of this section. Supplies of Standard Forms 98 and 98–A are available in all GSA supply depots under stock numbers 7540–926–8972 and 7540–118–1008, respectively. If there exists any question or doubt as to the possible application of the Act to a particular procurement, the contracting agency shall submit such question in a

timely manner to the Administrator for determination.

(b) The contracting agency shall file with its Notice of Intention to Make a Service Contract (SF-98) either a Standard Form 98-A or a statement in writing, containing the following information concerning the service employees expected by the agency to be employed by the contractor and any subcontractors in performing the contract:

(1) The number of such employees of all classes, or a statement indicating whether such number will or will not exceed 5, the number for which the inclusion of a wage determination in the contract is mandatory under the provisions of section 10 of the Act as set forth in § 4.3(a); and

(2) A listing of those classes of service employees expected to be employed under the contract which, if employed by the agency, would be subject to the wage provisions of 5 U.S.C. 5341 or 5 U.S.C. 5332, together with a specification of the rates of wages and fringe benefits that would be paid by the Government to employees of each such class if such statute were applicable to them. (Under section 2(a)(5) of the Act and § 4.6 the inclusion of such a statement in the service contract is also required.)

(c) If the services to be furnished under the proposed contract will be substantially the same as services being furnished for the same location by an incumbent contractor whose contract the proposed contract will succeed, and if such incumbent contractor is furnishing such services through the use of service employees whose wage rates and fringe benefits are the subject of one or more collective bargaining agreements, the contracting agency shall file with its Notice of Intention to Make a Service Contract (SF-98) a copy of each such collective bargaining agreement together with any related documents specifying the wage rates and fringe benefits currently or prospectively payable under such agreement. If such services are being furnished for more than one location and the collectively bargained wage rates and fringe benefits are different for different locations or do not apply for one or more locations, the agency shall identify the locations to which such agreements have application. If the collective bargaining agreement does not apply to all service employees under the contract, the agency shall identify the employees and/or work subject to the collective bargaining agreement. In the event that the agency has reason to believe that any such collective bargaining agreement was not entered into as a result of arm's-length negotiations, a full statement of the facts so indicating shall be transmitted with the copy of such agreement. See § 4.11. If the agency has information indicating that any such collectively bargained wage rates and fringe benefits are substantially at variance with those prevailing for services of a similar character in the locality, the agency shall so advise the Office of Government Contract Wage Standards and, if it believes a hearing thereon pursuant to section 4(c) of the Act is warranted, shall file its request for such hearing pursuant to § 4.10 at the time of filing the Notice of Intention to Make a Service Contract (Form SF-98).

(d) If the proposed contract is for a multi-year period subject to other than annual appropriations, the contracting agency shall file with its Standard Form 98 a statement in writing concerning the type of funding and the contemplated term of the proposed contract. Unless otherwise advised by the Wage and Hour Division that a Standard Form 98 must be filed on the annual anniversary date, a new Standard Form 98 shall be submitted on each bi-annual and anniversary date of the proposed multi-year contract in the event its term is for a period in excess of two years.

(e) Any Standard Form 98 submitted by a contracting agency without the information required under paragraphs (b), (c), or (d) of this section will be returned to the agency for further action.

(f) If exceptional circumstances prevent the filing of the notice of intention and supplemental information required by this section on a date at least 60 days (or 30 days in the case of unplanned procurements) prior to any invitation for bids, request for proposals, or commencement of negotiations, the notice shall be submitted to the Office of Government Contract Wage Standards as soon as practicable with a detailed explanation of the special circumstances which prevented timely submission. In the event the proposed contract involves performance by more than 5 service employees and an emergency situation requires an immediate award, the contracting agency shall contact the Office of Government Contract Wage Standards, Wage and Hour Division, by telephone for guidance prior to any such award. In no event may a contract subject to the act on which more than 5 service employees are contemplated to be employed be awarded without an appropriate wage determination. (Section 10 of the Act.)

(g) If any invitation for bids, request for proposals, bid opening, or commencement of negotiations for a proposed contract for which a wage determination was provided in response to a Standard Form 98 has been delayed, for whatever reason, more than 60 days from the date of such procurement action as on the submitted Standard Form 98, the contracting agency shall contact the Office of Government Contract Wage Standards, Wage and Hour Division, for the purpose of determining whether the wage determination issued pursuant to the initial submission is still current. Any revision of a wage determination received by the contracting agency as a result of such communication or upon discovery by the Department of Labor of a delay, shall supersede and replace the earlier response as the wage determination applicable to such procurement, subject to the time frames set forth in § 4.5(a)(2).

§ 4.5 Contract specification of determined minimum wages and fringe benefits.

(a) Any contract in excess of $2,500 shall contain an attachment specifying the minimum wages and fringe benefits for service employees to be employed thereunder, as determined in the applicable currently effective wage determination, including the applicable wage determination contained in any document referred to in paragraphs (a)(1) or (2) of this section:

(1) Any communication from the Office of Government Contract Wage Standards, Wage and Hour Division, Employment Standards Administration, Department of Labor, responsive to the notice required by § 4.4; or

(2) Any revision of a wage determination issued prior to the award of the contract or contracts which specifies minimum wage rates or fringe benefits for classes of service employees whose wages or fringe benefits were not previously covered by wage determinations, or which changes previously determined minimum wage rates and fringe benefits for service employees employed on covered contracts in the locality. However, revisions received by the Federal agency later than 10 days before the opening of bids, in the case of contracts entered into pursuant to competitive bidding procedures, shall not be effective if the Federal agency finds that there is not a reasonable time still available to notify bidders of the revision. In the case of procurements entered into pursuant to negotiations (or in the case of the execution of an option or an extension of the initial contract term), revisions received by the agency after award (or execution of an option or extension of term, as the case may be) of the contract shall not be effective *provided* that the contract start of performance is within 30 days of such

award (or execution of an option or extension of term). If the contract does not specify a start of performance date which is within 30 days from the award, and/or if performance of such procurement does not commence within this 30-day period, the Department of Labor shall be notified and any notice of a revision received by the agency not less than 10 days before commencement of the contract shall be effective. In situations arising under section 4(c) of the Act, the provisions in § 4.1b(b) apply.

(b)(1) The following exemption from the compensation requirements of section 2(a) of the Act applies, subject to the limitations set forth in paragraphs (b) (2), (3), and (4) of this section: To avoid serious impairment of the conduct of Government business it has been found necessary and proper to provide exemption from the determined wage and fringe benefits section of the Act (section 2(a) (1), (2)) but not the minimum wage specified under section 6(a)(1) of the Fair Labor Standards Act of 1938, as amended (section 2(b) of this Act), of contracts under which five or less service employees are to be employed, and for which no such wage or fringe benefit determination has been issued;

(2) The exemption provided in paragraph (b)(1) of this section, which was adopted pursuant to section 4(b) of the Act prior to its amendment by Public Law 92–473, does not extend to undetermined wages or fringe benefits in contracts for which one or more, but not all, classes of service employees are the subject of an applicable wage determination. The procedure for determination of wage rates and fringe benefits for any classes of service employees engaged in performing such contracts whose wages and fringe benefits are not specified in the applicable wage determination is set forth in § 4.6(b).

(3) The exemption provided in paragraph (b)(1) of this section does not exempt any contract from the application of the provisions of section 4(c) of the Act as amended, concerning successor contracts.

(c)(1) If the notice of intention required by § 4.4 is not filed with the required supporting documents within the time provided in such section, the contracting agency shall, through the exercise of any and all of its power and authority that may be needed (including, where necessary, its authority to negotiate, its authority to pay any necessary additional costs, and its authority under any provision of the contract authorizing changes), include in the contract any wage determinations communicated to it by the Wage and Hour Division, Employment Standards Administration, U.S. Department of Labor, within 30 days of the receipt of such wage determination(s).

(2) Where the Department of Labor discovers and determines, whether before or subsequent to a contract award, that a contracting agency made an erroneous determination that the Service Contract Act did not apply to a particular procurement and/or failed to include an appropriate wage determination in a covered contract, the contracting agency, within 30 days of notification by the Department of Labor, shall include in the contract the stipulations contained in § 4.6 and any applicable wage determination issued by the Administrator or his authorized representative through the exercise of any and all authority that may be needed (including, where necessary, its authority to negotiate or amend, its authority to pay any necessary additional costs, and its authority under any contract provision authorizing changes, cancellation, and termination). *(G. L. Christian & Associates* v. *U.S.*, 312 F. 2d 418 (Ct. Cl. 1963), rearg. denied 320 F. 2d 345, cert. denied 375 U.S. 954; (53 Comp. Gen. 412, (1973); *Curtiss-Wright Corp.* v. *McLucas*, 381 F. Supp. 657 (D NJ 1974); *Marine Engineers Beneficial Assn., District 2* v. *Military Sealift Command*, 86 CCH Labor Cases ¶33,782 (D DC 1979); *Brinks, Inc.* v. *Board of Governors of the Federal Reserve System*, 466 F. Supp. 112 (D DC 1979), 466 F. Supp. 116 (D DC 1979). (See also 32 CFR 1–403.)

(d) In cases where the contracting agency has filed its SF–98 within the time limits discussed in § 4.4(a) and has not received a response from the Department of Labor, the contracting agency shall, with respect to any contract for which section 10 of the Act and § 4.3 of this Part mandate the inclusion of an applicable wage determination, contact the Office of Government Contract Wage Standards, Wage and Hour Division by telephone for guidance.

§ 4.6 Labor standards clauses for Federal service contracts exceeding $2,500.

The clauses set forth in the following paragraphs shall be included in full by the contracting agency in every contract (and any bid specification therefor) entered into by the United States or the District of Columbia, in excess of $2,500, or in an indefinite amount, the principal purpose of which is to furnish services through the use of service employees:

(a) Service Contract Act of 1965, as amended: This contract, is subject to the Service Contract Act of 1965, as amended (41 U.S.C. 351) and is subject to the following provisions and to all other applicable provisions of the Act and regulations of the Secretary of Labor issued thereunder (29 CFR Part 4).

(b)(1) Each service employee employed in the performance of this contract by the contractor or any subcontractor shall be paid not less than the minimum monetary wages and shall be furnished fringe benefits in accordance with the wages and fringe benefits determined by the Secretary of Labor or authorized representative, as specified in any wage determination attached to this contract. Unless specified otherwise in the wage determination, the contractor, where relevant, must consider an employee's length of service with the contractor or with the predecessor contractor(s) on the predecessor contract, if any, in determining the employee's wage and fringe benefit entitlements.

(2)(i) If there is such a wage determination attached to this contract, the contracting officer shall require that any class of service employee which is not listed therein and which is to be employed under the contract, be classified by the contractor so as to provide a reasonable relationship (i.e., appropriate level of skill comparison) between such unlisted classifications and the classifications listed in the wage determination. Such conformed class of employees shall be paid the monetary wages and furnished the fringe benefits as are determined by bona fide agreement of the interested parties, who shall be deemed to be the contracting officer, the contractor, and any authorized representative of the unlisted class of employees or, where there is no authorized representative, the employees in the unlisted class who will perform on the contract.

(ii) Such conforming procedure shall be initiated by the contractor at the time of the contract commencement date, or prior to the performance of contract work by such unlisted class of employee if a need for an additional class(es) arises, and shall be concluded no later than 30 days after such unlisted class of employees performs any contract work. A written report of the proposed conforming action, including evidence in writing of the agreement of the authorized representative of the employees involved or, where there is no authorized representative, the employees themselves, shall be promptly submitted by the contractor to the contracting officer who shall review this action, and if he or she agrees, shall promptly submit a report of the action to the Office of Government Contract

Wage Standards, Wage and Hour Division, Employment Standards Administration, U.S. Department of Labor, for review. The Office of Government Contract Wage Standards will approve or disapprove the action within 30 days of receipt or will notify the contracting officer within 30 days of receipt that additional time is necessary. If the conforming procedure cannot be concluded within the 30-day time period, the contracting officer shall submit an explanation of the special circumstances which prevent a timely agreement to the Office of Government Contract Wage Standards together with a request for additional time for resolution of the matter.

(iii) If the parties do not reach an agreement or acknowledge disagreement within this 30-day period on a proper classification which is, in fact, conformable, the contracting officer shall promptly submit the question, together with his or her recommendations and all pertinent information, including the positions of employees if in disagreement, to the Office of Government Contract Wage Standards, Wage and Hour Division, Employment Standards Administration, of the Department of Labor for final determination. The Office of Government Contract Wage Standards will render a determination within 30 days of receipt or will notify the contracting officer within 30 days of receipt that additional time is necessary.

(iv) The process of establishing wage rates that bear a reasonable relationship to those listed in a wage determination cannot be reduced to any single formula. The approach used may vary from wage determination to wage determination depending on the circumstances. Standard wage and salary administration practices which rank various job classifications by pay grade pursuant to point schemes or other job factors may, for example, be relied upon. Guidance may also be obtained from the way different jobs are rated under Federal pay systems (Federal Wage Board Pay System and the General Schedule) or from other wage determinations issued in the same locality. Basic to the establishment of any conformable wage rate(s) is the concept that a pay relationship should be maintained between job classifications based on the skill required and the duties performed.

(v) Failure to pay such unlisted employees the compensation agreed upon by the interested parties and/or finally determined by the Office of Government Contract Wage Standards retroactive to the date such class of employees commenced contract work shall be a violation of the Act and this contract.

(vi) No employee engaged in performing work on this contract shall in any event be paid less than the currently applicable minimum wage specified under section 6(a)(1) of the Fair Labor Standards Act of 1938, as amended.

(vii) Failure by the contractor to comply with its responsibilities in sections (b)(2) (i) through (vi) of this section shall also be a violation of the Act and this contract. Upon discovery of such violation, the Office of Government Contract Wage Standards shall then make a final determination of conformed classification, wage rate, and/or fringe benefits which shall be retroactive to the date such class of employees commenced contract work.

(viii) Any agreement reached by the interested parties will not be considered a bona fide agreement unless the affected employees in the unlisted classification(s) have been provided with a full explanation of the conformance procedures and the basis for arriving at the proposed conformed classification (and wage rate and/or fringe benefits). The affected employees shall be afforded an opportunity to agree or disagree without threat of job reprisal. Upon final determination of this action by the Office of Government Contract Wage Standards, each affected employee shall be furnished by the contractor with a written copy of such determination or it shall be posted as a part of the wage determination.

(3) If, as authorized pursuant to section 4(d) of the Service Contract Act of 1965 as amended, the term of this contract is more than 1 year, the minimum monetary wages and fringe benefits required to be paid or furnished thereunder to service employees shall be subject to adjustment after 1 year and not less often than once every 2 years, pursuant to wage determinations to be issued by the Wage and Hour Division, Employment Standards Administration of the Department of Labor as provided in such Act.

(c) The contractor or subcontractor may discharge the obligation to furnish fringe benefits specified in the attachment or determined conformably thereto by furnishing any equivalent combinations of bona fide fringe benefits, or by making equivalent or differential payments in cash in accordance with the applicable rules set forth in Subpart D of 29 CFR Part 4, and not otherwise.

(d)(1) In the absence of a minimum wage attachment for this contract, neither the contractor nor any subcontractor under this contract shall pay any person performing work under the contract (regardless of whether they are service employees) less than the minimum wage specified by section 6(a)(1) of the Fair Labor Standards Act of 1938. Nothing in this provision shall relieve the contractor or any subcontractor of any other obligation under law or contract for the payment of a higher wage to any employee.

(2) If this contract succeeds a contract, subject to the Service Contract Act of 1965 as amended under which substantially the same services were furnished and service employees were paid wages and fringe benefits provided for in a collective bargaining agreement, in the absence of the minimum wage attachment for this contract setting forth such collectively bargained wage rates and fringe benefits, neither the contractor nor any subcontractor under this contract shall pay any service employee performing any of the contract work (regardless of whether or not such employee was employed under the predecessor contract), less than the wages and fringe benefits provided for in such collective bargaining agreements, to which such employee would have been entitled if employed under the predecessor contract, including accrued wages and fringe benefits and any prospective increases in wages and fringe benefits provided for under such agreement. No contractor or subcontractor under this contract may be relieved of the foregoing obligation unless the limitations of § 4.16(b) of 29 CFR Part 4 apply or unless the Secretary of Labor or his authorized representative determines, after a hearing as provided in § 4.11 of 29 CFR Part 4, that the collective bargaining agreement applicable to service employees employed under the predecessor contract was not entered into as a result of arm's-length negotiations, or finds, after a hearing as provided in § 4.10 of 29 CFR Part 4 that the wages and/or fringe benefits provided for in such agreement are substantially at variance with those which prevail for services of a character similar in the locality. Where the Secretary finds after a hearing in accordance with the review procedures provided in 29 CFR 4.10 and Part 6 that some or all of the wages and/or fringe benefits contained in a predecessor contractor's collective bargaining agreement are substantially at variance with those which prevail for services of a character similar in the locality, the Department will issue a new or revised wage determination setting forth the applicable wage rates and fringe benefits. Such determination shall be

made part of the contract or subcontract, in accordance with the decision of the Administrative Law Judge, or the Secretary, as the case may be irrespective of whether such issuance occurs prior to or after the award of a contract or subcontract. 53 Comp. Gen. 401 (1973).

(e) The contractor and any subcontractor under this contract shall notify each service employee commencing work on this contract of the minimum monetary wage and any fringe benefits required to be paid pursuant to this contract, or shall post the wage determination attached to this contract. The poster provided by the Department of Labor (Publication WH 1313) shall be posted in a prominent and accessible place at the worksite. Failure to comply with this requirement is a violation of section 2(a)(4) of the Act and of this contract.

(f) The contractor or subcontractor shall not permit any part of the services called for by this contract to be performed in buildings or surroundings or under working conditions provided by or under the control or supervision of the contractor or subcontractor which are unsanitary or hazardous or dangerous to the health or safety of service employees engaged to furnish these services, and the contractor or subcontractor shall comply with the safety and health standards applied under 29 CFR Part 1925.

(g) The contractor and each subcontractor performing work subject to the Act shall make and maintain for 3 years from the completion of the work records containing the information specified in paragraphs (g)(1) through (5) of this section for each employee subject to the Act and shall make them available for inspection and transcription by authorized representatives of the Wage and Hour Division, Employment Standards Administration of the U.S. Department of Labor:

(1) Name and address and social security number of each employee.

(2) The correct work classification or classifications, rate or rates of monetary wages paid and fringe benefits provided, rate or rates of fringe benefit payments in lieu thereof, and total daily and weekly compensation of each employee.

(3) The number of daily and weekly hours so worked by each employee.

(4) Any deductions, rebates, or refunds from the total daily or weekly compensation of each employee.

(5) A list of monetary wages and fringe benefits for those classes of service employees not included in the wage determination attached to this contract but for which such wage rates or fringe benefits have been determined by the interested parties or by the Administrator or authorized representative pursuant to the labor standards clause in paragraph (b) of this section. A copy of the report required by the clause in paragraph (b)(2)(ii) of this section shall be deemed to be such a list.

(6) Any list of the predecessor contractor's employees which had been furnished to the contractor pursuant to § 4.6(l)(2).

(7) The contractor shall also make available a copy of this contract for inspection or transcription by authorized representatives of the Wage and Hour Division.

(8) The contractor shall permit authorized representatives of the Wage and Hour Division to conduct interviews with employees at the worksite during normal working hours.

Failure to make and maintain or to make available such records for inspection and transcription shall be a violation of the regulations and this contract, and in the case of failure to produce such records, the contracting officer, upon direction of the Department of Labor and notification of the contractor, shall take action to cause suspension of any further payment or advance of funds until such violation ceases.

(h) The contractor shall unconditionally pay to each employee subject to the Act all wages due free and clear and without subsequent deduction (except as otherwise provided by law or Regulations, 29 CFR Part 4), rebate, or kickback on any account. Such payments shall be made no later than one pay period following the end of the regular pay period in which such wages were earned or accrued. A pay period under this Act may not be of any duration longer than semi-monthly.

(i) The contracting officer shall withhold or cause to be withheld from the Government prime contractor under this or any other Government contract with the prime contractor such sums as an appropriate official of the Department of Labor requests or such sums as the contracting officer decides may be necessary to pay underpaid employees employed by the contractor or subcontractor. In the event of failure to pay any employees subject to the Act all or part of the wages or fringe benefits due under the Act, the agency may, after authorization or by direction of the Department of Labor and written notification to the contractor, take action to cause suspension of any further payment or advance of funds until such violations have ceased. Additionally, any failure to comply with the requirements of these clauses relating to the Service Contract Act of 1965, may be grounds for termination of the right to proceed with the contract work. In such event, the Government may enter into other contracts or arrangements for completion of the work, charging the contractor in default with any additional cost.

(j) The contractor agrees to insert these clauses in this section relating to the Service Contract Act of 1965 in all subcontracts subject to the Act. The term "contractor" as used in these clauses in any subcontract, shall be deemed to refer to the subcontractor, except in the term "Government Prime Contractor."

(k)(1) As used in these clauses, the term "service employee" means any person engaged in the performance of this contract other than any person employed in a bona fide executive, administrative, or professional capacity, as those terms are defined in Part 541 of Title 29, Code of Federal Regulations, as of July 30, 1976, and any subsequent revision of those regulations. The term "service employee" includes all such persons regardless of any contractual relationship that may be alleged to exist between a contractor or subcontractor and such persons.

(2) The following statement is included in contracts pursuant to section 2(a)(5) of the Act and is for *informational purposes only:*

The following classes of service employees expected to be employed under the contract with the Government would be subject, if employed by the contracting agency, to the provisions of 5 U.S.C. 5341 or 5 U.S.C. 5332 and would, if so employed, be paid not less than the following rates, of wages and fringe benefits:

Employee class	Monetary wage-fringe benefits

(l)(1) If wages to be paid or fringe benefits to be furnished any service employees employed by the Government prime contractor or any subcontractor under the contract are provided for in a collective bargaining agreement which is or will be effective during any period in which the contract is being performed, the Government prime contractor shall report such fact to the contracting officer, together with full information as to the application and accrual of such wages and fringe

benefits, including any prospective increases, to service employees engaged in work on the contract, and a copy of the collective bargaining agreement. Such report shall be made upon commencing performance of the contract, in the case of collective bargaining agreements effective at such time, and in the case of such agreements or provisions or amendments thereof effective at a later time during the period of contract performance, such agreements shall be reported promptly after negotiation thereof.

(2) Not less than 10 days prior to completion of any contract being performed at a Federal facility where service employees may be retained in the performance of the succeeding contract and subject to a wage determination which contains vacation or other benefit provisions based upon length of service with a contractor (predecessor) or successor (§ 4.173 of Regulations, 29 CFR Part 4), the incumbent prime contractor shall furnish to the contracting officer a certified list of the names of all service employees on the contractor's or subcontractor's payroll during the last month of contract performance. Such list shall also contain anniversary dates of employment on the contract either with the current or predecessor contractors of each such service employee. The contracting officer shall turn over such list to the successor contractor at the commencement of the succeeding contract.

(m) All rulings and interpretations of the Service Contract Act of 1965, as amended, expressed in Regulations, 29 CFR Part 4 are hereby incorporated by reference in this contract.

(n)(1) By entering into this contract, the contractor (and officials thereof) certifies that neither it (nor he or she) nor any person or firm who has a substantial interest in the contractor's firm is a person or firm ineligible to be awarded Government contracts by virtue of the sanctions imposed pursuant to section 5 of the Act.

(2) No part of this contract shall be subcontracted to any person or firm ineligible for award of a Government contract pursuant to section 5 of the Act.

(3) The penalty for making false statements is prescribed in the U.S. Criminal Code, 18 U.S.C. 1001.

(o) Notwithstanding any of the clauses in paragraphs (b) through (m) of this section relating to the Service Contract Act of 1965, the following employees may be employed in accordance with the following variations, tolerances, and exemptions, which the Secretary of Labor, pursuant to section 4(b) of the Act prior to its amendment by Public Law 92–473, found to be necessary and proper in the public interest or to avoid serious impairment of the conduct of Government business:

(i) Apprentices, student-learners, and workers whose earning capacity is impaired by age, physical, or mental deficiency or injury may be employed at wages lower than the minimum wages otherwise required by section 2(a)(1) or 2(b)(1) of the Service Contract Act without diminishing any fringe benefits or cash payments in lieu thereof required under section 2(a)(2) of that Act, in accordance with the conditions and procedures prescribed for the employment of apprentices, student-learners, handicapped persons, and handicapped clients of sheltered workshops under section 14 of the Fair Labor Standards Act of 1938, in the regulations issued by the Administrator (29 CFR Parts 520, 521, 524, and 525).

(ii) The Administrator will issue certificates under the Service Contract Act for the employment of apprentices, student-learners, handicapped persons, or handicapped clients of sheltered workshops not subject to the Fair Labor Standards Act of 1938, or subject to different minimum rates of pay under the two acts, authorizing appropriate rates of minimum wages (but without changing requirements concerning fringe benefits or supplementary cash payments in lieu thereof), applying procedures prescribed by the applicable regulations issued under the Fair Labor Standards Act of 1938 (29 CFR Parts 520, 521, 524, and 525).

(iii) The Administrator will also withdraw, annul, or cancel such certificates in accordance with the regulations in Parts 525 and 528 of Title 29 of the Code of Federal Regulations.

(p) Apprentices will be permitted to work at less than the predetermined rate for the work they perform when they are employed and individually registered in a bona fide apprenticeship program registered with a State Apprenticeship Agency which is recognized by the U.S. Department of Labor, or if no such recognized agency exists in a State, under a program registered with the Bureau of Apprenticeship and Training, Employment and Training Administration, U.S. Department of Labor. Any employee who is not registered as an apprentice in an approved program shall be paid the wage rate and fringe benefits contained in the applicable wage determination for the journeyman classification of work actually performed. The wage rates paid apprentices shall not be less than the wage rate for their level of progress set forth in the registered program, expressed as the appropriate percentage of the journeyman's rate contained in the applicable wage determination. The allowable ratio of apprentices to journeymen employed on the contract work in any craft classification shall not be greater than the ratio permitted to the contractor as to his entire work force under the registered program.

(q) An employee engaged in an occupation in which he or she customarily and regularly receives more than $30 a month in tips may have the amount of tips credited by the employer against the minimum wage required by section 2(a)(1) or section 2(b)(1) of the Act in accordance with section 3 (m) of the Fair Labor Standards Act and Regulations, 29 CFR Part 531: Provided, however, That the amount of such credit may not exceed $1.24 per hour beginning January 1, 1980, and $1.34 per hour after December 31, 1980. To utilize this proviso:

(1) the employer must inform tipped employees about this tip credit allowance before the credit is utilized;

(2) the employees must be allowed to retain all tips (individually or through a pooling arrangement and regardless of whether the employer elects to take a credit for tips received);

(3) the employer must be able to show by records that the employee receives at least the applicable Service Contract Act minimum wage through the combination of direct wages and tip credit;

(4) the use of such tip credit must have been permitted under any predecessor collective bargaining agreement applicable by virtue of section 4(c) of the Act.

§ 4.7 Labor standards clause for Federal service contracts not exceeding $2,500.

Every contract with the Federal Government which is not in excess of $2,500 but has as its principal purpose the furnishing of services through the use of service employees shall contain the following clause:

Service Contract Act. Except to the extent that an exemption, variation or tolerance would apply if this were a contract in excess of $2,500, the contractor and any subcontractor hereunder shall pay all of his employees engaged in performing work on the contract not less than the minimum wage specified under section 6(a)(1) of the Fair Labor Standards Act of 1938, as amended. All regulations and interpretations of the Service Contract Act of 1965 expressed in 29 CFR Part 4 are hereby incorporated by reference in this contract.

§ 4.8 Notice of awards.

Whenever an agency of the United States or the District of Columbia awards a contract subject to the Act which may be in excess of $2,500, it shall furnish the Office of Government Contract Wage Standards, Wage and Hour Division, ESA, an original and one copy of Standard Form 99, Notice of Award of Contract. The form shall be completed as follows:

(a) Items 1 through 7 and 12 and 13: Self-explanatory;

(b) Item 8: Enter the notation "Service Contract Act;"

(c) Item 9: Leave blank;

(d) Item 10: (1) Enter the notation "Major Category," and indicate beside this entry the general service area into which the contract falls (e.g., food services, grounds maintenance, computer services, installation or facility support services, custodial-janitorial service, garbage collection, insect and rodent control, laundry and drycleaning services, etc.);

(e) Item 11: Enter the dollar amount of the contract, or the estimated dollar value with the notation "estimated" (if the exact amount is not known). If neither the exact nor the estimated dollar value is known, enter "indefinite," or "not to exceed $——." Supplies of Standard Form 99 are available in all GSA supply depots under stock number 7540–634–4049.

§ 4.9 [Reserved]

§ 4.10 Substantial variance proceedings under section 4(c) of the Act.

(a) *Statutory provision.* Under section 4(c) of the Act, and under corresponding wage determinations made as provided in section 2(a)(1) and (2) of the Act, contractors and subcontractors performing contracts subject to the Act generally are obliged to pay to service employees employed on the contract work wages and fringe benefits not less than those to which they would have been entitled under a collective bargaining agreement if they were employed on like work under a predecessor contract. (See §§ 4.1b, 4.3, 4.6(d)(2).) Section 4(c) of the Act provides, however, that "such obligations shall not apply if the Secretary finds after a hearing in accordance with regulations adopted by the Secretary that such wages and fringe benefits are substantially at variance with those which prevail for services of a character similar in the locality".

(b) *Prerequisites for hearing.* (1)(i) A request for a hearing under this section may be made by the contracting agency or other person affected or interested, including contractors or prospective contractors and associations of contractors, representatives of employees, and other interested Governmental agencies. Such a request shall be submitted in writing to the Administrator, Wage and Hour Division, Employment Standards Administration, U.S. Department of Labor, Washington, D.C. 20210, to the attention of the Office of Government Contract Wage Standards, and shall include the following:

(A) The number of any wage determination at issue, the name of the contracting agency whose contract is involved, and a brief description of the services to be performed under the contract;

(B) A statement regarding the status of the procurement and any estimated procurement dates, such as bid opening, contact award, commencement date of the contract or its follow-up option period;

(C) A statement of the applicant's case, setting forth in detail the reasons why the applicant believes that a substantial variance exists with respect to some or all of the wages and/or fringe benefits, attaching available data concerning wages and/or fringe benefits prevailing in the locality;

(D) Names and addresses (to the extent known) of interested parties.

(ii) If the information in paragraph (b)(1)(i) of this section is not submitted with the request, the Administrator may deny the request or request supplementary information, at his/her discretion. No particular form is prescribed for submission of a request under this section.

(2) No hearing will be provided pursuant to this section and section 4(c) of the Act unless the Administrator determines from information available or submitted with a request for such a hearing that there may be a substantial variance between some or all of the wage rates and/or fringe benefits provided for in a collective bargaining agreement to which the service employees would otherwise be entitled by virtue of the provisions of section 4(c) of the Act, and those which prevail for services of a character similar in the locality.

(3) Pursuant to section 4(b) of the Act, requests for a hearing shall not be considered unless received as specified below, except in those situations where the Administrator determines that extraordinary circumstances exist:

(i) For advertised contracts, prior to ten days before the award of the contract;

(ii) For negotiated contracts and for contracts with provisions extending the initial term by option, prior to the commencement date of the contract or the follow-up option period, as the case may be.

(c) *Referral to the Chief Administrative Law Judge.* When the Administrator determines from the information available or submitted with a request for a hearing that there may be a substantial variance, the Administrator on his own motion or on application of any interested person may by order refer the issue to the Chief Administrative Law Judge, for designation of an Administrative Law Judge who shall conduct such a fact finding hearing as may be necessary to render a decision solely on the issue of whether the wages and/or fringe benefits contained in the collective bargaining agreement which was the basis for the wage determination at issue are substantially at variance with those which prevail for services of a character similar in the locality. However, in situations where there is also a question as to whether the collective bargaining agreement was reached as a result of "arm's-length negotiations" (see § 4.11), the referral shall include both issues for resolution in one proceeding. No authority is delegated under this section to hear and/or decide any other issues pertaining to the Service Contract Act. As provided in section 4(a) of the Act, the provisions of §§ 4 and 5 of the Walsh-Healey Public Contracts Act (41 U.S.C. 38, 39) shall be applicable to such proceeding, which shall be conducted in accordance with the procedures set forth at 29 CFR Part 6, Subpart B.

(d) The Administrator shall be an interested party and shall have the opportunity to participate in the proceeding to the degree he/she considers appropriate.

§ 4.11 Arm's length proceedings.

(a) *Statutory provision.* Under Section 4(c) of the Act, the wages and fringe benefits provided in the predecessor contractor's collective bargaining agreement must be reached "as a result of arm's-length negotiations." This provision precludes arrangements by parties to a collective bargaining agreement who, either separately or together, acted with an intent to manipulate, exploit or otherwise take advantage of the wage determination scheme provided for in Sections 2(a) and 4(c) of the Act, or situations where it has been determined by the National Labor Relations Board that "good faith" bargaining did not occur. If the National Labor Relations Board makes such a finding, the Administrator shall issue a decision based on that finding and that decision shall be final and not subject to

appeal. A finding as to whether a collective bargaining agreement or particular wages and fringe benefits therein are reached as a result of arm's-length negotiations may be made through investigation, hearing or otherwise pursuant to the Secretary's authority under Section 4(a) of the Act.

(b)(1) A request for a determination under this section may be made by a contracting agency or other person affected or interested, including contractors or prospective contractors and associations of contractors, representatives of employees, and interested Governmental agencies. Such a request shall be submitted in writing to the Administrator, Wage and Hour Division, Employment Standards Administration, U.S. Department of Labor, Washington, D.C. 20210, to the attention of the Office of Government Contract Wage Standards. Although no particular form is prescribed for submission of a request under this section, such request shall include the following information:

(i) A statement of the applicant's case setting forth in detail the reasons why the applicant believes that the wages and fringe benefits contained in the collective bargaining agreement were not reached as a result of arm's-length negotiations;

(ii) A statement regarding the status of the procurement and any estimated procurement dates, such as bid opening, contract award, commencement date of the contract or its follow-up option period;

(iii) Names and addresses (to the extent known) of interested parties.

(2) Pursuant to Section 4(b) of the Act, requests for a hearing shall not be considered unless received as specified below except in those situations where the Administrator determines that extraordinary circumstances exist:

(i) For advertised contracts, prior to ten days before the award of the contract;

(ii) For negotiated contracts and for contracts with provisions extending the term by option, prior to the commencement date of the contract or the follow-up option period, as the case may be.

(c)(1) The Administrator, on his/her own motion or after receipt of a request for a determination, may make a finding on the issue of arm's-length negotiations.

(2) If the Administrator determines that there may not have been arm's-length negotiations, but finds that there is insufficient evidence to render a final decision thereon, the Administrator may refer the issue to the Chief Administrative Law Judge in accordance with subsection (d).

(3)(i) If the Administrator finds that the collective bargaining agreement or wages and fringe benefits at issue were reached as a result of arm's-length negotiations or that arm's-length negotiations did not take place, the interested parties, including the parties to the collective bargaining agreement, will be notified of the Administrator's findings, which shall include the reasons therefor, and such parties shall be afforded an opportunity to request that a hearing be held to render a decision on the issue of arm's-length negotiations.

(ii) Such parties shall have 20 days from the date of the Administrator's ruling to request a hearing. A detailed statement of the reasons why the Administrator's ruling is in error, including facts alleged to be in dispute, if any, shall be submitted with the request for a hearing.

(iii) If no hearing is requested within the time mentioned in paragraph (c)(3)(ii) of this section above, the Administrator's ruling shall be final, and, in the case of a finding that arm's-length negotiations did not take place, a new wage determination will be issued for the contract. If a hearing is requested, the decision of the Administrator shall be inoperative.

(d) Referral to the Chief Administrative Law Judge. The Administrator on his/her own motion, under paragraph (c)(2) or upon a request for a hearing under paragraph (c)(3)(ii) where the Administrator determines that material facts are in dispute, shall by order refer the issue to the Chief Administrative Law Judge for designation of an Administrative Law Judge, who shall conduct such hearings as may be necessary to render a decision solely on the issue of arm's-length negotiations. However, in situations where there is also a question as to whether some or all of the collectively bargained wage rates and/or fringe benefits are substantially at variance (see § 4.10), the referral shall include both issues for resolution in one proceeding. As provided in Section 4(a) of the Act, the provisions of Sections 4 and 5 of the Walsh-Healey Public Contracts Act (41 U.S.C. 38, 39) shall be applicable to such proceeding, which shall be conducted in accordance with the procedures set forth at 29 CFR Part 6.

(e) Referral to the Secretary. When a party requests a hearing under paragraph (c)(3)(ii) and the Administrator determines that no material facts are in dispute, the Administrator shall refer the issue and the record compiled thereon to the Secretary to render a decision solely on the issue of arm's-length negotiations. Such proceeding shall be conducted in accordance with the procedures set forth at 29 CFR Part 6.

§ 4.12 Substantial interest proceedings

(a) *Statutory provision.* Under Section 5(a) of the Act, no contract of the United States (or the District of Columbia) shall be awarded to the persons or firms appearing on the list distributed by the Comptroller General giving the names of persons or firms who have been found to have violated the Act until 3 years have elapsed from the date of publication of the list. Section 5(a) further states that "no contract of the United States shall be awarded * * * to any firm, corporation, partnership, or association in which such persons or firms have a substantial interest * * * ." A finding as to whether persons or firms whose names appear on the debarred bidders list have a substantial interest in any other firm, corporation, partnership, or association may be made through investigation, hearing, or otherwise pursuant to the Secretary's authority under Section 4 (a) of the Act.

(b) *Ineligibility.* See § 4.188 of this part for the Secretary's rulings and interpretations with respect to substantial interest.

(c)(1) A request for a determination under this section may be made by any interested party, including contractors or prospective contractors, and associations of contractors, representatives of employees, and interested Government agencies. Such a request shall be submitted in writing to the Administrator, Wage and Hour Division, Employment Standards Administration, U.S. Department of Labor, Washington, D.C. 20210, to the attention of the Office of Government Contract Wage Standards.

(2) The request shall include a statement setting forth in detail why the petitioner believes that a person or firm whose name appears on the debarred bidders list has a substantial interest in any firm, corporation, partnership, or association which is seeking or has been awarded a contract of the United States or the District of Columbia. No particular form is prescribed for the submission of a request under this section.

(d)(1) The Administrator, on his/her own motion or after receipt of a request for a determination, may make a finding on the issue of substantial interest.

(2) If the Administrator determines that there may be a substantial interest, but finds that there is insufficient evidence to render a final ruling thereon, the Administrator may refer the issue to the Chief Administrative Law Judge in accordance with subsection (e).

(3) If the Administrator finds that no substantial interest exists, or that there is not sufficient information to warrant the initiation of an investigation, the requesting party, if any, will be so notified and no further action taken.

(4)(i) If the Administrator finds that a substantial interest exists, the person or firm affected will be notified of the Administrator's finding, which shall include the reasons therefor, and such person or firm shall be afforded an opportunity to request that a hearing be held to render a decision on the issue of substantial interest.

(ii) Such person or firm shall have 20 days from the date of the Administrator's ruling to request a hearing. A detailed statement of the reasons why the Administrator's ruling is in error, including facts alleged to be in dispute, if any, shall be submitted with the request for a hearing.

(iii) If no hearing is requested within the time mentioned in subparagraph (ii) above, the Administrator's finding shall be final and the Administrator shall so notify the Comptroller General. If a hearing is requested, the decision of the Administrator shall be inoperative unless and until the Administrative Law Judge or the Secretary issues an order that there is a substantial interest.

(e) *Referral to the Chief Administrative Law Judge.* The Administrator on his/her own motion, or upon a request for a hearing where the Administrator determines that relevant facts are in dispute, shall by order refer the issue to the Chief Administrative Law Judge, for designation of an Administrative Law Judge who shall conduct such hearings as may be necessary to render a decision solely on the issue of substantial interest. As provided in Section 4(a) of the Act, the provisions of Sections 4 and 5 of the Walsh-Healey Public Contracts Act (41 U.S.C. 38, 39) shall be applicable to such proceedings, which shall be conducted in accordance with the procedures set forth at 29 CFR Part 6.

(f) Referral to the *Secretary.* When the person or firm requests a hearing and the Administrator determines that relevant facts are not in dispute, the Administrator will refer the issue and the record compiled thereon to the Secretary to render a decision solely on the issue of substantial interest. Such proceeding shall be conducted in accordance with the procedures set forth at 29 CFR Part 6.

Subpart B—Wage Determination Procedures

§ 4.50 Types of wage and fringe benefit determinations.

The Administrator specifies the minimum monetary wages and fringe benefits to be paid as required under the Act in two types of determinations:

(a) *Prevailing in the Locality.* Determinations that set forth minimum monetary wages and fringe benefits determined to be prevailing for various classes of service employees in the locality (sections 2(a)(1) and 2(a)(2) of the Act) after giving "due consideration" to the rates applicable to such service employees if directly hired by the Federal Government (section 2(a)(5) of the Act); and

(b) *Collective Bargaining Agreement—(Successorship).* Determinations that set forth the wage rates and fringe benefits, including accrued and prospective increases, contained in a collective bargaining agreement applicable to the service employees under the predecessor contract.

§ 4.51 Prevailing in the locality determinations.

(a) *Information considered.* The minimum monetary wages and fringe benefits set forth in determinations of the Secretary are based on all available pertinent information as to wage rates and fringe benefits being paid at the time the determination is made. Such information is most frequently derived from area surveys made by the Bureau of Labor Statistics, U.S. Department of Labor, or other Labor Department personnel. Information may also be obtained from Government contracting officers and from other available sources, including employees and their representatives and employers and their associations. The determinations may be based on the wage rates and fringe benefits contained in collective bargaining agreements where they have been determined to prevail in a locality for specified occupational class(es) of employees.

(b) *Determination of Prevailing Rates.* Where a single rate is paid to a majority (50 percent or more) of the workers in a class of service employees engaged in similar work in a particular locality, that rate is determined to prevail. The wage rates and fringe benefits in a collective bargaining agreement covering 2,001 janitors in a locality, for example, prevail if it is determined that no more than 4,000 workers are engaged in such janitorial work in that locality. In the case of information developed from surveys, statistical measurements of central tendency such as a median (a point in a distribution of wage rates where 50 percent of the surveyed workers receive that or a higher rate and an equal number receive a lesser rate) or the mean (average) are considered reliable indicators of the prevailing rate. Which of these statistical measurements will be applied in a given case will be determined after a careful analysis of the overall survey, separate classification data, patterns existing between survey periods, and the way the separate classification data interrelate. Use of the median is the general rule. However, the mean (average) rate may be used in situations where, after analysis, it is determined that the median is not a reliable indicator. Examples where the mean may be used include situations where:

(1) The number of workers studied for the job classification constitutes a relatively small sample and the computed median results in an actual rate that is paid to few of the studied workers in the class;

(2) Statistical deviation such as a skewed (bimodal or multimodal) frequency distribution biases the median rate due to large concentrations of workers toward either end of the distribution curve and the computed median results in an actual rate that is paid to few of the studied workers in the class; or

(3) The computed median rate distorts historic wage relationships between job levels within a classification family, (i.e., Electronic Technician Classes A, B, and C levels within the Electronic technician classification family), between classifications of different skill levels (i.e., a maintenance electrician as compared with a maintenance carpenter), or, for example, yields a wage movement inconsistent with the pattern shown by the survey overall or with related and/or similarly skilled job classifications.

(c) *Due consideration.* In making wage and fringe benefit determinations, section 2(a)(5) of the Act requires that due consideration be given to the rates that would be paid by the Federal agency to the various classes of service employees if § 5341 or § 5332 of Title 5, United States Code, were applicable to them. Section 5341 refers to the Wage Board or Coordinated Federal Wage System for "blue collar" workers and § 5332 refers to the General Schedule pay system for "white collar" workers. The term "due consideration" implies the exercise of discretion on the basis of the facts and circumstances surrounding each determination, recognizing the legislative objective of narrowing the gap between the wage rates and fringe

benefits prevailing for service employees and those established for Federal employees. Each wage determination is based on a survey or other information on the wage rates and fringe benefits being paid in a particular locality and also takes into account those wage rates and fringe benefits which would be paid under Federal pay systems.

§ 4.52 Collective bargaining agreement (successorship) determinations.

Determinations based on the collective bargaining agreement of a predecessor contractor set forth by job classification each provision relating to wages (such as the established straight time hourly or salary rate, cost-of-living allowance, and any shift, hazardous, and other similar pay differentials) and to fringe benefits (such as holiday pay, vacation pay, sick leave pay, life, accidental death, disability, medical, and dental insurance plans, retirement or pension plans, severance pay, supplemental unemployment benefits, saving and thrift plans, stock-option plans, funeral leave, jury/witness leave, or military leave) contained in the predecessor's collective bargaining agreement, as well as conditions governing the payment of such wages and fringe benefits. Accrued wages and fringe benefits and prospective increases therein are also included. Each wage determination is limited in application to a specific contract succeeding a contract which had been performed by a contractor with a collective bargaining agreement, and contains a notice to prospective bidders regarding their obligations under section 4(c) of the Act.

§ 4.53 Locality basis of wage and fringe benefit determinations.

(a) Under section 2(a) of the Act, the Secretary or his authorized representative is given the authority to determine the minimum monetary wages and fringe benefits prevailing for various classes of service employees "in the locality". Although the term "locality" has reference to a geographic area, it has an elastic and variable meaning and contemplates consideration of the existing wage structures which are pertinent to the employment of particular classes of service employees on the varied kinds of service contracts. Because wage structures are extremely varied, there can be no precise single formula which would define the geographic limits of a "locality" that would be relevant or appropriate for the determination of prevailing wage rates and prevailing fringe benefits in all situations under the Act. The locality within which a wage or fringe benefit determination is applicable is, therefore, defined in each such determination upon the basis of all the facts and circumstances pertaining to that determination. Locality is ordinarily limited geographically to a particular county or cluster of counties comprising a metropolitan area. For example, a survey by the Bureau of Labor Statistics of the Baltimore, Maryland Standard Metropolitan Statistical Area includes the counties of Baltimore, Harford, Howard, Anne Arundel, and the City of Baltimore. A wage determination based on such information would define locality as the same geographic area included within the scope of the survey. Locality may also be defined as, for example, a city, a State, or, under rare circumstances, a region, depending on the actual place or places of contract performance, the geographical scope of the data on which the determination was based, the nature of the services being contracted for, and the procurement method used. In addition, in *Southern Packaging & Storage Co.* v. *United States*, 618 F.2d 1088 (4th Cir. 1980), the court held that a nationwide wage determination normally is not permissible under the Act, but postulated that "there may be the rare and unforeseen service contract which might be performed at locations throughout the country and which would generate truly nationwide competition.

(b) Where the wage rates and fringe benefits contained in a collective bargaining agreement applicable to the predecessor contract are set forth in a determination, locality in such a determination is typically described as the geographic area in which the Federal facility is situated. The determination applies to any sucessor contractor, regardless of place of performance and whether the place of performance is known at the time of bid advertising.

§ 4.54 Issuance and revision of wage determinations.

(a) Section 4.4 of Subpart A requires that the awarding agency file a notice of intention to make a service contract which is subject to the Act with the Office of Government Contract Wage Standards, Wage and Hour Division, Employment Standards Administration, prior to any invitation for bids or the commencement of negotiations for any contract exceeding $2,500. Upon receipt of the notice, the Office of Government Contract Wage Standards may issue a new determination of minimum monetary wages and fringe benefits for the classes of service employees who will perform work on the contract or may revise a determination which is currently in effect.

(b) Determinations will be reviewed periodically and where prevailing wage rates or fringe benefits have changed, such changes will be reflected in revised determinations. For example, in a locality where it is determined that the wage rate which prevails for a particular class of service employees is the rate specified in a collective bargaining agreement(s) applicable in that locality, and such agreement(s) specifies increases in such rates to be effective on specific dates, the determinations would be revised to reflect such changes as they become effective. Revised determinations shall be applicable to contracts in accordance with the provisions of § 4.5(a)(2) of Subpart A.

(c) Determinations issued by the Office of Government Contract Wage Standards with respect to particular contracts are required to be incorporated in the invitations for bids or requests for proposals or quotations issued by the contracting agencies, and are to be incorporated in the contract specifications in accordance with § 4.5 of Subpart A. In this manner, prospective contractors and subcontractors are advised of the minimum monetary wages and fringe benefits required under the most recently applicable determination to be paid the service employees who perform the contract work. These requirements are, of course, the same for all bidders so none will be placed at a competitive disadvantage.

§ 4.55 Review and reconsideration of wage determinations.

(a) *Review by the Administrator.* (1) Any interested party affected by a wage determination issued under section 2(a) of the Act may request review and reconsideration by the Administrator. A request for review and reconsideration may be made by the contracting agency or other interested party, including contractors or prospective contractors and associations of contractors, representatives of employees, and other interested Governmental agencies. Any such request must be accompanied by supporting evidence. In no event shall a request for review of any aspect of a wage determination, including its accuracy or its applicability, be considered after the opening of bids in the case of a competitively advertised procurement, or after the commencement of a contract in the case of a negotiated procurement. This limitation is necessary in order to ensure competitive equality and an orderly procurement process.

(2) The Administrator shall, upon receipt of a request for reconsideration, review the data sources relied upon as a basis for the wage determination, the evidence furnished by the party requesting review or reconsideration, and, if necessary to resolve the matter, any additional information found to be relevant to determining prevailing wage rates and fringe benefits in a particular locality. The Administrator, pursuant to a review of available information, may issue a new wage determination, may cause the wage determination to be revised, or may affirm the wage determination issued, and will notify the requesting party in writing of the action taken. The Administrator will render a decision within 30 days of receipt of the request or will notify the requesting party in writing within 30 days of receipt that additional time is necessary.

(b) *Review by the Secretary.* Any decision of the Administrator under paragraph (a) of this section may be appealed to the Secretary within 20 days of issuance of the Administrator's decision. Any such appeal shall be in accordance with the provisions of Part 6 of this title.

Subpart C—Application of the McNamara-O'Hara Service Contract Act

Introductory

§ 4.101 Official rulings and interpretations in this subpart.

(a) The purpose of this subpart is to provide, pursuant to the authority cited in § 4.102, official rulings and interpretations with respect to the application of the McNamara-O'Hara Service Contract Act for the guidance of the agencies of the United States and the District of Columbia which may enter into and administer contracts subject to its provisions, the persons desiring to enter into such contracts with these agencies, and the contractors, subcontractors, and employees who perform work under such contracts.

(b) These rulings and interpretations are intended to indicate the construction of the law and regulations which the Department of Labor believes to be correct and which will be followed in the administration of the Act unless and until directed otherwise by Act of Congress or by authoritative ruling of the courts, or if it is concluded upon reexamination of an interpretation that it is incorrect. See for example, *Skidmore* v. *Swift & Co.*, 323 U.S. 134 (1944); *Roland Co.* v. *Walling*, 326 U.S. 657 (1946); *Endicott Johnson Corp.* v. *Perkins*, 317 U.S. 501, 507–509 (1943); *Perkins* v. *Lukens Steel Co.*, 310 U.S. 113, 128 (1940); *United States* v. *Western Pacific Railroad Co.*, 352 U.S. 59 (1956). The Department of Labor (and not the contracting agencies) has the primary and final authority and responsibility for administering and interpreting the Act, including making determinations of coverage. See *Woodside Village* v. *Secretary of Labor*, 611 F. 2d 312 (9th Cir. 1980); *Nello L. Teer Co.* v. *United States*, 348 F.2d 533, 539–540 (Ct. Cl. 1965), cert. denied, 383 U.S. 934 (Davis-Bacon Act); *North Georgia Building & Construction Trades Council* v. *U.S. Department of Transportation*, 399 F. Supp. 58, 63 (N.D. Ga. 19075) (Davis-Bacon Act); *Zachry Co.* v. *United States*, 344 F.2d 352 (Ct. Cl. 1965) (Davis-Bacon Act); *Curtiss-Wright Corp.* v. *McLucas*, 364 F. Supp. 750, 769–72 (D.N.J. 1973); and 43 Atty. Gen. Ops. —— (March 9, 1979); 53 Comp. Gen. 647, 649–51 (1974); 57 Comp. Gen. 501, 506 (1978).

(c) Court decisions arising under the Act (as well as under related remedial labor standards laws such as the Walsh-Healey Public Contracts Act, the Davis-Bacon Act, the Contract Work Hours and Safety Standards Act, and the Fair Labor Standards Act) which support policies and interpretations contained in this part are cited where it is believed that they may be helpful. On matters which have not been authoritatively determined by the courts, it is necessary for the Secretary of Labor and the Administrator to reach conclusions as to the meaning and the application of provisions of the law in order to carry out their responsibilities of administration and enforcement (*Skidmore* v. *Swift & Co.*, 323 U.S. 134 (1944)). In order that these positions may be made known to persons who may be affected by them, official interpretations and rulings are issued by the Administrator with the advice of the Solicitor of Labor, as authorized by the Secretary (Secretary's Order No. 16–75, Nov. 21, 1975, 40 FR 55913; Employment Standards Order No. 2–76, Feb. 23, 1976, 41 FR 9016). These interpretations are a proper exercise of the Secretary's authority. *Idaho Sheet Metal Works* v. *Wirtz*, 383 U.S. 190, 208 (1966), reh. den. 383 U.S. 963 (1966). References to pertinent legislative history, decisions of the Comptroller General and of the Attorney General, and Administrative Law Judges' decisions are also made in this part where it appears they will contribute to a better understanding of the stated interpretations and policies.

(d) The interpretations of the law contained in this part are official interpretations which may be relied upon. The Supreme Court has recognized that such interpretations of the Act "provide a practical guide to employers and employees as to how the office representing the public interest in its enforcement will seek to apply it" and "constitute a body of experience and informed judgment to which courts and litigants may properly resort for guidance" (*Skidmore* v. *Swift & Co.*, 323 U.S. 134 (1944)). Interpretations of the agency charged with administering an Act are generally afforded deference by the courts. (*Griggs* v. *Duke Power Co.*, 401 U.S. 424, 433–34 (1971); *Udall* v. *Tallman*, 380 U.S. 1 (1965).) Some of the interpretations in this part relating to the application of the Act are interpretations of provisions which appeared in the original Act before its amendments in 1972 and 1976. Accordingly, the Department of Labor considers these interpretations to be correct, since there were no amendments of the statutory provisions which they interpret. (*United States* v. *Davison Fuel & Dock Co.*, 371 F.2d 705, 711–12 (C.A. 4, 1967).)

(e) On and after final publication of this part in the **Federal Register**, the interpretations contained herein shall be in effect and shall remain in effect until they are modified, rescinded, or withdrawn. This part supersedes and replaces certain interpretations previously published in the **Federal Register** and Code of Federal Regulations as Part 4 of this chapter. Prior opinions, rulings, and interpretations and prior enforcement policies which are not inconsistent with the interpretations in this part or with the Act as amended are continued in effect; all other opinions, rulings, interpretations, and enforcement policies on the subjects discussed in the interpretations in this part, to the extent they are inconsistent with the rules herein stated, are superseded, rescinded, and withdrawn.

(f) Principles governing the application of the Act as set forth in this subpart are clarified or amplified in particular instances by illustrations and examples based on specific fact situations. Since such illustrations and examples cannot and are not intended to be exhaustive, or to provide guidance on every problem which may arise under the Act, no inference should be drawn from the fact that a subject or illustration is omitted.

(g) It should not be assumed that the lack of discussion of a particular subject in this subpart indicates the adoption of any particular position by the Department of Labor with respect to such matter or to constitute an interpretation, practice, or enforcement policy. If doubt arises or a question

exists, inquiries with respect to matters other than safety and health standards should be directed to the Administrator of the Wage and Hour Division, Employment Standards Administration, U.S. Department of Labor, Washington, D.C. 20210, or to any regional office of the Wage and Hour Division. Safety and health inquiries should be addressed to the Assistant Secretary for Occupational Safety and Health, U.S. Department of Labor, Washington, D.C. 20210, or to any OSHA regional office. A full description of the facts and any relevant documents should be submitted if an official ruling is desired.

§ 4.102 Administration of the Act.

As provided by section 4 of the Act and under provisions of sections 4 and 5 of the Walsh-Healey Public Contracts Act (49 Stat. 2036, 41 U.S.C. 38, 39) which are made expressly applicable for the purpose, the Secretary of Labor is authorized and directed to administer and enforce the provisions of the McNamara-O'Hara Service Contract Act, to make rules and regulations, issue orders, make decisions, and take other appropriate action under the Act. The Secretary is also authorized to make reasonable limitations and to make rules and regulations allowing reasonable variations, tolerances, and exemptions to and from provisions of the Act (except section 10), but only in special circumstances where it is determined that such action is necessary and proper in the public interest or to avoid serious impairment of the conduct of Government business and is in accord with the remedial purposes of the Act to protect prevailing labor standards. The authority and enforcement powers of the Secretary under the Act are coextensive with the authority and powers under the Walsh-Healey Act. *Curtiss Wright Corp.* v. *McLucas* 364 F. Supp. 750, 769 (D N] 1973).

§ 4.103 The Act.

The McNamara-O'Hara Service Contract Act of 1965 (Pub. L. 89–286, 79 Stat. 1034, 41 U.S.C. 351 et seq.), hereinafter referred to as the Act, was approved by the President on October 22, 1965 (1 Weekly Compilation of Presidential Documents 428). It establishes standards for minimum compensation and safety and health protection of employees performing work for contractors and subcontractors on service contracts entered into with the Federal Government and the District of Columbia. It applies to contracts entered into pursuant to negotiations concluded or invitations for bids issued on or after January 20, 1966. It has been amended by Pub. L. 92–473, 86 Stat. 798; by Pub. L. 93–57, 87 Stat. 140; and by Pub. L. 94–489, 90 Stat. 2358.

§ 4.104 What the Act provides, generally.

(a) The provisions of the Act apply to contracts, whether negotiated or advertised, the principal purpose of which is to furnish services in the United States through the use of service employees. Under its provisions, every contract subject to the Act (and any bid specification therefor) entered into by the United States or the District of Columbia in excess of $2,500 must contain stipulations as set forth in § 4.6 of this Part requiring (a) that specified minimum monetary wages and fringe benefits determined by the Secretary of Labor (based on wage rates and fringe benefits prevailing in the locality or, in specified circumstances, the wage rates and fringe benefits contained in a collective bargaining agreement applicable to employees who performed on a predecessor contract) be paid to service employees employed by the contractor or any subcontractor in performing the services contracted for; (b) that working conditions of such employees which are under the control of the contractor or subcontractor meet safety and health standards; and (c) that notice be given to such employees of the compensation due them under the minimum wage and fringe benefits provisions of the contract. Contractors performing work subject to the Act thus enter into competition to obtain Government business on terms of which they are fairly forewarned by inclusion in the contract. (*Endicott Johnson Corp.* v. *Perkins*, 317 U.S. 501, 507 (1943).) The Act's purpose is to impose obligations upon those favored with Government business by precluding the use of the purchasing power of the Federal Government in the unfair depression of wages and standards of employment. (See H.R. Rep. No. 948, 89th Cong., 1st Sess. 2–3 (1965); S. Rep. No. 798, 89th Cong., 1st Sess. 3–4 (1965).) The Act does not permit the monetary wage rates specified in such a contract to be less than the minimum wage specified under section 6(a)(1) of the Fair Labor Standards Act, as amended (29 U.S.C. 206(a)(1)). In addition, it is a violation of the Act for any contractor or subcontractor under a Federal contract subject to the Act, regardless of the amount of the contract, to pay any of his employees engaged in performing work on the contract less than such Fair Labor Standards Act minimum wage. Contracts of $2,500 or less are not, however, required to contain the stipulations described above. These provisions of the Service Contract Act are implemented by the regulations contained in this Part 4 and are discussed in more detail in subsequent sections of Subparts C, D, and E.

§ 4.105 The Act as amended.

(a) The provisions of the Act (see §§ 4.102–4.103) were amended, effective October 9, 1972, by Public Law 92–473, signed into law by the President on that date. By virtue of amendments made to paragraphs (1) and (2) of section 2(a) and the addition to section 4 of a new subsection (c), the compensation standards of the Act (see §§ 4.159–4.179) were revised to impose on successor contractors certain requirements (see § 4.1b) with respect to payment of wage rates and fringe benefits based on those agreed upon for substantially the same services for the same location in collective bargaining agreements entered into by their predecessor contractors (unless such agreed compensation is substantially at variance with that locally prevailing or the agreement was not negotiated at arm's length). The Secretary of Labor is to give effect to the provisions of such collective bargaining agreements in his wage determinations under section 2 of the Act. A new paragraph (5) added to section 2(a) of the Act requires a statement in the government service contract of the rates that would be paid by the contracting agency in the event of its direct employment of those classes of service employees to be employed on the contract work who, if directly employed by the agency, would receive wages determined as provided in 5 U.S.C. 5341. The Secretary of Labor is directed to give due consideration to such rates in determining prevailing monetary wages and fringe benefits under the Act's provisions. Other provisions of the 1972 amendments include the addition of a new section 10 to the Act to insure that wage determinations are issued by the Secretary for substantially all service contracts subject to section 2(a) of the Act at the earliest administratively feasible time; an amendment to section 4(b) of the Act to provide, in addition to the conditions previously specified for issuance of administrative limitations, variations, tolerances, and exemptions (see § 4.123), that administrative action in this regard shall be taken only in special circumstances where the Secretary determines that it is in accord with the remedial purpose of the Act to protect prevailing labor standards; and a new subsection (d) added to section 4 of the Act providing for the award of service contracts for terms not more than 5 years with provision for periodic adjustment of minimum wage rates and fringe benefits payable thereunder by

the issuance of wage determinations by the Secretary of Labor during the term of the contract. A further amendment to section 5(a) of the Act requires the names of contractors found to have violated the Act to be submitted for the debarment list (see § 4.188) not later than 90 days after the hearing examiner's finding of violation unless the Secretary recommends relief, and provides that such recommendations shall be made only because of unusual circumstances.

(b) The provisions of the Act were amended by Pub. L. 93–57, 87 Stat. 140, effective July 6, 1973, to extend the Act's coverage to Canton Island.

(c) The provisions of the Act were amended by Pub. L. 94–489, 90 Stat. 2358, approved October 13, 1976, to extend the Act's coverage to white collar workers. Accordingly, the minimum wage protection of the Act now extends to all workers, both blue collar and white collar, other than persons employed in a bona fide executive, administrative, or professional capacity as those terms are used in the Fair Labor Standards Act and in Part 541 of Title 29. Pub. L. 94–489 accomplished this change by adding to Section 2(a)(5) of the Act a reference to 5 U.S.C. 5332, which deals with white collar workers, and by amending the definition of service contract employee in Section 8(b) of the Act.

(d) Included in this Part 4 and in Part 6 of this subtitle are provisions to give effect to the amendments mentioned in this section.

§ 4.106 [Reserved]

Agencies Whose Contracts May Be Covered

§ 4.107 Federal contracts.

(a) Section 2(a) of the Act covers contracts (and any bid specification therefor) "entered into by the United States" and section 2(b) applies to contracts entered into "with the Federal Government." Within the meaning of these provisions, contracts entered into by the United States and contracts with the Federal Government include generally all contracts to which any agency or instrumentality of the U.S. Government becomes a party pursuant to authority derived from the Constitution and laws of the United States. The Act does not authorize any distinction in this respect between such agencies and instrumentalities on the basis of their inclusion in or independence from the executive, legislative, or judicial branches of the Government, the fact that they may be corporate in form, or the fact that payment for the contract services is not made from appropriated funds. Thus, contracts of wholly owned Government corporations, such as the Postal Service, and those of nonappropriated fund instrumentalities under the jurisdiction of the Armed Forces, or of other Federal agencies, such as Federal Reserve Banks, are included among those subject to the general coverage of the Act. (*Brinks, Inc.* v. *Board of Governors of the Federal Reserve System*, 466 F. Supp. 116 (D DC 1979); 43 Atty. Gen. Ops. ——— (September 26, 1978).) Contracts with the Federal Government and contracts entered into "by the United States" within the meaning of the Act do not, however, include contracts for services entered into on their own behalf by agencies or instrumentalities of other Governments within the United States, such as those of the several States and their political subdivisions, or of Puerto Rico, the Virgin Islands, Guam, or American Samoa.

(b) Where a Federal agency exercises its contracting authority to procure services desired by the Government, the method of procurement utilized by the contracting agency is not controlling in determining coverage of the contract as one entered into by the United States. Such contracts may be entered into by the United States either through a direct award by a Federal agency or through the exercise by another agency (whether governmental or private) of authority granted to it to procure services for or on behalf of a Federal agency. Thus, sometimes authority to enter into service contracts of the character described in the Act for and on behalf of the Government and on a cost-reimbursable basis may be delegated, for the convenience of the contracting agency, to a prime contractor which has the responsibility for all work to be done in connection with the operation and management of a Federal plant, installation, facility, or program, together with the legal authority to act as agency for and on behalf of the Government and to obligate Government funds in the procurement of all services and supplies necessary to carry out the entire program of operation. The contracts entered into by such a prime contractor with secondary contractors for and on behalf of the Federal agency pursuant to such delegated authority, which have such services as their principal purpose, are deemed to be contracts entered into by the United States and contracts with the Federal Government within the meaning of the Act. However, service contracts entered into by State or local public bodies with purveyors of services are not deemed to be entered into by the United States merely because such services are paid for with funds of the public body which have been received from the Federal Government as a grant under a Federal program. For example, a contract entered into by a municipal housing authority for tree trimming, tree removal, and landscaping for an urban renewal project financed by Federal funds is not a contract entered into by the United States and is not covered by the Service Contract Act. Similarly, contracts let under the Medicaid program which are financed by Federally-assisted grants to the States, and contracts which provide for insurance benefits to a third party, under the Medicare program are not subject to the Act.

§ 4.108 District of Columbia contracts.

Section 2(a) of the Act covers contracts (and any bid specification therefor) in excess of $2,500 which are "entered into by the * * * District of Columbia." The contracts of all agencies and instrumentalities which procure contract services for or on behalf of the District or under the authority of the District Government are contracts entered into by the District of Columbia within the meaning of this provision. Such contracts are also considered contracts entered into with the Federal Government or the United States within the meaning of section 2(b), section 5, and the other provisions of the Act. The legislative history indicates no intent to distinguish District of Columbia contracts from the other contracts made subject to the Act, and traditionally, under other statutes, District Government contracts have been made subject to the same labor standards provisions as contracts of other agencies and instrumentalities of the United States.

§ 4.109 [Reserved]

Covered Contracts Generally

§ 4.110 What contracts are covered.

(a) The Act covers service contracts of the Federal agencies described in §§ 4.107–4.108. Except as otherwise specifically provided (see §§ 4.115 et seq.), all such contracts, the principal purpose of which is to furnish services in the United States through the use of service employees, are subject to its terms. This is true of contracts entered into by such agencies with States or their political subdivisions, as well as such contracts entered into with private employers. Contracts between a Federal or District of Columbia agency and another such agency are not within the purview of the Act; however, "subcontracts" awarded under "prime contracts" between the Small Business

Administration and another Federal agency pursuant to various preferential set-aside programs, such as the 8(a) program, are covered by the Act. It makes no difference in the coverage of a contract whether the contract services are procured through negotiation or through advertising for bids. Also, the mere fact that an agreement is not reduced to writing does not mean that the contract is not within the coverage of the Act. The amount of the contract is not determinative of the Act's coverage, although the requirements are different for contracts in excess of $2,500 and for contracts of a lesser amount. The Act is applicable to the contract if the principal purpose of the contract is to furnish services, if such services are to be furnished in the United States, and if service employees will be used in providing such services. These elements of coverage will be discussed separately in the following sections.

(b) *"Contract" as including "any bid specification".* The Act, by its express terms, applies to "every contract (and any bid specification therefor) * * * the principal purpose of which is to furnish services in the United States through the use of service employees". Thus, as noted in subsequent sections discussing the application of the Act to particular contracts, the Act's provisions may be applicable to separate specifications for services in a contract but not to other contract specifications such as construction or supply specifications. Accordingly, except where otherwise noted, the term "contract" as used in this part shall be deemed to include any contract subject wholly or in part to the provisions of the Act. (See § 4.1a(e).)

§ 4.111 Contracts "to furnish services."

(a) *"Principal purpose" as criterion.* Under its terms, the Act applies to a "contract (and any bid specification therefor) * * * the principal purpose of which is to furnish services * * *." The principal purpose criterion applies only in determining whether a contract or bid specification is for services. Covered contracts need not be performed "principally in the United States" or "principally through the use of service employees." (See §§ 4.112 and 4.113.) If the principal purpose is to provide something other than services of the character contemplated by the Act and any such services which may be performed are only incidental to the performance of a contract or bid specification for another purpose, the Act does not apply. However, as will be seen by examining the illustrative examples of covered contracts in §§ 4.130 et seq., no hard and fast rule can be laid down as to the precise meaning of the term "principal purpose". This remedial Act is intended to be applied to a wide variety of contracts, and the Act does not define or limit the types of services which may be contracted for under a contract the principal purpose of which is to furnish services. Further, the nomenclature, type, or particular form of contract used by procurement agencies is not determinative of coverage. Whether the principal purpose of a particular contract is the furnishing of services through the use of service employees is largely a question to be determined on the basis of all the facts in each particular case. Even where tangible items of substantial value are important elements of the subject matter of the contract, the facts may show that they are of secondary import to the furnishing of services in the particular case. This principle is illustrated by the examples set forth in § 4.131.

(b) *Determining whether a contract is for "services", generally.* Except indirectly through the definition of "service employee" the Act does not define, or limit, the types of "services" which may be contracted for under a contract "the principal purpose of which is to furnish services". As stated in the congressional committee reports on the legislation, the types of service contracts covered by its provisions are varied. Among the examples cited are contracts for laundry and dry cleaning, for transportation of the mail, for custodial, janitorial, or guard service, for packing and crating, for food service, and for miscellaneous housekeeping services. Covered contracts for services would also include those for other types of services which may be performed through the use of the various classes of service employees included in the definition in section 8(b) of the Act (see § 4.113). Examples of some such contracts are set forth in §§ 4.130 et seq. In determining questions of contract coverage, due regard must be given to the apparent legislative intent to include generally as contracts for "services" those contracts which have as their principal purpose the procurement of something other than the construction activity described in the Davis-Bacon Act or the materials, supplies, articles, and equipment described in the Walsh-Healey Act. The Committee reports in both the House and Senate, and statements made on the floor of the House, took note of the labor standards protections afforded by these two Acts to employees engaged in the performance of construction and supply contracts and observed: "The service contract is now the only remaining category of Federal contracts to which no labor standards protections apply" (H. Rept. 948, 89th Cong., 1st Sess., p. 1; see also S. Rept. 798, 89th Cong., 1st Sess., p. 1; daily Congressional Record Sept. 20, 1965, p. 23497). A similar understanding of contracts principally for "services" as embracing contracts other than those for construction or supplies is reflected in the statement of President Johnson upon signing the Act (1 Weekly Compilation of Presidential Documents, p. 428).

§ 4.112 Contracts to furnish services "in the United States."

(a) The Act covers contract services furnished "in the United States, including" any State of the United States, the District of Columbia, Puerto Rico, the Virgin Islands, Outer Continental Shelf lands as defined in the Outer Continental Shelf Lands Act, American Samoa, Guam, Wake Islands, Eniwetok Atoll, Kwajalein Atoll and Johnston Island. The definition expressly excludes any other territory under the jurisdiction of the United States and any United States base or possession within a foreign country. Services to be performed on a vessel operating exclusively in international or foreign waters outside the geographic areas named in section 8(d) would not be services furnished "in the United States" within the meaning of the Act.

(b) A service contract to be performed in its entirety outside the geographic limits of the United States as thus defined is not covered and is not subject to the labor standards of the Act. However, if a service contract is to be performed in part within and in part without these geographic limits, the stipulations required by § 4.6 or § 4.7, as appropriate, must be included in the invitation for bids or negotiation documents and in the contract, and the labor standards must be observed with respect to that part of the contract services that is performed within these geographic limits. In such a case, the requirements of the Act and of the contract clauses will not be applicable to the services furnished outside the United States.

§ 4.113 Contracts to furnish services "through the use of service employees".

(a) *Use of "service employees" in a contract performance.* (1) As indicated in § 4.110, the Act covers service contracts only where "service employees" will be used in performing the services which it is the purpose of the contract to procure. A service contract otherwise subject to the Act ordinarily will meet this condition if any of the services which it is the principal

purpose of the contract to obtain will be furnished through the use of any service employee or employees. Even where it is contemplated that the services (of the kind performed by service employees) will be performed individually by the contractor, the contract cannot be considered outside the reach of the Act unless it is known in advance that the contractor or any subcontractor will in no event use any service employee during the term of the contract in furnishing the services called for. If the contracting officer knows when advertising for bids or concluding negotiations that no such employee will be used by the contractor in any event in providing the contract services, the Act will not be deemed applicable to the contract and the contract clauses required by § 4.6 or § 4.7 may be omitted. The fact that the required services will be performed by municipal employees or employees of a State would not remove the contract from the purview of the Act, as this Act does not contain any exemption for contracts performed by such employees. Also as discussed in subparagraph (2) of this paragraph where the services the Government wants under the contract are of a type that will require the use of service employees as defined in section 8(b) of the Act, the contract is not taken out of the purview of the Act by the fact that the manner in which the services of such employees are performed will be subject to the continuing overall supervision of professional personnel to whom the Act does not apply.

(2) The coverage of the Act does not extend, however, to contracts which have as their principal purpose the procurement of a type of service in the furnishing of which no service employees will be used. A contract for medical services by professional medical personnel is an example of such a contract. So are other contracts under which the desired services called for by the Government are to be performed exclusively by bona fide executive, administrative, or professional personnel as defined in Part 541 of this title (see paragraph (b) of this section).

(3)(i) In addition to the types of contracts discussed in subparagraph (2) of this part, the Department does not require application of the Act to any contract for professional services which is performed essentially by professional employees, with the use of service employees being only a minor factor in the performance of the contract. This tolerance does not extend to a contract for professional services which may involve the use of service employees to a significant or substantial extent even though there is some use of professional employees in the performance of the contract. This tolerance is issued pursuant to section 4(b) of the Act. It has been found to be necessary and proper in the public interest and to be in accord with the remedial purpose of the Act.

(ii) In applying this tolerance, if service employees constitute less than 10 percent of the total projected employment or staff years under a contract, the Act will not be applied to such contract. If service employees constitute 20 percent or more of the total projected employment or staff years under the contract, the Act will be required to be applied, since this would clearly be a significant use of service employees. Where the projected use of service employees is between 10 and 20 percent, the Department of Labor should be consulted, since such situations require consideration of other factors such as the nature of the contract work, the type of work performed by service employees, how necessary the work is to contract performance, the amount of contract work performed by service employees vis-a-vis professional employees, and the total number of service employees employed on the contract.

(4) Under these principles, the Act applies to many contracts for research and development, statistical surveys, engineering research and designing, computer services, etc., because the contracts may involve the use of a significant number of service employees. Laboratory technicians, interviewers, draftsmen, computer operators, and data entry personnel are a few examples of the classes of service employees that may be employed on such contracts. While the work of such service employees may be performed under the supervision and direction of professional personnel and the final analysis and reporting may be performed by professionals, nevertheless, the work performed by the service employees is a significant and important part of the overall contract requirements.

(b) *"Service employees" defined.* In determining whether or not any of the contract services will be performed by service employees, the definition of "service employee" in section 8(b) of the Act is controlling. It provides:

> The term "service employee" means any person engaged in the performance of a contract entered into by the United States and not exempted under section 7, whether negotiated or advertised, the principal purpose of which is to furnish services in the United States (other than any person employed in a bona fide executive, administrative, or professional capacity, as those terms are defined in part 541 of title 29, Code of Federal Regulations, as of July 30, 1976, and any subsequent revision of those regulations); and shall include all such persons regardless of any contractual relationship that may be alleged to exist between a contractor or subcontractor and such persons.

It will be noted that the definition expressly excludes those employees who are employed in a bona fide executive, administrative, or professional capacity as defined in Part 541 of this title and as discussed further in § 4.156. Some of the specific types of service employees who may be employed on service contracts are noted in other sections which discuss the application of the Act to employees.

§ 4.114 Subcontracts.

(a) *"Contractor" as including "subcontractor."* Except where otherwise noted or where the term "Government prime contractor" is used, the term "contractor" as used in this Part 4 shall be deemed to include a subcontractor. The term "contractor" as used in the contract clauses required by Subpart A in any subcontract under a covered contract shall be deemed to refer to the subcontractor, or, if in a subcontract entered into by such a subcontractor, shall be deemed to refer to the lower level subcontractor. (See § 4.1a(f).)

(b) *Liability of Prime Contractor.* When a contractor undertakes a contract subject to the Act, the contractor agrees to assume the obligation that the Act's labor standards will be observed in furnishing the required services. This obligation may not be relieved by shifting all or part of the work to another, and the prime contractor is jointly and severally liable with any subcontractor for any acts, omissions, or underpayments on the part of a subcontractor which would constitute a violation of the prime contract. The prime contractor is required to include the prescribed contract clauses (§§ 4.6–4.7) and applicable wage determination in all subcontracts and the appropriate enforcement sanctions provided under the Act may be invoked against both the prime contractor and the subcontractor in the event of failure to comply with any of the Act's requirements.

Specific Exclusions

§ 4.115 Exemptions and exceptions generally.

(a) The Act, in section 7, specifically excludes from its coverage certain contracts and work which might otherwise come within its terms as procurements the principal purpose of

which is to furnish services through the use of service employees.

(b) The statutory exemptions in section 7 of the Act are as follows:

(1) Any contract of the United States or District of Columbia for construction, alteration, and/or repair, including painting and decorating of public buildings or public works;

(2) Any work required to be done in accordance with the provisions of the Walsh-Healy Public Contracts Act (49 Stat. 2036);

(3) Any contract for the carriage of freight or personnel by vessel, airplane, bus, truck, express, railway line, or oil or gas pipeline where published tariff rates are in effect;

(4) Any contract for the furnishing of services by radio, telephone, telegraph, or cable companies, subject to the Communications Act of 1934;

(5) Any contract for public utility services, including electric light and power, water, steam, and gas;

(6) Any employment contract providing for direct services to a Federal agency by an individual or individuals;

(7) Any contract with the Post Office Department, (now the U.S. Postal Service) the principal purpose of which is the operation of postal contract stations.

§ 4.116 Contracts for construction activity.

(a) *General scope of exemption.* The Act, in paragraph (1) of section 7, exempts from its provisions "any contract of the United States or District of Columbia for construction, alteration and/or repair, including painting and decorating of public buildings or public works." This language corresponds to the language used in the Davis-Bacon Act to describe its coverage (40 U.S.C. 276a). The legislative history of the McNamara-O'Hara Service Contract Act indicates that the purpose of the provision is to avoid overlapping coverage of the two acts by excluding from the application of the McNamara-O'Hara Act those contracts (and any bid specification therefor) to which the Davis-Bacon Act is applicable and in the performance of which the labor standards of that Act are intended to govern the compensation payable to the employees of contractors and subcontractors on the work. (See H. Rept. 798, pp. 2, 5, and H. Rept. 948, pp. 1, 5, also Hearing, Special Subcommittee on Labor, House Committee on Education and Labor, p. 9 (89th Cong., 1st sess.).) The intent of section 7(1) is simply to exclude from the provisions of the Act those construction contracts which involve the employment of persons whose wage rates and fringe benefits are determinable under the Davis-Bacon Act.

(b) *Contracts not within exemption.* Section 7(1) does not exempt contracts which, for purposes of the Davis-Bacon Act, are not considered to be of the character described by the corresponding language in that Act, and to which the provisions of the Davis-Bacon Act are therefore not applied. Such contracts are accordingly subject to the McNamara-O'Hara Act where their principal purpose is to furnish services in the United States through the use of service employees. For example, a contract for clearing timber or brush from land or for the demolition or dismantling of buildings or other structures located thereon may be a contract for construction activity subject to the Davis-Bacon Act where it appears that the clearing of the site is to be followed by the construction of a public building or public work at the same location. If, however, no further construction activity at the site is contemplated the Davis-Bacon Act is considered inapplicable to such clearing, demolition, or dismantling work. In such event, the exemption in section 7(1) of the McNamara-O'Hara Act has no application and the contract will be subject to the Act in accordance with its general coverage provisions. It should be noted that the fact that a contract may be labeled as one for the sale and removal of property, such as salvage material, does not negate coverage under the Act even though title to the removable property passes to the contractor. While the value of the property being sold in relation to the services performed under the contract is a factor to be considered in determining coverage, the principal purpose of removal, dismantling, and demolition contracts is to furnish services through the use of service employees and thus these contracts are subject to the Act. (See also § 4.131.)

(c) *Partially exempt contracts.* (1) Instances may arise in which, for the convenience of the Government, instead of awarding separate contracts for construction work subject to the Davis-Bacon Act and for services of a different type to be performed by service employees, the contracting officer may include separate specifications for each type of work in a single contract calling for the performance of both types of work. For example, a contracting agency may invite bids for the installation of a plumbing system or for the installation of a security alarm system in a public building and for the maintenance of the system for one year, under separate bid specifications. In such a case, the exemption provided by section 7(1) will be deemed applicable only to that portion of the contract which calls for construction activity subject to the Davis-Bacon Act. The contract documents are required to contain the clauses prescribed by § 4.6 for application to the contract obligation to furnish services through the use of service employees, and the provisions of the McNamara-O'Hara Act will apply to that portion of the contract.

(2) *Supply, services, or maintenance contracts involving construction work.* The provisions of both the Davis-Bacon Act and the Service Contract Act would generally apply to contracts involving construction and service work. The exemption provided by section 7(1) of the Act would be applicable to construction contract work in such hybrid contracts where

(i) The contract contains specific requirements for substantial amounts of construction, reconstruction, alteration, or repair work (hereinafter referred to as construction) or it is ascertainable that a substantial amount of construction work will be necessary for the performance of the contract (the word "substantial" relates to the type and quantity of construction work to be performed and not merely to the total value of construction work (whether in absolute dollars or cost percentages) as compared to the total value of the contract); and

(ii) The construction work is physically or functionally separate from, and as a practical matter is capable of being performed on a segregated basis from, the other work called for by the contract.

§ 4.117 Work subject to requirements of Walsh-Healey Act [Reserved]

§ 4.118 Contracts for carriage subject to published tariff rates.

The Act, in paragraph (3) of section 7, exempts from its provisions "any contract for the carriage of freight or personnel by vessel, airplane, bus, truck, express, railway line or oil or gas pipeline where published tariff rates are in effect". In order for this exemption to be applicable, the contract must be for such carriage by a common carrier described by the terms used. It does not, for example, apply to contracts for taxicab or ambulance service, because taxicab and ambulance companies are not among the common carriers specified by the statute. Also, a contract for transportation service does not come within this exemption unless the service contracted for is actually governed by published tariff rates in effect pursuant to State or Federal law for such carriage.

The contracts excluded from the reach of the Act by this exemption are typically those where there is on file with the Interstate Commerce Commission or an appropriate State or local regulatory body a tariff rate applicable to the transportation involved, and the transportation contract between the Government and the carrier is evidenced by a bill of lading citing the published tariff rate. An administrative exemption has been provided for certain contracts where such carriage is subject to rates covered by section 10721 of the Interstate Commerce Act. See § 4.123(d). It should be noted further that only such contracts for the carriage of "freight or personnel" are exempt. Further, the exemption cannot apply where the contracts are principally for packing, crating, handling, loading, and/or storage of goods, with local drayage constituting an incidental part of the contract work. Also this exemption thus does not exclude any contracts for the transportation of mail from the application of the Act, because the term "freight" does not include the mail. (For an administrative exemption of certain contracts with common carriers for carriage of mail, see § 4.123(d)).

§ 4.119 Contracts for services of communications companies.

The Act, in paragraph (4) of section 7, exempts from its provisions "any contract for the furnishing of services by radio, telephone, telegraph, or cable companies, subject to the Communications Act of 1934." This exemption is applicable to contracts with such companies for communication services regulated under the Communications Act. It does not exempt from the Act any contracts with such companies to furnish any other kinds of services through the use of service employees.

§ 4.120 Contracts for public utility services.

The Act, in paragraph (5) of section 7, exempts from its provisions "any contract for public utility services, including electric light and power, water, steam, and gas." This exemption is applicable to contracts for such services with companies whose rates therefor are regulated under State, local, or Federal law governing operations of public utility enterprises. Contracts entered into with public utility companies to furnish services through the use of service employees, other than those subject to such rate regulation, are not exempt from the Act. Among the contracts included in the exemption would be those between Federal electric power marketing agencies and investor-owned electric utilities, Rural Electrification Administration cooperatives, municipalities and State agencies engaged in the transmission and sale of electric power and energy.

(See H. Rept. No. 948, 89th Cong., 1st sess., p. 4)

§ 4.121 Contracts for individual services.

The Act, in paragraph (6) of section 7, exempts from its provisions "any employment contract providing for direct services to a Federal agency by an individual or individuals." This exemption, which applies only to an "employment contract" for "direct services," makes it clear that the Act's application to Federal contracts for services is intended to be limited to service contracts entered into with independent contractors. If a contract to furnish services (to be performed by a service employee as defined in the Act) provides that they will be furnished directly to the Federal agency by the individual under conditions or circumstances which will make him an employee of the agency in providing the contract service, the exemption applies and the contract will not be subject to the Act's provisions. The exemption does not exclude from the Act any contract for services of the kind performed by service employees which is entered into with an independent contractor whose individual services will be used in performing the contract, but as noted earlier in § 4.113, such a contract would be outside the general coverage of the Act if only the contractor's individual services would be furnished and no service employee would in any event be used in its performance.

§ 4.122 Contracts for operation of postal contract stations.

The Act, in paragraph (7) of section 7, exempts from its provisions "any contract with the Post Office Department, [now the U.S. Postal Service], the principal purpose of which is the operation of postal contract stations." The exemption is limited to postal service contracts having the operation of such stations as their principal purpose. A provision of the legislation which would also have exempted contracts with the U.S. Postal Service having as their principal purpose the transportation, handling, or delivery of the mails was eliminated from the bill during its consideration by the House Committee on Education and Labor (H. Rept. 948, p. 1, 89th Cong., 1st sess.).

§ 4.123 Administrative limitations, variances, tolerances, and exemptions.

(a) *Authority of the Secretary.* Section 4(b) of the Act as amended in 1972 authorizes the Secretary to "provide such reasonable limitations" and to "make such rules and regulations allowing reasonable variations, tolerances, and exemptions to and from any or all provisions of this Act (other than § 10), but only in special circumstances where he determines that such limitation, variation, tolerances, or exemption is necessary and proper in the public interest or to avoid the serious impairment of Government business, and is in accord with the remedial purpose of this Act to protect prevailing labor standards." This authority is similar to that vested in the Secretary under section 6 of the Walsh-Healey Public Contracts Act (41 U.S.C. 40) and under section 105 of the Contract Work Hours and Safety Standards Act (40 U.S.C. 331).

(b) *Administrative action under section 4(b) of the Act.* The authority conferred on the Secretary by section 4(b) of the Act will be exercised with due regard to the remedial purpose of the statute to protect prevailing labor standards and to avoid the undercutting of such standards which could result from the award of Government work to contractors who will not observe such standards, and whose saving in labor cost therefrom enables them to offer a lower price to the Government than can be offered by the fair employers who maintain the prevailing standards. Administrative action consistent with this statutory purpose may be taken under section 4(b) with or without a request therefor, when found necessary and proper in accordance with the statutory standards. No formal procedures have been prescribed for requesting such action. However, a request for exemption from the Act's provisions will be granted only upon a strong and affirmative showing that it is necessary and proper in the public interest or to avoid serious impairment of Government business, and is in accord with the remedial purpose of the Act to protect prevailing labor standards. If the request for administrative action under section 4(b) is not made by the headquarters office of the contracting agency to which the contract services are to be provided, the views of such office on the matter should be obtained and submitted with the request or the contracting officer may forward such a request through channels to the agency headquarters for submission with the latter's views to the Administrator of the Wage and Hour

Division, Department of Labor, whenever any wage payment issues are involved. Any request relating to an occupational safety or health issue shall be submitted to the Assistant Secretary for Occupational Safety and Health, Department of Labor.

(c) *Documentation of official action under section 4(b).* All papers and documents made a part of the official record of administrative action pursuant to section 4(b) of the Act are available for public inspection in accordance with the regulations in 29 CFR Part 70. Limitations, variations, tolerances and exemptions of general applicability and legal effect promulgated pursuant to such authority are published in the **Federal Register** and made a part of the rules incorporated in this Part 4. For convenience in use of the rules, they are generally set forth in the sections of this part covering the subject matter to which they relate. (See, for example, the exemption provided in §§ 4.5(b), 4.6(o), and the limitations set forth in §§ 4.115 et seq.) Any rules that are promulgated under section 4(b) of the Act relating to subject matter not dealt with elsewhere in this Part 4 will be set forth immediately following this paragraph.

(d) In addition to the statutory exemptions in § 7 of the Act (see § 4.115(c)), the following types of contracts have been exempted from all the provisions of the Service Contract Act of 1965, pursuant to section 4(b) of the Act, which exemptions the Secretary of Labor found to be necessary and proper in the public interest or to avoid serious impairment of the conduct of Government business.

(1) Contracts entered into by the United States with common carriers for the carriage of mail by rail, air (except air star routes), bus, and ocean vessel, where such carriage is performed on regularly scheduled runs of the trains, airplanes, buses, and vessels over regularly established routes and accounts for an insubstantial portion of the revenue therefrom.

(2) Any contract entered into by the U.S. Postal Service with an individual owner-operator for mail service where it is not contemplated at the time the contract is made that such owner-operator will hire any service employee to perform the services under the contract except for short periods of vacation time or for unexpected contingencies or emergency situations such as illness, or accident.

(3) Contracts for the carriage of freight or personnel where such carriage is subject to rates covered by section 10721 of the Interstate Commerce Act.

§§ 4.124—4.129 [Reserved]

Particular Application of Contract Coverage Principles

§ 4.130 Types of covered service contracts illustrated.

(a) The types of contracts, the principal purpose of which is to furnish services through the use of service employees, are too numerous and varied to permit an exhaustive listing. The following list is illustrative, however, of the types of services called for by such contracts that have been found to come within the coverage of the Act. Other examples of covered contracts are discussed in other sections of this subpart.

(1) Aerial spraying
(2) Aerial reconnaissance for fire detection
(3) Ambulance service
(4) Barber and beauty shop services
(5) Cafeteria and food service
(6) Carpet laying (other than part of construction) and cleaning
(7) Cataloging services
(8) Chemical testing and analysis
(9) Clothing alteration and repair
(10) Computer services
(11) Concessionaire services
(12) Custodial, janitorial, and housekeeping services
(13) Data collection, processing, and/or analysis services
(14) Demolition, dismantling and/or removal of buildings and other real property (other than part of construction)
(15) Drafting and illustrating
(16) Electronic equipment maintenance and operation and engineering support services
(17) Exploratory drilling (other than part of construction)
(18) Film processing
(19) Fire fighting and protection
(20) Fueling services
(21) Furniture repair and rehabilitation
(22) Geological field surveys and testing
(23) Grounds maintenance
(24) Guard and watchman security service
(25) Inventory services
(26) Keypunching and keyverifying contracts
(27) Laboratory analysis services
(28) Landscaping (other than part of construction)
(29) Laundry and dry cleaning
(30) Linen supply services
(31) Lodging and/or meals
(32) Mail hauling
(33) Mailing and addressing services
(34) Maintenance and repair of all types of equipment, e.g., aircraft, engines, electrical motors, vehicles, and automated data processing, electronic, telecommunications, office and related business, and construction equipment
(35) Mess attendant services
(36) Mortuary services
(37) Motor pool operation
(38) Nursing home services
(39) Operation, maintenance, or logistic support of a Federal facility
(40) Packing and crating
(41) Parking services
(42) Pest control
(43) Property management
(44) Snow removal
(45) Stenographic reporting
(46) Support services at military installations
(47) Surveying and mapping services (preliminary but not directly related to construction)
(48) Taxicab services
(49) Telephone and field interview services
(50) Timber removal/sale contracts
(51) Tire and tube repairs
(52) Transporting property or personnel (except as explained in § 4.118)
(53) Trash and garbage removal
(54) Vending machine services
(55) Visual and graphic arts
(56) Warehousing or storage

§ 4.131 Furnishing services involving more than use of labor.

(a) If the principal purpose of a contract is to furnish services in the performance of which service employees will be used, the Act will apply to the contract, in the absence of an exemption, even though the use or furnishing of nonlabor items may be an important element in the furnishing of the services called for by its terms. The Act is concerned with protecting the labor standards of workers engaged in performing such contracts, and is applicable if the statutory coverage test is met, regardless of the form in which the contract is drafted. The proportion of the labor cost to the total cost of the contract and the necessity of furnishing or receiving tangible nonlabor items in performing the contract obligations will be considered but are not necessarily determinative. A procurement that requires tangible items to be supplied to the Government or the contractor as a part of the service furnished is covered by the Act so long as the facts show that the contract is chiefly for services, and that the furnishing of tangible items is of secondary importance.

(b) Some examples of covered contracts illustrating these principles may be helpful. One such example is a contract for the maintenance and repair of typewriters. Such a contract may require the contractor to furnish typewriter parts, as the need arises, in

performing the contract services. Since this does not change the principal purpose of the contract, which is to furnish the maintenance and repair services through the use of service employees, the contract remains subject to the Act.

(c) Another example of the application of the above principle is a contract for the recurrent supply to a Government agency of freshly laundered items on a rental basis. It is plain from the legislative history that such a contract is typical of those intended to be covered by the Act. S. Rept. 798, 89th Cong., 1st Sess., p. 2; H. Rept. 948, 89th Cong., 1st Sess., p. 2. Although tangible items owned by the contractor are provided on a rental basis for the use of the Government, the service furnished by the contractor in making them available for such use when and where they are needed, through the use of service employees who launder and deliver them, is the principal purpose of the contract.

(d) Similarly, a contract in the form of rental of equipment with operators for the plowing and reseeding of a park area is a service contract. The Act applies to it because its principal purpose is the service of plowing and reseeding, which will be performed by service employees, although as a necessary incident the contractor is required to furnish equipment. For like reasons the contracts for aerial spraying and aerial reconnaissance listed in § 4.130 are covered, even though the use of airplanes, an expensive item of equipment, is essential in performing such services. In general, contracts under which the contractor agrees to provide the Government with vehicles or equipment on a rental basis with drivers or operators for the purpose of furnishing services are covered by the Act. Such contracts are not considered contracts for furnishing equipment within the meaning of the Walsh-Healey Public Contracts Act. On the other hand, contracts under which the contractor provides equipment with operators for the purpose of construction of a public building or public work, such as road resurfacing or dike repair, even where the work is performed under the supervision of Government employees, would be within the exemption in section 7(1) of the Act as contracts for construction subject to the Davis-Bacon Act. (See § 4.116.)

(e) Contracts for data collection, statistical surveys, computer services, and the like are within the general coverage of the Act even though the contractor may be required to furnish such tangible items as written reports or computer printouts, since items of this nature are considered to be of secondary importance to the services which it is the principal purpose of the contract to procure.

(f) Contracts under which the contractor receives tangible items from the Government in return for furnishing services (which items are in lieu of or in addition to monetary consideration granted by either party) are covered by the Act where the facts show that the furnishing of such services is the principal purpose of the contracts. For example, so-called "timber sales" contracts are subject to the Act where removal of trees is accomplished for the purpose of forest management, such as removal of diseased or damaged trees; to open up the forest for public use, such as camping; or for similar services. Similarly, even where the removal of trees is not accomplished for the purpose of forest management or some other service, such contracts generally contain service specifications which are subject to the act, such as building of temporary roads, firefighting and control, erosion control, slash removal and trimming, and removal of diseased or injured trees. Under these contracts, the fact that a contractor will receive a substantial amount of timber is of secondary importance to the services which it is the principal purpose of the Government contract (or specification) to procure. The same principle applies with respect to so-called property removal or disposal contracts which involve demolition of buildings or other structures.

§ 4.132 Services and other items to be furnished under a single contract.

If the principal purpose of a contract or bid specification (i.e., a line item in a bid or contract) is to furnish services through the use of service employees within the meaning of the Act, the contract to furnish such services is not removed from the Act's coverage merely because, as a matter of convenience in procurement, it is combined in a single contract document with specifications for the procurement of different or unrelated items. For example, a contracting agency may invite bids for supplying a quantity of new typewriters and for the maintenance and repair of the typewriters under separate bid specifications. The principal purpose of the latter, but not the former, would be the furnishing of services through the use of service employees; however, the specifications for each might be included in a single contract with a typewriter company for the convenience of the parties. In such a case, the contract obligation to furnish the maintenance and repair services would be subject to the provisions of the Act. The "principal purpose" test would be applicable to the specification for such services rather than to the combined contract. The Act would not apply in such case to the contract obligation to furnish new typewriters, although its performance would be subject to the provisions of the Walsh-Healey Public Contracts Act if the amount was in excess of $10,000. With respect to contracts which contain separate specifications for the furnishing of services and construction activity, see § 4.116(c).

§ 4.133 [Reserved]

§ 4.134 Contracts outside the Act's coverage.

(a) Contracts entered into by agencies other than those of the Federal Government or the District of Columbia as described in §§ 4.107–4.108 are not within the purview of the Act. Thus, the Act does not cover service contracts entered into with any agencies of Puerto Rico, the Virgin Islands, American Samoa, or Guam acting in behalf of their respective local governments. Similarly, it does not cover service contracts entered into by agencies of States or local public bodies, not acting as agents for or on behalf of the United States or the District of Columbia, even though Federal financial assistance may be provided for such contracts under Federal law or the terms and conditions specified in Federal law may govern the award and operation of the contract.

(b) Further, as already noted in §§ 4.111–4.113, the Act does not apply to Government contracts or bid specifications which do not have as their principal purpose the furnishing of services, or which call for no services to be furnished within the United States or through the use of service employees as those terms are defined in the Act. Clearly outside the Act's coverage for these reasons are such contracts as those for the purchase of tangible products which the Government needs (e.g. vehicles, office equipment, and supplies), for the logistic support of an air base in a foreign country, or for the services of a lawyer to examine the title to land. Similarly, where the Government contracts for a lease of building space for Government occupancy and the building owner furnishes general janitorial and other building services on an incidental basis through the use of service employees, the leasing of the space rather than the furnishing of the building services is the principal purpose of the contract, and the Act does not apply. However, if the

contract contains a separate line item or items which requires the contractor to furnish specified levels and frequencies of janitorial, security, or other maintenance services, the requirement for such services is considered to be a separate specification the principal purpose of which is the furnishing of services, and as set forth in § 4.132, the Act would apply to such specification. Another type of contract which is outside the coverage of the Act because it is not for the principal purpose of furnishing services may be illustrated by a contract for the rental of parking space under which the Government agency is simply given a lease or license to use the contractor's real property. Such a contract is to be distinguished from contracts for the storage of vehicles which are delivered into the possession or custody of the contractor, who will provide the required services including the parking or retrieval of the vehicles.

(c) There are a number of types of contracts which, while outside the Act's coverage in the usual case, may be subject to its provisions under the conditions and circumstances of a particular procurement, because these may be such as to require a different view of the principal purpose of the contract. Thus, the ordinary contract for the recapping of tires would have as its principal purpose the manufacture and furnishing of rebuilt tires for the Government rather than the furnishing of services through the use of service employees, and thus would be outside the Act's coverage. Similarly, contracts calling for printing, reproduction, and duplicating ordinarily would appear to have as their principal purpose the furnishing in quantity of printed, reproduced or duplicated written materials rather than the furnishing of reproduction services through the use of service employees. However, in a particular case, the terms, conditions, and circumstances of the procurement may be such that the facts would show its purpose to be chiefly the furnishing of services (e.g. repair services, typesetting, photocopying, editing, etc.), and where such services require the use of service employees the contract would be subject to the Act unless excluded therefrom for some other reason.

§§ 4.135–4.139 [Reserved]

Determining Amount of Contract

§ 4.140 Significance of contract amount.

As set forth in § 4.104 and in the requirements of §§ 4.6–4.7, the obligations of a contractor with respect to labor standards differ in the case of a covered and nonexempt contract, depending on whether the contract is or is not in excess of $2,500. Rules for resolving questions that may arise as to whether a contract is or is not in excess of this figure are set forth in the following sections.

§ 4.141 General criteria for measuring amount.

(a) In general, the contract amount is measured by the consideration agreed to be paid, whether in money or other valuable consideration, in return for the obligations assumed under the contract. Thus, even though a contractor, such as a wrecker entering into a contract with the Government to raze a building on a site which will remain vacant, may not be entitled to receive any money from the Government for such work under his contract or may even agree to pay the Government in return for the right to dispose of the salvaged materials, the contract will be deemed one in excess of $2,500 if the value of the property obtained by the contractor, less anything he might pay the Government, is in excess of such amount. In addition, concession contracts are considered to be contracts in excess of $2,500 if the contractor's gross receipts under the contract may exceed $2,500.

(b) All bids from the same person on the same invitation for bids will constitute a single offer, and the total award to such person will determine the amount involved for purposes of the Act. Where the procurement is made without formal advertising, in arriving at the aggregate amount involved, there must be included all property and services which would properly be grouped together in a single transaction and which would be included in a single advertisement for bids if the procurement were being effected by formal advertising. Therefore, if an agency procures continuing services through the issuance of monthly purchase orders, the amount of the contract for purposes of application of the Act is not measured by the amount of an individual purchase order. In such cases, if the continuing services were procured through formal advertising, the contract term would typically be for one year, and the monthly purchase orders must be grouped together to determine whether the yearly amount may exceed $2,500. However, a purchase order for services which are not continuing but are performed on a one-time or sporadic basis and which are not performed under a requirements contract, need not be equated to a yearly amount. (See § 4.142(b)). In addition, where an invitation is for services in an amount in excess of $2,500 and bidders are permitted to bid on a portion of the services not amounting to more than $2,500, the amounts of the contracts awarded separately to individual and unrelated bidders will be measured by the portions of the services covered by their respective contracts.

(c) Where a contract is issued in an amount in excess of $2,500 this amount will govern for purposes of application of the Act even though penalty deductions, deductions for prompt payment, and similar deductions may reduce the amount actually expended by the Government to $2,500 or less.

§ 4.142 Contracts in an indefinite amount.

(a) Every contract subject to this Act, (and any bid specification therefor) which is indefinite in amount is required to contain the clauses prescribed in § 4.6 for contracts in excess of $2,500, unless the contracting officer has definite knowledge in advance that the contract will not exceed $2,500 in any event.

(b) Where contracts or agreements between a Government agency and prospective purveyors of services are negotiated which provide terms and conditions under which services will be furnished through the use of service employees in response to individual purchase orders or calls, if any, which may be issued by the agency during the life of the agreement, these agreements would ordinarily constitute contracts within the intendment of the Act under principles judicially established in United Biscuit Co. v. Wirtz, 17 WH Cases 146 (C.A.D.C.), a case arising under the Walsh-Healey Public Contracts Act. Such a contract, which may be in the nature of a bilateral option contract and not obligate the Government to order any services or the contractor to furnish any, nevertheless governs any procurement of services that may be made through purchase orders or calls issued under its terms. Since the amount of the contract is indefinite, it is subject to the rule stated in paragraph (a) of this section. The amount of the contract is not determined by the amount of any individual call or purchase order.

Changes in Contract Coverage

§ 4.143 Effects of changes or extensions of contracts, generally.

(a) Sometimes an existing service contract is modified, amended, or extended in such a manner that the changed contract is considered to be a new contract for purposes of the application of the Act's provisions. The general rule with respect to such contracts is that, whenever changes affecting the labor requirements are made in the terms of the contract, the provisions of the Act and the regulations thereunder will apply to the changed

contract in the same manner and to the same extent as they would to a wholly new contract. However, contract modifications or amendments (other than contract extensions) that are unrelated to the labor requirements of a contract will not be deemed to create a new contract for purposes of the Act. In addition, only significant changes related to labor requirements will be considered as creating new contracts. This limitation on the application of the Act has been found to be in accordance with the provisions of section 4(b) of the Act.

(b) Also, whenever the term of an existing contract is extended, pursuant to an option clause or otherwise, so that the contractor furnishes services over an extended period of time, rather than being granted extra time to fulfill his original commitment, the contract extension is considered to be a new contract for purposes of the application of the Act's provisions. All such "new" contracts as discussed above require the insertion of a new or revised wage determination in the contract as provided in § 4.5.

§ 4.144 Contract modifications affecting amount.

Where a contract which was originally issued in an amount not in excess of $2,500 is later modified so that its amount may exceed that figure, all the provisions of section 2(a) of the Act, and the regulations thereunder are applicable from the date of modification to the date of contract completion. In the event of such modification, the contracting officer will immediately request a wage determination from the Department of Labor and insert the required contract clauses and any wage determination issued into the contract. In the event that a contract for services subject to the Act in excess of $2,500 is modified so that it cannot exceed $2,500, compliance with the provisions of section 2(a) of the Act and the contract clauses required thereunder ceases to be an obligation of the contractor when such modification becomes effective.

§ 4.145 Extended term contracts.

(a) Sometimes service contracts are entered into for a term of years; however, their continuation in effect is subject to the appropriation by Congress of funds for each new fiscal year. In such event, for purposes of this Act, a contract shall be deemed entered into at the beginning of each new fiscal year during which the terms of the original contract are made effective by an appropriation for the purpose. In other cases a service contract, entered into for a specified term by a Government agency, may contain a provision such as an option clause under which the agency may unilaterally extend the contract for a period of the same length or other stipulated period. Since the exercise of the option results in the rendition of services for a new or different period not included in the term for which the contractor is obligated to furnish services or for which the Government is obligated to pay under the original contract in the absence of such action to extend it, the contract for the additional period is a wholly new contract with respect to application of the Act's provisions and the regulations thereunder.

(b) With respect to multi-year service contracts which are not subject to annual appropriations (for example, concession contracts which are funded through the concessionaire's sales, certain research and development contracts which are funded with so-called "no year money" or contracts awarded by instrumentalities of the United States, such as the Federal Reserve Banks, which do not receive appropriated funds), section 4(d) of the Act allows such contracts to be awarded for a period of up to five years on the condition that the multi-year contracts will be amended no less often than once every two years to incorporate any new Service Contract Act wage determination which may be applicable. Accordingly, unless the contracting agency is notified to the contrary (see § 4.4(d)), at the end of the second year and again at the end of the fourth year, etc. such contracts are treated as wholly new contracts for purposes of the application of the Act's provisions and regulations thereunder. The two-year period is considered to begin on the date that the contractor commences performance on the contract (i.e., anniversary date) rather than on the date of contract award.

Period of Coverage

§ 4.146 Contract obligations after award, generally.

A contractor's obligation to observe the provisions of the Act arises on the date the contractor is informed that award of the contract has been made, and not necessarily on the date of formal execution. However, the contractor is required to comply with the provisions of the Act and regulations thereunder only while the employees are performing on the contract, provided the contractor's records make clear the period of such performance. (See also § 4.179.) If employees of the contractor are required by the contract to complete certain preliminary training or testing prior to the commencement of the contract services, or if there is a phase-in period which allows the new contractor's employees to familiarize themselves with the contract work so as to provide a smooth transition between contractors, the time spent by employees undertaking such training or phase-in work is considered to be hours worked on the contract and must be compensated for even though the principal contract services may not commence until a later date.

§§ 4.147-4.149 [Reserved]

Employees Covered by the Act

§ 4.150 Employee coverage generally.

The Act, in section 2(b), makes it clear that its provisions apply generally to all employees engaged in performing work on a covered contract entered into by the contractor with the Federal Government, regardless of whether they are the contractor's employees or those of any subcontractor under such contract. All service employees who, on or after the date of award, are engaged in working on or in connection with the contract, either in performing the specific services called for by its terms or in performing other duties necessary to the performance of the contract, are thus subject to the Act unless a specific exemption (see §§ 4.115 et seq.) is applicable. All such employees must be paid wages at a rate not less than the minimum wage specified under section 6(a)(1) of the Fair Labor Standards Act (29 U.S.C. 206(a)(1)), as amended. Payment of a higher minimum monetary wage and the furnishing of fringe benefits may be required under the contract, pursuant to the provisions of sections 2 (a)(1), (2), and 4(c) of the Act.

§ 4.151 Employees covered by provision of section 2(a).

The provisions of sections 2(a) and 4(c) of the Act prescribe labor standards requirements applicable, except as otherwise specifically provided, to every contract in excess of $2,500 which is entered into by the United States or the District of Columbia for the principal purpose of furnishing services in the United States through the use of service employees. These provisions apply to all service employees engaged in the performance of such a contract or any subcontract thereunder. The Act, in section 8(b) defines the term "service employee". The general scope of the definition is considered in § 4.113(b) of this subpart.

§ 4.152 Employees subject to prevailing compensation provisions of sections 2(a) (1) and (2) and 4(c).

(a) Under section 2(a) (1) and (2) of the Act, minimum monetary wages and fringe benefits to be paid or furnished the various classes of service employees performing such contract work are determined by the Secretary of Labor or his authorized representative in accordance with prevailing rates and fringe benefits for such employees in the locality or in accordance with the rates contained in a predecessor contractor's collective bargaining agreement, as appropriate, and are required to be specified in such contracts and subcontracts thereunder. All service employees of the classes who actually perform the specific services called for by the contract (e.g., janitors performing on a contract for office cleaning; stenographers performing on a contract for stenographic reporting) are covered by the provisions specifying such minimum monetary wages and fringe benefits for such classes of service employees and must be paid not less than the applicable rate established for the classification(s) of work performed.

(b) The duties which an employee actually performs govern the classification and the rate of pay to which the employee is entitled under the applicable wage determination. Some job classifications listed in an applicable wage determination are descriptive by title and have commonly understood meanings, (e.g., janitors, security guards, pilots, etc.). In such situations, detailed position descriptions may not be included in the wage determination. However, in cases where additional descriptive information is needed to inform users of the scope of duties included in the classification, the wage determination will generally contain detailed position descriptions based on the data source relied upon for the issuance of the wage determination.

(c) Some wage determinations will list a series of classes within a job classification family, e.g., Computer Operators, Class A, B, and C, or Electronic Technicians, Class A, B, and C, or Clerk Typist, Class A and B. Generally, the lowest level listed for a job classification family is considered to be the entry level and establishment of a lower level through conformance (§ 4.6(b)(2)) is not permissible. Likewise, so-called trainee classifications are not permissible and cannot be conformed under § 4.6(b)(2). Helpers in skilled maintenance trades (e.g., electricians, machinists, automobile mechanics, etc.) whose duties constitute, in fact, separate and distinct jobs, may be conformed. However, conformance may not be used to artificially split or subdivide classifications listed in the wage determination. In other words, conforming procedures may not be used if the work which an employee performs under the contract is within the scope of any classification listed on the wage determination, regardless of job title. Subminimum rates for apprentices, student learners, and handicapped workers are permissible under the conditions discussed in § 4.6(o).

§ 4.153 Inapplicability of prevailing compensation provisions to some employees.

There may be employees used by a contractor or subcontractor in performing a service contract in excess of $2,500 which is subject to the Act, whose services, although necessary to the performance of the contract, are not subject to minimum monetary wage or fringe benefit provisions contained in the contract pursuant to section 2(a) because such employees are not directly engaged in performing the specified contract services. An example might be a laundry contractor's billing clerk performing billing work with respect to the items laundered. In all such situations, the employees who are necessary to the performance of the contract but not directly engaged in the performance of the specified contract services, are nevertheless subject to the minimum wage provision of section 2(b) (see § 4.150) requiring payment of not less than the minimum wage specified under section 6(a)(1) of the Fair Labor Standards Act to all employees working on a covered contract, unless specifically exempt. However, in situations where minimum monetary wages and fringe benefits for a particular class or classes of service employees actually performing the services called for by the contract have not been specified in the contract because the wage and fringe benefit determination applicable to the contract has been made only for other classes of service employees who will perform the contract work, the employer will be required to pay the monetary wages and fringe benefits which may be specified for such classes of employees pursuant to the conformance procedures provided in § 4.6(b).

§ 4.154 Employees covered by sections 2(a) (3) and (4).

The safety and health standards of section 2(a)(3) and the notice requirements of section 2(a)(4) of the Act (see § 4.183) are applicable, in the absence of a specific exemption, to every service employee engaged by a contractor or subcontractor to furnish services under a contract subject to section 2(a) of the Act.

§ 4.155 Employee coverage does not depend on form of employment contract.

The Act, in section 8(b), makes it plain that the coverage of service employees depends on whether their work for the contractor or subcontractor on a covered contract is that of a service employee as defined in section 8(b) and not on any contractual relationship that may be alleged to exist between the contractor or subcontractor and such persons. In other words, any person, except those discussed in § 4.156 below, who performs work called for by a contract or that portion of a contract subject to the Act is, per se, a service employee. Thus, for example, a person's alleged status as an "owner-operator" or an "independent contractor" is immaterial in determining coverage under the Act and all such persons performing the work of service employees must be compensated in accordance with the Act's requirements.

§ 4.156 Employees in bona fide executive, administrative, or professional capacity.

The term "service employee" as defined in Section 8(b) of the Act does not include persons employed in a bona fide executive, administrative, or professional capacity as those terms are defined in 29 CFR Part 541. Employees within the definition of service employee who are employed in an executive, administrative, or professional capacity are not excluded from coverage, however, even though they are highly paid, if they fail to meet the tests set forth in 29 CFR Part 541. Thus, such employees as laboratory technicians, draftsmen, and air ambulance pilots, though they require a high level of skill to perform their duties and may meet the salary requirements of the regulations in Part 541 of this title, are ordinarily covered by the Act's provisions because they do not typically meet the other requirements of those regulations.

Subpart D—Compensation Standards

§ 4.159 General minimum wage.

The Act, in section 2(b)(1), provides generally that no contractor or subcontractor under any Federal contract subject to the Act shall pay any employee engaged in performing work on such a contract less than the minimum wage specified under section 6(a)(1) of the Fair Labor Standards Act. Section 2(a)(1) provides that the minimum monetary wage specified in any such contract exceeding $2,500 shall in no case be lower than this Fair Labor

Standards Act minimum wage. Section 2(b)(1) is a statutory provision which applies to the contractor or subcontractor without regard to whether it is incorporated in the contract; however, §§ 4.6–4.7 provide for inclusion of its requirements in covered contracts and subcontracts. Because this statutory requirement specifies no fixed monetary wage rate and refers only to the minimum wage specified under section 6(a)(1) of the Fair Labor Standards Act, and because its application does not depend on provisions of the contract, any increase in such Fair Labor Standards Act minimum wage during the life of the contract is, on its effective date, also effective to increase the minimum wage payable under section 2(b)(1) to employees engaged in performing work on the contract. The minimum wage rate under section 6(a)(1) of the Fair Labor Standards Act is $3.10 per hour beginning January 1, 1980, and $3.35 per hour after December 31, 1980.

§ 4.160 Effect of section 6(e) of the Fair Labor Standards Act.

Contractors and subcontractors performing work on contracts subject to the Service Contract Act are required to pay all employees, including those employees who are not performing work on or in connection with such contracts, not less than the general minimum wage standard provided in section 6(a)(1) of the Fair Labor Standards Act, as amended (Pub. L. 95–151).

§ 4.161 Minimum monetary wages under contracts exceeding $2,500.

The standards established pursuant to the Act for minimum monetary wages to be paid by contractors and subcontractors under service contracts in excess of $2,500 to service employees engaged in performance of the contract or subcontract are required to be specified in the contract and in all subcontracts (see § 4.6). Pursuant to the statutory scheme provided by sections 2(a)(1) and 4(c) of the Act, every covered contract (and any bid specification therefor) which is in excess of $2,500 shall contain a provision specifying the minimum monetary wages to be paid the various classes of service employees engaged in the performance of the contract or any subcontract thereunder, as determined by the Secretary or his authorized representative in accordance with prevailing rates for such employees in the locality, or, where a collective bargaining agreement applied to the employees of a predecessor contractor, in accordance with the rates for such employees provided for in such agreement; including prospective wage increases as provided in such agreement as a result of arm's-length negotiations. In no case may such wages be lower than the minimum wage specified under section 6(a)(1) of the Fair Labor Standards Act of 1938, as amended. (For a detailed discussion of the application of section 4(c) of the Act, see § 4.163.) If some or all of the determined wages in a contract fall below the level of the Fair Labor Standards Act minimum by reason of a change in that rate by amendment of the law, these rates become obsolete and the employer is obligated under section 2(b)(1) of the Service Contract Act, to pay the minimum wage rate established by the amendment as of the date it becomes effective. A change in the Fair Labor Standards Act minimum by operation of law would also have the same effect on advertised specifications or negotiations for covered service contracts, i.e., it would make ineffective and would supplant any lower rate or rates included in such specifications or negotiations whether or not determined. However, unless affected by such a change in the Fair Labor Standards Act minimum wage, by contract changes necessitating the insertion of new wage provisions (see §§ 4.143–4.145 or by the requirements of section 4(c) of the Act (see § 4.163), the minimum monetary wage rate specified in the contract for each of the classes of service employees for which wage determinations have been made under section 2(a)(1) will continue to apply throughout the period of contract performance. No change in the obligation of the contractor or subcontractor with respect to minimum monetary wages will result from the mere fact that higher or lower wage rates may be determined to be prevailing for such employees in the locality after the award and before completion of the contract. Such wage determinations are effective for contracts not yet awarded, as provided in § 4.5(a).

§ 4.162 Fringe benefits under contracts exceeding $2,500.

(a) Pursuant to the statutory scheme provided by sections 2(a)(2) and 4(c) of the Act, every covered contract in excess of $2,500 shall contain a provision specifying the fringe benefits to be furnished the various classes of service employees, engaged in the performance of the contract or any subcontract thereunder, as determined by the Secretary or his authorized representative to be prevailing for such employees in the locality or, where a collective bargaining agreement applied to the employees of a predecessor contractor, the various classes of service employees engaged in the performance of the contract or any subcontract must be provided the fringe benefits, including prospective or accrued fringe benefit increases, provided for in such agreement as a result of arm's-length negotiations. (For a detailed discussion of section 4(c) of the Act, see § 4.163.) As provided by section 2(a)(2) of the Act, fringe benefits include medical or hospital care, pensions on retirement or death, compensation for injuries or illness resulting from occupational activity, or insurance to provide any of the foregoing, unemployment benefits, life insurance, disability and sickness insurance, accident insurance, vacation and holiday pay, costs of apprenticeship or other similar programs and other bona fide fringe benefits not otherwise required by Federal, State, or local law to be provided by the contractor or subcontractor.

(b) Under this provision, the fringe benefits, if any, which the contractor or subcontractor is required to furnish the service employees engaged in the performance of the contract are specified in the contract documents (see § 4.6). How the contractor may satisfy this obligation is dealt with in §§ 4.170–4.177 of this part. A change in the fringe benefits required by the contract provision will not result from the mere fact that other or additional fringe benefits are determined to be prevailing for such employees in the locality at a time subsequent to the award but before completion of the contract. Such fringe benefit determinations are effective for contracts not yet awarded (see § 4.5(a)), or in the event that changes in an existing contract requiring their insertion for prospective application have occurred (see §§ 4.143–4.145). However, none of the provisions of this subsection may be construed as altering a successor contractor's obligations under section 4(c) of the Act. (See § 4.163.)

§ 4.163 Section 4(c) of the Act.

(a) Section 4(c) of the Act provides that no "contractor or subcontractor under a contract, which succeeds a contract subject to this Act and under which substantially the same services are furnished, shall pay any service employee under such contract less than the wages and fringe benefits, including accrued wages and fringe benefits, and any prospective increases in wages and fringe benefits provided for in a collective-bargaining agreement as a result of arm's-length negotiations, to which such service employees would have been entitled if they were employed under the predecessor contract: Provided, That in any of the

foregoing circumstances such obligations shall not apply if the Secretary finds after a hearing in accordance with regulations adopted by the Secretary that such wages and fringe benefits are substantially at variance with those which prevail for services of a character similar in the locality." Under this provision, the successor contractor's sole obligation is to insure that all service employees are paid no less than the wages and fringe benefits to which such employees would have been entitled if employed under the predecessor's collective bargaining agreement (i.e., irrespective of whether the successor's employees were or were not employed by the predecessor contractor). The obligation of the successor contractor is limited to the wage and fringe benefit requirements of the predecessor's collective bargaining agreement and does not extend to other items such as seniority, grievance procedures, work rules, overtime, etc.

(b) Section 4(c) is self-executing. Under section 4(c), a successor contractor is statutorily obligated to pay no less than the wage rates and fringe benefits which the predecessor contractor paid pursuant to a collective bargaining agreement. This is a direct statutory obligation and requirement placed on the successor contractor by section 4(c) and is not contingent or dependent upon the issuance or incorporation in the contract of a wage determination based on the predecessor contractor's collective bargaining agreement. Pursuant to section 4(b) of the Act, a variation has been granted which limits the self-executing application of section 4(c) in the circumstances and under the conditions described in § 4.1b(b) of this part. It must be emphasized, however, that the variation in § 4.1b(b) is applicable only if the contracting officer has given both the incumbent (predecessor) contractor and the employees' collective bargaining representative notification at least 30 days in advance of any estimated procurement date.

(c) *Variance hearings.* The regulations and procedures for hearings pursuant to section 4(c) of the Act are contained in § 4.10 of Subpart A and Part 6 of this title. If, as the result of such hearing, some or all of the wage rate and/or fringe benefit provisions of a predecessor contractor's collective bargaining agreement are found to be substantially at variance with the wage rates and/or fringe benefits prevailing in the locality, the Administrator will cause a new wage determination to be issued in accordance with the decision of the Administrative Law Judge or the Secretary. Since "it was the clear intent of Congress that any revised wage determinations resulting from a section 4(c) proceeding were to have validity with respect to the procurement involved" (53 Comp. Gen. 401, 402, 1973), the solicitation, or the contract if already awarded, must be amended to incorporate the newly issued wage determination. Such new wage determination shall be made applicable to the contract as of the date of the Administrative Law Judge's decision or as of the date of the decision of the Secretary. The legislative history of the 1972 Amendments makes clear that the collectively bargained "wages and fringe benefits shall continue to be honored * * * unless and until the Secretary finds, after a hearing, that such wages and fringe benefits are substantially at variance with those prevailing in the locality for like services" (S. Rept. 92–1131, 92nd Cong., 2d Sess. 5). Thus, variance decisions do not have application retroactive to the commencement of the contract.

(d) *Sections 2(a) and 4(c) must be read in conjunction.* The Senate report accompanying the bill which amended the Act in 1972 states that "Sections 2(a)(1), 2(a)(2), and 4(c) must be read in harmony to reflect the statutory scheme." (S. Rept. 92–1131, 92nd Cong., 2nd Sess. 4.) Therefore, since section 4(c) refers only to the predecessor contractor's collective bargaining agreement, the reference to collective bargaining agreements in sections 2(a)(1) and 2(a)(2) can only be read to mean a predecessor contractor's collective bargaining agreement. The fact that a successor contractor may have its own collective bargaining agreement does not negate the clear mandate of the statute that the wages and fringe benefits called for by the predecessor contractor's collective bargaining agreement shall be the minimum payable under a new (successor) contract. 48 Comp. Gen. 22, 23–24 (1968). In addition, because section 2(a) only applies to covered contracts in excess of $2,500, the requirements of section 4(c) likewise apply only to successor contracts which may be in excess of $2,500. However, if the successor contract is in excess of $2,500, section 4(c) applies regardless of the amount of the predecessor contract. (See §§ 4.141–4.142 for determining contract amount.)

(e) *The operative words of section 4(c) refer to "contract" not "contractor".* Section 4(c) begins with the language, "[n]o contractor or subcontractor under a *contract, which succeeds a contract* subject to this Act" (emphasis supplied). Thus, the statute is applicable by its terms to a successor contract without regard to whether the successor contractor was also the predecessor contractor. A contractor may become its own successor because it was the successful bidder on a recompetition of an existing contract, or because the contracting agency exercises an option or otherwise extends the term of the existing contract, etc. (See §§ 4.143–4.145). Further, since sections 2(a) and 4(c) must be read in harmony to reflect the statutory scheme, it is clear that the provisions of section 4(c) apply whenever the Act or the regulations require that a new wage determination be incorporated into the contract (53 Comp. Gen. 401, 404–6 (1973)).

(f) *Collective bargaining agreement must be applicable to work performed on the predecessor contract.* Section 4(c) will be operative only if the employees who worked on the predecessor contract were actually paid in accordance with the wage and fringe benefit provisions of a predecessor contractor's collective bargaining agreement. Thus, for example, section 4(c) would not apply if the predecessor contractor entered into a collective bargaining agreement for the first time, which did not become effective until after the expiration of the predecessor contract. Likewise, the requirements of section 4(c) would not apply if the predecessor contractor's collective bargaining agreement applied only to other employees of the firm and not to the employees working on the contract.

(g) *Contract reconfigurations.* As a result of changing priorities, mission requirements, or other considerations, contracting agencies may decide to restructure their support contracts. Thus, specific contract requirements from one contract may be broken out and placed in a new contract or combined with requirements from other contracts into a consolidated contract. However, the protections afforded service employees under section 4(c) are not lost or negated because of such contract reconfigurations, and the predecessor contractor's collectively bargained rates follow identifiable contract work requirements into new or consolidated contracts.

(h) *Interruption of contract services.* Other than the requirement that substantially the same services be furnished, the requirement for arm's-length negotiations and the provision for variance hearings, the Act does not impose any other restrictions on the application of section 4(c). Thus, the application of section 4(c) is not negated because the contracting authority may

change and the successor contract is awarded by a different contracting agency. Also, there is no requirement that the successor contract commence immediately after the completion or termination of the predecessor contract, and an interruption of contract services does not negate the application of section 4(c). Contract services may be interrupted because the Government facility is temporarily closed for renovation, or because a predecessor defaulted on the contract or because a bid protest has halted a contract award requiring the Government to perform the services with its own employees. In all such cases, the requirements of section 4(c) would apply to any successor contract which may be awarded after the temporary interruption or hiatus. The basic principle in all of the preceding examples is that successorship provisions of section 4(c) apply to the full term successor contract. Therefore, temporary interim contracts, which allow a contracting agency sufficient time to solicit bids for a full term contract, also do not negate the application of section 4(c) to a full term successor contract.

(i) *Place of performance.* The successorship requirements of section 4(c) apply to all contracts for substantially the same services as were furnished under the predecessor contract. The Act does not distinguish between successor contracts performed at the same Government installation and successor contracts performed at the location of a successful bidder, and the requirements of section 4(c) apply equally to both types of contracts.

(j) *Interpretation of wage and fringe benefit provisions of wage determinations issued pursuant to sections 2(a) and 4(c).* Wage determinations which are issued for successor contracts subject to section 4(c) are intended to accurately reflect the rates and fringe benefits set forth in the predecessor's collective bargaining agreement. However, failure to include in the wage determination any job classification, wage rate, or fringe benefit encompassed in the collective bargaining agreement does not relieve the successor contractor of the statutory requirement to comply at a minimum with the terms of the collective bargaining agreement insofar as wages and fringe benefits are concerned. Since the successor's obligations are governed by the terms of the collective bargaining agreement, any interpretation of the wage and fringe benefit provisions of the wage determination must be based on the intent of the parties to the collective bargaining agreement to the extent that such interpretation is not violative of law. Therefore, some of the principles discussed in §§ 4.170–4.177 regarding specific interpretations of the fringe benefit provisions of prevailing wage determinations may not be applicable to wage determinations issued pursuant to section 4(c). As provided in section 2(a)(2), a contractor may satisfy its fringe benefit obligations under any wage determination "by furnishing any equivalent combinations of fringe benefits or by making equivalent or differential payments in cash" in accordance with the rules and regulations set forth in § 4.177 of this Subpart.

(k) No provision of this section shall be construed as permitting a successor contractor to pay its employees less than the wages and fringe benefits to which such employees would have been entitled under the predecessor contractor's collective bargaining agreement. Thus, some of the principles discussed in § 4.167 may not be applicable in section 4(c) successorship situations. For example, if the predecessor contractor's collective bargaining agreement did not provide for the deduction from employees' wages of the reasonable cost or fair value for providing board, lodging, or other facilities, then the successor also may not include such costs as part of the applicable minimum wage specified in the wage determination. Likewise, unless the predecessor contractor's agreement allowed a tip credit (§ 4.6(q)), the successor contractor may not take a tip credit toward satisfying the minimum wage requirements under sections 2(a)(1) and 4(c).

Compliance with Compensation Standards

§ 4.164 [Reserved]

§ 4.165 Wage payments and fringe benefits—in general.

(a)(1) Monetary wages specified under the Act shall be paid to the employees to whom they are due promptly and in no event later than one pay period following the end of the pay period in which they are earned. No deduction, rebate, or refund is permitted, except as hereinafter stated. The same rules apply to cash payments authorized to be paid with the statutory monetary wages as equivalents of determined fringe benefits (see § 4.177).

(2) The Act makes no distinction, with respect to its compensation provisions, between temporary, part-time, and full-time employees, and the wage and fringe benefit determinations apply, in the absence of an express limitation, equally to all such service employees engaged in work subject to the Act's provisions. (See § 4.176 regarding fringe benefit payments to temporary and part-time employees.)

(b) The Act does not prescribe the length of the pay period. However, for purposes of administration of the Act, and to conform with practices required under other statutes that may be applicable to the employment, wages and hours worked must be calculated on the basis of a fixed and regularly recurring workweek of seven consecutive 24-hour workday periods, and the records must be kept on this basis. It is appropriate to use this workweek for the pay period. A bi-weekly or semimonthly, pay period may, however, be used if advance notification is given to the affected employees. A pay period longer than semi-monthly is not recognized as appropriate for service employees and wage payments at greater intervals will not be considered as constituting proper payments in compliance with the Act.

(c) The prevailing rate established by a wage determination under the Act is a minimum rate. A contractor is not precluded from paying wage rates in excess of those determined to be prevailing in the particular locality. Nor does the Act affect or require the changing of any provisions of union contracts specifying higher monetary wages or fringe benefits than those contained in an applicable determination. However, if an applicable wage determination contains a wage or fringe benefit provision for a class of service employees which is higher than that specified in an existing union agreement, the determination's provision must be observed for any work performed on a contract subject to that determination.

§ 4.166 Wage payments—unit of payment.

The standard by which monetary wage payments are measured under the Act is the wage rate per hour. An hourly wage rate is not, however, the only unit for payment of wages that may be used for employees subject to the Act. Employees may be paid on a daily, weekly, or other time basis, or by piece or task rates, so long as the measure of work and compensation used, when translated or reduced by computation to an hourly basis each workweek, will provide a rate per hour that will fulfill the statutory requirement. Whatever system of payment is used, however, must ensure that each hour of work in performance of the contract is compensated at not less than the required minimum rate. Failure to pay for certain hours at the required rate cannot be transformed into compliance

with the Act by reallocating portions of payments made for other hours which are in excess of the specified minimum.

§ 4.167 Wage payments—Medium of payment.

The wage payment requirements under the Act for monetary wages specified under its provisions will be satisfied by the timely payment of such wages to the employee either in cash or negotiable instrument payable at par. Such payment must be made finally and unconditionally and "free and clear." Scrip, tokens, credit cards, "dope checks", coupons, salvage material, and similar devices which permit the employer to retain and prevent the employee from acquiring control of money due for the work until some time after the pay day for the period in which it was earned, are not proper mediums of payment under the Act. If, as is permissible, they are used as a convenient device for measuring earnings or allowable deductions during a single pay period, the employee cannot be charged with the loss or destruction of any of them and the employer may not, because the employee has not actually redeemed them, credit itself with any which remain outstanding on the pay day in determining whether it has met the requirements of the Act. The employer may not include the cost of fringe benefits or equivalents furnished as required under section 2(a)(2) of the Act, as a credit toward the monetary wages it is required to pay under section 2(a)(1) or 2(b) of the Act (see § 4.170). However, the employer may generally include, as a part of the applicable minimum wage which it is required to pay under the Act, the reasonable cost or fair value, as determined by the Administrator, of furnishing an employee with "board, lodging, or other facilities," as defined in Part 531 of this title, in situations where such facilities are customarily furnished to employees, for the convenience of the employees, not primarily for the benefit of the employer, and the employees' acceptance of them is voluntary and uncoerced. The determination of reasonable cost or fair value will be in accordance with the Administrator's regulations under the Fair Labor Standards Act, contained in such Part 531 of this title. While employment on contracts subject to the Act would not ordinarily involve situations in which service employees would receive tips from third persons, the treatment of tips for wage purposes in the situations where this may occur should be understood. For purposes of this Act, tips may generally be included in wages in accordance with the regulations under the Fair Labor Standards Act, contained in Part 531 (See also § 4.6(q).) The general rule under that Act is that the amount paid a tipped employee by his employer is deemed to be increased on account of tips by an amount determined by the employer, not in excess of 40 percent of the minimum wage applicable under section 6 of that Act, effective January 1, 1980. Thus, the tip credit taken by an employer subject to the Service Contract Act may not exceed $1.34 per hour after December 31, 1980. (See § 4.163(k) for exceptions in section 4(c) situations.) In no event shall the sum credited be in excess of the value of tips actually received by the employee.

§ 4.168 Wage payments—deductions from wages paid.

(a) The wage requirements of the Act will not be met where unauthorized deductions, rebates, or refunds reduce the wage payment made to the employee below the minimum amounts required under the provisions of the Act and the regulations thereunder, or where the employee fails to receive such amounts free and clear because he "kicks back" directly or indirectly to the employer or to another person for the employer's benefit the whole or part of the wage delivered to him. Authorized deductions are limited to those required by law, such as taxes payable by employees required to be withheld by the employer and amounts due employees which the employer is required by court order to pay to another; deductions allowable for the reasonable cost or fair value of board, lodging, and facilities furnished as set forth in § 4.167; and deductions of amounts which are authorized to be paid to third persons for the employee's account and benefit pursuant to his voluntary assignment or order or a collective bargaining agreement with bona fide representatives of employees which is applicable to the employer. Deductions for amounts paid to third persons on the employee's account which are not so authorized or are contrary to law or from which the contractor, subcontractor or any affiliated person derives any payment, rebate, commission, profit, or benefit directly or indirectly, may not be made if they cut into the wage required to be paid under the Act. The principles applied in determining the permissibility of deductions for payments made to third persons are explained in more detail in §§ 531.38 - 531.40 of this title.

(b) *Cost of maintaining and furnishing uniforms.* If the employees are required to wear uniforms either by the employer, the nature of the job, or the Government contract, then the cost of furnishing and maintaining the uniforms is deemed to be a business expense of the employer and such cost may not be borne by the employees to the extent that to do so would reduce the employee's compensation below that required by the Act. Since it may be administratively difficult and burdensome for employers to determine the actual cost incurred by all employees for maintaining their own uniforms, payment in accordance with the following standards is considered sufficient for the contractor to satisfy its wage obligations under the Act:

(1) The contractor furnishes all employees with an adequate number of uniforms without cost to the employees or reimburses employees for the actual cost of the uniforms. (2) Where uniform cleaning and maintenance is made the responsibility of the employee, the contractor reimburses all employees for such cleaning and maintenance at the rate of $3.10 a week (or 62 cents a day) as of January 1, 1980 and of $3.35 a week (or 67 cents a day) as of January 1, 1981. Since employees are generally required to wear a clean uniform each day regardless of the number of hours the employee may work that day, the preceding weekly amounts generally may be reduced to the stated daily equivalent but not to an hourly equivalent. A contractor may reimburse employees at a different rate if the contractor furnishes affirmative proof as to the actual cost to the employees of maintaining their uniforms or if a different rate is provided for in a bona fide collective bargaining agreement covering the employees working on the contract.

(c) Stipends, allowances or other payments made directly to an employee by a party other than the employer (such as a stipend for training paid by the Veterans Administration) are not part of "wages" and the employer may not claim credit for such payments toward its monetary obligations under the Act.

§ 4.169 Wage payments—work subject to different rates.

If an employee during a workweek works in different capacities in the performance of the contract and two or more rates of compensation under section 2 of the Act are applicable to the classes of work which he or she performs, the employee must be paid the highest of such rates for all hours worked in the workweek unless it appears from the employer's records or other affirmative proof which of such hours were included in the periods spent in each class of work. The rule is the same where such an employee is

employed for a portion of the workweek in work not subject to the Act, for which compensation at a lower rate would be proper if the employer by his records or other affirmative proof, segregated the worktime thus spent.

§ 4.170 Furnishing fringe benefits or equivalents.

(a) *General.* Fringe benefits required under the Act shall be furnished, separate from and in addition to the specified monetary wages, by the contractor or subcontractor to the employees engaged in performance of the contract, as specified in the determination of the Secretary or his authorized representative and prescribed in the contract documents. Section 2(a)(2) of the Act provides that the obligation to furnish the specified benefits "may be discharged by furnishing any equivalent combinations of fringe benefits or by making equivalent or differential payments in cash under rules and regulations established by the Secretary." The governing rules and regulations for furnishing such equivalents are set forth in § 4.177 of this Subpart. An employer cannot offset an amount of monetary wages paid in excess of the wages required under the determination in order to satisfy his fringe benefit obligations under the Act, and must keep appropriate records separately showing amounts paid for wages and amounts paid for fringe benefits.

(b) *Meeting the requirement, in general.* The various fringe benefits listed in the Act and in § 4.162(a) are illustrative of those which may be found to be prevailing for service employees in a particular locality. The benefits which an employer will be required to furnish employees performing on a particular contract will be specified in the contract documents. A contractor may dispose of certain of the fringe benefit obligations which may be required by an applicable fringe benefit determination, such as pension, retirement, or health insurance, by irrevocably paying the specified contributions for fringe benefits to an independent trustee or other third person pursuant to an existing "bona fide" fund, plan, or program on behalf of employees engaged in work subject to the Act's provisions. Where such a plan or fund does not exist, a contractor must discharge his obligation relating to fringe benefits by furnishing either an equivalent combination of "bona fide" fringe benefits or by making equivalent payments in cash to the employee, in accordance with the regulations in § 4.177.

§ 4.171 "Bona fide" fringe benefits.

(a) To be considered a "bona fide" fringe benefit for purposes of the Act, a fringe benefit plan, fund, or program must constitute a legally enforceable obligation which meets the following criteria:

(1) The provisions of a plan, fund, or program adopted by the contractor, or by contract as a result of collective bargaining, must be specified in writing, and must be communicated in writing to the affected employees. Contributions must be made pursuant to the terms of such plan, fund, or program. The plan may be either contractor-financed or a joint contractor-employee contributory plan. However, any contributions made by employees must be voluntary, and if such contributions are made through payroll deductions, such deductions must be made in accordance with § 4.166. No contribution toward fringe benefits made by the employees themselves, or fringe benefits provided from monies deducted from the employee's wages may be included or used by an employer in satisfying any part of any fringe benefit obligation under the Act.

(2) The primary purpose of the plan must be to provide systematically for the payment of benefits to employees on account of death, disability, advanced age, retirement, illness, medical expenses, hospitalization, supplemental unemployment benefits, and the like.

(3) The plan must contain a definite formula for determining the amount to be contributed by the contractor and a definite formula for determining the benefits for each of the employees participating in the plan or the benefits provided under the plan must be specified or definitely determinable on an actuarial basis.

(4) Except as provided in paragraph (b), the contractor's contributions must be paid irrevocably to a trustee or other third person pursuant to an insurance agreement, trust or other funded arrangement. The trustee must assume the usual fiduciary responsibilities imposed upon trustees by applicable law. The trust or fund must be set up in such a way that in no event will the contractor be able to recapture any of the contributions paid in nor in any way divert the funds to its own use or benefit.

(5) Benefit plans or trusts of the types listed in 26 U.S.C. 401(a) must be approved by the Internal Revenue Service as satisfying the requirements of section 401(a) of the Internal Revenue Code and meet the requirements of the Employee Retirement Income Security Act of 1974, 29 U.S.C. 1001, et seq. and regulations thereunder.

(6) It should also be noted that such plans must meet certain other criteria as set forth in § 778.215 of 29 CFR 778 in order for any contributions to be excluded from computation of the regular rate of pay for overtime purposes under the Fair Labor Standards Act (§§ 4.180–4.182).

(b)(1) Unfunded self-insured fringe benefit plans (other than fringe benefits such as vacations and holidays which by their nature are normally unfunded) under which contractors allegedly make "out of pocket" payments to provide benefits as expenses may arise, rather than making irrevocable contributions to a trust or other funded arrangement as required under § 4.171(a)(4), are not considered "bona fide" plans or equivalent benefits for purposes of the Act.

(2) A contractor may request approval by the Administrator of an unfunded self-insured plan in order to allow credit for payments under the plan to meet the fringe benefit requirements of the Act. In considering whether such a plan is bona fide, the Administrator will consider such factors as whether it could be reasonably anticipated to provide the prescribed benefits, whether it represents a legally enforceable commitment to provide such benefits, whether it is carried out under a financially responsible program, and whether the plan has been communicated to the employees in writing. The Administrator in his/her discretion may direct that assets be set aside and preserved in an escrow account or that other protections be afforded to meet the plan's future obligation.

(c) No benefit required by any other Federal law or by any State or local law, such as unemployment compensation, workers' compensation, or social security, is a "bona fide" fringe benefit for purposes of the Act.

(d) The furnishing to an employee of board, lodging, or other facilities under the circumstances described in § 4.167, the cost or value of which is creditable toward the monetary wages specified under the Act, may not be used to offset any fringe benefit obligations, as such items and facilities are not fringe benefits or equivalent benefits for purposes of the Act.

(e) The furnishing of facilities which are primarily for the benefit or convenience of the contractor or the cost of which is properly a business expense of the contractor is not the furnishing of a "bona fide" fringe benefit or equivalent benefit or the payment of wages. This would be true of such items,

for example, as relocation expenses, travel and transportation expenses incident to employment, incentive or suggestion awards, and recruitment bonuses, as well as tools and other materials and services incidental to the employer's performance of the contract and the carrying on of his business, and the cost of furnishing, laundering, and maintaining uniforms and/or related apparel or equipment where employees are required by the contractor, by the contractor's Government contract, by law, or by the nature of the work to wear such items. See also § 4.168.

(f) Contributions by contractors for such items as social functions or parties for employees, flowers, cards, or gifts on employee birthdays, anniversaries, etc. (sunshine funds), employee rest or recreation rooms, paid coffee breaks, magazine subscriptions, and professional association or club dues, may not be used to offset any wages or fringe benefits specified in the contract, as such items are not "bona fide" wages or fringe benefits or equivalent benefits for purposes of the Act.

§ 4.172 Meeting requirements for particular fringe benefits—in general.

Where a fringe benefit determination specifies the amount of the employer's contribution to provide the benefit, the amount specified is the actual minimum cash amount that must be provided by the employer for the employee. No deduction from the specified amount may be made to cover any administrative costs which may be incurred by the contractor in providing the benefits, as such costs are properly a business expense of the employer. If prevailing fringe benefits for insurance or retirement are determined in a stated amount, and the employer provides such benefits through contribution in a lesser amount, he will be required to furnish the employee with the difference between the amount stated in the determination and the actual cost of the benefits which he provides. Unless otherwise specified in the particular wage determination, such as one reflecting collectively bargained fringe benefit requirements, issued pursuant to Section 4(c) of the Act, every employee performing on a covered contract must be furnished the fringe benefits required by that determination for all hours spent working on that contract up to a maximum of 40 hours per week and 2,080 (i.e., 52 weeks of 40 hours each) per year, as these are the typical number of nonovertime hours of work in a week, and in a year, respectively. Since the Act's fringe benefit requirements are applicable on a contract-by-contract basis, employees performing on more than one contract subject to the Act must be furnished the full amount of fringe benefits to which they are entitled under each contract and applicable wage determination. Where a fringe benefit determination has been made requiring employer contributions for a specified fringe benefit in a stated amount per hour, a contractor employing employees part of the time on contract work and part of the time on other work, may only credit against the hourly amount required for the hours spent on the contract work, the corresponding proportionate part of a weekly, monthly, or other amount contributed by him for such fringe benefits or equivalent benefits for such employees. If , for example, the determination requires health and welfare benefits in the amount of 30 cents an hour and the employer provides hospitalization insurance for such employees at a cost of $10.00 a week, the employer may credit 25 cents an hour ($10.00 ÷ 40) toward his fringe benefit obligation for such employees. If an employee works 25 hours on the contract work and 15 hours on other work, the employer cannot allocate the entire $10.00 to the 25 hours spent on contract work and take credit for 30 cents per hour in that manner, but must spread the cost over the full forty hours.

§ 4.173 Meeting requirements for vacation fringe benefits.

(a) *Determining length of service for vacation eligibility.* It has been found that for many types of service contracts performed at Federal facilities a successor contractor will utilize the employees of the previous contractor in the performance of the contract. The employees typically work at the same location providing the same services to the same clientele over a period of years, with periodic, often annual, changes of employer. The incumbent contractor, when bidding on a contract, must consider his liability for vacation benefits for those workers in his employ. If prospective contractors who plan to employ the same personnel were not required to furnish these employees with the same prevailing vacation benefits, it would place the incumbent contractor at a distinct competitive disadvantage as well as denying such employees entitlement to prevailing vacation benefits.

(1) Accordingly, most vacation fringe benefit determinations issued under the Act require an employer to furnish to employees working on the contract a specified amount of paid vacation upon completion of a specified length of service with a contractor or successor. This requirement may be stated in the determination, for example, as "one week paid vacation after one year of service with a contractor or successor" or by a determination which calls for "one week's paid vacation after one year of service". Unless specified otherwise in an applicable fringe benefit determination, an employer must take the following two factors into consideration in determining when an employee has completed the required length of service to be eligible for vacation benefits:

(i) The total length of time spent by an employee in any capacity in the continuous service of the present (successor) contractor, including both the time spent in performing on regular commercial work and the time spent in performing on the Government contract itself, and

(ii) Where applicable, the total length of time spent in any capacity as an employee in the continuous service of any predecessor contractor(s) who carried out similar contract functions at the same Federal facility.

(2) The application of these principles may be illustrated by the example given above of a fringe benefit determination calling for "one week paid vacation after one year of service with a contractor or successor". In that example, if a contractor has an employee who has worked for him for 18 months on regular commercial work and only for 6 months on a Government service contract, that employee would be eligible for the one week vacation since his total service with the employer adds up to more than 1 year. Similarly, if a contractor has an employee who worked for 16 months under a janitorial service contract at a particular Federal base for two different predecessor contractors, and only 8 months with the present employer, that employee would also be considered as meeting the "after one year of service" test and would thus be eligible for the specified vacation.

(3) The "contractor or successor" requirement set forth in paragraph (a)(1) of this section is not affected by the fact that a different contracting agency may have contracted for the services previously or by the agency's dividing and/or combining the contract services. However, prior service as a Federal employee is not counted toward an employee's eligibility for vacation benefits under fringe benefit determinations issued pursuant to the Act.

(4) Some fringe benefit determinations may require an employer to furnish a specified amount of paid vacation upon completion of a specified length of service *with the employer*, for example, "one week paid vacation after one year

of service with an employer". Under such determinations, only the time spent in performing on commercial work and on Government contract work in the employment of the present contractor need be considered in computing the length of service for purposes of determining vacation eligibility.

(5) Whether or not the predecessor contract(s) was covered by a fringe benefit determination is immaterial in determining whether the one year of service test has been met. This qualification refers to work performed before, as well as after, an applicable fringe benefit determination is incorporated into a contract. Also, the fact that the labor standards in predecessor service contract(s) were only those required under the Fair Labor Standards Act has no effect on the applicable fringe benefit determination contained in a current contract.

(b) Eligibility requirement—*continuous service.* Under the principles set forth above, if an employee's total length of service adds up to at least one year, the employee is eligible vacation with pay. However, such service must have been rendered continuously for a period of not less than one year for vacation eligibility. The term "continuous service" does not require the combination of two entirely separate periods of employment. Whether or not there is a break in the continuity of service so as to make an employee ineligible for a vacation benefit is dependent upon all the facts in the particular case. No fixed time period has been established for determining whether an employee has a break in service. Rather, as illustrated below, the reason(s) for an employee's absence from work is the primary factor in determining whether a break in service occurred.

(1) In cases where employees have been granted leave with or without pay by their employer, or are otherwise absent with permission for such reasons as sickness or injury, or otherwise perform no work on the contract because of reasons beyond their control, there would not be a break in service. Likewise, the absence from work for a few days, with or without notice, does not constitute a break in service, without a formal termination of employment. The following specific examples are illustrative situations where it has been determined that a break in service did not occur:

(i) An employee absent for five months due to illness but employed continuously for three years.

(ii) A strike after which employees returned to work.

(iii) An interim period of three months between contracts caused by delays in the procurement process during which time personnel hired directly by the Government performed the necessary services. However, the successor contractor in this case was not held liable for vacation benefits for those employees who had anniversary dates of employment during the interim period because no employment relationship existed during such period.

(iv) A mess hall closed three months for renovation. Contractor employees were considered to be on temporary layoff during the renovation period and did not have a break in service.

(2) Where an employee quits, is fired for cause, or is otherwise terminated (except for temporary layoffs), there would be a break in service even if the employee were rehired at a later date. However, an employee may not be discharged and rehired as a subterfuge to evade the vacation requirement.

(c) *Vesting and payment of vacation benefits.*

(1) In the example given in paragraph (a)(1) of this section of a fringe benefit determination calling for "one week paid vacation after 1 year of service with a contractor or successor", an employee who renders the "one year of service" continuously becomes eligible for the "one week paid vacation" (i.e., 40 hours of paid vacation, unless otherwise specified in an applicable wage determination) upon his anniversary date of employment and upon each succeeding anniversary date thereafter. However, there is no accrual or vesting of vacation eligibility before the employee's anniversary date of employment, and no segment of time smaller than one year need be considered in computing the employer's vacation liability, unless specifically provided for in a particular fringe benefit determination. For example, an employee who has worked 13 months for an employer subject to such stipulations and is separated without receiving any vacation benefit is entitled only to one full week's (40 hours) paid vacation. He would not be entitled to the additional fraction of one-twelfth of one week's paid vacation for the month he worked in the second year unless otherwise stated in the applicable wage determination. An employee who has not met the "one year of service" requirement would not be entitled to any portion of the "one week paid vacation".

(2) Eligibility for vacation benefits specified in a particular wage determination is based on completion of the stated period of past service. The individual employee's anniversary date (and each annual anniversary date of employment thereafter) is the reference point for vesting of vacation eligibility, but does not necessarily mean that the employee must be given the vacation or paid for it on the date on which it is vested. The vacation may be scheduled according to a reasonable plan mutually agreed to and communicated to the employees. A "reasonable" plan may be interpreted to be a plan which allows the employer to maintain uninterrupted contract services but allows the employee some choice, by seniority or similar factor, in the scheduling of vacations. However, the required vacation must be given or payment made in lieu thereof before the next anniversary date, before completion of the current contract, or before the employee terminates employment, whichever occurs first.

(d) *Contractor liability for vacation benefits.*

(1) The liability for an employee's vacation is not prorated among contractors unless specifically provided for under a particular fringe benefit determination. The contractor by whom a person is employed at the time the vacation right vests, i.e., on the employee's anniversary date of employment, must provide the full benefit required by the determination which is applicable on that date. For example, an employee, who had not previously performed similar contract work at the same facility, was first hired by a predecessor contractor on July 1, 1978. July 1 is the employee's anniversary date. The predecessor's contract ended June 30, 1979, but the employee continued working on the contract for the successor. Since the employee did not have an anniversary date of employment during the predecessor's contract, the predecessor would not have any vacation liability with respect to this employee. However, on July 1, 1979 the employee's entitlement to the full vacation benefit vested and the successor contractor would be liable for the full amount of the employee's vacation benefit.

(2) The requirements for furnishing data relative to employee hiring dates in situations where such employees worked for "predecessor" contractors are set forth in § 4.6. However, a contractor is not relieved from any obligation to provide vacation benefits because of any difficulty in obtaining such data.

(e) *Rate applicable to computation of vacation benefits.*

(1) If an applicable wage determination requires that the hourly wage rate be increased during the period of the contract, the rate

applicable to the computation of any required vacation benefits is the hourly rate in effect in the workweek in which the actual paid vacation is provided or the equivalent is paid, as the case may be, and would not be the average of the two hourly rates. This rule would not apply to situations where a wage determination specified the method of computation and the rate to be used.

(2) As set forth in § 4.172, unless specified otherwise in an applicable fringe benefit determination, service employees must be furnished the required amount of fringe benefits for all hours paid for up to a maximum of 40 hours per week and 2,080 hours per year. Thus, an employee on paid vacation leave would accrue and must be compensated for any other applicable fringe benefits specified in the fringe benefit determination, and if any of the other benefits are furnished in the form of cash equivalents, such equivalents must be included with the applicable hourly wage rate in computing vacation benefits or a cash equivalent therefor. The rules and regulations for computing cash equivalents are set forth in § 4.177.

§ 4.174 Meeting requirements for holiday fringe benefits.

(a) *Determining eligibility for holiday benefits—in general.*

(1) Most fringe benefit determinations list a specific number of named holidays for which payment is required. Unless specified otherwise in an applicable determination, an employee who performs any work during the workweek in which a named holiday occurs is entitled to the holiday benefit, regardless of whether the named holiday falls on a Sunday, another day during the workweek on which the employee is not normally scheduled to work, or on the employee's day off. In addition, holiday benefits cannot be denied because the employee has not been employed by the contractor for a designated period prior to the named holiday or because the employee did not work the day before or the day after the holiday, unless such qualifications are specifically included in the determination.

(2) An employee who performs no work during the workweek in which a named holiday occurs is generally not entitled to the holiday benefit. However, an employee who performs no work during the workweek because he is on paid vacation or sick leave in accordance with the terms of the applicable fringe benefit determination is entitled to holiday pay or another day off with pay to substitute for the named holiday. In addition, an employee who performs no work during the workweek because of a layoff does not forfeit his entitlement to holiday benefits if the layoff is merely a subterfuge by the contractor to avoid the payment of such benefits.

(3) The obligation to furnish holiday pay for the named holiday may be discharged if the contractor furnishes another day off with pay in accordance with a plan communicated to the employees involved. However, in such instances the holidays named in the fringe benefit determination are the reference points for determining whether an employee is eligible to receive holiday benefits. In other words, if an employee worked in a workweek in which a listed holiday occurred, the employee is entitled to pay for that holiday. Some determinations may provide for a specific number of holidays without naming them. In such instances the contractor is free to select the holidays to be taken in accordance with a plan communicated to the employees involved, and the agreed-upon holidays are the reference points for determining whether an employee is eligible to receive holiday benefits.

(b) *Determining eligibility for holiday benefits—newly hired employees.* The contractor generally is not required to compensate a newly hired employee for the holiday occurring prior to the hiring of the employee. However, in the one situation where a named holiday falls in the first week of a contract, all employees who work during the first week would be entitled to holiday pay for that day. For example, if a contract to provide services for the period January 1 through December 31 contained a fringe benefit determination listing New Year's Day as a named holiday, and if New Year's Day were officially celebrated on January 2 in the year in question because January 1 fell on a Sunday, employees hired to begin work on January 3 would be entitled to holiday pay for New Year's Day.

(c) *Payment of holiday benefits.*

(1) A full-time employee who is eligible to receive payment for a named holiday must receive a full day's pay up to 8 hours unless a different standard is used in the fringe benefit determination, such as one reflecting collectively bargained holiday benefit requirements issued pursuant to Section 4(c) of the Act or a different historic practice in an industry or locality. Thus, for example, a contractor must furnish 7 hours of holiday pay to a full-time employee whose scheduled workday consists of 7 hours. An employee whose scheduled workday is 10 hours would be entitled to a holiday payment of 8 hours unless a different standard is used in the determination. As discussed in § 4.172, such holiday pay must include the full amount of other fringe benefits to which the employee is entitled.

(2) Unless a different standard is used in the wage determination, a full-time employee who works on the day designated as a holiday must be paid, in addition to the amount he ordinarily would be entitled to for that day's work, the cash equivalent of a full-day's pay up to 8 hours or be furnished another day off with pay.

(3) If the fringe benefit determination lists the employee's birthday as a paid holiday and that day coincides with another listed holiday, the contractor may discharge his obligation to furnish payment for the second holiday by either substituting another day off with pay with the consent of the employee, furnishing holiday benefits of an extra day's pay, or if the employee works on the holiday in question, furnish holiday benefits of two extra days' pay.

(4) As stated in paragraph (a)(1) of this section, an employee's entitlement to holiday pay fully vests by working in the workweek in which the named holiday occurs. Accordingly, any employee who is terminated before receiving the full amount of holiday benefits due him must be paid the holiday benefits as a final cash payment.

(5) The rules and regulations for furnishing holiday pay to temporary and part-time employees are discussed in § 4.176.

(6) The rules and regulations for furnishing equivalent fringe benefits or cash equivalents in lieu of holiday pay are discussed in § 4.177.

§ 4.175 Meeting requirements for health, welfare, and/or pension benefits.

(a) *Determining the required amount of benefits.*

(1) Most fringe benefit determinations containing health and welfare and/or pension requirements specify a fixed payment per hour on behalf of each service employee. These payments are usually also stated as weekly or monthly amounts. As set forth in § 4.172, unless specified otherwise in the applicable determination such payments are due for all hours paid for, including paid vacation, sick leave, and holiday hours, up to a maximum of 40 hours per week and 2,080 hours per year on each contract. The application of this rule can be illustrated by the following examples:

(i) An employee who works 4 days a week, 10 hours a day is entitled to 40 hours of health and welfare and/or pension fringe benefits. If an employee works 3 days a week, 12 hours a day, then such employee is entitled to 36 hours of these benefits.

(ii) An employee who works 32 hours in a workweek and also receives 8 hours of holiday pay is entitled to the maximum of 40 hours of health and welfare and/or pension payments in that workweek. If the employee works more than 32 hours and also received 8 hours of holiday pay, the employee is still only entitled to the maximum of 40 hours of health and welfare and/or pension payments.

(iii) If an employee is off work for two weeks on vacation and received 80 hours of vacation pay, the employee must also receive payment for the 80 hours of health and welfare and/or pension benefits which accrue during the vacation period.

(iv) An employee entitled to two weeks paid vacation who instead works the full 52 weeks in the year, receiving the full 2,080 hours worth of health and welfare and/or pension benefits, would be due an extra 80 hours of vacation pay in lieu of actually taking the vacation; however, such an employee would not be entitled to have an additional 80 hours of health and welfare and/or pension benefits included in his vacation pay.

(2) A fringe benefit determination calling for a specified benefit such as health insurance contemplates a fixed and definite contribution to a "bona fide" plan (as that term is defined in § 4.171) by an employer on behalf of each employee, based on the monetary cost to the employer rather than on the level of benefits provided. Therefore, in determining compliance with an applicable fringe benefit determination, the amount of the employer's contribution on behalf of each individual employee governs. Thus, as set forth in § 4.172, if a determination should require a contribution to a plan providing a specified fringe benefit and that benefit can be obtained for less than the required contribution, it would be necessary for the employer to make up the difference in cash to the employee, or furnish equivalent benefits, or a combination thereof. The following illustrates the application of this principle: A fringe benefit determination requires a rate of $36.40 per month employee for a health insurance plan. The employer obtains the health insurance coverage specified at a rate of $20.45 per month for a single employee, $30.60 for an employee with spouse, and $40.90 for an employee with a family. The employer is required to make up the difference in cash or equivalent benefits to the first two classes of employees in order to satisfy the determination, notwithstanding that coverage for an employee would be automatically changed by the employer if the employee's status should change (e.g., single to married) and notwithstanding that the employer's average contribution per employee may be equal to or in excess of $36.40 per month.

(3) In determining eligibility for benefits under certain wage determinations containing hours or length of service requirements (such as having to work 40 hours in the preceding month), the contractor must take into account time spent by employees on commercial work as well as time spent on the Government contract.

(b) Some fringe benefit determinations specifically provide for health and welfare and/or pension benefits in terms of average cost. Under this concept, a contractor's contributions per employee to a "bona fide" fringe benefit plan are permitted to vary depending upon the individual employee's marital or employment status. However, the firm's total contributions for all service employees enrolled in the plan must average at least the fringe benefit determination requirement per hour per service employee. If the contractor's contributions average less than the amount required by the determination, then the firm must make up the deficiency by making cash equivalent payments or equivalent fringe benefit payments to all service employees in the plan who worked on the contract during the payment period. Where such deficiencies are made up by means of cash equivalent payments, the payments must be made promptly on the following payday. The following illustrates the application of this principle: The determination requires an average contribution of $0.84 an hour. The contractor makes payments to bona fide fringe benefit plans on a monthly basis. During a month the firm contributes $15,000 for the service employees employed on the contract who are enrolled in the plan, and a total of 20,000 man-hours had been worked by all service employees during the month. Accordingly, the firm's average cost would have been $15,000 ÷ 20,000 hours or $0.75 per hour, resulting in a deficiency of $0.09 per hour. Therefore, the contractor owes the service employees in the plan who worked on the contract during the month an additional $0.09 an hour for each hour worked on the contract, payable on the next regular payday for wages. Unless otherwise provided in the applicable wage determination, contributions made by the employer for non-service employees may not be credited toward meeting Service Contract Act fringe benefit obligations.

(c) *Employees not enrolled in or excluded from participating in fringe benefit plans.*

(1) Some health and welfare and pension plans contain eligibility exclusions for certain employees. For example, temporary and part-time employees may be excluded from participating in such plans. Also, employees receiving benefits through participation in plans of an employer other than the Government contractor or by a spouse's employer may be prevented from receiving benefits from the contractor's plan because of prohibitions against "double coverage". While such exclusions do not invalidate an otherwise bona fide insurance plan, employer contributions to such a plan cannot be considered to be made on behalf of the excluded employees. Accordingly, under fringe benefit determination requirements as described in the preceding subparagraph (a)(2), the employees excluded from participation in the health insurance plan must be furnished equivalent bona fide fringe benefits or be paid a cash equivalent payment during the period that they are not eligible to participate in the plan.

(2) It is not required that all employees participating in a fringe benefit plan be entitled to receive benefits from that plan at all times. For example, under some plans, newly hired employees who are eligible to participate in an insurance plan from their first day of employment may be prohibited from receiving benefits from the plan during a specified "waiting period". Contributions made on behalf of such employees would serve to discharge the contractor's obligation to furnish the fringe benefit. However, if no contributions are made for such employees, no credit may be taken toward the contractor's fringe benefit obligations.

(d) *Payment of health and welfare and pension benefits.*

(1) Health and welfare and/or pension payments to a "bona fide" insurance plan or trust program may be made on a periodic payment basis which is not less often than quarterly. However, where fringe benefit determinations contemplate a fixed contribution on behalf of each employee, and a contractor exercises his option to make hourly cash equivalent or differential payments, such payments must be made promptly on the regular payday for wages. (See § 4.165.)

(2) The rules and regulations for furnishing health and welfare and pension benefits to temporary and part-time employees are discussed in § 4.176.

(3) The rules and regulations for furnishing equivalent fringe benefits or cash equivalents in lieu of health and welfare and pension benefits are discussed in § 4.177.

§ 4.176 Payment of fringe benefits to temporary and part-time employees.

(a) As set forth in § 4.165(a)(2), the Act makes no distinction, with respect to its compensation provisions, between temporary, part-time, and full-time employees. Accordingly, in the absence of express limitations, the provisions of an applicable fringe benefit determination apply to all temporary and part-time service employees engaged in covered work. However, in general, such temporary and part-time employees are only entitled to an amount of the fringe benefits specified in an applicable determination which is proportionate to the amount of time spent in covered work. The application of these principles may be illustrated by the following examples:

(1) Assuming the paid vacation for full-time employees is one week of 40 hours, a part-time employee working a regularly scheduled workweek of 16 hours is entitled to 16 hours of paid vacation time or its equivalent each year, if all other qualifications are met.

(2) In the case of holidays, a part-time employee working a regularly scheduled workweek of 16 hours would be entitled to two-fifths of the holiday pay due full-time employees. It is immaterial whether or not the holiday falls on a normal workday of the part-time employee. A temporary or casual employee hired during a holiday week, but after the holiday, would be due no holiday benefits for that week.

(3) Holiday or vacation pay obligations to temporary and part-time employees working an irregular schedule of hours may be discharged by paying such employees a proportion of the holiday or vacation benefits due full-time employees based on the number of hours each such employee worked in the workweek prior to the workweek in which the holiday occurs or, with respect to vacations, the number of hours which the employee worked in the year preceding the employee's anniversary date of employment. For example:

(i) An employee works 10 hours during the week preceding July 4, a designated holiday. The employee is entitled to 10/40 of the holiday pay to which a full-time employee is entitled (i.e., 10/40 times 8=2 hours holiday pay).

(ii) A part-time employee works 520 hours during the 12 months preceding the employee's anniversary date. Since the typical number of nonovertime hours in a year of work is 2,080, if a full-time employee would be entitled to one week (40 hours) paid vacation under the applicable fringe benefit determination, then the part-time employee would be entitled to 520/2,080 times 40=10 hours paid vacation.

(4) A part-time employee working a regularly scheduled workweek of 20 hours would be entitled to one-half of the health and welfare and/or pension benefits specified in the applicable fringe benefit determination. Thus, if the determination requires $36.40 per month for health insurance, the contractor could discharge his obligation towards the employee in question by providing a health insurance policy costing $18.20 per month.

(b) A contractor's obligation to furnish the specified fringe benefits to temporary and part-time employees may be discharged by furnishing equivalent benefits, cash equivalents, or a combination thereof in accordance with the rules and regulations set forth in § 4.177.

§ 4.177 Discharging fringe benefit obligations by equivalent means.

(a) *In general.*

(1) Section 2(a)(2) of the Act, which provides for fringe benefits that are separate from and in addition to the monetary compensation required under section 2(a)(1), permits an employer to discharge his obligation to furnish the fringe benefits specified in an applicable fringe benefit determination by furnishing any equivalent combinations of "bona fide" fringe benefits or by making equivalent or differential payments in cash. However, credit for such payments is limited to the employer's fringe benefit obligations under section 2(a)(2), since the Act does not authorize any part of the monetary wage required by section 2(a)(1) and specified in the wage determination and the contract, to be offset by the fringe benefit payments or equivalents which are furnished or paid pursuant to section 2(a)(2).

(2) When a contractor substitutes fringe benefits not specified in the fringe benefit determination contained in the contract for fringe benefits which are so specified, the substituted fringe benefits, like those for which the contract provisions are prescribed, must be "bona fide" fringe benefits, as that term is defined in § 4.171.

(3) When a contractor discharges his fringe benefit obligation by furnishing, in lieu of those benefits specified in the applicable fringe benefit determination, other "bona fide" fringe benefits, cash payments, or a combination thereof, the substituted fringe benefits and/or cash payments must be "equivalent" to the benefits specified in the determination. As used in this subpart, the terms "equivalent fringe benefit" and "cash equivalent" mean equal in terms of monetary cost to the contractor. Thus, as set forth in § 4.172, if an applicable fringe benefit determination calls for a particular fringe benefit in a stated amount and the contractor furnished this benefit through contributions in a lesser amount, the contractor must furnish the employee with the difference between the amount stated in the determination and the actual cost of the benefit which the contractor provides. This principle may be illustrated by the example given in § 4.175(a)(2).

(b) *Furnishing equivalent fringe benefits.*

(1) A contractor's obligation to furnish fringe benefits which are stated in a specified cash amount may be discharged by furnishing any combination of "bona fide" fringe benefits costing an equal amount. Thus, if an applicable determination specifies that 20 cents per hour is to be paid into a pension fund, this fringe benefit obligation will be deemed to be met if, instead, hospitalization benefits costing not less than 20 cents per hour are provided. The same obligation will be met if hospitalization benefits costing 10 cents an hour and life insurance benefits costing 10 cents an hour are provided. As set forth in § 4.171(c), no benefit required to be furnished the employee by any other law, such as workers' compensation, may be credited toward satisfying the fringe benefit requirements of the Act.

(2) A contractor who wishes to furnish equivalent fringe benefits in lieu of those benefits which are not stated in a specified cash amount, such as "one week paid vacation", must first determine the equivalent cash value of such benefits in accordance with the rules set forth in paragraph (c) of this section.

(c) *Furnishing cash equivalents.*

(1) Fringe benefit obligations may be discharged by paying to the employee on his regular payday, in addition to the monetary wage required, a cash amount per hour in lieu of the specified fringe benefits, provided such amount is equivalent to the cost of the fringe benefits required. If, for example, an employee's monetary rate under an applicable determination is $4.50 an hour, and the fringe benefits to be furnished are hospitalization benefits costing 20 cents an hour and retirement benefits costing 20 cents an hour, the fringe benefit obligation is discharged if instead of furnishing the required fringe

benefits, the employer pays the employee, in cash, 40 cents per hour as the cash equivalent of the fringe benefits in addition to the $4.50 per hour wage rate required under the applicable wage determination.

(2) The hourly cash equivalent of those fringe benefits which are not stated in the applicable determination in terms of hourly cash amounts may be obtained by mathematical computation through the use of pertinent factors such as the monetary wages paid the employee and the hours of work attributable to the period, if any, by which fringe benefits are measured in the determination. If the employee's regular rate of pay is greater than the minimum monetary wage specified in the wage determination and the contract, the former must be used for this computation, and if the fringe benefit determination does not specify any daily or weekly hours of work by which benefits are to be measured, a standard 8-hour day and 40-hour week will be considered applicable. The application of these rules in typical situations is illustrated in paragraphs (c)(3) through (7) of this section.

(3) Where fringe benefits are stated as a percentage of the monetary rate, the hourly cash equivalent is determined by multiplying the stated percentage by the employees' regular or basic (i.e., wage determination) rate of pay, whichever is greater. For example, if the determination calls for a 5 percent pension fund payment and the employee is paid a monetary rate of $4.50 an hour, or if the employee earns $4.50 an hour on a piece-work basis in a particular workweek, the cash equivalent of that payment would be 22½ cents an hour.

(4) If the determination lists a particular fringe benefit in such terms as $8 a week, the hourly cash equivalent is determined by dividing the amount stated in the determination by the number of working hours to which the amount is attributable. For example, if a determination lists a fringe benefit as "pension—$8 a week", and does not specify weekly hours, the hourly cash equivalent is 20 cents per hour, i.e., $8 divided by 40, the standard number of non-overtime working hours in a week.

(5) In determining the hourly cash equivalent of those fringe benefits which are not stated in the determination in terms of a cash amount, but are stated, for example, as "nine paid holidays per year" or "1 week paid vacation after one year of service", the employee's hourly monetary rate of pay is multiplied by the number of hours making up the paid holidays or vacation. Unless the hours contemplated in the fringe benefit are specified in the determination, a standard 8-hour day and 40-hour week is considered applicable. The total annual cost so determined is divided by 2,080, the standard number of non-overtime hours in a year of work, to arrive at the hourly cash equivalent. This principle may be illustrated by the following examples:

(i) If a particular determination lists as a fringe benefit "nine holidays per year" and the employee's hourly rate of pay is $4.50, the $4.50 is multiplied by 72 (9 days of 8 hours each) and the result, $324, is then divided by 2,080 to arrive at the hourly cash equivalent, $0.1557 an hour. See § 4.174(c)(4).

(ii) If the determination requires "one week paid vacation after one year of service", and the employee's hourly rate of pay is $4.50, the $4.50 is multiplied by 40 and the result, $180.00, is then divided by 2,080 to arrive at the hourly cash equivalent, $0.0865 an hour.

(6) Where an employer elects to pay an hourly cash equivalent in lieu of a paid vacation, which is computed in accordance with paragraph (c)(5) of this section, such payments need commence only after the employee has satisfied the "after one year of service" requirement. However, should the employee terminate employment for any reason before receiving the full amount of vested vacation benefits due, the employee must be paid the full amount of any difference remaining as the final cash payment. For example, an employee becomes eligible for a week's vacation pay on March 1. The employer elects to pay this employee an hourly cash equivalent beginning that date; the employee terminates employment on March 31. Accordingly, as this employee has received only 1/12 of the vacation pay to which he/she is entitled, the employee is due the remaining 11/12 upon termination. As set forth in § 4.173(e), the rate applicable to the computation of cash equivalents for vacation benefits is the hourly wage rate in effect at the time such equivalent payments are actually made.

(d) *Furnishing a combination of equivalent fringe benefits and cash payments.* Fringe benefit obligations may be discharged by furnishing any combination of cash or fringe benefits as illustrated in the preceding paragraphs of this section, in monetary amounts the total of which is equivalent, under the rules therein stated, to the determined fringe benefits specified in the contract. For example, if an applicable determination specifies that 20 cents per hour is to be paid into a pension fund, this fringe benefit obligation will be deemed to be met if instead, hospitalization benefits costing 15 cents an hour and a cash equivalent payment of 5 cents an hour are provided.

(e) *Effect of equivalents in computing overtime pay.* Section 6 of the Act excludes from the regular or basic hourly rate of an employee, for purposes of determining the overtime pay to which the employee is entitled under any other Federal law, those fringe benefit payments computed under the Act which are excluded from the regular rate under the Fair Labor Standards Act by provisions of section 7(e) (formerly designated as section 7(d)) of that Act (29 U.S.C. 207(e)). Fringe benefit payments which qualify for such exclusion are described in Subpart C of Regulations, 29 CFR Part 778. When such fringe benefits are required to be furnished to service employees engaged in contract performance, the right to compute overtime pay in accordance with the above rule is not lost to a contractor or subcontractor because it discharges its obligation under this Act to furnish such fringe benefits through alternative equivalents as provided in this section. If it furnishes equivalent benefits or makes cash payments, or both, to such an employee as authorized herein, the amounts thereof, which discharge the employer's obligation to furnish such specified fringe benefits, may be excluded pursuant to this Act from the employee's regular or basic rate of pay in computing any overtime pay due the employee under any other Federal law. No such exclusion can operate, however, to reduce an employee's regular or basic rate of pay below the monetary wage rate specified as the applicable minimum wage rates under sections 2(a)(1), 2(b), or 4(c) of this Act or under other law or an employment contract.

§ 4.178 Computation of hours worked.

Since employees subject to the Act are entitled to the minimum compensation specified under its provisions for each hour worked in performance of a covered contract, a computation of their hours worked in each workweek when such work under the contract is performed is essential. Determinations of hours worked will be made in accordance with the principles applied under the Fair Labor Standards Act as set forth in Part 785 of this title which is incorporated herein by reference. In general, the hours worked by an employee include all periods in which the employee is suffered or permitted to work whether or not required to do so, and all time during which the employee is required to be on duty or to be on the employer's premises or to be at a prescribed workplace. The hours worked which are subject to the

compensation provisions of the Act are those in which the employee is engaged in performing work on contracts subject to the Act. However, unless such hours are adequately segregated, as indicated in § 4.179, compensation in accordance with the Act will be required for all hours of work in any workweek in which the employee performs any work in connection with the contract, in the absence of affirmative proof to the contrary that such work did not continue throughout the workweek.

§ 4.179 Identification of contract work.

Contractors and subcontractors under contracts subject to the Act are required to comply with its compensation requirements throughout the period of performance on the contract and to do so with respect to all employees who in any workweek are engaged in performing work on such contracts. If such a contractor during any workweek is not exclusively engaged in performing such contracts, or if while so engaged it has employees who spend a portion but not all of their worktime in the workweek in performing work on such contracts, it is necessary for the contractor to identify accurately in its records, or by other means, those periods in each such workweek when the contractor and each such employee performed work on such contracts. In cases where contractors are not exclusively engaged in Government contract work, and there are adequate records segregating the periods in which work was performed on contracts subject to the Act from periods in which other work was performed, the compensation specified under the Act need not be paid for hours spent on non-contract work. However, in the absence of records adequately segregating non-covered work from the work performed on or in connection with the contract, all employees working in the establishment or department where such covered work is performed shall be presumed to have worked on or in connection with the contract during the period of its performance, unless affirmative proof establishing the contrary is presented. Similarly, in the absence of such records, an employee performing any work on or in connection with the contract in a workweek shall be presumed to have continued to perform such work throughout the workweek, unless affirmative proof establishing the contrary is presented. Even where a contractor can segregate Government from non-Government work, it is necessary that the contractor comply with the requirements of section 6(e) of the FLSA discussed in § 4.160.

Overtime Pay of Covered Employees

§ 4.180 Overtime pay—in general.

The Act does not provide for compensation of covered employees at premium rates for overtime hours of work. Section 6 recognizes however, that other Federal laws may require such compensation to be paid to employees working on or in connection with contracts subject to the Act (see § 4.181) and prescribes, for purposes of such laws, the manner in which fringe benefits furnished pursuant to the Act shall be treated in computing such overtime compensation as follows: "In determining any overtime pay to which such service employees are entitled under any Federal law, the regular or basic hourly rate of such an employee shall not include any fringe benefit payments computed hereunder which are excluded from the regular rate under the Fair Labor Standards Act by provisions of section 7(d) [now section 7(e)] thereof." Fringe benefit payments which qualify for such exclusion are described in Part 778, Subpart C of this title. The interpretations there set forth will be applied in determining the overtime pay to which covered service employees are entitled under other Federal statutes. The effect of section 6 of the Act in situations where equivalent fringe benefits or cash payments are provided in lieu of the specified fringe benefits is stated in § 4.177(e) of this part, and illustrated in § 4.182.

§ 4.181 Overtime pay provisions of other Acts.

(a) *Fair Labor Standards Act.* Although provision has not been made for insertion in Government contracts of stipulations requiring compliance with the overtime provisions of the Fair Labor Standards Act, contractors and subcontractors performing contracts subject to the McNamara-O'Hara Service Contract Act may be required to compensate their employees working on or in connection with such contracts for overtime work pursuant to the overtime pay standards of the Fair Labor Standards Act. This is true with respect to employees engaged in interstate or foreign commerce or in the production of goods for such commerce (including occupations and processes closely related and directly essential to such production) and employees employed in enterprises which are so engaged, subject to the definitions and exceptions provided in such Act. Such employees, except as otherwise specifically provided in such Act, must receive overtime compensation at a rate of not less than 1½ times their regular rate of pay for all hours worked in excess of the applicable standard in a workweek. See Part 778 of this title. However, the Fair Labor Standards Act provides no overtime pay requirements for employees, not within such interstate commerce coverage of the Act, who are subject to its minimum wage provisions only by virtue of the provisions of section 6(e), as explained in § 4.180.

(b) *Contract Work Hours and Safety Standards Act.* (1) The Contract Work Hours and Safety Standards Act (40 U.S.C. 327–332) applies generally to Government contracts, including service contracts in excess of $2,500, which may require or involve the employment of laborers and mechanics. Guards, watchmen, and many other classes of service employees are laborers or mechanics within the meaning of such Act. However, employees rendering only professional services, seamen, and as a general rule those whose work is only clerical or supervisory or nonmanual in nature, are not deemed laborers or mechanics for purposes of the Act. The wages of every laborer or mechanic for performance of work on such contracts must include compensation at a rate not less than 1½ times the employee's basic rate of pay for all hours worked in any workweek in excess of 40 or in excess of eight on any calendar days therein, whichever is the greater number of overtime hours. Exemptions are provided for certain transportation and communications contracts, contracts for the purchase of supplies ordinarily available in the open market, and work required to be done in accordance with the provisions of the Walsh-Healey Act.

(2) Regulations concerning this Act are contained in Subparts A and C of 29 CFR Part 5 which permit overtime pay to be computed in the same manner as under the Fair Labor Standards Act, subject of course to the differences in computations required by reason of the daily overtime provision of the Contract Work Hours and Safety Standards Act, which has no counterpart in the Fair Labor Standards Act.

(3) Although the application of the Contract Work Hours and Safety Standards Act does not depend on inclusion of its requirements in provisions physically made part of the contract, the Act and the regulations of the Secretary require such provisions to be set forth in contract clauses. (See § 5.5(c) of this subtitle.)

(c) *Walsh-Healey Public Contracts Act.* As pointed out in § 4.117, while some Government contracts may be subject both to the McNamara-O'Hara Service Contract Act and to the Walsh-Healey Public Contracts Act, the employees performing work on the contract which is subject to the latter

Act are, when so engaged, exempt from the provisions of the former. They are, however, subject to the overtime provisions of the Walsh-Healey Act if, in any workweek, any of the work performed for the employer is subject to such Act and if, in such workweek, the total hours worked by the employee for the employer (whether wholly or only partly on such work) exceed 40 hours in the workweek or 8 hours in any day therein. In any such workweek the Walsh-Healey Act requires payment of overtime compensation at a rate not less than 1½ times the employee's basic rate for such weekly or daily overtime hours, whichever are greater in number. The overtime pay provisions of the Walsh-Healey Act are discussed in greater detail in 41 CFR Part 50–201.

§ 4.182 Overtime pay of service employees entitled to fringe benefits.

Reference is made in § 4.180 to the rules prescribed by section 6 of the Act which permit exclusion of certain fringe benefits and equivalents provided pursuant to section 2(a)(2) of the Act from the regular or basic rate of pay when computing overtime compensation of a service employee under the provisions of any other Federal law. As provided in § 4.177, not only those fringe benefits excludable under section 6 as benefits determined and specified under section 2(a)(2), but also equivalent fringe benefits and cash payments furnished in lieu of the specified benefits may be excluded from the regular or basic rate of such an employee. The application of this rule may be illustrated by the following examples:

(a) The A company pays a service employee $4.50 an hour in cash under a wage determination which requires a monetary rate of not less than $4 and a fringe benefit contribution of 50 cents which would qualify for exclusion from the regular rate under section 7(e) of the Fair Labor Standards Act. The contractor pays the 50 cents in cash because he made no contributions for fringe benefits specified in the determination and the contract. Overtime compensation in this case would be computed on a regular or basic rate of $4 an hour.

(b) The B company has for some time been paying $4.25 an hour to a service employee as his basic cash wage plus 25 cents an hour as a contribution to a welfare and pension plan, which contribution qualifies for exclusion from the regular rate under the Fair Labor Standards Act. For performance of work under a contract subject to the Act a monetary rate of $4 and a fringe benefit contribution of 50 cents (also qualifying for such exclusion) are specified because they are found to be prevailing for such employees in the locality. The contractor may credit the 25 cent welfare and pension contribution toward the discharge of his fringe benefit obligation under the contract but must also make an additional contribution of 25 cents for the specified or equivalent fringe benefits or pay the employee an additional 25 cents in cash. These contributions or equivalent payments may be excluded from the employee's regular rate which remains $4.25, the rate agreed upon as the basic cash wage.

(c) The C company has been paying $4 an hour as its basic cash wage on which the firm has been computing overtime compensation. For performance of work on a contract subject to the Act the same rate of monetary wages and a fringe benefit contribution of 50 cents an hour (qualifying for exclusion from the regular rate under the Fair Labor Standards Act) are specified in accordance with a determination that these are the monetary wages and fringe benefits prevailing for such employees in the locality. The contractor is required to continue to pay at least $4 an hour in monetary wages and at least this amount must be included in the employee's regular or basic rate for overtime purposes under applicable Federal law. The fringe benefit obligation under the contract would be discharged if 50 cents of the contributions for fringe benefits were for the fringe benefits specified in the contract or equivalent benefits as defined in § 4.177. The company may exclude such fringe benefit contributions from the regular or basic rate of pay of the service employee in computing overtime pay due.

Notice to Employees

§ 4.183 Employees must be notified of compensation required.

The Act, in section 2(a)(4), and the regulations thereunder in § 4.6(e), require all contracts subject to the Act which are in excess of $2,500 to contain a clause requiring the contractor or subcontractor to notify each employee commencing work on a contract to which the Act applies of the compensation required to be paid such employee under section 2(a)(1) and the fringe benefits required to be furnished under section 2(a)(2). A notice form (WH Publication 1313 and any applicable wage determination) provided by the Wage and Hour Division is to be used for this purpose. It may be delivered to the employee or posted as stated in § 4.184.

§ 4.184 Posting of notice.

Posting of the notice provided by the Wage and Hour Division shall be in a prominent and accessible place at the worksite, as required by § 4.6(e). The display of the notice in a place where it may be seen by employees performing on the contract will satisfy the requirement that it be in a "prominent and accessible place". Should display be necessary at more than one site, in order to assure that it is seen by such employees, additional copies of the poster may be obtained without cost from the Division. The contractor or subcontractor is required to notify each employee of the compensation due or attach to the poster any applicable wage determination specified in the contract listing all minimum monetary wages and fringe benefits to be paid or furnished to the classes of service employees performing on the contract.

Records

§ 4.185 Recordkeeping requirements.

The records which a contractor or subcontractor is required to keep concerning employment of employees subject to the Act are specified in § 4.6(g) of Subpart A of this part. They are required to be maintained for 3 years from the completion of the work, and must be made available for inspection and transcription by authorized representatives of the Administrator. Such records must be kept for each service employee performing work under the contract, for each workweek during the performance of the contract. If the required records are not separately kept for the service employees performing on the contract, it will be presumed, in the absence of affirmative proof to the contrary, that all service employees in the department or establishment where the contract was performed were engaged in covered work during the period of performance. (See § 4.179.)

§ 4.186 [Reserved]

Subpart E—Enforcement

§ 4.187 Recovery of underpayments.

(a) The Act, in section 3(a), provides that any violations of any of the contract stipulations required by sections 2(a)(1), 2(a)(2), or 2(b) of the Act, shall render the party responsible liable for the amount of any deductions, rebates, refunds, or underpayments (which includes non-payment) of compensation due to any employee engaged in the performance of the contract. So much of the accrued payments due either on the contract or on any other contract (whether subject to the Service Contract

Act or not) between the same contractor and the Government may be withheld in a deposit fund as is necessary to pay the employees. In the case of requirements-type contracts, it is the contracting agency, and not the using agencies, which has the responsibility for complying with a withholding request by the Secretary or authorized representative. The Act further provides that on order of the Secretary (or authorized representatives), any compensation which the head of the Federal agency or the Secretary has found to be due shall be paid directly to the underpaid employees from any accrued payments withheld. In order to effectuate the efficient administration of this provision of the Act, such withheld funds shall be transferred to the Department of Labor for disbursement to the underpaid employees on order of the Secretary or his or her authorized representatives, or an Administrative Law Judge, and are not paid directly to such employees by the contracting agency without the express prior consent of the Administrator. (See Decision of the Comptroller General, B–170784, February 12, 1971.) It is mandatory for a contracting officer to adhere to a request from the Department of Labor to withhold funds where such funds are available. (See Decision of the Comptroller General, B–109257, October 14, 1952, arising under the Walsh-Healey Act.) Contract funds which are or may become due a contractor under any contract with the United States may be withheld prior to the institution of administrative proceedings by the Secretary. (*McCasland* v. *U.S. Postal Service*, 82 CCH Labor Cases ¶ 33,607 (N.D. N.Y. 1977.))

(b) *Priority to withheld funds.*

The Comptroller General has afforded employee wage claims priority over an Internal Revenue Service levy for unpaid taxes. (See Decisions of the Comptroller General, B–170784, February 17, 1971; B–189137, August 1, 1977; 546 Comp. Gen. 499 (1977); 55 Comp. Gen. 744 (1976), arising under the Davis-Bacon Act; B–178198, August 30, 1973; B–161460, May 25, 1967.)

(1) As the Comptroller General has stated, "[t]he legislative histories of these labor statutes [Service Contract Act and Contract Work Hours and Safety Standards Act, 41 U.S.C. 327, *et seq.*] disclose a progressive tendency to extend a more liberal interpretation and construction in successive enactments with regard to worker's benefits, recovery and repayment of wage underpayments. Further, as remedial legislation, it is axiomatic that they are to be liberally construed". (Decision of the Comptroller General, B–170784, February 17, 1971.)

(2) Since section 3(a) of the Act provides that accrued contract funds withheld to pay employees wages must be held in a deposit fund, it is the position of the Department of Labor that monies so held may not be used or set aside for agency reprocurement costs. To hold otherwise would be inequitable and contrary to public policy, since the employees have performed work from which the Government has received the benefit (see *National Surety Corporation* v. *U.S.*, 132 Ct. Cl. 724, 728, 135 F. Supp 381 (1955), cert. denied, 350 U.S. 902), and to give contracting agency reprocurement claims priority would be to require employees to pay for the breach of contract between the employer and the agency. The Comptroller General has sanctioned priority being afforded wage underpayments over the reprocurement costs of the contracting agency following a contractor's default or termination for cause. Decision of the Comptroller General, B–167000, June 26, 1969; B–178198, August 30, 1973; and B–189137, August 1, 1977.

(3) Wage claims have priority over reprocurement costs and tax liens without regard to when the competing claims were raised. See Decisions of the Comptroller General, B–161460, May 25, 1967; B–189137, August 1, 1977.

(4) Wages due underpaid on the contract workers have priority over any assignee of the contractor, including assignments made under the Assignment of Claims Act, 311 U.S.C. 203, 41 U.S.C. 115, to funds withheld, since an assignee can acquire no greater rights to withheld funds than the assignor has in the absence of an assignment. See *Modern Industrial Bank* v. *U.S.*, 101 Ct. Cl. 808 (1944); *Royal Indemnity Co.* v. *United States*, 178 Ct. Cl. 46, 371 F. 2d 462 (1967), cert. denied, 389 U.S. 833; *Newark Insurance Co.* v. *U.S.* 149 Ct. Cl. 170, 181 F. Supp. 246 (1960); *Henningsen* v. *United States Fidelity and Guaranty Company*, 208 U.S. 404 (1908). Where employees have been underpaid, the assignor has no right to assign funds since the assignor has no property rights to amounts withheld from the contract to cover underpayments of workers which constitute a violation of the law and the terms, conditions, and obligations under the contract. (Decision of the Comptroller General, B–164881, August 14, 1968; B–178198, August 30, 1973; 56 Comp. Gen. 499 (1977); 55 Comp Gen. 744 (1976); *The National City Bank of Evansville* v. *United States*, 143 Ct. Cl. 154, 163 F. Supp. 846 (1958); *National Surety Corporation* v. *United States*, 132 Ct. Cl. 724, 135 F. Supp. 381 (1955), cert. denied, 350 U.S. 902.)

(5) The Comptroller General, recognizing that unpaid laborers have an equitable right to be paid from contract retainages, has also held that wage underpayments under the Act have priority over any claim by the trustee in bankruptcy. 56 Comp. Gen. 499 (1977), citing *Pearlman* v. *Reliance Insurance Company*, 371 U.S. 132 (1962); *Hadden* v. *United States*, 132 Ct. Cl. 529 (1955), in which the courts gave priority to sureties who had paid unpaid laborers over the trustee in bankruptcy.

(c) Section 5(b) of the Act provides that if the accrued payments withheld under the terms of the contract are insufficient to reimburse all service employees with respect to whom there has been a failure to pay the compensation required pursuant to the Act, the United States may bring action against the contractor, subcontractor, or any sureties in any court of competent jurisdiction to recover the remaining amount of underpayments. The Service Contract Act is not subject to the statute of limitations in the Portal to Portal Act, 29 U.S.C. 255, and contains no prescribed period within which such an action must be instituted; it has therefore been held that the general period of six years prescribed by 28 U.S.C. 2415 applies to such actions, *United States of America* v. *Deluxe Cleaners and Laundry, Inc.*, 511 F. 2d 929 (C.A. 4, 1975). Any sums thus recovered by the United States shall be held in the deposit fund and shall be paid, on the order of the Secretary, directly to the underpaid employees. Any sum not paid to an employee because of inability to do so within 3 years shall be covered into the Treasury of the United States as miscellaneous receipts.

(d) Releases or waivers executed by employees for unpaid wages and fringe benefits due them are without legal effect. As stated by the Supreme Court in *Brooklyn Savings Bank* v. *O'Neil*, 324 U.S. 697, 704, (1945), arising under the Fair Labor Standards Act:

"Where a private right is granted in the public interest to effectuate a legislative policy, waiver of a right so charged or colored with the public interest will not be allowed where it would thwart the legislative policy which it was designed to effectuate."

See also *Schulte, Inc.* v. *Gangi*, 328 U.S. 108 (1946); *United States* v. *Morley Construction Company*, 98 F. 2d. 781 (C.A. 2, 1938), cert. denied, 305 U.S. 651.

Further, as noted above, monies not paid to employees to whom they are due because of violation are covered into the

U.S. Treasury as provided by section 5(b) of the Act.

(e)(1) The term "party responsible" for violations in section 3(a) of the Act is the same term as contained in the Walsh-Healey Public Contracts Act, and therefore, the same principles are applied under both Acts. An officer of a corporation who actively directs and supervises the contract performance, including employment policies and practices and the work of the employees working on the contract, is a party responsible and liable for the violations, individually and jointly with the company (*S & G Coal Sales, Inc.*, Decision of the Hearing Examiner, PC–946, January 21, 1965, affirmed by the Administrator June 8, 1965; *Tennessee Processing Co., Inc.*, Decision of the Hearing Examiner, PC–790, September 28, 1965).

(2) The failure to perform a statutory public duty under the Service Contract Act is not only a corporate liability but also the personal liability of each officer charged by reason of his or her corporate office while performing that duty. *United States* v. *Sancolmar Industries, Inc.*, 347 F. Supp 404, 408 (E.D. N.Y. 1972). Accordingly, it has been held by administrative decisions and by the courts that the term "party responsible", as used in section 3(a) of the Act, imposes personal liability for violations of any of the contract stipulations required by sections 2(a)(1) and (2) and 2(b) of the Act on corporate officers who control, or are responsible for control of, the corporate entity, as they, individually, have an obligation to assure compliance with the requirements of the Act, the regulations, and the contracts. See, for example, *Waite, Inc.*, Decision of the ALJ, SCA 530–566, October 19, 1976, *Spruce-Up Corp.*, Decision of the Administrator SCA 368–370, August, 19, 1976, *Ventilation and Cleaning Engineers, Inc.*, Decision of the ALJ, SCA 176, August 23, 1973, Assistant Secretary, May 17, 1974, Secretary, September 27, 1974; *Fred Van Elk*, Decision of the ALJ, SCA 254–58, May 28, 1974, Administrator, November 25, 1974; *Murcole, Inc.*, Decision of the ALJ, SCA 195–198, April 11, 1974; *Emile J. Bouchet*, Decision of the ALJ, SCA 38, February 24, 1970; *Darwyn L. Grover*, Decision of the ALJ, SCA 485, August 15, 1976; *United States* v. *Islip Machine Works, Inc.*, 179 F. Supp. 585 (E.D. N.Y. 1959); *United States* v. *Sancolmar Industries, Inc.*, 347 F. Supp. 404 (E.D. N.Y. 1972).

(3) In essence, individual liability attaches to the corporate official who is responsible for, and therefore causes or permits, the violation of the contract stipulations required by the Act, i.e., corporate officers who control the day-to-day operations and management policy are personally liable for underpayments because they cause or permit violations of the Act.

(4) It has also been held that the personal responsibility and liability of individuals for violations of the Act is not limited to the officers of a contracting firm or to signatories to the Government contract who are bound by and accept responsibility for compliance with the Act and imposition of its sanctions set forth in the contract clauses in § 4.6, but includes all persons, irrespective of proprietary interest, who exercise control, supervision, or management over the performance of the contract, including the labor policy or employment conditions regarding the employees engaged in contract performance, and who, by action or inaction, cause or permit a contract to be breached. *U.S.* v. *Islip Machine Works, Inc.*, 179 F. Supp. 585 (E.D. N.Y. 1959); *U.S.* v. *Sancolmar Industries, Inc.*, 347 F. Supp. 404 (E.D. N.Y. 1972); *Oscar Hestrom Corp.*, Decision of the Administrator, PC–257, May 7, 1946, affirmed, *U.S.* v. *Hedstrom*, 8 Wage Hour Cases 302 (N.D. Ill. 1948); *Craddock-Terry Shoe Corp.*, Decision of the Administrator, PC–330, October 3, 1947; *Reynolds Research Corp.*, Decision of the Administrator, PC–381, October 24, 1951; *Etowah Garment Co., Inc.*, Decision of the Hearing Examiner, PC–632, August 9, 1957, Decision of the Administrator, April 29, 1958; *Cardinal Fuel and Supply Co.*, Decision of the Hearing Examiner, PC–890, June 17, 1963.

(5) Reliance on advice from contracting agency officials (or Department of Labor officials without the authority to issue rulings under the Act) is not a defense against a contractor's liability for back wages under the Act. *Standard Fabrication Ltd.*, Decision of the Secretary, PC–297, August 3, 1948; *Airport Machining Corp.*, Decision of the ALJ, PC–1177, June 15, 1973; *James D. West*, Decision of the ALJ, SCA 397–398, November 17, 1975; *Metropolitan Rehabilitation Corp.*, WAB Case No. 78–25, August 2, 1979; *Fry Brothers Corp.*, WAB Case No. 76–6, June 14, 1977.

(f) The appellate rights of a contractor or subcontractor regarding violations of the Act, including back wage liability or the disposition of funds withheld by the agency for such liability are contained in Part 6 of this Title. Appeals in such matters have not been delegated to the contracting agencies and such matters cannot be appealed under the disputes clause in the contractor's contract.

(g) While the Act provides that action may be brought against a surety to recover underpayments of compensation, there is no statutory provision requiring that contractors furnish either payment or performance bonds before an award can be made. The courts have held, however, that when such a bond has been given, including one denominated as a performance rather than payment bond, and such a bond guarantees that the principal shall fulfill "all the undertakings, convenants, terms, conditions, and agreements" of the contract, or similar words to the same effect, the surety-guarantor is jointly liable for underpayments by the contractor of the wages and fringe benefits required by the Act up to the amount of the bond. *U.S.* v. *Powers Building Maintenance Co.*, 366 F. Supp. 819 (W.D. Okla. 1972); *U.S.* v. *Gillespie*, 72 CCH Labor Cases ¶ 33,986 (C.D. Cal. 1973) *U.S.* v. *Glens Falls Insurance Co.*, 279 F. Supp. 236 (E.D. Tenn. 1967); *United States* v. *Hudgins-Dize Co.*, 83 F. Supp. 593 (E.D. Va. 1949); *U.S.* v. *Continental Casualty Company*, 85 F. Supp. 573 (E.D. Pa. 1949), affirmed per curiam, 182 F.2d 941 (3rd Cir. 1950).

§ 4.188 Ineligibility for further contracts when violations occur.

(a) Section 5 of the Act directs the Comptroller General to distribute a list to all agencies of the Government giving the names of persons or firms that the Federal agencies or the Secretary has found violated this Act. Unless the Secretary otherwise recommends because of unusual circumstances, no contract of the United States or the District of Columbia (whether or not subject to the Act) shall be awarded to the persons or firms appearing on this list or to any firm, corporation, partnership, or association in which such persons or firms have a substantial interest until 3 years have elapsed from the date of publication of the list containing the names of such persons or firms. This prohibition against the award of a contract to an ineligible contractor applies to the contractor in its capacity as either a prime contractor or a subcontractor. Because the Act contains no provision authorizing removal from the list of the names of such persons or firms prior to the expiration of the three-year statutory period, the Secretary is without authority to accomplish such removal (other than in situations involving mistake or legal error). On the other hand, there may be situations in which persons or firms already on the list are

found in a subsequent administrative proceeding to have again violated the Act and their debarment ordered. In such circumstances, a new, three-year debarment term will commence with the republication of such names on the list.

(b)(1) The term "unusual circumstances" is not defined in the Act. Accordingly, the determination must be made on a case-by-case basis in accordance with the particular facts present. It is clear, however, that the effect of the 1972 Amendments is to limit the Secretary's discretion to relieve violators from the debarred list (H. Rept. 92–1251, 92d Cong., 2d Sess. 5; S. Rept. 92–1131, 92d Cong., 2d Sess. 3–4) and that the violator of the Act has the burden of establishing the existence of unusual circumstances to warrant relief from the debarment sanction. *Ventilation and Cleaning Engineers, Inc.*, SCA–176, Administrative Law Judge, August 23, 1973, Assistant Secretary, May 22, 1974, Secretary, October 2, 1974. It is also clear that unusual circumstances do not include any circumstances which would have been insufficient to relieve a contractor from the ineligible list prior to the 1972 amendments, or those circumstances which commonly exist in cases where violations are found, such as negligent or willful disregard of the contract requirements and of the Act and regulations, including a contractor's plea of ignorance of the Act's requirements where the obligation to comply with the Act is plain from the contract, failure to keep necessary records and the like. *Emerald Maintenance Inc.*, Supplemental Decision of the ALJ, SCA–153, April 5, 1973.

(2) The Subcommittee report following the oversight hearings conducted just prior to the 1972 amendments makes it plain that the limitation of the Secretary's discretion through the unusual circumstances language was designed in part to prevent the Secretary from relieving a contractor from the ineligible list provisions merely because the contractor paid what he was required by his contract to pay in the first place and promised to comply with the Act in the future. See, House Committee on Education and Labor, Special Subcommittee on Labor, The Plight of Service Workers under Government Contracts 12–13 (Comm. Print 1971). As Congressman O'Hara stated: "Restoration * * * [of wages and benefits] is not in and of itself a penalty. The penalty for violation is the suspension from the right to bid on Government contracts * * *. The authority [to relieve from blacklisting] was intended to be used in situations where the violation was a minor one, or an inadvertent one, or one in which disbarment * * * would have been wholly disproportionate to the offense." House Committee on Education and Labor, Special Subcommittee on Labor, Hearings on H.R. 6244 and H.R. 6245, 92d Cong., 1st Sess. 3 (1971).

(3)(i) The Department of Labor has developed criteria for determining when there are unusual circumstances within the meaning of the Act. See, e.g., *Washington Moving & Storage Co.*, Decision of the Assistant Secretary, SCA 68, August 16, 1973, Secretary, March 12, 1974; *Quality Maintenance Co.*, Decision of the Assistant Secretary, SCA 119, January 11, 1974. Thus, where the respondent's conduct in causing or permitting violations of the Service Contract Act provisions of the contract is willful, deliberate or of an aggravated nature or where the violations are a result of culpable conduct such as culpable neglect to ascertain whether practices are in violation, culpable disregard of whether they were in violation or not, or culpable failure to comply with recordkeeping requirements (such as falsification of records), relief from the debarment sanction cannot be in order. Furthermore, relief from debarment cannot be in order where a contractor has a history of similar violations, where a contractor has repeatedly violated the provisions of the Act, or where previous violations were serious in nature.

(ii) A good compliance history, cooperation in the investigation, repayment of moneys due, and sufficient assurances of future compliance are generally prerequisites to relief. Where these prerequisites are present and none of the aggravated circumstances in the preceding paragraph exist, a variety of factors must still be considered, including whether the contractor has previously been investigated for violations of the Act, whether the contractor has committed recordkeeping violations which impeded the investigation, whether liability was dependent upon resolution of a bona fide legal issue of doubtful certainty, the contractor's efforts to ensure compliance, the nature, extent, and seriousness of any past or present violations, including the impact of violations on unpaid employees, and whether the sums due were promptly paid.

(4) A contractor has an affirmative obligation to ensure that its pay practices are in compliance with the Act, and cannot itself resolve questions which arise, but rather must seek advice from the Department of Labor. *Murcole, Inc.*, Decision of the ALJ, SCA 195–198, April 10, 1974; *McLaughlin Storage, Inc.*, Decision of the ALJ, SCA 362–365, November 5, 1975, Administrator, March 25, 1976; *Able Building & Maintenance & Service Co.*, Decision of the ALJ, SCA 389–390, May 29, 1975, Assistant Secretary, January 13, 1976; *Aarid Van Lines, Inc.*, Decision of the Administrator, SCA 423–425, May 13, 1977.

(5) Furthermore, a contractor cannot be relieved from debarment by attempting to shift his/her responsibility to subordinate employees. *Security Systems, Inc.*, Decision of the ALJ, SCA 774–775, April 10, 1978; *Ventilation & Cleaning Engineers, Inc.*, Decision of the Secretary, SCA 176, September 27, 1974; *Ernest Roman*, Decision of the Secretary, SCA 275, May 6, 1977. As the Comptroller General has stated in considering debarment under the Davis-Bacon Act, "[n]egligence of the employer to instruct his employees as to the proper method of performing his work or to see that the employee obeys his instructions renders the employer liable for injuries to third parties resulting therefrom. * * * The employer will be liable for acts of his employee within the scope of the employment regardless of whether the acts were expressly or impliedly authorized. * * * Willful and malicious acts of the employee are imputable to the employer under the doctrine of respondeat superior although they might not have been consented to or expressly authorized or ratified by the employer." (Decision of the Comptroller General, B–145608, August 1, 1961.)

(6) Negligence per se does not constitute unusual circumstances. Relief on no basis other than negligence would render the effect of section 5(a) a nullity, since it was intended that only responsible bidders be awarded Government contracts. *Greenwood's Transfer & Storage, Inc.*, Decision of the Secretary, SCA 321–326, June 1, 1976; *Ventilation & Cleaning Engineers, Inc.*, Decision of the Secretary, SCA 176, September 27, 1974.

(c) Similarly, the term "substantial interest" is not defined in the Act. Accordingly, this determination, too, must be made on a case-by-case basis in light of the particular facts, and cognizant of the legislative intent "to provide to service employees safeguards similar to those given to employees covered by the Walsh-Healey Public Contracts Act". *Federal Food Services, Inc.*, Decision of the ALJ, SCA 585–592, November 22, 1977. Thus, guidance can be obtained from cases arising under the

Walsh-Healey Act, which uses the concept "controlling interest". See *Regal Mfg. Co.*, Decision of the Administrator, PC–245, March 1, 1946; *Acme Sportswear Co.*, Decision of the Hearing Examiner, PC–275, May 8, 1946; *Gearcraft, Inc.*, Decision of the ALJ, PCX–1, May 3, 1972. In a supplemental decision of February 23, 1979, in *Federal Food Services, Inc.* the Judge ruled as a matter of law that the term "does not preclude every employment or financial relationship between a party under sanction and another * * * [and that] it is necessary to look behind titles, payments, and arrangements and examine the existing circumstances before reaching a conclusion in this matter."

(1) Where a person or firm has a direct or beneficial ownership or control of more than 5 percent of any firm, corporation, partnership, or association, a "substantial interest" will be deemed to exist. Similarly, where a person is an officer or director in a firm or the debarred firm shares common management with another firm, a "substantial interest" will be deemed to exist. Furthermore, wherever a firm is an affiliate as defined in § 4.1a(g) of Subpart A, a "substantial interest" will be deemed to exist, or where a debarred person forms or participates in another firm in which he/she has comparable authority, he/she will be deemed to have a "substantial interest" in the new firm and such new firm would also be debarred (*Etowah Garment Co., Inc.*, Decision of the Hearing Examiner, PC–632, August 9, 1957).

(2) Nor is interest determined by ownership alone. A debarred person will also be deemed to have a "substantial interest" in a firm if such person has participated in contract negotiations, is a signatory to a contract, or has the authority to establish, control, or manage the contract performance and/or the labor policies of a firm. A "substantial interest" may also be deemed to exist, in other circumstances, after consideration of the facts of the individual case. Factors to be examined include, among others, sharing of common premises or facilities, occupying any position such as manager, supervisor, or consultant to, any such entity, whether compensated on a salary, bonus, fee, dividend, profit-sharing, or other basis of remuneration, including indirect compensation by virtue of family relationships or otherwise. A firm will be particularly closely examined where there has been an attempt to sever an association with a debarred firm or where the firm was formed by a person previously affiliated with the debarred firm or a relative of the debarred person.

(3) Firms with such identity of interest with a debarred person or firm will be placed on the debarred bidders list after the determination is made pursuant to procedures in Part 6, Subpart A, or § 4.12 and Part 6, Subpart D. Where a determination of such "substantial interest" is made after the initiation of the debarment period, contracting agencies are to terminate any contract with such firm entered into after the initiation of the original debarment period since all persons or firms in which the debarred person or firm has a substantial interest are also ineligible to receive Government contracts.

§ 4.189 Administrative proceedings relating to enforcement of labor standards.

The Secretary is authorized pursuant to the provisions of section 4(a) of the Act to hold hearings and make decisions based upon findings of fact as are deemed to be necessary to enforce the provisions of the Act. Pursuant to section 4(a) of the Act, the Secretary's findings of fact after notice and hearing are conclusive upon all agencies of the United States and, if supported by the preponderance of the evidence, conclusive in any court of the United States, without a trial de novo. *United States* v. *Powers Building Maintenance Co.*, 336 F. Supp. 819 (W.D. Okla. 1972). Rules of practice for administrative proceedings are set forth in Part 6 of this Title.

§ 4.190 Contract cancellation.

(a) As provided in section 3 of the Act, where a violation is found of any contract stipulation, the contract is subject upon written notice to cancellation by the contracting agency, whereupon the United States may enter into other contracts or arrangements for the completion of the original contract, charging any additional cost to the original contractor.

(b) Every contractor shall certify pursuant to § 4.6(n) of Subpart A that it is not disqualified for the award of a contract by virtue of its name appearing on the debarred bidders list or because any such currently listed person or firm has a substantial interest in said contractor, as described in § 4.188. Upon discovery of such false certification or determination of substantial interest in a firm performing on a Government contract, as the case may be, the contract is similarly subject upon written notice to immediate cancellation by the contracting agency and any additional cost for the completion of the contract charged to the original contractor as specified in paragraph (a), *supra*. Such contract is without warrant of law and has no force and effect and is void ab initio, 33 Comp Gen. 63; Decision of the Comptroller General, B–115051, August 6, 1953. Furthermore, any profit derived from said illegal contract is forfeited (*Paisner* v. *U.S.*, 138 Ct. Cl. 420, 150 F. Supp. 835 (1957), cert. denied, 355 U.S. 941.)

§ 4.191 Complaints and compliance assistance.

(a) Any employer, employee, labor or trade organization contracting agency, or other interested person or organization may report to any office of the Wage and Hour Division (or to any office of the Occupational Safety and Health Administration, in instances involving the safety and health provisions), a violation, or apparent violation, of the Act, or of any of the rules or regulations prescribed thereunder. Such offices are also available to assist or provide information to contractors or subcontractors desiring to insure that their practices are in compliance with the Act. Information furnished is treated confidentially. It is the policy of the Department of Labor to protect the identity of its confidential sources and to prevent an unwarranted invasion of personal privacy. Accordingly, the identity of an employee who makes a confidential written or oral statement as a complaint or in the course of an investigation, as well as portions of the statement which would reveal his identity, will not be disclosed without the prior consent of the employee. Disclosure of employee statements shall be governed by the provisions of the "Freedom of Information Act" (5 U.S.C. 552, see 29 CFR Part 70) and the "Privacy Act of 1974" (5 U.S.C. 552a).

(b) A report of breach or violation relating solely to safety and health requirements may be in writing and addressed to the Regional Administrator of an Occupational Safety and Health Administration Regional Office, U.S. Department of Labor, or to the Assistant Secretary for Occupational Safety and Health, U.S. Department of Labor, Washington, D.C. 20210.

(c) Any other report of breach or violation may be in writing and addressed to the Assistant Regional Administrator of a Wage and Hour Division's regional office, U.S. Department of Labor, or to the Administrator of the Wage and Hour Division, U.S. Department of Labor, Washington, D.C. 20210.

(d) In the event that an Assistant Regional Administrator for the Wage and Hour Division, Employment Standards Administration, is notified of

a breach or violation which also involves safety and health standards, the Regional Administrator of the Employment Standards Administration shall notify the appropriate Regional Administrator of the Occupational Safety and Health Administration who shall with respect to the safety and health violation take action commensurate with his responsibilities pertaining to safety and health standards.

(e) Any report should contain the following:

(1) The full name and address of the person or organization reporting the breach or violations.

(2) The full name and address of the person against whom the report is made.

(3) A clear and concise statement of the facts constituting the alleged breach or violation of any of the provisions of the McNamara-O'Hara Service Contract Act, or of any of the rules or regulations prescribed thereunder.

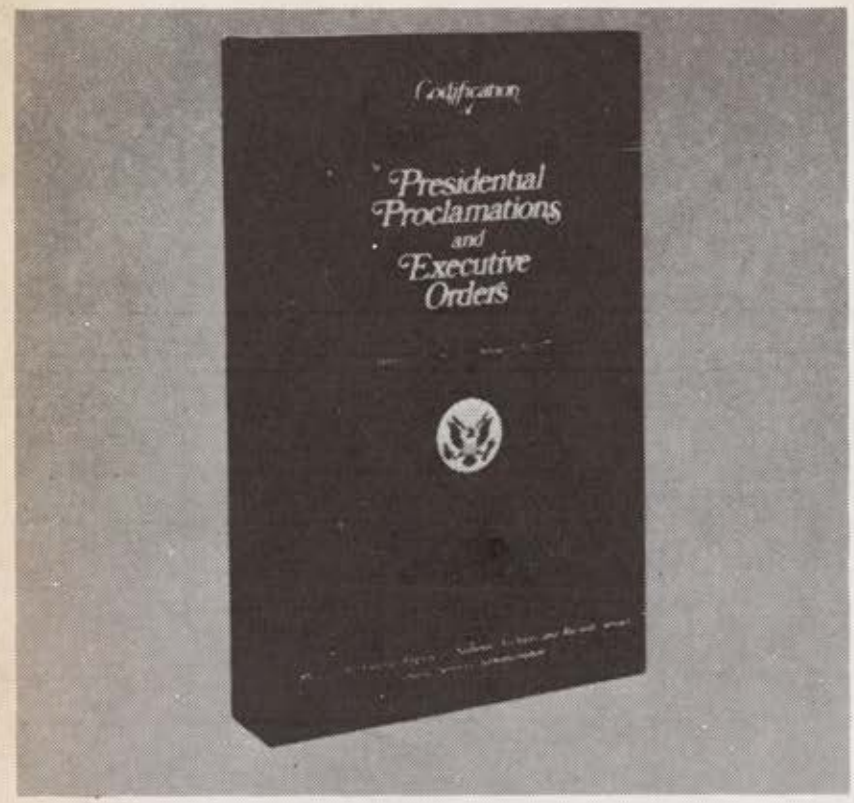
NEW PUBLICATION NOW AVAILABLE



For those of you who must keep informed about Presidential proclamations and Executive orders, there is now a convenient reference source that will make researching certain of these documents much easier.

Arranged by subject matter, this first edition of the *Codification* contains proclamations and Executive orders that were issued or amended during the period January 20, 1961, through January 20, 1977, and which have a continuing effect on the public. For those documents that have been affected by other proclamations or Executive orders, the codified text presents the amended version. Therefore, a reader can use the *Codification* to determine the latest text of a document without having to "reconstruct" it through extensive research.

Special features include a comprehensive index and a table listing each proclamation and Executive order issued during the 1961–1977 period, along with any amendments, an indication of its current status, and, where applicable, its location in this volume.

4614 Part XIX—EPA:
Identification and Listing of Hazardous Waste

4622 Part XX—USDA/FNS and Labor/Office of the Secretary:
Food Stamp Program; Work Registration and Job Search

4634 Part XXI—HHS/FDA:
Licensed Biological Products

4660 Part XXII—USDA/FNS:
Food Stamp Program

DEPARTMENT OF LABOR

Employment Standards Administration, Wage and Hour Division

29 CFR Part 5

Labor Standards Provisions Applicable to Contracts Covering Federally Financed and Assisted Construction (Also Labor Standards Provisions Applicable to Nonconstruction Contracts Subject to the Contract Work Hours and Safety Standards Act)

AGENCY: Wage and Hour Division, Employment Standards Administration, Labor.

ACTION: Final rule.

SUMMARY: This document provides the final Regulations, 29 CFR Part 5, Subpart A, pertaining to labor standards applicable to contracts for Federally financed and assisted construction and to contracts subject to the Contract Work Hours and Safety Standards Act. Changes have been made in the contract labor standard clauses which are required to be included in such construction contracts, and provision has been made for withholding of funds due a contractor on other Federal and Federally assisted contracts in situations where laborers or mechanics have not been paid in compliance with the law and insufficient monies remain under the contract on which such violations occurred. Apprenticeship requirements have also been revised. Other changes have been made in debarment and enforcement procedures, and in the procedure for adding wage rates for classifications of workers which have been omitted from the prevailing wage determination applicable to the contract. Changes have also been made to preclude a debarred contractor from becoming either a contractor or a subcontractor on other Federal or Federally assisted projects, and to reduce the number of reports that contracting agencies must submit to the Department of Labor.

EFFECTIVE DATE: February 17, 1981.

FOR FURTHER INFORMATION CONTACT: Dorothy P. Come, Assistant Administrator, Wage and Hour Division, Department of Labor, Room S-3502, 200 Constitution Avenue, NW, Washington, D.C. 20210, telephone: (202) 523-8333.

SUPPLEMENTARY INFORMATION: On December 28, 1979, a proposal was published in the **Federal Register** (44 FR 77080) to make certain revisions to Subpart A of Regulations, 29 CFR Part 5. Labor Standards Provisions Applicable to Contracts Covering Federally Financed and Assisted Construction (Also Labor Standards Provisions Applicable to Nonconstruction Contracts Subject to the Contract Work Hours and Safety Standards Act). The purpose of these changes was to revise, update, and clarify this subpart.

Interested persons were afforded the opportunity to submit comments to the Wage and Hour Division within 60 days after publication of the notice in the **Federal Register**. Subsequently, on February 15 and April 1, 1980, notice was given in the **Federal Register** extending the dates for submission of comments to March 27 and May 27, 1980, respectively. The first extension was granted at the request of various interested parties who needed additional time to prepare their comments. The second extension was granted in order to allow the comment period to run concurrently with that for the related procedural rules in revised Part 6 of this Title, published in proposed form on April 22, 1980.

Comments were received from approximately 246 interested parties, which included contracting agencies, contractor associations, contractors, labor unions and organizations, State and local governmental bodies, business organizations, law firms and individuals. In addition, the General Accounting Office submitted comments on the proposed regulations. Among those Federal agencies submitting comments were the Department of Defense, the Federal Highway Administration, the General Services Administration, the Department of Energy, the National Aeronautics and Space Administration, the Logistics Service and the Office of Airport Planning and Programming of the Federal Aviation Administration, and the Department of Housing and Urban Development. Contractor associations and business organizations submitting comments included the Associated General Contractors of America, the Associated Builders and Contractors, Inc., the National Association of Home Builders, the Chamber of Commerce of the United States, the National Association of Manufacturers, and the Business Roundtable. Labor unions and organizations commenting on the proposal included the Building and Construction Trades Department of the American Federation of Labor—Congress of Industrial Organizations (whose comments were endorsed by the Center to Protect Worker's Rights) and the International Brotherhood of Electrical Workers.

While some requests for public hearings were made, it was decided, after careful consideration that, in view of the broad range of the responses and issues addressed, such hearings would be redundant.

It has been determined that the amendments to these Regulations do not meet the criteria of Executive Order 12044 and the Department of Labor Guidelines (44 FR 5570) for a regulatory analysis. These regulations will not, in our opinion, cause major cost/price increases.

The following is an analysis of all the principal comments received and the concomitant changes made to the proposed rule. Each submission has been thoroughly reviewed, and each criticism and suggestion has been given careful consideration. For each section and, where appropriate, subsection of the final rule, the analysis contains a description of the major comments and recommendations, the Department's findings as to whether or not suggested changes to the proposed rule would be in accordance with the statutory language and intent of the Davis-Bacon Act, the Contract Work Hours and Safety Standards Act, and the Copeland Act, as appropriate, and the substantive changes herein adopted.

Discussion of Major Comments

Definitions (§ 5.2(a)–(r))

Comments were received concerning the definitions of the terms "contract"; "construction", "prosecution", "completion", or "repair"; "site of work"; "laborer" or "mechanic"; "apprentice" and "trainee"; "employed"; "wage determination"; and "any affiliated person".

A number of comments received from State and local Governments reflected a misunderstanding of the intent of our revisions to the definition of "contract". The revision does not extend coverage to State and local Government employees. There are, however, certain statutes which require the payment of Davis-Bacon prevailing wage rates to the recipient State and local Government's employees who are performing the construction work. For example, the U.S. Housing Act of 1937 requires the payment of the Davis-Bacon prevailing wage rates to all laborers or mechanics employed in the development of the project, including employees of the recipient local Government. Accordingly, we have amended the proposed regulations to clarify this term with respect to the application of prevailing wage standards to State and local Governmental employees.

Questions were raised as to whether the definition of the terms "construction", "prosecution",

"completion", or "repair" included the on-site installation of items fabricated off-site. Therefore, this subsection has been amended to include language to make it clear that on-site installation involving construction is within the meaning of these terms. In addition, as requested by the Federal Highway Administration, the citation for the Federal-Aid Highway Act of 1956 was changed.

Several comments were received objecting to the inclusion within the definition of "site of work" of such facilities as fabrication plants, mobile factories, batch plants, borrow pits, job headquarters, tool yards, etc., which are dedicated exclusively, or nearly so, to a particular contract and are located in close proximity to the actual location of construction. Contrary to the understanding of many of the commenters, we are not extending the scope of this definition. Rather, we are including in the regulations the Department's long-standing position with respect to the definition of this term which has been upheld by the Department's Wage Appeals Board. In this regard, it should be noted that the General Accounting Office has indicated that, despite its prior rulings on this issue, it does not object to the proposed definition of this term.

Numerous commenters objected to including working foremen in the definition of the term "laborer" or "mechanic" on the basis that "supervisors" and "foremen" should be excluded as part of management. Normally, anyone who performs duties which are manual or physical on a covered project is a "laborer" or "mechanic" during the time so spent. However, recognizing the realities of the construction industry and the fact that some employees are assigned managerial duties, it was decided to adopt a reasonable tolerance by applying a percentage limitation test on the amount of time which could be spent performing such non-managerial duties, after which working foremen would be considered "laborers or mechanics" for purposes of the Davis-Bacon Act. The language on working foremen and the 20 percent limitation on such work simply codify a long-standing policy of the Department which was adopted to accommodate the needs of the industry without ignoring the remedial purposes of the statute to protect the wages of the workers.

There were several comments concerning the definitions of the terms "apprentice" and "trainee". First, there were comments disapproving of the requirement that apprenticeship and training programs be registered with the Bureau of Apprenticeship and Training or with a State apprenticeship agency recognized by BAT. Numerous commenters shared the opinion that the policy of permitting only employment of apprentices and trainees under BAT approved programs was denying job opportunities to youths, minorities, and women. In addition, several parties recommended that changes be made in this subsection to reflect the provisions of 23 U.S.C. 113(c) which exempt apprentices and trainees certified by the Secretary of Transportation, rather than the Secretary of Labor, on Federal-Aid Highway projects, from the required payment of prevailing wage rates.

The Davis-Bacon Act requires that all laborers and mechanics be paid the applicable prevailing wage rate for the classification of work performed. However, in an effort to encourage meaningful training of workers in the construction industry, which will provide a ready and stable reservoir of skilled workers, the Department of Labor permits the use of apprentices and trainees at less than the required applicable predetermined rate for the work performed, where the apprentices and trainees are enrolled in training programs approved in accordance with the requirements of the Bureau of Apprenticeship and Training, or, with respect to apprentices, a similar State agency approved by BAT. We do this because we are assured that the training is real and is not a subterfuge to freeze young, minority, and female workers into low paying unskilled jobs. It should be stressed that the provisions allowing for the payment of less than the prevailing wage rates to apprentices and trainees is an exception to the requirements of the Davis-Bacon Act (see *Gevyn Construction Corporation* v. *United States*, No. 515–78 (Ct. Cl., September 12, 1980)) and that strict conditions must be maintained in order to prevent the circumvention of the Act's requirements, especially in the case of the young, minority, and female worker against whom job and wage discrimination might otherwise be widespread.

Contrary to some of the opinions expressed that the registration requirements deny employment opportunities to youths, minorities, and women, participation in apprenticeship and training programs is available to all of these groups.

The suggestions with respect to 23 U.S.C. section 113(c) have been implemented.

A number of commenters opposed including the phrase "regardless of any contractual relationship alleged to exist between the contractors or such person" in the definition of the term "employed". They argue that such language would encompass bona fide subcontractors and it was their belief that such language was only meant to apply to alleged subcontractors who are in fact employees. The phrase in question is required by the statute itself. Furthermore, the argument of these commenters was considered and rejected by the Attorney General (41 Op. Atty. Gen. 488 (1960)), who concluded that Congress intended to preserve the benefits of the Act for all engaged in laborer's or mechanic's work, whether they are independent contractors of employees.

There were objections to the deletion of the language "issued prior to the award of the contract" which had been contained in the previous definition of the term "wage determination" because it was felt that this change would give the Department "carte blanche" authority to change the wage determination in the contract after award. These comments are discussed together with the rules regarding application of wage determinations in Part 1 of this title.

Concern was expressed that the term "any affiliated person" would extend debarment to members of a contractor's immediate family who were not responsible for the violations which led to the debarment. This term was included in the text of the proposed subsection because of the Department's original intention to incorporate the existing Part 3 of this Title (concerning allowable deductions under the Copeland Act), where the term "affiliated person" is defined, as Subpart D of this Part. However, since the publication of Subpart D will be delayed, we are deleting this subsection and any concern of parties who have an interest in this issue should be dispelled.

Contract Provisions and Related Matters (Section 5.5)

Objections were raised to the deletion of former language allowing contracting agencies to insert modifications to the Davis-Bacon labor standards contract clauses to meet the particular needs of the agency, if first approved by the Department of Labor. Upon reconsideration, we have decided that the objections are valid and we are adding language to allow for the above.

Several parties took exception to the addition of the language "without regard to skill" in § 5.5(a)(1)(i), which deals with the issue of wage payments for laborers and mechanics. In addition, a suggestion was made to add language to make it clear that laborers and

mechanics performing work in more than one classification should receive the applicable rate for the time spent performing work in each classification. The addition of the phrase "without regard to skill" makes clear to the public the Department's long-standing policy on the minimum payment due to laborers or mechanics working in a given classification. There is no prohibition under the Davis-Bacon Act against payment of a higher rate than that found to be prevailing if the contractor wishes to recognize a worker's special skill. This policy has been upheld in administrative hearings and by the Wage Appeals Board. As suggested, we have added language to this subsection to reflect that laborers and mechanics must be paid the applicable prevailing wage rate for the classification of work performed.

A substantial number of comments were received concerning the provisions of § 5.5(a)(1)(ii), which deals with the issue of adding necessary classifications and rates omitted from the wage determination which has been made applicable to the project in question. Concern was expressed that the procedures in this subsection would impose collective bargaining, cause delays, create the potential for disruption and disagreement, and slow the construction process.

These changes proposed and finalized in this subsection will not impose collective bargaining. The Department of Labor will continue its long-standing policy of prohibiting the artificial splitting of classifications traditionally recognized in the construction industry and traditionally contained in Department of Labor wage determinations. The inclusion of employees, or their representatives, as interested parties in the process of adding classifications and rates which have been omitted from wage determinations recognizes the facts of economic reality, that workers bring a useful intelligence of the relationship of the work they are performing to that of other classes which helps set proper rate relationships. To deprive them of a right to have input in this process, as was the case in the past, would be to continue an unjustifiable inequity. This was recognized when the policy dealing with the same issue in cases arising under the Service Contract Act was adopted in 1966.

While we have included time limits on responding to agency conformance requests in (B) of this subsection to eliminate any unnecessary delays in processing requests for additional classifications, we agree with the commenters that the same limits should be followed under (C) of this subsection, concerning resolution of disputes, and the language has been changed accordingly.

Numerous comments were received opposing the addition of provisions in §§ 5.5(a)(2) and 5.5(b)(3) to allow agencies to withhold monies to satisfy DBRA/CWHSSA underpayments on contracts other than those in which the alleged violations occurred (hereafter referred to as "cross-withholding"). Some commenters argued that the statute did not authorize cross-withholding and that the decision in *Whitney Bros. Plumbing and Heating* v. *United States* (224 F. Supp. 860 (D. Alaska 1963)] specifically prohibited this. Several agencies state that these provisions would in effect remove authority from the contracting agency to withhold funds and redelegate it to the Department of Labor. Other commenters objected that the provisions would be unworkable when more than one agency was involved.

The language of both the DBA and the CWHSSA provide that stipulations (clauses) be included in each contract subject to the Acts to permit the contracting agency to withhold funds from the contract to satisfy unpaid wages due to laborers and mechanics employed on the contract. The clear Congressional intent of such language is to protect the wages of laborers and mechanics who perform work on the contract. In the past, due to the lack of the cross-withholding provisions, many contractors and subcontractors have escaped payment of back wages because violations were not discovered until after final payment on the contract had been made. To allow such practices to continue is contrary to the clear intent of the Acts. The decision in *Whitney Bros. Plumbing and Heating* v. *United States*, while precluding the withholding from another contract under the regulations as they existed at that time, did not indicate the cross-withholding would be prohibited if the Department adopted regulations to accomplish cross-withholding.

Provisions for cross-withholding have been contained in the Service Contract Act and the Walsh-Healey Public Contracts Act since their inception, and the Department's experience with this authority and its enforcement of such provisions under these Acts has not caused any of the disruptions and administrative delays anticipated by many of the commenters. It should be noted that the General Accounting Office commented in favor of cross-withholding. GAO concluded its comments on this matter by stating: "We believe that a cross-withholding procedure provided by regulations and contractual provision is not contrary to the DBA and CWHSSA, and indeed is consistent with the remedial purpose of those Acts."

While the Department recognizes that the contracting officer takes the action necessary to accomplish actual withholding of payment of contract funds, it is clear that to require such action be taken on a request by authorized representatives of the Department of Labor is not a usurpation of the contracting agency's authority but rather the exercise of an authority given to the Department by Reorganization Plan No. 14 of 1950 in order to accomplish the enforcement coordination and oversight responsibilities conferred upon it under that Plan, and to permit it to carry out its investigatory responsibilities.

With respect to the contract labor standards provision pertaining to the submission of weekly payrolls set forth in § 5.5(a)(3)(ii), commenters suggested that contractors be required to report the employee's address only in the first week of employment and thereafter only when there was a change in the address. A Federal agency questioned why the social security number was not required since such information would further aid in identifying employees, many of whom may have similar names. Another Federal agency commented that an agency should have the right to delegate its recordkeeping responsibilities to local Government agencies, which are the recipient of Federal funds, with monitoring authority only being retained by the agency. In response to the comments on employee addresses, the instructions for completing the Form WH–347 require only that the address of the employee be reported on the first payroll an employee works on the contract unless the address changes. Many firms do not use this optional form but submit the required information in a manner preferable to them, and therefore are not aware of these instructions. Accordingly, we have added language to this subsection to reflect the Department's policy. The inclusion of employees' social security numbers would assist the Federal agencies, the Department of Labor, and the General Accounting Office in making positive identification of employees and in making tax deductions on back wage payments, and we have added the social security number to the information which is to be reported on the payrolls.

Based on our experience there has been little or no review of certified payroll records by parties other than the Federal agencies, and consequently, we have not adopted the suggestion of delegating this responsibility since we want to insure that these documents so necessary to on-going compliance are fully used for the essential purpose for which they are intended.

Several contractors' associations and construction companies expressed dissatisfaction with the requirement in § 5.5(a)(4) to pay the full amount of the fringe benefits stipulated on the applicable wage decision for journeymen to apprentices and trainees when the apprenticeship or training program is silent regarding the payment of such benefits. There were also objections to the proposed requirement to observe the ratios and wage rates for apprentices and trainees in localities where construction is performed, rather than those ratios applicable in the locality in which the program is registered or approved. A Federal agency recommended that a minor language change be made to make it clear that it is the contractor's or subcontractor's obligation to furnish written evidence of the registration of the apprenticeship program or the certification of the training program without being specifically requested by the contracting officer to do so. Another Federal agency suggested that language similar to that in § 5.5(a)(4)(ii) regarding the withdrawal of approval of training programs by BAT be added to § 5.5(a)(4)(i) referencing apprentices.

It has been the Department's position that if the apprentice or trainee plan is silent on fringe benefits, the apprentices or trainees must receive the full amounts of the fringe benefits stipulated in the applicable wage decision for the classification of work performed. In situations where fringe benefits are listed on the wage determination for a particular craft, apprentices or trainees in that craft normally receive such benefits. In cases where the prevailing apprentice practice indicates they do not receive the full fringe benefits, or no benefits at all, we have made provisions in the regulations to allow for less than the payment of full fringe benefits. To allow a contractor to make its own decisions on the amount of fringe benefits to pay his apprentices and trainees when its approved plan is silent on the issue would give it a distinctly unfair competitive advantage with the cost to be borne by the apprentices and trainees employed by such a contractor. This is clearly against the intent of the law. We have, however, clarified the language in this subsection for easier comprehension.

We have also made revisions in this subsection to allow contractors to follow the ratios and wage rates stipulated in their approved programs at the "home" locality instead of requiring contractors to observe the ratios and wage rates for apprentices and trainees in the locality where the construction is performed, if it happens to be different from those required by their programs. Upon reconsideration, we decided that to impose different plans on contractors, many of which work in several locations where there could be differing apprenticeship standards, would be adding needless burdens to their business activities.

In addition, we adopted the Federal agencies' suggestions to change the language in § 5.5(a)(4) to make it clear it was the contractor's or subcontractor's obligation to submit written evidence of the program and to add the language in § 5.5(a)(4)(ii) concerning the withdrawal of registration of the program to § 5.5(a)(4)(i).

Several contractor associations objected to the new language of § 5.5(a)(7) which prohibits debarred persons or firms from performing not only as prime contractors but also as subcontractors on projects subject to any of the statutes listed in § 5.1. The change in this subsection is in accordance with the intent of the Acts that debarred contractors not perform any work on Government contracts. This has been a policy followed under the Service Contract Act from its inception. See § 4.188 of 29 CFR Part 4. In addition, this provision is consonant with the Federal Procurement Regulations, the Defense Acquisition Regulations, and other individual agency procurement regulations. Moreover, in its comments on the proposed regulations, the General Accounting Office stated that it had no objection to debarred contractors being ineligible to receive subcontracts from contractors having contracts with the Government.

A number of respondents objected to the portion of § 5.5(a)(9) which states that disputes arising out of the labor standards provisions of the contract are not subject to the general disputes clause of the contract, but to the provisions of Parts 5, 6, and 7 of this Title. Federal agencies commented that the provision conflicts with the authority of the contracting officer as set forth in the Contracts Dispute Act of 1978 (Pub. L. 95-563, 41 U.S.C. Sec. 601 et seq.). Reorganization Plan No. 14 of 1950, as explained in the President's message accompanying the Plan, invests in the Secretary of Labor the responsibility "to coordinate the administration of laws relating to wages and hours on Federally-financed or assisted projects by prescribing standards, regulations, and procedures to govern the enforcement activities of the various Federal agencies * * *". With respect to the Contract Disputes Act of 1978, section 14 of that statute sets forth the specific amendments to existing statutes. Significantly, no change, repeal, amendment, or other reference was made to the Davis-Bacon and Related Acts, the Contract Work Hours and Safety Standards Act, the Copeland Act, or Reorganization Plan No. 14 of 1950. Therefore, in our view, the Department's authority to resolve disputes under these statutes and Reorganization Plan No. 14 is not impinged by section 14 of the Contract Disputes Act. Also, section 6(a) of the Contract Disputes Act states, in part, that "the authority of this subsection shall not extend to a claim or dispute for penalties or forfeitures prescribed by statute or regulation which another Federal agency is specifically authorized to administer, settle, or determine".

Furthermore, logic would dictate that the authority to resolve labor disputes should reside in the agency which has the primary responsibility for protecting worker labor standards and the prerequisite expertise in administering the law and the regulations necessary to insure the effective and consistent enforcement of such labor standards provisions. Agencies should note that the General Accounting Office stated that it had no objection to the adoption of this provision.

Concern was expressed, particularly by contractor associations, about the possible interpretation of the term "interest" found in § 5.5(a)(10)(i) dealing with the debarment of contractors. The phrase "any person or firm who has an interest in the contractor's firm", is derived from the statutory language of the Davis-Bacon Act. The Department looks to each situation on a case by case basis and we will consider all the circumstances, including such factors as the question of a person's involvement with the firm's daily operations and policy decisions and the person's ownership interest in the firm.

As suggested by a Federal agency, we have amended § 5.5(c), which deals with the labor standards clauses which are to be inserted in contracts subject to the CWHSSA, to set forth in full the recordkeeping requirements.

Enforcement (Section 5.6)

Several Federal agencies commented that some of the enforcement

responsibilities set forth in § 5.6, such as the preservation of payrolls and the filing of certifications of compliance, should be delegated to grantees. Other contracting agencies recommended that the Department furnish agencies a copy of the entire investigation file, including the interview statements to enable the agencies to make a more intelligent decision on the assessment of liquidated damages. Concern was expressed about the requirement that no payments be made to the contractor until the agency insures that the contract contains the applicable labor standards clauses and wage determination since disputes occasionally arise and the Department would be given unwarranted control over the disbursement of agency funds.

It is clear from the definition of "Federal agency" in § 5.2(c) that this term does not include local Government grantees or recipients of Federal assistance. The Davis-Bacon enforcement responsibility lies solely with the Federal agencies and the Department of Labor and cannot be abdicated to local Governments who are the recipients of the Federal funds. We believe that this policy is mandated by the terms of Reorganization Plan No. 14 of 1950, and is necessary in order to maintain effective and efficient control over Federal construction monies and construction standards and the Davis-Bacon enforcement program. In reporting the results of its investigations to contracting agencies, the Department routinely furnishes all of the information which is necessary for an agency to complete its actions. Experience has shown that copies of employee interview statements, which are obtained under a pledge of confidentiality, have sometimes been provided to the contractors who have instituted reprisals against the affected employees. Nevertheless, if a contracting agency feels it is necessary in a particular case, we do, and will continue to, provide summaries of the information contained in the statements. Contrary to the understanding of some commenters, on § 5.6(a)(1), the Federal agency may approve the payment of funds when there is a dispute provided that there is a certification on file that there is a substantial dispute with respect to the required provisions. Of course, withholding must be effectuated before final payment is made.

Suspension of Funds (Section 5.9)

Several contracting agencies questioned the Department's authority to request the contracting agencies to withhold funds as provided in § 5.9. The authority delegated to the Secretary of Labor under Reorganization Plan No. 14 of 1950, contemplates that the Department of Labor, which is responsible for a coordinated Government-wide enforcement program, should have the concomitant authority to request the withholding of funds with the full expectation of having such requests honored by the agency. Without this authority to protect funds from which workers will be paid wages owed them, the Department's authority under the Plan to conduct investigations would be meaningless.

Department of Labor Hearings (Section 5.11)

In its comments on Part 6, containing enforcement procedures, the ABC, commented on the "loophole" it perceived in proposed section 5.11 pursuant to which the granting of evidentiary hearings on enforcement matters other than debarment was subject to the Administrator's discretion when the dispute involved significant sums of money, large groups of employees, or novel or unusual situations. ABC argued that this "loophole" constituted a denial of due process to contractors. Although hearings have commonly been afforded under the existing regulation, this regulation has been revised to provide hearings on disputes whenever there is a relevant issue of fact. However, in many instances a hearing is not necessary because there is no relevant issue of fact. Accordingly, in such a case the regulation provides that a ruling will be issued by the Administrator, and the contractor afforded an opportunity to seek review by the Wage Appeals Board.

As suggested by one of the respondents, we have increased the time in which a contractor may request a hearing from twenty days to thirty days from the date of the Administrator's letter.

Debarment Proceedings (Section 5.12)

There were several comments questioning why there are different periods of debarment under the Davis-Bacon Act and the Davis-Bacon and Related Acts, and different provisions for removal from the ineligible list under the Davis-Bacon and the Related Acts. It was also suggested that the Department provide for varied periods of debarment under the Davis-Bacon and the Related Acts.

Section 3(a) of the Davis-Bacon Act mandates a three-year period of debarment and there is no provision in the statute for removal from the ineligible bidders list prior to the expiration of the three years. Debarment under the Davis-Bacon and Related Acts is not mandated by these various statutes, but is provided for by regulations. In consonance with the ruling by the U.S. Court of Appeals for the District of Columbia in *Copper Plumbing and Heating Co.* v. *Campbell* (290 F 2d 368 (C.A.D.C. 1961)] we have provided by regulation for removal from the ineligible list of the contractors debarred under the Related Acts who can demonstrate a current responsibility to comply with labor standards requirements. Since these regulations provide procedures for removal from the ineligible list after six months, we are, in effect, allowing varying periods of debarment as suggested by some of the commenters.

There was also a suggestion to provide for an interim debarment mechanism during the pendency of administrative proceedings similar to the mechanisms currently utilized by other agencies. While no changes are being made in the regulations at this time, we are considering the development of interim debarment procedures.

As in § 5.11, we are changing the 20 day time limit in which to respond to the letter notifying the party of potential debarment to 30 days.

A new subsection (d) has been added to provide a procedure for determination of a debarred contractor's interest in another firm. This subsection provides for administrative law judge hearings where there is a relevant question of fact, or appeal to the Wage Appeals Board where relevant facts are not in dispute. This provision dovetails with the hearing procedure in 29 CFR Part 6, Subpart D, and corresponds with proposed 29 CFR 4.12. This change is procedural in nature and was omitted as an oversight.

In addition to the above, there were other comments recommending minor editorial and language changes which we deemed valid, and we have amended the affected sections.

This rule was drafted under the supervision and direction of Donald Elisburg, Assistant Secretary of Labor, Employment Standards Administration, U.S. Department of Labor, 200 Constitution Avenue, NW., Washington, D.C. 20210 (202–523–6191).

Accordingly, 29 CFR Part 5 is revised as set forth below.

Signed at Washington, D.C., this 12th day of January, 1981.

Donald Elisburg,

Assistant Secretary of Labor, Employment Standards Administration.

PART 5—LABOR STANDARDS PROVISIONS APPLICABLE TO CONTRACTS COVERING FEDERALLY FINANCED AND ASSISTED CONSTRUCTION (ALSO LABOR STANDARDS PROVISIONS APPLICABLE TO NONCONSTRUCTION CONTRACTS SUBJECT TO THE CONTRACT WORK HOURS AND SAFETY STANDARDS ACT)

Subpart A—Davis-Bacon and Related Acts Provisions and Procedures

Authority: 40 U.S.C. 276a–276a–7; 40 U.S.C. 276c; 40 U.S.C. 327–332; Reorganization Plan No. 14 of 1950, 5 U.S.C. Appendix; 5 U.S.C. 301; and the statutes listed in section 5.1(a) of this part.

§ 5.1 Purpose and scope.

(a) The regulations contained in this part are promulgated under the authority conferred upon the Secretary of Labor by Reorganization Plan No. 14 of 1950 and the Copeland Act in order to coordinate the administration and enforcement of the labor standards provisions of each of the following acts by the Federal agencies responsible for their administration and of such additional statutes as may from time to time confer upon the Secretary of Labor additional duties and responsibilities similar to those conferred upon the Secretary of Labor under Reorganization Plan No. 14 of 1950:

1. The Davis-Bacon Act (sec. 1–7, 46 Stat. 1949, as amended; Pub. L. 74–403, 40 U.S.C 276a–276a–7).

2. Copeland Act (40 U.S.C. 276c).

3. The Contract Work Hours and Safety Standards Act (40 U.S.C. 327–332).

4. National Housing Act (sec. 212 added to c. 847, 48 Stat. 1246, by sec. 14, 53 Stat. 807; 12 U.S.C. 1715c and repeatedly amended).

5. Housing Act of 1950 (college housing) (amended by Housing Act of 1959 to add labor provisions, 73 Stat. 681; 12 U.S.C. 1749a(f)).

6. Housing Act of 1959 (sec. 401(f) of the Housing Act of 1950 as amended by Pub. L. 86–372, 73 Stat. 681; 12 U.S.C. 1701q(c)(3)).

7. Commercial Fisheries Research and Development Act of 1964 (sec. 7, 78 Stat. 199; 16 U.S.C. 779e(b)).

8. Library Services and Construction Act (sec. 7(a), 78 Stat. 13; 20 U.S.C. 355c(a)(4), as amended).

9. National Technical Institute for the Deaf Act (sec. 5(b)(5), 79 Stat. 128; 20 U.S.C. 684(b)(5)).

10. National Foundation on the Arts and Humanities Act of 1965 (sec. 5(k), 79 Stat. 846 as amended; 20 U.S.C. 954(j)).

11. Elementary and Secondary Education Act of 1965 as amended by Elementary and Secondary and other Education Amendments of 1969 (sec. 423 as added by Pub. L. 91–230, title IV, sec. 401(a)(10), 84 Stat. 169, and renumbered sec. 433, by Pub. L. 92–318; title III, sec. 301(a)(1), 86 Stat. 326; 20 U.S.C. 1232(b)). Under the amendment coverage is extended to all programs administered by the Commissioner of Education.

12. The Federal-Aid Highway Act of 1956 (sec. 108(b), 70 Stat. 378, recodified at 72 Stat. 895; 23 U.S.C. 113, as amended), see particularly the amendments in the Federal-Aid Highway Act of 1968 (Pub. L. 90–495, 82 Stat. 815).

13. Indian Self-Determination and Education Assistance Act (sec. 7, 88 Stat. 2205; 25 U.S.C. 450e).

14. Indian Health Care Improvement Act (sec. 303(b), 90 Stat. 1407; 25 U.S.C. 1633(b)).

15. Rehabilitation Act of 1973 (sec. 306(b)(5) 87 Stat. 384, 29 U.S.C. 776(b)(5)).

16. Comprehensive Employment and Training Act of 1973 (sec. 606, 87 Stat. 880, renumbered sec. 706 by 88 Stat. 1645; 29 U.S.C. 966; also sec. 604, 88 Stat. 1846; 29 U.S.C. 964(b)(3)).

17. State and Local Fiscal Assistance Act of 1972 (sec. 123(a)(6), 86 Stat. 933; 31 U.S.C. 1246(a)(6)).

18. Federal Water Pollution Control Act (sec. 513 of sec. 2, 86 Stat. 894; 33 U.S.C. 1372).

19. Veterans Nursing Home Care Act of 1964 (78 Stat. 502, as amended; 38 U.S.C. 5035(a)(8)).

20. Postal Reorganization Act (sec. 410(b)(4)(C); 84 Stat. 726 as amended; 39 U.S.C. 410(b)(4)(C)).

21. National Visitors Center Facilities Act of 1966 (sec. 110, 32 Stat. 45; 40 U.S.C. 808).

22. Appalachian Regional Development Act of 1965 (sec. 402, 79 Stat. 21; 40 U.S.C. App. 402).

23. Health Services Research, Health Statistics, and Medical Libraries Act of 1974 (sec. 107, see sec. 308(h)(2) thereof, 88 Stat. 370, as amended by 90 Stat. 378; 42 U.S.C. 242m(h)(2)).

24. Hospital Survey and Construction Act, as amended by the Hospital and Medical Facilities Amendments of 1964 (sec. 605(a)(5), 78 Stat. 453; 42 U.S.C. 291e(a)(5)).

25. Health Professions Educational Assistance Act (sec. 303(b), 90 Stat. 2254; 42 U.S.C. 293a[g](1)(C); also sec. 308a, 90 Stat. 2258, 42 U.S.C. 293a(c)(7)).

26. Nurse Training Act of 1964 (sec. 941(a)(1)(C), 89 Stat. 384; 42 U.S.C. 296a(b)(5)).

27. Heart Disease, Cancer, and Stroke Amendments of 1965 (sec. 904, as added by sec 2, 79 Stat. 928; 42 U.S.C. 299d(b)(4)).

28. Safe Drinking Water Act (sec. 2(a) see sec. 1450e thereof, 88 Stat. 1691; 42 U.S.C. 300j–9(e)).

29. National Health Planning and Resources Act (sec. 4, see sec. 1604(b)(1)(H), 88 Stat. 2261, 42 U.S.C. 300o–3(b)(1)(H)).

30. U.S. Housing Act of 1937, as amended and recodified (88 Stat. 867; 42 U.S.C. 1437j).

31. Demonstration Cities and Metropolitan Development Act of 1966 (secs. 110, 311, 503, 1003, 80 Stat. 1259, 1270, 1277, 1284; 42 U.S.C. 3310; 12 U.S.C. 1715c; 42 U.S.C. 1437j).

32. Slum clearance program: Housing Act of 1949 (sec. 109, 63 Stat. 419, as amended; 42 U.S.C. 1459).

33. Farm housing: Housing Act of 1964 (adds sec. 516(f) to Housing Act of 1949 by sec. 503, 78 Stat. 797; 42 U.S.C. 1486(f)).

34. Housing Act of 1961 (sec. 707, added by sec. 907, 79 Stat. 496, as amended; 42 U.S.C. 1500c–3).

35. Defense Housing and Community Facilities and Services Act of 1951 (sec. 310, 65 Stat. 307; 42 U.S.C. 1592i).

36. Special Health Revenue Sharing Act of 1975 (sec. 303, see sec. 222(a)(5) thereof, 89 Stat. 324; 42 U.S.C. 2689j[a)(5)).

37. Economic Opportunity Act of 1964 (sec. 607, 78 Stat. 532; 42 U.S.C. 2947).

38. Headstart, Economic Opportunity, and Community Partnership Act of 1974 (sec. 11, see sec. 811 thereof, 88 Stat. 2327; 42 U.S.C. 2992a).

39. Housing and Urban Development Act of 1965 (sec 707, 79 Stat. 492 as amended; 42 U.S.C. 3107).

40. Older Americans Act of 1965 (sec. 502, Pub. L. 89–73, as amended by sec. 501, Pub. L. 93–29; 87 Stat. 50; 42 U.S.C. 3041a[a)(4)].

41. Public Works and Economic Development Act of 1965 (sec. 712; 79 Stat. 575 as amended; 42 U.S.C. 3222).

42. Juvenile Delinquency Prevention Act (sec. 1, 86 Stat. 536; 42 U.S.C. 3884).

43. New Communities Act of 1968 (sec. 410, 82 Stat. 516; 42 U.S.C. 3909).

44. Urban Growth and New Community Development Act of 1970 (sec. 727(f), 84 Stat. 1803; 42 U.S.C. 4529).

45. Domestic Volunteer Service Act of 1973 (sec. 406, 87 Stat. 410; 42 U.S.C. 5046).

46. Housing and Community Development Act of 1974 (secs. 110, 802(g), 88 Stat. 649, 724; 42 U.S.C. 5310, 1440(g)).

47. Developmentally Disabled Assistance and Bill of Rights Act (sec. 126(4), 89 Stat. 488; 42 U.S.C. 6042(4); title I, sec. 111, 89 Stat. 491; 42 U.S.C. 6063(b)(19)).

48. National Energy Conservation Policy Act (sec. 312, 92 Stat. 3254; 42 U.S.C. 6371j).

49. Public Works Employment Act of 1976 (sec. 109, 90 Stat. 1001; 42 U.S.C. 6708; also sec. 208, 90 Stat. 1008; 42 U.S.C. 6728).

50. Energy Conservation and Production Act (sec. 451(h), 90 Stat. 1168; 42 U.S.C. 6881(h)).
51. Solid Waste Disposal Act (sec. 2, 90 Stat. 2823; 42 U.S.C. 6979).
52. Rail Passenger Service Act of 1970 (sec. 405d, 84 Stat. 1337; 45 U.S.C. 565(d)).
53. Urban Mass Transportation Act of 1964 (sec. 10, 78 Stat. 307; renumbered sec. 13 by 88 Stat. 715; 49 U.S.C. 1609).
54. Highway Speed Ground Transportation Study (sec. 6(b), 79 Stat. 893; 49 U.S.C. 1636(b)).
55. Airport and Airway Development Act of 1970 (sec. 22(b), 84 Stat. 231; 49 U.S.C. 1722(b)).
56. Federal Civil Defense Act of 1950 (50 U.S.C. App. 2281(i).
57. National Capital Transportation Act of 1965 (sec. 3(b)(4), 79 Stat. 644; 40 U.S.C. 682(b)(4). Note.—Repealed December 9, 1969, and labor standards incorporated in sec. 1–1431 of the District of Columbia Code).
58. Model Secondary School for the Deaf Act (sec. 4, 80 Stat. 1027, Pub. L. 89–694, but not in the United States Code).
59. Delaware River Basin Compact (sec. 15.1, 75 Stat. 714, Pub. L. 87–328) (considered a statute for purposes of the plan but not in the United States Code).
60. Energy Security Act (sec. 175(c), Pub. L. 96–294, 94 Stat. 611; 42 U.S.C. 8701 note).

(b) Part 1 of this subtitle contains the Department's procedural rules governing requests for wage determinations and the issuance and use of such wage determinations under the Davis-Bacon Act and its related statutes as listed in that part.

§ 5.2 Definitions.

(a) The term "Secretary" includes the Secretary of Labor, the Assistant Secretary of Labor for Employment Standards, and their authorized representatives.

(b) The term "Administrator" means the Administrator of the Wage and Hour Division or the authorized representative as set forth in this part. In the absence of the Wage-Hour Administrator, the Deputy Administrator of the Wage and Hour Division, is designated to act for the Administrator under this Part. Except as otherwise provided in this Part, the Assistant Administrator for Government Contract Wage Standards is the authorized representative of the Administrator in the administration of the statutes listed in § 5.1.

(c) The term "Federal agency" means the agency or instrumentality of the United States which enters into the contract or provides assistance through loan, grant, loan guarantee or insurance, or otherwise, to the project subject to a statute listed in § 5.1.

(d) The term "Agency Head" means the principal official of the Federal agency and includes those persons duly authorized to act in the behalf of the Agency Head.

(e) The term "Contracting Officer" means the individual, a duly appointed successor, or authorized representative who is designated and authorized to enter into contracts on behalf of the Federal agency.

(f) The term "labor standards" as used in this part means the requirements of the Davis-Bacon Act, the Contract Work Hours and Safety Standards Act (other than those relating to safety and health), the Copeland Act, and the prevailing wage provisions of the other statutes listed in § 5.1, and the regulations in Parts 1 and 3 of this subtitle and this part.

(g) The term "United States or the District of Columbia" means the United States, the District of Columbia, and all executive departments, independent establishments, administrative agencies, and instrumentalities of the United States and of the District of Columbia, including corporations, all or substantially all of the stock of which is beneficially owned by the United States, by the foregoing departments, establishments, agencies, instrumentalities, and including non-appropriated fund instrumentalities.

(h) The term "contract" means any contract in excess of $2,000 which is subject wholly or in part to the labor standards provisions of any of the acts listed in § 5.1 and any subcontract of any tier thereunder, let under the prime contract, which is entered into for the actual construction, alteration and/or repair, including painting and decorating, of a public building or public work, or building or work financed in whole or in part from Federal funds or in accordance with guarantees of a Federal agency or financed from funds obtained by pledge of any contract of a Federal agency to make a loan, grant or annual contribution, except where a different meaning is expressly indicated. A State or local Government is not regarded as a contractor under statutes providing loans, grants, or other Federal assistance in situations where construction is performed by its own employees. However, under certain enabling statutes, State and local recipients of Federal-aid must pay these employees according to Davis-Bacon labor standards.

(i) The terms "building" or "work" generally include construction activity as distinguished from manufacturing, furnishing of materials, or servicing and maintenance work. The terms include without limitation, buildings, structures, and improvements of all types, such as bridges, dams, plants, highways, parkways, streets, subways, tunnels, sewers, mains, power lines, pumping stations, heavy generators, railways, airports, terminals, docks, piers, wharves, ways, lighthouses, buoys, jetties, breakwaters, levees, canals, dredging, shoring, rehabilitation and reactivation of plants, scaffolding, drilling, blasting, excavating, clearing, and landscaping. The manufacture or furnishing of materials, articles, supplies or equipment (whether or not a Federal or State agency acquires title to such materials, articles, supplies, or equipment during the course of the manufacture or furnishing, or owns the materials from which they are manufactured or furnished) is not a "building" or "work" within the meaning of the regulations in this part unless conducted in connection with and at the site of such a building or work as is described in the foregoing sentence, or under the United States Housing Act of 1937 and the Housing Act of 1949 in the construction or development of the project.

(j) The terms "construction", "prosecution", "completion", or "repair" mean all types of work done on a particular building or work at the site thereof or under the United States Housing Act of 1937 and the Housing Act of 1949 in the construction or development of the project, including without limitation, altering, remodeling, installation (where appropriate) on-site of items fabricated off-site, painting and decorating, the transporting of materials and supplies to or from the building or work by the employees of the construction contractor or construction subcontractor, and the manufacturing or furnishing of materials, articles, supplies or equipment on the site of the building or work (or under the United States Housing Act of 1937 and the Housing Act of 1949 in the construction or development of the project), by persons employed by the contractor or subcontractor. However, the term "initial construction" in section 113 of Title 23, U.S.C., which pertains to Federal-aid highway work, does not include repair or maintenance work.

(k) The term "public building" or "public work" includes building or work, the construction, prosecution, completion, or repair of which, as defined above, is carried on directly by authority of or with funds of a Federal agency to serve the interest of the general public regardless of whether title thereof is in a Federal agency.

(l) The term "site of the work" is defined as follows:

(1) The "site of the work" is limited to the physical place or places where the construction called for in the contract will remain when work on it has been

completed and to other adjacent or nearby property used by the contractor or subcontractor in such construction which can reasonably be said to be included in the "site" because of its proximity.

(2) Fabrication Plants, "mobile factories," batch plants, borrow pits, job headquarters, tool yards, etc., are part of the "site of the work" provided they are dedicated exclusively, or nearly so, to performance of the contract and are so located in proximity to the actual construction location that it would be reasonable to include them.

(3) Not included in the "site of the work" are permanent home offices or branch plant establishments of a contractor or subcontractor, its fabrication plant and tool yard establishments, whose locations and continuance are governed by its general business operations.

(m) The term "laborer" or "mechanic" includes at least those workers whose duties are manual or physical in nature (including those workers who use tools or who are performing the work of a trade), as distinguished from mental or managerial. The term "laborer" or "mechanic" includes apprentices and trainees, and, in the case of contracts subject to the Contract Work Hours and Safety Standards Act, watchmen or guards. The term does not apply to workers whose duties are primarily administrative, executive, or clerical, rather than manual. Persons employed in a bona fide executive, administrative, or professional capacity as defined in Part 541 of this title are not deemed to be laborers or mechanics. Working foremen who devote more than 20 percent of their time during a workweek to mechanic or laborer duties, and who do not meet the criteria of Part 541, are laborers and mechanics for the time so spent.

(n) The terms apprentice and trainee are defined as follows:

(1) "Apprentice" means (i) a person employed and individually registered in a bona fide apprenticeship program registered with the U.S. Department of Labor, Employment and Training Administration, Bureau of Apprenticeship and Training, or with a State Apprenticeship Agency recognized by the Bureau, or (ii) a person in the first 90 days of probationary employment as an apprentice in such an apprenticeship program, who is not individually registered in the program, but who has been certified by the Bureau of Apprenticeship and Training or a State Apprenticeship Agency (where appropriate) to be eligible for probationary employment as an apprentice;

(2) "Trainee" means a person registered and receiving on-the-job training in a construction occupation under a program which has been approved in advance by the U.S. Department of Labor, Employment and Training Administration, Bureau of Apprenticeship and Training as meeting its standards for on-the-job training programs and which has been so certified by that Bureau.

(3) These provisions do not apply to "apprentices" and "trainees" employed on projects subject to 23 U.S.C. 113 who ar enrolled in programs which have been certified by the Secretary of Transportation in accordance with 23 U.S.C. 113(c).

(o) Every person performing the duties of a laborer or mechanic in the construction, prosecution, completion, or repair of a public building or public work, or building or work financed in whole or in part by loans, grants, or guarantees from the United States is "employed" regardless of any contractual relationship alleged to exist between the contractor or such person.

(p) The term "wages" means the basic hourly rate of pay; any contribution irrevocably made by a contractor or subcontractor to a trustee or to a third person pursuant to a bona fide fringe benefit fund, plan, or program; and the rate of costs to the contractor or subcontractor which may be reasonably anticipated in providing bona fide fringe benefits to laborers and mechanics pursuant to an enforceable commitment to carry out a financially responsible plan or program, which was communicated in writing to the laborers and mechanics affected. The fringe benefits enumerated in the Davis-Bacon Act include medical or hospital care, pensions on retirement or death, compensation for injuries or illness resulting from occupational activity, or insurance to provide any of the foregoing; unemployment benefits; life insurance, disability insurance, sickness insurance, or accident insurance; vacation or holiday pay; defraying costs of apprenticeship or other similar programs; or other bona fide fringe benefits. Fringe benefits do not include benefits required by other Federal, State, or local law.

(q) The term "wage determination" includes the original decision and any subsequent decisions modifying, superseding, correcting, or otherwise changing the provisions of the original decision. The application of the wage determination shall be in accordance with the provisions of § 1.6 of this title.

§§ 5.3–5.4 [Reserved]

§ 5.5 Contract provisions and related matters.

(a) The Agency head shall cause or require the contracting officer to insert in full in any contract subject to the labor standards provisions of any of the acts listed in § 5.1, except those subject only to the Contract Work Hours and Safety Standards Act, the following clauses (or any modifications thereof to meet the particular needs of the agency: *Provided,* That such modifications are first approved by the Department of Labor):

(1) *Minimum wages.* (i) All laborers and mechanics employed or working upon the site of the work (or under the United States Housing Act of 1937 or under the Housing Act of 1949 in the construction or development of the project), will be paid unconditionally and not less often than once a week, and without subsequent deduction or rebate on any account (except such payroll deductions as are permitted by regulations issued by the Secretary of Labor under the Copeland Act (29 CFR Part 3)), the full amount of wages and bona fide fringe benefits (or cash equivalents thereof) due at time of payment computed at rates not less than those contained in the wage determination of the Secretary of Labor which is attached hereto and made a part hereof, regardless of any contractual relationship which may be alleged to exist between the contractor and such laborers and mechanics. Contributions made or costs reasonably anticipated for bona fide fringe benefits under section 1(b)(2) of the Davis-Bacon Act on behalf of laborers or mechanics are considered wages paid to such laborers or mechanics, subject to the provisions of paragraph (a)(1)(iv) of this section; also, regular contributions made or costs incurred for more than a weekly period (but not less often than quarterly) under plans, funds, or programs which cover the particular weekly period, are deemed to be constructively made or incurred during such weekly period. Such laborers and mechanics shall be paid the appropriate wage rate and fringe benefits on the wage determination for the classification of work actually performed, without regard to the skill, except as provided in § 5.5(a)(4). Laborers or mechanics performing work in more than one classification may be compensated at the rate specified for each classification for the time actually worked therein: *Provided,* That the employer's payroll records accurately set forth the time spent in each classification in which work is performed. The wage

determination (including any additional classification and wage rates conformed under paragraph (a)(1)(ii) of this section) and the Davis-Bacon poster (WH-1321) shall be posted at all times by the contractor and its subcontractors at the site of the work in a prominent and accessible place where it can be easily seen by the workers.

(ii)(A) The contracting officer shall require that any class of laborers or mechanics which is not listed in the wage determination and which is to be employed under the contract shall be classified in conformance with the wage determination. The contracting officer shall approve an additional classification and wage rate and fringe benefits therefor only when the following criteria have been met:

(*1*) The work to be performed by the classification requested is not performed by a classification in the wage determination; and

(*2*) The classification is generally recognized in the area by the construction industry; and

(*3*) The proposed wage rate, including any bona fide fringe benefits, bears a reasonable relationship to the wage rates contained in the wage determination.

(B) If the contractor and the laborers and mechanics to be employed in the classification (if known), or their representatives, agree with the classification and wage rate (including the amount designated for fringe benefits where appropriate), a report of the action taken shall be sent by the contracting officer to the Administrator of the Wage and Hour Division, Employment Standards Administration, U.S. Department of Labor, Washington, D.C. 20210. The Administrator, or an authorized representative, will respond within 30 days of receipt thereof and will approve, reverse, or modify every additional classification action.

(C) In the event the contractor, or the laborers or mechanics to be employed in the classification or their representatives, do not agree with the contracting officer on the proposed classification and wage rate (including the amount designated for fringe benefits, where appropriate), the contracting officer shall refer the questions, including the views of all interested parties and the recommendation of the contracting officer, to the Administrator for determination. The Administrator, or an authorized representative, will issue a determination within 30 days of receipt unless notice is otherwise furnished to the contracting agency within the 30 day period.

(D) The wage rate (including fringe benefits where appropriate) determined pursuant to subparagraphs (1)(B) or (C) of this paragraph, shall be paid to all workers performing work in the classification under this contract from the first day on which work is performed in the classification.

(iii) Whenever the minimum wage rate prescribed in the contract for a class of laborers or mechanics includes a fringe benefit which is not expressed as an hourly rate, the contractor shall either pay the benefit as stated in the wage determination or shall pay another bona fide fringe benefit or an hourly cash equivalent thereof.

(iv) If the contractor does not make payments to a trustee or other third person, the contractor may consider as part of the wages of any laborer or mechanic the amount of any costs reasonably anticipated in providing bona fide fringe benefits under a plan or program, *Provided,* That the Secretary of Labor has found, upon the written request of the contractor, that the applicable standards of the Davis-Bacon Act have been met. The Secretary of Labor may require the contractor to set aside in a separate account assets for the meeting of obligations under the plan or program.

(2) *Withholding.* The (write in name of Federal Agency or the loan or grant recipient) shall upon its own action or upon written request of an authorized representative of the Department of Labor withhold or cause to be withheld from the contractor under this contract or any other Federal contract, or any other Federally-assisted contract subject to Davis-Bacon prevailing wage requirements, which is held by the contractor, so much of the accrued payments or advances as may be considered necessary to pay laborers and mechanics, including apprentices and trainees, employed by the contractor or any subcontractor the full amount of wages required by the contract. In the event of failure to pay any laborer or mechanic, including any apprentice or trainee, employed or working on the site of the work (or under the United States Housing Act of 1937 or under the Housing Act of 1949 in the construction or development of the project), all or part of the wages required by the contract, the (Agency) may, after written notice to the contractor, sponsor, applicant, or owner, take such action as may be necessary to cause the suspension of any further payment, advance, or guarantee of funds until such violations have ceased.

(3) *Payrolls and basic records.* (i) Payrolls and basic records relating thereto shall be maintained by the contractor during the course of the work and preserved for a period of three years thereafter for all laborers and mechanics working at the site of the work (or under the United States Housing Act of 1937, or under the Housing Act of 1949, in the construction or development of the project). Such records shall contain the name, address, and social security number of each such worker, his or her correct classification, hourly rates of wages paid (including rates of contributions or costs anticipated for bona fide fringe benefits or cash equivalents thereof of the types described in section 1(b)(2) of the Davis-Bacon Act), daily and weekly number of hours worked, deductions made and actual wages paid. Whenever the Secretary of Labor has found under 29 CFR 5.5(a)(1)(iv) that the wages of any laborer or mechanic include the amount of any costs reasonably anticipated in providing benefits under a plan or program described in section 1(b)(2)(B) of the Davis-Bacon Act, the contractor shall maintain records which show that the commitment to provide such benefits is enforceable, that the plan or program is financially responsible, and that the plan or program has been communicated in writing to the laborers or mechanics affected, and records which show the costs anticipated or the actual cost incurred in providing such benefits.

(ii) The contractor shall submit weekly a copy of all payrolls to the (write in name of appropriate Federal agency) if the agency is a party to the contract, but if the agency is not such a party the contractor will submit the payrolls to the applicant, sponsor, or owner, as the case may be for transmission to the (write in name of agency). The payrolls shall set out accurately and completely the name and address (on the first payroll on which the employee's name appears and on subsequent payrolls if the employee's address changes) and social security number of each laborer or mechanic, his or her correct classification, rate of pay, daily and weekly number of hours worked, deductions made, and actual wages paid. This information may be submitted in any form desired. Optional Form WH–347 is available for this purpose and may be purchased from the Superintendent of Documents (Federal Stock Number 029–005–00014–1), U.S. Government Printing Office, Washington, D.C. 20402. Each payroll shall be accompanied by a "Statement of Compliance" as set forth on the reverse side of Optional Form WH–347 or on any form with identical wording, signed by the employer or his or her agent indicating that the payrolls are

correct and complete, that the wage rates and fringe benefits or cash equivalents shown therein are not less than those determined by the Secretary of Labor and that the classifications set forth for each laborer or mechanic conform with the work performed. The prime contractor shall be responsible for the submission of copies of payrolls of all subcontractors. The contractor or subcontractor will make the records required under the labor standards clauses of the contract available for inspection, copying, or transcription by authorized representatives of the (write the name of agency) and the Department of Labor, and will permit such representatives to interview employees during working hours on the job. If the contractor or subcontractor fails to make the required records available, the Federal agency may, after written notice to the contractor, sponsor, applicant, or owner, take such action as may be necessary to cause the suspension of any further payment, advance, or guarantee of funds. Contractors employing apprentices or trainees under approved programs shall include a notation on the first weekly certified payrolls submitted to the contracting agencies that they are registered in an approved program and shall identify the program.

(4) *Apprentices and trainees—(i) Apprentices.* Apprentices will be permitted to work at less than the predetermined rate for the work they performed when they are employed pursuant to and individually registered in a bona fide apprenticeship program registered with the U.S. Department of Labor, Employment and Training Administration, Bureau of Apprenticeship and Training, or with a State Apprenticeship Agency recognized by the Bureau, or if a person is employed in his or her first 90 days of probationary employment as an apprentice in such an apprenticeship program, who is not individually registered in the program, but who has been certified by the Bureau of Apprenticeship and Training or a State Apprenticeship Agency (where appropriate) to be eligible for probationary employment as an apprentice. The allowable ratio of apprentices to journeymen on the job site in any craft classification shall not be greater than the ratio permitted to the contractor as to the entire work force under the registered program. Any worker listed on a payroll at an apprentice wage rate, who is not a trainee as defined in subdivision (ii) of this subparagraph or is not registered or otherwise employed as stated above, shall be paid not less than the applicable wage rate on the wage determination for the classification of work actually performed. In addition, any apprentice performing work on the job site in excess of the ratio permitted under the registered program shall be paid not less than the applicable wage rate on the wage determination for the work actually performed. Where a contractor is performing construction on a project in a locality other than that in which its program is registered, the ratios and wage rates (expressed in percentages of the journeyman's hourly rate) specified in the contractor's or subcontractor's registered program shall be observed. The contractor or subcontractor shall furnish to the contracting officer written evidence of the registration of the program, the registration of the apprentices, and the ratios and wage rates prescribed in the applicable program, prior to using any apprentices on the contract work. Every apprentice must be paid at not less that the rate specified in the registered program for the apprentice's level of progress, expressed as a percentage of the journeymen hourly rate specified in the applicable wage determination. Apprentices shall be paid fringe benefits in accordance with the provisions of the apprenticeship program. If the apprenticeship program does not specify fringe benefits, apprentices must be paid the full amount of fringe benefits listed on the wage determination for the applicable classification. If the Administrator determines that a different practice prevails for the applicable apprentice classification, fringes shall be paid in accordance with that determination. In the event the Bureau of Apprenticeship and Training, or a State Apprenticeship Agency recognized by the Bureau, withdraws approval of an apprenticeship program, the contractor will no longer be permitted to utilize apprentices at less than the applicable predetermined rate for the work performed until an acceptable program is approved.

(ii) *Trainees.* Except as provided in 29 CFR 5.16 trainees will not be permitted to work at less than the predetermined rate for the work performed unless they are employed pursuant to and individually registered in a program which has received prior approval, evidenced by formal certification by the U.S. Department of Labor, Employment and Training Administration, Bureau of Apprenticeship and Training. The ratio of trainees to journeymen on the job site shall not be greater than permitted under the plan approved by the Bureau of Apprenticeship and Training. Every trainee must be paid at not less than the rate specified in the approved program for the trainee's level of progress, expressed as a percentage of the journeyman hourly rate specified in the applicable wage determination. Trainees shall be paid fringe benefits in accordance with the provisions of the trainee program. If the trainee program does not mention fringe benefits, trainees shall be paid the full amount of fringe benefits listed on the wage determination unless the Administrator of the Wage and Hour Division determines that there is an apprenticeship program associated with the corresponding journeyman wage rate on the wage determination which provides for less than full fringe benefits for apprentices. Any employee listed on the payroll at a trainee rate who is not registered and participating in a training plan approved by the Bureau of Apprenticeship and Training shall be paid not less than the applicable wage rate on the wage determination for the classification of work actually performed. In addition, any trainee performing work on the job site in excess of the ratio permitted under the registered program shall be paid not less than the applicable wage rate on the wage determination for the work actually performed. The contractor or subcontractor shall furnish the contracting officer written evidence of the certification of the program, the registration of the trainees, and the ratios and wage rates (expressed in percentages of the journeyman hourly rate) prescribed in that program prior to using any trainees on the contract work. In the event the Bureau of Apprenticeship and Training withdraws approval of a training program, the contractor will no longer be permitted to utilize trainees at less than the applicable predetermined rate for the work performed until an acceptable program is approved.

(iii) *Equal employment opportunity.* The utilization of apprentices, trainees and journeymen under this part shall be in conformity with the equal employment opportunity requirements of Executive Order 11246, as amended, and 29 CFR Part 30.

(5) *Compliance with Copeland Act requirements.* The contractor shall comply with the requirements of 29 CFR Part 3, which are incorporated by reference in this contract.

(6) *Subcontracts.* The contractor or subcontractor shall insert in any subcontracts the clauses contained in 29 CFR 5.5(a)(1) through (10) and such other clauses as the (write in the name of the Federal agency) may by appropriate

instructions require, and also a clause requiring the subcontractors to include these clauses in any lower tier subcontracts. The prime contractor shall be responsible for the compliance by any subcontractor or lower tier subcontractor with all the contract clauses in 29 CFR 5.5.

(7) *Contract termination: debarment.* A breach of the contract clauses in 29 CFR 5.5 may be grounds for termination of the contract, and for debarment as a contractor and a subcontractor as provided in 29 CFR 5.12.

(8) *Compliance with Davis-Bacon and Related Act requirements.* All rulings and interpretations of the Davis-Bacon and Related Acts contained in 29 CFR Parts 1, 3, and 5 are herein incorporated by reference in this contract.

(9) *Disputes concerning labor standards.* Disputes arising out of the labor standards provisions of this contract shall not be subject to the general disputes clause of this contract. Such disputes shall be resolved in accordance with the procedures of the Department of Labor set forth in 29 CFR Parts 5, 6, and 7. Disputes within the meaning of this clause include disputes between the contractor (or any of its subcontractors) and the contracting agency, the U.S. Department of Labor, or the employees or their representatives.

(10) *Certification of Eligibility.* (i) By entering into this contract, the contractor certifies that neither it (nor he or she) nor any person or firm who has an interest in the contractor's firm is a person or firm ineligible to be awarded Government contracts by virtue of section 3(a) of the Davis-Bacon Act or 29 CFR 5.12(a)(1).

(ii) No part of this contract shall be subcontracted to any person or firm ineligible for award of a Government contract by virtue of section 3(a) of the Davis-Bacon Act or 29 CFR 5.12(a)(1).

(iii) The penalty for making false statements is prescribed in the U.S. Criminal Code, 18 U.S.C. 1001.

(b) *Contract Work Hours and Safety Standards Act.* The Agency Head shall cause or require the contracting officer to insert the following clauses set forth in paragraphs (b)(1), (2), (3), and (4) of this section in full in any contract subject to the Contract Work Hours and Safety Standards Act. These clauses shall be inserted in addition to the clauses required by § 5.5(a) or § 4.6 of Part 4 of this title. As used in this paragraph, the terms "laborers" and "mechanics" include watchmen and guards.

(1) *Overtime requirements.* No contractor or subcontractor contracting for any part of the contract work which may require or involve the employment of laborers or mechanics shall require or permit any such laborer or mechanic in any workweek in which he or she is employed on such work to work in excess of eight hours in any calendar day or in excess of forty hours in such workweek unless such laborer or mechanic receives compensation at a rate not less than one and one-half times the basic rate of pay for all hours worked in excess of eight hours in any calendar day or in excess of forty hours in such workweek, whichever is greater.

(2) *Violation; liability for unpaid wages; liquidated damages.* In the event of any violation of the clause set forth in subparagraph (1) of this paragraph, the contractor and any subcontractor responsible therefor shall be liable for the unpaid wages. In addition, such contractor and subcontractor shall be liable to the United States (in the case of work done under contract for the District of Columbia or a territory, to such District or to such territory), for liquidated damages. Such liquidated damages shall be computed with respect to each individual laborer or mechanic, including watchmen and guards, employed in violation of the clause set forth in subparagraph (1) of this paragraph, in the sum of $10 for each calendar day on which such individual was required or permitted to work in excess of eight hours or in excess of the standard workweek of forty hours without payment of the overtime wages required by the clause set forth in subparagraph (1) of this paragraph.

(3) *Withholding for unpaid wages and liquidated damages.* The (write in the name of the Federal agency or the loan or grant recipient) shall upon its own action or upon written request of an authorized representative of the Department of Labor withhold or cause to be withheld, from any moneys payable on account of work performed by the contractor or subcontractor under any such contract or any other Federal contract, or any other Federally-assisted contract subject to the Contract Work Hours and Safety Standards Act, which is held by the same contractor, such sums as may be determined to be necessary to satisfy any liabilities of such contractor or subcontractor for unpaid wages and liquidated damages as provided in the clause set forth in subparagraph (2) of this paragraph.

(4) *Subcontracts.* The contractor or subcontractor shall insert in any subcontracts the clauses set forth in subparagraphs (1) through (4) of this paragraph and also a clause requiring the subcontractors to include these clauses in any lower tier subcontracts. The prime contractor shall be responsible for compliance by any subcontractor or lower tier subcontractor with the clauses set forth in subparagraphs (1) through (4) of this paragraph.

(c) In addition to the clauses contained in paragraph (b), in any contract subject only to the Contract Work Hours and Safety Standards Act and not to any of the other statutes cited in § 5.1, the Agency Head shall cause or require the contracting officer to insert a clause requiring that the contractor or subcontractor shall maintain payrolls and basic payroll records during the course of the work and shall preserve them for a period of three years from the completion of the contract for all laborers and mechanics, including guards and watchmen, working on the contract. Such records shall contain the name and address of each such employee, social security number, correct classifications, hourly rates of wages paid, daily and weekly number of hours worked, deductions made, and actual wages paid. Further, the Agency Head shall cause or require the contracting officer to insert in any such contract a clause providing that the records to be maintained under this paragraph shall be made available by the contractor or subcontractor for inspection, copying, or transcription by authorized representatives of the (write the name of agency) and the Department of Labor, and the contractor or subcontractor will permit such representatives to interview employees during working hours on the job.

§ 5.6 Enforcement.

(a)(1) It shall be the responsibility of the Federal agency to ascertain whether the clauses required by § 5.5 have been inserted in the contracts subject to the labor standards provisions of the Acts contained in § 5.1. Agencies which do not directly enter into such contracts shall promulgate the necessary regulations or procedures to require the recipient of the Federal assistance to insert in its contracts the provisions of § 5.5. No payment, advance, grant, loan, or guarantee of funds shall be approved by the Federal agency unless the agency insures that the clauses required by § 5.5 and the appropriate wage determination of the Secretary of Labor are contained in such contracts. Furthermore, no payment, advance, grant, loan, or guarantee of funds shall be approved by the Federal agency after the beginning of construction unless there is on file with the agency a certification by the contractor that the contractor and its subcontractors have complied with the provisions of § 5.5 or unless there is on file with the agency a certification by

the contractor that there is a substantial dispute with respect to the required provisions.

(2) The Federal agency shall make such examination of the submitted payrolls and statements of compliance as may be necessary to assure compliance with the labor standards clauses required by § 5.5 and the applicable statutes listed in § 5.1. In connection with such examination particular attention should be given to the correctness of classifications and disproportionate employment of laborers, of helpers where they are listed on the wage determination, and of apprentices or trainees registered in approved programs. Such payrolls and statements shall be preserved by the agency for a period of 3 years from the date of completion of the contract and shall be produced at the request of the Department of Labor at any time during the 3-year period.

(3) In addition to the examination of payrolls and statements required by paragraph (a)(2) of this section, the Federal agency shall cause such investigations to be made as may be necessary to assure compliance with the labor standards clauses required by § 5.5 and the applicable statutes listed in § 5.1. Investigations shall be made of all contracts with such frequency as may be necessary to assure compliance. Such investigations shall include interviews with employees, which shall be taken in confidence, and examinations of payroll data and evidence of registration and certification with respect to apprenticeship and training plans to determine the correctness of classifications and disproportionate employment of laborers, of helpers where they are listed on the wage determination, and of apprentices or trainees registered in approved programs. Such investigations shall also include evidence of fringe benefit plans and payments thereunder. Complaints of alleged violations shall be given priority.

(4) In accordance with normal operating procedures, the contracting agency may be furnished various investigatory material from the investigation files of the Department of Labor. None of the material, other than computations of back wages and liquidated damages and the summary of back wages due, may be disclosed in any manner to anyone other than Federal officials charged with administering the contract or program providing Federal assistance to the contract, without requesting the permission and views of the Department of Labor.

(5) It is the policy of the Department of Labor to protect the identity of its confidential sources and to prevent an unwarranted invasion of personal privacy. Accordingly, the identity of an employee who makes a written or oral statement as a complaint or in the course of an investigation, as well as portions of the statement which would reveal the employee's identity, shall not be disclosed in any manner to anyone other than Federal officials without the prior consent of the employee. Disclosure of employee statements shall be governed by the provisions of the "Freedom of Information Act" (5 U.S.C. 552, see 29 CFR Part 70) and the "Privacy Act of 1974" (5 U.S.C. 552a).

(b) The Administrator shall cause to be made such investigations as deemed necessary, in order to obtain compliance with the labor standards provisions of the applicable statutes listed in § 5.1, or to affirm or reject the recommendations by the Agency Head with respect to labor standards matters arising under the statutes listed in § 5.1. Federal agencies, contractors, subcontractors, sponsors, applicants, or owners shall cooperate with any authorized representative of the Department of Labor in the inspection of records, in interviews with workers, and in all other aspects of the investigations. The findings of such an investigation, including amounts found due, may not be altered or reduced without the approval of the Department of Labor. Where the underpayments disclosed by such an investigation total $1,000 or more, where there is reason to believe that the violations are aggravated or willful (or, in the case of the Davis-Bacon Act, that the contractor has disregarded its obligations to employees and subcontractors), or where liquidated damages may be assessed under the Contract Work Hours and Safety Standards Act, the Department of Labor will furnish the Federal agency an enforcement report detailing the labor standards violations disclosed by the investigation and any action taken by the contractor to correct the violative practices, including any payment of back wages. In other circumstances, the Federal agency will be furnished a letter of notification summarizing the findings of the investigation.

§ 5.7 Reports to the Secretary of Labor.

(a) *Enforcement reports.* (1) Where underpayments by a contractor or subcontractor total less than $1,000, and where there is no reason to believe that the violations are aggravated or willful (or, in the case of the Davis-Bacon Act, that the contractor has disregarded its obligations to employees and subcontractors), and where restitution has been effected and future compliance assured, the Federal agency need not submit its investigative findings and recommendations to the Administrator, unless the investigation was made at the request of the Department of Labor. In the latter case, the Federal agency shall submit a factual summary report detailing any violations including any data on the amount of restitution paid, the number of workers who received restitution, liquidated damages assessed under the Contract Work Hours and Safety Standards Act, corrective measures taken (such as "letters of notice"), and any information that may be necessary to review any recommendations for an appropriate adjustment in liquidated damages under § 5.8.

(2) Where underpayments by a contractor or subcontractor total $1,000 or more, or where there is reason to believe that the violations are aggravated or willful (or, in the case of the Davis-Bacon Act, that the contractor has disregarded its obligations to employees and subcontractors), the Federal agency shall furnish within 60 days after completion of its investigation, a detailed enforcement report to the Administrator.

(b) *Semi-annual enforcement reports.* To assist the Secretary in fulfilling the responsibilities under Reorganization Plan No. 14 of 1950, Federal agencies shall furnish to the Administrator by April 30 and October 31 of each calendar year semi-annual reports on compliance with and enforcement of the labor standards provisions of the Davis-Bacon Act and its related acts covering the periods of October 1 through March 31 and April 1 through September 30, respectively. Such reports shall be prepared in the manner prescribed in memoranda issued to Federal agencies by the Administrator.

(c) *Additional information.* Upon request, the Agency Head shall transmit to the Administrator such information available to the Agency with respect to contractors and subcontractors, their contracts, and the nature of the contract work as the Administrator may find necessary for the performance of his or her duties with respect to the labor standards provisions referred to in this part.

(d) *Contract termination.* Where a contract is terminated by reason of violations of the labor standards provisions of the statutes listed in § 5.1, a report shall be submitted promptly to the Administrator and to the Comptroller General (if the contract is subject to the Davis-Bacon Act) giving the name and address of the contractor

or subcontractor whose right to proceed has been terminated, and the name and address of the contractor or subcontractor, if any, who is to complete the work, the amount and number of the contract, and the description of the work to be performed.

§ 5.8 Liquidated damages under the Contract Work Hours and Safety Standards Act.

(a) The Contact Work Hours and Safety Standards Act requires that laborers or mechanics shall be paid wages at a rate not less than one and one-half times the basic rate of pay for all hours worked in excess of eight hours in any calendar day or forty hours in any work week. In the event of violation of this provision, the contractor and any subcontractor shall be liable for the unpaid wages and in addition for liquidated damages, computed with respect to each laborer or mechanic employed in violation of the Act, of $10, for each calendar day or workweek in which such individual was required or permitted to work without payment of required overtime wages. Any contractor or subcontractor aggrieved by the withholding of liquidated damages shall have the right to appeal to the head of the agency of the United States (or the territory or District of Columbia, as appropriate) for which the contract work was performed or for which financial assistance was provided.

(b) *Findings and recommendations of the Agency Head.* The Agency Head has the authority to review the administrative determination of liquidated damages and to issue a final order affirming the determination. It is not necessary to seek the concurrence of the Administrator but the Administration shall be advised of the action taken. Whenever the Agency Head finds that a sum of liquidated damages administratively determined to be due is incorrect or that the contractor or subcontractor violated inadvertently the provisions of the Act notwithstanding the exercise of due care upon the part of the contractor or subcontractor involved, and the amount of the liquidated damages computed for the contract is in excess of $500, the Agency Head may make recommendations to the Secretary that an appropriate adjustment in liquidated damages be made or that the contractor or subcontractor be relieved of liability for such liquidated damages. Such findings with respect to liquidated damages shall include findings with respect to any wage underpayments for which the liquidated damages are determined.

(c) The recommendations of the Agency Head for adjustment or relief from liquidated damages under paragraph (a) of this section shall be reviewed by the Administrator or an authorized representative who shall issue an order concurring in the recommendations, partially concurring in the recommendations, or rejecting the recommendations, and the reasons therefor. The order shall be the final decision of the Department of Labor, unless a petition for review is filed pursuant to Part 7 of this title, and the Wage Appeals Board in its discretion reviews such decision and order.

(d) Whenever the Agency Head finds that a sum of liquidated damages administratively determined to be due under section 104(a) of the Contract Work Hours and Safety Standards Act for a contract is $500 or less and the Agency Head finds that the sum of liquidated damages is incorrect or that the contractor or subcontractor violated inadvertently the provisions of the Contract Work Hours and Safety Standards Act notwithstanding the exercise of due care upon the part of the contractor or subcontractor involved, an appropriate adjustment may be made in such liquidated damages or the contractor or subcontractor may be relieved of liability for such liquidated damages without submitting recommendations to this effect or a report to the Department of Labor. This delegation of authority is made under section 105 of the Contract Work Hours and Safety Standards Act and has been found to be necessary and proper in the public interest to prevent undue hardship and to avoid serious impairment of the conduct of Government business.

§ 5.9 Suspension of funds.

In the event of failure or refusal of the contractor or any subcontractor to comply with the labor standards clauses contained in § 5.5 and the applicable statutes listed in § 5.1, the Federal agency, upon its own action or upon written request of an authorized representative of the Department of Labor, shall take such action as may be necessary to cause the suspension of the payment, advance or guarantee of funds until such time as the violations are discontinued or until sufficient funds are withheld to compensate employees for the wages to which they are entitled and to cover any liquidated damages which may be due.

§ 5.10 Restitution, criminal action.

(a) In cases other than those forwarded to the Attorney General of the United States under paragraph (b). of this section, where violations of the labor standards clauses contained in § 5.5 and the applicable statutes listed in § 5.1 result in underpayment of wages to employees, the Federal agency or an authorized representative of the Department of Labor shall request that restitution be made to such employees or on their behalf to plans, funds, or programs for any type of bona fide fringe benefits within the meaning of section 1(b)(2) of the Davis-Bacon Act.

(b) In cases where the Agency Head or the Administrator finds substantial evidence that such violations are willful and in violation of a criminal statute, the payment of wage underpayments shall not be requested and the matter shall be forwarded to the Attorney General of the United States for prosecution if the facts warrant. In all such cases the Administrator shall be informed simultaneously of the action taken.

§ 5.11 Disputes concerning payment of wages.

(a) This section sets forth the procedure for resolution of disputes of fact or law concerning payment of prevailing wage rates, overtime pay, or proper classification. The procedures in this section may be initiated upon the Administrator's own motion, upon referral of the dispute by a Federal agency pursuant to § 5.5(a)(9), or upon request of the contractor or subcontractor(s).

(b)(1) In the event of a dispute described in paragraph (a) of this section in which it appears that relevant facts are at issue, the Administrator will notify the affected contractor and subcontractor(s) (if any), by registered or certified mail to the last known address, of the investigation findings. If the Administrator determines that there is reasonable cause to believe that the contractor and/or subcontractor(s) should also be subject to debarment under the Davis-Bacon Act or § 5.12(a)(1), the letter will so indicate.

(2) A contractor and/or subcontractor desiring a hearing concerning the Administrator's investigative findings shall request such a hearing by letter postmarked within 30 days of the date of the Administrator's letter. The request shall set forth those findings which are in dispute and the reasons therefore, including any affirmative defenses, with respect to the violations and/or debarment, as appropriate.

(3) Upon receipt of a timely request for a hearing, the Administrator shall refer the case to the Chief Administrative Law Judge by Order of Reference, to which shall be attached a copy of the letter from the Administrator and response thereto, for designation of

an Administrative Law Judge to conduct such hearings as may be necessary to resolve the disputed matters. The hearing shall be conducted in accordance with the procedures set forth in 29 CFR Part 6.

(c)(1) In the event of a dispute described in paragraph (a) of this section in which it appears that there are no relevant facts at issue, and where there is not at that time reasonable cause to institute debarment proceedings under § 5.12, the Administrator shall notify the contractor and subcontractor(s) (if any), by registered or certified mail to the last known address, of the investigation findings, and shall issue a ruling on any issues of law known to be in dispute.

(2)(i) If the contractor and/or subcontractor(s) disagree with the factual findings of the Administrator or believe that there are relevant facts in dispute, the contractor or subcontractor(s) shall so advise the Administrator by letter postmarked within 30 days of the date of the Administrator's letter. In the response, the contractor and/or subcontractor(s) shall explain in detail the facts alleged to be in dispute and attach any supporting documentation.

(ii) Upon receipt of a response under paragraph (c)(1)(i) of this section alleging the existence of a factual dispute, the Administrator shall examine the information submitted. If the Administrator determines that there is a relevant issue of fact, the Administrator shall refer the case to the Chief Administrative Law Judge in accordance with paragraph (b)(3) of this section. If the Administrator determines that there is no relevant issue of fact, the Administrator shall so rule and advise the contractor and subcontractor(s) (if any) accordingly.

(3) If the contractor and/or subcontractor(s) desire review of the ruling issued by the Administrator under paragraphs (c)(1) or (2) of this section, the contractor and/or subcontractor(s) shall file a petition for review thereof with the Wage Appeals Board within 30 days of the date of the ruling, with a copy thereof to the Administrator. The petition for review shall be filed in accordance with Part 7 of this title.

(d) If a timely response to the Administrator's findings or ruling is not made or a timely petition for review is not filed, the Administrator's findings and/or ruling shall be final, except that with respect to debarment under the Davis-Bacon Act, the Administrator shall advise the Comptroller General of the Administrator's recommendation in accordance with § 5.12(a)(1). If a timely response or petition for review is filed, the findings and/or ruling of the Administrator shall be inoperative unless and until the decision is upheld by the Administrative Law Judge or the Wage Appeals Board.

§ 5.12 Debarment proceedings.

(a)(1) Whenever any contractor or subcontractor is found by the Secretary of Labor to be in aggravated or willful violation of the labor standards provisions of any of the applicable statutes listed in § 5.1, other than the Davis-Bacon Act, such contractor or subcontractor or any firm, corporation, partnership, or association in which such contractor or subcontractor has a substantial interest shall be ineligible for a period not to exceed 3 years (from the date of publication by the Comptroller General of the name or names of said contractor or subcontractor on the ineligible list as provided below) to receive any contracts or subcontracts subject to any of the statutes listed in § 5.1.

(2) In cases arising under contracts covered by the Davis-Bacon Act, the Administrator shall transmit to the Comptroller General the names of the contractors or subcontractors and their responsible officers, if any (and any firms in which the contractors or subcontractors are known to have an interest), who have been found to have disregarded their obligations to employees, and the recommendation of the Secretary of Labor or authorized representative regarding debarment. The Comptroller General will distribute a list to all Federal agencies giving the names of such ineligible person or firms, who shall be ineligible to be awarded any contract or subcontract of the United States or the District of Columbia and any contract or subcontract subject to the labor standards provisions of the statutes listed in § 5.1.

(b)(1) In addition to cases under which debarment action is initiated pursuant to § 5.11, whenever as a result of an investigation conducted by the Federal agency or the Department of Labor, and where the Administrator finds reasonable cause to believe that a contractor or subcontractor has committed willful or aggravated violations of the labor standards provisions of any of the statutes listed in § 5.1 (other than the Davis-Bacon Act), or has committed violations of the Davis-Bacon Act which constitute a disregard of its obligations to employees or subcontractors under section 3(a) thereof, the Administrator shall notify by registered or certified mail to the last known address, the contractor or subcontractor and its responsible officers, if any (and any firms in which the contractor or subcontractor are known to have a substantial interest), of the finding. The Adminstrator shall afford such contractor or subcontractor and any other parties notified an opportunity for a hearing as to whether debarment action should be taken under paragraph (a)(1) of this section or section 3(a) of the Davis-Bacon Act. The Administrator shall furnish to those notified a summary of the investigative findings. If the contractor or subcontractor or any other parties notified wish to request a hearing as to whether debarment action should be taken, such a request shall be made by letter postmarked within 30 days of the date of the letter from the Administrator, and shall set forth any findings which are in dispute and the reasons therefor, including any affirmative defenses to be raised. Upon receipt of such request for a hearing, the Administrator shall refer the case to the Chief Administrative Law Judge by Order of Reference, to which shall be attached a copy of the letter from the Administrator and the response thereto, for designation of an Administrative Law Judge to conduct such hearings as may be necessary to determine the matters in dispute. In considering debarment under any of the statutes listed in § 5.1 other than the Davis-Bacon Act, the Administrative Law Judge shall issue an order concerning whether the contractor or subcontractor is to be debarred in accordance with paragraph (a)(1) of this section. In considering debarment under the Davis-Bacon Act, the Administrative Law Judge shall issue a recommendation as to whether the contractor or subcontractor should be debarred under section 3(a) of the Act.

(2) Hearings under this section shall be conducted in accordance with 29 CFR Part 6. If no hearing is requested within 30 days of receipt of the letter from the Administrator, the Administrator's findings shall be final, except with respect to recommendations regarding debarment under the Davis-Bacon Act, as set forth in paragraph (a)(2) of this section.

(c) Any person or firm debarred under § 5.12(a)(1) may in writing request removal from the debarment list after six months from the date of publication by the Comptroller General of such person or firm's name on the ineligible list. Such a request should be directed to the Administrator of the Wage and Hour Division, Employment Standards Administration, U.S. Department of Labor, Washington, D.C. 20210, and shall contain a full explanation of the reasons why such person or firm should be removed from the ineligible list. In

cases where the contractor or subcontractor failed to make full restitution to all underpaid employees, a request for removal will not be considered until such underpayments are made. In all other cases, the Administrator will examine the facts and circumstances surrounding the violative practices which caused the debarment, and issue a decision as to whether or not such person or firm has demonstrated a current responsibility to comply with the labor standards provisions of the statutes listed in § 5.1, and therefore should be removed from the ineligible list. Among the factors to be considered in reaching such a decision are the severity of the violations, the contractor or subcontractor's attitude towards compliance, and the past compliance history of the firm. In no case will such removal be effected unless the Administrator determines after an investigation that such person or firm is in compliance with the labor standards provisions applicable to Federal contracts and Federally assisted construction work subject to any of the applicable statutes listed in § 5.1 and other labor statutes providing wage protection, such as the Service Contract Act, the Walsh-Healey Public Contracts Act, and the Fair Labor Standards Act. If the request for removal is denied, the person or firm may petition for review by the Wage Appeals Board pursuant to 29 CFR Part 7.

(d)(1) Section 3(a) of the Davis-Bacon Act provides that for a period of three years from date of publication on the ineligible list, no contract shall be awarded to any persons or firms placed on the list as a result of a finding by the Comptroller General that such persons or firms have disregarded obligations to employees and subcontractors, and further, that no contract shall be awarded to "any firm, corporation, partnership, or association in which such persons or firms have an interest." Paragraph (a)(1) of this section similarly provides that contracts subject to any of the statutes listed in § 5.1 (other than the Davis-Bacon Act) shall not be awarded to "any firm, corporation, partnership, or association" in which a contractor or subcontractor on the ineligible list pursuant to that paragraph has a "substantial interest." A finding as to whether persons or firms whose names appear on the ineligible list have an interest (or a substantial interest, as appropriate) in any other firm, corporation, partnership, or association, may be made through investigation, hearing, or otherwise.

(2)(i) The Administrator, on his/her own motion or after receipt of a request for a determination pursuant to paragraph (d)(3) of this section may make a finding on the issue of interest (or substantial interest, as appropriate).

(ii) If the Administrator determines that there may be an interest (or substantial interest, as appropriate), but finds that there is insufficient evidence to render a final ruling thereon, the Administrator may refer the issue to the Chief Administrative Law Judge in accordance with paragraph (d)(4) of this section.

(iii) If the Administrator finds that no interest (or substantial interest, as appropriate) exists, or that there is not sufficient information to warrant the initiation of an investigation, the requesting party, if any, will be so notified an no further action taken.

(iv)(A) If the Administrator finds that an interest (or substantial interest, as appropriate) exists, the person or firm affected will be notified of the Administrator's finding (by certified mail to the last known address), which shall include the reasons therefor, and such person or firm shall be afforded an opportunity to request that a hearing be held to render a decision on the issue.

(B) Such person or firm shall have 20 days from the date of the Administrator's ruling to request a hearing. A detailed statement of the reasons why the Administrator's ruling is in error, including facts alleged to be in dispute, if any, shall be submitted with the request for a hearing.

(C) If no hearing is requested within the time mentioned in paragraph (d)(2)(iv)(B) of this section, the Administrator's finding shall be final and the Administrator shall so notify the Comptroller General. If a hearing is requested, the ruling of the Administrator shall be inoperative unless and until the administrative law judge or the Wage Appeals Board issues an order that there is an interest (or substantial interest, as appropriate).

(3)(i) A request for a determination of interest (or substantial interest, as appropriate), may be made by any interested party, including contractors or prospective contractors and associations of contractors, representatives of employees, and interested Government agencies. Such a request shall be submitted in writing to the Administrator, Wage and Hour Division, Employment Standards Administration, U.S. Department of Labor, Washington, D.C. 20210, to the attention of the Office of Government Contract Wage Standards.

(ii) The request shall include a statement setting forth in detail why the petitioner believes that a person or firm whose name appears on the debarred bidders list has an interest (or a substantial interest, as appropriate) in any firm, corporation, partnership, or association which is seeking or has been awarded a contract of the United States or the District of Columbia, or which is subject to any of the statutes listed in § 5.1. No particular form is prescribed for the submission of a request under this section.

(4) *Referral to the Chief Administrator Law Judge.* The Administrator, on his/her own motion under paragraph (d)(2)(ii) of this section or upon a request for hearing where the Administrator determines that relevant facts are in dispute, will by order refer the issue to the Chief Administrative Law Judge, for designation of an Administrative Law Judge who shall conduct such hearings as may be necessary to render a decision solely on the issue of interest (or substantial interest, as appropriate). Such proceedings shall be conducted in accordance with the procedures set forth at 29 CFR Part 6.

(5) *Referral to the Wage Appeals Board.* If the person or firm affected requests a hearing and the Administrator determines that relevant facts are not in dispute, the Administrator will refer the issue and the record compiled thereon to the Wage Appeals Board to render a decision solely on the issue of interest (or substantial interest, as appropriate). Such proceeding shall be conducted in accordance with the procedures set forth at 29 CFR Part 7.

§ 5.13 Rulings and interpretations.

All questions relating to the application and interpretation of wage determinations (including the classifications therein) issued pursuant to Part 1 of this subtitle, of the rules contained in this part and in Parts 1 and 3, and of the labor standards provisions of any of the statutes listed in § 5.1 shall be referred to the Administrator for appropriate ruling or interpretation. The rulings and interpretations shall be authoritative and those under the Davis-Bacon Act may be relied upon as provided for in section 10 of the Portal-to-Portal Act of 1947 (29 U.S.C. 259). Requests for such rulings and interpretations should be addressed to the Administrator, Wage and Hour Division, Employment Standards Administration, U.S. Department of Labor, Washington, D.C. 20210.

§ 5.14 Variations, tolerances, and exemptions from Parts 1 and 3 of this subtitle and this part.

The Secretary of Labor may make variations, tolerances, and exemptions from the regulatory requirements of this part and those of Parts 1 and 3 of this subtitle whenever the Secretary finds that such action is necessary and proper in the public interest or to prevent injustice and undue hardship. Variations, tolerances, and exemptions may not be made from the statutory requirements of any of the statutes listed in § 5.1 unless the statute specifically provides such authority.

§ 5.15 Limitations, variations, tolerances, and exemptions under the Contract Work Hours and Safety Standards Act.

(a) *General.* Upon his or her own initiative or upon the request of any Federal agency, the Secretary of Labor may provide under section 105 of the Contract Work Hours and Safety Standards Act reasonable limitations and allow variations, tolerances, and exemptions to and from any or all provisions of that Act whenever the Secretary finds such action to be necessary and proper in the public interest to prevent injustice, or undue hardship, or to avoid serious impairment of the conduct of Government business. Any request for such action by the Secretary shall be submitted in writing, and shall set forth the reasons for which the request is made.

(b) *Exemptions.* Pursuant to section 105 of the Contract Work Hours and Safety Standards Act, the following classes of contracts are found exempt from all provisions of that Act in order to prevent injustice, undue hardship, or serious impairment of Government business:

(1) Contracts of $2,000.00 or less.

(2) Purchases and contracts other than construction contracts in the aggregate amount of $2,500.00 or less. In arriving at the aggregate amount involved, there must be included all property and services which would properly be grouped together in a single transaction and which would be included in a single advertisement for bids if the procurement were being effected by formal advertising.

(3) Contract work performed in a workplace within a foreign country or within territory under the jurisdiction of the United States other than the following: A State of the United States; the District of Columbia; Puerto Rico; the Virgin Islands; Outer Continental Shelf lands defined in the Outer Continental Shelf Lands Act (ch. 345, 67 Stat. 462); American Samoa; Guam; Wake Island; Eniwetok Atoll; Kwajalein Atoll; and Johnston Island;

(4) Agreements entered into by or on behalf of the Commodity Credit Corporation providing for the storing in or handling by commercial warehouses of wheat, corn, oats, barley, rye, grain sorghums, soybeans, flaxseed, rice, naval stores, tobacco, peanuts, dry beans, seeds, cotton, and wool.

(5) Sales of surplus power by the Tennessee Valley Authority to States, counties, municipalities, cooperative organization of citizens or farmers, corporations and other individuals pursuant to section 10 of the Tennessee Valley Authority Act of 1933 (16 U.S.C. 8311).

(c) *Tolerances.* (1) The "basic rate of pay" under section 102 of the Contract Work Hours and Safety Standards Act may be computed as an hourly equivalent to the rate on which time-and-one-half overtime compensation may be computed and paid under section 7 of the Fair Labor Standards Act of 1938, as amended (29 U.S.C. 207), as interpreted in Part 778 of this title. This tolerance is found to be necessary and proper in the public interest in order to prevent undue hardship.

(2) Concerning the tolerance provided in paragraph (c)(1) of this section, the provisions of section 7(d)(2) of the Fair Labor Standards Act and § 778.7 of this title should be noted. Under these provisions, payments for occasional periods when no work is performed, due to vacations, and similar causes are excludable from the "regular rate" under the Fair Labor Standards Act. Such payments, therefore, are also excludable from the "basic rate" under the Contract Work Hours and Safety Standards Act.

(3) See § 5.8(c) providing a tolerance subdelegating authority to the heads of agencies to make appropriate adjustments in the assessment of liquidated damages totaling $500 or less under specified circumstances.

(4)(i) Time spent in an organized program of related, supplemental instruction by laborers or mechanics employed under bona fide apprenticeship or training programs may be excluded from working time if the criteria prescribed in paragraphs (c)(4)(ii) and (iii) of this section are met.

(ii) The apprentice or trainee comes within the definition contained in § 5.2(n).

(iii) The time in question does not involve productive work or performance of the apprentice's or trainee's regular duties.

(d) *Variations.* (1) In order to prevent undue hardship, a workday consisting of a fixed and recurring 24-hour period commencing at the same time on each calendar day may be used in lieu of the calendar day in applying the daily overtime provisions of the Act to the employment of firefighters or fireguards, under the following conditions: (i) Where such employment is under a platoon system requiring such employees to remain at or within the confines of their post of duty in excess of eight hours per day in a standby or on-call status; and (ii) if the use of such alternate 24-hour day has been agreed upon between the employer and such employees or their authorized representatives before performance of the work; and (iii) provided that, in determining the daily and the weekly overtime requirements of the Act in any particular workweek of any such employee whose established workweek begins at an hour of the calendar day different from the hour when such agreed 24-hour day commences, the hours worked in excess of 8 hours in any such 24-hour day shall be counted in the established workweek (of 168 hours commencing at the same time each week) in which such hours are actually worked.

(2) In the event of failure or refusal of the contractor or any subcontractor to comply with overtime pay requirements of the Contract Work Hours and Safety Standards Act, if the funds withheld by Federal agencies for the violations are not sufficient to pay fully both the unpaid wages due laborers and mechanics and the liquidated damages due the United States, the available funds shall be used first to compensate the laborers and mechanics for the wages to which they are entitled (or an equitable portion thereof when the funds are not adequate for this purpose); and the balance, if any, shall be used for the payment of liquidated damages.

(3) In the performance of any contract entered into pursuant to the provisions of 38 U.S.C. 620 to provide nursing home care of veterans, no contractor or subcontractor under such contract shall be deemed in violation of Section 102 of the Contract Work Hours and Safety Standards Act by virtue of failure to pay the overtime wages required by such section for work in excess of 8 hours in any calendar day or 40 hours in the workweek to any individual employed by an establishment which is an institution primarily engaged in the care of the sick, the aged, or the mentally ill or defective who reside on the premises if, pursuant to an agreement or understanding arrived at between the employer and the employee before performance of the work, a work period of 14 consecutive days is accepted in lieu of the workweek of 7 consecutive

days for the purpose of overtime compensation and if such individual receives compensation for employment in excess of 8 hours in any workday and in excess of 80 hours in such 14-day period at a rate not less than 1½ times the regular rate at which the individual is employed, computed in accordance with the requirements of the Fair Labor Standards Act of 1938, as amended.

§ 5.16 Training plans approved or recognized by the Department of Labor prior to August 20, 1975.

(a) Notwithstanding the provisions of § 5.5(a)(4)(ii) relating to the utilization of trainees on Federal and federally assisted construction, no contractor shall be required to obtain approval of a training program which, prior to August 20, 1975, was approved by the Department of Labor for purposes of the Davis-Bacon and Related Acts, was established by agreement of organized labor and management and therefore recognized by the Department, and/or was recognized by the Department under Executive Order 11246, as amended. A copy of the program and evidence of its prior approval, if applicable shall be submitted to the Employment and Training Administration, Bureau of Apprenticeship and Training, which shall certify such prior approval or recognition of the program. In every other respect, the provisions of § 5.5(a)(4)(ii)—including those relating to registration of trainees, permissible ratios, and wage rates to be paid—shall apply to these programs.

(b) Every trainee employed on a contract executed on and after August 20, 1975, in one of the above training programs must be individually registered in the program in accordance with BAT procedures, and must be paid at the rate specified in the program for the level of progress. Any such employee listed on the payroll at a trainee rate who is not registered and participating in a program certified by BAT pursuant to this section, or approved and certified by BAT pursuant to § 5.5(a)(4)(ii), must be paid the wage rate determined by the Secretary of Labor for the classification of work actually performed. The ratio of trainees to journeymen shall not be greater than permitted by the terms of the program.

(c) In the event a program which was recognized or approved prior to August 20, 1975, is modified, revised, extended, or renewed, the changes in the program or its renewal must be approved by the Bureau of Apprenticeship and Training before they may be placed into effect.

§ 5.17 Withdrawal of approval of a training program.

If at any time the Employment and Training Administration, Bureau of Apprenticeship and Training determines, after opportunity for a hearing, that the standards of any program, whether it is one recognized or approved prior to August 20, 1975, or a program subsequently approved, have not been complied with, or that such a program falls to provide adequate training for participants, a contractor will no longer be permitted to utilize trainees at less than the predetermined rate for the classification of work actually performed until an acceptable program is approved. If the contractor files an appeal pursuant to § 5.18 within 30 days of receipt of a certified letter withdrawing the Bureau of Apprenticeship and Training's approval, the effect of the withdrawal of approval of the program will be delayed until a decision is rendered on the appeal.

§ 5.18 Appeal from Bureau of Apprenticeship and Training's decisions.

(a) Appeal from a withdrawal of approval of a training program by the Bureau of Apprenticeship and Training pursuant to § 5.17 may be made to the Assistant Secretary for Employment and Training, U.S. Department of Labor, Washington, D.C. 20210. Appeals brought more than 30 days after the contractor's receipt of notice of withdrawal of approval of a program will be processed, but the effects of withdrawal of approval of the program will not be delayed during consideration of such an appeal.

(b) Appeal from disapproval of new training programs whose approval is requested pursuant to these regulations may be made to the Assistant Secretary for Employment and Training, U.S. Department of Labor, Washington, D.C. 20210.

(c) The Assistant Secretary for Employment and Training (or designee) shall examine the complete record on the basis of which the denial was issued, including the application for the program, supporting data, Bureau of Apprenticeship and Training decision, and any written argument which the applicant may submit, and any reply thereto by the Bureau of Apprenticeship and Training. Copies of any such reply shall be served on the applicant. The Assistant Secretary, or designee, shall approve or disapprove the decision of the Bureau or shall advise what modifications are necessary for approval of the program. This decision by the Assistant Secretary or designee shall be final.

Part X

Department of Labor

Office of the Secretary

Rules of Practice for Administrative Proceedings Enforcing Labor Standards in Federal and Federally Assisted Construction Contracts and Federal Service Contracts; Final Rule

Office of the Secretary

29 CFR Part 6

Rules of Practice for Administrative Proceedings Enforcing Labor Standards in Federal and Federally Assisted Construction Contracts and Federal Service Contracts

AGENCY: Department of Labor.

ACTION: Final rule.

SUMMARY: The revisions to this part are intended to provide administrative hearings in enforcement cases and substantial interest proceedings involving the Davis-Bacon and related acts, the Service Contract Act, and the Contract Work Hours and Safety Standards Act, and substantial variance and arm's length proceedings under Section 4(c) of the Service Contract Act. These revisions are designed to make such proceedings as uniform as possible. A procedure for appeal to the Secretary is provided instead of appeal to a Board, which had been proposed as a new Part 8 to 29 CFR.

EFFECTIVE DATE: February 17, 1981.

FOR FURTHER INFORMATION CONTACT: Gail V. Coleman, Counsel for Contract Labor Standards, General Legal Services, Office of the Solicitor, U.S. Department of Labor, Room N2464, 200 Constitution Ave., NW., Washington, D.C. 20210. Phone 202-523-8268.

SUPPLEMENTARY INFORMATION: On April 22, 1980, a proposal was published in the Federal Register (45 FR 27400) to make revisions to 29 CFR Part 6, Rules of Practice for Administrative Proceedings Enforcing Labor Standards in Federal and Federally Assisted Construction Contracts and Federal Service Contracts. As stated in the proposal, its purpose was primarily to make more uniform the proceedings for enforcement under the various labor standards statutes and to provide more expedited hearings under Section 4(c) of the Service Contract Act.

Interested persons were afforded the opportunity to submit comments to the Office of the Solicitor by May 27, 1980. Comments were received from eight interested parties, including the Department of Defense, the National Aeronautics and Space Administration, the Philadelphia Area Office of the Department of Housing and Urban Development, the American Federation of Labor and Congress of Industrial Organizations (AFL-CIO), the International Brotherhood of Electrical Workers, the Building and Construction Trades Department, AFL-CIO, the Associated Builders and Contractors, Inc. (ABC), and the Council of Defense and Space Industry Associations (CODSIA).

The following is an analysis of all the principal comments received and the corresponding changes made to the proposed rule. Each submission has been thoroughly reviewed and each criticism and suggestion has been given careful consideration. For each section and, where appropriate, subsection of the final rule, the analysis contains a description of the major comments and recommendations, the Department's findings as to whether or not suggested changes to the proposed rule are appropriate, and the substantive changes herein adopted.

The Building and Construction Trades Department, CODSIA, and the Philadelphia Area Office of the Department of Housing and Urban Development commented generally in favor of the proposed regulations, which are designed to ensure due process resolution of disputes.

The International Brotherhood of Electrical Workers and the Building and Construction Trades Department objected to the different standard for debarment of affiliated companies under the Davis-Bacon Act and the related acts, and suggested that the standard in § 6.2(d) and in Subparts C and D should be "interest" rather than "substantial interest." The regulations adopt the "interest" standard for debarment under the Davis-Bacon Act because it is the standard imposed by the statute. In determining both "interest" and "substantial interest" the Department looks to each situation on a case by case basis and considers all the circumstances, including such factors as the person's involvement with the firm's daily operations and policy decisions and the person's ownership interest in the firm. Although no change is made in the standard for debarment, the definition of "Respondent" is amended to include the Davis-Bacon statutory standard.

The Department of Defense suggested that service in Section 6.3 should be by certified mail. The Department of Labor in fact serves the complaint under the Service Contract Act and the notification letter under Davis-Bacon procedures (see 29 CFR 5.11 and 5.12) by certified or registered mail because of the legal ramifications of failure to respond to these documents. However, regular mail is the normal method of service of briefs, etc., and is more expeditious than certified mail. Therefore no change is adopted except to make it clear that filing is accomplished upon service.

The International Brotherhood of Electrical Workers suggested the addition of the Davis-Bacon Act to the subpoena provision in § 6.7. No change can be made in this provision since there is no statutory basis for administrative subpoenas under the Act. However, the concern is partially accommodated by § 6.8, concerning production of documents and witnesses.

The Department of Defense suggested that production of documents and witnesses should only be available against parties to the proceeding. However, this is already implicit in the regulation, which defines parties as the Department of Labor and the respondents. Section 6.8 has been amended to make it clear that confidential statements may not be disclosed prior to trial without the employee's consent.

The National Aeronautics and Space Administration expressed concern over the provision of proposed § 6.12(b) that permitted a party to appeal a decision although the party did not appear at the hearing. To address its concern, the regulation has been amended to limit appeal rights under these circumstances to non-evidentiary issues.

Because agency recommendations for waiver of liquidated damages under the Contract Work Hours and Safety Standards Act are not received until after violations are finally determined, § 6.26 has been amended to eliminate the possibility that the complaint might state that such a recommendation has been received. Appeals regarding the Department's actions in response to such agency recommendations will be heard by the Wage Appeals Board to provide uniform decisions, rather than two forums.

CODSIA suggested that § 6.26 should be amended to provide that the name of a contractor found to have violated the Service Contract Act would not be sent to the Comptroller General to be put on the ineligibility list until after federal court proceedings are completed. This suggestion is contrary to the mandate of Section 5(a) of the Service Contract Act, which requires that the violator's name be sent to the Comptroller General not later than 90 days after a finding of violation. However, § 6.24 and corresponding provisions have been amended to make it clear that the administrative law judge's decision is inoperative while it is being appealed.

The ABC suggested that Subpart C, concerning hearings under the Davis-Bacon and related acts, should contain a provision defining the burden of proof. Although the Department agrees in general that the initial burden is on it to establish the existence of violations, the

nature of the burden varies under the circumstances, particularly where the contractor has not kept required records. Furthermore, the burden of proof is a legal issue, rather than procedural. Therefore, this suggestion is not adopted.

The International Brotherhood of Electrical Workers suggested that employees should be parties to enforcement proceedings under Subpart C and suggested that § 6.30 be so amended. In the Department's view this change is not appropriate since the employees' interests are represented by the Department. However, employees are normally notified of such proceedings because their presence as witnesses may be necessary.

The Building and Construction Trades Department and the International Brotherhood of Electrical Workers commented on the delays that may be inherent in the debarment procedures in Subpart C. It is the Department of Labor's opinion that elimination of the appeal to the Administrator in the current procedure will result in a net decrease in the time to a final decision. However, the Department is looking into the possibility of an interim debarment mechanism similar to that of other agencies, as suggested by the Building Trades.

CODSIA opposed the provision in § 6.31 that the scope of the hearing can be expanded to include debarment. It suggested that the regulation should require that before such an amendment may be made additional substantial violations must be brought to light for the first time at the hearing. Protection against misuse of the provision is contained in the regulation since the approval of the administrative law judge is required, the amendment cannot prejudice the opposing party's presentation on the merits, and a continuance in the hearing may be granted if necessary to allow the party to address the charges. Evidence that violations previously uncovered are aggravated or willful may often be disclosed just prior to or at the hearing. Therefore the provision proposed is necessary to effectuate the Act and no change is recommended.

The ABC was pleased to see that Section 6.33(b) administrative law judge decisions are final if not appealed, rather than recommendations to the Wage and Hour Division. However, it suggested that § 6.33(b) specifically require issuance of findings of fact and conclusions of law. Although in the Department's view this requirement was implicit in the requirement for "a statement of findings and conclusions," it has been made explicit here and elsewhere in this part.

The ABC commented on the different time limits for filing by the parties of proposed findings and conclusions by the parties and petitions for review in Subparts C and D (§§ 6.33 and 6.34, 6.44 and 6.45) and suggested a uniform longer period of 60 days throughout. Relatively short time periods are provided in Subpart D because of the necessity of providing prompt notice to contracting agencies of firms found ineligible as a result of the existence of a substantial interest in the firm by a debarred contractor. The Department believes the time periods in Subparts C and D are generally sufficient, but notes that under Subpart C, additional time may be allowed. In the Department's view, 60 days as a general rule is unnecessary.

Because of the possibility of a good faith dispute regarding the violations, the Department of Defense opposed the provision in § 6.33(b)(2) that relief from debarment under the Davis–Bacon Act be conditioned upon payment of back wages. Since debarment is not effectuated until after the completion of administrative appeals on the issue of liability for back wages, this suggestion is not accepted.

In response to the comment of the Philadelphia Area Office of the Department of Housing and Urban Development, no specific time limit is put on the administrative law judge's decision under § 6.33 because there is no constraint imposed by procurement deadlines, and because of the complexity of some cases.

With regard to proceedings under Subpart E to determine a substantial variance pursuant to Section 4(c) of the Service Contract Act, the National Aeronautics and Space Administration commented generally that the procedures in Subpart E are potentially more formal and more time-consuming (if an appeal is taken to the Board of Service Contract Appeals) than in the current regulations. Contrary to NASA's view, it is the Department's opinion that hearings on the record are required by Section 4(c). Furthermore, because such proceedings often inherently involve substantive legal issues, an appellate forum appears to be necessary. To the extent possible the proposed and final regulations tighten the time frames and provide for more expeditious hearings. Time restrictions have not been placed on the Administrator's own decisions because further investigation is often required, although it is the Department's intent to act quickly with a view towards accommodating procurement deadlines. As discussed under new Subpart F below, it has been determined that appeals shall be to the Secretary rather than to a new board. In our view, this should result in more expeditious decisionmaking.

The AFL–CIO opposed what it perceived as two separate procedures for determining "substantial variance" and "arm's length" negotiations pursuant to Section 4(c) of the Act. To the contrary, § 4.11(d) of 29 CFR clearly states that where both questions are at issue, only one proceeding will be held.

The Department of Defense has suggested that contractors known to be desirous of bidding on a contract be eliminated from the list of parties notified in § 6.51(a). The Department of Labor agrees that as proposed the provision is overly broad, and therefore it has been amended to include only contractors known or believed to be interested in the issue, as well as other interested parties.

The AFL–CIO suggested the authorized representative of affected Federal employees should receive the Order of Reference pursuant to § 6.51(a). It is not anticipated that Federal employees would be affected by these proceedings since Section 4(c) of the Act concerns only contracts where there was a predecessor contract, not contract work previously performed by Federal employees. However, the section has been amended to include other affected parties known to be interested.

Section 6.54 has been amended to expressly preclude disclosure of source data collected by the Bureau of Labor Statistics as a result of comments concerning this issue on proposed 29 CFR Part 8 by several labor organizations.

Comments were received in support of and in opposition to the establishment of a Board of Service Contract Appeals, proposed as a new 29 CFR Part 8 (45 FR 27410, April 22, 1980). Those in favor were pleased to see an independent, appellate procedure. Those opposed were concerned that a hearing procedure for wage determinations would result in a court decision such as that in *Wirtz* v. *Baldor Electric Co.*, 337 F.2d 518 (D.C. Cir. 1963) (arising under the Walsh-Healey Public Contracts Act), and the cessation of wage determinations under the Service Contract Act. Other concerns were the length of time and cumbersomeness of the process, and a view that another Government body was unnecessary. Although the Department disagrees strongly with the analyses of *Baldor*, which was based on a provision in the Walsh-Healey Act, not contained in SCA, which required hearings on the record, the Department shares the other concerns expressed. Accordingly, it has

been determined to substitute for the proposed Board a formal appeal procedure to the Secretary. This procedure, which has been incorporated in a new Subpart F, will provide due process review of issues such as wage determinations and coverage, which have not previously been subject to any appeal procedure. This change was adopted to expedite the review process, thereby reducing administrative delays in the procurement process, and to further the goal of controlling the proliferation of Governmental bodies.

Accordingly, Part 8 has been withdrawn and a new Subpart F is being issued in substitution, to provide for administrative appeals of Service Contract Act matters to the Secretary. Appeals are permitted from decisions of administrative law judges pursuant to Subparts B, D and E of this part, and from any final decisions of the Administrator of the Wage and Hour Division (including wage determinations, additional classification actions, coverage decisions, etc.).

Subpart F adopts the same general framework as the procedures proposed for the Board. The comments received on the corresponding sections of proposed Part 8 are discussed herein.

The Department of Defense, NASA, CODSIA and NCTSI questioned the scope of the appeals permitted (see proposed § 8.1). Appeals on all final decisions are permitted pursuant to § 6.62, including conformance actions and rulings on issues such as the application wage determinations and of the Act (e.g., coverage). In addition, the Wage-Hour Administrator or authorized representative is substituted for the Department of Labor in this section to make it clear that only official agency actions may be appealed. This is not intended, however, to preclude review of decisions of the Assistant Secretary for Employment Standards acting in the stead of the Administrator.

NASA suggested that review by the Board should not be discretionary. The procedures adopted for appeals to the Secretary provide a right of review.

NCTSI suggested that some factfinding should be provided (see proposed § 8.1(e)). It has been the Department's experience that factfinding is not appropriate before an appellate body, and further that it is necessary for the Wage and Hour Division to evaluate data before it is submitted on appeal since the data may affect its decision and obviate the necessity of appeal. Therefore no such change has been made to § 6.61(d).

The AFGE and the Research Department of the AFL–CIO suggested that Federal employees should be parties able to petition for review of wage determinations (see proposed § 8.2(5)). Since Federal employees frequently have no substantial interest in a wage determination, they have not been specifically added to § 6.61(a). However, a general provision concerning parties whom the Secretary finds to have a sufficient interest in the wage determination has been added, which would presumably include Federal employees in appropriate cases.

The Department of Defense suggested that 30 days rather than 15 days should be allowed to appeal a wage determination (see proposed § 8.3(a)). In the Department's view this suggestion does not permit the expedited decisionmaking required by the procurement process. However, § 6.61(c) does allow 20 days to appeal. It is believed that this time is sufficient to prepare a petition and also accommodate procurement deadlines.

NASA, on the other hand, commented on the delays inherent in the Board procedure. To make it clear that the Secretary will act with a view to applicable procurement deadlines, appropriate provisions have been added to §§ 6.65 and 6.66.

NCTSI and the Department of Defense suggested that wage determinations be reviewable after contract award and be applicable to the contract (see proposed § 8.6(b)). The regulations provide (§ 6.61(e)(2)) that the Secretary in his/her discretion may review a case involving significant issues of general applicability after award, for application to future procurements where a contracting agency has incorporated the wage determination required by 29 CFR 4.4 and 4.5 into the contract specifications, changing that wage determination would be contrary to basic principles of competitive bidding and contrary to a long line of Wage Appeals Board precedent. Therefore the suggestions have not been adopted.

NASA suggested that proposed § 8.6(c) should include situations where it has been found that no substantial variance exists. This provision, now contained in § 6.61(e), concerns review of prevailing wage determinations, not determinations regarding the existence of a substantial variance. Appeals may be filed of determinations that no substantial variance exists, even if made after award, provided the time limitations of 29 CFR 4.10 have been met. See § 6.57.

Because of the concerns expressed by the various labor organizations regarding the *Baldor* decision, a provision has been added to § 6.64 to prohibit the inclusion of BLS source data in the wage determination record submitted to the Secretary. NCTSI also expressed concern over protection of proprietary and commercial information. The Department is sympathetic to this concern but at this time cannot envision a method of protecting such information and ensuring the ability to challenge the basis of a wage determination, when the data has been collected by Wage and Hour. Presumably the Secretary, if appropriate, could protect certain proprietary data, subject to the constraints of the Freedom of Information Act and 29 CFR Part 70, but it does not appear to be appropriate to make further specific changes to the regulations at this time.

The Department of Defense suggested that regulations of the Department of Labor should be reviewable or at least subject to interpretation (see proposed § 8.1(b)). It is the Department of Labor's view that duly promulgated regulations must be observed in any administrative proceedings unless amended pursuant to rulemaking procedures. The Secretary of course has the authority to interpret the regulations, and § 6.66 contains no limitation on this authority.

As suggested by the Department of Defense, the standard of review of findings of fact (proposed § 8.9(b)) has been changed in § 6.66 from "clearly erroneous" to "not supported by substantial evidence."

In addition to the above, other minor editorial and language changes have been made in various sections.

Because Part 6 is procedural in character, it was determined that it is not a significant regulation within the meaning of Executive Order 12044 and the Department's guidelines. Accordingly, no regulatory analysis was prepared.

This rule was drafted under the supervision and direction of Carin Ann Clauss, Solicitor of Labor, U.S. Department of Labor, 200 Constitution Avenue, NW., Washington, D.C. 20210.

29 CFR Part 6 is revised as set forth below.

Signed at Washington, D.C. this 12th day of January 1981.

Ray Marshall,

Secretary of Labor.

PART 6—RULES OF PRACTICE FOR ADMINISTRATIVE PROCEEDINGS ENFORCING LABOR STANDARDS IN FEDERAL AND FEDERALLY ASSISTED CONSTRUCTION CONTRACTS AND FEDERAL SERVICE CONTRACTS

Subpart A—General

Sec.

6.1 Applicability of rules.

6.57 Petition for review.

Subpart F—Appeals From Decisions Under the Service Contract Act (and Under the Contract Work Hours and Safety Standards Act for Contracts Subject to the Service Contract Act)

6.60 Scope.
6.61 Petitions for review of wage determinations.
6.62 Petitions for review of other decisions.
6.63 Filing and service.
6.64 Filing of administrative record.
6.65 Presentations of other interested parties.
6.66 Decision of the Secretary.

Authority: Secs. 4 and 5, 79 Stat. 1034, 1035 as amended by 86 Stat. 789, 790, 41 U.S.C. 353 and 354; 5 U.S.C. 301; Reorg. Plan No. 14 of 1950, 64 Stat. 1267, 5 U.S.C. Appendix; 46 Stat. 1494, as amended by 49 Stat. 1011, 78 Stat. 238, 40 U.S.C. 276a–276a–7; 76 Stat. 357–359, 40 U.S.C. 327–332; 48 Stat. 948, as amended by 63 Stat. 108, 72 Stat. 967, 40 U.S.C. 276c.

Subpart A—General

§ 6.1 Applicability of rules.

This part provides the rules of practice for administrative proceedings under the Service Contract Act, the Davis-Bacon Act and related statutes listed in § 5.1 of Part 5 of this title which require payment of wages determined in accordance with the Davis-Bacon Act, the Contract Work Hours and Safety Standards Act, and the Copeland Act. See Parts 4 and 5 of this title.

§ 6.2 Definitions.

(a) "Administrator" means the Administrator of the Wage and Hour Division, Employment Standards Administration, U.S. Department of Labor, or authorized representative.

(b) "Associate Solicitor" means the Associate Solicitor for General Legal Services, Office of the Solicitor, U.S. Department of Labor, Washington, D.C. 20210.

(c) "Chief Administrative Law Judge" means the Chief Administrative Law Judge, U.S. Department of Labor, 1111 20th Street, N.W., Suite 700, Washington, D.C. 20036.

(d) "Respondent" means the contractor, subcontractor, person alleged to be responsible under the contract or subcontract, and/or any firm, corporation, partnership, or association in which such person or firm is alleged to have a substantial interest (or interest if the proceeding is under the Davis-Bacon Act) against whom the proceedings are brought.

§ 6.3 Service; copies of documents and pleadings.

(a) *Manner of service.* Service upon any party shall be made by the party filing the pleading or document by delivering a copy or mailing a copy to the last known address. When a party is represented by an attorney, the service should be upon the attorney. For purposes of this part, filing is accomplished upon the day of service, by mail or otherwise.

(b) *Proof of service.* A certificate of the person serving the pleading or other document by personal delivery or by mailing, setting forth the manner of said service shall be proof of the service. Where service is made by mail, service shall be complete upon mailing.

(c) *Service upon Department, number of copies of pleading or other documents.* An original and three copies of all pleadings and other documents shall be filed with the Department of Labor: The original and one copy with the Administrative Law Judge before whom the case is pending, one copy with the attorney representing the Department during the hearing, and one copy with the Associate Solicitor.

§ 6.4 Computation of time.

Saturdays, Sundays, and holidays shall be included in computing the time allowed for filing any document or paper under this part, but when such time expires on such a day, such period shall be extended to include the next following day which is not a Saturday, Sunday or holiday.

§ 6.5 Motions and requests.

Motions or requests or any matter, including discovery, shall be filed with the Chief Administrative Law Judge, except that those made during the course of the hearing shall be filed with the Administrative Law Judge or shall be stated orally and made part of the transcript. Each motion or request shall state the particular order, ruling, or action desired, and the grounds therefor. The Administrative Law Judge is authorized to rule upon all motions or requests filed or made prior to the filing of the decision.

§ 6.6 Depositions.

(a) *When, how, and by whom taken.* For good cause shown, the testimony of any witness may be taken by deposition in any proceeding, after a complaint has been filed. Depositions may be taken upon written interrogatories or orally before any person having power to administer oaths.

(b) *Application.* Any party desiring to take the deposition of a witness shall make application in writing to the Administrative Law Judge, setting forth the reasons why such deposition should be taken; the time when, the place where, and the name and address of the person before whom the deposition is to be taken; the name and address of each witness; and the subject matter concerning which each witness is expected to testify.

(c) *Notice.* Such notice as the Administrative Law Judge shall order shall be given for the taking of a

deposition, but this shall not be less than 5 days' written notice when the deposition is to be taken within the United States and not less than 20 days' written notice when the deposition is to be taken elsewhere.

(d) *Taking and receiving in evidence.* Each witness testifying upon deposition shall be sworn, and, with respect to oral depositions, the adverse party shall have the right to cross-examine. The questions propounded and the answers thereto, together with all objections made, shall be reduced to writing, read to and subscribed by the witness, and certified by the officer authorized to administer oaths. Thereafter, the officer shall seal the deposition, with two copies thereof, in an envelope and mail the same by registered mail to the Administrative Law Judge. Subject to such objections to the questions and answers as were noted at the time of taking the deposition and would be valid were the witness personally present and testifying, such deposition may be read and offered in evidence by the party taking it as against any party who was present or represented at the taking of the deposition or who had due notice thereof. No part of a deposition shall be admitted in evidence except for the limited purpose of impeachment, unless there is a showing that the witness is unavailable to testify (including a witness who cannot be subpoenaed or who is located outside of the State in which the hearing is held) or unless the parties stipulate regarding use of the deposition.

§ 6.7 Subpoenas.

All applications under the Service Contact Act for subpoenas ad testificandum and subpoenas duces tecum shall be made in writing to the Administrative Law Judge. Application for subpoenas duces tecum shall specify as exactly as possible the documents to be produced, showing their general relevancy and reasonable scope.

§ 6.8 Production of documents and witnesses.

The parties, who shall be deemed to be the Department of Labor and the respondent(s), may serve on any other party a request to produce documents or witnesses in the control of the party served, setting forth with particularity the documents or witnesses requested. The party served shall have 15 days to respond or object thereto unless a shorter or longer time is ordered by the Administrative Law Judge. The parties shall produce documents and witnesses to which no privilege attaches which are in the control of the party, if so ordered by the Administrative Law Judge upon motion therefor by a party. If a privilege is claimed, it must be specifically claimed in writing prior to the hearing or orally at the hearing, including the reasons therefor. In no event shall a statement taken in confidence by the Department of Labor or other Federal agency be ordered to be produced prior to the date of testimony at trial of the person whose statement is at issue unless the consent of such person has been obtained.

§ 6.9 Witnesses and fees.

Witnesses subpoenaed by any party shall be paid the same fees and mileage as are paid for like services in the District Court of the United States. The witness fees and mileage shall be paid by the party at whose instance the witnesses appear.

§ 6.10 Administrative Law Judge.

(a) *Who presides.* All hearings shall be presided over by an Administrative Law Judge appointed under section 11 of the Administrative Procedure Act.

(b) *How assigned.* The presiding Administrative Law Judge shall be designated by the Chief Administrative Law Judge.

(c) *Powers.* Administrative Law Judges shall have all powers necessary to the conduct of fair and impartial hearings, including the following:

(1) To administer oaths and affirmations;

(2) To issue subpoenas in proceedings under the Service Contract Act upon proper applications as provided in § 6.7 of this title;

(3) To rule upon offers of proof and receive relevant evidence;

(4) To take or cause to be taken depositions and to determine their scope;

(5) To regulate the course of the hearing and the conduct of the parties and their counsel therein;

(6) To hold conferences for the settlement or simplification of the issues by consent of the parties;

(7) To consider and rule upon procedural requests;

(8) To make and file decisions in conformity with this part;

(9) To take any action authorized by the rules in this part or in conformance with the Administrative Procedure Act.

(d) *Consultation.* The Administrative Law Judge shall not consult any person or party on any fact in issue unless upon notice and opportunity for all parties to participate.

(e) *Disqualification of Administrative Law Judge.* (1) When an Administrative Law Judge deems himself/herself disqualified to preside in a particular proceeding, he/she shall withdraw therefrom by notice on the record directed to the Chief Administrative Law Judge.

(2) Whenever any party believes the Administrative Law Judge for any reason to be disqualified to preside, or to continue to preside, in a particular proceeding, that party shall file with the Chief Administrative Law Judge a motion to disqualify and remove such Administrative Law Judge, such motion to be supported by affidavits setting forth the alleged grounds for disqualification. The Chief Administrative Law Judge shall rule upon the motion.

(f) *Contemptuous conduct: failure or refusal of a witness to appear or answer.* Contemptuous conduct at any hearing before an Administrative Law Judge shall be ground for exclusion from the hearing. The failure or refusal of a witness to appear at any hearing when so ordered by the Administrative Law Judge, or to answer any question which has been ruled to be proper, shall be ground for the action provided in section 5 of the Act of June 30, 1936 (41 U.S.C. 39) and, in the discretion of the Administrative Law Judge, for striking out all or part of the testimony which may have been given by such witness.

§ 6.11 Prehearing conferences.

(a) Upon his/her own motion or the motion of the parties, the Administrative Law Judge may direct the parties or their counsel to meet with the Administrative Law Judge for a conference to consider:

(1) Simplification of the issues;

(2) Necessity or desirability of amendments to pleadings for purposes of clarification, simplification, or limitation;

(3) Stipulations, admissions of fact and contents and authenticity of documents;

(4) Limitation of the number of expert witnesses; and

(5) Such other matters as may tend to expedite the disposition of the proceeding.

(b) The record shall show the matters disposed of by order and by agreement in such pretrial conferences. The subsequent course of the proceedings shall be controlled by such action.

§ 6.12 Appearances.

(a) *Representation.* The parties may appear in person, by counsel, or otherwise.

(b) *Failure to appear.* In the event that a party appears at the hearing and no party appears for the opposing side, the party who is present shall have an election to present evidence in whole or such portion thereof sufficient to make a prima facie case before the

Administrative Law Judge. Failure to appear at a hearing shall not be deemed to be a waiver of the right to be served with a copy of the Administrative Law Judge's decision and to file a petition for review thereof with the Secretary or the Wage Appeals Board, as appropriate. *Provided, however,* That no such petition for review may be filed concerning any findings of fact of the Administrative Law Judge or concerning the admissibility of evidence.

§ 6.13 Hearing.

(a) *Order of proceeding.* Except as may be determined otherwise by the Administrative Law Judge or where the only issue in the proceeding is the existence of unusual circumstances under section 5(a) of the Service Contract Act, counsel for the Department of Labor shall proceed first at the hearing.

(b) *Evidence*—(1) *In general.* The testimony of witnesses shall be upon oath or affirmation administered by the Administrative Law Judge and shall be subject to such cross-examination as may be required for a full and true disclosure of the facts. The Administrative Law Judge may exclude evidence which is immaterial, irrelevant, or unduly repetitious.

(2) *Objections.* If a party objects to the admission or rejection of any evidence or to the limitation of the scope of any examination or cross-examination or the failure to limit such scope, the party shall state briefly the grounds for such objection. Rulings on all objections shall appear in the record. Only objections made before the Administrative Law Judge may be relied upon subsequently in the proceeding. Formal exception to an adverse ruling is not required.

(c) *Official notice.* Official notice may be taken of any material fact not appearing in evidence in the record, which is among the traditional matters of judicial notice and also concerning which the Department of Labor by reason of its functions is presumed to be expert: *Provided,* That the parties shall be given adequate notice at the hearing or by reference in the Administrative Law Judge's decision of the matters so noticed, and shall be given adequate opportunity to show the contrary.

(d) *Transcript.* A transcript shall be made of the proceeding.

§ 6.14 Transmission of record.

If a petition for review of the Administrative Law Judge's decision is filed with the Secretary or the Wage Appeals Board, the Chief Administrative Law Judge shall promptly transmit the record of the proceeding. The record shall include: The pleadings, motions, and requests filed in written form, rulings thereon, the transcript of the testimony and proceeding taken at the hearing, together with the exhibits admitted in evidence, and documents or papers filed in connection with prehearing conferences, such proposed findings of fact, conclusions of law, orders, and supporting reasons, as may have been filed, the Administrative Law Judge's decision, and such other documents as may have been filed in the proceeding. If a petition for review is not filed within the time prescribed in this part, the Chief Administrative Law Judge shall so advise the Administrator.

Subpart B—Enforcement Proceedings Under the Service Contract Act (and Under the Contract Work Hours and Safety Standards Act for Contracts Subject to the Service Contract Act)

§ 6.20 Complaints.

(a) Enforcement proceedings under the Service Contract Act and under the Contract Work Hours and Safety Standards Act for contracts subject to the Service Contract Act, may be instituted by the Deputy Solicitor or a Regional Solicitor by issuing a complaint and causing the complaint to be served upon the respondent.

(b) The complaint shall contain a clear and concise factual statement of the grounds for relief and the relief requested.

(c) The Administrative Law Judge shall notify the parties of the time and place for a hearing.

§ 6.21 Answer.

(a) Within 20 days after the service of the complaint, the respondent shall file an answer with the Chief Administrative Law Judge. The answer shall be signed by the respondent or his/her attorney.

(b) The answer shall (1) contain a statement of the facts which constitute the grounds of defense, and shall specifically admit, explain, or deny, each of the allegations of the complaint unless the respondent is without knowledge, in which case the answer shall so state; or (2) state that the respondent admits all of the allegations of the complaint. The answer may contain a waiver of hearing. Failure to file an answer to or plead specifically to any allegation of the complaint shall constitute an admission of such allegation.

(c) Failure to file an answer shall constitute grounds for waiver of hearing and entry of a default judgment unless respondent shows good cause for such failure to file. In preparing the decision of default judgment the Administrative Law Judge shall adopt as findings of fact the material facts alleged in the complaint and shall order the appropriate relief and/or sanctions.

§ 6.22 Amendments to pleadings.

At any time prior to the close of the hearing record, the complaint or answer may be amended with the permission of the Administrative Law Judge and on such terms as he/she may approve. Such amendments shall be allowed when justice and the presentation of the merits are served thereby, provided there is no prejudice to the objecting party's presentation on the merits. A continuance in the hearing may be granted or the record left open to enable the new allegations to be addressed.

§ 6.23 Consent findings and order.

(a) At any time prior to the receipt of evidence or, at the discretion of the Administrative Law Judge, prior to the issuance of the decision of the Administrative Law Judge, the parties may enter into consent findings and an order disposing of the proceedings in whole or in part.

(b) Any agreement containing consent findings and an order disposing of a proceeding in whole or in part shall also provide:

(1) That the order shall have the same force and effect as an order made after full hearing;

(2) That the entire record on which any order may be based shall consist solely of the complaint and the agreement;

(3) A waiver of any further procedural steps before the Administrative Law Judge and Secretary regarding those matters which are the subject of the agreement; and

(4) A waiver of any right to challenge or contest the validity of the findings and order entered into in accordance with the agreement.

(c) Within 30 days after receipt of an agreement containing consent findings and an order disposing of the disputed matter in whole, the Administrative Law Judge shall accept such agreement by issuing a decision based upon the agreed findings and order. If such agreement disposes of only a part of the disputed matter, a hearing shall be conducted on the matters remaining in dispute.

§ 6.24 Decision of the Administrative Law Judge.

(a) *Proposed findings of fact, conclusions, and order.* Within 30 days of filing of the transcript of the testimony or such additional time as the Administrative Law Judge may allow, each party may file with the

Administrative Law Judge proposed findings of fact, conclusions of law, and order, together with a supporting brief expressing the reasons for such proposals. Such proposals and brief shall be served on all parties, and shall refer to all portions of the record and to all authorities relied upon in support of each proposal.

(b) *Decision of the Administrative Law Judge.* (1) Within a reasonable time after the time allowed for the filing of proposed findings of fact, conclusions of law, and order, or within 30 days after receipt of an agreement containing consent findings and order disposing of the disputed matter in whole, the Administrative Law Judge shall make his/her decision. If any aggrieved party desires review of the decision, a petition for review thereof shall be filed as provided in § 6.25 of this title, and such decision and order shall be inoperative unless and until the Secretary issues an order affirming the decision. The decision of the Administrative Law Judge shall include findings of fact and conclusions of law, with reasons and bases therefor, upon each material issue of fact, law, or discretion presented on the record. The decision of the Administrative Law Judge shall be based upon a consideration of the whole record, including any admissions made under §§ 6.21, 6.22, and 6.23 of this title. It shall be supported by reliable, probative, and substantial evidence. Such decision shall be in accordance with the regulations and rulings continued in Parts 4 and 5 and other pertinent parts of this title.

(2) If the respondent is found to have violated the Service Contract Act, the Administrative Law Judge shall include in his/her decision an order as to whether the respondent is to be relieved from the ineligible list as provided in Section 5(a) of the Act, and, if relief is ordered, findings of the unusual circumstances, within the meaning of Section 5(a) of the Act, which are the basis therefor. If respondent is found to have violated the provisions of the Contract Work Hours and Safety Standards Act, the Administrative Law Judge shall issue an order as to whether the respondent is to be subject to the ineligible list as provided in § 5.12(a)(1) of Part 5 of this title, including findings regarding the existence of aggravated or willful violations. If wages and/or fringe benefits are found due under the Service Contract Act and/or the Contract Work Safety Standards Act and are unpaid, no relief from the ineligible list shall be ordered except on condition that such wages and/or fringe benefits are paid.

(3) The Administrative Law Judge shall make no findings regarding liquidated damages under the Contract Work Hours and Safety Standards Act.

§ 6.25 Petition for review.

Within 40 days after the date of the decision of the Administrative Law Judge (or such additional time as is granted by the Secretary), any party aggrieved thereby who desires review thereof shall file a petition for review of the decision with supporting reasons. Such party shall transmit the petition in writing to the Secretary pursuant to Subpart E, with a copy thereof to the Chief Administrative Law Judge. The petition shall refer to the specific findings of fact, conclusions of law, or order at issue. A petition concerning the decision on the ineligibility list shall also state the unusual circumstances or lack thereof under the Service Contract Act, and/or the aggravated or willful violations of the Contract Work Hours and Safety Standards Act or lack thereof, as appropriate.

§ 6.26 Ineligible list.

(a) Upon the final decision of the Administrative Law Judge or Secretary, as appropriate, the Administrator shall promptly forward to the Comptroller General the name of any respondent found in violation of the Service Contract Act, including the name of any firm, corporation, partnership, or association in which the respondent has a substantial interest, unless such decision orders relief from the ineligible list because of unusual circumstances.

(b) Upon the final decision of the Administrative Law Judge or the Secretary, as appropriate, the Administrator promptly shall forward to the Comptroller General the name of any respondent found to be in aggravated or willful violation of the Contract Work Hours and Safety Standards Act, and the name of any firm, corporation, partnership, or association in which the respondent has a substantial interest.

Subpart C—Enforcement Proceedings Under the Davis-Bacon Act and Related Prevailing Wage Statutes, the Copeland Act, and the Contract Work Hours and Safety Standards Act (Except Under Contracts Subject to the Service Contract Act)

§ 6.30 Referral to Chief Administrative Law Judge.

(a) Upon timely receipt of a request for a hearing under §§ 5.11 (where the Administrator has determined that relevant facts are in dispute) or 5.12 of Part 5 of this title, the Administrator shall refer the case to the Chief Administrative Law Judge by Order of Reference, to which shall be attached a copy of the notification letter to the respondent from the Administrator and response thereto, for designation of an Administrative Law Judge to conduct such hearings as may be necessary to decide the disputed matters. A copy of the Order of Reference and attachments thereto shall be served upon the respondent.

(b) The notification letter from the Administrator and response thereto shall be given the effect of a complaint and answer, respectively, for purposes of the administrative proceedings. The notification letter and response shall be in accordance with the provisions of § 5.11 or § 5.12(b)(1) of Part 5 of this title, as appropriate.

§ 6.31 Amendments to pleadings.

At any time prior to the closing of the hearing record, the complaint (notification letter) or answer (response) may be amended with the permission of the Administrative Law Judge and upon such terms as he/she may approve. For proceedings pursuant to § 5.11 of Part 5 of this title, such an amendment may include a statement that debarment action is warranted under § 5.12(a)(1) of Part 5 of this title or under Section 3(a) of the Davis-Bacon Act. Such amendments shall be allowed when justice and the presentation of the merits are served thereby, provided there is no prejudice to the objecting party's presentation on the merits. A continuance in the hearing may be granted or the record left open to enable the new allegations to be addressed.

§ 6.32 Consent findings and order.

(a) At any time prior to the receipt of evidence or, at the discretion of the Administrative Law Judge, prior to the issuance of the decision of the Administrative Law Judge, the parties may enter into consent findings and an order disposing of the proceeding in whole or in part.

(b) Any agreement containing consent findings and an order disposing of a proceeding in whole or in part shall also provide:

(1) That the order shall have the same force and effect as an order made after full hearing;

(2) That the entire record on which any order may be based shall consist solely of the complaint and the agreement;

(3) That any order concerning debarment under the Davis-Bacon Act (but not under any of the other statutes listed in § 5.1 of Part 5 of this title) shall

constitute a recommendation to the Comptroller General;

(4) A waiver of any further procedural steps before the Administrative Law Judge and the Wage Appeals Board regarding those matters which are the subject of the agreement; and

(5) A waiver of any right to challenge or contest the validity of the findings and order entered into in accordance with the agreement.

(c) Within 30 days after receipt of an agreement containing consent findings and an order disposing of the disputed matter in whole, the Administrative Law Judge shall accept such agreement by issuing a decision based upon the agreed findings and order. If such agreement disposes of only a part of the disputed matter, a hearing shall be conducted on the matters remaining in dispute.

§ 6.33 Decision of the Administrative Law Judge.

(a) *Proposed findings of fact, conclusions, and order.* Within 30 days of filing of the transcript of the testimony or such additional time as the Administrative Law Judge may allow, each party may file with the Administrative Law Judge proposed findings of fact, conclusions of law, and order, together with a supporting brief expressing the reasons for such proposals. Such proposals and brief shall be served on all parties, and shall refer to all portions of the record and to all authorities relied upon in support of each proposal.

(b) *Decision of the Administrative Law Judge.* (1) Within a reasonable time after the time allowed for filing of proposed findings of fact, conclusions of law, and order, or within 30 days of receipt of an agreement containing consent findings and order disposing of the disputed matter in whole, the Administrative Law Judge shall make his/her decision. If any aggrieved party desires review of the decision, a petition for review thereof shall be filed as provided in § 6.34 of this title, and such decision and order shall be inoperative unless and until the Wage Appeals Board either declines to review the decision or issues an order affirming the decision. The decision of the Administrative Law Judge shall include findings of fact and conclusions of law, with reasons and bases therefor, upon each material issue of fact, law, or discretion presented on the record. Such decision shall be in accordance with the regulations and rulings contained in Part 5 and other pertinent parts of this title. The decision of the Administrative Law Judge shall be based upon a consideration of the whole record, including any admissions made in the respondent's answer (response) and § 6.32 of this title. It shall be supported by reliable, probative, and substantial evidence.

(2) If the respondent is found to have violated the labor standards provisions of any of the statutes listed in § 5.1 of Part 5 of this title other than the Davis-Bacon Act, and if debarment action was requested pursuant to the complaint (notification letter) or any amendment thereto, the Administrative Law Judge shall issue an order as to whether the respondent is to be subject to the ineligible list as provided in § 5.12(a)(1) of this title, including any findings of aggravated or willful violations. If the respondent is found to have violated the Davis-Bacon Act, and if debarment action was requested, the Administrative Law Judge shall issue as a part of the order a recommendation as to whether respondent should be subject to the ineligible list pursuant to Section 3(a) of the Act, including any findings regarding respondent's disregard of obligations to employees and subcontractors. If wages are found due and are unpaid, no relief from the ineligible list shall be ordered or recommended except on condition that such wages are paid.

(3) The Administrative Law Judge shall make no findings regarding liquidated damages under the Contract Work Hours and Safety Standards Act.

§ 6.34 Petition for review.

Within 40 days after the date of the decision of the Administrative Law Judge (or such additional time as is granted by the Wage Appeals Board), any party aggrieved thereby who desires review thereof shall file a petition for review of the decision with supporting reasons. Such party shall transmit the petition in writing to the Wage Appeals Board, pursuant to Part 7 of this title, with a copy thereof to the Chief Administrative Law Judge. The petition shall refer to the specific findings of fact, conclusions of law, or order at issue. A petition concerning the decision on debarment shall also state the aggravated or willful violations and/or disregard of obligations to employees and subcontractors, or lack thereof, as appropriate.

§ 6.35 Ineligible list.

Upon the final decision of the Administrative Law Judge or Wage Appeals Board, as appropriate, regarding violations of any statute listed in § 5.1 of Part 5 of this title other than the Davis-Bacon Act, the Administrator promptly shall forward to the Comptroller General the name of any respondent found to have committed aggravated or willful violations of the labor standards provisions of such statute, and the name of any firm, corporation, partnership, or association in which such respondent has a substantial interest. Upon the final decision of the Administrative Law Judge or Wage Appeals Board, as appropriate, regarding violations of the Davis-Bacon Act, the Administrator promptly shall forward to the Comptroller General any recommendation regarding debarment action against a respondent, and the name of any firm, corporation, partnership, or association in which such respondent has an interest.

Subpart D—Substantial Interest Proceedings

§ 6.40 Scope.

This subpart supplements the procedures contained in § 4.12 of Part 4 and § 5.12(d) of Part 5 of this title, and states the rules of practice applicable to hearings to determine whether persons or firms whose names appear on the ineligible list pursuant to Section 5(a) of the Service Contract Act or § 5.12(a)(1) of Part 5 of this title have a substantial interest in any firm, corporation, partnership, or association other than those listed on the ineligible list; and/or to determine whether persons or firms whose names appear on the ineligible list pursuant to Section 3(a) of the Davis-Bacon Act have an interest in any firm, corporation, partnership, or association other than those listed on the ineligible list.

§ 6.41 Referral to Chief Administrative Law Judge.

(a) Upon timely receipt of a request for a hearing under § 4.12 of Part 4 or § 5.12 of Part 5 of this title, where the Administrator has determined that relevant facts are in dispute, or on his/her own motion, the Administrator shall refer the case to the Chief Administrative Law Judge by Order of Reference, to which shall be attached a copy of any findings of the Administrator and response thereto, for designation of an Administrative Law Judge to conduct such hearings as may be necessary to decide the disputed matters. A copy of the Order of Reference and attachments thereto shall be served upon the person or firm requesting the hearing, if any, and upon the respondents.

(b) The findings of the Administrator and response thereto shall be given the effect of a complaint and answer, respectively, for purposes of the administrative proceedings.

§ 6.42 Amendments to pleadings.

At any time prior to the closing of the hearing record, the complaint (Administrator's findings) or answer (response) may be amended with the permission of the Administrative Law Judge and upon such terms as he/she may approve. Such amendments shall be allowed when justice and the presentation of the merits are served thereby, provided there is no prejudice to the objecting party's presentation on the merits. A continuance in the hearing may be granted or the record left open to enable the new allegations to be addressed.

§ 6.43 Consent findings and order.

(a) At any time prior to the receipt of evidence or, at the discretion of the Administrative Law Judge, prior to the issuance of the decision of the Administrative Law Judge, the parties may enter into consent findings and an order disposing of the proceeding in whole or in part.

(b) Any agreement containing consent findings and an order disposing of a proceeding in whole or in part shall provide:

(1) That the order shall have the same force and effect as an order made after full hearing;

(2) That the entire record on which any order may be based shall consist solely of the complaint and the agreement;

(3) A waiver of any further procedural steps before the Administrative Law Judge and the Secretary or Wage Appeals Board, as appropriate, regarding those matters which are the subject of the agreement; and

(4) A waiver of any right to challenge or contest the validity of the findings and order entered into in accordance with the agreement.

(c) Within 30 days after receipt of an agreement containing consent findings and an order disposing of the disputed matter in whole, the Administrative Law Judge shall accept such agreement by issuing a decision based upon the agreed findings and order. If such agreement disposes of only a part of the disputed matter, a hearing shall be conducted on the matters remaining in dispute.

§ 6.44 Decision of the Administrative Law Judge.

(a) *Proposed findings of fact, conclusions, and order.* Within 30 days of filing of the transcript of the testimony, each party may file with the Administrative Law Judge proposed findings of fact, conclusions of law, and order, together with a supporting brief expressing the reasons for such proposals. Such proposals and brief shall be served on all parties, and shall refer to all portions of the record and to all authorities relied upon in support of each proposal.

(b) *Decision of the Administrative Law Judge.* Within 60 days after the time allowed for filing of proposed findings of fact, conclusions of law, and order, or within 30 days after receipt of an agreement containing consent findings and order disposing of the disputed matter in whole, the Administrative Law Judge shall make his/her decision. If any aggrieved party desires review of the decision, a petition for review thereof shall be filed as provided in § 6.45 of this title, and such decision and order shall be inoperative unless and until the Secretary or the Wage Appeals Board, as appropriate, issues an order affirming the decision. The decision of the Administrative Law Judge shall include findings of fact and conclusions of law, with reasons and bases therefor, upon each material issue of fact, law, or discretion presented on the record. Such decision shall be in accordance with the regulations and rulings contained in Parts 4 and 5 and other pertinent parts of this title. The decision of the Administrative Law Judge shall be based upon a consideration of the whole record, including any admissions made in the respondents' answer (response) and § 6.43 of this title.

§ 6.45 Petition for review.

Within 30 days after the date of the decision of the Administrative Law Judge, any party aggrieved thereby who desires review thereof shall file a petition for review of the decision with supporting reasons. Such party shall transmit the petition in writing to the Secretary if the proceeding was under the Service Contract Act, or to the Wage Appeals Board if the proceeding was under § 5.12(a)(1) of Part 5 of this title or under Section 3(a) of the Davis-Bacon Act, with a copy thereof to the Chief Administrative Law Judge. The petition for review shall refer to the specific findings of fact, conclusions of law, or order at issue.

§ 6.46 Ineligible list.

Upon the final decision of the Administrative Law Judge, Secretary or Wage Appeals Board, as appropriate, the Administrator promptly shall forward to the Comptroller General the names of any firm, corporation, partnership, or association in which a person or firm debarred pursuant to Section 5(a) of the Service Contract Act or § 5.12(a) of Part 5 of this title has a substantial interest; and/or the name of any firm, corporation, partnership, or association in which a person or firm debarred pursuant to Section 3(a) of the Davis-Bacon Act has an interest.

Subpart E—Substantial Variance and Arm's-Length Proceedings

§ 6.50 Scope.

This subpart supplements the procedures contained in §§ 4.10 and 4.11 of Part 4 of this title and states the rules of practice applicable to hearings under Section 4(c) of the Act to determine whether the collectively bargained wages and/or fringe benefits otherwise required to be paid under that section and Sections 2(a) (1) and (2) of the Act are substantially at variance with those which prevail for services of a character similar in the locality, and/or to determine whether the wages and/or fringe benefits provided in the collective bargaining agreement were reached as a result of arm's-length negotiations.

§ 6.51 Referral to Chief Administrative Law Judge.

(a) Referral pursuant to § 4.10 or § 4.11 of Part 4 of this title will be by an Order of Reference from the Administrator to the Chief Administrative Law Judge, to which will be attached the material submitted by the applicant or any other material the Administrator considers relevant and, for proceedings pursuant to § 4.11 of this title, a copy of any findings of the Administrator. A copy of the Order of Reference and all attachments will be sent by mail to the following parties: the agency whose contract is involved, the parties to the collective bargaining agreement, any contractor or subcontractor performing on the contract, any contractor or subcontractor known to be desirous of bidding thereon or performing services thereunder who is known or believed to be interested in the determination of the issue, any unions or other authorized representatives of service employees employed or who may be expected to be employed by such contractor or subcontractor on the contract work, and any other affected parties known to be interested in the determination of the issue. The Order of Reference will have attached a certificate of service naming all interested parties who have been served.

(b) Accompanying the Order of Reference and attachments will be a notice advising that any interested party, including the applicant, who intends to participate in the proceeding shall submit a written response to the Chief Administrative Law Judge within 20 days of the date on which the certificate of service indicates the Order

of Reference was mailed. The notice will state that such a response shall include:

(1) A statement of the interested party's case;

(2) A list of witnesses the interested party will present, a summary of the testimony each is expected to give, and copies of all exhibits proposed to be proffered;

(3) A list of persons who have knowledge of the facts for whom the interested party requests that subpoenas be issued and a brief statement of the purpose of their testimony; and

(4) A certificate of service in accordance with § 6.3 of this title on all interested parties, including the Administrator.

§ 6.52 Appointment of Administrative Law Judge and notification of prehearing conference and hearing date.

Upon receipt from the Administrator of an Order of Reference, notice to the parties, attachments and certificate of service, the Chief Administrative Law Judge shall appoint an Administrative Law Judge to hear the case. The Administrative Law Judge shall promptly notify all interested parties of the time and place of a prehearing conference and of the hearing which shall be held immediately upon the completion of prehearing conference. The date of the prehearing conference and hearing shall be not less than 30 nor more than 40 days from the date on which the certificate of service indicates the Order of Reference was mailed.

§ 6.53 Prehearing Conference.

(a) At the prehearing conference the Administrative Law Judge shall attempt to determine the exact areas of agreement and disagreement raised by the Administrator's Order of Reference and replies thereto, so that the evidence and arguments presented at the hearing will be relevant, complete, and as brief and concise as possible.

(b) Any interested party desiring to file proposed findings of fact and conclusions of law shall submit them to the Administrative Law Judge at the prehearing conference.

(c) If the parties agree that no hearing is necessary to supplement the written evidence and the views and arguments that have been presented, the Administrative Law Judge shall forthwith render his/her final decision. The Administrative Law Judge with the agreement of the parties may permit submission of additional written evidence or argument, such as data accompanied by affidavits attesting to its validity or depositions, within ten days of commencement of the prehearing conference.

§ 6.54 Hearing.

(a) Except as provided in § 6.53(c) of this title, the hearing shall commence immediately upon the close of the prehearing conference. All matters remaining in controversy, including the presentation of additional evidence, shall be considered at the hearing. There shall be a minimum of formality in the proceeding consistent with orderly procedure.

(b) To expedite the proceeding the Administrative Law Judge shall, after consultation with the parties, set reasonable guidelines and limitations for the presentations to be made at the hearing. The Administrative Law Judge may limit cross-examination and may question witnesses.

(c) Under no circumstances shall source data obtained by the Bureau of Labor Statistics, U.S. Department of Labor, or the names of establishments contacted by the Bureau be submitted into evidence or otherwise disclosed. Where the Bureau has conducted a survey, the published summary of the data may be submitted into evidence.

(d) Affidavits or depositions may be admitted at the discretion of the Administrative Law Judge. The Administrative Law Judge may also require that unduly repetitious testimony be submitted as affidavits. Such affidavits shall be submitted within three days of the conclusions of the hearing.

(e) Counsel for the Administrator shall participate in the proceeding to the degree he/she deems appropriate.

(f) An expedited transcript shall be made of the hearing and of the prehearing conference.

§ 6.55 Closing of record.

The Administrative Law Judge shall close the record promptly and not later than 10 days after the date of commencement of the prehearing conference. Post-hearing briefs may be permitted, but the filing of briefs shall not delay issuance of the decision of the Administrative Law Judge pursuant to § 6.56 of this title.

§ 6.56 Decision of the Administrative Law Judge.

Within 15 days of receipt of the transcript, the Administrative Law Judge shall render his/her decision containing findings of fact and conclusions of law. The decision of the Administrative Law Judge shall be based upon consideration of the whole record, and shall be in accordance with the regulations and rulings contained in Part 4 and other pertinent parts of this title. If any party desires review of the decision, a petition for review thereof shall be filed as provided in § 6.57 of this title, and such decision and order shall be inoperative unless and until the Secretary issues an order affirming the decision. If a petition has not been filed within 10 days of issuance of the Administrative Law Judge's decision, the Administrator shall promptly issue any wage determination which may be required as a result of the decision.

§ 6.57 Petition for review.

Within 10 days after the date of the decision of the Administrative Law Judge, any interested party who participated in the proceedings before the Administrative Law Judge and desires review of the decision shall file a petition for review by the Secretary. The petition shall refer to the specific findings of fact, conclusions of law, or order excepted to and the specific pages of transcript relevant to the petition for review.

Subpart F—Appeals From Decisions Under the Service Contract Act (and Under the Contract Work Hours and Safety Standards Act for Contracts Subject to the Service Contract Act)

§ 6.60 Scope.

This subpart contains the rules regarding appeals to the Secretary from decisions of Administrative Law Judges under the Service Contract Act pursuant to Subparts B, D and E of this part, and from wage determinations and other final decisions of the Administrator or authorized representative under the Service Contract Act. These rules also apply to appeals to the Secretary from decisions under the Contract Work Hours and Safety Standard Act for contracts subject to the Service Contracts Act, issued by Administrative Law Judges pursuant to Subpart B of this part.

§ 6.61 Petitions for Review of Wage Determinations.

(a) Any interested party who is seeking a modification or other change in a wage determination under the Service Contract Act and who has requested the Administrator or authorized representative to make such modification or other change under § 4.55 of Part 4 of this title, and the request has been denied, shall have a right to petition for review of the action taken by that officer.

(b) For purposes of this subpart, the term "interested party" shall mean:

(1) Any employee or any labor orgainzation which represents an employee who is likely to be employed or to seek employment under a contract containing a particular wage

determination, or any contractor or association representing a contractor who is likely to seek a contract or to work under a contract containing a particular wage determination;

(2) The Federal agency(ies) which will administer a proposed contract containing a particular wage determination issued pursuant to the Service Contract Act; and

(3) Any other party whom the Secretary finds to have a sufficient interest in the wage determination.

(c) Requests for review of wage determinations must be filed within 20 days of issuance of the Administrator's decision denying a request to make a change in the wage determination. The Secretary shall under no circumstances request any administering agency to postpone any contract action because of the filing of a petition.

(d) A petition for review of a wage determination shall:

(1) Be in writing and signed by the petitioner or his/her counsel (or other authorized representative);

(2) Be addressed to the Secretary;

(3) Identify clearly the wage determination, location where the contract will be performed, if known, and the agency concerned;

(4) State that the petitioner has requested reconsideration of the wage determination in question and describe briefly the action taken in response to the request;

(5) Contain a short and plain statement of the grounds for review;

(6) Be accompained by supporting data, views, or arguments; and

(7) Contain a statement that all data or other evidence submitted have previously been submitted to the Administrator.

(e) Except as provided in paragraphs (d)(1) and (2) of this section, the Secretary will not review a wage determination after award, exercise of option, or extension of a contract, unless such procurement action was taken without the wage determination required pursuant to §§ 4.4 and 4.5 of Part 4 of this title.

(1) A wage determination may be reviewed after award, exercise of option, or extension of a contract if it is issued after a finding by an Administrative Law Judge that a substantial variance exists between collectively bargained wage rates and/or fringe benefits otherwise required to be paid pursuant to Section 4(c) of the Act and those prevailing for services of a character similar in the locality, or after a finding that such collective bargaining agreement was not reached as a result of arm's length negotiations.

(2) Where a petition for review of a wage determination is filed prior to award, exercise of option, or extension of a contract, the Secretary may review the wage determination after such award, exercise of option, or extension of a contract if the issue is a significant issue of general applicability. The Secretary's decision shall not affect the contract after such award, exercise of option or extension.

§ 6.62 Petitions for Review of Other Decisions.

(a) A petition for review of a decision of an Administrative Law Judge pursuant to Subparts B, D or E of this part shall be filed in accordance with the provisions therein.

(b) A petition for review of a final written decision (other than a wage determination) of the Administrator or authorized representative shall be filed within 60 days of the date of the decision of which review is sought. Where a case has been referred directly to the Secretary pursuant to § 4.11 or § 4.12 of this title, no petition for review shall be necessary; a brief in support of the aggrieved party's position shall be filed within 30 days of filing of the administrative record by the Administrator.

(c) The petition shall state concisely the points relied upon, and shall be accompanied by a statement setting forth supporting reasons.

§ 6.63 Filing and Service.

(a) *Filing.* An original and one copy of all papers submitted shall be filed with the Secretary of Labor, U.S. Department of Labor, Washington, D.C. 20210, Attention: Service Contract Act Appeals.

(b) *Manner of Service.* Service shall be personal or by mail. Service by mail is complete on mailing. For purposes of this subpart, filing is accomplished upon the day of service, by mail or otherwise.

(c) *Proof of Service.* Papers filed with the Secretary shall contain an acknowledgement of service by the person served or proof of service in the form of a statement of the date and the manner of service and the names of the person or persons served, certified by the person who made service.

(d) *Service upon the Department of Labor and other interested parties.* A copy of all documents filed shall be served upon the Associate Solicitor, Division of General Legal Services, U.S. Department of Labor, Washington, D.C. 20210; the Administrator; the Federal contracting agency involved; and all other interested parties.

§ 6.64 Filing of administrative record.

(a) If a petition for review has been filed concerning a decision pursuant to Subparts B, D or E of this part, the Chief Administrative Law Judge shall promptly forward the record of the proceeding before the Administrative Law Judge to the Secretary.

(b) If a petition for review has been filed concerning a wage determination or other final decision of the Administrator or authorized representative, the Associate Solicitor shall promptly file a record upon which the decision was based. The record of a wage determination shall under no circumstances include source data obtained by the Bureau of Labor Statistics, U.S. Department of Labor, or the names of establishments contacted by the Bureau. Where the Bureau has conducted a survey, the published summary of the data may be filed.

§ 6.65 Presentations of other interested parties.

(a) Where a petition has been filed for review of a wage determination or other final decision of the Administrator or authorized representative, the Wage and Hour Division shall notify the parties known or believed to be interested in the case. The Associate Solicitor and any other parties interested in presenting their views shall file a statement within 30 days of the filing of the petition (or such other time as is specified by the Secretary, with consideration of procurement deadlines, as appropriate).

(b) Where a petition has been filed for review of a decision issued pursuant to Subparts B, D or E of this part, any other parties to the proceeding interested in presenting their views shall file a statement within 30 days of the filing of the petition (or such other time as is specified by the Secretary, with consideration of procurement deadlines, as appropriate).

§ 6.66 Decision of the Secretary.

(a) The Secretary will issue his/her decision upon the basis of the entire record. The Secretary may affirm, modify or set aside, in whole or in part, the decision under review and will issue a decision including a statement of reasons or bases for the actions taken. The Secretary, in his/her decision, will observe the provisions of pertinent portions of the Code of Federal Regulations and, in reviewing decisions of Administrative Law Judges pursuant to Subparts B, D and E of this part, will modify or set aside findings of fact only when the Secretary has determined that those findings are not supported by substantial evidence. In any remand of a case, the Secretary will include any appropriate instructions.

(b) In issuing decisions, the Secretary will take into consideration procurement deadlines where appropriate.

Part XI

Department of Labor

Occupational Safety and Health Administration

Hazards Indentification; Notice of Proposed Rulemaking and Public Hearings

DEPARTMENT OF LABOR

Occupational Safety and Health Administration

29 CFR Part 1910

Hazards Identification; Notice of Public Rulemaking and Public Hearings

AGENCY: Occupational Safety and Health Administration, Labor.

ACTION: Notice of proposed rulemaking; notice of public hearings.

SUMMARY: The proposed standard requires employers to identify the hazardous chemicals in their workplaces, and to inform their employees of the identity and nature of the employees' hazardous exposures. OSHA has determined that this standard is necessary because most employees are not aware of the presence of hazardous chemicals in their workplaces, or of the health effects exposure to these hazards may produce. Furthermore, many employers are also unaware of the complete chemical identities and hazards of the chemicals in their workplaces. The proposed standard would alleviate these problems through specific hazard identification and evaluation procedures, labeling requirements, and records preservation. Public hearings are being scheduled to permit interested parties the opportunity to orally present information and data related to the issues raised by this proposed rule.

DATES: Comments must be received on or before April 16, 1981.

Notices of intention to appear at the public hearings must be received on or before May 1, 1981.

The hearings are scheduled as follows:

Date Hearing Will Begin and City

1. May 26, 1981, Washington, D.C.
2. July 7, 1981, Houston, Texas
3. July 21, 1981, Chicago, Illinois
4. August 11, 1981, Philadelphia, Pennsylvania
5. September 1, 1981, San Francisco, California.

ADDRESS: Comments should be submitted, in quardruplicate, to the Docket Officer, Docket H–022, U.S. Department of Labor, Occupational Safety and Health Administration, 200 Constitution Avenue, N.W., Room S–6212, Washington, D.C. 20210; (202) 523–7894.

Notices of intention to appear should be submitted to Mr. Tom Hall, Division of Consumer Affairs, Room N3635, U.S. Department of Labor, Occupational Safety and Health Administration, 200 Constitution Avenue, N.W., Washington, D.C. 20210, (202) 523–8024.

Addresses for the hearing locations will be published in the **Federal Register** at a later date.

Written comments received and notices of intention to appear will be available for inspection and copying in the Docket Office, Room S6212 at the above address.

FOR FURTHER INFORMATION CONTACT:

Proposal

Mr. James Foster, Room N3641, Office of Public Affairs, Occupational Safety and Health Administration, U.S. Department of Labor, 200 Constitution Avenue, N.W., Washington, D.C., 20210; (202) 523–8151.

Hearings

Mr. Tom Hall, Division of Consumer Affairs, Room N–3635, U.S. Department of Labor, Occupational Safety and Health Administration, 200 Constitution Avenue, N.W., Washington, D.C. 20210. (202) 523–8024.

SUPPLEMENTARY INFORMATION: The following is a table of contents for this section of the preamble:

I. Need for a Hazards Identification Standard

II. Background to the Hazards Identification Standard

A. Introduction
B. Survey Estimates of Potential Workplace Hazardous Exposures
C. Previous Recognition of the Need for Labeling
  1. Occupational Safety and Health Administration Standards.
  2. National Institute for Occupational Safety and Health (NIOSH) Criteria Document.
  3. Report of the OSHA Standards Advisory Committee.
  4. American National Standards Institute (ANSI) Standard.
D. Selected Labeling Regulations Which are Currently in Effect
  1. Occupational Safety and Health Administration (OSHA).
  2. Fair Packaging and Labeling Act.
  3. Environmental Protection Agency (EPA).
  4. Food and Drug Administration (FDA).
  5. Department of Transportation (DOT).
  6. Consumer Product Safety Commission (CPSC).
  7. State Regulations.
  8. European Economic Community (EEC).
E. History of OSHA's Proposed Labeling Standard

III. Summary of the Proposed Standard

IV. Major Issues for the Rulemaking

A. Issues of Scope and Type of Standard
  1. The generic approach to a hazard identification standard.
  2. Employers covered by the standard.
  3. Duty to disclose specific chemical identity and impact on trade secrets.
B. Scientific Issues
  1. Hazards covered by the standard (general issues).
  a. Universal vs. hazard labeling.
  b. General or workplace-specific hazard determinations.
  c. Impurities, Intermediates, By-products.
  2. Hazards covered by the standard (definitional issues).
  a. General.
  b. Physical Hazards.
  c. Health Hazards.
  d. Specific definitional issues.
  e. Regulation of physical hazards by other agencies.
  f. Regulation of health hazards by other agencies.
  3. Hazard Determination Process.
  a. Description.
  b. Performance vs. specification standard for the hazard determination process and evaluation scheme.
  c. Literature search.
  d. Use of TDB, standard reference works and NIOSH documents.
  e. Search files.
  f. Concentration of constituent substances and mixtures hazard determination.
  4. Evaluation procedure.
  a. In general.
  b. Adequate and well-controlled study.
  c. Case studies use.
  d. Statistical significance.
  e. Expert opinions.
C. Regulatory Issues
  1. "Performance" vs. "specification" requirements.
  2. Content and format of labels and placards.
  3. Disclosure of chemical identity in labels shipped in commerce.
  4. Exclusion of small containers.
  5. Access to records and documents required by the standard.
  6. Worker access to safety data sheets.
  7. Material safety data sheets.
  8. Substance-employee identification lists.
  9. The need for generic training requirements.
  10. Impact on small business.
  11. Miscellaneous issues.
D. References

V. Legal Authority

VI. Regulatory Analysis, Environmental Impact, and Regulatory Flexibility Requirements

VII. Public Participation

VIII. Authority and Signature

I. Need for a Hazards Identification Standard

Approximately 25 million American workers are currently exposed on the job to chemical or physical hazards. As many as 40 to 50 million Americans (23 percent of the entire U.S. population) may have been exposed to one or more of the hazardous chemicals presently regulated by OSHA at some point during their lifetime (1).* Yet, as indicated in the NIOSH National Occupational Hazards Survey (NOHS) discussed below, workers are generally unaware of the presence of hazardous chemicals in the workplace and of the very real potential that exposure to such chemicals may injure their health. Furthermore, some workers complain that even where they receive information about hazardous chemicals, it is often inaccurate or incomplete.

Thus, workers and their representatives have consistently emphasized in previous OSHA rulemakings the need for OSHA to promulgate a standard for chemical substance identification. The following testimony presented during the OSHA rulemaking hearings on "Access to Employee Exposure and Medical Records," OSHA Docket H–112, is evidence of workers' concerns about a labeling regulation (28).

(A)pproximately 150 new chemicals come into that plant every day, many of them with just trade names, many with just a code number. As I have been investigating, every company uses a different code number * * *

Many times our people are exposed for a month, six weeks or two months before we find out (the chemical identity) * * * then, after we have it evaluated, (the company) will remove it; but the damage is already done.

(Mr. John Mroczkowski, United Steelworkers, Tr. 1189–1190, OSHA Docket H–112.)

* * * * *

(N)ow our employees are rather well-schooled craftsmen. They can recognize hazards if they know what the hazard is. Our basic problem is on a daily exposure we have to work with coolants, lubricants, and the vapors that result from the use therein * * *

The thing we are asking for is a labeling, a chemical labeling of what really is contained in that lubricant or that coolant. And I think we can take it from there. We are not asking for a hell of a lot. But if the men don't know what they are being exposed to on a daily basis, there is nothing they can do about it until years later. And then it is too darn late.

(Mr. Victor Horvath, International Ass'n of Machinists, Tr. 1378, OSHA Docket H–112)

* * * * *

(W)e must reiterate the importance of labeling data * * * without some kind of very efficient labeling data we are absolutely in the dark about many chemicals that are used in our shop.

(Mr. Michael Gaffney, United Autoworkers, Tr. 1325, OSHA Docket H–112)

Without adequate chemical substance identification, millions of workers with routine exposures to hazardous chemical substances are unaware of the hazards posed by these substances, and are thus incapable of protecting themselves or ensuring that their employers provide adequate protection. The need for self-protection is no trivial matter. Workers are exposed to hazardous chemicals both in the workplace and the general environment, making them the greatest involuntary consumers of hazardous chemicals in the nation. And in many cases, exposure in the workplace is far greater than what occurs in the general environment. Consequently, to leave workers ignorant of the hazards they face, without the ability to protect themselves, would be incompatible with OSHA's duty under the Occupational Safety and Health Act of 1970, 29 U.S.C. 651 *et seq.*, to assure every working man and woman in the nation, so far as possible, safe and healthful working conditions.

This lack of an adequate system for the identification and labeling of hazardous substances in the workplace has been, and continues to be, a contributing factor in the occurrence of occupational disease. As the Committee on Government Operations, U.S. House of Representatives concluded in its report, *Chemical Dangers in the Workplace* (Thirty-forth Report, 1976) (28):

Identifying and controlling toxic substances in the workplace is becoming progressively more difficult as more chemicals, chemical processes, and chemical products are used in industry. Tens of thousands of trade-name products, whose chemical contents are not disclosed, are used daily. Lack of knowledge about exposure hampers the identification of occupationally caused diseases, illnesses, and deaths and is a major impediment to preventing them.

Dr. Thomas Mancuso, an occupational medicine practitioner for thirty years, addressed the problem of inadequate chemical substance identification at Congressional hearings held in 1976 on control of toxic substances in the workplace (25). Dr. Mancuso stated:

* * * the doctor in practice, if he is to make a medical diagnosis, needs information about the work environment and the specific work exposures, the specific chemicals to which his worker patient was exposed prior to the illness. Basically, this lack of information constitutes the fundamental obstacle to the recognition of causality of an occupational illness and appropriate steps and approaches must be evolved to overcome this fundamental problem.

Dr. Mancuso also indicated that there is a nation-wide lack of recognition of occupationally-related illness, disease, and death by the worker and his family, by the doctor, by the industry and by the government. He further stated:

This stems in general from the fact that for decades the workers, the doctors and society have been predominantly oriented and trained on the infectious causes of disease, due to bacteria and viruses, and there has been a corresponding lack of realization of the impact of the many thousands of chemicals—the microchemicals in the work environment—in the causation of illness, disability, and death.

Similarly, Dr. Daniel Teitelbaum, a practicing occupational toxicologist familiar with the problems of inadequate substance identification in occupational medicine, offered the following testimony at the OSHA hearings on access to records (28):

(W)hen such (chemical identification) information is not provided to a consultant, diagnostic difficulties often occur. Patients usually do not know what materials were used in the course of their employment. Even if they are familiar with the material, they do not know the health effects, the level of their exposure, or the chemistry of the material itself. They are usually unable to provide to me enough information for development of a definitive diagnostic and treatment program.

(Tr. 116, OSHA Docket H–112)

To end the disparity between what workers now know and what they should know about potential chemical hazards in the workplace, OSHA is today proposing a comprehensive hazard identification standard which will require employers to communicate two types of basic information to their employees. Under the standard, an employer must inform employees of the precise chemical identity of the hazardous chemicals with which they work. The employer must also warn employees of the particular hazards

*Numerical references are to the References listed in this preamble, *infra*.

posed by chemicals in the workplace, including any applicable precautions to be used when working with hazardous chemicals. This information would be conveyed to the workers by the use of container labels, placards, and material safety data sheets.

The benefit of informing workers of the particular hazards of a chemical is immediate and direct. The need for workers to know the precise chemical identities of the hazardous chemicals with which they work is less direct, but no less important.

Access to the precise chemical identity of hazardous chemicals will substantially improve the ability of workers to participate actively in the promotion of health and safety in the workplace, whether their efforts be individual or combined with the efforts of physicians, unions, or agencies of government concerned with worker health. For example, access to the precise chemical identities of hazardous chemicals will give workers the capability to:

—Provide physicians with exact descriptions of workplace exposures when workers suspect occupational causes of disease or material impairment of bodily functions;
—Complement incomplete information communicated to workers concerning the hazards of workplace chemicals;
—Participate with their employers on an intelligent basis in designing and implementing industrial hygiene precautions and procedures to promote workplace health and safety.

In addition, if a requirement for a substance-employee identification list is included in the finale rule, then workers will be able to:

—Obtain an accurate history of the hazardous chemicals to which a worker might have been exposed in the workplace as an aid in identifying the causes of chronic diseases and diseases with long latency periods;
—Determine, with scientific assistance, any additional adverse effects upon workers that are known to be caused by prolonged exposures to chemicals which have been classified as posing only a moderately acute hazard;
—Determine, with scientific assistance, whether worker exposure to various chemicals results in synergistic adverse effects not attributable to any one chemical.

Without access to precise chemical identity, workers must continue to rely principally upon their employers, and upon the limited resources of OSHA and NIOSH, for protection against injury and disease caused by hazardous chemicals. These resources are inadequate, and to fulfill its statutory mandate to strive for a safe and healthful workplace for every worker, OSHA must give workers the means to protect themselves.

OSHA realizes that some employers have already made efforts to institute substance identification and labeling practices in their establishments as part of their occupational safety and health programs. However, although they may conform to some industry consensus standard, such as that of ANSI, these programs are not uniformly designed or self-enforced. Also, the use of identification systems is not widespread in industry. Even when a system is in place, the system may be unique only to that establishment, and may not be as comprehensive as would be necessary to be truly effective. These inadequacies were clearly demonstrated by the results of the NIOSH occupational health survey, which is discussed below. As a result, the Committee on Government Operations concluded in its 1976 report that voluntary identification standards were not adequately protecting employees. The report stated (26):

> Attempts at self-regulation by the chemical industry have not generated adequate information for buyers and users about toxic chemicals in industrial products. Voluntary labeling guidelines developed by the chemical manufacturing industry are directed primarily to the avoidance of injury from single, accidental exposures and do not address the health hazards caused by chronic low-level exposure to toxic chemical substances.

As a result of their investigations in this regard, the Committee concluded:

> We believe that industry self-regulation is preferable to governmental intervention if it can produce the necessary level of safety. To this point, however, self-regulation, although laudable, has not been equal to the task.

Similarly, the provisions contained in the regulations of other Federal agencies and state governments, which are described below, are also not comprehensive in scope. None of the Federal statutes adequately addresses itself to the problems presented by hazardous materials in the workplace environment. While nine of the fifty states have regulations covering labeling in the workplace, these standards are not comprehensive or uniform, and this small number of state laws is not sufficient to adequately protect the vast majority of American workers. Nonetheless, the fact that the states are beginning to recognize the need for regulation of this type indicates the need for national, uniform standards to address a problem which, as Congress recognized in the OSH Act and in subsequent oversight hearings, is of nationwide scope. The proposed standard will help to avoid the potential for conflicting state-imposed burdens on interstate commerce.

The proposed hazards identification standard has been developed as the second major component of a total information system designed to convey to workers information essential to awareness of existing and potential job related health hazards. The first component of this system is OSHA's standard on Access to Employee Exposure and Medical Records, 29 CFR 1910.20 (45 Federal Register 35212 *et seq.*, May 23, 1980), which provides employees exposed to toxic substances and harmful physical agents with access to their employer maintained exposure and medical records.

The information provided by the existing access standard and the proposed hazard identification standard is complementary, and without the type of information provided by either standard, the ability of workers to understand and react to significant workplace hazards will be significantly diminished. The access standard generally assures employees access, upon request, to information concerning the identification of toxic substances and harmful physical agents to which they are exposed, as well as access to other exposure and health information, if such information has been recorded by the employer. Access by employees to such records thereby provides an early warning system of possible occupational health hazards and is crucial to the overall purposes of the Act. The access standard does not, however, require the creation of such records. The hazard identification standard, therefore, will significantly add to the informational rights provided to employees in the access standard by affirmatively assuring that chemical manufacturers and users will establish hazard identification systems within their workplaces. Furthermore, unlike the access standard, the hazards identification standard is designed to assure that hazards-related information will flow from the manufacturers and importers to the downstream employees of industrial users, who, because of the trade name problem, are themselves often unaware of the identities or hazards posed by chemicals in their workplaces. Accordingly, to provide anything less than the basic information afforded by these twin standards would deprive workers of the right to protect themselves from danger.

The two rules do, however, in some situations overlap; thus there may be a need to modify the language of the

access standard upon final promulgation of a chemical identification and labeling standard. Comments are invited as to which provisions, if any, in the access standard should be changed in light of the hazard identifiction standard. OSHA does not anticipate substantial alterations in the content of the Access standard, but does intend to make necessary conforming amendments so that similar terms are used consistently in both rules.

II. Background to the Hazard Identification Standard

A. Introduction

According to data obtained from the National Occupational Hazards Survey conducted by the National Institute for Occupational Safety and Health (NIOSH), approximately 25 million American workers, or one in four, are potentially exposed to one or more of the nearly 8,000 hazards identified by NIOSH (see references 1, 25, 26, and 27). Occupational exposure to the hazardous substances covered by this proposed standard is common. The proposed standard will provide information on potential hazardous exposures to the approximately 20.5 million people employed in the nearly 328,000 manufacturing facilities in SIC categories 20–39, including one million workers in the chemical industry (31). In addition, workers in other SIC categories will obtain partial information on potential hazardous exposures because the proposed standard requires that labels, once attached, remain affixed to containers with hazardous contents.

In its General Industry Standards (29 CFR Part 1910, Subpart Z), OSHA regulates approximately 430 toxic substances, a small percentage of the total number of toxic or hazardous materials present in the workplace. According to the Toxic Substances Control Act Chemical Substances Inventory (TSCAI) compiled by the Environmental Protection Agency (EPA), as of July, 1980, there are approximately 55,103 chemical substances which are manufactured, imported or processed for commercial purposes in the United States (4). The TSCAI figure includes only those substances which are covered by the Toxic Substances Control Act, and does not include many other substances, such as food additives, drugs, cosmetics, and pesticides, which can pose a hazard in the workplace. In addition, approximately 1,000 new chemicals are marketed each year. Thus, only gross estimates can be made of the total number of toxic or hazardous chemicals to which the American worker may be exposed, as well as the number of workers who are exposed to such substances. The data does indicate that both of these figures are extremely large.

The number of occupational illnesses resulting from occupational exposure to hazardous substances is difficult to quantify. The most comprehensive figures are compiled by the Bureau of Labor Statistics (BLS) in an annual survey of approximately 200,000 industrial facilities entitled, *"Occupational Injuries and Illnesses in the United States by Industry."* BLS reported approximately 168,000 new cases of occupational illness in 1976, and 162,000 in 1977. These figures do not include the number of workers totally disabled from occupational illness due to chemical exposures who have left the workforce.

An analysis of the survey reveals that 54.7 percent of occupational illnesses in 1976, and 57.9 percent of occupational illnesses in 1977 fell into the categories of illnesses (not counting malignant and benign tumors) most likely to be related to chemical exposures. This comes to a total of more than 180,000 illnesses in those two years, some of which are attributable to exposures which might have been avoided by proper labeling.

The BLS report also indicates that a large number of the total occupational illnesses recorded occur in manufacturing industries (SIC Major Groups 20–39). In 1976, employees in manufacturing industries reported 57.5 percent of all occupational illnesses, but accounted for less than 30 percent of total employment. The 20 industries with the highest rates of occupational illness were all manufacturing industries.

Although these figures are substantial, they probably underestimate the magnitude and severity of occupational illness and injury. The BLS reports that:

> The recording and reporting of illness continue to present some measuring problems, since employers (and even doctors) are often unable to recognize some illnesses as being work related. The annual survey includes data on only current and visible illnesses of workers; it does not include data on illnesses which might surface later.

Occupational diseases caused by chemical exposures are often not recognized as such, and thus under-reporting of chemically-caused occupational disease is a major problem. To assess the accuracy and completeness of worker compensation reports and OSHA Form 200 reports, the University of Washington conducted a two-year study for NIOSH which was published in 1975 (32). Medical examination of over 900 employees revealed 346 cases of "probable occupational disease". These were so classified only if the observed manifestations of the disease were consistent with those known to result from excessive exposure to a specific injurious agent, and the patient was known to have had significant contact with the particular agent during the course of a normal working day. Of these 346 cases, only 8 had been recorded on either the OSHA Form 200 or in worker compensation reports.

B. Survey Estimates of Potential Workplace Hazardous Exposures

The lack of adequate chemical substance identification in the workplace was investigated as part of the National Occupational Hazards Survey undertaken by NIOSH in 1972 (1, 25, 26, 27).

The NIOSH surveyors visited over 5,200 industrial plants that had been selected by the Bureau of Labor Statistics as a representative cross-section of industry type and size. General information was collected about each plant, such as its major product or service, the number of employees, and the availability and kind of medical care. The surveyors then conducted walk-through inspections of each facility to record worker exposures to specific health hazards. The NIOSH teams observed each process in the plants, recorded the number of workers in each job category, and listed the specific chemical and physical agents to which these workers were potentially exposed.

If an employee was exposed to a trade-name product, the surveyor recorded the name of the product, its manufacturer, and the ingredients listed on the product container. If labels on the containers did not list the ingredients, the surveyors tried to ascertain the composition from material safety data sheets or other sources at the plant. All these sources supplied the needed information for only 10% of the trade-name products.

The following is a summary of the NIOSH findings in regards to the adequacy of chemical substance identification in the workplace (25, 26, 27):

Table 1.—*NOHS Findings*

1. 85,000 individual trade-name products were identified.
2. These 85,000 products accounted for 70% of all recorded exposures. The remaining 30% of these exposures were either properly identified chemicals or physical agents.
3. The total number of 'hazardous' exposures represented by these trade-name products is not known, since NIOSH was unable to identify the chemical composition of all of these products.
4. In 90% of the trade-name product cases, neither the employer nor the employee knew the identity of the chemicals in the trade-name products.

NIOSH attempted to further identify the trade-name products by contacting the product manufacturers. This effort was complicated by the problem of "nested" trade names—that is, when the manufacturer supplied NIOSH with information on the chemical substances contained in trade-name products, approximately one-third contained secondary trade-name chemicals. If the secondary trade-name composed more than 10 percent of the mixture, NIOSH also pursued identification of it by contacting the manufacturer.

NIOSH contacted over 10,000 manufacturers to obtain additional information on the chemcial identification of the trade-name products. At the time they reported their findings to Congress in 1976, NIOSH had obtained product ingredient information on over 40,000 trade-name products. The following is a summary of NIOSH findings in regards to trade-name products (TRN) (25, 26):

Table 2.—*Potential Exposure to TRN Products Containing Hazards*

Total number of trade name products = 45,404
Total number of employees exposed to TRN products = 278,324
Total number of exposures for employees named above = 1,420,717
Of the total number of employees exposed to TRN products, the number exposed to OSHA-regulated chemicals = 126,028
Total number of exposures for the above employees = 308,567
Percentage of employees exposed to OSHA-regulated chemicals = 45%
Of employees exposed to TRN products which contain OSHA-regulated chemicals, the number of employees exposed to products whose composition is deemed to be a trade secret = 66,727
Total number of exposures for the above employees = 113,665

Table 3.—*Potential Exposure to TRN Products Containing Carcinogens*

Number of TRN products that contain at least one of the 15 OSHA *regulated** carcinogens = 427
Total number of employees exposed to TRN products containing carcinogens = 5,638
Total number of carcinogen exposures for employees named above = 7,132
Percentage of employees exposed to carcinogens = 2%
Total number of employees exposed to TRN products containing carcinogens which the manufacturers call trade secret = 2,830
Total number of exposures for employees named above = 3,274

*Number of regulated carcinogens = 16

The NOHS survey promoted the Committee on Government Operations, in its report on chemical dangers in the workplace, to state that they thought the NOHS "* * * disclosed alarming conditions." They further indicated that:

> [T]he problem of worker and employer ignorance of hazardous substances used in industry is far greater than previously supposed. The chief cause is the practice of identifying chemical compounds by trade names without the disclosure of ingredients, which thwarts even the most conscientious attempt to alert workers to exposures beyond specified limits.

They concluded:

> It is clear that the major objectives of the Act override narrow self-interest on the part of manufacturers. No trade secret can justify exposing great numbers of American workers to cancer-causing agents or other toxic chemicals. Any trade-name product containing a substance known to be hazardous or a carcinogen must be clearly labeled so that precautions may be taken.

The NOHS survey thus provided strong evidence that chemical substance identification was not sufficiently widespread to protect employees adequately, and that an OSHA standard in this area is necessary to provide such protection.

C. Previous Recognition of the Need for Labeling

For nearly sixty years, various government, industry and professional organizations have recognized the need to label hazardous substances, and have sought to identify relevant issues, as well as to develop comprehensive and consistent systems. Several of the more recent documents of significance will be discussed.

1. *Occupational Safety and Health Administration (OSHA) Standards:* The Occupational Safety and Health Act, 29 U.S.C. 651 *et seq.*, was passed to assure safe and healthful working conditions for working men and women (5). Section 6(b)(7), one of the sections which delegates OSHA the authority to promulgate labeling requirements, states:

> Any standard promulgated under this subsection shall prescribe the use of labels or other appropriate forms of warning as are necessary to insure that employees are apprised of all hazards to which they are exposed, relevant symptoms and appropriate emergency treatment, and proper conditions and precautions of safe use or exposure.

Several of OSHA's safety and health standards for General Industry in 29 CFR Part 1910(3) were subsequently promulgated with such labeling requirements for a relatively small number of specific substances. (These standards are listed in Tables 4 and 5 of section (C) below).

2. *National Institute for Occupational Safety and Health (NIOSH) Criteria Document:* OSHA and NIOSH have long recognized the desireability of a uniform and complete system to identify hazardous materials found in the workplace. Under section 22(c)(1) of the OSH Act, which authorized NIOSH to develop recommended occupational safety and health standards, a criteria document was published in 1974 which was entitled, "A Recommended Standard . . . An Identification System for Occupationally Hazardous Materials" (7). The recommended standard was designed to inform employees of potentially hazardous materials which are encountered in the workplace by a three-component warning system, including the use of placards, labels, and Material Safety Data Sheets.

A "hazardous material" was defined by NIOSH as "a substance or mixture of substances having intrinsic properties capable of producing adverse effects on the health or safety of the worker". NIOSH recognized that all materials "can cause unwanted changes under some circumstances, but a careful assessment of properties and circumstances will classify common substances such as water and sodium chloride as practically nonhazardous materials from the viewpoint of the need for informing the worker".

NIOSH further refined their definition of hazardous by stating that a material would be considered hazardous if it met any one of the following criteria:

"(1) Toxicity—A toxic substance is one that has demonstrated the potential to: endanger human life by exposure via any route found in the workplace; produce short or long-term disease or bodily injury; affect health adversely; induce cancer or other neoplastic effects in man or experimental animals; induce a transmissible change in the characteristics of an offspring from those of its human or experimental animal parents; or cause the production of physical defects in the developing human or experimental animal embryo.

"In the absence of human or animal effects data described above, a toxic substance is one that produces death in experimental animals exposed to the substances in quantities and by routes which are reasonable * * * The following cut-off points apply to animal exposure data:

A single oral LD50 of up to 5,000 mg/kg.
A single inhalation exposure LC 50 of up to 10,000 ppm for gases, or 100,000 mg/cu m by volume for mists or dusts.
A single skin absorption (percutaneous) LD50 of up to 2,800 mg/kg."

"(2) Flammability—A flammable substance is one that will burn in air when exposed to a temperature of 1,500 F (815 C) for a period of five (5) minutes or less."

"(3) Reactivity—A reactive substance is one that will release hazardous amounts of energy when subject to shock, spark, or light, during uncontrolled polymerization, or when contacted by common substances, e.g., water, air, or steel, or is a strong oxidizing or reducing material."

NIOSH further recommended that all materials that are toxic, flammable, or reactive be rated as to their relative hazard. For example, a toxic substance could be rated in any one of five toxicity categories, ranging from "no significant health hazard" (zero rating) to "extreme health hazard" (rating of four). Specific criteria for determining in which category a substance should be included were also recommended by NIOSH. Information to be used by the employer to determine the appropriate hazard rating was to be assembled from "reference sources, expert opinion, and direct experience and familiarity with the material or specific combination of materials". NIOSH also noted that references are "major sources of information on hazardous materials, but many other sources are equally valuable and should not be neglected."

No specific guidance was provided for employers to assist them in making the hazard determinations necessary to comply with the requirements of the NIOSH recommended standard. NIOSH simply stated that following a review of available information, "a composite statement of the potential hazard from the standpoint of health effect, flammability, and reactivity can then be formulated. The proper relative hazard ratings are then assessed by a comparison of the summary data with the tables and relative rating definitions." For health effects assessments, employers were directed to use available human experience data before using animal data, and to rate on the basis of the "worst effect" when both acute and chronic data are available. NIOSH did not provide any examples of how specific substances would be rated according to their recommended classification scheme.

In addition to labels, NIOSH recommended that employers be required to have a Material Safety Data Sheet (MSDS) for each hazardous material or mixture of hazardous materials. A format for the MSDS was also recommended by NIOSH, and included the following categories of information:

1. Product Identification
2. Hazardous Ingredients
3. Physical Data
4. Fire and Explosion Data
5. Health Hazard Information
6. Reactivity Data
7. Spill or Leak Procedures
8. Special Protection Information
9. Special Precautions

3. *Report of the OSHA Standards Advisory Committee.* In 1974, the OSHA Standards Advisory Committee on Hazardous Materials Labeling was formed in accordance with Section 7(b) of the OSH Act (6). The purpose of this committee, which was comprised of experts representing employers, employees, the Federal govenment, state governments, and the public, was to develop generic guidelines for the implementation of Section 6(b)(7) of the OSH Act. The recommendations of the Committee involved a "total systems" approach to the problem of labeling. This approach included classification of hazards and the use of warning devices, such as labels and placards, coupled with the use of physical/chemical data and employee training programs. The Committee "identified and confined its discussion to four categories of hazards, namely, flammability hazards, health hazards, reactivity hazards, and materials hazardous by reason of being under pressure in their container". For each of these categories, a number of sub-categories were developed and the Committee recommended the criteria a substance would have to meet to be included in these sub-categories. Wherever possible, the Committee defined these criteria similar to currently used and accepted definitions. For example, the definition of "unstable (reactive) material" was that which OSHA already used in 29 CFR 1910.106(a)(20). The Committee recommended adoption of such a labeling standard to serve both employer and employee by providing a safer and more healthy working environment. The final report of the Committee was submitted to the Assistant Secretary of Labor on June 6, 1975.

In terms of health hazards, the Committee recommended that a labeling standard be developed by OSHA to cover any material which is:

—a carcinogen;
—a corrosive to eyes;
—a corrosive to skin;
—extremely toxic;
—highly toxic;
—an irritant;
—a mutagen;
—a strong sensitizer;
—a teratogen; or
—toxic.

The Committee defined each of these terms, and based their definitions on available test methods wherever possible. However, in some cases they determined that the issues involved were so complex that the Committee thought resolution of them should be left to the Secretary of Labor. Carcinogens, mutagens, strong sensitizers, and teratogens were thus defined very generally, and OSHA would not have been able to incorporate the Committee's recommendations into a standard without further refining these definitions.

The definitions of "extremely toxic", "highly toxic", and "toxic" were based on estimates of lethal dose. For example, the following are the criteria recommended for determining that a material is "extremely toxic":

"(i) a material that has a median lethal dose (LD50) of 5 milligrams or less per kilogram of body weight when administered orally to albino rats weighing between 200 grams and 300 grams each;⊖

"(ii) a material that has a median lethal dose (LD50) of 20 milligrams or less per kilogram of body weight when administered by continuous contact for 24 hours or less with the bare skin of albino rabbits weighing between 2 kilograms and 3 kilograms each; or

"(iii) a material that has a median lethal concentration (LC50) in air of 50 parts per million by volume or less of gas or vapor or 0.5 milligrams per liter or less of mist, fume or dust when administered by continuous inhalation for one hour or less to albino rats weighing between 200 grams and 300 grams each."

Given this type of definition for toxicity, it is clear that chronic effects other than carcinogenicity, mutagenicity or teratogenicity would not be specifically covered by the standard recommended by the Advisory Committee. The Committee did recommend that the Secretary retain the right to regulate "special" hazards, not otherwise specifically designated, and assumed this method would be used to cover chronic hazards.

The Advisory Committee did not provide any guidance for employers to determine whether a substance meets the recommended criteria for being toxic. No indication of where employers can find the toxicity data needed to comply with the standard is given. The Committee also did not indicate how employers should assess available data. The question of how to resolve conflicting test results to determine the applicable LC50 was not addressed.

4. *American National Standards Institute (ANSI) Standard.* Industry also recognized the need for an official standard for the precautionary labeling of hazardous chemicals used in the workplace. In 1944, the Manufacturing Chemists Association, since renamed

Chemical Manufacturers Association (CMA), a trade association composed of members of the chemical industry, established their Labels and Precautionary Information (LAPI) Committee. This committee produced the first published guide to precautionary labeling for hazardous chemicals (Manual L-1) in 1946. In 1970, the LAPI voiced their strong support for precautionary labeling being part of worker safety programs in the following statement:

> Precautionary information should, as far as is practicable, reach every person using, handling, or storing hazardous substances. The most practical means of disseminating this information has been found to be by precautionary labels, affixed to containers of hazardous substances, bearing appropriate precautionary statements expressed as simply and briefly as possible. (Manufacturing Chemists Association, *Guide to Precautionary Labeling of Hazardous Chemicals*, Manual L-1, 7th ed. 1970, p. 9).

A subcommittee of the LAPI Committee also assisted in the development of the American National Standards Institute (ANSI) standard entitled "American National Standard for the Precautionary Labeling of Hazardous Industrial Chemicals" (8). This standard, published in 1976, is considered to be the official guideline for voluntary use by industry for the precautionary labeling of hazardous chemicals used in industrial operations.

Some industry representatives have maintained that an OSHA labeling standard is not necessary because industry already voluntarily complies with the ANSI standard. However, findings of the National Occupational Hazards Survey (NOHS) demonstrated that this is not the case in many situations. The ANSI standard is nearly identical to the manual produced by the CMA for its member companies. As stated above, this manual was first available in 1946. However, the NOHS found that CMA member companies did not fare well in terms of identifying dangerous products to purchasers. As reported in 1976 by NIOSH to the House of Representatives' Committee on Government Operations (26), CMA members manufactured almost 9,000 of the trade-name products found in the NOHS, and designated over 3,000 of these as trade secrets. In addition, over 3,000 of the 9,000 trade-name products contained OSHA-regulated chemicals, and 1,440 of these products were among those that CMA members had designated as trade secrets.

The ANSI standard applies to the precautionary labeling of "hazardous chemicals used under industrial occupational conditions". "Hazardous chemical" is defined as "a chemical or mixture of chemicals that is toxic, highly toxic, irritant, corrosive, a strong oxidizer, a strong sensitizer, combustible, flammable, extremely flammable, dangerously reactive, or pressure-generating, or which otherwise may cause substantial illness during or as a direct result of any customary or reasonable foreseeable handling or use". Each of the specific listed hazards is individually defined by ANSI. However, no definition or guidance is provided to help employers determine what a "substantial illness" is, or which substances may cause such illnesses.

The definitions of "toxic" and "highly toxic" involve lethal dose determinations. Thus chronic effects are not specifically addressed by the ANSI standard. In fact, the ANSI standard is even less protective in terms of chronic effects than the Advisory Committee's recommended standard would be since even carcinogenicity, mutagenicity, and teratogenicity are not covered by ANSI.

Furthermore, the ANSI standard does not specify the precise mode of identification required, simply stating that it should be "adequate to permit selection of proper action in case of exposure". ANSI also does not specify what percentage of a mixture a hazardous component must comprise to trigger the identification requirements, but indicates that "those compounds which contributes substantially to the hazard(s) shall be identified".

The House of Representatives' Committee on Government Operations concluded on the basis of their evaluation of testimony presented at their hearings that the ANSI standard does not adequately cover chemical substance identification (26). There were two major reasons for their conclusions. First of all, the ANSI standard is a guide for industry, and there is no requirement for industry to comply with such a guide. Second, the Committee recognized that the ANSI standard does not address chronic effects. Their report stated:

> A second problem with the ANSI standard is that, like the MCA guide, it is deficient in recognizing potential harm from continuous low-level exposures. It does not include labeling guidelines for chemicals that can cause cancer or genetic defects. Without such labeling, all known hazards are not addressed.

Most recently, the issue of labeling in the workplace was addressed in "An Interim Report to the Congress on Occupational Diseases," submitted by the U.S. Department of Labor in June, 1980 (2). In this report, OSHA indicates the importance of including in its health standards requirements for the use of hazard warning signs or labels. In health standards which regulate workplace exposures to hazardous substances, such labeling provisions are considered to be necessary to the primary prevention of occupational disease by informing workers of the dangers due to exposure and of methods of prevention. Other primary means of preventing occupational disease, to be used in conjunction with labeling, include employee exposure monitoring, medical surveillance, and training, as well as compliance with permissible exposure limits to regulate employee exposures to hazardous substances.

D. Selected Labeling Regulations Which Are Currently in Effect

1. *Occupational Safety and Health Administration (OSHA).* OSHA's safety and health standards for General Industry, 29 CFR Part 1910, were either adopted from voluntary consensus standards, in accordance with Section (6)(a) of the OSH Act, or were promulgated by OSHA through the rulemaking process prescribed by section (6)(b) of the Act (3, 5). Several standards from both sources currently contain provisions for labeling hazardous materials which are present in the workplace.

A number of the standards OSHA adopted under section (6)(a) of the Act require employers to placard, label or mark various types of work sites or containers (see Table 1). For example, 29 CFR 1910.103 covers hydrogen. The standard requires the employer to permanently placard hydrogen storage locations with a warning equivalent to: "HYDROGEN—FLAMMABLE GAS—NO SMOKING—NO OPEN FLAMES". In addition, a portable container of hydrogen must be legibly marked with the name "Hydrogen", in accordance with "Marking Portable Compressed Gas Containers to Identify the Material Contained" ANSI Z48.1-1954.

Another OSHA safety standard which addresses labeling of hazardous materials is 29 CFR 1910.252, which covers welding, cutting and brazing. For example, containers of welding materials with significant amounts of cadmium in them must be marked as follows:

WARNING
CONTAINS CADMIUM—POISONOUS FUMES MAY BE FORMED ON HEATING

Do not breathe fumes. Use only with adequate ventilation such as fume collectors, exhaust ventilators, or air-supplied respirators. See ANSI Z49.1-1967.

If chest pain, cough, or fever develops after use, call physician immediately.

The following table summarizes the OSHA safety standards which include requirements for hazard identification:

Table 4.—*OSHA Safety Standards Adopted Under Section 6(a) of the Act Which Contain Labeling Requirements*

Standard and name of substance/hazard	storage labeling required	Container labeling required
1910.96 Ionizing radiation	×	×
1910.103 Hydrogen	×	×
1910.104 Oxygen	×	×
1910.111 Anhydrous ammonia.	×	×
1910.144 Color coding		
1910.145 Accident prevention signs and tags.		
1910.252 Welding, cutting, and brazing.	×	×

The only OSHA health standard adopted under section (6)(a) of the Act, 29 CFR 1910.1000, Air Contaminants, does not include labeling provisions. However, each of the other health standards, which were promulgated for individual substances under section (6)(b) of the Act, do include provisions for signs and labels.

The warnings required under each standard are specific to the substance being regulated. Each sign or label must include the precise chemical identification of the substance, as well as whatever hazard warnings or precautionary measures are indicated in the standard. Table 5 is a compilation of these standards, including the section number of each, the substance covered, and the hazard or other information to be noted on the label.

Table 5.—*Subpart Z standards Which Contain Labeling Requirements*

Sec. No. and substance	Information on label
1910.1001 Asbestos	Breathing dust may cause serious bodily harm.
1910.1003 4-Nitrobiphenyl	Cancer-suspect agent.
1910.1004 alpha-Napthylamine.	Cancer-suspect agent.
1910.1006 Methyl Chloromethyl Ether.	Cancer-suspect agent.
1910.1007 3,3'-Dichlorobenzidine (and its salts).	Cancer agent.
1910.1008 bis-Chloromethyl Ether.	Cancer-suspect agent.
1910.1009 beta-Napthylamine.	Cancer-suspect agent.
1910.1010 Benzidine	Cancer-suspect agent.
1910.1011 4-Aminodiphenyl	Cancer-suspect agent.
1910.1012 Ethyleneimine	Cancer-suspect agent.
1910.1013 beta-Propriolactone.	Cancer-suspect agent.
1910.1014 2-Acetylaminofluorene.	Cancer-suspect agent.
1910.1015 4-Dimethylaminoazobenzene.	Cancer-suspect agent.
1910.1016 N-Nitrosodimethylamine.	Cancer-suspect agent.
1910.1017 Vinyl Chloride	Cancer-suspect,extremely flammable gas under pressure.
1910.1018 Inorganic Arsenic.	Cancer-suspect, harmful if inhaled or swallowed.
1910.1029 Coke Oven Emissions.	Cancer hazard.
1910.1043 Cotton Dust	May cause acute or delayed lung injury.
1910.1044 1,2-dibromo-3-chloropropane.	Cancer hazard.
1910.1045 Acrylonitrile	Cancer hazard.

2. Fair Packaging and Labeling Act. Congress passed the Fair Packaging and Labeling Act (29) in 1966 to require information to be provided to consumers about the commodities they purchase. Congress stated: "Packages and their labels should enable consumers to obtain accurate information as to the quantity of the contents and should facilitate value comparisons." The Act applies to anyone engaged in packaging or labeling consumer commodities. The Food and Drug Administration is responsible for enforcing the Act in regards to food, drugs, devices or cosmetics which they regulate, while other consumer commodities are regulated by the Federal Trade Commission.

Basically, the Act requires consumer commodities distributed in commerce to be labeled with:

(1) The identity of the commodity, and the name and place of business of the manufacturer, packer, or distributor; and

(2) The net quantity of contents, in whatever measure is appropriate for the package and its contents (weight, linear measure, area).

FDA and FTC have specific regulations describing their implementation and enforcement of the Fair Packaging and Labeling Act. Since the Act is directed towards consumers, compliance with its requirements does not provide information for employees in the workplace.

3. Environmental Protection Agency (EPA). In 1976, the Toxic Substances Control Act (TSCA) (15 U.S.C. 2601 *et seq.)* was passed (18). This Act gives EPA broad authority to regulate chemical substances and mixtures which present an unreasonable risk of injury to health or the environment. Under TSCA, unreasonable risk to human health or the environment may be regulated wherever it occurs. TSCA also emphasizes delayed or chronic effects of chemical exposure, particularly cancer, gene mutations and birth defects.

Under Section 6(a)(3) of this Act, EPA may require that a substance, mixture or article be marked or accompanied by warnings and instructions with respect to its use, distribution and disposal. To date, no labeling rules have been promulgated under TSCA.

The Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) (7 U.S.C. 136 *et seq.*) authorizes EPA to regulate pesticides (19). To carry out its statutory mandate to protect against "unreasonable adverse effects", EPA requires that pesticides be tested prior to registration, which licenses distribution and marketing, to determine their health and environmental effects. An array of acute, subchronic and chronic testing is required, together with environmental chemistry and safety data.

Acute effects testing generally includes acute oral, dermal and inhalation toxicity tests, and skin and eye effects potential. The following table summarizes the acute toxicity categorization scheme utilized by EPA (19):

Table 6.—*Toxicity Categories*

Hazard Indicators	I	II	III	IV
Oral LD50	Up to and including 50 mg/kg.	From 50 thru 500 mg/kg.	From 500 thru 5,000 mg/kg.	Greater than 5,000 mg/kg.
Inhalation LC50	Up to and including .2 mg/liter.	From .2 thru 2 mg/liter.	From 2 thru 20 mg/liter.	Greater than 20 mg/liter.
Dermal LD50	Up to and including 200 mg/kg.	From 200 thru 2,000	From 2,000 thru 20,000.	Greater than 20,000.
Eye effects	Corrosive: corneal opacity not reversible within 7 days.	Corneal opacity irritation reversible within 7 days; irritation persisting for 7 days.	No corneal opacity; reversible within 7 days.	No irritation.
Skin effects	Corrosive	Severe irritation at 72 hours.	Moderate irritation at 72 hours.	Mild or slight irritation at 72 hours.

Required subchronic and chronic toxicity testing varies, but may include assessment of oncogenic, mutagenic, teratogenic, reproductive, and metabolic effects; other adverse effects on the central nervous system or hematopoietic system; and histological changes in the organs, including but not limited to liver, kidney, and both male and female

reproductive systems. The extent of chronic testing for a particular pesticide depends on a number of factors, such as the intended use, type of application and chemical family.

It should be noted, however, that many registered pesticides have not been adequately tested to determine chronic effects, and therefore such data is not always available. EPA discussed this lack of data in the preamble to their regulations on conditional registration of pesticides (44 FR 27935; May 11, 1979):

> There are many pesticides registered that have not yet been addressed by either the generic standards program, or the RPAR program, and thus may not have been evaluated against the unreasonable adverse effects standard of FIFRA section 3(c)(5). The Agency intends to move ahead rapidly with both programs. Nevertheless, it will be some time before a significant number of pesticides are reviewed within these systems, and an even longer time before chronic hazard studies to serve as a basis for reaching regulatory decisions are completed by registrants. During this interim period, many of the risks associated with the use of pesticides will not be identifed or fully quantified * * *

EPA has issued proposed testing guidelines for many of the studies that may now be required during the registration process (21).

Based on the testing results, EPA determines whether a pesticide may cause unreasonable adverse effects, and therefore whether it may be registered. In conjunction with registration, EPA may classify a product for restricted use, a determination that additional restrictions are necessary to prevent unreasonable adverse effects. Further, a pesticide product must be labeled according to Agency-established requirements. Labeling is a significant adjunct to the registration process because under FIFRA, the label is the legal standard by which pesticide misuse is judged. Under Section 12 of FIFRA, it is a violation of the Act to "use a registered pesticide in a manner inconsistent with its labeling", and penalties may be levied under Section 14 of FIFRA for this violation.

EPA specifies that the pesticide label must include the following information (40 CFR 162.10):

1. Product name;
2. Company name and address;
3. Net contents;
4. EPA (Product) Registration number;
5. EPA (Producing) Establishment number;
6. a. Ingredients statement, including the name and percentage of each active ingredient (accepted common name, if there is one, followed by the chemical name);

b. A signal word, based on the acute effects of the pesticide (Danger, Warning, or Caution);

c. A child hazard warning, "Keep Out of Reach of Children";

7. A series of precautionary statements addressing human health, environmental effects on fish and wildlife, and physical/chemical hazards the product may pose;
8. A statement of practical treatment in the event of exposure;
9. If restricted use, a statement to that effect; and
10. Directions for use, storage, disposal, and, if applicable, reentry into areas where the pesticide has been used.

Beyond these specified contents, labels are developed by the individual companies seeking registration and thus may vary in terms of additional contents and appearance for the same product from different producers.

EPA has instituted a Rebuttable Presumption Against Registration (RPAR) procedure to assess the risks and benefits of pesticides that are identified as exceeding a threshold level of hazard (40 CFR 162.11). Initially, identification of RPAR candidates has been accomplished through the registration program. A pesticide placed within the RPAR system is fully evaluated relative to all products and uses affected to determine whether the adverse effects identified are unreasonable. Evidence of either acute or chronic "unreasonable" health effects may result in initiation of an RPAR proceeding. If the adverse effects are demonstrated to be unreasonable during the RPAR, cancellation or denial of registration action may result. Thirty substances have been placed in the RPAR system, and five have been completed.

4. *Food and Drug Administration (FDA).* The Food, Drug, and Cosmetic Act, administered by the FDA, provides for the labeling of substances which are ingested or come into close contact with humans (24). The following products must be labeled:

Foods
Cosmetics
Prescription drugs
Over-the-counter drugs
Animal drugs
Biologics
Diagnostics
Radiological products
Medical devices

The labels required by FDA are applied to the final products prior to consumer distribution, and do not provide any information or protection for employees in the workplace who may be exposed to hazardous substances during the production process.

Food is defined as articles used for food or drink for man or other animals, components of such articles, and chewing gum. Section 403 of the Act requires that foods be labeled with the following information:

1. Name and address of the manufacturer, packer, or distributor;
2. Net amount of food in the package;
3. Common name of all nonstandardized foods or the complete name of a food listed in the Standard of Identity;
4. Presence of any artificial flavoring, artificial coloring, or chemical preservative, indicated by the chemical name of the substance;
5. Ingredients by weight (except for certain standardized foods);
6. Food for dietary uses must include information on vitamins, minerals, and other dietary properties; and
7. Imitations must be labeled as imitations.

FDA maintains a list of substances which are directly or indirectly added to food and which are "generally recognized as safe (GRAS)" (21 CFR Part 182). To be included on the GRAS list, a substance's safety must be determined by scientists who are experts in food safety. FDA defines the "safety" of food additives as follows:

> "Safe" or "safety" means that there is a reasonable certainty in the minds of competent scientists that the substance is not harmful under the intended conditions of use * * * (21 CFR 170.3(i))

Although FDA may determine that a substance is "safe" for purposes of their regulations, this does not mean that the same substances are necessarily "safe" for employees exposed in the occupational setting. Therefore, it seems reasonable that a number of the GRAS substances, as well as other food additives, will be evaluated as hazards under this proposed regulation.

Drugs are defined as articles recognized in the official United States Pharmacopeia, offical Homeopathic Pharmacopeia of the U.S., or official National Forumlary; or articles used to prevent, diagnose, or treat disease; or articles used to affect function or structure in man or animals (21 U.S.C. 321). Medical devices are regulated separately. Section 502 of the Food, Drug, and Cosmetic Act sets forth the following general labeling requirements for drugs:

1. Name and address of the manufacturer, packer, or distributor;
2. Net amount of drug in the package;
3. List of active ingredients, using established names (the established

name is the official name designated; if there is no such designation, the name used in an official compendium; or if a name is not otherwise available, the common name may be used);

4. "May be habit forming" if the drug contains certain substances such as opium;

5. Quantity of certain specified substances such as alcohol;

6. If a prescription drug:

a. "Caution: Federal law prohibits dispensing without prescription."

b. Quantity or proportion of each active ingredient.

c. Names and quantities of all ingredients if for injection.

d. Recommended dosage.

e. Full information on effects and purposes.

f. Established name in type at least half as high as trade name.

7. If an over-the-counter drug: a. Identity statement followed by general pharmacological category or principal intended action.

b. Quantity of contents.

8. Adequate directions for use including frequency, duration, and route of administration, preparation for use, and other dosage information; and

9. Adequate warnings (indications that the drug has narcotic or habit forming properties; warnings against use by persons having certain medical conditions or by children where use may be dangerous to health, precaution concerning safe dosage and manner of use).

FDA has promulgated extensive specific drug labeling provisions under these general requirements of the Act. These provisions are addressed to either the general categories of prescription or over-the-counter drugs, or to individual, specific drugs.

There may be several stages of labeling during the development and packaging of a drug product. The first involves bulk drug shipments from a pharmaceutical manufacturer to another establishment where the drug will be processed, labeled, or repacked in substantial quantity. This establishment then ships the drug product to a retail firm or other dispensing facility (e.g., a pharmacy). Then the drug is dispensed to a customer.

Bulk shipments are generally exempt from the specific drug labeling requirements of the Act but must bear the statement "Caution: For manufacturing, processing, or repacking." Bulk packages of dosage units (such as tablets or capsules) are not covered by this exemption. Certain bulk shipments of drugs must also bear the statement "Caution: Federal law prohibits dispensing without prescription" (21 CFR 201.122). If the bulk shipment is to be used in the manufacture, processing or repacking of a new drug, the shipper may be required to add to the warning as follows: "Caution: For manufacturing, processing, or repackaging in the preparation of a new drug or new animal drug limited by Federal law to investigational use" (21 CFR 201.122(b)).

Labeling requirments for products being shipped from the packager to the dispenser of the drug are different for prescription and over-the-counter drugs.

Generally, prescription drug labeling must meet the following requirements (21 CFR 201.56):

(a) The labeling shall contain a summary of the essential scientific information needed for the safe and effective use of the drug.

(b) The labeling shall be informative and accurate and neither promotional in tone nor false or misleading in any particular.

(c) The labeling shall be based whenever possible on data derived from human experience. No implied claims or suggestions of drug use may be made if there is inadequate evidence of safety or a lack of substantial evidence of effectiveness. Conclusions based on animal data but necessary for safe and effective use of the drug in humans shall be identified as such and included with human data in the appropriate section of the labeling * * *"

The information required is to be presented under the following subject headings, and in this order:

Description.
Clinical Pharmacology.
Indications and Usage.
Contraindications.
Warnings.
Precautions.
Adverse Reactions.
Drug Abuse and Dependence.
Overdosage.
Dosage and Administration.
How Supplied.

If necessary, the following headings may also be used:

Animal Pharmacology and/or Animal Toxicology.
Clinical Studies.
References.

FDA provides specific guidance indicating what information must be provided under each heading (21 CFR 201.57). In addition, for some individual drugs FDA has promulgated specific provisions requiring certain information to appear on the particular drug's label.

If the packager cannot fit all of this information about the drug on the container label, a package insert may be used to supplement the label.

The information FDA requires is intended for the use of the physician or pharmacist. Labels on dispensed drugs are regulated by the individual State Boards of Pharmacy, and thus vary from state to state.

FDA also has regulations specifying labeling requirements for over-the-counter drugs. Basically, the label must include a statement of identity and a declaration of the net quantity of the contents.

FDA has promulgated a number of regulations for specific drug labeling of both prescription and over-the-counter drugs.

For example, lozenges, mouth washes, gargles and other articles sold over-the-counter for relief of minor irritations of the mouth or throat can only be labeled "for the temporary relief of minor sore throats", if the following statement is also included: "Warning—Severe or persistent sore throat or sore throat accompanied by high fever, headache, nausea, and vomiting may be serious. Consult physician promptly. Do not use more than 2 days or administer to children under 3 years of age unless directed by physician."

Cosmetics are articles applied to the human body for cleanliness or to alter appearance. Soap is not classified as a cosmetic. Generally, under the Act a cosmetic label requires the name of the manufacturer, packer, or distributor and statement of weight, but does not require the listing of specific ingredients. An exception is coal-tar hair dyes which must be labeled to warn that they may cause skin irritations, and should not be used for eyebrows or lashes because they may cause blindness. However, FDA has promulgated in its regulations under the Act an additional provision which requires that each cosmetic package "bear a declaration of each ingredient in descending order of predominance, except that fragrance or flavor may be listed as fragrance or flavor" (21 CFR 701.3). The names of the ingredients are to be either the FDA adopted name, or in the absence of one, the common or usual name. If there is no adopted or common name, the chemical or technical name is to be used.

5. *Department of Transportation (DOT).* Section 105(a) of the Hazardous Materials Transportation Act, which was passed in 1975, gave DOT the authority to regulate the labeling of hazardous materials in transportation which may pose an unreasonable risk to health, safety, or property (22). The Secretary of Transportation is given the authority to designate which substances are hazardous. In addition, the Secretary has the authority to regulate substances which meet the definition of hazardous,

but are not specifically designated as such by the Secretary. The shipper is thus required to determine if an individual substance that is not on the list is hazardous, and thus must be labeled. Hazardous substances may include, but are not limited to, explosives, radioactive materials, etiologic agents, flammable liquids or solids, combustible liquids or solids, poisons (dangerous to life, known to be a human health hazard, or presumed to be a hazard on the basis of animal testing results), oxidizing or corrosive materials, and compressed gases.

Over 1500 individual substances or categories of substances have been designated as hazardous (49 CFR Part 172). Some of the categories are general in nature, and thus the categories cover most substances which are hazardous, but are not specifically or individually designated as such. For example, one category is "drugs, not otherwise specified; Poison B". If a drug fits the definition for a Poison B, it would thus have to be labeled, even though it is not individually listed by DOT by substance name. A table which is part of the DOT regulations indicates the specific labeling requirements for each of these designations.

The hazardous substances which are categorized on the basis of their health effects are designated as either Poison A or Poison B. The substances categorized as "Poison A" are considered to be "extremely dangerous", and those categorized as "Poison B" are considered to be "less dangerous". Approximately 20 individual substances are listed as Poison A, as well as 6 general categories. Nearly 130 substances are considered to be Poison B, and there are about 20 general categories listed as such.

Under DOT regulations, 49 CFR Part 172, all dangerous goods or their packages must have the designated labels. The label must include the name, DOT identification number, and a statement of the hazard. In addition, the regulations require the placarding of each motor vehicle, rail car, or freight container containing any quantity of a hazardous material.

DOT regulations cover interstate shipment by truck, rail, water, an air but vary depending on the mode of transportation. The responsibility for labeling is placed on manufacturers, shippers, and the reconditioners and testers of containers in which the hazardous materials are transported. Both the carrier and the manufacturer are forbidden to transport a package which is improperly labeled.

6. *The Consumer Product Safety Commission (CPSC).* The CSPC regulates the labeling of toxic substances in household products used by consumers as part of its broad mandate to protect the public against unreasonable risk of injury (23). The CPSC administers the Federal Hazardous Substances Act (FHSA) which requires the labeling of hazardous substances. "Hazardous substance" is defined in the FHSA regulations as "any substance or mixture of substances which is toxic, corrosive, an irritant, a strong sensitizer, flammable or combustible, or generates pressure through decomposition, heat or other means, if such substance or mixture of substances may cause substantial personal injury or substantial illness during or as a proximate result of any customary or reasonably forseeable handling or use, including reasonably foreseeable ingestion by children." A "toxic" substance is one which "has the capacity to produce personal injury or illness to man through ingestion, inhalation, or absorption through any body surface." A "highly toxic" substance is defined by lethal dose testing results. (These definitions may be found in 16 CFR 1500.3).

The person or firm who releases a product into interstate commerce (usually the manufacturer) has the primary responsibility for determining if the FHSA applies to their product and thus warrants labeling (section (4) of the FHSA). However, if CPSC finds that there may be uncertainty as to the application of the Act in certain instances, or if the hazard is such that the general labeling requirements will not protect consumers, individual specific regulations may be required for hazardous substances. This authority has only been used in a few cases, such as charcoal briquettes (16 CFR 1500.12 and 1500.14) and methyl alcohol (16 CFR 1500.14). CPSC may also ban hazardous substances if the degree of hazard warrants discontinuing consumer use. For example, carbon tetrachloride is a banned hazardous substance (16 CFR 1500.17).

The FHSA requires the following information on a label or tag attached to a hazardous substance:

1. Name and place of business of the manufacturer, packer, or distributor;

2. Common or chemical name of the hazardous substance or of each component which contributes substantially to its hazard;

3. The signal word *"danger"* on substances which are extremely flammable, corrosive, or highly toxic;

4. The signal word *"warning"* or *"caution"* on all other hazardous substances;

5. Affirmative statement of the principal hazard or hazards;

6. Precautionary measures describing the action to be followed or avoided;

7. Instruction, when necessary or appropriate, for first-aid treatment;

8. The word "poison" for any hazardous substance defined as highly toxic;

9. Instructions for handling and storage of packages if special care is required;

10. Statement "Keep out of the reach of children" or if intended for use by children, adequate directions for the protection of children.

As stated above, if this information is not adequate to protect consumer health and safety, additional requirements may be applicable. For example, special labeling is required at certain concentrations for benzene, toluene, xylene, and petroleum distillates (16 CFR 1500.14).

7. *State Regulations.* Twenty-four states have regulations which address labeling. However, only nine states have regulations which apply to labeling in the workplace environment (9, 10, 11, 12, 13, 14, 15, 16, and 17).

Table 7 lists all of the provisions contained in the state regulations. Also listed, by individual state, are the specific provisions applicable to each. This table was prepared by OSHA to give a general overview of existing state laws based on a review of the written regulations supplied by these states. It should not be considered to be a legal interpretation of these state requirements. Most of the states do not have any provisions pertaining to the protection of trade secret information, nor do they provide employers with any specific guidance for determining which substances in their workplaces are covered by the regulations.

Table 7.—*Summary of State Labeling Provisions*

Provisions which may be included in state regulations:

1. Substance Identification:
   - (a) Requires substance identification by chemical name or common name(s).
   - (b) Requires substance identification by chemical name and common name(s).
2. Identification Criteria:
   - (a) Includes a list of regulated substances.
   - (b) The employer determines which substances are regulated on the basis of definitions.

Table 7.—*Summary of State Labeling Provisions*—Continued

(c) Sources of information the employer can use are provided.
(d) A combination of lists and definitions is used.
3. Requires the Use of Material Safety Data Sheets.
4. Information Required to be Provided on Labels or Equivalent.
(a) Requires hazards warning information.
(b) Requires precautionary measures information.
5. Requires Employee Training.
6. Recordkeeping Requirements:
(a) Provides for employee access to records maintained by employer.
(b) Requires retention of records by employer.
Provisions included in regulations of specific states:
California—1(a), 2(d), 4(a) and (b).
Connecticut—1(a), 2(a), 4(b), 5, 6(a).
Maine—1(a), 2(d), 5, 6(a) and (b).
Massachusetts—1(a), 2(a), 4(a) and (b).
Michigan—1(b), 2(b), 3, 4(a) and (b), 6(a).
New Jersey—1(a), 2(d), 4(a) and (b).
New York—1(b), 2(c) and (d), 3, 4(a) and (b), 5, 6(a) and (b).
Oregon—1(a), 2(b), 4(a) and (b).
Washington—1(a), 2(b), 4(a) and (b).

8. *European Economic Community (EEC).* Since hazardous substances are frequently traded between the U.S. and other countries, the labeling requirements of those nations may have an impact on American labeling practices. The standards established by the EEC, an organization composed of nine member nations, is the most widely known of available standards in foreign countries.

The EEC standards were initiated in 1967 by the Council of the European Communities. Since that time, the Council has issued four Directives concerning the classification, packaging and labeling of "dangerous" chemical products (30). The term "dangerous" is similar to OSHA's definitions of "hazardous". These Directives require each member nation of the EEC to develop harmonious laws, regulations, and administrative provisions regarding trade in these products within a determined period of time.

Each Directive focuses on a distinct category of dangerous materials or products as follows:

1. *"Substance Directive":* Concerns the classification, packaging, and labeling of dangerous substances (Directive 67/548/EEC, August 16, 1967; as amended by Directive 79/831/EEC, September 18, 1979).

2. *"Solvents Directive":* Concerns dangerous preparations (i.e. mixtures) and certain substances that are intended for use as solvents (Directive 73/173/EEC, June 4, 1973).

3. *"Paints Directive":* Covers paints, varnishes, printing inks, adhesives, and similar products (Directive 77/728/EEC, November 7, 1977).

4. *"Pesticides Directive":* Covers pesticide products (Directive 78/631/EEC, June 26, 1978).

The Substance Directive specifies fourteen categories of dangerous products and the criteria by which they are defined. The EEC categories encompass products that may present health, physical, and environmental hazards during use, handling, or disposal. Eight categories identify products that pose health hazards or degrees of hazards: very toxic, toxic, harmful, corrosive, irritant, carcinogenic, teratogenic, and mutagenic. There are five categories of materials that pose physical hazards: explosives, oxidizing, extremely flammable, highly flammable, and flammable. A final category includes products whose use threatens the environment: dangerous for the environment. A dangerous product is one which can be classified in one or more of these categories.

Containers of dangerous substances that are distributed within the EEC must be labeled with the following information: (1) The name of the substance, (2) the name and address of the manufacturer, importer, or distributor of the substance, (3) hazard symbol(s), if applicable, and key hazard terms, (4) appropriate Risk Statements, and (5) appropriate standard Safety Advice Statements. Terms such as "non-toxic" or "non-harmful" must not appear on any package containing a dangerous substance.

The EEC labeling standard use symbols as the primary hazard warning method. Associated with nine categories are six pictograms: explosives—an exploding bomb; oxidizing—a flame over a circle; extremely flammable and highly flammable—a flame; very toxic and toxic—a skull and crossbones; harmful and irritant—the St. Andrew's cross (a bold-face "X"); corrosive—a symbol showing the destructive effects of an acid dripping from test tubes onto a hand and a bar. Containers of a product which satisfy the criteria for any of these categories must bear the corresponding pictogram(s) and key hazard term(s) on their labels. The pictograms must be printed in black and appear on a rectangular orange-yellow background. Together the pictogram and the hazard term constitute the EEC hazard warning symbol.

For products that satisfy the criteria for more than one of the danger categories, the EEC prescribes procedures for determining which pictograms take precedence over others on the label. These requirements determine which of the hazards are to be highlighted on the label by symbols (and, therefore, which are left to be dealt with by means of appropriate risk statements). A label may contain no more than two symbols.

The EEC has established specific labeling requirements for nearly 1,000 dangerous substances, which appear in an appendix to the Substance Directive. These requirements specify precisely what information must appear on the product's label, including the nomenclature for identifying each substance, hazard symbols, and standard risk and safety statements. However, substances which meet the criteria for being dangerous but do not appear in this appendix, must still be labeled.

The Substance Directive will go into effect in September 1981. The Paints Directives became effective on November 7, 1979; the Solvents Directive on June 4, 1976; and the Pesticides Directive on January 1, 1981.

E. History of OSHA's Proposed Labeling Standard

OSHA's involvement in the identification and labeling of hazardous chemicals in the workplace began several years ago. In 1974, the Standards Advisory Committee on Hazardous Materials labeling was established under Section 7(b) of the OSH Act to develop guidelines for the implementation of Section 6(b)(7) of the Act with respect to hazardous materials. On June 6, 1975, the Committee submitted its final report which identified issues and recommended guidelines for categorizing and ranking chemical hazards. Labels, data sheets, and training programs were also prescribed.

In 1976, Congressman Andrew Maguire (New Jersey) and the Health Research Group petitioned OSHA to issue a standard to require the labeling of all workplace chemicals. The House of Representatives' Committee on Government Operations in 1976 and 1977 recommended that OSHA should enforce the health provisions of the OSH Act by requiring manufacturers to disclose any toxic ingredients in their products, and by requiring employers to disclose this information to workers (House Report No. 94-1688 and House Report No. 95-710).

On January 28, 1977, OSHA published an advance notice of proposed rulemaking on chemical labeling in the **Federal Register** (42 FR 5372). The notice requested comments from the public regarding the need for a standard which would require employers to label hazardous materials. Information was also requested regarding the provisions to be included in such a standard to assure that employees are apprised of the hazards to which they are exposed.

A total of eight-one comments were received from a variety of federal, state, and local government agencies, trade associations, businesses, and labor

organizations. In general, there was support for the concept of a chemical identification and labeling standard. A number of commenters said that such a standard should be comprehensive in scope, but not too complex in design. Many expressed the opinion that OSHA's standard should be compatible with the standards of other regulatory agencies with labeling authority, such as the Department of Transportation (DOT), and with existing voluntary labeling standards, such as that of the American National Standards Institute (ANSI). A few commenters expressed concerns about protection of trade secret information and about labeling chemical intermediates.

Various suggestions were put forth for determining which materials should be covered by the standard. Some commenters thought that chemicals which met specified definitions or other classifications should be regulated. Others preferred that a list of substances to be regulated be provided, for example, those substances in 29 CFR 1910.1000 (OSHA's list of air contaminants), in the NIOSH Registry of Toxic Effects of Chemical Substances (RTECS), or in the DOT hazardous materials list.

Virtually all commenters recognized the need for labels in the workplace, and for inclusion of warnings and descriptive information. However, opinions varied as to what form these labels and information should take, or if an existing system should be adopted. Similarly, there was general recognition of the need to inform employees of the hazards to which they are exposed by means of data sheets and training programs, although suggestions as to content and format varied.

In developing this proposal, OSHA has considered all of the regulations, documents, and comments described above. Consideration has also been given to all other available information, such as that presented at conferences and at meetings of professional societies, and meetings with interested members of the public and other Federal agencies.

In addition, as a member of the Interagency Regulatory Liaison Group (IRLG), OSHA is working to assure that the provisions of this standard will not conflict with other related federal policies and regulations. The IRLG, which was established to coordinate federal regulatory activities, consists of representatives from OSHA, the Environmental Protection Agency (EPA), the Food and Drug Administration (FDA), the Consumer Product Safety Commission (CPSC), and the Food Safety and Quality Service of the Department of Agriculture. The "IRLG Labeling Regulations Task Force" and the "IRLG Labeling Education Task Force Group" are currently involved in planning research projects to determine the factors that contribute to effective labeling. OSHA recognizes the need for such research. However, the evidence found and presented in this document indicates that immediate action should be taken to protect employees. The IRLG deliberations and research findings will be entered into OSHA's rulemaking record as they become available, and will be given full consideration in the development of OSHA's final standard.

III. Summary of the Proposed Standard

The proposed hazards identification standard will establish a system designed to communicate to workers, employers and governmental agencies concerned with worker health, the essential facts necessary to assess the hazards of workplace chemicals. Chemicals are classified under the proposal as either "substances" or "mixtures." Information about the identities and hazardous properties of hazardous chemicals will be communicated primarily by means of labels and placards, and material safety data sheets. Container labels and placards will give workers immediate access to the identities of the hazardous chemicals and mixtures with which they work directly. Safety data sheets, when available, will provide workers and their representatives with detailed information about the properties and handling of hazardous chemicals and mixtures, supplementing the information on hazard warning labels. Hazard evaluation files will enable employees and their representatives to do their own hazard determinations and to check those done by the employer.
