Book 1 of 3 Books
Friday, January 16, 1981

Highlights

3801 **National Inventors' Day** Presidential proclamation

3803 **National Salute to Hospitalized Veterans' Day** Presidential proclamation

4536 **Grant Programs** ED issues rules making available Federal grants to assist local educational agencies and State educational agencies in the identification of asbetos hazards in school buildings; effective 1–16–81 (Part XIV of this issue)

3951 **Grant Programs** Commerce/MBDA solicits
3952 financial assistance applications to provide technical assistance to minority business persons to increase their management and marketing capabilities (2 documents)

4606 **Education** ED issues rules for the Arts in Education Program and solicits applications for grant awards to state educational agencies, local educational agencies and other public or private institutions in order to establish programs in which the arts are an integral part of elementary and secondary curricula (2 documents) (Part XVIII of this issue)

CONTINUED INSIDE

FEDERAL REGISTER Published daily, Monday through Friday, (not published on Saturdays, Sundays, or on official holidays), by the Office of the Federal Register, National Archives and Records Service, General Services Administration, Washington, D.C. 20408, under the Federal Register Act (49 Stat. 500, as amended; 44 U.S.C. Ch. 15) and the regulations of the Administrative Committee of the Federal Register (1 CFR Ch. I). Distribution is made only by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

The **Federal Register** provides a uniform system for making available to the public regulations and legal notices issued by Federal agencies. These include Presidential proclamations and Executive Orders and Federal agency documents having general applicability and legal effect, documents required to be published by Act of Congress and other Federal agency documents of public interest. Documents are on file for public inspection in the Office of the Federal Register the day before they are published, unless earlier filing is requested by the issuing agency.

The **Federal Register** will be furnished by mail to subscribers, free of postage, for $75.00 per year, or $45.00 for six months, payable in advance. The charge for individual copies is $1.00 for each issue, or $1.00 for each group of pages as actually bound. Remit check or money order, made payable to the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

There are no restrictions on the republication of material appearing in the **Federal Register.**

Questions and requests for specific information may be directed to the telephone numbers listed under INFORMATION AND ASSISTANCE in the READER AIDS section of this issue.

Highlights

3906, 3908 **Loan Programs** USDA/REA proposes supplement to one bulletin regarding electric loan policies and application procedures and second bulletin with respect to loan terms and conditions and supplemental financing policies; comments by 3–17–81 (2 documents)

4584 **Social Security** HHS/SSA issues rules in regard to determinations of disability concerning disability insurance and supplemental security income; comments by 3–17–81 (Part XVII of this issue)

3983 **Medicare Program** HHS/HCFA establishes policy of reimbursement for costs incurred in relation to union activities; effective 1–16–81

3985 **Medicare Program** HHS/HCFA establishes a schedule of target reimbursement rates for institutions furnishing home dialysis supplies, equipment and support services

3866 **Guaranteed Student Loan Program** ED issues rules with comments by 1–16–81 and proposed rules with comments by 3–17–81 concerning deferment provisions

4412 **Hazards Identification** Labor/OSHA proposes rules requiring employers to identify hazardous chemicals in their workplaces and to inform the employees of the identity and nature of this exposure; comments by 4–18–81 (Part XI of this issue)

3989 **Privacy Act Documents** HHS/HCFA

4022 **Sunshine Act Meetings**

Title 3—

The President

Proclamation 4814 of January 14, 1981

National Inventors' Day, 1981

By the President of the United States of America

A Proclamation

As the progress of science and technology is fundamental to the economic and social welfare of our society, so is the patent system essential to the advance of science and technology. This relationship is recognized in the first Article of our Constitution, which empowers the Congress "to promote the progress of science and useful arts" by securing for limited times to inventors an exclusive right to their discoveries.

Established in accordance with this constitutional mandate, our patent system dates back to the very beginning of our Nation. Since George Washington signed the first patent act into law on April 10, 1790, the patent system has encouraged our dramatic progress from a small agrarian Nation to a great technological and industrial world leader. From the cotton gin, telephone, and electric lamp, through the transistor, modern medicines and space vehicles, the history of our creativity, ingenuity and determination is reflected in the records of our patent system.

The incentive offered by patent protection to invent and innovate has created new markets, new industries and more jobs. As a consequence, a strong and reliable patent system is a substantial element in our efforts to develop alternative energy sources, increase our productivity, improve our environment, and solve the technological challenges which will confront us in the future.

In honor of the important role played by inventors in promoting progress in the useful arts, and in recognition of the invaluable contribution of inventors to the welfare of our people, the 96th Congress, by House Joint Resolution 337, has designated February 11, 1981, as "National Inventors' Day." Because February 11 is the birthday of Thomas Alva Edison, this Nation's most prolific inventor, it is an especially appropriate day on which to honor one of our most valuable national resources, the inventive genius of our people.

NOW, THEREFORE, I, JIMMY CARTER, President of the United States of America, do hereby call upon the people of the United States to honor all inventors by observing February 11, 1981, as National Inventors' Day, with appropriate ceremonies and activities.

IN WITNESS WHEREOF, I have hereunto set my hand this fourteenth day of January, in the year of our Lord nineteen hundred and eighty-one, and of the Independence of the United States of America the two hundred and fifth.

Presidential Documents

Proclamation 4815 of January 14, 1981

National Salute to Hospitalized Veterans' Day

By the President of the United States of America

A Proclamation

There are today more than 30 million living veterans of the United States Armed Forces whose military service to their Nation has significantly influenced the role of the United States in world affairs.

During Fiscal Year 1979, approximately 1.3 million of these men and women were hospitalized in the 172 Veterans Administration medical centers across the country. A similar number will be admitted for care and treatment this year and in the years to come.

In order to encourage a continuing awareness of the service and sacrifice of these Americans, I urge citizens of all ages to participate in their communities in honoring our sick and disabled hospitalized veterans. I believe it essential that we do as much as possible to express our collective appreciation to the many hospitalized men and women who have served this Nation faithfully.

NOW, THEREFORE, I, JIMMY CARTER, President of the United States of America, do hereby proclaim February 14, 1981, as "National Salute to Hospitalized Veterans' Day." I invite all of our citizens to join with me in observing this day with appropriate ceremonies and activities.

IN WITNESS WHEREOF, I have hereunto set my hand this fourteenth day of January, in the year of our Lord nineteen hundred and eighty-one, and of the Independence of the United States of America the two hundred and fifth.

Jimmy Carter

Rules and Regulations

Federal Register
Vol. 46, No. 11
Friday, January 16, 1981

This section of the FEDERAL REGISTER contains regulatory documents having general applicability and legal effect, most of which are keyed to and codified in the Code of Federal Regulations, which is published under 50 titles pursuant to 44 U.S.C. 1510.
The Code of Federal Regulations is sold by the Superintendent of Documents. Prices of new books are listed in the first FEDERAL REGISTER issue of each month.

OFFICE OF PERSONNEL MANAGEMENT

5 CFR Part 351

Reduction in Force

AGENCY: Office of Personnel Management.

ACTION: Final Rule; Republication.

SUMMARY: Since November 1979 the Office of Personnel Management (OPM) has published eight final reduction in force regulations in the **Federal Register.** These changes were intended to clarify and simplify existing material, and to reflect changes in the Federal personnel system that resulted from the Civil Service Reform Act (CSRA). For reference, we are now republishing the revised reduction in force regulations. OPM will forward a copy of this document to individual agencies in a Federal Personnel Manual (FPM) posting bulletin.

FOR FURTHER INFORMATION CONTACT: Ted Dow or Tom Glennon, (202) 632-4422.

EFFECTIVE DATE: January 16, 1981.

SUPPLEMENTARY INFORMATION: OPM has published final reduction in force regulations covering eight specific subject areas:

(i) *Preference eligible employees with a compensable service-connected disability of 30 percent or more.* On January 30, 1979, OPM published interim regulations providing for new retention subgroup AD (44 FR 5864). Final regulations were published in the **Federal Register** on November 9, 1979 (44 FR 65047).

(ii) *How to establish reduction in force tenure groups for new supervisors and managers.* OPM published proposed regulations in the **Federal Register** on December 28, 1979 (44 FR 76799). Final regulations were published on April 29, 1980 (45 FR 28301).

(iii) *How to use new performance appraisal systems established by the CSRA in the determination of reduction in force retention standing.* OPM published proposed regulations in the **Federal Register** on February 5, 1980 (45 FR 7818). Final regulations were published on May 2, 1980 (45 FR 29264).

(iv) *Clarification of the reduction in force assignment rights of full-time employees to other-than-full-time positions.* OPM published proposed regulations in the **Federal Register** on February 8, 1980 (45 FR 31379). Final regulations were published on June 20, 1980 (45 FR 41628).

(v) *Clarification of the transfer of function provisions.* OPM published proposed regulations in the **Federal Register** on May 13, 1980 (45 FR 31379). Final regulations were published on September 12, 1980 (45 FR 60401).

(vi) *Clarification of how agencies determine the retention standing of employees receiving military retired pay.* OPM published proposed regulations in the **Federal Register** on May 20, 1980 (45 FR 33640). Final regulations were published on September 23, 1980 (45 FR 62971).

(vii) *How to establish reduction in force competitive levels for supervisors and managers covered by the Merit Pay System provisions, and/or new probationary period requirements, that were established by the CSRA.* OPM published proposed regulations in the **Federal Register** on July 1, 1980 (45 FR 44304). Final regulations were published on December 12, 1980 (45 FR 81725).

(viii) *Clarification of how reemployment priority lists are established and maintained.* OPM published proposed regulations in the **Federal Register** on July 22, 1980 (45 FR 48904). Final regulations were published on December 30, 1980 (45 FR 85651).

The revised Part 351 of this title (which this document republishes) includes these final provisions.

Before March 1, 1981, OPM plans to publish final reduction in force regulations covering two additional subject areas:

(ix) *Clarification of how agencies formally designate positions as trainee or developmental positions for reduction in force purposes.* OPM published poposed regulations in the **Federal Register** on October 21, 1980 (45 FR 69469). Final regulations are expected to be published before March 1, 1981.

(x) *Clarification of how agencies identify employees with transferring positions under the transfer of function provisions of OPM's reduction in force regulations.* OPM published proposed regulations in the **Federal Register** on October 28, 1980. Final regulations are expected to be published before March 1, 1981.

Proposed regulations (ix) and (x) would properly incorporate in Part 351 of this title existing policy that is presently set forth in FPM Chapter 351.

OPM has determined that this is a significant regulation for the purposes of E.O. 12044.

Office of Personnel Management.

Beverly M. Jones,

Issuance System Manager.

Accordingly, Part 351 of Title 5, Code of Federal Regulations, is republished to read as follows:

PART 351—REDUCTION IN FORCE

Subpart A—[Reserved]

Subpart B—General Provisions

Sec.

351.201 Use of regulations.
351.202 Coverage.
351.203 Definitions.
351.204 Responsibility of agency.
351.205 Authority of OPM.

Subpart C—Transfer of Function

351.301 Applicability.
351.302 Transfer of employees.

Subpart D—Scope of Competition

351.401 Determining retention standing.
351.402 Competitive area.
351.403 Competitive level.
351.404 Retention register.
351.405 Employees demoted because of unacceptable performance.

Subpart E—Retention Standing

351.501 Tenure groups and subgroups—competitive service.
351.502 Tenure groups and subgroups—excepted service.
351.503 Length of service.
351.504 Performance rating.
351.505 Records.
351.506 Effective date of retention standing.

Subpart F—Release From Competitive Level

351.601 General.
351.602 Order of release from competitive level.
351.603 Actions.
351.604 Use of furlough.

351.605 Liquidation provisions.
351.606 Mandatory exceptions.
351.607 Permissive continuing exceptions.
351.608 Permissive temporary exceptions.

Subpart G—Assignment Rights

351.701 Qualifications for assignment.
351.702 Exception to qualifications.
351.703 Assignment involving displacement.
351.704 Rights and prohibitions.
351.705 Administrative assignment.

Subpart H—Notice to Employee

351.801 Notice period.
351.802 Content of notice.
351.803 General and specific notices.
351.804 Content of general notice.
351.805 Expiration of notice.
351.806 New notice required.
351.807 Status during notice period.
351.808 Notice concerning consideration for reemployment.

Subpart I—Appeals and Corrective Action

351.901 Appeal.
351.902 Correction by agency.

Subpart J—Reemployment Priority List

351.1001 Establishment and maintenance of the reemployment priority list.
351.1002 Persons covered.
351.1003 Employee eligibility.
351.1004 Duration of eligibility.
351.1005 Operation of the list in Alaska or overseas.

Authority: 5 U.S.C. 1302, 3502, unless otherwise noted.

Subpart A [Reserved]

Subpart B—General Provisions

§ 351.201 Use of regulations.

(a) Each agency shall follow this part when it releases a competing employee from his/her competitive level by separation demotion, furlough for more than 30 days, or reassignment requiring displacement, when the release is required because of lack of work, shortage of funds, reorganization, reclassification due to change in duties, or the exercise of reemployment rights or restoration rights.

(b) This part does not require an agency to fill a vacant position. However, when an agency, in its discretion, chooses to fill a vacancy by an employee who has been reached for release from his/her competitive level for one of the reasons named in paragraph (a) of this section, this part shall be followed.

(c) This part does not apply to the change of an employee from regular to substitute in the same pay level in the U.S. Postal Service field service.

(d) An agency authorized to administer alien employee programs under section 444 of the Foreign Service Act of 1946, as amended (22 U.S.C. 889), may include special plans for reduction in force in its alien employee programs. In these special plans an agency may give effect to the labor laws and practices of the locality of employment by supplementing the selection factors in Subparts D and E of this part to the extent consistent with the public interest. Subpart I of this part does not apply to actions taken under the special plans authorized by this paragraph.

(e) This part does not apply to the termination of a temporary promotion or to the return of an employee to the position from which he/she was temporarily promoted or his/her reassignment or demotion to a different position that is not at a lower grade or level than the position from which he/she was temporarily promoted.

(f) This part does not apply to the release from his/her competitive level of a National Guard technician under section 709 of title 32, United States Code.

(g) This part does not apply to an employee in the Senior Executive Service.

(h) This part does not apply to the return of an employee promoted under § 335.102(g) to the position from which promoted or to a position of equivalent grade and pay.

§ 351.202 Coverage.

(a) Except as provided in paragraph (b) of this section, this part applies to each civilian employee in:

(1) the executive branch of the Federal Government,

(2) Those parts of the Federal Government outside the executive branch which are subject by statute to the competitive service requirements,

(3) the civil service of the government of the District of Columbia.

(b) This part does not apply to an employee:

(1) In a position in or under the legislative or judicial branch of the Federal Government, except an employee in a position subject by statute to the competitive service requirements, or

(2) Whose appointment is required by Congress to be confirmed by, or made with, the advice and consent of the United States Senate, except a postmaster.

§ 351.203 Definitions.

In this part:

(a) "Competing employee" means an employee in tenure group I, II, or III.

(b) "Days" means calendar days.

(c) "Function" means all or a clearly identifiable segment of an agency's mission (including all integral parts of that mission), regardless of how it is performed.

(d) "Local commuting area" means the geographic area that usually constitutes one area for employment purposes. It includes any population center (or two or more neighboring ones) and the surrounding localities in which people live and reasonably can be expected to travel back and forth daily in their usual employment.

(e) "Performance rating" means the current official performance rating under a performance rating plan approved by OPM.

(f) "Reorganization" means the planned elimination, addition, or redistribution of functions or duties in an organization.

(g) "Representative rate" means the fourth step of the grade for a position subject to the General Schedule, the prevailing rate for a position under a wage-board or similar wage-determining procedure, and for other positions, the rate designated by the agency as representative of the position.

(h) "Transfer of function" means:

(1) The transfer of the performance of a continuing function from one competitive area and its addition to one or more other competitive areas; or

(2) The movement of the competitive area in which the function is performed to another commuting area.

§ 351.204 Responsibility of agency.

Each agency covered by this part is responsible for following and applying the regulations in this part when the agency determines that a reduction in force is necessary.

§ 351.205 Authority of OPM.

The Office of Personnel Management may examine an agency's preparations for reduction in force at any stage. When OPM finds that an agency's preparations are contrary to the spirit and intent of these regulations or that they would result in violation of employee rights or equities, OPM shall require appropriate corrective action.

Subpart C—Transfer of Function

§ 351.301 Applicability.

The transfer of function provisions set forth in § 351.203(i)(1) are applicable when the work of one or more employees is moved from one competitive area to another, regardless of whether or not the movement is made under authority of a statute, Executive Order, reorganization plan, or other authority.

§ 351.302 Transfer of employees.

(a) Before a reduction in force is made in connection with the transfer of any or all of the functions of a competitive area to another continuing competitive area,

each competing employee in a position identified with the transferring function or functions shall be transferred to the continuing competitive area without any change in the tenure of his or her employment.

(b) An employee whose position is transferred under this subpart solely for liquidation, and who is not identified with an operating function specifically authorized at the time of transfer to continue in operation more than 60 days, is not a competing employee for other positions in the competitive area gaining the function.

(c) Regardless of an employee's personal preference, an employee has no right to transfer with his or her function, unless the alternative in the competitive area losing the function is separation or demotion.

(5 U.S.C. 3503)

Subpart D—Scope of Competition

§ 351.401 Determining retention standing.

Each agency shall determine the retention standing of each competing employee on the basis of the selection factors in this subpart and in Subpart E of this part.

§ 351.402 Competitive area.

(a) Each agency shall establish competitive areas in which employees compete for retention under this part.

(b) The standard for a competitive area is that it include all or that part of an agency in which employees are assigned under a single administrative authority. A competitive area in the departmental service meets this standard when it covers a primary subdivision of an agency in the local commuting area. A competitive area in the field service meets this standard when it covers a field installation in the local commuting area.

(c) An agency may establish a competitive area larger than one that meets the standard named in paragraph (b) of this section. In exceptional circumstances, and with the prior approval of the Office, an agency may establish a competitive area smaller than one that meets the standard named in paragraph (b) of this section. Agencies which have been delegated individual authority to do so may establish competitive areas smaller than named in paragraph (b) of this section, without prior approval of the Office.

(d) An agency may combine two or more competitive areas for initial competition in an enlarged competitive level or levels without correspondingly combining the areas for assignments between competitive levels. When an agency combines areas for initial competition only, it may limit competition for assignments between competitive levels to (1) the enlarged area, (2) a single competitive area, or (3) an area larger than a single area but smaller than the enlarged area.

(5 U.S.C. 1104; Pub. L. 95-454, sec. 3(5))

§ 351.403 Competitive level.

(a) Each agency shall establish competitive levels consisting of all positions in a competitive area and in the same grade or occupational level which are sufficiently alike in qualification requirements, duties, responsibilities, pay schedules, and working conditions, so that an agency readily may assign the incumbent of any one position to any of the other positions without changing the terms of his appointment or unduly interrupting the work program. Sex may not be a basis for assigning a position to a competitive level, except for a position for which restriction of certification of eligibles by sex is found justified by OPM.

(b)(1) Each agency shall establish separate competitive levels for competitive positions, as distinguished from excepted positions. Among competitive positions and among excepted positions, each agency shall establish separate competitive levels for positions that are:

(i) Under different pay schedules;

(ii) Filled on a full-time basis;

(iii) Filled on a seasonal basis;

(iv) Filled on a part-time basis;

(v) Filled on an intermittent basis; or

(vi) Filled by a supervisor or management official, as defined in 5 U.S.C. 7103(a)(10) and (11).

(2) Among excepted positions, each agency shall establish separate competitive levels for positions filled under different appointment authorities.

(3) Employees covered by the Merit Pay System provisions are General Schedule employees for all reduction in force purposes.

(4) A probationary period required by Subpart I of Part 315 of this title upon initial appointment to a supervisory or managerial position does not constitute a basis for establishing a separate competitive level.

(5) Differences in work schedules among other-than-full-time employees who would otherwise be assigned to the same competitive level do not constitute a basis for establishing separate competitive levels.

§ 351.404 Retention register.

(a) When a competing employee is to be released from a competitive level under this part, the agency shall establish a separate retention register for that competitive level. The retention register is prepared from the current retention records of employees:

(1) In the competitive level;

(2) Temporarily promoted from the competitive level; or

(3) Detailed from the competitive level under 5 U.S.C. 3341 or other appropriate authority.

(b) Except for an employee on military duty with a restoration right, the agency shall enter on the retention register, in the order of his or her retention standing, the name of each competing employee who is:

(1) In the competitive level;

(2) Temporarily promoted from the competitive level; or

(3) Detailed from the competitive level under 5 U.S.C. 3341 or other appropriate authority.

(c) The agency shall enter on a list apart from the retention register the name and expiration date of the appointment or promotion of each employee serving in a position under specifically limited temporary appointment or temporary promotion, followed by the name of each employee serving in the competitive level with, as applicable:

(1) A performance rating of less than "Satisfactory" in an agency that has not implemented a performance appraisal system meeting all the requirements of 5 U.S.C. 4302 and Subpart 430-B of this title; or

(2) A written decision under § 432.204(a) of this title to remove him or her because of "Unacceptable Performance" as defined in § 432.202 of this title.

§ 351.405 Employees demoted because of unacceptable performance.

An employee who has received a written decision under § 432.204(a) of this title to demote him or her because of "Unacceptable Performance," as defined in § 432.202 of this title, competes under this part from the position to which he or she will be demoted.

Subpart E—Retention Standing

§ 351.501 Tenure groups and subgroups—competitive service.

(a) Each agency shall classify the competing employees on a retention register who occupy positions in the competitive service in the following groups and subgroups on the basis of tenure of employment and veteran preference. The descending order of retention standing:

(1) By groups is group I, group II, group III;

(2) Within each group is subgroup AD, subgroup A, subgroup B;

(3) Within each subgroup persons are ranked beginning with the earliest service date.

(b) Group I includes each career employee who is not serving a probationary period. (A supervisory or managerial employee serving a probationary period required by Subpart I of Part 315 of this title is in group I if the employee is otherwise eligible to be included in this group.)

(c) Group II includes:

(1) Each employee serving a probationary period under Subpart H of Part 315 of this title. (A supervisory or managerial employee serving a probationary period required by Subpart I of Part 315 of this title is in group II if that employee has not completed a probationary period under Subpart H of Part 315 of this title); and

(2) Each career-conditional employee.

(d) Group III includes:

(1) Each indefinite employee;

(2) Each employee serving under a temporary appointment pending establishment of register;

(3) Each employee in status quo; and

(4) Each employee serving under other nonstatus nontemporary appointment.

(e) Subgroup AD includes each preference eligible employee who has a compensable service-connected disability of 30 percent or more.

(f) Subgroup A includes each preference eligible employee not included in subgroup AD.

(g) Subgroup B includes each nonpreference eligible employee.

(h) A retired member of a uniformed service is considered a preference eligible under this part only if he or she meets at least one of the conditions in the following paragraphs (h) (1), (2), or (3):

(1) The employee's military retirement is based on disability that either:

(i) Resulted from injury or disease received in the line of duty as a direct result of armed conflict; or

(ii) Was caused by an instrumentality of war incurred in the line of duty during a period of war as defined by sections 101 and 301 of title 38, United States Code.

(2) The employee's military service does not include 20 or more years of full-time active service, regardless of when performed. However, this total does not include periods of active duty for training.

(3) The employee has been employed continuously since November 30, 1964, in a position covered by this Part without a break in service of more than 30 days.

(4) An employee who would otherwise be considered a preference eligible under conditions in § 351.501(h)(2) or (3) is not, effective October 1, 1980, considered a preference eligible for purposes of this part if the employee retired at or above the rank of major or its equivalent.

§ 351.502 Tenure groups and subgroups—excepted service.

Each agency shall classify the competing employees on a retention register who occupy positions in the excepted service by groups and subgroups that correspond to those for employees who occupy positions in the competitive service having similar tenure of employment and veteran preference, except that an employee who completes 1 year of current continuous service under a temporary appointment is in tenure group III.

§ 351.503 Length of service.

(a) Each agency shall establish a service date for each competing employee.

(b) An employee's service date is whichever of the following dates reflects his or her total creditable service, and the service credit rating provided under this part:

(1) The date the employee entered on duty, when he or she has no previous creditable service;

(2) The date obtained by subtracting the employee's total creditable previous service from the date he or she last entered on duty; or

(3) The date obtained by subtracting from the date in paragraph (b)(1) or (b)(2) of this section, the service equivalent allowed for a performance rating under § 351.504.

(c) An employee who is a retired member of a uniformed service is entitled to credit under this part for:

(1) The length of time in active service in the armed forces during a war, or in a campaign or expedition for which a campaign badge has been authorized; or

(2) The total length of time in active sevices in the armed forces if the employee meets one of the conditions included under § 351.501(h) of this title.

(d) Each agency shall adjust the service date for each employee to withhold credit for noncreditable time.

§ 351.504 Credit for performance.

(a) Each employee's performance rating of record on the date of issuance of specific reduction in force notices shall determine the employee's entitlement to additional service credit for performance under this section.

(b) An agency that has not implemented a performance appraisal system meeting all the requirements of 5 U.S.C. 4302 and Part 430 Subpart B of this title, and assigns summary objective performance ratings, shall credit the following employees with additional service, which is added to each employee's creditable service under this part:

(1) Each employee who has an "Outstanding" performance rating shall receive 4 years of additional service; and

(2) Each employee who has a performance rating between "Satisfactory" and "Outstanding" shall receive 2 additional years of service.

(c) An agency that has implemented a performance appraisal system meeting all the requirements of 5 U.S.C. 4302, and Part 430 Subpart P of this title, is responsible for using employee performance appraisals to credit employees with additional service toward retention standing. This additional service is added to each employee's creditable service under this part. Each employee who has an "Outstanding" or highest appraisal under the agency's system, shall receive 4 additional years of service. Each employee whose performance meets, but does not exceed the established minimum performance standards for the critical elements of his or her position shall be credited with no additional years of service. Agencies may use employee performance appraisals to assign other employees whose performance exceeds the established minimum performance standards for the critical elements of the position, but is less than "Outstanding" or the highest equivalent appraisal under the agency's system, an amount of service credit ranging from 0 to less than 4 years.

Each agency is responsible for ensuring that these provisions are:

(1) Consistent with Part 430 Subpart B of this title; and

(2) Uniformly and consistently applied in any one reduction in force.

§ 351.505 Records.

Each agency shall maintain the current, correct records needed to determine the retention standing of its competing employees. The agency shall allow the inspection of its retention registers and related records by:

(a) A representative of OPM; and

(b) An employee of the agency to the extent that the registers and records have a bearing on his case.

The agency shall preserve intact all registers and records relating to an employee for at least 1 year from the date the employee is issued a specific notice.

§ 351.506 Effective date of retention standing.

Except for determining additional service credit for performance ratings as provided in § 351.504:

(a) The retention standing of each employee released from his competitive level in the order prescribed in § 351.602 is determined as of the date he is so released.

(b) The retention standing of each employee temporarily retained in his competitive level under § 351.608 is determined as of the date he would have been released from his competitive level had temporary retention action under § 351.608 not been taken. The retention standing of each employee so retained remains fixed until the completion of the reduction in force action which resulted in the temporary retention.

(c) When an agency discovers an error in the determination of an employee's retention standing, it shall correct the error and adjust any erroneous reduction in force action to accord with the employee's true retention standing as of the effective date established by this section.

Subpart F—Release From Competitive Level

§ 351.601 General.

(a) An agency may not release a competing employee from a competitive level while retaining in that level an employee with:

(1) A specifically limited temporary appointment;

(2) A specifically limited temporary promotion;

(3) A performance rating of less than "Satisfactory" in an agency that has not implemented a performance appraisal system meeting all the requirements of 5 U.S.C. 4302 and Subpart B or Part 430 of this title; or

(4) A written decision under § 432.204(a) of removal or demotion from the competitive level because of "Unacceptable Performance," as defined in § 432.202 of this title.

(b) An agency may not release a competing employee from a competitive level while retaining in that level an employee with lower retention standing except:

(1) As required under § 351.606 when an employee is retained under a mandatory exception or under § 351.806 when an employee is entitled to a new written notice of reduction in force; or

(2) As permitted under § 351.607 when an employee is retained under a permissive continuing exception or under § 351.608 when an employee is retained under a permissive temporary exception.

§ 351.602 Order of release from competitive level.

Each agency shall select competing employees for release from a competitive level under this part in the inverse order of retention standing, beginning with the employee with the lowest retention standing on the retention register. When employees in the same retention subgroup have identical service dates and are tied for release from a competitive level, the agency may select any tied employee for release.

§ 351.603 Actions.

Subject to Subpart G of this part, when an agency selects an employee for release from his competitive level, it shall:

(a) Assign him with his consent to a position for which he is qualified which will last at least 3 months;

(b) Furlough him; or

(c) Separate him.

§ 351.604 Use of furlough.

(a) An agency may furlough a competing employee only when it intends to recall him within 1 year to duty in the position from which furloughed.

(b) An agency may not separate a competing employee under this part while an employee with lower retention standing in the same competitive level is on furlough.

(c) An agency may not furlough a competing employee for more than 1 year.

(d) When an agency recalls employees to duty in the competitive level from which furloughed, it shall recall them in the order of their retention standing, beginning with the highest standing employee.

§ 351.605 Liquidation provisions.

When an agency will abolish all positions in a competitive area within 3 months it shall release employees in subgroup order but may release them regardless of retention standing within a subgroup, except as provided in § 351.606. When an agency releases an employee under this section, the notice to the employee shall so state and also shall give the date the liquidation will be completed. An agency may apply §§ 351.607 and 351.608 in liquidation.

§ 351.606 Mandatory exceptions.

(a) When an agency applies § 351.602 or §351.605, it shall give the following special retention priorities:

(1) Each group I or II preference eligible employee entitled under section 9 of the Military Selective Service Act of 1967, as amended (50 U.S.C. App. 459), to retention for 1 year after restoration shall be retained over other employees in his subgroup for the retention period; and

(2) Each group I or II nonpreference eligible employee entitled under section 9 of the Military Selective Service Act of 1967, as amended (50 U.S.C. App. 459), to retention for either 6 months or 1 year after restoration shall be retained over other employees in his subgroup for the retention period.

(b) Each agency shall record on the retention register, for inspection by each employee, the reasons for any deviation from the regular order of selection required by paragraph (a) of this section.

§ 351.607 Permissive continuing exceptions.

An agency may make exception to the selection sequence in § 351.602 and to the action provisions of § 351.603 when needed to retain an employee on duties that cannot be taken over within 90 days and without undue interruption to the activity by an employee with higher retention standing. The agency shall notify in writing each higher-standing employee reached for release from the same competitive level of the reasons for the exception.

§ 351.608 Permissive temporary exceptions.

An agency may make exception for not more than 90 days to the selection sequence in § 351.602 and to the action provisions of § 351.603 when needed to retain an employee for 90 days or less after the effective date of release from the same competitive level of a higher-standing employee to continue an activity without undue interruption, or to satisfy a Government obligation to the retained employee, or when the temporary retention of the lower-standing employee does not adversely affect the rights of any higher-standing employee who is released ahead of him. The temporary retention of a lower-standing employee on sick leave as a permissive exception may exceed 90 days but may not exceed the date of exhaustion of his sick leave. When the agency retains an employee for more than 30 days after the effective date of release from the same competitive level of a higher-standing employee, it shall notify in writing each higher-standing employee of the reasons for the exception and the date the lower-standing employee's retention will end. When the agency retains a lower-standing employee for 30 days or less it shall list opposite his name on the retention register the reasons for the exception and the date his retention will end.

Subpart G—Assignment Rights

§ 351.701 Qualifications for assignment.

(a) Except as provided in § 351.702, an employee is qualified for assignment under § 351.603 if the employee:

(1) Meets the Office standards and requirements for the position, including any minimum educational requirement;

(2) Is physically qualified for the duties of the position;

(3) Meets any special qualifying condition which the Office has approved for the position; and

(4) Has the capacity adaptability, and any special skills needed to satisfactorily perform the duties and responsibilities of the position without undue interruption to the activity.

(b) An agency may not consider the sex of an employee as a factor in determining the employee's qualification for a position, except when the position is one for which restriction of certification of eligibles by sex is found justified by the Office.

(c) An employee who is carried on leave of absence because of a compensable injury and is released from his/her competitive level may not be denied an assignment right solely because the employee is not physically qualified for the duties of the position when the physical disqualification resulted from the compensable injury. Such an employee must be afforded appropriate assignment rights subject to his/her recovery as provided by 5 U.S.C. 8151 and Part 353 of this chapter.

(d) If an agency determines that, on the basis of evidence before it, a preference eligible employee who has a compensable service-connected disability of 30 percent or more is not able to fulfill the physical requirements of a position to which the employee would otherwise have been assigned under this part, the agency must notify the Office of this determination. At the same time, the agency must notify the employee of the reasons for the determination and of the right to respond, within fifteen days of the notification, to the Office, which will require the agency to demonstrate that the notification was timely sent to the employee's last known address. The Office shall make a final determination concerning the physical ability of the employee to perform the duties of the position. This determination must be made before the agency may select any other person for the position. When the Office has completed its review of the proposed disqualification on the basis of physical disability, it must send its finding to both the agency and the employee. The agency must comply with the findings of the Office. The functions of the Office under this paragraph may not be delegated to an agency.

§ 351.702 Exception to qualifications.

An agency may assign an employee under § 351.201(b) or § 351.603 without regard to OPM's standards and requirements for the position if:

(a) He meets any minimum education requirement for the position; and

(b) The agency determines that the employee has the capacity, adaptability, and special skills needed to satisfactorily perform the duties and responsibilities of the position.

§ 351.703 Assignment involving displacement.

(a) An agency shall assign under § 351.603 a group I or II employee in a position in the competitive service, rather than furlough or separate him, to a position in the competitive service in another competitive level in his competitive area which requires no reduction, or the least possible reduction, in representative rate when a position in the other competitive level is held by an employee:

(1) In a lower subgroup; or

(2) With lower retention standing in a position from which the group I or II employee was promoted or an essentially identical position.

(b) Each employee's assignment rights shall be determined on the basis of the pay rates in effect on the date of issuance of specific notices of reduction in force, except that when it is officially known on the date of issuance of notices that new pay rates have been approved and will become effective by the effective date of the reduction in force, assignment rights shall be determined on the basis of the new pay rates.

§ 351.704 Rights and prohibitions.

(a) An agency may satisfy an employee's right to assignment under § 351.703 by assignment under § 351.201(b) or § 351.705 to a position having a representative rate equal to that to which he or she would be entitled under § 351.703.

(b) Section 351.703 does not:

(1) Require an agency to assign an employee to a position having a higher representative rate:;

(2) Authorize or permit an agency to displace a full-time employee by other than a full-time employee;

(3) Authorize or permit an agency to displace an other-than-full-time employee by a full-time employee; or

(4) Authorize or permit an agency to satisfy a full-time employee's right to assignment under § 351.603 by assigning the employee to a vacant other-than-full-time position. However, an agency may, at its discretion, choose to offer a vacant other-than-full-time position to a full-time employee in lieu of separation by reduction in force.

§ 351.705 Administrative assignment.

(a) An agency may, in its discretion, adopt provisions which:

(1) Provide for assignments across competitive areas;

(2) Permit a competing employee to displace an employee with lower retention standing in the same subgroup when it cannot make an equally reasonable assignment by displacing an employee in a lower subgroup;

(3) Permit an employee in subgroup III–AD to displace an employee in subgroup III–A or III–B, or permit an employee in subgroup III–A to displace an employee in subgroup III–B; or

(4) Provide competing employees in the excepted service with assignment rights similar to those in § 351.703 and in paragraphs (a) (1), (2), and (3) of this section.

(b) Provisions adopted by an agency under paragraph (a) of this section:

(1) Shall be consistent with this part;

(2) Shall be uniformly and consistently applied in any one reduction in force;

(3) May not provide for the assignment of a less-than-full-time employee to a full-time position;

(4) May not provide for the assignment of an employee in a competitive position to a position in the excepted service; and

(5) May not provide for the assignment of an excepted employee to a position in the competitive service.

Subpart H—Notice to Employee

§ 351.801 Notice period.

(a) Each competing employee selected for release from his or her competitive level under this part is entitled to a written notice at least 30 full days before the effective date of his or her release.

(b) The notice shall not be issued more than 90-days before release except when the agency determines that additional time will protect employee rights or avoid administrative hardship.

(c) When an agency retains an employee under § 351.606 or § 351.608 the agency may not continue the notice period beyond the employee's retention period. The notice to the employee shall cite the date on which the retention period ends as the effective date of the employee's release from his or her competitive level.

(5 U.S.C. 1104; Pub. L. 95–454, sec. 3 (5))

§ 351.802 Content of notice.

Except as provided in § 351.803, the notice required by § 351.801 shall state specifically the action to be taken and its effective date; the employee's competitive area, competitive level, subgroup, and service date; the place where the employee may inspect the regulations and records pertinent to this case; the reasons for retaining a lower-standing employee in the same competitive level under § 351.607; the reasons for retaining a lower-standing employee in the same competitive level for more than 30 days under § 351.608; and the employee's right to appeal to the Merit Systems Protection Board under the provisions of the Board's regulations. The agency shall comply with the provisions of § 1201.21 of this title.

(5 U.S.C. 7701, et seq.)

§ 351.803 General and specific notices.

When an agency cannot determine specifically all individual actions at the start of the notice period, it may issue general notices which shall be supplemented by specific notices. The combined contents of the general and specific notices shall meet the requirements in § 351.802. When an agency issues a general notice, the notice period begins the day after the employee receives the general notice. An agency may cancel an unexpired general notice, or may renew it for additional periods within the maximum notice period referred to in § 351.801. A general notice expires as stated therein unless, on or before the expiration date, the employee receives a renewal of the general notice or a specific notice. A general notice expires no later than at a time that will allow 5 days before the end of the maximum notice period. When a general notice is supplemented by a specific notice, an agency may not release an employee from his competitive level until at least 5 days after the employee's receipt of the specific notice.

§ 351.804 Content of general notice.

A general notice shall inform the employee that action under this part may be necessary but that the agency has determined no specific action in his case. The notice shall state that as soon as the agency determines what action, if any, will be taken under this part the employee will receive specific notice of the action to be taken. The general notice shall state that it will expire as stated therein unless, on or before the expiration date, it is renewed or supplemented by a specific notice.

A general notice may also include any other information specified in § 351.802.

§ 351.805 Expiration of notice.

A general notice expires as provided in § 351.803. A specific notice expires except when followed by the action specified, or by action less severe than specified, in the notice or in an amendment made to the notice before the agency takes the action. The agency may not take the action before the effective date specified in the specific notice. An action taken after the specified date in the specific notice shall not be ruled invalid for that reason except when it is challenged by a higher-standing employee in the competitive level who is reached out of order for reduction in force as a result of the action or except when it results in a notice period longer than the maximum allowed.

§ 351.806 New notice required.

An employee is entitled to a new written notice of at least 30 full days if the agency decides to take an action more severe than first specified.

§ 351.807 Status during notice period.

When possible, the agency shall retain the employee on active duty during the notice period, but it may place him/her on annual leave with or without his/her consent, on leave without pay with his/her consent, or in a nonpay status without his/her consent when in an emergency the agency lacks work or funds for all or part of the notice period.

(5 U.S.C. 7701, et seq.)

§ 351.808 Notice concerning consideration for reemployment.

An employee who receives a specific notice of separation under this part must be given information concerning his or her right to consideration for reemployment under the provisions of Subparts B and C of Part 330 of this title. This information is in addition to that specified in § 351.802. The information concerning consideration for reemployment should be included in or with the specific reduction in force notice; otherwise, a separate supplemental notice covering this information must be given to the employee.

Subpart I—Appeals and Corrective Action

§ 351.901 Appeal.

An employee who has been affected by a reduction in force action and who believes this part has not been correctly applied may appeal to the Merit Systems Protection Board under the provisions of the Board's regulations.

(5 U.S.C. 7701, et seq.)

§ 351.902 Correction by agency.

When an agency decides that an action under this part was unjustified or unwarranted and restores an individual to his former grade or rate of pay or to an intermediate grade or rate of pay, it shall make the restoration retroactively effective to the date of the improper action.

(5 U.S.C. 7701, et seq.)

Subpart J—Reemployment Priority List

§ 351.1001 Establishment and maintenance of the reemployment priority list.

Each agency shall establish and maintain a reemployment priority list for each commuting area in which it separates group I or group II employees from competitive positions under this part.

§ 351.1002 Persons covered.

(a) The name of each group I or group II employee who receives a specific notice of separation from a competitive position (as distinguished from an excepted position) under this part is entered on the reemployment priority list.

(b) This priority extends to all competitive positions in the commuting area for which the employee is qualified and available, except as provided in § 351.1005.

(c) Subpart B of Part 330 of this title covers appointment from the reemployment priority list.

§ 351.1003 Employee eligibility.

(a) A full-time group I or group II employee is entered on the reemployment priority list unless he or she has declined assignment under Subpart G of this part to a position that:

(1) Is full-time;

(2) Is competitive;

(3) Is nontemporary; and

(4) Has a representative rate no lower than that of the position from which the employee was separated.

(b) An other-than-full-time group I or group II employee is entered on the reemployment priority list unless he or she has declined assignment under Subpart G of this part to an other-than-full-time position that:

(1) Is of the same type work schedule (i.e., part-time, intermittent, or seasonal) as the position from which the employee was separated;

(2) Is competitive;

(3) Is nontemporary;

(4) Has a representative rate no lower than that of the position from which the employee was separated; and

(5) Has a regularly scheduled administrative workweek no lower than that or the position from which the employee was separated.

§ 351.1004 Duration of eligibility.

(a) The name of a group I employee remains on the reemployment priority list for 2 years, and a group II employee's name for 1 year, from the date he or she was separated.

(b) An employee's name is deleted from the reemployment priority list when the employee submits a written request to the agency asking that his or her name be deleted.

(c) A full-time employee's name is also deleted from the reemployment priority list when the employee:

(1) Accepts a non-temporary, full-time, competitive position; or

(2) Declines under this subpart a full-time, nontemporary, competitive position with a representative rate the same as, or higher than, that of the position from which he or she was separated under this part.

(d) An other-than-full-time employee's name is also deleted from the reemployment priority list when the employee:

(1) Accepts a nontemporary competitive position; or

(2) Declines under this subpart a nontemporary, competitive position with a representative rate, and regularly scheduled administrative workweek, the same as or higher than that of the position from which the employee was separated under this part.

§ 351.1005 Operation of the list in Alaska and overseas.

(a) The name of each group I or group II employee who receives a notice of separation under this part from a competitive position in Alaska or overseas is entered on the reemployment priority list for the area in which the position from which separated is located, except when:

(1) The employee leaves that area; or

(2) The agency has a general program for rotating employees between overseas areas and the United States and the employee's immediately preceding overseas services or residence, combined with prospective overseas service under available appointments, exceeds the maximum duration of an overseas duty tour in the agency's rotation program.

(b) Upon his or her written request, the name of an employee who leaves the area is entered on the agency's reemployment priority list for:

(1) The commuting area from which he or she was employed for Alaskan or overseas service; or

(2) Another area, except in Alaska or overseas, that is mutually acceptable to the employee and the agency.

(c) In addition to any of the reasons, as appropriate, in § 351.1004 (b), (c), or (d), for deleting an employee's name from the reemployment priority list, the name of an employee is deleted from an Alaskan or overseas reemployment priority list when the employee:

(1) Leaves the area covered by that list; or

(2) Becomes disqualified for overseas appointment because of his or her previous service or residence.

DEPARTMENT OF AGRICULTURE

Food and Nutrition Service

7 CFR Parts 210, 220, and 235

[Amendments 47, 37, and 5, respectively]

National School Lunch Program, School Breakfast Program and State Administrative Expense Funds; Changes to National Average Payment Factors

AGENCY: Food and Nutrition Service, USDA.

ACTION: Final rule.

SUMMARY: This final rule amends the National School Lunch Program, School Breakfast Program, and State Administrative Expense fund regulations for the period January 1, 1981 through September 30, 1981 in the following ways: (1) there will be no January 1, 1981 semiannual adjustment made in the Section 4 and Section 11 National Average Payment factors for lunches and breakfast served; (2) the Section 4 and Section 11 National Average Payment adjustment to be made in July 1981 shall be based on the Consumer Price Index for the previous 12 months, rather than for the previous six months; (3) Section 4 National Average Payment factors for school lunches will be reduced by two and one-half cents for all categories of lunches served by school food authorities in which less than 60 percent of the lunches served were served free or at a reduced price during school year 1978–79; (4) reductions in Section 4 National Average Payment factors must be reflected in reimbursement payments actually made to School Food Authorities in which less than 60 percent of the lunches served were served free or at a reduced price during school year 1978–79; (5) State revenue matching requirements under the National School Lunch Program for the school year beginning July 1, 1981 will not be reduced by the reduction in Section 4 National Average Payment factors; and (6) State Administrative Expense fund allocations for the fiscal year ending September 30, 1983 will not be reduced by the reduction in Section 4 National Average Payment Factors. These changes implement the mandates of P.L. 96–499, the Omnibus Reconciliation Act of 1980. These changes are anticipated to save $126.1 million for the National School Lunch Program and $8 million for School Breakfast Program.

EFFECTIVE DATE: January 1, 1981.

FOR FURTHER INFORMATION CONTACT: Stanley C. Garnett, Branch Chief, Policy and Program Development Branch, School Programs Division, Food and Nutrition Service, U.S. Department of Agriculture, Washington, D.C. 20250, (202) 447–9065. An Impact Analysis Statement is available on request from the above named individual.

SUPPLEMENTARY INFORMATION: This final action has been reviewed under USDA procedures established in the Secretary's Memorandum 1955 to implement Executive Order 12044 and has been classified "not significant." Robert Greenstein, Administrator, Food and Nutrition Service, has determined that this final rule is nondiscretionary and mandated by Public Law 96–499. Therefore, solicitation of public comments is unnecessary. Good cause exists both for the dispensing with the solicitation of public comments and for making this rule effective earlier than 30 days after publication.

Background

Public Law 96–499 authorized several legislative changes in all Child Nutrition Programs which will result in significant savings for fiscal year 1981. These changes are intended by Congress to achieve savings by amending Part 210 National School Lunch Program and Part 220 School Breakfast Program with the three provisions which are explained below.

Two and one-half cent Section 4 Reduction in Reimbursement Rates

Section 4 of the National School Lunch Act provides for general cash payment for all lunches served under the National School Lunch Act. Currently most States earn 18.5 cents under Section 4 for each lunch (free, reduced-price or paid) served under the National School Lunch Program. Section 201 of Public Law 96–499 provides for a two and one-half cent reduction in the

general cash payment factor under Section 4 of the National School Lunch Act for all categories of lunches served (free, reduced-price, paid) by school food authorities in which less than 60 percent of the lunches were served free or at a reduced-price during the second preceding school year (SY 1978–79).

The two and one-half cent reduction in the Section 4 general cash payment factor will not affect the amount of State administrative expense funds to be made available under Section 7 of the Child Nutrition Act of 1966 for the fiscal year ending September 30, 1983. In addition, the amount of State revenues appropriated or used for meeting the requirements under Section 7 of the National School Lunch Act for the school year ending June 30, 1982 will not be affected by a reduction in the amount of Federal funds expended as a result of the reduction in Section 4 earnings.

Annual Adjustments in National Average Payment (NAP) Rates

Section 204 of Public Law 96–499 eliminated the semiannual adjustment in the Section 4 and Section 11 National Average Payment factors for lunch and the National Average Payment factors for breakfast served under Section 4 of the Child Nutrition Act of 1966 for fiscal year 1981. This final rule eliminates the January 1, 1981 semiannual adjustment of National Average Payment factors for the National School Lunch Program and School Breakfast Program. The National Average Payment factors for these programs for the period January 1, 1981, through June 30, 1981, will be those factors prescribed for the period July 1 through December 31, 1980, (45 FR 48174), except for the changes noted below.

PART 210—NATIONAL SCHOOL LUNCH PROGRAM

Accordingly, Part 210 is amended as follows:

1. § 210.4 paragraph (a) is amended by adding a new sentence at the end of the paragraph to read as follows:

§ 210.4 Payment of Funds to States and FNSROs.

* * * * *

(a) * * * For the period from January 1, 1981 through September 30, 1981, the National Average Payment factor for lunches served under the National School Lunch Act, after being adjusted under Section 11(a) of the National School Lunch Act, shall be reduced by two and one-half cents for any school food authority in which less than 60 percent of lunches served in the National School Lunch Program were served free or at a reduced price during the second preceding school year (SY 1978–79).

§ 210.4 [Amended]

2. § 210.4 paragraph (c) is amended by adding a new sentence at the end of the paragraph to read as follows:

* * * * *

(c) * * * In the fiscal year ending September 30, 1981, however, the Secretary shall omit the January semiannual adjustments and shall make adjustments by July 1, which shall reflect changes in the cost of operating the program as indicated by the changes in the food away from home series of the Consumer Price Index for All Urban Consumers published by the Bureau of Labor Statistics of the Department of Labor for the 12 month period ending May 31, 1981.

* * * * *

3. § 210.6 paragraph (b) is amended by revising the last sentence of the paragraph to read as follows:

§ 210.6 Matching of funds.

* * * * *

(b) * * * For the school year beginning July 1, 1979, and for each school year thereafter, such State revenue shall constitute at least 10 percent of the matching requirements for the preceding school year based on the total general cash-for-food assistance funds expended for that period: *Except that*, for the school year beginning July 1, 1981, an additional amount shall also be subject to the State revenue matching requirement. Such amount for each State shall be determined by multiplying two and one-half cents by the number of lunches served during the period January 1, 1981 through June 30, 1981 in those School Food Authorities administered by the State agency in which less than 60 percent of the lunches served under the Program during the 1978–79 school year were served free or at a reduced price.

* * * * *

4. § 210.11 paragraph (c) is amended by revising the first sentence of the paragraph to read as follows:

§ 210.11 Reimbursement payments.

* * * * *

(c) Based on the principles set forth in this section, State agencies, and FNSROs where applicable, shall have maximum flexibility in assigning rates of reimbursement from general cash-for-food assistance funds among schools and School Food Authorities: *Except that*, for the period January 1, 1981 through September 30, 1981, the total amount of general cash-for-food assistance reimbursement actually paid to all School Food Authorities under the jurisdiction of a State agency in which less than 60 percent of the lunches served were served at a free or reduced price in school year 1978–79, shall not be greater than the amount of general cash-for-food assistance funds available for such School Food Authorities for this period under § 210.4(a) of this part. * * *

* * * * *

PART 220—SCHOOL BREAKFAST PROGRAM

§ 220.9 [Amended]

section 220.9 paragraph (b) is amended by adding a new sentence at the end of the paragraph to read as follows:

(b) * * * In the fiscal year ending September 31, 1981, however, the Secretary shall omit the January 1 semiannual adjustments and shall make annual adjustments by July 1, which shall reflect changes in the cost of operating the program, as indicated by the changes in the food away from home series of the Consumer Price Index for All Urban Consumers published by the Bureau of Labor Statistics of the Department of Labor for the 12 month period ending May 31, 1981.

* * * * *

PART 235—STATE ADMINISTRATIVE EXPENSE FUNDS

Section 235.4 paragraph (a) is amended by adding the following sentence after the first sentence of the paragraph:

§ 235.4 Allocation of funds to States.

(a) * * * For the fiscal year ending September 30, 1981, the amount of funds expended under Section 4 of the National School Lunch Act in each State shall, for purposes of this paragraph, be the sum of: (1) the amount of such funds actually expended within the State during the fiscal year, and (2) the amount determined by multiplying two and a half cents times the number of lunches served during the period January 1, 1981 through September 30, 1981 in those School Food Authorities in which less than 60 percent of the lunches served under the National School Lunch Program during the 1978–79 school year were served free or at a reduced price. * * *

(Catalogue of Federal Domestic Assistance Nos. 10.555 and 10.556).

(Public Law 96–499. Sections 201 and 204, 94 Stat. 2599)

Dated: January 8, 1981.

Carol Tucker Foreman,

Assistant Secretary for Food and Consumer Services.

7 CFR Part 226

Child Care Food Program; Matching of Federal Funds

AGENCY: Food and Nutrition Service, USDA.

ACTION: Final rule.

SUMMARY: This final regulation implements for the Child Care Food Program a provision of Title VI of Pub. L. 96-205. This provision (section 601) waives any requirements for local matching funds under $100,000 for American Samoa and the Northern Mariana Islands.

EFFECTIVE DATE: March 12, 1980.

FOR FURTHER INFORMATION CONTACT: Beverly Walstrom, Branch Chief, Policy and Program Development Branch, Child Care and Summer Programs Division, USDA, Food and Nutrition Service, Washington, D.C. 20250. Telephone (202) 447-6509. The final Impact Statement describing the options considered in developing this final rule and the impact of implementing each option is available on request from Beverly Walstrom at the above address.

SUPPLEMENTARY INFORMATION:

Administrative Procedures

This final action has been reviewed under USDA procedures established in the Secretary's Memorandum 1955 to implement Executive Order 12044 and has been classified as "not significant."

Robert Greenstein, Administrator, FNS, has determined that a situation exists which warrants publication without opportunity for a public comment period on this final action. Section 601 of Pub. L. 96-205 is mandatory; the Department is not at liberty to change the matching requirement should public comments indicate disapproval of the rule.

Solicitation of public comments is unnecessary. Good cause exists both for dispensing with the solicitation of public comments and for making this rule effective earlier than 30 days after publication.

Current Child Care Food Program Matching Requirements

Section 17(a) of the National School Lunch Act requires States to match the Federal funds received to assist institutions to acquire food service equipment under the Food Service Equipment Assistance (FSEA) Program (7 CFR 226.25). Section 226.25(d) requires States to provide at least one-fourth of the cost of equipment financed with FSEA funds from sources within the State, except that especially needy institutions are exempted from this matching requirement. The regulations also establish the matching requirement on a fiscal year basis.

Pub. L. 96-205

In section 601 of Pub. L. 96-205, enacted on March 12, 1980, Congress has required that "* * * in the case of American Samoa and the Northern Mariana Islands any department or agency shall waive any requirement for local matching funds under $100,000 (including in-kind contributions) required by law to be provided by American Samoa or the Northern Mariana Islands."

Effect of Law on Child Care Food Program

A review of FNS data indicates that for Fiscal Year 1980, the Northern Mariana Islands was not required to produce matching FSEA funds because all the child care institutions participating in the CCFP in this territory were classified as "especially needy." As of March 12, 1980, pursuant to the mandate of section 601 of Pub. L. 96-205, the Northern Mariana Islands was also exempt from producing local FSEA matching funds under $100,000. Furthermore, it is not anticipated that future funding will increase to a level that would require this jurisdiction to match Federal monies.

American Samoa was not participating in the Child Care Food Program in Fiscal year 1980 and therefore was not awarded any FSEA funds. Should American Samoa participate at some future time, it is not anticipated that any Food Service Equipment Assistance funds allocated to this territory would be at a high enough level to require this jurisdiction to match Federal monies. Therefore, these territories are expected to be exempt from the matching requirements of Part 226 in accordance with Pub. L. 96-205 and these regulations.

PART 226—CHILD CARE FOOD PROGRAM

Accordingly, Part 226, Child Care Food Program, is amended as follows:

Section 226.25 of the regulations is amended by revising paragraph (d) to read as follows:

§ 226.25 Food service equipment assistance.

* * * * *

(d) Matching of food service equipment assistance funds. Payment to any State of funds allocated under this paragraph for any fiscal year shall be made upon condition that at least one-fourth of the cost of equipment funded under this section shall be financed from sources within the State, except that this condition shall not apply to equipment obtained for institutions that are especially needy, as defined in the approved State Plan of Child Care Food Program Operations. Beginning March 12, 1980, however, American Samoa and the Northern Mariana Islands shall be exempt from the matching requirements under this section if their respective matching requirement is under $100,000. Payments made by FNS to State agencies and by State agencies to institutions may be matched by either the recipient institution or other State or local sources and payments. Funds from sources within the State may include any source of State or local funds.

7 CFR Part 245

Determining Eligibility for Free and Reduced Price Meals and Free Milk in Schools; Implementation of Revised Income Poverty Guidelines

AGENCY: Food and Nutrition Service.

ACTION: Emergency final rule.

SUMMARY: The Department announces the temporary use of revised eligibility standards and procedures that schools participating in the National School Lunch and Breakfast Programs and Special Milk Program shall use to determine a child's eligibility for free and reduced price meals and free milk for the remainder of this fiscal year through September 30, 1981. The new income poverty guidelines that include a standard deduction are posted in the Notice of Income Poverty Guidelines that appears in the Notice Section of today's **Federal Register**. Public Law 96-499 requires this change in the income guidelines and the use of a standard deduction. This emergency ruling specifies the timetable and the steps to be taken to implement the changes.

These changes will affect the eligibility of some children for free and reduced price meals and free milk. This rule requires that those children be given advance notice of a reduction or termination of benefits.

EFFECTIVE DATE: January 1, 1981.

FOR FURTHER INFORMATION CONTACT: Stanley C. Garnett, Branch Chief, Policy and Program Development Branch, School Programs Division, USDA, FNS, Washington, D.C. 20250, (202) 447–9069. An Impact Analysis Statement is available on request from Mr. Garnett.

SUPPLEMENTARY INFORMATION:

Classification: This final rule has been reviewed under USDA procedures established in Secretary's Memorandum 1955 to implement Executive Order 12044, and has been classified as "not significant". Robert Greenstein, Administrator of the Food and Nutrition Service, has determined that an emergency situation exists which warrants making this rule effective on January 1, 1981. Because the provisions of this rule are mandated by Public Law 96–499 and are thus non-discretionary, solicitation of public comment is impractical and unnecessary. Further, the provisions of Public Law 96–499 implemented by this rule are effective January 1, 1981. Therefore, good cause exists both for making this rule effective earlier than 30 days after publication and for dispensing with the solicitation of comments.

Background

Public Law 96–499 which was enacted on December 5, 1980, requires the following provisions: (1) deletion of the Secretary's adjustment of the Office of Management and Budget's Income Poverty Guidelines; (2) replacement of the hardship deductions with a standard deduction; and (3) implementation options for School Food Authorities to use in determining eligibility under the new income poverty guidelines. These provisions are in effect through September 30, 1981. These provisions are fully explained in the Notice of Income Poverty Guidelines that appears in today's **Federal Register**.

Public Law 96–499 requires the Department to establish the standard deduction for each family size as follows:

(1) in States other than Alaska, Hawaii, and Guam, the Secretary shall allow a standard deduction of $60 each month for each household, which shall be adjusted to the nearest $5 on July 1, 1980, to reflect changes in the Consumer Price Index for All Urban Consumers, published by the Bureau of Labor Statistics, Department of Labor, for items other than food for the period beginning September 1977 and ending March 1980;

(2) the monthly standard deduction allowed in Alaska shall bear the same ratio to the standard deduction allowed in the contiguous States as the applicable income poverty guidelines for Alaska bear to the applicable income poverty guidelines for such States; and

(3) the monthly standard deduction allowed in Hawaii and Guam shall bear the same ratio to the standard deduction allowed in the contiguous States as the applicable income poverty guidelines for Hawaii bear to the applicable income poverty guidelines for such States.

The new Income Poverty Guidelines which are announced in the notice section of this **Federal Register** include the standard deduction allowed by law for each household.

Implementation

In determining a child's eligibility under the new income guidelines, a school shall compare the family's income to the guidelines without allowing any hardship deductions, because such deductions are not allowable through September 30, 1981. They have been replaced by the appropriate standard deductions which have been incorporated into the Income Poverty Guidelines.

Because the income guidelines change in the middle of the school year, Public Law 96–499 allows the Department to provide schools with some flexibility in implementing the new certification procedures.

A School Food Authority has two choices in implementing the new income guidelines. It may: 1) use the applications that it has on hand to make new eligibility determinations; or 2) it may distribute new applications with the new guidelines. In either case, the School Food Authority shall review all of its applications and make new eligibility determinations based on the new guidelines. School Food Authorities which distribute new applications are provided an additional 30 days to collect the income information. The family of each child whose eligibility for program benefits is reduced or terminated shall receive written notice of the reduction in benefits at least 10 days prior to the date the reduction or termination of benefits takes effect. This advance notice will enable children to arrive at school prepared to pay an additional amount if necessary.

Accordingly, a new paragraph is added to Part 245 as follows: § 245.3, a new paragraph (d) is added to the end of the section to read as follows:

§ 245.3 Eligibility standards and criteria.

* * * * *

(d) For the period of time between January 1 and September 30, 1981, notwithstanding any provision of this Part, all State agencies, School Food Authorities, and FNSROs where applicable, shall abide by the following provisions in implementing the revised Income Poverty Guidelines which are required by Public Law 96–499:

(1) Within 15 days after the Department publishes the revised Income Poverty Guidelines, the State agencies or FNSRO, where applicable, shall notify School Food Authorities of the new guidelines.

(2) Within 15 days of receipt of the revised guidelines the School Food Authority shall issue a public release to the informational media to publicly announce the revised family size income standards for determining eligibility for free and reduced price meals and free milk in the National School Lunch Program, School Breakfast Program and Special Milk Program. Applications containing the revised income guidelines may be distributed. A new application shall be issued to parents or guardians who express interest in submitting a new application as a result of the revised family size income standards.

(3) Each School Food Authority shall ensure that each child's eligibility for free or reduced price benefits is redetermined based on the revised Income Poverty Guidelines published in the notice section of the **Federal Register** dated January 16, 1981. Such redeterminations of eligibility may be based on applications already on file for school year 1980–81 or may be based on new applications distributed to comply with this rule. School Food Authorities shall ensure that: (i) schools which use applications on file redetermine each child's eligibility for benefits within 30 days and implement the new income guidelines within 45 days after the State agency or FNSRO, where applicable, issues the new income eligibility guidelines; and (ii) schools which distribute new applications redetermine each child's eligibility for benefits within 60 days and implement the new guidelines within 75 days after the State agency or FNSRO, where applicable, issues the new income eligibility guidelines.

(4) Each School Food Authority shall ensure that when these eligibility redeterminations are made, as specified in the preceding section, "special hardship deductions" are not subtracted from family income. The Income Poverty Guidelines for the remainder of this fiscal year include a standard deduction for each family size, which replaces the hardship deductions.

(5) Each School Food Authority shall ensure that the family of each child whose eligibility for program benefits is

reduced or terminated receives written notice of the reduction or termination of benefits at least 10 days prior to the effective date of the reduction or termination.

(6) No School Food Authority is required to amend its current free and reduced price policy statement as a result of this rule.

(42 U.S.C. 1785, 1766, 1772, 1773(e), sec. 203, Pub. L. 96-499, 94 Stat. 2599)

Dated: January 8, 1981.

Carol Tucker Foreman,

Assistant Secretary for Food and Consumer Services.

BILLING CODE 3410-30-M

Animal and Plant Health Inspection Service

7 CFR Part 371

Organization, Functions and Delegations of Authority

AGENCY: Animal and Plant Health Inspection Service, USDA.

ACTION: Final rule.

SUMMARY: This document revises the statement of functions of Animal and Plant Health Inspection Service as it relates to the Deputy Administrator, Veterinary Services, to specifically provide authority to purchase unlicensed veterinary biological products on the open market, test same, and disseminate the results of such tests as provided in section 101(d) of the Act of September 21, 1944 (7 U.S.C. 430). Also, for clarification purposes, the statement of functions and delegations of authority for both the Deputy Administrator, Veterinary Services, and the Deputy Administrator, Plant Protection and Quarantine, is begin revised to include U.S. Code citations for the various programs and activities assigned to each Deputy Administrator.

EFFECTIVE DATE: January 16, 1981.

FOR FURTHER INFORMATION CONTACT: John C. Frey, Animal and Plant Health Inspection Service, U.S. Department of Agriculture, Washington, DC 20250, (202-447-5335 or 301-436-6466).

SUPPLEMENTARY INFORMATION: The statement of organization, functions, and delegations of authority of the Animal and Plant Health Inspection Service, is being amended to delegate to the Deputy Administrator, Veterinary Services, the authority to purchase in the open market, from applicable appropriations, samples of all tuberculin, serums, antitoxins, or analogous products of foreign or domestic manufacture which are sold in the United States, for the detection, prevention, treatment, or cure of diseases of domestic animals, to test the same, and to disseminate the results of said tests in such manner deemed best. It is necessary to provide this delegation of authority to appropriate officers consistent with, and with due regard to, the continuing responsibility for the proper discharge of the functions assigned to APHIS. Delegation of this authority will provide for the acquisition and dissemination of information regarding the quality of veterinary biological products available in U.S. markets. It will serve to encourage those who produce and distribute veterinary biological products which are pure, safe, potent, and efficacious. The Secretary has delegated this authority to the Assistant Secretary for Marketing and Transportation Services who in turn has delegated such authority to the Administrator, Animal and Plant Health Inspection Service (45 FR 80477).

In addition, to more precisely delineate those functions heretofore delegated to the Deputy Administrators of APHIS, and to assure that future delegations are clear, the applicable U.S. Code citations are being inserted with each program and activity delegation.

This rule relates to internal agency management and, therefore, pursuant to 5 U.S.C. 553, it is found upon good cause that notice and other public procedures with respect thereto are impractical and contrary to the public interest, and good cause is found for making this rule effective less than 30 days after its publication in the **Federal Register.**

Further, since this rule relates to internal agency management, it is exempt from the provisions of Executive Order 12044, Improving Government Regulations, and, thus, does not require the preparation of a regulatory impact analysis.

Accordingly, 7 CFR Part 371 is amended as follows:

Section 371.2 is amended by revising paragraphs (c)(2) and (d)(2) to read as follows:

§ 371.2 The Office of the Administrator.

* * * * *

(c) * * *

(2) Planning, providing leadership, formulating and coordinating policies, developing and issuing regulations (including quarantines), and directing the administration of PPQ programs and activities. These programs and activities include:

(i) Sec. 102, Organic Act of September 21, 1944, as amended, and the Act of April 6, 1937, as amended (7 U.S.C. 147a, 148, 148a-148e), relating to control and eradication of plant pests and diseases;

(ii) the Mexican Border Act, as amended (7 U.S.C. 149);

(iii) the Golden Nematode Act (7 U.S.C. 150-150g);

(iv) the Federal Plant Pest Act (7 U.S.C 150aa-150jj);

(v) the Plant Quarantine Act, as amended (7 U.S.C. 151-164a, 167);

(vi) the Terminal Inspection Act, as amended (7 U.S.C. 166);

(vii) the Honeybee Act, as amended (7 U.S.C. 281-282);

(viii) the Federal Noxious Weed Act of 1974 (7 U.S.C. 2801-2813);

(ix) the Endangered Species Act of 1973 (87 Stat. 884);

(x) Executive Order 11987; and

(xi) the responsibilities of the United States under the International Plant Protection Convention.

* * * * *

(d) * * *

(2) Planning, providing leadership, formulating and coordinating policies, developing and issuing regulations (including quarnatines) pursuant to law, and directing the administration of the VS programs and related activities involving:

(i) Sec. 306 of the Tariff Act of June 17, 1930, as amended (19 U.S.C. 1306);

(ii) Act of August 30, 1890, as amended (21 U.S.C. 102-105);

(iii) Act of May 29, 1884, as amended, Act of February 2, 1903, as amended, and Act of March 3, 1905, as amended, and supplemental legislation (21 U.S.C. 111-114a, 114a-1, 115-130);

(iv) Act of February 28, 1947, as amended (21 U.S.C. 114b-114c, 114d-1);

(v) Act of June 16, 1948 (21 U.S.C. 114e-114f);

(vi) Act of September 6, 1961 (21 U.S.C. 114g-114h);

(vii) Act of July 2, 1962 (21 U.S.C. 134-134h);

(viii) Act of May 6, 1970 (21 U.S.C. 135-135b);

(ix) Sections 12-14 of the Federal Meat Inspection Act, as amended, and so much of Section 18 of such Act as pertains to the issuance of certificates of condition of live animals intended and offered for export (21 U.S.C. 612-614, 618);

(x) Improvement of poultry, poultry products and hatcheries (7 U.S.C. 429);

(xi) (Laboratory) Animal Welfare Act, as amended (7 U.S.C. 2131-2147, 2149-2155);

(xii) Horse Protection Act (15 U.S.C. 1821-1831);

(xiii) 28 Hour Law, as amended (45 U.S.C. 71-74);

(xiv) Export Animal Accommodation Act, as amended (46 U.S.C. 466a-466b);

(xv) Purebred animal duty-free entry provision of Tariff Act of June 17, 1930, as amended (19 U.S.C. 1202, Part I, Item 100.01);

(xvi) Virus-Serum Toxin Act (21 U.S.C. 151–158);

(xvii) Sections 203 and 205 of the Agricultural Marketing Act of 1946, as amended with respect to voluntary inspection and certification of inedible animal byproducts and inspection, testing, treatment, and certification of animals and a program to investigate and develop solutions to the problems resulting from the use of sulfonamides in swine (7 U.S.C. 1622, 1624); and

(xviii) Section 101(d) of the Organic Act of September 21, 1944 (7 U.S.C. 430).

* * * * *

(5 U.S.C. 301)

Issued at Washington, D.C., this 31st day of December, 1980.

Harry C. Mussman,

Administrator, Animal and Plant Health Inspection Service.

[FR Doc. 81-1589 Filed 1-15-81; 8:45 am]

BILLING CODE 3401-34-M

Farmers Home Administration

7 CFR Part 1900

Farmers Home Administration Appeal Procedure

AGENCY: Farmers Home Administration, USDA.

ACTION: Final rule.

SUMMARY: The Farmers Home Administration (FmHA) amends its appeal procedures to provide clarity, limit unnecessary hearings, and add a reporting function designed to ultimately provide FmHA and the public with information on appeal results. This action is the result of an administrative review.

EFFECTIVE DATE: January 16, 1981.

FOR FURTHER INFORMATION CONTACT: Arthur M. Collings, Jr., Special Assistant to the Administrator, USDA, FmHA, Washington, DC 20250, phone 202–447–8448.

The Final Impact Statement describing the options considered in developing this final rule and the impact of implementing each option is available on request from Joseph H. Linsley, Chief, Directives Management Branch, USDA, FmHA, Washington, DC 20250, telephone (202) 447–4057.

SUPPLEMENTARY INFORMATION: This final action has been reviewed under USDA procedure established in Secretary's Memorandum 1955 to implement Executive Order 12044, and has been classified "not significant."

The FmHA programs and projects which are affected by this instruction are subject to State and local clearinghouse review in the manner delineated in FmHA Instruction 1901–H.

On December 31, 1979, FmHA published in the **Federal Register** (44 FR 77183) a notice of proposed rulemaking involving the amending of Subpart B of Part 1900, Chapter XVIII, Title 7, Code of Federal Regulations.

Comments were received from 19 individuals and organizations. Followup correspondence and/or dialogue has occurred with some respondents and changes or revisions have been made as a result of a review of the comments. The overall appeal process has been broken down into 3 sections: 1900.56, 1900.57, and 1900.58 in an attempt to provide recognizable distinctions between the functions. The following sections were reconsidered and in most instances the December 31, 1979, proposed rules revised as a result of the comments received:

1900.51—Reference to administrative decisions made after November 13, 1978, has been deleted.

1900.52—One respondent asked that the term "applicant" be defined. FmHA determined this to be unnecessary.

1900.52(b)—A respondent asked that coercion of any kind in limiting appeals be forbidden. FmHA has acted to forbid any Agency officials from delaying approved assistance pending the outcome of appeal of a partial adverse action.

1900.52(c)—The proposed new 1900.52(c) as a definition of decisions not appealable has been deleted. The essence of this subsection has been transferred to a new § 1900.53. A number of suggested specific instances where a decision is not appealable were rejected in that they were subjective in nature.

1900.52(d)(5)—An objection was raised to District Directors handling foreclosure appeals. Section 510 of the Housing Act of 1949 was cited. The changed regulation provides that hearing officers for appeals of accounts serviced in County Offices will be a District Director from a nearby district. Appeals of such accounts that are serviced in District Offices will be heard by the appropriate Assistant Administrator or designee.

1900.52(d)—Hearing officer: Changed to provide that the appropriate Assistant Administrator or designee will be the hearing officer for decisions made by State Directors.

1900.52(f)—Review officer: Changed to provide that the appropriate Assistant Administrator or designee will be review officer for State Director decisions and in foreclosure cases. A request that there be only one National Office review, including that of the Administrator, was rejected.

1900.52—A new definition for stayed assistance was added to provide clarity. Also, a new definition for official positions is added to note that FmHA titles for similar level positions may vary in some areas.

1900.53—A new § 1900.53 is incorporated to list examples of decisions which are not appealable. Denial of section 502 refinancing because of the 5-year limitation was deleted due to passage of Pub. L. 96–153.

1900.53(a)(13)—Appraisals of property value are not appealable via a hearing. See § 1900.54. Two respondent groups objected to FmHA's omitting appraisals, but the decision was made since all appraisals are somewhat subjective and

therefore every decision on value could produce a hearing.

1900.53(a)(14)—Published interest rates may not be appealed.

1900.53(a)(15)—Rent increase rejections are not appealable when the borrower fails or refuses to apply for rental assistance and low-income tenants must pay more than 25 percent of the income for rent.

1900.53(b)—New § 1900.53(b) is added to prohibit appeals on new applications or requests when an adverse decision has been appealed and upheld, and there is no change in circumstances.

1900.54—A new § 1900.54 entitled "review of appraisals" provides for a review by the State Director, but without a hearing. FmHA rejected two suggestions that appraisals should be appealable, since they are a judgmental art, and almost every appraisal could be contested. State Directors will dispatch a representative to make an onsite review when the situation appears warranted.

1900.55—A new section designed to limit hearings guides FmHA actions leading to the reduction of hearings without interfering with an appellant's ultimate right to a hearing.

1900.56—Appeal from an FmHA Decision—Changed to include actions leading up to a hearing. Numerous suggestions and complaints were received related to the circumstances leading to a hearing. This section:

(1) Prescribes that the appellant must first have a meeting with the decisionmaker before requesting a hearing. They may bring a representative to the meeting as well as to the hearing.

(2) Provides that, when the individual or organization receives an adverse notice and invitation to meet with the decision maker, the name, title, address, and telephone number of the hearing officer will be included. FmHA received comments on all sides of this issue. Many respondents stated that notifying the borrower of the hearing officer in the initial letter would lead to direct access to that route without trying to resolve differences with the decision maker. They believed it would encourage unnecessary appeals. FmHA elected to identify the hearing officer in the letter but require the meeting before a hearing.

1900.56(a)(3)—FmHA will provide the name and address of legal services and legal referral services on request. At least one respondent asked that FmHA automatically supply the name of local legal services with the notice of adverse action. Another believed FmHA should never supply this service. The decision represents a middle ground. FmHA must provide copies of subsequent notices and correspondence to the appellant's representative.

1900.56(a)(4)—Provides that requests for a meeting with the decision maker must be made within 15 days of notification of the adverse action. Requests for a hearing must be made within 15 days of notification of results of the meeting with the decision maker.

1900.56(e)—Provides for exceptions to the hearing process in Samoa, Guam, and the Pacific Trust Territories. This area is serviced by Hawaii and time and travel budget restraints inhibit FmHA's ability to provide hearings.

1900.56(f)—Clarifies that appellants will be afforded favorable consideration when interest rates change during an appeal.

1900.57—A new section covering the hearing.

1900.57(a)—Refers to a new Exhibit A—"Guide for a Hearing."

1900.57(d)—Provides for copies of FmHA file information at no expense to the appellant, in accordance with Freedom of Information and Privacy Act Regulations.

1900.57(f)—Requires FmHA to tape record all hearings, but only as a back up to the hearing notes, which are the official record. FmHA received a number of suggestions on how best to develop a hearing record. Verbatim notes and transcripts were rejected as being too costly and time consuming.

1900.57(f)(2)—Changed to suggest that hearing officer take own notes.

1900.57(h)—Changed to eliminate the proposed prohibition on making hearing decisions in consultation with other FmHA employees. This approach is implied in Exhibit A—"Guide to Conducting a Hearing."

1900.58—Additional Appeals—This new section relates solely to appeal reviews. Few changes have been made to the review process other than to provide time deadlines and make the regulation easier to follow by utilizing the separate section.

1900.60—Reporting requirements. Has been changed to provide for a record which will follow an appeal through its course. Several respondents deplored the fact that FmHA has no record wherein appeal decisions can be used to change practical operating procedures and thus limit the need for appeals. FmHA is studying methods for instituting a computerized index system which would utilize information from the appeal record.

Exhibit A—"A Guide to Conducting a Hearing," developed to provide uniformity in holding hearings, and guidance for FmHA officials, the basic information contained in this Exhibit was used in Administrative Notice (A. N.) circulated to field staff on August 2, 1979.

Exhibit B—"Guide Letter for Notifying Applicants and Borrowers of Adverse Decisions where the Decision is Appealable," supplements the regulation to provide uniformity, guidance to FmHA officials, and assurance that there will be due process.

Exhibit C—"Guide Letter for Notifying Applicants and Borrowers of Adverse Decisions where the Decision is not Appealable." Provides for a invitation to meet with the decision maker when hearings will not be permitted.

Therefore, Subpart B of Part 1900 is revised to read as follows:

PART 1900—GENERAL

Subpart B—Farmers Home Administration Appeal Procedure

Sec.

1900.51 Purpose.
1900.52 Definitions.
1900.53 Decisions which are not appealable.
1900.54 Review of appraisals.
1900.55 FmHA actions to limit hearings.
1900.56 Appeal from an initial FmHA decision.
1900.57 Hearings.
1900.58 Additional appeals.
1900.59 Effect of appeal decision.
1900.60 Reporting requirements.
1900.61–1900.100 [Reserved]
Exhibit A—Guide to Conducting a Hearing.
Exhibit B—Guide Letter for Notifying Applicants and Borrowers of Adverse Decisions Where the Decision is Appealable.
Exhibit C—Guide Letter for Notifying Applicants and Borrowers of Adverse Decisions Where the Decision is not Appealable.

Authorities: 7 U.S.C. 1989; 42 U.S.C. 1480; delegation of authority by the Secretary of Agriculture, 7 CFR 2.23; delegation of authority by the Assistant Secretary for Rural Development, 7 CFR 2.70.

PART 1900—GENERAL

Subpart B—Farmers Home Administration Appeal Procedure

§ 1900.51 Purpose.

This Subpart provides a uniform procedure whereby a person or organization may appeal any Farmers Home Administration (FmHA) program administrative action directly affecting such person or organization. This procedure does not apply to Guaranteed loans, debt settlement actions as found in Part 1864 of this Chapter (FmHA Instruction 456.1), Freedom of Information Act or Privacy Act appeals, and is not intended to affect the Suspension and Debarment procedure found at Subpart E of Part 1924 of this chapter. This procedure takes precedence over all other FmHA

appeals procedures affecting applicants, borrowers, or grantees. Tenant appeals are covered in Subpart L of Part 1944 of this Chapter. This regulation does not replace any existing procedures for handling discrimination complaints.

§ 1900.52 Definitions.

(a) *Appellant.* An appellant is an applicant for FmHA assistance or an FmHA borrower or grantee, either individual or organization, that is directly and adversely affected by an administrative decision by FmHA.

(b) *Directly and adversely affected.* The term "directly and adversely affected" includes having a request for FmHA assistance denied in whole or in part or having FmHA assistance reduced, cancelled, or not renewed. The term "directly and adversely affected" does not include actions where persons or organizations are clearly not eligible such as in the examples cited in § 1900.53. FmHA officials may not deny or delay approved assistance pending the outcome of appeal of a partial adverse action.

(c) *Hearing.* A hearing, as used in this Subpart, is an informal proceeding at which an appeal from an adverse decision is heard.

(d) *Hearing officer.* The hearing officer has the authority to uphold or reverse decisions and will be:

(1) In the case of an appeal of an initial decision by a County Supervisor, the District Director having jurisdiction over that County Office. If that District Director has a significant role in the initial determination, the District Director from a nearby District Office will be designated by the State Director. The term "significant role" does not include routine supervision by the District Director.

(2) In the case of an appeal of an initial decision by the County Committee, the State Director or Acting State Director. The State Director may designate a State Office program chief, or other State Office official, including a District Director, to conduct the hearing, acting for the State Director, provided that the designee has had no significant role in the decision.

(3) In the case of an appeal of an initial decision by a District Director, the State Director, who may designate a program chief or other State Office official to be the hearing officer.

(4) In the case of an appeal of an initial decision by a State Director, the appropriate Program Assistant Administrator or designee.

(5) In the case of a decision to foreclose an account:

(i) For accounts serviced in County Offices, a District Director from a nearby district.

(ii) For accounts serviced in District Offices, the appropriate Program Assistant Administrator or designee.

(6) In the case of an appeal of an initial decision by a Division Director or an Assistant Administrator, the appropriate Deputy Administrator or designee.

(7) For any decision not directly covered in paragraphs (d) (1) through (6) of this section, the person in the next highest level of FmHA authority, or the designee of that person.

(e) *Record.* The term "record" means the FmHA file, papers filed by an appellant, notes, tapes, or transcript (if any) of a hearing, and decisions made by FmHA.

(f) *Review officer.* The review officer has the authority to uphold or reverse the decision of the hearing officer. Regardless of the level of the decision maker and hearing officer, there will only be one review made in the National Office. However, the review provided for in § 1900.58 (c)(6), and (e) will always be available except where the Administrator is the review officer. When the hearing officer is:

(1) The District Director, the review officer will be the State Director or designee, except that, when a decision to foreclose is appealed, the review officer will be the appropriate Assistant Administrator or designee;

(2) The State Director or designee, the review officer will be the appropriate Assistant Administrator or designee;

(3) The Program Assistant Administrator or designee, the review officer will be the Administrator, or designee.

(g) *District Director.* Wherever the term "District Director" is used, it will also include Assistant District Director.

(h) *Decision maker.* The FmHA official who actually makes the specific decision. For example, if a State Director reviews a preapplication from an organization and directs a District Director to include specific items in Form AD 622, "Notice of Preapplication Review Action," the State Director is the decision maker. However, when the State Director or designee serves only in an advisory capacity in interpreting instructions, policies, and technical items and is not significantly involved in the decision, the District Director will be considered the decision maker. Additionally, when State Directors refer questions of interpretation to the National Office, and National Office officials act only in an advisory capacity, the State Director will be considered the decision maker.

(i) *Stayed assistance.* The act by FmHA of maintaining assistance at a current or present level, instead of reducing or terminating it pending the outcome of an appeal.

(j) *Official positions.* The terms "County Supervisor" and "District Director" may vary in a few geographical areas. These terms will also mean Assistant Area Loan Specialist and Area Loan Specialist, respectively, in Alaska.

§ 1900.53 Decisions which are not appealable.

(a) FmHA decisions based solely on a limitation of law, or solely and directly on objective standards that are included in published regulations may not be appealed. Examples of these include:

(1) Denial of a Section 504 grant to an applicant less than 62 years of age.

(2) Denial of a loan and/or grant when a city or town to be served has a population in excess of published limits.

(3) Denial of a loan and/or grant to an organization not identified as an eligible applicant by the regulations.

(4) Applications for emergency loans not filed before a prescribed termination date.

(5) Decision not to release basic security for unauthorized purposes.

(6) Denial of a loan because of confirmed income that is above FmHA published limits.

(7) Interest credit reduction that is the result of a confirmed income increase.

(8) A determination of ineligibility for emergency loans based on confirmation or verification by the Agricultural Stabilization and Conservation Service (ASCS) or the Federal Crop Insurance Corporation (FCIC) that the applicant did not have the required production losses of 20 percent or more.

(9) A finding that a cooperative, corporation or partnership applying for an economic emergency loan is not eligible when it has been *confirmed* that less than 50 percent of such applicant's total income is from farming.

(10) Denial of compensation for construction defects when it has been determined that the contractor is willing and able to correct the deficiencies.

(11) Requirements and conditions designated by law to be developed by agencies other than FmHA. They include, but are not limited to: Davis-Bacon wage rates; flood plain determinations; and archaeological and historical areas preservation requirements.

(12) Property standards. An appeal may only be made when the appellant claims FmHA is misapplying the written standards.

(13) Appraisals of property value. (See § 1900.54)

(14) Interest rates as set forth in FmHA procedure.

(15) A rent increase rejection when the borrower fails or refuses to apply for rental assistance in accordance with Exhibit C of Subpart C of Part 1930 of this Chapter.

(b) A new application or request for FmHA assistance, when an adverse decision has been appealed and upheld, and when the applicant provides no new supportive information or substantative change, may not be appealed.

§ 1900.54 Review of appraisals.

Appraisals of property value are not appealable. When a loan is not made because the appraisal did not justify the amount requested, the applicant will be notified and advised that a request may be made for a review of the appraisal by the State Director. When a request is made the State Director will review the specific appraisal documents and, when warranted and deemed necessary, send a representative to make an on site review.

§ 1900.55 FmHA actions to limit hearings.

Formal appeals and hearings are time consuming and actions are to be taken to avoid them whenever possible, but without jeopardizing the rights of the appellant. The following procedure should be utilized to minimize the number of appeals.

(a) FmHA personnel should carefully check the accuracy of any adverse actions to be taken.

(b) The reasons for adverse actions should be clearly explained when the applicant or borrower is notified. Vague reasons such as "you lack repayment ability" should be avoided and the applicant or borrower specifically advised why they lack repayment ability.

(c) Affected parties will be required to meet with the decision maker before they request a hearing.

§ 1900.56 Appeal from an initial FmHA decision.

(a) If an applicant for FmHA assistance, an FmHA borrower, or an FmHA grantee is directly and adversely affected by an FmHA decision or action, the official taking such action or making the decision will inform that person or organization by letter of the action taken within 15 calendar days of such action. The letter will be similar in form and content to Exhibit B of this Subpart, or Exhibit C in the case of actions not appealable in accordance with § 1900.53 of this Subpart, and will include the following:

(1) A statement of the action taken or decision made and all of the specific reason(s) for so doing.

(2) An invitation to call at the decision-making official's office, which may include a meeting with the County Committee, to discuss the decision with that official and to obtain information on appeal rights. The person (or organization) may bring to the meeting any additional information or a representative, including an attorney. (Whenever an appellant utilizes the services of a representative FmHA will provide that representative with copies of all notices and correspondence directly related to the appeal.)

(3) A statement that if the appellant wishes the services of an attorney and does not have one, the name and address of the nearest legal services representative and any known legal referral assistance will be furnished upon request.

(4) When the FmHA actions are appealable, as statement that the person or organization is entitled to a hearing in the event the meeting with the decision maker does not satisfactorily resolve their differences. The letter will state that:

(i) Requests for a meeting with the decision maker must be made within 15 days of the notification.

(ii) When not satisfied with the results of the meeting, the person or organization may appeal directly to the hearing officer. The appeal must be made within 15 days of the notification of the results of the meeting. An additional 30 days may be granted when circumstances clearly warrant the extension.

(iii) The name, title, address, and telephone number of the hearing officer.

(iv) A statement that they should provide the hearing officer and/or bring to the hearing, any evidence supporting their claim.

(v) A statement that if the person (or organization) wants the terminated or reduced assistance maintained at the existing level, the decision to reduce or terminate may be stayed pending appeal if requested by the person (or organization). The appellant will agree to repay any assistance received during the stay for which the appellant is, upon completion of the appeal, determined to have been ineligible.

(vi) When an appeal from a foreclosure action is instituted and includes appeal of corollary matters such as denial of moratorium or interest credits, the letter will include a statement that all matters are merged into a single appeal.

(vii) In acceleration notices, the statement shall read substantially as found in the "Notice of Acceleration" Exhibit C to Subpart A of Part 1955 of this Chapter. The term "hearing" will be used in lieu of "meeting" in the "Notice of Acceleration."

(b) When the person or organization takes the opportunity for a meeting with the decision-making official and the meeting results in a resolution of the problem, the official will send the person or organization a letter within 7 days setting forth the resolution and all of the reasons for it. If the meeting does not result in granting the request or a part of the request the letter will restate the person or organization's right to a hearing, and provide the name, title, address, and telephone number of the hearing officer. The letter will require that such hearing requests be made within 15 days of notification.

(c) If a request is received to stay the decision, the hearing officer, based on the facts and circumstances, will stay the decision. An appropriate case for a stay would be if not to grant the stay would make an appeal useless.

(d) When an appellant appeals a decision and requests a hearing, the appeal will be handled as follows:

(1) Upon the receipt of the request for a hearing, the hearing officer will request the entire file from the decision-making official.

(2) The hearing officer will arrange for a hearing to be held as soon as possible but within 30 calendar days of the receipt of the request for a hearing. The hearing will be held at a location convenient to the appellant, decision-making official and hearing officer. If no such place can be agreed on, the hearing officer will select the location. The hearing officer, after reviewing the file, will return it to the office of the decision-maker so that it will be available to the appellant or representative. If the appellant or the decision-maker for good reason is unable to attend a hearing within the 30 calendar day period, the hearing officer, after considering the circumstances, will reschedule the hearing within 15 days of the original hearing date. The 15 day extension may only be exceeded for verified medical reasons, or other good cause as agreed to by FmHA.

(3) Failure to appear.

(i) If the appellant or appellant's representative, without reasonable cause, fails to appear at the hearing, the appellant's appeal will be deemed to have been concluded.

(ii) If the failure to appear is with reasonable cause and the appellant can demonstrate inability to notify FmHA, the hearing officer will reschedule the hearing at a time convenient to all interested parties, but usually not later

than 15 days after the initially scheduled date.

(e) Cases originating in Samoa, Guam and the Western Pacific Territories and submitted to the Hawaii State Office for a hearing, may be acted upon without a meeting between the appellant and the hearing officer when circumstances due to travel and time involved preclude having such a meeting. In such cases the decision-maker must obtain and mail to the hearing officer the complete FmHA file for the case together with any available documents from the appellant supporting their allegations, and statements from other witnesses who would have appeared at the hearing.

(f) When interest rates change during an appeal involving a loan application, and the decision is reversed or modified, the final rate shall be the one most favorable to the appellant if authorized by statute.

(g) Whenever a preliminary review of the file by the hearing officer clearly indicates that the decision will be reversed, the hearing officer will make that decision, notify all involved parties of the reasons, and cancel the hearing.

§ 1900.57 Hearings.

(a) The hearing will be an informal proceeding at which the appellant will bear the burden of proving the initial decision erroneous. To do so the appellant may provide any information or witnesses the appellant believes should be considered in reaching a proper decision. The appellant may present evidence, witnesses, and arguments in support of appellant's complaint, controvert evidence relied on by FmHA, and question all witnesses. Any evidence may be received by the hearing officer without regard to whether that evidence could be employed in judicial proceedings. A suggested guide for the order of presentation at a hearing is included in Exhibit A to this Subpart.

(b) The decision making official (or successor) or delegate will be at the hearing and will present evidence if necessary. Any other witnesses or FmHA personnel the decision making official thinks necessary to fully determine the matter will be at the hearing to present evidence.

(c) The hearing officer may request additional witnesses to appear or request further information if in the hearing officer's opinion such is necessary to reach a proper decision.

(d) Before the hearing, the appellant or appellant's representative, may examine, and copy at no cost to the appellant, all relevant documents, records, and regulations of FmHA normally releasable under the provisions of the Freedom of Information Act and the Privacy Act.

(e) If any new evidence or reasons for adverse action will be presented by FmHA, it should be provided to the appellant at least 3 working days before the hearing, or sooner when such information becomes known and available to FmHA.

(f) Hearing record:

(1) FmHA will tape record all hearings, but will use the tapes as a back up to support the outline notes as the official record.

(i) The appellant may tape record the proceedings at their own expense or may obtain a copy for the cost of reproduction. FmHA must notify the other party when the taping begins.

(ii) The taking of transcripts is neither required nor prohibited. Either party may arrange to have a transcript of the hearing made at their own expense. When one party has a transcript made the other will make their own arrangements to obtain a copy. Ordinarily FmHA will not have transcripts made. Prior approval of the Administrator is required when transcripts are made or copied for FmHA.

(2) An FmHA employee (not the decision maker) will take notes at the hearing. The hearing officer may take the notes or assign this responsibility to another FmHA employee. Hearing officers will, in the interest of efficient use of agency staff time, give first consideration to taking their own notes.

(3) The notes will *informally reflect* the essential positions, pertinent information presented, and comments made by both parties, *may be in outline form*, and *need not repeat proceedings* verbatim. They will indicate if the appellant arranged for a transcript.

(4) A typed copy of the notes will be provided to the appellant within 15 days of the hearing. The appellant will notify FmHA of any changes the appellant thinks should be made within 7 days of receipt of the copy. This period of time may be extended an additional 7 days by FmHA upon the request of the applicant. The suggested changes will be made part of the record even if not agreed to by FmHA.

(5) File documents and other written materials used in the hearing will be included as part of the FmHA record.

(g) For good cause, the hearing officer on the request of either the appellant or an FmHA official may, at the hearing officer's complete discretion, continue the hearing to a future time.

(h) *The decision of the hearing officer* shall be based on facts presented at the hearing, appropriate FmHA files, applicable statutes and regulations, and the hearing officer's general knowledge of FmHA program functions.

(i) Within 30 days of the hearing, the hearing officer will determine what action to take with regard to the appeal, unless FmHA has ordered a transcript in which case the decision will be made within 15 days of receipt of the transcript. Hearing officers will make their decision in less time when possible.

(j) If the initial decision is reversed, the hearing officer will inform the appellant and original decision making official by letter of the decision, the reason for it, and what action will be taken. The State Director or Acting State Director must sign the letter on County Committee decision reversals regardless of who conducts the hearing for the State Director.

§ 1900.58 Additional appeals.

(a) If the initial decision is upheld or modified but not reversed, the hearing officer will inform the appellant by letter of the decision giving specific reasons, with a copy to the decision making official. The letter must contain the following statement:

"If you wish to have the above decision further reviewed, you may appeal in writing to (*review officer/address*) within 20 calendar days of the date of this letter explaining why you believe the decision is incorrect. Since this review will be based on the record, including papers filed, FmHA files, notes, or transcripts of the appeal meeting, my decision, applicable statutes and regulations, and any *additional written* information you wish to submit, you should include any additional information you think is important and indicate whether you wish to present any information in person. The right to present information in person is limited to a meeting and is not to be construed as another hearing."

(b) If the appellant does not request in writing a review of the hearing officer's decision within the 20 calendar day period provided in the letter, the appeal will be considered concluded.

(c) If the appellant appeals to the review officer:

(1) Upon receipt of the appeal the review officer will request that the hearing officer forward the record to the review officer. The hearing officer will promptly do so.

(2) With prior approval of the Administrator the review officer may obtain a copy of the transcript of the hearing if one was arranged for by the appellant.

(3) If no personal meeting was requested by the appellant, the review officer will review the record on the case and applicable law and regulations, any additional information furnished by the appellant, and such

additional information as the review officer deems necessary and render a decision within 30 calendar days of receipt of the appeal.

(4) If the appellant indicates a desire to present information in person, the review officer will arrange a meeting for the sole purpose of receiving such additional information. The meeting will be held within 15 calendar days of receipt of the appeal and at the offices of the review official. A final decision will be rendered within 20 calendar days after the meeting.

(5) If the decision of the hearing officer is reversed, the appellant will be informed by letter of the decision and what action will be taken. The decision-making official and the hearing officer will also be notified, with the reasons for reversal provided.

(6) If the hearing officer's decision is upheld or modified but not completely reversed, the appellant will be informed of the decision by letter giving the specific reasons for the decision, with a copy each to the decision making official and hearing officer. The letter must contain the following statement:

If you believe the above decision is arbitrary and capricious, that it is lacking any rational, factual, or legal basis, or is contrary to FmHA regulations, you may write the Administrator, FmHA, 14th and Independence Avenue, SW., Washington, D.C. 20250, within 30 days, explaining why. The Administrator's review will be based only on the existing written record. A copy of your letter to the Administrator should be sent to me so that I can expeditiously forward the record to the Administrator.

(d) If a letter appealing the decision of the review officer is not received within 30 days, the appeal will be concluded.

(e) Upon receipt of an appeal from a review officer's decision, the Administrator or a delegate will review the record, which will have been forwarded by the review officer upon receipt of a copy of the letter, and determine whether the decision was arbitrary and capricious or contrary to FmHA regulations. If not, the decision will be upheld and the appellant so notified. If the Administrator or a delegate finds the decision to have been arbitrary and capricious, or contrary to FmHA regulations, the official will determine what action should be taken and notify all affected parties.

§ 1900.59 Effect of appeal decision.

(a) *Effective date.* When an appeal is concluded, the effective date of the action to be taken will be the date of the initial decision from which the appeal was taken. Regulations in effect on the effective date will govern the action unless those requirements would not be authorized under statutory or case law at the time the appeal is concluded. Effective interest rates are covered in § 1900.56(f).

(b) *Legal effect.* When an appeal is concluded the decision will be administratively conclusive. The decision will not, however, be determinative of the legality of the action to be taken.

§ 1900.60 Reporting requirements.

(a) A record will be maintained for all cases appealed. The record will consist of the following:

(1) Form FmHA 1900–2, "Appeal Record." This completed form will follow each appeal through final action.

(2) Copies of decision letters by the hearing officer and/or review officer will be attached to Form FmHA 1900–2.

(3) The hearing outline notes will also be attached to Form FmHA 1900–2.

(b) The original appeal record will be maintained in the applicable case folder.

(c) Copies of the appeal record for cases handled at the State Office level and below will be transmitted to and filed in the State Office where the appropriate information will be assembled for the computer entry. The Management Information Systems Division (MISD) will maintain files on appeals in the National Office and will assemble information for computer entry.

(d) Summary reports listing the number and type of appeals and disposition will be submitted semi-annually to the MISD in the National Office on Form FmHA 1900–1, "Semi-annual Report on Appeals." County and District Offices will submit their report to the State Office by the tenth of April and October. State Offices will prepare consolidated State reports which will be transmitted to the National Office by the twentieth of April and October.

§§ 1900.61–1900.100 [Reserved]

[FmHA Instruction 1900–B]

Exhibit A—Guide to Conducting a Hearing

A. Obtain the FmHA file from the decision-maker and retain the file. After reviewing the file the hearing officer will return it to the decision maker so that it may be available to the appellant or representative.

B. Arrange a hearing within 30 calendar days of receipt of the notice of appeal at a place convenient to the appellant, decision-making official, and hearing officer.

C. Ensure that appellant sees and is able to photocopy the FmHA file if appellant so requests before the hearing.

1. Concern here should be that if the appellant requests an opportunity to see the file that every document (unless privileged) which may be used in making the decision will be made available to the appellant.

2. This is necessary to give the appellant an adequate opportunity to rebut the evidence that might be against the appellant.

D. Be an unbiased presiding officer.

1. The hearing officer is not representing FmHA or the decision-maker, nor is the hearing officer an advocate for the initial decision.

2. The hearing officer should have no preconceived opinions concerning the issues.

3. To preserve this unbiased atmosphere—

a. The hearing should be held someplace other than the hearing officer's office or office of any FmHA official. The latter may not be possible, but an attempt should be made to hold the hearing at a neutral place.

b. The hearing officer should not fraternize with the decision-maker or other FmHA personnel in the presence of the appellant before or after the hearing. This can be accomplished by having the hearing officer seated separate from the others at the hearing.

E. Conduct an informal proceeding.

1. At this informal proceeding the appellant will bear the burden of proving the initial decision erroneous.

2. The hearing officer may receive evidence without regard to whether that evidence could be employed in judicial proceedings.

3. However the hearing must be conducted in a manner to get facts on the record. Therefore, the hearing must deal in facts and not opinions.

4. The hearing officer should keep control over the hearing and not allow any of the participants, including counsel for the appellant or the decision-maker, to unduly attempt to set the tone of the hearing.

5. As a fact-finder, the hearing officer may question any witness, request additional witnesses to appear, and/or request further information if this information is necessary to reach a proper decision. If the hearing officer is going to request additional witnesses, these witnesses should be given adequate notice along with the time and place of the hearing.

F. Order of presentation. The order listed below should be followed:

1. Opening statement by appellant setting forth why original decision was erroneous. This is an outline of how appellant plans to proceed.

2. Opening statement by decision-maker to show why decision is correct.

3. Appellant presents evidence including documents, witnesses, and arguments supporting their position. The decision-maker can be questioned at this time by the appellant. Any witnesses presented by the appellant can be questioned by the decision-maker or other Government representative.

4. Decision-maker or other Government representative then has opportunity to rebut appellant's arguments and/or evidence by presenting evidence including witnesses. Any witnesses may be questioned by appellant.

5. The hearing should be concluded by a summary by both sides.

6. If the appellant has arranged to have a transcript of the hearing made at the appellant's expense, the hearing officer, with the prior approval of the Administrator, may purchase a copy of the transcript.

G. See to it that typed notes of the hearing are forwarded to the appellant for review

within 15 days of the hearing. These notes should be reviewed by the hearing officer before transmittal to the appellant. The appellant has an additional 7 days from receipt of the notes to return them with any suggested changes noted.

H. Make a decision based on the following:

1. Facts presented at the hearing.

2. Appropriate FmHA files.

3. Applicable statutes and regulations.

4. The hearing officer's general knowledge of FmHA program functions.

5. In short, the decision must be based on the record plus the general knowledge of the FmHA program functions.

I. After reaching a decision, the hearing officer must prepare the appropriate letter setting out the decision and forward it to the appellant.

1. This letter must set out *specific* reasons for the decision. The letter must contain more than conclusions. *It also must set forth the facts on which the decision is based.*

2. The decision will be communicated by letter to the appellant within 30 calendar days of the hearing.

a. If the initial decision is reversed, the letter will so inform the appellant and the decision-maker giving the reasons and action to be taken.

b. If the initial decision is upheld or modified, the letter will contain a statement set out in the regulations that the appellant may have the decision reviewed further if the appellant files an appeal within 20 calendar days of the date of the letter.

[FmHA Instruction 1900-B]

Exhibit B—Guide Letter for Notifying Applicants and Borrowers of Adverse Decisions Where the Decision is Appealable

UNITED STATES DEPARTMENT OF AGRICULTURE

Farmers Home Administration

(Washington, D.C. 20250)

(Date) ————

Dear ————:

After careful consideration we were unable to take favorable action on your application/request for Farmers Home Administration services.

(Insert here the adverse decision and all of the *specific* reasons for the adverse action. Non appealable reasons may be entered; however, if all reasons are non appealable, use Exhibit C)

You have a right to appeal this decision and are entitled to a hearing. However, FmHA regulations require that you first meet with (this Office/the County Committee) so that we may explain in greater detail why your request has not been approved. We may also review possible alternatives and any new information you may have. Any new information or evidence supporting your claim should be provided this office or brought with you to the meeting. You may bring a representative. If you wish the services of an attorney and do not have one, we will furnish you with the name and address of the nearest legal services representative and known legal referral assistance. Your request for a meeting must be made within 15 days of this notice.

The hearing officer is (insert name, title, address and telephone number). You must make a hearing request to the hearing officer within 15 days of notification of the results of the meeting with (this office/the County Committee). A 30 day extension of time may be granted, but only when you are unable to meet the 15 day deadline for warranted or unavoidable reasons. Additional evidence to support your claim can be sent to the hearing officer or taken to the hearing.

(When the action involves an applicant or borrower who will receive less assistance than requested or a termination of assistance add the following paragraph):

You may wish to have your present assistance maintained at the current level. At your request we will maintain this level of assistance pending the outcome of your appeal. However any such request carries with it an automatic agreement to repay any reduced or terminated assistance should the FmHA decision be upheld.

The Federal Equal Credit Opportunity Act prohibits creditors from discriminating against credit applicants on the basis of race, color, religion, national origin, sex, marital status, or age (provided that the applicant has the capacity to enter into a binding contract); because all or part of the applicant's income derives from any public assistance program, or because the applicant has in good faith exercised any right under the Consumer Credit Protection Act. The Federal agency that administers compliance with the law concerning this creditor is the Federal Trade Commission, Equal Credit Opportunity, Washington, D.C. 20580.

Very truly yours,

(Decision-maker) ————

[FmHA Instruction 1900-B]

Exhibit C—Guide Letter for Notifying Applicants and Borrowers of Adverse Decisions Where the Decision Is Not Appealable

United States Department of Agriculture

Farmers Home Administration

(Insert Address)

(Date) ————

Dear ————:

After careful consideration we were unable to take favorable action on your application/request for Farmers Home Administration services.

(Insert here all of the *specific* reasons for the adverse action. Examples of non appealable reasons are listed in § 1900.53(a))

If you have any questions about this action, we would like the opportunity to explain in detail why your request has not been approved, explain any possible alternative, or provide any other information you would like. You may bring any additional information you may have and you may bring a representative if you wish. Please call *(telephone number)* for an appointment.

Applicants and borrowers generally have a right to appeal adverse decisions, but certain FmHA decisions are not appealable. We have determined that the decisions(s) made in this case (is/are) not appealable under FmHA regulations. You may, however, write the State Director (insert name and address) for a review of the accuracy of our finding this decision not appealable. (Substitute the appropriate hearing officer's name and address in the event the decision was made by a State Director or National Office Official.)

The Federal Equal Credit Opportunity Act prohibits creditors from discriminating against credit applicants on the basis of race, color, religion, national origin, sex, marital status, or age (provided that the applicant has the capacity to enter into a binding contract), because all or part of the applicant's income derives from any public assistance program, or because the applicant has in good faith exercised any right under the Consumer Credit Protection Act. The Federal agency that administers compliance with the law concerning this creditor is the Federal Trade Commission, Equal Credit Opportunity, Washington, D.C. 20580.

Very truly yours,

(Decision-maker) ————

Appeal Record

1. Enter Last name, First name, and then Middle Initial.
2. Enter street address or RFD number and Box Number.
3. Enter Appellant's Social Security Number.
4. Enter "A" for Applicant and "B" for Borrower.
5. Enter Month, Day and Year numerically.
6. Enter Type of Loan Program involved, such as: OL, FO, EM, EE, S&W, 502, 504.
7. Enter the appropriate Reason or Reasons by code as shown below:
A. Lack of repayment ability.
B. Poor credit history.
C. Management capability.
D. Foreclosure action.
E. Excessive cost.
F. Credit elsewhere.
G. Not recognized as a farmer.
H. Size of farm operation.
I. Inadequate security.
J. (Reserved).
K. Third party eligibility or deficiencies.
L. Not in rural area.
M. Loan/grant ratio.
N. Other.
8. Enter the appropriate reason or reasons by code as shown below—match to the Primary code entered in item 5 by space entry.
1. Insufficient income to pay loan.
2. Excessive debt payments.
3. Credit history one of general slow payment.
4. Credit history one of default.
5. Judgements on record and reasons not excluded in FmHA Instruction 1910-A.
6. Significant legal action pending that would impair security and repayment.
7. Insufficient managerial experience.
8. Experience totally unrelated to loan purpose.
9. Delinquent more than 4 monthly payments.
10. Has been continually delinquent for more than 6 months.
11. FmHA paid real estate taxes.
12. Legal action by other creditors.
13. FmHA payment adjustment plans not carried out.
14. Not primarily serving rural residents.
9. Enter the appropriate codes.
1. District Director.
2. State Director.
3. Area Coordinator.
4. Assistant Administrator.
5. Administrator.
10. Enter the appropriate code: 1. Upheld; 2. Overruled; 3. Modified.
11. Enter the month, day and year numerically.

This document has been reviewed in accordance with FmHA Instruction 1901-G, "Environmental Impact Statements." It is the determination of FmHA that the proposed action does not constitute a major Federal action significantly affecting the quality of the human environment and, in accordance with the National Environmental Policy Act of 1969, Pub. L. 91-190 an Environmental Impact Statement is not required.

Dated: January 6, 1981.

Gordon Cavanaugh,

Administrator, Farmers Home Administration.

BILLING CODE 3410-07-M

Food Safety and Quality Service

7 CFR Part 2852

United States Standards for Grades of Frozen Brussels Sprouts [1]

AGENCY: Food Safety and Quality Service, USDA.

ACTION: Final rule.

SUMMARY: The purpose of this rule is to revise the voluntary U.S. grade standards for frozen Brussels sprouts. The final rule was developed by the U.S. Department of Agriculture at the request of the frozen vegetable industry. This rule (1) revises the present grade standard to permit more variation in the trim of units, (2) converts the current variables (score points) standard to an attributes type standard, and (3) replaces dual grade nomenclature with single letter designations. Its effect will be to improve the standards, and promote orderly and efficient marketing.

EFFECTIVE DATE: February 17, 1981.

FOR FURTHER INFORMATION CONTACT: Mr. Melvin J. Horst, Processed Products Branch, Fruit and Vegetable Quality Division, Food Safety and Quality Service, U.S. Department of Agriculture, Washington, D.C. 20250, (202) 447-6194. The Final Impact Statement describing the options considered in developing this final rule and the impact of implementing each option is available on request from the above named individual.

SUPPLEMENTARY INFORMATION:

Significance

This final rule has been reviewed under USDA procedures established in Secretary's Memorandum 1955 to implement Executive Order 12044, and has been classified "not significant".

[1] Compliance with the provisions of these standards shall not excuse failure to comply with the provisions of the Federal Food, Drug, and Cosmetic Act, or with applicable State laws and regulations.

Background

The current voluntary grading standards for frozen Brussels sprouts have been in effect since May 11, 1951. At the time these standards were developed, nearly all Brussels sprouts were harvested by hand and transported to the processing plant in burlap bags, baskets or wooden boxes. At the processing plant, the sprouts were hand sorted and trimmed. The sprouts were expected to be cut neatly at or near the point of attachment to the outer leaves. Therefore, reflecting marketing practices prevalent when they were developed, the current grade standards require that any unit (sprout) not smoothly trimmed at the point of attachment be scored as a "defect".

California is the source of nearly all of the commercial crop of Brussels sprouts produced for processing. In 1979, approximately 61,353,000 pounds of frozen Brussels sprouts were packed in the United States.

During the 1960's, machinery became available to harvest and trim Brussels sprouts. By 1966, according to unofficial estimates, approximately 50 percent of the California Brussels sprouts crop was harvested by machine. The use of machines, such as the mechanical trimmer, has become commonplace in the typical Brussels sprouts processing plant. Due to the effects of mechanical harvesting and processing, sprouts often vary in size and shap. Although product can be processed more efficiently using machinery than by hand, the sprouts will more often show the effects of machine trimming. For example, the butt end might have a more ragged or slanted cut and the head end might show a cut edge exposing the underlying head material. In addition more of the tender leaf material, cut from the outer portion of the sprout head, is now more likely to appear in the finished product. These trimming conditions are "cosmetic" and do not affect the eating quality or nutritional value of the finished food.

This revision of the voluntary grading standards for Brussels sprouts changes the quality requirement of the product with respect to appearance by permitting more variation in the trim of the units, allowing conformity to the present day industry practice of using mechanical trimmers.

The current grade standards for frozen Brussels sprouts specifies a numerical scoring system (0 to 100 points) for assigning a quality grade to the product. When the total score is not less than 90 points, a Grade "A" or "Fancy" quality grade is assigned. When the total score is 80 to 89 points, a Grade "B" or "Extra Standard" quality grade is

assigned. When the total score is 70 to 79 points, a Grade "C" or "Standard" quality grade is assigned. Frozen Brussels sprouts which have a total score of less than 70 points are given a "Substandard" quality rating.

This action also changes the procedure for assigning a quality grade and eliminates the numerical scoring system. The new system for determining whether the product quality meets or fails to meet a designated grade level is called "attributes sampling." Under this new system, the quality of the product would be compared with the minimum quality permitted in the intended or designated grade. If the quality is as good as, or better than, the minimum quality permitted, the product would be assigned that grade. If the quality of the product is not as good as the minimum quality permitted, the product could not be assigned that grade. However, it could be assigned a lower grade.

The existing grade standards for frozen brussels sprouts provide two names for each quality grade level. Currently, "Grade A" and "Fancy" are used to describe the highest quality grade level; "Grade B" and "Extra Standard" are the intermediate quality grade level; and "Grade C" and "Standard" are the lowest quality grade level acceptable in the marketplace. This action changes the grade names by deleting the terms "Fancy," "Extra Standard," and "Standard" and retains only the single letter grades of "Grade A," "Grade B," and "Grade C," preferred by consumers.

Comments

The proposed rule to revise the voluntary grading standards for frozen brussels sprouts was published in the Federal Register on January 4, 1980 (45 FR 1046–1049). One comment was received from the American Frozen Food Institute fully endorsing the proposed rule with suggestions for minor editorial changes for the purpose of clarity. Several editorial changes have been made in the final publication to enable better reader understanding.

Options Considered

The Department considered three options in preparing this final rule.

Option I—Revision of the U.S. Standards for Grades of Frozen Brussels Sprouts (Attributes type). The U.S. Standards would be revised to permit more variation in the trim of units; convert the current variables (score points) standard to an attributes type standard; and replace the dual grade nomenclature with single letter designations.

Option II—Revision of the U.S. Standards for Grades of Frozen Brussels Sprouts (Variables type). The U.S. Standards would be revised to permit more variation in the trim of units; and replace the dual grade nomenclature with single letter designations.

Option III—Continue the currently effective U.S. Standards for Grades of Frozen Brussels Sprouts. The frozen vegetable industry would be denied a change in the standards. No action would be taken to adjust the standards to comply with USDA policy or consumer preferences. Options II and III were rejected as they would not promote the orderly marketing of frozen Brussels sprouts and would fail to utilize the procedure which is currently available to improve the U.S. standards.

Thus, after review of the comments and in order to promote the orderly marketing of brussels sprouts, USDA hereby revises the U.S. grades for Brussels sprouts to (1) permit more variation in the trim of units allowing conformity with the present industry practice of using mechanical trimmers, (2) convert to attributes type standards; and (3) replace dual grade nomenclature with single letter designations.

In consideration of the foregoing, Subpart—United States Standards for brussels sprouts (7 CFR 2852.651 through 2852.659) are hereby revised to read as follows, and the Table of Contents is revised accordingly:

Subpart—United States Standards for Grades of Frozen Brussels Sprouts

Sec.

2852.651 Product description.
2852.652 Definitions of terms.
2852.653 Recommended sample unit size.
2852.654 Grades.
2852.655 Factors of quality.
2852.656 Classification of defects.
2852.657 Tolerances for defects.
2852.658 Sample size.
2852.659 Quality requirements.

Subpart—United States Standards for Grades of Frozen Brussels Sprouts

§ 2852.651 Product description.

Frozen Brussels sprouts means the frozen product prepared from the clean, sound succulent heads of the Brussels sprouts plant (*Brassica oleracea L. var. gemmifera*) by trimming, washing, blanching, and properly draining. The product is frozen in accordance with good commercial practice and maintained at temperatures necessary for its preservation.

§ 2852.652 Definitions of terms.

(a) *Acceptable Quality Level (AQL)* means the maximum percent of defective units or the maximum number of defects per hundred units of product that, for the purpose of acceptance sampling, can be considered satisfactory as a process average.

(b) *Blemished* means a unit affected by surface or internal discoloration, pathological injury, insect injury, or by other means to the extent that the appearance or eating quality is affected:

(1) Slightly;

(2) Materially; or

(3) Seriously.

(c) *Character.* (1) *Good character* means the individual heads are well formed, compact or very compact, and reasonably firm.

(2) *Reasonably good character* means the individual heads are reasonably well formed, reasonably compact, and fairly firm.

(3) *Fairly good character* means the individual heads are fairly well formed.

(4) *Poor character* means the individual heads fail the requirements for fairly good character.

(d) *Color (individual units).* (1) *Well colored* means the individual units have a color ranging from a distinct dark green to a lighter predominating characteristic green color with a definite yellow cast.

(2) *Fairly well colored* means the individual units have a predominating characteristic yellow color with or without slight tinges of green color.

(e) *Defect (or defective)* means any nonconformance of a unit(s) of product from a specified requirement of a single characteristic.

(f) *Extraneous vegetable material* means harmless vegetable substances other than from Brussels sprouts.

(g) *Flavor and odor. "Normal flavor and odor"* means that the product, after cooking, is free from objectionable flavors or odors of any kind.

(h) *Loose leaves and loose small pieces* means Brussels sprouts leaves, pieces of leaves or small pieces of edible stalk or stems not attached to a unit.

(i) *Sample unit* means the amount of product specified to be used for grading. It may be: (1) The entire contents of a container;

(2) A portion of the contents of a container;

(3) A combination of the contents of two or more containers; or

(4) A portion of unpacked product.

(j) *Trim.* (1) *Well trimmed* means the appearance of the unit is not materially affected by mechanical damage or by cutting into the head or by cutting of the stalk or stem.

(2) *Poorly trimmed* means the appearance of the unit is materially affected by mechanical damage or by excessive cutting into the head, or by insufficient cutting of the stalk or stem.

(k) *Unit* means a Brussels sprout or portion thereof other than loose leaves and loose small pieces.

§ 2852.653 Recommended sample unit size.

Meeting the requirements for factors of quality is based on a sample unit size of 50 units.

§ 2852.654 Grades.

(a) *U.S. Grade A* is the quality of frozen Brussels sprouts that: (1) Meets the following prerequisites in which the sprouts: (i) Have similar varietal characteristics;

(ii) Have a normal flavor and odor;

(iii) Have a good overall brightness;

(iv) Are free from grit or silt that affect the appearance or eating quality; and

(v) Have loose leaves and loose small pieces that may slightly affect the appearance or eating quality.

(2) Is within the limits for defects as classified in Tables I and II and specified in Tables III and IV, as applicable.

(b) *U.S. Grade B* is the quality of frozen Brussels sprouts that:

(1) Meets the following prerequisites in which the sprouts: (i) Have similar varietal characteristics;

(ii) Have a normal flavor and odor;

(iii) Have a reasonably good overall brightness;

(iv) Are free from grit or silt that affect the appearance or eating quality; and

(v) Have loose leaves and loose small pieces that may materially affect the appearance or eating quality.

(2) Is within the limits for defects as classified in Tables I and II and specified in Tables III and IV, as applicable.

(c) *U.S. Grade C* is the quality of frozen Brussels sprouts that: (1) Meets the following prerequisites in which the sprouts: (i) Have similar varietal characteristics;

(ii) Have a normal flavor and odor;

(iii) Have a fairly good overall brightness;

(iv) Have no more than a slight trace of grit or silt; and

(v) Have loose leaves and loose small pieces that may seriously affect the appearance or eating quality.

(2) Is within the limits for defects as classified in Tables I and II and specified in Tables III and IV, as applicable.

(d) *Substandard* is the quality of frozen Brussels sprouts that fails to meet the requirements of *U.S. Grade C.*

§ 2852.655 Factors of quality.

The grade of frozen Brussels sprouts is based on meeting the requirements for the following quality factors: (a) *Prerequisite quality factors:*

(1) Varietal characteristics;

(2) Flavor and odor;

(3) Brightness;

(4) Grit or silt; and

(5) Loose leaves and loose small pieces.

(b) *Classified quality factors:*

(1) Individual unit color (in U.S. Grades A and B only);

(2) Blemish;

(3) Trim;

(4) Extraneous vegetable material; and

(5) Character.

§ 2852.656 Classification of defects.

All defects, other than character defects, are classified as minor, major, severe, or critical. All character defects are classified as reasonably good, fairly good, or poor. Each "X" in Tables I and II represents "one (1) defect."

Table I.—*Classification of Defects (Other Than Character)*

Quality factor	Defects	Classification			
		Minor	Major	Severe	Critical
Individual unit color	Fairly well colored in U.S. Grades A and B only (each unit).		X		
Blemished	Slightly (each unit)	X			
	Materially (each unit)		X		
	Seriously (each unit)			X	
Trim	Poor (each unit)		X		
Extraneous vegetable material	Each piece				X

Table II.—*Classification of Character Defects*

Quality factor	Defects	Reasonably good	Fairly good	Poor
Character	"B" (each unit)	X		
	"C" (each unit)		X	
	"Substandard" (each unit)			X

§ 2852.657 Tolerances for defects.

Table III.—*All Classified Defects Except Character*

	Total [1]	Major	Severe	Critical
	Grade A			
AQL [2]	20.0	12.5	4.0	0.15
	Grade B			
AQL [2]	40.0	33.0	8.5	1.5
	Grade C			
AQL [2]	50.0	33.0	10.0	2.5

[1] AQL expressed as defects per hundred units.
[2] Total = Minor + Major + Severe + Critical.

Table IV.—*Classified Defects for Character Only*

	Grade					
	A			B		C
	Total [1]	Fairly good	Poor	Total [1]	Poor	Poor
AQL [2]	15.0	5.0	1.5	40.0	8.5	40.0

[1] AQL expressed as percent defective.
[2] Total = Reasonably Good + Fairly Good + Poor.
[3] Total = Fairly Good + Poor.

§ 2852.658 Sample size.

The sample size to determine meeting the requirements of these standards shall be as specified in the sampling plans and procedures in the "Regulations Governing Inspection and Certification of Processed Fruits and Vegetables, Processed Products Thereof, and Certain Other Processed Food Products" (7 CFR 2852.1–2852.83), for lot grading and on-line grading, as applicable.

§ 2852.659 Quality requirements.

(a) *Lot grading.* A lot of frozen Brussels sprouts is considered as meeting the requirements for quality if:

(1) The prerequisite requirements specified in § 2852.654 are met; and

(2) The Acceptable Quality Levels (AQL) in Tables III and IV, as applicable, are not exceeded.

(b) *On-line grading.* A portion of production is considered as meeting the requirements for quality if:

(1) The prerequisite requirements specified in § 2852.654 are met; and

(2) The Acceptable Quality Levels (AQL) in Tables III and IV, as applicable, are not exceeded.

(c) *Single sample unit.* Each single sample unit submitted for quality evaluation will be treated individually

and is considered as meeting the requirements for quality if:

(1) The prerequisite requirements specified in § 2852.654 are met; and

(2) The Acceptable Quality Levels (AQL) in Tables III and IV, as applicable, are not exceeded.

(Agricultural Marketing Act of 1946, Secs. 203, 205, 60 Stat. 1087, as amended, 1090, as amended (7 U.S.C. 1622, 1624))

Done at Washington, DC, on: January 12, 1981.

Donald L. Houston,

Administrator, Food Safety and Quality Service.

BILLING CODE 3410-DM-M

DEPARTMENT OF ENERGY

Economic Regulatory Administration

10 CFR Part 212

[Docket No. ERA-R-80-26]

Maximum Lawful Selling Price for Unleaded Gasoline

AGENCY: Economic Regulatory Administration, DOE.

ACTION: Final rule.

SUMMARY: The Economic Regulatory Administration (ERA) of the Department of Energy (DOE) hereby adopts two amendments to its gasoline price rules. The first amendment adopted includes the unleaded gasoline production incentive in the "B" factor rather than in the "H" factor to make clear that the increased cost passthrough computed under the incentive may be "banked" and to specify its sequence of recoupment. Second, DOE clarifies that new grades of unleaded gasoline may be treated as separate product categories.

EFFECTIVE DATE: January 9, 1981.

FOR FURTHER INFORMATION CONTACT:

William Webb (Office of Public Information), Economic Regulatory Administration, Room B-110, 2000 M Street, NW., Washington, D.C. 20461, (202) 653-4055.

Chuck Boehl (Office of Regulatory Policy), Economic Regulatory Administration, Room 7116, 2000 M Street, NW., Washington, D.C. 20461, (202) 653-4290.

William Mayo Lee or William Funk (Office of General Counsel), Department of Energy, Room 6A-127, 1000 Independence Avenue, SW., Washington, D.C. 20585, (202) 252-6754 or 252-6736.

SUPPLEMENTARY INFORMATION:

I. Background
II. Summary of Comments
III. Discussion
IV. Amendment
V. Procedural Requirements

I. Background

On August 15, 1980, DOE issued a notice of proposed rulemaking (45 FR 54694) proposing several changes to the price rules for unleaded gasoline. Specifically DOE proposed: (1) That all firms be permitted the option of imputing a May 15, 1973 selling price for unleaded gasoline; (2) several alternative methods of imputing the May 15, 1973 selling price for all grades of unleaded gasoline; (3) that all new grades of unleaded gasoline be considered separate product categories; and (4) that the unleaded gasoline production incentive be included in the "A" factor.

Generally, under the current price regulations the maximum lawful price refiners may charge for unleaded gasoline is the May 15, 1973 selling price of unleaded gasoline plus increased product and non-product costs. In addition, refiners are permitted to recoup additional increased costs on gasoline pursuant to the unleaded gasoline production incentive in § 212.83(j).

If a refiner did not sell unleaded gasoline on May 15, 1973, or 30 days prior thereto, the maximum lawful selling price for unleaded gasoline is calculated using an imputed May 15, 1973 selling price determined pursuant to § 212.112(b)(1). This imputed selling price is the weighted average selling price charged for leaded gasoline on May 15, 1973, of the same or nearest octane as the unleaded gasoline currently sold, plus one cent. The additional one cent is intended to reflect the additional cost associated with producing unleaded gasoline.

Pursuant to § 212.83(c)(1)(i)(B) refiners may designate different types and grades of gasoline as separate categories within the product category gasoline, provided such types and grades have consistently and historically been designated as such by the refiner and not disapproved by the DOE. In some instances, DOE has not disallowed refiners treating new grades of unleaded gasoline as separate product categories.

Finally, refiners are permitted to increase the amount of costs which may be passed through in gasoline price increases to reflect increased production of unleaded gasoline (44 FR 69594, December 3, 1979). The increased costs are permitted refiners which produce more unleaded gasoline than the national average or than they refined in the corresponding month in 1978.

II. Summary of Comments

Approximately 13 interested parties testified at a public hearing held in Washington, D.C. on September 24, 1980, and approximately 26 firms submitted written comments regarding the proposals.

The majority of the parties commenting were refiners. While they generally supported the thrust of DOE's proposals, there was considerable disagreement on the appropriate methods to impute a standard base price for both minimum octane and higher grades of unleaded gasoline. Also there were suggestions that no changes in the present system be made since decontrol will occur no later than September 30, 1981.

With respect to the various proposals for changing the method of imputing the May 15, 1973 selling prices, most refiners agreed that none of the proposals adequately reflected the increased costs associated with producing unleaded gasoline. Some refiners stated that it would be impossible to determine the per octane cost for producing higher grades of unleaded gasoline. Several commenters stated that in establishing prices often there is only an indirect relationship between the cost of producing a product and its selling price.

Most of the refiners that impute a May 15, 1973 unleaded gasoline selling price with reference to the May 15, 1973 selling price of a sub-regular grade of gasoline supported using an imputed selling price of regular leaded gasoline instead of the actual selling price of the sub-regular grade of leaded gasoline plus one cent to determine the May 15, 1973 unleaded selling price.

Commenters favored permitting refiners which sold unleaded on May 15, 1973, to have the option of imputing a May 15, 1973 selling price for unleaded gasoline. Most refiners opposed amending the rules to require all refiners which sold unleaded gasoline in May 1973 to impute unleaded base selling prices.

Commenters supported the proposal to eliminate the requirement that DOE approval be obtained before new grades of unleaded gasoline may be treated as separate product categories.

Many refiners supported removing the unleaded production incentive from the "H" factor. However, most commenters suggested it be included in the "B" factor to remove any confusion over the relationship between the production incentive and the gasoline "tilt" provision contained in the "A" factor.

III. Discussion

The amount of increased costs that refiners may assign to gasoline has increased because of the "tilt" and the unleaded gasoline production incentive rules. Moreover, during 1980, most refiners were unable to recover a significant amount of increased costs attributable to gasoline. It appears that cumulative gasoline banks are now approaching $30 billion.

The elimination of the equal application rule grants refiners greater pricing flexibility by permitting them to recoup increased costs allocated to gasoline as they deem appropriate. A refiner's aggregate price increases will be compared to total increased costs to determine compliance with the price rules. In other words, the primary limitation on a refiner's allowable gasoline price increases above the May 15, 1973, selling price is that the total increased costs allocated to gasoline for passthrough may not be exceeded.[1]

DOE believes that the current level of refiner "banks" and the pricing flexibility permitted refiners by elimination of the equal application rule will insure that refiners have an incentive to produce sufficient quantities of unleaded gasoline. Therefore, DOE does not believe that additional price relief is necessary at this time. Currently, refiners may allocate increased costs to meet competitive factors. Accordingly, DOE is terminating this rulemaking with respect to all the proposals concerning the provisions for imputing a May 15, 1973, selling price for unleaded gasoline.

IV. Amendments

The elimination of the equal application rule (45 FR 72626, November 3, 1980) permits refiners to allocate increased costs to determine maximum lawful selling prices of gasoline as refiners deem appropriate. Accordingly, refiners may allocate increased costs *within* their historical categories of gasoline at their discretion. Consequently, the limitations in the provision in § 212.83(c)(1)(i)(B) regarding separate categories of gasoline within the gasoline product categories are meaningless with respect to the allocation of increased costs to determine maximum lawful selling prices and, therefore, are being deleted. Refiners may allocate increased costs to all types and grades of gasoline, regardless of when they were first produced, as the refiner deems appropriate.

The other amendment DOE is adopting today is technical in nature. DOE is deleting the unleaded production incentive from the "H" factor and including it in the "B" factor.

The purpose of the amendment is to clarify that recouped costs derived from the incentive may be "banked" and to specify their exact order of recoupment. By removing the incentive from the "H" factor any ambiguities regarding "banks" and sequence of recoupment are eliminated. The production incentive is included in the "B" factor rather than the "A" factor to remove any confusion regarding the treatment of the production incentive and the "tilt" rule.

V. Procedural Requirements

A. FERC Review

Under Section 404(a) of the Department of Energy Organization Act, Pub. L. 95-91 (DOE Act), the proposed rule was referred to the Federal Energy Regulatory Commission (FERC) for a determination as to whether it may significantly affect any functions within the jurisdiction of the FERC under Section 402 (a)(1), (b), and (c)(1) of the DOE Act. The FERC has declined to make such a determination.

B. NEPA Review

Under DOE's Proposed Guidelines for Compliance with the National Environmental Policy Act (44 FR 42136, July 18, 1978) the DOE has determined that the adoption of this rule is not a major federal action significantly affecting the quality of the environment. Thus the preparation of an environmental impact statement is not required.

C. Effective Date

The provisions of 5 U.S.C. section 553(d) generally require that only substantive rules may not be made effective less than 30 days following publication of the rule. In this instance, the rule is not substantive in nature, so DOE is making the rule effective the day it is issued.

L. 95-91; Energy Policy and Conservation Act, 42 U.S.C. § 6201 *et seq.*, Pub. L. 94-163, as amended, Pub. L. 94-385, Pub. L. 95-70, Pub. L. 95-619, and Pub. L. 96-30; Department of Energy Organization Act, 42 U.S.C. 7101 *et seq.*, Pub. L. 95-91, Pub. L. 95-509, Pub. L. 95-619, Pub. L. 95-620, and Pub. L. 95-621; E.O. 11790, 39 FR 23185; E.O. 12009, 42 FR 46267)

In consideration of the foregoing, Part 212, Chapter II of Title 10 of the Code of Federal Regulations is amended as set forth below effective the date this rule is issued.

Issued in Washington, D.C., January 9, 1981.

Hazel R. Rollins,

Administrator, Economic Regulatory Administration.

1. Section 212.83(c)(1)(i)(B) is revised to read as follows:

§ 212.83 Price rule.

* * * * *

(c) *Allocation of increased costs.*

* * *

(1) *Allocation of increased costs incurred in the period "t"—*

(i) * * *

* * * * *

(B) Notwithstanding any other provision of this subpart, for purposes of this section, a refiner may designate as categories within the product gasoline different types (unleaded gasoline as differentiated from leaded gasoline) and grades (differentiated by octane number), if the categories so designated by the refiner represent discrete gasoline types and grades. In apportioning the total amount of increased costs allocable to gasoline among categories of gasoline, a refiner may apportion amounts of increased costs to a particular category of gasoline in whatever amounts it deems appropriate.

* * * * *

2. Section 212.83(c)(2)(iii)(C) *The "B" factor* is revised in the definition of "B_i^T" to read as follows:

§ 212.83 Price rule.

* * * * *

(c) *Allocation of increased costs.* * * *

(2) *Formulae.* * * *

(iii) *Definitions.* * * *

(C) *The "B" factor.*

* * * * *

"B_i^T" is the total increased cost of the specific covered product or products of the type "i" purchased or landed in the period "t," provided such cost is not included in computing "A_i." The cost of a specific covered product or products of the type "i" shall include the cost of a product or products not of the type "i" which was a covered product as of May 31, 1976 and is purchased and defined or blended, that is attributable to the production of the covered product or products of the type "i." Beginning December 1, 1979, with respect to category "i" = 3, the cost of gasoline

[1] Section 212.83(c)(1)(C) prohibits refiners from charging in retail sales at a retail outlet more than 17.7 cents per gallon over the price charged by the refiner in its nearest DTW price to an independent retailer.

shall include materials and compounds, including catalyst, alcohol, and process chemicals, that are purchased and refined or blended and are attributable to the production of gasoline. The cost and quantity of covered products purchased or landed that are consumed as refinery fuel shall be excluded from this amount. Effective January 9, 1981, "B_i^T" shall include the unleaded gasoline production incentive found in § 212.83(j).

Where: cl^o = The total cost of a covered product or products of the type "i" purchased or landed in the period "o".

cl^T = The total cost of a covered product or products of the type "i" purchased or landed in the period "t".

ql^o = The total quantity or volume of a covered product or products of the type "i" purchased or landed in the period "o".

ql^T = The total quantity or volume of a covered product of the type "i" purchased or landed in the period "t".

Y_i = The lowest price at or above [below] which at least 10 percent of the product or products of type "i" were priced in transactions during the month of May 1973, or, if no transactions occurred in that month, the month next preceding May 1973 in which such transactions occurred.

* * * * *

3. Section 212.83(c)(2)(iii)(G) The "H" factor is revised to read as follows:

§ 212.83 Price rule.

* * * * *

(c) *Allocation of increased costs.* * * *

(2) *Formulae.* * * *

(iii) *Definitions.* * * *

(G) *The "H" Factor.*

"H_i^u" = For i=1, i=2, and i=4, the portion, if any, of the total dollar amount available in the period "u" for inclusion in price adjustments to the product of the type "i" that pursuant to paragraphs (d) or (e) of this section the refiner elects to include in prices of gasoline for the period "u" (in which case "H_i^w" shall be subtracted); for "i"=3, the portion, if any, of the total dollar amount available in the period "u" for inclusion in price adjustments to No. 2 oils, aviation jet fuel, or general refinery products that pursuant to paragraphs (d) or (e) of this section the refiner elects to include in the price of gasoline for the period "u" (in which case "H_i^w" shall be added).

* * * * *

BILLING CODE 6450-01-M

FEDERAL TRADE COMMISSION

16 CFR Part 305

Rules for Using Energy Cost and Consumption Information Used in Labeling and Advertising for Consumer Appliances Under the Energy Policy and Conservation Act; Technical Correction to Ranges of Comparability

AGENCY: Federal Trade Commission.

ACTION: Technical corrections to final rule and comparability ranges.

SUMMARY: On November 19, 1979, the Federal Trade Commission issued a final rule that requires the disclosure of energy efficiency information for the following categories of appliances: refrigerators and refrigerator-freezers, freezers, dishwashers, clothes washers, water heaters, room air conditioners and furnaces. Section 305.8 of the rule requires affected members of the appliance industry to submit to the Commission information relating to the energy cost or energy efficiency rating of covered appliances. Using this information, the Commission published [1] the ranges of energy cost or energy efficiency ratings for the appliances covered by the rule. This information was to be used by the industry to prepare required labels and fact sheets.

After publication of the ranges, the Commission discovered certain technical errors, and published corrections on March 25, 1980. The Commission found that the information published on March 25 contained errors in the furnace ranges that were not ascertainable prior to publication, and published corrections on April 17, 1980.

The Commission has found that the refrigerator and refrigerator-freezer ranges published on April 17 also contain errors. This notice corrects those errors.

A provision in section 326(c) of the Energy Policy and Conservation Act prohibits the Commission from requiring that labels be changed to reflect revised tables of ranges more often than annually. Consequently, any changes made to required labels in response to this notice would be purely voluntary.

EFFECTIVE DATE: These corrections are effective on January 16, 1981.

FOR FURTHER INFORMATION CONTACT: James Mills, 202–724–1491 or Lucerne D. Winfrey, 202–724–1453, Attorneys, Federal Trade Commission, 414 11th Street NW., Washington, D.C. 20580.

[1] 45 FR 13998, March 3, 1980.

SUPPLEMENTARY INFORMATION: The Commission published the final rule on November 19, 1979 (44 FR 66466). Information respecting the annual ranges of comparability was published in the **Federal Register** on Monday, March 3, 1980 (45 FR 13998), Tuesday, March 25, 1980 (45 FR 19520) and on Thursday, April 17, 1980 (45 FR 26036). The published ranges are applicable to refrigerators and refrigerator-freezers, freezers, dishwashers, clothes washers, water heaters, room air conditioners and furnaces. Appendix A1- Refrigerators, and Appendix A2- Refrigerator-freezers have been corrected so that the ranges of comparability for these products now more accurately reflect all of the information submitted by industry members prior to the submission deadline of January 21, 1980.

A1.—*Refrigerators*

Manufacturer's rated total refrigerated volume in cubic feet	Ranges of estimated yearly energy costs, electricity	
	Low	High
Less than 2.5	$18	$25
2.5 to 4.4	20	31
4.5 to 6.4	22	31
6.5 to 8.4	22	23
8.5 to 10.4	22	35
10.5 to 12.4	24	37
12.5 to 14.4	28	41
14.5 to 16.4	(1)	(1)
16.5 and over	58	59

[1] No data submitted.

A2.—*Refrigerators-Freezers*

Manufacturer's rated total refrigerated volume in cubic feet	Ranges of estimated yearly energy costs, electricity	
	Low	High
Less than 10.5	$27	$38
10.5 to 12.4	31	60
12.5 to 14.4	31	69

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

18 CFR Part 282

[Docket No. RM81-9]

Rule Adopting Revised Alternative Fuel Price Ceilings for the State of Kentucky; Public Hearing

Issued January 12, 1981.

AGENCY: Federal Energy Regulatory Commission.

ACTION: Notice of public hearing.

SUMMARY: On December 24, 1980, the Federal Energy Regulatory Commission (Commission) issued an Interim Rule (46 Fed. Reg. 2036) in Docket No. RM81-9 revising the alternative fuel price ceilings for the State of Kentucky under the Natural Gas Policy Act of 1978. The Commission has received a request for a public hearing in Docket No. SA81-9 wherein interested persons would have the opportunity to make oral presentations of their views on the interim rule. Pursuant to this request, the Commission has scheduled a public hearing to be held on January 19, 1981, at the Federal Energy Regulatory Commission, 825 North Capitol Street, N.E., Washington, D.C. 20426, Hearing Room A.

DATES: The public hearing will be held on January 19, 1981, 10:00 a.m.

ADDRESSES: The public hearing will be held at: Hearing Room A, Federal Energy Regulatory Commission, 825 North Capitol Street, N.E., Washington, D.C. 20426.

FOR FURTHER INFORMATION CONTACT:

Sandra Delude, Federal Energy Regulatory Commission, 825 North Capitol Street, N.E., Washington, D.C. 20426, (202) 357-9095

Alice Fernandez, Federal Energy Regulatory Commission, 825 North Capitol Street, N.E., Washington, D.C. 20426, (202) 357-9095

Kenneth F. Plumb,

Secretary.

BILLING CODE 6450-85-M

DEPARTMENT OF LABOR

Employment and Training Administration

20 CFR Part 656

Labor Certification Process for the Permanent Employment of Aliens in the United States; Correction

AGENCY: Employment and Training Administration, Labor.

ACTION: Final rule; correction.

SUMMARY: This document corrects an error in a final rule on the permanent alien labor certification process, published December 19, 1980 (45 FR 83926).

FOR FURTHER INFORMATION CONTACT: Mr. Aaron Bodin, Division of Labor Certifications. Telephone: 202-376-6295.

SUPPLEMENTARY INFORMATION: This document corrects an error contained in the final rule on the permanent alien labor cretification process, published at 45 FR 83926 (December 19, 1980). In the final rule, the word "shall" in the introductory language to 20 CFR 656.21(b) was changed incorrectly to the word "may". See 45 FR 83939.

Accordingly, the Employment and Training Administration is correcting the introductory language to 20 CFR 656.21(b) to read as follows:

§ 656.21 Basic labor certification process.

* * * * *

(b) Except for labor certification applications involving occupations designated for special handling (see § 656.21a) and *Schedule A* occupations (see §§ 656.10 and 656.22), the employer shall submit as a part of every labor certification application, on the *Application for Alien Employment Certification* form or in attachments, as appropriate, the following clear documentation:

* * * * *

Signed in Washington, D. C., this 9th day of January, 1981.

Ernest G. Green,

Assistant Secretary for Employment and Training.

BILLING CODE 4510-30-M

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

21 CFR Part 178

[Docket No. 80F-0164]

Indirect Food Additives: Adjuvants, Production Aids, and Sanitizers; 4-[[4,6-Bis(Octylthio)-S-Triazin-2-yl]amino]-2,6-di-Tert-Butylphenol

AGENCY: Food and Drug Administration.

ACTION: Final rule.

SUMMARY: The Food and Drug Administration (FDA) is amending the food additive regulations to provide for the safe use of 4-[[4,6-bis(Octylthio)-*s*-triazin-2-yl]amino]-2,6-di-*tert*-butylphenol as an antioxidant and thermal stabilizer for styrene block copolymers, polystyrene, and rubber-modified polystyrene polymers. Ciba-Geigy Corp. petitioned for this use.

DATES: Effective January 16, 1981; objections by February 17, 1981.

ADDRESS: Written objections to the Hearing Clerk (HFA-305), Food and Drug Administration, Rm. 4-62, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: Mary W. Lipien, Bureau of Foods (HFF-334), Food and Drug Administration, 200 C St. SW., Washington, D.C. 20204, 202-472-5740.

SUPPLEMENTARY INFORMATION: FDA issued a notice in the Federal Register of June 10, 1980 (45 FR 39340) announcing that a food additive petition (FAP OB3509) had been filed by Ciba-Geigy Corp., Ardsley, NY 10502, proposing that § 178.2010 *Antioxidants and/or stabilizers for polymers* (21 CFR 178.2010) be amended to provide for the safe use of 4-[[4,6-bis(Octylthio)-*s*-triazin-2-yl]amino]-2,6-di-*tert*-butylphenol as an antioxidant and thermal stabilizer for styrene block copolymers complying with § 177.1810 (21 CFR 177.1810) and polystyrene and rubber-modified polystyrene polymers complying with § 177.1640 (21 CFR 177.1640).

FDA has evaluated data in the petition and other relevant material and concludes that § 178.2010 should be amended as set forth below to include the petitioned additive.

Therefore, under the Federal Food, Drug, and Cosmetic Act (secs. 201(s) and 409, 72 Stat. 1784–1788 as amended (21 U.S.C. 321(s) and 348)) and under authority delegated to the Commissioner of Food and Drugs (21 CFR 5.1), Part 178 is amended in § 178.2010(b) by inserting a new entry alphabetically in the table, to read as follows:

§ 178.2010 Antioxidants and/or stabilizers for polymers.

* * * * *

(b) * * *

Substances	Limitations
* * * * *	
4-[[4,6-Bis(octylthio)-s-triazin-2-yl]amino]-2, 6-di-*tert*-butylphenol (CAS Reg. No. 991-84-4).	For use only: 1. At levels not to exceed 0.5 percent by weight in styrene block copolymers complying with § 177.1810 of this chapter: *Provided*, That the finished styrene block copolymers contact food identified as types I, II, IV-B, VI, VII-B, and VIII in table 1 of § 176.170(c) of this chapter under conditions of use D, E, F, and G described in table 2 of § 176.170(c) of this chapter. 2. At levels not to exceed 0.1 percent by weight in polystyrene and rubber-modified polystyrene complying with § 177.1640 of this chapter: *Provided*, That the finished polystyrene and rubber-modified polystyrene polymer contact food only under conditions of use D, E, F, and G described in table 2 of § 176.170(c) of this chapter.
* * * * *	

Any person who will be adversely affected by the foregoing regulation may at any time on or before February 17, 1981 submit to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–62, 5600 Fishers Lane, Rockville, MD 20857, written objections thereto and may make a written request for a public hearing on the stated objections. Each objection shall be separately numbered and each numbered objection shall specify with particularity the provision of the regulation to which objection is made. Each numbered objection on which a hearing is requested shall specifically so state; failure to request a hearing for any particular objection shall constitute a waiver of the right to a hearing on that objection. Each numbered objection for which a hearing is requested shall include a detailed description and analysis of the specific factual information intended to be presented in support of the objection in the event that a hearing is held; failure to include such a description and analysis for any particular objection shall constitute a waiver of the right to a hearing on the objection. Four copies of all documents shall be submitted and shall be identified with the Hearing Clerk docket number found in brackets in the heading of this regulation. Received objections may be seen in the office above between 9 a.m. and 4 p.m., Monday through Friday.

Effective date. This regulation becomes effective January 16, 1981.

(Secs. 201(s) and 409, 72 Stat. 1784–1788 as amended (21 U.S.C. 321(s) and 348))

Dated: January 12, 1981.

William F. Randolph,

Acting Associate Commissioner for Regulatory Affairs.

[FR Doc. 81-1661 Filed 1-15-81; 8:45 am]

BILLING CODE 4110-03-M

21 CFR Parts 430, 436 and 442

[Docket No. 80N-0285]

Antibiotic Drugs; Cefaclor

AGENCY: Food and Drug Administration.

ACTION: Final rule.

SUMMARY: The Food and Drug Administration (FDA) amends the antibiotic drug regulations to provide for the certification of a new antibiotic drug, cefaclor. The manufacturer has supplied sufficient data and information to establish its safety and efficacy.

DATES: Effective January 16, 1981. Comments by February 17, 1981.

ADDRESS: Written comments to the Dockets Management Branch (formerly the Hearing Clerk's office) (HFA–305), Food and Drug Administration, Rm. 4–62, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: Joan Eckert, Bureau of Drugs (HFD–140), Food and Drug Administration, 5600 Fishers Lane, Rockville, MD 20857, 301–443–4290.

SUPPLEMENTARY INFORMATION: FDA has evaluated data submitted in accordance with regulations promulgated under section 507 of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 357), as amended, with respect to providing for the certification of a new antibiotic drug, cefaclor. The agency concludes that the data supplied by the manufacturer concerning this antibiotic drug are adequate to establish its safety and efficacy when used as directed in the labeling and that the regulations should be amended in Parts 430, 436, and 442 (21 CFR Parts 430, 436, and 442) to provide for its certification.

The agency has determined pursuant to 21 CFR 25.24(b)(22) (proposed December 11, 1979; 44 FR 71742) that this action is of a type that does not individually or cumulatively have a significant impact on the human environment. Thus, neither an environmental assessment nor an environmental impact statement is required.

Therefore, under the Federal Food, Drug, and Cosmetic Act (sec. 507, 59 Stat. 463 as amended (21 U.S.C. 357)) and under authority delegated to the Commissioner of Food and Drugs (21 CFR 5.1), Parts 430, 436, and 442 are amended as follows:

PART 430—ANTIBIOTIC DRUGS; GENERAL

1. Part 430 is amended in Subpart A as follows:

a. In § 430.5 by adding new paragraph (a)(66) and new paragraph (b)(66) to read as follows:

§ 430.5 Definitions of master and working standards.

(a) * * *

(66) *Cefaclor.* The term "cefaclor master standard" means a specific lot of cefaclor that is designated by the Commissioner as the standard of comparison in determining the potency of the cefaclor working standard.

(b) * * *

(66) *Cefaclor.* The term "cefaclor working standard" means a specific lot of a homogeneous preparation of cefaclor.

b. In § 430.6 by adding new paragraph (b)(68) to read as follows:

§ 430.6 Definitions of the terms "unit" and "microgram" as applied to antibiotic substances.

* * * * *

(b) * * *

(68) *Cefaclor.* The term "microgram" applied to cefaclor means the cefaclor activity (potency) contained in 1.0493 micrograms of cefaclor master standard.

PART 436—TESTS AND METHODS OF ASSAY OF ANTIBIOTIC AND ANTIBIOTIC-CONTAINING DRUGS

2. Part 436 is amended in § 436.105 (a) and (b) by alphabetically inserting a new item into the respective tables, as follows:

§ 436.105 Microbiological agar diffusion assay.

* * * * *

(a) * * *

Antibiotic	Media to be used (as listed by medium number in § 436.102(b))		Milliliters of media to be used in the base and seed layers		Test organism	suggested volume of standardized inoculum to be added to each 100 milliliters of seed agar	Incubation temperature for the plates
	Base layer	Seed layer	Base layer	Seed layer			
						Milliliters	*Degrees C*
*	*	*	*	*	*	*	*
Cefaclor	2	1	21	5	A	0.05	36-37.5
*	*	*	*	*	*	*	*

(b) * * *

Antibiotic	Working standard stock solutions					Standard response line concentrations	
	Drying conditions (method number as listed in § 436.200)	Initial solvent	Diluent (solution number as listed in § 436.101(a))	Final concentration units or milligrams per milliliter	Storage time under refrigeration	Diluent	Final concentrations, units or micrograms of antibiotic activity per milliliter
*	*	*	*	*	*	*	*
Cefaclor	Not dried		1	1 mg	1 day	1	3.2, 4.0, 5.0, 6.25, 7.81 µg
*	*	*	*	*	*	*	*

PART 442—CEPHA ANTIBIOTIC DRUGS

3. Part 442 is amended:

a. In Subpart A by adding new § 442.4 to read as follows:

§ 442.4 Cefaclor monohydrate.

(a) *Requirements for certification*—(1) *Standards of identity, strength, quality, and purity.* Cefaclor monohydrate is the monohydrate form of (6*R*, 7*R*)-7-[(*R*)-2-amino-2-phenylacetamido]-3-chloro-8-oxo-5-thias-1-azabicyclo [4.2.0]oct-2-ene-2-carboxylic acid. It is so purified and dried that:

(i) Its potency is not less than 860 micrograms and not more than 1,050 micrograms of cefaclor per milligram on an "as is" basis.

(ii) Its moisture content is not less than 3.0 percent and not more than 8.0 percent.

(iii) Its pH in an aqueous suspension containing 25 milligrams per milliliter is not less than 3.0 and not more than 4.5.

(iv) It gives a positive identity test.

(v) It is crystalline.

(2) *Labeling.* It shall be labeled in accordance with the requirements of § 432.5 of this chapter.

(3) *Requests for certification; samples.* In addition to complying with the requirements of § 431.1 of this chapter, each such request shall contain:

(i) Results of tests and assays on the batch for potency, moisture, pH, identity, and crystallinity.

(ii) Samples required: 10 packages, each containing approximately 300 milligrams.

(b) *Tests and methods of assay*—(1) *Potency.* Use either of the following methods; however, the results obtained from the hydroxylamine colorimetric assay shall be conclusive.

(i) *Microbiological agar diffusion assay.* Proceed as directed in § 436.105 of this chapter, preparing the sample for assay as follows: Dissolve an accurately weighed sample in sufficient 1 percent potassium phosphate buffer, pH 6.0 (solution 1), to obtain a stock solution containing 1 milligram of cefaclor per milliliter (estimated). Further dilute an aliquot of the stock solution with solution 1 to the reference concentration of 5.0 micrograms of cefaclor per milliliter (estimated).

(ii) *Hydroxylamine colorimetric assay.* Proceed as directed in § 442.40(b)(1)(ii) of this chapter, except prepare the working standard and sample solutions and calculate the cefaclor content as follows:

(*a*) *Preparation of working standard solution.* Dissolve and dilute an accurately weighed portion of the cefaclor working standard in sufficient 0.1*M* potassium phosphate buffer, pH 4.5 (as described in § 436.101(a)(4) of this chapter) to obtain a concentration of 1 milligram of cefaclor per milliliter.

(*b*) *Preparation of sample solution.* Dissolve an accurately weighed portion of the sample in sufficient 0.1*M* potassium phosphate buffer, pH 4.5 (as described in § 436.101(a)(4) of this chapter) to obtain a concentration of 1 milligram of cefaclor per milliliter.

(*c*) *Calculations.* Calculate the cefaclor content in micrograms per milligram as follows:

$$\text{Micrograms of cefaclor per milligram of sample} = \frac{A_u \times P_s}{A_s \times W_u}$$

where:

A_u = Absorbance of sample solution;

P_s = Potency of working standard solution in micrograms per milliliter;

A_s = Absorbance of working standard solution;

W_u = Milligrams of sample per milliliter of sample solution.

(2) *Moisture.* Proceed as directed in § 436.201 of this chapter.

(3) *pH.* Proceed as directed in § 436.202 of this chapter, using an aqueous suspension containing 25 milligrams per milliliter.

(4) *Identity.* Proceed as directed in § 436.211 of this chapter, using the

sample preparation described in paragraph (b)(2) of that section.

(5) *Crystallinity.* Proceed as directed in § 436.303(a) of this chapter.

b. In Subpart B by adding new §§ 442.104, 442.104a, and 442.104b to read as follows:

§ 442.104 Cefaclor monohydrate oral dosage forms.

§ 442.104a Cefaclor monohydrate capsules.

(a) *Requirements for certification*—(1) *Standards of identity, strength, quality, and purity* Cefaclor monohydrate capsules are composed of cefaclor monohydrate and one or more suitable and harmless lubricants and diluents enclosed in a gelatin capsule. Each capsule contains cefaclor monohydrate equivalent to either 250 milligrams or 500 milligrams of cefaclor. Its potency is satisfactory if it is not less than 90 percent and not more than 120 percent of the number of milligrams of cefaclor that it is represented to contain. Its moisture content is not more than 8.0 percent. The cefaclor monohydrate used conforms to the standards prescribed by § 442.4(a)(1).

(2) *Labeling.* It shall be labeled in accordance with the requirements of § 432.5 of this chapter.

(3) *Requests for certification; samples.* In addition to complying with the requirements of § 431.1 of this chapter, each such request shall contain:

(i) Results of tests and assays on:

(*a*) The cefaclor monohydrate used in making the batch for potency, moisture, pH, identity, and crystallinity.

(*b*) The batch for potency and moisture.

(ii) Samples required:

(*a*) The cefaclor monohydrate used in making the batch: 10 packages, each containing approximately 300 milligrams.

(*b*) The batch: A minimum of 30 capsules.

(b) *Tests and methods of assay*—(1) *Potency.* Proceed as directed in § 442.40(b)(1)(ii) of this chapter, except prepare the working standard and sample solutions and calculate the potency of the sample as follows:

(i) *Preparation of working standard solution.* Dissolve and dilute an accurately weighed portion of the cefaclor working standard in sufficient 0.1*M* potassium phosphate buffer, pH 4.5 (as described in § 436.101(a)(4) of this chapter) to obtain a concentration of 1 milligram of cefaclor.

(ii) *Preparation of sample solution.* Place one capsule into a high-speed glass blender jar containing sufficient 0.1*M* potassium phosphate buffer, pH 4.5 (as described in § 436.101(a)(4) of this chapter) to obtain a concentration of 1 milligram per milliliter. Filter a portion to be used through a 10-micron filter.

(iii) *Calculations.* Calculate the cefaclor content in milligrams per capsule as follows:

$$\text{Milligrams of cefaclor per capsule} = \frac{A_u \times P_s \times d}{A_s \times 1{,}000}$$

where:

A_u = Absorbance of sample solution;
P_s = Potency of working standard in micrograms per milliliter;
A_s = Absorbance of working standard solution;
d = Dilution factor of the sample.

(2) *Moisture.* Proceed as directed in § 436.201 of this chapter.

§ 442.104b Cefaclor monohydrate for oral suspension.

(a) *Requirements for certification*—(1) *Standards of identity, strength, quality, and purity.* Cefaclor monohydrate for oral suspension is cefaclor monohydrate with one or more suitable and harmless diluents, buffer substances, colorings and flavorings. When reconstituted as directed in the labeling, each milliliter contains cefaclor monohydrate equivalent to 25 milligrams or 50 milligrams of cefaclor. Its potency is satisfactory if it is not less than 90 percent and not more than 120 percent of the number of milligrams of cefaclor that it is represented to contain. Its moisture content is not more than 2.0 percent. When reconstituted as directed in the labeling, its pH is not less than 2.5 and not more than 4.5. The cefaclor monohydrate used conforms to the standards prescribed by § 4442.4(a)(1).

(2) *Labeling.* It shall be labeled in accordance with the requirements of § 432.5 of this chapter.

(3) *Requests for certification; samples.* In addition to complying with the requirements of § 431.1 of this chapter, each such request shall contain:

(i) Results of tests and assays on:

(*a*) The cefaclor monohydrate used in making the batch for potency, moisture, pH, identity, and crystallinity.

(*b*) The batch for potency, moisture, and pH.

(ii) Samples required:

(*a*) The cefaclor monohydrate used in making the batch: 10 packages, each containing approximately 300 milligrams.

(*b*) The batch: A minimum of six immediate containers.

(b) *Tests and methods of assay*—(1) *Potency.* Proceed as directed in § 442.40(b)(1)(ii) of this chapter, except prepare the working standard and sample solutions and calculate the potency of the sample as follows:

(i) *Preparation of working standard solution.* Dissolve and dilute an accurately weighed portion of the cefaclor working standard in sufficient 0.1*M* potassium phosphate buffer, pH 4.5 (as described in § 436.101(a)(4) of this chapter) to obtain a concentration of 1 milligram of cefaclor.

(ii) *Preparation of sample solution.* Reconstitute the sample as directed in the labeling. Transfer a 5.0-milliliter portion into an appropriate-sized volumetric flask and dilute to volume with 0.1*M* potassium phosphate buffer, pH 4.5 (as described in § 436.101(a)(4) of this chapter) to obtain a concentration of 1 milligram per milliliter.

(iii) *Calculations.* Calculate the cefaclor content as follows:

$$\text{Milligrams of cefaclor for 5 milliliters of sample} = \frac{A_u \times P_s \times d}{A_s \times 1{,}000}$$

where:

A_u = Absorbance of sample solution;
P_s = Potency of working standard in micrograms per milliliter;
A_s = Absorbance of working standard solution;
d = Dilution factor of the sample.

(2) *Moisture.* Proceed as directed in § 436.201 of this chapter.

(3) *pH.* Proceed as directed in § 436.202 of this chapter, using the drug reconstituted as directed in the labeling.

This regulation announces standards that FDA has accepted in a request for approval of an antibiotic drug. In accordance with the conditions for certification in section 507 of the act, FDA permits the manufacturer to market this drug on a "release" status pending the regulation's becoming effective.

Because this regulation is not controversial and because when effective it provides notice of accepted standards and permits earlier certification of regulated products, notice and comment procedure and delayed effective date are found to be unnecessary and not in the public interest. The amendment, therefore, is effective upon the date of publication in the **Federal Register**. However, interested persons may, on or before February 17, 1981, submit to the Dockets Management Branch (HFA–305), Food and Drug Administration, Rm. 4–62, 5600 Fishers Lane, Rockville, MD 20857, written comments on this rule. Four copies of any comments to be submitted, except that individuals may submit one copy. Comments are to be identified with the docket number found in brackets in the heading of this document. Received comments may be seen in the Dockets Management Branch office between 9 a.m. and 4 p.m., Monday through Friday.

Any person who will be adversely affected by this regulation may file objections to it, request a hearing, and show reasonable grounds for the hearing. Any person who decides to seek a hearing must file (1) on or before February 17, 1981, a written notice of participation and request for hearing, and (2) on or before March 17, 1981, the data, information, and analyses on which the person relies to justify a hearing, as specified in 21 CFR 430.20. A request for a hearing may not rest upon mere allegations or denials, but must set forth specific facts showing that there is a genuine and substantial issue of fact that requires a hearing. If it conclusively appears from the face of the data, information, and factual analyses in the request for hearing that no genuine and substantial issue of fact precludes the action taken by this order, or if a request for hearing is not made in the required format or with the required analyses, the Commissioner of Food and Drugs will enter summary judgment against the person(s) who request(s) the hearing, making findings and conclusions and denying a hearing.

The procedures and requirements governing this order, a notice of participation and request for hearing, a submission of data, information, and analyses to justify a hearing, other comments, and grant or denial of a hearing are contained in 21 CFR 430.20.

All submissions under this order must be filed in four copies, identified with the docket number appearing in the heading of this order and filed with the Dockets Management Branch (HFA–305), Food and Drug Administration, Rm. 4–62, 5600 Fishers Lane, Rockville, MD 20857.

All submissions under this order, except for data and information prohibited from public disclosure under 21 U.S.C. 331(j) or 18 U.S.C. 1905, may be seen in the office of the Dockets Management Branch, between 9 a.m. and 4 p.m., Monday through Friday.

Effective date. This regulation shall be effective January 16, 1981.

(Sec. 507, 59 Stat. 463 as amended (21 U.S.C. 357))

Dated: January 6, 1981.

Mary A. McEniry,

Assistant Director for Regulatory Affairs, Bureau of Drugs.

[FR Doc. 81-1306 Filed 1-15-81; 8:45 am]

BILLING CODE 4110-03-M

21 CFR Parts 510 and 558

Tylosin; New Animal Drugs for Use in Animal Feeds

AGENCY: Food and Drug Administration.

ACTION: Final rule.

SUMMARY: The Food and Drug Administration (FDA) amends the animal drug regulations to reflect approval of a new animal drug application (NADA) filed for Indiana Farm Bureau Cooperative Association, Inc., providing for safe and effective use of a 10-grams-per-pound tylosin premix for making complete swine feeds, and to add this firm to the list of approved NADA sponsors.

EFFECTIVE DATE: January 16, 1981.

FOR FURTHER INFORMATION CONTACT: Jack C. Taylor, Bureau of Veterinary Medicine (HFV–136), Food and Drug Administration, 5600 Fishers Lane, Rockville, MD 20857, 301–443–5247.

SUPPLEMENTARY INFORMATION: Indiana Farm Bureau Cooperative Association, Inc., 120 E. Market St., Indianapolis, IN 46204, is sponsor of NADA 125–226 submitted on its behalf by Elanco Products Co. The NADA provides for use of a premix containing 10 grams of tylosin (as tylosin phosphate) per pound for making complete swine feeds used to increase rate of weight gain and improve feed efficiency.

Approval of this NADA relies upon safety and effectiveness data contained in Elanco Products Co.'s approved NADA 12–491. Use of the data in NADA 12–491 to support this NADA has been authorized by Elanco. This approval does not change the approved use of the drug. Consequently, approval of this NADA poses no increased human risk from exposure to residues of the animal drug, nor does it change the conditions of the drug's safe use in the target animal species. Accordingly, under the Bureau of Veterinary Medicine's supplemental approval policy (42 FR 64367; December 23, 1977), approval of this NADA has been treated as would an approval of a Category II supplement and does not require reevaluation of the safety and effectiveness data in NADA 12–491.

Indiana Farm Bureau Cooperative Association, Inc., has not previously been included in the regulations under the list of approved sponsors. The regulations are amended to reflect this approval and to include this firm in the list of sponsors.

In accordance with the freedom of information provisions of Part 20 (21 CFR Part 20) and § 514.11(e)(2)(ii) (21 CFR 514.11(e)(2)(ii)), a summary of safety and effectiveness data and information submitted to support approval of this application may be seen in the Dockets Management Branch (formerly the Hearing Clerk's office) (HFA–305), Food and Drug Administration, Rm. 4–62, 5600 Fishers Lane, Rockville, MD 20857, from 9 a.m. to 4 p.m., Monday through Friday.

The agency has determined pursuant to 21 CFR 25.24(d)(1) (proposed December 11, 1979; 44 FR 71742) that this action is of a type that does not individually or cumulatively have a significant impact on the human environment. Therefore, neither an environmental assessment nor an environmental impact statement is required.

Therefore, under the Federal Food, Drug, and Cosmetic Act (sec. 512(i), 82 Stat. 347 (21 U.S.C. 360b(i))), under authority delegated to the Commissioner of Food and Drugs (21 CFR 5.1) and redelegated to the Bureau of Veterinary Medicine (21 CFR 5.83), Parts 510 and 558 are amended as follows:

PART 510—NEW ANIMAL DRUGS

1. In Part 510, § 510.600 is amended by adding a new sponsor alphabetically to paragraph (c)(1) and numerically to paragraph (c)(2), to read as follows:

§ 510.600 Names, addresses, and drug labeler codes of sponsors of approved applications.

* * * * *

(c) * * *

(1) * * *

Firm name and address	Drug labeler code
* * * * *	
Indiana Farm Bureau Cooperative Association, Inc., 120 E. Market St., Indianapolis, IN 46204	021502
* * * * *	

(2) * * *

Drug labeler code	Firm name and address
*	* * * * *
021502	Indiana Farm Bureau Cooperative Association, Inc., 120 E. Market St., Indianapolis, IN 46204
*	* * * * *

PART 558—NEW ANIMAL DRUGS FOR USE IN ANIMAL FEEDS

2. In Part 558, § 558.625 is amended by adding new paragraph (b)(76), to read as follows:

§ 558.625 Tylosin.

* * * * *

(b) * * *

(76) To 021502: 10 grams per pound; paragraph (f)(1)(vi)(*a*) of this section.

* * * * *

Effective date. This regulation is effective January 16, 1981.

(Sec. 512(i), 82 Stat. 347 (21 U.S.C. 360b(i)))

Dated: January 7, 1981.

Gerald B. Guest,

Acting Director, Bureau of Veterinary Medicine.

[FR Doc. 80-1380 Filed 1-15-81; 8:45 am]

BILLING CODE 4110-80-M

21 CFR Parts 430, 436, 446

[Docket No. 80N-0304]

Antibiotic Drugs; Meclocycline Sulfosalicylate

AGENCY: Food and Drug Administration, HHS.

ACTION: Final rule.

SUMMARY: The Food and Drug Administration (FDA) amends the antibiotic drug regulations to provide for the certification of a new antibiotic drug, meclocycline sulfosalicylate. The manufacturer has supplied sufficient data and information to establish its safety and efficacy.

DATES: Effective January 16, 1981. Comments by February 17, 1981.

ADDRESS: Written comments to the Dockets Management Branch (formerly the Hearing Clerk's office) (HFA-305), Food and Drug Administration, Rm. 4-62, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: Joan Eckert, Bureau of Drugs (HFD-140), Food and Drug Administration, 5600 Fishers Lane, Rockville, MD 20857, 301-443-4290.

SUPPLEMENTARY INFORMATION: FDA has evaluated data submitted in accordance with regulations promulgated under section 507 of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 357), as amended, with respect to providing for the certification of a new antibiotic drug, meclocycline sulfosalicylate. The agency concludes that the data supplied by the manufacturer on meclocycline sulfosalicylate are adequate to establish its safety and efficacy when used as directed in the labeling and that the regulations should be amended in Parts 430, 436, and 446 (21 CFR Parts 430, 436, and 446) to provide for its certification.

The agency has determined pursuant to 21 CFR 25.24(b)(22) (proposed December 11, 1979; 44 FR 71742), that this action is of a type that does not individually or cumulatively have a significant impact on the human environment. Therefore, neither an environmental assessment nor an environmental impact statement is required.

Therefore, under the Federal Food, Drug, and Cosmetic Act (sec. 507, 59 Stat. 463 as amended (21 U.S.C. 357)) and under authority delegated to the Commissioner of Food and Drugs (21 CFR 5.1), Parts 430, 436, and 446 are amended as follows:

PART 430—ANTIBIOTIC DRUGS; GENERAL

1. Part 430 is amended: a. In § 430.5 by adding paragraphs (a)(70) and (b)(70) to read as follows:

§ 430.5 Definitions of master and working standards.

(a) * * *

(70) *Meclocycline.* The term "meclocycline master standard" means a specific lot of meclocycline that is designated by the Commissioner as the standard of comparison in determining the potency of the meclocycline working standard.

(b) * * *

(70) *Meclocycline.* The term "meclocycline working standard" means a specific lot of a homogeneous preparation of meclocycline.

b. In § 430.6 by adding paragraph (b)(72) to read as follows:

§ 430.6 Definitions of the terms "unit" and "microgram" as applied to antibiotic substances.

* * * * *

(b) * * *

(72) *Meclocycline.* The term "microgram" applied to meclocycline means the meclocycline activity (potency) contained in 1.0493 micrograms of the meclocycline master standard.

PART 436—TESTS AND METHODS OF ASSAY OF ANTIBIOTIC AND ANTIBIOTIC-CONTAINING DRUGS

2. Part 436 is amended:

a. In § 436.106 (a) and (b) by alphabetically inserting a new item into the respective tables as follows:

§ 436.106 Microbiological turbidimetric assay.

* * * * * * *

(a) * * *

	Working standard stock solutions						Standard response line concentrations
Antibiotic	Drying conditions (method number as listed in § 436.200)	Initial solvent	Diluent (solution number as listed in § 436.101(a))	Final concentration units or milligrams per milliliter	Storage time under refrigeration	Diluent (solution number as listed in § 436.101(a))	Final concentrations—units or micrograms of antibiotic activity per milliliter
*	*	*	*	*	*	*	*
Meclocycline	Not dried		13	1 mg	Use same day	Distilled water	0.048, 0.054, 0.06, 0.067, 0.075 µg
*	*	*	*	*	*	*	*
*	*	*	*	*	*	*	*

(b) * * *

Antibiotic	Test organism	Medium (nutrient broth)	Suggested volume of standardized inoculum to be added to each 100 milliliters of medium (nutrient broth)	Incubation temperature
			Milliliters	*Degrees C*
* * *	*	*	*	*
Meclocycline	A	3	0.2	36-37.5
* * *	*	*	*	*
* * *	*	*	*	*

b. By adding new § 436.329 to read as follows:

§ 436.329 High-pressure liquid chromatographic assay for meclocycline.

(a) *Equipment.* A suitable high-pressure liquid chromatograph, such as a Waters Associates Model 244 [1] or equivalent equipped with:

(1 A low dead volume cell 8 to 20 microliters;

(2) A light path of 1 centimeter;

(3) A suitable ultraviolet detection system operating at a wavelength of 340 nanometers;

(4) A suitable recorder of at least 25.4 centimeter deflection;

(5) A suitable integrator;

(6) A column approximately 25 centimeters in length having an inside diameter of approximately 4 millimeters and packed with a suitable reverse-phase packing such as: 10 micrometer silica gel particles bonded to octadecyl silane, Vydac 201 TP Reverse Phase [2] or equivalent.

(b) *Reagents*—(1) *0.001M Ammonium (ethylenedinitrilo) tetraacetate.* Moisten 293 milligrams of (ethylenedinitrilo) tetraacetic acid with 1 milliliter of methanol and dissolve in 7 milliliters of concentrated ammonium hydroxide. Dilute to 900 milliliters with distilled water, adjust the pH to 6.6 with glacial acetic acid, and dilute to 1,000 milliliters with distilled water.

(2) *Mobile phase.* Mix 150 milliliters of tetrahydrofuran (high-pressure liquid chromatography grade) with 850 milliliters of 0.001*M* ammonium (ethylenedinitrilo) tetraacetate. Filter the mobile phase through a suitable glass fiber filter or equivalent that is capable of removing particulate contamination to 1 micron in diameter. Degas the mobile phase just prior to its introduction into the chromatograph pumping system.

(c) *Operating conditions.* Perform the assay at ambient temperature with a typical flow rate of 0.8 milliliter per minute. Use a detector sensitivity setting that gives a peak height for the reference standard that is at least 50 percent of scale. The minimum between peaks must be no more than 2 millimeters above the initial baseline.

(d) *Preparation of sample and working standard solutions.* Accurately weigh an amount of sample or working standard equivalent to approximately 25 milligrams of meclocycline into a 50-milliliter volumetric flask. Dissolve and dilute to volume with methanol and mix. Transfer exactly 3.0 milliliters of this solution to a 25-milliliter volumetric flask, dilute to volume with mobile phase, and mix.

(e) *Procedure.* Using the equipment, reagents, and operating conditions listed in paragraphs (a), (b), and (c) of this section, inject 10 microliters of the sample or working standard solution prepared as described in paragraph (d) of this section into the chromatograph. Allow an elution time sufficient to obtain satisfactory separation of expected components. The elution order is void volume, oxytetracycline (if present), demeclocycline (if present), methacycline (if present), and meclocycline.

(f) *Calculations.* Calculate the meclocycline content as follows:

$$\text{Micrograms of meclocycline per milligram} = \frac{A}{B} \times \text{milligrams of working standard} \times \text{potency of the working standard in micrograms per milligram} \times \frac{1}{\text{milligrams of sample}}$$

where:

A = Area or peak height of the sample peak (at a retention time equal to that observed for the standard);

B = Area or peak height of the standard peak.

[2] Available from: The Separations Group, 18640 Spruce St., Hesperia, CA 92345.

PART 446—TETRACYCLINE ANTIBIOTIC DRUGS

3. Part 446 is amended:

a. In Subpart A by adding new § 446.42 to read as follows:

§ 446.42 Meclocycline sulfosalicylate.

(a) *Requirements for certification*—(1) *Standards of identity, strength, quality, and purity.* Meclocycline sulfosalicylate is the sulfosalicylate salt of 7-chloro-4-(dimethylamino)-1,4,4a,5,5a,6,11,12a-octahydro-3,5,10,12,12a-pentahydroxy-6-methylene-1,11-dioxo-2-

naphthacenecarboxamide. It is so purified and dried that:

(i) Its potency is not less than 620 micrograms of meclocycline per milligram on an "as is" basis.

(ii) Its moisture content is not more than 4.0 percent.

(iii) Its pH is an aqueous suspension containing 10 milligrams per milliliter is not less than 2.5 and not more than 3.5.

(iv) It is crystalline.

(2) *Labeling.* It shall be labeled in accordance with the requirements of § 432.5 of this chapter.

(3) *Requests for certification; samples.* In addition to complying with the requirements of § 431.1 of this chapter, each such request shall contain:

(i) Results of tests and assays on potency, moisture, pH, and crystallinity.

(ii) Samples required: 10 packages, each containing approximately 300 milligrams.

(b) *Tests and methods of assay*—(1) *Potency.* Use either of the following methods; however, the results obtained from the high-pressure liquid chromatography method shall be conclusive.

(i) *High-pressure liquid chromatography.* Proceed as directed in § 436.329 of this chapter.

(ii) *Microbiological turbidimetric assay.* Proceed as directed in § 436.106 of this chapter, preparing the sample for assay as follows: Dissolve an accurately weighed portion of the sample in sufficient 0.01*N* methanolic hydrochloric acid (solution 13) to obtain a stock solution of convenient concentration. Further dilute an aliquot of the stock solution with distilled water to the reference concentration of 0.06 microgram of meclocycline per milliliter (estimated).

(2) *Moisture.* Proceed as directed in § 436.201 of this chapter.

(3) *pH.* Proceed as directed in § 436.202 of this chapter, using an aqueous suspension containing 10 milligrams of meclocycline per milliliter.

(4) *Crystallinity.* Proceed as directed in § 436.203(a) of this chapter.

b. In Subpart F by adding new § 446.542 to read as follows:

§ 446.542 Meclocycline sulfosalicylate cream.

(a) *Requirements for certification*—(1) *Standards of identity, strength, quality, and purity.* Meclocycline sulfosalicylate cream contains meclocycline sulfosalicylate in a suitable and harmless cream base. Each gram contains meclocycline sulfosalicylate equivalent to 10 milligrams of meclocycline. Its potency is satisfactory if it is not less than 90 percent and not more than 125 percent of the number of milligrams of meclocycline that it is represented to contain. the meclocycline sulfosalicylate used conforms to the standards prescribed by § 446.42(a)(1).

(2) *Labeling.* It shall be labeled in accordance with the requirements of § 432.5 of this chapter.

(3) *Requests for certification; samples.* In addition to complying with the requirements of § 431.1 of this chapter, each such request shall contain:

(i) Results of tests and assays on:

(*a*) The meclocycline sulfosalicylate used in making the batch for potency, moisture, pH, and crystallinity.

(*b*) The batch for potency.

(ii) Samples required:

(*a*) The meclocycline sulfosalicylate used in making the batch: 10 packages, each containing approximately 300 milligrams.

(*b*) The batch: A minimum of five immediate containers.

(b) *Tests and methods of assay; potency.* Use either of the following methods; however, the results obtained from the high-pressure liquid chromatography method shall be conclusive.

(1) *Microbiological turbidimetric assay.* Proceed as directed in § 436.106 of this chapter, preparing the sample for assay as follows: Place an accurately weighed representative portion of the sample into a high-speed glass blender jar containing sufficient 0.01*N* methanolic hydrochloric acid (solution 13) to obtain a stock solution of convenient concentration. Blend for 3 to 5 minutes. Further dilute an aliquot of the stock solution with distilled water to the reference concentration of 0.06 microgram of meclocycline per milliliter (estimated).

(2) *High-pressure liquid chromatography.* Proceed as directed in § 436.329 of this chapter, except, prepare the working standard and sample solution and calculate the meclocycline content as follows:

(i) *Preparation of standard solution.* Accurately weigh an amount of working standard equivalent to approximately 25 milligrams of meclocycline into a 50-milliliter volumetric flask and mix. Transfer exactly 2.0 milliliters of this solution to a 100-milliliter volumetric flask, dilute to volume with mobile phase, and mix.

(ii) *Preparation of sample solution.* Accurately weigh approximately 0.4 to 0.7 gram of sample into a 50-milliliter glass-stoppered centrifuge tube. Add 20 milliliters of methanol and 20 milliliters of 0.025*N* sulfuric acid. Disperse the sample thoroughly by a combination of ultrasonic/vortexing and shaking by hand. Shake for 15 minutes on a wrist action shaker. Quantitatively transfer the contents of the centrifuge tube into a 50-milliliter volumetric flask. Rinse the centrifuge tube with two 5-milliliter portions of methanol and add to the flask. Dilute to volume with methanol and mix. Transfer a portion of the content of the volumetric flask into an appropriate-sized centrifuge tube. Centrifuge for 5 minutes at 2,000 revolutions per minute. Transfer 5.0 milliliters of this solution into a 50-milliliter volumetric flask and dilute to volume with mobile phase and mix. Filter this solution through a 0.5 micrometer filter. Inject the filtrate onto the column.

(iii) *Calculations.* Calculate the meclocyline content as follows:

$$\text{Meclocycline content of cream in percent} = \frac{A \times 2 \times \text{milligrams of working standard} \times \text{Potency of working standard in micrograms per milligram}}{B \times 100 \times \text{milligrams of sample}}$$

This regulation announces standards that FDA has accepted in a request for approval of an antibiotic drug. In accordance with the conditions for certification in section 506 of the act, FDA permits the manufacturer to market this drug on a "release" status pending the regulation's becoming effective. Because this regulation is not controversial and because when effective it provides notice of accepted standards and permits earlier certification of regulated products, notice and comment procedure and delayed effective date are found to be unnecessary and not in the public interest. The amendment, therefore, is effective January 16, 1981. However, interested persons may, on or before February 17, 1981, submit to the Dockets

Management Branch (FDA–305), Food and Drug Administration, Rm. 4–62, 5600 Fishers Lane, Rockville, MD 20857, written comments on this rule. Four copies of any comments are to be submitted, except that individuals may submit one copy. Comments are to be identified with the docket number found in brackets in the heading of this document. Received comments may be seen in the Dockets Management Branch office between 9 a.m. and 4 p.m., Monday through Friday.

Any person who will be adversely affected by this regulation may file objections to it, request a hearing, and show reasonable grounds for the hearing. Any person who decides to seek a hearing must file (1) on or before February 17, 1981, a written notice of participation and request for hearing, and (2) on or before March 17, 1981, the data, information, and analyses on which the person relies to justify a hearing, as specified in 21 CFR 430.20. A request for a hearing may not rest upon mere allegations or denials, but must set forth specific facts showing that there is a genuine and substantial issue of fact that requires a hearing. If it conclusively appears from the face of the data, information, and factual analyses in the request for hearing that no genuine and substantial issue of fact precludes the action taken by this order, or if a request for hearing is not made in the required format or with the required analyses, the Commissioner of Food and Drugs will enter summary judgment against the person(s) who request(s) the hearing, making findings and conclusions and denying a hearing.

The procedures and requirements governing this order, a notice of participation and request for hearing, a submission of data, information, and analyses to justify a hearing, other comments, and grant or denial of a hearing are contained in 21 CFR 430.20.

All submissions under this order must be filed in four copies, identified with the docket number appearing in the heading of this order, with the Dockets Management Branch (HFA–305), Food and Drug Administration, Rm. 4–62, 5600 Fishers Lane, Rockville, MD 20857.

All submissions under this order, except for data and information prohibited from public disclosure under 21 U.S.C. 331(j) or 18 U.S.C. 1905, may be seen in the office of the Dockets Management Branch, between 9 a.m. and 4 p.m., Monday through Friday.

Effective date. This regulation shall be effective January 16, 1981.

(Sec. 507, 59 Stat. 463 as amended (21 U.S.C. 357))

Dated: December 29, 1980.

Philip L. Paquin,

Acting Director, Bureau of Drugs.

[FR Doc. 81-1307 Filed 1-15-81; 8:45 am]

BILLING CODE 4110-03-M

---

21 CFR Parts 436 and 453

[Docket No. 80N-0316]

Tests and Methods of Assay of Antibiotic-Containing Drugs and Lincomycin Antibiotic Drugs; Microbiological Turbidimetric Assay for Lincomycin Hydrochloride Monohydrate

AGENCY: Food and Drug Administration, HHS.

ACTION: Final rule.

SUMMARY: The Food and Drug Administration (FDA) amends the antibiotic drug regulations to provide for an improved method for determining the lincomycin potency of drugs containing lincomycin hydrochloride monohydrate. The new method, microbiological turbidimetric assay, replaces the micribiological agar diffusion assay for lincomycin potency. The regulation is intended to improve drug quality.

DATES: Effective January 16, 1981; comments by February 17, 1981.

ADDRESS: Written comments to the Dockets Management Branch (formerly the Hearing Clerk's office) (HFA–305), Food and Drug Administration, Rm. 4–62, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: Joan Eckert, Bureau of Drugs (HFD–140), Food and Drug Administration, 5600 Fishers Lane, Rockville, MD 20857, 301–443–4290.

SUPPLEMENTARY INFORMATION: FDA is replacing the microbiological agar diffusion assay currently specified in the regulations for determining the potency of the antibiotic drug lincomycin hydrochloride monohydrate with a microbiological turbidimetric assay. The agency finds that the microbiological turbidimetric assay method is more accurate and reliable than the method being replaced in the regulations.

Three minor editorial changes are also included in this document. The word "monohydrate" is added to correct the section heading for sterile lincomycin hydrochloride; vapor phase chromatography is changed to gas liquid chromatography to reflect current nomenclature; and the work "sirup" is changed to read "syrup" in the section heading for lincomycin hydrochloride sirup and wherever it appears in the monograph to conform with U.S.P. nomenclature.

Also, the chemical method, gas liquid chromatography, is made the conclusive potency assay to reflect current certification practices.

The agency has determined pursuant to 21 CFR 25.24(b)(22) (proposed December 11, 1979, 44 FR 71742) that this action is of a type that does not individually or cumulatively have a significant impact on the human environment. Therefore, neither an environmental assessment nor an environmental impact statement is required.

Therefore, under the Federal Food, Drug, and Cosmetic Act (sec. 507, 59 Stat. 463 as amended (21 U.S.C. 357)) and under authority delegated to the Commissioner of Food and Drugs (21 CFR 5.1), Parts 436 and 453 are amended as follows:

1. Part 436 is amended as follows:

PART 436—TEST AND METHODS OF ASSAY OF ANTIBIOTIC AND ANTIBIOTIC-CONTAINING DRUGS

§ 436.105 [Amended]

a. In § 436.105 *Microbiological agar diffusion assay*, paragraphs (a) and (b) are amended by removing the item "Lincomycin" from the respective tables.

b. In § 436.106(a) and (b) by alphabetically inserting a new item in the respective tables to read as follows:

§ 436.106 **Microbiological trubidimetric assay.**

* * * * * * * *

(a) * * *

Antibiotic	Working standard stock solutions: Drying conditions (method number as listed in § 436.200)	Working standard stock solutions: Initial solvent	Working standard stock solutions: Diluent (solution number as listed in § 436.101(a))	Working standard stock solutions: Final concentration units or milligrams per milliliter	Working standard stock solutions: Storage time under refrigeration	Standard response line concentrations: Diluent (solution number as listed in § 436.101 (a))	Standard response line concentrations: Final concentration—units or micrograms of antibiotic activity per milliliter
*	*	*	*	*	*	*	*
Lincomycin	Not dried		Distilled water	1 mg	1 month	Distilled water	0.400, 0.447, 0.500, 0.559, 0.625μg
*	*	*	*	*	*	*	*

* * * * * * * *

(b) * * *

Antibiotic	Test organism	Medium (nutrient broth)	Suggested volume of standarized inoculum to be added to each 100 milliliters of medium (nutrient broth)	Incubation temperature
			Milliliters	*Degrees C.*
*	*	*	*	*
Lincomycin	A	3	0.1	36–37.5
*	*	*	*	*

* * * * * * * *

c. In § 436.306 by revising the section heading to read as follows:

§ 436.306 Lincomycin gas liquid chromatography.

* * * * *

2. Part 453, is amended as follows:

PART 453—LINCOMYCIN ANTIBIOTIC DRUGS

a. In § 453.30 by revising paragraph (a)(1)(viii), the introductory text of paragraph (b)(1), paragraph (b)(1)(i) and the heading of paragraph (b)(1)(ii) to read as follows:

§ 453.30 Lincomycin hydrochloride monohydrate.

(a) * * *

(1) * * *

(viii) It passes the identity test if the elution pattern of the lincomycin sample compares quantitatively to that of the lincomycin working standard under identical conditions of gas liquid chromatography.

* * * * *

(b) * * *

(1) *Potency.* Use either of the following methods; however, the results obtained from the gas liquid chromatography assay shall be conclusive.

(i) *Microbiological turbidimetric assay.* Proceed as directed in § 436.106 of this chapter, preparing the sample for assay as follows: Dissolve an accurately weighed sample in sufficient sterile distilled water to obtain a stock solution of convenient concentration. Further dilute an aliquot of the stock solution with sterile distilled water to the reference concentration of 0.5 microgram of lincomycin per milliliter (estimated).

(ii) *Gas liquid chromatography assay.* * * *

* * * * *

b. In § 453.30a by revising the section heading and paragraph (a)(1)(xi), the introductory text of paragraph (b)(1), paragraph (b)(1)(i), and the heading of paragraph (b)(1)(ii) to read as follows:

§ 453.30a Sterile lincomycin hydrochloride monohydrate.

(a) * * *

(1) * * *

(xi) It passes the identity test if the elution pattern of the lincomycin sample compares quantitatively to that of the lincomycin working standard under identical conditions of gas liquid chromatorgrphy.

* * * * *

(b) * * *

(1) *Potency.* Use either of the following methods; however, the results obtained from the gas liquid chromatography assay shall be conclusive.

(i) *Microbiological turbidimetric assay.* Proceed as directed in § 436.106 of this chapter, preparing the sample for assay as follows: Dissolve an accurately weighed sample in sufficient sterile distilled water to obtain a stock solution of convenient concentration. Further dilute an aliquot of the stock solution with sterile distilled water to the reference concentration of 0.5 microgram of lincomycin per milliliter (estimated).

(ii) *Gas liquid chromatography assay.* * * *

* * * * *

c. In § 453.130a by revising the introductory text of paragraph (b)(1), paragraph (b)(1)(i), and the heading of paragraph (b)(1)(ii) to read as follows:

§ 453.130a Lincomycin hydrochloride monohydrate capsules.

* * * * *

(b) * * *

(1) *Potency.* Use either of the following methods; however, the results obtained from the gas liquid chromatography assay shall be conclusive.

(i) *Microbiological turbidimetric assay.* Proceed as directed in § 436.106 of this chapter, preparing the sample for assay as follows: Place a representative number of capsules into a high-speed glass blender jar with sufficient sterile distilled water to obtain a stock solution of convenient concentration. Blend for 3 to 5 minutes. Remove an aliquot of the stock solution and further dilute with sterile distilled water to the reference concentration of 0.5 microgram of lincomycin per milliliter (estimated).

(ii) *Gas liquid chromatography assay.* * * *

* * * * *

d. In § 453.130b by revising the section heading, the first sentence in paragraph (a)(1), and paragraph (b)(1) to read as follows:

§ 453.130b Lincomycin hydrochloride syrup.

(a) * * *

(1) *Standards of identity, strength, quality, and purity.* Lincomycin hydrochloride syrup is a syrup containing lincomycin hydrochloride monohydrate, one or more suitable preservatives, flavorings, sweetening agents, colorings, and purified water.

* * *

* * * * *

(b) * * *

(1) *Potency.* Use either of the following methods; however, the results obtained from the gas liquid chromatography assay shall be conclusive.

(i) *Microbiological turbidimetric assay.* Proceed as directed in § 436.106 of this chapter, preparing the sample for assay as follows: Remove an accurately measured representative sample with a suitable hypodermic needle and syringe. Place into a high-speed glass blender jar with sufficient sterile distilled water to give a total volume of 500 milliliters. Blend for 3 to 5 minutes. Further dilute an aliquot with sterile distilled water to the reference concentration of 0.5 microgram of lincomycin per milliliter (estimated).

(ii) *Gas liquid chromatography assay.* Proceed as directed in § 436.306 of this chapter, except prepare the sample for assay by either of the following methods:

(*a*) Place an aliquot of syrup, containing the equivalent of 250 milligrams of lincomycin into a 50-milliliter volumetric flask and add 30 milliliters of absolute ethanol. Place on a steam bath and boil gently for 5 minutes. Remove from the steam bath and cool. Add ethanol to prior volume level and let stand overnight. Adjust to mark, shake well, and transfer a 5-milliliter aliquot into a 25-milliliter volumetric flask and make to mark with methanol. Place 4 milliliters of this solution in a 15-milliliter centrifuge tube and evaporate to dryness on a steam bath with a stream of dry air. Dissolve the residue in 1 milliliter of dry pryidine. Calculate the lincomycin content as follows:

$$\text{Lincomycin content in milligrams per milliliter} = \frac{(R_u)(W_s)(d)(f)}{(R_s)(M)}$$

where:

R_u = Area of lincomycin sample peak / Area of internal standard;

R_s = Area of lincomycin standard peak / Area of internal standard;

W_s = Weight of lincomycin working standard in milligrams;

d = Dilution factor;

f = Potency of lincomycin working standard in milligrams of lincomycin per milligram;

M = Milliliters of syrup used.

(*b*) Treat the lincomycin working standard and sample in a similar manner, except lyophilize an aliquot of the sample containing the equivalent of 50 milligrams of lincomycin. To approximately 50 milligrams of the standard, accurately weighed, and to the dried residue of the sample, add 5 milliliters of dry pyridine which contains 10 milligrams of tetraphenylcyclopentadienone per milliliter. Warm on a hot plate for 5 minutes to attain complete solution. Remove from the hot plate and add 5 milliliters of hexamethyldisilazane and 2 milliliters of trimethylchlorosilane. Shake mechanically for 60 minutes, then centrifuge for 15 minutes. Inject 2 microliters of the supernate into the chromatograph. Calculate the lincomycin content as follows:

$$\text{Lincomycin content in milligrams per milliliter of syrup} = \frac{(R_u)(W_s)(f)}{(R_s)(M)}$$

where:

R_u = Area of lincomycin sample peak / Area of internal standard;

R_s = Area of lincomycin standard peak / Area of internal standard;

W_s = Weight of lincomycin working standard in milligrams;

f = Potency of lincomycin working standard in milligrams of lincomycin per milligram;

M = Milliliters of syrup used.

* * * * *

e. In § 453.230 by revising the introductory text of paragraph (b)(1), paragraph (b)(1)(i), and the heading of paragraph (b)(1)(ii) to read as follows:

§ 453.230 Lincomycin hydrochloride injection.

* * * * *

(b) * * *

(1) *Potency.* Use either of the following methods; however, the results obtained from the gas liquid chromatography assay shall be conclusive.

(i) *Microbiological turbidimetric assay.* Proceed as directed in § 436.106 of this chapter, preparing the sample for assay as follows: Using a suitable hypodermic needle and syringe, remove all of the withdrawable contents if it is represented as a single-dose container; or, if the labeling specifies the amount of potency in a given volume of the resultant preparation, remove an accurately measured representative portion from each container. Place the portion, thus obtained, into a suitably-sized volumetric flask and dilute to volume with sterile distilled water. Remove an aliquot and further dilute with sterile distilled water to the reference concentration of 0.5 microgram of lincomycin per milliliter (estimated).

(ii) *Gas liquid chromatography assay.* * * *

* * * * *

This amendment institutes changes that are either corrective, editorial, or of a minor substantive nature. In addition, because this amendment is an improvement in testing procedures and the only manufacturer affected has agreed to the change, the Food and Drug Administration finds that prior notice, public procedure and delayed effective date are unnecessary and not in the public interest. The amendment may become effective January 16, 1981. However, an opportunity is provided for submission of comments to determine whether the regulation should subsequently be modified or revoked. Interested persons may, on or before Febraury 17, 1981, submit to the Dockets Management Branch (HFA-305), Food and Drug Administration, Rm. 4-62, 5600 Fishers Lane, Rockville, MD 20857, written comments on this regulation. Four copies of any comments are to be submitted, except that individuals may submit one copy. Comments are to be identified with the docket number found in brackets in the heading of this document. Received comments may be seen in the office above between 9 a.m. and 4 p.m., Monday through Friday. (A copy of the agreement with the manufacturer is on file with the Dockets Management Branch).

Any person who will be adversely affected by this regulation may file objections to it, request a hearing, and show reasonable grounds for the hearing. Any person who decides to seek a hearing must file (1) on or before February 17, 1981, a written notice of participation and request for hearing, and (2) on or before March 17, 1981, the data, information, and analyses on which the person relies to justify a hearing, as specified in 21 CFR 430.20. A request for a hearing may not rest upon mere allegations or denials, but must set forth specific facts showing that there is a genuine and substantial issue of fact that requires a hearing. If it conclusively appears from the face of the data, information, and factual analyses in the request for hearing that no genuine and substantial issue of fact precludes the action taken by this order, or if a request for hearing is not made in the required format or with the required analyses, the Commissioner of Food and Drugs will enter summary judgment against the person(s) who request(s) the hearing, making findings and conclusions and denying a hearing.

The procedures and requirements governing this order, a notice of participation and request for hearing, a submission of data, information, and analyses to justify a hearing, other comments, and grant or denial of a hearing are contained in 21 CFR 430.20.

All submissions under this order must be filed in four copies, identified with the docket number appearing in the heading of this order, with the Dockets Management Branch (HFA-305), Food and Drug Administration, Rm. 4-62, 5600 Fishers Lane, Rockville, MD 20857.

All submissions under this order, except for data and information prohibited from public disclosure under 21 U.S.C. 331(j) or 18 U.S.C. 1905, may be seen in the office of the Dockets Management Branch, between 9 a.m. and 4 p.m., Monday through Friday.

Effective date. This regulation shall be effective January 16, 1981.

(Sec. 507, 59 Stat. 463 as amended (21 U.S.C. 357))

Dated: January 6, 1981

Mary A. McEniry,

Assistant Director for Regulatory Affairs, Bureau of Drugs.

[FR Doc. 81-308 Filed 1-15-81; 8:45 am]

BILLING CODE 4110-03-M

21 CFR Part 558

New Animal Drugs for Use in Animal Feeds; Antibiotic, Nitrofuran, and Sulfonamide Drugs

AGENCY: Food and Drug Administration, HHS.

ACTION: Final rule.

SUMMARY: The Food and Drug Administration (FDA) is amending the animal drug regulations to reflect the change of sponsor from Thompson-Hayward Chemical Co. to A. L. Laboratories, Inc., the new name for International Minerals & Chemical Corp., and the new drug name for bactracin zinc. The **Federal Register** publications that established these revisions in other sections failed to amend § 558.15 accordingly. This document corrects that omission.

EFFECTIVE DATE: January 16, 1981.

FOR FURTHER INFORMATION CONTACT: Robert S. Brigham, Bureau of Veterinary Medicine (HFV-238), Food and Drug Administration, 5600 Fishers Lane, Rockville, MD 20857, 301-443-6243.

SUPPLEMENTARY INFORMATION: In the **Federal Register** of April 5, 1977 (42 FR 18060), FDA amended the animal drug regulations in 21 CFR 510.600 and 558.15 to reflect the change of sponsor of NADA 98-452 from Thompson-Hayward Chemical Co. to A.L. Laboratories, Inc. In the **Federal Register** of February 16, 1979 (44 FR 10058), FDA amended the regulations in 21 CFR 510.600(c) to reflect the change of sponsor name from IMC Chemical Group to International Minerals & Chemical Corp. In the **Federal Register** of June 13, 1978 (43 FR 25444), the agency proposed, and in the **Federal Register** of April 13, 1979 (44 FR 22053) published, a final rule for several amendments to the bacitracin regulations in 21 CFR Part 548, including the name change from zinc bacitracin to bacitracin zinc. The bacitracin name change conforms to a recent revision in the U.S. Pharmacopoeia (U.S.P. XX). The amendments failed to amend 21 CFR 558.15 to reflect the changes. This document amends 21 CFR 558.15 to provide for these changes.

§ 558.15 [Amended]

Therefore, under the Federal Food, Drug, and Cosmetic Act (sec. 512(i), 82 Stat. 347 (21 U.S.C. 360b(i))), under the authority delegated to the Commissioner of Food and Drugs (21 CFR 5.1) and redelegated to the Bureau of Veterinary

Medicine (21 CFR 5.83), § 558.15 *Antibiotic, nitrofuran, and sulfonamide drugs in the feed of animals* is amended in paragraph (g) (1) and (2) in the column "Drug sponsor", by deleting the sponsor name "IMC Chemical Group, Inc.," and inserting in its place the name "International Minerals & Chemical Corp.," by deleting the sponsor name "Thompson-Hayward Chemical Co." and inserting in its place "A. L. Laboratories, Inc.," and in paragraph (g)(1) in the column "Drug premix" and in paragraph (g)(2) in the column "Drug ingredient" by deleting the drug name "Zinc bacitracin" and inserting in its place the name "Bacitracin zinc" wherever it appears.

Effective date. This regulation is effective January 16, 1981.

(Sec. 512(i), 82 Stat. 347 (21 U.S.C. 360b(i)))

Dated: January 7, 1981.

Gerald B. Guest,

Acting Director, Bureau of Veterinary Medicine.

[FR Doc. 81-1310 Filed 1-15-81; 8:45 am]

BILLING CODE 4110-03-M

21 CFR Part 558

New Animal Drugs for Use in Animal Feeds; Tylosin and Sulfamethazine

AGENCY: Food and Drug Administration, HHS.

ACTION: Final rule.

SUMMARY: The Food and Drug Administration amends the animal drug regulations to reflect approval of a new animal drug application (NADA) filed by Custom Feed Blenders Corp., providing for safe and effective use of a premix containing 10 grams-per-pound each of tylosin and sulfamethazine for making complete swine feeds.

EFFECTIVE DATE: January 16, 1981.

FOR FURTHER INFORMATION CONTACT: Jack C. Taylor, Bureau of Veterinary Medicine (HFV-136), Food and Drug Administration, 5600 Fishers Lane, Rockville, MD 20857, 301-443-5247.

SUPPLEMENTARY INFORMATION: Custom Feed Blenders Corp., 540 Hawkeye Ave., Fort Dodge, IA 50501, is the sponsor of NADA 122-522 providing for use of premix containing 10 grams per pound each of tylosin (as tylosin phosphate) and sulfamethazine for making complete swine feeds used to increase rate of weight gain and to improve feed efficiency.

Approval of this application is based on safety and effectiveness data contained in Elanco Products Co.'s approved NADA 41-275. Use of the data in NADA 41-275 to support this application has been authorized by Elanco. This approval does not change the approved use of the drug. Consequently, approval of this NADA poses no increased human risk from exposure to residues of the animal drug, nor does it change the conditions of the drug's safe use in the target animal species. Accordingly, under the Bureau of Veterinary Medicine's supplemental approval policy (see the **Federal Register** of December 23, 1977 (42 FR 64367)), approval of this NADA has been treated as would approval of a Category II supplemental NADA and does not require reevaluation of the safety and effectiveness data in NADA 41-275.

In accordance with the freedom of information provisions of Part 20 (21 CFR Part 20) and § 514.11(e)(2)(ii) (21 CFR 514.11(e)(2)(ii)), a summary of safety and effectiveness data and information submitted to support approval of this application may be seen in the Dockets Management Branch (formerly the Hearing Clerk's office) (HFA-305), Food and Drug Administration, Rm. 4-62, 5600 Fishers Lane, Rockville, MD 20857, from 9 a.m. to 4 p.m., Monday through Friday.

The agency has determined pursuant to 21 CFR 25.24(d)(1) (proposed December 11, 1979; 44 FR 71742) that this action is of a type that does not individually or cumulatively have a significant impact on the human environment. Therefore, neither an environmental assessment nor an environmental impact statement is required.

Therefore, under the Federal Food, Drug, and Cosmetic Act (sec. 512(i), 82 Stat. 347 (21 U.S.C. 360b(i))), under authority delegated to the Commissioner of Food and Drugs (21 CFR 5.1) and redelegated to the Director of the Bureau of Veterinary Medicine (21 CFR 5.83), Part 558 is amended in § 558.630 by revising paragraph (b)(3) to read as follows:

§ 558.630 Tylosin and sulfamethazine.

* * * * *

(b) * * *

(3) To 011490, 016968, 017255, 017274, 026186, 034500, 035955, 043743, 046987: 10 grams per pound each, paragraph (f)(2)(ii) of this section.

* * * * *

Effective date. This regulation is effective January 16, 1981.

(Sec. 512(i), 82 Stat. 347 (21 U.S.C. 360b(i)))

Dated: January 7, 1981.

Gerald B. Guest,

Acting Director, Bureau of Veterinary Medicine.

BILLING CODE 4110-03-M

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

Office of Assistant Secretary for Housing—Federal Housing Commissioner

24 CFR Part 241

[Docket No. R-81-696]

Mortgage and Loan Insurance Programs Under the National Housing Act

AGENCY: Department of Housing and Urban Development.

ACTION: Final rule.

SUMMARY: This final rule amends 24 CFR 241.65 to delete the requirement that the term of a supplementary financing loan insured under Section 214 of the National Housing Act may not exceed the remaining term of the insured mortgage. Section 319 of the Housing and Community Development Amendments of 1979 eliminated the maturity requirement.

EFFECTIVE DATE: February 17, 1981.

FOR FURTHER INFORMATION CONTACT: Linda D. Cheatham, Office of Multifamily Housing Development, Development Division, Room 6116, 451 Seventh Street, SW., Washington, D.C. 20410. (202) 755-9280 (This is not a toll free number.)

SUPPLEMENTARY INFORMATION: Section 319 of the Housing and Community Development Amendments of 1979 amended Section 241(b)(2) of the National Housing Act to eliminate the requirement that the maximum term of a loan insured under Section 241 could not exceed the remaining term of the insured mortgage. Section 241.65 of 24 CFR is being amended to implement that statutory change.

The Secretary has determined that, in light of the current economic situation, the benefit afforded by this amendment should be made available as soon as possible. Publishing a notice of proposed rulemaking and giving the public an opportunity to comment on this amendment would cause a substantial delay in making the benefit available. Therefore, the Secretary finds that notice and public procedure on this amendment would be contrary to the public interest. Accordingly, this

amendment will become effective as soon as legally permissible following publication of this rule in the **Federal Register**.

A Finding of no significant Impact respecting the National Environmental Policy Act of 1969 has been made in accordance with HUD procedures. A copy of this Finding of Inapplicability will be available for public inspection during regular business hours in the Office of the Rules Docket Clerk, Office of the General Counsel, Room 5218, Department of Housing and Urban Development, 451 Seventh Street, S.W., Washington, D.C. 20410.

This rule is not listed in the Department's semiannual agenda of significant rules, published pursuant to Executive Order 12044 as extended by Executive Order 12221.

Accordingly, Title 24, Code of Federal Regulations, § 241.65 is revised as follows:

§ 241.65 Maturity.

The loan shall have a maturity satisfactory to the Commissioner.

(Section 319, Housing and Community Development Amendments of 1979)

Issued at Washington, D.C., on December 1, 1980.

Clyde McHenry,

Deputy Assistant Secretary for Housing—Federal Housing Commissioner.

[FR Doc. 81-1739 Filed 1-15-81; 8:45 am]

BILLING CODE 4210-01-M

---

24 CFR Part 885

[Docket No. R-81-897]

Loans for Housing for the Elderly or Handicapped (Interest Rate Determination)

AGENCY: Department of Housing and Urban Development (HUD).

ACTION: Final rule.

SUMMARY: This amendment implements the determination by the Secretary of HUD that the allowance for administrative costs and probable losses to be included in the Section 202 direct loan interest rate charged to Borrowers should be ¼ of 1 percent per annum for both the construction loan and the permanent loan. These loans are for housing for the elderly or handicapped.

EFFECTIVE DATE: February 23, 1981.

FOR FURTHER INFORMATION CONTACT: George O. Hipps, Jr., Director, Office of Multifamily Housing Development, 451 7th Street, S.W., Room 6128, Washington, D.C. 20410, Telephone (202) 755-5720. (This is not a toll-free number.)

SUPPLEMENTARY INFORMATION: The present regulation provision (24 CFR 885.410(g)) incorporates a determination by the Secretary that the allowance for administrative costs and probable losses should be 1 percent per annum during the construction period and ⅛ of 1 percent per annum thereafter.

The Section 202 interest rate is based on a rate determined by the Secretary of the Treasury taking into account the average interest rate on all interest-bearing obligations of the United States forming a part of the public debt, computed as of the end of the preceding fiscal year plus the allowance determined by the HUD Secretary.

Because the average interest rate on Federal borrowing during the first half of Fiscal Year 1980 was extraordinarily high, many Section 202 sponsor organizations have sought administrative and statutory relief to obtain a rate not in excess of that charged HUD on loans made during Fiscal Year 1980.

HUD shares the program sponsors' concern over the possible detrimental effect of a higher interest rate on program viability. Therefore, based on consideration of the large portfolio of Section 202 loans now held by HUD, the relatively low number of defaults so far experienced and administrative costs for the program, the Secretary has determined that an allowance of ¼ of 1 percent per annum should be added to the rate determined by the Secretary of the Treasury, beginning with loans made in Fiscal Year 1981.

Because of the remedial nature of the Section 202 interest rate change and in order to avoid further delay in processing projects presently in development, the Department has determined that there is good cause for making this rule effective as soon as possible.

A determination has also been made that public comments need not be obtained because of the remedial nature of the change. Accordingly, this Final Rule becomes effective on the date set forth above.

The Catalog of Federal Domestic Assistance Program title and number is Housing for the Elderly or Handicapped, 14.157.

A Finding of No Significant Impact with respect to the environment has been made in accordance with HUD regulations in 24 CFR Part 50, which implement Section 102(2)(c) of the National Environmental Policy Act of 1969. The Finding of No Significant Impact is available for public inspection during regular business hours at the Office of the Rules Docket Clerk, Office of the General Counsel, Room 5218, Department of Housing and Urban Development, 451 Seventh Street, S.W., Washington, D.C. 20410.

This Rule is not listed in the Department's semiannual agenda of significant rules, published pursuant to Executive Order 12221.

Accordingly, 24 CFR Part 885, § 885.410(g) (1) and (2) is revised to read as follows:

§ 885.410 Amount and terms of financing.

* * * * *

(g) The loan shall bear interest at a rate established by the Secretary by adding:

(1) A rate determined by the Secretary of the Treasury to be the average interest rate on all interest-bearing obligations to the United States then forming a part of the public debt computed at the end of the fiscal year immediately prior to the date on which the loan is made; plus

(2) an allowance to cover administrative costs and probable losses under the program, which allowance has been determined by the Secretary of HUD to be one-fourth of one percent (.25%) per annum for both the construction and permanent loan periods.

BILLING CODE 4210-01-M

DEPARTMENT OF JUSTICE

Office of the Attorney General

28 CFR Parts 0 and 40

[Order No. 924-81]

Office of Inmate Grievance Procedure Certification Standards for Inmate Grievance Procedures

AGENCY: Department of Justice.

ACTION: Final rule.

SUMMARY: The "Civil Rights of Institutionalized Persons Act," requires that the Attorney General of the United States promulgate minimum standards for inmate grievance procedures and establish a method of certifying such procedures. The following fulfills these requirements.

EFFECTIVE DATE: The "Civil Rights of Institutionalized Persons Act" states

that the standards for inmate grievance procedures shall become effective thirty legislative days after the date of publication.

FOR FURTHER INFORMATION CONTACT: William R. Yeomans, Attorney-Advisor, Office for Improvements in the Administration of Justice, Department of Justice, Room 4250, Main Justice Building, Washington, D.C. 20530 (202–633–4582).

SUPPLEMENTARY INFORMATION: "The Civil Rights of Institutionalized Persons Act" of 1980 grants the Attorney General authority to initiate and to intervene in civil actions against states and their political subdivisions to protect the federal rights of institutionalized persons. It also encourages the protection of constitutional rights of adults in correctional facilities by encouraging the development and implementation of administrative mechanisms for the resolution of prisoner grievances within institutions.

The Act requires that the Attorney General develop minimum standards for prisoner grievance mechanisms in adult correctional and detention facilities. States and their political subdivisions voluntarily may submit plans for grievance mechanisms to the Attorney General for certification that they comply with the standards. Courts may continue cases filed pursuant to 42 U.S.C. 1983 by adults confined in correctional or detention facilities for a period of up to 90 days in order to allow exhaustion of the grievance mechanism, if the Attorney General has certified a plan, or the court determines that the grievance mechanism is in substantial compliance with the minimum standards promulgated by the Attorney General. Such continuances should only occur if the issues raised in the action pursuant to 42 U.S.C. 1983 reasonably can be expected to be resolved by the grievance mechanism.

Section 7, Pub. L. 96–247, 94 Stat. 353 (42 U.S.C. 1997e) requires that the minimum standards for grievance mechanisms provide for an advisory role for employees and prisoners in the formulation, implementation, and operation of the mechanism; specific time limits for written replies to grievances including explanations of decisions; priority processing of emergency grievances; safeguards to prevent reprisals against grievants; and independent review of grievance decisions "by a person or other entity not under the direct supervision or direct control of the institution."

The Act also requires that the Attorney General develop a certification procedure to determine whether grievance procedures submitted to the Attorney General are in substantial compliance with the minimum standards. An Office of Inmate Grievance Procedure Certification is created to apply the standards.

A total of sixteen comments were received in response to the publication on November 28, 1980 (45 FR 79095) of the proposed rule. This section responds to the major comments. The following comments prompted changes in the final rule:

Comment One. It was suggested that the proposed definition of "grievance" was too restrictive. Therefore, the definition of a "grievance" was expanded to include "a written complaint by an inmate on the inmate's own behalf regarding * * * a condition in an institution * * *". (See § 40.1(d)). It was thought that this addition combined with the proposed language would allow an inmate to file a grievance regarding any aspect of confinement that might cause the inmate harm and that was not governed by some other procedure, such as a disciplinary or parole proceeding.

Comment Two. It was pointed out that grievance procedures are intended to be adopted by states or their political subdivisions and that the use of "institution" in § 40.2 was inappropriate. The word "institution" has been replaced by "applicant". (See § 40.2).

Comment Three. It was proposed that § 40.5 was unclear where it stated: "The grievance procedure shall not supplant disciplinary procedures." In order to clarify the meaning, the sentence has been changed to read: "The grievance procedure shall not be used as a disciplinary procedure." (See § 40.5).

Comment Four. It was suggested that inclusion of information reflecting trends over time in the use of a grievance procedure would contribute to the usefulness of the evaluation of the procedure. Consequently, the requirement was added to § 40.11 that the evaluation report on "year to year trends in inmate use of the grievance procedure". (See § 40.11).

The following significant comments are not reflected in the final rule for the reasons stated:

Comment One. It was suggested that the standards reflect the different natures of short and long-term holding facilities. It was determined that compliance with the proposed standards by facilities that house inmates for short periods would be difficult. While recognizing the difficulties that such facilities might experience, it was decided that such a distinction was neither practical nor desirable. As a practical matter, the difficulty of administering two sets of standards would introduce confusion and require a larger than desirable bureaucratic structure to apply the standards.

Nor was it thought that separate requirements for short- and long-term facilities were desirable. Under 42 U.S.C. 1997e, certification of a grievance procedure by the Attorney General provides justification for a court to stay consideration of an action by an inmate pursuant to 42 U.S.C. 1983 for 90 days to allow exhaustion of the certified grievance procedure. The possibility that an action by an inmate confined for a short period may be stayed, possibly preventing him from receiving court consideration of his action before his release, places special demands on the fairness of the grievance procedures in short-term holding facilities. Consequently, any dilution of the standards applicable to such facilities was rejected.

Comment Two. It was suggested that § 40.7(b) be changed to permit inmate participation in the disposition of all grievances, not just those "challenging general policy and practices." On the other hand, comments were received opposing inmate participation in the disposition of individual grievances. Both suggestions were rejected in favor of the present language which strikes a desirable balance between the competing concerns of preventing inmate exclusion from meaningful participation in the grievance procedure and affording inmates opportunity to abuse positions of influence.

Comment Three. A variety of comments were offered regarding the nature of the review to be afforded the disposition of inmate grievances under § 40.7(f). The suggestions ranged from elimination altogether of review by a person or entity not under the supervision or control of the corrections agency to providing such review for all grievances. Comments were also received supporting the language of § 40.7(f). It was determined that the proposed language of § 40.7(f) struck a proper balance assuring that the appropriateness of policies challenged through grievances would receive independent examination by individuals who were not responsible for promulgation of the policies, while reducing fears that every grievance would be reviewed outside the correctional agency, thereby creating a potentially costly extra step in the grievance procedure.

Comment Four. It was suggested that the standards require the availability of monetary relief through the grievance procedure. Proposed § 40.6 listed

monetary relief among the remedies that a grievance procedure "may include". The final § 40.6 retains the original language based on a determination that some systems may not be empowered to offer monetary relief through a grievance procedure without amendment of existing statutes. Further, it was determined that, although monetary relief is desirable, it is not an essential component of a fair and effective grievance procedure. Finally, it should be noted that under 42 U.S.C. 1997e a court may determine whether exhaustion of a grievance procedure should be required of an inmate before adjudication of his claim pursuant to 42 U.S.C. 1983. Presumably, where monetary relief was the sole adequate remedy and could not be obtained through a grievance procedure, exhaustion would not be appropriate.

Comment Five. It was suggested that states with the equivalent of an Administrative Procedure Act be required to adopt formally their grievance procedures. Although formal adoption may be desirable, it does not rise to the level of a requirement for minimum standards for grievance procedures, particularly in consideration of the standards' provisions for inmate and public contribution to the adoption of procedures.

Comment Six. It was suggested that it was not necessary to distribute the written grievance procedure to every inmate, as required by § 40.3. It was decided that this requirement should be retained as the only method of ensuring that all inmates were aware of the existence and workings of the grievance procedure. Such awareness is necessary if inmates are to use the grievance procedure and if they are to contribute meaningfully to its formulation, implementation and operation.

Comment Seven. A comment was received questioning the need for evaluations of grievance procedures, as required by § 40.11. It was determined that such evaluations were essential to inform both corrections administrators and the Attorney General of the effectiveness of grievance procedures. It is essential that grievance procedures, once certified, continue to operate effectively to avoid unfair and needless postponement of court consideration of inmate petitions.

Comment Eight. A comment was received suggesting that the standards address the effect of inmate transfers on pending grievances. It was concluded that the use of a transfer for the purpose of mooting a grievance was covered adequately by § 40.9, which forbids reprisals against inmates for using a grievance procedure. It was also determined that a general rule stating the effect of a transfer on a pending grievance was undesirable in consideration of the myriad matters that may form the subject matter of a grievance. Therefore, it has been left to applicants to treat such matters on a case by case basis. It is expected that the grievance procedure may be used to challenge the mooting of a grievance.

It is the position of the Attorney General that the provision in Section 7, Pub. L. 96-247, 94 Stat. 353 (42 U.S.C. 1997e) subjecting these model standards for inmate grievance procedures to a legislative veto is unconstitutional under Article I, § 7, of the United States Constitution insofar as it deprives the President of the opportunity to veto congressional action that has the effect of law. The standards will be transmitted to Congress as required by Section 7, Pub. L. 96-247, 94 Stat. 353 (42 U.S.C. 1997e) and will be implemented thirty legislative days thereafter. Although any congressional views that are expressed regarding the standards will be considered carefully, any resolution of "disapproval" will not be treated as binding.

For the reasons set forth in the preamble and under the authority of Pub. L. 96-247, 94 Stat. 349 (42 U.S.C. 1997) and 28 U.S.C. 509, 510 and 5 U.S.C. 301, it is hereby ordered as follows:

1. A new Part 40 is added to Title 28, Code of Federal Regulations to read as follows: .

PART 40—STANDARDS FOR INMATE GRIEVANCE PROCEDURES

Subpart A—Minimum Standards for Inmate Grievance Procedures

Sec.
40.1 Definitions.
40.2 Adoption of procedures.
40.3 Communication of procedures.
40.4 Accessibility.
40.5 Applicability.
40.6 Remedies.
40.7 Operation and decision.
40.8 Emergency procedure.
40.9 Reprisals.
40.10 Records.
40.11 Evaluation.

Subpart B—Procedures for Obtaining Certification of a Grievance Procedure

40.12 Submissions by applicant.
40.13 Notice of intent to apply for certification.
40.14 Review by the Attorney General.
40.15 Conditional certification.
40.16 Full certification.
40.17 Denial of certification.
40.18 Reapplication after denial of certification.
40.19 Suspension of certification.
40.20 Withdrawal of certification.
40.21 Contemplated change in certified procedure.
40.22 Notification of court.
40.23 Significance of certification.
Appendix A—Commentary.

Authority: Pub. L. 96-247, 94 Stat. 349 (42 U.S.C. 1997).

Subpart A—Minimum Standards for Inmate Grievance Procedures

§ 40.1 Definitions.

For purposes of this part—

(a) "Act" means the Civil Rights of Institutionalized Persons Act of 1980, Pub. L. 96-247, 94 Stat. 349, (42 U.S.C. 1997).

(b) "Applicant" means a state or political subdivision of a state that submits to the Attorney General a request for certification of a grievance procedure.

(c) "Attorney General" means the Attorney General of the United States or the Attorney General's designees.

(d) "Grievance" means a written complaint by an inmate on the inmate's own behalf regarding a policy applicable within an institution, a condition in an institution, an action involving an inmate of an institution, or an incident occurring within an institution. The term "grievance" does not include a complaint relating to a parole decision.

(e) "Inmate" means an individual confined in an institution for adults who has been convicted of a crime.

(f) "Institution" means a jail, prison, or other correctional facility, or pretrial detention facility that houses adults and is owned, operated, or managed by or provides services on behalf of a state or political subdivision of a state.

(g) "State" means a State of the United States, the District of Columbia, the Commonwealth of Puerto Rico, or any of the territories and possessions of the United States.

(h) "Substantial compliance" means that there is no omission of any essential part from compliance, that any omission consists only of an unimportant defect or omission, and that there has been a firm effort to comply fully with the standards.

§ 40.2 Adoption of procedures.

Each applicant seeking certification of its grievance procedure for purposes of the Act shall adopt a written grievance procedure. Inmates and employees shall be afforded an advisory role in the formulation and implementation of a grievance procedure adopted after the effective date of these regulations, and shall be afforded an advisory role in reviewing the compliance with the standards set forth herein of a grievance procedure adopted prior to the effective date of these regulations.

§ 40.3 Communication of procedures.

The written grievance procedure shall be distributed to all employees and inmates of the institution, together with explanatory materials reasonably necessary to ensure that potential participants understand how to use the procedure. Additionally, each inmate and employee shall, upon arrival at the institution and periodically thereafter, receive an oral explanation of the procedure including the opportunity to have questions regarding the procedure answered orally. Explanatory materials and oral presentations shall be available in any language spoken by a significant portion of the institution's population. An inmate who does not understand a language spoken by a significant portion of the institution's population shall receive an explanation of the grievance procedure in a language in which the inmate is fluent. Impaired and handicapped inmates shall receive explanations in a manner comprehensible to them. All employees of the institution who may reasonably be expected to operate or participate in the grievance procedure shall receive training in the skills necessary to operate or participate in the grievance procedure.

§ 40.4 Accessibility.

Each inmate shall be entitled to invoke the grievance procedure regardless of any disciplinary, classification, or other administrative or legislative decision to which the inmate may be subject. The institution shall ensure that the procedure is accessible to impaired and handicapped inmates.

§ 40.5 Applicability.

The grievance procedure shall be applicable to a broad range of complaints and shall state specifically the types of complaints covered and excluded. At a minimum, the grievance procedure shall permit complaints by inmates regarding policies and conditions within the jurisdiction of the institution or the correctional agency that affect them personally, as well as actions by employees and inmates, and incidents occurring within the institution that affect them personally. The grievance procedure shall not be used as a disciplinary procedure.

§ 40.6 Remedies.

The grievance procedure shall afford a successful grievant a meaningful remedy. Acceptable forms of relief may include, but are not limited to monetary remedies, restitution of property, reclassification, correction of records, personnel actions, agreement by institution officials to remedy an objectionable condition within a reasonable, specified time, and a change in an institution policy or practice. Although available remedies may vary among institutions, a reasonable range of meaningful remedies in each institution is necessary.

§ 40.7 Operation and decision.

Initiation. The procedure for initiating a grievance shall be simple and include the use of a standard form. Necessary materials shall be freely available to all inmates and assistance shall be readily available for inmates who cannot complete the forms themselves. Forms shall not demand unnecessary technical compliance with formal structure or detail, but shall encourage a simple and straightforward statement of the inmate's grievance.

(b) *Inmate and employee participation.* The institution shall provide a role for employees and inmates in the operation of the system in such a manner as to promote the credibility and use of the grievance procedure. At a minimum, some employees and inmates shall be permitted to participate directly in an advisory capacity in the disposition of grievances challenging general policy and practices and to review the effectiveness and credibility of the grievance procedure. To protect confidentiality, an inmate shall not participate in the resolution of another inmate's grievance over an objection by the grievant.

(c) *Investigation and consideration.* The institution shall establish a procedure for investigating the allegations and establishing the facts of each grievance. No inmate or employee who appears to be involved in the matter shall participate in any capacity in the resolution of the grievance.

(d) *Reasoned, written responses.* Each grievance shall be answered in writing at each level of decision and review. The response shall state the reasons for the decision reached and shall include a statement that the inmate is entitled to further review, if such is available, and shall contain simple directions for obtaining such review.

(e) *Fixed time limits.* Responses shall be made within fixed time limits at each level of decision. Time limits may vary between institutions, but expeditious processing of grievances at each level of decision is essential to prevent grievances from becoming moot. In all instances grievances must be processed from initiation to final disposition in less than 90 days, unless the grievant agrees in writing to an extension for a fixed period. Expiration of a time limit at any stage of the process shall entitle the grievant to move to the next stage of the process, unless the grievant has agreed in writing to an extension of the time for a response.

(f) *Review.* The grievant shall be entitled to review by a person or other entity, not under the institution's supervision or control, of the disposition of all grievances concerning alleged reprisals by an employee against an inmate and grievances concerning the substance or general application of policy. A grievance challenging a policy promulgated by the correctional agency that supervises the institution shall be reviewed by a person or other entity not under the supervision or control of the correctional agency. The correctional agency must give serious consideration to the results of such review, but need not agree to be bound by the results. A request for review shall be allowed automatically without interference by administrators or employees of the institution or correctional agency and such review shall be conducted without influence or interference by administrators or employees of the institution or correctional agency.

§ 40.8 Emergency procedure.

The grievance procedure shall contain special provision for responding to grievances of an emergency nature. Emergency grievances shall be defined, at a minimum, as matters regarding which disposition according to the regular time limits would subject the inmate to a substantial risk of personal injury, or cause other serious and irreparable harm to the inmate. The grievance procedure shall state specifically the matters that will be reviewed under the emergency procedure. Emergency grievances shall be forwarded immediately, without substantive review to the level at which corrective action can be taken. The procedure for resolving emergency grievances shall provide for expedited responses at every level of decision. The emergency procedure shall also include review by a person or entity not under the supervision or control of the institution.

§ 40.9 Reprisals.

The grievance procedure shall prohibit reprisals against inmates for their use of the procedure, and shall specify the steps that will be taken to prevent and redress reprisals, and the penalties for engaging in a reprisal. "Reprisal" means any action or threat of action against an inmate based on the inmate's use of or participation in the grievance procedure. Each inmate must be given written assurance that use of or participation in the grievance

mechanism will not result in formal or informal reprisals against the inmate. Employees of the institution shall also be given assurances that they will not be subject to reprisals resulting from their participation in the grievance procedure. An inmate shall be entitled to pursue through the grievance procedure a complaint that a reprisal occurred against the inmate.

§ 40.10 Records.

(a) *Nature.* Records regarding the filing and disposition of grievances shall be collected and maintained systematically by the institution. Such records shall be preserved for at least three years following final disposition of the grievance. At a minimum, such records shall include aggregate information regarding the numbers, types and dispositions of grievances, as well as individual records of the date of, and the reasons for each disposition at each stage of the procedure.

(b) *Confidentiality.* Records regarding the participation of an individual in grievance proceedings shall not be available to staff or other inmates, except to the extent that access for clerical processing of the records is necessary. Such records shall not be available to individuals participating in parole decisions. Records of any testimony or evidence received in connection with a grievance proceeding shall not be made available to staff or other inmates, except to the extent that access for clerical processing is necessary or as hereafter provided. Such records shall not be available to individuals participating in parole decisions. Consistent with ensuring confidentiality, staff and inmates who are participating in the disposition of a grievance shall have access to records essential to the resolution of the grievance.

§ 40.11 Evaluation.

The grievance procedure shall contain a plan for periodic evaluation reports, at least annually, of the performance of the grievance procedure. At a minimum, such evaluation shall report on the inmates' use of the grievance procedure, including year to year trends in inmate use of the grievance procedure, information regarding types of grievances filed, types of remedies granted, implementation of remedies, numbers and types of emergency grievances, and the average time for disposition of standard and emergency grievances. The evaluation report shall include recommendations for improvements in the grievance procedure. The evaluation report shall also contain information regarding the costs generated or saved by compliance with 42 U.S.C. 1997e. Evaluation reports shall be reviewed by a person or entity not under the supervision or control of the institution with specific reference to compliance with the standards set forth in §§ 40.2 through 40.10. Such evaluation and review shall be submitted promptly after their completion to the Attorney General.

Subpart B—Procedures for Obtaining Certification of a Grievance Procedure

§ 40.12 Submissions by applicant.

An application for certification shall be submitted to the Office of Inmate Grievance Procedure Certification, Department of Justice, Main Justice Building, Washington, D.C. 20530, and shall contain the following:

(a) *Written statement.* A written statement describing the grievance procedure, including a brief description of the institution or institutions covered by the procedure, with accompanying plans for or evidence of implementation in each institution.

(b) *Instructional materials.* A copy of the instructional materials for inmates and employees regarding use of the grievance procedure together with a description of the manner in which such materials are distributed, a description of the oral explanation of the grievance procedure, including the circumstances under which it is delivered, and a description of the training provided to employees and inmates in the skills necessary to operate the grievance procedure.

(c) *Form.* A copy of the form used by inmates to initiate a grievance and to obtain review of the disposition of a grievance.

(d) *Information regarding past performance.* For a procedure that has operated for more than one year at the time of the application, the applicant shall submit information regarding the number and types of grievances filed over the preceding year, the disposition of the grievances with sample responses from each level of decision, the remedies granted, evidence of compliance with time limits at each level of decision, and a description of the role of inmates and employees in the formulation, implementation, and operation of the grievance procedure.

(e) *Plan for collecting information.* For a procedure that has operated for less than one year at the time of the application, the applicant shall submit a plan for collecting the information described in paragraph (d) of this section.

(f) *Assurance of confidentiality.* A description of the steps taken to ensure the confidentiality of records of individual use of or participation in the grievance procedure.

(g) *Evaluation.* A description of the plans for periodic evaluation of the grievance procedure, including identification of the group, individuals or individual who will conduct the evaluation and identification of the person or entity not under the control or supervision of the institution who will review the evaluation, together with two copies of the most recent evaluation, if one has been performed.

(h) *Public participation.* A list of all local agencies, interested persons and groups that have received a copy of the grievance procedure submitted to the Attorney General.

§ 40.13 Notice of intent to apply for certification.

The applicant shall publish notice of its intent to request certification in at least one newspaper that receives general circulation in the vicinity of each institution to be covered by the application. The notice shall invite comments regarding the grievance procedure and direct them to the Attorney General. A similar notice shall be posted within each institution to be covered by the application.

§ 40.14 Review by the Attorney General.

The Attorney General shall review and respond to each application as promptly as the circumstances, including the need for independent investigation and consideration of the comments of agencies, and interested groups and persons, permit.

§ 40.15 Conditional certification.

If, in the judgment of the Attorney General, a grievance procedure that has been in existence less than one year is at the time of application in substantial compliance with the standards promulgated herein, the Attorney General shall grant conditional certification for one year or until the applicant satisfies the requirements of § 40.16, whichever period is shorter.

§ 40.16 Full certification.

If, in the judgment of the Attorney General, a grievance procedure that has been in existence longer than one year at the time of application is in substantial compliance with the standards promulgated herein, full certification shall be granted. Such certification shall remain in effect unless and until the Attorney General finds reasonable cause to believe that the grievance procedure is no longer in substantial compliance with the

minimum standards and so notifies the applicant in writing.

§ 40.17 Denial of certification.

If the Attorney General finds that the grievance procedure is not in substantial compliance with the standards promulgated herein, the Attorney General shall deny certification and inform the applicant in writing of the area or areas in which the grievance procedure or the application is deemed inadequate.

§ 40.18 Reapplication after denial of certification.

An applicant denied certification may resubmit an application for certification at any time after the inadequacy in the application or the grievance procedure is corrected.

§ 40.19 Suspension of certification.

(a) *Reasonable belief of non-compliance.* If the Attorney General has reasonable grounds to believe that previously certified grievance procedure may no longer be in substantial compliance with the minimum standards, the Attorney General shall suspend certification. The suspension shall continue until such time as the deficiency is corrected, in which case certification shall be reinstated, or until the Attorney General determines that substantial compliance no longer exists, in which case, except as provided in paragraph (b) of this section, the Attorney General shall withdraw certification pursuant to § 40.20.

(b) *Defect may be readily remedied; good faith effort.* If the Attorney General determines that a grievance procedure is no longer in substantial compliance with the minimum standards, but has reason to believe that the defect may be readily corrected and that good faith efforts are underway to correct it, the Attorney General may suspend certification until the grievance procedure returns to compliance with the minimum standards.

(c) *Recertification after suspension pursuant to paragraph (a).* The Attorney General shall reinstate the certification of an applicant whose certification was suspended pursuant to paragraph (a) of this section upon a demonstration in writing by the applicant that the specific deficiency on which the suspension was based has been corrected or that the information that caused the Attorney General to suspend certification was erroneous.

(d) *Recertification after suspension pursuant to paragraph (b).* The Attorney General shall reinstate the certification of an applicant whose certification has been suspended pursuant to paragraph (b) upon a demonstration in writing that the deficiency on which the suspension was based has been corrected.

(e) *Notification in writing of suspension or reinstatement.* The Attorney General shall notify an applicant in writing that certification has been suspended or reinstated and state the reasons for the action.

§ 40.20 Withdrawal of certification.

(a) *Finding of non-compliance.* If the Attorney General finds that a grievance procedure is no longer in substantial compliance with the minimum standards, the Attorney General shall withdraw certification, unless the Attorney General concludes that suspension of certification under § 40.19(b) of this part is appropriate.

(b) *Notification in writing of withdrawal of certification.* The Attorney General shall notify an applicant in writing that certification has been withdrawn and state the reasons for the action.

(c) *Recertification after withdrawal.* An applicant whose certification has been withdrawn and who wishes to receive recertification shall submit a new application for certification.

§ 40.21 Contemplated change in certified procedure.

A proposed change in a certified procedure must be submitted to the Attorney General thirty days in advance of its proposed effective date. The Attorney General shall review such proposed change and notify the applicant in writing before the effective date of the proposed change whether such change will result in suspension or withdrawal of the certification of the grievance procedure.

§ 40.22 Notification of court.

The Attorney General shall notify in writing the Chief Judges of the United States Court of Appeals and of the United States District Court(s) within whose jurisdiction the applicant is located of the certification, suspension of certification, withdrawal of certification and recertification of the applicant's grievance procedure. The Attorney General shall also notify the court of the certification status of any grievance procedure the request of the court or any party in an action by an adult inmate pursuant to 42 U.S.C. 1983.

§ 40.23 Significance of certification.

Certification of a grievance procedure by the Attorney General shall signify only that on the basis of the information submitted, the Attorney General believes the grievance procedure is in substantial compliance with the minimum standards. Certification shall not indicate approval of the use or application of the grievance procedure in a particular case.

Appendix A—Commentary

Section 40.2 Adoption of Procedures

The essential feature of this standard is the requirement that the grievance procedure be adopted in writing. Written grievance procedures provide assurances to inmates that established procedures exist for processing, reviewing, and resolving their complaints. They also assist institutional administrators and staff by providing guidance regarding the proper handling of inmate complaints.

Section 40.3 Communication of Procedures—written and oral explanation

This standard is intended to ensure that the institution takes reasonable steps to communicate how and when to use the grievance procedure to the inmates. The standard incorporates the requirement of 42 U.S.C. 1997e that inmates and employees participate in the formulation and implementation of the grievance procedure. The type of participation is left to the correctional agency or institution to determine, but it should be of such a nature as to enhance the credibility of the grievance mechanism by fostering a sense of inmate and employee responsibility for the final design and operation of the procedure. For further comment on the need to foster inmate and employee responsibility see Commentary on § 40.7(b) below.

Research on existing grievance mechanisms sheds important light on the need for inmate familiarity with those mechanisms.[1] Many inmates may not develop extensive knowledge of

[1] The relevant research is limited to general surveys of grievance mechanisms presently in use and evaluations of their effects on such factors as inmate and staff attitudes concerning the resolution of complaints, patterns of use by inmates, and dispositions of grievances resolved. Very few of the studies gather extensive empirical data on the operation and effects of grievance mechanisms. Those that do are limited to individual correctional institutions or systems. Thus, extensive empirical comparisons between the effects of different types of grievance mechanisms on prisons and inmates are not available.

Most of the research simply describes the operation of grievance mechanisms, and inmate and staff perceptions of their fairness and efficiency. It is not possible to draw firm conclusions from this research about the effectiveness of grievance mechanisms in reducing levels of tension or violence in institutions, or even about whether there are significant systematic differences among grievance mechanisms in their effects on prisons. Accordingly, discussion of research in this commentary only summarizes the research findings that are related to the central points of discussion and that are strongly supported across the literature cited.

their rights under grievance mechanisms or of the specific procedures used in filing grievances or appealing grievance decisions.[2] Formal orientation involving inmates and staff may reduce apprehension when the grievance mechanisms are introduced, increase awareness of their existence, and stimulate their use in settling disputes.[3]

Thorough orientation and training about grievance mechanisms is necessary for both inmates and staff. Orientation for inmates might involve both inmate and staff participation, and should attempt to increase inmates' knowledge of rules and procedures in filing grievances and appealing grievance decisions. Training for employees and inmates should cover the skills necessary to participate in and, where appropriate, operate the grievance procedure. Active involvement and support by the institutional administration in training and orientation is important.[4]

Section 40.4 Accessibility

An inmate must have access to the grievance procedure, regardless of personal impairments or handicaps. The purposes of a grievance procedure cannot be fulfilled if certain classes of inmates are prevented from using it. The provisions of 42 U.S.C. 1997e apply to adult inmates convicted of crimes. Although juveniles and pretrial detainees are excluded, as a matter of sound policy and equal treatment, institutions containing mixed populations are encouraged to open the grievance procedure to all inmates, despite the ability of inmates not covered by the Act to proceed directly to court.

Section 40.5 Applicability

The range of complaints to which the grievance procedure applies and the types of remedies that the procedure affords are fundamental features of the design of a grievance mechanism. Pursuant to 42 U.S.C. 1997e, a court may stay any inmate action filed under 42 U.S.C. 1983 for 90 days to allow exhaustion of a grievance procedure. If exhaustion is to be a realistic alternative in such cases, the grievance procedure must be applicable to many complaints that could be raised in an action under section 1983 and the relief available under the procedures must approximate the remedies available under the statute. Otherwise, a major purpose of the "Civil Rights of Institutionalized Persons Act"—to permit non-judicial resolution of inmate grievances—may not be realized.

Grievance mechanisms should explicitly state what matters or categories of complaints are subject to review under the procedure in order to ensure proper and necessary use of the procedure. General examples of such matters include institutional policies, applications of the policies, actions by employees or other inmates, and living conditions within the institution. There also should be explicit statements of matters not subject to review. Applicants are encouraged to use the grievance procedure to determine whether a complaint is grievable. The grievance procedure shall not replace disciplinary procedures which are subject to certain constitutional safeguards.

Section 40.6 Remedies

The requirement that grievance procedures afford meaningful remedies is essential. The procedures should clearly specify the types of remedies that are within their scope and authority. Examples of such remedies include monetary relief, restitution of a grievant's property, correction of records, reclassification, and changes in institutional policies or practices that are the subject of grievances. As stated previously, if the purposes of the Civil Rights of Institutionalized Persons Act are to be fulfilled, grievance procedures must be empowered to award a broad range of remedies.

Section 40.7 Operation and Decision

a. *Initiation.* All inmates should be permitted to file grievances. The requisite materials should be readily accessible to every inmate in the institution, regardless of classification or disciplinary status. Since the effectiveness of a complaint may turn on the ability of the inmate to express the compliant in writing, inmates with handicaps or minimal or diminished capacity for written expression must be afforded assistance in presenting their grievances. However, this standard should not be read as requiring the provisions of legal representation for inmates.

In filing grievances, inmates should not be forced to comply with technicalities of form or detail, but should be required only to state their compliant in a simple, straightforward manner. The use of a standard form will assist the simplification of the filing process and assist decision-makers by structuring the presentation of the grievance.

b. *Inmate and Employee Participation.* Taken in conjunction with § 40.2 of this part, this standard requires inmate and employee participation in the formulation, implementation and operation of the grievance procedure. The exact nature of the participation is left to each applicant for certification with the caveat that the participation must be such as to promote the credibility and use of the grievance procedure.

Inmate participation in an advisory capacity is mandated at the most decentralized level reasonably possible. This requirement is intended to ensure that inmates play a role in the initial consideration of their grievances. Such participation will allow full airing of the dispute at the earliest possible time and promote prompt and efficient settlement of grievances.

Examples of inmate involvement include participation in designing grievance procedures, reviewing the overall operation of the grievance system and working with staff to assure the system is successful and credible. Staff and administration involvement may include participation in the design of grievance procedures, and in dispute resolution through the grievance mechanisms. Administrators may also serve in reviewing capacities.

As a reflection of the concern for confidentiality expressed in Standard IV(b), this Standard allows an inmate to request that other inmates not participate in the actual resolution of a grievance filed by the inmate. Barring such a request, inmates may have other inmates participate in an advisory capacity in the resolution of their disputes, although the standard does not require that any inmates have access to confidential records. A request that inmates not participate in the resolution of a dispute shall be made by the inmate who filed the grievance and may be withdrawn before the grievance procedure is completed.

Many existing grievance procedures are designed to include inmate participation. A recent survey indicates that under some programs inmates accept and screen incoming grievances and work together with staff in settling inmates' disputes.[5] The survey also showed that almost one-third of the

[5] Dillingham and Singer, *Complaint Procedures in Prisons and Jails: An Examination of Recent Experience*, pp. 22–23 (1980).

programs that involve prisoner participation and hearings on grievances give prisoners "decision-making" roles.[6]

There is reason to believe that prisoners in programs with participatory grievance mechanisms may be more willing to use the grievance mechanism.[7] A study by Dillingham and Singer suggests that more prisoners feel that complaints are handled fairly and satisfactorily under participatory grievance procedures (those with inmate participation and external review) than do under nonparticipatory procedures.[8] This finding may be due in part to the higher rates of dispositions favoring inmates in correctional systems using participatory grievance procedures.[9]

Another study indicates that prisoners and correctional officers may often feel participatory grievance procedures achieve fair, useful and expeditious resolution of prisoners' complaints.[10] Correctional administrators also feel that, as a general matter, grievance mechanisms are effective in resolving prisoner complaints.[11] Some administrators indicate that prisoner participation in grievance mechanisms enables prisoners to question and challenge policies more easily, more expeditiously, and at lower levels of decision-making within the institution.[12] Hepburn et al. report that line-officers and staff involved in participatory grievance procedures, who may initially resist involvement due to concerns over weakening authority and reduced autonomy, may come to believe that the procedures improve working conditions by (1) reducing prisoner hostility toward staff, (2) clarifying ambiguous or contradictory policies, and (3) effecting change in unpopular or unenforceable institutional rules.[13] In brief, available evidence shows that grievance mechanisms that provide for inmate and staff involvement tend to be perceived as fair and effective, and thus achieve greater credibility.

c. *Investigation and consideration.* A grievance procedure must have a method for investigating the allegations contained in a grievance and establishing the facts necessary to be just resolution. The method need not be modeled on a strict adversarial approach to grievance resolution, but it may be necessary for inmates to be interviewed personally regarding their grievances.

To enhance the impartiality of grievance decisions, the Standard requires that employees and inmates who are the subject of grievances or were involved in the events that produced the grievance not participate in resolving the grievance.

d. *Reasoned, written responses.* The requirement that grievances receive reasoned, written responses may aid in ensuring that grievances are considered carefully by staff and administrators and may inform administrators whether institution policies and procedures are appropriate and are being implemented properly. Equally important is the possible effect upon an inmate of a reasoned, written response. It will give the inmate some assurance that the grievance has been reviewed and should serve to clarify the institutional policy or practice that was the subject of the grievance. Furthermore, the requirement of a written response provides administrators with a document that identifies the outcome of an inmate's grievance. Thus, reasoned, written responses may enhance inmates' perceptions that they have been treated fairly, and may assist administrators in operating the facility.

There is little research concerning responses to grievances. Dillingham and Singer note that summary replies to grievances such as "Request denied—contrary to policy" were often observed in their analysis of grievance records.[14] Dillingham's analysis of the California Youth Authority grievance procedure indicates that mandatory provision for explanations of grievance decisions has resulted in reasoned replies.[15]

e. *Fixed time limits.* The credibility and practical success of grievance procedures may be enhanced if the procedures result in prompt responses to inmates' complaints. Fixed time limits help to ensure inmates that complaints will not be put off by decision-makers. The standard provides that time limits may not be exceeded unless an inmate agrees in writing to an extension. If the inmate has not agreed to an extension and no response is forthcoming during the prescribed period, the inmate may move to the next stage of review. The standard would not affect the ability of correctional systems and institutions to impose stronger penalties for delay among decision-makers.

Surveys of grievance procedures indicate that a great majority impose time limits on replies to inmates' complaints.[16] Many apply these time limits to all levels of the grievance procedure.[17] There is limited information on the comparative efficiency of grievance procedures with fixed time limits and other grievance mechanisms. Dillingham and Singer indicate there may be more complaints filed per prisoner under grievance procedures allowing inmate participation and employing fixed time limits.[18] Hepburn et al. conclude that the grievance procedure with fixed time limits implemented in South Carolina is more efficient than the state ombudsman program handling similar types of complaints.[19]

In spite of fixed time limits, delays in processing grievances may occur in most grievance mechanisms. Failures to comply with time limits in California's Ward Grievance Procedure, for example, occur most frequently during appellate reviews of grievances.[20] Serious delays may also attend upon the introduction of grievance procedures, as was the case following the introduction of a grievance procedure in New York. There, the most frequent delays took place at the initial hearing stages, as a result of heavy filing of grievances and the difficulty of obtaining attendance at hearings of prisoners subject to special conditions of confinement.[21]

f. *Review.* Review of the disposition of inmate grievances may ensure that institutional policies are applied fairly and objectively and that the procedural guarantees of the grievance procedure itself are observed. The standard states two different minimum requirements for review. For grievances that are based on incidents occurring within the institution or that challenge practices, policies or conditions that only pertain in a specific institution, the standard mandates review by a person or entity not under the control or supervision of the institution. For grievances that challenge policies or practices that apply throughout the correctional system, the

standard requires an independent review—that is, by a person or entity wholly outside the correctional system. The review should ordinarily be a step in the grievance procedure. Evidence from the states' experience shows that this step is rarely invoked. Accordingly, fears that heavy burdens may result from this process appear to be unsupported.

Although correctional administrators are expected to be capable of fair and detached consideration of grievances, a structure that ensures that administrators will not be the only individuals reviewing their own policies will enhance the credibility of the grievance procedure among inmates and will furnish administrators with impartial input into their dispositions of grievances. Although the standard directs correctional agencies to consider the views of the reviewing body or individual, it does not require that the views be binding. Review by a correctional agency of the disposition of a grievance by an institution official will be binding.

It is important to recognize that the standard dictates the minimum level of independence of review. Obviously, independence and its appearance increase as the reviewing authority gains distance from the institution and the correctional structure. For instance, greater independence would be achieved by giving reviewing authority to an individual or group which is separate from the executive branch of government. An example of this would be a legislatively appointed commission or ombudsman. Still greater independence could be achieved by giving the reviewing commission or official binding authority over grievance decisions and other matters pertaining to grievance decisions. While this type of review may be perceived as challenging the authority of correctional administrators, it might improve the credibility of grievance mechanisms among prisoners and result in increased use of the mechanism in settling disputes. No grievance mechanisms currently permit such a degree of independent review of grievance decisions.[22]

A variety of mechanisms exist, however, that employ impartial or "outside" review by individuals or groups not under the direct supervision of the institution or department of corrections. Prisoners may be more likely to use these grievance mechanisms with impartial review and more likely to perceive them as fair and responsive to their complaints than grievance mechanisms with other forms of review.[23] Mechanisms affording impartial review rely on several different types of reviewers: grievance commissions consisting of persons not affiliated with correctional agencies; ombudsmen acting in conjunction with administrative grievance procedures; arbitration panels; and professional arbitrators acting as mediators in the final stage of grievance appeals. Under all grievance mechanisms using outside review, the reviewing bodies make advisory recommendations to correctional administrators with respect to final settlement of grievances.

Section 40.8 Emergency Procedures

A special emergency grievance procedure is necessary to handle matters that will inevitably arise that would result in serious harm to an inmate or a threat to the safety or security of the institution if they were not treated on an expedited basis. It is important, however, that the procedure state explicitly what matters will be subject to emergency treatment so that inmates may avail themselves of the procedure and frivolous filings will be discouraged and screened out quickly when they occur. Emergency grievances must reach a decisionmaker with authority to take corrective action without passing through preliminary levels of substantive review.

Prisoners in systems with emergency provisions may file "emergency" grievances relatively frequently. For example, forty percent of all grievances filed in the California Youth Authority's system in 1977 were initially declared "emergencies."[24] Although the heavy filing of such grievances may be a burden on the operation of the overall grievance mechanism, the provision for handling grievances on an emergency basis may serve as a "safety valve" for prisoners' immediate reactions to institutional problems as well as a mechanism for settling problems which generally require immediate relief.[25]

Section 40.9 Reprisals

Reprisals or fear of reprisals may discourage use of the grievance mechanism. No inmate should be subjected to adverse consequences or threats as a result of having invoked or participated in the grievance procedure. Inmates must, therefore, be given a remedy against possible reprisals, at least to the extent of being permitted to complain of reprisals through the grievance procedure. In addition, employees of the institution should be informed that reprisals against inmates will be viewed seriously by the administrators of the institution and correctional agency and met with specific penalties. And, since employees must also be encouraged to participate freely in the grievance procedure, they should receive assurances against reprisals by administrators.

Research on grievance procedures discloses no evidence of formal reprisals against grievants.[26] Evidence of fear of reprisal among prisoners, however, is clear. Approximately, one-in-six prisoners in the California Youth Authority's initial experiment with grievance procedures reported reluctance to use the procedure due to fear of negative consequences.[27] Similar attitudes have been observed among prisoners in New York and South Carolina.[28] A reprisal feared by many is unfavorable intervention in parole decisions.[29] Such fear may harm the credibility of grievance procedures and limit their usefulness.

Standards for grievance mechanisms cannot be expected to prevent all informal reprisals against grievants, but formal reprisals by staff and administration may be deterred by the remedies discussed above in combination with the safeguards contained in other standards, such as those ensuring the confidentiality of grievance files. To minimize informal reprisals, grievance mechanisms might also provide for immediate independent review of allegations of reprisals.

Section 40.10 Records—Nature; Confidentiality

a. *Nature.* The systematic collection of information regarding the operation of the grievance mechanism is essential for administrators if they are to ensure that the procedure is operating fairly,

[22] Dillingham and Singer, *supra* note 5, at 23, 27; Keating et al., *supra* note 3, at 35–47.

[23] Keating et al., *supra* note 3, at 14; Dillingham and Singer, *supra* note 5, at 43–57. Dillingham and Singer summarize their analysis of interviews with prisoners and staff and examination of records in ten prison systems using different types of grievance mechanisms: "Procedures have a greater chance of success if they include inmates and line staff in resolving complaints, permit appeal to outsiders seen as impartial and adhere to established time limits and other procedural requirements." (at 43) While Dillingham and Singer's findings do not indicate that appellate review by external authorities alone ensures effective dispute resolution, the findings suggest that external review may be necessary to ensure utilization of grievance mechanisms by prisoners and enhance their perception as fair and timely in resolving disputes.

[24] Hepburn et al., *supra* note 3, at 100–101.

[25] *Id.*, at 113.

[26] Hepburn et al., *supra* note 3, at 405.

[27] California Youth Authority Report, *supra* note 2.

[28] Hepburn et al., *supra* note 3, at 162, 281.

[29] Keating et al. *supra* note 3, at 15.

effectively and according to its own internal requirements.

Examples of information which might be collected include types of grievances filed, nature of disputed issues, final dispositions of grievances, levels of review required, compliance with time limits, and reasons for dispositions of grievances.[30]

b. *Confidentiality.* To prevent reprisals, it is important to keep records of individual inmate use and participation in grievance mechanisms out of the reach of fellow inmates and staff. Similarly, to prevent individuals or bodies making parole decisions from considering inmate use or involvement in grievance procedures as a factor in their deliberations, strict precautions must be taken to ensure that such material is not available to them. Fear on the part of inmates that use of or participation in grievance procedures could affect release decisions negatively may restrict use of the grievance procedure. In addition, fear that testimony or evidence produced during grievance proceedings will become known to persons making release decisions may restrict inmate participation in the proceedings and impede efforts to develop fully and accurately the factual bases of grievances.

Although institutional records are exempted from the disclosure requirements of freedom of information acts in many states, it is not the intent of this standard to override such disclosure requirements where they exist under state law.

Section 40.11 Evaluation

Only through periodic evaluations can administrators and outside reviewers guarantee that grievance procedures serve the institutional purposes of administrators while also resolving inmates' grievances fairly. An important concern is the availability of information on grievance processing. Development and implementation of record-keeping as discussed in Standard IX will aid in conducting informed evaluations. The standard requires review of the evaluation by a person or group that is not associated with the institution to assist the administrators of the grievance procedure in maintaining compliance with the standards. The evaluation and the review are to be submitted to the Attorney General to assist him in acquitting his obligation to review certified procedures for continuing compliance with the standards.

An additional concern involves criteria used in evaluations to measure the effectiveness of grievance mechanisms. Criteria should be based upon the specific objectives of the grievance mechanism. Due to the inherent difficulties in determining whether grievance mechanisms meet the general objectives of reducing levels of frustration, tension, and violence among prisoners, Keating et al. recommend that criteria of effectiveness simply reflect prisoners' use of grievance mechanisms and whether such use results in clarification and changes in institutional policies.[31]

2. A new § 0.18 to read as follows, is added to Title 28, Code of Federal Regulations:

§ 0.18 Office of Inmate Grievance Procedure Certification.

The Office of Inmate Grievance Procedure Certification shall be under the direction of a Director. Under the supervision of the Deputy Attorney General, the Director shall review and certify, in accordance with Part 40 of this title, plans for inmate grievance procedures submitted by States or their political subdivisions.

Dated: January 12, 1981.

Benjamin R. Civiletti,

Attorney General.

[FR Doc. 81-1528 Filed 1-15-81; 8:45 am]

BILLING CODE 4410-01-M

[30] Hepburn et al. *supra* note 3, at 262-264. The standard allows inmates and staff to handle records where necessary for clerical purposes. The most effective method to implement this Standard may be to establish a separate record-keeping system for inmate grievance records. Whenever possible, such records should not be managed or handled by inmates.

DEPARTMENT OF LABOR

Occupational Safety and Health Administration

29 CFR Part 1903

Walkaround Compensation

AGENCY: Occupational Safety and Health Administration (OSHA); Labor.

ACTION: Final rule.

SUMMARY: This document amends 29 CFR 1903.8 to require employers to compensate employees who participate in walkaround inspections and related activities. The requirement will protect the statutory right of employees to participate in inspections of their working conditions with the OSHA inspector and will facilitate walkaround participation, thus increasing the effectiveness of inspections and thereby promoting occupational safety and health.

EFFECTIVE DATE: February 17, 1981.

FOR FURTHER INFORMATION CONTACT: Mr. James Foster, Office of Public Affairs, Occupational Safety and Health Administration, Third Street and Constitution Avenue, NW., Room N-3641, Washington, D.C. 20210 (Tel. 202-523-6151).

SUPPLEMENTARY INFORMATION:

I. Background

A. Introduction

On November 14, 1980, the Occupational Safety and Health Administration ("OSHA" and the "agency") published in the Federal Register proposed amendments to 29 CFR 1903.8 and 1977 requiring employers to compensate employees who participate in walkaround inspections and related activities. 45 FR 75232. The agency invited the public to submit written data, views and arguments with respect to the proposed amendments and all issues involved therein. Comments were to be postmarked on or before December 29, 1980.

The agency has received numerous comments from businesses, unions, trade associations, law firms and others. In addition, comments relating to the issues in this proceeding were received from OSHA field personnel. All submissions were made part of the record and were duly considered.

B. Statutory Framework

The Occupational Safety and Health Act of 1970, 29 U.S.C. 651 *et seq.* (the "Act" and the "OSH Act"), was enacted "to assure so far as possible every working man and woman in the Nation safe and healthful working conditions and to preserve our human resources." In order to carry out these purposes, section 8(a) of the Act authorizes the Secretary of Labor ("Secretary") to conduct inspections and investigations of workplaces in order to determine whether violations of the Act are present. An essential feature of such inspections is set forth in section 8(e) of the Act, which provides:

> Subject to regulations issued by the Secretary, a representative of the employer and a representative authorized by his employees shall be given an opportunity to accompany the Secretary or his authorized representative during the physical inspection of any workplace under subsection (a) for the purpose of aiding such inspection. Where there is no authorized employee representative, the Secretary or his authorized representative shall consult with a reasonable number of employees concerning matters of health and safety in the workplace.

Thus, the Act grants employer representatives and employee representatives an express right to accompany an OSHA inspector for the purpose of aiding the inspection and provides for consultation with employees by the inspector where there is no authorized employee representative. In addition, section 8(f)(2) of the Act grants employees the right to complain to OSHA compliance officers prior to or during an inspection about possible violations of the Act, and section 8(a)(2) provides that OSHA compliance officers may question employees about workplace conditions. The right to accompany an OSHA inspector may be implemented by the promulgation of regulations pursuant to section 8(e) of the Act. In addition, this provision, as well as other provisions such as sections 8(a)(2), 8(e) and 8(f)(2), may be implemented pursuant to section 8(g)(2) of the Act, which provides:

> The Secretary and the Secretary of Health, Education and Welfare shall each prescribe such rules and regulations as he may deem necessary to carry out their responsibilities under this Act, including rules and regulations dealing with the inspection of an employer's establishment.

C. History of Walkaround Compensation Regulation

In 1973, the Assistant Secretary of Labor for Occupational Safety and Health, relying in part upon the Solicitor of Labor's opinion that walkaround time was not "hours worked" under the Fair Labor Standards Act ("FLSA"), 29 U.S.C. 203(o) (1976), concluded that an employer's failure to pay employees for the time spent with the OSHA inspector was not a *per se* violation of section 11(c). (See 38 FR 2681, 2684 (January 29, 1973) (codified at 29 CFR 1977.21(a) (1975)).

In 1974, a federal district court upheld the Department of Labor's interpretation in a civil action brought by employees to recover wages lost because of participation in an OSHA inspection. *Leone* v. *Mobil Oil Corp.*, 377 F. Supp. 1302 (D.D.C. 1974).

In 1975, the U.S. Court of Appeals for the District of Columbia Circuit affirmed the district court's decision and held that because walkaround time primarily benefits employees and because the walkaround is conducted beyond the employer's control, walkaround time does not constitute "hours worked" under the FLSA. *Leone, supra,* 523 F.2d 1153, 1163–64. Furthermore, the court held that a walkaround payment requirement could not be inferred from the provisions of the Occupational Safety and Health Act. *Id.* at 1159–61.

In 1977, the Solicitor of Labor reevaulated the original legal position and, in September 1977, issued a new opinion, based on further study and the agency's experience, which stated that walkaround time was "hours worked" under the FLSA, that an employer's failure to pay employees for that time was inherently destructive of the walkaround right, and that therefore the failure to pay was discrimination prohibited by section 11(c)(1) of the Act. On September 20, 1977, the Assistant Secretary promulgated a rule declaring that "an employer's failure to pay employees for time during which they are engaged in walkaround inspections is discriminatory under section 11(c)." 42 FR 47344. Because the rule was considered "an interpretive rule and general statement of policy," 42 FR 47344, public participation was not provided in accordance with the provisions of the Administrative Procedure Act ("APA"), 5 U.S.C. 553.

In 1978, a federal district court, in an action challenging the validity of the new regulation, concluded that the regulation was interpretive and therefore exempt from the notice-and-comment procedures of the APA. *Chamber of Commerce of the United States of America* v. *OSHA*, 465 F. Supp. 10 (D.D.C. 1978), *rev'd* No. 78–2221, 8 BNA OSHC 1648 (D.C. Cir. 1980). The court held that OSHA did not exceed its statutory authority in issuing the new regulation. On appeal, the U.S. Court of Appeals for the District of Columbia Circuit reversed the judgment of the district court and remanded the case to that court with instructions to vacate the regulation. *Chamber of Commerce of the United States of America* v. *OSHA*, F. 2d , No. 78–2221, 8 BNA 1648 (D.C. Cir. 1980). The Court of Appeals held that walkaround time did not constitute "hours worked" within the meaning of the FLSA because the employer did not select or regulate the employee representative during the walkaround, nor was the employer the primary beneficiary of the walkaround. The court also held that the Act itself neither prohibited nor compelled pay for walkaround time. Therefore, according to the court, the regulation was not interpretive but legislative. Because OSHA did not comply with the notice-and-comment procedures of the APA for the promulgation of legislative rules, the court concluded that the walkaround pay regulation was invalid and should be vacated. The court expressed no view on whether the Assistant Secretary could reissue the same rule after complying with the notice-and-comment procedures of 5 U.S.C. 553.

On remand, the district court vacated the regulation. On October 31, 1980, the Assistant Secretary deleted the regulation (45 FR 72118) and instructed OSHA field staff to cease enforcing its provisions.

D. Summary of the Proposed Amendment

On November 14, 1980, OSHA proposed regulations requiring employers to compensate employees who participate in walkaround inspections and related activites. In the preamble to the proposal, the agency noted its disagreement with the *Chamber* decision that walkaround time is not "hours worked" under the FLSA but noted that the proposal was not based on any determination that walkaround time is "hours worked" under the FLSA.

Under paragraph (e)(1)(i) of the proposed additions to 29 CFR 1903.8, the employer would have been required to provide to an authorized representative of the employees walkaround benefits for time during which the representative participates in any OSHA inspection of the workplace, including attendance at the opening and closing conferences. Paragraph (e)(1)(ii) of the proposal stated that if a new employee representative replaces an employee representative then on the inspection team, the employer would be required to provide walkaround benefits to each representative for that portion of the walkaround in which each representative participated. Paragraph (e)(1)(iii) provided that if compliance officers inspect different parts of a workplace at the same time or at different times, one employee representative for each inspection team would be entitled to walkaround benefits. Paragraph (e)(1)(iv) would have required employers to provide to any employee walkaround benefits for time spent in other activities related to the inspection. Paragraph (e)(1)(v) defined walkaround benefits. Paragraph (e)(2) provided the method of enforcement of the regulation. Paragraph (e)(3) provided for an effective date of the regulation.

The proposal would have also added a new 29 CFR 1977.21 to Part 1977 which provided that an employer's failure to pay for walkaround time was *per se* discrimination against employees because of the exercise of employee rights and therefore violative of section 11(c)(1) of the Act. With respect to the proposed amendment to 29 CFR Part 1977, the agency has decided, for the reasons discussed below, not to promulgate the proposal at this time.

As noted earlier, the agency has received numerous comments in

response to the November 14, 1980 Federal Register notice. Several commentors requested public hearings on the proposed amendments. The agency reviewed these requests and determined that public hearings would not be held. Since the proposed regulations at 29 CFR 1903.8 and 1977 are not occupational safety and health standards as defined by section 3(8) of the Act, 29 U.S.C. 652(8), the provisions of section 6(b) of the Act, 29 U.S.C. 655(b), do not apply. Additionally, hearings are not required by the APA when, as here, an agency is engaged in informal rulemaking. 5 U.S.C. 553; *Vermont Yankee Nuclear Power* v. *National Resources Defense Council, Inc.*, 435 U.S. 519 (1978). Accordingly, the agency has determined not to conduct public hearings in this matter.

Many commentors requested that the comment period be extended beyond the December 29, 1980 deadline established in the November 14, 1980 Federal Register Notice of Proposed Rulemaking. Most of these commentors cited Executive Order 12044 (43 FR 12661 (March 24, 1978)) and Department of Labor guidelines (44 FR 5570 (January 26, 1979)) in support of their requests.

First, the instant rulemaking was conducted in conformance with the notice-and-comment requirements of the APA. Neither the Executive Order nor the Department of Labor guidelines require a 60-day comment period in every rulemaking proceeding. Both contemplate situations in which the 60-day period will not be provided and require that in such circumstances the regulation be accompanied by a statement of reasons for the shorter time period. The purpose of the provisions of the Executive Order and the Department guidelines is to assure that full public discussion of the issues in the rulemaking be afforded. Here, we believe that this purpose has been more than adequately achieved. As noted in the Notice of Proposed Rulemaking, 45 FR at 75237, the issues relating to pay for walkaround have already been subject to extensive public discussion since the agency's original interpretation was made several years ago. Moreover, since a notice was published by OSHA on October 31, 1980, (45 FR 72118) deleting the walkaround pay interpretive regulation and stating that OSHA was planning to propose a walkaround compensation regulation shortly, as a practical matter, the public had approximately 60 days to prepare and submit comments from the time OSHA first announced its intention to propose a new regulation. Accordingly, the agency determined that the full 60-day comment period was unnecessary and that the comment period should not be extended.

II. Basis and Purpose of the Regulation

A. Statutory Basis

As noted above, section 8(e) expressly authorizes the Secretary to issue regulations implementing the walkaround requirements of that section. In addition section 8(g)(2) empowers the Secretary to promulgate regulations as he may deem necessary to carry out his responsibilities under the Act, including regulations dealing with inspections. The regulation, an addition to 20 CFR 1903.8, which details procedures for selection of employer and employee walkaround representatives, is based on the Secretary's authority under sections 8(e) and 8(g)(2). As discussed more fully below, compensation for time spent in walkaround and related activities will facilitate employee participation in these activities and as a result will enhance the effectiveness of OSHA's inspections. Thus, the regulation being promulgated is necessary to implement the walkaround requirement of section 8(e) and is necessary to effectively carry out the Secretary's responsibilities to conduct occupational safety and health inspections, in accordance with section 8(g)(2).

B. Importance of Employee Walkaround Representative

In proposing the amendments to 29 CFR 1903.8, the agency noted the crucial importance of employee involvement to the successful enforcement of the Act. The Act itself underscores the importance of employee participation in the inspection process and grants employees an express right to accompany an OSHA inspector for the purpose of aiding the inspection. *See* section 8(e) of the Act, 29 U.S.C. 657(e). Other provisions of the Act also seek to facilitate employee participation by attempting to assure a free and open exchange of information between representatives of the Secretary and employees. Thus, the Act expressly provides in section 8(f)(2) that employees have the right to notify the OSHA inspector prior to or during the inspection itself of violations which they have reason to believe exist in the workplace. In addition, section 8(a)(2) of the Act provides that OSHA compliance officers may question employees about workplace conditions and section 8(e) provides that compliance officers may consult with a reasonable number of employees about occupational safety and health matters where there is no employee representative.

The remarks of Senator Williams, Chairman of the Senate Labor Committee and one of the main sponsors of the OSHA bill, reflect the crucial importance of employee participation in the walkaround process:

> During the field hearings held by the subcommittee on labor, the complaint was repeatedly voiced that under existing safety and health legislation, employees are generally not advised of the content and results of a Federal or State inspection. Indeed, they are often not even aware of the inspector's presence and are thereby deprived of an opportunity to inform him of alleged hazards. Much potential benefit of an inspection is therefore never realized, and workers tend to be cynical regarding the thoroughness and efficacy of such inspections. Consequently, in order to aid in the inspection and provide an appropriate degree of involvement of employees themselves in the physical inspections of their own places of employment, the committee has concluded that an authorized representative of employees should be given an opportunity to accompany the person who is making the physical inspection * * * [T]he inspector should have an opportunity to question employees in private so that they will not be hesitant to point out hazardous conditions which they might otherwise be reluctant to discuss.
>
> *Legislative History of the Occupational Safety and Health Act of 1970*, 92d Cong. 1st Sess., p. 151 (Committee Print, 1971) (Hereinafter *"Leg. Hist."*).
>
> Certainly no one knows better than the working man what the conditions are, where the failures are, where the hazards are, and particularly where there are safety hazards. The opportunity to have the working man himself and a representative of other working men accompanying inspectors is manifestly wise and fair, and in arriving at the objectives of this legislation I think it is one of the key provisions of the bill * * *
>
> Remarks of Senator Williams, *Leg. Hist.* p. 430; *see also Leg. Hist.*, pp. 852, 1216-17.

In addition to the above statements in the legislative history, it has been the agency's experience that employee participation and cooperation at the inspection stage have proved to be crucial to enforcement efforts under the Act. Throughout the agency's nine-year enforcement experience, employees have provided assistance and information essential to enable representatives of the Secretary to determine whether violations of the Act exist and what abatement action should be taken. Employee participation in the walkaround process and related activities has aided the Secretary in the performance of his duties and responsibilities under the Act to conduct

comprehensive and effective inspections.

The importance of employee involvement in the inspection process is substantiated beyond peradventure by the numerous comments addressing the issue. Numerous OSHA field personnel have documented for the record the many ways in which employee participation has aided the Secretary in the performance of his duties and responsibilities. For example, there have been many instances where employees have informed OSHA during the inspection of hazards which might otherwise not have been detected by the compliance officer. *See,* e.g., Exhibits 3–4 at p. 5; 3–6 at p. 6; 3–7 at pp. 4, 5; 3–8 at p. 5; 3–18 at p. 1; 3–19 at p. 9; 3–27 at p. 1. By virtue of their familiarity with the workplace and its operations, employee representatives have ensured that all locations and all phases of workplace activities are examined for possible hazards. *See,* e.g., Exhibits 3–5 at p. 7; 3–7 at p. 2; 3–8 at p. 2; 3–8 at p. 7; 309 at p. 7; 3–10 at p. 4; 3–35 at p. 1. Employees often explain to OSHA inspectors how machinery operates. *See,* e.g., Exhibits 3–4 at p. 4; 3–6 at p. 2; 3–9 at p. 12; 3–25 at p. 2; 3–33 at p. 2. The increasingly complex nature of workplace hazards, as in the health area, has imposed greater burdens on the Secretary in detecting these hazards and has correspondingly made the need for employee involvement at the inspection stage even more compelling. *See,* e.g., Exhibits 3–8 at p. 4; 3–33 at p. 15. In several instances, compliance officers have found that employee representatives clarify or correct representations made to the inspector by employer representatives. *See,* e.g., Exhibits 3–3 at p. 4; 3–4 at p. 2; 3–19 at p. 28; 3–38 at p. 2. Many OSHA personnel have expressed the view that the presence of the employee representative in the inspection team often serves to encourage other employees to discuss workplace conditions with the OSHA inspector. As a result, the statutorily preferred open channels of communication between the Secretary and employees are better facilitated. *See,* e.g., Exhibits 3–4 at pp. 3, 4; 3–6 at pp. 4, 8; 3–9 at pp. 7, 9; 3–11 at pp. 1, 6; 3–12 at pp. 1, 3; 3–19 at p. 9. One compliance officer indicated that the presence of an employee representative reduces tensions among all parties and results in greater cooperation between the inspector and the employer representative. *See* Exhibit 3–11 at p. 3. Moreover, some OSHA personnel believed that the absence of an employee representative makes the conduct of the inspection more difficult. *See,* e.g., Exhibits 3–6 at p. 3; 3–19 at p. 13; 3–25 at p. 3; 3–28 at p. 1. Other inspectors, on the basis of actual experience, have concluded that inspections without the benefit of employee representatives are more difficult to conduct and less efficient than those in which an employee representative participates. *See,* e.g., Exhibits 3–6 at p. 8; 3–8 at p. 8; 3–19 at pp. 11, 15, 16; 3–23 at p. 1.

The agency's experience that employee participation is an essential part of the inspection process is also supported by the comments submitted by the public. *See,* e.g., Exhibits 2–4; 2–58; 2–61; 2–116; 2–141; 2–146; 2–271. Many commentors expressed the view that the worker is in the best position to understand and identify workplace hazards and their location. *See,* e.g., Exhibits 2–69; 2–109; 2–111; 2–123; 2–146; 2–169; 2–215; 2–282, 2–289. Some commentors noted that hazards may go undetected by OSHA inspectors who do not have the benefit of an employee representative's knowledge and experience. *See,* e.g., Exhibits 2–34; 2–61. Other commentors expressed concern that, in the absence of an employee representative, some employers make incomplete or incorrect representations to the inspector regarding workplace practices or conditions. *See,* e.g., Exhibits 2–69, 2–155, 2–256, 2–267, 2–282, 2–307. Also noted were the views that the presence of an employee representative in the inspection team alerts other employees to the inspector's presence and encourages other workers to express their concerns regarding hazardous conditions to the inspectors. *See.* Exhibits 2–196, 2–217.

In view of the above, the agency concludes that the participation of employee representatives in walkaround and related activities is crucial to effective and efficient enforcement of the Act. In reaching this conclusion, the agency is not unmindful of some comments which question the usefulness of employee representatives. *See,* e.g., Exhibits 2–1; 2–44; 2–78; 2–151; 2–185; 2–186; 2–211; 2–214; 2–253; 2–257; 2–261; 2–265; 2–272; 3–9 at p. 15. However, the overwhelming evidence in the record confirms the value of employee participation in the inspection process substantiating the agency's experience and supporting the above finding.

The agency recognizes that a considerable number of walkaround inspections are conducted without the participation of employee walkaround representatives. However, this fact in no way detracts from the importance of employee involvement in the walkaround. Rather, it indicates that in some instances, particularly in non-union establishments, the selection of an employee walkaround representative would be impractical or would entail complex and time-consuming procedures that would seriously delay the conduct of inspections and effective and efficient enforcement of the Act. Section 8(e) of the Act recognizes that in some situations the participation of an employee representative would not be possible; in those cases, the Act requires that the OSHA inspector consult with a reasonable number of employees at the workplace during the course of the inspection. OSHA field instructions require compliance officers to make every effort to determine if an employee walkaround representative can be designated, and where the selection is "impractical" the inspector is directed to proceed to the inspection, interviewing employees as he or she makes the physical tour of the workplace. *See,* Field Operations Manual, V–8. However, the record overwhelmingly shows that where an employee representative has been selected his or her participation is crucial to effective inspection activity.

C. Pay for Employee Representatives

As noted in the November 14, 1980 proposal, the agency believes that forcing employees to suffer economic detriment through loss of pay or other benefits would constitute a serious disincentive to an employee from participating in a walkaround inspection. As a consequence, the failure to pay for walkaround would interfere with the statutory right of employees to accompany the OSHA inspector and to notify compliance officers of hazards prior to and during inspections, a right expressly granted to employees under section 8(f)(2) of the Act. When employees are discouraged from present and future participation in the walkaround and related activities, the open channels of communication between employees and the Secretary would be seriously impaired. OSHA compliance personnel would be substantially limited to reliance on information provided by employers—the subject of the inspection—thereby reducing the likelihood of obtaining complete, objective and useful information on workplace hazards, as discussed earlier. Thus, the failure to pay for walkaround would be harmful not only to the exercise of employees' protected rights but also to the entire enforcement scheme of the Act.

That an employee would be more reluctant to participate in a walkaround if he or she would lose pay for the time involved is, in the view of the agency, a

matter of common sense in light of experience. This view was corroborated by many comments in the record. Commentors stated that walkaround compensation is essential in order to ensure proper administration and enforcement of the Act. *See*, e.g., Exhibits 2–9, 2–271, 2–276, 2–307. Commentors expressed concern over the chilling and deterring effects that the failure to pay walkaround compensation has on employee participation in the inspection. *See*, e.g., Exhibits 2–9, 2–58, 2–116, 2–175, 2–203, 2–269, 2–283, 2–306. Other commentors have noted the inability of many employees to afford a loss of earnings caused by participation in a walkaround. *See*, e.g., Exhibits 2–34, 2–61, 2–94, 2–109, 2–160, 2–210, 2–290. According to several commentors, employees will choose to remain at their work station when presented a choice between receiving pay or accompanying the OSHA inspector without pay, thereby depriving other employees of representation and the inspector of their assistance. *See*, e.g., Exhibits 2–58, 2–133, 2–155, 2–290. This is especially true when lengthy inspections are conducted and significant amounts of compensation would be lost. *See*, e.g., Exhibit 2–276.

In addition to the above, specific instances noted in the record demonstrate that the failure to pay for time spent during the walkaround discourages employee participation in such activities. In one case, the treasurer of the company refused to pay the union representative for time spent on the walkaround and the representative then chose not to accompany the compliance officer. The inspector noted that not having an employee representative made it difficult to ascertain that all work areas and all operations were seen during the high hazard industry inspection of the large facility. *See* Exhibit 3–6, at p. 8.

In another case, the company refused walkaround pay to any person wishing to accompany OSHA personnel during the walkaround, and the union could not pay any of the plant personnel. The president of the union, not a plant employee, was invited to participate in the walkaround but he declined the offer. The inspector noted several ways in which the effectiveness of the inspection was seriously diminished, including a reluctance of employees to speak to the inspector and a very uncooperative attitude on the part of the employer's supervisory personnel. *See* Exhibit 3–19 at p. 11.

In another instance, a company denied walkaround pay to the representative of a local union. The representative spent a few days participating in the inspection conducted in response to a complaint of worker overexposure to carcinogenic and highly toxic chemicals, but after the third day of the inspection he could no longer afford financially to continue on the walkaround. Because of the size and complexity of the facility, as well as the seriousness of the alleged health hazards, the commentor was convinced that the effectiveness of the inspection was diminished by the lack of union representation on the walkaround. *See* Exhibit 2–276.

In another case, a complaint was filed by a union in response to an explosion that killed eight workers and another incident in which exposure to benzene was allegedly found. The complaint triggered a lengthy, complex inspection which at times consisted of up to five inspection teams in the facility at one time, with one union representative on each team. Two weeks into the inspection, the company announced that it would pay walkaround compensation for only one union representative. Thereafter, the union had to reduce the size of its walkaround representation. *See* Exhibit 2–276.

Another case in which lack of compensation served as a disincentive to employee participation in a walkaround occurred during a recent state inspection that lasted three days a week for seven to eight weeks. Because of a past practice of paying the union representative for internal safety inspections, the company agreed to pay one representative for the safety inspection but would not pay for the health inspection participation. Since the local union could not afford to cover that cost, no employee representative covered the inspections for such hazards as lead, arsenic, and sulfur dioxide. *See* Exhibit 2–310.

Several commentors expressed the view that the agency has not provided sufficient evidence to support its conclusion that lack of pay discourages employee participation in inspection process. *See*, e.g., Exhibits 2–83, 2–104, 2–113, 2–114, 2–119, 2–120, 2–128, 2–137, 2–150, 2–202, 2–216, 2–252, 2–253, 2–254, 2–270, 2–279. More specifically, a number of instances were adduced in the comments where employees participated in the walkaround despite the fact that they were not paid. *See*, e.g., exhibits 3–9 at p. 3; 3–19 at p. 7; 3–26. However, these comments in all cases do not make clear whether the employee was not paid at all for the walkaround, or was not paid by the employer but paid by the union. Indeed, a number of cases were mentioned in the record where employees were paid for the walkaround by the union. *See*, e.g., Exhibits 3–9 at pp. 5, 11, 12; 3–25. If, as may well be the case, the employee in these situations was paid by the union, the facts would *not* establish that failure to pay for walkaround is not a disincentive to participation. On the contrary, such union reimbursement in the face of the employer's refusal to pay indicates a recognition by the union that, without such reimbursement, the employees would be reluctant to act as walkaround representatives; accordingly, the unions voluntarily undertook this obligation in order to eliminate the economic suffering which would result from the employees not being paid, thereby enabling them to participate in the walkaround.

We recognize however that the record does not contain numerous specific instances of employee non-participation in walkaround because of non-payment. There therefore remains the question on this record whether the employer who is being inspected should be required to make this payment, or, as has sometimes been the case, the unions should assume this obligation, or employees should be relied on to participate in walkaround without being paid, presumably out of a sense of public responsibility. For the following reasons, the agency concludes that employers should be required to pay for walkaround pay, and that this critical element in the inspection process should not be left to the vagaries of union payment or employees agreeing to participate in walkaround even though it means a loss of pay. In the first place, there will undoubtedly be many cases where no union exists in the plant where the inspection is taking place. Even where there is a union there will be circumstances where the union is unable for financial reasons to undertake this obligation, particularly where the inspection is lengthy and more than one employee walkaround representative is involved. *See*, e.g., Exhibit 2–276. Also, since the union is supported by employee dues, payment by the union for walkaround time in the last analysis must be viewed as employees paying themselves for participation in the walkaround. Finally, it is uncertain to what extent employees are now willing, and would continue to be willing, to assume the walkaround obligation at the sacrifice of wages, particularly in the context of lengthy inspections.

Our conclusion that employers should be mandated to assume this burden is impelled by yet another critical consideration. We have already stated that the inspection process—and the

walkaround which is integral to effective inspection activity—are essential ingredients in the statutory scheme for abatement of workplace hazards and protection of workers. As has been recognized on numerous occasions, Congress has placed on employers the economic burden of taking the necessary actions to neutralize these dangerous conditions. The Senate Labor Committee in its report made it clear that, "Final responsibility for compliance with the requirements of this Act remains with the employer." *Leg. Hist. supra, 150–51; see Atlantic & Gulf Stevedores, Inc.* v. *OSHRC*, 534 F. 2d 541, 553 (3d Cir. 1976). And Senator Eagleton, a member of the subcommittee which considered the OSHA bill, stated that "[t]he costs that will be incurred by employers in meeting the standards of health and safety to be established under the bill are * * * reasonable and necessary costs of doing business." *Leg. Hist.* at 1150; *see also Leg. Hist.* at 444. We conclude that just as employers must under the statutory scheme assume the financial burdens of complying with the standards, so must they be obligated to make payments to employees for walkaround time to assure that this critical aspect of Congress' procedure for effective enforcement is fully carried out and not left to the uncertainties of union payment or voluntary action by unpaid employees.

In a strikingly similar situation, the Court of Appeals for the District of Columbia recently upheld a provision of the lead standard requiring employers who removed employees from areas of excessive lead exposure to maintain the earnings and benefits of the removed employees. *See United Steelworkers of America* v. *Marshall*, No. 79–1048, 8 BNA OSHC 1810, 1835–1842 (D.C. Cir., August 15, 1980). The Court relied on various statutory provisions and statements in the legislative history, in concluding that employers had "general financial responsibility" under the Act. *See also American Federation of Labor, etc.* v. *Marshall*, 617 F. 2d 636, 674–75 (D.C. Cir 1979).

In sum, the record evidence supports the self-evident, common-sense proposition that compensation is critical to the effectuation of employees' walkaround rights, which in turn is crucial to effective inspection activity. Clearly, if employees receive no reimbursement for their time spent in engaging in walkaround and related activities, they will be confronted with the Hobson's choice between promoting safety and health and receiving their regular remuneration. Such a choice is antithetical to the remedial purposes of the Act. And, in light of the record, the statutory scheme and the policy considerations discussed above, the agency further concludes that it is employers who should be required to assume the burden of payment for walkaround time.

It should be emphasized that OSHA's requiring walkaround compensation is not based on the "hours worked" provisions of the Fair Labor Standards Act, as the proposal stated. It is also not based on section 11(c) of the Act, which prohibits discrimination against employees for exercising rights under the Act. In the proposal, the agency concluded that failure to pay for walkaround benefits should be considered *per se* discrimination under section 11(c) because of its chilling effect on employee participation. While the agency continues to believe in the validity of the rationale, it has concluded based on the record that the more appropriate means for enforcement of the walkaround pay obligation is through the amendment of 29 CFR 1903.8 and the issuance of citations, and penalties which are adjudicated through the Review Commission. The provision of alternate routes of enforcement—as proposed—would lead to redundancy and confusion. (See, e.g., Exhibit 2–270)

D. Statutory Objections to Walkaround Compensation Requirement

Employers and industry groups commenting on the proposal argue that OSHA exceeded its authority in promulgating a walkaround compensation regulation (*See*, e.g., Exhibits 2–202, 2–253, 2–254, 2–259, 2–265, 2–270). They contend on the basis of *Leone* v. *Mobil Oil Corporation*, 523 F.2d 1153, 1160–61, (D.C. Cir. 1975) that Congress was silent on the issue of walkaround pay and that therefore OSHA is forbidden to promulgate a regulation dealing with the subject. However, Congressional silence on the issue does not lead to this conclusion. We have already discussed at length the legal and policy basis for this regulation. The Act is silent on most specific safety and health issues, but, as *United Steelworkers of America, supra*, notes, the Act gives OSHA broad remedial powers to effectuate Congressional purposes, including section 8(g)(2), with which *Leone, supra*, did not deal. In the later decision on the issue of walkaround pay, *Chamber of Commerce of the United States of America* v. *OSHA*, No. 78–2221, 8 BNA OSHC 1648, 1653 (D.C. Cir., July 10, 1980), the District of Columbia Circuit specifically left open the question of "* * * whether ordering pay for walkaround time is indeed a statutorily authorized, rational, nonarbitrary, and noncapricious method of supplementing the Act's provisions."

Employers and industry groups also contend that since the Act expressly includes certain employee rights, such as the right to file complaints with OSHA under section 8(f), the right to be parties in Occupational Safety and Health Review Commission proceedings, as well as the right of an authorized employee representative to accompany an OSHA compliance officer during a walkaround inspection, the Act excludes all other types of employee rights, such as walkaround benefits. Thus they rely on the canon of construction *expressio unius est exclusio alterius* ("the expression of one is the exclusion of another"). An argument against medical removal protection benefits based on this canon was rejected in *United Steelworkers of America, supra*, which relied on the following language in *Nat'l Petroleum Refiners Ass'n* v. *FTC*, 482 F.2d 672, 676 (D.C. Cir. 1973), *cert. denied*, 515 U.S. 951 (1975):

> This maxim (*expressio unius est exclusio alterius*) is increasingly considered unreliable * * * for it stands on the faulty premise that all possible alternative or supplemental provisions were necessarily considered and rejected by the legislative draftsmen.

Thus it is incorrect to say that because Congress expressly granted certain rights, such as the walkaround right, it prohibited OSHA from using its broad section 8 rulemaking authority to provide other employee rights, where it determines, after rulemaking, that such rights are necessary to enable the agency effectively to carry out its responsibilities.

Another argument based on the canon *expressio unius* was made by employers and their associations (*See*, e.g., Exhibits 2–202, 2–253). They contend that the express Congressional inclusion of walkaround pay in section 103(f) of the Federal Mine Safety and Health Act of 1977 indicates that in passing the OSH Act in 1970 the Congress intended to preclude OSHA from requiring walkaround pay. This contention is similar to an argument which was rejected in *United Steelworkers of America, supra*, at 1837. In that case an employer association argued that because Congress provided for earnings protection for miners suffering from pneumoconiosis in the Federal Coal Mine Health and Safety Act of 1969, it was aware of the concept of medical removal protection (MRP) in 1970 when it passed the OSH Act and so its failure to require MRP in the OSH Act or to

expressly delegate to OSHA the authority to require MRP proves that Congress intended that OSHA may not include MRP in any standards. After detailing the difficulties inherent in the *expressio unius* canon, as noted previously, the court noted that the maxim can only apply sensibly when very similar statutes are compared. However, as the court noted, there is a crucial difference between the two laws. In the OSH Act the Congress granted OSHA extremely broad authority to prevent all kinds of safety and health hazards throughout American industry. In the Coal Act the Congress created a sharply focused statute with many detailed standards. As the court stated at 1837:

> Congress may well have avoided all mention of medical removal protection in the OSH Act simply because it thought that mandating such a specific program was inappropriate in a statute so much broader and so much more dependent on agency implementation than the Coal Act.

Likewise, the Federal Mine Safety and Health Act of 1977 (to a certain extent the successor to the Coal Act), which is the basis of the employers' argument in this rulemaking proceeding, is a sharply focused statute with many detailed standards. Congress may well have avoided all mention of walkaround pay in the OSH Act because it thought that mandating such a specific program was inappropriate in a statute so much broader and so much more dependent on agency implementation than the Federal Mine Safety and Health Act of 1977. *See also Marshall* v. *Whirlpool Corp.*, 593 F. 2d 715, 723–26 (6th Cir. 1979), *aff'd* 445 U.S. 1 (1980).

Another contention made by employers and industry groups is that an OSHA requirement of walkaround pay would constitute an unwarranted interference with the collective bargaining process (*See* e.g. Exhibits 20103, 2–113, 2–253, 2–254). This type of argument was also rejected in *United Steelworkers of America, supra*, at 1840. Although MRP is a mandatory subject of collective bargaining under federal law, the court held that this fact does not mean that an OSHA requirement for walkaround pay is precluded. As noted by the court, any issue directly related to worker safety or health is a mandatory subject of collective bargaining; in passing the comprehensive OSH Act Congress knew it was laying a basis for OSHA regulations that would replace or obviate the occupational safety and health provisions of many collective bargaining agreements, the court stated. In the view of the court, there is nothing in the OSH Act or other labor legislation to suggest that Congress removed from OSHA the authority to promulgate a regulation necessary in achieving occupational safety and health simply because such a program could otherwise be established through collective bargaining. Such an inference would contradict the principle that remedial welfare and labor laws are to be liberally construed, the court held. This reasoning, which was applied to sustain a provision for medical removal protection benefits, is directly applicable to a provision for walkaround benefits.

Some commentors who oppose the regulation rely upon the current practice of many employers to pay walkaround compensation. Such industry comments argue that since many employers already provide walkaround compensation the regulation is unnecessary. (*See*, e.g., Exhibits 2–113, 2–254, 2–270). However, there is no guarantee that employers will continue this practice. Further, there still are a number of employers which do not provide walkaround compensation (*See*, e.g., Exhibits 2–202, 2–253D, p. 18).

In conclusion, the Act permits OSHA to require employers to provide walkaround benefits. This imposition of the financial burden on employers is justified as a practical matter by the unpredictability of union reimbursement and of a voluntary employer-paid walkaround compensation program.

III. Summary and Explanation of the Regulation and Particular Issues

The following part discusses individual provisions of the regulation, including analysis of the particular issues involving the individual requirements, the record evidence, and the policy considerations underlying the various provisions of the regulation. The language of the regulation closely follows that of the proposed amendment of 29 CFR 1903.8 except for revisions based on OSHA's review of the rulemaking record.

Section 1903.8(e)(1)(i). This provision sets forth the general requirement that employers provide walkaround benefits to authorized employee representatives who accompany compliance officers during inspections. The rationale for this basic requirement has been discussed previously.

One specific issue that has been raised with respect to this provision is the requirement that the employee representative be paid for attendance at opening and closing conferences. Employers commented that opening and closing conferences are not part of the "physical inspection" mentioned in section 8(e) on walkaround rights and that therefore employee representatives have no right to participate in these conferences. (*See*, e.g., Exhibits 2–104, 2–113, 2–202, 2–216, 2–254, 2–270). To the contrary, opening conferences and closing conferences are integral parts of the physical inspection. During the opening conference the purposes of the inspection and procedures for the rest of the inspection are explained. One comment noted that the effectiveness of employee participation in the rest of the inspection is diminished when employee representatives do not understand the broader context of the inspection and cannot assist in planning the inspection because of their non-attendance at the opening conference. (*See* Exhibit 2–252A). The closing conference is also an important part of the inspection because at that time possible violations and abatement periods are discussed. The OSHA Field Operations Manual notes these important functions of the opening and closing conferences. In particular, the Field Operations Manual states that the compliance officer should conduct joint opening and closing conferences with employer and employee representatives; if such joint conferences are not practical separate conferences with employer representatives and employee representatives are to be conducted. *See* Field Operations Manual V–6.2, V–14. Since the opening and closing conferences are integral parts of physical inspections and employee representatives have the right to attend them, the rationale for employer walkaround compensation for the observation portion of the inspection, discussed previously, applies to walkaround compensation for the opening and closing conferences.

Paragraph (e)(1)(ii). Under this requirement, if a new employee representative replaces an employee representative then on the inspection team, the employer would be required to provide walkaround benefits to each representative for that portion of the walkaround in which each representative participated.

Paragraph (e)(1)(iii). Under this provision, if compliance officers, either individually or in groups inspect different parts of a workplace at the same time or at different times—for example, in a large facility—one employee representative for each inspection team would be entitled to walkaround benefits.

In general the regulation specifies the number of employee representatives which must be compensated. Under the regulation one employee representative

accompanying the compliance officer(s) during a walkaround inspection would be entitled to walkaround benefits. In some situations a group of two or more compliance officers will conduct an inspection jointly. In such circumstances only one employee representative would be entitled to benefits. Many union comments stated that if the compliance officer requests additional employee representatives all should receive walkaround benefits. (*See*, e.g., Exhibits 2-107, 2-181, 2-184, 2-268, 2-271, 2-275). Some industry comments opposed this concept on the grounds that compensating more than one employee representative for a single inspection team would be burdensome and disruptive (*See*, Exhibits 2-216, 2-259, 2-270). OSHA rejects the idea that more than one employee representative per inspection team should be compensated because to do so would be burdensome for employers. A single employee representative at a time can usually provide sufficient information to the compliance officer and any lack of information on his part may be supplied by interviews with individual employees at their worksite. Furthermore, compensating only one employee representative for an inspection would be consistent with section 103(b) of the Federal Mine Safety and Health Act of 1977, 30 U.S. 813(b).

As paragraph (e)(1)(iii) states, if more than one inspection team inspects different parts of a workplace at the same time or at different times, there will be more than one employee representative, but, as stated previously, only one for each team. Concern has been expressed about the number of inspection teams on a worksite at the same time (e.g., Ex. 2-270). As a general rule, more than one team is utilized only in large worksites.

A related issue is the number of employee representatives to be compensated at multi-employer worksites, such as construction sites. Concern has been expressed that payment of one employee representative for each employer would be burdensome. (*See* Exhibit 2-270). On the other hand, some unions have urged that each trade on a building site should have a compensated employee representative. (*See*, Exhibit 2-212). Under section 8(e) of the Act, a representative of the employees of each employer is entitled to accompany the compliance officer. Therefore, the representative of the employees of each employer on a multi-employer worksite shall be compensated. As a practical matter, this solution is helpful to the inspection because in any cases each contractor on the site does a different type of work, e.g. carpentry and plumbing, and an employee representative for each employer could provide information on the employer's individual work processes and hazards. However, compensating an employee representative for each trade, when more than one trade works for a single employer, would be unduly burdensome, for the reasons stated previously with respect to the general question of the number of compensated employee representatives for an inspection team.

It should be stated that 29 CFR 1903.8(a) does make provision for more than one employee representative for an inspection team when the compliance officer deems this necessary. Nothing in this regulation should be construed to affect the operation of that provision. Only compensation is affected by this regulation.

Paragraph (e)(1)(iv). The employer would also be required to provide to any employee walkaround benefits for time spent by employees in other activities related to the inspection. The rationale for this provision has been discussed previously.

Paragraph (v). The requirement that the employer provide walkaround benefits is defined to include maintenance not only of the earnings which the employee would have received if he had performed his work duties, but also of all other benefits, such as seniority and insurance, to which an employee would otherwise be entitled for working. The purpose of this provision is to ensure that the employee suffers no economic loss of any kind because of his participation in the inspection. The final regulation, as compared to the proposal, specifies that an employee be paid at the same wage rate during his walkaround activities as he would have been paid for performing his work duties at that time. (For a discussion of overtime pay see paragraph (e)(1)(vi) below.)

Paragraph (e)(1)(vi). Under the regulation employee walkaround representatives and employees engaged in related activities will be entitled to receive walkaround benefits only for time spent in the walkaround inspection during their regular working hours, or overtime hours, which were assigned or would have normally been assigned for purposes other than the inspection. Thus, for example, an employer would not be required to provide walkaround benefits to a representative whose regular working day has ended and has remained in the workplace or who returns to the workplace solely for the purpose of participating in a walkaround inspection.

Comments were specifically invited on the issue whether walkaround benefits should apply to any time during which an employee representative participates in a walkaround inspection or an employee engages in inspection-related activities. A number of unions supported this concept, saying, for example, that the failure to pay for any time, including unplanned overtime, would constitute a disincentive to participation during unplanned overtime hours. (*See*, e.g., Exhibits 2-190, 2-195, 2-204, 2-213, 2-255, 2-256, 2-260, 2-266, 2-268, 2-269, 2-271). A number of employers and employer groups objected to this idea, saying, for example, that if walkaround compensation is to be paid at all, the only type of overtime which should be the subject of compensation is previously scheduled overtime, that to compensate for unplanned overtime would be unlawful, and that an employee representative leaving his shift may be replaced by another representative. (*See*, e.g., Exhibits 2-113, 2-253, 2-254, 2-270). OSHA has determined that it would be unreasonable to require employers to provide walkaround compensation benefits for unplanned overtime because the employee, if he were denied compensation for such time, would not be losing expected compensation. However when an employee is entitled to overtime pay under this regulation because such overtime has been previously planned, the employee will be paid at his normal overtime rate. Such a requirement is necessary to assure that the employee receives the pay that he normally would expect. Failure to receive such expected payment would act as a disincentive to walkaround participation.

Paragraph (e)(2)(i). This regulation would be enforced like other OSHA regulations, such as those in Part 1904 on recordkeeping and reporting. If violations of the regulation are found, citations would be issued under section 9(a) and civil penalties, if appropriate, would be proposed. The employer would have the right to contest these citations before the Occupational Safety and Health Review Commission (see section 10), whose decisions are subject to review in the courts of appeals (see section 11(a)). The Secretary also has the right to seek enforcement of final Review Commission orders in the courts of appeals (section 11(b)).

Paragraph (e)(2)(iii). Under this provision employers found in violation of the other provisions of this regulation would be required to post a notice setting forth the regulation and stating

that a citation became a final order on a certain date with respect to a denial of walkaround compensation for a named employee and that the employer has complied with and promises to comply with the walkaround compensation regulation.

IV. Regulatory Assessment

In accordance with Executive Order No. 12044 (43 FR 12661, March 24, 1978), OSHA has assessed the potential economic impact of this regulation. Based on the economic identification guidelines of the Department of Labor (44 FR 5570, January 26, 1979), OSHA has concluded that the subject matter of this regulation is not a "major" action which would necessitate further economic impact evaluation and the preparation of a regulatory analysis.

In general, the guidelines provide that a regulatory analysis should be performed, if the regulation is likely to cause or result in:

(1) An increased cost of $100 million or more in any one year for the national economy;

(2) A $50 million or larger increase in costs or total revenues in any one year for a specific segment of the economy such as a specific industry, geographic regions or state or local government;

(3) A direct dislocation of 10,000 jobs or more;

(4) A substantial limitation on competition, marketing, market information or an increase in concentration in a market doing $100 million of business a year or more. (44 FR 5576).

The third and fourth factors are not relevant to the regulation. With regard to the first two factors, OSHA estimates that walkaround benefits will amount to approximately $5.3 million a year. This estimate has been made on the basis of statistics which take into consideration average wage rates, the number of federal and state OSHA inspections a year, and the average length of a federal OSHA inspection. It also assumes that the only increased costs, as a general matter, will be compensation for the employee representative's walkaround time because, according to OSHA's experience, employers generally do not deduct from wages for time spent by employees (who are not walkaround representatives) in the discusson of occupational safety and health matters with compliance officers during inspections. The average hourly earnings of a production of nonsupervisory worker on a private nonagricultural payroll during June, 1980, was $6.61. Bureau of Labor Statistics, "Employment and Earnings, September, 1980," "Vol. 27 No. 9 (Exhibit 3-1).

According to OSHA statistics, there were 146,288 federal and state OSHA safety inspections during fiscal year 1979, the latest year for which figures are available; there were 19,272 federal and state health inspections during that time. (Exhibit 3-2). The average length of a federal safety inspection during that year was 4.4 hours; the average length of a federal health inspection was 8.3 hours (Exhibit 3-39). (For this preliminary analysis, the average length of state inspections is assumed to be the same.) On the basis of these figures, the maximum cost of the proposed regulations would be approximately $5.3 million per year, which is clearly below the threshold for classifying a regulation as a major regulation. Moreover, this is a worst-case estimate since many employers already provide walkaround benefits to employee representatives and since many workplaces do not have authorized employee representatives for walkaround and thus the increased cost to employers from these regulations should be much less than $5.3 million. Accordingly, having considered the comments on the cost of walkaround compensation (*See*, e.g. Exhibits, 2-254 and 2-257), it is determined that preparation of a regulatory analysis is not necessary. The benefits of the proposal are significant. As discussed previously, the proposal will encourage walkaround participation, thus increasing the effectiveness of inspections and thereby promoting occupational safety and health.

V. Effective Date

The regulation will be effective with respect to walkaround benefits for time spent in walkaround or related activities on or after the thirtieth day after the promulgation of this regulation. This provision should give employers sufficient time to prepare for compliance with the new regulation as well as satisfy the legitimate expectations for compensation of employees who participate in inspections.

VI. Authority

This document was prepared under the direction of Eula Bingham, Assistant Secretary of Labor for Occupational Safety and Health, 200 Constitution Ave., NW., Washington, D.C. 20210.

Accordingly, pursuant to sections 8(e) and 8(g)(2) of the Occupational Safety and Health Act of 1970 (29 U.S.C. 657(e) and 657(g)(2)), 5 U.S.C. 553, and Secretary of Labor's Order 8-76 (41 FR 25059), OSHA amends Part 1903 of Title 29 of the Code of Federal Regulations by adding a new paragraph (e) to § 1903.8, as set forth below.

Signed at Washington, D.C. this 13th day of January 1980.

Eula Bingham,

Assistant Secretary, Occupational Safety and Health.

PART 1903—INSPECTIONS, CITATIONS AND PROPOSED PENALTIES

1. 29 CFR 1903.8 is amended by adding a new paragraph (e) to read as follows:

§ 1903.8 Representatives of employers and employees.

* * * * *

(e) *Walkaround compensation*—(1) *Requirements.* (i) The employer shall provide to the authorized representative of the employees walkaround benefits for the time during which the representative accompanies the Compliance Safety and Health Officer(s) in a walkaround inspection team during any physical inspection of a workplace, including attendance at the opening and closing conferences.

(ii) If a new employee representative replaces an employee representative during a walkaround inspection, each representative is entitled to walkaround benefits for the portion of the inspection in which each representative participated.

(iii) If more than one walkaround inspection team is utilized, the employee representative for each team is entitled to the walkaround benefits required by this section.

(iv) In addition, the employer shall provide walkaround benefits to any employee for the time during which (A) a Compliance Safety and Health Officer, in conducting the inspection consults with or questions the employee concerning matters of safety or health in the workplace; or (B) the employee notifies the Compliance Safety and Health Officer, while conducting the inspection, of an occupational safety or health hazard or violation of the Act which the employee has reason to believe exists in such workplace.

(v) For the purposes of this section, the requirement that an employer provide walkaround benefits means that the employer shall maintain the earnings, seniority, and other employment rights and benefits of an employee as though the employee had been performing work for the employer.

(iv) For the purposes of this section, the time spent by an employee for which the employer shall provide walkaround benefits includes only the regular working hours of the employee, or overtime hours which were assigned or

would otherwise normally have been assigned by the employer for purposes other than the walkaround inspection. The rate of pay will be the rate which normally would be applicable for the time if work duties had been performed.

(2) *Enforcement.* (i) Any employer who fails to comply with paragraph (e)(1) of this section shall be subject to citations, civil penalties, and enforcement of Occupational Safety and Health Review Commission orders in the courts of appeals, in accordance with sections 9, 10, 11 (a) and (b), and 17 of the Act.

(ii) Any citation issued against an employer because of his violation of this regulation shall include in the abatement requirements thereof a requirement that the employer shall post a notice within ten days of the date on which the citation or citation item becomes a final order, setting forth that the ordered walkaround compensation has been paid and the employer will comply with the requirement of the regulation in the future. The citation shall also require that the notice shall be posted in a conspicuous place and will remain in place for sixty days.

(3) Effective date. This regulation will be effective with respect to time spent in walkaround or related activities on or after [insert date 30 days after publication].

(Secs. 8(e) and (g)(2); 84 Stat. 1600, 1603 (29 U.S.C. 657(e) and (g)(2) (5 U.S.C. 553); Secretary of Labor's Order 8-76 (41 FR 25059))

[FR Doc. 81-1746 Filed 1-15-81; 8:45 am]

BILLING CODE 4510-26-M

---

29 CFR Part 1952

Approval of Supplements to California State Plan

AGENCY: Occupational Safety and Health Administration, U.S. Department of Labor.

ACTION: Final rule.

SUMMARY: The State of California has submitted an Occupational Safety and Health Plan supplement containing the restructuring of Safety Engineer classification used in State service (Cal/OSHA). This document announces the approval of the supplement.

EFFECTIVE DATE: January 16, 1981.

FOR FURTHER INFORMATION CONTACT: Patricia O. Horn, Project Officer, Office of State Programs, Occupational Safety and Health Administration, 200 Constitution Avenue, N.W., Washington, D.C. 20210, (202) 523-8045.

SUPPLEMENTARY INFORMATION:

Background

Part 1953 of Title 29, Code of Federal Regulations, provides procedures under Section 18 of the Occupational Safety and Health Act of 1970 (29 U.S.C. 667) (hereinafter referred to as the Act) for review of changes and progress in the development and implementation of State plans which have been approved in accordance with Section 18(c) of the Act and Part 1902 of this chapter. On August 19, 1977, a notice was published in the **Federal Register** (Vol. 42, No. 161) of a decision to approve the California Plan and the adoption of Subpart K to Part 1952 containing the decision.

The U.S. Civil Service Commission found in January 1976 that the California personnel operations were in conformance with the Standards for a Merit System of Personnel Administration. On July 1, 1979, the State adopted a revised stratification of the Safety Engineer series, including salaries and classification, in order to overcome the difficulty in recruiting a significant number of women and minority candidates in safety engineering jobs. The Division of Occupational Safety and Health has had to rely on recruitment efforts directed almost exclusively at the journey level of Safety Engineer, and these circumstances have hampered the Division in its efforts to develop effective affirmative action and upward mobility programs. In addition to these considerations, questions have arisen concerning the lack of salary parity between the safety engineering series and other engineering series in State service, and the supplement addresses these questions as well. Review of this plan supplement by OSHA indicates that the State regulation conforms to the merit system requirements in effect.

Description of Supplement

This supplement establishes a safety engineering technician series to provide an alternative entry into the professional technician series and an upward mobility opportunity for clerical support staff.

Establishing the safety technician series further delineates the levels of complexity of the safety engineering work.

The revised stratification of the Safety Engineer series relieves existing positions of less technical tasks currently assigned, and raises the level of responsibility at which they function.

Comparisons are also made between the supervisory structure of the Safety Engineering series and existing supervisory classes in various engineering disciplines in other State agencies. In addition, salary increases for supervisory personnel are listed along with their class description.

Location of the Plan and Supplement for Inspection and Copying

A copy of the plan and its supplements may be inspected and copied during normal business hours at the following locations:

Office of the Directorate of Federal Compliance and State Programs, 200 Constitution Avenue, N.W., Room N3619, Washington, D.C. 20210

Office of Regional Administrator, Occupational Health and Safety Administration, 450 Golden Gate Avenue, Room 11349, San Francisco, California 94102

California Occupational Safety and Health Administration, 455 Golden Gate Avenue, San Francisco, California 94102

Public Participation

Under § 1953.2 of this Chapter, the Assistant Secretary may prescribe alternative procedures to expedite the review process or for any other good cause which may be consistent with applicable law. The Assistant Secretary finds that this restructuring is consistent with the merit system (personnel administration) contained in the approved plan which was previously made available for public comments. Good cause is, therefore, found for approval of the supplement without public comment and notice.

Decision

After careful consideration, the California plan supplement described above is hereby approved under Part 1953 of this Chapter. This decision incorporates the requirements of the Act and implementing regulations applicable to State plans generally. Accordingly, Subpart K of 29 CFR Part 1952 is amended by adding a new paragraph (f) to § 1952.175 as follows:

§ 1952.175 Changes to approved plan.

* * * * *

(f) In accordance with Subpart E of 1953 of this Chapter, the revised stratification of the Safety Engineer Series, adopted by California on July 1, 1979, was approved by the Assistant Secretary on January 12, 1981.

(Sec. 18, Pub. L. 91-596, 84 Stat. 1608 (29 U.S.C. 667))

Signed at Washington, D.C. this 12th day of January 1981.

Eula Bingham,

Assistant Secretary of Labor.

[FR Doc. 81-1732 Filed 1-15-81; 8:45 am]

BILLING CODE 4510-26-M

29 CFR Part 1952

Approval of Supplements to the Michigan State Plan

AGENCY: Occupational Safety and Health Administration, Department of Labor.

ACTION: Final rule.

SUMMARY: This notice approves the administrative proceedings for granting variances; regulations for inspections and investigations, citations, and proposed penalties; the procedural rules for the State Board of Health and Safety Compliance and Appeals; procedures for notifying complainants of the disposition of complaints; and the 1979 amendments to the Michigan Occupational Safety and Health Act.

EFFECTIVE DATE: January 16, 1981.

FOR FURTHER INFORMATION CONTACT: John M. Kelly, Project Officer, Office of State Programs, Occupational Safety and Health Administration, U.S. Department of Labor, 200 Constitution Avenue, N.W., Washington, D.C. 20210, (202) 523-8081.

SUPPLEMENTARY INFORMATION:

Background

Part 1953 of Title 29, Code of Federal Regulations, prescribes procedures under Section 18 of the Occupational Safety and Health Act of 1970 (29 U.S.C. 667) (hereinafter referred to as the Act) for review of changes and progress in the development and implementation of State plans which have been approved under Section 18(c) of the Act and 29 CFR Part 1902. On October 3, 1973 notice was published in the **Federal Register** of the approval of the Michigan plan and of the adoption of Subpart T of Part 1952 containing the decision (38 FR 27391). On November 1, 1977, a notice was published in the **Federal Register** (42 FR 57140) acknowledging the receipt of the supplements containing the procedural rules for Variances; regulations for Inspections and Investigations, Citations, and Proposed Penalties; the procedural rules for the State Board of Health and Safety Compliance and Appeals; and copies of letters for notifying complainants of the disposition of complaints. In a letter dated March 17, 1980, to the Acting Regional Administrator, Region V, the State submitted the 1979 amendments to the Michigan State plan for Occupational Safety and Health. Except for the amendments to the Michigan Occupational Safety and Health Act, all the supplements were made available for public comment.

Description of Plan Supplements

1. *Procedural Rules for Granting Variances, Part 12.* The State submitted rules effective March 1, 1976 which provide for the granting of variances under the Michigan Occupational Safety and Health Act. After review by OSHA, the State amended the Rules in May of 1979 to provide that requests for variances and interim orders include a statement concerning the opportunity for public response and a hearing, as well as notice of intention to modify or revoke a variance, and be published in the LABORegister, a publication of the Michigan Department of Labor. The State also agreed not to consider a request for a temporary variance if the standard from which a variance is requested is in effect at the time of the request, and clarified the requirement that the proponent of a permanent variance demonstrate, by a preponderance of evidence, that the operations proposed to be used will provide protection equivalent to that under the standard.

2. *Regulations for Inspections and Investigations, Citations, and Proposed Penalties, Part 13.* The State submitted regulations, effective November 12, 1976, for the conduct of inspections and investigations, the issuance of citations, and the proposal of penalties. They include provisions for regulating exceptions to the prohibition on advance notice of inspections and investigations.

3. *Procedural Rules for the Board of Health and Safety Compliance and Appeals, Part 4.* The State submitted rules of procedures, effective November 23, 1976, governing contested cases before the Board or a hearing officer. After review by OSHA, the State amended the rules, effective May 7, 1979, to include an indication in the rules that certain additional rights are granted to parties under the Michigan Administrative Procedures Act, such as provisions relating to posting of notices of appeals, and provisions dealing with service and notice to employees and employee representatives.

4. *Notification of the Disposition of Complaints.* The State submitted copies of form letters used to notify complainants of the final disposition of their complaints including provision for requesting an informal review of the determination not to issue a citation based on the complaint.

5. *Amendments to the Michigan Occupational Safety and Health Act, Act 154 Public Acts of 1974 (MIOSHA).* MIOSHA was amended by Act 149 of the Public Acts of 1979, approved on November 17, 1979, and became effective March 27, 1980. The amendments include provisions relating to an employer's obligation to pay for personal protective equipment, employee access to health records, employee attendance at meetings, walkaround pay, red tag procedures, collection of civil penalties, employee attendance at first appeal meetings, trade secrets, and discrimination complaints.

Location of the Plan and Its Supplements for Inspection and Copying

A copy of the plan and the supplements may be inspected and copied during normal business hours at the following locations: the Office of the Regional Administrator, Occupational Safety and Health Administration, 230 South Dearborn Street, Chicago, Illinois 60604; Michigan Department of Labor, State Secondary Complex, 7150 Harris Drive, Lansing, Michigan 48926; Office of State Programs, Occupational Safety and Health Administration, Room N-3613, 3rd and Constitution Avenue N.W., Washington, D.C. 20210.

Public Participation

Interested persons were afforded thirty days to submit written comments or request a hearing concerning all the supplements except the amendments to the Michigan Occupational Safety and Health Act. No public comments or request for a hearing were received. The amendments to the Michigan Occupational Safety and Health Act were adopted in accordance with the procedural requirements of State law and further public participation is not necessary.

Decision

After careful consideration, the Michigan plan supplements described above are approved under Part 1953. This decision incorporates the requirements of the Act and implementing regulations applicable to State plans generally. Accordingly, Subpart T of 29 CFR Part 1952.264 is amended by adding new paragraphs (e) and (f) as follows:

§ 1952.264 Completed developmental steps.

* * * * *

(e) In accordance with § 1952.263(d), Procedural Rules for the granting of Variances, Regulations for Inspections and Investigations, Citations, and Proposed Penalties and Procedural Rules for the Board of Health and Safety Compliance and Appeals, were approved by the Assistant Secretary on January 12, 1981.

(f) In accordance with prior commitments, the Michigan Occupational Safety and Health Act as amended by Act 149 of the Public Acts of 1979, was approved by the Assistant Secretary on January 12, 1981.

(Sec. 18, Pub. L. 91-596, 84 Stat. 1608 (29 U.S.C. 667))

Signed at Washington, D.C. this 12th day of January 1981.

Eula Bingham,

Assistant Secretary of Labor.

[FR Doc. 81-1730 Filed 1-15-81; 8:45 am]

BILLING CODE 4510-26-M

29 CFR Part 1952

Approval of Supplements to the Michigan State Plan

AGENCY: Occupational Safety and Health Administration, Department of Labor.

ACTION: Final rule.

SUMMARY: This notice approves the State's regulations for reporting of occupational injuries and illnesses; and the operations manuals for the occupational safety program and the occupational health program.

EFFECTIVE DATE: January 16, 1981.

FOR FURTHER INFORMATION CONTACT: John M. Kelly, Project Officer, Office of State Programs, Occupational Safety and Health Administration, U.S. Department of Labor, 200 Constitution Avenue NW., Washington, D.C. 20210, (202) 523-8081.

SUPPLEMENTARY INFORMATION:

Background

Part 1953 of title 29, Code of Federal Regulations, prescribes procedures under Section 18 of the Occupational Safety and Health Act of 1970 (29 U.S.C. 667) (hereinafter referred to as the Act) for review of changes and progress in the development and implementation of State plans which have been approved under Section 18(c) of the Act and 29 CFR Part 1902. On October 3, 1973, notice was published in the **Federal Register** of the approval of the Michigan plan and of the adoption of Subpart T of Part 1952 containing the decision (38 FR 27391). On February 25, 1977, a notice was published in the **Federal Register** (42 FR 11024) acknowledging receipt of a supplement concerning manuals for compliance operations of the Michigan Department of Labor and Public Health. On November 1, 1977, a notice was published in the **Federal Register** (42 FR 57140) acknowledging the receipt of the supplement containing the rules for recording and reporting occupational injuries and illnesses by employers covered under the Michigan Occupational Safety and Health Act. Both supplements were made available for public comment.

Description of Plan Supplements

1. *Manuals for Compliance Operations of the Michigan Department of Labor and Public Health.* On September 28, 1976, the State submitted compliance manuals for the occupational safety program and for the occupational health program. The manuals provide basic information and guidance for State personnel of the Department of Labor and the Department of Public Health in administering and enforcing the occupational safety and health program according to the provisions of the Michigan Occupational Safety and Health Act. The State has subsequently submitted amendments to the manuals to reflect changes in Federal procedures. This notice does not approve these subsequent amendments.

2. *Rules for Recording and Reporting of Occupational Injuries and Illnesses, Part 11.* The State submitted rules effective March 1, 1976 (amended May 7, 1979), which provide for recording and reporting of occupational injuries and illnesses by employers covered under the Michigan Occupational Safety and Health Act.

Location of the Plan and Its Supplements for Inspection and Copying

A copy of the plan and the supplements may be inspected and copied during normal business hours at the following locations: the Office of the Regional Administrator, Occupational Safety and Health Administration, 230 South Dearborn Street, Chicago, Illinois 60640; Michigan Department of Labor, State Secondary Complex, 7150 Harris Drive, Lansing, Michigan 48926; Office of State Programs, Occupational Safety and Health Administration, Room N-3613, 3rd and Constitution Avenue NW., Washington, D.C. 20210.

Public Participation

Interested persons were afforded thirty days to submit written comments or request a hearing concerning both supplements. No public comment or request for a hearing were received.

Decision

After careful consideration, the Michigan plan supplements described above are approved under Part 1953. This decision incorporates the requirements of the Act and implementing regulations applicable to State plans generally. Accordingly, 29 CFR 1952.264 is hereby amended by adding new paragraphs (g) and (h) as follows:

§ 1952.264 Completed developmental steps.

* * * * *

(g) In accordance with § 1952.263(c), Manuals for Compliance Operations of the Michigan Department of Labor and Public Health were approved by the Assistant Secretary on January 13, 1981.

(h) In accordance with § 1952.263(e), Rules for Recording and Reporting of Occupational Injuries and Illnesses, were approved by the Assistant Secretary on January 13, 1981.

(Sec. 18, Pub. L. 91-596, 84 Stat. 1608 (29 U.S.C. 667))

Signed at Washington, D.C. this 13th day of January 1981.

Eula Bingham,

Assistant Secretary of Labor.

29 CFR Part 1952

Certification of Completion of Developmental Steps for Michigan State Plan

AGENCY: Occupational Safety and Health Administration, Department of Labor.

ACTION: Final rule.

SUMMARY: Michigan, on or before September 24, 1976, submitted documentation attesting to the completion of all structural, developmental aspects of its approved State plan. After extensive review and opportunity for State correction, all developmental plan supplements have now been approved. This notice certifies this completion and the beginning of the final evaluation phase of State plan development. This certification attests only to the fact that Michigan now has in place those structural components necessary for an effective program. It does not render judgment, either positively or negatively, on the adequacy of the State's actual performance. In addition, although original State plan commitments on staffing and resources have been met, these initial commitments may not be interpreted as meeting the ultimate requirements of the Occupational Safety and Health Act of 1970 for "sufficient staff" as redefined by the U.S. Court of Appeals decision in "AFL-CIO v. Marshall", 570 F. 2d 1030 (1978).

EFFECTIVE DATE: January 16, 1981.

FOR FURTHER INFORMATION CONTACT: John M. Kelly, Project Officer, Office of State Programs, Occupational Safety

and Health Administration, 200 Constitution Avenue, N.W., Rm. N3613, Washington, D.C. 20210—(202) 523–8081.

SUPPLEMENTARY INFORMATION:

Background

Section 18 of the Occupational Safety and Health Act of 1970 (the "Act," 29 U.S.C. 667) provides that States which desire to assume responsibility for the development and enforcement of occupational safety and health standards shall submit for Federal approval a State plan for such development and enforcement. Part 1902 of Title 29, Code of Federal Regulations, sets forth procedures under which the Assistant Secretary of Labor for Occupational Safety and Health ("Assistant Secretary") shall approve such plans. Under the Act and regulations, plan approval is essentially a two-step procedure. A State must first submit its plan for an initial determination under section 18(b) of the Act. If the Assistant Secretary, after reviewing the State's submission, determines that the plan satisfies or will satisfy the criteria set forth in section 18(c) of the Act, a decision of "initial approval" is issued and the State may begin enforcement of its safety and health standards in accordance with the plan and with concurrent enforcement by the Occupation Safety and Health Administration (OSHA).

A State plan may receive initial approval even though at the time of submission not all essential components of the plan are in place. As provided at 29 CFR 1902.2(b), the Assistant Secretary may initially approve the submission as a "developmental plan" and a schedule within which the State must complete specified "developmental steps" is issued as part of the initial approval decision.

When the Assistant Secretary finds that the State has completed all developmental steps specified in the initial approval decision, a notice of such completion is published in the **Federal Register** (see 29 CFR 1902.34 and 35). Certification of completion of developmental steps initiates a thorough evaluation of the State plan by the Assistant Secretary to determine, on the basis of actual operations, whether the plan adequately protects safety and health of the State's workers. Certification does not render judgment as to the adequacy of State performance.

Final approval of the plan under section 18(e) of the Act and 29 CFR Part 1902 may not be granted until at least three years after initial approval and until at least one year after completion of developmental steps. Thereafter, when the Assistant Secretary determines on the basis of actual performance under the plan that the Act's criteria are being applied, a decision of final approval may be granted.

On October 3, 1973, a notice was published in the **Federal Register** (38 FR 27391) of initial approval of the developmental Michigan plan and the adoption of Subpart T of Part 1952 containing the decision, a description of the plan and the developmental schedule. During the three year period ending September 24, 1976, following commencement of State operations, the Designees of the Michigan Department of Labor and the Department of Public Health, submitted documentation attesting to the completion of each State developmental commitment for review and approval as provided in 29 CFR Part 1953. Following Departmental review, opportunity for public comment and subsequent modification of the State's submissions, as deemed appropriate, the Assistant Secretary has approved the completion of all individual Michigan developmental steps.

Completion of Developmental Steps

All developmental steps specified in the October 3, 1973 notice of initial approval have been completed as follows:

a. In accordance with § 1952.263(a), the State on June 19, 1974, submitted a supplement containing its enabling legislation enacted on June 18, 1974. (40 FR 8555, February 28, 1975.) The 1979 amendments to the Michigan Occupational Safety and Health Act, submitted as a State-initiated change supplement to the Michigan State plan, were approved on January 12, 1981, and appear elsewhere in this issue.

b. In accordance with § 1952.263(b), the State has promulgated occupational safety and health standards covering all the issues contained in 29 CFR Part 1910, Subparts D through S, and Part 1926. (The State will not cover Parts 1915, 1916, 1917, and 1918). (40 FR 50583, October 30, 1975; 41 FR 18483, May 4, 1976; 41 FR 53078, December 3, 1976; 43 FR 31457, July 21, 1978).

c. In accordance with § 1952.263(c), the State, on September 28, 1976, submitted compliance manuals for the occupational safety program and for the occupational health program. The State has subsequently submitted amendments to these manuals to reflect changes in Federal procedures. The original submission was approved on January 13, 1981, and appears elsewhere in this issue.

d. In accordance with § 1952.263(d), regulations similar to Parts 1903, 1905, and 2200 became effective November 12, 1976, March 1, 1976, and November 23, 1976, respectively. After review by OSHA, they were approved on January 12, 1981, and appears elsewhere in this issue.

e. In accordance with § 1952.263(e), the State submitted rules effective March 1, 1976 (amended May 7, 1979), for recordkeeping and reporting of occupational injuries and illnesses which were approved on January 13, 1981, and appears elsewhere in this issue.

f. In accordance with § 1952.263(f), an interagency agreement between the Michigan Department of Labor and the Michigan Department of Public Health was signed on September 23, 1974, and approved on September 21, 1975. (41 FR 8555, February 28, 1975).

g. In accordance with § 1952.263(g), Michigan's public employee program was implemented with an effective date of July 1, 1975, and approved on October 17, 1977. (42 FR 57123, November 1, 1977).

h. In accordance with the requirements of § 1952.10, the Michigan State poster was approved by the Assistant Secretary on September 22, 1975. (40 FR 44131, September 25, 1975).

i. The Michigan Departments of Labor and Public Health have established a comprehensive management information system which was approved on October 17, 1977. (42 FR 57123 November 1, 1977).

j. The State submitted revisions to the staffing pattern contained in the State's plan and indicated that the Michigan Departments of Labor and Public Health were in substantial conformity with the revised staffing pattern. The supplement was approved by the Assistant Secretary on October 17, 1977. (42 FR 57123, November 1, 1977).

k. The system of personnel administration in the Michigan Departments of Labor and Public Health has been found to be in substantial conformity with the standards for a merit system in a letter dated August 25, 1980 from the United States Office of Personnel Management. Operation of the State merit system has been found acceptable by OSHA.

This certification covers all occupational safety and health issues covered under the Federal program except for longshoring and maritime standards found in 29 CFR Parts 1915, 1916, 1917 and 1918 (longshoring, ship repairing, ship building, and ship breaking), which are excluded from coverage under the plan. This certification also covers the State's

program covering State and local government employees.

Location of the Plan and Its Supplements for Inspection and Copying

Copies of the supplements, along with the approved plan, may be inspected and copied during normal business hours at the following locations:

Office of the Director of Federal Compliance and State Programs, Occupational Safety and Health Administration, Room N3613, U.S. Department of Labor, 200 Constitution Avenue, N.W., Washington, D.C. 20210

Office of the Regional Administrator, Occupational Safety and Health Administration, Region V, 230 South Dearborn Street, Chicago, Illinois 60604

Michigan Department of Labor, State Secondary Complex, 7150 Harris Drive, Lansing, Michigan 48926

Effect of Certification

The Michigan plan is certified effective January 16, 1981 as having completed all developmental steps on or before September 24, 1976. This certification attests to structural completion, but does not render judgment on adequacy of performance.

The Michigan occupational health and safety program will be monitored and evaluated for a period of not less than one year after publication of this certification to determine whether the State program in operation provides for an effective program of enforcement. The Assistant Secretary will then determine whether Federal authority should be withdrawn with respect to issues covered by the plan pursuant to Section 18(e) of the Act.

Level of Federal Enforcement

In accordance with 29 CFR 1902.35, Federal enforcement authority under sections 5(a)(2), 8, 9, 10, 13 and 17 of the Act (29 U.S.C. 654(a)(2), 657, 658, 659, 662, and 666) and Federal standards authority under section 6 of the Act (29 U.S.C. 655) will not be relinquished during the evaluation period. However, under the terms of an operational status agreement entered into between OSHA and the Michigan Departments of Labor and Public Health on January 6, 1977 (42 FR 15411) the exercise of this authority by the U.S. Department of Labor will continue to be limited to, among other things: complaints about employee discrimination, enforcement of new Federal standards such as temporary emergency standards until adopted by the State; enforcement of standards excluded from plan coverage, investigations for fulfillment of monitoring obligations under Sections 18 (e) and (f) of the Act; and abatement dates from OSHA-issued citations, which extend beyond the date of State assumption of inspection responsibility. Pursuant to 29 CFR § 1954.3(f)(1) the agreement provides for resumption of Federal enforcement activity for failure to substantially comply with the provisions of the agreement, or as a result of evaluation or other factors.

The continuation of this operational status agreement is not to be construed as a determination that the Michigan program has met the requirements of the Act and regulations for a "sufficient number of qualified personnel, as defined in "AFL-CIO v. Marshall," but rather that the State has reached a satisfactory, interim level of staffing. In accordance with this certification, 29 CFR 1952.263 is hereby amended to reflect successful completion of the developmental period by changing the title of the section and by adding paragraph (i) as follows:

§ 1952.263 Completion of developmental steps and certification.

* * * * *

(i) In accordance with § 1902.34 of this chapter, the Michigan occupational safety and health plan was certified effective January 13, 1981 as having completed all developmental steps specified in the plan as approved on September 24, 1973, on or before September 24, 1976.

This certification attests to structural completion, but does not render judgment on adequacy of performance.

(Sec. 18, Pub. L. 91-596, 84 Stat. 1608 (29 U.S.C. 667))

Signed at Washington, D.C., this 13th day of January, 1981.

Eula Bingham,

Assistant Secretary of Labor.

[FR Doc. 81-1729 Filed 1-15-81; 8:45 am]

BILLING CODE 4510-26-M

DEPARTMENT OF EDUCATION

34 CFR Part 300

Assistance to States for Education of Handicapped Children

AGENCY: Department of Education.

ACTION: Technical amendment: Final rule.

SUMMARY: The Secretary issues this regulation to make changes in the definition of "handicapped children" under Part B of the Education of the Handicapped Act, as amended.

(1) The reference to "autistic" children is deleted from the disability category "seriously emotionally disturbed" under the definition of "handicapped children"; and

(2) A reference to "autistic" children is added under the disability category "other health impaired" under the definition of "handicapped children".

EFFECTIVE DATE: These regulations are expected to take effect 45 days after they are transmitted to Congress. They are transmitted to Congress several days before they are published in the Federal Register. The effective date is changed by statute if Congress takes certain adjournments. If you want to know the effective date of these regulations, call or write the Department of Education contact person.

FOR FURTHER INFORMATION CONTACT: Mrs. Beverly E. Brightly, U.S. Department of Education, Office of Special Education and Rehabilitative Services, Division of Assistance to States, 400 Maryland Avenue, S.W. (Room 4932, Donohoe Building), Washington, D.C. 20202, Telephone: (202) 472-7921.

SUPPLEMENTARY INFORMATION: The proposed rules which included the definition of "handicapped children" for the purposes of Part B of the Education of the Handicapped Act, as amended by Pub. L. 94-142, were published December 30, 1976 (41 FR 56966). The final regulations were published August 23, 1977 (42 FR 42474).

Congress did not address autism in developing the statute. When the implementing regulations were published in 1977, autism was placed under the category of "seriously emotionally disturbed", based upon knowledge available to the agency at that time. We now conclude that this original classification of autistic children is inappropriate because not all autistic children are seriously emotionally disturbed. The technical amendment to the regulations reflects our expanded knowledge of autism gained through our contracts with and knowledge provided by the National Society for Autistic Children (NSAC), the National Institute for Neurological and Communicative Disorders and Stroke (NINCDS), and others who have sought to bring to our attention current thinking in the field of autism. The Secretary does not expect this change to affect the number of handicapped children identified as autistic, but only the manner or category in which autistic children will be reported.

Since this amendment does not represent a substantive change in the regulations, the Secretary has determined, in accordance with 5 U.S.C.

553, that public participation in the rulemaking process is unnecessary.

Dated: January 11, 1981.

Shirley M. Hufstedler,

Secretary of Education.

(Catalog of Federal Domestic Assistance Number 84.027; Education of Handicapped Children, Part B)

(The Education of the Handicapped Act, as amended (20 U.S.C. 1401 *et seq.*))

The Secretary amends Part 300 of Title 34 of the Code of Federal Regulations by revising § 300.5(b)(7) and (b)(8)(ii) to read as follows:

§ 300.5 Handicapped children.

* * * * *

(b) * * *

(7) "Other health impaired" means (i) having an autistic condition which is manifested by severe communication and other developmental and educational problems; or (ii) having limited strength, vitality or alertness, due to chronic or acute health problems such as a heart condition, tuberculosis, rhematic fever, nephritis, asthma, sickle cell anemia, hemophilia, epilepsy, lead poisoning, leukemia, or diabetes, which adversely affects a child's educational performance.

(8) "Seriously emotionally disturbed" is defined as follows:

* * * * *

(ii) The term includes children who are schizophrenic. The term does not include children who are socially maladjusted, unless it is determined that they are seriously emotionally disturbed.

BILLING CODE 4000-01-M

---

34 CFR Part 682

Guaranteed Student Loan Program

AGENCY: Department of Education.

ACTION: Final Regulations with Comments Invited.

SUMMARY: Recent laws have added five new provisions for deferment of repayment to the Guaranteed Student Loan Program (GSLP). The Secretary of Education is establishing criteria to implement these new deferments for a GSLP borrower who: (1) Is pursuing a course of study under a rehabilitation training program for disabled individuals; (2) Is serving as an officer in the Commissioned Corps of the United States Public Health Service; (3) Is serving as a full-time volunteer for a tax-exempt organization providing service that is comparable to service in the Peace Corps or full-time service in ACTION agency programs; (4) Is temporarily totally disabled or is unable to secure employment by reason of the care required by a spouse who is temporarily totally disabled; or (5) Is serving an internship required to gain professional recognition required to begin professional practice.

DATES: Comments must be received on or before March 17, 1981. These regulations are expected to take effect 45 days after they are transmitted to Congress. Regulations are usually transmitted to Congress several days before they are published in the **Federal Register**. The effective date is changed if the Congress takes certain adjournments. If you want to know the effective date of these regulations, call or write the Department of Education contact person.

When these regulations become effective they will apply to all outstanding loans, and borrowers will be entitled to obtain these new deferments for all periods during which they are eligible after the regulations become effective. In the case of the rehabilitation training deferement, coverage also will be retroactive to the date that provision was enacted into law. Therefore, any borrower who has been granted forbearance since November 1, 1978 because he or she was engaged in an approved rehabilitation training program will be able to receive this benefit if the program meets the criteria established by this regulation.

ADDRESS: Comments should be addressed to Jane A. Bryson, Chief, Guaranteed Student Loan Policy Section, Office of Student Financial Assistance, (Room 4310, ROB-3), 400 Maryland Avenue, SW., Washington, D.C. 20202.

FOR FURTHER INFORMATION CONTACT: Cheryl Leibovitz or Jane A. Bryson, Telephone (202) 245-2475.

SUPPLEMENTARY INFORMATION:

A. Background

During a deferment period, and until six months after the deferment period ends (post-deferment grace period), the borrower's obligation to repay the principal amount due on a GSLP loan is temporarily suspended. The interest on the principal amount owed continues to accrue during both the deferment and post-deferment grace periods. However, if the borrower was deemed eligible for Federal interest benefits at the time the loan was made, the Federal government pays the interest owed by the borrower during both the deferment and post-deferment grace periods.

The Education Amendments of 1980 (Pub. L. 96-374) added four new deferment provisions to the GSLP. The new deferment provisions permit a borrower to defer repayment during the following periods: (1) Up to 3 years of service as an officer in the Commissioned Corps of the United States Public Health Service; (2) Up to 3 years of full-time volunteer service for an organization which is exempt from taxation under Section 501(c)(3) of the Internal Revenue Code of 1954 if the service provided is comparable to service in the Peace Corps or full-time service in ACTION agency programs; (3) Up to 2 years of internship, the successful completion of which is necessary to receive recognition required to begin professional practice or service; (4) Up to 3 years during which the borrower is temporarily totally disabled, as established by the sworn affidavit of a qualified physician, or during which the borrower is unable to secure employment by reason of the care required by a spouse who is so disabled, as established by the affidavit of a qualified physician.

In addition, the Middle Income Student Assistance Act (Pub. L. 95-566), added a deferment to the GSLP, permitting a disabled borrower to defer repayment on his or her loan if he or she is pursuing a rehabilitation training program that is approved by the Secretary. Accordingly, § 682.508 of the GSLP regulations has been revised to accommodate these changes.

These amendments to § 682.508 provide criteria under which: (1) Service in a volunteer program for an organization which is exempt from taxation under section 501(c)(3) of the Internal Revenue Code of 1954 may be considered comparable to service in the Peace Corps or full-time service in other ACTION agency programs; (2) A borrower can qualify for an internship deferment; and (3) A rehabilitation program can receive the Secretary's approval. The deferments for service in the United States Public Health Service and for temporary total disability are self-implementing and do not require additional rules by the Secretary. In addition, certain changes have been made to the existing regulations governing the deferment for graduate fellowship programs in order to simplify their administration. The procedure by which a borrower may receive each deferment is also specified.

Section 682.508 is part of Subpart E, which sets forth the requirements for the Federal Insured Student Loan Program (FISLP). However, the deferment provisions contained in § 682.508 have been incorporated by reference into § 682.401(b)(10) of Subpart D, which governs guarantee agency programs.

Therefore, these deferment provisions apply equally to guarantee agency programs.

B. Criteria for Approving the Volunteer Service Deferment

Volunteer service for a tax-exempt organization is determined to be comparable to volunteer service in the Peace Corps or full-time service in other ACTION agency programs if: (1) The service is for an organization which is exempt from taxation under § 501(c)(3) of the Internal Revenue Code of 1954; (2) The borrower provides service to low-income persons and their communities to assist them in eliminating poverty and poverty-related human, social, and environmental conditions; (3) The borrower's compensation does not exceed the compensation received by a full-time volunteer in the Peace Corps or in a program administered by the ACTION agency; (4) The borrower, as part of his or her duties, does not give religious instruction, conduct worship services, engage in religious proselytizing or engage in fundraising to support religious activities; and (5) The volunteer has agreed to serve on a full-time basis for a term of at least one year. Service in MEDICO and the International Voluntary Service are examples of such service. To receive this deferment, the borrower obtains a certification of the program's eligibility from a program official and gives it to the lender, as described in the regulations.

These criteria are based on policies established by the Peace Corps and the ACTION agency for the organizations that sponsor their volunteers. The Secretary is seeking public comment on the adequacy of these criteria. In particular, the Secretary requests comments on whether the deferment should be limited to borrowers who serve only the type of populations that Peace Corps and ACTION agency volunteers serve; whether the deferment should be limited to borrowers who earn only as much as Peace Corps and ACTION agency volunteers earn; and whether the deferment should be limited to borrowers who provide direct services to the target populations or should include borrowers serving as support staff in the volunteer agency.

C. Internship Deferment

To qualify for an internship deferment a borrower must: (1) Hold at least a baccalaureate or professional degree; and (2) Be serving in an eligible internship program, the successful completion of which is required to receive recognition required to begin professional practice or service. A medical residency is an example of such an internship, since medical school graduates are required to complete a residency before they can be licensed to practice medicine in most States. The Secretary requests comments on this provision. The Secretary is particularly interested in receiving comments from the public concerning what other types of professions require an internship. To receive this deferment, the borrower gives the lender evidence that he or she is serving in a program which the Secretary has determined is an eligible internship. For programs other than medicine that have internships, program information may be submitted for the Secretary's approval.

D. Graduate Fellowship Deferment

Currently the GSLP regulations specify that, to qualify for a graduate fellowship deferment, a borrower must be enrolled in a program that is approved by the Secretary. To gain approval, the borrower or the graduate fellowship program submits a written request to the Education Department (ED), which reviews the request and provides the graduate fellowship program with a letter of approval. The graduate fellowship program then provides the borrower and/or lender with a copy of the letter of approval. In an effort to respond more quickly to the needs of both borrowers and lenders, the Secretary has simplified the process in these regulations. Under the new procedures, graduate fellows will be required to submit a certification by an official of the fellowship program that the program meets the six regulatory criteria for the Secretary's approval. Experience with the provision since September, 1979 has convinced the Secretary that an individual review of each program is not necessary to prevent abuse of the deferment.

E. Criteria for Approving a Rehabilitation Training Program

A rehabilitation training program is approved if: (1) The provider of the rehabilitation services is recognized by a government agency with specific responsibility for rehabilitation programs in a given area (e.g. a State vocational rehabilitation agency); (2) The provider agrees to develop an individual plan for the borrower's rehabilitation; and (3) The plan the provider has agreed to develop requires that the borrower make a substantial commitment of time or effort toward his or her rehabilitation.

Borrowers in a wide range of circumstances may qualify for the deferment. The regulations provide for approval of drug, alcohol, and mental health rehabilitation programs, as well as more traditional vocational rehabilitation programs. The regulations also have been written to permit deferment for up to three months for a borrower who is scheduled to receive rehabilitation services from a qualified program but who has not actually started his or her program. This provision prevents loan default in situations when the borrower may be required to wait either for his or her injuries to heal prior to starting rehabilitation or for the availability of an opening in a particular rehabilitation program.

The requirement that the program offer the borrower an individual rehabilitation plan is common to most public and private rehabilitation programs. The plan developed for the borrower may be designated as either an Individual Treatment Plan or an Individual Written Rehabilitation program. The latter term is most frequently used in vocational rehabilitation.

The Secretary has included the criterion requiring a substantial commitment of time or effort from the borrower in order to exclude from deferment eligibility a borrower who may be in a type of rehabilitation that occupies the borrower for a relatively short period of time each week and allows the borrower to be regularly employed on a full-time basis. For example, a borrower who visits his or her therapist for only an hour two evenings a week would be excluded. Similarly, a borrower in a drug treatment program whose sole rehabilitation is receiving methadone maintenance would not be eligible for the rehabilitation training program deferment.

The regulations establish a procedure for approval which relies on the expertise of the Veterans Administration and the State rehabilitation agencies designated in the criteria. Under these regulations, the Secretary would accept a certification by one of these agencies that the borrower's program meets the approved criteria. Since these agencies maintain close communication with the various rehabilitation programs in their respective jurisdictions, these agencies are better suited to make decisions concerning both a program's legitimacy and the borrower's situation.

The Secretary requests public comments on these criteria and particularly on whether there are types of programs, excluded under these regulations, which should be included.

Coverage for Borrowers Currently in Rehabilitation

The Secretary has asked, because of the delay in issuing regulations on criteria for approval, that lenders grant forbearance to any borrower seeking relief from payment under this deferment. This deferment coverage will be retroactive, thereby covering any disabled borrower who has been granted forbearance since November 1, 1978 because the borrower was engaged in rehabilitation training, provided that the borrower's program of rehabilitation otherwise qualifies for approval.

Waiver of Proposed Rulemaking Procedures

In accordance with Section 431(b)(2)(A) of the General Education Provisions Act (20 U.S.C. 1232(b)(2)(A)), it has been the practice of the Secretary to offer interested parties the opportunity to comment on proposed regulations. The Secretary then reviews these comments and makes appropriate changes before republishing the regulations in final form.

For the reasons described in the following paragraph, the use of that practice in connection with the provisions of these regulations is unnecessary and contrary to the public interest under 5 U.S.C. 553(b). However, the Secretary invites the public to comment on these regulations and will consider appropriate comments before publishing the regulations again.

The Secretary has waived proposed rulemaking procedures because the regulatory changes mainly reflect the statutory changes made by the Education Amendments of 1980 and the Middle Income Student Assistance Act of 1978; the other changes are of a minor or technical nature. The Secretary wishes to enable borrowers to obtain the new deferments that are being implemented by these regulations. In addition, the Secretary wishes to give the higher education and lending communities as much advance notice as possible of these changes. Accordingly, in this instance, the Secretary is publishing these rules as final regulations.

Comments requested: While the Secretary is publishing these rules as final regulations, the Secretary is requesting public comments on the provisions dealing with the new deferments. Issues on which the Secretary is particularly interested in receiving comments are specified in the descriptions of each new deferment in the "Supplementary Information" section of this preamble. The Secretary also is requesting comments regarding whether the definition of "estimated financial assistance" in § 682.200 of the GSLP regulations should be revised to include Veterans' benefits, students' benefits under Social Security, or other social service payments such as Aid to Families with Dependent Children. This revision would avoid duplication of GSLPs with other Federal assistance.

Written comments submitted in response to this notice will be available for public inspection, during and after the comment period, in Room 4310, ROB-3, 7th and D Streets, S.W., Washington, D.C. between the hours of 8:30 a.m. and 4:30 p.m., Monday through Friday of each week except on Federal holidays.

Regulatory Flexibility Act Analysis

The Regulatory Flexibility Act (Pub. L. 96-354, enacted Sept. 19, 1980) requires each Federal agency to prepare an initial regulatory flexibility analysis and a final regulatory flexibility analysis for each regulation that—

(1) Is published as a notice of proposed rulemaking after January 1, 1981, and

(2) Has a significant economic impact on a substantial number of small businesses, small organizations, or small governmental jurisdictions.

Because the Department has not yet established its own definitions of "small organization" and "small governmental jurisdiction", as contemplated by the Act, it is not possible to prepare a full initial regulatory flexibility analysis at this time. Further, since these regulations were required by statute to be published in final no later than May 31, 1981, it is impracticable to delay publication while the necessary definitions are being developed. In these circumstances, the Regulatory Flexibility Act permits a waiver or delay of the initial regulatory flexibility analysis. If it is later determined that these regulations are subject to that Act, the Secretary will prepare the necessary analysis in conjunction with the issuance of later regulations.

As an interim measure, this preamble, to the maximum extent possible, includes information of the kind contemplated by the Regulatory Flexibility Act, including the reasons for the regulations, the objectives and legal basis for the regulations, and any significant issues and alternatives for consideration by the public. To assist the Department in determining whether the Regulatory Flexibility Act applies to these regulations and in complying with the Act's requirements, public comment is especially invited on the following matters: (1) The number and kind of small businesses, small organizations, and small governmental jurisdications affected by the GSLP deferment provisions regulations;

(2) The reporting, recordkeeping, and compliance burdens imposed by these regulations;

(3) The type of professional skills necessary for preparation of any reports or records required by these regulations;

(4) Any Federal rules that may duplicate, overlap, or conflict with these regulations;

(5) Any significant alternatives that would accomplish the purposes of the applicable statute but would minimize any significant economic impact of these regulations on small entities (small business, small organizations, and small governmental jurisdictions). The Secretary is particularly interested in suggestions for alternatives such as the following:

- The establishment of differing reporting or compliance requirements or timetables that take into account the resources available to small entities.
- The clarification, consolidation, or simplification of compliance and reporting requirements for small entities.
- The use of performance rather than design standards.
- An exemption for small entities from coverage of part or all of the regulations.

Citation of Legal Authority

A citation of statutory authority for the regulations is placed in parentheses on the line following each substantive provision of these regulations.

Assessment of Educational Impact

The Department particularly requests comments on whether the regulations in this document would require transmission of information that is already being gathered by or is available from any other agency or authority of the United States.

(Catalog of Federal Domestic Assistance No. 84.032, Guaranteed Student Loan Program)

Dated: January 12, 1981.

Shirley M. Hufstedler,

Secretary of Education.

34 CFR Part 682 is amended as follows:

Section 682.508 is revised to read as follows:

§ 682.508 Deferment.

(a) *Borrower eligibility.* (1) Once the repayment period has commenced, a borrower is entitled to have periodic installment payments of principal deferred during authorized periods and during the six months (post-deferment grace period) after the completion of each such period or combination of

periods. Except as provided in paragraph (e)(4) of this section, a period of authorized deferment begins when the condition entitling a borrower to deferment first exists. Interest accrues and is payable by the borrower during the deferment and post-deferment grace periods unless the borrower was determined to be eligible for Federal interest benefits when the loan was made. The borrower shall provide to the lender all documentation required to establish eligibility for a specific type of deferment.

(2) A deferment cannot be denied by a lender when the borrower meets the eligibility criteria, even though the borrower may be delinquent, but not in default, in making required installment payments. The 120- or 180-day period required to establish a default does not run during the deferment and post-deferment grace periods. When the post-deferment grace period expires, a borrower resumes any delinquent status that existed when the deferment period began.

(3) A borrower whose loan is in default is not eligible for a deferment unless the borrower has made satisfactory arrangements with the lender to bring the account current.

(b) *Authorized deferments.* Deferment is authorized during periods when a borrower is engaged in at least one of the following activities:

(1)(i) Full-time study at a participating school, unless the borrower is not a national of the United States and is pursuing a course of study at a school not located in a State; or

(ii) Full-time study at a school which meets the definition of an institution of higher education or a vocational school and is operated by an agency of the Federal government (e.g., the service academies), unless the borrower is not a national of the United States and is pursuing a course of study at a school not located in a State.

(2) Study under an eligible graduate fellowship program, as described in paragraph (c) of this section.

(3) Up to 3 years of active duty service in the United States Armed Forces or of service as an officer in the Commissioned Corps of the United States Public Health Service.

(4) Up to 3 years of volunteer service under the Peace Corps Act.

(5) Up to 3 years of service as a full-time volunteer under Title I of the Domestic Volunteer Service Act of 1973 (ACTION programs).

(6) Up to 3 years of full-time volunteer service which the Secretary has determined is comparable to service referred to in paragraphs (b)(4) and (b)(5) of this section for a tax-exempt organization, as described in paragraph (d) of this section.

(7) Conscientiously seeking but unable to find full-time employment in the United States over a single period of up to twelve months, as described in paragraph (e) of this section.

(8) Pursuing a course of study under a rehabilitation training program for disabled individuals, as described in paragraph (f) of this section.

(9) Up to 2 years of service as an intern, as described in paragraph (g) of this section.

(10) Up to 3 years during which the borrower is temporarily totally disabled, as described in paragraph (h) of this section, or during which the borrower is unable to secure employment because he or she is caring for a spouse who is temporarily totally disabled, as described in paragraph (i) of this section.

(c) *Graduate fellowship deferment.* To qualify for a deferment for study under a graduate fellowship program, a borrower shall provide the lender with a statement from an official of the borrower's fellowship program certifying that—

(1) The fellowship program—

(i) Provides sufficient financial support to graduate fellows to allow for full-time study for at least six months;

(ii) Requires, prior to the award of that financial support, a written statement from each applicant which explains the applicant's objectives; and

(iii) Requires a graduate fellow to submit periodic reports, projects, or other evidence of the graduate fellow's progress; and

(2) The borrower—

(i) Holds at least a baccalaureate degree conferred by an institution of higher education;

(ii) Is engaged in full-time study, that may be independent of an educational or cultural institution, in an academic or professional subject area for which the borrower has shown an interest and ability; and

(iii) Has been recommended by an institution of higher education for acceptance into the graduate fellowship program.

(d) *Full-time volunteer service for a tax-exempt organization deferment.* To qualify for a deferment for full-time volunteer service for a tax-exempt organization comparable to volunteer service in the Peace Corps or full-time volunteer service in a program administered by the ACTION agency, a borrower shall provide the lender with a statement from an official of the borrower's volunteer program certifying that—

(1) The borrower serves in an organization which is exempt from taxation under Section 501(c)(3) of the Internal Revenue Code of 1954;

(2) The borrower provides service to low-income persons and their communities to assist them in eliminating poverty and poverty-related human, social, and environmental conditions;

(3) The borrower's compensation does not exceed the compensation received by a full-time volunteer in the Peace Corps or in a program administered by the ACTION agency. Compensation includes a subsistence allowance, necessary travel expenses and stipends;

(4) The borrower, as part of his or her duties, does not give religious instruction, conduct worship services, engage in religious proselytizing, or engage in fundraising to support religious activities; and

(5) The borrower has agreed to serve on a full-time basis for a term of at least one year.

(e)(1) *Basic eligibility for an unemployment deferment.* (i) For purposes of this section, full-time employment involves at least 30 hours of work per week and is expected to last at least 3 months.

(ii) A borrower is entitled to the deferment whether or not he or she has been previously employed. If previously employed, the borrower is entitled to a deferment regardless of the circumstances under which the employment ended.

(iii) An unemployment deferment is not justified if the borrower has sought employment only in kinds of positions or at salary and responsibility levels for which he or she feels qualified by virtue of education or previous experience.

(2) *Submission of request.* To receive an unemployment deferment, a borrower shall submit a request for the deferment in writing to the holder of the loan. To continue the deferment for more than 6 months, the borrower shall submit a second request by the end of that 6-month period. Each request must be signed and dated and contain the following:

(i) A statement from the borrower describing his or her conscientious search of full-time employment.

(ii) The borrower's latest permanent home address and, if applicable the borrower's latest temporary address.

(iii) Certification that the borrower has registered with a public or private employment agency, if one is accessible, specifying its name and address.

(iv) The borrower's agreement to notify the lender promptly when he or she becomes employed full-time.

(3) *Lender's approval or disapproval of request.* (i) The lender must review the borrower's request and notify the borrower of its decision within one month after receipt of the request.

(ii) The lender may rely upon the written statements provided by the borrower, unless the lender has information to the contrary.

(iii) If the lender is satisfied that the borrower has conscientiously searched for full-time employment and otherwise meets the requirements for an unemployment deferment, the lender shall approve the request.

(iv) If the borrower's request does not justify an unemployment deferment, the lender may grant the borrower forbearance if authorized under § 682.512.

(4) *When the unemployment deferment begins:* An unemployment deferment begins—

(i) On the date that the lender approves the request; or

(ii) On a date not in excess of 60 days prior to the lender's approval if the unemployment existed at the earlier date.

(5) *When the unemployment deferment ends:* An unemployment deferment ends on the earliest of—

(i) The date the lender learns that the borrower has become employed full-time;

(ii) One month after the date when a certification of unemployment deferment eligibility is due from the borrower but has not been received; or

(iii) 12 months after the commencement of the deferment period.

(f) *Rehabilitation training program deferment.* (1) To qualify for this deferment—

(i) The borrower must either be receiving or be scheduled to receive services under a program designed to rehabilitate disabled individuals; and

(ii) The borrower's rehabilitation program must meet the Secretary's criteria for approval.

(2) *Criteria for the Secretary's approval of rehabilitation training programs.* The Secretary approves a rehabilitation training program if the organization providing rehabilitation services to the borrower—

(i) Is licensed, approved, certified or otherwise recognized as providing rehabilitation training to disabled individuals by any of the following agencies—

(A) A State vocational rehabilitation agency;

(B) A State agency for drug abuse treatment;

(C) A State agency for mental health services;

(D) A State agency for alcohol abuse treatment; or

(E) The Veterans Administration; and

(ii) Provides or has agreed to provide that borrower with services for his or her rehabilitation under a rehabilitation plan that is—

(A) Written;

(B) Individualized to meet the borrower's needs;

(C) Specific as to the date on which the services to the borrower are expected to end; and

(D) Structured in a way that requires a substantial commitment by the borrower to his or her rehabilitation. The Secretary considers a substantial commitment by the borrower to be a commitment of time or effort that would normally prevent an individual from engaging in full-time employment either because of the number of hours that he or she must devote to rehabilitation or because of the nature of his or her rehabilitation. For the purpose of this paragraph, full-time employment involves at least 30 hours of work per week.

(3) *Qualification for a rehabilitation training program deferment.* (i) To obtain a rehabilitation training deferment, a borrower shall provide the lender with evidence that he or she qualifies for the defement, in a form approved by the Secretary. The evidence must include—

(A) The statement of the provider of the rehabilitation services certifying that the borrower either is receiving or is scheduled to receive rehabilitation training services from the provider; and

(B) A statement from an agency described in paragraph (e)(2)(i) of this section certifying that the provider from which the borrower is receiving services or is scheduled to receive services meets the requirements of paragraph (e)(2) of this section with respect to that borrower.

(ii) On receipt of the properly completed request, the lender shall grant the borrower a deferment.

(4) *When the rehabilitation training program deferment begins.* The rehabilitation training deferment begins—

(i) In the case of a borrower who is actually receiving rehabilitation services under an approved program on the date specified in the borrower's rehabilitation plan as the beginning date for his or her receipt of services through that program, but no earlier than November 1, 1978; or

(ii) In the case of a borrower who is requesting deferment based on being scheduled to receive rehabilitation services under an approved program, on the date that the borrower provides the lender with a properly completed request.

(5) *When the rehabilitation training program deferment ends.* Unless the borrower re-establishes his or her eligibility to continue a deferment by repeating the request procedure described in paragraph (3), the rehabilitation program deferment ends on the earliest of the following dates:

(i) In the case of a borrower who was granted deferment based on being scheduled to receive rehabilitation services under an approved program, the date the borrower informs the lender that he or she no longer plans to receive rehabilitation services; or

(ii) In the case of a borrower who was granted deferment based on being scheduled to receive rehabilitation services under an approved program, the date three months from the date the borrower submitted a request for a rehabilitation deferment; or

(iii) The date the borrower ceases rehabilitation training; or

(iv) The date specified in the borrower's rehabilitation plan as the date on which rehabilitation services to the borrower are anticipated to end; or

(v) The date twelve months from the date the borrower begins receiving services.

(g) *Internship deferment.* To qualify for an internship deferment, a borrower shall provide the lender with evidence that he or she is serving in an eligible internship, after obtaining a baccalaureate or professional degree, which the Secretary has determined is required to receive professional recognition required to begin professional practice or service. The Secretary has determined that medical residency is an example of such an internship.

(h) *Borrower's temporary total disability deferment.* (1) To qualify for this deferment the borrower shall give the lender an affidavit of a qualified physician stating that the borrower is temporarily totally disabled.

(2) For purposes of this section, a borrower who is "temporarily totally disabled" is one who, by reason of injury or illness, cannot be expected to be able to attend school or to be gainfully employed during an extended period of time needed to recover from such an injury or illness.

(i) *Deferment for a borrower whose spouse is temporarily totally disabled.* In order to qualify for this deferment the borrower shall give the lender—

(1) An affidavit of a qualified physician stating that the borrower's spouse is temporarily totally disabled. For purposes of this section a spouse who is "temporarily totally disabled" is

one who, by reason of injury or illness, cannot be expected to be gainfully employed during an extended period of time needed to recover from such injury or illness and who during that period requires continuous nursing or other similar services; and

(2) A statement from the borrower certifying that he or she is unable to secure employment because he or she is providing this care.

BILLING CODE 4000–01–M

---

34 CFR Part 682

Guaranteed Student Loan Program; Refund of Tuition Charges and Other Fees

AGENCY: Department of Education.

ACTION: Final regulation.

SUMMARY: The Secretary of Education is revising the regulations governing the Guaranteed Student Loan Program (GSLP) which set criteria for determining the fairness and equity of a school's policy for refunding tuition charges and other fees. This rule relates to students who either never enroll or do not complete the academic period for which they borrowed under the GSLP. It amends § 682.608(b) of the GSLP regulations by replacing the Federal standards for equity in school refund policies with reliance on State law and the standards developed by the postsecondary education community.

EFFECTIVE DATE: These regulations are expected to take effect 45 days after they are transmitted to Congress. Regulations are usually transmitted to Congress several days before they are published in the Federal Register. The effective date is changed by statute if the Congress takes certain adjournments. If you want to know the effective date of these regulations, call or write the Department of Education contact person.

FOR FURTHER INFORMATION CONTACT: Ms. Cheryl Leibovitz, GSLP Specialist, or Ms. Jane A. Bryson, Chief, Guaranteed Student Loan Policy Section, Division of Policy and Program Development, Department of Education, 400 Maryland Avenue SW., Washington, D.C. 20202, (202) 245–2475.

SUPPLEMENTARY INFORMATION: The Secretary views the lack of equitable school refund policies and the failure of schools to administer properly their refund policies on a timely basis as one of the major causes of defaults on student loans.

For this reason, the Secretary considers it appropriate that schools participating in the GSLP establish and properly administer "fair and equitable" policies for refunding school charges and fees to students who have borrowed under the GSLP to meet their educational expenses. However, the Secretary is now placing greater reliance on the standards for equitable refund policies which have been developed by the postsecondary education community.

A. Background

A refund policy applicable to GSLP participating schools was first included in the GSLP regulations in 1975. The policy was based on 20 U.S.C. 1082 and 20 U.S.C. 1088f–1. The present amendments on "fair and equitable" refunds result from several actions taken by the Secretary of Education and, previously, the Commissioner of Education. On July 19, 1978, the Commissioner published proposed rules (43 FR 31104–05) inviting public comment on the GSLP requirements regarding school refunds. The language of the 1978 proposed refund rules mirrored the original 1975 language with minor technical changes. On September 17, 1979, the Commissioner published a comprehensive package of final GSLP rules which included the refund provisions of § 682.608 (44 FR 53697), the section now being amended.

The most controversial provision of the refund rules has been § 682.608(b) which sets forth the criteria for the Secretary's determination of whether a school's refund policy is fair and equitable. Many of the commenters on the 1978 proposed rules called this provision an enroachment into school prerogatives and challenged the Commissioner's authority to issue specific rules on school refunds. Still other commenters voiced their objections in terms of specific suggestions for improvement of the provision. However, the Commissioner received strong support for continued regulation on refund equity from student organizations and other concerned citizens.

The September 17, 1979, final regulations for the GSLP modified the proposed regulations as suggested by several commenters. However, the basic Federal criteria were retained. In response to the opposing comments, the Commissioner resolved, in the preamble to those regulations, that the issue of refund policy criteria would be reconsidered in view of the growing efforts of the higher education groups towards viable self-regulation. After further consideration, and in partial fulfillment of the Secretary of Education's commitment to both the public and the Congress to reconsider the refund issue, a proposed regulation was published on July 2, 1980. Comments were received in response to that NPRM from the higher education community, educational institutions, and guarantee agencies. The majority of comments supported the proposed revisions. Consequently, in publishing this final regulation the Secretary is adopting the revisions proposed in the NPRM.

The Senate Report accompanying S. 1839 addressed the issue of the Secretary's authority to establish criteria for determining whether a school's refund policy is "fair and equitable", and endorsed the self-regulation approach contained in these regulations. The Senate Report stated:

> New section 487, like section 497A of current law, authorizes the Secretary to prescribe such regulations as may be necessary to provide for the establishment of reasonable standards of financial responsibility and appropriate institutional capability on the part of an educational institution in its administration of student financial aid funds. The Department of Health, Education, and Welfare has relied on this provision as a basis for specifying factors to be considered in determining whether an institution's policy for refunding tuition, fees, and other charges to a student who terminates his enrollment during an academic term is "fair and equitable."

The Committee believes that the setting of the specific elements on an institutional refund policy is primarily the prerogative of the educational institution. Neither new section 487 nor any other provision of this bill or current law gives the Secretary the authority to prescribe a single national refund policy. At the same time, the Committee recognizes that the lack of a fair and equitable institutional refund policy can easily lead to defaults on student loans made under Title IV of the Higher Education Act. Students who leave school shortly after enrolling may not feel responsible for repaying loans intended to cover most or all of the academic term for which they enrolled. An institutional refund in a reasonable amount under such circumstances could reduce the loan balance and increase the likelihood that the student would repay the remainder of the loan.

Accordingly, the Committee encourages an approach under which the Secretary's review is limited to determining whether an institution's refund policy is in accord with requirements imposed by the State government and with a reasonable policy endorsed by self-regulatory

organizations such as the institution's accrediting agency. This approach, which is authorized by the new section 487, would preserve the principle of minimum Federal involvement in institutional refund policies without compromising the Government's interest in keeping defaults on student loans to an absolute minimum.

B. Community-Developed Standards.

These regulations revise the GSLP regulations by placing increased reliance on standards developed by the postsecondary education community in determining what is fair and equitable in regard to refunds. Where a State enacted laws affecting the school's refund policy, compliance with State law of course is necessary. In addition, the school must demonstrate fairness and equity in its refund policy by establishing a policy that is in accord with standards accepted by the postsecondary education community and the Secretary.

These regulations establish two avenues for compliance, each of which is based on community self-regulation. A school must adhere to criteria approved by the Secretary which are set by the school's nationally recognized accrediting agency. If no such standards exist, the school must adhere either to the standards for fair and equitable refunds set out in Appendix A or to standards that are established by the higher education community through its self-regulating guidelines and approved by the Secretary.

A school may not opt to comply with standards where no standards exist (e.g., by basing its refund policy on an accrediting agency policy that offer no guidance on refunds). These regulations do not require accrediting agencies or other postsecondary organizations to develop refund standards in order to retain eligibility in Federal programs. These regulations simply recognize that some accrediting agencies have already developed such standards and treat those standards as strong evidence of appropriate practice within the postsecondary education community.

The Secretary considers the guidelines on refund policies which were established by the National Association of College and University Business Officers (NACUBO), in conjunction with persons representing a wide range of schools and professional responsibilities, as the closest indication of the higher education community's consensus on fair and equitable refund policies. These guidelines were specifically developed to assist in achieving self-regulation and have received support from fifteen higher education associations. The guidelines have been incorporated in Appendix A to these regulations. A refund policy based on State law and these guidelines is, therefore, in compliance with § 682.608(b) requirements if the school's nationally recognized accrediting agency has not adopted standards approved by the Secretary.

For ease of reference, the entire document has been reproduced. However, the reader should direct his or her attention to guidelines VI, VII, and VIII of the appendix, which relate to fair and equitable refund policies. This document does not affect a school's obligation to comply with State law or with any Department of Education regulation other than § 682.608(b). Refund policies which are based on other guidelines will be accepted if those guidelines receive the Secretary's approval.

The Department of Education has discussed this regulatory approach with various constituent groups. It is the Secretary's belief that the shift toward the reliance on standards developed through initiatives like the one undertaken by NACUBO will not deprive student borrowers or the program in general of the necessary protection against unfair refund policies.

C. Summary of Comments and Responses

Comment. One commenter felt that guideline XII of Appendix A should not be considered as part of the GSLP refund policy because it is not fair and equitable to all students.

Response. Guideline XII is not a part of the GSLP refund policy. Appendix A—*Standards for Acceptable Refund Policies by Participating Schools* was developed and published by the National Association of College and University Business Officers (NACUBO). For purposes of the GSLP, the Secretary considers guidelines VI, VII, and VIII of that document to be acceptable elements of a fair and equitable school refund policy. The document was reproduced in its entirety merely for the convenience of the reader.

Comment. One school commenter said that two programs at his school were governed by a State Board that stipulates that additional students may not enroll in these programs once class has commenced. The commenter felt that since the school was not able to replace drop-outs the school should not be required to refund any money to students who left class after the program began.

Response. In developing its refund policy NACUBO, in conjunction with persons representing a wide range of schools and professional responsibilities, considered situations such as the one described by the commenter. The Secretary feels that it is necessary to require that GSLP-participating schools have a fair and equitable refund policy for the protection of student borrowers. Since NACUBO's refund policy is the closest indication of the higher education community's consensus on fair and equitable refund policies the Secretary has chosen to adopt it.

D. Citation of Legal Authority

A citation statutory or other legal authority for the regulations is placed in parentheses on the line following the text of the regulation.

Dated: January 12, 1981.

Shirley M. Hufstedler,

Secretary of Education.

(Catalogue of Federal Domestic Assistance No. 84.032, Guaranteed Student Loan Program)

34 CFR Part 682 is amended as follows:

* * * * *

1. Section 682.608(b) is revised to read as follows:

§ 682.608 Refund policy.

* * * * *

(b) *Fair and equitable refund policy.* A school's refund policy is fair and equitable if that policy conforms with—

(1) The requirements of applicable State law; and

(2)(i) Specific refund standards set by the school's nationally recognized accrediting agency and approved by the Secretary;

(ii) If no such standards exist, other specific refund policy standards, either contained in Appendix A to this Part or set by another association of institutions of postsecondary education and approved by the Secretary.

(20 U.S.C. 1082, 1088f–1(a)(2))

* * * * *

2. An Appendix A to 34 CFR Part 682 is added, to read as follows:

Appendix A—Standards for Acceptable Refund Policies by Participating Schools

For purposes of § 682.608(b), the Secretary considers guidelines VI, VII, and VIII of the following document to be acceptable elements of a fair and equitable school refund policy. The document, which is reproduced in its entirety for the convenience of the reader, was developed by the National Association of College and University Business Officers. The document does not affect a school's obligation to comply with other Department of Education regulations.

Policy Guidelines for Refund of Student Charges

(I) *The governing board of the institution should review and approve the schedule of all institutional charges and refund policies applicable to students.* The pricing of services and refund policies have important consequences to students, parents, the institution, and society; as such, pricing and refund policies should receive board attention and approval.

(II) *Institutions should seek consumer views in the process of establishing and amending charge and refund structures.* Decisions regarding institutional funds are ultimately the sole responsibility of the institution's legally designated fund custodians. However, consumer concerns do affect decision making, and involving consumers in decision making related to charges and refunds is a desirable approach for assessing student needs and creating public awareness of institutional requirements.

(III) *Institutions should publish a current schedule of all student charges, a statement of the purpose for such charges, and related refund policies, and have them readily available free of charge to current and prospective students.* Students and parents have a right to know what charges they will be expected to pay and what will or will not be refunded. They also have a right to know what services accompany payment of the charges. Informational materials published free for students and prospective students are ideal for this purpose.

(IV) *Institutions should clearly designate all optional charges as "optional" in all published schedules and related materials. Clearly, charges that are mandatory and charges that are optional must be plainly differentiated in all printed materials.* Also, the institution should state clearly in its schedule if a charge is optional for some students but required for others. Statements accompanying the schedule may include institutional endorsements of the optional program or service.

(V) *Institutions should clearly identify charges and deposits that are nonrefundable as "nonrefundable" on all published schedules.* Institutions determine on an individual basis which of their charges are refundable or non-refundable. In general, admission fees, application fees, laboratory fees, facility and student activity fees, and other similar charges are not refundable. These fees are generally charged to cover the cost of activities such as processing applications and other student information, reserving academic positions, and establishing the limits of institutional programs and services, reserving housing space, and otherwise setting the fixed costs of the institution for the coming academic periods.

Institutions determine on an individual basis which of their deposits are refundable or nonrefundable. Some deposits will be nonrefundable or will be credited to a student's account (e.g., tuition deposits). Others are refundable according to the terms of the deposit agreement (e.g., deposits for breakage).

(VI) *Institutions should refund housing rental charges, less a deposit, so long as written notification of cancellation is made prior to a well-publicized date that provides reasonable opportunity to make the space available to other students.* Written notification on or before the beginning of the term of the contract is necessary to ensure utilization of housing units. During the term of the contract, room charges are generally not refundable. However, based on the program offered, space availability, debt service requirements, State and local laws, and other individual circumstances, institutions may provide for some more flexible refund guideline for housing.

(VII) *Institutions should refund board charges in full, less a deposit, if written notification of cancellation is made prior to a well-publicized date that falls on or before the beginning of the term of the contract. Subsequent board charges should be refunded on a pro rata basis less a withdrawal fee.* It is reasonable to make a refund for those goods and services not consumed. The withdrawal charge should reflect that portion of an institution's costs that are fixed for the term of the contract.

(VIII) *The institutional tuition refund policy for an academic period should include the following minimum guidelines:*

A. *The institution should refund 100 percent of the tuition charges, less a deposit fee, if written notification of cancellation is made prior to a well-publicized date that falls on or before the first day of classes.*

B. *The institution should refund at least 25 percent of the tuition charge if written notification of withdrawal is made during the first 25 percent of the academic period.* It is reasonable to refund tuition charges on a sliding scale if a student withdraws from his or her program prior to the end of the first 25 percent of the academic period unless state law imposes a more restrictive refund policy.

(IX) *The institution should assess no penalty charges where the institution, as opposed to the student, is in error. The institution should make refunds in cases where the institution has assessed charges in error.* Penalty charges, such as those involving late registration fees, change of schedule fees, late payment fees, should not be assessed if it is determined that the student is not responsible for the action causing the charge to be levied.

(X) *Institutions should advise students that any notifications of withdrawal or cancellation and requests for refund must be in writing and addressed to the designated institutional officer.* A student's written notification of withdrawal or cancellation and request for a refund provides an accurate record of transactions and also ensures that such request will be processed on a timely basis. Acceptance of oral requests is an undesirable practice.

(XI) *Institutions should pay or credit refunds due on a timely basis.* The definition of "timely basis" should include the time required to process a formal student request for refund, to process a check if required, and to allow for mail delivery, when necessary. If an institution has a policy that a refund of an inconsequential amount will not be made, this policy should be published in part of all materials related to refund policies.

(XII) *Institutions should publicize, as a part of their dissemination of information on charges and refunds, that an appeals process exists for students or parents who feel that individual circumstances warrant exceptions from published policy. The informational materials should include the name, title, and address of the official responsible.* Although charges and refund policies should reflect extensive consideration of student and institutional needs, it will not be possible to encompass in these structures the variety of personal circumstances that may exist or develop. Institutions are required to provide a system of due process to their students, and charges and refund policies are legitimately a part of that process. Students and parents should be informed regularly of procedures for requesting information concerning exceptions to published policies.

BILLING CODE 4000-01-M

Office of Educational Research and Improvement

34 CFR Part 735

Minority Institutions Science Improvement Program (MISIP)

AGENCY: Department of Education.

ACTION: Final regulations.

SUMMARY: The Secretary issues regulations to implement the Minority Institutions Science Improvement Program.

These regulations will allow accredited two- and four-year institutions of higher education whose enrollments are predominantly (more than 50 percent) American Indian; Alaskan Native; Black, not of Hispanic Origin; Hispanic (including persons of Mexican, Puerto Rican, Cuban, and Central or South American origin); Pacific Islander or any combination of these or other disadvantaged ethnic minorities who are underrepresented in science to become eligible to participate in the program. The program provides support to these minority institutions and certain other nonprofit groups to effect long-range improvement in science education at predominantly minority institutions and to increase the flow of underrepresented ethnic minorities into scientific and engineering careers.

EFFECTIVE DATE: These final regulations are expected to take effect 45 days after they are transmitted to Congress. Regulations are usually transmitted to Congress several days before they are published in the **Federal Register**. The effective date is changed if Congress takes certain adjournments. If you want to know the effective date of these final regulations, call or write the Department of Education contact person.

FOR FURTHER INFORMATION CONTACT:
Dr. Argelia Velez-Rodriquez, Telephone: (202) 282-7760.

SUPPLEMENTARY INFORMATION: The authority to administer the Minority Institutions Science Improvement Program (MISIP) is firmly rooted in Congressional action. Prior to its transfer to the Department of Education, MISIP was administered by the National Science Foundation under the authority of section 3(a) of the National Science Foundation Act 42 U.S.C. 1862. When the Department of Education was established, MISIP was specifically transferred to it by Congress. (Section 304 of the Department of Education Organization Act and 20 U.S.C. 3444; S. Rep. No. 96-49, 96th Cong., 1st Sess. 50-51) (1979). S. Rep. No. 96-326, 96th Cong., 1st Sess. 50 (1979). These references indicate that Congress recognized the purpose of the program to assist institutions with predominantly minority enrollments and that Congress intended that the Department of Education administer the program in a manner consistent with this purpose.

Finally, section 1303 of the Education Amendments of 1980 specifically amends the General Education Provisions Act to authorize appropriations to carry out the MISIP program during fiscal year 1981. Pub. L. 96-374, § 1303 (1980).

The objectives of MISIP are two-fold: (1) to effect long-range improvement in science education at predominantly minority institutions, and (2) to increase the flow of underrepresented ethnic minorities into scientific careers. In general, predominantly minority institutions lack the extensive financial resources needed to plan for and implement improved programs of science instruction. The students at these institutions represent a large, relatively untapped, reservoir of scientific talent. In addition, many of these students have suffered the pervasive effects of years of discrimination, including economic disadvantage and inferior academic preparation, that have not yet been eradicated by the Civil Rights Act of 1964 and other remedial measures.

For these reasons, students are often poorly prepared for the rigors of science education opportunities at the postsecondary level. With improved science education opportunity these students will be able to redress the current underrepresentation of certain minorities within the scientific and engineering community and make a large contribution to the Nation's need for trained professionals in these fields.

It should also be emphasized that all students that attend predominantly minority institutions—whether or not they belong to a disadvantaged ethnic group currently underrepresented in science and engineering—are expected to benefit from the improved educational opportunities that result from this program. In addition, although the purpose of MISIP is to improve these opportunities at predominantly minority institutions, entities other than minority institutions are eligible to receive a grant and participate in certain types of projects conducted as part of MISIP.

The provisions of these final regulations are substantially the same as the provisions of the notice of proposed rulemaking (NPRM) published in the **Federal Register** on November 5, 1980, 45 FR 73514. Interested persons were given 30 days in which to comment on the NPRM. No comments were received during the comment period which ended December 5, 1980.

Assessment of Educational Impact

On November 14, 1980, the Secretary published a notice in the **Federal Register** of the Department's intent to publish regulations necessary to implement the Education Amendments of 1980. In that notice, the Department listed the existing regulations affected by the new law and requested comments whether those regulations required information that is already being gathered by or is available from any other agency or authority of the United States. The regulations in this document are based on regulations listed in the November 14 notice. Based on any comments received and the Department's own review, it has been determined that the regulations in this document do not require information that is already being gathered by or is available from any other agency or authority of the United States.

Citation of Legal Authority

The reader will find a citation of statutory or other legal authority in parentheses on the line following each substantive provision.

(Catalog of Federal Domestic Assistance No. 84.120, Minority Institutions Science Improvement Program. Part I of OMB Circular A-95 does not apply to this program)

Dated: January 12, 1981.

Shirley M. Hufstedler,

Secretary of Education.

The Secretary of Education amends Title 34 of the Code of Federal Regulations to add a new Part 755, reading as follows:

PART 735—THE MINORITY INSTITUTIONS SCIENCE IMPROVEMENT PROGRAM

Subpart A—General

Sec.

735.1 What is the Minority Institutions Science Improvement Program (MISIP)?
735.2 Who is eligible to receive a grant?
735.3 How does a minority institution establish eligibility?
735.4 What regulations apply to the Minority Institutions Science Improvement Program?
735.5 What definitions apply to the Minority Institutions Science Improvement Program?

Subpart B—What Kinds of Projects Does the Department of Education Assist Under This Program?

735.10 What kinds of projects are supported by this program?
735.11 What are institutional projects?
735.12 What are design projects?
735.13 What are special projects?
735.14 What are cooperative projects?

Subpart C—How Does One Apply for a Grant?

735.20 Application procedures.

Subpart D—How Does the Secretary Make a Grant?

735.30 How does the Secretary evaluate an application?
735.31 What selection criteria does the Secretary use?

Subpart E—What Conditions Must a Grantee Meet?

735.40 What are the restrictions on the types of costs a grant may support?

Authority: Sec. 3(a) of the National Science Foundation Act of 1950 as enacted by Pub. L. 81-507, 64 Stat. 149, as amended (42 U.S.C. 1862).

Subpart A—General

§ 735.1 What is the minority institutions science improvement program (MISIP)?

The Minority Institutions Science Improvement Program is designed to effect long-range improvement in science education at predominantly minority institutions and to increase the flow of underrepresented ethnic minorities into scientific careers.

(42 U.S.C 1862)

§ 735.2 Who is eligible to receive a grant?

The following parties are eligible to receive grants:

(a) Public and private, nonprofit minority institutions as defined in § 735.5(b).

(b) Nonprofit science-oriented organizations, professional scientific societies, and all nonprofit, accredited colleges and universities which render a needed service to a group of eligible minority institutions or which provide

in-service training for project directors, scientists, and engineers from eligible minority institutions.

(42 U.S.C. 1862)

§ 735.3 How does a minority institution establish eligibility?

The institution is required to provide the information necessary to establish eligibility to participate in the program, including the data on enrollment furnished by the institution to the Office for Civil Rights, Education Department, for the "Fall Enrollment and Compliance Report of Institutions of Higher Education, 1978" (Higher Education General Information Survey HEGIS XIII: OE Form 2300–2.3).

(42 U.S.C. 1862)

§ 735.4 What regulations apply to the minority institutions science improvement program?

The following regulations apply to the Minority Institutions Science Improvement Program:

(a) The Education Department General Administrative Regulations (EDGAR) in 34 CFR Part 75 (Direct Grant Programs) and 34 CFR Part 77 (General).

(b) The regulations in this Part 735.

(42 U.S.C. 1862, 20 U.S.C. 3444)

§ 735.5 What definitions apply to the minority institutions science improvement program?

(a) *Definitions in EDGAR.* The following terms used in this part are defined in 34 CFR Part 77.

Applicant
Application
Department
Grants
Grantee
Nonprofit
Private
Project
Project period
Resources
Secretary

(20 U.S.C. 1221e–3(a)(1))

(b) *Definitions that apply to this part:*

"Accredited" means currently certified by a nationally recognized accrediting agency or making satisfactory progress toward achieving accreditation.

"Minority" means American Indian, Alaskan Native, black (not of Hispanic origin), Hispanic (including persons of Mexican, Puerto Rican, and Central or South American origin), Pacific Islander or other ethnic group underrepresented in science and engineering.

"Minority institution" means an accredited college or university whose enrollment of a single minority group or a combination of minority groups as defined in § 735.5(b) exceeds fifty percent of the total enrollment.

"Pre-College level" means middle or secondary school.

"Science" means, for the purposes of this program, the biological, engineering, mathematical, physical and social sciences, and the history and philosophy of science; also included are interdisciplinary fields which are comprised of overlapping areas among two or more sciences.

"Underrepresented in science and engineering" means a minority group whose number of scientists and engineers per 10,000 population of that group is substantially below the comparable figure for scientists and engineers who are white and not of Hispanic origin.

(42 U.S.C. 1862)

Subpart B—What Kinds of Projects Does the Department of Education Assist Under This Program?

§ 735.10 What kinds of projects are supported by this program?

The Secretary awards grants under this program for all or some of the following categories of projects:

(a) Institutional projects for implementing a comprehensive science improvement plan as described in § 735.11.

(b) Design projects for developing a long-range science improvement plan as described in § 735.12.

(c) Special projects to support a single activity as described in § 735.13.

(d) Cooperative projects to share facilities and personnel and disseminate information as described in § 735.14.

(42 U.S.C. 1862)

§ 735.11 What are institutional projects?

(a) Institutional project grants support the implementation of a comprehensive science improvement plan, which may include any combination of activities for improving the preparation of minority students for careers in science.

(b) The length of the project period is a maximum of 36 months.

(c) Activities that the Secretary may assist under an institutional project include but are not limited to the following:

(1) Faculty development programs; or

(2) Development of curriculum materials.

(d) Eligible applicants for institutional projects are minority institutions.

(42 U.S.C. 1862)

§ 735.12 What are design projects?

(a) Design project grants assist minority institutions that do not have their own appropriate resources or personnel to plan and develop long-range science improvement programs.

(b) The length of the project period is a maximum of 12 months.

(c) Activities that the Secretary may assist under a design project include but are not limited to the following:

(1) Development of planning, management, and evaluation systems; and

(2) Improvement of institutional research or development offices.

(d) Eligible applicants for design projects are minority institutions that have not received support under this program in prior years.

(42 U.S.C. 1862)

§ 735.13 What are special projects?

(a) Special project grants support a single activity to—

(1) Improve quality training in science and engineering at minority institutions;

(2) Enhance the minority institutions' general scientific research capabilities;

(3) Provide a needed service to a group of eligible minority institutions; or

(4) Provide in-service training for project directors, scientists, and engineers from eligible minority institutions.

(b) The length of the project period is a maximum of 24 months.

(c) Activities that the Secretary may assist under a special project include, but are not limited to, the following:

(1) Advanced science seminars;

(2) Science faculty workshops;

(3) Faculty training to develop specific science research or education skills;

(4) Research in science education;

(5) Programs for visiting scientists;

(6) Preparation of films or audio-visual materials in science;

(7) Development of learning experiences in science beyond those normally available to minority undergraduate students;

(8) Development of pre-college enrichment activities in science; and

(9) Any other activities designed to address specific barriers to the entry of minorities into science.

(d) Eligible applicants for special projects of the type listed in paragraphs (a) (1) and (2) of this section are minority institutions. Eligible applicants for special projects of the type listed in paragraphs (a) (3) and (4) of this section are all applicants eligible for assistance under this program.

(42 U.S.C. 1862)

§ 735.14 What are cooperative projects?

(a) Cooperative project grants assist groups of nonprofit accredited colleges and universities with common problems to work together to conduct a science improvement project.

(b) The length of the project period is a maximum of 36 months.

(c) Activities that the Secretary may fund under cooperative projects include, but are not limited to, the following:

(1) Assisting institutions in sharing facilities and personnel;

(2) Disseminating information about established programs in science and engineering;

(3) Supporting cooperative efforts to strengthen the institutions' science and engineering programs; and

(4) Carrying out a combination of any of the activities in paragraphs (c)(1)–(3) of this section.

(d) Eligible applicants for cooperative projects are groups of nonprofit accredited colleges and universities whose primary fiscal agent is an eligible minority institution as defined in § 735.5(d).

(42 U.S.C. 1862)

Subpart C—How Does One Apply for a Grant?

One applies for a grant under the procedures of EDGAR §§ 75.100 through 75.129.

Subpart D—How Does the Secretary Make a Grant?

§ 735.30 How does the Secretary evaluate an application?

(a) The Secretary evaluates an application on the basis of the criteria in § 735.31.

(b) The Secretary awards up to 100 points for these criteria.

(c) The maximum possible score for each criterion is indicated in parentheses.

(d) For applications of substantially equal quality, the Secretary gives priority to projects that contribute to achieving balance among projects funded by this program within each of the following categories:

(1) Past history of participation in the program;

(2) Geographic location;

(3) Academic discipline; and

(4) Project type.

§ 735.31 What selection criteria does the Secretary use?

The Secretary evaluates applications using the following criteria:

(a) *Plan of operation.* (10 points)

(1) The Secretary reviews each application for information that shows the quality of the plan of operation for the project.

(2) The Secretary looks for information that shows—

(i) High quality in the design of the project;

(ii) An effective plan of management that insures proper and efficient administration of the project;

(iii) A clear description of how the objectives of the project relate to the purpose of the program;

(iv) The way the applicant plans to use its resources and personnel to achieve each objective; and

(v) Methods of coordination. (See EDGAR 34 CFR 75.581)

(b) *Quality of key personnel.* (10 points)

(1) The Secretary reviews each application for information that shows the quality of the key personnel the applicant plans to use on the project.

(2) The Secretary looks for information that shows—

(i) The qualifications of the project director (if one is to be used);

(ii) The qualifications of each of the other key personnel to be used in the project;

(iii) The time that each person referred to in paragraphs (b)(2) (i) and (ii) of this section plans to commit to the project.

(iv) The extent to which the applicant, as part of its nondiscriminatory employment practices, encourages applications for employment from persons who are members of groups that have been traditionally underrepresented, such as members of a racial or ethnic minority groups, women, handicapped persons, and the elderly.

(3) To determine the qualifications of a person, the Secretary considers evidence of past experience and training, in fields related to the objectives of the project, as well as other information that the applicant provides.

(c) *Budget and cost effectiveness.* (5 points)

(1) The Secretary reviews each application for information that shows that the project has an adequate budget and is cost effective.

(2) The Secretary looks for information that shows—

(i) The budget for the project is adequate to support the project activities; and

(ii) Costs are reasonable in relation to the objectives of the project.

(d) *Evaluation plan.* (10 points)

(1) The Secretary reviews each application for information that shows the quality of the evaluation plan for the project. (See EDGAR 34, CFR 75.590—Evaluation by the grantee; where applicable)

(2) The Secretary looks for information that shows methods of evaluation that are appropriate for the project and, to the extent possible, are objective and produce data that are quantifiable.

(e) *Adequacy of resources.* (5 points)

(1) The Secretary reviews each application for information that shows that the applicant plans to devote adequate resources to the project.

(2) The Secretary looks for information that shows—

(i) The facilities that the applicant plans to use are adequate; and

(ii) The equipment and supplies that the applicant plans to use are adequate.

(20 U.S.C. 1221(e)—3(a)(1))

(f) *Identification of need for the project.* (10 points)

(1) The Secretary reviews each application for information that shows the identification of need for the project.

(2) The Secretary looks for information that shows—

(i) An adequate needs assessment;

(ii) An identification of specific needs in science; and

(iii) An involvement of appropriate individuals, especially science faculty, in identifying the institutional needs.

(g) *Potential institutional impact of the project.* (15 points)

(1) The Secretary reviews each application to determine the extent to which the proposed project gives evidence of potential for enhancing the institution's capacity for improving and maintaining quality science education for its minority students.

(2) The Secretary looks for information that shows—

(i) For an institutional or cooperative project, the extent to which both the established science education program(s) and the proposed project will expand or strengthen the established program(s) in relation to the identified needs; or

(ii) For a design project, the extent to which realistic long-range science education improvement plans will be developed with the technical assistance provided under the project; or

(iii) For a special project, the extent to which it addresses needs that have not been adequately addressed by any existing institutional science program or takes a particularly new and exemplary approach that has not been taken by any existing institutional science program.

(h) *Institutional commitment to the project.* (15 points)

(1) The Secretary reviews each application for information that shows that the applicant plans to continue the project activities when funding ceases.

(2) The Secretary looks for information that shows—

(i) Adequate institutional commitment to absorb any after-the-grant burden initiated by the project;

(ii) Adequate plans for continuation of project activities when funding ceases;

(iii) Clear evidence of past institutional commitment to the provision of quality science programs for its minority students; and

(iv) A local review statement signed by the chief executive officer of the institution endorsing the project and indicating how the project will accelerate the attainment of the institutional goals in science.

(i) *Expected outcomes.* (10 points)

(1) The Secretary reviews each application to determine the extent to which minority students will benefit from the project.

(2) The Secretary looks for information that shows—

(i) Expected outcomes likely to result in the accomplishment of the program goals;

(ii) Educational value for science students; and

(iii) Possibility of long-term benefits to minority students, faculty, or the institution.

(j) *Scientific and educational value of the proposed project.* (10 points)

(1) The Secretary reviews each application for information that shows its potential for contributions to science education.

(2) The Secretary looks for information that shows—

(i) The relationship of the proposed project to the present state of science education;

(ii) The use or development of effective techniques and approaches in science education; and

(iii) Potential use of some aspects of the project at other institutions.

(42 U.S.C. 1862)

Subpart E—What Conditions Must a Grantee Meet?

§ 735.40 What are the restrictions on the types of costs a grant may support?

Funds may not be used for—

(a) Undergraduate scholarships;

(b) Augmenting the salary rate for faculty members pursuing regularly assigned duties;

(c) Full support of faculty members currently employed by the institutions;

(d) Support for a project director or for faculty members beyond the extent of their participation in project activities. For design grants no more than fifty percent of the academic year salaries may be paid;

(e) Support for faculty members engaged in project activities during summer in excess of two-months of a faculty member's current academic year salary for full-time involvement for an 8-week period;

(f) Fees and expenses for consultants in excess of the established applicant's rate;

(g) Support for student assistants not involved in project activities or in excess of the approved work-study rates in operation at the institution;

(h) Support of any other on-going, regular activity at the institution;

(i) Staff benefits, if they are treated as an item of indirect cost in the negotiation of the institution's indirect cost rate; and

(j) Major renovations of existing physical facilities.

(42 U.S.C. 1862)

[FR Doc. 81-1565 Filed 1-15-81; 8:45 am]

BILLING CODE 4000-01-M

---

34 CFR Part 757

Law-Related Education Program [1]

AGENCY: Department of Education.

ACTION: Final regulations.

SUMMARY: The Secretary of Education issues final regulations to implement the Law-Related Education Act of 1978. These regulations govern grant awards to encourage State educational agencies (SEA's), local educational agencies (LEA's), and other public and non-profit private agencies, organizations, and institutions to provide law-related education programs. These regulations replace the final regulations that were issued for the Act on April 24, 1980 (45 FR 27880).

EFFECTIVE DATE: These regulations are expected to take effect 45 days after they are transmitted to the Congress. Regulations are usually transmitted to the Congress several days before they are published in the **Federal Register**. The effective date is changed by statute if the Congress takes certain adjournments. If you want to know the effective date of these regulations, call or write to the Department of Education contact person.

FOR FURTHER INFORMATION CONTACT: Elizabeth Farquhar, Telephone (202)-472-4594.

SUPPLEMENTARY INFORMATION:

A. Background

The Law-Related Education Act of 1978 is enacted as Part G of Title III of the Elementary and Secondary Education Act.

The Act authorizes the Secretary to fund discretionary grants or contracts supporting law-related education activities. It defines "law-related education" to mean education to equip non-lawyers with knowledge and skills pertaining to the law, the legal process, and the legal system and the fundamental principles and values on which these are based. The purpose is to enable children, youth, and adults to be more informed and effective citizens.

The Act is premised on congressional findings that—

(1) There is a lack of understanding of how our system of law and legal institutions works;

(2) That understanding is essential in developing faith and appreciation in our democratic system of government and in preparing youth to be knowledgeable, responsible citizens; and

(3) There is an urgent need for Federal involvement to encourage and support the development of law-related education programs.

Under the Act, the Secretary is authorized to fund a variety of law-related education activities, including awareness activities, program support, materials and methods development, pilot and demonstration projects, dissemination, clearinghouse activities, technical assistance, training, research and evaluation, involvement of law-related organizations, and youth internships.

The regulations govern grant and contract awards beginning in Fiscal Year 1981. Regulations are needed—

(1) To clarify the scope of law-related education as defined in the statute;

(2) To establish the types of activities eligible for support;

(3) To authorize priorities for types of activities; and

(4) To indicate criteria governing the selection of grantees.

B. Public Comments on the Proposed Regulations

A notice of proposed rulemaking (NPRM) for the Law-Related Education Act was published in the **Federal Register** of September 22, 1980 (45 FR 62859). The NPRM proposed to replace final regulations issued for the Act on April 24, 1980 (45 FR 27880), and invited public comment. Seven people provided responses. In general, these comments supported the simplification of the regulations and the elimination of cost-sharing and other requirements. A number of specific questions were raised on provisions of the proposed regulations; in many instances, these comments have resulted in changes which are incorporated in the final regulations.

[1] Note: The closing date for applications for new projects under the Law-Related Education Program was published on January 15, 1981 at page 3589.

While the provisions of these final regulations are substantially the same as those of the NPRM, some notable modifications include: alterations in the list of subjects used to illustrate topics eligible for funding under the Act; elimination of the requirement that existing projects include technical assistance activities and consolidation of other sections referring to technical assistance; elimination of a five percent limit on equipment costs. Other changes serve to conform the regulations more closely to the language of the Act, to clarify provisions of the regulations, or to provide additional flexibility for applicant institutions. The paragraphs below summarize the comments and the Secretary's responses to them. They appear in the order of the sections to which they pertain. All references which in the NPRM appeared under the heading Part 161g have been redesignated to refer to the new Part 757; the section numbers, however, remain the same.

§ 757.1 Scope of law-related education

Comment. Two commenters raised questions regarding the list of illustrative activities pertinent to the Act. One commenter recommended that (c)(4) be expanded to include lawmaking processes at the local and State levels as well as the Federal level. Another stated that (c)(6) did not make clear what kinds of rules are covered. The commenter also questioned, in (c)(7), who would determine the "strengths and weaknesses" of our system. It was also suggested that the study of the juvenile justice system be added to that of the criminal and civil systems under that example. A commenter objected to the inclusion, in (c)(8), of "informal law" as a possible invitation for applicants to include the study of morals and ethics. One of the commenters suggested modifications in (c) (9), (11), and (13), adding "equality, rights, and responsibilities" and removing "punishment" ((c)(9)); substituting "housing" for "criminal" ((c)(11)); and substituting "American Indian legal traditions" for "Indian law" in (c)(13).

Response. Some changes have been made. Local, State, and Federal lawmaking processes are now included under (c)(4). The reference to development and administration of rules has been made more specific; it includes rules formulated by government. Paragraph (c)(7) is amended to include the juvenile justice system while the phrase on strengths and weaknesses is deleted to avoid confusion. Paragraph (c)(8) is deleted. The recommended changes in (c) (9), (11), and (13) have not been made; the examples provided under the NPRM are illustrative only; the commenter's suggestions are all legitimate subjects of study under the Act.

§ 757.4 Definitions

Comment. One commenter asked why the definition of "interested groups and individuals" was broader than that mentioned in the Act.

Response. The definition has been eliminated.

§ 757.12 Elementary/Secondary School Project Activities

Comment. One commenter was concerned that by combining awareness and training activities in the same section, the regulations were deviating from the language of the law ((b)(1)). Clarification was sought concerning the phrase "to the extent that they are incidental to training activities" ((b)(2)) and the commenter asked if this qualification applied to all materials or lesson plans only. The commenter expressed a concern over the provisions for technical assistance in ((b) (3) and (5)). This concern included a question as to the recipients of technical assistance and the mandatory inclusion of technical assistance activities by applicants from established programs. The commenter felt that these provisions were unclear and inconsistent with the statute. The commenter asked why the regulations include grants involving activities to mobilize financial and programmatic support ((b)(4)), while a second commenter suggested a rewording of this section to place additional emphasis on community participation.

Response. Several changes have been made to conform the regulation more closely to the language of the Act. Awareness and training activities have been separated into two discrete provisions, with each identifying participants as stated in the Act. With respect to the comment requesting an explanation of (b)(2) on materials development, the section applies to all materials listed. It is included so that materials development does not become the major focus of elementary/secondary programs. There is evidence that a diversity of curriculum materials for elementary/secondary education already exists; there are far greater needs for program development and institutionalization within the schools. At the same time, we recognize that existing materials must be adapted to serve local needs. For this reason, curriculum development is permitted as an adjunct activity to training in this section, while § 757.13, exemplary projects, permits an exclusive focus on curriculum development for neglected areas within law-related education.

The two provisions on technical assistance have been combined into one so as to make it clear that the regulatory intent, like that of the Act, is for technical assistance to be extended to both individuals (such as teachers) and groups and organizations. In addition, the reference to technical assistance requirements of multiyear projects has been deleted. The Act is designed to encourage the development of law-related education programs throughout the Nation. Its authorized funding level cannot provide direct funding for more than a small number of programs. It must, therefore, encourage funded projects with developed expertise to offer assistance to other developing programs to achieve the statutory purposes. At the same time, the Secretary realizes that the law authorizes, but does not mandate, technical assistance activities and for that reason a change is made.

The provision for the mobilization of financial and programmatic support is retained with a minor change. Part of the overall strategy in this program is to fund seed or incentive grant projects that will eventually become self-sustaining programs. It is critical that projects seek other sources of funding for their long-term operation. Insufficient attention paid to future sources of support for federally funded programs will impede the process of program development authorized by the Act and may contribute to the problem of programs ending when Federal funds are exhausted. With respect to the comment suggesting a greater emphasis on community participation in this section, no change is deemed necessary; the Secretary hopes that community involvement will be a strong component of any such activities, but does not consider it appropriate to mandate that approach within the regulations.

§ 757.13 Exemplary Projects

Comment. One commenter suggested, under (a), removal of the requirement that exemplary projects propose approaches that have "not been taken by any law-related education program," stating that this was too prescriptive and not very realistic.

Response. A change has been made in accordance with the comment.

§ 757.20 Private School Participation.

Comment. A commenter requested that the regulations place additional emphasis on the need for LEAs and SEAs to involve private school officials in developing applications under the Act

so that children in these schools can be served by funded projects.

Response. A change has been made. This provision is unformly maintained for all ED programs by §§ 75.650 and 76.650–652. The more complete section from Part 76 is now referenced in the regulation and will be part of the application package for the program. No special provisions, however, will be added for these regulations in order to retain a consistent policy throughout the Department.

§ 757.30 Award Decisions

Comment. One commenter asked why the Secretary might not fund a project if it comes within a priority of another Federal agency, and asked whether other existing Federal programs overlap with this one.

Response. No change has been made. The Secretary believes that the Department should be certain to use appropriated funds in a manner that does not duplicate activities of other Federal agencies. In general, law-related education has not been a major concern of any Federal agency. Two agencies—the National Endowment for the Humanities (NEH) and the Office of Juvenile Justice and Delinquency Prevention (OJJDP)—have funded a small number of projects in law-related education. NEH defines jurisprudence as a discipline of the humanities; OJJDP is concerned with law-related education's potential role in delinquency prevention. To insure wise expenditure of Federal funds, the ED program is closely coordinated with relevant programs in these other agencies. it is for this reason that the provision is maintained.

§ 757.31 Evaluation Criteria

Comment. One commenter asked why the regulations refer to gains in students' attitudes, when the law only refers to knowledge and skills.

Response. A change has been made to conform the criterion to the language of the Act.

Comment. The same commenter asked why, in (a)(4), "on-site" training was specified, and, in (a)(iii), why "on-site" technical assistance was required.

Response. Changes have been made: under training, the criterion has been made less prescriptive, but it retains the idea that training should be conducted in a manner and place accessible to trainees. No changes have been made in the reference to technical assistance. There is evidence that program quality will be enhanced when the project includes some provisions for attention to the specific, on-site needs of the recipients of technical assistance. Studies of educational innovations clearly demonstrate that the implementation of innovations takes place over time within the classroom and school building. Technical assistance away from the implementor's site is likely to be less effective than when it occurs at that site. It should be noted, however, that both these passages are not program requirements; but simply one means of evaluating the likely quality of a proposed project.

Comment. The commenter asked why, in (a)(5)(i) and (c)(2), the regulation appears to require commitment from organizations likely to participate in law-related education activities, when the law simply encourages their involvement.

Response. A change has been made. Involvement of repesentative organizations in law-related education is not a requirement of the regulation. It is simply one way of judging the likely quality of proposed activities. Just as the law encourages the involvement of organizations in law-related education programs, the selection criteria encourage applicants to make provisions for participation. The language of the criterion has been modified, however, to reflect more closely the language of the Act.

Comment. The commenter asked for clarification of provisions for technical assistance under (d)(1)(ii) and (d)(3).

Response. Changes have been made in order to clarify and consolidate these sections.

Comment. One commenter asked, in response to paragraph (b)(v)(D), how elementary and secondary school projects could include access for the elderly. Another commenter requested inclusion, under plan of operation, (b)(2)(v), of immigrant groups and those of limited English-speaking ability.

Response. No change has been made. This criterion applies to all ED programs and should be employed to the extent to which it is appropriate. Immigrant groups and others mentioned by the second commenter would be included as members of racial or ethnic minority groups. In the first year of the program, one of the grants went to an immigrant refugee group from Southeast Asia and several others involved American Indians and handicapped persons with limited English-speaking facility.

§ 757.32 Evaluation Criteria

Comment. A commenter suggested that, under (g), an organization with a potentially significant contribution to make but limited experience in law-related education would be at a competitive disadvantage.

Response. A change has been made. The applicant must have knowledge of law-related education, but if it lacks experience in the field it can make provision for obtaining assistance from those with appropriate background in law-related education.

§ 757.33 Duration of Support

Comment. A commenter asked for explanation of the rationale for the optional two-year project period and whether after completion of a two-year project, a grantee would be able to compete for another award.

Response. No change has been made. The recommended two-year project period is designed to provide programs with some stability over the short term and to reduce administrative burdens. The recipient of a two-year project would certainly be eligible to compete for another project upon expiration of the first one.

§ 757.40 Allowable Costs

Comment. A commenter asked why the regulation limits equipment costs to five percent of the grant amount.

Response. The section has been deleted.

Citation of Legal Authority

A citation of statutory or other legal authority has been placed in parentheses on the line following each provision.

(Catalog of Federal Domestic Assistance Number 84.123, Law-Related Education Program)

Dated: January 12, 1981.

Shirley M. Hufstedler,

Secretary of Education.

The Secretary of Education amends Title 34 of the Code of Federal Regulations by adding a new Part 757 reading as follows:

PART 757—LAW RELATED EDUCATION

Subpart A—General

Sec.
757.1 The Law-Related Education Program.
757.2 What regulations apply to the Law-Related Education Program?
757.3 Who is eligible to apply?
757.4 Definitions.

Subpart B—What Kinds of Activities Does the Secretary Support Under This Program?

757.10 What are the eligible projects; priorities?
757.11 Non-duplication of procurements.
757.12 Elementary and secondary school projects.
757.13 Exemplary projects.

Subpart C—How Does One Apply for a Grant?

757.20 What limitations apply to applications?

Subpart D—How Is a Grant Made?

757.30 How does the Secretary evaluate an application?
757.31 What criteria are used to evaluate applications for elementary and secondary school projects?
757.32 What criteria are used to evaluate applications for exemplary projects?
757.33 What is the duration of support?

Subpart E—What Conditions Must Be Met by a Grantee?

757.40 What are the limitations on allowable costs?

Authority: Part G of Title III of the Elementary and Secondary Education Act of 1965, as amended by Pub. L. 95–561, 92 Stat. 2216 (20 U.S.C. 3001–03).

Subpart A—General

§ 757.1 The Law-Related Education Program.

(a) The Law-Related Education Program is designed to give persons knowledge and skills pertaining to the law, the legal process, and the legal system, and the fundamental principles and values on which these are based.

(b) The purpose of law-related education is to enable non-lawyers, including children, youth, and adults, to be more informed and effective citizens.

(c) Law-related education may include a variety of learning approaches in such subject areas as—

(1) Fundamental legal principles and the values on which they are based;

(2) The Bill of Rights and other constitutional law;

(3) The role and limits of law in a democratic society both past and present;

(4) The Federal, State, and local lawmaking process;

(5) The role of law in avoiding and resolving conflicts;

(6) Development and administration of specific rules of law by Federal, State or local government and examination in a general or theoretical way of how rules of governance are developed and administered;

(7) The administration of the criminal, civil and juvenile justice systems;

(8) Issues of authority, freedom, enforcement, and punishment;

(9) Law as a vehicle to illuminate and resolve social and political issues;

(10) Areas of law that affect the daily lives of citizens (e.g., criminal, consumer, labor, education, administrative, environmental, and family law);

(11) Comparative law that examines law and its role in different societies and cultures;

(12) Indian law; and

(13) The application of the above and other law-related subject areas to school policies and practices.

(d) Law-related education does not include direct training for careers in law. It does not include programs designed exclusively or primarily to provide information to persons preparing for or working in a particular profession on a specific law or set of laws that affect that profession.

(20 U.S.C. 3001, 3002; S. Rep. No. 95–856, Pages 41–42)

§ 757.2 What regulations apply to the Law-Related Education Program?

The following regulations apply to grants under the Law-Related Education Act: (a) The Education Department General Administrative Regulations (EDGAR) in 34 CFR Part 75 (Direct Grant Programs) and 34 CFR Part 77 (General); and (b) The regulations in this part 757.

(20 U.S.C. 1221e–3, 3001, 3002)

§ 757.3 Who is eligible to apply?

A State educational agency (SEA), local educational agency (LEA), or other public or nonprofit private agency, organization, or institution may apply for a grant. An applicant may apply singly or jointly with another eligible applicant, as provided in §§ 75.127 through 75.129 of EDGAR.

(20 U.S.C. 3002(a))

§ 757.4 Definitions.

As used in these regulations—

"Act" means the Law-Related Education Act of 1978 that is enacted by Pub. L. 95–561 as Part G of Title III of the Elementary and Secondary Education Act of 1965.

(20 U.S.C. 1221e–3(a)(1), 3001)

Subpart B—What Kinds of Activities Does the Secretary Support Under this Program?

§ 757.10 What are the eligible projects; priorities?

(a) *Eligible projects.* The Secretary awards grants to support any law-related education activities authorized under the Act.

(b) *Annual priority areas.* The Secretary annually may reserve funds to support some, all, or a combination of the following types of projects: (1) Projects to support law-related education programs in elementary or secondary schools or both, as described in § 757.12. In this area, the Secretary may reserve funds for—

(i) Projects to plan and establish new law-related education programs;

(ii) Projects to strengthen or expand established law-related education programs;

(iii) Projects to provide technical assistance from established law-related education programs to other organizations in one or more States;

(2) Projects to carry out exemplary activities in any area authorized by the Act, as described in § 757.13.

(20 U.S.C. 3002)

§ 757.11 Non-duplication of procurements.

The Secretary does not fund a grant to support activities that duplicate any procurement activities under the Act.

(20 U.S.C. 3002)

§ 757.12 Elementary and secondary school projects.

(a) *Purposes.* The Secretary awards grants to support law-related education programs that serve elementary or secondary schools or both in a State, school district, or combination of school districts to—

(1) plan and establish a new program; or

(2) strengthen or expand an already established program—or provide technical assistance from the program to other organizations in one or more States—or both.

(b) *Activities.* To carry out these purposes the Secretary awards grants that support:

(1) The planning and implementation of awareness activities such as conferences or workshops for educators, law-related personnel, and the public;

(2) The planning and implementation of training activities—such as workshops, seminars, courses, or institutes—for educators and law-related personnel;

(3) The planning, development, and adaptation of curriculum and resource materials such as curriculum guides, resource publications, and lesson plans to the extent that they are incidental to training activities;

(4) Technical assistance to help individual participants (such as teachers) plan and implement the law-related education program in elementary or secondary schools and classrooms—or technical assistance to other agencies or organizations to help them identify and use available resources in initiating or conducting law-related education programs—or both; and

(5) Activities to mobilize and coordinate financial and programmatic support in the community for the grantee's program.

(20 U.S.C. 3002(d); S. Rep. No. 95–856, pages 41–42)

§ 757.13 Exemplary projects.

(a) *General.* The Secretary awards grants under this section to support innovative activities at any level of education and in any area of law-related education authorized under the Act. The

project shall address needs that have not been adequately addressed by any law-related education program or take a particularly new and exemplary approach to law-related education.

(b) *Significance of project.* The project must be of national or regional significance by—

(1) Carrying out activities that are national or regional in scope;

(2) Developing a model program or product that can be used, copied, or adapted by other agencies and institutions in other places; or

(3) Addressing a particularly critical need in law-related education.

(20 U.S.C. 3002(d); S. Rep. No. 95-856, pages 41-42)

Subpart C—How Does One Apply for a Grant?

§ 757.20 What limitations apply to applications?

(a) An application from an LEA must comply with the requirements in §§ 75.138 through 75.141 of EDGAR concerning an open meeting on the application.

(b) An application from an LEA or SEA must document compliance with Section 302(b) of the Elementary and Secondary Education Act, as implemented by §§ 75.650 and 76.650-662 of EDGAR, concerning the opportunity for participation by private school children.

(c) An application for the second year of an approved two-year project must comply with § 75.118 of EDGAR and—

(1) Provide a budget for the second year;

(2) Detail any proposed project changes, as described in § 75.110 of EDGAR; and

(3) Provide a detailed project description for the second year—as required in § 75.110 of EDGAR—if this description was not fully provided in the original project application.

(20 U.S.C. 3002(c))

Subpart D—How Is a Grant Made?

§ 757.30 How does the Secretary evaluate an application?

(a) Within any established funding reservations, the Secretary decides whether or not to fund an application based on the following factors: (1) The criteria for evaluating applications in § 757.31 (Elementary and secondary school projects) or § 757.32 (Exemplary projects), as applicable.

(i) The maximum possible score for an application is 100 points. The maximum possible score for each criterion reflects the degree of importance assigned to that criterion by the Secretary and is indicated in parentheses.

(ii) In evaluating an application under the appropriate criteria from an applicant that previously received a grant under the Act, the Secretary places great emphasis on the success of the previously funded project in reaching its objectives.

(2) Whether funding the proposed project will contribute to the widest possible distribution of law-related education programs throughout the United States.

(b) The Secretary may decline to fund a project if it comes within a priority of another Federal agency.

(20 U.S.C. 3001, 3002)

§ 757.31 What criteria are used to evaluate applications for elementary and secondary school projects?

In evaluating applications to plan and initiate, to strengthen or expand, or to provide technical assistance to law-related education programs under § 181g.12, the Secretary considers the following: (a) *Quality of the project.* (25 points) The quality of the applicant's law-related education project. In applying this criterion, the Secretary considers—

(1) Evidence of success of the applicant's materials, programs, or approaches in law-related education and in the types of activities proposed in the project;

(2) The applicant's and the staff's experience in and knowledge of law-related education, or provisions to obtain training and technical assistance from persons or groups experienced in law-related education;

(3) How the project addresses a diversity of learning approaches that are—

(i) Appropriate to the students to whom the project is directed;

(ii) Designed to address gains not only in students' knowledge, but also in their skills;

(iii) Balanced and based on sound scholarship and do not advocate particular legal or political viewpoints.

(4) The nature and scope of proposed training activities for participating individuals, including the extent of continuing training in a manner and place accessible to trainees.

(5) The likely quality of proposed technical assistance activities under § 757.12 (b)(4), including—

(i) In the case of technical assistance to other agencies and organizations, the applicant's plans for identifying the communities to receive technical assistance services and for involving representative educational, law-related, and other organizations in these communities as participants in the projects;

(ii) The applicant's capacity and plans to respond to the needs and interests of individuals and local communities to be assisted;

(iii) The nature and scope of the proposed technical assistance activities, including the extent of continuing, on-site technical assistance and the extent to which recipients of technical assistance will be exposed to a variety of law-related education models, materials, and approaches.

(b) *Plan of operation.* (12 points)

(1) The Secretary reviews each application for information that shows the quality of the plan of operation for the project.

(2) The Secretary looks for information that shows—

(i) High quality in the design of the project;

(ii) An effective plan of management that insures proper and efficient administration of the project;

(iii) A clear description of how the objectives of the project relate to the purpose of the program;

(iv) The way the applicant plans to use its resources and personnel to achieve each objective;

(v) A clear description of how the applicant will provide equal access and treatment for eligible project participants who are members of groups that have been traditionally underrepresented, such as—

(A) Members of racial or ethnic minority groups;

(B) Women;

(C) Handicapped persons; and

(D) The elderly.

(vi) If the applicant is an SEA or LEA, how the applicant will provide an opportunity for the participation of children in private schools.

(c) *Likelihood of sustaining program.* (20 points) The likelihood that the project will help the applicant or organizations that receive technical assistance sustain a viable law-related education program. In applying this criterion, the Secretary considers the adequacy of the applicant's plan for institutionalizing law-related education or for assisting other organizations to institutionalize law-related education, including evidence of: (1) A plan for integrating law-related education as a regular part of the school curriculum;

(2) The participation of interested groups and individuals in planning and implementing the project;

(3) A realistic plan for developing financial support to continue the program after Federal funding expires, or, with respect to technical assistance to other agencies or organizations, for

helping recipients develop this support for their programs.

(d) *Need for support.* (13 points) (1) With respect to an application to initiate or strengthen a law-related education program—

(i) The need and rationale for the applicant's program at the site and grade levels at which it is directed; and

(ii) The financial need of the applicant's program and the extent to which the project is likely—both directly and indirectly—to strengthen the program's financial capacity to sustain law-related education activities.

(2) With respect to an application from an established program that requests funding only to provide technical assistance to other agencies or organizations, the need and interest of communities to receive technical assistance from the project, as documented in the application.

(3) Applications designed both to strengthen an existing program and also to provide technical assistance to other agencies or organizations are evaluated under (d)(1) and (2) of this section.

(e) *Breadth of the proposed programs.* (5 points) The breadth of the law-related education programs likely to be developed as a result of the project. In applying this criterion, the Secretary considers—

(1) The numbers of students, teachers, and schools proposed to be served by the applicant's program and by programs given technical assistance; and

(2) The extent to which the project will increase the capacity of State or local organizations to offer law-related education at a variety of grade levels and educational settings.

(20 U.S.C. 3001, 3002)

(f) *Quality of key personnel.* (12 points) (1) The Secretary reviews each application for information that shows the quality of key personnel the applicant plans to use on the project.

(2) The Secretary looks for information that shows—

(i) The qualifications of the project director (if one is to be used);

(ii) The qualifications of each of the other key personnel to be used in the project;

(iii) The time that each person referred to in paragraphs (f)(2)(i) and (ii) of this section plans to commit to the project; and

(iv) The extent to which the applicant, as part of its nondiscriminatory employment practices, encourages applications for employment from persons who are members of groups that have been traditionally underrepresented, such as—

(A) Members of racial or ethnic minority groups;

(B) Women;

(C) Handicapped persons; and

(D) The elderly.

(3) To determine the qualifications of a person, the Secretary considers evidence of past experience and training in fields related to the objectives of the project, as well as other information that the applicant provides.

(g) *Budget and cost effectiveness.* (5 points) (1) The Secretary reviews each application for information that shows that the project has an adequate budget and is cost effective.

(2) The Secretary looks for information that shows—

(i) The budget for the project is adequate to support the project activities; and

(ii) Costs are reasonable in relation to the objectives of the project.

(h) *Evaluation plan.* (5 points) (1) The Secretary reviews each application for information that shows the quality of the evaluation plan for the project. (See 34 CFR § 75.590—Evaluation by the grantee.)

(2) The Secretary looks for information that shows methods of evaluation that are appropriate for the project and, to the extent possible, are objective and produce data that are quantifiable.

(i) *Adequacy of resources.* (3 points) (1) The Secretary reviews each application for information that shows that the applicant plans to devote adequate resources to the project.

(2) The Secretary looks for information that shows—

(i) The facilities that the applicant plans to use are adequate; and

(ii) The equipment and supplies that the applicant plans to use are adequate.

(20 U.S.C. 3001, 3002)

§ 757.32 What criteria are used to evaluate applications for exemplary projects?

In evaluating applications for exemplary grants, the Secretary considers—

(a) *Importance of need.* (18 points) The importance of the need addressed by the project, as documented by objective evidence in the application. In applying this criterion, the Secretary considers the extent to which the project—if successful—contributes to the Act's purposes to expand opportunities for law-related education throughout the United States and to improve the quality of law-related education programs.

(b) *Innovativeness.* (13 points) The extent to which the proposed project addresses needs that have not been adequately addressed by any law-related education program or the extent to which the proposed project uses a particularly new and exemplary approach to law-related education.

(c) *Quality of activities.* (16 points) The quality of the law-related education activities in the project. In applying this criterion, the Secretary considers how the project addresses the need for sound scholarship, quality control, and a balanced curriculum that does not advocate particular legal or political viewpoints.

(d) *Plan of operation.* (10 points) The Secretary evaluates an application on the basis of the criterion in § 757.31(b).

(e) *Evaluation plan.* (12 points) The Secretary evaluates an application on the basis of the criterion in § 757.31(h).

(f) *Quality of key personnel.* (13 points) The Secretary evaluates an application on the basis of the criterion in § 757.31(f).

(g) *Applicant's experience.* (10 points) The applicant's knowledge of and experience in law-related education, or specific provision for obtaining assistance from individuals or groups expert in the field.

(h) *Budget and cost effectiveness.* (5 points) The Secretary evaluates an application on the basis of the criterion in § 757.31(g).

(i) *Adequacy of resources.* (3 points) The Secretary evaluates an application on the basis of the criterion in § 757.31(i).

(20 U.S.C. 3001, 3002)

§ 757.33 What is the duration of support?

The Secretary approves a project for a period of up to two years. A multi-year application must comply with § 75.117 of EDGAR. Approval of a project for more than a year and the award of continuation grants within the project period are subject to the provisions in §§ 75.250 through 75.254 of EDGAR.

(20 U.S.C. 1221e-3)

Subpart E—What Conditions Must Be Met by a Grantee?

§ 757.40 What are the limitations on allowable costs?

Allowable costs under a grant are direct and indirect costs incurred by the grantee in carrying out the approved project, subject to the applicable cost principles provided or referenced in §§ 75.530 through 75.534 of EDGAR, except that construction and other capital costs are not allowable.

(20 U.S.C. 1221e-3)

BILLING CODE 4000-01-M

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Parts 52 and 81

[A-9-FRL 1722-1]

California Plan Revision: Redesignation of Air Quality Control Regions

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rulemaking.

SUMMARY: The EPA takes final action to approve the redesignation of seven Air Quality Control Regions (AQCR's) and the designation of two additional AQCR's in California, as requested by the California Air Resources Board (ARB). The intended effect of these designations and redesignations is to promote more efficient and effective air quality management.

EFFECTIVE DATE: February 17, 1981.

ADDRESS: A copy of the redesignation request is located at: The Office of the Federal Register, 1100 "L" Street NW., Room 8401, Washington, D.C. 20408.

FOR FURTHER INFORMATION CONTACT: Louise P. Giersch, Director, Air and Hazardous Materials Division, EPA Region IX, 215 Fremont Street, San Francisco, California 94105, Attn: Douglas Grano, (415) 556-2938.

SUPPLEMENTARY INFORMATION:

Background

Under Section 107 of the Clean Air Act, as amended, 11 AQCR's in California were designated by the Administrator. Boundaries of these AQCR's are described in the following sections of 40 CFR Part 81:

Sec.
81.17 Metropolitan los Angeles AQCR.
81.21 The San Francisco Bay Area Intrastate AQCR.
81.159 Great Basin Valley intrastate AQCR.
81.160 North Central Coast Intrastate AQCR.
81.161 North Coast Intrastate AQCR.
81.162 Northeast Plateau Intrastate AQCR.
81.163 Sacramento Valley intrastate AQCR.
81.164 San Diego Intrastate AQCR.
81.165 San Joaquin Valley Intrastate AQCR;
81.166 South Central Coast Intrastate AQCR.
81.167 Southeast Desert Intrastate AQCR.

Altogether, the AQCR's listed above include the entire state. At the time they became effective their boundaries coincided with those of the California Air Basins as defined in the California Administrative Code. Since then the boundaries of several air basins have been changed, and additional air basins have been created.

Changes that have been made by the ARB to the original air basins are as follows:

1. On May 18, 1971, northeastern Solano County was transferred from the San Francisco Bay Area Air Basin to the Sacramento Valley Air Basin.
2. On May 18, 1971, northern Sonoma County was transferred from the San Francisco Bay Area Air Basin to the North Coast Air Basin.
3. On July 21, 1971, western Siskiyou County was transferred from the North Coast Air Basin to the Northeast Plateau Air Basin.
4. On September 15, 1971, a portion of Kern County in the vicinity of Tehachapi was transferred from the San Joaquin Valley Air Basin to the Southeast Desert Air Basin.
5. On June 21, 1974, the Mountain Counties Air Basin was created from five counties (Plumas, Sierra, Nevada, Placer, and El Dorado) of the Sacramento Valley Air Basin and four counties (Amador, Calaveras, Tuolumne, and Mariposa) of the San Joaquin Valley Air Basin.
6. On July 19, 1974, the Lake County Air Basin, consisting of all of Lake County (previously in the North Coast Air Basin), was created.
7. On December 30, 1975, the Lake Tahoe Air Basin, comprising the Lake Tahoe watershed in Placer and El Dorado Counties, was created from part of the Mountain Counties Air Basin.
8. On August 31, 1976, Ventura County and southern Santa Barbara County were transferred from the South Coast Air Basin (Metropolitan Los Angeles AQCR) to the South Central Coast Air Basin.
9. On July 1, 1977, eastern San Diego County was transferred from the Southeast Desert Air Basin to the San Diego Air Basin.

As a result of these changes, there are now 14 State-designated air basins in California, of which two (North Central Coast and Great Basin Valleys) remain as originally established. Of the remaining 12, three (Mountain Counties, Lake County, and Lake Tahoe) are new and nine have been changed since their original establishment.

The Redesignation

On September 11, 1978, the Executive Officer of the ARB requested the EPA's approval of seven redesignated and two additionally designated (new) AQCR's in California.

The seven redesignated AQCR's in the State's proposal are as follows:

1. Northeast Plateau
2. North Coast
3. Sacramento Valley
4. San Francisco Bay Area
5. San Joaquin Valley
6. Southeast Desert
7. San Diego

The two new AQCR's proposed by the State are as follows:

1. Lake County
2. Mountain Counties

Two AQCR's in the State's proposal are unchanged from their original designation and thus remain as now designated, as follows:

1. Great Basin Valley
2. North Central Coast

Two AQCR's continue to differ from the corresponding air basins. Although the boundary between the South Central Coast and the South Coast Air Basins was changed in 1976 (see change #8 under Background, above), redesignation of the South Central Coast and the Metropolitan Los Angeles (South Coast) AQCR's is not being proposed at this time.

Another discrepancy between the air basins designated by the ARB and their proposed redesignation of AQCR's is the exclusion of the Lake Tahoe basin from the proposed Mountain Counties AQCR without a separate proposal of Lake Tahoe as an AQCR, although the basin was designated as an air basin by the ARB in 1975 (see change #7 under Background, above).

As indicated in the ARB's Staff Report No. 78-14-3, the Lake Tahoe basin presents unique regulatory and administrative problems because the airshed is shared by California and Nevada. In view of the possibility of designation of the Lake Tahoe basin as an Interstate AQCR, intrastate designation was not proposed by the ARB.

Under section 107(b)(2) of the Clean Air Act, as amended, the Lake Tahoe situation is being remedied by the EPA's designation of the basin as an intrastate AQCR. This action, which the EPA now takes, does not preclude any future designation of the Lake Tahoe area by California or by California and Nevada.

Effects of Redesignation

The redesignation AQCR's in California should begin to eliminate much of the confusion and misunderstanding which have occurred because of the differences between the State air basins and the Federal AQCR's. With this approval by the EPA of the redesignation (including designation of the Lake Tahoe AQCR), the geographic applicability of local, State, and Federal regulations will be more uniform and thus more easily understood.

As a result of these designations and redesignations of AQCR's, many changes are being made to the *Code of Federal Regulations* (CFR). In Part 81, most of the California AQCR descriptions are being revised, and newly designated AQCR's are being added. As a consequence of those Part 81 changes, numerous revisions are being made in Part 52, Subpart F (§§ 52.220–52.280).

Many of the changes in Part 52 are of a classificatory nature, where either (1) certain APCD's are being reclassified as to the AQCR in which they are located, or (2) references to AQCR's are being removed from the CFR; §§ 52.231, 52.233, 52.234, 52.236, 52.240, 52.269, 52.271, 52.272, 52.273, 52.275, and 52.280 are so revised.

In other sections (§§ 52.246, 52.252, 52.253, 52.254, and 52.255), which contain Federal requirements, the AQCR's to which the regulations apply are being defined "as of July 1, 1979" ("old" AQCR's), so that the Federal requirements in affected areas are not changed.

On April 20, 1979 [44 FR 23544] the EPA published a Notice of Proposed Rulemaking, proposing to approve the redesignation and to designate on its own the Lake Tahoe AQCR, and inviting public comments.

One comment, a letter from the Nevada Department of Conservation and Nautral Resources, Division of Environmental Protection, was received. That letter objected to the EPA's proposed designation of the California portion of the Lake Tahoe Basin as an intrastate AQCR and advocated designation of an interstate AQCR to include the entire Basin, in California and Nevada.

As noted in the Notice of Proposed Rulemaking, the ARB excluded the Lake Tahoe Basin from the Mountain Counties AQCR but did not propose the designation of a Lake Tahoe Intrastate AQCR, nor have the two states proposed an interstate AQCR for Lake Tahoe. As provided in section 107(b)(2) of the Clean Air Act, as amended, "the portion of such State which is not part of any such designated region shall be an air quality control region . . ."

This action by the EPA does not preclude the future designation of the Lake Tahoe Basin as an interstate AQCR. The EPA would publish a proposal to that effect as soon as the States of California and Nevada jointly request such a redesignation.

The EPA is approving this redesignation because it meets the requirements of section 107(e) of the Clean Air Act, as amended, which requires that the redesignation be for purposes of improved air quality management.

The EPA has determined that this action is "specialized" and therefore not subject to the procedural requirements of Executive Order 12044.

(Secs. 107, 110, 310(a), Clean Air Act, as amended (42 U.S.C. 7407, 7410, and 7601(a))

Dated: January 12, 1981.

Douglas M. Costle,

Administrator.

Note.—Incorporation by reference of the State Implementation Plan for the State of California was approved by the Director of the Federal Register on July 1, 1980.

Chapter I, Title 40 of the Code of Federal Regulations is amended as follows:

PART 52—APPROVAL AND PROMULGATION OF IMPLEMENTATION PLANS

Subpart F—California

1. Section 52.220, paragraph (c)(61) is added as follows:

§ 52.220 Identification of plan.

* * * * *

(c) * * *

(61) Redesignation of AQCR's in California, submitted on September 11, 1978, by the Governor's designee.

* * * * *

2. In section 52.221, three new AQCR's are added to the classification table, as follows:

§ 52.221 Classification of regions.

The California plan is evaluated on the basis of the following classifications:

Air quality control region	Pollutant				
	P.M.	SO_x	NO_x	CO	O_x
* * *					
San Diego Intrastate	II	III	III	I	I
Lake County Intrastate	II	III	III	III	III
Lake Tahoe Intrastate	II	III	III	I	I
Mountain Counties Intrastate	II	III	III	I	I

* * * * *

3. To correct a misprint in 40 CFR Part 52 of July 1, 1979, section 52.224(a)(1) is amended by revising paragraphs (iv) through (viii) and removing paragraph (ix) as follows:

§ 52.224 General requirements.

(a) * * *

(1) * * *

(i) * * *

(ii) * * *

(iii) * * *

(iv) Del Norte County APCD.

(v) Humboldt County APCD.

(vi) Mendocino County APCD.

(vii) Northern Sonoma County APCD.

(viii) Trinity County APCD.

(2) * * *

* * * * *

4. The title of section 52.226 is revised to read as follows:

§ 52.226 Control strategy and regulations: Particulate matter, San Joaquin Valley and Mountain Counties Intrastate Regions.

* * * * *

5. The title of section 52.230 is revised to read as follows:

§ 52.230 Control strategy and regulations: Nitrogen dioxide.

* * * * *

6. In section 52.231, paragraphs (a)(3) and (b)(1) are revised to read as follows:

§ 52.231 Regulations: Sulfur oxides.

(a) * * *

(3) Mountain Counties Intrastate Region.

* * * * *

(b) * * *

(1) Lake County Intrastate Region.

* * * * *

7. In section 52.233, paragraphs (c), (d), (f)(1)(i), and (g)(1) are revised as follows:

§ 52.233 Review of new sources and modifications.

* * * * *

(c) The requirements of § 51.18 (a) and (c) of this chapter are not met in the following Air Pollution Control Districts since the regulations of the APCD's do not provide the means to prevent construction of sources which would violate applicable portions of the control strategy or would interfere with the attainment or maintenance of a national standard.

(1) Mariposa County APCD.

(2) Santa Barbara County APCD.

(d) The requirements of § 51.18(c) of this chapter are not met in the following Air Pollution Control Districts since the regulations of the APCD's do not include a means to prevent construction or modification if such construction or modification would interfere with the attainment or maintenance of a national standard.

(1) Amador County APCD.

(2) Calaveras County APCD.

(3) El Dorado County APCD.

(4) Fresno County APCD.

(5) Glenn County APCD.

(6) Humboldt County APCD.

(7) Kern County APCD.

(8) Kings County APCD.

(9) Lake County APCD.

(10) Lassen County APCD.

(11) Madera County APCD.

(12) Mendocino County APCD.

(13) Merced County APCD.

(14) Modoc County APCD.
(15) Monterey Bay Unified APCD.
(16) Nevada County APCD.
(17) Northern Sonoma County APCD.
(18) Placer County APCD.
(19) Plumas County APCD.
(20) San Joaquin County APCD.
(21) Shasta County APCD.
(22) Sierra County APCD.
(23) Siskiyou County APCD.
(24) Stanislaus County APCD.
(25) Sutter County APCD.
(26) Tulare County APCD.
(27) Tuolumne County APCD.
(28) Yolo-Solano APCD.

* * * * *

(f) * * *
(1) * * *
(i) Any stationary source in the APCD's listed below, the construction or modification of which is commenced after the effective date of this regulation.
(*a*) Mariposa County APCD.
(*b*) Sacramento County APCD.
(*c*) Santa Barbara County APCD.
(*d*) Ventura County APCD.

* * * * *

(g) * * *
(1) The requirements of this paragraph are appliable to any stationary source in the APCD's listed below, the construction or modification of which is commenced after the effective date of this regulation.
(i) Amador County APCD.
(ii) Calaveras County APCD.
(iii) El Dorado County APCD.
(iv) Fresno County APCD.
(v) Glenn County APCD.
(vi) Humboldt County APCD.
(vii) Kern County APCD.
(viii) Kings County APCD.
(ix) Lassen County APCD.
(x) Madera County APCD.
(xi) Mendocino County APCD.
(xii) Merced County APCD.
(xiii) Modoc County APCD.
(xiv) Monterey Bay Unified APCD.
(xv) Nevada County APCD.
(xvi) Placer County APCD.
(xvii) Plumas County APCD.
(xviii) San Joaquin County APCD.
(xix) Shasta County APCD.
(xx) Sierra County APCD.
(xxi) Siskiyou County APCD.
(xxii) Stanislaus County APCD.
(xxiii) Sutter County APCD.
(xxiv) Tulare County APCD.
(xxv) Tuolumne County APCD.
(xxvi) Yolo-Solano APCD.

* * * * *

8. In section 52.234, paragraphs (a) and (e) are amended as follows:

§ 52.234 Source surveillance.

(a) * * *
(1) Amador County APCD.
(2) Bay Area AQMD.
(3) Calaveras County APCD.
(4) Del Norte County APCD.
(5) El Dorado County APCD.
(6) Humboldt County APCD.
(7) Imperial County APCD.
(8) Lake County APCD.
(9) Mariposa County APCD.
(10) Mendocino County APCD.
(11) Nevada County APCD.
(12) Northern Sonoma County APCD.
(13) Placer County APCD.
(14) Plumas County APCD.
(15) Sierra County APCD.
(16) Trinity County APCD.
(17) Ventura County APCD.

* * * * *

(e) * * *
(1) Amador County APCD.
(2) Bay Area AQMD
(3) Calaveras County APCD.
(4) El Dorado County APCD.
(5) Imperial County APCD.
(6) Kern County APCD.
(7) Kings County APCD.
(8) Los Angeles County APCD.
(9) Mariposa County APCD.
(10) Monterey Bay Unified APCD.
(11) Nevada County APCD.
(12) Placer County APCD.
(13) Plumas County APCD.
(14) San Bernardino County Desert APCD.
(15) San Diego County APCD.
(16) San Joaquin County APCD.
(17) San Luis Obispo County APCD.
(18) Santa Barbara County APCD.
(19) Sierra County APCD.
(20) South Coast AQMD.
(21) Stanislaus County APCD.
(22) Tulare County APCD.
(23) Ventura County APCD.

* * * * *

9. In § 52.236, paragraphs (a), (b), (c), (e), and (f) are amended as follows:

§ 52.236 Rules and regulations.

(a) * * *
(1) Imperial County APCD.
(i) Rule 114.5, submitted on November 10, 1976.
(ii) Rule 148.D(3), submitted on November 10, 1976.
(b) * * *
(1) San Luis Obispo County APCD.
(i) Rules 401(B)(4) and 401(B)(6), submitted on November 10, 1976.
(2) Sacramento County APCD.
(i) Rule 7(b)(5), submitted on November 4, 1977.
(3) Glenn County APCD.
(i) Section 77(e), submitted on June 30, 1972, and previously approved under 40 CFR 52.223 (37 FR 19812).
(4) Mariposa County APCD.
(i) Rule 203(G), submitted on June 6, 1977.
(5) Kern County APCD.
(i) Rules 402(c) and 402(e), submitted on; November 10, 1976.
(6) Fresno County APCD.
(i) Rules 402(c) and 402(e), submitted on October 23, 1974.
(ii) Rules 402(c) and 402(e), submitted on June 30, 1972, and previously approved under 40 CFR 52.223 (37 FR 19812).
(7) Tulare County APCD.
(i) Section 402(c), submitted on November 10, 1976, and previously approved under 40 CFR 52.223 (42 FR 47556).
(8) Madera County APCD.
(i) Rules 402(c) and 402(e), submitted on January 10, 1975, and previously approved under 40 CFR 52.223 (42 FR 42219).
(c) * * *
(1) Merced County APCD.
(i) Rule 102(hh), submitted on June 30, 1972, previously approved under 40 CFR 52.223, and deleted by the August 2, 1976 submittal, is retained.

* * * * *

(e) * * *
(1) Mendocino County APCD.
(i) Rule 130(p4), submitted on November 10, 1976. (Part III–49, previously submitted on February 21, 1972, and approved in 40 CFR 52.223, is retained).
(ii) Rule 130(s3), submitted on November 10, 1976. (Part III–55, previously submitted on February 21, 1972, and approved in 40 CFR 52.233, is retained).
(2) Shasta County APCD.
(i) The definition of "modification" in Rule 1:2, *Definitions*, submitted on October 13, 1977, is disapproved.
(3) San Bernardino County Desert APCD.
(i) Rule 103, *Definition of Terms*, submitted on November 4, 1977, is disapproved with respect to the deletion of the following terms: "Distilling type heater", "Noncomplying orchard heater", "Pipe line systems", and "Return stack heater". (Rule 2, *Definitions*, submitted on February 21, 1972 and approved in 40 CFR 52.223, is retained for the above terms.)
(f) * * *
(1) El Dorado County APCD.
(i) Rule 201, submitted on November 4, 1977, is disapproved. (The previously approved Rule 49, submitted on June 30, 1972, is retained for Federal enforcement purposes.)

* * * * *

10. In section 52.240, paragraphs (a) and (d)(1) are revised to read as follows:

§ 52.240 Compliance schedules.

(a) The requirements of § 51.15(c) of this chapter are not met in the following Air Pollution Control Districts since the regulations cited do not provide

increments to progress toward compliance.

(1) Rules 50–A, 52–A, 53–A(a), 53–A(b), 53–A(c), 53.2, 53.3, 54.A, 58.A, 62.1, 68, 69, 70, and 71 of the San Bernardino County APCD.

(2) Rules 53, 72.1, and 72.2 of the Riverside County APCD.

(3) Rules 53, 66.c, and 68.a of the Orange County APCD.

(4) Rule 39.1 of the Santa Barbara County APCD.

(5) Rule 59 of the Ventura County APCD.

(6) Rule 66(c) of the Los Angeles County APCD.

(7) Rule 4.5 of the Siskiyou County APCD.

(8) Rule 64(c) of the Northern Sonoma County APCD.

(9) Rule 409 of the Tulare County APCD.

* * * * *

(d) *Regulation for increments of progress.* (1) The requirements of this paragraph are applicable to any stationary source in the following Air Pollution Control Districts subject to the indicated regulations.

(i) Rules 50–A, 52–A, 53–A(a), 53–A(b), 53–A(c), 53.2, 53.3, 54.A, 58.A, 62.1, 68, 69, 70, and 71 of the San Bernardino County APCD.

(ii) Rules 53, 72.1, and 72.2 of the Riverside County APCD.

(iii) Rules 53 and 66.c of the Orange County APCD.

(iv) Rule 39.1 of the Santa Barbara County APCD.

(v) Rule 59 of the Ventura County APCD.

(vi) Rules 66(c) and 68 of the Los Angeles County APCD.

(vii) Rule 4.5 of the Siskiyou County APCD.

(viii) Rule 64(c) of the Northern Sonoma County APCD.

(ix) Rule 409 of the Tulare County APCD.

* * * * *

11. In section 52.246, paragraph (b) is revised to read as follows:

§ 52.246 Control of dry cleaning solvent vapor losses.

* * * * *

(b) This section is applicable in the Metropolitan Los Angeles, Sacramento Valley, San Joaquin Valley, and San Francisco Bay Area Intrastate Air Quality Control Regions (the "Regions"), as described in 40 CFR Part 81, dated July 1, 1979, except as follows:

* * * * *

12. In section 52.252, paragraph (b) is revised to read as follows:

§ 52.252 Control of degreasing operations.

* * * * *

(b) This section is applicable in the Metropolitan Los Angeles, Sacramento Valley, San Joaquin Valley, and San Francisco Bay Area Air Quality Control Regions (the "Regions"), as described in 40 CFR Part 81, dated July 1, 1979, except as follows:

* * * * *

13. In section 52.253, paragraph (b) is revised to read as follows:

§ 52.253 Metal surface coating thinner and reducer.

* * * * *

(b) This section is applicable in the Metropolitan Los Angeles, San Diego, Sacramento Valley, San Joaquin Valley, and San Francisco Bay Area Intrastate Air Quality Control Regions (the "Regions"), as described in 40 CFR Part 81, dated July 1, 1979, except as follows:

* * * * *

14. In section 52.254, paragraph (a) is revised to read as follow:

§ 52.254 Organic solvent usage.

(a) This section is applicable in the Sacramento Valley, San Francisco Bay Area, and San Joaquin Valley Intrastate Air Quality Control Regions (the "Regions"), as described in 40 CFR Part 81, dated July 1, 1979, except as follows:

* * * * *

15. In section 52.255, the introductory text of paragraph (b) is revised to read as follows:

§ 52.255 Gasoline transfer vapor control.

* * * * *

(b) This section is applicable in the Metropolitan Los Angeles, Sacramento Valley, and San Joaquin Valley Intrastate Air Quality Control Regions, as described in 40 CFR Part 81, dated July 1, 1979, with the following exceptions:

* * * * *

16. In section 52.267, an error in the description of the Sacramento Valley Air Quality Maintenance Area is corrected by revising subparagraph (a)(1) to read as follows:

§ 52.267 Maintenance of national standards.

(a) * * *

(1) Sacramento Valley Air Quality Maintenance Area.

(i) Pollutants for which the area is identified: Carbon monoxide and photochemical oxidants.

(ii) Geographical compostion of area:

Sacramento County
Yolo County
That portion of Solano County lying in the Sacramento Valley Air Basin, as defined in the plan.
That portion of Placer County lying west of the easterly line of Range 7 East, and that portion of Placer County lying south of the northerly line of Township 11 North, Mount Diablo Base and Meridian.

* * * * *

17. In Section 52.269, paragraph (b)(1) is revised to read "Mountain Counties Intrastate Region". Paragaraph (b)(1-1), "San Joaquin Valley Intrastate Region", is inserted following paragaraph (b)(1)(ii)(B). Paragraphs (b)(1)(iii) through (viii) are redesignated (b)(1-1)(i) through (vi), respectively.

18. In § 52.271(a), paragraphs (a)(1) through (8) are revised, and all paragraphs (a)(9) through (a)(35) are added to read as follows:

§ 52.271 Malfunction regulations.

(a) * * *

(1) Amador County APCD.

(i) Rule 404, submitted on April 21, 1976.

(ii) Rule 4f, submitted on June 30, 1972, and previously approved under 40 CFR 52.223 (37 FR 19812).

(2) Bay Area APCD.

(i) Regulation 2, Section 3212, and Regulation 3, Section 3203, submitted on April 21, 1976.

(ii) Regulation 2, Section 3212, submitted on February 21, 1972, and previously approved under 40 CFR 52.223 (37 FR 10842).

(3) Calaveras County APCD.

(i) Rules 110 and 402(f), submitted on July 25, 1973.

(ii) Rule 404, submitted on October 13, 1977.

(4) Colusa County APCD.

(i) Rule 4.4g, submitted on July 25, 1973, and Rule 4.4g, submitted on June 30, 1972, and previously appoved under 40 CFR 52.223 (37 FR 19812).

(5) Del Norte County APCD.

(i) Rule 540, submitted on November 10, 1976.

(ii) Rule 45, submitted on February 21, 1972, and previously approved under 40 CFR 52.223 (37 FR 10842).

(6) Fresno County APCD.

(i) Rule 110, submitted on June 30, 1972, and previously approved under 40 CFR 52.223.

(ii) Rules 110 and 402(f), submitted on October 23, 1974.

(7) Glenn County APCD.

(i) Rules 95.2 and 95.3, submitted on January 10, 1975.

(8) Great Basin Unified APCD.

(i) Rule 403, submitted on June 6, 1977.

(ii) Rule 617, submitted on November 4, 1977.

(9) Humboldt County APCD.

(i) Rule 540, Submitted on November, 10, 1976.

(ii) Rule 59, Submitted on February 21, 1972 and previously approved under 40 CFR 52.223 (37 FR 10842).

(10) Kern County APCD.

(i) Rule 111, submitted on July 19, 1974.

(11) Kings County APDC.

(i) Rule 111, submitted on July 25, 1973, and Rule 111, submitted on July 30, 1972, and previously approved under 40 CFR 52.223.

(ii) Rule 111, submitted on November 4, 1977.

(12) Lake County APCD.

(i) Chapter III, Article I, Section 500, and Article II, Sections 510 and 511, submitted on February 10, 1977.

(ii) Part VI, Sections 1 and 2, submitted on June 30, 1972, and previously approved under 40 CFR 52.223.

(13) Los Angeles County APCD.

(i) Rule 430, submitted on June 6, 1977.

(14) Madera County APCD.

(i) Rule 402(f), submitted on January 10, 1975, and Rule 110, submitted on June 30, 1972, and previously approved under 40 CFR 52.223.

(ii) Rule 110, submitted on January 10, 1975.

(15) Mariposa County APCD.

(i) Rule 203(j), submitted on January 10, 1975, and Rule 4.3(g), submitted on February 21, 1972, and previously approved under 40 CFR 52.223.

(ii) Rule 404, submitted on June 6, 1977.

(16) Mendocino County APCD.

(i) Rule 540, submitted on November 10, 1976.

(ii) Sections 1 and 2 of Part VI, submitted on February 21, 1972, and previously approved under 40 CFR 52.223 (37 FR 10842).

(17) Merced County APCD.

(i) Rule 109, submitted on August 2, 1976.

(ii) Rule 109, submitted on June 30, 1972, and previously approved under 40 CFR 52.223 (37 FR 19812).

(18) Nevada County APCD.

(i) Rule 55(f), submitted on February 21, 1972, and previously approved under 40 CFR 52.223 (37 FR 10842).

(19) Northern Sonoma County APCD.

(i) Rule 540, submitted on November 10, 1976.

(20) Placer County APCD.

(i) Rule 55(f), submitted on February 21, 1972, and previously approved under 40 CFR 52.223 (37 FR 10842).

(ii) Rule 404, submitted on October 13, 1977.

(21) Plumas County APCD.

(i) Rule 203(j), submitted on January 10, 1975.

(ii) Rule 404, submitted on June 6, 1977.

(22) Riverside County APCD.

(i) Rule 430, submitted on June 6, 1977.

(23) San Bernardino County APCD.

(i) Rule 430, submitted on June 6, 1977.

(ii) Rule 55, submitted on February 21, 1972, and previously approved under 40 CFR 52.223 (37 FR 10842).

(24) San Joaquin County APCD.

(i) Rule 110, submitted on October 23, 1974, and Rule 110, submitted on June 30, 1972, and previously approved under 40 CFR 52.223 (37 FR 19812).

(25) San Luis Obispo County APCD.

(i) Rule 107, submitted on November 10, 1976.

(ii) Rule 102, submitted on February 21, 1972, and previously approved under 40 CFR 52.223 (37 FR 10842).

(26) Shasta County APCD.

(i) Rule 3:10, submitted on July 19, 1974.

(ii) Rule 3:10, submitted on June 30, 1972, and previously approved under 40 CFR 52.223 (37 FR 19812).

(27) Sierra County APCD.

(i) Rule 51, submitted on June 30, 1972, and previously approved under 40 CFR 52.223 (37 FR 19812), and Rule 203(j), submitted on January 10, 1975, and previously approved under 40 CFR 52.223 (42 FR 23805).

(ii) Rule 404, submitted on June 6, 1977.

(28) Southern California APCD.

(i) Rule 430, submitted on February 10, 1977.

(29) Stanislaus County APCD.

(i) Rule 110, submitted on June 30, 1972, and previously approved under 40 CFR 52.223 (37 FR 19812), and Rule 110, submitted on July 19, 1974.

(30) Tehama County APCD.

(i) Rule 417, submitted on July 19, 1974.

(ii) Rule 4:1g, submitted on June 30, 1972, and previously approved under 40 CFR 52.223 (37 FR 19812).

(31) Trinity County APCD.

(i) Rule 540, submitted on November 10, 1976.

(ii) Rule 44, submitted on June 30, 1972, and previously approved under 40 CFR 52.223 (37 FR 19812).

(32) Tulare County APCD.

(i) Rules 111 and 402(f), submitted on November 10, 1976.

(33) Tuolumne County APCD.

(i) Rule 404, submitted on February 10, 1977, and Rule 402(f), submitted on June 30, 1972, and previously approved under 40 CFR 52.223.

(34) Ventura County APCD.

(i) Rule 32, submitted on July 19, 1974.

(ii) Rule 32, submitted on June 30, 1972, and previously approved under 40 CFR 52.223 (37 FR 19812).

(35) Yuba County APCD.

(i) Rule 4.5, submitted on July 25, 1973.

* * * * *

19. In section 52.272, a sentence is added to the introduction text of paragraph (a), paragraphs (a)(1) through (a)(5) are revised, and all other paragraphs (a)(6) through (a)(9) are added to read as follows:

§ 52.272 Research operations exemptions.

(a) * * * Therefore, the following regulations are disapproved:

(1) Bay Area APCD.

(i) Regulation 2, Division 1, sections 1214 to 1214.3, submitted on July 25, 1973.

(ii) Regulation 3, Division 1, sections 1205 to 1205.3, submitted on July 25, 1973.

(2) El Dorado County APCD.

(i) Rule 203(D), submitted on November 4, 1977.

(3) Great Basin Unified APCD.

(i) Rule 423, submitted on November 4, 1977.

(4) Los Angeles County APCD.

(i) Rule 441, submitted on June 6, 1977.

(5) Placer County APCD.

(i) Rule 203(D), submitted on October 13, 1977.

(6) Riverside County APCD.

(i) Rule 441, submitted on June 6, 1977.

(7) Sacramento County APCD.

(i) Rule 30, submitted on January 22, 1974.

(8) San Bernardino County APCD.

(i) Rule 441, submitted on June 6, 1977.

(9) Southern California APCD.

(i) Rule 441, submitted on August 2, 1976.

20. In section 52.273, paragraphs (a)(1) through (a)(9) and (b)(1) through (b)(9) are revised, and all other paragraphs (a)(10) through (a)(25) and (b)(10) through (b)(18) are renumbered and revised to read as follows:

§ 52.273 Open burning.

(a) * * *

(1) Amador County APCD.

(i) Rules 308 and 312, submitted on April 21, 1976.

(ii) Rule 304, submitted on October 13, 1977.

(2) Calaveras County APCD.

(i) Rules 304 and 322, submitted on October 13, 1977.

(3) Del Norte County APCD.

(i) Rule 410(c)(2) and the following portions of Regulation 2: General prohibitions (all of page 1), paragraph (f) of Article I, paragraphs (f) and (g) of Article V, and paragraph (f) of Article VI, submitted on November 10, 1976.

(4) El Dorado County APCD.

(i) Rules 302(C), 304, 307, 319, and 322, submitted on November 4, 1977.

(5) Fresno County APCD.

(i) Rules 416.1(e)(1), (e)(3), and (e)(4), submitted on October 23, 1974.

(ii) Rule 416.1(c)(1), submitted on June 30, 1972, and previously approved under 40 CFR 52.223 (37 FR 19812).

(6) Humboldt County APCD.

(i) Rule 410(c)(2) and the following portions of Regulation 2: General prohibitions (all of page 1), paragraph (f) of Article I, paragraphs (f) and (g) of Article V, and paragraph (f) of Article VI, submitted on November 10, 1976.

(7) Kern County APCD.

(i) Rule 417(I)(A), submitted on November 10, 1976.

(8) Madera County APCD.

(i) Rules 416.1(e)(1), (e)(3), and (e)(4), submitted on January 10, 1975.

(ii) Rule 416.1(c)(1), submitted on June 30, 1972, and previously approved under 40 CFR 52.223 (37 FR 19812).

(9) Mariposa County APCD.

(i) Rules 302(C), 304, 319, and 322, submitted on June 6, 1977.

(10) Mendocino County APCD.

(i) Rule 410(c)(2) and the following portions of Regulation 2: General prohibitions (all of page 1), paragraph (f) of Article I, paragraphs (f) and (g) of Article V, and paragraph (f) of Article VI, submitted on November 10, 1976.

(11) Merced County APCD.

(i) Rule 416(h), submitted on August 2, 1976.

(ii) Rules 416.1(III)(A), (V)(A), (V)(B), (V)(C), and (V)(D), submitted on August 2, 1976. (Rule 416.1(c)(2), submitted on June 30, 1972, and previously approved, is retained. Rule 416.1(a)(1), submitted on June 30, 1972, and previously approved, is retained for the purpose of enforcing Rule 416.1(c)(2).)

(12) Monterey Bay Unified APCD.

(i) Rules 409(a), 409(a)(5), and 410(b)(1), submitted on January 10, 1975.

(13) Nevada County APCD.

(i) Rules 302(C), 307, 314, and 322, submitted on April 10, 1975.

(ii) Rules 304 and 319, submitted on June 6, 1977.

(14) Northern Sonoma County APCD.

(i) Rule 410(c)(2) and the following portions of Regulation 2: General prohibitions (all of page 1), paragraph (f) of Article I, paragraphs (f) and (g) of Article V, and paragraph (f) of Article VI, submitted on November 10, 1976.

(15) Placer County APCD.

(i) Rules 302(C), 302(G), 304, 307, 314, 319, and 322, submitted on October 13, 1977.

(16) Plumas County APCD.

(i) Rule 314, submitted on January 10, 1975.

(ii) Rules 302(C), 304, 307, 319, and 322, submitted on June 6, 1977.

(17) Sacramento County APCD.

(i) Rule 96(a), submitted on November 10, 1976.

(ii) Rule 96(a), submitted on November 4, 1977.

(18) San Joaquin County APCD.

(i) Rule 402(e), submitted on November 10, 1976.

(ii) Rule 416.1(c)(1), submitted on June 30, 1972, and previously approved under 40 CFR 52.223 (37 FR 19812).

(iii) Rules 416.1(D)(1) and (D)(2), submitted on October 23, 1974.

(19) Santa Barbara County APCD.

(i) Rules 40(4)(a) and 40(4)(1), submitted on July 25, 1973. (The analogous Rules 40(4)(a) and 40(4)(g), previously approved in the February 21, 1972 submittal, are retained.) Rule 40(4)(c), submitted on July 25, 1973, is also disapproved.

(ii) Rule 22, submitted on January 22, 1974. (The analogous Rule 22, previously approved in the February 21, 1972 submittal, is retained.) Rules 24.1 and 24.2, submitted on January 22, 1974, are also disapproved.

(20) Shasta County APCD.

(i) Rule 2:6, sections (1)(b)(iii) (a ,b, and d), (1)(c)(viii), 2(c), 3(f), 4(e), 5(c), and 5(d). (Previously approved Rule 2:6, sections (2)(c), (3)(f), and (4)(e), submitted on July 19, 1974, are retained.)

(21) Sierra County APCD.

(i) Rules 302(C), 319, and 322, submitted on June 6, 1977.

(22) Trinity County APCD.

(i) Rule 410(c)(2) and the following portions of Regulation 2: General prohibitions (all of page 1), paragraph (f) of Article I, paragraphs (f) and (g) of Article V, and paragraph (f) of Article VI, submitted on November 10, 1976.

(23) Tulare County APCD.

(i) Rule 402(e), submitted on November 10, 1976.

(ii) Section 417(III)(A), submitted on June 30, 1972, and previously approved under 40 CFR 52.223 (37 FR 19812).

(iii) Section 417.1(e)(1), (e)(3), and (e)(4), submitted on January 10, 1975.

(24) Tuolumne County APCD.

(i) Rule 322, submitted on February 10, 1977.

(25) Yolo-Solano APCD.

(i) Rules 2.8(c) (4) and (5), 6.3, and 6.5(a), submitted on July 25, 1973.

(ii) Rules 6.1(a), (e)(6), and (g), submitted on January 10, 1975. (Rules 4.1 (a) and (g), submitted on February 21, 1972, and previously approved under 40 CFR 52.223, are retained.)

(b) * * *

(1) Del Norte County APCD.

(i) Regulation 2, Article I, paragraph (e), submitted on November 10, 1976.

(ii) Rule 410(c)(2), submitted on May 7, 1979.

(2) Fresno County APCD.

(i) Rule 416.1(c)(1), submitted on October 23, 1974.

(ii) Rule 416.1(g), submitted on November 4, 1977.

(3) Humboldt County APCD.

(i) Regulation 2, Article I, paragraph (e), submitted on November 10, 1976.

(ii) Rule 410(c)(2), submitted on May 7, 1979.

(4) Imperial County APCD.

(i) Rule 422, submitted on November 4, 1977. (The requirements of Rule 115, submitted on February 21, 1972, and previously approved under 40 CFR 52.223, are retained as applicable to the burning of wood waste.)

(ii) Regulation VII (Rules 701 to 706), submitted on November 4, 1977. (Regulation VII (Rules 200 to 206), submitted on July 25, 1973 and previously approved under 40 CFR 52.223, is retained.)

(5) Kings County APCD.

(i) Rules 416.1 and 417.1, submitted on November 4, 1977.

(6) Lake County APCD.

(i) Sections 435, 436, 1003, and 1200(A), submitted on February 10, 1977.

(ii) Section 435, submitted on January 2, 1979.

(7) Los Angeles County APCD.

(i) Rule 444, submitted on June 6, 1977. (Rules 57.1, 57.2, 57.3, and 57.4, submitted on June 30, 1972, and previously approved under 40 CFR 52.223, are retained.)

(8) Madera County APCD.

(i) Rule 416.1(c)(1), submitted on January 10, 1975.

(9) Mendocino County APCD.

(i) Regulation 2, Article I, paragraph (e), submitted on November 10, 1976.

(ii) Rule 410(c)(2), submitted on May 7, 1979.

(10) Merced County APCD.

(i) Rule 416.1(I)(A)(2), submitted on August 2, 1976.

(11) Northern Sonoma County APCD.

(i) Regulation 2, Article I, paragraph (e), submitted on November 10, 1976.

(ii) Rule 410(c)(2), submitted on may 7, 1979.

(12) San Bernardino County Desert APCD.

(i) Rule 444 and the definition of "Agricultural Burning" in Rule 102, submitted on November 4, 1977. (Rule 57, submitted on February 21, 1972, and previously approved under 40 CFR 52.223, is retained.)

(13) San Diego County APCD.

(i) Rules 102(e) and 103(g), submitted on October 13, 1977.

(14) San Luis Obispo County APCD.

(i) Rule 501(B), submitted on November 10, 1976, and Rule 501(A)(7), submitted on November 4, 1977. (Previously approved Rule 115(2), submitted on February 21, 1972, is retained.)

(15) Santa Barbara County APCD.

(i) Rules 2(b), 40(3), and 40(4)(e), submitted on July 25, 1973. (Analogous Rules 2(b), 40(3), and 40(4)(c), submitted

on February 21, 1972, and previously approved, are retained.)

(16) Shasta County APCD.

(i) Rule 2:8, submitted on October 13, 1977. (Rule 2:8, submitted on July 19, 1974, and July 22, 1975, and previously approved, is retained.)

(17) Siskiyou County APCD.

(i) Rule 4.3(2), submitted on January 2, 1979.

(18) Trinity County APCD.

(i) Regulation 2, Article I, paragraph (e), submitted on November 10, 1976.

(ii) Rule 410(c)(2), submitted on May 7, 1979.

21. In section 52.275, paragraphs (a)(1) and (2) and (b)(1) through (b)(5) are revised, and paragraphs (b)(6) through (b)(14) are added to read as follows:

§ 52.275 Particulate matter control.

(a) * * *

(1) Lake County APCD.

(i) Part III–50 and Part V–1B, submitted on October 23, 1974, and previously approved under 40 CFR 52.223.

(2) San Luis Obispo County APCD.

(i) Rule 113, submitted on February 21, 1972, and previously approved under 40 CFR 52.223.

(b) * * *

(1) Amador County APCD.

(i) Rules 211 and 212, submitted on April 21, 1976. (Regulation V, Rules 13 and 14, submitted on June 30, 1972, and previously approved, are retained.)

(ii) Rules 207 and 212, submitted on October 13, 1977. (The analogous Rules 10 and 14 of Regulation V, submitted on June 30, 1972, and previously approved, are retained and shall remain in effect for Federal enforcement purposes.)

(2) Calaveras County APCD.

(i) Rule 211, submitted on October 13, 1977. (Rule 211, submitted on July 22, 1975, and previously approved, is retained and shall remain in effect for Federal enforcement purposes.)

(3) Del Norte County APCD.

(i) Rules 410(c)(7) and 420(e), submitted on November 10, 1976.

(ii) Rules 420(e) and (f), submitted on November 4, 1977.

(4) El Dorado County APCD.

(i) Rule 212, submitted on April 10, 1975, and Rule 211, submitted on August 2, 1976. (The analogous Rule 55, submitted on February 21, 1972, and previously approved, is retained and shall remain in effect for Federal enforcement purposes.)

(5) Humbolt County APCD.

(i) Rules 410(c)(7) and 420(e), submitted on November 10, 1976.

(ii) Rules 420(e) and (f), submitted on November 4, 1977.

(6) Mariposa County APCD.

(i) Rule 211, submitted on June 6, 1977. (Rule 211, submitted on January 10, 1975, and previously approved, is retained and shall remain in effect for Federal enforcement purposes.)

(7) Mendocino County APCD.

(i) Rule 410(c)(7), submitted on November 10, 1976.

(ii) Rules 420(e) and (f), submitted on November 4, 1977.

(8) Nevada County APCD.

(i) Rule 212, submitted on April 10, 1975, and Rule 211, submitted on April 21, 1976. (Rule 52.1, submitted on June 30, 1972, and previously approved, is retained and shall remain in effect for Federal enforcement purposes.)

(9) Northern Sonoma County APCD.

(i) Rule 420(e), submitted on november 10, 1976.

(ii) Rules 420(e) and (f), submitted on October 13, 1977.

(10) Placer County APCD.

(i) Rule 211, submitted on October 13, 1977. (The analogous Rule 61, submitted on June 30, 1972, and previously approved, is retained and shall remain in effect for Federal enforcement purposes.)

(11) Plumas County APCD.

(i) Rule 211, submitted on June 6, 1977. (The analogous Rule 211, submitted on January 10, 1975, and previously approved, is retained and shall remain in effect for Federal enforcement purposes.)

(12) San Luis Obispo County APCD.

(i) Rule 403, submitted on November 10, 1976.

(13) Sierra County APCD.

(i) Rule 211, submitted on June 6, 1977. (The analogous Rule 211, submitted on January 10, 1975, and previously approved, is retained and shall remain in effect for Federal enforcement purposes.)

(14) Trinity County APCD.

(i) Rules 410(c)(7) and 420(e), submitted on November 10, 1976.

(ii) Rules 420(e) and (f), submitted on November 4, 1977.

22. In section 52.280, paragraph (a)(1) is revised to read as follows:

§ 52.280 Fuel burning equipment.

(a) * * *

(1) Mountain Counties Intrastate AQCR:

* * * * *

PART 81—DESIGNATION OF AREAS FOR AIR QUALITY PLANNING PURPOSES

Subpart B—Designation of Air Quality Control Regions

23. In section 81.21, the title and description are revised to read as follows:

§ 81.21 San Francisco Bay area intrastate air quality control region.

* * * * *

In the State of California: Alameda County, Contra Costa County, Marin County, Napa County; San Francisco County, San Mateo County, Santa Clara County.

Solano County—that portion of Solano County which lies south and west of a line described as follows:

Beginning at the intersection of the westerly boundary of Solano County and the ¼ section line running east and west through the center of Section 34, T. 6 N., R. 2 W., M.D.B.&M., thence east along said ¼ section line to the east boundary of Section 36, T. 6 N., R. 2 W., thence south ½ mile and east 2.0 miles, more or less, along the west and south boundary of Los Putos Rancho to the northwest corner of Section 4, T. 5 N., R. 1 W., thence east along a line common to T. 5 N. and T. 6 N. to the northeast corner of Section 3, T. 5 N., R. 1 E., thence south along section lines to the southeast corner of Section 10, T 3 N., R. 1 E., thence east along section lines to the south ¼ corner of Section 8, T. 3 N., R. 2 E., thence east to the boundary between Solano and Sacramento Counties.

Sonoma County—that portion of Sonoma County which lies south and east of a line described as follows:

Beginning at the southeasterly corner of the Rancho Estero Americano, being on the boundary line between Marin and Sonoma Counties, California; thence running northerly along the easterly boundary line of said Rancho Estero Americano to the northeasterly corner thereof, being an angle corner in the westerly boundary line of Rancho Canada de Jonive; thence running along said boundary of Rancho Canada de Jonive westerly, northerly and easterly to its intersection with the easterly line of Graton Road; thence running along the easterly and southerly line of Graton Road, northerly and easterly to its intersection with the easterly line of Sullivan Road; thence running northerly along said easterly line of Sullivan Road to the southerly line of Green Valley Road; thence running easterly along the said southerly line of Green Valley Road and easterly along the southerly line of State Highway 116, to the westerly line of Vine Hill Road; thence running along the westerly and northerly line of Vine Hill Road, northerly and easterly to its intersection with the westerly line of Laguna Road; thence running northerly along the westerly line of Laguna Road and the northerly projection thereof to the northerly line of Trenton Road; thence running westerly along the northerly line of said Trenton Road to the easterly line of Trenton-Healdsburg Road; thence running northerly along said easterly line of Trenton-Healdsburg Road to the easterly line of Eastside Road; thence running northerly along said easterly line of Eastside Road to its intersection with the southerly line of Rancho Sotoyome; thence running easterly along said southerly line of Rancho Sotoyome to its intersection with the township line common to Townships 8 and 9 North, Mt.

Diablo Base and Meridian; thence running easterly along said township line to its intersection with the boundary line between Sonoma and Napa Counties, State of California.

24. In section 81.161, the description is revised to read as follows:

§ 81.161 North coast intrastate air quality control region.

* * * * *

In the State of California: Del Norte County, Humboldt County, Mendocino County, Trinity County.

Sonoma County—that portion of Sonoma County which lies north and west of a line described as follows:

Beginning at the southeasterly corner of the Rancho Estero Americano, being on the boundary line between Marin and Sonoma counties, California; thence running northerly along the easterly boundary line of said Rancho Estero Americano to the northeasterly corner thereof, being an angle corner in the westerly boundary line of Rancho Canada de Jonive; thence running along said boundary of Rancho Canada de Jonive westerly, northerly and easterly to its intersection with the easterly line of Graton Road; thence running along the easterly and southerly line of Graton Road, northerly and easterly to its intersection with the easterly line of Sullivan Road; thence running northerly along said easterly line of Sullivan Road to the southerly line of Green Valley Road; thence running easterly along the said southerly line of Green Valley Road and easterly along the southerly line of State highway 116, to the westerly line of Vine Hill Road; thence running along the westerly and northerly line of Vine Hill Road, northerly and easterly to its intersection with the westerly line of Laguna Road; thence running northerly along the westerly line of Laguna Road and the northerly projection thereof to the northerly line of Trenton Road; thence running westerly along the northerly line of said Trenton Road to the easterly line of Trenton-Healdsburg Road; thence running northerly along said easterly line of Trenton-Healdsburg Road to the easterly line of Eastside Road; thence running northerly along said easterly line of Eastside Road to its intersection with the southerly line of Rancho Sotoyome; thence running easterly along said southerly line of Rancho Sotoyome to is intersection with the township line common to Townships 8 and 9 North, Mt. Diablo Base and Meridian; thence running easterly along said township line to its intersection with the boundary line between Sonoma and Napa Counties, State of California.

25. In section 81.162, the description is revised to read as follows:

§81.162 Northeast Plateau intrastate air quality control region.

* * * * *

In the State of California: Lassen County, Modoc County, Siskiyou County.

Shasta County—that portion of Shasta County which lies east and north of a line described as follows:

Beginning at the Shasta-Siskiyou County boundary and running south along the range line common to R. 2 E. and R. 1 E., Mt. Diablo Base and Meridian, to the southwest corner of T. 35 N., R. 2 E; then east along the township line common to T. 35 N. and T. 34 N. to the northwest corner of T. 34 N., R. 3 E.; then south along the range line common to R. 3 E. and R. 2 E. to the southwest corner of T. 33 N., R. 3 E.; then east along the township line common to T. 33 N. and T. 32 N. to the northwest corner of T. 32 N., R. 4 E.; then south along the range line common to R. 4 E. and R. 3 E. to the point of intersection with the northwest corner of the Lassen Volcanic National Park boundary; then east along the north boundary of Lassen Volcanic National Park to the point of intersection with the Lassen-Shasta County boundary.

26. In section 81.163, the description is revised to read as follows:

§ 81.163 Sacramento Valley intrastate air quality control region.

* * * * *

In the State of California: Butte County, Colusa County, Glenn County, Sacramento County, Sutter County, Tehama County, Yolo County, Yuba County.

Shasta County—that portion of Shasta County which lies west and south of a line described as follows:

Beginning at the Shasta-Siskiyou County boundary and running south along the range line common to R. 2 E. and R. 1 E., Mt. Diablo Base and Meridian, to the southwest corner of T. 35 N., R. 2 E.; then east along the township line common to T. 35 N. and T. 34 N. to the northwest corner of T. 34 N., R. 3 E.; then south along the range line common to R. 3 E. and R. 2 E. to the southwest corner of T. 33 N., R. 3 E.; then east along the township line common to T. 33 N. and T. 32 N. to the northwest corner of T. 32 N., R. 4 E.; then south along the range line common to R. 4 E. and R. 3 E. to the point of intersection with the northwest corner of the Lassen Volcanic National Park boundary; then east along the north boundary of Lassen Volcanic National Park to the Point of intersection with the Lassen-Shasta County boundary.

Solano County—that portion of Solano County which lies north and east of a line described as follows:

Beginning at the inersection of the westerly boundary of Solano County and the ¼ section line running east and west through the center of Section 34, T. 6 N., R. 2 W., M.D.B.&M., thence east along said ¼ section line to the east boundary of Section 36, T. 6 N., R. 2 W., thence south ½ mile and east 2.0 miles, more or less, along the west and south boundary of Los Putos Rancho to the northwest corner of Section 4, T. 5 N., R. 1 W., thence east along a line common to T. 5 N. and T. 6 N. to the northeast corner of Section 3, T. 5 N., R. 1 E., thence south along section lines to the southeast corner of Section 8, T. 3 N., R. 2 E., thence east to the boundary between Solano and Sacramento Counties.

27. In section 81.164, the description is revised to read as follows:

§ 81.164 San Diego intrastate air quality control region.

* * * * *

In the State of California: San Diego County.

28. In section 81.165, the description is revised to read as follows:

§ 81.165 San Joaquin Valley Intrastate Air Quality Control Region.

* * * * *

In the State of California: Fresno County, Kings County, Madera County, Merced County, San Joaquin County, Stanislaus County, Tulare County.

Kern County—that portion of Kern County which lies west and north of a line described as follows:

Beginning at the Kern-Los Angeles County boundary and running north and east along the northwest boundary of the Rancho La Liebre Land Grant to the point of intersection with the range line common to R. 15 W. and R. 16 W., San Bernardino Base and Meridian; then north along the range line to the northwest corner of Section 2, T. 32 S., R. 32 E., Mount Diablo Base and Meridian; then east along the township line common to T. 32 S. and T. 31 S.; then north along the range line common to R. 35 E. and R. 34 E.; then east along the township line common to T. 29 S. and T. 28 S.; then north along the range line common to R. 36 E. and R. 35 E.; then east along the township line common to T. 28 S. and T. 27 S.; then north along the range line common to R. 37 E. and R. 36 E. to the Kern-Tulare County boundary.

29. In section 81.167, the description is revised to read as follows:

§ 81.167 Southeast Desert Intrastate Air Quality Control Region.

* * * * *

In the State of California: Imperial County.

Kern County—that portion of Kern County which lies east and south of a line described as follows:

Beginning at the Kern-Los Angeles County boundary and running north and east along the northwest boundary of the Rancho La Liebre Land Grant to the point of intersection with the range line common to R. 15 W. and R. 16 W., San Bernardino Base and Meridian; then north along the range line to the northwest corner of Section 2, T. 32 S., R. 32 E., Mount Diablo Base and Meridian; then east along the township line common to T. 32 S. and T. 31 S.; then north along the range line common to R. 35 E. and R. 34 E.; then east along the township line common to T. 29 S. and T. 28 S.; then north along the range line common to R. 36 E. and R. 35 E.; then east along the township line common to T. 28 S. and T. 27 S.; then north along the range line common to R. 37 E. and R. 36 E. to the Kern-Tulare County boundary.

Los Angeles County—that portion of Los Angeles County which lies north and east of a line described as follows:

Beginning at the Los Angeles-San Bernardino County boundary and running west along the township line common to T. 3 N. and T. 2 N., San Bernardino Base and Meridian; then north along the range line common to R. 8 W. and R. 9 W.; then west along the township line common to T. 4 N. and T. 3 N.; then north along the range line common to R. 12 W. and R. 13 W. to the southeast corner of Section 12, T. 5 N.; R. 13 W.; then west along the south boundaries of Sections 12, 11, 10, 9, 8, and 7, T. 5 N., R. 13 W. to the boundary of the Angeles National Forest which is collinear with the range line common to R. 13 W. and R. 14 W.; then north and west along the Angeles National Forest boundary to the point of intersection with the township line common to T. 7 N. and T. 6 N. (point is at the northwest corner of Section 4 in T. 6 N., R. 14 W.); then west along the township line common to T. 7 N. and T. 6 N.; then north along the range line common to R. 15 W. and R. 16 W. to the southeast corner of Section 13, T. 7 N., R. 16 W.; then along the south boundaries of Sections 13, 14, 15, 16, 17, and 18, T. 7 N., R. 16 W.; then north along the range line common to R. 16 W. and R. 17 W. to the north boundary of the Angeles National Forest (collinear with the township line common to T. 8 N. and T. 7 N.); then west and north along the Angeles National Forest boundary to the point of intersection with the south boundary of the Rancho La Liebre Land Grant; then west and north along this land grant boundary to the Los Angeles-Kern County boundary.

Riverside County—that portion of Riverside County which lies east of a line described as follows:

Beginning at the Riverside-San Diego County boundary and running north along the range line common to R. 4 E. and R. 3 E., San Bernardino Base and Meridian; then east along the township line common to T. 8 S. and T. 7 S.; then north along the range line common to R. 5 E. and R. 4 E.; then west along the township line common to T. 6 S. and T. 7 S. to the southwest corner of Section 34, T. 6 S., R. 4 E.; then north along the west boundaries of Sections 34, 27, 22, 15, 10, and 3, T. 6 S., R. 4 E.; then west along the township line common to T. 5 S. and T. 6 S.; then north along the range line common to R. 4 E. and R. 3 E.; then west along the south boundaries of Sections 13, 14, 15, 16, 17, and 18, T. 5 S., R. 3 E.; then north along the range line common to R. 2 E. and R. 3 E.; then west along the township line common to T. 4 S. and T. 3 S. to the intersection with the southwest boundary of partial Section 31, T. 3 S., R. 1 W.; then northwest along that line to the intersection with the range line common to R. 2 W. and R. 1 W.; then north to the Riverside-San Bernardino County line.

San Bernardino County—that portion of San Bernardino County which lies east and north of a line described as follows:

Beginning at the San Bernardino-Riverside County boundary and running north along the range line common to R. 3 E. and R. 2 E., San Bernardino Base and Meridian; then west along the township line common to T. 3 N. and T. 2 N. to the San Bernardino-Los Angeles County boundary.

30. Section 81.273 is added as follows:

§ 81.273 Lake County Intrastate Air Quality Control Region.

The Lake County Intrastate Air Quality Control Region consists of the territorial area encompassed by the boundaries of the following jurisdictions or described area (including the territorial area of all municipalities (as defined in section 302(f) of the Clean Air Act, 42 U.S.C. 1857h(f)) geographically located within the outermost boundaries of the area so delimited):

In the State of California: Lake County.

31. Section 81.274 is added as follows:

§ 81.274 Mountain Counties Intrastate Air Quality Control Region.

The Mountain Counties Intrastate Air Quality Control Region consists of the territorial area encompassed by the boundaries of the following jurisdictions or described area (including the territorial area of all municipalities (as defined in section 302(f) of the Clean Air Act, 42 U.S.C. 1857h(f)) geograpically located within the outermost boundaries of the area so delimited):

In the State of California: Amador County, Calaveras County, Mariposa County, Nevada Country, Plumas County, Sierra County, Tuolumne County.

El Dorado County—all of El Dorado County except that portion within the drainage area naturally tributary to Lake Tahoe including said Lake.

Placer County—all of Placer County except the following described area:

That portion of Placer County within the drainage area naturally tributary to Lake Tahoe including said Lake, plus that area in the vicinity of the head of the Truckee River described as follows: commencing at the point common to the aforementioned drainage area crestline and the line common to Townships 15 North and 16 North, Mount Diablo Base and meridian (M.D.B.&M.), and following that line in a westerly direction to the northwest corner of Section 3, Township 15 North, Range 16 East, M.D.B.&M., thence south along the west line of Sections 3 and 10, Township 15 North, Range 16 East, M.D.B.&M., to the intersection with the said drainage area crestline, thence following the said drainage area boundary in a southeasterly, then northeasterly direction to and along the Lake Tahoe Dam, thence following the said drainage area crestline in a northeasterly, then northwesterly direction to the point of beginning.

32. Section 81.275 is added as follows:

§ 81.275 Lake Tahoe Intrastate Air Quality Control Region.

The Lake Tahoe Intrastate Air Quality Control Region consists of the territorial area encompassed by the boundaries of the following jurisdictions or described area (including the territorial area of all municipalities (as defined in Section 302(f) of the Clean Air Act, 42 U.S.C. 1857h(f)) geographically located within the outermost boundaries of the area so delimited:

In the State of California:

El Dorado County—that portion of El Dorado County within the drainage area naturally tributary to Lake Tahoe including said Lake.

Placer County—that portion of Placer County within the drainage area naturally tributary to Lake Tahoe including said Lake, plus that area in the vicinity of the head of the Truckee River described as follows: commencing at the point common to the aforementioned drainage area crestline and the line common to Townships 15 North and 16 North, Mount Diablo Base and Meridian (M.D.B.&M.), and following that line in a westerly direction to the northwest corner of Section 3, Township 15 North, Range 16 East, M.D.B.&M., thence south along the west line of Sections 3 and 10, Township 15 North, Range 16 East, M.D.B.&M., to the intersection with the said drainage area crestline, thence following the said drainage area boundary in a southeasterly, then northeasterly direction to and along the Lake Tahoe Dam, thence following the said drainage area crestline in a northeasterly, then northwesterly direction to the point of beginning.

Public Contracts and Property Management; Federal Standards for Federally Funded Grants and Agreements

Correction

In FR Doc. 80-39059 appearing in the issue for Tuesday, December 16, 1980, make the following corrections:

(1) On page 82828, in the first column, in the "**SUMMARY**", 2nd paragraph, in the 17th line, "Circular A-122" should have read "OMB Circular A-122".

(2) On page 82828, in the third column, in the fourth line, "70.216-1(a)" should have read "70.216a-1(a)".

(3) On page 82828, in the third column, in paragraph i, in the first line, the word "required" should have been "requires".

(4) On page 82834 in the middle column, in paragraph (7), (contract clause contained in § 29-70.216-13(b)(6)), in the 18th line, the word "which" should have read "with".

(5) On page 82838, in the first column, in § 29–70.216b–1, paragraph (c)(2), in the last line "sec. 122(k)" should have read "sec. 121(k)".

BILLING CODE 1505–01–M

Office of Federal Contract Compliance Programs

41 CFR Part 60–1

Payment of Membership Fees and Other Expenses to Private Organizations

AGENCY: Office of Federal Contract Compliance Programs, Labor.

ACTION: Final rule.

SUMMARY: This rule amends 41 CFR Part 60–1 by adding a new § 60–1.11 to prohibit Federal contractors under Executive Order 11246, as amended, from paying membership fees and other expenses for employee participation in discriminatory private clubs or organizations except where the contractor can provide evidence that such restrictions or limitations do not abridge the promotional opportunities, status, compensation or other terms and conditions of employment of those of its employees barred from membership because of their race, color, religion, sex, or national origin. The rule requires OFCCP to provide contractors with the opportunity to present evidence in defense of their actions, and requires that contractors' fee payment policies be administered without regard to employees' race, color, religion, sex, or national origin. The rule is designed to address the problems facing employees excluded from contractor sponsored membership in discriminatory private clubs or organizations because of their race, color, religion, sex, or national origin, and to ensure that the contractor conducts business related activities and provides employee benefits in an environment free of discrimination.

EFFECTIVE DATE: February 17, 1981.

FOR FURTHER INFORMATION CONTACT: James W. Cisco, Acting Director, Division of Program Policy, Office of Federal Contract Compliance Programs, U.S. Department of Labor, Washington, D.C. 20210, telephone (202) 523–9426.

SUPPLEMENTARY INFORMATION: The Office of Federal Contract Compliance Programs (OFCCP) administers three programs which prohibit employment discrimination by Federal contractors and subcontractors. Executive Order 11246, as amended, prohibits employment discrimination based on race, color, religion, sex, and national origin; Section 503 of the Rehabilitation Act of 1973 prohibits handicap-based discrimination; and Section 402 of the Vietnam Era Veterans' Readjustment Assistance Act of 1974 prohibits discrimination based on veteran status.

The rule published today covers practices under Executive Order 11246, but not under either Sections 402 or 503. The matter of payment of membership fees first arose under the Executive Order, and most concerns have revolved around the employment impact of exclusion from discriminatory clubs upon minorities and women. Only one commentator expressed the opinion that coverage of the rule should be extended to qualified handicapped persons under Section 503. However, if OFCCP becomes aware of problems in this area, consideration will be given to further rulemaking.

OFCCP has no jurisdiction over the membership practices of private organizations, and does not seek any through this rule. The regulation does not prohibit contractors from making direct contributions unrelated to employment to charitable, service, or other private organizations. Neither does the regulation prohibit employees from maintaining membership in any organization for which they elect to pay membership or other fees not reimbursed by the contractor.

I. Background—Summary of the Proposed Rule.

The proposal published January 22, 1980 (45 FR 4953) would have made it a violation of Executive Order 11246 for contractors to pay membership fees or other expenses to organizations which bar, restrict, or limit membership on the basis of race, color, religion, sex, or national origin where such restrictions or limitations impacted upon employees' promotional opportunities, status, compensation, or other terms and conditions of employment. The proposal would have established a procedure through which the contractor would conduct an analysis of its membership fee payment policy to determine whether any employees were maintaining contractor sponsored membership in a discriminatory organization which conferred a business or professional advantage affecting excluded employees. Nothing in the proposal would have prohibited contractors from paying membership fees to organizations which confer no business or professional advantage.

The proposed regulation contained an analysis composed of five steps designed to enable the contractor to determine whether its fee payment policy was nondiscriminatory, which organizations to which it paid fees had discriminatory membership practices, which employees maintained employer paid memberships in such discriminatory organizations, whether these employees received any business or professional advantage by virtue of their membership in such discriminatory organizations, and whether such advantage impacted upon the employment opportunities or status of those similarly situated. The sixth step of the process would have required the cessation of payments to any discriminatory organization which the contractor's analysis determined to be conferring a business or professional advantage having an employment impact.

II. Analysis of Comments Received

During the comment period ending March 24, 1980, OFCCP received an unduplicated count of 203 comments broken down into the following categories of commentators: members of Congress or the Senate, 4; women's groups, 6; minority groups, 2; public interest groups, 4; religious groups, 3; service clubs, 21; other clubs, 31; club "industry" associations, 7; banks and savings and loan associations, 20; other contractors and companies, 15; contractor associations, 7; state agencies, 1; individuals, 82. Comments OFCCP considered as substantive numbered 35 of the unduplicated total. Of the 202 commentators expressing an opinion on the proposal, 41 supported the proposal, while 161 opposed it. OFCCP reviewed and considered comments received after the close of the comment period, but these are not reflected in the figures given above. The major concerns raised in the comments are considered below.

A. *Justification for the rule.* One of the most frequently expressed comments by opponents to the proposal was the belief that the proposal is unwarranted. While some of these commentators agreed that OFCCP had a role in prohibiting employment discrimination, they argued that the purpose of a contractor's payment of membership fees was not to discriminate in employment, but to further the contractor's business interests.

But membership fees are generally paid, to quote one corporate commentator, " as a perquisite and adjunct to the company's compensation program or for business purposes to contact officers [of other businesses] with the understanding that the membership will be used for business cultivation and direct business purposes." It is then reasonable to conclude that in furthering the business through membership, company

sponsored members further their own careers as well. It is also reasonable to conclude that those excluded from membership in clubs or organizations used to further the business are correspondingly impeded in advancing their careers in the same manner as their company sponsored member colleagues. Evidence gathered in various compliance reviews by the Department of the Treasury as a contract compliance agency, testimony provided before the Senate Committee on Banking, Housing and Urban Affairs, and information received by the Department of Labor both before and after the proposal's publication provide sufficient cause for OFCCP to conclude that exclusion from contractor sponsored membership in a discriminatory private organization may affect employment.

B. *Determining effects on employment.* The basis of the proposal was that employees provided with contractor sponsored membership in a discriminatory private organization receive an employment advantage not available to employees excluded from membership in the discriminatory organization. The analysis in proposed paragraph (b), through a progression of steps, was intended to identify those situations in which membership conferred an employment advantage leading to disparities in employment opportunities, status, compensation, or other terms and conditions of employment.

Paragraph (b)(4) would have required contractors to "determine any direct or indirect benefits received by employees from their membership in . . . exclusionary clubs or organizations which serve to enhance their employment opportunities or which give to them an employment or professional advantage over employees who are excluded from such membership."

To determine whether the employment advantage was accompanied by actual disparities in employment opportunities, the proposal contained a paragraph (b)(5), which required the contractor to "compare the promotion rate, compensation, and other job benefits of employees who maintain contractor sponsored membership in . . . exclusionary clubs or organizations with those of employees who are excluded from such clubs or organizations. . . ." In paragraph (b)(6) the contractor, "upon determining that there exists any employment or professional advantage," was to "immediately cease the reimbursement or payment of membership fees for participation in the exclusionary club or organization."

In speaking of proposed paragraph (b)(4), some commentators went to great lengths to produce hypothetical situations for which contractors would have difficulty determining whether the club conferred an employment advantage. Few other commentators on this paragraph spoke as much on the specifics of paragraph (b)(4) as on the reasons employers pay membership fees. Some opponents of the rule who answered questions relating to why contractors pay membership fees stated that they do not pay fees to confer any employment advantage or to discriminate, but instead to further business, make contacts, and establish relationships with potential customers—all activities which would be likely to have some effect upon the contractor sponsored employee's opportunities for career advancement.

Supporters of the rule found fault with proposed paragraph (b)(5). They believed that the comparison of promotion rates, compensation, etc. required by this paragraph would be meaningless because it could not consider the fact that two employees of unequal ability and perseverance could achieve the same level of success—one through contacts made at a discriminatory private club, the other through harder work and greater talent.

The fact that one employee would have had to work harder than the other to achieve the same level of success would indicate discrimination, but such discrimination would be hidden from the analysis in paragraph (b)(5). Other commentators simply believed that the procedure of (b)(5) was too complex to be feasible.

The analytical process of paragraph (b), particularly the payment cessation requirement of (b)(6), received criticism from many commentators because of their belief that it presumed the employer "guilty" of employment discrimination without any evidence of "guilt." Opponents believed that the existence of the opportunity to continue paying fees to discriminatory organizations upon establishing that no employment impact would result was insufficient assurance that the analysis raised no issue of "guilt" or "innocence."

As stated above, the purpose of the analysis was to provide a means of identifying those instances of fee payment which conferred a business or professional advantage having an effect on the employment opportunities or status of similarly situated employees. OFCCP, following the guidance provided by the Department of Justice, had concluded that such identification was necessary to restrict the impact of the regulation to those situations where employment was affected by the contractor's fee payment policy.

Partly because of the realization that it is the furtherance of business which is at the heart of fee payments, and partly because of the complexities associated with the analysis of the proposal, OFCCP has removed the analysis process of proposed paragraph (b), and has simply stated the conditions under which a violation of the Executive Order exists. The rule published today also ensures that "OFCCP shall provide the contractor with the opportunity to present evidence in defense of its actions" in implementing its membership fee policy.

C. *Determining discriminatory membership.* Paragraph (b) of the proposal contained a provision that required the contractor to determine which, if any, of the organizations to which payments are made maintain membership policies which bar, restrict, or limit membership on the basis of race, color, religion, sex, or national origin. Most of the 27 commentators expressing opinions on this portion of the proposed regulation were opposed to the requirement. They believed either that OFCCP intended contractors to "investigate" private organizations or that the provision provided insufficient guidance for contractors to know what was intended.

It was never the intention of OFCCP that either contractors or the Government would conduct "investigations" of private organizations. Although the determination procedure would have been left to contractors, OFCCP envisioned a simple process in which the contractor would generally determine an organization's membership practices by requesting a policy statement from an officer of the organization or by checking the organization's by-laws.

D. *Per se violation.* At the end of the preamble to the proposal appeared a note stipulating that EEOC disagreed with OFCCP's position regarding the regulation, and inviting "comment on the alternative position which, under § 703(a)(1) of Title VII of the Civil Rights Act of 1964, as amended, would absolutely prohibit payment by employers of fees to such discriminating clubs."

Seventeen commentators expressed opinions on the question EEOC raised. Although opposition to any rule in this area was generally widespread, 15 of the 17 commentators who specifically discussed the *per se* violation question

supported EEOC's position that contractors' payments of membership fees to a discriminatory organization should be prohitibed absolutely. These commentators viewed any contractor payment to any discriminatory organization as abetting discrimination. They believed that any employee excluded from contractor sponsored membership in a discriminatory organization would suffer diminished employment opportunities and status.

In its two opinions, however, the Department of Justice advised the Department of Labor that employment discrimination under Executive Order 11246 does not exist simply because a contractor pays membership fees for employee participation in a discriminatory organization. The 1976 opinion stated that the Department of Labor could not assume that all membership fee payments were made to clubs to transact business and make business contacts, and that therefore Labor could also not assume that membership in all clubs automatically affects promotion and advancement potential of employees. The 1977 opinion clarified Justice's earlier position by stating that the Department of Labor could assert that a contractor's payment of dues to a discriminatory organization violates Executive Order 11246 so long as the contractor is provided the opportunity to show that its policy and the effects of its policy on employment are nondiscriminatory. In electing to follow the advice of the Department of Justice on this issue of authority under the Executive Order, OFCCP in no way asserts that EEOC is similarly limited in interpreting Title VII.

E. *Exemption of types or organizations.* The proposal provided for no exemptions from the rule for either specific organizations or organizations of particular "types." Among the questions OFCCP asked in the preamble was whether any "types" of organizations should be exempted and how one would characterize an organization as being of a particular "type" (for example, a religious society, service club or social club).

Most of the comments advocating exemptions came from organizations or their industry associations. Although most of these commentators opposed promulgation of any rule, they sometimes qualified their opposition by stating that should OFCCP finalize a rule on membership fees, their type of organization should be exempt from the rule. Service clubs and their members were generally of the opinion that no connection between employment opportunity and membership in a service club could be shown, and that the rule would discourage employers from sponsoring their employees for membership. They expressed the opinion that the effect of the rule would be to diminish their memberships substantially, with resulting reduction in the services the community would receive. None of the two minority groups and only one of the six women's groups filing comments advocated an exemption for organizations established to increase the employment opportunities of women or minorities.

Some determination as to "type" would be necessary to categorize what kinds of organization should be exempt from the rule. Few commentators provided any guidance on how one determines whether an organization is of a particular "type" other than to say that the "type" of organization is dependent upon its purpose. Considering organizations as being of a particular "type" according to their purpose rather than their function, however, leaves unanswered the question of what consideration should be given to the effect that contractor sponsored membership in that organization might have upon employment.

In adopting a rule without exemptions, OFCCP recognizes that participation in various organizations will have varying impacts upon employment. Some organizations are established primarily to provide an environment in which to further business, and function to do so. Others are established for nonbusiness purposes, but have memberships and activities which function to further the business interests of their members. Others have neither business purposes nor functions. Therefore, the rule adopted today will not affect payments made to organizations when the contractor can demonstrate that no effect upon employment results.

III. The Rule Explained.

The rule adopted today is divided into two paragraphs. Paragraph (a) requires that the contractor's fee payment policy be applied without discrimination, and establishes the general principle that payment of membership fees and other expenses for participation in a discriminatory private club or organization is a "a violation of Executive Order 11246 except where the contractor can provide evidence that such restrictions or limitations do not abridge the promotional opportunities, status, compensation or other terms and conditions of employment of those of its employees barred from membership because of their race, color, religion, sex, or national origin." The paragraph also ensures that "OFCCP shall provide the contractor with the opportunity to present evidence in defense of its actions." Paragraph (b) requires the contractor to determine whether an organization to which it pays fees maintains a discriminatory membership policy or practice.

A. *Principle of the Rule.* Paragraph (a)(1) requires that the contractor administer its policy or practice of paying membership fees or other expenses for employee participation in private clubs or organizations without regard to the race, color, religion, sex, or national origin of employees. This paragraph merely applies the existing nondiscrimination requirements of Section 202(1) of the Executive Order to the specific policy or practice of paying membership fees.

Paragraph (a)(2) establishes that "payment or reimbursement by contractors of membership fees and other expenses for participation by their employees in a private club or organization which bars, restricts or limits its membership on the basis of race, color, religion, sex, or national origin constitutes a violation of Executive Order 11246 except where the contractor can provide evidence that such restrictions or limitations do not abridge the promotional opportunities, status, compensation or other terms and conditions of employment of those of its employees barred from membership because of their race, color, religion, sex, or national origin." The paragraph also ensures that "OFCCP shall provide the contractor with the opportunity to present evidence in defense of its actions."

As has been discussed above, OFCCP's assertion of violation arises from the conclusion that contractors pay membership fees and other expenses either to further the interests of the business or to provide benefits to employees, and that both types of actions have employment effects. The interests of the business may be furthered by the use of a club or organization in activities such as the following: Use of a club to confer with, transact business with, or entertain clients; use of a club to hold business meetings and company functions; use of the social activities of an organization to establish and maintain contacts on behalf of the contractor; or participation in activities of the organization to enhance the goodwill of the employer within the community.

Although not all employment benefits automatically affect one's employment opportunities, compensation, status, or other terms and conditions of employment, some benefits are career

enhancing. A career enhancing benefit is one which may advance the career or business interests of the employee, including meeting with members of the employee's profession or business, participating in activities which provide information on business related or professional fields (such as lectures on the employee's profession or on local business or the economy), or participating in activities designed to improve the employment or career opportunities of the employee (such as use of job banks, directories, libraries, etc. and participation in job seminars).

OFCCP does not expect, however, that membership in every club or organization will automatically abridge the terms and conditions of employment of employees or applicants excluded from membership. Therefore, the contractor is afforded the opportunity to provide evidence that no effect has resulted. In determining the adequacy of the contractor's demonstration of no effect, OFCCP will review any evidence the contractor may present, and compare this evidence against its own analyses for adverse impact, disparate treatment, or other evidence of employment effect.

B. *Consideration of terms.* Much of the controversy arising over the proposed regulation surrounded the interpretation of terms, particularly those relating to membership and requirements placed upon contractors. Therefore, several of the key terms are described here to provide guidance.

1. *Membership fees and other expenses.* Although the rule is often discussed as affecting *membership fees*, expenses other than the fees themselves are covered. *Membership fees* are those expenses levied by a club or organization for the privilege of association through membership. *Other expenses* are expenses incurred incidental to membership and which are paid or reimbursed by the employer. Generally such expenses include entertainment expenses, facility usage fees, tuition for organization sponsored courses or training, admission and event participation fees, and convention registration and associated convention or meeting expenses. Expenses the employee pays on his or her own behalf are not *other expenses* covered by this regulation.

2. *Discriminatory private club or organization.* A discriminatory private club or organization is one which "bars, restricts or limits its membership on the basis of race, color, religion, sex, or national origin." Such restrictions may arise either from the organization's *policy* or *practice*.

Policy means a written statement (in the by-laws, for example) or verbal agreement among the membership by which members and officers of the organization determine who is eligible for membership. *Practice* means a method of operating the club, including verbal agreements among the members or tradition recognized by the members, which has the effect of determining who is eligible for membership.

Universal eligibility for membership is not a criterion for considering a club or organization as nondiscriminatory. Clubs or organizations which select members according to any criterion other than race, color, religion, sex, or national origin are not considered discriminatory for the purposes of this regulation. For example, an organization which requires candidates for membership to receive a certain minimum level of income or to have attained a certain standard of professional achievement is not considered discriminatory solely on the basis of these membership criteria.

A nondiscriminatory club or organization need not necessarily make all of its facilities available to all of its members. For example, athletic clubs would not be discriminatory if they maintained separate locker rooms, lodgings, and exercise facilities for men and women.

B. *Determining nondiscrimination of membership policies.* As paragraph (b) of the rule states, "the contractor has the responsibility of determining whether the club or organization restricts membership on the basis of race, color, religion, sex, or national origin. The contractor may make separate determinations for different chapters of an organization, and where it does so, may limit any necessary corrective action to the particular chapters which observe discriminatory membership policies and practices."

Although OFCCP prescribes no procedure for complying with the rule, the contractor may find it most efficient to place the responsibility for determining the membership policies of an organization to which the payment of fees and expenses is contemplated with the management official who authorizes the expenditure. The determination may be based upon certification from an officer of the club, from an examination of the organization's by-laws, or from any other evidence that enables the contractor to determine the organization's membership policies and practices in accordance with the rule.

Unless the contractor receives indications of a change in the membership policies or practices of a given club or organization, the determination of an organization's or club's membership policies need be made only once to cover payments of fees for all eligible employees to participate in that club or organization. (Of course, the contractor may elect to make determinations more than once, such as annually or in advance of paying each employee's fees for participation in that club or organization.) OFCCP may verify that the determination for each club or organization is both correct and current by contacting the club on its own.

IV. Expected Impact of the Rule

In the preamble to the proposed regulation, OFCCP asked several questions relating to how widespread the practice of paying membership fees is and what the likely impact of a rule on membership fees would be. No commentator answered these questions with sufficient useful information to allow OFCCP to make more than rough estimates of the extent of the practice of paying membership fees or the costs to contractors of complying with the rule. Only one commentator expressed an opinion which attempted to judge the actual costs of the rule as proposed. Some commentators argued that a regulatory analysis should be conducted.

With deletion of the analysis procedure contained in the proposal, the rule published today imposes only incidental new requirements upon contractors. The actions required to comply with the rule can be conducted coincidental to the contractor's established procedure for authorizing expenditures for membership fees and other expenses. The Department has therefore determined that no regulatory analysis is necessary.

This document was prepared by OFCCP's Division of Program Policy under the direction and control of Weldon J. Rougeau, Director, Office of

Federal Contract Compliance Programs. Staff from the Office of the Solicitor provided assistance.

Accordingly, a new § 60–1.11 is added to Part 60–1, Title 41, Code of Federal Regulations, as set forth below to take effect February 17, 1981.

Dated: January 13, 1981 at Washington, D.C.

Ray Marshall,

Secretary of Labor.

Donald Elisburg,

Assistant Secretary, Employment Standards Administration.

Weldon J. Rougeau,

Director, OFCCP.

§ 60–1.11 Payment or reimbursement of membership fees and other expenses to private clubs.

(a)(1) A contractor which maintains a policy or practice of paying membership fees or other expenses for employee participation in private clubs or organizations shall ensure that the policy or practice is administered without regard to the race, color, religion, sex, or national origin of employees.

(2) Payment or reimbursement by contractors of membership fees and other expenses for participation by their employees in a private club or organization which bars, restricts or limits its membership on the basis of race, color, sex, religion, or national origin constitutes a violation of Executive Order 11246 except where the contractor can provide evidence that such restrictions or limitations do not abridge the promotional opportunities, status, compensation or other terms and conditions of employment of those of its employees barred from membership because of their race, color, religion, sex, or national origin. OFCCP shall provide the contractor with the opportunity to present evidence in defense of its actions.

(b) The contractor has the responsibility of determining whether the club or organization restricts membership on the basis of race, color, religion, sex, or national origin. The contractor may make separate determinations for different chapters of an organization, and where it does so, may limit any necessary corrective action to the particular chapters which observe discriminatory membership policies and practices.

FEDERAL COMMUNICATIONS COMMISSION

47 CFR Parts 1, 2, and 90

[PR Docket No. 79–338; RM–3470; FCC 80–753]

Temporary Licensing for Multiple Licensed Mobile Relay Systems Operating in the Business Radio Service in the 450–470 MHz Band

AGENCY: Federal Communications Commission.

ACTION: Final rule (order).

SUMMARY: The Commission adopts an order denying the Petition for limited reconsideration filed by the General Electric Company to delay the implementation date of a temporary licensing procedure available to some users in the Business Radio Service. The Commission further provides for an interim form to be used for this procedure due to the temporary unavailability of Form 572, the temporary licensing form.

EFFECTIVE DATE: December 29, 1980.

ADDRESS: Federal Communications Commission, Washington, D.C. 20554.

FOR FURTHER INFORMATION CONTACT: Gay Ludington, Private Radio Bureau, (202) 634–2443.

SUPPLEMENTARY INFORMATION:

In the matter of amendment of Parts 1, 2, and 90 of the Commission's rules and regulations to implement a system of temporary licensing for multiple licensed mobile relay systems operating in the Business Radio Service in the 450–470 MHz band, PR Docket No. 79–338, RM–3470.

Order

Adopted: December 18, 1980.

Released: December 29, 1980.

By the Commission: Commissioners Quello and Jones absent.

1. We have before us a petition filed by the General Electric Co. (GE) to reconsider the decision we took in our Report and Order in this proceeding to create a temporary licensing system for some users in the Business Radio Service.[1]

2. The gist of the GE petition is that the effective date of the rules adopted in the Report and Order should be delayed from January 1, 1981, to March 4, 1981.

3. In support GE has expressed concern that the proposed change will have adverse repercussions on the highly competitive equipment marketplace, because it will necessitate major changes in the way GE and some other radio equipment manufacturers market their products. GE contends that most dealers presently do not maintain an inventory to enable them to sell radio equipment off the shelf. Instead, the dealer orders the necessary radio equipment from the manufacturer who then assembles and delivers it to the dealer. The lag time has historically coincided with the time between application submission and license grant and arrangements have usually been made to have the equipment delivered to the dealer about the same time that a license is issued to the user. The new licensing procedure, however, will eliminate this delay. Dealers will be faced with a demand from customers to purchase and install equipment immediately. GE contends that such a change in customer demand characteristics will require dealers to stock inventory in order to remain competitive and thus may require local dealers to procure financing to purchase equipment, insurance, rent storage space, etc. GE therefore requests we delay implementation of our new rules to provide a longer period of time for manufacturers and dealers to alter or adjust their marketing procedures to assimilate this change.

4. We have considered GE's arguments. The issues it raises are merely reiterations of its earlier arguments in this proceeding and were considered and disposed of in our Report and Order.[2] GE has presented no new evidence or arguments in its Petition for Reconsideration to support its request, and has essentially restated the position it took in its comments in the earlier phase of this proceeding. GE does not contend there has been any change of conditions or circumstances which requires our reconsideration of these matters. Accordingly, there is no apparent basis for reconsideration action.[3]

5. In view of the foregoing, it is ordered that General Electric Co.'s petition for reconsideration is denied.

6. The form originally designated for use in this temporary licensing program will not be available on January 1, 1981, the effective date of the rules. We have, however, developed an interim procedure utilizing an existing form, a copy of the submitted FCC Form 400, that does not require the submission of any additional information. This interim procedure was described in a Public Notice issued on December 8, 1980, attached as an Appendix to this order.

[1] *See Report and Order*, Docket No. 79–338, FCC 80–487, adopted August 1, 1980, released September 4, 1980.

[2] *Id.*, at paragraphs 12–13.

[3] *See* 47 CFR 1.429.

7. Therefore, it is further ordered, That until FCC Form 572 is available, eligible applicants may obtain temporary permits by following the interim procedure set out in the attached Appendix below. This interim procedure shall be effective January 1, 1981. It is determined that 30 days notice is not required for the adoption of this interim procedure because it is of a procedural nature; it conforms with existing policy; and expedited implementation is required in the public interest.

8. The Secretary shall cause this order to be published in the **Federal Register.**

Federal Communications Commission.

William J. Tricarico,

Secretary.

Appendix

FCC Form 572 Temporarily Unavailable; FCC Provides Interim Procedure To Allow Implementation of Temporary Licensing System in the Business Radio Service on January 1, 1981, as Scheduled.

December 8, 1980

On September 4, 1980, the FCC released a Report and Order in PR Docket 79-338 which created a system of temporary licensing for add-on users of existing multiple licensed shared stations in the Business Radio Service (for example, a community repeater, or a radio or wireline controlled shared base station facility) in the frequency bands 30-50 MHz, 150-170 MHz and 450-470 MHz. The program becomes effective January 1, 1981. However, due to processing delays, the temporary permit form itself will not be available on January 1, 1981. We are aware that manufacturers and equipment dealers alike have relied on the January 1 effective date in their planning and production schedules. The Commission has therefore provided for an interim "form" which will substitute for the temporary permit form (#572) until it becomes available.

Applicants in the Business Radio Service eligible to use the temporary licensing system when it begins on January 1, 1981, may use as a substitute for the temporary permit the Form 400 work sheet, or a photo copy or other duplicate of the completed FCC Form 400 being used to apply for Commission authorization. This copy should be signed, dated and posted at every control point or station covered by the application. Do not mail the copy to the FCC.

We caution applicants who use the temporary licensing system that eligibility provisions remain the same as outlined in the Report and Order.

(1) Applicants may use a copy of a completed Form 400 as an interim temporary permit only if he or she wants to operate on an existing licensed facility in the 30-50 MHz, 150-170 MHz, or 450-470 MHz band while the original Form 400 is being processed by the Federal Communications Commission.

(2) An applicant may not be temporarily licensed under this system if he or she operates an individual non-shared station.

(3) An applicant will not qualify for a temporary permit until he or she has complied with frequency coordination requirements under Section 90.175 of the FCC rules.

(4) The applicant must certify that he or she:

(a) is not a representative of a foreign government;

(b) is eligible in the Business Radio Service under Section 90.75 of the FCC Rules;

(c) has not had a license denied or revoked by the FCC;

(d) is not the subject of legal action concerning the operation of a radio station;

(e) has mailed a completed Form 400 to the FCC;

(f) has complied with the frequency coordination requirements under Section 90.175 of the FCC rules.

The applicant must clearly label the copied Form 400 as a "Temporary permit to operate a business radio station" in the space marked "Special Conditions." Also, the applicant will construct a temporary call sign consisting of the letters "WT" plus his or here local business telephone number, and will use that call sign until a permanent call sign is assigned by the FCC. The temporary call sign should be written in the space marked "call sign" on the copied Form 400.

This interim procedure will be valid only so long as the temporary permit Form 572 is unavailable. A Public Notice will be issued when the form is available.

47 CFR Part 73

[Docket No. 20642; FCC 80-725]

Radio Broadcast Services; Clear Channel Broadcasting in the Standard Broadcast Band

AGENCY: Federal Communications Commission.

ACTION: Final rule (Memorandum Opinion and Order.)

SUMMARY: This action addresses petitions for reconsideration of the *Report and Order* in Docket No. 20642, *Clear Channel Broadcasting in the AM Broadcast Band.* Petitions for reconsideration filed by Great Southern Broadcasting Company, Inc., KBMR Radio, Inc., Peidmont Broadcasting Company, Inc., National Black Media Coalition, American Broadcasting Companies, Inc., Midwest Television, Inc., and Midwest Radio-Television, Inc., are denied. Section 73.37(e)(2) of the Commission's rules is amended in response to the petition of Clear Channel Broadcasting Service, which petition is otherwise denied.

EFFECTIVE DATE: January 26, 1981.

ADDRESS: Federal Communications Commission, Washington, D.C. 20554.

FOR FURTHER INFORMATION CONTACT: Molly Pauker, Broadcast Bureau, (202) 632-6302; or Gary Stanford, Broadcast Bureau, (202) 632-9660.

SUPPLEMENTARY INFORMATION:

In the matter of Clear Channel Broadcasting in the Standard Broadcast Band, Docket No. 20642.

Memorandum Opinion and Order

Adopted: December 4, 1980.

Released: December 22, 1980.

By the Commission: Commissioner Quello concurring in the result.

1. Before the Commission are several petitions for reconsideration of the *Report and Order* in Docket No. 20642, Clear Channel Broadcasting in the AM Band, 45 FR 43172, published June 26, 1980. Petitioners are Great Southern Broadcasting Company, Inc., licensee of Station WAMB, Donalson, Tennessee ("WAMB"); KBMR Radio, Inc., licensee of Station KERR, Polson, Montana ("KERR"); Piedmont Broadcasting Company, Inc., licensee of Station WSPF, Hickory, North Carolina ("WSPF"); National Black Media Coalition ("NBMC"), American Broadcasting Companies, Inc. ("ABC"); Clear Channel Broadcasting Service ("CCBS"); Midwest Television, Inc., licensee of Station KFMB, San Diego, California ("KFMB"); and Midwest Radio-Television, Inc., licensee of Station WCCO, Minneapolis, Minnesota ("WCCO").[1]

2. The City of New York Municipal Broadcasting System, licensee of Station WNYC ("WNYC"), filed comments addressing issues raised in WCCO's Petition II. WCCO filed a reply to WNYC's comments. These are discussed

[1] WCCO filed a petition to stay acceptance of applications on 820 kHz, as well as three petitions for reconsideration. All are addressed *infra*, and are referred to as "WCCO Petition I, II or III."

in paragraphs 29 and 31, *infra*. Association for Broadcast Engineering Standards, Inc. ("ABES"), filed a statement in reponse to the petitions for reconsideration of WSPF, WAMB, KBMR, CCBS, ABC and NBMC. ABES' views are noted, *infra*, in connection with consideration of each of the subject petitions. Southern California Broadcasting Company, licensee of Station KIEV, Glendale, California ("KIEV"), filed a comment opposing CCBS's petition (see paragraphs 21 through 23, *infra*) and also urging denial of the other petitions for reconsideration.

I. Petitions of WAMB, KBMR, WSPF

3. Petitioners seek reconsideration of paragraphs 69 and 70 of the *Report and Order*, relating to the daytime (ground wave) interference protection required to be afforded to Class I–A stations. Petitioners note that at paragraph 32 of the *Further Notice of Proposed Rule Making* in this proceeding, 44 FR 4502, 70 F.C.C. 2d 1077 (1978), the Commission proposed to reduce the daytime interference protection afforded to Class I–A stations from the 0.1 mV/m contour to the 0.5 mV/m contour. In the *Report and Order*, however, the Commission chose not to do so, in reliance upon three assumptions: (1) Generally, the controlling factor in the placement of any new unlimited-time Class II stations on the Class I–A channels would be the need to protect the dominant station's 0.5 mV/m 50% skywave contour, rather than the Class I station's daytime contour; (2) the proposed reduction in daytime interference protection would affect the placement of daytime-only stations on Class I channels, but action on applications for those stations have been deferred for the present; and (3) the question of daytime-only stations concerns Class I–B stations as well as the Class I–As, but limits on Class I–B service areas are beyond the scope of this proceeding, and the issue of reduction of daytime interference protection for Class I stations would be more appropriately addressed in a separate proceeding focused specifically on that question. See *Report and Order*, paragraphs 69 and 70, 45 FR at 43181.

4. Petitioners claim that the degree of daytime protection afforded the Class I station by unlimited time co-channel Class II stations has significant effects on the operation of the Class II station. Pursuant to § 73.187 of the Commission's rules, a Class II station has the obligation of protecting the co-channel Class I station's 0.1 mV/m ground wave contour during critical hours, that is, two hours after local sunrise or two hours before local sunset. Under these provisions, a Class II station can operate in three different modes during different times of the day: a high power (as much as 50 kW) during daytime hours; a low power operation to protect the requisite skywave contours at night; and an intermediate power to protect the dominant station's ground wave contour during critical hours. Petitioners argue that decreasing the ground wave protection afforded Class I stations would permit Class II stations to operate at a higher power during critical hours, perhaps in the same mode as its daytime operation. Thus, the operation of a Class II station would be simplified.

5. ABES supports the present 0.1 mV/m protection level, contending that maintenance of 0.1 mV/m groundwave protection will not inhibit additional unlimited-time Class II stations. In addition, ABES argues that the benefits from daytime Class I–A service between the 0.5 mV/m and 0.1 mV/m contours, to rural residents and highway travelers, in particular, outweigh whatever benefits woud be derived from reducing daytime protection of Class I stations to the 0.5 mV/m contour.

6. It appears that petitioners have raised adequate grounds for reconsideration of our determination not to reduce the level of ground wave protection afforded Class I stations. In fact, a reduction in the Class I daytime contour protection level would increase the primary service areas of some Class II stations during critical hours, but that increase in the Class II station's service area would come at the cost of a decrease in the Class I station's service area. However, upon reconsideration, we remain of the opinion that it would be inappropriate to resolve this conflict within the confines of this proceeding. As previously noted, this proceeding involves Class I–A stations only, but the daytime interference standards affect Class I–B stations as well. We could not summarily amend the rules with regard to Class I–B stations without benefit of notice and comment, and we do not believe that it would be appropriate to add to the already complicated AM protection rules with different daytime standards for Class I–A and Class I–B stations. Rather, the better course would be institution of a new rule making proceeding looking to the modification of those rules for all Class I stations.

7. Accordingly, upon reconsideration, the conclusions of our *Report and Order* in Docket No. 20642 regarding daytime interference protection afforded Class I–A stations are affirmed. However, the petitions for reconsideration filed by WAMB, KBMR and WSPF will be treated as petitions for rule making; and we shall proceed as expeditiously as possible to develop a Notice of Proposed Rule Making on the subject of daytime interference protection required to be afforded to all Class I stations.

II. Petition of NBMC

8. NBMC asks the Commission to reconsider its intent to consider well-founded requests for waivers of the requirements of § 73.37(e)(2) of the Rules. See *Report and Order*, paragraph 72, 45 FR, at 43181, published June 26, 1980. NBMC urges that the Commission not accept requests for waivers of this section, arguing that this would substantially dilute the effect of the preference afforded to minority-owned and noncommercial applicants by the *Report and Order*. Additionally, NBMC asks that the Commission grant a strong preference to minority applicants in comparative hearings against other applicants for the new Class II stations on Class I–A channels. In support, NBMC alleges that such a preference could enhance the availability of funds for minority applicants and might discourage non-minority applications, thus obviating the need for comparative hearings altogether, in some instances. NBMC cites the recent decision of the Supreme Court in *Fullilove* v. *Klutznick*, U.S. 78–1007, decided July 2, 1980 (48 U.S.L.W. 4979), as an intervening development which broadens the Commission's discretion in the area of minority ownership policies.

9. NBMC correctly states that the criteria in § 73.37(e)(2) were designed to facilitate our primary objectives in this proceeding: provision of additional AM spectrum for minority-owned and noncommercial applicants, as well as applicants who would provide first or second local primary nighttime service. However, NBMC is incorrect in its further assumption that because no other equally meritorious service objective has been suggested to date, no other will ever be. Purely as a matter of logic, it must be acknowledged that there could arise a desirable use of this additional spectrum space not heretofore considered. We are not prepared now to close the door to every other possible applicant, however worthy, by refusing even to consider applications for waiver of the § 73.37(e)(2) criteria.

10. Moreover, we would be legally constrained to consider the merits of waiver requests for other possible uses. *Storer* v. *United States*, 351 U.S. 192, 100 L. Ed. 1081, 76 S. Ct. 763 (1956), holds that the Communications Act requires the Commission to afford a hearing to an applicant with a well-founded request for a waiver of the rules. That principle, announced in the context of

the prohibition against multiple ownership, applies here, as well. The Court has told us that we must be willing to consider waiving our rules for nonconforming proposals which nevertheless may be found to serve the public interest. See *WAIT Radio* v. *F.C.C.*, 418 F. 2d 1153 (D.C. Cir. 1969).

11. NBMC next argues that the assignment of a strong preference to minority applications on the Class I–A channels would stimulate minority applications and funding therefor, as well as possible discourage nonminority applications and thereby reduce the necessity for comparative hearings in some instances. In opposition, ABES argues that NBMC's proposal goes beyond the scope of the instant proceeding, and raises constitutional issues which require most serious consideration.

12. We believe that it would not be appropriate for us to take up issues which relate to the conduct of comparative hearings in the instant proceeding. We have taken note of the *Fullilove* opinion, and, while we find its teachings valuable, we do not think it mandates any change in the approach taken here. It would appear to be more useful for NBMC's suggestion to be taken up in connection with a proceeding specifically designed to address our comparative criteria, in which the comments of all interested parties could be elicited and due note taken of the *Fullilove* case, as well as *TV–9 Inc.* v. *F.C.C.*, 495 F. 2d 929 (D.C. Cir. 1973) and *Garrett* v. *F.C.C.*, 513 F. 2d 1063 (D.C. Cir. 1975), in which the court has instructed the Commission regarding its minority ownership policies.

III. Petition of ABC

13. ABC urges the Commission to reconsider paragraph 84 of the *Report and Order* and decline to grant interim authorizations for limited-time stations to operate at night until such time as it has balanced the desirability of increased operations by limited-time stations against the possible reduction in new unlimited-time stations this could cause. Second, ABC suggests that the Commission limit the minority ownership criterion in § 73.37(e)(2)(iv) to minority-owned applicants explicitly seeking to operate in communities with high minority populations and to provide programming specifically to serve those populations. Articulation of the policy objectives underlying the minority ownership provision would, according to ABC, strengthen the rule against possible constitutional challenge. Finally, ABC advocates that the Commission adopt streamlined comparative hearing procedures, to reduce the administrative burden of competing applications for the newly-available frequencies.

14. We have considered ABC's first argument that since disruption to existing service is a strong factor militating against rescission of any temporary operating authority, we should not grant interim authorizations to limited-time stations. ABES' support of this position has also been noted. However, we believe that at an appropriate future time, the Commission will be able to adequately weigh the continued efficiency of the small number of interim authorizations which might be granted pursuant to paragraph 84 of the *Report and Order*, in connection with rule making undertaken pursuant to paragraph 85 of the *Report and Order*, or otherwise. In the interim, it appears that the public would benefit now from additional nighttime service on those limited-time stations which seek to provide it. Therefore, this portion of ABC's request for reconsideration will be denied, and we intend to accept requests for interim nighttime authorizations.[2]

15. We believe that ABC is quite correct in suggesting that the primary objective of our minority ownership policy is to foster diversity in the source and content of programming. The courts have approved the awarding of merit to minority applications in service to this end. See, *e.g.*, *TV–9, Inc.* v. *F.C.C.*, 495 F. 2d 929, 938 (D.C. Cir. 1973). However, we have been directed by the court that once minority ownership has been established, we may not ask for further evidence relating to program content, but must presume a relationship between ownership by minorities and programming for minorities. "The entire thrust of *TV–9* is that Black ownership and participation together are themselves likely to bring about programming that is responsive to the needs of the Black citizenry [footnote omitted], and that that 'reasonable expectation' without 'advance demonstration' gives them relevance." (footnote omitted) *Garrett* v. *F.C.C.*, 513 F. 2d 1063 (D.C. Cir. 1975). Furthermore, because we believe that minority-controlled stations can have the additional function of educating nonminorities about minority viewpoints, we would be hesitant to restrict the threshhold criterion of this rule on the basis of the racial composition of the community of application. See *Statement of Policy on Minority Ownership of Broadcast Facilities*, 68 F.C.C. 2d 979, 981 (1978).

16. Moreover, as ABES points out, 73.37(e)(2)(iv) merely sets out a threshhold standard which applications must meet in order to be acceptable for further processing. It would be neither feasible nor desirable to introduce program content criteria into the initial screening process.

17. We also note ABC's suggestions regarding the streamlining of comparative hearings for new stations on the Class I–A channels. Its suggestions may prove useful; however, as we have said, issues relating to the conduct of comparative hearings do not properly belong in this proceeding. See paragraph 12, *supra*.

IV. Petition of CCBS

18. CCBS asks that the Commission authorize a maximum daytime power of 100 kilowatts for Class I–A stations, to conform to the standards adopted in the Buenos Aires Region 2 Report, and adds that all but one of its members would apply to increase power of this level. Also, CCBS seeks deferment of authorization of new stations on Class I–A channels, until other proceedings which contemplate provision of spectrum space for additional radio stations have been completed. CCBS asserts that coordination of proceedings involving 9 kHz spacing, expansion of the AM band and expanded use of FM frequencies would facilitate more orderly provision of aditional aural services. CCBS' third request is for clarification of the *Report and Order*, specifically as to whether the amended § 73.37(e)(2) would apply to applications for modification of facilities by stations currently operating on or seeking to operate on Class I–A channels.

19. The Commission has considered a lengthy record of proposals for power above the present 50 kW maximum, and has concluded that a 50 kW day and nighttime power limit for Class I–A stations best serves the public interest. CCBS offers no additional evidence in its petition for reconsideration which persuades us to the contrary. We noted

[2] We note that on September 10, 1980, the Commission adopted an *Order* delegating to the Broadcast Bureau the authority to grant applications for interim authorizations. ABC opposed the issuance of interim grants pending reconsideration, via letters of September 8 and 15, 1980. We have considered ABC's position. However, since the provisional nature of the grants creates no equities on the part of the licensees thus treated, no further demand for new full-time stations on the Class I–A channels will be prejudiced thereby. In these circumstances, in conformance with the policy on interim grants set out in paragraphs 83 and 84 of the *Report and Order*, three grants of special temporary authority have been issued to limited-time stations. File Nos. BP–800804AQ, BP–800513AC and BP–800814AD. Should applications by these limited-time licensees for regular nighttime operation conflict with future applications for new stations on the Class I–A channels, we shall consider the relative merits of the service each could provide.

the Region 2 resolution providing for 100 kW daytime in the *Report and Order*. That this power level may, under some circumstances, be authorized internationally is not, however, sufficient reason for its domestic adoption, especially in light of countervailing factors. ABES concurs with this view, adding that it might be premature to evaluate maximum AM power limits, prior to the second session of the Region 2 Conference.

20. Preliminary analysis indicates that CCBS' proposed power increase would have a substantial preclusionary impact on the first adjacent channels to the Class I–A channels, particularly where these adjacencies are also Class I–A channels. This result would run directly counter to the Commission's objectives in the instant rule making. Mindful of the social value placed by all on a diversity of voices in the media, we reaffirm our conviction that the public will benefit more from the present scheme than from an increase in daytime power on Class I–A stations. Our reasons for rejecting power increases for Class I–A stations were stated at some length in the *Further Notice* and were reannounced in the *Report and Order*, which incorporated the supporting analyses and evaluations of the *Further Notice*. Accordingly, we are denying this part of CCBS' petition.

21. CCBS' request for deferment of the *Report and Order* until such time as the various proceedings looking toward provision of additional spectrum space may be resolved is opposed by ABES and KIEV, a daytime-only station which contends it is qualified to extend its hours of operation under § 73.37(e)(2)(ii). We also find CCBS' proposal impracticable. As we noted both in the *Further Notice* and the *Report and Order*, our action here takes advantage of the first possible opportunity to respond to a growing demand for additional spectrum space. In light of the immediacy of this demand, we believe it would disserve the public to postpone effectuation of the *Report and Order*.

22. The progressive diminution of need for nighttime exclusivity on the Class I–A channels has long been acknowledged. Indeed, the possibility of further duplication of these channels was foreseen in 1961, on the resolution of the predecessor proceeding to this one. See 31 F.C.C. 565 (1961). We have not acted in haste, but have based our decision on a lengthy and thorough evaluation of relevant factors. Furthermore, there is ample evidence that the approximately 125 stations which could be created as a result of this proceeding will not even approach fulfillment of the demand for more stations. Thus, the spectrum-related rule makings are not interdependent. That is, the facilitation of an increased number of stations accomplished in this proceeding will not obviate the need for additional rule making to the same end.

23. Moreover, the Region 2 MF Broadcasting Conference has called for prompt submission of data concerning proposed stations meeting the needs of each country in the Western Hemisphere. On the other hand, developments which could result in the expansion of the AM band at the upper end of the spectrum will likely not be implemented until the latter part of this decade. It would then be some time until most radio receivers are capable of receiving the additional channels. Resolution of both domestic and international matters relating to 9 kHz spacing between AM channels will require additional time, also. We do note, however, that these matters are being explored in the recently reorganized Advisory Committee on Radio Broadcasting (see *Requests for Formation of New Government-Industry Advisory Committee on AM and FM Radio Broadcasting, and for Institution of Consolidated Inquiry Proceeding on AM and FM Radio*, adopted September 10, 1980, released September 22, 1980, FCC No. 80–537, published ————). We, nevertheless, see no point in delaying for at least a decade utilization of the first additional spectrum space we have been able to make available, pending availability of the last. Whatever benefits might be gained from coordination of these rule makings would be far outweighted by the delay in getting additional stations on the air.

24. As the third part of its tripartite request, CCBS asks that we explain whether and how § 73.37(e)(2) would apply to an existing fulltime AM station seeking to change frequency to one of the 25 Class I channels, or to change facilities on a Class I channel on which it is currently operating. CCBS points out that the *Report and Order* in Docket No. 20265, 54 F.C.C. 2d 1 (1975), amended the rules so that existing AM stations applying to change frequency would not have to meet any of the (then) three alternative criteria set out in § 73.37(e)(2)(i)–(iii), but would merely be required to demonstrate compliance with the "go-no-go" rules and the interference prohibitions of § 73.182(o), the same standards applied to stations desiring to increase power. See 54 F.C.C. 2d, at 20. At that time, however, existing AM stations were precluded from applying to operate fulltime on the 25 Class I–A channels by §§ 73.22, 73.25(a) and 73.182(i).

25. The *Report and Order* in Docket No. 20642 amended §§ 73.21, 73.25(a) and 73.182, to make available the 25 Class I channels for applications for fulltime AM operation from qualified applicants. Under § 73.37(e)(2), applications for new unlimited time stations and nighttime operation by existing daytime stations must meet one of the (now) five criteria outlined therein. The *Report and Order* evinces, as CCBS acknowledges, the Commission's intent that, unless waived in individual cases, these five criteria apply to all applications regarding AM operation on the 25 Class I channels, including those for modification of facilities by existing AM stations, as well as new AM operations and daytime stations applying to operate at night. However, CCBS avers that the language of § 73.37(e)(2), as amended, does not encompass existing fulltime AM stations seeking modification to one of the 25 Class I frequencies, or stations already operating on a Class I channel which seek to increase power while remaining on the same channel. Thus, under the amended rules, as CCBS asserts they might be interpreted, such a station could apply to change to a Class I frequency, or to increase power on the frequency, without fulfilling any of the criteria of § 73.37(e)(2), only by meeting the interference protection requirements of § 73.182 and the "go-no-go" rules.

26. We recognize that there is so little opportunity for frequency changes in any given community that only in rare cases will the aural service maximums be exceeded by relaxing the frequency change requirements. Yet, the instant proceeding is intended to increase optimally the opportunity for additional stations on the Class I–A channels. It would be inconsistent not to require frequency change applications onto the Class I–A channels to serve those objectives, also. In order to eliminate the possibility of any party misconstruing the intent of the amended rules, to permit existing AM stations to apply to change frequency to one of the Class I–A channels, or to change facilities on one of the Class I–A channels, without first meeting one of the criteria of § 73.37(e)(2), we are acceding to the request for clarification in CCBS' petition and amending that rule to provide expressly that existing fulltime AM stations seeking to change frequency onto a Class I–A channel or to modify their facilities or mode of operation on a Class I–A channel must meet the requirements of § 73.37(e)(2).

V. Petition of KFMB

27. KFMB asks the Commission to amend the *Report and Order* to delete the footnote to § 73.21(a)(2)(ii), which restricts Station KFMB to 5 kW, arguing that a 50 kW power limit for KFMB would provide additional primary service in southern California and would not unduly interfere with the operation of any other station, in particular, the Class I–A station operating at 760 kHz, WJR, Detroit, Michigan. KFMB states that when it was required to change frequency from 540 to 760 kHz in 1961, as a result of U.S.-Mexican negotiations, this footnote was added to limit its power as described.

28. Initially, we note that the footnote in question has been deleted. See Attachment III to the *Report and Order*. KFMB's power level is now governed by § 73.21(a)(2)(ii)(B), which limits its power to that authorized as of June 1, 1980, or such other power level as the Commission may subsequently authorize. This technically disposes of KFMB's request. As we stated in the *Further Notice* and in the *Report and Order*, this proceeding is designed solely to revise the rules governing clear channel usage nationwide. KFMB must therefore seek any power increase by an application for a construction permit which will be governed by the provisions of §§ 73.21(a)(2)(ii)(B) and 73.37(e)(2) of the rules.

VI. Petition of WCCO

29. In Petition I WCCO asks that the *Report and Order* be amended to reflect the precise relationship between Stations WCCO and WNYC, both of which currently operate on 830 kHz. Petition II asks that the Commission issue a Show Cause Order requiring Station WNYC to modify its operation to 820 kHz, which could, WCCO asserts, resolve the lengthy dispute between it and WNYC over WNYC's nighttime operation. WNYC's comment, while not opposing a switch to 820 kHz, avers that additional data, particularly engineering analysis, is necessary to evaluate WCCO's proposal, and emphasizes its desire for prompt resolution of the controversy along the lines of the Supplemental Initial Decision (FCC 78–D–36), currently pending before the Commission on exceptions. WCCO's reply to WNYC's comment argues that the benefits to the public from switching WNYC to 820 kHz outweigh those which would derive from retention of WNYC on 830 kHz. WCCO has also petitioned the Commission to stay acceptance of applications on 820 kHz, pending resolution of its request that Station WNYC be shifted to that channel, in order that competing equities not be permitted to develop which could reduce the desirability of this solution. Finally, WCCO asks in Petition III that the Commission require directionalization of the limited-time stations, to prevent interference to the new unlimited-time Class II stations between local sunset at the limited-time stations and local sunset at the co-channel Class I–A station to the west.

30. The omission, in the general list in Attachment I to the *Report and Order*, of express reference to the explicit conditions under which WNYC currently operates on 830 kHz in no way alters the terms of the SSA which governs WNYC's nighttime operations. Nor does it in any way affect the resolution of the issues under the consolidated proceeding—Dockets No. 11227 and 17588—in which, as expressly observed in Note 1 to § 75.25(a)(2)(ii), questions relating to the future use of 830 kHz for a Class II station at New York City, will be decided. No amendment is needed in this respect.

31. We do not believe WCCO's Petition II warrants action in this proceeding. It was the Commission's intent, in the Clear Channel proceeding, to make 820 kHz, as well as the other 24 Class I–A channels, available for use by additional unlimited-time AM stations. The manner in which those frequencies are used is a matter which must be addressed in connection with application processing, not rule making. Indeed, the primary request of WCCO is the issuance of an Order to Show Cause why Station WNYC should not be required to modify its operation to 820 kHz.[3] The decision whether to issue such an order is properly made in the context of licensing, not rule making. In addition, as we stated in paragraph 75 of the *Report and Order* and paragraph 28, *supra*, we do not intend to consider individual cases in this docket. Although WCCO's proposal is put forward as a possible means of resolving a dispute which has been in hearing for many years, the proposal nevertheless does not call for resolution through action in a generalized rule making proceeding. Intimating no evaluation of the merits of WCCO's proposal, we refer petitioner to the license application process in which to seek the relief it desires. We likewise take no position herein on the issues raised in WNYC's comments and WCCO's reply to them.

32. WCCO's pleading styled "Petition for Stay" asks the Commission not to accept applications on 820 kHz, nor take any other action which would permit "equities" to develop which might later prejudice its case regarding the shift of Station WNYC to 820 kHz. Public Notice has been given of the pendency of WCCO's Petition II. Thus, to the extent that expenditure on preparation of an application itself can be claimed to give rise to "equities," this will not occur by virtue of the absence of such notice. It would be inappropriate for the Commission to take further action with respect to petitioner's request, in the context of the instant proceeding, however, especially in view of the absence of sufficient data on which to base an estimate of WCCO's prevailing on the merits. Whether a stay should be issued will be determined when petitioner has submitted information adequate to establish the desirability and feasibility, or lack thereof, of its proposal.[4] We decline to prejudge these issues at this preliminary stage.

33. Without evaluating the merits of WCCO's Petition III, we refer petitioner to paragraph 85 of the *Report and Order*, where we indicated that we have under consideration the possible inauguration of separate rule making to address the potential interference problems between the present limited-time and new unlimited-time stations. We continue to believe that these matters should be considered separately. Therefore, we are not evaluating petitioner's request on its merits herein, but will consider its views in connection with whatever separate proceeding may be initiated regarding the limited-time stations.

VII Conclusion

34. In conclusion, we have reviewed the several petitions for reconsideration in Docket No. 20642. As indicated above, we have not been persuaded that new evidence has been adduced which warrants modification of the conclusions in the *Report and Order*. We find merit, however, in the request for clarification contained in the third part of CCBS' petition, and, accordingly, amend § 73.37(e)(2) of the rules, as set out in Appendix I below. Where a proposal would be more suitably considered in another rule making proceeding or pursuant to a procedure other than rule making, we have so indicated in the discussion above.

35. Accordingly, pursuant to authority continued in Sections 1, 4(i), 303 (a) and (r), 307(b) and 403 of the Communications Act of 1934, as

[3] Midwest Radio's other request, that the Commission grant Station WNYC 820 kHz facilities in Docket No. 17588, likewise warrants no action in Docket No. 20642.

[4] It may well be determined that petitioner's proposal would be better judged against other proposed uses of 820 kHz which would be precluded thereby, and a stay might be denied on that basis alone.

amended, it is ordered, that the petition for reconsideration of Clear Channel Broadcasting Service is granted to the extent stated in paragraph 34, *supra;* and otherwise denied; and

36. It is further ordered, That the other subject petitions for reconsideration of the *Report and Order* in Docket No. 20642 are denied; and

37. It is further ordered, That effective January 26, 1981, the rule amendment set out in Appendix I attached below is adopted; and

38. It is further ordered, That this proceeding is terminated.

39. For further information concerning this proceeding contact Molly Pauker, Broadcast Bureau, (202) 632–6302, or Gary L. Stanford, Broadcast Bureau, (202) 632–9660.

(Secs. 4, 303, 307, 48 Stat., as amended, 1066, 1082, 1083; (47 U.S.C. 154, 303, 307))

Federal Communications Commission.

William J. Tricarico,

Secretary.

Proposed Rules

Federal Register
Vol. 46, No. 11
Friday, January 16, 1981

This section of the FEDERAL REGISTER contains notices to the public of the proposed issuance of rules and regulations. The purpose of these notices is to give interested persons an opportunity to participate in the rule making prior to the adoption of the final rules.

OFFICE OF PERSONNEL MANAGEMENT

5 CFR Part 359

Removal, Reinstatement, and Guaranteed Placement in the Senior Executive Service

AGENCY: Office of Personnel Management.

ACTION: Status Update on Proposed Regulations.

SUMMARY: On August 1, 1980, the Office of Personnel Management (OPM) published proposed regulations on reduction in force in the Senior Executive Service (45 FR 51214). Reaction to the proposal was sharply divided, and the formal comments were sufficiently diverse to cause OPM to decide not to publish final regulations at this time. Rather, OPM is proceeding to form an interagency task group to advise on what should be issued. In the absence of final regulations agencies have been told that they should consult with the Executive Personnel and Management Development Group in OPM if they are facing reduction-in-force situations prior to initiating any formal action.

FOR FURTHER INFORMATION CONTACT: Neal Harwood, (202) 632-7676.

Office of Personnel Management.
Beverly M. Jones,
Issuance System Manager.

DEPARTMENT OF AGRICULTURE

Food and Nutrition Service

7 CFR Part 210

National School Lunch Program; Nutritional Requirements

AGENCY: Food and Nutrition Service, USDA.

ACTION: Proposed rule.

SUMMARY: This proposal would amend 210.10 of the National School Lunch Program regulations. The Department proposes to restrict the service of foods of minimal nutritional value during the lunch period in senior high, junior high and middle schools participating in the "offer versus serve" method of school lunch service. The reasons for the restrictions are (1) these foods have very little nutritional value, (2) the "offer versus serve" option is being used in a manner which encourages students to consume foods with little nutritional value and (3) because USDA reimburses the States for food service, it has in some cases paid for food lacking in nutritional value.

DATES: To be assured of consideration, comments must be received no later than March 17, 1981.

ADDRESS: Comments may be mailed to: Samuel P. Bauer, Director, School Programs Division, USDA, Food and Nutrition Service, 201 14th Street, S.W., Auditor's Building, Room 4122, Washington, D.C. 20250, or delivered to Room 4300B at the above address between 8:30 a.m. and 5:00 p.m., Monday through Friday. Comments received may be inspected at room 4300B Auditor's Building, Policy and Programs Development Branch, School Programs Division, 201 14th Street S.W., Washington, D.C. 20250, during regular business hours (8:30 a.m. to 5:00 p.m., Monday through Friday).

FOR FURTHER INFORMATION CONTACT: Stanley C. Garnett, Policy and Program Development Branch, School Programs Division, USDA, FNS, Washington, D.C. 20250, Telephone: (202) 447-9065.

SUPPLEMENTARY INFORMATION: This proposed action has been reviewed under USDA procedures established in Secretary's Memorandum 1955 to implement Executive Order 12044, and has been classified not significant.

This proposal has been reviewed with regard to the requirements of Public Law 96-354. Robert Greenstein, Administrator of the Food and Nutrition Service, has certified that this proposal does not have a significant economic impact on a substantial number of small entities. The Department is not aware of any small school districts that are not already in compliance with this, and therefore is unaware of any economic impact on any small school district. The Department is aware of only one large school district that would be affected, and the effect on that one school district would not impact on a substantial number of small businesses.

Background

Meal Pattern

Section 9 of the National School Lunch Act requires the Secretary to establish minimum nutritional standards for lunches reimbursed under the Act. Pursuant to that authority, the Department has developed a meal pattern for lunch. The components of the lunch pattern are milk, meat or meat alternate, fruits or vegetables or both, and bread or bread alternate. The required quantities of these food items are specified in the Program regulations at 7 CFR 210.10. Besides the food items making up the components of the meals, schools frequently serve other foods as condiments and seasonings, to round out the meal, to improve acceptability and to satisfy student appetites. The cost of other foods when served as part of the reimbursable meal is an allowable cost, but the presence or absence of these foods does not determine whether the meal is reimbursable.

The Department has always allowed schools to serve other foods and has not restricted the other foods that can be served. These foods supply calories which help to meet the energy needs of growing children. The Department recognizes that the required minimum amounts of foods in the lunch do not always meet the caloric needs of all children. In addition, other foods also contribute varying amounts of protein, vitamins, and minerals essential to good nutrition. However, some of these foods may be of minimal nutritional value. School food service personnel should carefully plan the kinds, amounts, and frequency of the other foods that they serve.

Offer versus Serve

Section 9(a) of the National School Lunch Act further provides the Secretary with authority to establish procedures which are designed to diminish waste of foods "without endangering the nutritional integrity of lunches . . ."

Until 1975, children were required to take all of the required food items prescribed by the Food and Nutrition Service (FNS). If a student did not receive all of the food items, the meal was not reimbursable by FNS.

To curtail plate waste in the National School Lunch Program and to comply with the Congressional mandate of Public Law 94–105, that students "shall not be required to accept offered foods which they do not intend to consume", the Department implemented the "offer versus serve" provision for high school students in 1976 (210.10(a)(5)). Under this provision, schools must offer students the five required items of the lunch, but students need only choose three items.

The "offer vs. serve" option was an attempt to insure that children choose only those foods they intend to eat. The amendments made by Pub. L. 94–105 limited this provision to high school students who might be expected to have more strongly formed food preferences. At the same time, the Department continued to encourage schools to offer choices and to encourage student involvement in the hope that more older students would take and consume all five food items. In 1978, Public Law 95–166, amended the National School Lunch Act to authorize extension of the "offer versus serve" option to junior high and middle schools. The "offer versus serve" option does not apply to the School Breakfast Program.

Competitive Foods Rule

On January 29, 1980 (45 FR 6758), the Department published the competitive foods regulations. These regulations implement Section 10 of the Child Nutrition Act of 1966 as amended by Section 17 of Public Law 95–166 concerning the sale of foods in competition with meals served under the National School Lunch and the School Breakfast Programs. The competitive foods regulations were finalized after a lengthy analysis period. During this analysis, numerous types of data were examined which concerned the nutritional status of the school age population in the United States, food consumption/health problem correlations and methods of comparing the nutritional quality of various foods. These data and the Department's decision making process are described in the preambles to the proposed and final rules (43 FR 17476 and 45 FR 6758, respectively) and the reader is referred to those documents, which are hereby incorporated by reference.

7 CFR § 210.2(h–1) defines foods of minimal nutritional value that may not be sold from the beginning of the school day to the end of the last lunch period. Categories of foods of minimal nutritional value are listed in Appendix B of Part 210. They are: soda water (carbonated beverages), water ices, chewing gum and certain candies (hard candies, jellies and gums, marshmallow candies, fondants, licorice, spun candy, and candy coated popcorn). These categories of foods provide less than five percent of the United States Recommended Dietary Allowance (USRDA) for each of eight specified nutrients per 100 calories and less than five percent of the USRDA for each of the eight specified nutrients per serving.

7 CFR 210.2(c–3) defines competitive foods and 7 CFR 210.15b prohibits the sale of foods of minimal nutritional value from the beginning of the school day until the end of the last lunch period.

It has come to the Department's attention that foods of minimal nutritional value are being offered to students in schools which utilize the "offer versus serve" method of lunch service. Thus, foods of minimal nutritional value are being offered in direct competition to the five required meal components. Because of a recent U.S. District Court decision in *Pulaski County School District vs. Bergland*, (C.A. No. 80–399) questions have arisen as to the applicability of the restriction on the sale of foods of minimal nutritional value when offered as a food alternate in the "offer versus serve" setting. In order to eliminate any ambiguity in the regulations on this part, it is proposed that the regulations governing the requirements for lunches described in 210.10 be amended to prohibit the inclusion of foods of minimal nutritional value as an additional food item in the "offer versus serve" lunch service.

The rationale for this action is threefold. Foods of minimal nutritional value as defined by 210.2(h–1) were found to contain fewer nutrients than other foods. This fact underpinned the decision to restrict the sale of these foods during the time the school meal programs were in effect. Providing foods of minimal nutritional value to students on an "offer versus serve" lunch line allows a student to choose a food of minimal nutritional value in lieu of one or more of the prescribed five meal components. The competition for the student's appetite is perhaps more apparent in this situation than when a student must purchase foods of minimal nutritional value separately from the school lunch. The accessibility of these foods endangers the nutritional integrity of the school lunch.

Second, the Department never intended the "offer versus serve" option to be used in a manner which encourages students to forego the five required meal components for comparatively less nutritious food items. The "offer versus serve" provision was developed to encourage student participation and reduce waste. Inclusion of foods of minimal nutritional value as an alternate to required lunch components, if it contributes to either of these goals, does so at the expense of allowing substitution of less nutritious foods for the required lunch components. The Department was sufficiently concerned about the availability of these foods to children to restrict the sale of foods of minimal nutritional value. Therefore, providing the foods as an alternate on the "offer versus serve" lunch line directly conflicts with the prohibition on the sale of competitive foods.

Third, because the Department reimburses States for meals on a cost basis, the Department is, in some cases, reimbursing schools for service of foods of minimal nutritional value. Such a result is totally inconsistent with the Department's action concerning competitive foods and places the Department in a contradictory position of restricting the sale of these foods on the one hand while financing their availability on the other.

For these reasons, the Department is proposing the following rule. This rule will restrict the service of foods of minimal nutritional value listed in Appendix B of Part 210 National School Lunch Program regulations during the lunch period(s) in schools which participate in the "offer versus serve" option.

In § 210.10 it is proposed that paragraph (a)(6) be redesignated as 210.10(a)(7) and a new paragraph (a)(6) be added to read as follows:

§210.10 Requirements for lunches.

(a)* * *

(6) Foods of minimal nutritional value as defined in Appendix B of this Part shall not be offered during the lunch period in schools which participate in the offer versus serve option described in paragraph (5) above.

BILLING CODE 3410–30–M

7 CFR Parts 210 and 220

National School Lunch Program and School Breakfast Program; Competitive Foods

AGENCY: Food and Nutrition Service, USDA.

ACTION: Proposed Rule.

SUMMARY: This proposed rule would amend the current National School Lunch and School Breakfast Program regulations to exempt the living quarters of residential educational units, which includes boarding schools, from the restrictions of the so-called competitive foods rule, (concerns the sale of food in competition with the meals served under the National School Lunch and the School Breakfast Programs). (45 FR 6758). This proposal would also reword the definition of "school" to clarify the distinction between residential and nonresidential schools.

DATE: Comments should be received on or before March 17, 1981.

ADDRESSES: Comment should be submitted to: Samuel P. Bauer, Director, School Program Division, FNS, USDA, Washington, D.C. 20250.

Comments will be available for review during regular business hours (8:30 a.m. to 5:00 p.m.), Monday through Friday in Room 4300B Auditors Building at the address listed above.

FOR FURTHER INFORMATION CONTACT: Stanley C. Garnett, Branch Chief, Policy and Program Development Branch, School Programs Division, FNS, USDA, Washington, D.C. 20250, (202) 447-9069.

SUPPLEMENTARY INFORMATION:

Administrative Procedures

This proposed rulemaking has been reviewed under USDA procedures established in the Secretary's Memorandum 1955 to implement Executive Order 12044, and has been classified as not significant.

This proposal has been reviewed with regard to the requirements of Public Law 96-354. Robert Greenstein, Administrator of the Food and Nutrition Service, has certified that the proposal does not have a significant economic impact on a substantial number of small entities. The proposal would have a limited impact on a number of boarding schools by removing any Federal restrictions on foods that can be made available to children through vending machines or other means in residential parts of boarding schools during school hours. A limited number of boarding schools will be affected, and in few, if any, cases would there be a significant economic impact. There may be a slight increase in the sale of certain products in those boarding schools, but it would not be enough to have a significant economic impact on any substantial number of small businesses.

Background

7 CFR 210.15b and 220.12 prohibit the sale of foods of minimal nutritional value on school premises from the beginning of the school day until after the last lunch period. These restrictions apply to all schools which participate in the National School Lunch and School Breakfast Programs. Foods of minimal nutritional value identified are soda water (carbonated beverages), frozen ices, chewing gum and certain candies.

Because boarding schools, residential child care institutions, and nonresidential schools also participate in the lunch and breakfast programs, the restrictions apply equally in those institutions.

The Department has received questions concerning the effect of the competitive foods regulations in residential schools. Because the restrictions on sale of certain foods extends throughout the school premises, both the living areas and educational areas of residential schools are affected. Such coverage may be overly broad. The living quarters of residential schools are, in effect, students' homes.

The competitive foods rule was promulgated at Congress' direction to regulate the sale of competitive foods in schools. By definition, "school" under most circumstances includes the entire school premises. However, we think it unlikely that Congress considered the situation of residential institutions or intended the Department to regulate the sale of foods in student living quarters. The Department is proposing to exempt from coverage only the living quarters of residential schools. Those areas of the schools which constitute the educational facilities, as well as the food service areas, will be covered by the competitive foods regulations. Thus, the intent of Congress that students have limited access to certain foods on school premises would be satisfied.

It is also proposed that the term "school" defined in 7 CFR 210.2(o) would be redefined to clarify the distinction between residential educational units and nonresidential educational units. This revision would be made in all existing school nutrition program regulations. The Department is seeking public comment on these proposed provisions as they relate to the School Breakfast Program as well.

1. Accordingly, Part 210, National School Lunch Program, is amended in § 210.2(o) by revising the definition of "school" as follows:

§ 210.2 Definitions.

* * * * *

(o) "School" means (1) a nonresidential educational unit of high school grade or under, operating under public or nonprofit private ownership in a single building or complex of buildings. The term "high school grade or under" includes classes of preprimary grade when they are conducted in a school having classes of primary or higher grade, or when they are recognized as a part of the educational system in the State, regardless of whether such preprimary grade classes are conducted in a school having classes of primary or higher grade. (2) A residential educational unit of high school grade or under, operating under public or nonprofit private ownership in a single building or complex of buildings. The term "high school grade or under" as defined in (o)(1) nonresidential educational unit, is applicable to (o) (2) residential educational units, (3) with the exception of residential summer camps which participate in the Summer Food Service Program for Children and private foster homes, any distinct part of public or nonprofit private institution or any public or nonprofit child care institution, which (i) maintains children in residence, (ii) operates principally for the care of children, and (iii) if private, is licensed to provide residential child care services under the appropriate licensing code by the State or a subordinate level of government. The term "child care institution" includes, but is not limited to: homes for the mentally retarded, the emotionally disturbed, the physically handicapped, and unmarried mothers and their infants; group homes; halfway houses; orphanages; temporary shelters for abused children and for runaway children; long-term care facilities for chronically ill children and juvenile detention centers. (4) With respect to the Commonwealth of Puerto Rico, nonprofit child care centers certified as such by the Governor of Puerto Rico.

* * * * *

2. Part 210.15b, paragraph (a) is amended by adding to the end of the first sentence of that paragraph the following sentence:

§ 210.15b Competitive Food Services.

(a) * * * Except that, such regulations need not apply to the service of competitive foods in the living quarters of a residential school as defined in Section 210.2(o) (2) and (3). * * *

* * * * *

Note.—The above definition of "school" would be used to amend all existing school nutrition program regulations.

(Section 17, Public Law 95–166, 91 Stat. 1345 (42 U.S.C. 1779))

Dated: January 8, 1981.

Rural Electrification Administration

7 CFR Part 1701

Public Information; Appendix A—REA Bulletins—Bulletin 345–10, REA Standard PC–6, Acceptance Testing; Procedures for Cable Television Systems

AGENCY: Rural Electrification Administration, USDA.

ACTION: Proposed Rule.

SUMMARY: REA proposes to amend Appendix A—REA Bulletins to issue a new Bulletin 345–10, REA Standard PC–6, Acceptance Testing Procedures for Cable Television Systems, to establish testing procedures and minimum acceptable performance criteria for REA financed CATV systems.

DATE: Public comments must be received by REA no later than March 17, 1981.

ADDRESS: Submit written comments to Joseph M. Flanigan, Director, Telecommunications Engineering and Standards Division, Rural Electrification Administration, Room 1355, South Building, U.S. Department of Agriculture, Washington, D.C. 20250.

FOR FURTHER INFORMATION CONTACT: Claude F. Buster, Jr., Chief, Transmission Branch, Telecommunications engineering and Standards Division, Rural Electrification Administration, Room 1367, south Building, U.S. Department of Agriculture, Washington, D.C. 20250, telephone (202) 447–3917. The Draft Impact Analysis Statement describing the options considered in developing this proposed rule and the impact of implementing each option is available on request from the above office.

SUPPLEMENTARY INFORMATION: Pursuant to the Rural Electrification Act, as amended (7 U.S.C. 901 et seq.), REA proposes to issue Bulletin 345–10, Acceptance Testing Procedures for Cable Television Systems. This action has been reviewed under USDA procedures established in Secretary's Memorandum No. 1955 to implement Executive Order No. 12044 and has been classified not significant.

This program is listed in the Catalog of Federal Domestic Assistance as 10.853, Community Antenna Television Loans and Loan Guarantees. REA, in its effort to assure the best, most cost-effective telecommunications for rural America, and to assure loan security, proposes to issue a new Bulletin 345–10. This action will provide REA borrowers, contractors, engineers, and other interested parties with information on acceptance test procedures and minimum acceptable performance criteria for REA-financed CATV systems. All written submissions made pursuant to this action will be made available for public inspection during regular business hours, above address.

Dated: January 8, 1981.

John H. Arnesen,

Assistant Administrator—Telephone.

[FR Doc. 81–1688 Filed 1–15–81; 8:45 am]

BILLING CODE 3410–15–M

7 CFR Part 1701

REA Bulletin 20–2, "Electric Loan Policies and Application Procedures—Supplemental Resource Financing"; Supplement to Existing Bulletin

AGENCY: Rural Electrification Administration, USDA.

ACTION: Proposed rule.

SUMMARY: REA proposes to issue a supplement to Bulletin 20–2, "Electric Loan Policies and Application Procedures," concerning the making of front-end and construction financing loans and loan guarantees to borrowers for projects utilizing supplemental energy resources.

In accordance with national energy goals, REA encourages its borrowers to utilize supplemental energy resources to the greatest extent practicable to meet power and energy requirements of beneficiaries under the Rural Electrification Act of 1936, as amended. Such supplemental energy resources include, but are not limited to hydroelectric, geothermal, storage, solar, fuel cell, biomass, gas recovery from coal mines and landfills and co-generation.

Under REA's existing loan policies, borrowers interested in developing supplemental resources projects for electric generation have had insufficient incentive for doing so. Early costs involved in studying technical, economic and environmental aspects of such projects have had to be borne by the borrower from revenues, or borrowed at high interest rates as short- or intermediate-term loans from private sources. If a borrower had committed funds to feasibility studies or other early costs of a project later found infeasible, the cost would have to be absorbed by consumers over a short time period. If found feasible, the most likely source of construction funds would be from REA under a loan guarantee.

REA proposes to modify existing loan policies to:

1. Provide fast-track front-end financing at attractive interest rates for early costs of assessing and developing generating projects utilizing supplemental resources;

2. Provide construction financing for such projects with loan guarantees or, where deemed appropriate by the Administrator to provide additional incentive, with insured loan funds or a blend of insured loans and loan guarantees; and

3. Allow for other considerations (national energy goals) to take priority over REA's usual criteria where the project involves initial and supplemental generation utilizing supplemental energy resources.

DATE: Public comments must be received by REA no later than March 17, 1981.

ADDRESS: Submit written comments to the Director, Energy Management and Utilization Division, Rural Electrification Administration, Room 5908 South Building, U.S. Department of Agriculture, Washington, D.C. 20250.

FOR FURTHER INFORMATION CONTACT: Mr. Thomas B. Heath, Director, Energy Management and Utilization Division, at the above address. Telephone number (202) 447–6065. The Draft Impact analysis describing the options considered in developing and implementing the proposal is available on request from the above office.

SUPPLEMENTARY INFORMATION: Pursuant to the Rural Electrification Act of 1936, as amended (7 U.S.C. 901 *et seq.*), REA proposes to issue a supplement to be applicable to REA Bulletin 20–2 as described above. The proposed action has been reviewed under USDA procedures established in Secretary's Memorandum 1955 to Implement Executive Order 12044 and has been classified "not significant." the text of the proposed rule follows:

Subject: Supplement to REA Bulletin 20–2, "Policies and Applications Procedures for Financing Supplemental Energy Projects"

I. Purpose:

To set forth Rural Electrification Administration policies and requirements concerning financing of electric generating facilities utilizing supplemental energy resources.

II. Policy:

A. It is the policy of REA to encourage its borrowers to utilize supplemental energy resources for power and energy requirements.

B. REA will consider making insured loans and/or loan guarantees to finance the costs of developing and constrtucting new generating projects or modifications to existing facilities which will utilize supplemental energy resources. Such loans and guarantees will be made in conformity with the provisions of all applicable REA bulletins, except that Bulletin 20–6, "Guarantee of Loans for Bulk Power Supply Facilities," and Section VII.B of Bulletin 20–2, "Electric Loan Policy and Application Procedures," shall not be applicable to such financing.

III. Eligible Projects:

A. The following are among the supplemental energy resource technologies for which REA will consider providing financing, when utilized for electric generation:

Solar—Storage

Thermal, Mechanical (includes compressed gas); Wind, Electrochemical.

Hydro—Fuel Cells

Conventional and Pumped Storage—No Fuel Cells.

Geothermal; Direct Combustion or Co-Combustion of:

Peat, Biomass (includes wood), Refuse or Refuse Derived Fuel.

Production and Utilization of Fuels From:

Gasification or Liquefaction of Coal, Peat, Biomass, or Refuse by Thermal, Chemical, or Biological Processes.
Fuel Gas Recovered from Mines or Landfills.

B. REA will consider providing financing for co-generation facilities to the extent that such facilities are a necessary and integral part of a borrower's electric system. For the purposes of this section co-generation shall mean the combined generation by any facility of electrical energy and energy of any other form not used within the borrower's system.

IV. Front-End Financing:

A. REA financing for early costs associated with supplemental resource utilization projects will be available as follows:

1. *Insured loans* may be approved for the following items: pre-construction activities including resource investigations, plant site options or acquisition, technical feasibility studies, cost evaluations and comparison of alternatives, environmental analyses, and costs associated with pre-construction permits and licenses other than detailed design engineering costs. Insured loans will not be available for design engineering except when necessary to develop specifications and conduct permits and licenses which are vital to keeping the proposed project on a schedule necessary to meet power or energy supply needs.

The amount of insured funds made available for front-end financing of a particular project will be at the discretion of the Administrator.

2. *Loan guarantees* may be approved for the following items: the procurement of land for resources (such as peat lands, biomass production land or land for project storage capacity), transmission rights-of-way, design engineering other than that provided under IV.A.I, cancellation charges on contracts for long lead time equipment, and for all items specified in IV.A.I, should insured loan funds be limited or unavailable.

B. Front-end financing for a proposed supplemental resource project may be requested by submitting the following items to the Director, Energy Management and Utilization Division, Washington, D.C. 20250:

1. A brief discussion of the need for the project and how it will be utilized to meet members' power and energy needs, and the estimated amount and source (supplier) of any power and energy which might be displaced by the proposed project;

2. An estimated schedule of major project milestones, including financial obligations and cash flow requirements;

3. An estimate of the impact upon the retail consumer's cost of power in the event that all front-end financing is expended but the proposed project is never constructed;

4. Two certified copies of the board resolution authorizing the requested financing; and

5. Two signed copies of REA Form 740c, "Cost Estimates and Loan Budget for Electric Borrowers." An itemized attachment to REA Form 740c should be prepared, showing the amount and purpose for each item for which financing is requested.

V. Construction Financing:

A. Normally, loan guarantees will be available for financing the cost of construction of supplemental energy resource projects. However, the Administrator may approve a blend of guaranteed funds and insured funds to provide an interest rate conducive to development of a project.

B. Construction financing for a proposed supplemental energy resource project may be requested by submitting the following items to the Director, Energy Management and Utilization Division:

1. Two certified copies of the board's resolution to construct the project and request financing from REA, specifying the amount requested;

2. Two signed copies of REA Form 740c, "Cost Estimates and Loan Budget for Electric Borrowers," with an attachment showing the detailed total construction cost estimate, including interest during construction, and any transmission or distribution facilities required, and deductions for previously provided REA front-end financing;

3. Five copies of technical and feasibility analyses. Assumptions used in the analyses must be specified, and it is recommended that they be discussed with REA prior to performance of analyses;

4. A board approved financial forecast, prepared in accordance with REA Bulletin 105–5 (distribution borrowers) or Bulletin 105–7 (power supply borrowers), for a period extending at least 10 years beyond commercial operation of the proposed project. Ths forecast must include a forecast of annual accrual and cash costs of wholesale power under the plan of power supply utilizing the proposed project vs. the plan which would be pursued if the supplemental resource project were not available;

5. Most recent REA Form 7, "Financial and Statistical Report," and REA Form 740a, "Review of General Funds" for the same period as Form 7. These must not be older than 60 days;

6. A detailed project construction schedule;

7. A report on integration of the proposed project into the existing power supply plan including such items as arrangements, for project interconnection, sale of power from the project, back-up and reserve power for the project and transmission of project power; and

8. Environmental information in accordance with REA Bulletin 20–21. REA should be consulted well in advance of a financing request to determine the exact information required for a particular project.

Copies of the draft bulletin and the Draft Impact Analysis are available upon request from the address indicated above. All written submissions made pursuant to this action will be made available for public inspection during

regular business hours at the above address.

This program is listed in the Catalog of Federal Domestic Assistance as 10.850 Rural Electrification Loans and Loan Guarantees.

Dated: January 19, 1981.

Robert W. Feragen,

Administrator.

7 CFR Part 1701

REA Bulletin 20-14 With Respect to Loan Terms and Conditions and Supplemental Financing Policies; Supplement to Existing Bulletin

AGENCY: Rural Electrification Administration, USDA.

ACTION: Proposed Rule.

SUMMARY: REA proposes to issue a supplement to Bulletin 20-14, Supplemental Financing for Loans Considered Under Section 4 of the Rural Electrification Act. Under the existing policy, in order to meet program needs more effectively and conserve available loan funds, REA requires qualified borrowers to obtain a portion of their long-term loan funds from a supplemental lender, on terms and conditions approved by REA, as a prerequisite for obtaining REA loan funds. Heretofore, REA has generally been making loans with terms of 35 years, which is the maximum permitted by the REA Act of 1936, as amended. No requirement as to the duration of a supplemental loan has been in effect. The intent of the proposed action is to require that supplemental lenders which make loans to borrowers concurrently with REA provide loans having a minimum term of 25 years.

DATE: Public comments must be received by REA no later than March 17, 1981.

ADDRESS: Submit written comments to the Director, Electric Loans and Management Division, Rural Electrification Administration, Room 3342, South Building, U.S. Department of Agriculture, Washington, D.C. 20250.

FOR FURTHER INFORMATION CONTACT: Mr. Charles R. Weaver, Director, Electric Loans and Management Division, at the above address, telephone number (202) 447-5900. The Draft Impact Analysis describing the options considered in developing and implementing the proposal is available on request from the above office.

SUPPLEMENTARY INFORMATION: Pursuant to the Rural Electrification Act, as amended (7 U.S.C. 901 *et seq.*), REA proposes to issue a supplement to be applicable to REA Bulletin 20-14 as described above. This proposed action has been reviewed under USDA procedures established in Secretary's Memorandum 1955 to implement Executive Order 12044 and has been classified "significant."

General Summary of Changes

As the spread between cost of supplemental loans and the REA standard interest rate has increased, some borrowers have indicated an interest in shortening the term of future supplemental loans as a means of reducing the overall cost of financing. In order to fairly allocate the limited availability of REA's Revolving Fund, REA will generally require that supplemental loans have a minimum term of 25 years. This will serve to reduce a potential added future requirement for REA insured loan funds while continuing to provide reasonable flexibility in the source, terms and conditions of the required concurrent supplemental financing. REA will continue to offer loans with a term of up to 35 years with principal deferments not to exceed three years.

This requirement of a minimum of a 25-year term for supplemental loans may be modified in special cases where statutory requirements, existing financial arrangements or other valid reasons could preclude certain borrowers from obtaining necessary capital with otherwise acceptable financing if the requirement were strictly applied. Each such situation will be considered on its individual merits.

Copies of the draft bulletin and the Draft Impact Analysis are available upon request from the address indicated above. All written submissions made pursuant to this action will be made available for public inspection during regular business hours at the above address.

(This program is listed in the Catalog of Federal Domestic Assistance as 10.850, Rural Electrification Loans and Loan Guarantees)

Dated: January 13, 1981.

Robert W. Feragen,

Administrator.

BILLING CODE 3410-15-M

NUCLEAR REGULATORY COMMISSION

10 CFR Parts 30, 31, and 32

Static Elimination Devices and Ion Generating Tubes

AGENCY: Nuclear Regulatory Commission.

ACTION: Withdrawal of proposed rule.

SUMMARY: The Nuclear Regulatory Commission is withdrawing a notice of proposed rulemaking published in the **Federal Register** on April 1, 1971, (sic) in which the Atomic Energy Commission (the predecessor of the NRC) solicited comments on proposed amendments of its regulations which would establish a class exemption from licensing requirements for the possession and use of tritium, krypton-85, or polonium-210 in static elimination devices and ion generating tubes. In consideration of the length of time since public comments were requested on the proposed rule and since it will be another year or more before a Commission value impact assessment will recommend the course of action that should be taken on static elimination devices and ion generating tubes, the Commission concludes that it should withdraw the proposed rule published April 1, 1971. The withdrawal of the proposed rule will not affect any person because it is not an action that adds, amends, or rescinds any NRC regulation.

EFFECTIVE DATE: January 16, 1981.

FOR FURTHER INFORMATION CONTACT: Mr. J. J. Henry, Office of Standards Development, U.S. Nuclear Regulatory Commission, Washington, D.C. 20555, (301) 443-5946.

SUPPLEMENTARY INFORMATION: On April 1, 1971, the Atomic Energy Commission (the predecessor of the Nuclear Regulatory Commission) published in the **Federal Register** (36 FR 6015) proposed amendments to 10 CFR Parts 30, 31, and 32 of its regulations which would (a) in proposed new § 30.21(a) establish a class exemption from licensing requirements for the possession and use of tritium, krypton-85, or polonium-210 in static elimination devices and ion generating tubes manufactured, processed, produced, imported, or transferred in accordance with a specific license issued by the AEC authorizing transfer for use under the exemption, (b) in proposed new §§ 32.30, 32.31, 32.32, and 32.33 establish requirements for the issuance of specific licenses authorizing the distribution of the static elimination devices and ion generating tubes to persons for use under the class exemption, (c) in proposed new §§ 30.21 (b) and (c) exempt those static elimination devices and ion generating tubes distributed for use under general license in § 31.3 prior to a specified date, and (d) revoke § 31.3 as of that same specified date.

A number of comments were received in response to the notice of proposed rulemaking, some of which suggested

that proposed new § 32.30 may have been too restrictive in requiring a specific license for the incorporation of static elimination devices or ion generating tubes into products for commercial distribution.

Neither the Atomic Energy Commission nor the Nuclear Regulatory Commission (established by the Energy Reorganization Act of 1974 on January 19, 1975) took any further action on this rulemaking proceeding. Over the intervening years, the staff began studies (including a generic environmental impact statement on consumer products) that eventually should result in Commission decisions on criteria for approval of consumer products and policy on the use of general licenses that might have a bearing on the regulatory control of static elimination devices and ion generating tubes containing byproduct materials.

The Commission believes that it would be premature to exempt at this time additional products containing radioactive material for consumer use in view of the above studies. In consideration of the length of time since public comments were requested on the proposed rule and since it will be another year or more before a Commission value impact assessment will recommend the course of action that should be taken on static elimination devices and ion generating tubes, the Commission concludes that it should withdraw the proposed rule published April 1, 1971.

In view of these considerations, the proposed rule is hereby withdrawn. The withdrawal of this proposed rule, however, does not preclude the Commission from issuing similar notices in the future or commit the Commission to any course of action with regard to static elimination and ion generating devices.

(5 U.S.C. 552(a))

Dated at Washington, D.C., this 12th day of January, 1981.

For the Nuclear Regulatory Commission.

Samuel J. Chilk,

Secretary of the Commission.

[FR Doc. 81-1415 Filed 1-15-81; 8:45 am]

BILLING CODE 7590-01-M

FEDERAL HOME LOAN BANK BOARD

12 CFR Part 545

[No. 81-5]

Washington, D.C.-Maryland-Virginia SMSA Branching

Dated: January 8, 1981.

AGENCY: Federal Home Loan Bank Board.

ACTION: Establishing comment period on proposed regulation.

SUMMARY: The Federal Home Loan Bank Board will accept public comments until February 13, 1981, on its pending proposal to allow branching of Federal savings and loan associations throughout the Washington Standard Metropolitan Statistical Area.

DATE: Comments will be accepted until February 13, 1981.

ADDRESS: Comments should be addressed to Secretary, Federal Home Loan Bank Board, 1700 G Street NW., Washington, D.C. 20552

FOR FURTHER INFORMATION CONTACT: Nancy Feldman, Associate General Counsel, Federal Home Loan Bank Board, 1700 G Street NW., Washington, D.C. 20552; (202) 377-6440.

SUPPLEMENTARY INFORMATION: On June 14, 1979, the Federal Home Loan Bank Board, by Resolution No. 79-340 (44 FR 36057; published June 20, 1979), proposed to amend its regulations to permit Federal associations with offices within the Washington, D.C.-Md.-Va. Standard Metropolitan Statistical Area ("SMSA") to branch throughout the SMSA.

When the Board proposed this regulation, it was aware that Congress had requested the President of the United States to conduct a study of the McFadden Act, which imposes restrictions on the branching of banks. While the McFadden Act does not impose restrictions on the branching of savings and loan institutions, the McFadden Study addresses competitive issues that parallel savings and loan branching issues. To give the Board and the public an adequate opportunity to assess the application of material contained in the McFadden Study to the Washington SMSA branching proposal, the Board announced on October 4, 1979, by Resolution No. 79-498 (44 FR 58744; published October 11, 1979), that it was extending the October 15, 1979, comment period deadline until at least 30 days after release of the Study. Accordingly, the Study ("Geographic Restrictions on Commercial Banking in the United States") having been submitted to Congress on January 6, 1981, the Board will accept comments regarding its proposed Washington SMSA regulation until February 13, 1981.

(Sec. 17, 47 Stat. 736, as amended; 12 U.S.C. 1437, Reorg. Plan No. 3 of 1947, 3 CFR, 1943-48 Comp., p. 1071)

By the Federal Home Loan Bank Board.

Robert D. Linder,

Acting Secretary.

BILLING CODE 6720-01-M

DEPARTMENT OF ENGERGY

Federal Energy Regulatory Commission

18 CFR Part 35

[Docket No. RM80-36]

Rate of Return on Equity for Electric Utilities; Informal Conference

Issued January 12, 1981.

AGENCY: Federal Energy Regulatory Commission.

ACTION: Notice of informal conference.

SUMMARY: The staff of the Federal Energy Regulatory Commission (Commission) will hold an informal public conference to hear and discuss views from interested persons on proposals made in a Study group discussion paper on rate of return for electric utilities. The discussion paper is entitled, "Establishing the Rate of Return on Equity for Wholesale Electric Sales: Potential Regulatory Reforms."

DATES: Requests to participate in the public conference due January 27, 1981; public conference will be held on Friday, January 30, 1981, at 9:00 a.m.

ADDRESSES: Request to participate to:

The Secretary, Federal Energy Regulatory Commission, 825 North Capitol Street, N.E., Washington, D.C. 20426 (202) 357-8400;

Public conference: Hearing Room A, Federal Energy Regulatory Commission, 825 North Capitol Street, N.E., Washington, D.C. 20426;

Requests for copies of discussion paper: Office of Congressional and Public Affairs, Federal Energy Regulatory Commission, 825 North Capitol Street, N.E., Room 1000, Washington, D.C. 20426 (202) 357-8055.

FOR FURTHER INFORMATION CONTACT: Ms. Angela Lancaster, Federal Energy Regulatory Commission, 825 North Capitol Street, N.E., Washington, D.C. 20426 (202) 357-8377.

SUPPLEMENTARY INFORMATION: On December 15, 1980, the Commission directed its staff to make public a Study Group discussion paper on rate of return for electric utilities entitled, "Establishing the Rate of Return on Equity for Wholesale Electric Sales: Potential Regulatory Reforms." In addition, the Commission authorized the staff to hold informal public conferences

to solicit views from interested persons on the proposals made by the Study Group as described in the paper. The Study Group proposed that the Commission institute one of three alternative generic procedures for setting equity rates of return for jurisdictional electric utilities, rather than continue the current, case-by-case procedures for setting rates of return. The alternatives and the basis of the Study Group's recommendation are described in the Study Group's discussion paper.

The public conference will be held on Friday, January 30, 1981. The conference will be conducted as a roundtable discussion, with members of the staff Study Group participating along with other interested persons. Persons wishing to participate in the meeting should contact the Secretary by January 27, 1981, and should give some indication of the particular issues they would most like to discuss. A record will be kept of the discussion.

There are several specific questions on which views are solicited. First, has the Study Group adequately identified the problems and advantages of the Commission's current procedures for setting electric rate of return on equity? If not, what alternative considerations should be brought to the Commission's attention?

Second, has the Study Group correctly identified the options available to the Commission for improving the Commission's regulation of the rate of return on equity allowed jurisdictional electric utilities? If not, what other options should be considered by the Commission?

Finally, which option is preferred?

Kenneth F. Plumb,

Secretary.

BILLING CODE 6450-85-M

DEPARTMENT OF LABOR

Employment and Training Administration

20 CFR Part 656

Labor Certification Process for the Permanent Employment of Aliens in the United States; Certification of Canadian Railway Workers

AGENCY: Employment and Training Administration, Labor.

ACTION: Notice of proposed rulemaking.

SUMMARY: The Employment and Training Administration of the Department of Labor proposes to amend its regulations relating to certification of immigrant aliens for permanent employment in the United States. The amendment would add to the *Schedule A* precertification list certain Canadian railway workers who have qualified for employment through seniority rights under a collective bargaining agreement.

DATE: Interested persons are invited to submit written comments on this proposed rulemaking on or before March 17, 1981.

ADDRESS: Send written comments to: Mr. David O. Williams, Administrator, United States Employment Service, Employment and Training Administration, United States Department of Labor, Suite 8000—Patrick Henry Building, 601 "D" Street N.W., Washington, D.C. 20213.

FOR FURTHER INFORMATION CONTACT: Mr. Aaron Bodin, Chief, Division of Labor Certifications, Telephone: 202-376-6295.

SUPPLEMENTARY INFORMATION: The Employment and Training Administration (ETA) of the Department of Labor (DOL) is proposing to amend its regulations at 20 CFR Part 656, to add to the *Schedule A* precertification list certain Canadian railway workers who will be employed with the same international railway corporation or organization with which they were employed in the United States or Canada for one continuous year.

Permanent Alien Employment Certification Process

Pursuant to the Immigration and Nationality Act (Act), before the Department of State and the Immigration and Naturalization Service (INS) may issue visas and admit certain immigrant aliens to work permanently in the United States, the Secretary of Labor must first certify to the Secretary of State and to the Attorney General that:

(a) There are not sufficient United States workers, who are able, willing, qualified, and available at the time of the application for a visa and admission into the United States and at the place where the alien is to perform the work; and

(b) The employment of the alien will not adversely affect the wages and working conditions of similarly employed United States workers. 8 U.S.C. 1182(a)(14).

Department of Labor Regulations

DOL has promulgated regulations at 20 CFR Part 656 governing the labor certification process described above for the permanent employment of immigrant aliens in the United States. 45 FR 83926 (December 19, 1980). Part 656 was promulgated pursuant to and implements section 212(a)(14) of the Act (8 U.S.C. 1182(a)(14)).

The regulations at 20 CFR Part 656 set forth the factfinding process designed to develop information sufficient to support the granting or denial of a permanent labor certification. Part 656 also sets forth the responsibilities of employers who desire to permanently employ immigrant aliens in the United States, and the responsibilities of the alien beneficiaries of permanent alien labor certifications.

Schedule A Precertification List

ETA has published, at 2 CFR 656.10, a list of occupations *(Schedule A)* for which the Administrator, U.S. Employment Service, has determined that there are not sufficient United States workers who are able, willing, qualified, and available, and that the wages and working conditions of U.S. workers similarly employed will not be adversely affected by the employment of aliens. 45 FR 83934 (December 19, 1980). DOL has delegated to the Department of State and the INS the authority to determine if an alien falls within one of the occupational categories on *Schedule A*, and, if so, to issue a permanent alien labor certification for the alien. 20 CFR 656.22; 45 FR 83941 (December 19, 1980). The *Schedule A* determination of the INS or Deparment of State is conclusive and final, and is not appealable within DOL.

Canadian Railway Workers

Various international railway companies operate tracks which cross the United States-Canadian border, or facilities which are in both the United States and Canada. Pursuant to collective bargaining agreements between these railway employers and international railway unions, the employers' employees may exercise seniority rights and bid for jobs on both sides of the border. United States workers seek and obtain employment in Canada under such agreements, as do Canadian workers in the United States.

Canadian immigration authorities may issue an employment authorization (similar to a labor certification) to a non-Canadian if the employment of that person would result in reciprocal treatment of Canadian citizens in other countries. Thus, the issuance of *Schedule A* United States permanent alien labor certifications to Canadian workers in such an occupational category would result in reciprocal employment opportunities for similarly situated U.S. workers in Canada.

During the recent rulemaking process revising 20 CFR Part 656 (see 44 FR 83926 (December 19, 1980)), DOL

received a request from inernational railway unions that consideration be given to Canadian railway workers exercising their collective bargaining agreement seniority rights across the border, so that reciprocity might be extended to United States workers in Canada. These unions represent members on both sides of the border, under collective bargaining agreements with international railway employers. Although the unions' request was outside the scope of the rulemaking concluded on December 19, 1980, ETA has determined that the request has merit and is issuing this Notice of Proposed Rulemaking. Because of the unique nature of railway employment, with tracks crossing and facilities located on both sides of the border, and the unique nature of the employment, resulting in expanded job opportunities for U.S. workers in Canada, certain Canadian railway workers will be added to *Schedule A*.

The Canadians must qualify for such employment on the basis of seniority rights under a collective bargaining agreement between an international railway corporation or organization and an international labor union. Two groups of workers would be included:

(1) Canadian citizens who have been admitted to the United States in order to work in, and who are currently working in, railway employment with the same international railway corporations or organization with which they were continuously employed in railway employment in Canada for one year before they were admitted to the United States; and

(2) Canadian citizens in Canada who will be engaged in the United States in railway employment with the same international railway corporations or organizations with which they have been continuously employed in railway employment in Canada for the immediately prior year.

Precertification of the above two groups would be permitted only where the Canadian immigration authorities reciprocate in permitting similar employment of United States railway workers in Canada.

Development of Final Rule

The final rule was prepared under the direction and control of Mr. David O. Williams, Administrator, United States Employment Service, Employment and Training Administration, United States Department of Labor, Washington, D.C.

Regulatory Impact

The rule would have less impact than specified in DOL's criteria, so that the effect of the proposed regulation is not so major as to require the preparation of a regulatory analysis. See 44 FR 5576 (January 26, 1979). This shall also certify that the rule, if promulgated, will not have a significant economic impact on a substantial number of small business entities, since it applies only to large multinational employers. 5 U.S.C. 605(b).

Catalog of Federal Domestic Assistance Number

This program is listed in the *Catalog of Federal Domestic Assistance* at Number 17.203, "Certification for Immigrant Workers".

Proposed Rule

Accordingly, it is proposed to amend Part 656 of Chapter V of Title 20, Code of Federal Regulations, as follows:

1. Section 656.10 is amended by designating paragraph (d)(3) on *Schedule A* as paragraph (d)(4) and by adding a new paragraph (d)(3) to read as follows:

§ 656.10 Schedule A.

* * * * *

(d) Group IV: * * *

(3)(i)(A) Canadian citizens who have been admitted to the United States in order to work in, and who are currently working in, railway employment with the same international railway corporations or organization with which they were continuously employed in railway employment in Canada for one year before they were admitted to the United States, and who have qualified for such employment in the United States on the basis of seniority rights under a collective bargaining agreement between the employer and an international labor union.

(B) Canadian citizens in Canada who will be engaged in the United States in railway employment with the same international railway corporations or organizations with which they have been continuously employed in railway employment in Canada for the immediately prior year, and who have qualified for such employment in the United States on the basis of seniority rights under a collective bargaining agreement between the employer and an international labor union.

(ii) A Canadian citizen shall qualify under paragraph (d)(3)(i) of this section only if the employment of the alien would result in the reciprocal employment of United States railway workers in Canada.

* * * * *

2. Section 656.22 is amended as follows:

a. Paragraph (f)(2)(iii) is amended by deleting the word "and" at the end thereof;

b. Paragraphs (f)(1) and (f)(2)(iv) are revised, and a new paragraph (f)(2)(v) is added, to read as follows:

§ 656.22 Applications for labor certifications for Schedule A occupations.

* * * * *

(f)(1) Aliens seeking labor certifications under Group IV(1) or IV(2) of *Schedule A* shall meet, at the time of filing the application, the eligibility requirements of the Immigration and Nationality Act for an L–1 nonimmigrant visa classification as a manager or executive. See 8 U.S.C. 1101(a)(15)(L); and 8 CFR 214.2(1). However, persons who are eligible for an L–1 visa on the basis of specialized knowledge, but not managerial or executive experience, do not meet the requirements for Group IV(1) of IV(2) of *Schedule A*. The actual filing of an L–1 visa petition is not required.

* * * * *

(2) * * *

(iv) The dates the international corporation or organization was established and has been doing business in the United States prior to the submission of the application (The term "doing business" is defined in *Schedule A* at § 656.10(d)(4) of this Part); and

(v) If the alien is seeking certification of employment as a railway worker, as described in Group IV(3) of *Schedule A*, the alien shall attach:

(A) Proof of the alien's Canadian citizenship; and

(B) A document signed by an authorized officer of the international railway corporation or organization which will employ the alien in the United States and by an authorized officer of the international labor union under whose collective bargaining agreement the alien is seeking railway employment in the United States, stating that the alien has qualified for the employment on the basis of seniority rights under a collective bargaining agreement between the employer and the union. Notwithstanding such documentation, such aliens do not qualify for the purposes of *Schedule A*, Group IV(3) (see § 656.10(d)(3) of this Part), unless the alien's employment would result in the reciprocal employment of United States railway workers in Canada.

* * * * *

(Sec. 212(a)(14) of the Immigration and Nationality Act, 8 U.S.C. 1101 et seq.; Wagner-Peyser Act of 1933, as amended, 29 U.S.C. 49 et seq.; 5 U.S.C. 301)

Signed in Washington, D.C., this 12th day of January 1981.

Ray Marshall,

Secretary of Labor.

BILLING CODE 4510-30-M

DEPARTMENT OF THE TREASURY

Internal Revenue Service

26 CFR Part 1

Income Tax; Dollar-Value LIFO Inventory

AGENCY: Internal Revenue Service, Treasury.

ACTION: Notice of proposed rulemaking.

SUMMARY: This document contains proposed amendments to the regulations relating to the valuation of dollar-value last-in, first-out (LIFO) inventories. The proposed amendments would provide the public with guidance regarding a method of valuing dollar-value LIFO inventories and would affect taxpayers required to maintain inventories.

DATES: Written comments and requests for a public hearing must be mailed or delivered by April 16, 1981. The amendments are proposed to be effective for taxable years beginning after the proposed amendments are adopted by a Treasury decision.

ADDRESS: Send comments and requests for a public hearing to: Commissioner of Internal Revenue, Attention: CC:LR:T (LR-267-79), Washington, D.C. 20224.

CONTACT FOR FURTHER INFORMATION: Philip Bosco of the Legislation and Regulations Division, Office of the Chief Counsel, Internal Revenue Service, 1111 Constitution Avenue, NW., Washington, D.C. 20224, Attention: CC:LR:T, 202-566-3238, not a toll-free call.

SUPPLEMENTARY INFORMATION:

Background

This document contains proposed amendments to the Income Tax Regulations (26 CFR Part 1) under section 472 of the Internal Revenue Code of 1954. The proposed amendments are to be issued under the authority contained in sections 472 and 7805 of the Internal Revenue Code of 1954 (68A Stat. 159, 917; 26 U.S.C. 472, 7805).

Explanation of Proposed Amendments

Under regulations § 1.472-8, taxpayers are permitted to use the dollar-value LIFO method of accounting for inventories, which accounts for inventories in terms of dollars of cost rather than specific goods. In order to compare the costs in an inventory pool at the close of a year with the costs in an inventory pool at the beginning of the year, it is necessary to convert costs into dollars with a constant value, which are referred to as "base-year" dollars.

Current rules provide that taxpayers generally are not permitted to use an inventory price index to determine the base-year dollars in an inventory pool unless the index is based on the price change experience for the particular inventory pool. An exception to this rule is the *Department Store Inventory Price Indexes*, prepared by the United States Bureau of Labor Statistics for the purpose of valuing inventories found in the departments of department stores. Taxpayers generally cannot use price indexes such as the consumer and producer price indexes prepared by the Bureau of Labor Statistics because they cannot show that the use of such indexes is accurate, reliable, and suitable for their particular inventory pools.

Many taxpayers, especially small businesses, do not currently use the LIFO method because the use of the current dollar-value LIFO rules are perceived to be complex and burdensome. Amendments to the regulations are being proposed to simplify the use of the dollar-value LIFO method so that the LIFO method could be used by more taxpayers and would be easier to use by taxpayers currently using the method. However, before the proposed amendments can be adopted as final regulations, in addition to the issues addressed by the proposed amendments, several issues not addressed by the proposed amendments also must be resolved. A notice of proposed rulemaking might be published in the future addressing these issues, but written comments at this time would be helpful. The remainder of this preamble, which discusses the draft proposed amendments, also identifies some of the issues that remain to be resolved.

The proposed amendments to the regulations would simplify the use of the dollar-value LIFO method by providing that for taxable years beginning after the proposed amendments are adopted as final regulations, taxpayers may establish inventory pools under special rules and may compute an inventory price index for valuing a pool by referring to 80 percent of the percent change in selected consumer or producer price indexes prepared by the Bureau of Labor Statistics and published in the *CPI Detailed Report* or *Producer Prices and Price Indexes*, which are monthly reports on consumer price movements and producer price movements.

In developing the proposed amendments, it was determined that the consumer and producer price indexes prepared by the Bureau of Labor Statistics would overstate the movement of inventory prices experienced by some taxpayers and would understate the movement of inventory prices experienced by other taxpayers. Taxpayers experiencing a rate of inventory price inflation lower than the published rate would tend to choose the use of the published consumer and producer price indexes. Taxpayers experiencing a rate of inventory price inflation higher than the published rate would tend to choose to use a price index based on their own inventory price inflation experience. It was decided that the use of the consumer and producer price indexes prepared by the Bureau of Labor Statistics should not depend on whether a taxpayer's actual rate of inventory price inflation was relatively high or low. However, it was also decided that the use of overstated inflation rates to value LIFO inventory pools should be reduced to the extent possible consistent with the purposes of simplifying the use of the dollar-value LIFO method. The 80 percent limitation is intended to be an alternative to computing an inventory price index based on the taxpayer's own inflation rate and is intended to be an appropriately conservative estimate that the taxpayer can use without regard to the inflation rate actually experienced by the taxpayer.

An unresolved issue is how to apply the 80 percent limitation to the inflation rate for a period of more than one taxable year. For example, if a selected consumer or producer price index for a specific category of goods increased 10 percent per year for two years, the cumulative published inflation rate for the two-year period is 21 percent. If the 80 percent limitation were applied to the 21 percent cumulative published inflation rate, the inventory price index would reflect an increase of 16.8 percent (80 percent of 21 percent). However, if the 80 percent limitation were applied to the annual published inflation rate, the inventory price index would reflect an increase of 8 percent (80 percent of 10 percent) for each year and a cumulative increase of 16.64 percent.

The *CPI Detailed Report* and *Producer Prices and Price Indexes* can each be ordered from the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402. The *CPI Detailed Report* has a single copy price

of $2.25 and a one-year subscription price of $15.00. The *Producer Prices and Price Indexes* has a single copy price of $2.75 and a one-year subscription price of $17.00.

An excerpt from the *CPI Detailed Report* for December 1979 is reproduced here.

Excerpt from Table 5.—*CPI for All Urban Consumers: Nonfood Expenditure Categories, U.S. City Average*

	Index base	Unadjusted index Dec. 1979	Unadjusted percent change to Dec. 1979 from Dec. 1978
Household furnishings and operation	1967	195.8	6.4
Housefurnishings:	1967	166.9	5.2
Textile household furnishings	1967	178.6	6.1
Household linens	1977	108.3	4.3
Curtains, drapes, slipcovers, and sewing materials	1977	114.6	7.9
Furniture and Bedding	1967	182.8	6.3
Bedroom furniture	1977	118.3	6.7
Sofas	1977	108.2	4.5
Livingroom chairs and tables	1977	108.1	4.5
Other furniture	1977	117.1	6.3
Appliances including TV and sound equipment	1977	137.5	3.3
Television and sound equipment	1977	105.3	2.0
Television	1967	103.6	.9
Sound equipment	1977	107.8	2.9
Household appliances	1967	157.9	4.5
Refrigerators and home freezers	1967	156.7	4.5
Laundry equipment	1977	113.6	6.9
Other household appliances	1977	109.9	3.4
Stoves, dishwashers, vacuums, and sewing machines	1977	108.6	.5
Office machines, small electric appliances and air conditioners	1977	111.4	7.0
Other household equipment	1977	113.0	6.5
Floor and window coverings, infants', laundry, cleaning, and outdoor equipment	1977	111.7	5.7
Clocks, lamps, and decor items	1977	110.1	6.9
Tableware, serving pieces, and nonelectric kitchenware	1977	117.2	8.0
Lawn equipment, power tools, and other hardware	1977	110.3	4.8

The proposed amendments would provide that the index or indexes selected for an inventory pool must be the most detailed index or indexes for the category or categories of goods that most closely resemble the type of goods in the inventory pool. Written comments are requested suggesting additional criteria to be used to determine the appropriate index or indexes for an inventory pool. Suggestions with respect to specific types of businesses would be helpful.

The proposed amendments would also provide that if it is necessary to select more than one consumer or producer price index for an inventory pool, the inventory price index used to determine the LIFO value of the pool is computed by referring to 80 percent of a weighted average of the percent changes in the selected consumer or producer price indexes for the pool. The weighted average is computed with reference to the relative amounts of costs of goods in each consumer or producer price index category of goods in the inventory pool. An issue not resolved is whether the weighting of the indexes should be based on the relative current-year costs in ending inventory, the relative base-year costs in ending inventory, or the relative costs in ending inventory of a representative year which would be revised at reasonable intervals such as every five years. Written comments addressing these issues or suggesting alternate ways of applying multiple indexes to a single pool are requested.

The proposed amendments would also provide special rules for establishing the inventory pools of retailers, wholesalers, jobbers and distributors to be valued with the inventory price indexes computed under the new rules. The proposed amendments would provide that retailers, wholesalers, jobbers, and distributors using the new rules to compute an inventory price index may establish inventory pools for any group of goods included within one of eleven general categories of consumer goods described in the *CPI Detailed Report*. These categories are food and beverages, housing maintenance and repair commodities, fuels (other than gasoline), house furnishings and housekeeping supplies, apparel commodities, private transportation (including gasoline), medical care commodities, entertainment commodities, tobacco products, toilet goods and personal care appliances, and school books and supplies. Written comments suggesting other pooling methods to be used with the new inventory price index rules are welcome.

The proposed amendments would provide that the use of an inventory price index based on selected consumer or producer price indexes is a method of accounting. The proposed amendments would provide that taxpayers must request the Commissioner's consent to a change to such method of accounting, but also would provide that for the first or second taxable year beginning after the proposed amendments are adopted as final regulations, taxpayers may change to this method of computing inventory price indexes without requesting the consent of the Commissioner. This change would be made by filing a Form 970 with the taxpayer's income tax return for the year of change.

Initial Regulatory Flexibility Analysis

Amendments to the regulations are being proposed because the existing rules relating to the computation of inventory price indexes used in connection with the dollar-value LIFO method of inventory valuation are perceived by many taxpayers, especially many small businesses, as being too complex and therefore the LIFO method is not used by such taxpayers.

The objective of these proposed amendments is to provide taxpayers with an alternate, simplified, method of computing an inventory price index that will make the use of the dollar-value LIFO method easier and therefore more accessible, especially to small businesses. The proposed amendments, if adopted, would therefore permit taxpayers to use price indexes prepared by the United States Bureau of Labor Statistics in lieu of computing an inventory price index based on their own inflation experience. A necessary part of the objective to simplify the use of the dollar-value LIFO method is to maintain the integrity of the method as a method that results in the clear reflection of income. Therefore, in order to mitigate any inaccuracy inherent in the use of averages and to reduce the possibility of adverse selection against the Government, the proposed amendments would permit taxpayers to use only 80 percent of the percent change in the selected consumer or producer price indexes. The amendments are proposed under the authority of sections 472 and 7805 of the Internal Revenue Code of 1954.

The proposed amendments, if adopted, will affect any small business that is required under section 471 of the Internal Revenue Code to maintain inventories, elects to use the LIFO method in valuing such inventories, and wishes to use the rules provided by the proposed amendments. No taxpayer will

be required to use the method provided by the proposed amendments.

If the proposed amendments are adopted, any small business wishing to use the rules provided by the proposed amendments will be required to report for the first year that the method is used the inventory pools used, the type of goods included in each pool, and the consumer or producer price index or indexes selected for each pool. In addition, for each year in which the inventory price index computation method is used, the taxpayer will be required to maintain adequate books and records showing how inventory pools were established, how the consumer and producer price indexes were selected, and how the inventory price indexes and the change in such indexes were computed. Professional accounting skills may be desirable in the initial year of using the method provided by the proposed rules, although information disseminated by various industry groups may provide small businesses with adequate assistance. Otherwise, the rules prescribed in the proposed amendments do not require any professional skills in addition to those already needed to keep inventory accounting records for a small business.

The proposed amendments do not overlap with, conflict with, or duplicate any existing federal regulation.

The amendments are being proposed to reduce the economic impact on small businesses of the rules relating to the use of the LIFO method by simplifying the computations required under such method, thereby enabling more small entities to avail themselves of the tax reduction benefits of the use of the LIFO method and reducing the computational and recordkeeping costs of taxpayers using the LIFO method. The only significant alternative that was considered, other than not proposing any amendments, was to limit the availability of the new method to small businesses and allow the use of 100 percent of the change in the selected consumer and producer price indexes. This alternative was rejected because there is no authority under sections 472 and 7805 of the Internal Revenue Code to differentiate between large and small businesses in providing rules that would affect tax liability. In addition, allowing the use of 100 percent of the change in the selected indexes would result in an increase in the number of taxpayers using an overstated inflation rate to value inventory pools and would increase the extent to which such rates are overstated. The 80 percent limitation provided in the proposed amendments is intended to be an alternative to computing an inventory price index based on the taxpayer's own inflation experience and therefore a conservative estimate that taxpayers can use without regard to the inflation rate actually experienced by the taxpayer.

Comments and Requests for a Public Hearing

Before adopting these proposed amendments, consideration will be given to any written comments (preferably six copies) that are submitted to the Commissioner of Internal Revenue. All comments will be available for public inspection and copying. A public hearing will be held upon written request to the Commissioner by any person who has submitted written comments. If a public hearing is to be held, notice of the time and place will be published in the **Federal Register.**

Drafting Information

The principal author of these proposed amendments is Geoffrey B. Lanning of the Legislation and Regulations Division of the Office of Chief Counsel, Internal Revenue Service. However, personnel from other offices of the Internal Revenue Service and Treasury Department participated in developing the proposed amendments, both on matters of substance and style.

Proposed Amendments to the Regulations

The proposed amendments to 26 CFR Part 1 are as follows:

Paragraph (e) of § 1.472–8 is amended by adding new paragraph (e)(3) to read as set forth below:

§ 1.472–8 Dollar-value method of pricing LIFO inventories.

* * * * *

(e) *Methods of computation of the LIFO value of a dollar-value pool.* * * *

(3) *Use of inventory price index computed with reference to consumer or producer price indexes*—(i) *In general.* For purposes of paragraph (e)(1) of this section, for taxable years beginning after [insert date these proposed amendments are adopted by a Treasury decision], an inventory price index computed in the manner provided by paragraph (e)(3) will be accepted by the Commissioner as an appropriate method of computing an index, and the use of such inventory price index to compute the LIFO value of a dollar-value inventory pool will be accepted as accurate, reliable, and suitable. A taxpayer using the inventory price index computation method provided by paragraph (e)(3) must use such method in determining the value of all goods for which the taxpayer has elected to use the LIFO method. However, the inventory price index computation method provided by paragraph (e)(3) may not be used by a taxpayer eligible to use inventory price indexes prepared by the United States Bureau of Labor Statistics for the purpose of valuing the LIFO inventories of a specific industry. Thus, a taxpayer eligible to use the retail price indexes prepared by the Bureau of Labor Statistics and published in *Department Store Inventory Price Indexes* may not use the inventory price index computation method provided by paragraph (e)(3). An inventory price index computed as provided by paragraph (e)(3) is computed in the manner provided by paragraph (e)(3)(ii) with reference to consumer or producer price indexes selected in the manner provided by paragraph (e)(3)(iii). Special rules for establishing inventory pools to be valued by an inventory price index computed in the manner provided by paragraph (e)(3) are in paragraph (e)(3)(iv). Rules relating to the adoption of, or change to, the method of computing an inventory price index in the manner provided by paragraph (e)(3) are in paragraph (e)(3) (v) and (vi).

(ii) *Computation of index.* An inventory price index computed in the manner provided by this subdivision (ii) shall reflect 80 percent of the percent change in the selected consumer or producer price index or indexes for a specific category or categories of goods. See paragraph (e)(3)(iii) of this section for rules relating to the selection of appropriate consumer or produce price indexes. Thus, if the selected consumer or producer price index for a specific category of goods increased 10 percent for the period December 1981 to December 1982, an inventory price index computed in the manner provided by this subdivision (ii) with reference to such consumer or producer price index will reflect an increase of 8 percent (80 percent of 10 percent) for the period December 1981 to December 1982. If under paragraph (e)(3)(ii) it is necessary to select more than one consumer or producer price index for an inventory pool, 80 percent of the percent change in such indexes is 80 percent of the weighted average percent change for such indexes. Such weighted average is computed with reference to the relative amounts of costs in the inventory pool for each index category of goods.

(iii) *Selection of consumer or producer price indexes*—(A) *In general.* An inventory price index computed as provided by paragraph (e)(3) of this section is computed with reference to

the most detailed consumer or producer price indexes for specific categories of goods in the *CPI Detailed Report* or *Producer Prices and Price Indexes* published by the United States Bureau of Labor Statistics.

(B) *Selection of category of goods.* The index or indexes selected must be the most detailed index or indexes for the specific category or categories of goods that most closely resemble the type of goods in the inventory pool to be valued. Whether the selection of the consumer or producer price indexes to be used to compute an inventory price index is appopriate, and the propriety of all computations incidental to the use of such consumer or producer price indexes, will be determined in connection with the examination of the taxpayer's income tax return. The selection of a consumer or producer price index for a specific category of goods to compute an inventory price index under paragraph (e) (3) is a method of accounting. A taxpayer desiring to change the selection of the consumder or producer price indexes must secure the consent of the Commissioner as provided in § 1.446–1 (e). In the case of such a change, any layers of inventory increments previously determined and the LIFO value of such increments shall be retained. Instead of using the earliest taxable year for which the taxpayer adopted the LIFO method for any items in the inventory pool, the year of such change shall be used as the base year in determining the LIFO value of the inventory pool for the year of change and later taxable years. The base year costs of layers of increments in the pool at the beginning of the year of change shall be restated in terms of new base year costs using the year of change as the new base year.

(C) *Other selection requirements.* Manufactuers, processors, wholesalers, jobbers, and distributors may select indexes from only *Producer Prices and Price Indexes*. Retailers may select indexes from either the *CPI Detailed Report* or *Producer Prices and Price Indexes*, but if equally appropriate indexes could be selected from either publication, a retailer using the retail inventory method must select the index from the *CPI Detailed Report* and a retailer not using the retail inventory method must select the index from *Producer Prices and Price Indexes*. If a retailer using the retail inventory method selects a price index from *Producer Prices and Price Indexes*, the selected index must be converted into a retail price index. If a retailer not using the retail inventory method selects an index from the *CPI Detailed Report*, the selected index must be converted into a cost price index. Manufacturers, processors, wholesalers, jobbers, and distributors, must convert selected indexes into cost prices indexes. Seasonally adjusted indexes may not be selected. Indexes for specific cities, class of cities, or regions may not be selected. In the case of indexes published in the *CPI Detailed Report*, indexes may be selected only from indexes for all urban consumers. In the case of a taxpayer using the retail inventory method, the selected index must be the index as of the last month of the taxpayer's taxable year. Taxpayers that do not use the retail inventory method must select indexes as of the month or months most appropriate to the taxpayer's method of determining the current-year cost of the inventory pool under paragraph (e)(2)(ii) of this section. For example, assume that a calendar year taxpayer does not use the retail method and determines the current year cost of inventory pools underparagraph (e)(2)(ii)(*a*) by reference to the actual cost of the goods most recently purchased or produced. If all the goods most recently purchased or produced in 1982 were purchased or produced in November, the selected index or indexes must be indexes as of November 1982.

(iv) *Special rules for pools.* A retailer, wholesaler, jobber, or distributor computing an inventory price index in the manner provided by paragraph (e)(3) of this section may establish an inventory pool for any group of goods included within one of eleven general categories of consumer goods described in the *CPI Detailed Report*. The eleven categories are food and beverages, housing maintenance and repair commodities, fuels (other than gasoline), house furnishings and housekeeping supplies, apparel commodities, private transportation (including gasoline), medical care commodities, entertainment commodities, tobacco products, toilet goods and personal care appliances, and school books and supplies. See paragraphs (b), (c) and (d) of this section for additional rules relating to the establishment of pools. Exccpt as provided in paragraph (e)(3)(v) of this section, relating to the adoption or change of method of computing an inventory price index, the rules of paragraph (g) (1) and (2) of this section apply to a change in method of pooling.

(v) *Adoption or change of method.* The use of an inventory price index computed in the manner provided by paragraph (e) (3) of this section is considered a method of accounting. A taxpayer permitted to adopt or change to the dollar-value LIFO inventory method without first securing the consent of the Commissioner may adopt the inventory price index computation method prescribed by paragraph (e) (3) incident to such adopotion or change without first securing the consent of the Commissioner. In all other cases, a taxpayer may adopt or change to the inventory price index computation method prescribed by paragraph (e) (3) only after first securing the consent of the Commissioner as provided in § 1.446–1 (e). However, in the case of a taxpayer not using the inventory price index computation method prescribed by paragraph (e) (3), the taxpayer may adopt or change to such method for the taxpayer's first or second taxable year beginning after [insert date Treasury decision adopting these amendments is published by the **Federal Register**] without requesting the Commissioner's consent to such adoption or change. In addition, in such a case the taxpayer is not required to request the Commissioner's consent to a change in method of pooling incident to such adoption or change if the taxpayer is changing to a method of pooling authorized by paragraph (e) (3) (iv). The inventory price index computation method provided by paragraph (e) (3) may be adopted and used only if the taxpayer indicates on a Form 970 a listing of each inventory pool, the type of goods included in each pool, and the consumer or producer price index or indexes selected for each inventory pool. In the case of a taxpayer permitted to adopt or change to the inventory price index computation method without requesting the Commissioner's consent, the Form 970 shall be attached to the taxpayer's income tax return for the taxable year of such adoption or change. In other cases, the Form 970 shall be attached to a Form 3115 filed in accordance with § 1.446–1 (e). Taxpayers must maintain adequate books and records of the use and computation of the inventory price index method in order to satisfy the requirements of § 1.472–2 (h). Notwithstanding the rules in paragraph (e) (1) of this section, a taxpayer adopting or changing to the use of an inventory price index computed in the manner provided by paragraph (e) (3) is not required to demonstrate that the use of the double-extension method is impractical.

(vi) *Requirement incident to change.* In the case of a taxpayer using a method other than an inventory price index computed as prescribed by paragraph

(e) (3) of this section to determine the LIFO value of a dollar-value inventory pool, any layers of inventory increments previously determined by such method and the LIFO value of such layers shall be retained if the taxpayer changes to the use of a price index computed as prescribed by paragraph (e) (3). Instead of using the earliest taxable year for which the taxpayer adopted the LIFO method for any items in the pool, the year of such change shall be used as the base year in determining the LIFO value of the inventory pool for the year of change and later taxable years. The base year costs of layers of increments in the pool at the beginning of the year of change shall be restated in terms of new base year costs, using the year of change as the new base year. See paragraph (f) (2) of this section for rules relating to a change to the dollar-value method from another method of pricing LIFO inventories.

BILLING CODE 4830-01-M

DEPARTMENT OF LABOR

Wage and Hour Division

29 CFR Part 530

Employment of Homeworkers in Certain Industries

AGENCY: Wage and Hour Division, Labor.

ACTION: Hearing for the purpose of obtaining information concerning employment of homeworkers: extension of period for submitting written comments.

SUMMARY: This document extends the period for filing written comments regarding Regulations 29 CFR Part 530. This action is taken to permit addtitional comment from interested persons.

DATE: Comments must be received on or before February 17, 1981.

ADDRESS: Comments should be sent to the Deputy Administrator, Wage and Hour Division, U.S. Department of Labor, 200 Constitution Avenue, N.W., Room S-3508, Washington, D.C. 20210, (202) 523-7043.

SUPPLEMENTARY INFORMATION: In the **Federal Register** of December 5, 1980 (45 FR 80555) the Wage and Hour Division published a notice of a hearing to obtain information concerning the employment of homeworkers. Interested parties desiring to comment in writing were to submit comments on or before January 13, 1981.

Because of the interest in this matter, the Wage and Hour Division believes that it is desirable to grant an extension of the comment period for interested parties. Therefore, the comment period for submitting information concerning the employment of homeworkers under the Fair Labor Standards Act is extended to February 17, 1981.

Signed at Washington, D.C., this 9th day of January 1981.

Henry T. White, Jr.,

Deputy Administrator, Wage and Hour Division.

29 CFR Part 1603

41 CFR Part 60-20

Interpretive Guidelines on Employment Discrimination and Reproductive Hazards; Withdrawal of Proposed Guidelines

AGENCY: Equal Employment Opportunity Commission and Department of Labor.

ACTION: Withdrawal of Proposed Interpretive Guidelines.

SUMMARY: On February 1, 1980, (45 FR 7514) the Equal Employment Opportunity Commission and the Department of Labor published proposed interpretive guidelines on employment discrimination and reproductive hazards for public comment. Extensive comments were received. Upon reviewing the comments, the agencies have concluded that the most appropriate method of eliminating employment discrimination in the work place where there is potential exposure to reproductive hazards is through investigation and enforcement of the law on a case by case basis, rather than by the issuance of interpretive guidelines. Therefore, the agencies hereby withdraw the proposed interpretive guidelines. The agencies, however, will apply general principles of Title VII of the Civil Rights Act of 1964, as amended, and Executive Order 11246, as amended, to their continued vigorous investigation and resolution of sex discrimination issues involving employer/contractor policies and practices based on occupational exposure to potential reproductive hazards.

FOR FURTHER INFORMATION CONTACT: Karen Danart, Acting Director, or Raj K. Gupta, Supervisory Attorney, Office of Policy Implementation, Equal Employment Opportunity Commission, Room 4002, 2401 E Street, NW, Washington, D.C. 20506, (202) 634-7060, or the Acting Director, Division of Program Policy, Office of Federal Contract Compliance Programs, U.S. Department of Labor, 200 Constitution Ave., NW, Washington, D.C. 20210, (202) 523-9426.

Authority: E. O. 11246, as amended, and Title VII of the Civil Rights Act of 1964, as amended.

Signed at Washington, D.C., this 13th day of January, 1981.

DEPARTMENT OF LABOR

Occupational Safety and Health Administration

29 CFR Part 1910

[Docket No. S-201]

Conveyor Standard; Extension of Written Comment Period; Notice of Informal Hearing

AGENCY: Occupational Safety and Health Administration (OSHA), Department of Labor.

ACTION: Extension of Time for Submission of Comments; Notice of Public Hearing.

SUMMARY: This notice extends the time for written comments concerning the rulemaking proceeding for conveyors (29 CFR 1910.186). A notice reopening the record and providing opportunity for submission of written comments was published on November 14, 1980, at 45 FR 75258. The notice requested submission of written comments by December 29, 1980. Many interested parties requested extensions of time to submit their comments. OSHA finds validity in these requests and has

decided to grant an extension of time, until March 17, 1981, to submit written comments.

This notice also schedules an informal public hearing concerning conveyors. The purpose of this hearing is to receive testimony on certain issues concerning economic feasibility and alternative provisions.

DATES: Written comments must be received by March 17, 1981. The informal public hearing will begin on May 5, 1981, at 9:30 a.m.

All notices of intention to appear at the public hearing must be submitted by April 7, 1981. All testimony and evidence which will be introduced into the hearing record must be received by April 21, 1981.

ADDRESSES: The informal hearing will begin at 9:30 a.m. on May 5, 6, and 7, 1981, in the Auditorium, Frances Perkins Department of Labor Building, 200 Constitution Avenue, N.W., Washington, D.C. 20210; at 9:00 a.m. on May 12, 13, and 14, 1981, in the Lakeside Room, Best Western/Lakeshore Hotel, 600 North Lakeshore Drive, Chicago, Illinois 60611; and at 9:00 a.m. on May 19, 20, and 21, 1981, in the Century Room, Quality Inn-Airport, 5249 West Century Blvd., Los Angeles, California 90071.

Comments should be sent to: Docket Officer, Docket No. S–201, Room S–6212, U.S. Department of Labor, 200 Constitution Avenue, N.W., Washington, D.C. 20210, Telephone: (202) 523–7894.

Notices of intention to appear and written testimony should be sent to: Tom Hall, Division of Consumer Affairs, Room N–3635, Occupational Safety and Health Administration, U.S. Department of Labor, 200 Constitution Avenue, N.W., Washington, D.C. 20210, Telephone: (202) 523–8024.

FOR FURTHER INFORMATION CONTACT: Carrol E. Burtner, Director, Office of Mechanical Engineering Safety Standards, Occupational Safety and Health Administration, U.S. Department of Labor, Room N–3506, 200 Constitution Avenue, N.W., Washington, D.C. 20210, Telephone: (202) 523–7202.

SUPPLEMENTARY INFORMATION: The Occupational Safety and Health Administration (OSHA) published a Notice of Proposed Rulemaking for a permanent occupational safety standard on conveyors used in general industry (29 CFR 1910.186) on June 3, 1974, in the Federal Register (39 FR 19507). Interested persons were given until August 2, 1974 to submit comments with respect to the proposal and to file objections and require a hearing thereon. The period for submission of written comments was extended until October 9, 1974, pursuant to a notice in the Federal Register on September 9, 1974 (39 CFR 32562), which also announced scheduling of an informal rulemaking hearing in Washington, D.C., on October 15, 1974. Approximately 130 comments were received in response to the proposal, and 14 parties testified at the public hearing. The record was kept open until November 15, 1974, for the submission of posthearing comments and documents. The record of the public hearing was closed on December 1, 1974, and was certified by the Administrative Law Judge to the Assistant Secretary for Occupational Safety and Health on December 2, 1974. All the documents relating to this hearing are available for inspection and copying at the OSHA Docket Office, Room S–6212, Frances Perkins Department of Labor Building, 200 Constitution Avenue, N.W., Washington, D.C. 20210.

A notice to reopen the record was published on November 14, 1980, at 45 FR 75238 to permit additional accident and economic data and analyses to be entered into the record and to allow public comment thereon. The notice allowed interested persons until December 29, 1980, to submit written comments concerning the new information placed in the record. Many commenters requested additional time to review the record and submit written data, views and arguments and also requested an opportunity for a public hearing. OSHA has decided, based on these requests, to extend the comment period 60 days from the date of publication of this document, until March 17, 1981, and to schedule a public hearing.

Hearing Issues

In addition to the general extension of the written comment period on all the issues raised in the notice of November 14, 1980, OSHA invites hearing testimony on the following issues. Any other issues raised in the written comments that are determined to be appropriate for discussion at the hearing will be published in a supplementary hearing notice.

Issue 1

The purpose of the November 14 notice was to allow the public an opportunity to comment on the economic material and injury data entered into the record. Several commenters requested additional time to comment on this new information, and OSHA believes that this extension of time and informal public hearing will provide interested persons with such an opportunity. Therefore, the economic impact of a conveyor standard and the injury data will be a subject to be addressed at the hearing.

In addition, although this rulemaking predates the Regulatory Flexibility Act (Pub. L. 96–353, 94 Stat. 1164 (5 U.S.C. 601 *et seq.*)) OSHA is requesting information about the economic impact of the proposed conveyor standard on small business.

Issue 2

In response to requests from interested persons, OSHA is publishing the text of four alternative provisions that have been developed, based on evidence in the rulemaking record, from four provisions proposed in 1974. The four alternatives, and the proposed requirements on which they are based, are set forth below.

a. *Proposed provision (c)(2):* Before operating the conveyor each day, a visual inspection of the entire conveyor and immediate area shall be made by the operator of the conveyor to determine that actuation will cause no hazard to employees; the inspection shall include an examination of at least the following: (i) Feed points; (ii) Discharge points; (iii) Brakes; (iv) Cables and sheaves; (v) Tracks and rails, wheels, rollers; (vi) Limit switches and slack cable switches; (vii) The presence of all guards and switches; and (viii) Any parts of the conveyor exposed to employees.

Alternative to proposed provision (c)(2): The employer shall inspect the safety devices, guards, and danger zones on conveyors before each day's use.

b. *Proposed provision (c)(3):* If observation of the entire conveyor is not possible from the operator's station, audible or visual warning signals or both, detectable at all employee stations, shall be used to warn of the conveyor's actuation.

Proposed provision (c)(4): If a conveyor is not operated continuously, an audible or visual alarm shall be used to warn employees that the conveyor is being started.

Alternative to proposed provisions (c)(3) and (c)(4): Warning. Before a conveyor is started, except as specified below, the employer shall provide a visible or audible warning that is:

(i) Seen or heard by all employees at or adjacent to the conveyor;

(ii) Of sufficient duration to allow employees to get clear of the conveyor before it is started; and

(iii) Activated by the conveyor's mechanism if the conveyor is automatically or remotely controlled.

Exception. No warning is required before activation of an assembly conveyor when employees working at or

near the conveyor are familiar with the conveyor's indexing cycle, or a completely enclosed conveyor, or a conveyor at which no employees are working.

c. *Proposed provision (c)(14):* Only trained operators shall be permitted to operate conveyors. Training shall include instruction in operation under normal conditions and emergency action under unusual conditions.

Alternative to proposed provision (c)(14): Training. (1) The employer shall ensure that conveyors are only operated by designated employees trained in standard operating and emergency procedures.

(2) Employers shall instruct employees whose work stations are at or adjacent to conveyors in the operation of emergency stop devices and the locations and hazards of any danger zones in the vicinity of their work stations.

d. *Proposed provision (f)(2)(i):* Before repairs, tests or services are begun, the following precautions shall be taken: (i) The conveyor shall be placed in a location where it will cause the least possible interference with employees not involved in the conveyor operation. Where the regular work of employees requires them to frequently pass close to the conveyor, the area shall be roped off or barricaded and caution signs shall be posted in the area in accordance with the caution sign requirements of § 1910.145.

Alternative to proposed provision (f)(2)(i): During conveyor modification, repair, testing, or servicing, the employer shall rope off, barricade, or post any unguarded danger zones.

OSHA particularly welcomes testimony and data on the economic and technological feasibility of these alternative provisions. OSHA has estimated the costs of compliance for the four proposed provisions and the alternatives, and has included these estimates in a document, "Compliance Cost Estimation and Economic Impact Assessment for the Proposed Federal Standard Regulating Conveyors."

Issue 3

In the 1974 conveyor proposal, OSHA included one "lockout" requirement, (f)(2), which stated that:

(f)(2) Before repairs, tests or services are begun, the following precautions shall be taken: * * *

(ii) All power controls shall be locked out. When operation of the conveyor is necessary during repairs or testing, the power shall be left on only to perform those tests and repairs. Affected employees shall be warned that the power is on for this purpose;

Although OSHA intends to include a similar provision in any final standard for conveyors, an analysis of conveyor accident and injury data suggests that additional lockout emphasis is necessary to protect conveyor workers from the risk of serious injury. For example, employees who attempt to free a conveyor which has been stopped by a conveyor jam are exposed to several serious hazards. First, the sudden release of the energy stored up while the power remains on and the conveyor is jammed might cause an employee to fall and be pulled into the conveyor. Second, an employee continuing to hold a tool used to free a jam might be pulled into the reactivated conveyor. Finally, any tool, such as a probe, used to release a jammed and stopped conveyor might itself be turned into a lethal projectile.

An analysis of the data from a study by Coleman et al. (Exh. 24) shows that a lockout provision for jammed and stopped conveyors might have prevented between 11 and 16% of the conveyor-related accidents studied, although it is not possible to determine with certainty how many of the accidents studied were caused specifically by efforts to unjam, rather than maintain, the conveyor. Review of data from a Safety Sciences study (Exh. 22) suggests that approximately 6% of the accidents investigated might have been prevented by lockout of the power supply. In addition, analysis of a series of 39 conveyor fatality reports from several states (Exh. 89) reveals that several of these fatalities would probably have been prevented if the conveyor involved had been locked out while the employee attempted to unjam it, and a review of an OSHA report on fixed machine fatalities (Exh. 93) shows that two of the fatalities reported were caused by failure to observe the same precaution.

OSHA invites comment and testimony on the feasibility and appropriateness of providing conveyor workers with such additional lockout protection. In particular, OSHA welcomes any injury data related to the failure to lock out powered conveyors in these operation situations.

Public Participation in Hearing

Under section 6(b)(3) of the Act and 29 CFR Part 1911, an opportunity to submit oral testimony concerning the hearing issues will be provided at an informal public hearing scheduled to begin at 9:30 a.m. on May 5, 1981, in the Auditorium, Frances Perkins Department of Labor Building, 200 Constitution Avenue, NW., Washington, D.C. 20210. The hearing will continue at regional locations as follows: 9 a.m. on May 12, 1981, in the Best Western/Lakeshore Hotel, Chicago, Illinois 60611; and 9:00 a.m. on May 19, 1981, in the Quality Inn-Airport, Los Angeles, California 90045.

Notice of Intention to Appear

Persons desiring to participate at the hearing, including those who previously requested that a public hearing be held, must file a notice of intention to appear, which must be received by April 7, 1981, with Tom Hall, OSHA Division of Consumer Affairs, Room N3635, U.S. Department of Labor, 200 Constitution Avenue, N.W., Washington, D.C. 20210. Telephone: (202) 523–8024. Persons who do not intend to appear at the hearing may submit written comments on the hearing issues, by March 17, 1981, to the Docket Office, Docket S–201, U.S. Department of Labor, Washington, D.C. 20210. Telephone: (202) 523–7894.

The notices of intention to appear, which will be available for inspection and copying at the OSHA Division of Consumer Affairs, must contain the following information:

1. The name, address, and telephone number of each person to appear;
2. The capacity in which the person will appear;
3. The city where the person intends to appear;
4. The approximate amount of time required for the presentation;
5. The specific issues that will be addressed;
6. A detailed statement of the position that will be taken with respect to each issue addressed; and
7. Whether the party intends to submit documentary evidence, and if so, a detailed summary of the evidence.

Filing of Testimony and Evidence Before Hearing

Any party requesting more than 15 minutes for presentation at the hearing or who will submit documentary evidence, must provide in quadruplicate the complete text of its testimony, including all documentary evidence to be presented at the hearing, to the OSHA Division of Consumer Affairs, where they will be available for inspection and copying. This material must be received by April 21, 1981. Each submission will be reviewed in light of the amount of time requested in the notice of intention to appear. In instances where the information contained in the submission does not justify the amount of time requested, a more appropriate amount of time will be allocated and the participant will be notified of that fact.

Any party who has not substantially complied with the above requirement

may be limited to a 15 minute presentation, and may be requested to return for questioning at a later time. Any party who has not filed a notice of intention to appear may be allowed to testify, as time permits, at the discretion of the Administrative Law Judge.

Conduct of the Hearings

The hearing will commence at 9:30 a.m. on May 5, 1981, with the resolution of any procedural matters relating to the proceeding. The hearing will be presided over by an Administrative Law Judge who will have all the powers necessary or appropriate to conduct a full and fair informal hearing as provided in 29 CFR Part 1911, including the powers:

1. To regulate the course of the proceedings;

2. To dispose of procedural requests, objections, and comparable matters;

3. To confine the presentation to the matters pertinent to the issues raised;

4. To regulate the conduct of those present at the hearing by appropriate means;

5. In the Judge's discretion, to question and permit questioning of any witness; and

6. In the Judge's discretion, to keep the record open for a reasonable stated time to receive written information and additional data, views, and arguments from any person who has participated in oral proceeding.

Following the close of the hearing, the presiding Administrative Law Judge will certify the record of the hearing to the Assistant Secretary of Labor for Occupational Safety and Health. Proposed § 1910.186 of Part 1910 will be reviewed in light of all testimony and written submissions received as part of the record, and a standard will be issued or a determination will be made not to issue a rule, based on the entire record of this proceeding, as well as all previously submitted evidence from the earlier written comments and public hearing.

This hearing notice for proposed § 1910.186 was prepared under the diretion of Eula Bingham, Assistant Secretary of Labor for Occupational Safety and Health, U.S. Department of Labor, 200 Constitution Avenue, N.W., Washington, D.C. 20210.

(Sec. 6, Pub. L. 91-596, 84 Stat. 1593 (29 U.S.C. 655), 29 CFR Part 1911; Secretary of Labor's Order No. 8-76 (41 FR 25059))

Signed at Washington, D.C., this 9th day of January 1981.

Eula Bingham,

Assistant Secretary of Labor.

[FR Doc. 81-1242 Filed 1-15-81; 8:45 am]

BILLING CODE 4510-26-M

29 CFR Parts 1952 and 1955

Proposed Withdrawal of the Indiana State Plan

AGENCY: Occupational Safety and Health Administration, Department of Labor.

ACTION: Notice of Initiation of Withdrawal Action.

SUMMARY: This notice publishes the Assistant Secretary's decision to initiate a proceeding under Section 18(f) of the Occupational Safety and Health Act, 29 U.S.C. 667(f), and the regulations promulgated thereunder at Part 1955 of this chapter, to withdraw the approval of the Indiana State plan for Occupational Safety and Health. Indiana has 30 days in which to submit a response to the statement of issues in the notice. Interested persons have 30 days in which to submit a petition requesting party status. At any time during the proceeding, any person who is not a party may submit a written statement of position.

DATES: Requests for party status should be submitted by February 17, 1981. Comments may be submitted at any time during the proceeding.

ADDRESSES: Requests for party status should be submitted to: Chief Administrative Law Judge, U.S. Department of Labor, Room 700, Vanguard Building, 1111 20th Street, NW., Washington, D.C. 20036. Written comments to the State should be submitted to: Bill Ray, Acting Commissioner, Indiana Division of Labor, 1013 State Office Building, Indianapolis, Indiana 46204.

Written comments to the Department of Labor and Information requests should be submitted to: Barbara Bryant, Chief, Eastern Division, Office of State Programs, Occupational Safety and Health Administration, Room N-3613, 200 Constitution Ave., NW., Washington, D.C. 20210, (202) 523-8045.

SUPPLEMENTARY INFORMATION: Pursuant to Section 18(f) of the Occupational Safety and Health Act of 1970 (29 U.S.C. 667(f)) and Part 1955 of this Chapter, notice is hereby given that the following complaint, having been served on the Commissioner of the Indiana Division of Labor, has been placed on public record. This complaint initiates an administrative action by the Assistant Secretary for withdrawal of the Indiana plan for occupational safety and health. Absent summary decision or settlement, this action will lead to a formal, fact-finding hearing before a departmental administrative law judge, during which the State will have an opportunity to present witnesses, obtain evidence through discovery, and fully brief and argue all issues of fact and law. The Department of Labor has the burden of proof in the proceeding. Any other interested persons wishing to participate in the proceeding as a party, should submit a petition to the administrative law judge within 30 days hereafter, in accordance with the requirements set out at 29 CFR 1955.17. Pursuant to the provisions set out at 29 CFR 1955.18, any person who is not a party may submit a written statement of position with 4 copies to either the Assistant Secretary or the State. Mere statements of approval or opposition to the plan without any documentary support shall not be considered as falling within this provision.

On the basis of the hearing record, the administrative law judge will decide whether approval of the Indiana plan should be withdrawn. The decision of the administrative law judge can be appealed by any party to the Secretary; if the Secretary upholds the decision, the State may obtain judicial review of the determination in the court of appeals for the circuit in which the State is located. Throughout the courts of the withdrawal proceedings, until a final decision by the Secretary the plan will continue to be in effect.

(Sec. 18, Pub. L. 91-596 84 Stat. 1608 (29 U.S.C. 667))

Signed at Washington, D.C. this 12th day of January 1981.

Eula Bingham,

Assistant Secretary of Labor.

Complaint

Complainant, Eula Bingham, Assistant Secretary of Labor for Occupational Safety and Health, brings this action to enforce the provisions of the Occupational Safety and Health Act of 1970, (hereinafter referred to as the "Act") 84 Stat. 1590, 29 U.S.C. 651 et seq., seeking to withdraw approval of the Indiana State plan.

I

This proceeding arises under Section 18(f) (29 U.S.C. 667(f)), of the Act and the regulations promulgated thereunder at 29 CFR Part 1955.

II

Jurisdiction of this action is conferred upon the Office of Administrative Law Judges, U.S. Department of Labor, pursuant to Section 18(f) of the Act and the regulations promulgated at 29 CFR 1955.11 and 1955.12.

III

Respondent, the State of Indiana, has been administering its own plan for occupational safety and health through the Indiana Occupational Safety and Health Administration (hereinafter referred to as IOSHA) since February 25, 1974, pursuant to Section 18(b) (29 U.S.C. 667(b)) of the Act.

IV

Respondent as a result of the aforesaid activities, is subject to the requirements of Section 18(c) (29 U.S.C. 667(c)) of the Act and the regulations at 29 CFR Part 1955 promulgated thereunder.

V

Complainant is bringing this action under a delegation of authority from the Secretary of Labor, who is mandated by law (29 U.S.C. 657(f)), to make a continuing evaluation of the manner in which each State having an approved plan is carrying out such plan.

VI

Comprehensive monitoring by complainant during the past six years of the Indiana State plan has revealed a consistent pattern of poor performance in critical program areas.

VII

In June, 1977, both the State and the National AFL-CIO submitted to the complainant a petition requesting the complainant to withdraw approval of the respondent's State plan. The United Steelworkers of American subsequently joined the AFL-CIO in its petition.

VIII

Based upon the evaluation of special studies undertaken in response to this petition, complainant preliminarily determined that the respondent's State plan failed to provide an effective program for the protection of the safety and health of employees in the State of Indiana and failed to comply with assurances contained in the State plan that IOSHA would provide enforcement of safety and health standards at least as effective as Federal enforcement of Federal standards, and failed to comply with assurances in the State plan that IOSHA would have qualified personnel necessary for the effective enforcement of its standards. Thereafter, in accordance with the requirements of Section 18(f) of the Act and 29 CFR 1955.10(a), the complainant notified the respondent on April 2, 1980, of its intent to institute a proceeding to withdraw the approval of the respondent's plan.

IX

On May 15, 1980, the respondent filed a response to the complainant's notice in which it denied the allegations in the notice and preserved its right to an administrative hearing on the issue of whether the State plan should be withdrawn.

X

First Ground for Withdrawal. Respondent has substantially failed to comply with the provisions of the State plan by not hiring and retaining a sufficient number of experienced, qualified industrial hygienists. As a result, the State has been unable to establish an adequate health enforcement program.

XI

Second Ground for Withdrawal. Respondent has substantially failed to comply with the provisions of the State plan by failing to provide effective enforcement of standards. Respondent's compliance officers have failed to recognize a substantial number of serious hazards present in inspected workplaces, and have failed to issue citations for such hazards. Therefore, employees in Indiana have been exposed to serious hazards which were not cited, and hence not abated.

XII

Third Ground for Withdrawal. Respondent has substantially failed to comply with the provisions of the State plan by improperly proposing penalties for violations of respondent's standards. Penalties proposed by IOSHA are substantially lower than those proposed by complainant OSHA for similar violations in similar workplaces. Enforcement of IOSHA standards therefore is less effective than federal enforcement of federal standards.

XIII

Fourth Ground for Withdrawal. Respondent has substantially failed to comply with the provisions of the State plan by circumscribing the rights of employees so as to diminish the effectiveness of the program, and by failing to maintain its program in accordance with the appropriate changes in the Federal program regarding employee rights.

Wherefore, complainant prays that the judge affirm complainant's decision to withdraw approval of the Indiana State Plan.

Respectfully submitted,

Carin Ann Clauss,
Solicitor of Labor.
Benjamin W. Mintz,
Associate Solicitor for Occupational Safety and Health.
Harold J. Engel,
Counsel for Regional Trial Litigation.
Patrick R. Tyson,
Assistant Counsel for State Plans.
Arthur J. Amchan,
Attorney.
Olympia Pachares,
Attorney.

BILLING CODE 4510-26-M

Office of the Secretary

34 CFR Subtitle A

Definitions of Small Organization and Small Governmental Jurisdiction

AGENCY: Department of Education.

ACTION: Notice of Definitions under the Regulatory Flexibility Act.

SUMMARY: The Secretary proposes definitions of "small organization" and "small governmental jurisdiction" to be used to implement the Regulatory Flexibility Act.

This Act allows the Secretary to apply to these terms definitions that are appropriate to the Department's activities. The definitions will govern the procedures of the Department in proposing regulations that affect institutions of higher education and local educational agencies (LEAs) in carrying out Federally funded programs.

DATE: Comments must be received on or before February 17, 1981.

ADDRESS: Comments should be addressed to A. Neal Shedd, Director, Division of Regulations Management, Office of the General Counsel, U.S. Department of Education (Room 2129, FOB-6) 400 Maryland Avenue, S.W., Washington, D.C. 20202.

FOR FURTHER INFORMATION CONTACT: A. Neal Shedd. Telephone (202) 245-7091.

SUPPLEMENTARY INFORMATION:

Summary of the Regulatory Flexibility Act

The Regulatory Flexibility Act, (Pub. L. 96-354, enacted September 19, 1980), provides procedures that Federal agencies must follow in promulgating regulations that have a significant economic impact on a substantial number of small entities. "Small entities" are defined in the Act to mean small businesses, small organizations, and small governmental jurisdictions.

The Act seeks to alleviate the disparate burden that regulations may place on small entities but, at the same time, to ensure that statutory purposes are fulfilled. The Act requires Federal agencies to consider for their regulations alternative provisions that will minimize any significant economic impact on small entities.

Requirements of the Regulatory Flexibility Act

The Regulatory Flexibility Act applies to all regulations for which a notice of proposed rulemaking (NPRM) is issued on or after January 1, 1981 and which will have a significant economic impact on a substantial number of small entities. If regulations do have that impact, the agency promulgating the regulations must publish an initial regulatory flexibility analysis or a summary in the **Federal Register** with the proposed regulations. The agency must also prepare and make available to the public a final regulatory flexibility analysis.

The initial regulatory flexibility analysis must include the following:

(a) The reasons for and objectives of the regulations.

(b) The legal basis for the regulations.

(c) A description—and, if possible, an estimate of the number—of small entities to which the proposed regulations will apply.

(d) A description of the proposed paperwork associated with the regulations.

(e) An identification, if possible, of all relevant Federal regulations which may

duplicate, overlap or conflict with the proposed regulations.

(f) A discussion of alternatives that could minimize the significant economic impact of the regulations on small entities.

The final regulatory flexibility analysis must include the following:

(a) Reasons for and objectives of the regulations.

(b) A summary of the issues raised by the public comments in response to the initial regulatory flexibility analysis.

(c) A summary of the agency's assessment of these issues.

(d) A summary of any changes made in the proposed regulations as a result of the comments.

(e) A description of each significant alternative designed to minimize any significant economic impact of the regulations on small entities considered by the Department and the reasons why it was rejected.

The analyses are not required if the Secretary certifies that the regulations will not impose a significant economic impact on a substantial number of small entities.

The Act also requires an agency to—

(a) Take action so as to ensure that small entities are given an opportunity to participate in rulemaking for regulations that have significant economic impact on a substantial number of small entities;

(b) Publish a semi-annual agenda of planned or proposed regulations that will have a significant economic impact on a substantial number of small entities;

(c) Review and, if necessary, amend existing regulations that have a significant economic impact on a substantial number of small entities.

Definitions Under the Regulatory Flexibility Act

The Act allows each agency to define "small business", "small organization" and "small governmental jurisdiction" in terms appropriate to that agency's activities where the agency finds the definitions in the Act to be inappropriate. The Secretary has found that the Act's definitions of "small organization" and "small governmental jurisdiction" are unsuited to two kinds of organizations with which the Department is primarily concerned—local educational agencies (LEAs) and institutions of higher education. It is therefore proposed to define "small LEA" and "small institution of higher education" to better carry out the intent of the Act.

The definitions published in this notice will be the Department's working standards under the Act while public comments are being considered.

The definitions of "small LEA" and "small institution of higher education" that the Secretary is proposing for use under the Regulatory Flexibility Act are explained in the following sections of this document.

Small LEA

"Small governmental jurisdiction" is defined by the Act as "governments of cities, counties, towns, townships, villages, school districts or special districts with a population of less than 50,000."

Under most of the Department's programs, an LEA is defined by statute as—

(a) A public board of education or other public authority legally constituted within a State for either administrative control of or direction of, or to perform service functions for, public elementary or secondary schools in—

(1) A city, county, township, school district, or other political subdivision of a State; or

(2) Such combination of school districts or counties a State recognizes as an administrative agency for its public elementary or secondary schools; or

(b) Any other public institution or agency that has administrative control and direction of a public elementary or secondary school. (See 34 CFR 77.1 (c), formerly 45 CFR 100c.1(c)).

The definition of "small governmental jurisdiction" is not appropriate for LEAs, since LEAs frequently serve areas with smaller populations than areas served by other governmental bodies. Moreover, an LEA's size is measured more easily and more accurately by focusing on enrollment rather than population.

For these reasons, the Secretary proposes to define a small LEA as one with a student enrollment of fewer than 1500 students. Based on available data, this definition would include 65 percent of all LEAs in the United States and 11 percent of the total student population in the United States.

For the convenience of those who may wish to comment on this definition the following table shows the number of LEAs and the number of students that would be affected if the Secretary were to use different figures to define small LEA. The first column, "Size of Enrollments," shows LEAs by various total enrollments ranging from those with no students to those with more than 25,000 students. The second column, "Number of LEAs," shows the number of LEAs corresponding to each enrollment category in the first column. The third column, "Percent of Total LEAs" shows the percentage of LEAs corresponding to each enrollment category in the first column. The fourth column, "Enrollments," shows the number of students enrolled in LEAs corresponding to each enrollment category in the first column. The fifth column, "Percent of Total Enrollments," shows the percentage of students enrolled in LEAs corresponding to each category in the first column.

LEA's by Enrollment Size: 1979–80

Size of enrollments	Number of LEA's	Percent of total LEA's	Enrollments	Percent of total enrollments
No students	639	3.819	0	0.000
Under 300	4,394	26.259	525,525	1.198
300 to 499	1,705	10.189	671,153	1.530
500 to 999	2,576	15.395	1,862,305	4.246
1,000 to 1,499	1,516	9.060	1,872,069	4.268
1,500 to 1,999	1,203	7.189	2,083,083	4.749
2,000 to 2,499	812	4.853	1,817,160	4.143
2,500 to 2,999	662	3.956	1,817,633	4.144
3,000 to 3,499	496	2.964	1,599,661	3.647
3,500 to 3,999	389	2.325	1,448,453	3.303
4,000 to 4,999	532	3.179	2,365,216	5.393
5,000 to 9,999	1,112	6.646	7,748,133	17.666
10,000 to 24,999	512	3.060	7,448,661	16.983
25,000 and over	185	1.106	12,600,125	28.729
All LEA's	16,733	100.0	43,859,177	100.0

SOURCE: Elementary and Secondary Education General Information Survey—Public School Districts 1979–80. National Center for Educational Statistics, U.S. Department of Education, (1001 Presidential Building), 400 Maryland Avenue, S.W., Washington, D.C. 20202.

Small Institution of Higher Education

"Small organization" is defined under the Act as "any not-for-profit enterprise which is independently owned and

operated and is not dominant in its field." The Secretary has decided to refine this definition as it applies to institutions of higher education.

For purposes of the Act the Secretary proposes to define a "small institution of higher education" as an institution of higher education (as that term is defined in the individual authorizing statute or implementing regulations for the program) that has a fulltime equivalent (FTE) student enrollment of fewer than 500 or—if the FTE figure is not readily available—a total student population of fewer than 550. Based on available data, for programs this definition would include 20–25 percent of all institutions of higher education and 1.5–2.4 percent of FTE students attending those institutions.

For the convenience of those who may wish to comment on the proposed definition, the following table shows the number of colleges and universities and the number of FTE students that would be affected if the Secretary were to use different figures to define "small institutions of higher education." The data on which the proposed definition is based in the best available data. It includes both non-profit and for-profit postsecondary institutions.

Colleges and universities have been included in the following table if:

(a) They are legally authorized to offer and are offering at least a one-year program of college-level studies leading toward a degree ("college-level" means a postsecondary associate, baccalaureate, post-baccalaureate, or rabbinical education program);

(b) They submitted the information requested by NCES; and

(c) They meet one of the following criteria:

(1) The institution is accredited at the college level by an agency that has been listed as nationally recognized by the Secretary of Education;

(2) The institution holds preaccredited status at the college level with a designated nationally recognized accrediting agency; or

(3) If the institution is public or nonprofit, it has qualified under the "three-institutional-certification method" established by Section 1201 (a)(5)(B) of the Higher Education Act of 1965. That is, the Secretary of Education verifies that not fewer than three accredited college level institutions have accepted and do accept an unaccredited institution's credits, on transfer, as though the credits came from an institution accredited by a nationally recognized accrediting agency.

The first column, "Size of FTE Student Enrollments," lists categories of FTE enrollments ranging from fewer than 114 to fewer than 628. The second column, "Number of Colleges and Universities Included," shows the number of these institutions corresponding to each FTE enrollment category in the first column. The third column, "Percent of Total Colleges and Universities," shows the percentage of these institutions corresponding to each FTE enrollment category in the first column. The fourth column, "FTE Student Enrollments," shows the total FTE student enrollment for colleges and universities corresponding to each FTE enrollment in the first column. The fifth column, "Percent of total FTE Student Enrollments," shows the percentage of total FTE Student enrollment for colleges and universities corresponding to each FTE enrollment category in the first column.

FTE [1] Student Enrollments for Colleges and Universities, Fall 1979

[All figures are cumulative]

Size of FTE student enrollments	Number of colleges and universities included	Percent of total colleges and universities	FTE student enrollments	Percent of total FTE student enrollments
Under 114	160	5	11,618	0.1
Under 198	319	10	36,255	0.4
Under 301	478	15	76,264	0.8
Under 429	638	20	134,073	1.5
Under 534	797	25	210,568	2.4
Under 628	958	30	304,715	3.5
Total number of colleges and universities			3,188	
Total FTE student enrollment			8,605,506	

[1] NCES generated full-time equivalent.

Invitation to comment: Interested persons are invited to submit comments and recommendations regarding the proposed definitions. The public is also invited to comment on—

(a) Whether the Department's activities require additional definitions under the Regulatory Flexibility Act (e.g., "small proprietary institutions") should be defined;

(b) What should constitute a "significant economic impact" and a "substantial number of small entities" under the Act; and

(c) Whether the Department should establish a definition for small private elementary and secondary schools and, if so, what that definition should be.

In addition, the Secretary is considering ways to reduce regulatory burdens on small entities by such methods as simplifying or consolidating requirements for small entities; applying less stringent requirements on small entities; or exempting small entities from the requirements. As another possible approach to reducing regulatory burden, it may be useful to apply the definitions of small LEA and small institution of higher education in current or future program regulations. The Secretary invites comments on this concept. Comments are also sought on what regulations should be changed and how they should be changed to minimize burdens on small institutions of higher education and small LEAs.

Written comments and recommendations may be sent to the address given at the beginning of this preamble. All comments received on or before February 17, 1981 will be considered in the development of the final definitions.

All comments submitted in response to these proposed definitions will be available for public inspection, during and after the comment period, in Room 2129, FOB–6, 400 Maryland Avenue, S.W., Washington, D.C. between the hours of 8:30 a.m. and 4:00 p.m., Monday through Friday of each week except Federal holidays.

Shirley M. Hufstedler,

Secretary of Education.

January 12, 1981.

DEPARTMENT OF EDUCATION

34 CFR Part 682

Guaranteed Student Loan Program

AGENCY: Department of Education.

ACTION: Notice of proposed rulemaking; Cross-reference.

SUMMARY: In this issue of the **Federal Register** the Secretary of Education has promulgated final regulations for the Guaranteed Student Loan Program deferment provisions. The Secretary has, however, requested comments on all the new provisions of those regulations. In addition, the Secretary requests comments concerning whether the definition of "estimated financial assistance" in § 682.200 of the GSLP regulations should be revised to include Veterans benefits, student benefits under Social Security, and other social service payments such as aid to Families with Dependent Children. This revision would avoid duplication of GSLs with other Federal assistance.

The texts of the regulations on which the Secretary invites comments are published in the Rules and Regulations section of this issue of the **Federal Register.** They have been adopted as final regulations and will govern these

programs until the Secretary issues new regulations based on public comment.

DATES: All comments, suggestions, or objections must be reviewed on or before March 17, 1981.

ADDRESSES: Comment should be addressed to: Jane A. Bryson, Office of Student Financial Assistance, U.S. Department of Education, (Room 4310, ROB-3) 400 Maryland Avenue, S.W., Washington, D.C. 20202.

FOR FURTHER INFORMATION CONTACT: Jane A. Byrson or Cheryl Leibovitz, Telephone: (202)245-2475.

INVITATION TO COMMENT: For additional details on how to comment, see the Preamble of the final regulations for this program published in this issue of the Federal Register.

(Catalog of Federal Domestic Assistance Number 84.032, Guaranteed Student Loan Program)

Dated: January 12, 1981.

Shirley M. Hufstedler,

Secretary of Education.

BILLING CODE 4000-01-M

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 52

[A-1-FRL 1628-5]

Approval and Promulgation of Implementation Plans—Connecticut; Notice of Proposed Rulemaking: State of Connecticut Ambient Monitoring Network

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule.

SUMMARY: Revisions to the State Implementation Plan (SIP) for the State of Connecticut were submitted to EPA on June 9, 1980 and November 17, 1980 by the Commissioner of the Department of Environmental Protection. On May 10, 1979, EPA promulgated Ambient Air Quality Monitoring, Data Reporting, and Surveillance Provisions. That action revoked the requirements for air quality monitoring in Part 51 of Title 40 of the Code of Federal Regulations and established a new Part 58 entitled Ambient Air Quality Surveillance. Those regulations satisfy the requirements of Section 110(a)(2)(C) of the Clean Air Act (the Act) by requiring ambient air quality monitoring and data reporting for purposes of SIPs. Additionally, requirements of Sections 319, 313, and 127 of the Act are statisfied.

The intended effect of Connecticut's SIP revision is to meet the requirements of this new Part 58.

This Notice discusses the Connecticut submittal and EPA's proposed action. EPA is proposing to approve the comprehensive air quality monitoring network.

DATES: Comments must be received on or before February 17, 1981.

ADDRESSES: Copies of the Connecticut submittal and EPA's evaluation are available for public inspection during normal business hours at the Environmental Protection Agency, Region I, Room 1903, JFK Federal Building, Boston, Massachusetts 02203; Public Information Reference Unit, Environmental Protection Agency, 401 M Street, S.W., Washington, D.C. 20460; the Department of Environmental Protection, Air Compliance Unit Library, Room 144, State Office Building, 165 Capitol Avenue, Hartford, Connecticut 06115

Copies of EPA guidance pertaining to the requirements of the SIP revision are available for inspection in Room 1903, JFK Federal Building, Boston, Massachusetts; the Public Information Reference Unit, Environmental Protection Agency, 401 M Street, S.W., Washington, D.C. 20460; and at the Department of Environmental Protection, State Office Building, Hartford, Connecticut 06115.

Comments should be submitted to the Regional Administrator, Region I, Environmental Protection Agency, Room 2203, JFK Federal Building, Boston, Massachusetts 02203.

FOR FURTHER INFORMATION CONTACT: Donald P. Porteous, Air Section, EPA Region I, 60 Westview Street, Lexington, Massachusetts 02173, (617) 861-6700.

SUPPLEMENTARY INFORMATION: On May 10, 1979 (44 FR 27558) pursuant to the requirements of Sections 110(a)(2)(C), 319, 313 and 127 of the Act, EPA promulgated Ambient Air Quality Monitoring, Data Reporting, and Surveillance Provisions, revoking Part 51 and establishing a new Part 58 entitled Ambient Air Quality Surveillance.

As required by Subpart C, 58-20, "the State shall adopt and submit to the Administrator a revision to the plan which will:

(a) Provide for the establishment of an air quality surveillance system that consists of a network of monitoring stations designated as State and Local Air Monitoring Stations (SLAMS) which measure ambient concentrations of those pollutants for which standards have been established in Part 50 of this chapter.

(b) Provide for meeting the requirements of Appendices A, C, D, and E to this part.

(c) Provide for the operation of at least one SLAMS per pollutant during any stage of an air pollution episode as defined in the contingency plan.

(d) Provide for the review of the air quality surveillance system on an annual basis to determine if the system meets the monitoring objectives defined in Appendix D to this part. Such review must identify needed modifications to the network such as termination or relocation of unnecessary stations or establishment of new stations which are necessary.

(e) Provide for having a SLAMS network description available for public inspection and submission to the Administrator upon request. The network description must be available at the time of plan revision submittal and must contain the following information for each SLAMS:

(1) The Storage and Retrieval of Aerometric Data (SAROAD), site identification form for existing stations.

(2) The proposed location for scheduled stations.

(3) The sampling and analysis method.

(4) The operating schedule.

(5) The monitoring objective and spatial scale of representativeness as defined in Appendix D to this part.

(6) A schedule for:

(i) locating, placing into operation, and making available the SAROAD site identification form for each SLAMS which is not located and operating at the time of plan revision submittal,

(ii) implementing quality assurance procedures of Appendix A to this part for each SLAMS for which such procedures are not implemented at the time of plan revision submittal, and

(iii) resiting each SLAMS which does not meet the requirements of Appendix E to this part at the time of plan revision submittal.

Connecticut's SIP submittal to EPA on November 17, 1980 included a comprehensive air quality monitoring plan designed to meet anticipated Federal regulations. Connecticut has worked closely with EPA, Region I to design a comprehensive monitoring system. The number and locations of SLAMS were jointly determined by Connecticut and the Regional Office. Stations are located in all areas where Connecticut and EPA decided they are necessary to determine: (1) highest concentrations expected to occur in the area covered by the network; (2) representative concentrations in areas of high population density; (3) the impact of significant sources or source categories on ambient pollution levels;

and (4) general background concentrations. Connecticut will operate the SLAMS network in accordance with the Quality Assurance Procedures described in Appendix A to 40 CFR Part 58 and will submit a written Quality Assurance Program to the Regional Office by December 31, 1980. Some SLAMS will be designated as episode monitoring sites for declaring and monitoring episodes for CO, SO_2 NO_2 O_3 and particulate matter.

Connecticut also provides for a special purpose monitoring system which is comprised of several studies designed to aid in determining air quality levels and the effects of air pollution sources on air quality in Connecticut, measure effects of control strategies on air quality, and provide a better understanding of air pollution in Connecticut and the effects of air pollution on the public's health.

The site-specific SLAMS monitoring network description is not included in the SIP revision to allow for annual review and revision of the network without repeating the full SIP revision procedure.

Connecticut's submittal establishes an ambient air montoring network for "Criteria Pollutants" (SLAMS) meeting Appendices A, C, D, and E, establishes episode monitoring stations, and provides for a network description and an annual SLAMS review.

EPA finds the Connecticut submittal meets the applicable regulations and is proposing approval of the comprehensive air quality monitoring network.

The Administrator's decision to approve or disapprove the plan revision will be based on whether it meets the requirements of Section 110(a)(2)(C), 319, 313, and 127 of the Clean Air Act, as amended, and EPA regulations in 40 CFR Part 58. This revision is being proposed pursuant to Sections 110(a) and 301 of the Clean Air Act, as amended (42 U.S.C. 7401 et seq. and 7601).

Under Executive Order 12044, EPA is required to judge whether a regulation is "significant" and therefore subject to the procedural requirements of the Order or whether it may follow other specialized development procedures. EPA refers to these other regulations as "specialized". I have reviewed this regulation and determined that it is a specialized regulation not subject to the procedural requirements of Executive Order 12044.

Pursuant to the provisions of 5 U.S.C. 605(b) I hereby certify that this proposed rule will not, if promulgated, have a significant economic impact on a substantial number of small entities. The reason for this finding is that the proposal relates only to air quality surveillance to be carried out by four states and will not cause any significant economic impacts.

Dated: December 31, 1980.

William R. Adams, Jr.,

Regional Administrator, Region I.

Interstate Air Pollution Abatement: Notice of Proceedings Under Section 126 of the Clean Air Act

AGENCY: Environmental Protection Agency.

ACTION: General notice to extend the date for closure of a public hearing record of proceedings under Section 126 of the Clean Air Act (Interstate Pollution Abatement).

SUMMARY: This notice extends the date for closure of the public hearing record concerning petitions filed pursuant to Section 126 of the Clean Air Act by Connecticut and New Jersey. These petitions, discussed in a November 3, 1980 **Federal Register** notice (45 FR 72702), concern interstate air pollution impacts of particulate matter and sulfur dioxide within the New Jersey-New York-Connecticut metropolitan area. A public hearing was held in response to these petitions on December 3 and 4, 1980. On December 24, 1980 EPA received a request from the New York State Department of Environmental Conservation to maintain the public hearing record for an additional 30 days, and is honoring that request through today's action.

DATE: The date for closure of the public hearing record is extended until February 5, 1981.

ADDRESS: Written material should be submitted to: Robert A. Predale, Environmental Protection Agency, Air Programs Branch, Room 1005, 26 Federal Plaza, New York, New York 10278, (212) 264-9800.

All material submitted should include a reference to "Docket No. 2A-80-1."

FOR FURTHER INFORMATION CONTACT: William S. Baker, Chief, Air Programs Branch, Environmental Protection Agency, Region II Office, 26 Federal Plaza, New York, New York 10278, (212) 264-2517.

Dated: January 9, 1981.

(Sections 110 and 301 of the Clean Air Act, amended (42 U.S.C. 7410 and 7601))

Tennessee's Application for Interim Authorization, Phase I

AGENCY: EPA, Region IV.

ACTION: Reopening of comment period on Tennessee's Application for Interim Authorization

SUMMARY: By notice dated November 28, 1980 (45 FR 79118), EPA announced review of the Tennessee Application for Interim Authorization to administer a Hazardous Waste Management Program under the Resouce Conservation and Recovery Act (RCRA). On December 29, 1980, a public hearing was held concerning Tennessee's application. Since the public hearing, EPA has received several requests for an extension of time for submittal of comments on Tennessee's Application for Interim Authorization. Today EPA is announcing that the comment period on Tennessee's Application is being reopened and the final date for receipt of written comments is January 30, 1981. This comment period is being reopened as a result of the several requests from various organizations and individuals. The State submission has not been materially changed, which would require that the formal review process start over.

DATE: Comments on Tennessee's Application for Interim Authorization must be received by January 30, 1981.

ADDRESSES: Copies of Tennessee's Application for Interim Authorization and the transcript of the public hearing are available at the following addresses for inspection and copying by the public:

(1) Division of Solid Waste Management, Tennessee Department of Public Health, 320 Capitol Hill Building, Nashville, Tennessee 37219, Telephone: 615/741-3424.

(2) Environmental Protection Agency, Regional Office Library, Room 121, 345 Courtland Street, NE, Atlanta, Georgia 30365, Telephone: 404/881-4216.

(3) EPA Headquarters Library, Room 2404, 401 M Street, SW, Washington, D.C. 20460.

Written comments should be addressed to: Patricia S. Zweig, Environmental Protection Agency,

Residuals Management Branch, 345 Courtland Street, NE, Atlanta, Georgia 30365, Telephone: 404/881-3966.

Dated: January 9, 1981

John A. Little,

Acting Regional Administrator.

BILLING CODE 6560-30-M

FEDERAL COMMUNICATIONS COMMISSION

47 CFR Ch. I

Improving Government Regulations; Semiannual Agenda of Significant Proceedings

AGENCY: Federal Communications Commission.

ACTION: Publication of semiannual agenda of significant proceedings.

SUMMARY: On March 23, 1978, President Carter signed Executive Order 12044 directing Federal agencies to make improvements in the regulatory process. As part of these improvements, the Order stated that agencies shall publish at least semiannually an agenda of significant proceedings to provide the public with adequate notice of these matters. In compliance with the Order, the FCC has prepared an agenda of important proceedings under development or review.

EFFECTIVE DATE: November 24, 1980.

ADDRESS: Federal Communications Commission, 1919 M Street N.W., Washington, D.C. 20554.

FOR FURTHER INFORMATION CONTACT: Anne Riffey, Office of the Executive Director, (202) 632-7513.

SUPPLEMENTARY INFORMATION: .

Semiannual Agenda of Significant Proceedings

The Commission wants to encourage greater public participation in the FCC rule making process. To help keep the public informed of significant rule making proceedings, the Commission has prepared an agenda of important proceedings now in progress. The Commission expects to publish an agenda of significant proceedings in the **Federal Register** every six months.

The following terms may be helpful in understanding the status of the proceedings included in this report:

1. A Notice of Inquiry (NOI) is issued by the Commission when it is seeking information on a broad subject or trying to generate ideas on a given topic. A comment period is specified during which all interested parties may submit comments.

2. A Notice of Proposed Rule Making (NPRM) is issued by the Commission when it is proposing a specific change to the FCC Rules and Regulations. Before any changes are actually made, interested parties may submit written comments on the proposals.

3. A Memorandum Opinion and Order (MO&O) is issued by the Commission to deny a petition for rule making, conclude an inquiry, modify a decision, or deny a petition for reconsideration of a decision.

4. A Report and Order is issued by the Commission to state a new or amended rule or state that the FCC Rules will not be changed.

5. A Report Making (RM) Number is assigned to a proceeding after the appropriate Bureau/Office has reviewed a petition for rule making, but before the Commission has taken action on the petition.

6. A Docket Number is assigned to a proceeding if the Commission has issued either a Notice of Proposed Rule Making or a Notice of Inquiry in regard to the matter under consideration. Since January 1, 1978, the Commission has used docket numbers which consist of the last two digits of the calendar year in which the docket was established plus a sequential number which begins at 1 with the first docket initiated during a calendar year (e.g. Docket 78-1 or Docket 79-1). The abbreviation for the responsible Bureau usually precedes the docket number, as in "BC Docket 79-164." When a docket number consists of only five digits (e.g. Docket 19622), this indicates that the docket was established before January 1, 1978.

Semiannual Agenda of Significant Proceedings (as of Nov. 24, 1980)

Title of proceeding	Rulemaking or docket No.	Description	Stage of development	Projected date of upcoming action
A. Broadcast Matters				
A-1—Clear Channel Proceeding. Contact Person: Louis Stephens, 632-7792; Gary Stanford, 632-9660.	20642	Consideration of a proposal to permit additional AM stations to operate on the 25 Class I-A Clear Channels.	Report and Order Adopted in May 1980. Petitions for Reconsideration scheduled for presentation to Commission.	Dec. 4, 1980, agenda.
A-2—Reduction of AM Bandwidth to 9kHz. Contact Person: Gary Stanford, 632-9660.	BC Docket 79-164	Inquiry into reduction of spacing between AM channels from 10 kHz to 9kHz.	Final resolution is awaiting results of Region 2 Conference on AM Broadcasting, to be held in November 1981. In the interim, Commission will develop further reports.	Bureau will present Commission with full report of activities prior to Jan. 19, 1981.
A-3—Deregulation of Radio. Contact Person: Roger Holberg, 632-7792.	BC Docket 79-219	Study to determine if radio broadcasting should be partially or totally deregulated.	Combined Notice of Inquiry (NOI) and NPRM issued September 1979. Comments are being analyzed and R&O is planned.	R&O is expected to be ready for Commission agenda in January 1981.
A-4—FCC Renewal Forms. Contact Person: Israel Teitelbaum, 632-7792.	BC Docket 80-253	Study to revise FCC renewal forms for Commercial and non-commercial broadcast stations.	Commission issued NPRM June 4, 1980. Reply comments due Dec. 4, 1980; final item being drafted.	Final item Expected to go to Commission in February 1981.
A-5—Inquiry into the Proper Role of Television, Translators, and Low-Power TV Broadcasting. Contact Person: Michael Couzens, 632-6302.	BC Docket 78-253	Inquiry into uses of television translators, especially in rural areas, to determine if rules concerning translators should be changed to permit their increased use.	Commission adopted a NPRM in September 1980. Further comments close on Mar. 1, 1981. Several Petitions for Reconsideration are pending which will be presented to Commission.	February 1981 for Petitions for Reconsideration.
A-6—Subscription (Pay) TV Operations. Contact Peraon: Freda Thyden, 632-7792.	21502	Inquiry to determine whether current rules governing pay TV operation are necessary or desirable and whether any new rules are needed to govern the service.	A Second Report and Order (R&O) is forthcoming, and a further NPRM which will include wuch issues as the "complement of four" requirement.	April 1981.
A-7—Equal Employment Opportunity in the Broadcast Industry. Contact Person: Steve Bookshester, 653-7586.	21474	Revision of FCC Form 395, the annual employment form filed by broadcasters, to make it more useful in monitoring the broadcaster's commitment to equal employment opportunity.	Further NPRM issued in 1980 seeking comments on a revised Model EEO program R&O is being drafted.	R&O expected to be ready for agenda in Second Quarter, 1981.

Title of proceeding	Rulemaking or docket No.	Description	Stage of development	Projected date of upcoming action
A. Broadcast Matters—Continued				
A-8—Children's Television Programming and Advertising Practices. Contact Person: Steve Bookshester, 653-7586.	19142	Evaluation of television licensees' compliance with the Commission's 1974 policy guidelines on children's television programming and advertising practices.	NPRM adopted by Commission in December 1979. The comment stage extends from January to August 1980. R&O is being drafted.	R&O ready to be scheduled for agenda in Second Quarter, 1981.
A-9—New VHF Channel Assignment. Contact Person: Martin Blumenthal, 632-7792.	20418	Study of possibility of assigning new VHF channels in the Top-100 markets, specifically at this time in Charleston, West Virginia; Johnstown or Altoona, Pennsylvania; Knoxville, Tennessee; and Salt Lake City, Utah.	Report and Order adopted in September 1980. See entries for New Jersey VHF-TV, below.	
A-10—New Jersey UHF-TV Assignments. Contact Person: Gordon Godfrey, 632-9660.	BC Docket 79-269	Study to assign 6 UHF-TV frequencies to various New Jersey communities.	NPRM adopted Oct. 18, 1979. Record closed August 1980, R&O being developed.	R&O projected for consideration on agenda in first Quarter, 1981.
A-11—New Jersey UHF-TV Financial Viability. Contact Person: Martin Blumenthal, 632-7792.	BC Docket 79-270	Study of means by which the New Jersey UHF-TV stations created in BC Docket 79-269 (above) might best become financially viable.	NPRM adopted Oct. 18, 1979, in conjunction with BC Docket 79-269; record closed August 1980.	Final action projected for the same time as BC Docket 79-269, above.
A-12—Reassignment of UHF-TV. Frequency to New Jersey. Contact Person: Mark Lipp, 632-7792.	BC Docket 80-719	Study of possibility of reassigning the Channel 9 UHF-TV frequency from New York City to a New Jersey community.	NPRM adopted Nov. 6, 1980. Matter being held in abeyance pending resolution of RKO appeal by Federal court.	
A-13—Revision of Financial Qualifications Form. Contact Person: Alan Stillwell, 632-6302.	BC Docket 80-190	Study to revise form 324, Financial Qualifications form, which broadcasters are required to file with the Commission.	NPRM adopted Apr. 24, 1980; reply comments due December.	R&O is planned for scheduling on agenda in first Quarter, 1981.
A-14—Commercial Television Network Practices. Contact Person: Israel Teitelbaum, 632-7792.	Docket 21049	Inquiry into practices and policies of the 3 major television networks regarding the acquisition and distribution of television programming.	Network Inquiry Special Staff has made final report to Commission. Report is now being analyzed by B/cast Bureau staff. Recommendations to the Commission are being formulated.	May or June 1981.
A-15—Use of FM Frequencies. Contact Person: Kathryn Hosford, 632-9660.	BC Docket 80-90	Study of means for increasing the use of FM frequencies.	NPRM issued on Feb. 28, 1980. Reply comments due on Dec. 1, 1980.	Item to the Commission in June 1981.
A-16—Processing of FM Rulemaking Petitions. Contact Person: Jonathan David, 632-7792.	BC Docket 80-130	Study of possible modifications to the procedures for processing FM petitions.	NPRM issued Mar. 27, 1980. Reply comments due Dec. 1, 1980.	Item to the Commission in June 1981.
A-17—FM Quadraphonic Broadcasting. Contact Person: Al Jarratt, 632-7275.	Docket 21310	Inquiry into whether Commission should authorize a quadraphonic FM broadcasting system.	Notice of Proposed Rule Making (NPRM) adopted July 17, 1980. Reply comments due on Feb. 9, 1981.	
A-18—AM Stereo. Contact Person: James McNally, 632-9660.	Docket 21313	The Commission must decide if, and under what circumstances, standards for the transmission of stereophonic program material by AM broadcast stations should be established.	NPRM adopted September 1978; a Memorandum Rept. and Order and Further NPRM adopted July 30, 1980, and released Sept. 11, 1980. Comment period closes in February 1981, after which the staff will probably draft an R&O.	
A-19—Teletext Inquiry. Contact Person: Jim Green, 632-6302.	Rulemaking 3727	Petition by CBS, Inc., to authorize use of teletext by TV stations.	Period for comments on the petition has closed. Staff is evaluating several alternatives with a view to taking action in the next two or three months.	First Quarter, 1981.
B. Cable Television Matters				
B-1—Cable TV Systems: Multiple Ownership and Cross-Ownership. Contact Person: William Johnson, 632-6466.	Dockets 18891 and 20423	Inquiry to determine if FCC should limit size of cable systems, multiple ownership and cross ownership.	Additional R&O's are forthcoming in these dockets. Office of Plans and Policy has a study of these issues in progress. Study includes telephone cross-ownership issues also.	
B-2—Cable TV Impact on Broadcast Service. Contact Person: William Johnson, 632-6468.	Dockets 21284 and 20988	Inquiry into the economic relationship between television broadcasting and cable television to provide the Commission with better methods of predicting changes in these industries and analyzing cases where questions of impact are raised.	R&O eliminating CATV rules has been adopted by Commission, but rule changes have been stayed in connection with an appeal of the Commission's decision. Court action is expected by the Spring of 1981.	
B-3—Cable TV Local Franchise Fees. Contact Person: Deborah Stuehrmann, 632-6468.	Docket 21002	Proposal to eliminate rule (§ 76.31) that limits the ability of local authorities to collect franchise fees in excess of 3% of a cable system's gross revenues.	Draft of final R&O is in progress. Additional analysis of economic study (NERA study) submitted in comments may be required.	
B-4—Cable TV Mandatory Local TV Signal Carriage Rules for "Saturated" Cable TV Systems. Contact Person: Stephen Bailey, 632-6468.	Docket 21472	Proposal to amend the cable TV mandatory signal carriage rules with respect to those situations where the availability of additional channels on local cable systems has been exhausted.	Draft of final R&O is in progress.	
C. Common Carrier Matters				
C-1—Cost Allocation Manual—AT&T. Contact Person: Tim Stevens, 632-9342.	CC Docket 79-245	Proceeding to develop and prescribe specific procedures to be followed by AT&T in allocating costs among its various services.	Final Commission Order tentatively scheduled for vote in December 1980. Reconsideration should follow.	December 1980.

Title of proceeding	Rulemaking or docket No.	Description	Stage of development	Projected date of upcoming action
C. Common Carrier Matters—Continued				
C-2—Cellular Mobile Communications. Contact Person: Michael Sullivan, 632-6450.	CC Docket 79-318	Inquiry into implementation of cellular mobile communications systems.	Draft of Report and Order completed and expected to be before the Commission in First Quarter, 1981.	First Quarter, 1981.
C-3—Xerox XTEN Proposal. Contact Person: Beverly Baker, 632-5930.	Gen. Docket 79-188	Xerox Corporation has proposed the allocation of microwave frequencies in the 10.55-10.68 GHz band for use in providing a new common carrier electronic message service.	Draft item revised. Awaiting final comments from Common Carrier Bureau, Office of Science and Technology, Office of Plans and Policy and General Counsel's office.	First Quarter, 1981.
C-4—Resale and Shared Use of WATS. Contact Person: Brad Allenby, 632-6917.	CC Docket 80-54 (RM 3453)	Regulatory policies concerning resale and shared use of common carrier domestic public swtiched network services. (MCI petition for rule making #3453).	On Oct. 21, 1980, the Commission concluded that the tariff restrictions were unlawful. The Commission's final order prescribing unlimited resale and shared use of public swtiched network service is expected to be released in December. AT&T will have 60 days from the release date to file tariff revisions removing all resale and sharing restrictions.	
C-5—WATS Offering. Contact Person: Kent Nakamura, 632-6917.	Bureau Project #210 (TR-13555).	AT&T tariff revisions reflect significant and complex changes in a major basic service. The filing represents substantial structural change in the WATS offering.	Numerous petitions for rejection or suspension of the proposed tariff revisions have been filed primarily by large volume WATS customers and companies that compete with AT&T. The Commission will act on the petitions before the effective date of the proposed tariff revisions.	December 1980.
C-6—Bell System Operating Companies Tariff, FCC No. 6. Contact Person: Kent Nakamura, 632-6917.	21499 Rate Case	Investigation into the lawfulness of facilities offerings by AT&T and its associated Bell companies to other common carriers; Bell System Operating Companies Tariff FCC No. 6.	The Commission is expected to adopt in December 1980 a Notice of Inquiry and Proposed Rulemaking.	December 1980.
C-7—Second Generation Satellites. Contact Person: Ron Lepkowski, 632-5930.	Bureau Project #130	The total number of applications for new domestic satellites may exceed the number that could be accommodated in the orbital arc useful for U.S. service. In order to avoid potential conflicts, a rulemaking approach is desired.	Action on applications to be completed in December 1980. Staff now working on the follow-on proceedings to develop and promulgate long term policy and procedures.	First Quarter, 1981.
C-8—AT&T Rate Structure Rulemaking. Contact Person: Pat Donovan, 632-5550.	CC Docket 79-246	Inquiry into AT&T private line tariff and rate structures and volume discount policies.	Staff is preparing a commission Memoranuum Opinion and Order and Second Notice of Inquiry. Item is scheduled to be presented to the Commission in February.	February 1981.
C-9—MTS-WATS Market Structure Inquiry. Contact Person: Carl Lawson, 632-9342.	CC Docket 78-72	Inquiry to determine whether public interest requires interstate Message Telecommunications Service (long distance telephone service) and/or Wide Area Telecommunications Service (bulk rate long distance service) or their functional equivalents, to be provided on a sole source basis.	Report and third supplemental notice, issued Aug. 19, 1980, resolved entry policy question and issues other than access charges and Alaska entry policy. Staff preparing further order as access charges. Awaiting supplemental comment regarding Alaska entry policy.	Planned for February 1981.
C-10—"Authorized User" Petitions. Contact Person: Gene Belardi, 632-7265.	CC Docket 80-170	Study of whether to authorize non-carrier entities to obtain service directly from Comsat for provision of international communications.	An NPRM was issued in May 1980. Comments and reply comments have been filed and reviewed. Staff research and economic studies completed. R&O is being drafted. See also CC Docket 80-634, below.	
C-11—International Resale and Shared Use. Contact Person: Helen Golding, 632-6917.	CC Docket 80-176	Study of the restrictions on resale and shared use of international services.	Comments were filed by twenty-three parties, seventeen of which filed reply comments in late September. The staff is in the process of drafting a recommended decision to be presented to the Commission in the Spring of 1981.	April 1981.
C-12—AT&T General Rate Increase. Contact Person: Brad Allenby, 632-6917.	Bureau Project #28	Tariff filing by AT&T that would increase its tariff charges, to become effective in part by June 1980.	Bureau's order was released on June 13, 1980, with Chief ordering an investigation of the across-the-board increases, but deferred that investigation until the hearing on AT&T's rate of return in Docket 79-63. MCI has challenged some procedural aspects of the decision and an application for review is pending.	No earlier than Second Quarter, 1981.
C-13—Uniform System of Accounts for Telephone Companies. Contact Person: David Chessler, 653-7413.	CC Docket 78-196	Study to develop a system of accounts which can readily provide cost information by both jurisdiction and individual service categories.	Review of comments received on First Supplemental NPRM is ongoing. Staff will devise specifications of the new proposed Uniform System of Accounts.	
C-14—Communications Satellite Corporation Structure. Contact Person: J. Ball, 632-7834.	CC Docket 80-634	An inquiry into changes in the corporate structure and operations of Communications Satellite Corporation.	NPRM adopted Oct. 9, 1980; released Oct. 29, 1980, to provide interested parties the opportunity to comment on the tentative proposals the Commission made in the Comsat study for changes in the Corporate structure and operations of Comsat. See also CC Docket 80-170 above.	Second Quarter, 1981.

Title of proceeding	Rulemaking or docket No.	Description	Stage of development	Projected date of upcoming action
C. Common Carrier Matters—Continued				
C-15—Overseas Communication Service. Contact Person: Stuart Chiron, 632-7265.	CC Docket 80-632	The Commission has tentatively concluded that voice/record dichotomy in international services no longer best serves the public interest. This NPRM proposes to permit the IRCs to provide international voice services and AT&T to provide international record services. NPRM revisits 1964 TAT-4 decision which helped establish voice/record dichotomy.	NPRM released Oct. 28, 1980. Comments due Dec. 12, 1980. Replies due Jan. 16, 1961.	Second Quarter, 1981.
C-16—AT&T Rate of Return. Contact Person: Kent Nilsson, 632-9342.	CC Docket 79-187	Inquiry to determine if AT&T's rate of return during 1978 exceeded the limits specified by the Commission in Docket 20376.	Comments from NOI have been reviewed. Further action pending policy guidance from the Commission.	
C-17—INMARSAT INterconnection—Implementation of Sec. 503(G) of INMARSAT Act. Contact Person: J. Ball, 632-7834.	CC Docket 79-35	Rulemaking regarding operational arrangements for maritime satellite service; interconnection with earth stations; and regulating safeguards against cross-subsidization of costs.	Further Notice of Proposed Rule Making being prepared requesting public comment on whether Comsat should be permitted to combine the expenses and assets of its INMARSAT investment with its INTELSAT revenue requirement for rate setting purposes.	
C-18—MDS Licensing. Contact Person: Cicely Holiday, 632-6415.	CC Docket 80-116	Inquiry on alternatives to trial-type proceedings for awarding MDS licenses. Possible alternatives include paper kearings, lotteries, and auctions.	NPRM issued March 1980. Staff is evaluating comments to draft an R&O.	
C-19—MDS Frequency Reallocation. Contact Person: Kevin Kelley, 632-6430.	Gen. Docket 80-112	Inquiry and rulemaking to consider reallocation of frequencies; in the 2500-2690 MHz band.	NPRM issued March 1980. Comment period extended to Sept. 26 and Oct. 27, 1980. Staff anticipates issuance of an R&O.	
D. Field Operations Bureau Matters				
D-1—Radio Operator Licensing. Contact Person: Vernon Wilson, 632-7240.	Docket 20817	Inquiry to review radio operator rules and evaluate the current need for them.	Order issued extending time to file comments to Dec. 5, 1980, and reply comments until Jan. 5, 1981.	2d Quarter, 1981 or later.
E. Office of General Counsel				
E-1—Reimbursement for Participation in Commission Proceedings. Contact Person: Randy May, 632-7020.	Gen. Docket 78-205	Inquiry as to the rules under which FCC should reimburse expenses of public participants in its rulemaking proceedings.	Comments are being evaluated by staff.	2d Quarter, 1981 or later.
F. Office of Plans and Policy				
F-1—Improvements to UHF TV Reception. Contact Person: Phil Giesler, 653-5940.	Gen. Docket 78-391	A five-person task force has been created to examine comparability for UHF and VHF television reception and to assist in determining what regulatory changes are needed to achieve comparability.	Last Report was issued November 1980. Contractor's reports pending.	
F-2—Direct Broadcast Satellite Inquiry. Contact Person: Florence Setzer, 653-5940.	Gen. Docket 80-603	Study of regulatory options concerning direct broadcast satellite (DBS).	NOI and R&O issued in October 1980. Comments due by Dec. 5, 1980, and reply comments by Dec. 22, 1980.	2d Quarter, 1981.
G. Office of Science and Technology				
G-1—Xerox XTEN Proposal. Contact Persons: Bert Withers, 653-8100; Beverly Baker, 632-5930.	Gen. Docket 79-188	Xerox Corporation has proposed the allocation of microwave frequencies in the 10.55-10.68 GHz band for use in providing a new common carrier electronic message service.	Comment dates on NPRM of August 1979, were extended to March 1980. An initial Commission decision is expected by the end of 1980.	1st Quarter, 1981.
G-2—Spread Spectrum Communications Technology. Contact Person: Michael Kennedy, 632-7073.	Not yet Assigned	Inquiry into possible civil application of spread spectrum <communications technology and possible rulemakings needed to permit its use (it is implicitly forbidden under present rules).	NOI is being written to be presented to Commission.	February 1981.
G-3—Radio Frequency Interference to Electronic Equipment. Contact Person: Al Paul, 653-8126.	Gen. Docket 78-369	Inquiry to determine extent of radio frequency interference to electronic equipment and need for government regulation to lessen such interference.	Pursuant to NOI, review of the comments received and the record has been completed. Statistical summary of comments is currently being developed, to be followed by coordination with appropriate operating bureaus/offices. An options paper is to be issued early in 1981.	1st Quarter, 1981.

Title of proceeding	Rulemaking or docket No.	Description	Stage of development	Projected date of upcoming action
G. Office of Science and Technology—Continued				
G-4—Broadcasting-Satellite Planning Conference. Contact Person: Michael Kennedy, 632-7073.	Gen. Docket 80-398	Preparation of U.S. Proposals to a 1983 ITU Region 2 Conference to plan the use to 12 GH, broadcasting satellites in the Western Hemisphere.	An initial NOI has been released and comments are being reviewed. Release of another NOI is anticipated.	1st or 2d Quarter, 1981.
G-5—Mobile Services Conferences. Contact Person: Lawrence Palmer, 653-8102.	Gen. Docket 80-184	Preparation of U.S. proposals to a 1982 World Conference on the Mobile Radio Services.	Two NOIs have been issued and comments are being reviewed. Expect another NOI in 1st Quarter 1981 and a R&O containing FCC recommended proposals in 2d Quarter 1981.	NOI—1st Quarter, 1981; R&O—2d Quarter, 1981.
G-6—Space Services Planning Conference Space WARC. Contact Person: Thomas S. Tycz, 653-8102.	Gen. Docket 80—	Preparation of U.S. proposals to a 1984/85 (2d session) ITU WARC on "Use of the Geostationary-Satellite Orbit and Planning of the Space Services Utilizing It".	Initial NOI on agenda of Nov. 25, 1980. Expect another NOI to be released 2d Quarter.	Initial NOI—November 1980; 2d NOI—2d Quarter, 1981.
G-7—Air-to-Ground Telephone Service at 900 MH, Contact Person: Mel Murray, 653-8166.	RM. 3524	This proposed system is designed to serve passengers on commercially scheduled airlines in the contiguous United States. Airfone, the petitioner, plans to use single side band modulation, proposes the use of a total of 4 MH, of spectrum to provide 310 two-way voice channels which will be interconnected to the public telephone network.	Petition is being analyzed along with the experimental-developmental applications filed by petitioners.	2d Quarter, 1981.
H. Private Radio Bureau Matters				
H-1—Telephone Interconnection in Land Mobile Radio Services. Contact Person: Lewis Goldman, 632-6498.	Docket 20846	Proceeding to develop and prescribe specific rules for interconnection of private land mobile radio systems with the public switched telephone network.	An R&O is being drafted by the staff...	April 1981.
H-2—Additional Personal Radio Service. Contact Person: John B. Johnston, 234-6884.	PR Docket 79-140	Inquiry into need for new Personal Radio Service at 900 MH, and technical and operational characteristics of such a possible service.	NOI issued previously and comment period ended in February 1980. Staff is drafting a NPRM in conjunction with the Office of Science and Technology.	April 1981.

[CC Docket No. 79-35; FCC 80-744]

Further Proposal Regarding Implementation of Requirements of the International Maritime Satellite Telecommunications Act

AGENCY: Federal Communications Commission.

ACTION: Further notice of proposed rulemaking (Docket No. 79-35).

SUMMARY: This Further Notice of Proposed Rulemaking provides and opportunity for interested parties to comment on whether the Communication Satellite Corporation (Comsat) should be permitted to include, for rate setting purposes, the net expenses and assets of its International Maritime Satellite System (INMARSAT) investment in the revenue requirements for its International Telecommunications Satellite (INTELSAT) operations.

This further notice is necessary because Comsat indicated in initial comments filed in this proceeding that no such cross-subsidization would be necessary, but has now changed its position in view of the significant start-up losses that it foresees as resulting from its participation in INMARSAT.

DATES: Interested parties may file comments on or before February 27, 1981 and reply comments on or before March 20, 1981.

ADDRESS: Comments and responses to this notice should be submitted to: The Secretary, Federal Communications Commission, 1919 M Street, NW., Washington, D.C. 20554.

FOR FURTHER INFORMATION CONTACT: James L. Ball/Glenn deChabert, International Facilities Planning Division, Common Carrier Bureau, Federal Communications Commission, Washington, D.C. 20554, (202) 632-3214.

In the matter of implementation of requirements of the International Maritime Satellite Telecommunications Act, CC Docket No. 79-35.

Adopted: December 16, 1980.
Released: December 29, 1980.

1. On February 26, 1979, we released a Notice of Proposed Rulemaking inviting comments on proposals to implement certain requirements imposed on the Commission by the International Maritime Satellite Telecommunications Act, 47 U.S.C. 751 (1979). *International Maritime Satellite System*, 70 F.C.C. 2d 1968 (1979). The International Maritime Satellite Telecommunications Act declares that it is the policy of the United States to provide for U.S. participation in the International Maritime Satellite Organization (INMARSAT) in order to develop a global maritime satellite system that will meet the maritime commercial and safety needs of the United States and foreign countries. INMARSAT is intended to be an independent international organization that will provide for ownership and operation of such a system. The Act amends the Communications Satellite Act of 1962, 47 U.S.C. 701 (1976), to designate the Communications Satellite Corporation (Comsat) as the U.S. operating entity in INMARSAT and place sole responsibility on Comsat for any financial obligations it incurs in that capacity.

2. Our Notice of Proposed Rulemaking inquired into (1) ownership of earth stations and operational arrangements by which Comsat and U.S. domestic or international carriers will interconnect their facilities for the purpose of extending maritime satellite services to users in the United States and beyond, and (2) operational arrangements by which Comsat will interconnect its facilities with private communications systems authorized by this Commission.[1] In addition, it sought comments from interested parties concerning regulatory safeguards to assure that Comsat's participation in INMARSAT will not adversely affect its participation in INTELSAT, and to prevent Comsat from cross-subsidizing its maritime satellite services with its other communication services. The purpose of this Further Notice of Proposed Rulemaking is to provide interested parties with an opportunity to comment on issues relating to this latter subject area that were raised by Comsat following the period for comments and replies allowed by our initial notice.

[1] We addressed issues concerning operational arrangements, interconnection between Comsat and U.S. domestic and international carriers and private communications systems on April 30, 1979. *International Maritime Satellite System*, 71 FCC 2d 1069 (1979). Issues concerning earth station ownership and operation are still outstanding.

A. Background

3. In our initial notice, we indicated that regulatory safeguards with respect to Comsat's investment in INMARSAT would be necessary for two reasons. First, we stated that Comsat's participation in INMARSAT should not be permitted to adversely affect its participation in INTELSAT or furtherance of the objectives set forth in the Communications Satellite Act. Second, we stated Comsat's provision of maritime satellite services should not be cross-subsidized with other communications services it provides. We noted that Comsat's participation in INMARSAT will necessarily involve substantial investment, and that the immediate prospects for an economically viable maritime satellite system appear uncertain.[2] In view of these factors, we indicated a concern that the costs of financial commitments undertaken by Comsat, as the U.S. operating entity in INMARSAT, not be passed on to users of communications services other than maritime satellite services.

4. We therefore posed several approaches to guard against potential cross-subsidization situations: (1) Requiring Comsat to establish a separate subsidiary for maritime satellite services; (2) changing elements of Comsat's basic structure without a separate subsidiary for maritime satellite services; (3) requiring Comsat to establish a separate system of accounts for maritime satellite services; and, (4) a combination approach. We invited comments from interested parties on these approaches and on any other regulatory measures which they believe should be taken to guard against cross-subsidization. However, we indicated that we would defer imposition of specific subsidiary arrangements, structural changes, or accounting rules until we examined Comsat's overall corporate structure and activities in the Comsat Study.[3]

[2] We noted that the Economic, Marketing and Financial Panel of the INMARSAT Preparatory Committee does not expect total cumulative INMARSAT revenues to equal total cumulative INMARSAT costs until the late 1980's at the earliest. However, we expressed concern that even this projection may be optimistic, and that initial losses may not be recouped until after that date.

[3] The Comsat Study was undertaken pursuant to Section 505 of the International Maritime Satellite Telecommunications Act which directed the Commission to determine whether any changes are required in Comsat's structure or operations to ensure that the corporation is able to fulfill effectively its obligations and carry out its functions under the Communications Satellite Act of 1962 and the Communications Act of 1934. A Final Report and Order in the Comsat Study was transmitted to Congress on May 1, 1980. *Communications Satellite Corporation*, 77 F.C.C. 2d 564 (1980).

5. In our final report in the Comsat Study, we reaffirmed the observation we made in our initial notice in this proceeding that INMARSAT will suffer losses. We observed that Comsat will be faced with a substantial negative cash flow in providing INMARSAT services, and concluded that a fundamental policy question exists with respect to how Comsat's expected INMARSAT losses should be absorbed. In so concluding, we recognized that Comsat will have the incentive and perhaps the ability to cover at least a part of its INMARSAT losses by shifting as many INMARSAT-related costs to its INTELSAT rate base, a process of cross-subsidization which would be difficult to detect as long as common facilities are involved. We further recognized that such cross-subsidization could impose excessive costs on INTELSAT ratepayers. However, we decided not to recommend at that time total separation between Comsat's INTELSAT and INMARSAT functions. Instead, we deferred imposition of any structural separation between Comsat's INTELSAT and INMARSAT roles to this proceeding, in which we would consider how Comsat may treat its INMARSAT losses from a regulatory standpoint. We also stated it would be useful for Congress to also consider this problem and provide the Commission with direction or guidance as to how it should be handled. In this respect we suggested that Congress may wish to reexamine U.S. national interest in light of expected INMARSAT losses and alternatives available to treat such losses.[4]

6. This further notice is necessitated by the fact that Comsat has recently proposed to treat its INMARSAT losses in a manner that is markedly different from the position that it took in the comments it filed in response to our initial notice in this proceeding.[5] In

[4] We noted that an alternative to permitting any form of cross-subsidization would be direct government subsidy of Comsat's INMARSAT operations. On the other hand, we indicated that a more extreme form of cross-subsidy than the cross-subsidy which may be available through common cost allocations would be to permit Comsat to add all of its INMARSAT investment and expenses to its INTELSAT revenue requirements.

[5] In our initial notice, we requested Comsat to indicate: (1) The means by which Comsat intended to fund its initial INMARSAT investment; (2) how Comsat intended to treat any losses it might sustain during initial maritime satellite operations; (3) the effect any such losses (or its initial INMARSAT investment) might have on its INTELSAT obligations and provision of INTELSAT services; (4) the level of all costs, including, but not limited to, operational, administrative, equipment and hardware costs, it expected to incur in providing maritime satellite service and in participating in INMARSAT; (5) all common, joint and overhead costs it expected to incur; and (6) how such costs

Footnotes continued on next page

response to our initial notice, Comsat gave the clear impression that its INMARSAT losses would have no adverse impact on its INTELSAT obligations, and that cross-subsidization of its INMARSAT services with its INTELSAT services neither would be necessary nor was contemplated. As for funding of its initial INMARSAT investment, Comsat asserted that it has the "financial capability to undertake the INMARSAT program without any adverse impact on its furnishing of INTELSAT services." Comments at 21. Comsat declared a consolidated cash position of approximately $66 million and a continuing ability to generate "substantial amounts of cash which will be adequate to finance both Comsat's INTELSAT and INMARSAT activities, as well as other activities." Comments at 21. Moreover, Comsat asserted that insofar as its capitalization consisted of $373 million of equity and $1.8 million of long term debt as of December 31, 1978, the corporation "is in an excellent position to acquire additional long-term debt, if necessary," and noted that the Commission, in fact, "explicitly acknowledged this capability when it imputed 45 percent debt to Comsat in determining an appropriate rate of return in the Comsat rate proceeding." Comments at 21.

7. As for treatment of INMARSAT losses, Comsat stated that it "fully intends to keep these two (INTELSAT and INMARSAT) activities separate from one another through appropriate organizational and accounting practices." Comments at 3–4. It indicated that to the extent it incurs losses from its INMARSAT services, it will be able to separately record and isolate such losses through a separate system of accounts for its INMARSAT activities. Comments at 24. Comsat further stated that the appropriate mechanism to record such losses would be instituted once Comsat could clearly determine the magnitude of projected losses. Comments at 24. Comsat concluded that whatever the ultimate disposition of the losses, "as long as they are segregated they can have no impact on Comsat's INTELSAT obligations or its provision of INTELSAT services." Comments at 24.[5] It assured the Commission that its planned internal corporate controls and separate accounting capability would prevent the costs of INMARSAT services from being borne by other communications services. Comments at 24.

8. On July 17, 1980, Comsat submitted a letter to the Commission in which it proposed a strikingly different approach to handling anticipated INMARSAT losses than the position it took in the comments it filed in this proceeding.[7] Essentially, Comsat proposed that it be allowed to combine for rate setting purposes, the net expenses and assets of its INMARSAT activities with its INTELSAT revenue requirements. It attached an internal memorandum to its letter which contains a hypothetical analysis concluding that such a remedy would have a minimal impact on its INTELSAT business.[8] The memorandum finds several options for absorbing initial INMARSAT losses to be either infeasible or undesirable. It maintains that existing maritime satellite rates cannot be increased because, based on the MARISAT experience,"* * *the demand characteristics in this market would cause much lower utilization of the service and would retard, if not prevent, its development." The memorandum observes that a reduction in Comsat's ownership in INMARSAT to reduce losses "* * * would produce the adverse result of U.S. and Comsat having an even lower voice in the business." And, it states that "asking for a government subsidy is possible, but our strong preference is that this business should be totally supported by the private sector. But still we cannot expect our shareholders to support this venture on a stand-alone basis."

9. The memorandum contains a worldwide maritime satellite traffic forecast based on Comsat's experience in providing maritime satellite services. According to the memorandum, the financial implications of the projections contained therein show Comsat's "* * * share of the after-tax losses accumulating to over $17 million in the period 1980–1988." The memorandum states that "* * * while the first year of profitability is estimated to be 1988, it is speculative to project when thereafter, even on a year-by-year basis, INMARSAT will provide an acceptable return." It further states that "these results will be in return a gross investment by Comsat of almost $100 million," and concludes that "clearly these are not the characteristics of a venture that prudent business people with a responsibility to shareholders can willingly pursue; further action is both required and appropriate."

10. The action recommended in the memorandum is to propose to the Commission that "* * * we be allowed to include, for rate setting purposes, the net expenses and assets of INMARSAT in the revenue requirements of our INTELSAT operations, at least during the several years of start up for the new service." The memorandum states that while Comsat would organizationally separate its INTELSAT and INMARSAT lines of business, its rate of return should reflect a single jurisdictional business and the reasonableness of Comsat's earnings from INTELSAT and INMARSAT services should be viewed on an overall basis. According to the memorandum, this approach would have a "very small impact" on Comsat's INTELSAT business. The memorandum further states:

> Our best forecasts for INTELSAT circuit costs show a steady decline averaging about 8.7% over the next ten years. The effect of combining the revenue requirements is a slight decrease of about one-half percentage point in that rate of decline. Viewed another way, INTELSAT rates would average 4–5% more over the period than they otherwise would have been. Naturally, the percentage impact on costs to the end user is an order of magnitude smaller, probably less than 1% if any at all, as our costs are a shrinking fraction of the total costs of international communications.

11. Three carriers submitted responses to the Commission concerning Comsat's July 17, 1980 letter. AT&T reiterated the comments that it made in the Comsat Study that Comsat's INMARSAT activities should not be subsidized by its INTELSAT activities, or vice versa, unless a conscious decision is made by the Commission that any subsidy is in the public interest.[9] AT&T stated that it would not, in principle oppose Comsat's proposal to combine its INMARSAT and INTELSAT expenses and assets for rate setting purposes during a transition period, so long as the Commission closely monitors such a combination

---

Footnotes continued from last page
would be allocated or accounted for between corporate organizational units and the service they provide.

[4] Comsat stated that it expects INMARSAT's capital requirements "to be relatively small in the early years, particularly in view of the expectation that the initial INMARSAT space segment will be leased from other entities and the capital investment in those facilities will be made by such other entities." Comments at 22. It also stated that it expects that all of the costs it would incur by operating earth stations and participating in INMARSAT "would be offset by revenues received for furnishing maritime services," and concluded that even if losses are experienced in the early years, "neither they nor the required capital investments are likely to be of such magnitude as to have any adverse effect on Comsat's ability to meet its INTELSAT obligations." Comments at 22.

[7] Letter to Chief, Common Carrier Bureau, from William H. Berman, Vice President and General Counsel, Communications Satellite Corporation, dated July 17, 1980. That letter has been made a part of the record in this proceeding.

[8] The internal memorandum was originally provided by Comsat to the Commission's Common Carrier Bureau in connection with the Comsat Study.

[9] Letter to Chief, Common Carrier Bureau from Robert E. Boone, Sr., General Attorney, dated August 11, 1980.

"* * * with an eye toward (a) the duration of the transition period, and (b) its effect on present and future rates charged by Comsat to service carriers for INTELSAT circuits." TRT Communications Corporation opposes any Commission grant of the relief sought by Comsat in its July 17 letter. TRT points out that if Comsat is permitted to combine its INMARSAT and INTELSAT expenses and assets, the international service carriers will subsidize Comsat's INMARSAT business.[10] TRT maintains that it in effect would be helping Comsat to compete against the public coast station services that it provides through Station WNU at Slidell, Louisiana. Western Union International opposes Comsat's proposal and requests an opportunity to more fully submit comments to the Commission.[11] WUI notes its efforts along with other carriers to become involved in INMARSAT. It emphasizes that "Comsat now seeks to burden WUI and others with the risks of the new venture by burdening its INTELSAT ratepayers with the INMARSAT start-up costs."

B. Discussion

(1) Overview

12. At the outset, we note that the concern we expressed in our initial notice in this proceeding—that the cost of INMARSAT financial commitments made by Comsat not be borne by users of its other communications services—reflects well established Commission policy declaring cross-subsidization between services as generally inimical to the pbulic interest.[12] In our initial notice, we emphasized that the cost of providing a service is at the heart of the statutory requirements of sections 201 through 205 of the Communications Act for just, reasonable and nondiscriminatory rates, and that such costs are to be directly controlling in rate setting or are to be considered as the reference or benchmark from which to measure departures from this basis.[13] In addition, we noted that these views were expressed during the early stages of INMARSAT's development. In a 1976 letter to the Secretary of State concerning the formation of an international organization to provide maritime satellite services, we recommended that the United States participate in a forthcoming confernece looking toward resolution of outstanding issues and formation of general principles upon which such an organization would be based.[14] We indicated that the Commission then had under consideration in a formal proceeding the issue regarding creation of a U.S. entity to be responsible for maritime satellite services.[15] In this respect, we stated:

It is not, however, the intention of the Commission to create a U.S. entity that would undertake a financial commitment in INMARSAT under any arrangements that would require the users of services other than maritime satellite service to bear the costs of such commitments. Any such course, we believe, would require Congressional action.

13. We recognize that our general policy against cross-subsidization cannot be applied in a vacuum without regard to other public interest considerations. It is clear that costs are not the only criterion for determining the lawfulness of rates and that other factors may be weighed.[16] However, it is unclear that the circumstances before us present other factors which outweigh our general policy. Comsat's main reason for requesting permission to cross-subsidize its INMARSAT and INTELSAT services appears to be a business judgment that INMARSAT is an even less attractive investment than Comsat originally anticipated, and that the Comsat shareholders should not be expected "to support this venture on a stand-alone basis." We do not regard the fact that losses will be sustained, in and of itself, to be sufficient justification for permitting the cross-subsidization that Comsat seeks. The drastic departure from traditional Commission policy sought by Comsat requires clear public interest justification. Comsat's July 17 letter to the Commission fails to provide such justification.

14. It appears that the only factors which may provide such justification involve the U.S. commitment to the commercial and operational success of INMARSAT and the national interest and foreign policy implications that flow from this commitment. However, as we will discuss, we question whether there is sufficient connection between Comsat's projects INMARSAT losses and U.S. foreign policy objectives to warrant cross-subsidization between Comsat's INMARSAT and INTELSAT services.

(2) The National Interest and Foreign Policy Basis for U.S. Participation in INMARSAT

15. In a joint letter to the Chief, Common Carrier Bureau, the

[14] The conference was the second among three intergovernmental conferences convened regarding international maritime satellite communications services. In 1972, the Intergovernmental Maritime Consultative Organization (IMCO) estalished a panel of representatives from over 20 countries, including the United States, to study the feasibility of creating an international maritime satellite system. The panel included U.S. Government, common carrier, and maritime industry representatives. It completed its study in 1974 and issued a report that (1) examined operational requirements and technical parameters for a maritime satellite system; (2) provided an economic assessment for such a system; and (3) included a draft agreement that would create an international organization to operate the system. IMCO thereafter convened in Intergovernmental Conference in 1975 to consider the establishment of an international maritime satellite organization. U.S. participation in the Conference again was through U.S. Government, common carrier, and maritime industry representatives. After three sessions, the Conference adopted and opened for signature in 1976 two separate agreements providing for the establishment of INMARSAT—a Convention to be signed by governments and an Operating Agreement to be signed by either the governments or their designated operating entities. These instruments set forth the legal and financial requirements for participation in INMARSAT and the institutional basis upon which the organization operates.

[15] We released a Notice of Inquiry on December 5, 1974, seeking comments from interested parties on a number of issues relating to the establishment of an intenational maritime satellite system. *International Maritime Satellite System*, 50 F.C.C. 2d 640 (1974). We considered the comments filed in adopting recommendations to the Department of State for the first session of the Intergovernmental Conference convened in 1975 to consider an international organization to establish a martime sattlite system. We invited further comments regarding the designation of a private communications entity to be the U.S. participant and investor in any such organization. *International Maritime Satellite System*, 55 F.C.C. 2d 87 (1975). Subsequently, however, we terminated this proceeding in view of enactment of the International Maritime Satellite Telecommunications Act designating Comsat as the U.S. representative in INMARSAT, *International Martime Satellite System*, 70 F.C.C. 2d 1985 (1979).

[16] *See* Private Line Rate cases, 34 F.C.C. 2d at 217, 231 and 297; In Re WATS, 59 F.C.C. 2d at 671, 678. *See also*, AT&T Private Line Rate Cases, 61 FCC 2d 587, 589 (1976), in which we stated:

Our prior policy supports the position that actual costs of providing service underlie the statutory requirement that rates be just, reasonable, and nondiscriminatory, albeit this does not mean that costs are the *only* criterion useful in determining whether rates are lawful under the Act. Further, we conclude that the public interest is not generally served by interservice cross-subsidization, but recognize that statutory and social policies may lend sanction to some intraservice subsidies. Finally, we make findings regarding proper cost standards, measures of cross-subsidization, and acceptable departures from cost of service as a criterion of the justness and reasonableness of return levels and relationships (emphasis in original).

Department of State and the National Telecommunications and Information Administration (NTIA) emphasize the U.S. commitment to the commercial and operational success of INMARSAT, and call for expeditious Commission determination of proper treatment of Comsat's INMARSAT investment costs "* * * in view of foreign policy considerations * * *" [17] They state that:

The United States was instrumental in bringing INMARSAT into being and is now, through COMSAT, the largest investor in the Organization. United States policy, as clearly stated in the International Maritime Satellite Telecommunications Act supports participation in INMARSAT in order to serve the maritime commercial and safety needs of the United States. Any international uncertainty about our commitment to the commercial and operational success of INMARSAT could have an unfortunate impact upon our influence in the Organization. An early Commission determination as to the appropriate treatment of COMSAT's start-up costs would be helpful in dispelling such uncertainty. Additionally, our record of leadership in INTELSAT prompts us to favor a climate within INMARSAT which enables U.S. spokesmen to play a similarly constructive role in the further development of a global maritime satellite capability generally, and on behalf of U.S. interests more particularly.

The two agencies take no position on what the appropriate regulatory treatment should be concerning Comsat's anticipated INMARSAT losses. However, they note that:

* * * the Commission has several tools available which it can—and should—use to assure that the overall public interest is served. For example, if the Commission determines that COMSAT should be permitted to combine the expenses and assets of its INMARSAT revenue requirements with its INTELSAT revenue requirements, it should set firm limitations of duration, amount, etc. These limitations would not only have the effect of protecting the INTELSAT ratepayer, but would also act as an incentive for COMSAT to assure commercially sound and efficient INMARSAT operations. The Commission should also consider the extent to which such combination affects COMSAT's ability to pass on reductions in INTELSAT charges. It is particularly important that COMSTAT's charges not deter utilization of INTELSAT capacity or the introduction of new INTELSAT services.

16. We note that the views expressed above by NTIA and State are consistent with their position during Congressional hearings considering INMARSAT legislation. In those hearings the two agencies stressed the importance of national interest and foreign policy concerns in connection with U.S. participation in INMARSAT. [18] The Department of State maintained that U.S. participation in an international joint undertaking for the provision of maritime satellite communications service would be in the public interest. [19] The State Department indicated a concern that the failure of the U.S. to participate in INMARSAT could cause duplicative efforts by other countries in deploying maritme communications satellites which would result in a needlessly wasteful use of available radio spectrum and limited orbital locations. [20] It concluded that * * * a responsible approach dictates U.S. support for a joint and unified enterprise to avoid duplicative requirements and the squandering of scarce resources." [21] With respect to foreign policy concerns, the State Department concluded that:

* * * a decision not to permit participation in INMARSAT, following our failure to implement after a lengthy period of negotiation and the signature of a memorandum of understanding, the joint program of experimentation and evaluation using an aeronautical satellite Capability with European and Canada, would lend credence to the argument that the U.S. is really not interested in cooperative international efforts to exploit space for peaceful purposes. [22]

17. In supporting legislation to provide for U.S. participation in INMARSAT, NTIA indicated that the executive branch "* * * strongly believes that the INMARSAT organization should come into existence." [23] It further stated that the failure of the U.S. to participate in INMARSAT

* * * would not sit well with the international community, having urged so strongly INMARSAT on the conditions we set forth, and having gotten those conditions after a big fight, to turn around and not go forward. It would not put us in the best position in the international community.

18. National interest and foreign policy factors accordingly were considered in the U.S. decision to participate in INMARSAT. In enacting the International Maritime Satellite Telecommunications Act, Congress recognized the lengthy negotiations in which the U.S. actively participated looking toward the creation of INMARSAT.[24] The Senate Committee on Commerce, Science and Transportation stated:

Although Congress did not decide prior to the negotiations that it is in the national interest to participate in INMARSAT, as it did with the establishment of INTELSAT, it is apparent to the committee that if the United States is to have any credibility in future international telecommunications negotiations, the Congress must authorize the U.S. participation in INMARSAT and designate a representative to sign the operating agreement. S. Rep. No. 95–1036, 95th Cong., 2d Sess. 5 (1978).

The Senate Committee further cited the statement of the Assistant Secretary of Commerce that the failure of the U.S. to participate in INMARSAT "would not sit well with the international community." S. Rep. No. 95–1036 at 5.

[17] Letter to Chief, Common Carrier Bureau, from the Assistant Secretary of Commerce for Communications and Information, and the Assistant Secretary of State for Transportation and Telecommunications, dated October 16, 1980.

[18] Commission testimony did not address national interest of foreign policy considerations with respect to U.S. participation in INMARSAT. Commission testimony reviewed the involvement of Commission staff members, under the aegis of the Department of State, in international discussions and negotiations leading up to U.S. initialling of the INMARSAT Convention. In addition, it indicated that the Commission had further assisted the Department of State by outlining its views concerning institutional arrangements which might be adopted for INMARSAT. Commission testimony focused on institutional, operational and regulatory issues concerning the type of entity to be the U.S. representative should the U.S. participate in INMARSAT. In doing so, the testimony emphasized that the Commission had neither conducted a formal inquiry nor reached a formal conclusion as to whether the U.S. should participate in INMARSAT. *See* Statement of Charles D. Ferris, Chairman, Federal Communications Commission, before Subcommittee on Communications, Senate Committee on Commerce, Science and Transportation, May 8, 1978 (Serial No. 95–99), pp. 27–42; Statement of Walter R. Hinchman, Chief, Common Carrier Bureau, Federal Communications Commission, before the Subcommittee on Communications, House Interstate and Foreign Commerce Committee, April 4, 1978 (Serial No. 95–101), pp. 78–85

[19] *See* Statement of Joel W. Billar, Deputy Assistant Secretary of State for Commercial Telecommunications Affairs, before Subcommittee on Communications, House Interstate and Foreign Commerce Committee, April 4, 1978 (Serial No. 95–101), p. 19

[20] The State Department was concerned that the failure of the U.S. to participate in a joint international undertaking would pressure European interests to deploy European developed MAROTS satellites operationally. Such an effort would be duplicative of the existing U.S. MARISAT system and any follow-on MARISAT system that may be deployed by U.S. carriers.

[21] Statement of Joel W. Billar, p. 19.

[22] *Id.* p. 20. The State Department further concluded: In view of the fact that good communications are essential for the efficient operation of world shipping and for the safety and welfare of those at sea, and taking into account the difficulty in recent years of maintaining an adequate standard of ship-to-shore communications service using existing techniques, the State Department supports new legislation which would establish a legal basis for the U.S. Government to became a Party to the INMARSAT Convention, and designate, subject to appropriate Executive Branch oversight, an entity to be the United States Signatory to the INMARSAT Operating Agreement.

[23] *See* Statement of Henry Geller, Assistant Secretary-designate, Telecommunications and Information, Department of Commerce, before Subcommittee on Communications, Senate Committee on Commerce, Science and Transportation, May 8, 1978 (Serial No. 95–99) p. 67.

[24] See footnote 14, above.

The House Committee on Interstate and Foreign Commerce took a similar view:

> It is the view of this committee that a decision not to participate in INMARSAT, following the failure of the United States to arrive at a satisfactory plan with Europe and Canada for the growth of undersea cables and satellite facilities, would lend credence to the argument that the United States is not interested in cooperative international efforts to promote telecommunications technologies for peaceful purposes. H.R. Rep. No. 95–1134, Part 1, 95th Cong., 2d Sess. 9 (1978).

(3) General Considerations

19. In view of the national interest and foreign policy considerations underlying the declared policy objective of the International Maritime Satellite Telecommunications Act to provide for U.S. participation in INMARSAT, and the expressed concerns of the Department of State and NTIA that there be no international uncertainty regarding the U.S. commitment to the commercial and operational success of the organization, we will expeditiously consider Comsat's proposed treatment of its anticipated INMARSAT losses. However, at the outset, we question whether the form of cross-subsidization that Comsat seeks would be consistent with the spirit, if not the intent, of the International Maritime Satellite Telecommunications Act. The Act provides for U.S. participation in INMARSAT through a private entity that operates for profit and is not an agency of the Federal Government.[25] As the U.S. designated entity in INMARSAT, Comsat is solely responsible for meeting all financial obligations resulting from its participation in INMARSAT.[26] Section 503(d) of the Act states:

> The corporation shall be responsible for fulfilling any financial obligation placed upon the corporation as a signatory to the operating agreement or other pertinent instruments, and any other financial obligation which may be placed upon the corporation as the result of a convention or other instrument establishing INMARSAT. The corporation shall be the sole United States representative in the managing body of INMARSAT.

The legislative history of the Act clearly shows that "this section relieves the U.S. Government from any financial responsibility to Comsat for its participation in INMARSAT or in a similar system."[27] In addition, the legislative history indicates a Congressional intent that Comsat's INTELSAT obligations not be adversely affected by its participation in INMARSAT. In recommending enactment of the Act, Congressman Murphy of the House Committee on Merchant Marine and Fisheries stated:

> This bill does not require an authorization of appropriated funds. *Moreover, the policies in this bill do not impact INTELSAT or its relationship with U.S. carriers.* (emphasis added) Cong. Rec. H. 12731, October 12, 1978.

Finally, the Act's requirement that the Commission conduct the Comsat study, in part, was borne out of a general Congressional concern for Comsat's continued ability to fulfill effectively its obligations and carry out its functions under the 1962 Satellite Act and the 1934 Communications Act, in view of the additional responsibilities being placed on it as the designated U.S. operating entity in INMARSAT.[28]

20. In light of a legislative history which illustrates Congress' clear intent that Comsat be solely responsible for all financial obligations flowing from INMARSAT, we believe a serious question exists as to whether Comsat's proposal to cross-subsidize its INMARSAT services is consistent with the provisions of the International Maritime Satellite Telecommunications Act. Even assuming that Comsat's proposal is consistent with the Act, however, we believe that Comsat must clearly connect the fact that it will suffer initial start-up losses with overriding public interest factors that justify departure from our traditional policy disfavoring cross subsidies.

21. We recognize that high start-up cost and relatively low traffic volume will prohibit Comsat from initially setting INMARSAT rates based on cost. We further recognize that the U.S. policy commitment to INMARSAT's commercial and operational success as expressed in the International Maritime Satellite Telecommunications Act necessarily limits Comsat to providing maritime satellite services only through INMARSAT. Nevertheless, it is clear that Comsat accepted the risk of loss, along with the opportunity for profit when it voluntarily undertook the responsibilities and embraced the monopoly privileges associated with becoming the sole U.S. participant in INMARSAT. In this connection, Comsat actively sought to be the U.S. designated entity in INMARSAT to the exclusion of other U.S. carriers seeking the same status.[29] Comsat opposed an alternative in which it would be part of a consortium of U.S. carriers acting as the U.S. designated entity in INMARSAT, even though it recognized that initial losses would be incurred. Moreover, subsequent to being designated the U.S. operating entity in INMARSAT, Comsat attempted to increase its initial investment share in INMARSAT from the 17 percent originally provided for by the INMARSAT Operating Agreement to a 30 percent share. In seeking to increase its investment share, Comsat asserted that a 30 percent share would better approximate its initial projected use of the INMARSAT system. Comsat ultimately had to settle for a 23.5 percent share because of similar efforts by other INMARSAT Signatories.

22. Given the business decisions exercised by Comsat's management in seeking involvement in INMARSAT, we question whether we now should require Comsat's INTELSAT ratepayers to bear the initial losses associated with Comsat's INMARSAT activities. The crucial issue before us is not whether Comsat should be permitted to cross-subsidize its INMARSAT service out of its INTELSAT service revenues simply because of the start-up losses that it anticipates from participation in INMARSAT. The legislative history of the International Maritime Satellite Telecommunications Act demonstrates that the prospect of early losses was foreseen. Rather, the crucial issue is whether there are public interest factors relating to foreign policy concern which are sufficient to override this Commission's general policy that cross-subsidization between services is inimical to the public interest. In our view, resolution of that issue turns largely on whether Comsat's anticipated start-up losses will be so great as to

---

[25] Section 502(b) of the Act states: It is the purpose of this title to provide that the participation of the United States in INMARSAT shall be through the Communications Satellite Corporation, which constitutes a private entity operating for profit, and which is not an agency or establishment of the Federal Government.

[26] *See* S. Rep. No. 95–1036, 95th Cong., 2d Sess. 20 (1978); H.R. Rep. No. 95–1134, Part I, 95th Cong., 2d Sess. 15 (1978); H.R. Rep. No. 95–1134, Part II, 95th Cong., 2d Sess. 12 (1978).

[27] *See* H.R. Rep. No. 95–1134, Part II, at 12. See also, the comments of Congressman Devine on H.R. 11209 which state in part:

> This legislation is necessary to enable the United States to participate in INMARSAT through the designation of Comsat as its operating entity. *While Comsat must contribute roughly $34 million, there will be no taxpayer dollars involved in the program.*
>
> Comsat was chosen as the designated entity for many reasons, including its expertise in satellite endeavors, the necessity to have a designated entity in existence as soon as possible, and the lack of an economic justification for the creation of a new corporation for this limited purpose. (emphasis added) Cong. Rec. 3896, May 15, 1978.

[28] *See* S. Rep. No. 95–1036 at 15–16. *See also Communications Satellite Corporation*, 77 FCC 2d at 575.

[29] *See* Statement of Dr. Joseph V. Charyk, President, Communications Satellite Corporation, before the Subcommittee on Communications, House Interstate and Foreign Commerce Committee, April 4, 1978 (Serial No. 95–101), pp. 58–63; *See also* Statement of Dr. Charyk before the Subcommittee on Communications, Senate Committee on Commerce, Science, and Transportation, May 8, 1978 (Serial No. 95–99), pp. 109–127.

jeopardize its ability to participate in INMARSAT and, as a result, threaten the U.S. foreign policy commitment to INMARSAT's commercial and operational success. In this connection we do not have a clear statement from Comsat that it will seek to withdraw from INMARSAT if it is denied the remedy that it seeks. Nor do we have a clear statement from the State Department and NTIA of the national interest and foreign policy implications of a denial of Comsat's proposal. Such a statement from these agencies would be helpful in our consideration of the issues that Comsat's proposal raises.

23. If Comsat's start-up losses will be of such severity as to threaten U.S. national interests and foreign policy objectives, Congressional action addressing this problem could be an alternative to permitting Comsat to pass its INMARSAT investment losses on to its INTELSAT ratepayers. As we noted in the Comsat Study, one form of Congressional action could involve reconsideration of whether U.S. participation in INMARSAT should receive direct taxpayer subsidization. *Communications Satellite Corporation*, 77 FCC 2d at 668. From the perspective of economic efficiency and of the other values found in Section 1 of the Communications Act, direct payments from general tax revenues might be preferred to an internal subsidy arrangement of the sort proposed by Comsat. However, Congressional action may take other forms. For instance, Congress could amend the Act to designate a new U.S. Signatory to INMARSAT in the form of a consortium of carriers. This option would provide a risk-sharing solution to initial start-up losses. Also, Congress could revisit the Act and conduct a broad review of continued U.S. participation in INMARSAT as we suggested in the Comsat Study, 77 FCC 2d at 66. There, we indicated that such a review could consider the requirement for an independent maritime communications system, the identification of the most efficient means of providing maritime services and the determination of the most appropriate means for subsidizing this service. Finally, Congress might also reconsider whether a maritime satellite system, which will service a somewhat specialized consumer group, can best be provided through the private marketplace.

24. From a regulatory standpoint, Comsat's proposal to include its net INMARSAT assets and expenses with its INTELSAT operations for rate setting purposes also raises a number of other issues which we believe must be considered in the context of this proceeding. Moreover, in view of the opposition to the proposal already expressed by WUI and TRT, we believe that these carriers and other interested parties should have an opportunity to comment on it and to pose any alternative approaches that would assure U.S. commitment to INMARSAT's commercial and operational success. As we have noted, Comsat's proposal may affect U.S. international service carriers and their customers because it would essentially result in passing along INMARSAT investment costs to them. Since some of these carriers are the licensees of public coast radio stations that will compete with Comsat's INMARSAT services, we believe that they and other interested parties should be given an opportunity to comment on the effect the proposal will have on the overall competitive structure for maritime communications.

25. In addition, there may be regulatory approaches to dealing with Comsat's anticipated INMARSAT start-up losses other than Comsat's proposal. One approach could take the form of intertemporal subsidization. Under this approach, Comsat would be permitted to include within its INMARSAT rate base those expenses in excess of revenues occurring in the formative years of INMARSAT operations. Comsat's shareholders would continue to bear the risk of corporate participation in INMARSAT. However, Comsat could expand its INMARSAT rate base by the amount of its unrecovered expenses during the unprofitable INMARSAT start-up period. Thus, while Comsat's INMARSAT business would not have generated sufficient revenues to attain any net return on investment during the start-up period, the rate base would reflect in its return allowance the Corporation's risk-related expenses over that period. In this manner, Comsat ultimately could recover these expenses when and if it began to realize a net return on its INMARSAT investment.[30]

[30] We emphasize these unrecovered expenses would not include "revenue deficiencies"; *i.e.*, lost profits representing the amount by which total INMARSAT revenues may fall short of total INMARSAT revenue requirements for each year in which Comsat fails to earn its allowed return on its INMARSAT investment. We specifically denied Comsat's request to include alleged "revenue deficiencies" in its INTELSAT rate base in the Comsat Rate Case, *Communications Satellite Corporation*, 56 FCC 2d 1101, at 1129–1132 (1975), *aff'd. sub.nom. Communications Satellite Corporation* v. *FCC*, 611 F. 2d 863, 892–894 (1977). Moreover, the Supreme Court has consistently denied the requests of regulated companies to include "revenue deficiencies" in their rate bases on the principal ground that to do so would unfairly privilege ratepayers of previous years at the expense of ratepayers of future years. *See FPC* v. *Tennessee Gas Transmission Co.*, 371 U.S. 145, 152 83 S. Ct. 211, 9L.Ed. 2d 199 (1962); *FPC* v. *Natural Gas Pipeline Co.*, 315 U.S. 575, 590, 62 S. Ct. 736, 745, 86 L.Ed. 1037 (1942); *Galveston Electric Co.* v. *Galveston*, 258 U.S. 388, 395, 42 S. Ct. 351, 354, 66 L.Ed. 678 (1922).

26. Another approach would be to defer any action on the treatment of Comsat's anticipated start-up losses until some time after the INMARSAT system becomes operational. This approach would provide an incentive for Comsat, the sole U.S. representative and largest investor in INMARSAT, to exercise its influence within the organization in the pursuit of cost-effective options in the areas of INMARSAT operations, capital expenditures and the procurement of the second generation INMARSAT space segment. We note that Comsat has not indicated any change in the outlook for its consolidated cash position of approximately $66 million which is "projected to increase in the future", according to its initial comments to this proceeding. Comments at 21. Nor has Comsat indicated any change of position which would decrease its ability to acquire additional long-term debt to cover its INMARSAT start-up losses. On the basis of the information Comsat has provided to us, the adoption of this alternative for a period of limited duration would not appear to seriously undermine the financial position of the Corporation. *See* para. 6, above.

(4) Specific issues raised.

27. *Treatment of losses.* In commenting on Comsat's proposal, we urge interested parties to address four issues. The first issue involves the preferred means of handling the anticipated INMARSAT losses. This issue subsumes the basic question of who should bear the financial obligation for U.S. involvement in INMARSAT. In this connection, we must be cognizant of the fact that, in our free enterprise system, firms have the right to invest capital and to face the normal risks associated with their investment decisions. While this fact is tempered in regulated industries in which firms have common carrier obligations, such firms still assume responsibility for their investment decisions.

28. In Comsat's case, we face a potential conflict between theoretical and practical considerations. We have noted the legislative history which places responsibility on Comsat for any financial obligations that it incurs as the U.S. Signatory. We have also recounted Comsat's eagerness to be the sole U.S. participant in INMARSAT and its push to acquire a greater ownership share in this enterprise. Moreover, it is clear that

the common carrier obligations that Comsat has undertaken as the single U.S. representative in INTELSAT and INMARSAT are not without associated benefits and rewards. As the U.S. representative in INTELSAT, Comsat is sheltered from competition in the provision of INTELSAT services to and from the United States. As the U.S. representative in INMARSAT, Comsat will be similarly sheltered in the provision of INMARSAT services. It is also important to note that, like other common carriers under our jurisdiction, Comsat is allowed a rate of return which includes a risk factor. That is, Comsat's prescribed rate of return for INTELSAT services includes an explicit allowance to compensate for the risks it normally assumes in its business decisions.[31] Comsat similarly will be allowed a rate of return for its INMARSAT services that includes a risk factor. And, part of the risk that Comsat knowingly assumed in joining INMARSAT was the risk of incurring start-up losses, as projected by both its own forecasts and INMARSAT's forecasts. In view of these factors, we expect Comsat to fulfill the obligations it undertook in joining the INMARSAT system. However, we recognize that, if Comsat's current forecasts for INMARSAT losses are correct, it is likely to behave as we would expect any normal business to behave, and attempt to minimize its losses. Such behavior could take the form of unenthusiastic support for necessary capital expenditures by INMARSAT or the commitment of corporate resources to the development of the market for maritime satellite communications. We are concerned that the national interest and foreign policy considerations underlying the declared policy objective of the International Maritime Satellite Telecommunications Act may not be effectively fulfilled if Comsat behaves in this manner.

29. Therefore, we request public comment on whether action by the Commission is necessary to assure that the U.S. commitment to INMARSAT's operational and commercial success is fulfilled. We request those parties supporting some form of Commission action to comment on regulatory solutions such as those that we described in paragraphs 25 and 26 above, as well as the cross-subsidization scheme proposed by Comsat. We request all parties to comment on whether we should deny Comsat a regulatory remedy and direct it to seek Congressional relief.

30. *Effects on rates.* The second issue involves what effect combining INMARSAT expenses and assets with INTELSAT revenue requirements may have on the rates Comsat charges for its INTELSAT services. One of our major concerns in considering either Comsat's proposal or any other regulatory approach to treating anticipated INMARSAT losses will be its potential effect on users of INTELSAT services. We will carefully weigh any public interest benefits to be gained from a regulatory solution to INMARSAT losses against any adverse impact or disadvantage to consumers.

31. For purposes of our consideration of this issue, we urge interested parties to note the differences between Comsat's traffic and revenue projections and those of INMARSAT. The traffic and revenue projections made by Comsat in its July 17, 1980 letter to the Commission are based on its experience in providing four years of commercial maritime satellite services under the MARISAT developmental program.[32] The Comsat projections are significantly more conservative than the only other available comprehensive forecast of maritime satellite traffic and revenue—the July 1978 report of the INMARSAT Preparatory Committee's Economic, Financial and Marketing Panel.[33] The INMARSAT Prepcom Panel projected that cumulative INMARSAT revenues will equal total cumulative INMARSAT costs sometime in the late 1980's. As we concluded in our initial notice in this proceeding, however, INMARSAT's projection may be optimistic in view of certain assumptions made by the Panel in arriving at traffic and revenue forecasts. The revenue forecasts upon which the Panel's breakeven projection is predicated were developed from traffic forecasts based on a number of critical assumptions made because of (1) a lack of meaningful historical information on maritime satellite usage, and (2) the failure of countries representing an estimated fifty percent of the world's vessels to report any traffic estimates of future maritime satellite usage by their vessels. Although Comsat recently submitted its current traffic and revenue projections to INMARSAT and urged acceptance of these forecasts as the basis of operational and financial planning, INMARSAT apparently has decided to continue to rely on the 1978 report of the INMARSAT Prepcom Panel, with certain adjustments.[34] We note that these adjustments do not cure the basic problems that we have with the assumptions made by the Prepcom in arriving at its 1978 projections.[35]

32. In its July 17 letter to the Commission, Comsat projects higher initial market estimates than the INMARSAT Prepcom Panel due to an unexpected demand by unique customers (i.e., oil rigs and construction barges); however, it believes that the long term market for maritime satellite services is with "more traditional customers" (i.e., oil tankers, cargo ships).[36] Comsat forecasts a slower ship station terminal placement rate than the INMARSAT Prepcom Panel due to the "current and projected costs of terminals," although it envisions a higher utilization rate per ship or terminal. Comsat concludes that these factors combine to produce the summary difference between its projections and those of the INMARSAT Prepcom Panel—"a significantly slower, long term growth rate for the development of the maritime satellite communications market." We request Comsat to summarize in its comments the methodology it used to arrive at its projections. In particular, we request Comsat to identify and explain any judgments on the characteristics of the maritime satellite communications

[31] In the 1978 Settlement Agreement in the Comsat Rate Case, Comsat's overall allowed rate of return was set at 12.48%. *See Communications Satellite Corporation*, 68 FCC 2d 941, 950 (1978). Of that 12.48%, 7.48% represents the yield on long-term U.S. government bonds conditioned upon imputation of dept equal to 45% of Comsat's INTELSAT rate base for the six year period which began on January 1, 1978; 4.0% represents a "risk permium", as derived from our assessment of the evidence on Comsat's corporate risk characteristics in the Comsat to Rate Case; and 1.0% represents an incentive to Comsat improve its overall earnings through operating and internal efficiencies. *See Communications Satellite Corporation*, 56 FCC 2d 1101, 1170–1174 (1975).

[32] *See* Attachment 1 of the inter-office memorandum enclosed with Comsat's July 17, 1980 letter.

[33] *See* Report of the Fourth Session of the Economic, Marketing and Financial Panel, Prepcom/Econ/Report 4, July 7, 1978, submitted to the INMARSAT Preparatory Committee, July 13, 1978.

[34] Comsat submitted its projections in April of this year to the INMARSAT Advisory Committee on Finance and Market Planning. *See* Report of the Second Session of the Advisory Committee on Finance and Market Planning Council/4/11. ACFMP/2, April 17, 1980.

[35] For instance, in its report to the INMARSAT Council, the Advisory Committee continued reliance on the Prepcom Panel's 1978 ship terminal forecast rather than Comsat's more recent projections. The Advisory Committee noted that Comsat's forecasts and those of the Prepcom Panel are consistent for the period 1979 to mid-1983, but significantly diverge beyond that period. The Advisory Committee decided that Comsat's forecasts "* * * might not be sufficiently comprehensive and that all Signatories might jointly be in a better position to estimate, at the appropriate time, ship terminal fitting rates." However, in stating this reason for continuing reliance on the Prepcom Panel's 1978 ship terminal forecast, the Advisory Committee ignored the fact that the Prepcom Panel's forecast was partly based on critical assumptions made because of the failure of countries representing fifty percent of the world's vessels to report ship terminal or traffic estimates.

[36] *See* Attachment 1 of the inter-office memorandum enclosed with Comsat's July 17, 1980 letter.

market which provide a basis for its projections. We invite interested parties to comment on the viability of Comsat's projections and to submit any different traffic and revenue forecasts which they believe will more accurately reflect the future of the market. Comsat's projections are contained in its application (CSS–81–001–P) for authority to participate in INMARSAT's first generation satellite system, filed on November 5, 1980.

33. As for the projections Comsat makes on the effects of combining INMARSAT expenses and revenues with its INTELSAT revenue requirements, we note at the outset that Comsat's July 17 letter does not contain sufficient information to evaluate these projections. More troublesome, however, is the fact that Comsat has provided at least three different projections of the initial losses that it anticipates as a result of its involvement in INMARSAT.[37] In addition to the INMARSAT expense and revenue projections Comsat submitted to us its July 17 letter, on September 12, 1980, Comsat provided the State Department with a written analysis of the cost implications of implementing the Baseline Operational Plan for INMARSAT's first space segment facilities.[38] This analysis contains somewhat different projections of initial INMARSAT losses than those submitted on July 17. Moreover, the revenue projections for the Baseline Operational Plan, recommended to the INMARSAT Council by the Director General and ACTOM, submitted by Comsat in its November 5 application, vary from those submitted both on July 17 and September 12.

34. Whereas Comsat stated in its July 17 letter that the first year of profitability ($1 million after taxes) for its INMARSAT line of business may be 1988, it indicates in its September 12 letter to the State Department that pre-tax profits of $1.7 million may be realized in 1987. By contrast, Comsat indicated 1987 pre-tax profits of $1.1 million in its application CSS–81–001–P. In addition, whereas Comsat stated in its July 17 letter that it would incur after tax losses of $17 for the 1980–1988 period, Comsat (1) states in the body of its letter to the State Department that it will incur pre-tax losses of $33.8 million "for the first seven years of INMARSAT operations (1980–1988)" [39] and (2) indicates in its application pre-tax losses of $42.6 for the 1979–1988 period.[40] We note that Comsat's Attachment III, Table III–2 of its September 12 letter indicates that Comsat's pre-tax loss projection is for the 1979–1988 period rather than the 1982–1988 period. Table III–2 projects Comsat's pre-tax loss during the first seven years of INMARSAT operations as $29.0 million. According to the table, this translates into an after-tax loss of $14.5 million for this seven year period, a $16.7 after-tax loss for the 1980–1988 period that Comsat used in its July 17 letter to the Commission, and a $16.9 after-tax loss for the 1979–1988 period that Comsat used in the application it ultimately filed with the Commission.

35. We recognize that these discrepancies may be inconsequential for purposes of analysis. However, we believe that Comsat should state with specificity what information was considered and what assumptions it made in preparing its analysis to the State Department and its formal application that were not considered in preparing the analysis contained in its July 17 letter to the Commission. In particular, we request Comsat to explain the nature of the $4.8 million in operations losses that it attributed to the 1979–1981 timeframe in its September 12 letter.[41] We also request Comsat to amend its July 17 forecast of the impact combined INTELSAT and INMARSAT rate bases will have on Comsat's rates for INTELSAT circuits in view of the profit/loss analyses Comsat provided to the State Department and in its application.[42] In submitting this amended forecast, we expect Comsat to explain its methodology and provide all necessary background information or identify references to such information which the Commission may already have in its possession. This information will permit both the Commission and interested parties to assess Comsat's forecast with respect to the effects of its proposal to combine INMARSAT expenses and assets with INTELSAT revenue requirements.

36. *Restrictions on cross-subsidizations.* The third issue concerns what restrictions, if any, should be placed on Comsat if it is to be permitted to combine its INMARSAT expenses and assets with its INTELSAT revenue requirement. We agree with NTIA and AT&T that Comsat's INMARSAT business should ultimately stand on its own. Comsat may not have the incentive to work toward this end if it is permitted to cross-subsidize for an unlimited period. We therefore believe that, should Comsat be permitted to cross-subsidize, it should only be allowed to do so for a pre-determined transition period. Our initial determination of the duration of that transition period could be reviewed as may be necessary to reflect changing conditions. This would provide us with the opportunity to compare changing INMARSAT traffic and revenue projections to capital outlays and expenses.

37. The transition period should be of sufficient duration to provide Comsat both the incentive and a reasonable opportunity to develop the maritime satellite communications market. As it draws to a close, we would review the results of Comsat's efforts in developing this market and determine whether continued combination of INMARSAT expenses and assets with the INTELSAT revenue requirement is necessary and in the public interest. In making this determination, we would consider the effect of continued cross-subsidization on Comsat's charges for INTELSAT circuits, as well as the prospects for Comsat's INMARSAT business to exist on a stand-alone basis.

38. Two factors must be considered in determining the initial transition period. First, the period should permit development of more complete historical information on maritime satellite traffic and revenue growth than now exists. We note that the current shipboard terminal projections of INMARSAT and Comsat generally conform through 1982, but begin to significantly diverge

[37] In its application CSS–81–001–P, Comsat submits both an Income Statement for the INMARSAT "Baseline Operational Plan" and an Income Statement for a "Baseline Operational Plan with Options" (Attachment 9). The Baseline Operational Plan is that which was recommended to the INMARSAT Council by the Director General of INMARSAT and by the INMARSAT Advisory Committee on Technical and Operational Matters (ACTOM). In Comsat's view, this Plan represents "an operationally sound approach to the implementation of space segment by INMARSAT." *See* FCC File No. CSS–81–001–P at 24. The Baseline Operational Plan with Options represents Comsat's gross INMARSAT operating losses through 1988 should INMARSAT exercise options for (1) a fourth and fifth MCS, (2) a third MARISAT–A, (3) one year of MARISAT–B service, (4) extension of the basic MAREC'S service to seven years with a deferred payment option, and (5) retention of the MARECS–B (POR–IOR) flexibility option. *See* FCC File No. CSS–81–001–P at 23–24. However, for the purposes of this discussion, we shall compare only the recommended Baseline Operational Plan projections to those which Comsat submitted in its July 17 letter and its September 12, 1980 letter, *infra*, n. 40.

[38] Letter from John L. MuLucas, Executive Vice President International Communications and Technical Services, Communications Satellite Corporation, to Mr. B. Boyd Hight, Deputy Assistant Secretary for Transportation and Telecommunications, Department of State, September 12, 1981 [sic]. We will make this letter part of the record in this proceeding.

[39] *Id.*, p. 2.

[40] FCC File No. CSS–81–001–P, Attachment 8.

[41] In its application, Comsat's attributes $5.0 million in operations losses to the 1979–1981 timeframe.

[42] Neither Comsat's letter to the State Department nor its application contains such forecasts.

thereafter. Since shipboard terminal growth is a major factor in projecting maritime satellite traffic and revenue growth, the initial transition period should be of sufficient length to establish a more definitive growth trend for shipboard terminal installation and its resulting impact on traffic and revenue growth.

39. Second, the initial period should encompass INMARSAT planning for a second generation INMARSAT system and thus permit the Commission to consider the magnitude of future capital outlays and expenses that Comsat will make in connection with its INMARSAT obligations. In this respect, we note that the INMARSAT Council made an initial determination of the configuration of the first generation of INMARSAT space segment at its November 12–19 meeting in London. The Council awarded contacts to INTELSAT, the European Space Agency (ESA) and the MARISAT consortium under a combination arrangement for the procurement of the first generation INMARSAT space segment which we view as generally consistent with the Baseline Operational Plan reflected in the Comsat application now before the Commission.[43] Depending upon the service availability dates of the various proposals, the first generation INMARSAT system should provide services approximately through the 1988–1990 period. INMARSAT second generation planning will have to involve sufficient lead time to replenish first generation space segment. An important decision to be made will be whether to procure dedicated second generation space segment or whether to continue leasing space segment from INTELSAT and/or other entities. A decision to procure a dedicated system would involve contractual commitments and capital outlays approximately three to four years prior to need for replenishment. A decision to lease space segment would probably defer major second generation costs until the satellites are in orbit.[44]

40. In view of these factors, if we should adopt Comsat's proposal we believe that an initial transition period in which Comsat would be permitted to combine its net INMARSAT expenses and assets with its INTELSAT revenue requirements should end no later than 1988, if not sooner. This period would be of sufficient length to develop definitive trends in maritime satellite communications usage. Also, it would permit the Commission to consider future capital outlays and expenses for INMARSAT's second generation system in determining whether continued cross-subsidization is in the public interest. We invite comments on this approach and suggestions for any other limitations that interested parties believe may be necessary.

41. *Monitoring cross-subsidization.* The fourth issue is whether any measures should be taken to monitor the effects of any cross-subsidization in which Comsat is permitted to engage. We believe that the tentative proposals for changes in Comsat's accounting system that we made in the Comsat Study will provide a basis to develop such measures. In the Comsat Study, we proposed changes in Comsat's accounting system that would provide the Commission with information for measuring Comsat's operations (e.g., revenues, expenses, investment).[45] To supplement these changes, we believe that Comsat should be required to show sufficient detail in its accounting system to enable separate identification of expenses and investment attributable to its INTELSAT and INMARSAT lines of business. The purpose of this requirement would be to keep any cross-subsidization between Comsat's INTELSAT AND INMARSAT investments as visible as possible and permit the Commission to monitor the effects of such cross-subsidization on a continuing basis.

42. We request comments from interested parties on specific accounting requirements that should be imposed on Comsat. We will make any such comments part of the record in Docket No. 80–634 and consider them in formulating comprehensive proposals for changes in Comsat's accounting system.[46]

C. Procedural Schedule

43. As in our initial notice in this proceeding, we instruct the Chief, Common carrier Bureau, to supplement the record by obtaining any information necessary for the conduct of this proceeding and consideration of the issues posed in this further notice. In view of the national interest and foreign policy concerns necessitating expeditious consideration of these issues, we will strictly adhere to the procedural deadlines established in this further notice.

44. For purposes of this non-restricted informal rulemaking proceeding, members of the public are advised that *ex parte* contacts are permitted from the time of issuance of a notice of proposed rulemaking until the time a draft order proposing a substantive disposition of such proceeding is placed on the Commission's Sunshine Agenda. In general, an *ex parte* presentation is any written or oral communication (other than formal written comments/pleadings and oral arguments) between a person outside the Commission and a Commissioner or a member of the Commission's staff which addresses the merits of the proceedings. Any person who submits a written *ex parte* presentation must serve a copy of that presentation on the Commission's Secretary for inclusion in the public file. Any person who makes an oral *ex parte* presentation addressing matters not fully covered in any written comments previously filed in the proceeding must prepare a written summary of that presentation. On the day of oral presentation, that written summary must be served on the Commission's Secretary for inclusion in the public file, with a copy to the Commission official receiving the oral presentation. Each *ex parte* presentation discussed above must state on its face that the Secretary has been served, and must also state by docket number the proceeding to which it relates. See generally, Section 1.1231 of the Commission's rules, 47 CFR 1.1231.

45. Accordingly, it is ordered, that, pursuant to sections 4 (i) and 4 (j) of the Communications Act of 1934, as amended, 47 U.S.C. 154(i), 154(j) (1976) and section 553(b) of the Administrative Procedure Act, 5 U.S.C. 553 (b) (1970), a further notice of proposed rulemaking into the above-captioned matter is instituted.

46. It is further ordered, that interested parties may file comments on or before

---

[43] The INMARSAT Council still has before it a number of open questions with respect to the first generation INMARSAT space segment; *e.g.*, the feasibility of deploying MAREC's in the IOR. We understand that such questions will be addressed at the INMARSAT Council meeting to be held in London in February 1981.

[44] A decision by INMARSAT in favor of a lease arrangement for a second generation system could reduce capital investment requirements and expenses associated with providing maritime satellite communications, and thereby reduce the amount of loss that Comsat would seek to subsidize. Continued lease of space segment from INTELSAT would be by means of maritime satellite packages added on to INTELSAT VI generation satellites. INTELSAT has already developed a decision schedule for INTELSAT VI planning (BG–13 10/9/80). The schedule calls for release of the RFP in March, 1981; receipt of proposals by July, 1981; contract award in March, 1982; and delivery of the first spacecraft by March, 1986.

[45] *See* Communications Satellite Corporation, 77 FCC 2d at 719–722.

[46] Docket No. 80–634 is a rulemaking proceeding recently instituted to consider the need for any changes in Comsat's corporate structure and operation in view of our tentative findings and conclusions in the Comsat Study. *See* FCC 80–588, October 29, 1980. In our initial notice in that proceeding, we stated that we will issue a Further Notice of Proposed Rulemaking regarding changes in Comsat's accounting system and in the reporting requirements imposed on Comsat by the Commission's rules.

February 27, 1981, and reply comments on or before March 20, 1981.

47. It is further ordered, that, in accordance with the provisions of § 1.419 of the Commission's rules and regulations, all participants in the proceeding ordered herein shall file with the Commission an original and five (5) copies of all comments and reply comments. In reaching this decision, the Commission may take into consideration information and ideas not contained in the comments, provided that such information or a writing indicating the nature and source of such information is placed in the public file, and provided that the fact of the Commission's reliance on such information is noted in the Report and Order. Copies of comments and reply comments filed in this proceeding shall be available for public inspection during regular business hours in the Commission's reference room at its headquarters at 1919 M street, NW., Washington, D.C.

Federal Communications Commission.

William J. Tricarico,

Secretary.

47 CFR Ch. I

[CC Docket No. 79-245]

American Telephone and Telegraph Co., Manual and Procedures for the Allocation of Costs; Order Cancelling Comment and Reply Comment Dates

AGENCY: Federal Communications Commission.

ACTION: Proposed rule; Cancellation of comment and reply comment dates.

SUMMARY: This Order cancels dates established in Notice of Proposed Rulemaking in CC Docket No. 79-245, Manual and Procedures for the Allocation of Costs, for filing comments on long-term cost allocation procedures. Those dates were January 11, 1981 for initial comments and March 7, 1981 for reply comments.

DATES: Supplemental Notice will be issued which will provide dates for submitting comments on long-term cost allocation procedures.

ADDRESS: Federal Communications Commission, Washington, D.C. 20554.

FOR FURTHER INFORMATION CONTACT: Albert Halprin, Policy and Program Planning Division, Common Carrier Bureau, Federal Communications Commission, Washington, D.C. 20554 (202-632-9342).

In the matter of American Telephone and Telegraph Co., manual and procedures for the allocation of costs, CC Docket 79-245.

Order (45 FR 46121)

Adopted: December 29, 1980.

Released: January 5, 1981.

1. This Order cancels dates established in Notice of Proposed Rulemaking in CC Docket No. 79-245 (78 FCC 2d 1296), released June 26, 1980, for filing comments on long-term cost allocation procedures. Those dates were January 11, 1981 for initial comments and March 7, 1981 for reply comments.

2. The Commission adopted a Report and Order in Docket 79-245 on December 19, 1980, in which it explained that consideration of long term approaches would occur through further proceedings in this docket. Filing dates for comments will be issued in a forthcoming Supplemental Notice.

3. Accordingly it is ordered, that filing dates established in Notice of Proposed Rulemaking in CC Docket No. 79-245 for comments on long term cost allocation procedures are hereby cancelled.

4. It is further ordered, That the Secretary shall cause this Order to be published in the **Federal Register.**

Federal Communications Commission.

Philip L. Verveer,

Chief, Common Carrier Bureau.

47 CFR Part 73

[BC Docket No. 78-253]

Inquiry Into Future Role of Low-Power Television Broadcasting and Television Translators in the National Telecommunications System; Order Extending Time for Filing Comments and Reply Comments

AGENCY: Federal Communications Commission.

ACTION: Proposed rule; extension of comment and reply comment period.

SUMMARY: This action extends time for filing comments and reply comments on the *Notice of Proposed Rule Making* in BC Docket No. 78-253, *An Inquiry into the Future Role of Low-Power Television Broadcasting and Television Translators in the National Telecommunications System*, in response to motions filed by the National Association of Broadcasters and the Corporation for Public Broadcasting.

DATES: Comments must be filed on or before March 2, 1981, and reply comments must be filed on or before April 13, 1981.

ADDRESS: Federal Communications Commission, Washington, D.C. 20554.

FOR FURTHER INFORMATION CONTACT: Molly Pauker, Broadcast Bureau (202) 632-6302.

SUPPLEMENTARY INFORMATION:

Adopted: January 8, 1981.

Released: January 12, 1981.

By the Chief, Policy and Rules Division:

1. On September 9, 1980, the Commission adopted a Notice of Proposed Rule Making, 45 FR 69178, In BC Docket No. 78-253, An Inquiry into the Future Role of Low-Power Television Broadcasting and Television Translators in the National Telecommunications System. The deadlines for comments and reply comments were set for January 15, 1981, and March 1, 1981, respectively.

2. We have received two requests for extension of time for responsive filings. The Corporation for Public Broadcasting seeks a comment date of February 15, 1981, and the National Association of Broadcasters seeks a comment date of March 1, 1981.

3. We believe that, in view of the magnitude of the record to date and the complexity of the issues involved, that the public interest will be served by an extension of time in which all interested parties may file responsive pleadings.

4. Accordingly, it is ordered, That the date for filing comments is extended to and including March 2, 1981, and the deadline for filing reply comments is extended to and including April 13, 1981.

5. This action is taken pursuant to authority contained in Sections 4(i), 5(d)(1) and 303(r) of the Communications Act of 1934, as amended, and § 0.281 of the Commission's Rules.

Federal Communications Commission.

Henry L. Baumann,

Chief, Policy and Rules Division, Broadcast Bureau.

47 CFR Part 81

(PR Docket No. 80-711; FCC 80-635)

Regarding Public Coast Station Replies to General Calls on Channel 16

AGENCY: Federal Communications Commission.

ACTION: Proposed Rule Making.

SUMMARY: The FCC has adopted a Notice of Proposed Rule Making relative to public coast stations answering

general calls on Channel 16. This action was prompted by a petition for rule making. The intended effect of this action is to allow public coast stations to answer general calls not addressed to it by call sign.

DATES: Comments must be received on or before February 13, 1981, and reply comments must be received on or before February 27, 1981.

ADDRESS: Federal Communications Commission, Washington, D.C. 20554.

FOR FURTHER INFORMATION CONTACT: Roy Carleton Howell, Private Radio Bureau, (202) 632-7175.

SUPPLEMENTARY INFORMATION:

Adopted: November 6, 1980.

Released: November 19, 1980.

By the Commision:

Background

1. On February 29, 1980, Gulf Coast Communications, Inc. (Gulf Coast) General Telephone and Electronics, and Tampa Marine Radio Service were all parties to an administrative law hearing, File Nos. 40-M-RL-28/179-M-ML-54/585-M-RL-111/79-M-RL-116; Docket 78-259, *et seq.* An important issue in this hearing was whether § 81.312(a) (6) of the Commission's Rules and Regulations is violated when a Tampa Bay, Florida public coast station answers calls on Channel 16 not addressed to it by specific call sign.

2. The Private Radio Bureau (Bureau) filed its Proposed Findings of Fact in this hearing; and, in regard to this issue as to whether § 81.312 (a) (6) is violated when a Tampa Bay public coast station answers calls on Channel 16 not addressed to it by specific call sign, the Bureau took the following position:

> Section 81.312 (a) (6) prohibits a public coast station operating on a shared frequency with another public coast station from answering a ship station until the ship station has transmitted the call sign or name of the particular coast station with which it wants to communicate. Emergency calls are excepted.[1]

3. Even though there are three public coast stations in the Tampa Bay area which share the Channel 16 frequency, nevertheless the Bureau's position on § 81.312 (a) (6) is that calls not specifically addressed to the call signs of the three Tampa Bay public coast stations may not be answered. The Bureau's position in its Proposed Findings of Fact was correctly premised on the plain meaning of § 81.312 (a) (6), which provides:

> Except in the event of an emergency involving safety, a public coast station, with respect to operation on any frequency which is used also by other coast stations within the same communication area, shall not answer, or attempt to answer, a ship station until the latter has transmitted the call sign or name of the particular coast station with which it desires to communicate.

4. Subsequently on March 27, 1980, a Petition For Emergency Stay was filed by Gulf Coast. Gulf Coast was seeking urgent relief from the severe restrictions placed on it as a result of the Bureau's interpretation of § 81.312 (a) (6) of the Commission's Rules and Regulations. Essentially, Gulf Coast considered the Bureau's interpretation of § 81.312 (a) (6) to mean that unless a vessel specifically uses its station call sign KU 2383, the call may not be answered by Gulf Coast. Thus, when a vessel calls "Marine Operator" in the Tampa area neither Gulf Coast nor any of the other public coast stations answer the call for fear of violating the subject rule. This in turn was resulting in repeated unanswered calls and lack of service to the public.

5. In response to Coast's Petition For Emergency Stay, the Bureau granted waivers to § 81.312 (a) (6) to Gulf Coast and all other public coast stations in the Tampa Bay area. The effect of these waivers was to allow public coast stations in the Tampa Bay area to answer calls from vessels, which don't use the public coast station's specific call sign. Therefore, when a vessel calls the "Marine Operator" in the Tampa Bay area, in lieu of the particular station call sign, any public coast station may answer the call. The Bureau's rationale in granting these waivers was to insure that all vessel calls were answered by a public coast station.[2]

6. In addition to Gulf Coast's Petition For Emergency Stay, it simultaneously filed a Petition for Rulemaking to amend or delete § 81.312 (a) (6) of the commission's Rules and regulations; and, this Notice of Proposed Rulemaking is in response to Gulf Coast's Petition For Rulemaking.

Proposal

7. The issue in this Notice of Prqposed Rulemaking is whether § 81.312 (a) (6) should be amended or deleted. Gulf Coat believes that if § 81.312 (a) (6) of the Commission's Rules and Regulations is amended, then the new version of the subject rule should provide the following:

> *Except in the event of an emergency involving safety, a public coast station, with respect to operation on any frequency which is used also by other coast stations within the same communication area, shall not answer, or attempt to answer, a ship station until the later has transmitted the call sign or name of the particular coast station with which it desires to communicate.* Provided, however, that this subparagraph does not apply to public coast stations providing service to Tampa Bay, Florida.[3]

The proposed amended version of § 81.312 (a) (6) by Gulf Coast would essentially exempt only public coast stations in the Tampa Bay, Florida area from the subject rule.

8. However, the crux of Gulf Coast's argument in regard to § 81.312 (a) (6) is that indeed the subject rule should be deleted. The Commission agrees with Gulf Coast's position that § 81.312 (a) (6) should be deleted.

Rationale for Deletion of § 1.312 (a) (6)

9. The Tampa Bay area is major international port. A significant proportion of imports and exports arrive in Tampa Bay and depart this area in foreign cargo vessels. A significant percentage of these foreign vessels are officered and crewed by non-English speaking crews.

> The captain of a Greek ship, for example, may only speak enough English to phonetically identify his ship by call sign and to request "Marine Operator". There is no practical method of instructing foreign flag deepwater vessels to call KUZ383 instead of Marine Operator.[4]

Insofar as many foreign vessels do not adequately employ the use of the English language, therefore § 81.312 (a) (6) is unduly restrictive; and, in turn this results in many unanswered calls from foreign vessels.

10. Gulf Coast argues that its experience is that approximately eighty percent of its calls for public correspondence service on Channel 16 are addressed to "Marine Operator" or by other names and not by call sign. Gulf Coast further argued the following:

> These calls cannot be answered under the Bureau's reading of the terms of § 81.312 (a) (6). But when a vessel calls "Marine Operator" on Channel 16 and does not receive an answer, the call is repeated and repeated again. Channel 16 then is cluttered with unanswered, repeated calls for the "Marine Operator". Each repeated unanswered call on Channel 16, of course, carries with it a finite probability (however

---

[1] The Private Radio Bureau filed its Proposed Findings of Fact in the hearing February 29, 1980. Paragraph 49, p. 61 of the Proposed Findings made the preceding statement with respect to Issue (B) (4).

[2] Gulf Coast's Petition for Emergency Stay was filed simulataneously with its Petition for Rulemaking to delete or amend § 81.312(a) (6), therefore the duration of these waivers to § 81.312 (a) (6) was contingent upon the outcome of this rulemaking.

[3] See, page 7 of Gulf Coast's Petition For Rulemaking (emphasis added).

[4] See, page 4 of Gulf Coast's Petition For Rulemaking for this Hypothetical argument for deletion of § 81.312 (a) (6).

small) that a distress message could unknowingly be covered up.[5]

11. On May 12, 1980, General Telephone and electronics (General) filed comments in support of Gulf Coast's Petition For Rulemaking. General agreed with the positions of Gulf Coast and the Commission's herein. General argued that § 81.312 (a) (6) of the Commission's Rules and Regulations should be deleted. Furthermore, General made the following argument in support of its position:

"General can see no benefit from continuing the restriction in § *81.312* Subsection (a) (6). It causes a disservice to the public by restricting service only to those who use the "magic words". It adds no further protection to public coast stations from another station "jumping in" on its calls. As stated above, § *81.312* Subsection (a) (7) already provides this protection. Furthermore, § *81.312* Subsection (A) (7) recognizes that there will be times when the specified station will not answer and permits another station to answer. The rules should similarly reflect that there are times when no operator is specified. When no station is specified, any station should be permitted to answer." [6]

Conclusion

12. In view of the foregoing reasons and analyses, the Commission proposes to delete § 81.312(a)(6) in its entirety. Section 81.312(a)(6) serves only to confuse marine users, particularly foreign vessels. Furthermore, because many ship operators don't know or remember particular call signs of all public coast stations (in the Tampa Bay area for example) it is not in the public's best interest to deny that ship licensee public coast service when said licensee makes a general call on Channel 16 for "Marine Operator".

13. Authority for issuance of this Notice is contained in Sections 4(i) and 303(r) of the Communications Act of 1934, as amended, 47 U.S.C. 154(i) and 303(r). Pursuant to procedures set out in Section 1.419 of the Rules and Regulations, 47 CFR 1.419, interested persons may file comments on or before February 13, 1981, and reply comments on or before February 27, 1981. All relevant and timely comments will be considered by the Commission before final action is taken in this proceeding. In reaching its decision, the Commission may take into consideration information and ideas not contained in the comments provided that such information or a writing indicating the nature and source of such information is placed in the public file, and provided that the fact of the Commission's reliance on such information is noted in the Report and Order.

14. In accordance with the provisions of Section 1.419 of the Rules and Regulations, 47 CFR 1.419, formal participants shall file an original and 5 copies of their comments and other materials. Participants wishing each Commissioner to have a personal copy of their comments should file an original and 11 copies. Members of the general public who wish to express their interest by participating informally may do so by submitting one copy. All comments are given the same consideration, regardless of the number of copies submitted. All documents will be available for public inspection during regular business hours in the Commission's Public Reference Room at its headquarters in Washington, D.C.

15. For further information concerning this rulemaking contact Roy C. Howell, Rules Division, Private Radio Bureau, Federal Communications Commission, Washington, D.C. 20554, (202) 632-7175.

Federal Communications Commission.

William J. Tricarico,

Secretary.

Appendix

Part 81 of Chapter I of Title 47 of the Code of Federal Regulations is amended as follows:

§ 81.312 [Amended]

In § 81.312 paragraph (a)(6) is removed, and reserved.

INTERSTATE COMMERCE COMMISSION

49 CFR Part 1056

[Ex Parte No. MC-19 (Sub-No. 36)]

Practices of Motor Common Carriers of Household Goods (Revision of Operations Regulations)

AGENCY: Interstate Commerce Commission.

ACTION: Denial of extension of time in notice of proposed rulemaking.

SUMMARY: The Commission intends to cancel the operational regulations now appearing in 49 CFR Part 1056 applicable to motor common carriers of household goods and to adopt new regulations in conformity with the Household Goods Transportation Act of 1980. It is intended to eliminate all regulation of household goods transportation cost estimating which pertains to the procedure or form of estimates or which require the final charges for the transportation of a shipment to be determined by an estimate. Further charges to the regulations are also intended.

Public notice of this proceeding was served October 16, 1980, and published at 45 FR 70923, October 27, 1980. In that notice, it was provided that comments by interested persons were scheduled as due 30 days from the date of publication in the **Federal Register**. That November 26, 1980, date was extended to December 11, 1980, at 45 FR 76718, November 20, 1980. A further extension of the time for filing comments in this proceeding was granted to December 31, 1980, at 45 FR 83642, December 19, 1980. A request for an additional extension of time for filing comments in this proceeding is denied by this decision.

DATES: Comments on this proceeding are due December 31, 1980. Comments received after December 31, 1980 will be given consideration if received within a reasonable time provided such consideration does not impede the decisionmaking process.

FOR FURTHER INFORMATION CONTACT: W. F. Sibbald, Jr. (202) 275-7148.

SUPPLEMENTARY INFORMATION: By petition filed December 30, 1980, Western Union Telegraph Company has requested a 30-day extension of time for filing comments in this proceeding on the basis that it was unaware of the institution of the proceeding until recently.

The comment period was extended twice, and embraced a total of 65 days, which is sufficient opportunity for notice and comment. The request is denied, but the Commission may consider late filed comments received within a reasonable time after December 31, 1980, if consideration will not interfere with the Commission's internal schedule of deliberations or the time limit set forth in Section 6 of the Household Goods Transportation Act of 1980.

It is ordered: The request for a 30-day extension of time for the filing of comments is denied.

Decided: January 7, 1981.

By the Commission, Darius W. Gaskins, Jr. Chairman.

Agatha L. Mergenovich,

Secretary.

BILLING CODE 7035-01-M

49 CFR Part 1109

[Ex Parte No. 393]

Standards for Railroad Revenue Adequacy

AGENCY: Interstate Commerce Commission.

ACTION: Extension of Time to Proposed Repeal of Existing Rules and Notice of Proposed Standards.

SUMMARY: In this proceeding, published at 45 FR 80150, December 3, 1980, the Commission proposed new standards for determining the adequacy of the revenues of individual railroads. The proposed new standards are intended to reflect the increased importance of railroad revenue adequacy determinations have on our exercise of jurisdiction under the Staggers Rail Act of 1980.

Comments were due on January 19, 1981, but in response to a petition filed with the Commission, a 4-day extension is being granted.

DATE: Comments are now due January 23, 1981.

ADDRESS: An original and 15 copies should be sent to: Room 5356, Interstate Commerce Commission, Washington, D.C. 20423.

FOR FURTHER INFORMATION CONTACT: Richard B. Felder (202) 275–7693, or Bruce Stram (202) 275–7381.

SUPPLEMENTARY INFORMATION: The American Association of Railroads (AAR) have petitioned for a four day extension to January 23, 1981. In light of the briefness of the requested extension and the substantial difficulties the AAR has encountered in developing its comments, the petition shall be granted.

Decided: January 12, 1981.

By the Commission, Darius W. Gaskins, Jr., Chairman.

Agatha L. Mergenovich,

Secretary.

BILLING CODE 7035-01-M

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

50 CFR Part 230

Taking of Bowhead Whales by Indians, Aleuts, or Eskimos for Subsistence Purposes

AGENCY: National Marine Fisheries Service, National Oceanic and Atmospheric Administration, Commerce.

ACTION: Proposed rulemaking.

SUMMARY: At its 32nd Annual Meeting held in Brighton, England, in July 1980, the International Whaling Commission (IWC) adopted an amendment to the Schedule of the International Convention for the Regulation of Whaling, 1946 (Convention), which established a three-year quota for the taking of the Bering Sea stock of bowhead whales for calendar years 1981, 1982, and 1983 of 45 landed or 65 struck, whichever occurs first, with a maximum of 17 landed in any year. All amendments to the Schedule of the Convention adopted by the 32nd Annual Meeting, including the three-year quota, became effective on November 25, 1980. 45 FR 85031 (December 24, 1980).

On March 28, 1980, the National Oceanic and Atmospheric Administration (NOAA) promulgated regulations under the Whaling Convention Act of 1949, 16 U.S.C. 916 et seq. (Act), which allocated the then available 1980 quota among the nine Alaskan villages which engage in subsistence whaling (45 FR 20486). These proposed rules amend these regulations to implement the 1981, 1982, and 1983 management program.

DATE: Comments may be submitted on or before February 27, 1981.

ADDRESS: Assistant Administrator for Fisheries, National Marine Fisheries Service, National Oceanic and Atmospheric Administration, Washington, D.C. 20235.

FOR FURTHER INFORMATION CONTACT: Mr. Richard B. Roe, Acting Director, Office of Marine Mammals and Endangered Species, National Marine Fisheries Service, Washington, D.C. 20235, Telephone: (202) 634–7461.

SUPPLEMENTARY INFORMATION: Prior to 1977, the IWC Schedule exempted the native subsistence harvest of bowhead whales from its otherwise total prohibition of the hunting of bowheads. In 1977, the IWC removed that exemption and has established annual quotas each year from 1977 through 1980. In 1980, the quota was 18 landed or 26 struck, whichever came first.

Recent scientific analyses have indicated that the bowhead whale population may decline even in the absence of any further hunting. Thus, a sustained harvest of bowhead whales at current levels over an extended period of time could endanger the herd and jeopardize the Eskimos' own interests.

At the 32nd Annual Meeting of the IWC, the United States proposed a transition period priorto lowering hunt levels during which NOAA and the Department of the Interior would cooperate with the Eskimos in developing and studying the implications of more biological evidence, exploring subsistence alternatives, and improving hunting practices and weapons to increase the efficiency of the hunt. The IWC responded by establishing a three-year block quota, beginning in 1981, of 45 whales landed or 65 struck, whichever occurs first, with the maximum landed in any one year of 17.

On October 22, 1980, NOAA published an advance notice of proposed rulemaking regarding implementing the three-year quota (45 FR 70032). With respect to the proposed rulemaking, NOAA invited comments on how the quota should be allocated over the three-year period, how the quota should be allocated among the villages, and how takings over or under annual allocations should affect the remaining quota.

Eight comments were received. They reflect a broad range of views on implementation on the quota, Eskimo cooperation, jurisdictional issues, changes in the quota, and efficiency of the harvest.

Three commenters urged that Eskimo cooperation in all aspects of the harvest be given primary concern. NOAA recognizes this as one of its highest priorities and will continue to work toward that end.

There was one comment that no regulation should be issued until the question of jurisdiction of the International Whaling Commission (IWC) over subsistence whaling has been judicially resolved. The government currently is involved in litigation of this question, *Adams* v. *Klutznick*, Civil No. A78–184 (D. Alaska). Its position is that the IWC has jurisdiction and it will continue to regulate whaling under the Act as it has in the past, unless there is a disposition of this case to the contrary. One commenter suggested that regulation should be proceeding simultaneously under the Marine Mammal Protection Act of 1972 (MMPA) to be available in the event the courts find that the IWC does not have jurisdiction. NOAA does not intend to institute MMPA hearings at this time. More expeditious regulatory approaches are likely to be available if necessary.

There were several comments regarding the IWC quota itself. One commenter wanted it raised. Another urged that single figure quotas be adopted, and a third wanted a zero quota. A fourth took the position that quotas should be determined under MMPA. After taking into account opposing views, the U.S. Government

has accepted the quota adopted by the IWC, and does not intend through this regulatory process to reopen debate on the quota itself.

The block quota is allocated among the three years to provide a realistic perspective on how the quota might be gradually reduced over a three year period and to provide for planning for ways to mitigate the adverse affects of reducing the quota. It is important to note, however, that flexibility is also provided for in the proposed regulations. The bowhead hunt is unpredictable, affected by widely varying climatic conditions. Inclement weather or adverse ice conditions may prevent some villages from taking any whales in one year or may preclude harvest by any village for one year. The regulatory system must have flexibility to be able to respond to the variable conditions in which the hunt is conducted. Therefore, unused quotas from one village may be reallocated to another village within annual quota limitations and unused quotas from one year may be allocated to subsequent years within the maximum of 17 whales in any one year. Therefore the quotas will be reviewed at the end of each spring and fall whaling season and amended if appropriate.

Comments reflected concern about enforcement of the quota. Two commenters suggested the 1981 quota be reduced by the number of whales struck in excess of the 1980 quota. Possible violations of the 1980 quotas are under investigation by the Department of Justice at this time. No other action which must be characterized as punitive will be taken during this investigation.

With regard to the 3-year quota two commenters suggested that whales taken in excess of village quotas in one year be subtracted from that village's quota in subsequent years. Violations of village quotas under the three year block quota will be taken into consideration in subsequent years to the extent that, when either 45 whales are landed or 65 are struck, further whaling will be prohibited. Two commenters who believe we should adopt quotas lower than the IWC quota urged we not reassign unused quotas as a means of reducing the quota. One commenter urged us to reassign quotas. Because we do not intend to reduce the quota below that adopted by the IWC we will consider reassigning unused portions until the IWC quota has been reached.

Another large group of comments concerned the efficiency of the hunt. The government, in cooperation with the Eskimos, is committed to employing all possible ways to achieving efficiency. Studies are planned for completion this year to improve hunting gear and methods, and we believe it is premature at this time to consider issuing regulations on this issue before we can review the results of our efforts.

The comments concerning the efficiency of the hunt which we will not adopt at this time include imposition of license fees, and numbering weapons. One commenter supported license fees because the Act does not limit the fees to commercial operations only, because the costs associated with monitoring the catch are as great with subsistence as with commercial catch, and because a license fee would reduce whaling effort. We maintain our previous position that these fees are not appropriate in the case of subsistence harvest. The fact that the Act does not address different kinds of whaling activities is not dispositive. We do not believe it appropriate to charge fees for taking animals where no profit is involved, when the whales taken constitute an important, historic element of the Eskimos diet, and where the hunt is of central importance to the cultural fabric of the community. There is a significant difference between this kind of harvest which involves subsistence and tradition, and one which is conducted for commercial profit or for sport. We disagree that the licensing fees would be an effective means of reducing effort. As noted above, the Eskimos and the government are committed to a cooperative effort to improve the efficiency of the hunt. We believe this cooperative effort is more effective than imposing a fee for cultural and subsistence uses.

Another suggestion is that each harpoon and darting gun dart be sequentially numbered before the spring hunt to obtain a rough index of the magnitude and efficiency of the hunt and to provide information regarding the number of harpoons needed to kill individual whales. the commenter believed this would be feasible because all weapons come from one source in Pennsylvania. We conjecture that this commenter envisions a system in which all weapons would be numbered prior to the hunt, and the difference between that total number and the number remaining at the end of the hunt would reflect and efficiency.

The value of numbering weapons has been extensively examined in the past and found to be too full of obstacles to be of merit. While it is true that the bombs are all manufactured in one location, there is no single inventory of bombs. There are existing supplies of bombs and gear which create the same problem as an open market. Harpoons are not manufactured in one place and there is no control over their source. Moreover, even if there were controlled conditions regarding weapons, we do not believe the procedure would result in usable data. Weapons are lost in ways other than insertion into a bowhead whale. Gear may be lost overboard or used for other hunting purposes. In summary, the difficulties involved in implementing a numbering system outweigh the value of the information collected.

Another commentor suggested harvest be limited to immature animals. By accepting IWC jurisdiction over bowhead whaling, we have deferred to its discretion in imposing limits. We see no reason to impose such a restriction that the IWC did not believe necessary to adopt. Furthermore, most animals taken are immature and there is little to be gained by adding such a regulation.

Another suggestion was that the regulations required by the Administrator to suspend licenses from whaling captains who intentionally or negligently fail to comply with the regulations. This comment was received last year and no new reasons were put forth for its adoption. We do not believe there is any reason to narrow the Administrator's prosecutorial discretion in this manner.

The comments have been taken into consideration in developing these proposed regulations.

Regulations in effect during 1978, 1979, and 1980 allocated the available quotas to nine whaling villages. There is no substantive difference between the regulations established for 1980 and those proposed for 1981 through 1983 other than total quotas.

Total proposed quotas are 17 landed or 25 struck, whichever occurs first, for calendar year 1981; 15 landed or 22 struck, whichever occurs first, for calendar year 1982; and 13 landed or 18 struck, whichever occurs first, for calendar year 1983.

Village allocations proposed herein reflect the preference of distribution originally suggested by the Alaska Eskimo Whaling Commission in 1978 with ratios being preserved as closely as possible.

In order to assure participation from those members of the public sector affected by the proposed regulation, NOAA will send copies of the proposed regulation directly to the Alaska Eskimo Whaling Commission, the village councils of Savoonga, Gambell, Wales, Kivalina, Point Hope, Wainwright, Barrow, Kaktovik, and Nuigsut, and U.S. conservation organizations.

Note.—The Department of Commerce has determined that no environmental impact

statement needs to be prepared in connection with these regulations. The National Marine Fisheries Service has determined that this document does not contain a major proposal requiring preparation of a regulatory analysis under Executive Order 12044.

A Final Environmental Impact Statement (FEIS), October 1977, a Final Supplement to the FEIS, March 1979, an Environmental Assessment of the 1980 regulations, and an Environmental Assessment of the 1981 through 1983 regulations are available upon request from the Information Contact previously indicated.

1. 50 CFR Part 230 is proposed to be amended by revising Section 230.10(b) to read as follows:

§ 230.10 Licenses required to engage in whaling.

* * * * *

(b) No permit or license shall be issued except as provided in § 230.13 and §§ 230.70 through 230.77. Licenses issued under § 230.73 shall be governed solely by the requirements of §§ 230.70 through 230.77.

2. 50 CFR Part 230 is proposed to be amended by revising §§ 230.70–230.77 and the undesignated center heading to read as follows:

Subsistence

Sec.
230.70 General.
230.71 Definitions.
230.72 Prohibited acts.
230.73 Licenses.
230.74 Quotas.
230.75 Salvage of stinkers.
230.76 Reporting by whaling captains.
230.77 Penalties.

Authority: Whaling Convention Act (WCA 16 U.S.C. 916a–1).

Subsistence

§ 230.70 General.

The provisions of §§ 230.70 through 230.77 govern subsistence whaling for bowhead whales.

§ 230.71 Definitions.

As used in §§ 230.70 through 230.77 of this Part 230:

(a) "Assistant Administrator" means the Assistant Administrator for Fisheries of the National Oceanic and Atmospheric Administration;

(b) "Bowhead" means a whale of the Bering Sea stock of bowhead whales; *Balaena mysticetus;*

(c) "Calf" means any bowhead which is less than 21 feet in length as measured from the point of the upper jaw to the notch between the tail flukes;

(d) "Landing" means bringing a bowhead or any parts thereof onto the ice or land in the course of whaling operations;

(e) "Whaling captain" or "captain" means any Indian, Aleut, or Eskimo domiciled in a whaling village who is in charge of a vessel and a whaling crew;

(f) "Stinker" means a dead unclaimed bowhead found upon a beach, stranded in shallow water, or floating at sea;

(g) "Strike" means hitting a bowhead with a harpoon, lance, or explosive dart;

(h) "Whaling" means the hunting, striking, harassing, killing, or landing of bowheads, but does not include the salvage or processing of any stinker;

(i) "Whaling crew" means those persons under the control of a captain, who collectively participate as a unit in whaling;

(j) "Whaling village" means any of the villages of Gambell, Savoonga, Wales, Kivalina, Point Hope, Wainwright, Barrow, Nuigsut, and Kaktovik in the State of Alaska; and

(k) "Wasteful manner" means a method of whaling which is not likely to result in the landing of a struck bowhead or which does not include all reasonable efforts to retrieve the bowhead.

§ 230.72 Prohibited acts.

(a) No person shall engage in whaling except a whaling captain licensed pursuant to § 230.73 or a member of a whaling crew under the control of a captain.

(b) No whaling captain shall engage in whaling for any calf or any bowhead whale accompanied by a calf.

(c) No whaling captain shall engage in whaling in a wasteful manner.

(d) No whaling captain shall engage in whaling without an adequate crew or without adequate supplies and equipment.

(e) No person may receive money for participation in native subsistence whaling.

(f) No whaling captain shall continue to whale after, (1) the quota set forth in § 230.74 for his village of domicile is reached, or (2) the license under which he is whaling is suspended as proved in § 230.73(b), or (3) the Assistant Administrator has declared that the whaling season is closed pursuant to § 230.74(c).

(g) No whaling captain shall claim domicile in more than one whaling village during any given calendar year.

(h) No person may salvage a stinker without complying with the provisions of § 230.75.

(i) No whaling captain shall engage in whaling with a harpoon, lance, or explosive dart which does not bear a permanent distinctive mark identifying the captain as the owner thereof.

§ 230.73 Licenses.

(a) A license is hereby issued to whaling captains.

(b) The Assistant Administrator may suspend the license of any whaling captain who fails to comply with these regulations.

§ 230.74 Quotas.

(a) During the calendar year 1981, the quota for bowheads is allocated among whaling villages as follows:

(1) Savoonga—2 whales landed or 3 struck, whichever occurs first;
(2) Gambell—2 whales landed or 3 struck, whichever occurs first;
(3) Wales—1 whale landed or 1 struck, whichever occurs first;
(4) Kivalina—1 whale landed or 1 struck, whichever occurs first;
(5) Pt. Hope—2 whales landed or 3 struck, whichever occurs first;
(6) Wainwright—2 whales landed or 3 struck, whichever occurs first;
(7) Barrow—4 whales landed or 7 struck, whichever occurs first;
(8) Kaktovik—2 whales landed or 3 struck, whichever occurs first;
(9) Nuigsut—1 whale landed or 1 struck, whichever occurs first;
(Totals)—(17) whales landed or (25) struck.

(b) During the calendar year 1982, the initial quota for bowheads is allocated as follows:

(1) Savoonga—2 whales landed or 3 struck, whichever occurs first;
(2) Gambell—2 whales landed or 3 struck, whichever occurs first;
(3) Wales—1 whale landed or 1 struck, whichever occurs first;
(4) Kivalina—1 whale landed or 1 struck, whichever occurs first;
(5) Pt. Hope—2 whales landed or 3 struck, whichever occurs first;
(6) Wainwright—2 whales landed or 3 struck, whichever occurs first;
(7) Barrow—4 whales landed or 6 struck, whichever occurs first;
(8) Kaktovik—1 whale landed or 2 struck, whichever occurs first;
(9) Nuigsut—0 whales landed or 0 struck;
(Totals)—(15) whales landed or (22) struck.

(c) During the calendar year 1983, the initial quota for bowheads is allocated as follows:

(1) Savoonga—2 whales landed or 3 struck, whichever occurs first;
(2) Gambell—2 whales landed or 3 struck, whichever occurs first;
(3) Wales—1 whale landed or 1 struck, whichever occurs first;
(4) Kivalina—0 whales landed or 0 struck;
(5) Pt. Hope—2 whales landed or 3 struck, whichever occurs first;
(6) Wainwright—1 whale landed or 1 struck, whichever occurs first;
(7) Barrow—4 whales landed or 6 struck, whichever occurs first;
(8) Kaktovik—1 whale landed or 1 struck, whichever occurs first;
(9) Nuiqsut—0 whales landed or 0 struck;
(Totals)—(13) Whales landed or (18) struck.

(d) If, for any reason, the landing or struck quota for whaling villages is not reached in any given year, the unused part of the quota may be reassigned to succeeding years to the extent that the total bowheads permitted to be landed or struck in 1982 or 1983 shall not exceed those prescribed for 1981 (17 landed or 25 struck, whichever occurs first) and that the 3-year total will not exceed 45 bowheads landed or 65 bowheads struck.

(e) When the number of bowheads struck or landed by whaling captains domiciled in a whaling village as set forth in paragraphs (a), (b), and (c) of this Section, whaling by all captains domiciled in that whaling village shall cease. All license holders shall be notified promptly by the Assistant Administrator for Fisheries using all reasonable means of communication. Licenses held by whaling captains domiciled in a whaling village which has reached its quota shall not be valid for the remainder of the calendar year after the quota for that whaling village has been reached.

(f) The Assistant Administrator for Fisheries shall monitor the bowhead whale hunt and keep tally of the number of bowheads landed and struck. When the number of bowhead whales landed or struck reaches the sum total of the village allocations set forth in § 230.74(a), (b), or (c) for the appropriate calendar year, the Assistant Administrator for Fisheries may declare that the whaling season is closed and there shall be no further whaling during that calendar year. Closure shall become effctive upon receipt by the **Federal Register** of notice by the Assistant Administrator for Fisheries that the season has been closed pursuant to this regulation.

(g) If for any reason the landing or struck quota for whaling villages is not reached, the part of the quota which remains may be reassinged by the Assistant Administrator to a second whaling village for the same calendar year: Provided, that if any other whaling village has exceeded its quota, the Assistant Administrator shall not reassign the quota if he determines that it is likely to result in the total number of whales landed or struck exceeding 17 landed or 25 struck, whichever occurs first and that the 3-year total will not exceed 45 landed or 65 struck. In making such reassignment, the Assistant Administrator shall consult with representatives of as many whaling villages as time reasonably permits.

§ 230.75 Salvage of stinkers.

(a) Any person salvaging a stinker shall submit to the Assistant Administrator or his representative an oral or written report describing the circumstances of the salvage within 12 hours of such salvage. He shall provide promptly to the Assistant Administrator or his representative each harpoon, lance, or explosive dart found in or attached to the stinker. The device shall be returned to the owner thereof promptly unless it is retained as evidence of a possible violation.

(b) There shall be a rebuttable presumption that a stinker has been struck by the captain whose mark appears on the harpoon, lance, or explosive dart found in or attached thereto, and, if no strike has been reported by such captain, such strike shall be deemed to have occurred at the time of recovery of the device.

§ 230.76 Reporting by whaling captains.

(a) A representative of the Assistant Administrator may request each whaling captain licensed pursuant to § 230.73 to provide written statement of his name and village of domicile and a description of the distinctive marking to be placed on each harpoon, lance, and explosive dart. Representatives of the Assistant Administrator may provide each captain with a form approved by the Assistant Administrator to facilitate reporting under this paragraph.

(b) Each whaling captin shall provide to appropriate representatives, on request, an oral or written report of whaling activities including but not limited to the striking, attempted striking, or landing of a bowhead whale and, where possible, specimens from landed whales. The Assistant Administrator is authorized to provide technoligical assistance to facilitate prompt reporting and collection of specimens from landed whales, including but not limited to ovaries, ear plugs, and baleen plates. The report shall include at least the following information:

(1) The number, dates, and locations of every strike, attempted strike, or landing;

(2) The length (as measured from the point of the upper jaw to the notch between the tail flukes), the extreme width of the flukes, and the sex of the bowhead(s) landed;

(3) The length and sex of a fetus, if present, in a landed bowhead whale;

(4) An explanation of circumstances associated with the striking or attempted striking of any bowhead whale not landed; and

(5) The number of bowhead whales sighted by the whaling captain or any member of the whaling crew.

§ 230.77 Penalties.

Any person who whales in contravention of these regulations, or violates any other provision of the Whaling Convention Act shall be subject to the penalties set forth in 16 U.S.C. 916e and 916f, and any other penalties provided by law.

Dated: December 29, 1980.

William Stevenson,

Deputy Administrator for Fisheries, National Marine Fisheries Service.

BILLING CODE 3510-22-M

Notices

Federal Register
Vol. 46, No. 11
Friday, January 16, 1981

This section of the FEDERAL REGISTER contains documents other than rules or proposed rules that are applicable to the public. Notices of hearings and investigations, committee meetings, agency decisions and rulings, delegations of authority, filing of petitions and applications and agency statements of organization and functions are examples of documents appearing in this section.

DEPARTMENT OF AGRICULTURE

Food and Nutrition Service

Determining Eligibility for Free and Reduced Price Meals and Free Milk in Schools; Income Poverty Guidelines

AGENCY: Food and Nutrition Service, USDA.

ACTION: Notice.

SUMMARY: The Department announces new guidelines to be used by schools participating in the National School Lunch, School Breakfast, and the Special Milk Programs, and commodity only schools in determining a child's eligibility for free and reduced price meals and free milk for the remainder of this fiscal year (through September 30, 1981). These new guidelines differ from previous guidelines in three ways: (1) they are based on Office of Management and Budget guidelines that are *not* adjusted by the Department; (2) they remove the hardship provisions; and (3) in place of the hardship provisions, they include a standard deduction. The Department is required by Public Law 96–499 to make these changes in the guidelines. These changes will affect the eligibility of some children for free and reduced price meals and free milk.

EFFECTIVE DATE: January 1, 1981.

IMPLEMENTATION DATE: See dates in Supplementary Information below and in Emergency Final Rules published in the Rules and Regulations Section of today's Federal Register.

FOR FURTHER INFORMATION CONTACT: Stanley C. Garnett, Branch Chief, Policy and Program Development Branch, School Programs Division, USDA, FNS, Washington, D.C. 20250, (202) 447–9069. The Impact Analysis Statement is available from Mr. Garnett.

SUPPLEMENTARY INFORMATION:

Classification

This notice has been reviewed under USDA procedures established in Secretary's Memorandum 1955 to implement Executive Order 12044 and has been classified as "not significant".

Background

The Department requires schools that charge for meals and mik separately from other fees to serve free meals and, at the option of the School Food Authority, free milk to all children from any family whose income is at or below 125 percent of the income level specified by the Department for that family's size. The Department also requires schools that charge for meals separately from other fees to serve reduced price meals to all children from any family whose income is more than 125 percent of the income level specified by the Department for that family's size but at or below 195 percent of that income level.

Definition of Income

There is no change in the definition of income. "Income", as the term is used in this notice, is similar to that defined in the Bureau of the Census report, "Characteristics of the Low-Income Population: 1971," Current Population Reports, series P–60, No. 86, December 1972. "Income" means income before deductions for income taxes, employees' socila security taxes, insurance premiums, bonds, etc. It includes the following: (1) Monetary compensation for services, including wages, salary, commissions, or fees; (2) net income from nonfarm self-employment; (3) net income from farm self-employment; (4) social security; (5) dividends or interest on savings or bonds, income from estates or trusts, or net rental income; (6) public assistance or welfare payments; (7) unemployment compensations; (8) Government civilian employee, or military retirement, or pensions or veterans' payments; (9) private pensions or annuities; (10) alimony or child support payments; (11) regular contributions from persons not living in the household; (12) net royalties; and (13) other cash income. Other cash income would include cash amounts received or withdrawn from any source including savings, investments, trust accounts, and other resources which would be available to pay the price of a child's meal.

"Income", as the term is used in this notice, does not include any income or benefits received under any Federal program which are excluded from consideration as income by any legislative prohibition, for example, income received by volunteers for services performed in the National Older Americans Volunteer Program as stipulated in the Domestic Volunteer Service Acts of 1973, Pub. L. 93–113, Title IV, c 418 (87 Stat. 413, 42 U.S.C. 5058). Furthermore, the value of assistance to children or their families shall not be considered as income if prohibited by the authorizing legislation, e.g., the National School Lunch Act, the Child Nutrition Act of 1966, and the Food Stamp Act of 1964.

In applying guidelines, a School Food Authority may consider both the income of the family during the past 12 months and the family's current rate of income to determine which is the better indicator of the need for free and reduced price meals and free milk. However, if one or more of a child's parents or guardians become unemployed and the family's income drops due to this unemployment so that the child should be eligible for free or reduced price meals and free milk, during the period of unemployment the School Food Authority shall provide that child with the type of meal for which the child is eligible.

Elimination of Secretary's Adjustment of Office of Management and Budget Guidelines

Section 11(b)(1) of the National School Lunch Act requires the Secretary to issue income poverty guidelines based on the nonfarm income poverty guidelines issued by the Office of Management and Budget (OMB) adjusted to reflect changes in the Consumer Price Index between the previous calendar year and March of the calendar in which the Secretary's guidelines would become effective. The Department generally issues the guidelines to be effective July 1. Thus the guidelines, when effective, are only three months behind changes in prices. Public Law 96–499, which became law on December 5, 1980, deletes this

adjustment for the remainder of fiscal year 1981. Therefore, the guidelines contained in the notice reflect the average of the Consumer Price Index for 1980 without the above described adjustment.

Replacement of Hardship Provisions with Standard Deduction

In the past, the Department allowed a family to deduct from its stated income the cost of certain "hardship" conditions that could not be reasonably anticipated or controlled by the household. The hardship conditions were: (1) unusually high medical expenses; (2) shelter costs in excess of 30 percent of income; (3) special education expenses due to the mental or physical condition of a child; and (4) disaster or casualty losses.

Pub. L. 96-499 deletes these hardship conditions for the remainder of fiscal year 1981. In their place, the law establishes a standard deduction for all families. The standard deduction is the same amount for all States except Hawaii, Alaska, and Guam. The standard deduction is adjusted to reflect the higher cost of living in those States and in Guam. The Department has included all appropriate standard deductions in the attached guidelines.

Implementation

Requirements for implementation of these new guidelines are set forth in the amendments made to 7 CFR 245.3 appearing in today's Rules and Regulations Section of the **Federal Register**. These changes in the income guidelines will expire on September 30, 1981.

No School Food Authority is required to amend its free and reduced price policy statement as a result of this notice.

The new guidelines are also intended to apply to independent centers and sponsoring organizations of centers which participate in the Child Care Food Program (7 CFR Part 226) or Special Milk Program (7 CFR Part 215). The Department will shortly issue a separate notice that will apply the new guidelines to these institutions.

New Guidelines

The following are the new income poverty guidelines to be effective until September 30, 1981. These guidelines include the standard deduction which replaces all hardship deductions.

Income Poverty Guidelines.—*Feb. 1, 1981—Sept. 30, 1981*

[48 States, District of Columbia, Territories Excluding Guam]

Family size	Poverty level			125 percent of poverty			195 percent of poverty		
	Year	Month	Week	Year	Month	Week	Year	Month	Week
1	$4,750	$396	$91	$5,700	$475	$110	$8,350	$696	$161

5	11,050	921	213	13,540	11,128	260	20,520	1,710	395
6	12,450	1,038	239	15,290	1,274	294	23,250	1,938	447
7	13,850	1,154	266	17,040	1,420	328	25,980	2,165	500
8	15,250	1,271	293	18,790	1,566	361	28,710	2,393	552
For each additional family member add	1,400	117	27	1,750	146	34	2,730	228	53

NOTE.—Do not allow hardship deductions from the above income poverty guidelines. The standard deduction has been included in all of the above income levels.

National Average Minimum Value of Donated Foods for the Period January 1, 1981, through June 30, 1981

AGENCY: Food and Nutrition Service, USDA.

ACTION: Notice of reduction in level of commodity assistance.

SUMMARY: This notice announces a reduction in the level of assistance per lunch under the National School Lunch Program, and per lunch and supper under the Child Care Food Program, for the period January 1, 1981 through June 30, 1981.

FOR FURTHER INFORMATION CONTACT: Gwena Kay Tibbits, Chief, Program Monitoring and Policy Development Branch, Food Distribution Division, Food and Nutrition Service, U.S. Department of Agriculture, Washington, DC 20250, (202) 447-8386.

SUPPLEMENTARY INFORMATION: Pursuant to sections 6(e) and 17(h) of the National School Lunch Act, as amended, and the regulations governing the Food Distribution Program (7 CFR Part 250) and Cash in Lieu of Commodities (7 CFR Part 240), notice was given in the **Federal Register** of Friday, August 15, 1980 (45 FR 54386) that the national average minimum value of donated foods, or cash in lieu thereof, per lunch under the National School Lunch Program (7 CFR Part 210) and per lunch and supper under the Child Care Food Program (7 CFR Part 226), was to be 15.50 cents for the period July 1, 1980 through June 30, 1981. This value was derived at by applying the annual percentage change in a three-month simple average value of the Price Index Used in Schools and Institutions for March, April and May of 1980 (from 230.9 in 1979 to 228.5 in 1980). The Index, prescribed in section 5(b) of Pub. L. 96-627, is computed using five major food components in the Bureau of Labor Statistics' Producer Price Index (cereal and bakery products, meats, poultry, and fish, dairy products, processed fruits and vegetables, and fats and oils). Each component is weighted using the same relative weight as determined by the Bureau of Labor Statistics.

Section 202(a) of Pub. L. 96-499, enacted December 5, 1980, provides that for the fiscal year ending September 30, 1981, the mandated level of commodity assistance under section 6(e) of the National School Lunch Act shall be

reduced by 2 cents after the required adjustment per Index changes has been made. This reduction shall become effective on January 1, 1981. Thus, the level of assistance for the period July 1, 1980, through December 31, 1980 remains at 15.50 cents per meal. For the period January 1, 1981 through June 30, 1981, the 2-cent reduction will be applied to the 15.50 cent rate of assistance, making the new level 13.50 cents per meal. Because the level of assistance required under section 6(e) is determined on a school-year basis, a new level of assistance will take effect on July 1, 1981 on the basis of 1980–1981 changes in the Price Index for Schools and Institutions, and the 2-cent reduction will be applied to that rate from July 1, 1981 through September 30, 1981.

(Sec. 202, Pub. L. 96–499, 95 Stat. 2599.)
(Catalog of Federal Domestic Assistance Nos. 10.555 and 10.556)

Effective Date: This notice is effective as of January 1, 1981.

Dated: January 8, 1981.

Carol Tucker Foreman,

Assistant Secretary for Food and Consumer Services.

[FR Doc. 81-1303 Filed 1-15-81; 8:45 am]

BILLING CODE 3410-30-M

Forest Service

Mill Creek Wilderness Study Area, Jefferson National Forest, Giles County, Va.; Intent To Prepare an Environmental Impact Statement

Pursuant to Section 102(2)(c) of the National Environmental Policy Act of 1969 (Pub. L. 91–190), the Forest Service, Department of Agriculture, will prepare an environmental impact statement for determining the suitability or nonsuitability of the Mill Creek Wilderness Study Area for preservation as wilderness.

Preparation of an environmental impact statement is a required part of the process in determining the suitability of Congressionally-designated Wilderness Study Areas. The Mill Creek Wilderness Study Area was so designated by Congress in the Eastern Wilderness Act of 1975 (Pub. L. 93–622). The Study Area encompasses approximately 4,000 acres on the Blacksburg Ranger District, Jefferson National Forest, Southern Region.

A range of alternatives for the area will be considered. One of them will be a no-action (no change) alternative which will be to continue present management of the area. Other alternatives will consider different management options for portions of the area—ranging from a non-wilderness to a wilderness classification.

The draft environmental impact statement will incorporate input from local, state and Federal agencies that have an interest in the area or specific knowledge that will be useful in the study process. University personnel with expertise in specific fields will be consulted.

Public input from citizen workshops and RARE II hearings that were held to discuss wilderness study areas will be included in the study, as will comments from interested individuals or organizations.

A public hearing on the draft environmental impact statement and the suitability of the Study Area for preservation as wilderness will be held in the Summer of 1981. Adequate notice of the hearing will be published in local newspapers prior to the hearing. At least 30 days before the date of the hearing, the Governor of Virginia, the governing board of Giles County, and Federal departments and agencies concerned with the area will be invited to submit their views on the proposed action at the hearing or by no later than 30 days following the date of the hearing. The draft environmental impact statement should be available for public review in the Summer of 1981, with a 3-month review period. The final environmental impact statement is scheduled for filing by December 1981.

R. Max Peterson, Chief of the Forest Service, is the official responsible for the environmental impact statement. The Secretary of Agriculture will make his recommendation based on this analysis. Written comments and suggestions concerning this notice of intent or the proposal should be sent to Forest Supervisor, Jefferson National Forest, 210 Franklin Road, Roanoke, Virginia 24001, by February 15, 1981.

For further information about the proposal or the environmental impact statement or other documents relevant to the proposal, contact: Charles Blankenship, Jefferson National Forest, 210 Franklin Road, Roanoke, Virginia 24001 (Phone 703–982–6270).

Dated: January 6, 1981.

J. Lamar Beasley,

Acting Chief, Forest Service.

[FR Doc. 81-1346 Filed 1-15-81; 8:45 am]

BILLING CODE 3410-11-M

Mountain Lake Wilderness Study Area, Jefferson National Forest, Craig and Giles Counties, Va., Monroe County, W. Va.; Intent To Prepare an Environmental Impact Statement

Pursuant to Section 102(2)(c) of the National Environmental Policy Act of 1969 (Pub. L. 91–190), the Forest Service, Department of Agriculture, will prepare an environmental impact statement for determining the suitability or nonsuitability of the Mountain Lake Wilderness Study Area for preservation as wilderness.

Preparation of an environmental impact statement is a required part of the process in determining the suitability of Congressionally-designated Wilderness Study Areas. The Mountain Lake Wilderness Study Area was so designated by Congress in the Eastern Wilderness Act of 1975 (Pub. L. 93–622). The Act identified the Study Area as encompassing 8,400 acres. Corrected acreage, according to resource data, is 11,827 acres. There are 1,543 acres in the Study Area classified as the Mountain Lake Scenic Area, which was established in 1960 by the Regional Forester, Southern Region under the authority of Regulation U–3 to protect and maintain the scenic resource. The Study Area is located on the Blacksburg Ranger District, Jefferson National Forest, Southern Region.

A range or alternatives for the area will be considered. One of them will be a non-action (no change) alternative which will be to continue present management of the area. Other alternatives will consider different management options for portions of the area—ranging from a non-wilderness to a wilderness classification.

The draft environmental impact statement will incorporate input from local, state and Federal agencies that have an interest in the area or specific knowledge that will be useful in the study process. University personnel with expertise in specific fields will be consulted. Public input from citizen workshops and RARE II hearings that were held to discuss wilderness study areas will be included in the study, as will comments from interested individuals or organizations.

A public hearing on the draft environmental impact statement and the suitability of the Study Area for preservation as wilderness will be held in the Summer of 1981. Adequate notice of the hearing will be published in local newspapers prior to the hearing. At least 30 days before the date of the hearing, the Governor of Virginia and West Virginia, the governing boards of Giles, Craig and Monroe Counties, and

Federal departments and agencies concerned with the areas will be invited to submit their reviews on the proposed action at the hearing or by not later than 30 days following the date of the hearing. The draft environmental impact statement should be available for public review by July 1981 with a 3-month review period. The final environmental impact statement is scheduled for filing by December 1981.

R. Max Peterson, Chief of the Forest Service, is the official responsible for the environmental impact statement. The Secretary of Agriculture will make his recommendation based on this analysis. Written comments and suggestions concerning this notice of intent or the proposal should be sent to Forest Supervisor, Jefferson National Forest, 210 Franklin Road, Roanoke, Virginia 24001, by February 15, 1981.

For further information about the proposal or the environmental impact statement, or other documents relevant to the proposal, contact: Charles Blankenship, Jefferson National Forest, 210 Franklin Road, Roanoke, Virginia 24001 (phone 703–982–6270).

Dated: January 6, 1981.

J. Lamar Beasley,

Acting Chief, Forest Service.

[FR Doc. 81-1347 Filed 1-15-81; 8:45 am]

BILLING CODE 3410-11-M

Rural Electrification Administration

Central Power Electric Cooperative; Finding of No Significant Impact

Notice is hereby given that the Rural Electrification Administration (REA) has made a Finding of No Significant Impact which concludes that there is no need for REA to prepare an environmental impact statement in connection with construction by Central Power Cooperative (Central), of Minot, North Dakota, of approximately 51.2 km (32 miles) of 115 kV transmission line and an associated 115/69 kV transmission substation to be financed with REA loan funds.

The planned 115 kV transmission line will be built between the Department of Energy's Leeds Substation located in Benson County, North Dakota, and the proposed Agate 115/69kV transmission substation to be located in Towner County, North Dakota. Central has prepared a Borrower's Environmental Report (BER) concerning the proposed project. REA has reviewed the BER and determined that it represents an accurate assessment of the environmental impact of the project. REA has prepared an Environmental Assessment concerning the proposed project and its impacts.

Threatened and endangered species, important farmland, archaeological and historic sites, wetlands, flood plains and potential impacts of the project are adequately considered in the BER. REA's independent evaluation of the proposed project leads it to conclude that its proposed financial assistance for this project does not represent a major Federal action that will significantly affect the qualify of the human environment.

Based on this independent evaluation and a review of Central's BER, a Finding of No Significant Impact was reached in accordance with Section IV.B and IV.D.1 of REA Bulletin 20–21:320–21, Part I.

Various alternatives to the proposed transmission line and substation were reviewed by Central and REA. The alternatives included no action, energy conservation, alternative line routes and an alternative line. After reviewing these alternatives, REA determined that the proposed 115 kV transmission line and associated substation is the best alternative for providing power to existing and future Central loads within the area.

Copies of REA's Finding of No Significant Impact and Central's BER may be reviewed in the office of the Director, Power Supply Division, Room 5829, South Agriculture Building, Rural Electrification Administration, Washington, D.C. 20250 and at the office of the cooperative, Central Power Electric Cooperative, P.O. Box 1576, Minot, North Dakota 58701.

This program is listed in the Catalog of Federal Domestic Assistance as 10.850—Rural Electrification Loans and Loan Guarantees.

Dated at Washington, D.C., this 9th day of January 1981.

Robert W. Feragen,

Administrator.

BILLING CODE 3410-15-M

Deseret Generation and Transmission Cooperative; Draft Environmental Impact Statement and Notice of Public Hearing

Notice is hereby given that the Bureau of Land Management (BLM) and the Rural Electrification Administration (REA) have jointly prepared a Draft Environmental Impact Statement (DEIS) in accordance with Section 102(2)(c) of the National Enviromental Policy Act of 1969. This action is in connection with an anticipated request for an REA loan guarantee commitment from Deseret Generation and Transmission Cooperative (Deseret), P.O. Box BB, Sandy, Utah 84070. The anticipated financial assistance would allow Deseret to secure funds for the contruction of the proposed two unit (800 MW) coal-fired steam electric Moon Lake Generating Station, Deserado Mine and associated transmission facilities. Deseret proposes to locate the generating station in Uintah County, Utah. The Deserado Mine will be located in Rio Blanco County, Colorado.

Additional information may be obtained from REA through requests submitted to Mr. Frank W. Bennett, Director, Power Supply Division, Rural Electrification Administration, U.S. Department of Agriculture, 12th and Independence Ave., S.W., Washington, D.C. 20250, (202) 447–6183. Comments are invited from the public and particularly from State and local agencies which are authorized to develop and enforce environmental standards, and from Federal agencies having jurisdiction by law or special expertise with respect to any environmental impact, from which comments have not been requested specifically.

Copies of the BLM–REA DEIS are being sent to various Federal, state and local agencies, as outlined in the Council on Environmental Quality Regulations. Copies are available upon request to the Utah State Office, Bureau of Land Management, 136 East South Temple, Salt Lake City, Utah 84111. The DEIS may be examined during regular business hours at the offices of REA in the South Agriculture Building, Room 5831, 12th And Independence Avenue, S.W., Washington, D.C. 20250, at the BLM Washington Office (WO–332), 18th and C Streets N.W., Washington, D.C. 20240, at BLM State and District Offices in Colorado and Utah, at Deseret's address, 8722 South 300 West, Sandy, Utah 89070 and at public libraries in appropriate towns in the affected counties.

All comments concerning the environmental impact of the proposed project should be addressed to: State Director (U910), Utah State Office, Bureau of Land Management, 136 East South Temple, Salt Lake City, Utah 84111. Comments must be received within forty-five (45) days from the date the Environmental Protection Agency (EPA) announces availability of the document in accordance with 40 CFR 1506.10, in order to be considered in connection with the proposed actions by BLM and REA.

Notice is also hereby given that oral and/or written comments regarding the adequacy of the DEIS can be presented

at public hearings scheduled on February 17 at the Salt Palace in Salt Lake City, Utah, on February 18, at the Unitah County Courthouse in Vernal, Utah, and on February 19 at the Rangely High School in Rangely, Colorado. The three public hearings will start at 7:00 p.m.

Any REA financing assistance which may be made pursuant to this proposal will be subject to, and the release of funds thereunder will be contingent upon REA's reaching satisfactory conclusions with respect to environmental effects. Final REA action will be taken only after compliance with the National Environmental Policy Act of 1969, and other environmentally related statutes, regulations, Executive Orders and Secretary's Memoranda normally considered by REA.

This Federal Assistance program is listed in the Catalog of Federal Domestic Assistance as 10.850—Rural Electrification Loans and Loan Guarantees.

Dated at Washington, D.C., this 13th day of January 1981.

Robert W. Feragen,

Administrator.

[FR Doc. 81-1664 Filed 1-15-81; 8:45 am]

BILLING CODE 3410-15-M

Sam Houston Electric Cooperative, Inc.; Finding of No Significant Impact

Notice is hereby given that the Rural Electrification Administration (REA) has made a Finding of No Significant Impact which concludes that there is no need for REA to prepare environmental impact statement in connection with a proposed insured loan by REA for Sam Houston Electric Cooperative, Inc., (Sam Houston), of Livingston, Texas. The proposed insured loan will assist Sam Houston in constructing approximately 49.6 km (31 miles) of 138 kV transmission line, two associated switching stations, and two associated substations.

The 138 kV transmission line will originate at the proposed New Waverly Switching Station in Walker County, extend to the proposed Evergreen and Oakhurst Substations, and terminate at the proposed Staley Switching Station in San Jacinto County. Sam Houston has prepared a Borrower's Environmental Report (BER) concerning the proposed project. REA has reviewed the BER and determined that it represents an accurate assessment of the environmental impact of the project. REA has prepared an Environmental Assessment concerning the proposed project and its impacts.

Threatened and endangered species, important farmland, archaeological and historic sites, wetlands, flood plains, and potential impacts of the project are adequately considered in the BER. REA's independent evaluation of the proposed project leads it to conclude that its proposed financing assistance for this project does not represent a major Federal action that will significantly affect the quality of the human environment.

Based on this independent evaluation and review of Sam Houston's BER, a Finding of No Significant Impact was reached in accordance with Section IV.B and IV.D.1 of REA Bulletin 20-21:320-21, Part I.

Various alternatives to the proposed transmission line and substation were reviewed by Sam Houston and REA. The alternatives included no action and construction and utilization of other facilities. After reviewing these alternatives, REA determined that the proposed 138 kV transmission line and associated facilities are the best alternative for providing power and system reliability to existing and future Sam Houston loads within the area.

Copies of REA's Finding of No Significant Impact and Sam Houston's BER may be reviewed in or requested from the office of the Director, Distribution Systems Division, Room 3304, South Agriculture Building, Rural Electrification Administration, Washington, D.C. 20250 and at the office of the cooperative, Sam Houston Electric Cooperative, Inc., P.O. Box 1121, Livingston, Texas 77351.

This program is listed in the Catalog of Federal Domestic Assistance as 10.850—Rural Electrification Loans and Loan Guarantees.

Dated at Washington, D.C., this 12th day of January 1981.

Robert W. Feragen,

Administrator.

CHRYSLER CORPORATED LOAN GUARANTEE BOARD

Closed Meeting

The Chrysler Corporation Loan Guarantee Board will hold a meeting closed to the public on January 14, 1981 at 4 p.m., in Room 4121, Main Treasury Building, 15th Street and Pennsylvania Avenue, N.W., Washington, D.C.

The Board will continue its discussion of Chrysler Corporation's new Operating and Financing Plans and related documents and its request for additional guarantees. The Board expects to begin considering whether to grant preliminary approval to Chrysler's application for an additional $400 million of guarantees.

Discussions of the above matters are closed to the public pursuant to applicable exemptions under the Government in the Sunshine Act. The discussions at the meeting will involve significant amounts of non-public financial and commerical information received from Chrysler Corporation, relating to anticipated profitability, market positions, capital expenditures and cost reduction actions.

An open meeting is likely to disclose (1) confidential commerical and financial information, which is exempt under 5 U.S.C. 552b(c)(4); and (2) information the premature disclosure of which would be likely to significantly frustrate implementation of Board action, which is exempt under 5 U.S.C 552b(c)(9)(B).

The meeting was closed pursuant to a unanimous vote of the Board taken on December 17, 1980 to close all Board meetings held during the thirty days after the Board's December 18, 1980 meeting, at which the same subject matters are discussed.

Those persons expected to attend the meeting, or portions thereof, include the Board members, the Executive Director, General Counsel, and Secretary of the Board, and members of the respective staffs of each Board member.

Those persons desiring further information should contact Bruce D. Bolander, Secretary of the Board, at (202) 566-2278.

This notice is given as a result of a court order. The position of the Board is that it is not subject to the Government in the Sunshine Act.

Dated: January 13, 1981.

Bruce D. Bolander,

Secretary of the Board.

BILLING CODE 4810-27-M

CIVIL AERONAUTICS BOARD

Applications for Certificates of Public Convenience and Necessity and Foreign Air Carrier Permits Filed Under Subpart Q of the Board's Procedural Regulations [1]

Week Ended January 9, 1981.

Subpart Q. Applications

The due date for answers, conforming applications, or motions to modify scope are set forth below for each application. Following the answer period the Board

[1] See 14 CFR 302.1701 *et seq.*

may process the application by expedited procedures. Such procedures may consist of the adoption of a show-cause order, a tentative order, or in appropriate cases a final order without further proceedings.

Date filed, Docket No., and Description

1-7-81—39135—Jet America, 10880 Wilshire Boulevard, Suite 911, Los Angeles, California 90024.

Application of Jet America, pursuant to Section 401 of the Act and Subpart Q of the Board's Procedural Regulations, requests a determination of its fitness, willingness and ability to operate as a federally certificated air carrier and for a certificate of public convenience and necessity, authorizing the scheduled transportation of persons, property and mail in a medium haul market, proposing nonstop service between the cities of Long Beach, California and Chicago, Illinois.

Conforming Applications, motions to modify scope, and Answers may be filed by February 4, 1981.

1-7-81—39140—New York Air, LaGuardia Airport Station, Hangar 5, Flushing, New York 11317.

Application of New York Air pursuant to Section 401 of the Act and Subpart Q of the Board's Procedural Regulations, requests that the Board amend its certificate of public convenience and necessity for Route 260 by the addition of new nonstop authority between and among the terminal points New York/Newark, Washington, Boston, Syracuse, Albany, Rochester, Buffalo, Cleveland, Columbus, Dayton, Cincinnati, Detroit, Indianapolis, and Pittsburgh and the alternate terminal points:

Atlanta, Georgia;
Atlantic City, New Jersey;
Baltimore, Maryland;
Charlotte, North Carolina;
Chicago, Illinois;
Columbia, South Carolina;
Greensboro/High Point/Winston-Salem, North Carolina;
Greenville/Spartanburg, South Carolina;
Hartford, Connecticut/Springfield, Massachusetts;
Islip, Long Island, New York;
Jacksonville, Florida;
Louisville, Kentucky;
Memphis, Tennessee;
Milwaukee, Wisconsin;
Nashville, Tennessee;
Norfolk/Virginia Beach, Virginia;
Philadelphia, Pennsylvania;
Providence, Rhode Island;
Raleigh/Durham, North Carolina;
Richmond, Virginia;
St. Louis, Missouri;
White Plains/Westchester County, New York.

Conforming Applications, motions to modify scope, and Answers may be filed by February 4, 1981.

1-8-81—39142—Trans World Airlines, Inc., 605 Third Avenue, New York, New York 10158.

Application of Trans World Airlines, Inc. pursuant to Section 401 of the Act and Subpart Q of the Board's Procedural Regulations requests authority to engage in foreign air transportation between the terminal point St. Louis, Missouri, and the terminal points Mexico City and Acapulco, Mexico.

Conforming Applications, motions to modify scope, and Answers may be filed by February 5, 1981.

Phyllis T. Kaylor,

Secretary.

DEPARTMENT OF COMMERCE

Minority Business Development Agency

General Business Services Program; Financial Assistance Application Announcement

January 3, 1981.

The Minority Business Development Agency announces that it is seeking applications under its program to operate a grant for management and technical performance project for 12 months beginning May 1, 1981.

Funding Instrument: It is anticipated that the funding instruments as defined by the Federal Grant and Cooperative Agreement Act of 1977 will be a grant.

Program Description: The General Business Services Program (GBS) of the Minority Business Development Agency (MBDA) provides technical assistance to minority business persons and firms for the purpose of improving their stability by increasing their management and marketing capabilities.

MBDA offers competitive grants to consulting firms either "not for profit" or commercial entities. These firms must be capable of providing such services as:

——Preparation of business plans;
——Financial Packaging;
——Industrial Management Services;
——Personnel Management Services;
——Marketing Planning.

Applications are invited for the following grant:

H—GBS Grant for a Management and Technical Performance Project to operate in Dallas, TX, SMSA county of Dallas. Project will operate at a cost not to exceed $278,000 and the Project I.D. Number is 06-60-80001-01 under Catalog of Federal Domestic Assistance, Minority Business Development 11.800.

Eligibility Requirements: Any for-profit or non-profit institution is eligible to submit an application. If an award is made, continuation awards of up to two additional years may be made to the successful recipient without competition, provided that: (1) Funds have been appropriated for a project of this kind, (2) MBDA has determined that such funds are available, (3) there is a continuing need for a project of this kind and (4) the recipient has performed satisfactorily.

Application Materials: An application kit for these projects may be requested by writing to the following address: U.S. Department of Commerce, Minority Business Development Agency, Grants Administration Unit, 1100 Commerce Street, Room 7B19, Dallas, TX 75242, Attn: Richard L. Greene, Grant/Cooperative Agreement Specialist.

The closing date for submitting an application is February 17, 1981. An appliation kit is available by written request to the above address, Attn: Richard L. Greene, Grant/Cooperative Agreement Specialist.

(11.800 Minority Business Development Catalog of Federal Domestic Assistance)

Richard H. Sewing,

Regional Director.

BILLING CODE 3510-21-M

General Business Services Program; Financial Assistance Application Announcement

The Minority Business Development Agency announces that it is seeking applications under its program to operate one project for a twelve month period beginning May 1, 1981. The total cost of the project will not exceed $358,000.

Funding Instrument: It is anticipated that the funding instrument, as defined by the Federal Grant and Cooperative Agreement Act of 1977, will be a grant.

Program Description: The General Business Services Program (GBS) of the Minority Business Development Agency (MBDA) provides technical assistance to minority businesspersons and firms for the purpose of improving their stability by increasing their management and marketing capabilities. MBDA offers competitive grants to consulting firms (either non-profit or commercial entities). These firms must be capable of providing such services as:

——Preparation of business plans;
——Financial packaging;
——Industrial management assistance;
——Personnel management services;
——Marketing planning;

and a broad range of other business services excluding legal services.

Applications are invited for the following project:

One grant for a management and technical assistance project to operate in the Memphis, Nashville and Louisville SMSAs in Tennessee and Kentucky. The project will operate at a cost not to exceed $358,000, and will also include supplying specialized consulting services. The Project I. D. Number is 04-10-80003-01.

Eligibility Requirements: There are no restrictions. Any profit or non-profit institution is eligible to submit an application.

Pre-application Conference: A Pre-application Conference for this project will be held on January 30, 1981, at 1:30 p.m. at the following address: U.S. Department of Commerce, Minority Business Development Agency, 1365 Peachtree Street, NE, Room 225, Atlanta, Georgia 30309.

Application Materials: An application kit for this project may be requested by writing the following address: U.S. Department of Commerce, Minority Business Development Agency, 1371 Peachtree Street, NE, Suite 505, Atlanta, Georgia 30309.

In requesting an application kit, the applicant must specify its profit status; i.e., State or Local Government, federally recognized Indian tribal units, educational institutions, hospitals, or other type of profit or non-profit institution. This information is necessary to enable MBDA to include the appropriate cost principles in the application kit.

Award Process: All applications that are submitted in accordance with the instructions in the application kit will be submitted to a panel for review and ranking. Specific criteria by which applications will be evaluated is included in the application kit.

Closing Date: Applicants are encouraged to obtain an application kit as soon as possible in order to allow sufficient time to prepare and submit an application before the closing date of February 13, 1981. Applications received after this date will not be considered.

COMMITTEE FOR PURCHASE FROM THE BLIND AND OTHER SEVERELY HANDICAPPED

Procedure List 1981; Additions

AGENCY: Committee for Purchase from the Blind and Other Severely Handicapped.

ACTION: Additions to Procurement List.

SUMMARY: This action adds to Procurement List 1981 a commodity to be produced by and services to be provided by workshops for the blind and other severely handicapped.

EFFECTIVE DATE: January 16, 1981.

ADDRESS: Committee for Purchase from the Blind and Other Severely Handicapped, 2009 14th Street North, Suite 610, Arlington, Virginia 22201.

FOR FURTHER INFORMATION CONTACT: C. W. Fletcher (703) 557–1145.

SUPPLEMENTARY INFORMATION: On October 31, 1980 and September 19, 1980, the Committee for Purchase from the Blind and Other Severely Handicapped published notices (45 FR 72248 and 45 FR 62520) of proposed additions to Procurement List 1981, November 12, 1980 (45 FR 74836).

After consideration of the relevant matter presented, the Committee has determined that the commodity and services listed below are suitable for procurement by the Federal Government under 41 U.S.C. 46–48c, 85 Stat. 77.

Accordingly, the following commodity and services are hereby added to Procurement List 1981:

Class 7530

Paper, Teletypewriter Roll
7530–00–142–9037

SIC 7349

Janitorial Service, Naval Air Station Miramar, San Diego, California

SIC 7699

Repair of Rubberized Items:
Mattress Pneumatic
(Nonimsulated 8465–00–254–8887)
(Insulated 8465–00–518–2781)
Ponchos (8405–00–935–3257)
Bag Clothing, Waterproof (8465–00–261–6909) Fort Bliss, Texas

COMMODITY FUTURES TRADING COMMISSION

Proposed Futures Contract; Proposed Rules of Major Economic Significance; Terms and Conditions of the Three-Month Domestic Certificates of Deposit Futures Contract of the Chicago Mercantile Exchange

AGENCY: Commodity Futures Trading Commission.

ACTION: Notice of proposed rules of contract markets.

SUMMARY: The Chicago Mercantile Exchange ("CME") has applied for designation as a contact market in $1,000,000 certificates of deposit with maturities of three months. The Commodity Futures Trading Commission ("Commission") has determined that the proposed terms and conditions of this proposed futures contract are of major economic significance and that, accordingly, publication of the proposed terms and conditions is in the public interest, will assist the Commission in considering the views of interested persons and is consistent with the purposes of the Commodity Exchange Act.

DATE: Comments must be received on or before March 17, 1981.

ADDRESS: Interested persons should submit their views and comments to Jane K. Stuckey, Secretary, Commodity Futures Trading Commission, 2033 K. Street, N.W., Washington, D.C. 20581. Reference should be made to CME Three-Month Domestic CD Futures Contract.

FUR FURTHER INFORMATION CONTACT: Christine A. Rock, Staff Attorney, Division of Trading and Markets, Commodity Futures Trading Commission, 2033 K Street, N.W., Washington, D.C. 20581; Telephone: (202) 254–8955.

SUPPLEMENTARY INFORMATION: The terms and conditions of CME's proposed three-month domestic CD futures contract are as follows:

Chapter —

Domestic Certificates of Deposit

00. Scope of Chapter.—This chapter is limited in application to futures trading in Domestic Certificates of Deposit. The procedures for trading, clearing, delivery and settlement, and any other matters not specifically covered herein shall be governed by the rules of the Exchange.

01. Commodity Specifications.—Each futures contract shall be for a $1,000,000 Domestic Certificate of Deposit with a three-month maturity.

02. Futures Call.—

A. Trading Months and Hours: Futures contracts shall be scheduled for trading during such hours and delivery in such months as may be determined by the Board of Governors.

B. Size of Trading Unit: The size of the unit of trading shall be a Domestic Certificate of Deposit in the amount of $1,000,000.

C. Minimum Increments: Bids and offers shall be quoted in terms of the IMM Index, 100.00 minus yield on an annual basis for a 360-day year. (A deposit rate of 7.20% shall be quoted as 92.80.) Minimum fluctuations of the IMM Index shall be in multiples of .01 ($25.00).

D. Daily Limits: There shall be no trading at a level more than 0.60 IMM Index points above or below the preceding day's settlement index except as provided by Rule 07 (Expanded Daily Limits) and on the last day of trading when there shall be no limit.

E. Discretionary Position Limits: The Board may in its sole and complete discretion impose limits upon an individual or upon related accounts.

F. Termination of Trading: Futures trading shall terminate on the business

day immediately preceding the last delivery day of the contract month.

G. Contract Modification: Specifications shall be fixed as of the first day of trading of a contract except that all deliveries must conform to government regulations in force at the time of delivery. If any U.S. governmental agency or body issues an order, ruling, directive or law pertaining to the trading or delivery of Domestic Certificates of Deposit, such order, ruling, directive or law shall be construed to take precedence and become part of these rules, and all open and new contracts shall be subject to such government orders.

03. Delivery.—The following shall specifically apply to the delivery of Domestic Certificates of Deposit.

A. Par Delivery Unit: A par delivery unit shall be a $1,000,000 three-month Domestic Certificate of Deposit.

B. Delivery Days: Delivery shall be made on any business day that is not a bank holiday in either New York or Chicago, and in the period beginning on the Monday following the 15th day of the contract month, and ending on the last business day of the contract month.

C. Approved Delivery Banks: The Board of Governors shall maintain a list of U.S. banks whose domestic certificates of deposit constitute approved delivery units on the Domestic Certificate of Deposit contract. Individual Banks may be deleted from this list by the Board of Governors without prior notice.

D. Deliverable Issues: Any domestic certificate of deposit meeting the following conditions shall constitute a deliverable CD.

1. Having a fixed maturity value (principal plus interest at maturity) not less than $1,000,000 and not greater than $1,200,000.

2. Having no interest payments between the delivery date and maturity date.

3. Maturing not before the 16th of the month three months after the spot month nor after the last day of the month three months after the spot month.

4. Maturing on a business day that is not a banking holiday in either New York or Chicago.

E. Seller's Duties: The clearing member representing a customer making delivery in liquidation of his position, shall present to the Clearing House by 2:00 p.m., one business day before delivery day, a Seller's Delivery Commitment completed in full. If such commitment is received later than 2:00 p.m. on the business day prior to the last delivery day but not later than 9:00 a.m. on the last delivery day, seller's clearing member shall be assessed a fine on a per contract basis, the amount to be determined by the Board. Any papers received subsequent to 9:00 a.m. on the last delivery day shall constitute the seller's failure to perform and be acted upon in accordance with Rule 06.

Before 12:00 noon (Chicago time) on the delivery date, Seller's Clearing Member shall deliver a Domestic Certificate of Deposit of an Approved Delivery Bank, satisfying the conditions of Rule 03.D, to a bank registered with the Exchange and a member of the Federal Reserve System selected by the buyer.

F. Buyer's Duties: Upon notification of delivery by the Clearing House, the clearing member representing the buyer shall deliver to the Clearing House by 5:00 p.m. (Chicago time) on the day before the delivery date, a buyer's delivery commitment that includes: the buyer's name and account number, and the name of a Chicago bank registered with the Exchange and a member of the Federal Reserve System to which the delivery unit should be transferred. The clearing member representing the buyer shall, by 12:45 noon (Chicago time) by payment against delivery on the day of delivery, present to the seller's clearing member's bank or its designated agent a wire transfer of Federal funds for the net invoicing price.

G. Matching Longs and Shorts: The Clearing House shall pair Seller's and Buyer's Delivery Commitments by matching the oldest long positions with the Seller's Delivery Commitments as received. The Clearing House shall, as soon as practicable thereafter, present or make known the Buyer's Delivery Commitment to the appropriate, paired clearing member.

04. Par Delivery.—

A. Par Delivery: A delivery unit shall be a Domestic Certificate of Deposit of an approved delivery bank satisfying the conditions of 03–D.

B. Payment: The following formula shall be used to calculate the net invoicing price:

(maturity value [1]) ÷ [1 + (F yield [2]) days to maturity]/360

C. Delivery Points: Delivery shall be made to a bank, registered with the Exchange and a member of the Federal Reserve System, specified by the Buyer's clearing member. All banks selected by the buyer and by the seller to effectuate delivery must be members of the Federal Reserve System.

[1] Maturity value is the value of the delivery unit at maturity (principal + interest).

[2] The F yield is the difference between 100.00 and the IMM index at settlement on the day before delivery day, expressed in decimals.

F yield = (100.00 − F index) × 0.01

05. Emergencies, Acts of God, Acts of Government.—If delivery or acceptance or any precondition or requirement of either is prevented by strike, fire, accident, action of government or act of God, the seller or buyer shall immediately notify the Exchange President. If the President determines that emergency action may be necessary, he shall call a special meeting of the Board of Governors and arrange for the presentation of evidence respecting the emergency condition. If the Board determines that an emergency exists, it shall take such action as it deems necessary under the circumstances and its decision shall be binding upon all parties to the contract. For example, and without limiting the Board's power, it may: take action in accordance with Rule 06; extend delivery dates; and designate alternate approved banks in the event of conditions interfering with the normal operations of approved facilities.

In the event that the Board of Governors or Business Conduct Committee determines that there exists a shortage of deliverable domestic Certificates of Deposit, it may upon a two-thirds vote of the members present or upon a two-thirds vote of the members who respond to a poll take such action as may in the Board's or Committee's sole discretion appear necessary to prevent, correct, or alleviate the condition. Without limiting the foregoing, the Board or Committee may: (1) designate as deliverable Certificates of Deposit of banks not on the Approved Bank List and (2) determine a cash settlement based on the current cash value of a 3-month Certificate of Deposit as determined by using the current cash market yield curve on the last day of trading.

06. Failure To Perform.—If the clearing member with a delivery commitment fails to perform all acts required by this chapter, then that clearing member shall be deemed as failing to perform which may be punishable as a major violation. A clearing member failing to perform shall be liable to the clearing member to which it was matched on the failing transaction for any loss sustained. The Board shall determine and assess losses sustained, taking into account the settlement price, interest earnings foregone, and such other factors as it deems appropriate. The Board may also assess such penalties as it deems appropriate in addition to damages.

07. Expanded Daily Limits.—Whenever on two successive days any contract month closes at the normal daily limit in the same direction (not

necessarily the same contract month on both days) an expanded daily limit schedule shall go into effect as follows:

1. The third day's daily limit in all contract months shall be 150% of the normal daily limit.

2. If any contract month closes at its expanded daily limit on the third day in the same direction, then the fourth day's expanded daily limit and each successive day thereafter, shall be 200% of the normal daily limit, so long as any contract month closes at its expanded daily limit.

3. Whenever the foregoing daily limit schedule is in effect and no contract month closes at the limit in the same direction which initiated or maintained the expanded schedule, then the normal daily limit shall be reinstated on the following day.

* * * * *

The Commission also will make available any other materials submitted by the CME in support of its application for contract market designation to the extent that such materials are not entitled to confidential treatment under Part 145 of the Commission's regulations (17 CFR Part 145). Copies of such materials submitted by the CME in support of its application for designation will be available through the Commission's Secretary or its offices in Washington, New York, Chicago Minneapolis, Kansas City and San Francisco.

Any person interested in submitting written data, views or arguments on the terms and conditions of the proposed futures contract, or with respect to other materials submitted by the CME in support of its application for contract market designation, should send such comments to Jane K. Stuckey, Secretary, Commodity Futures Trading Commission, 2033 K Street, N.W., Washington, D.C. 20581, by March 17, 1981.

Issued in Washington, D.C., on January 12, 1981.

Jane K. Stuckey,

Secretary of the Commission.

BILLING CODE 6351-01-M

Proposed Futures Contracts; Proposed Rules of Major Economic Significance; Terms and Conditions of the Three-Month Eurodollar Futures Contract of the Chicago Mercantile Exchange

AGENCY: Commodity Futures Trading Commission.

ACTION: Notice of proposed rules of contract markets.

SUMMARY: The Chicago Mercantile Exchange ("CME") has applied for designation as a contract market in one million dollar par value Eurodollar certificates of deposit or time deposits with maturities of three months. The Commodity Futures Trading Commission ("Commission") has determined that the proposed terms and conditions of this proposed futures contract are of major economic significance and that, accordingly, publication of the proposed terms and conditions is in the public interest, will assist the Commission in determining whether the CME should be so designated, and is consistent with the purposes of the Commodity Exchange Act.

DATE: Comments must be received on or before March 17, 1981.

ADDRESS: Interested persons should submit their views and comments to Jane K. Stuckey, Secretary, Commodity Futures Trading Commission, 2033 K Street, N.W., Washington, D.C. 20581. Reference should be made to CME Three-Month Eurodollar Futures Contract.

FOR FURTHER INFORMATION CONTACT: Christine A. Rock, Attorney, Division of Trading and Markets, Commodity Futures Trading Commission, 2033 K Street, N.W., Washington, D.C. 20581; Telephone: (202) 254-8955.

SUPPLEMENTARY INFORMATION: The terms and conditions of CME's proposed three-month Eurodollar futures contract are as follows:

Chapter —Three-Month Eurodollars

00. Scope of Chapter.—This chapter is limited in application to futures trading in Eurodollars. The procedures for trading, clearing, delivery and settlement, and any other matters not specifically covered herein shall be governed by the rules of the Exchange.

01. Commodity Specifications.—Each futures contract shall be for a $1,000,000 Eurodollar Time Deposit or Eurodollar Certificate of Deposit with a three-month maturity.

02. Futures Call.—

A. Trading Months and Hours: Futures contracts shall be scheduled for trading during such hours and delivery in such months as may be determined by the Board of Governors.

B. Size of Trading Unit: The size of the unit of trading shall be Eurodollar Time Deposits or Eurodollar Certificates of Deposit in the amount of $1,000,000.

C. Minimum Increments: Bids and offers shall be quoted in terms of the IMM Index, 100.00 minus yield on an annual basis for a 360-day year. (A deposit rate of 7.20% shall be quoted as 92.80). Minimum fluctuations of the IMM Index shall be in multiples of .01 ($25.00).

D. Daily Limits: There shall be no trading at a level more than 0.60 IMM Index points above or below the preceding day's settlement index except as provided by Rule 07 (Expanded Daily Limits) and on the last day of trading when there shall be no limit.

E. Discretionary Position Limits: The Board may in its sole and complete discretion impose limits upon an individual or upon related accounts.

F. Termination of Trading: Futures trading shall terminate on the last business day immediately preceding the third Tuesday of the contract month.

G. Contract Modification: Specifications shall be fixed as of the first day of trading of a contract except that all deliveries must conform to government regulations in force at the time of delivery. If any U.S. govermental agency or body issues an order, ruling, directive or law pertaining to the trading or delivery of Eurodollars, such order, ruling, directive or law shall be construed to take precedence and become part of these rules, and all open and new contracts shall be subject to such government orders.

03. Delivery.—The following shall specifically apply to the delivery of Eurodollars:

A. Par Delivery Unit: A part delivery unit shall be a $1,000,000 three-month Eurodollar Certificate of Deposit or Time Deposit.

B. Delivery Day: Delivery shall be made on the third business day following the last day of trading if that day is followed by a banking business day in London, Chicago, and New York. If that day is the day before a bank holiday, delivery shall be made on the next business day that is not followed by a holiday or weekend in either New York, Chicago or London.

C. Approved Delivery Banks: The Board of Governors shall maintain a list of London branches of U.S. or European banks whose dollar-denominated liabilities constitute approved delivery units on the Eurodollar contract. The Board of Governors may, without prior notification, delete banks from the Approved Delivery Bank list.

D. Deliverable Issues: Any dollar-denominated time deposit or certificate of deposit of any Approved Delivery Bank meeting the following conditions shall constitute a deliverable deposit:

1. For time deposits: (a) value dated on delivery day in New York Clearing House funds; (b) the initial amount of the deposit will be $1,000,000.00,

2. For both time deposits and certificates of deposit: maturing at least

86 days and not more than 93 days after delivery date, and maturing on a business day, not a banking holiday, not the last banking day of the week or the last banking day before a holiday in either London, New York or Chicago.

3. For certificates of deposit: (a) having a fixed maturity value (principal + interest) not less than $1,000,000 nor greater than $1,200,000 and (b) having no interest payments between the delivery date and the maturity data.

E. Seller's Duties: The clearing member representing a customer making delivery in liquidation of his position, shall present to the Clearing House by 2:00 p.m. on the business day before the delivery day, a Seller's Delivery Commitment completed in full. If the delivery unit is a Eurodollar Certificate of Deposit, the Seller's Delivery Commitment shall indicate the maturity date and the maturity value of the delivery unit. If the delivery unit is a time deposit, the clearing member representing seller shall indicate the bank, yield and maturity date. If seller has failed to negotiate a deliverable time deposit or purchase a deliverable CD at time of submission of Seller's Delivery Commitment, seller's clearing member will notify the Clearing House by 2:00 p.m. Time deposits negotiated and CDs purchased by short following 2:00 p.m. on the business day preceding delivery day will not be deliverable. If such commitment is received later than 2:00 p.m. on the day before the delivery day, but not later than 9:00 a.m. on the delivery day, the short clearing member shall be assessed a fine on a per contract basis, the amount to be determined by the Board. Any papers received subsequent to 9:00 a.m. on the delivery day shall constitute the seller's failure to perform and be acted upon in accordance with Rule 06.

If the delivery unit is a Certificate of Deposit, before 11:00 a.m. on the delivery date the seller shall deliver a Certificate of Deposit of an Approved Delivery Bank, satisfying the conditions of Rule 03–D, to a bank designated by the Clearing House.

On the delivery date the clearing member representing the seller shall present to the buyer's clearing member a certified or cashier's check or a wire transfer of Fed funds in the amount of the seller's remaining obligation to the buyer.

F. Buyer's Duties: The clearing member with a long position at close of trading on the last day of trading shall present to the Clearing House by 2:00 p.m. on that day, a Buyer's Delivery Commitment completed in full and an IMM approved payment order from an approved delivery bank confirming delivery of New York Clearing House funds value dated on the delivery date to the IMM Eurodollar delivery account in a bank named by the Clearing House. If such commitment is received later than 2:00 p.m. on the last day of trading, but not later than 9:00 a.m. on the following business day, buyer's clearing member shall be assessed a fine on a per contract basis, the amount to be determined by the Board. If papers are not submitted by 9:00 a.m. on the business day following the last day of trading, the clearing member representing the buyer shall pay a penalty of no more than the interest yield on $1 million, at twice the average of the prime loan rates of the ten largest U.S. banks, ranked by deposit size, per contract.

Upon notification of a delivery of a Eurodollar time deposit in buyer's name or a certificate of deposit, buyer's clearing member shall present a certified or cashier's check or a wire transfer of Fed funds in the amount of buyer's remaining obligation to seller.

G. Matching Longs and Shorts: The Clearing House shall match the oldest short positions with the Buyer's Delivery commitments as received. In the event that the clearing member representing the buyer does not present the Buyer's Delivery Commitment to the Clearing House by the required time, the Clearing House will assign the open long position to the remaining open short position.

04. Par Delivery.—

A. Delivery Unit: A delivery unit shall be a $1,000,000 liability of a London branch of an approved delivery bank satisfying the conditions of 03.

B. Payment: If the unit of delivery is a Certificate of Deposit satisfying the conditions of 03–D, buyer's clearing member shall be invoiced according to the formula:

$$\text{maturity value}^{*} \times \left[1 - \frac{\text{days to maturity}}{360} (\text{F yield}^{**})\right] = \text{invoice price}$$

*maturity value = value at maturity of the delivered CD.

**F yield = (100–F index) x 0.01 where (F index) is the index level of the expiring Eurodollar contract at close of business on the last day of trading.

If the delivery unit is a time deposit, $1,000,000 in New York Clearing House funds will be transferred to the buyer's time deposit account at an Approved Delivery bank.

If the unit of delivery is a time deposit, the following formula shall be used to calculate the amount of any remaining obligations between buyer's clearing member and seller's clearing member.

$$\text{remaining obligation} = \frac{\text{days to maturity} \times (\text{LTD yield}^{***} - \text{F yield}^{**}) \times \$1{,}000{,}000}{360} \times \left[1 + \frac{\text{days to maturity}}{360} (\text{F yield})\right]$$

If this amount is positive, Buyer's clearing member will make payment to Seller's clearing member. If this amount is negative, Seller's clearing member will make payment to Buyer's clearing member.

05. Emergencies, Acts of God, Acts of Government.—If delivery or acceptance of any precondition or requirement of either is prevented by strike, fire, accident, action of government or act of God, the seller or buyer shall immediately notify the Exchange President. If the President determines that emergency action may be necessary, he shall call a special meeting of the Board of Governors and arrange for the presentation of evidence respecting the emergency condition. If the Board determines that an emergency exists, it shall take such action as it deems necessary under the circumstances and its decision shall be binding upon all parties to the contract. For example, and without limiting the Board's power, it may: take action in accordance with Rule 06; extend delivery dates; and designate alternate dates; and designate alternate approved banks in the event of conditions interfering with the normal operations of approved facilities.

In the event that the Board of Governors or Business Conduct Committee determines that there exists a shortage of deliverable Eurodollar deposits, it may upon a two-thirds vote of the members who respond to a poll take such action as may in the Board's or Committee's sole discretion appear necessary to prevent, correct, or alleviate the condition. Without limiting the foregoing the Board or Commitee may: (1) designate as deliverable deposits of banks not on the Approved Bank List and (2) determine a cash settlement based on the current cash value of a 3-month Eurodollar deposit as determined by using the current cash market yield curve on the last day of trading.

06. Failure to Perform.—If the clearing member with a delivery commitment fails to perform all acts required by this chapter, then that clearing member shall be deemed as failing to perform which may be punishable as a major violation. A clearing member shall be liable to the clearing member to which it was matched on the failing transaction for any loss sustained. The Board shall determine and assess losses sustained, taking into account the settlement price, interest earnings foregone, and such other factors as it deems appropriate. The Board may also assess such penalties as it deems appropriate in addition to damages.

07. Expanded Daily Limits.—Whenever on two successive days any contract month closes at the normal daily limit in the same direction (not necessarily the same contract month on both days) an expanded daily limit schedule shall go into effect as follows:

1. The third day's daily limit in all contract months shall be 150% of the normal daily limit.

2. If any contract month closes at its expanded daily limit on the third day in the same direction, then the fourth day's expanded daily limit and each successive day thereafter, shall be 200% of the normal daily limit, so long as any contract month closes at its expanded daily limit.

3. Whenever the foregoing daily limit schedule is in effect and no contract month closes at the limit in the same direction which initiated or maintained the expanded schedule, then the normal daily limit shall be reinstated on the following day.

* * * * *

The Commission also will make available any other materials submitted by the CME in support of its application for contract market designation to the extent that such materials are not entitled to confidential treatment under Part 145 of the Commission's regulations (17 CFR Part 145). Copies of such materials submitted by the CME in support of its application for designation will be avialable through the Commission's Secretary or its offices in Washington, New York, Chicago, Minneapolis, Kansas City and San Francisco.

Any person interested in submitting written data, views or arguments on the terms and conditions of the proposed futures contract, or with respect to other materials submitted by the CME in support of its application for contract market designation, should send such comments to Jane K. Stuckey, Secretary, Commodity Futures Trading Commission, 2033 K Street, N.W., Washington, D.C. 20581, by March 17, 1981.

Issued in Washington, D.C., on January 12, 1981.

Jane K. Stuckey,

Secretary of the Commission.

BILLING CODE 6351-01-M

Proposed Futures Contracts; Proposed Rules of Major Economic Significance; Terms and Conditions of the 90-Day Certificates of Deposit Futures Contract of the New York Futures Exchange, Inc.

AGENCY: Commodity Futures Trading Commission.

ACTION: Notice of proposed rules of contract markets.

SUMMARY: The New York Futures Exchange, Inc. ("NYFE") has applied for designation as a contract market in $1,000,000 par value certificates of deposit with maturities of 90 days that are issued by major United States banks. The Commodity Futures Trading Commission ("Commission") has determined that the proposed terms and conditions of this proposed futures contract are of major economic significance and that, accordingly, publication of the proposed terms and conditions is in the public interest, will assist the Commission in determining whether the NYFE should be so designated, and is consistent with the purposes of the Commodity Exchange Act.

DATE: Comments must be received on or before March 17, 1981.

ADDRESS: Interested persons should submit their views and comments to Jane K. Stuckey, Secretary, Commodity Futures Trading Commission, 2033 K Street NW., Washington, D.C. 20581. Reference should be made to NYFE 90-Day CD Futures Contract.

FOR FURTHER INFORMATION CONTACT: Christine A. Rock, Attorney, Division of Trading and Markets, Commodity Futures Trading Commission, 2033 K Street NW., Washington, D.C. 20581; Telephone: (202) 254-8955.

SUPPLEMENTARY INFORMATION: The terms and conditions of NYFE's proposed 90-day certificates of deposit ("CD") futures contract are as follows:

CD Futures Contract

1000 Scope of Chapter

This chapter governs transactions involving contracts for the future delivery of ninety day certificates of deposit ("CD's") issued by major United States banks ("CD Futures Contracts"). The CD Futures Contract and all trading therein shall be subject to the rules contained in this chapter, the Rules of the Exchange and the Rules of the Clearing Corporation.

1001 Obligation of Parties to Contract

The seller under any CD Futures Contract sells and agrees to delivery to the purchaser, and the purchaser buys and agrees to receive from the seller, the delivery unit specified in these Rules in the delivery month and for the price agreed upon at the time the contract is transacted, in accordance with the Rules of the Exchange and the Rules of the Clearing Corporation.

1002 Standards

The contract grade for delivery in satisfaction of CD Futures Contracts shall be CDs issued by those major U.S. banks whose CDs are approved by the Board as being deliverable in satisfaction of CD Futures Contracts and which have a maturity of "ninety (90) days" from the day of delivery specified in the contract. The term "ninety (90) days" or "90-days" as used in these rules shall refer to CDs maturing on any Exchange business day within the half-month maturity period which includes the 90th calendar day from the date of settlement of the contract.

(a) The Board shall approve for delivery without discount, only CDs of those major U.S. banks whose CDs trade at the highest prices (lowest interest rate) and at prices equivalent to each other's and which are accepted as good delivery without specific name in cash market transactions by the major New York dealers regularly trading in such certificates.

(b) In the event of an emergency situation affecting the adequacy of the supply of CDs outstanding deliverable under paragraph (a) of this rule, the Board shall have the authority to approve for delivery CDs of major U.S. banks which trade at prices closest to those CDs specified in paragraph (a) of this rule. Such CDs shall be deliverable at a discount approximately equivalent to the cash market discount.

The cash market discount for CDs of each bank approved under this paragraph shall be determined by averaging the quotations of major New York CD dealers during the five business days prior to the day of delivery, after removing the highest and lowest quotes, based on the mean between the dealers' representative bid and asked quotations. The dealers whose quotations shall be used for this purpose shall be those as approved by the Board.

(c) Once trading has been initiated in a contract month, no deletions of approved banks under paragraph (a) of this rule shall be made for that contract month except under extreme adverse conditions which may impair that bank's ability to issue new or redeem its outstanding CDs.

(d) The list of banks approved pursuant to paragraph (a) of this rule shall be posted on the Exchange bulletin board prior to the opening of trading in a delivery month. Additions to or deletions from the list of approved banks as specified in paragraph (a) of this rule shall be made only for new contract months prior to their introduction for trading and only after survey of the New York cash dealer market and determination by the Board that such additions or deletions of banks correspond with such current CD cash market practice.

(e) CDs delivered under these rules shall mature "ninety (90) days" after delivery in the half month period designated at the beginning of trading in that delivery month. The first half month period shall be that period which includes the first and fifteenth day of the delivery month. The second half month period shall be that period which includes the sixteenth and the last day of the delivery month. CDs which mature on a weekend or a New York State bank holiday shall not be deliverable.

(f) CDs delivered under these rules shall not have an issuance date which is earlier than the first business day of the sixth month prior to the CD's maturity date.

(g) Only standard bearer form CDs paying a fixed rate of interest payable at maturity shall be deliverable. No variable coupon rate, semi-annual payment with interest payment due prior to maturity or any other non-conventional type of CD shall be deliverable.

(h) The following formulae shall be used to calculate the settlement value, principal value and accrued interest of a delivery unit at the time of delivery:

$$S = P\left(\frac{360 + (L_1 R_1)}{360 + (L_2 R_2)}\right)$$

$$I = P \times R_1\left(\frac{L_1 - L_2}{360}\right)$$

$$Q = S - I$$

Where—

S = Settlement value of a delivery unit.
L_1 = Original Life of CD.
L_2 = Remaining Life of CD.
R_1 = Coupon rate of CD.
R_2 = Yield to maturity (settlement price) of CD.
P = Par value.
I = Accrued interest.
Q = Principal value of a delivery unit.

1003 Unit of Trading

The unit of trading for CD Futures Contracts shall be CDs having a par value of $1,000,000.

1004 Months Traded

Trading in CD Futures Contracts may be conducted in the first and second half month periods during the six nearby calendar months and the first half month periods during March, June, September and June thereafter.

1005 Price Basis

Prices quoted shall be complements of 100% of the yield to maturity (100-yield to maturity) based on total dollars invested (e.g.: a CD future priced at 9.50% yield to maturity basis would be quoted on an Exchange Index at 90.50). Minimum price fluctuations shall be one basis point (.01%) per 100 points. For the purpose of calculating variation margin, the value of one basis point shall be set at $24.50 per contract.

1006 Limits on Daily Price Changes

(a) There shall be no trading at a price more than 1.00% (100 basis points) above or below the preceding day's settlement price for contracts in the same delivery month. Exceptions are provided for in paragraphs (b) and (c) below.

(b) Whenever on two successive days any contract month closes at the normal daily price limit in the same direction (not necessarily the same contract month on both days) an expanded daily price limit schedule shall go into effect as follows:

(1) The third day's daily price limit shall be 150% of the normal daily price limit.

(2) If any contract month closes at its expanded daily price limit on the third day in the same direction when the fourth day's expanded daily price limit shall be 200% of the normal daily price limit.

(3) If any contract month closes at its expanded daily price limit on the fourth day in the same direction, then there shall be no daily price limit on the fifth day. The normal daily price limit will be reinstated on the sixth day.

(4) Whenever the foregoing price limit schedule is in effect and no contract month closes by more than the expanded daily price limit in the same direction which initiated or maintained the expanded schedule, then the normal daily price limit shall be reinstated on the following day.

(c) There shall be no limit on daily contract price changes for the delivery month on and after the first exchange business day of the delivery month of the contract.

1007 Position Limits

The Board from time to time may set limits on the maximum net long or net short position in any one contract delivery month or in all months combined in the contract which any individual or organization acting alone or in concert with any other person may hold or control in CD Futures Contracts at the end of any business day.

1008 Reportable Positions

The Board from time to time may set the number of contracts, long or short, in any one contract delivery month or in all months combined in the contract whether owned or controlled or carried for any individual or organization, either alone or in conjunction with any other person, which shall be a reportable position. Every member and member organization shall report each and every reportable position to the Exchange at such times and in such form and manner as shall be prescribed by the Exchange.

1009 Hours of Trading

The hours of Futures trading in CD futures Contracts shall be from 9:00 a.m. to 3:00 p.m. Eastern time on all exchange business days except that on the last day of trading, trading shall be closed at 11:00 a.m. of that day.

1010 Last Day of Trading

(a) No trades in CD Futures Contracts deliverable in any first half month shall be made after the Tuesday closest to the seventh calendar day of that first half month period.

(b) No trades in CD Futures Contracts deliverable in any second half month period shall be made after the Tuesday closest to the twenty-first calendar day of the second half month period.

(c) Should such Tuesday be an Exchange holiday or precede an Exchange holiday, or the closest Tuesdays to the seventh and twenty-first calendar days not be determinable, the Board shall set the delivery day for that half month period.

1011 Delivery of Futures Contracts

All deliveries must be made through the Clearing Corporation. No deliveries shall be made in a current half delivery month except on the day specified for such delivery in these rules. At the conclusion of trading in the current delivery half month, all open positions must be satisfied by actual delivery of CDs meeting the standards of Rule 1002 or otherwise as provided for in the Rules of the Exchange.

1012 Tender of Delivery Notices

(a) A clearing member holding open positions in the CD Futures Contract in the current delivery month at the time trading in that contract has ceased in accordance with Rule 1010 of these rules, shall furnish delivery notices to the Clearing Corporation on a form prescribed by the Clearing Corporation not later than 1:00 p.m. of the last day of trading in that contract.

(b) Delivery notices from clearing members representing sellers shall contain the following information:

1. Name of bank CD to be delivered.
2. Interest rate of CD.
3. Original date of issuance of CD.
4. Date of maturity of CD.
5. Such other information as the Clearing Corporation may require.

1013 Copy of Delivery Notice to Commission

Every clearing member shall furnish promptly to the Commission a copy of each delivery notice specified in Rule 1012 of these rules issued by such member in conjunction with the delivery of CDs.

1014 Delivery Through the Clearing Corporation

(a) Delivery of CDs as required by these rules shall be made not later than —— p.m., on the Exchange business day following the last day of trading. In the event that day is a bank holiday in New York State, delivery shall be made on the next business day common to the Exchange and banks in New York State.

(b) The Clearing Corporation will advise clearing members holding open long positions of the details and settlement amounts of each delivery assigned to them, based on the settlement price established on the last day of trading in the delivery half month and the information furnished to it in the delivery notices tendered to it in accordance with Rule 1012 of these rules, no later than 2:00 p.m. of the Exchange business day prior to the delivery date.

1015 Payment by Buyers

Payment by buyers shall be remitted in Federal funds to the Clearing Corporation designated delivery bank not later than —— p.m. on the day specified for delivery. Calculation of the value of the delivery unit shall be in accordance with the formulae in Rule 1002(h) of these rules.

1016 Delinquency in Performance

If a clearing member fails to perform any acts required by this chapter or fails to deliver or accept delivery as required under Clearing Corporation Rules 502 and 503, respectively, the clearing member will be subject to disciplinary action, and the Exchange may assess such clearing member for the expenses associated therewith.

* * * * *

The Commission also will make available any other materials submitted by the NYFE in support of its application for contract market designation to the extent that such materials are not entitled to confidential treatment under Part 145 of the Commission's regulations (17 CFR Part 145). Copies of such materials submitted by the NYFE in support of its application for designation will be available through the Commission's Secretary or its offices in Washington, New York, Chicago, Minneapolis, Kansas City and San Francisco.

Any person interested in submitting written data, views or arguments on the terms and conditions of the proposed futures contract, or with respect to other materials submitted by the NYFE in support of its application for contract market designation, should send such comments to Jane K. Stuckey, Secretary, Commodity Futures Trading Commission, 2033 K Street, N.W., Washington, D.C. 20581, by March 17, 1981.

Issued in Washington, D.C., on January 12, 1981.

Jane K. Stuckey,

Secretary of the Commission.

[FR Doc. 81-1870 Filed 1-15-81; 8:45 am]

BILLING CODE 6351-01-M

Quarterly Publication of Indexes; Order

The Commodity Futures Trading Commission hereby determines, pursuant to subparagraph (a)(2) of the Freedom of Information Act, 5 U.S.C. 552(a)(2), that quarterly publication of the indexes required to be kept thereunder of:

(A) final Commission opinions, including concurring and dissenting opinions, as well as orders, made in the adjudication of cases;

(B) statements of policy and interpretations which have been adopted by the Commission and are not published in the **Federal Register**; and

(C) Commission administrative staff manuals and instructions to staff that affect a member of the public; is unnecessary and impractical. One of the reasons for this determination is that the records referred to in paragraph A above are continually being generated, so that any publication of an index of them would be quite lengthy and might soon become out-of-date. With respect to the items referred to in paragraph B above, all currently-effective Commission statements of policy and interpretations, except for one, have been published in the **Federal Register** and the Commission now generally publishes such documents in the **Federal Register** so that there will be few, if any, which are unpublished in the future. The Commission has determined that it is unnecessary to publish an index of this one document. Furthermore, the records listed in paragraph C are gradually generated and no need is seen for quarterly publication of an index of them. Finally, publication of the indexes would require an additional expenditure of the Commission's limited resources.

Instead of publication, the Commission's Office of the Secretariat will provide copies of the indexes of these records upon request at the direct cost of duplication. A listing of Commission indexes currently available is Appedix A hereto.

Issued by the Commission in Washington, D.C. on January 9, 1981.

Jane K. Stuckey,

Secretary of the Commission.

DEPARTMENT OF EDUCATION

Advisory Council on Developing Institutions; Meeting

AGENCY: Advisory Council on Developing Institutions.

ACTION: Notice of meeting.

SUMMARY: This notice sets forth the schedule and proposed agenda of a forthcoming meeting of the Advisory Council on Developing Institutions. This notice also describes the functions of the Council. Notice of this meeting is required under section 10(a)(2) of the Federal Advisory Committee Act.

DATE: January 29–30, 8 a.m. to 5 p.m.

ADDRESS: F.O.B. 6, Room 1130, 400 Maryland Avenue, SW., Washington, D.C. 20202.

FOR FURTHER INFORMATION CONTACT: Dr. Paul H. Carnell, Executive Director, Advisory Council on Developing Institutions, Regional Office Building 3, (202) 245–2455, 7th and D Streets, SW., Washington, D.C. 20202.

SUPPLEMENTARY INFORMATION: The Advisory Council on Developing Insitutions is established under Section 303 of the Higher Education Act of 1965, as amended (20 U.S.C. 1051–1056), unless otherwise noted. The Council is established to identify developing institutions through which the purposes of this title may be achieved; and establish the priorities and criteria to be used in making grants under section 304(a).

The meeting of the Council shall be open to the public. The proposed agenda includes:

1. Swearing-in of new members.
2. An Analysis of the Application Review Award Process.
3. A Progress Report on the "Study of the Strengthening Developing Institutions Program."

Records are kept of all Council proceedings, and are available for public inspection at the Office of the Executive Director of the Advisory Council on Developing Institutions, Room 3068, Regional Office Building 3, 7th and D Streets, SW., Washington, D.C. 20202.

Signed at Washington, D.C., on January 13, 1981.

Paul H. Carnell,

Executive Director, Advisory Council on Developing Institutions.

BILLING CODE 4000-01-M

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. RP81-30-000]

Algonquin Gas Transmission Co.; Filing

January 13, 1981.

Take notice that on January 9, 1981, Algonquin Gas Transmission Company (Algonquin Gas) filed three tariff sheets relating to Rate Schedule SNG–1 to provide for extra-schedule deliveries of synthesized natural gas (SNG) pursuant to urgent customer requests. Algonquin Gas also requests such other authorization as may be necessary to effectuate such deliveries.

By its proposal, Algonquin Gas states that it will deliver to its regular SNG–1 customers such extra-schedule quantities of SNG as are available from the SNG plant at Freetown, Massachusetts which is owned and operated by Algonquin Gas' wholly-owned subsidiary, Algonquin SNG, Inc. Deliveriers will be made during the remainder of the 1980–81 SNG delivery season. Algonquin Gas states that the price will be based on the incremental cost of feedstock plus the established rate for converting feedstock into SNG. It also states that its intent is neither to gain nor lose in net income as a result of making such proposed extra-schedule SNG deliveries. The full details of Algonquin Gas' filing are on file with the Commission and open for public inspection.

Algonquin further states that its proposal is designed to meet two *force majeure* situations, namely the inability of its distributor-customers to receive LNG supplies due to the interruption of shipping at Algeria, and the 20% colder-than-normal winter currently being experienced. Accordingly, Algonquin Gas requests Commission acceptance of its tariff filing and the issuance of any necessary authorization on an expedited basis.

Algonquin states that a copy of its letter and enclosure has been mailed to all affected customers and interested state commissions and is being posted as provided by our Regulations.

Take further notice that the above referenced tariff sheets were accepted for filing by letter order of the Director of the Office of Pipeline and Producer Regulation subject to noticing and review of any comments received. Said tariff sheets are to be effective for the period January 9, 1981 through March 31, 1981.

The January 9, 1981 order indicates that the proposed tariff sheets provide for an increase in the level of service without a change in rate, and that the revenues collected thereunder shall be subject to a revenue-cost comparison pursuant to the post audit procedures of § 10.6 of Rate Schedule SNG–1, which are intended to protect customers against overcollection of revenues.

Any person desiring to be heard or to protest said filing should file a petition to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street, N.E., Washington, D.C. 20426, in accordance with §§ 1.8 and 1.10 of the Commission's Rules of Practice and Procedure (18 CFR 1.8, 1.10). All such petitions or protests should be filed on or before January 23, 1981. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a petition to intervene.

Lois D. Cashell,

Acting Secretary.

[FR Doc. 81-1590 Filed 1-15-81; 8:45 a.m.]

BILLING CODE 6450-85-M

ENVIRONMENTAL PROTECTION AGENCY

[ER-FRL-1626-7]

Availability of Environmental Impact Statements

AGENCY: Office of Evironmental Review (A-104) U.S. Environmental Protection Agency.

PURPOSE: This notice lists the environmental impact statements (EIS's) which have been officially filed with the EPA and distributed to Federal agencies and interested groups, organizations and individuals for review pursuant to the Council on Environmental Quality's regulations (40 CFR Part 1506.9).

PERIOD COVERED: This notice includes EIS's filed during the week of January 5, 1981 to January 9, 1981.

REVIEW PERIODS: The 45-day review period for draft EIS's listed in this notice is calculated from January 16, 1981 and will end on March 2, 1981. The 30-day review period for final EIS's as calculated from January 16, 1981 will end on February 16, 1981.

EIS AVAILABILITY: To obtain a copy of an EIS listed in this notice you should contact the Federal agency which prepared the EIS. This notice will give a contact person for each Federal agency which has filed an EIS during the period covered by the notice. If a Federal agency does not have the EIS available upon request you may contact the Office of Environmental Review, EPA, for further information.

BACK COPIES OF EIS'S: Copies of EIS's previously filed with EPA or CEQ which are no longer available from the originating agency are available with charge from the following source: Information Resources Press, 1700 North Moore Street, Arlington, Virginia 22209 (703) 558-8270.

SUMMARY OF NOTICE: This notice sets forth a list of EIS's filed with EPA during the week of January 5, 1981 to January 9, 1981. The Federal agency filing the EIS, the name, address, and telephone number of the Federal agency contact for copies of the EIS, the filing status of the EIS, the actual date the EIS was filed with EPA, the title of the EIS, the State(s) and county(ies) of the proposed action and a brief summary of the proposed Federal action and the Federal agency EIS number, if available, is listed in this notice. Commenting entities on draft EIS's are listed for final EIS's. All additional information relating to EIS's such as time extensions or reductions of prescribed review periods, withdrawals, retractions, corrections or supplemental reports is also noticed under the appropriate agency.

FOR FURTHER INFORMATION CONTACT: Kathi L. Wilson, Office of Environmental Review, Environmental Protection Agency, 401 M Street SW., Washington, DC 20460 (202) 245-3006.

Dated: January 13, 1981.

William N. Hedeman, Jr.,

Director, Office of Environmental Review (A-104).

U.S. ARMY CORPS OF ENGINEERS

Contact: Mr. Richard Makinen, Office of Environmental Policy, Attn: DAEN-CWR-P, Office of the Chief of Engineers, U.S. Army Corps of Engineers, 20 Massachusetts Avenue, Washington, D.C. 20314 (202) 272-0121.

Draft

UVAS CREEK FLOOD PROTECTION PLAN, GILROY: Santa Clara County, California, January 6: Proposed is a flood control plan for Uvas Creek located along the city of Gilroy, Santa Clara County, California. The preferred alternative consists of: (1) A new or reconstructed levee along the north side of the creek, setback wherever possible; (2) reconstruction of about 1,000 feet of existing levee downstream of Miller Avenue; (3) raising of up to 1,000 feet of levee upstream of Miller Avenue; (4) relocation of Thomas Road; and (5) construction of a new bridge upstream of the existing structure. (San Francisco District) (EIS order No. 810007).

EXTENSION: The review period for the above EIS has been extended until March 29, 1981. (No. 810007.)

Draft Supplement

MANKATO-N. MANKATO-LE HILLIER FLOOD CONTROL (DS-2): Blue Earth County, Minnesota, January 5: Proposed is the alternation or relocation of two MN-169/60 bridges over the Blue Earth River in Blue Earth County, Minnesota. The bridges must be raised or replaced to an elevation approximately 17 feet above the existing bridges. The alternatives differ only in location and would consist of a new bridge built immediately upstream of the existing bridges and new off and on ramps to replace an existing at-grade intersection. This statement supplements an amended final EIS filed in April 1972. (St. Paul District) (EIS order No. 810003).

Report

REPORT—MISSOURI RIVER MANAGEMENT PLAN: Several, January 9: This supplemental report provides information concerning a management plan for the Missouri River as related to final EIS, No. 790003, filed 1-2-79 on the Missouri River bank stabilization and navigation project, continuing construction and maintenance. (Missouri River division) (EIS order No. 810019).

REESTABLISHMENT OF EIS AVAILABILITY DATE: Based on the actual availability of the following EIS's EPA has reestablished the date of availability and subsequently the end of the review periods for the following EIS's:

Rouge River Basin, Elk Creek Lake, OR—Date of EIS availability is December 12, 1981—End of Review is January 22, 1981. (No. 800946FS.)

Maalaea Harbor for Light-Draft Vessels, HI—Date of EIS availability is December 29, 1981—End of Review is January 27, 1981. (No. 800887F.)

DEPARTMENT OF ENERGY

Contact: Dr. Robert Stern, Acting Director, NEPA Affairs Division, Department of Energy, Mail Station 4G-064, Forrestal Bldg., Washington, D.C. 20585.

Draft

SOLVENT REFINED COAL-1 DEMONSTRATION PROJECT: Daviess County, Kentucky, January 9: Proposed is a cost sharing agreement for the construction and operation of a 6,000 TPSD solvent refined coal demonstration project with the potential for ultimate development of a 30,000 TPSD commercial facility at Newman in Daviess County, Kentucky. The alternatives consider: (1) Site locations, (2) design options, (3) plant layout, and (4) termination of contract. (DOE/EIS-0073-D/VI) (EIS order No. 810017).

ENVIRONMENTAL PROTECTION AGENCY

Draft

Contact: RTP Library, Environmental Protection Agency, Research Triangle Park, North Carolina 27711, (919) 541-2777.

BENZENE STORAGE TANK EMISSIONS, STANDARDS: Regulatory, January 7: Proposed are benzene emissions standards which would limit emissions from existing and new storage tanks. Several control options are considered both for new and existing plants including no additional standard and the prohibition of benzene tanks. The other options address the possible use of: (1) Internal floating roofs (contact or noncontact), (2) secondary seals, (3) contact internal floating roofs with liquid-mounted primary seals and a continuous secondary seal, and (4) vapor control systems. (EPA-45013-80-034A.)

EXTENSION: The review period for the above EIS has been extended until March 10, 1981. (No. 810011.)

Final

Contact: Mr. Edward Vest, Region VII, Environmental Protection Agency, 324 East 11th Street, Kansas City, Missouri 64106, (816) 374-2921.

MARION COUNTY SEWERAGE FACILITIES, GRANT: Marion County, Kansas, January 7: Proposed is the awarding or non-approval of funding for the constructing of a conventional sewerage collection and treatment system to serve the Marion County Lake Improvement District, Kansas. The project includes: (1) A conventional gravity collection system, and (2) a force main to the city of Marion's proposed treatment plant. Alternatives include: (1) A total retention lagoon, (2) new on-site systems, (3) pressure sewer and vacuum sewer collection systems, and (4) community leach fields. (EPA-907/9-80-004.) Comments made by: COE, USDA, HHS, HUD, DOI, State agencies, individuals and businesses. (EIS order No. 810013.)

Draft

Contact: Ms. Lisa Corbin, Region X, Environmental Protection Agency, 1200 6th Avenue, Seattle, Washington 98101, (206) 442–1285.

CITY OF COEUR D'ALENE WWT FACILITY, GRANT: Kootenai County, Idaho, January 7: Proposed is the awarding of a grant for the upgrading of sewage treatment facilities in the city of Coeur D'Alene, Kootenai County, Idaho. The alternatives consider: (1) no action, (2) upgrading of existing facilities and construction of additional facilities, (3) closure of existing plant and construction of a new trickling filter/activated sludge plant, and (3) upgrading the existing plant and construction of an additional plant. All of the alternatives would include sewer interceptor extensions. (EPA–910/9–80–076) (EIS order No. 810012).

GENERAL SERVICE ADMINISTRATION

Contact: Mr. Carl W. Penland, Acting Director, Environmental Affairs Division, General Services Administration, 18th and F Streets, NW., Washington, D.C. 20405, (202) 566–1416.

Draft

POST OFFICE AND COURTHOUSE RENOVATION, CHARLESTON: Charleston County, January 9: Proposed is the renovation of and annex construction to the US post office and courthouse in the city and county of Charleston, South Carolina. The annex will contain 25,270 sq. ft. of occupiable space. The alternatives consider: (1) No action, (2) construction of annex, (3) relocation of post office, (4) relocation of courthouse, (5) leasing of existing space, (6) acquisition of adjacent building, and (7) use of existing Government-owned buildings. (ESC–81001) (EIS order No. 810020).

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

SECTION 104H

The following are community development block grant statements prepared and circulated directly by applicants pursuant to section 104 (H) of the 1974 Housing and Community Development Act. Copies may be obtained from the office of the appropriate local executive. Copies are not available from HUD.

Final

PUEBLO DOWNTOWN HOTEL/CONVENTION CENTER, UDAG: Pueblo County, Colorado, January 1: Proposed is the awarding of a UDAG for the Pueblo Downtown Hotel/Convention Center project in the city and county of Pueblo, Colorado. The complex will be composed of separate but integrated facilities including: (1) A conference center, (2) a hotel, (3) a retail complex, (4) a parking facility, and (5) associated on-site improvements. Comments made by: AHP, EPA, FEMA, State, and local agencies. (EIS order No. 810010).

DEPARTMENT OF INTERIOR

Contact: Mr. Bruce Blanchard, Director, Environmental Project Review, Room 4256 Interior Bldg., Department of the Interior, Washington, D.C. 20240 (202) 343–3891.

Bureau of Land Management

Draft

MOON LAKE POWER PLANT UNITS 1 AND 2, RIGHT-OF-WAY: Uintah County, Utah, January 8: Proposed is the awarding of right-of-way for the Moon Lake Power Plant units 1 and 2 in Uintah County, Utah. The electricity generated would be distributed by one 345 kV transmission line and four 138 kV lines. The alternatives consider various options for plant sites, coal supply, coal transport, water source, and power transmission systems. The USDA/REA is a joint lead agency and proposes to issue loan guarantees. The FS is a cooperating agency. (FES–81–2). (USDA–REA–(ADM)–81–1–0). (EIS order No. 810016).

Final

EASTERN SAN DIEGO COUNTY PLANNING AREA MANAGEMENT: San Diego County, California, January 6: Proposed is a grazing and wilderness management plan for the eastern San Diego County planning unit (McCain Valley) in the El Cento resource area of the Riverside district, California. The planning area encompasses 98,902 acres of public land. Grazing management would be implemented on 67,903 acres, and wilderness designation recommended for 41,776 acres. The grazing alternatives include: (1) No grazing, (2) intensive use, (3) limited use, and (4) no action. The wilderness alternatives are: (1) Maximize wilderness, (2) no wilderness, and (3) limited wilderness. Comments made by: DOI, EPA, USDA, State and local agencies, groups, individuals, and business. (EIS order No. 810006).

Final

MOUNT DOME PLANNING UNIT LIVESTOCK GRAZING MGMT.: Siskiyou and Modoc Counties, California, January 6: Proposed is the implementation of a livestock grazing management plan for the Mount Dome area in Siskiyou and Modoc Counties, California. Components include: (1) Adjustments of authorized livestock use; (2) introduction of grazing treatments; and (3) range projects and facilities including vegetation manipulation and construction of reservoirs, fencing, pipeline, water tank and troughs. The alternatives include moderate, primitive, limited or exclusive uses and no action. (FES–81–2). Comments made by: FERC, DOI, EPA, USDA, HHS, AHP, State agencies, groups, and individuals. (EIS order No. 810005).

Bureau of Indian Affairs

Final

WILDHORSE RESERVOIR AND LANDS, RECREATIONAL LEASE: Elko County, Nevada, January 6: Proposed is the leasing of 150 acres of Federal lands, known as the Wildhorse Marina, within the Wildhorse Reservoir, Elko County, Nevada. The alternatives consider: (1) No action, (2) retain present administration in addition to further recreational development, (3) lease or convey all or portions of the reservoir area to nontribal entities, and (4) seek DOI sponsorship of legislation for the conveyance in trust of the BIA-administered areas of Wildhorse Reservoir to the tribes (Proposed Action of draft EIS). (FES–80–55). Comments made by: DOI, DOC, USDA, EPA, COE, AHP, State and Local Agencies, Groups, Individuals, and Businesses. (EIS order No. 810009).

Water and Power Resources Service

Draft

ACREAGE LIMITATION, RECLAMATION ACT OF 1902: Programmatic, January 8: Proposed are three alternatives for regulatory procedures under the Reclamation Act of 1902, specifically regarding acreage limitation provisions. The act allows Federal assistance through irrigation development so that opportunities can be provided in arid parts of the Western U.S. Acreage limitations provide that federally developed water could not be sold for use on more than 160 acres in individual ownership and that the user had to live on or near the benefited land. (DES–81–1). (EIS order No. 810015).

EXTENSION: The review period for the above EIS has been extended until March 16, 1981. (No. 810015).

O'NEILL UNIT, PICK-SLOAN BASIN PROGRAM, NB, published FR December 17, 1980—review extended from February 10, 1981 (prior extension) to March 2, 1981. (No. 800958).

DEPARTMENT OF LABOR

Contact: Ms. Joanne Lindhart, Chief, Office of Environmental Impact Assessment, Department of Labor, Room N–3673, Washington, D.C. 20210 (202) 523–7111.

Final

OCCUPATIONAL NOISE EXPOSURE STANDARDS, AMENDMENT: Regulatory, January 6: Proposed is the amendment of the standard for occupational exposure to noise. The amendment imposes requirements for hearing conservation programs. The alternatives consider: (1) Revision of the permissible exposure limits for noise, (2) initiation of hearing conservation programs at higher or lower levels, (3) revision of the monitoring, testing, and training provisions, and (4) no regulatory action. Comments made by: USDA, HEW, DOT, DOI, STAT, DOD, HUD, EPA, CEQ, ERDA, groups, and individuals. (EIS ORDER No. 810008).

DEPARTMENT OF TRANSPORTATION

Contact: Mr. Martin Convisser, Director, Office of Environment and Safety, U.S. Department of Transportation, 400 7th Street, SW., Washington, D.C. 20590, (202) 426–4357.

Federal Highway Administration

Draft

US 27 BYPASS OF DECATUR: Adams County, Indiana, January 8: Proposed is the relocation of US 27 to create a bypass of the city of Decatur in Adams County, Indiana. The bypass would extend from 0.5 mile south of the intersection of US 27 and In–124 to US 27/US 33, and vary from 9.4 to 12.7 miles depending on the alternative chosen. The alternatives considered are: (1) Construction on a new alignment west of Decatur, (2) Construction on a new alignment east of Decatur, and (3) widening and upgrading of the existing alignment. (FHWA–IND–EIS–79–05–D). (EIS order No. 810014).

EXTENSION: The review period for the above EIS has been extended until March 9, 1981. (No. 810004).

Final

I-78 COMPLETION, BERKELEY HEIGHTS TO SPRINGFIELD: Somerset and Union Counties, New Jersey, January 9: Proposed is the completion of I-78 from the present termini of I-78 in the vicinity of Plainfield Avenue in Berkeley Heights to the vicinity of Baltusrol Road in Springfield and within the counties of Somerset and Union, New Jersey. The facility would be a six lane, controlled access freeway extending for 5.5 miles. In addition to no build eight alternatives are considered. (FHWA-NJ-EIS-76-02-F). Comments made by: USDA, DOC, DOI, HUD, DOT, EPA, COE, and State and local agencies. (EIS order No. 810018).

Report

REPORT—NB-31 IMPROVEMENT, I-80 TO NB-31/50: Sarpy County, Nebraska, January 5: This supplemental report is an addendum to the final EIS, No. 800639, filed 8-26-80 concerning the improvement of NB-31 from I-80 to the junction of NB-31/50 in Sarpy County, Nebraska. (EIS order No. 810004).

EXTENSION: US 70 Improvement, Portales-Clovis Section, NM, published FR January 9, 1981—review extended from February 23, 1981 to February 26, 1981. (No. 810001).

[FR Doc. 81-1063 Filed 1-15-81; 8:45 am]

BILLING CODE 6560-37-M

[OPP-180548; PH-FRL 1628-2]

California; Issuance of Specific Exemption for Carbofuran on Artichokes

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: EPA has granted a specific exemption to the California Department of Food and Agriculture (hereafter referred to as the "Applicant") for the use of carbofuran to control the cribrate weevil on 625 acres of globe artichokes in Monterey County, California. The specific exemption is issued under the Federal Insecticide, Fungicide, and Rodenticide Act.

DATE: The specific exemption expires on August 25, 1981.

FOR FURTHER INFORMATION CONTACT: Jack E. Housenger, Registration Division (TS-767), Office of Pesticide Programs, Environmental Protection Agency, Rm. E-107, 401 M St. SW., Washington, D.C. 20460, (202-426-0223).

SUPPLEMENTARY INFORMATION: The cribrate weevil, *Otiorhynchus cribricollis*, has caused repeated and increasing damage to artichokes since it was found in artichoke fields in 1956. The spread of this pest has been slow but steady since adults do not fly. They spread by moving from plant to plant or by being carried with propagating stock to new fields. Damage occurs both to the roots by the larvae and to the foliage and buds by the adults. Control is achieved by killing the adults.

The Applicant claims that there are no registered alternatives for the control of cribrate weevils on artichokes. Aldrin and endrin had been successfully used until these uses were cancelled. No cultural or biological control methods are known. The Applicant reported that losses for the 1979 growing season exceeded $194,000. A negligible crop loss is anticipated with the use of carbofuran treatments.

The Applicant proposed to treat 625 acres of artichokes with a maximum of two applications at a rate of 0.5 to 1.0 pound active ingredient (a.i.) carbofuran per acre. All applications are to be made by ground equipment with a 30-day preharvest interval and a 24-hour field reentry interval to be observed. The second half of the 1980 growing season and the first half of the 1981 growing season will be covered by this exemption.

EPA has determined that residues of carbofuran and its metabolites from the proposed use should not exceed 1.0 part per million (ppm), of which no more than 0.2 ppm is carbamate. EPA also notes that control of the cribrate weevil now on this limited acreage could retard the spread of this pest to new acreage in the future. No undue adverse effects on the environment are anticipated from this use of carbofuran.

After reviewing the application and other available information, EPA has determined that the criteria for an exemption have been met. Accordingly, the Applicant has been granted permission to use the pesticide noted above until August 25, 1981, to the extent and in the manner set forth in the application. The specific exemption is also subject to the following conditions:

1. The product Furadan 4 Flowable, EPA Reg. No. 279-2876, may be used. If an unregistered label is used in connection with this product, it must contain the identical applicable precautions and restrictions which appear on the registered label.

2. A maximum of two applications per season may be made.

3. Furadan may be applied at a rate of 1 to 2 pints of formulation (0.5 to 1.0 pound a.i.) per acre.

4. Applications may be made using ground equipment. A minimum of 50 gallons of water per acre will be used.

5. All applications will be made by or under the direct supervision of State-certified applicators.

6. A maximum of 625 acres of globe artichokes in the county named above may be treated.

7. A total of 2,500 pounds of carbofuran is authorized.

8. No applications may be made within 30 days of harvest.

9. A field reentry interval of at least 24 hours shall be observed.

10. Carbofuran may not be applied directly to any body of water, and drift reduction precautions must be observed. Carbofuran may not be applied where excessive runoff is likely to occur. Care must be taken to prevent contamination of water by the cleaning of equipment or disposal of wastes or excess pesticides.

11. Residue levels of carbofuran in or on artichokes resulting from this use are not expected to exceed 1.0 ppm, of which no more than 0.2 ppm is carbamate. Artichokes with residue levels not exceeding this level may enter interstate commerce. The Food and Drug Administration, U.S. Department of Health and Human Services, has been advised of this action.

12. The EPA shall be immediately informed of any adverse effects resulting from the use of carbofuran in connection with this exemption.

13. The Applicant is responsible for ensuring that all of the provisions of this specific exemption are met and must submit an interim report by March 31, 1981, on the 1980 treatments and by February 28, 1982, on the 1981 treatments.

(Sec. 18 as amended 92 Stat. 819; (7 U.S.C. 136)).

Dated: January 9, 1981.

Edwin L. Johnson,

Deputy Assistant Administrator for Pesticide Programs.

Certains Chemicals; Premanufacture Notices

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: Section 5(a)(1) of the Toxic Substances Control Act (TSCA) requires any person who intends to manufacture or import a new chemical substance to submit a premanufacture notice (PMN) to EPA at least 90 days before manufacture or import commences. Section 5(d)(2) requires EPA to publish in the **Federal Register** certain information about each PMN within 5

working days after receipt. This Notice announces receipt of two PMN's and provides a summary of each.

DATES: Written comments by:

PMN 80-330 February 2, 1980
PMN 80-340 February 9, 1981

ADDRESS: Written comments to: Document Control Officer (TS-793), Management Support Division, Office of Pesticides and Toxic Substances, Environmental Protection Agency, Rm. E-447, 401 M St., SW., Washington, D.C. 20460, (202-755-8050).

FOR FURTHER INFORMATION CONTACT: Carolyn Brown, Chemical Control Division (TS-794), Office of Toxic Substances, Environmental Protection Agency, Rm. E-221, 401 M St., SW., Washington, D.C. 20460, (202-426-3980).

SUPPLEMENTARY INFORMATION: Section 5(a)(1) of TSCA (90 Stat. 2012 (15 U.S.C. 2604)), requires any person who intends to manufacture or import a new chemical substance to submit a PMN to EPA at least 90 days before manufacture or import commences. A "new" chemical substance is any substance that is not on the Inventory of existing substances compiled by EPA under section 8(b) of TSCA. EPA first published the Initial Inventory on June 1, 1979. Notices of availability of the Inventory were published in the **Federal Register** of May 15, 1979 (44 FR 28558-Initial) and July 29, 1980 (45 FR 505444-Revised). The requirement to submit a PMN for new chemical substances manfactured or imported for commercial purposes became effective on July 1, 1979.

EPA has proposed premanufacture notification rules and forms in the **Federal Register** issues of January 10, 1979 (44 FR 2242) and October 16, 1979 (44 FR 59764). These regulations, however, are not yet in effect. Interested persons should consult the Agency's Interim Policy published in the **Federal Register** of May 15, 1979 (44 FR 28564) for guidence concerning premanufacture notification requirements prior to the effective date of these rules and forms. In particular, see page 28567 of the Interim Policy.

A PMN must include the information listed in section 5(d)(1) of TSCA. Under section 5(d)(2) EPA must publish in the **Federal Register** nonconfidential information on the identity and use(s) of the substance, as well as a description of any test data submitted under section 5(b). In addition, EPA has decided to publish a description of any test data submitted with the PMN and EPA will publish the identity of the submitter unless this information is claimed confidential.

Publication of the section 5(d)(2) notice is subject to section 14 concerning disclosure of confidential information. A company can claim confidentiality for any information submitted as part of a PMN. If the company claims confidentially for the specific chemical identity or use(s) of the chemical, EPA encourages the submitter to provide a generic use description, a nonconfidential description of the potential exposures from use, and a generic name for the chemical. EPA will publish the generic name, the generic use(s), and the potential exposure descriptions in the **Federal Register.**

If no generic use description or generic name is provided, EPA will develop one and after providing due notice to the submitter, will publish an amended **Federal Register** notice. EPA immediately will review confidentiality claims for chemical identity, chemical use, the identity of the submitter, and for health and safety studies. If EPA determines that portions of this information are not entitled to confidental treatment, the Agency will publish an amended notice and will place the information in the public file, after notifying the submitter and complying with other applicable procedures.

After receipt, EPA has 90 days to review a PMN under section 5(a)(1). The section 5(d)(2) **Federal Register** notice indicates the date when the review period ends for each PMN. Under section 5(c), EPA may, for good cause, extend the review period for up to an additional 90 days. If EPA determines that an extension is necessary, it will pubish a notice in the **Federal Register.**

Once the review period ends, the submitter may manufacture the substance unless EPA has imposed restrictions. When the submitter begins to manufacture the substance, he must report to EPA, and the Agency will add the substance to the Inventory. After the substance is added to the Inventory, and company may manufacture it without providing EPA notice under section 5(a)(1)(A).

Therefore, under the Toxic Substances Control Act, summaries of the data taken from the PMN's are published herein.

Interested persons may, on or before the dates shown under "Dates," submit to the Document Control Officer (TS-793), Management Support Division, Office of Pesticides and Toxic Substances, Environmental Protection Agency, Rm. E-447, 401 M St., SW, Washington, DC 20460, written comments regading these notices. Three copies of all comments shall be submitted, except that individuals may submit single copies of comments. The comments are to be identified with the document control number "[OPTS-51193]" and the specific PMN number. Comments received may be seen in the above office between 8:00 a.m. and 4:00 p.m., Monday through Friday, excluding legal holidays.

(Sec. 5, 90 Stat. 2012 (15 U.S.C. 2604))

Dated: January 8, 1981.

Edward A. Klein,

Director, Chemical Control Division.

PMN 80-330

The following information is taken from data submitted by the manufacturer in the PMN.

Close of Review Period. February 17, 1981.

Manufacturer's Identity. Claimed confidential business information. Organizational description provided:

Annual sales—In excess of $500 million.

Manufacturing site—West-north central U.S.

Standard Industrial Classification Code—286 "Industrial Organic Chemicals."

Specific Chemical Identity. Claimed confidential business information. Generic name provided: Amino alcohol.

Use. Claimed confidential business information. Generic use information provided: PMN substance will be used in an open use that will release less than 5,000 kilograms (kg) to the environment per year with potential exposure to both chemical and non-chemical industrial employees.

Production Estimates

First year—50,000 kg.
Second year—60,000 kg.
Third year—70,000 kg.

Physical/Chemical Properties

Viscosity (23°C, 73°F)—12.5 cps.
Density (23°C, 73°F)—0.9019 g/ml.
Flashpoint (Closed cup)—203°F (95°C).
Coefficient of expansion (23-63°C, 73-145°F)—7.35×10^{-4}/°C, (4.09×10^{-4}/°F).
Freezing point—< −78°C, (< −108°F).
Vapor pressure (100°F, 38°C)—6.00 Torr.
Boiling range—238-240°C, (460-464°F).
pH of 10% aqueous solution—11.4.
Solubility in water (23°C, 73°F)—>10%.

Toxicity Data

Ames test—Nonmutagenic.
Acute oral LD_{50} (male, female rats)—1.72 ml/kg.

Primary ocular irritation—Severely irritating. All adverse effects were reversible in 30 days.

Primary dermal irritation—Severely irritating, corrosive. All adverse effects were reversible in 30 days.

Activity	Exposure route(s)	Maximum number exposed	Maximum duration		Concentration (ppm)	
			Hours/day	Day/year	Average	Peak
Manufacture	Dermal	10	8	21	0–1	
Do	Ocular					
Do	Inhalation					
The manufacturer states that workers will be potentially exposed to the new chemical substance during sampling, drum filling, and cleanup operations.						
Use	Dermal	10	24	30	0–1	
Do	Ocular				40	
Do	Inhalation				40	
Disposal	Dermal	10	5	30	0–1	
Do	Ocular				4–0	
Do	Inhalation					

Environmental Release/Disposal. The manufacturer states that less than 10 kg/yr of the chemical will be released into the air, with the duration of release reported as 24 hr/da, 21 da/yr; and that all air emissions will be incinerated. The manufacturer also states that less than 100 lb/yr of this chemical will be sewered to an onsite evaporative lagoon designed for long-term chemical storage.

PMN 80–340.

The following information is taken from data submitted by the manufacturer in the PMN.

Close of Review Period. February 24, 1981.

Manufacturer's Identity. Claimed confidential business information.

Specific Chemical Identity. Polymer of: Polymer diol, monocarboxylic acid diol, diamine, and a diisocyanate.

Use. No data were submitted.

Production Estimates

	Kilograms per year	
	Minimum	Maximum
First year	30,000	100,000
Second year	100,000	300,000
Third year	300,000	500,000

Physical/Chemical Properties. No data were submitted.

Toxicity Data. The manufacturer states that an Ames test has been conducted on the substance. It was found to be nonmutagenic when tested using the microbial plate assay for mutagenic potential both with and without S–9 enzymatic activation. The result indicated that neither the substance nor its metabolites are mutagenic.

Exposure. The manufacturer states that: The substance will be produced at one plant controlled by the submitter; five 8-hour shifts using four employees per week will be required to produce the maximum quantities indicated for 1983; and that direct exposure occurs only during accidental situations such as spills or leaks during loading or transferring of the product both at the manufacturing location and at the customer's site.

Environmental Release/Disposal. The manufacturer states that because the product is manufactured in closed kettles, environmental release at the manufacturing location or at the customer's site under normal operating conditions is nil.

BILLING CODE 6560–31–M

[OPP–180528; PH–FRL 1627–8]

New Mexico; Crisis Exemption for Fenvalerate on Lettuce

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: EPA gives notice that the New Mexico Department of Agriculture (hereafter referred to as "New Mexico") has availed itself of a crisis exemption for the use of fenvalerate to control *Heliothis* species on 3,300 acres of lettuce in the Mesilla Valley, New Mexico. New Mexico had submitted a request for a specific exemption for this use on August 25, 1980.

FOR FURTHER INFORMATION CONTACT: Jack E. Housenger, Registration Division (TS–767), Office of Pesticide Programs, Environmental Protection Agency, Rm. E–107, 401 M St., SW., Washington, D.C. 20460, (202–426–0223).

SUPPLEMENTARY INFORMATION: New Mexico reported that the State has experienced infestations of *Heliothis* species in lettuce for the past three years. The pest destroys the head and makes the lettuce unmarketable. This year New Mexico anticipated a severe infestation of this pest in lettuce because there was an outbreak of *Heliothis* spp. in cotton which is intermingled with lettuce fields. New Mexico stated that the time element became to critical to wait for a specific exemption so it initiated a crisis exemption on September 8, 1980. A total loss of the lettuce crop could mean a monetary loss of up to $28.7 million for growers in the State, New Mexico claimed.

According to New Mexico, methomyl, Orthene, Dipel, Phosdrin, Nudrin, Thiodan, and Thuricide are registered for use against *Heliothis* spp., but they have given erratic results.

New Mexico used Pydrin (fenvalerate), EPA Reg. No. 201–401, manufactured by Shell Chemical Co. A maximum of 3,300 pounds active ingredient (a.i.) was used at a rate of 0.1 to 0.2 pound a.i. per acre. A minimum of 3 gallons per acre with the specified dosage was applied by air; a minimum of 10 gallons per acre with the specified dosage was applied by ground. A maximum of 5 applications were to be made at 5–7 day intervals and a 7-day pre-harvest interval was to be observed. State-certified applicators or personnel under their direct supervision made the applications. Pydrin residue levels in lettuce were set at 1 part per million. On December 19, the agency raised the residue levels to 2 parts per million.

In order to reduce possible adverse effects on man and the environment, buffer zones were established according to the specific exemption issued last year for Pydrin; New Mexico Department of Agriculture personnel monitored the applications; wrapper leaves were to be trimmed on the lettuce where Pydrin applications were made; and all applicable directions, restrictions, and precautions on the product label were to be made available to the personnel involved. Since the program was expected to be needed for more than 15 days, New Mexico requested a specific exemption for its continuation.

(Sec. 18 as amended 92 Stat. 891; (7 U.S.C. 136))

Dated: January 9, 1981.

Edwin L. Johnson,

Deputy Assistant Administrator for Pesticide Programs.

[FR Doc. 81–1644 Filed 1–15–81; 8:45 am]

BILLING CODE 6560–32–M

[OPP-180531A; PH-FRL 1628-4]

Oklahoma; Issuance of Specific Exemption for Diazinon in Wheat Fields

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: EPA granted a specific exemption to the Oklahoma Department of Agriculture (hereafter referred to as the "Applicant") for the use of Diazinon to control white grubs on a maximum of 10,000 acres of winter wheat in 10 counties in Oklahoma. The specific exemption was issued under the Federal Insecticide, Fungicide, and Rodenticide Act.

DATE: The specific exemption expired on November 30, 1980.

FOR FURTHER INFORMATION CONTACT: Edward Gross, Registration Division (TS-767), Office of Pesticide Programs, Environmental Protection Agency, Rm. E-124, 401 M St. SW., Washington, D.C. 20460, (202-426-0223).

SUPPLEMENTARY INFORMATION: On September 18, 1980, the Applicant initiated a crisis exemption for the use of Diazinon 14G and Diazinon AG500 in Blaine, Canadian, Garfield, Grant, Kingfisher, and Major Counties, Oklahoma, for the control of white grubs in winter wheat. Notice of this crisis exemption appeared in the **Federal Register** of December 12, 1980.

According to the Applicant, white grubs infested land to be planted to winter wheat in Blaine, Canadian, Cotton, Garfield, Grant, Kay, Jackson, Kingfisher, Major, and Tillman Counties. The Applicant stated that white grubs exceeded economic threshold levels of 3 per square foot. There are no pesticides registered for use on white grubs in winter wheat. Data indicate that Diazinon, which contains the active ingredient O, O-diethyl O-(2-isopropyl-6-Methl-4-pyrimidinyl) phosphorothioate, is effective. The Applicant estimated that without the use of Diazinon, losses will range from $400,000 to $600,000 this year.

The Applicant proposed to use a maximum of 20,000 pounds of the active ingredient (a.i.) in a single pre-plant application. Diazinon is manufactured by Ciba-Geigy Corp. as Diazinon 14G, EPA Reg. No. 100-469 and Diazinon AG500, EPA Reg. No. 100-461.

EPA determined that residues of the a.i. in or on winter wheat grain should not exceed 0.03 part per million (ppm) from this use. This level has been judged adequate to protect the public health. It was expected that the proposed use would not present an undue hazard to the environment.

After reviewing the application and other available information, EPA determined that the criteria for a specific exemption had been met. Accordingly, the Applicant was granted permission to use the pesticide noted above until November 30, 1980, to the extent and in the manner set forth in the application. The specific exemption was also subject to the following conditions:

1. The products Diazinon 14G and Diazinon AG500 might be used.

2. Diazinon might be applied in the ten counties named above.

3. The dosage rate was not to exceed 7-14 pounds per acre of Diazinon 14G or 1½ quarts per acre of Diazinon AG500.

4. A single application was authorized.

5. Application was restricted to ground equipment only.6. The product was to be soil incorporated immediately after application.

7. Turn areas or row ends were to be soil incorporated.

8. Areas recently treated with Diazinon were not to be retreated. Infested areas were to be treated only once.

9. Granules which were spilled during loading or application were to be either covered or soil incorporated.

10. All applicable restrictions and precautions addressed on the label were to be adhered to.

11. The EPA was to be immediately informed of any adverse effects resulting from the use of Diazinon.

12. The Applicant was responsible for assuring that all of the provisions of this specific exemption were met and must submit a report summarizing the results of this program by May 1, 1981.

13. Residues of the a.i. in wheat grain or forage were not expected to exceed 0.03 ppm from this use. Wheat grain with residues not in excess of this level may be offered in interstate commerce. The Food and Drug Administration, U.S. Department of Health and Human Services, has been advised of this action.

(Sec. 18 as amended, 92 Stat. 819, [7 U.S.C. 136])

Dated: January 9, 1981.

Edwin L. Johnson,

Deputy Assistant Administrator for Pesticide Programs.

[FR Doc. 81-1640 Filed 1-15-81; 8:45 am]

BILLING CODE 6560-32-M

[OPP-180546; PH-FRL 16228-1]

Pennsylvania; Issuance of Specific Exemption for Permethrin in Mushroom Houses

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: EPA has granted a specific exemption to the Pennsylvania Department of Agriculture (hereafter referred to as the "Applicant") for the use of permethrin to control adult sciarid flies in the mushroom houses in Pennsylvania. The specific exemption is issued under the Federal Insecticide, Fungicide, and Rodenticide Act.

DATE: The specific exemption expires on August 22, 1981.

FOR FURTHER INFORMATION CONTACT: Jack E. Housenger, Registration Division (TS-767), Office of Pesticide Programs, Environmental Protection Agency, Rm. E-107, 401 M St. SW., Washington, D.C. 20460 (202-426-0223).

SUPPLEMENTARY INFORMATION: The sciarid fly is a serious pest of mushrooms in Pennsylvania. The sciarid flies transmit mushroom diseases in addition to causing damage from larval feeding. The Applicant reports that the shift in marketing from processing to fresh by the Pennsylvania mushroom industry makes the requirement for higher mushroom quality more vital.

According to the Applicant, pesticides registered for use on mushrooms are not providing effective control of the adult sciarid flies. Resistance is developing to some of the pesticides, phytotoxicity is a problem in some, and pyrethrins are generally not available and are expensive, the Applicant reports. Data indicate that permethrin is effective in controlling sciarid fly populations. The Applicant estimates that without the use of permethrin, a 15-to-17 percent yield loss will occur, amounting to a 4,800 pound loss per double house per crop.

The Applicant proposed to treat a maximum of 38.8 million square feet of mushroom houses with Pounce Mushroom Spraymist, an unregistered product. The product is to be applied as an aerosol with a mechanical fog applicator.

EPA has determined that residues of permethrin, per se, should not exceed 0.05 part per million (ppm) in or on mushrooms from the proposed use. This level has been judged adequate to protect the public health. The risk from applicator exposure is expected to be significantly reduced by the protective clothing and respirator requirements EPA has imposed.

After reviewing the application and other available information, EPA has determined that the criteria for an exemption have been met. Accordingly, the Applicant has been granted a specific exemption to use the pesticide noted above until August 22, 1981, to the extent and in the manner set forth in the application. The specific exemption is also subject to the following conditions:

1. The product Pounce Mushroom Spraymist, manufactured by the FMC Corp., may be used.

2. Pounce is to be applied with a mechanical fog applicator at a rate of 2 to 2.5 ounces of formulation in 30 ounces of water per double house (35,000 cubic feet).

3. A maximum of 20 applications may be made prior to pinning of first break.

4. Pounce may not be applied once pins begin to form.

5. Pounce may not be used when mushrooms are present.

6. Prior to application, all doors, windows, and ventilators should be closed. All entrances should be locked or barricaded, pilot lights turned off, warning signs posted, and precautions taken to prevent persons and animals from entering the area.

7. During treatment, a pesticide respirator, which has been jointly approved by the Mining Enforcement and Safety Administration (formerly the U.S. Bureau of Mines) and the National Institute of Occupational Safety and Health, must be worn.

8. Applicators must wear protective clothing and rubber gloves. They must wash thoroughly with soap and water after handling permethrin and before eating or smoking. They must remove contaminated clothing and wash it before reuse.

9. It is recommended that a closed system be used for mixing/loading operations of Pounce Mushroom Spraymist.

10. No applications may be made within 6 days before harvest.

11. Mushroom houses should be ventilated to remove fog after the treatment time has elapsed. Fans should be used in houses that do not have forced air circulation.

12. Permethrin is extremely toxic to fish and aquatic invertebrates. Care must be taken not to contaminate water by the cleaning of equipment or disposal of wastes or excess pesticides.

13. Applications will be made by or under the direct supervision of applicators State-certified for this category of pest control.

14. A maximum of 10,000 gallons of Pounce Mushroom Spraymist may be used.

15. Residues of permethrin, per se, are not expected to exceed 0.5 ppm in or on mushrooms. Mushrooms with residues that do not exceed this level may enter interstate commerce. The Food and Drug Administration, U.S. Department of Health and Human Services, has been advised of this action.

16. Participants are to be notified of their obligation to report any adverse effects arising from the use of Pounce Mushroom Spraymist. The EPA must be immediately informed of any adverse effects resulting from this use.

17. The Applicant is responsible for ensuring that all of the provisions of this specific exemption are met and must submit a final report summarizing the results of this program by January 31, 1982.

(Sec. 18 as amended 92 Stat. 819, (7 U.S.C. 136))

Dated: January 9, 1981.

Deputy Assistant Administrator for Pesticide Programs.

[FR Doc. 81-1643 Filed 1-15-81; 8:45 am]

BILLING CODE 6560-32-M

[OPP-30000/25C; PH-FRL 1627-6]

Preliminary Notice of Determination Concluding the Rebuttable Presumption Against Registration of Pesticides Containing Ethylene Dibromide; Extension of Comment Period

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: EPA has extended the period for submission of comments in regard to the preliminary determination concluding the rebuttable presumption against the registration and reregistration (RPAR) of pesticide products containing ethylene dibromide (EDB).

DATE: The comment period now closes on March 10, 1981.

ADDRESS COMMENTS TO: Document Control Officer (TS-793), Office of Pesticides and Toxic Substances, Environmental Protection Agency, Rm. E-447, 401 M St., SW., Washington, D.C. 20460.

Three copies of the comments should be submitted bearing the identifying notation [OPP 30000/25B].

FOR FURTHER INFORMATION CONTACT: Richard Johnson, Special Pesticide Review Division (TS-791), Office of Pesticide Programs, Environmental Protection Agency, Rm. 709, Crystal Mall No. 2, 1921 Jefferson Davis Highway, Arlington, VA 22202, (703-557-7451).

SUPPLEMENTARY INFORMATION: On December 2, 1980, EPA issued a preliminary determination concluding the RPAR on EDB. Notice of this action was published in the **Federal Register** of December 10, 1980 (45 FR 81516). The determination was not final, pending external review by the U.S. Department of Agriculture and the Scientific Advisory Panel. Registrants and other interested persons were given the same 30-day period in which to submit comments that the Federal Insecticide, Fungicide, and Rodenticide Act provides for comments from the Secretary of Agriculture and the Scientific Advisory Panel. That comment period ends on January 9, 1981.

EPA has received requests for an additional 60 days in which to submit comments on the preliminary determination. The agency has determined that additional time would be beneficial to ensure the submission of complete and accurate responses to this preliminary notice of determination. Therefore, all registrants, applicants for registration, and other interested persons shall have until March 10, 1981, to submit rebuttal evidence and other comments or information. These submissions should be sent to the Document Control Officer at the address given above. All comments should bear the identifying notation 30000/25B. All written comments filed will be available for public inspection in the office of the Document Control Officer at the above address from 8:00 a.m. to 4:00 p.m. daily except legal holidays.

(Sec. (3) as amended (Pub. L. 92.516, 86 Stat. 973; Pub. L. 94-140, 89 Stat. 755; 7 U.S.C. 136 et seq.))

Dated: January 9, 1981.

Edwin L. Johnson,

Deputy Assistant Administrator for Pesticide Programs.

[OPP-180517A; PH-FRL 1627-7]

Wyoming; Amendment to Specific Exemption for Strychnine To Control Rabid Skunks

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: EPA has issued an amendment to a specific exemption granted to the Wyoming Department of Agriculture (hereafter referred to as the "Applicant") to use strychnine baits to control rabid skunks in Wyoming.

DATE: The amendment extends the expiration date to December 31, 1980.

FOR FURTHER INFORMATION CONTACT: Libby Welch, Registration Division (TS–767), Office of Pesticide Programs, Environmental Protection Agency, Rm. E–124, 401 M St., SW., Washington, D.C. 20460, (202–426–0223).

SUPPLEMENTARY INFORMATION: In the **Federal Register** of November 13, 1980 (45 FR 74990), EPA announced that EPA had granted a specific exemption to the Applicant to use strychnine baits to control rabid skunks in Campbell and Crook Counties, Wyoming. The specific exemption expired on October 31, 1980. Since then, the Applicant has requested that the specific exemption be extended. No additional material will be required.

After reviewing the application and other available information, EPA has determined that the requested revision should not result in any additional environmental problems. Accordingly, EPA has granted the amendment so that applications of strychnine baits may be made until December 31, 1980, if necessary. All other provisions and restrictions of the specific exemption granted on May 23, 1980, still apply.

(Sec. 18 as amended 92 Stat. 819; (7 U.S.C. 136))

Dated: January 9, 1981.

FEDERAL COMMUNICATIONS COMMISSION

[Report No. A–22]

FM Broadcast Applications Accepted for Filing and Notification of Cut-Off Date

Released: December 22, 1980.

Cut-Off Date: February 4, 1981.

Notice is hereby given that the applications listed in the attached appendix are hereby accepted for filing. They will be considered to be ready and available for processing after February 4, 1981. An application, in order to be considered with any application appearing on the attached list or with any application on file by the close of business on February 4, 1981, which involves a conflict necessitating a hearing with any application on this list, must be substantially complete and tendered for filing at the offices of the Commission in Washington, D.C., not later than the close of business on February 4, 1981.

Petitions to deny any application on this list must be on file with the Commission no later than the close of business on February 4, 1981.

Federal Communications Commission.

William J. Tricarico,

Secretary.

[Report No. B–10]

FM Broadcast Applications Accepted for Filing and Notification of Cut-Off Date

Released: December 22, 1980.

Cut-Off Date: February 19, 1981.

Notice is hereby given that the applications listed in the attached appendix are accepted for filing. Because the applications listed in the attached appendix are in conflict with applications which were accepted for filing and listed previously as subject to a cut-off date for conflicting applications, no application which would be in conflict with the applications listed in the attached appendix will be accepted for filing.

Petitions to deny the applications listed in the attached appendix and minor amendments thereto must be on file with the Commission not later than the close of business on February 19, 1981. Any application previously accepted for filing and in conflict with the applications listed in the attached appendix may also be amended as a matter of right not later than the close of business on February 19, 1981. Amendments filed pursuant to this notice are subject to the provisions of § 73.3572(b) of the Commission's Rules.

Federal Communications Commission.

William J. Tricarico,

Secretary.

FEDERAL RESERVE SYSTEM

American Holding Co.; Formation of Bank Holding Company

American Holding Co., Glencoe, Illinois, has applied for the Board's approval under section 3(a)(1) of the Bank Holding Company Act (12 U.S.C. 1842(a)(1)) to become a bank holding company by acquiring 80 percent of the voting shares of Bank of Highland Park, Highland Park, Illinois. The factors that are considered in acting on the application are set forth in section 3(c) of the Act (12 U.S.C. 1842(c)).

The application may be inspected at the offices of the Board of Governors or at the Federal Reserve Bank of Chicago. Any person wishing to comment on the application should submit views in writing to the Reserve Bank, to be received not later than February 9, 1981. Any comment on an application that requests a hearing must include a statement of why a written presentation would not suffice in lieu of a hearing, identifying specifically any questions of fact that are in dispute and summarizing the evidence that would be presented at a hearing.

Board of Governors of the Federal Reserve System, January 9, 1981.

Jefferson A. Walker,

Assistant Secretary of the Board.

BILLING CODE 6210–01–M

Bank Holding Companies; Porposed de Novo Nonbank Activities

The bank holding companies listed in this notice have applied, pursuant to section 4(c)(8) of the Bank Holding Company Act (12 U.S.C. 1843(c)(8)) and section 225.4(b)(1) of the Board's Regulation Y (12 CFR 225.4(b)(1)), for permission to engage *de novo* (or continue to engage in an activity earlier commenced *de novo*), directly or indirectly, solely in the activities indicated, which have been determined by the Board of Governors to be closely related to banking.

With respect to each application, interested persons may express their views on the question whether consummation of the proposal can "reasonably be expected to produce benefits to the public, such as greater convenience, increased competition, or gains in efficiency, that outweigh possible adverse effects, such as undue concentration of resources, decreasd or unfair competition, conflicts of interest, or unsound banking practices." Any comment on an application that requests a hearing must include a statement of the reasons a written presentation would not suffice in lieu of a hearing, identifying specifically any questions of fact that are in dispute, summarizing the evidence that would be presented at a hearing, and indicating how the party commenting would be aggrieved by approval of that proposal.

Each application may be inspected at the offices of the Board of Governors or at the Federal Reserve Bank indicated for that application. Comments and requests for hearings should identify clearly the specific application to which they relate, and should be submitted in writing and, except as noted, received by the appropriate Federal Reserve Bank not later than February 11, 1981.

A. *Federal Reserve Bank of New York* (A. Marshall Puckett, Vice President) 33 Liberty Street, New York, New York 10045:

CITICORP, New York, New York (finance company activities; Georgia, Virginia, North Carolina, South Carolina, Tennessee, Alabama, Mississippi, and Florida): to engage through a *de novo* office of its subsidiary Citicorp Private Capital, Inc., in finance company activities, including the making or acquiring of loans and other extensions of credit (including loans secured by real or personal property) with primary emphasis on loans to business enterprises and large loans to individuals. These activities will be conducted from an office in Atlanta, Georgia, serving the eight states listed above. Comments on this application must be received by February 4, 1981.

B. *Federal Reserve Bank of San Franscisco* (Harry W. Green, Vice President) 400 Sansome Street, San Francisco, California 94120:

SECURITY PACIFIC CORPORATION, Los Angeles, California (Mortgage banking activities; Texas): to engage through its subsidiary, Security Pacific Mortgage Corporation, in the origination and acquisition of mortgage loans, including development and construction loans on multi-family and commercial properties for Security Pacific Mortgage Corporation's own account or for sale to others, and the servicing of such loans for others. These activities would be conducted from an office in Dallas, Texas, serving the State of Texas.

C. *Other Federal Reserve Banks:* None.

Board of Governors of the Federal Reserve System, January 12, 1981

Jefferson A. Walker,

Assistant Secretary of the Board.

BILLING CODE 6210-01-M

Bank Holding Companies; Proposed de Novo Nonbank Activities

The bank holding company listed in this notice has applied, pursuant to section 4(c)(8) of the Bank Holding Company Act (12 U.S.C. 1843 (c)(8)) and section 225.4(b)(1)) of the Board's Regulation Y (12 CFR § 225.4(b)(1), for permission to engage *de novo* (or continue to engage in an activity earlier commenced *de novo*), directly or indirectly, soley in the activities indicated, which have been determined by the Board of Governors to be closely related to banking.

With respect to this application, interested persons may express their views on the question whether consummation of the proposal can "reasonably be expected to produce benefits to the public, such as greater convenience, increased competition, or gains in efficiency, that outweigh possible adverse effects, such as undue concentration of resources, decreased or unfair competition, conflicts of interest, or unsound banking practices." Any comment on the application that requests a hearing must include a statement of the reasons a written presentation would not suffice in lieu of a hearing, identifying specifically any questions of fact that are in dispute, summarizing the evidence that would be presented at a hearing, and indicating how the party commenting would be aggrieved by approval of that proposal.

The application may be inspected at the offices of the Board of Governors or at the Federal Reserve Bank indicated for the application. Comments and requests for hearings should identify clearly the specific application to which they relate, and should be submitted in writting and received by the appropriate Federal Reserve Bank not later than February 8, 1981.

A. *Federal Reserve Bank of San Francisco* (Harry W. Green, Vice President), 400 Sansome Street, San Francisco, California 94120:

Security Pacific Corporation, Los Angeles, California; (financing, servicing, industrial loan, and credit-related insurance activities; California): to engage, through its subsidiary, Security Pacific Finance Money Center Inc., in financing and industrial loan corporation activities, including making, acquiring and servicing loans and other extensions of credit; in selling and issuing investment certificates; and in acting as agent for the sale of credit-related life, credit-related accident and health, and credit-related property insurance, all as authorized by California law. These activities would be conducted from an office in the city of Escondido, California, serving the state of California.

B. *Other Federal Reserve Banks:* None.

Board of Governors of the Federal Reserve System, January 9, 1981.

BILLING CODE 6210-01-M

FEDERAL TRADE COMMISSION

Commercial Practices; Early Termination of the Waiting Period of the Premerger Notification Rules

AGENCY: Federal Trade Commission.

ACTION: Granting of request for early termination of the waiting period of the premerger notification rules.

SUMMARY: Baldwin-United Corporation is granted early termination of the waiting period provided by law and the premerger notification rules with respect to the proposed acquisition of all voting securities of Mt. Hood Stages, Inc. The grant was made by the Federal Trade Commission and the Assistant Attorney General in charge of the Antitrust Division of the Department of Justice in response to a request for early termination submitted by both parties. Neither agency intends to take any action with respect to this acquisition during the waiting period.

EFFECTIVE DATE: December 30, 1980.

FOR FURTHER INFORMATION CONTACT: Roberta Baruch, Senior Attorney, Premerger Notification Office, Bureau of Competition, Room 303, Federal Trade Commission, Washington, D.C. 20580 (202) 523-3894.

SUPPLEMENTARY INFORMATION: Section 7A of the Clayton Act, 15 U.S.C. 18a, as added by Title II of the Hart-Scott-Rodino Antitrust Improvements Act of 1976, requires persons contemplating certain mergers or acquisitions to give the Commission and Assistant Attorney General advance notice and to wait designated periods before consummation of such plans. Section 7A(b)(2) of the Act permits the agencies, in individual cases, to terminate this waiting period prior to its expiration and requires that notice of this action be published in the **Federal Register.**

By direction of the Commission.

Carol M. Thomas,

Secretary.

BILLING CODE 6820-61-M

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Alcohol, Drug Abuse, and Mental Health Administration

National Advisory Council on Alcohol Abuse and Alcoholism; Meeting

In accordance with Section 10(a)(2) of the Federal Advisory Committee Act (5 U.S.C. Appendix I), announcement is made of the following national advisory body scheduled to assemble during the month of February 1981.

National Advisory Council on Alcohol Abuse and Alcoholism, February 2–3, 9:30 a.m., Conference Room 10, Building 31C, National Institutes of Health, 9000 Rockville Pike, Bethesda, Maryland 20205. Open—February 2. Closed February 3. Contact: Mr. James Vaughan, Room 16C-06, Parklawn Building, 5600 Fishers Lane, Rockville, Maryland 20857, (301) 443-3887.

Purpose: The Council advises the Secretary of Health and Human Services regarding policy direction and program issues of national significance in the area of alcohol abuse and alcoholism. The Council reviews all grant applications submitted, evaluates these applications in terms of scientific merit and coherence with Department policies, and makes recommendations to the Secretary with respect to approval and amount of award.

Agenda: February 2 will be devoted to general business of the Council and a discussion of legislation, budget, current program issues and other subjects related to Institute programs.

February 3, the Council will conduct a final review of grant applications for Federal assistance and this session will not be open to the public in accordance with the determination by the Acting Administrator, Alcohol, Drug Abuse, and Mental Health Administration pursuant to the provisions set forth in Section 552b(c)(6), Title 5 U.S. Code and Section 10(d) of Public Law 92-463 (5 U.S.C. Appendix I).

Substantive program information may be obtained from the contact person listed above. The NIAAA Committee Management Office will furnish upon request summaries of the meeting and a roster of Committee members. Contact Ms. Helen Garrett, Room 16C-21, Parklawn Building, 5600 Fishers Lane, Rockville, Maryland 20857, (301) 443-2860.

Dated: January 12, 1981.

Elizabeth A. Connolly,

Committee Management Officer, Alcohol, Drug Abuse, and Mental Health Administration.

BILLING CODE 4110-88-M

Rape Prevention and Control Advisory Committee; Meeting

In accordance with Section 10(a)(2) of the Federal Advisory Committee Act (5 U.S.C. Appendix I), announcement is made of the following National advisory body scheduled to assemble during the month of February 1981.

Rape Prevention and Control Advisory Committee, February 5–6, 1981; 9:30 a.m.—open meeting, Conference Room K, Parklawn Building, Rockville, Maryland 20857. Contact: Mary Lystad, Ph.D., Executive Secretary, Room 15-99, Parklawn Building, 5600 Fishers Lane, Rockville, Maryland 20857, (301) 443-1910.

Purpose: The Rape Prevention and Control Advisory Committee advises the Secretary, Department of Health and Human Services, the Administrator, Alcohol, Drug Abuse, and Mental Health Administration, and the Director, National Institute of Mental Health, through the National Center for the Prevention and Control of Rape, on matters regarding the needs and concerns associated with rape in the United States and makes

recommendations pertaining to activities to be undertaken by the Department to address the problems of rape.

Agenda: The entire meeting will be open to the public. The Advisory Committee will provide input to Title VI, Rape Prevention and Control, of the Mental Health Systems Act.

Substantive information may be obtained from the contact person listed above. Ms. Debbie Clawson, Assistant to the Executive Secretary, Rape Prevention and Control Advisory Committee, Room 15–99, 5600 Fishers Lane, Rockville, Maryland 20857, telephone number (301) 443–1910, will furnish upon request summaries of the meeting and rosters of the committee members.

Dated: January 12, 1981.

Elizabeth A. Connolly,

Committee Management Officer, Alcohol, Drug Abuse, and Mental Health Administration.

BILLING CODE 4110–88–M

Treatment and Rehabilitation Work Group; Meeting

In accordance with Section 10(a)(2) of the Federal Advisory Committee Act (5 U.S.C. Appendix I), announcement is made of the following national advisory body scheduled to assemble during the month of February 1981.

The Treatment and Rehabilitation Work Group of the Interagency Committee on Federal Activities for Alcohol Abuse and Alcoholism, February 3; 2:00 p.m.—open. Conference Room A, Parklawn Building, 5600 Fishers Lane, Rockville, Maryland 20857. Contact: Mr. David Clough, Room 11–19, Parklawn Building, 5600 Fishers Lane, Rockville, Maryland 20857, (301) 443–2070.

Purpose: The Treatment and Rehabilitation Work Group evaluates all Federal efforts in the areas of alcohol abuse and alcoholism treatment and rehabilitation; provides for the communication and exchange of information necessary; and seeks to coordinate and enhance these programs and activities. Any reports or recommendations are submitted to the Interagency Committee on Federal Activities for Alcohol Abuse and Alcoholism.

Agenda: Tentative agenda items include updated reports from work group members, a followup report on the Treatment Alternatives to Street Crime (TASC) program, and a report on criminal justice/alcoholism treatment issues.

Substantive program information may be obtained form the contact person listed above. The NIAAA Committee Management Office will furnish summaries of the meeting and a roster of Committee members upon request. Contact Ms. Helen Garrett, Room 16C–21, Parklawn Building, 5600 Fishers Lane, Rockville, Maryland 20857, (301) 443–2860.

Dated: January 12, 1981.

Elizabeth A. Connolly,

Committee Management Officer, Alcohol, Drug Abuse, and Mental Health Administration.

Food and Drug Administration

Consumer Participation; Open Meeting

AGENCY: Food and Drug Administration.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA) announces a forthcoming consumer exchange meeting to be chaired by Federick R. Carlson, District Director, Boston District Office, Boston, MA.

DATE: The meeting will be held at 10 a.m., Thursday, January 29, 1981.

ADDRESS: The meeting will be held at the Food and Drug Administration Bldg., 2d Floor Conference Room, 585 Commercial St., Boston, MA 02109.

FOR FURTHER INFORMATION CONTACT: Yolan L. Harsanyi, Consumer Affairs Officer, Food and Drug Administration, 585 Commercial St., Boston, MA 02109, 617–223–5857.

SUPPLEMENTARY INFORMATION: The purpose of this meeting is to encourage dialogue between consumers and FDA officials, to identify and set priorities for current and future health concerns, to enhance relationships between local consumers and FDA's Boston District Office, and to contribute to the agency's policymaking decisions on vital issues.

Dated: January 12, 1981.

William F. Randolph,

Acting Associate Commissioner for Regulatory Affairs.

BILLING CODE 4110–03–M

Ophthalmic Device Section of the Ophthalmic; Ear, Nose, and Throat; and Dental Devices Panel; Meeting

AGENCY: Food and Drug Administration.

ACTION: Notice.

SUMMARY: This notice announces a forthcoming meeting of a public advisory committee of the Food and Drug Administration (FDA). This notice also sets forth a summary of the procedures governing committee meetings and methods by which interested persons may participate in open public hearings conducted by the committees and is issued under section 10(a) (1) and (2) of the Federal Advisory Committee Act (Pub. L. 92–463, 86 Stat.

770–776 (5 U.S.C. App. I)), and FDA regulations (21 CFR Part 14) relating to advisory committees. The following advisory committee meeting is announced:

Ophthalmic Device Section of the Ophthalmic; Ear, Nose, and Throat; and Dental Devices Panel

Date, time, and place: February 5 and 6, 9 a.m., Holiday Inn, 8777 Georgia Ave., Silver Spring, MD.

Type of meeting and contact person: Open public hearing, February 5, 9 a.m. to 10 a.m., open committee discussion, February 5, 10 a.m. to 5 p.m.; open public hearing, February 6, 9 a.m. to 10 a.m., open committee discussion, February 6, 10 a.m. to 5 p.m.; Max W. Talbott, Bureau of Medical Devices (HFK–460), Food and Drug Administration, 87557 Georgia Ave., Silver Spring, MD 20910, 301–427–7538.

General function of the Committee: The Committee reviews and evaluates available data on the safety and effectiveness of devices currently in use and makes recommendations for their regulation.

Agenda—Open public hearing: Interested persons are encouraged to present information pertinent to intraocular lenses and the intraocular lens clinical investigation (February 5) and on contact lenses and contact lens products (February 6). Those desiring to make formal presentations should notify the contact person by January 22, 1981, and submit a brief statement of the general nature of the evidence or arguments they wish to present, the names and addresses of proposed participants, references to any data to be relied on, and an indication of the approximate time required to make their comments.

Open committee discussion. The Section will conduct reviews of premarket approval applications of intrraocular lenses and will discuss other statistical/epidemiological questions pertaining to intraocular lenses (February 5) and will conduct reviews of premarket approval applications for contact lens products (February 6).

Applications for reimbursement. Must be received by January 26, 1981.

Board of Tea Experts

Date, time, and place: February 9, 10 a.m., Rm. 700, 850 Third Ave., Brooklyn, NY.

Type of meeting and contact person: Open public hearing, 10 a.m. to 11 a.m., open committee discussion, 11 a.m. to 4:30 p.m.; Robert H. Dick, Food and Drug Administration, 850 Third Ave., Brooklyn, NY, 11232, 212–965–5739.

General function of the Committee: The Board advises on establishment of uniform standards of purity, quality, and fitness for consumption of all teas imported into the United States pursuant to 21 U.S.C. 42.

Agenda—Open public hearing: Any interested persons may present data, information, or views, orally or in writing, on issues pending before the Board.

Open committee discussion: Discussion and selection of tea standards.

Applications for reimbursement: Must be received by January 28, 1981.

FDA public advisory committee meetings may have as many as four separable portions: (1) An open public hearing, (2) an open committee discussion, (3) a closed presentation of data, and (4) a closed committee deliberation. Every advisory committee meeting shall have an open public hearing portion. Whether or not it also includes any of the other three portions will depend upon the specific meeting involved. There are no closed portions for the meetings announced in this notice. The dates and times reserved for the open portions of each committee meeting are listed above.

The open public hearing portion or each meeting shall be at least 1 hour long unless public participation does not last that long. It is emphasized, however, that the 1 hour time limit for an open public hearing represents a minimum rather than a maximum time for public participation, and an open public hearing may last for whatever longer period the committee chairman determines will facilitate the committee's work.

Meetings of advisory committees shall be conducted, insofar as is practical, in accordance with the agenda published in this **Federal Register** notice. Changes in the agenda will be announced at the beginning of the open portion of a meeting.

Any interested person who wishes to be assured of the right to make an oral presentation at the open public hearing portion of a meeting shall inform the contact person listed above, either orally or in writing, prior to the meeting. Any person attending the hearing who does not in advance of the meeting request an opportunity to speak will be allowed to make an oral presentation at the hearing's conclusion, if time permits, at the chairman's discretion.

Persons interested in specific agenda items to be discussed in open session may ascertain from the contact person the approximate time of discussion.

A list of committee members and summary minutes of meetings may be requested from the Dockets Management Branch (formerly the Hearing Clerk's office) (HFA–305), Food and Drug Administration, Rm. 4–62, 5600 Fishers Lane, Rockville, MD 20857, between 9 a.m. and 4 p.m., Monday through Friday. The FDA regulations relating to public advisory committees may be found in 21 CFR Part 14.

Applications for reimbursement for participation in the meeting listed above should be sent to the Office of Consumer Affairs (HFE–88), Food and Drug Administration, 5600 Fishers Lane, Rockville, MD 20857, rather than to the Dockets Management Branch as prescribed in § 10.210 of the regulations (21 CFR 10.210). If you wish to submit an application or wish more information regarding the reimbursement program, please call 301–443–3170.

FDA has established expedited procedures for review of any application for reimbursement for participation in the meetings announded in this notice. The Office of Consumer Affairs, FDA, will file any application for reimbursement for participation in the meetings announced in this notice in the docket for this notice.

Dated: January 9, 1981.

William F. Randolph,

Acting Associate Commissioner for Regulatory Affairs.

[FR Doc. 81–1558 Filed 1–15–81; 8:45 am]

BILLING CODE 4110–03–M

[Docket No. 75N–0184; DESI 597, 3265, 10837, and 9489]

Certain Anticholinergics/ Antispasmodics in Combination With a Sedative, and Single-Entity Antispasmodics, in Conventional Dosage Form; Drug Efficacy Study Implementation; Notice of Opportunity for Hearing

AGENCY: Food and Drug Administration.

ACTION: Notice.

SUMMARY: This notice reclassifies certain anticholinergics or antispasmodics in combination with a sedative, and single-entity antispasmodics in conventional dosage form to lacking substantial evidence of effectiveness, proposes to withdraw approval of the new drug applications, and offers an opportunity for a hearing on the proposal.

DATES: Any request for hearing must be submitted on or before February 17, 1981. All data and information relied upon in support of any such request and any other comments must be submitted on or before March 17, 1981.

ADDRESSES: Communications in response to this notice should be identified with the Docket No. 75N–0184 and the reference number DESI 597, 3265, 10837, or 9489, as appropriate, and directed to the attention of the appropriate office named below.

Requests for hearing, supporting data, and other comments: Dockets Management Branch (HFA–305), Rm. 4–62, Food and Drug Administration, 5600 Fishers Lane, Rockville, MD 20857.

Requests for opinion of the applicability of this notice to a specific product: Division of Drug Labeling Compliance (HFD–310), Bureau of Drugs,

Food and Drug Administration, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: Suzanne O'Shea, Bureau of Drugs (HFD–32), Food and Drug Administration, 5600 Fishers Lane, Rockville, MD 20857, 301–443–3650.

SUPPLEMENTARY INFORMATION: In notices published in the **Federal Register** of June 22, 1971 (36 FR 11875) (DESI 10837), July 27, 1972 (37 FR 15026) (DESI 597), September 18, 1973 (38 FR 26138) (DESI 9489), and November 11, 1975 (40 FR 52649) (DESI 3265), the Food and Drug Administration (FDA) classified anticholinergic or antispasmodic drugs in combination with a sedative, and antispasmodic drugs alone, as possibly effective for various gastrointestinal diseases. The indications lacking substantial evidence of effectiveness were specifically named in the notices. All other indications were classified as possibly effective. The possibly effective indications are set forth below:

DESI 10837

1. Tridihexethyl chloride and meprobamate (NDA 11–043 Milpath-200, Milpath-400, and NDA 10–837 Pathibamate-200 and Pathibamate-400): As adjunctive therapy in peptic ulcer and in the irratable bowel syndrome; functional diarrhea; drug induced diarrhea; ulcerative colitis; urinary bladder spasm; and urethral spasm.

DESI 597

1. Mepenzolate bromide and phenobarbital (NDA 10–679 Cantil with Phenobarbital Tablets): Motility disorders of the lower GI tract; acute enterocolitis; mild chronic ulcerative colitis; rectospasm; diverticulitis; post-gastrectomy diarrhea; diarrhea associated with diverticulitis.

2. Oxyphencyclimine hydrochloride and phenobarbital (NDA 13–515 Daricon PB): Peptic ulcers; hiatal hernia; functional bowel syndrome; chronic ulcerative colitis; bladder spasm with or without infection; urethral spasm.

3. Propantheline bromide and phenobarbital (NDA 9–014 Pro-Banthine with Phenobarbital Tablets): peptic ulcer; urinary bladder spasm; functional gastrointestinal disturbances; acute and chronic pancreatitis; illeoanal anastomosis; hyperhidrosis; ureteral spasm; infantile colic; useful ileostomies.

4. Glycopyrrolate and phenobarbital (NDA 12–950 Robinul PH Tablets and Robinul PH Forte): As adjunctive therapy for gastric and duodenal ulcer; esophagitis; hiatal hernia; spastic and irritable colon; functional bowel distress; splenic flexure syndrome; ileocolitis; diverticulitis; some neurogenic disturbances; acute enteritis; diarrhea; and intestinal viral infections.

5. Piperidolate hydrochloride and phenobarbital (NDA 8–907 Dactil with Phenobarbital): functional gastric disorders; post-gastrectomy syndrome.

6. Dicyclomine hydrochloride and phenobarbital (NDA 7–409 Bentyl with Phenobarbital): symptomatic control of functional gastrointestinal disorders; chronic irritable bowel; spastic constipation; mucous colitis; spastic colitis; biliary dyskenesia; gastrointestinal spasm secondary to organic disease.

DESI 9489

1. Tridihexethyl cholride and phenobarbital (NDA 9–489 Pathilon with Phenobarbital): peptic ulcer; gastric hyperacidity; gastric hypermotility; spastic and irritable colon; functional diarrhea; pylorospasm; gastritis where symptoms are due to hyperacidity.

DESI 3265

1. Piperidolate hydrochloride (NDA 8–907 Dactil Tablets): Irritable bowel syndrome and acute enterocolitis.

In a notice published in the **Federal Register** of November 11, 1975 (40 FR 52644) anticholinergic/sedative or antispasmodic/sedative combinations and antispasmodics alone were temporarily exempted from the time limits established for implementing certain phases of the Drug Efficacy Study. In order to qualify for the exemption manufacturers of anticholinergic/sedative combinations were required to undertake studies of the products as adjunctive therapy in the treatment of peptic ulcer, or in the treatment of the irritable bowel syndrome or acute enterocolitis. Manufacturers of antispasmodic/sedative combinations or antispasmodics alone were required to perform studies of their products in treating the irritable bowel syndrome or acute enterocolitis. The notice set forth a timetable for submitting protocols and for starting, reporting on, and completing the studies.

In a notice published in the **Federal Register** of June 20, 1978 (43 FR 26490), FDA extended the deadline for completion of the studies for 1 year. The notice also stated that abbreviated new drug applications for identical products would be conditionally approved if certain conditions were met. Among other things, it was required that the manufacturers of conditionally approved products conduct clinical studies. However, no study would be necessary if another manufacturer was conducting a study of a drug product containing the same ingredients to which the same efficacy conclusions would apply. The conditionally approved products have the same legal status as products initially covered by the exemption. The notices setting forth the exemption also apply to certain related drugs that are not the subject of an approved new drug application or a conditionally approved abbreviated new drug application.

No data were submitted to support the indications found by FDA to lack substantial evidence of effectiveness. The data submitted to comply with the exemption have been reviewed. Several studies require detailed analysis and will be the subject of a future **Federal Register** notice. The drug products affected by those studies are not listed above. However, many of the studies were seriously incomplete, and did not show that each component of the combination products makes a significant contribution to the effectiveness of the product. Analyses of these studies follow.

1. Studies were completed which investigated the effectiveness of Bentyl with Phenobarbital Tablets (Merrell-National Laboratories), Dactil with Phenobarbital Tablets (Merrell-National Laboratories), and Pro-Banthine with Phenobarbital Tablets (G. D. Searle & Co.) in treating the irritable bowel syndrome. However, none of the studies showed that each of the components makes a significant contribution to the effectiveness of the product. 21 CFR 300.50(a). In most cases, there was a trend toward improvement of the conditions regardless of the treatment. The sponsors acknowledge the lack of a showing of the effectiveness of their products.

2. Pfizer submitted the results of a completed double-blind, placebo controlled study on the effectiveness of Daricon PB Tablets as adjunctive therapy in duodenal ulcer. The patients took antacids concomitantly, after meals and before bed as needed.

The study does not show that each component makes a significant contribution to the effectiveness of Daricon PB. 21 CFR 300.50(a). The patients were evaluated at the final global rating as worse or unchanged, improved, or symptom free. In the patient and investigator rating there is very little difference in the proportions of "improved" and "symptom free" patients. In addition, when the "improved" and "symptom free" groups are combined, there is little difference between any of the treatment groups.

The sponsor claims that patients receiving Daricon PB consumed the least amount of antacids during the study except during the fourth week when

placebo patients consumed the least antacids. Placebo patients consumed less antacids than phenobarbital and plain Daricon patients, except for the fourth week when the placebo patients consumed more than phenobarbital patients. Throughout the study Daricon patients consumed the most antacids.

Pfizer claims that the Daricon PB group had the lowest number of symptoms per patient per week for four of seven symptoms. However, the sponsor also stated that "* * * the small patient population large within-group variation prevented statistical significance."

3. Robins submitted a status report on a double-blind, parallel investigation of Robinul PH in treating functional upper and lower gastrointestinal disorders. Robins claims that the data suggest that Robinul PH is helpful in alleviating symptoms and that the contribution of each component is evident.

The study is not adequate and well-controlled. 21 CFR 314.111(a)(5). The patients receiving Robinul PH had the greatest proportion of liquid or soft stools, and placebo patients had the most variable stools. Thus, it is not clear that the subjects were assigned to test groups in a way that minimizes bias. 21 CFR 314.111(a)(5)(*a*)(*2*)(*ii*). The test and control groups are not comparable because the Robinul PH used in the study contains 1.10 milligrams of glycopyrrolate per tablet, but the control group was given only 1.0 milligram of glycopyrrolate per tablet. In addition, the sponsor does not specify the patients who took concomitant drugs or those who had concomitant diseases, nor is there any explanation of the difference between "evaluable patients" and "patients completing the study." 21 CFR 314.111(a)(5)(ii)(*a*)(*2*)(*iii*).

Robins claims that Robinul PH is superior in normalizing stools after the first week. However, the patient diaries do not evaluate bowel habits. It is not clear, therefore, that adequate steps were taken to minimize bias in measuring responses. 21 CFR 314.111(a)(5)(ii)(*a*)(*3*).

In addition, the contribution of each component to the combination has not been demonstrated. 21 CFR 300.50(a). Although Robins claims that Robinul PH is superior in stool normalization, the physicians rating charts indicate that all drugs were equally effective. Robins claims that Robinul PH is effective treatment for night pain. However, Robinul (glycopyrrolate) alone and phenobarbital alone are as effective as Robinul PH in the treatment of night pain after the second week. For day pain, Robinul is as effective as Robinul PH. For duration of pain, there is little difference Robinul and Robinul PH. All treatments were shown to be equally effective in the global evaluation. The sponsor claims that the study demonstrates the clinical superiority of Robinul PH, but acknowledges that no statistical superiority has been shown.

No study was submitted for Robinul PH Forte.

4. Reed and Carnrick submitted data from a partially completed study of the effectiveness of Sidonna Tablets in treating the irritable bowel syndrome. The sponsor was able to study less than half the intended number of cases, but the specific number is not defined. The study is not adequate and well-controlled, nor do the results of the study demonstrate that each component makes a significant contribution to the combination product. 21 CFR 314.111(a)(5); 300.50(a).

The study's protocol was not submitted for review as required by the November 11, 1975 notice. The dose is not given for any of the test drugs used. Thus, it is not clear that the test drugs were standardized as required by 21 CFR 314.111(a)(5)(ii)(*b*). Several patients should not have been admitted to the study: those with depression, character disorders, migraines, diverticulosis, and those receiving antidiarrheal drugs, ampicillin, and Bentyl. 21 CFR 314.111(a)(5)(ii)(*a*)(*2*)(*iii*). The sponsor analyzed only the physicians' ratings because this rating was based in part on the patients' daily logs. The patients' daily logs should have been analyzed separately from the physicians' rating in order to minimize bias. 21 CFR 314.111(a)(5)(ii)(*a*)(*3*).

The sponsor found no statistical evidence of the superiority of Sidonna. The sponsor found no significant difference among treatment groups in abdominal pain, abdominal distention, and borborygmi. Sidonna and placebo were equally effective in treating mucus in stool. Significant differences exist at 2 weeks, but not at 4 weeks, in alleviation of diarrhea. However, the greatest improvement was in the simethicone and placebo groups and poorest in the Sidonna group. In the global assessment, there were no significant differences among the treatment groups at 2 weeks or 4 weeks. The highest percentage of improved patients occurred in the placebo group. Thus it has not been shown that each component makes a significant contribution to the combination product. 21 CFR 300.50(a).

5. Data submitted for six irritable bowel syndrome studies are seriously incomplete. The data obtained from these studies are inadequate to draw any conclusions on the effectiveness of the product. Merrell-National terminated a study of Dactil Tablets because only one patient entered the study. Only 19 patients completed the study of Endo Laboratories' Valpin 50 PB tablets. Lederle Laboratories studied only 22 patients in investigating Pathilon with Phenobarbital Tablets. Twenty-three patients completed Merrell-National's study of Cantil with Phenobarbital Tablets. In a joint study of Lederle's Pathibamate 200 and Wallace's Milpath 200, approximately 60 patients were analyzable. In a joint study of Lederle's Pathibamate-400 and Wallace's Milpath-400, 129 patients met protocol requirements and completed the study. The sponsors had planned on studying 500 patients. All sponsors acknowledge that the data submitted are insufficient to draw any conclusions on the effectiveness of their products.

Most of the above sponsors have requested additional time to study additional patients, as did Beecham Laboratories for Daricon PB Tablets, Robins for Robinul PH Tablets, Merrell-National for Bentyl with Phenobarbital, and Reed and Carnrick for Sidonna Tablets. The deadline for completion of studies has already been extended for 1 year. The Director of the Bureau of Drugs believes that adequate time has been allowed to investigate the effectiveness of these products. Therefore, requests for additional time in which to submit data are denied.

6. In addition to the incomplete study on irritable bowel syndrome (above), Merrell-National submitted a statement, "The Rationale for Cantil with PB in Peptic Ulcer." It claims that Cantil is currently effective for peptic ulcer, that the management of peptic ulcer is often complicated by anxiety, and that phenobarbital is an effective anti-anxiety, sedative agent. Therefore, Merrell-National asserts that Cantil with PB should be allowed to remain on the market for the treatment of peptic ulcer. No data were submitted on any studies for the use of Cantil with PB Tablets in peptic ulcer. Substantial evidence of effectiveness must be demonstrated by adequate and well-controlled clinical investigations. 21 U.S.C. 355; 21 CFR 314.111(a)(5). Clearly, this submission does not meet the statutory standard.

7. Roche Laboratories did not submit data from a clinical study in support of Librax. Instead, it submitted data from an ongoing study of the prevalence of emotional factors in association with certain gastrointestinal disorders. To date, 312 patients have been studied. Roche claims that patients with gastrointestinal disorders show higher emotional stress than other types of

patients, or persons with no medical disorders.

Roche also submitted the results of a medical marketing summary undertaken in August and September 1974 in which physicians were asked to indicate their preference concerning the use of anticholinergic/sedative drugs in various diseases. It also submitted the results of pharmacology studies in mice, from which it claims that both the tranquilizer and anticholinergic components are effective in protecting against stress-induced gastric mucosal erosion.

Clearly, none of these submissions fulfill the requirement that substantial evidence of effectiveness be shown by adequate and well-controlled studies. 21 U.S.C. 355; 21 CFR 314.111(a)(5). Moreover, because the study of emotional factors in gastrointestinal disorders is incomplete, the amount of reliance appropriately placed on that study is in question. The Director has already granted one time extension for the study of these drugs. Because adequate time has already been provided, no further extension is warranted.

No person has yet provided data that would support upgrading any of these products to effective. In addition, the Director believes that the time allowed for investigating the effectiveness of these products has been adequate for the design and conduct of acceptable studies. Accordingly, the temporary exemption granted by the November 11, 1975 and June 20, 1978 notices, as they pertain to these drugs, is revoked in a notice appearing elsewhere in this issue of the **Federal Register**.

Notice of Opportunity for Hearing

On the basis of all of the data and information available to him, the Director of the Bureau of Drugs is unaware of any adequate and well-controlled clinical investigation, conducted by experts qualified by scientific training and experience, meeting the requirements of section 505 of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 355) and 21 CFR 314.111(a)(5) and, for combination products, 21 CFR 300.50, demonstrating the effectiveness of the drugs.

Therefore, notice is given to the holders of the following new drug applications and conditionally approved abbreviated new drug applications, to manufacturers of the following related products, and to all other interested persons that the Director of the Bureau of Drugs proposes to issue an order under section 505(e) of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 355(e)), withdrawing approval of the new drug applications and all amendments and supplements thereto on the ground that new information before him with respect to the drug products, evaluated together with the evidence available to him when the applications were approved, shows there is a lack of substantial evidence that the drug products will have the effect they purport or are represented to have under the conditions of use prescribed, recommended, or suggested in the labeling.

DESI 597

1. NDA 7-409; Bentyl with Phenobarbital Capsules containing dicyclomine hydrochloride 10 milligrams and phenobarbital 15 milligrams, Merrell-National Laboratories, Division of Richardson-Merrel, Inc., 110 E. Amity Rd., Cincinnati, OH 45215.

2. NDA 8-907; Dactil with Phenobarbital tablets containing piperidolate hydrochloride 50 milligrams and phenobarbital 16 milligrams; Merrell-National Laboratories.

3. NDA 12-950; Robinul PH Tablets and Robinul PH Forte containing glycopyrrolate 1 milligram and phenobarbital 16 milligrams, and glycopyrrolate 2 milligrams and phenobarbital 16 milligrams; A. H. Robins Co., 1407 Cummings Dr., Richmond, VA 23220.

4. NDA 10-679; Cantil with Phenobarbital Tablets containing mepenzolate bromide 25 milligrams and phenobarbital 16 milligrams; Merrell-National Laboratories.

5. NDA 13-515; Daricon PB Tablets containing oxyphencyclimine hydrochloride 5 milligrams and phenobarbital 15 milligrams; Pfizer Laboratories, Division of Pfizer, Inc., 235 E. 42d St., New York, NY 10017.

6. NDA 9-014; Pro-Banthine with Phenobarbital Tablets containing propantheline bromide 15 milligrams and phenobarbital 15 milligrams; G. D. Searle & Co., P.O. Box 5110, Chicago, IL 60680.

DESI 3285

1. NDA 8-907; Dactil Tablets containing piperidolate hydrochloride 50 milligrams; Merrell-National Laboratories.

DESI 9489

1. NDA 9-489; Pathilon with Phenobarbital Tablets containing tridihexethyl chloride 25 milligrams and phenobarbital 15 milligrams; Lederle Laboratories Division, American Cyanimid Co., Pearl River, NY 10965.

DESI 10837

1. NDA 10-837; Pathibamate-200 Tablets and Pathibamate-400 Tablets containing tridihexethyl chloride 25 milligrams and meprobamate 200, and tridihexethyl chloride 25 milligrams and meprobamate 400 milligrams; Lederle Laboratories.

2. NDA 11-043; Milpath-200 Tablets and Milpath-400 Tablets containing tridihexethyl chloride 25 milligrams and meprobamate 200, and tridihexethyl chloride 25 milligrams and meprobamate 400 milligrams; Wallace Laboratories, Division of Carter-Wallace, Inc., Half-Acre Rd., Cranberry, NJ 08512.

The following products, not reviewed by NAS/NRC, were subject to the exemption notices of November 11, 1975, and June 20, 1978: 1. NDA 12-750; Librax Capsules containing clidinium bromide 2.5 milligrams and chlordiazepoxide 5 milligrams; Roche Laboratories, Division of Hoffman-LaRoche, Inc., Nutley, NJ 07110.

2. NDA 13-430; Valpin 50 PB Tablets and Valpin PB Tablets containing anisotropine methylbromide 50 milligrams and phenobarbital 15 milligrams, and anisotropine methylbromide 15 milligrams and phenobarbital 15 milligrams; Endo Laboratories, 1000 Stewart Ave., Garden City, NY 11530.

3. ANDA 86-281; Meprobamate with Tridihexethyl Chloride Tablets containing 200 milligrams meprobamate and 25 milligrams tridihexethyl chloride; Chelsea Laboratories, Inc., 428 Doughty Blvd., Inwood, NY 11696.

4. ANDA 86-526; Meprobamate with Tridihexethyl Chloride Tablets containing 400 milligrams meprobamate and 25 milligrams tridihexethyl chloride; Chelsea Laboratories, Inc.

5. ANDA 86-791; T.C.M. 200 Tablets containing 200 milligrams meprobamate and 25 milligrams tridihexethyl chloride; Zenith Laboratories, Inc., 140 Legrand Ave., Northvale, NJ 07647.

6. ANDA 86-792; T.C.M. 400 Tablets containing 400 milligrams meprobamate and 25 milligrams tridihexethyl chloride; Zenith Laboratories, Inc.

The following products are not the subject of an approved new drug application. The NDA number listed is for identification purposes and is the NDA number of the manufacturer's original product to which the product listed below is related.

1. NDA 9-014; Probital Tablets containing propantheline bromide 7.5 milligrams, and phenobarbital 15 milligrams; G. D. Searle & Co.

2. Ref. No. 90-006 (No NDA); Sidonna Tablets containing simethicone 25 milligrams, butabarbital sodium 16

milligrams, hyoscyamine sulfate 0.1037 milligram, scopolamine hydrobromide 0.0065 milligram and atropine sulfate 0.0194 milligram; Reed and Carnrick, 30 Boright Ave., Kenilworth, NJ 07033.

In addition to the holders of the new drug applications specifically named above, this notice of opportunity for hearing applies to all persons who manufacture or distribute a drug product not the subject of an approved new drug application, that is listed above or that is identical, related, or similar to a drug product named above, as defined in 21 CFR 310.6 It is the responsibility of every drug manufacturer or distributor to review this notice of opportunity for hearing to determine whether it covers any drug products that the person manufactures or distributes. An opinion of the applicability of this notice to a specific drug product may be obtained by writing to the Division of Drug Labeling Compliance (address given above).

In addition to the grounds for the proposed withdrawal of approval stated above, this notice of opportunity for hearing encompasses all issues relating to the legal status of the drug products subject to it (including identical, related, or similar drug products as defined in 21 CFR 310.6) e.g., any contention that a product is not a new drug because it is generally recognized as safe and effective within the meaning of section 201(p) of the act or because it is exempt from part or all of the new drug provisions of the act under the exemption for products marketed before June 25, 1938, contained in section 201(p) of the act, or under section 107(c) of the Drug Amendments of 1962 or for any other reason.

In accordance with section 505 of the act (21 U.S.C. 355) and the regulations promulgated thereunder (21 CFR Parts 310, 314), the applicants and all other persons subject to this notice under 21 CFR 310.6 are hereby given an opportunity for a hearing to show why approval of the new drug application(s) should not be withdrawn and an opportunity to raise, for administrative determination, all issues relating to the legal status of a drug product named above and of all identical, related or similar drug products.

An applicant or any other person subject to this notice under 21 CFR 310.6 who decides to seek a hearing, shall file (1) on or before February 17, 1981, a written notice of appearance and request for hearing, and (2) on or before March 17, 1981, the data, information, and analyses relied on to justify a hearing, as specified in 21 CFR 314.200. Any other interested person may also submit comments on this notice. The procedures and requirments governing this notice of opportunity for hearing, a notice of appearance and request for hearing, a submission of data, information, and analyses to justify a hearing, other comments, and a grant or denial of hearing, are contained in 21 CFR 314.200.

The failure of an applicant or any other persons subject to this notice under 21 CFR 310.6 to file time written appearance and request for hearing as required by 21 CFR 314.200 constitutes an election by the person not to make use of the opportunity for a hearing concerning the action proposed with respect to the product and consititues a waiver of any contentions concerning the legal status of any such drug product. Any such drug product may not thereafter lawfully be marketed, and the Food and Drug Administration will initiate appropriate regulatory action to remove such drug products from the market. Any new drug product marketed without an approved NDA is subject to regulatory action at any time.

A request for a hearing may not rest upon mere allegations or denials, but must set forth specific facts showing that there is a genuine and substantial issue of fact that requires a hearing. If it conclusively appears from the face of data, information, and factual analyses in the request for the hearing that there is no genuine and substantial issue of fact which precludes the withdrawal of approval of the application, or when a request for hearing is not made in the required format or with the required analyses, the Commissioner of Food and Drugs will enter summary judgment against the person(s) who requests the hearing, making findings and conclusions, denying a hearing.

All submissions under this notice must be filed in quintuplicate. Such submissions except for data and information prohibited from public disclosure under 21 U.S.C. 331(j) or 18 U.S.C. 1905, may be seen in the Dockets Management Branch between 9 a.m. and 4 p.m., Monday through Friday.

(Sec. 505, 52 Stat. 1052–1053, as amended (21 U.S.C. 355)), and under the authority delegated to the Director of the Bureau of Drugs (21 CFR 5.82)

Dated: December 24, 1980.

J. Richard Crout,

Director, Bureau of Drugs.

BILLING CODE 4110-03-M

[Docket No. 75N-0184; DESI Nos. 597, 3265, 9489 and 10837]

Certain Anticholinergics or Antispasmodics in Combination With a Sedative, and Single-Entity Antispasmodics, in Conventional Dosage Form; Drug Efficacy Study Implementation; Revocation of Exemption

AGENCY: Food and Drug Administration.

ACTION: Notice.

SUMMARY: This notice revokes the temporary exemption for continued marketing of certain anticholinergics or antispasmodics in combination with a sedative, or single-entity antispasmodics. Under the exemption, the drugs have been allowed to remain on the market for continued study beyond the time limit scheduled for implementation of the Drug Efficacy Study.

EFFECTIVE DATE: January 16, 1981.

FOR FURTHER INFORMATION CONTACT: Suzanne O'Shea, Bureau of Drugs (HFD-32), Food and Drug Administration, 5600 Fishers Lane, Rockville, MD 20857, 301-443-3650.

SUPPLEMENTARY INFORMATION: In notices published in the **Federal Register** of June 22, 1971 (36 FR 11875) (DESI 10837), July 27, 1972 (37 FR 15026) (DESI 597), September 18, 1973 (38 FR 26138) (DESI 9489), and November 11, 1975 (40 FR 52649) (DESI 3265), the Food and Drug Administration (FDA) classified anticholinergic or antispasmodic drugs in combination with a sedative, and antispasmodic drugs alone, as possibly effective for various gastrointestinal diseases. In a notice published in the **Federal Register** of November 11, 1975 (40 FR 52644), conventional dosage forms of these products were permitted to remain in the market pending completion of clinical studies testing their effectiveness in treating gastrointestinal disease. That notice established a timetable for submission of protocols, for beginning studies, and for completion of the studies. In a notice published in the **Federal Register** of June 20, 1978 (43 FR 26490), the deadline for completion of the studies was extended for 1 year. The June 20, 1978 notice required abbreviated new drug applications for duplicative products covered by the exemption and stated that conditionally approved abbreviated new drug applications have the same legal status as "deemed approved" applications reviewed in the Drug Efficacy Study.

The data received for several completed studies are undergoing detailed FDA analysis. The drugs used

in these studies will be the subject of a future Federal Register notice. However, data submitted in support of the drug products listed below are seriously incomplete and, for the combination products, do not show that each component of the combination product makes a significant contribution to its effectiveness. Many sponsors have requested time extensions beyond the final submission deadlines. FDA believes that adequate time has been allowed to investigate the effectiveness of these products, and that no further time extension is warranted.

In a notice published elsewhere in this issue of the Federal Register, the Director of the Bureau of Drugs reclassifies the possibly effective indications to lacking substantial evidence of effectiveness and offers an opportunity for a hearing. Because the time period for final reports has elapsed, these drug products are no longer in compliance with the requirements of the temporary exemption. Therefore, the temporary exemption granted in the November 11, 1975 and June 20, 1978 notices is hereby revoked for the following products in the Drug Efficacy Study or otherwise covered by the exemption, and all identical, similar, and related products not the subject of an approved or conditionally approved new drug application.

DESI 597

1. NDA 7–409; Bentyl with Phenobarbital Capsules containing dicyclamine hydrochloride 10 milligrams and phenobarbital 15 milligrams, Merrell-National Laboratories, Division of Richardson-Merrell, Inc., 110 E. Amity Rd., Cincinnati, OH 45215.

BILLING CODE 4110-03-M

[Docket No. 80F-0499]

Ciba-Geigy Corp.; Filing of Food Additive Petition

AGENCY: Food and Drug Administration.

ACTION: Notice.

SUMMARY: The Ciba-Geigy Corp. has filed a petition proposing that the food additive regulations be amended to provide for the use of 1,2-bis(3,5,di-*tert*-butyl-4-hydroxyhydrocinnamoyl) hydrazine as a component of adhesives in articles intended for food-contact use.

FOR FURTHER INFORMATION CONTACT: Julius Smith, Bureau of Foods (HFF–334), Food and Drug Administration, 200 C St. SW., Washington, DC 20204, 202–472–5690.

SUPPLEMENTARY INFORMATION: Under the Federal Food, Drug, and Cosmetic Act (secs. 201(s), 409, 72 Stat. 1784–1788 as amended (21 U.S.C. 321(s), 348)), notice is given that a petition (FAP OB3487) has been filed by Ciba-Geigy Corp., Ardsley, NY 10502, proposing that § 175.105 *Adhesives* (21 CFR 175.105) be amended to provide for the safe use of 1,2-bis(3,5-di-*tert*-butyl-4-hydroxyhydrocinnamoyl)hydrazine as a component of adhesives in articles intended for food-contact use.

The agency has carefully considered the potential environmental effects of this action and has concluded that the action will not have a significant impact on the human environment and that an environmental impact statement is not

required. The agency's finding of no significant impact and its environmental assessment may be seen in the Dockets Management Branch (formerly the Hearing Clerk's office) (HFA–305), Food and Drug Administration, Rm. 4–62, 5600 Fishers Lane, Rockville, MD 20857, between 9 a.m. and 4 p.m., Monday through Friday.

Dated: December 24, 1980.

BILLING CODE 4110-03-M

[Docket No. 80F-0482]

General Foods Corp.; Filing of Food Additive Petition

AGENCY: Food and Drug Administration.

ACTION: Notice.

SUMMARY: The Food and Drug Administration announces that the General Foods Corp. has filed a petition proposing that the food additive regulations be amended to provide for the safe use of ethyl acetate as a solvent for the decaffeination of coffee.

FOR FURTHER INFORMATION CONTACT: Richard C. Kraska, Bureau of Foods (HFF–334), Food and Drug Administration, 200 C St. SW., Washington, DC 20204, 202–472–5690.

SUPPLEMENTARY INFORMATION: Under the Federal Food, Drug, and Cosmetic Act (sec. 409(b)(5), 72 Stat. 1786 (21 U.S.C. 348(b)(5))), notice is given that a petition (FAP 8A3353) has been filed by the General Foods Corp., White Plains, NY 10625, proposing that Part 173—Secondary Direct Food Additives Permitted in Food for Human Consumption (21 CFR Part 173) be amended to provide for the safe use of ethyl acetate as a solvent for the decaffeination of coffee.

The environmental impact analysis report and other relevant material have been reviewed, and it has been determined that the proposed use of the additive will not have a significant environemental impact. Copies of the environmental analysis report and the environmental assessment report may be seen in the Dockets Management Branch (formerly the Hearing Clerk's office) (HFA–305), Food and Drug Administration, Rm. 4–62, 5600 Fishers Lane, Rockville, MD 20857, between 9 a.m. and 4 p.m., Monday through Friday.

Dated: December 29, 1980.

BILLING CODE 4110-03-M

[Docket No. 80N-0453; DESI 6550]

Methoxyphenamine Hydrochloride; Withdrawal of Approval of New Drug Application

AGENCY: Food and Drug Administration (FDA).

ACTION: Notice.

SUMMARY: This notice withdraws approval of those parts of a new drug application (NDA 6–550) pertaining to Orthoxine Hydrochloride Tablets and Syrup, each containing methoxyphenamine hydrochloride. The basis of the withdrawal is the lack of substantial evidence that the drug products are effective. The drug products have been used in treating bronchial asthma and certain allegic conditions.

EFFECTIVE DATE: January 26, 1981.

ADDRESS: Requests for an opinion of the applicability of this notice to a specific product should be identified with the reference number DESI 6550 and directed to the Division of Drug Labeling Compliance (HFD–310), Bureau of Drugs, Food and Drug Administration, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: Herbert Gerstenzang, Bureau of Drugs (HFD–32), Food and Drug Administration, 5600 Fishers Lane, Rockville, MD 20857, 301–443–3650.

SUPPLEMENTARY INFORMATION: In notice of opportunity for hearing published in the **Federal Register** of August 21, 1973 (38 FR 22501), (Docket No. FDC–D–650 (now Docket No. 80N–0453)), the Food and Drug Administration proposed to issue an order withdrawing approval of pertinent parts of the following new drug application on the ground that there is a lack of substantial evidence that the drug products are effective for their labeled indications.

NDA 6–550; those parts of the NDA pertaining to Orthoxine Hydrochloride Tablets and Syrup, containing methoxyphenamine hydrochloride; The Upjohn Co., 7171 Portage Rd., Kalamazoo, MI 49002.

Neither the holder of the application nor any other person filed a written appearance of election as provided by the notice. The failure to file such an appearance constitutes election by such persons not to avail themselves of the opportunity for a hearing.

Any drug product that is identical, related, or similar to a drug product named above and is not the subject of an approved new drug application is covered by the new drug application reviewed and is subject to this notice (21 CFR 310.6). Any person who wishes to determine whether a specific product is covered by this notice should write to the Division of Drug Labeling Compliance (address given above).

The Director of the Bureau of Drugs, under the Federal Food, Drug, and Cosmetic Act (sec. 505, 52 Stat. 1052–1053, as amended (21 U.S.C. 355)), and under authority delegated to him (21 CFR 5.82), finds that, on the basis of new information before him with respect to the drug products, evaluated together with the evidence available to him when the application was approved, there is a lack of substantial evidence that the drug products will have the effect they purport or are represented to have under the conditions of use prescribed, recommended, or suggested in the labeling.

Therefore, pursuant to the foregoing finding, approval of those parts of NDA 6–550 providing for the drug products named above and all amendments and supplements thereto is withdrawn effective January 26, 1981.

Shipment in interstate commerce of the above products or of any identical, related, or similar product that is not the subject of an approved new drug application will then be unlawful.

Dated: December 24, 1980.

J. Richard Crout,

Director, Bureau of Drugs.

BILLING CODE 4110-03-M

Health Care Financing Administration

Medicare Program; Reimbursement for Costs Incurred in Relation to Union Activities

AGENCY: Health Care Financing Administration (HCFA), HHS.

ACTION: Final Notice.

SUMMARY: This notice sets forth HCFA's response to its previous notice published in the **Federal Register** on October 21, 1980. That notice restated HCFA's policy with respect to the allowability of provider costs incurred in certain union activities and requested public comment on our policy.

As a result of our reexamination of this policy, following that publication, we have decided to retain the policy but to provide further clarification and examples in the *Provider Reimbursement Manual.*

EFFECTIVE DATE: January 16, 1981.

FOR FURTHER INFORMATION CONTACT: William Goeller, 301–597–1802.

SUPPLEMENTARY INFORMATION:

Background

The Medicare provisions of the Social Security Act specify that health care providers participating in the Medicare program will be reimbursed for the reasonable cost of furnishing covered services to Medicare beneficiaries. The statute further provides that determinations of "reasonable cost" will be made in accordance with Medicare regulations, which establish the methods of calculating costs and the items to be included in the calculations (42 U.S.C. 1396x(v)(1)(A)).

One of the provisions of these regulations is the general requirement that the determination of reasonable cost must be based on costs related to the delivery of health care to Medicare beneficiaries (42 CFR 405.451). HCFA has interpreted this provision to preclude reimbursement for costs incurred by providers for the purpose of persuading their employees not to form a collective bargaining unit or not to join a trade union. HCFA believes that such costs are clearly unrelated to patient care, and therefore, are not allowable under the statute and regulations. However, HCFA also believes that the costs incured to carry out the providers' obligation under a collective bargaining agreement are directly related to its delivery of appropriate health care and therefore are reimbursable under Medicare. This policy statement is currently contained in the *Provider Reimbursement Manual*, section 2180, and represents HCFA's longstanding interpretation of the requirements contained in the statute and regulations.

We believe the situations above represent two widely separate points of a spectrum of activities related to union activities and personnel management. In recent months, a number of questions arose on the application of our general policy to factual situations on the spectrum between these two points. As a result, we decided to seek the viewpoints and suggestions of interested members of the public regarding these and other situations. Moreover, we have been requested by providers and hospital associations to review our policy statement further. Accordingly, we published a Notice of Policy Interpretation in the **Federal Register** (45 FR 69561) on October 21, 1980, setting forth our interpretation and requesting comments to see whether changes or further development of existing policies are approprate.

Summary of Comments

The following are the major comments received from numerous hospitals and health facilities, as well as related provider and trade associations, in response to this notice.

1. Several commentors indicated that this policy precludes management's right and responsibility to communicate pertinent facts to employees so that informed choices can be made regarding unionization and cited that the present interpretation constitutes unreasonable interference with a provider's right to conduct business in accordance with its best business judgment. Many providers further stated that since they are not familiar with the details of labor law they often have to obtain advice and assistance from attorneys and consultants.

It was never the intent of this policy to interfere with a provider's prerogative to keep employees informed of issues and to keep the lines of communication open between an employer and the employees. A legitimate expression of facts and opinions involving both sides of an issue is not precluded by this policy. We recognize that consultants and/or attorneys retained by a provider may be needed at times to familiarize supervisors and employees with labor law. Costs incurred for such activities are usually considered allowable costs. On the other hand, activities by a consultant that are designed to persuade or influence employees not to join a union are not related to patient care and are, therefore, not included in the determination of allowable cost.

2. A number of providers argued that, in order to fully inform employees and maintain a smooth functioning environment, the costs of persuading employees not to join a union are related to patient care. These providers indicated that such activity eliminates potential discord between the employer and employees which may have an adverse effect on the facility environment and its ability to insure quality care to patients. Many providers stated that the similarities between collective bargaining and activities to persuade employees not to unionize are such that both situations are parallel in nature and are logically related to patient care.

Although arguments could be made on both sides of this question as to whether such provider costs do or do not contribute to a more effective working environment, the allowability under Medicare of costs incurred to persuade or influence employees on unionization hinges on whether such expenses are related to the health care of patients. We believe a clear distinction can be drawn between the costs incurred to persuade employees not to unionize and the collective bargaining process. Provider negotiations with provider employees with respect to wages, benefits and conditions of employment are clearly necessary to delivery of patient care whether conducted through individual or collective bargaining. The same is not true for activities designed to influence employees with respect to whether or not to conduct their negotiations with the provider on an individual or a collective basis, since either basis can be and is used in the provision of patient care.

3. Several comments indicated that our policy with regard to costs related to union activities is contrary to cost containment efforts since it precludes providers from obtaining services and supplies as cheaply as can be prudently purchased and, therefore, may result in an increase in expenses for operating a facility. They indicated that costs incurred in persuading employees not to form collective bargaining units will save patients and third party payers much more than what is spent to avoid unionization. Providers stated the Medicare's unwillingness to recognize these items as allowable expenses will result in shifting the costs of informing their employees entirely to the private sector and result in raising overall health care costs.

The argument that persuading employees not to join unions would be cost effective seems to rest on a belief that employees are less effective in bargaining for wages, benefits and conditions when they bargain individually than they are when they bargain collectively. While providers are expected to bargain effectively so that they pay no more than the going rate for any goods or services they purchase, we do not believe that this obligation would convert costs incurred to influence suppliers of goods and services on their method of organizing to costs related to patient care.

The fact that providers may impose costs unrelated to patient care on other payers is not relevant to the allowability of such costs under the Medicare law.

4. Several commenters suggested that our present policy violates neutrality and unfairly discriminates against providers who want to remain nonunionized.

It is not our intent, nor do we have the authority, to interfere with a provider's operating and management dcisions. In promulgating this policy, we do not intend to deny or diminish the rights of provider management to foster employer-employee relationships that

may or may not be pro-union. Our policy is intended to insure that only costs related to patient care are reimbursed under the Medicare program.

5. A number of commenters state that, since the IRS specifically recognizes the cost of persuasion of employees as a legitimate business expense, only those costs which are in direct violation of the NLRA should be denied for reimbursement.

The Internal Revenue code differs in nature and purpose from the Medicare law. Treatment of costs unrelated to patient care under the Code is irrelevant to the allowability of such costs under the Medicare law.

6. Several commenters indicated that the inclusion of section 2186 of the Medicare *Provider Reimbursement Manual* constituted a major change in reimbursement policy and that it was not promulgated in accordance with the Administrative Procedure Act (APA).

We believe the manual revision to be an interpretation and clarification of Medicare policy already stipulated in 42 CFR 405.451. That section indicates that only reasonable and necessary costs related to patient care activities are reimbursable. Therefore, we do not agree that the revision has been inappropriately implemented or that it represents a new policy being retroactively applied.

7. While in agreement with the present policy, various commenters suggested that it be expanded to include reasonable limits on costs related to collective bargaining activities. These commenters believed that the present policy may have the effect of encouraging employers to prolong union negotiations which, in turn, may force employees and their trade associations into arbitration which can be costly and time-consuming.

As with all allowable costs, costs incurred by a provider for collective bargaining and related activities are recognizable and allowable for the purpose of Medicare reimbursement only to the extent that they are reasonable and necessary. We believe that providers in the health care industry are concerned with providing quality care and would not jeopardize patient care by unnecessarily prolonging labor disputes with employees. Accordingly we do not plan to set specific limitations on those costs incurred by providers as a result of the collective bargaining process.

In addition to these comments, a number of responses indicated agreement with the policy contained in the notice published on October 21.

Clarification of Present Policy

The thrust of this policy has not been to preclude providers from seeking legal advice and consultation on union activity matters. Rather, our intent has been to preclude from reimbursement only the costs of activities (such as persuading employees not to form a union) which are not necessary to the provision of patient care.

Based on our analysis and review of the comments received, we believe there is a need to further clarify this policy in the *Provider Reimbursement Manual*. As a result we are planning to clarify and list those consultant activities and general expenses which are related to patient care but not specifically noted as allowable or unallowable in the Manual. The Manual issuance will be communicated through regular channels to Medicare contractors, providers and other interested parties.

(Sec. 1102, 1861(v)(1), 1866(a), and 1871 of the Social Security Act; 42 U.S.C. 1302, 1395f(b), 1395x(v)(1), 1395cc(a), and 1395hh)

BILLING CODE 4110-35-M

National Professional Standards Review Council; Request for Nomination of Members

The terms of four members of the National Professional Standards Review Council will expire as of June 30, 1981. Additionally legislative amendments signed into law on December 5, 1980 (Pub. L. 96-499) expand Council membership. The purpose of this notice is to solicit suggestions for qualified individuals to fill the impending vacancies and new positions.

The National Professional Standards Review Council was established under Section 1163 of the Social Security Act (42 U.S.C. 1320c-12). The recent amendments now require that the Council be composed of eleven physicians, one doctor of dental surgery or of dental medicine, one registered professional nurse, and one other nonphysician health professional.

The physicians must be of recognized standing and distinction in the appraisal of medical practice. The dentist, nurse and one other nonphysician health practitioner should also be of recognized standing and distinction in their respective disciplines. A majority of the Council's physician members must be recommended by national organizations recognized by the Secretary as representing practicing physicians. The membership of the Council must include physicians recommended by consumer groups and other health care interests. Members are appointed for 3 years and are eligible for reappointment. All members of the Council may not otherwise be in the employ of the United States.

In order to achieve a balance of expertise on the Council, we are particularly interested in nominees experienced in the areas of health care financing, specialized medical review methodologies such as ancillary services review, preventive health and data analysis.

Send nominations and curriculum vitae by February 17, 1981, to: Cleo E. Hancock, Jr., Staff Director, National Professional Standards Review Council, Room 4520, North Building, 330 Independence Avenue, S.W., Washington, D.C. 20201, Telephone: (202) 245-6097.

Nominations must state that the nominee is aware of the nomination and is willing to serve as a member of the Council.

Thank you for your assistance and prompt attention.

Dated: January 12, 1981.

Howard N. Newman,

Administrator.

BILLING CODE 4110-35-M

Medicare Program; Schedule of Target Reimbursement Rates for Institutions Furnishing Home Dialysis Supplies, Equipment, and Support Services

AGENCY: Health Care Financing Administration (HCFA), HHS.

ACTION: Final Notice.

SUMMARY: This notice sets forth a schedule of rates for End-Stage Renal Disease (ESRD) program reimbursement for supplies, equipment, and support services furnished to patients who dialyze themselves at home. The schedule establishes the calendar year 1981 regionally adjusted rates per treatment for home hemodialysis and home peritoneal dialysis. These rates are the amounts to be paid to approved hospital-based and independent dialysis facilities that enter into an optional agreement with HCFA to accept target rate reimbursement for all home dialysis patients under their direct supervision.

EFFECTIVE DATES: The rates are applicable to home dialysis services furnished on or after January 1, 1981, through December 31, 1981.

FOR FURTHER INFORMATION CONTACT: Bernadette Schumaker (301) 597-1048.

SUPPLEMENTARY INFORMATION:

Background

The End-Stage Renal disease (ESRD) Program Amendments of 1978 (Pub. L. 95-292) added section 1881(b)(6) to the Social Security Act. This section requires HCFA to establish target reimbursement rates for home dialysis for patients under the direct supervision of hospital-based or independent renal dialysis facility. The rates must be established for each calendar year, and must be adjusted for regional variations. This is an optional reimbursement method only for facilities that make an agreement with HCFA to furnish all home dialysis supplies, equipment, and support services (including the services of qualified home dialysis aides) that are medically necessary for patients to dialyze at home. If facilities do not choose this option, they are paid according to the usual Medicare reimbursement principles. That is, hospital-based facilities are paid on a reasonable cost basis, using the lower of cost or charges, and independent facilities are paid reasonable charges on a fee for service basis.

Regulations governing these optional agreements between HCFA and facilities are found at 42 CFR 405.691. Regulations governing the target rate reimbursement method and applications are at 42 CFR 405.440. These regulations were published together as a final rule with comment period on October 19, 1979 (44 FR 60287). A notice setting forth schedules for target rates covering April through December, 1979 (44 FR 60412) and a notice covering calendar year 1980 was published March 5, 1980 (45 FR 14249).

Section 1881(b)(6) limits the maximum target rate to no more than 70 percent of the national average payment for in-facility maintenance dialysis services furnished by approved hospital-based and independent facilities during the preceding fiscal year, as adjusted for regional variations and before application of the deductible and coinsurance requirements. The rates must be used without recomputation throughout the calendar year for which they are established. Accordingly, there can be no administrative appeal if actual costs for covered services exceed the target reimbursement rate payments (see regulations at 42 CFR 405.440).

We do not have sufficient cost information on the new services required under this optional reimbursement method (e.g., providing home dialysis aides) to evaluate the impact of alternate target rates. Therefore, in order not to discourage the use of home dialysis, we have kept the 1981 target reimbursement rate per treatment at the maximum rate permitted under the statute, as we did in 1979 and 1980.

Comments and Response

As a result of the publication of the regulations and notices mentioned above, we have received a number of comments. We plan to make minor clarifying changes in the rules during fiscal year 1981, such as clarifying the retroactive period for the target rate reimbursement method and deleting erroneous references, to 42 CFR 405.438, in 42 CFR 405.691. When those changes are published we will summarize and respond to all the comments received on the rule. However, since some comments referred directly to the rates, we thought it appropriate to respond to them at this time. We believe this will improve understanding of the rates published in this schedule.

1. *Rates too low.* Three comments indicated that the rate was too low and would discourage facilities from furnishing anything other than what was absolutely required under the regulation. Some commenters felt that the rate was adequate this year, but did not contain any guarantees that it would keep pace with inflation in the future. One commenter suggested that the rate be set three years in advance so that facilities could better judge the long term financial implications.

The law establishing the target rate clearly states that the maximum rate payable is 70 percent of the national average payment for in-facility maintenance dialysis services furnished during the previous fiscal year, adjusted for regional variations. We have set the rate at this maximum and cannot increase it. Because the law requires us to set the target rate annually based on the most recent data available at that time, we cannot set the rate more than one year in advance.

2. *"Without equipment" rate inadequately explained.* In responding to the notice on October 19, 1979 (44 FR 60412), some commenters indicated a misunderstanding of when the "without equipment" rate applies, apparently believing that a facility under the target rate has an option of not furnishing home dialysis equipment to its home patients. The notice has been revised to clearly state that all facilities that have elected target rate reimbursement must furnish all necessary home dialysis equipment, either directly or under arrangements, to all of their home patients. The lower "without equipment" rate applies where the facility elects to furnish the home dialysis equipment under a separate 100 percent equipment cost reimbursement agreement, as provided in 42 CFR 405.438 and 405.690. In all other cases, the higher rate applies.

3. *Inadequate differential between "with equipment" rate and "without equipment" rate.* Some comments indicated that the differential between the higher "with equipment" rate, and the lower "without equipment" rate did not accurately reflect the true costs of furnishing home dialysis equipment. HCFA does not have substantial, highly reliable data on the costs of home dialysis generally, or the cost per treatment of home dialysis equipment specifically. Consequently, these rates could not be computed by analyzing and comparing component costs. Instead, they were calculated from the cost data for in-facility dialysis services, adjusted by 70 percent acording to the requirements in the law for the maximum payable rate. Furthermore, because the "with equipment" rate is set at the maximum, a larger differential between the two rates would require the "without equipment" rate to be set lower than it is. We do not believe that the best interest of the ESRD program and its beneficiaries would be served by lowering the "without equipment" rate at this time.

4. *Alternate method of rate calculation suggested.* One commenter challenged the validity of using a prior year's cost data to establish a future rate. The law requires that the target rate be no more than 70 percent of the national average payment, adjusted for regional variations, for in-facility maintenance dialysis services furnished during the preceding fiscal year. Because facilities cannot report this data timely enough to be used to calculate the target rate by December of the same year, data from the year before must be used and updated.

Although the commenter suggested another method to be used in calculating the target rate limits, it, too, was based upon the same prior year's data. The commenter suggested that another inflation index be used in place of the one we used, and that the adjustment factor of the annualized inflation rate raised to the three-fourths power not be used. Apparently it was unclear that the adjustment factor was to convert the inflation rate to a rate that we could use

with our historical data. The historical data we have is based on a calendar year, whereas the law prescribes that the target rate limit must be based on the previous fiscal year's data. (See *Development of average maintenance dialysis payment data*, below, for further explanation.

Because of lack of historical data, it is impossible to demonstrate that the commenter's suggested method is more valid than the present method for calculating the maximum limits. The commenter's method would result in a greater expense to the program. As the intent of the law is to create more economical methods of reimbursement, we have decided to calculate the target rates in the same way as in the past two years. However, we intend to evaluate our experience in future years, and we will publish any resulting changes in the methodology for public comment.

5. *Alternate method of determining boundaries for regional adjustment suggested.* One commenter suggested that a facility's target rate should follow its ESRD network boundary rather than its HHS regional boundary. (ESRD "networks" are groups of ESRD facilities within a specified geographic area.) The target rate was not adjusted according to ESRD network boundaries because many networks do not have enough dialysis treatments to provide a statistically valid method of weighting them against the treatments furnished in the rest of the country. Therefore, we decided to use HHS regional boundaries, as we do have adequate data for these geographic divisions.

Calculation of Target Rates—Calendar Year 1981

1. *Development of average maintenance dialysis payment data.* As indicated above, the 1981 target rates equal 70 percent of the national average payment, before application of the coinsurance and deductible requirements and adjusted for regional variations, for in-facility maintenance dialysis services furnished by hospital-based and independent renal dialysis facilities during the preceding fiscal year.

The basis for determining the national average payment is the Renal Disease Program Cost Analysis System maintained by the Office of End-Stage Renal Disease (OESRD), Office of Special Programs, HCFA. We developed average maintenance dialysis payments for in-facility hemodialysis from Facility Cost Questionnaire Profiles, maintained by OESRD for each HHS regional area, for the accounting periods ending in the calendar year 1979.

The Facility Cost Questionnaire Profile is a computerized summary of the average maintenance dialysis cost per treatment, broken down into the various components of cost per treatment (e.g., supplies, salaries) for facilities on a regional and national basis. The costs and other statistical information (e.g., number of treatments) are derived from the Renal Dialysis Facility Cost and Statistical Questionnaire (form HCFA-9734) which is submitted annually based on cost data from a facility's most recently completed fiscal year.

While reported costs are the basis for the program payments made to hospital-based facilities, payments to independent facilities are made on a reasonable charge basis. (See 42 CFR 405.541) Information developed by OESRD established that the average reasonable charge payment per dialysis equalled the screen amount. Therefore, in developing the average payments for independent facilities, the Medicare payment screen of $138 was used as the average maintenance dialysis payment for independent facilities in all regions ($150 per treatment, including routine laboratory services, less $12 for the physician's direct patient care services during dialysis).

In developing the average payments, we excluded the portion of the payment applicable to physicians' direct patient care services, because reimbursement for these services is not included in the target rates. Under this reimbursement method, we pay for these physicians' services separately.

Facilities electing target rate reimbursement are required to provide medically necessary dialysis equipment, including installation, maintenance, and repair. A facility may fulfill this requirement by arranging for equipment for its home dialysis patients under the provision for 100 percent reimbursement for home dialysis equipment established by section 1881(e) of the Social Security Act and implemented by 42 CFR 405.438. In this case the lower target rate (excluding equipment costs) applies. Alternatively, a facility may own, lease, or otherwise arrange for equipment to be provided to patients whose self-care home dialysis it is furnishing. Under these circumstances, the higher target rate (including equipment costs) applies.

Accordingly, we computed two sets of payment rates for home hemodialysis. The higher target rate, entitled "Including Equipment Costs," includes an amount for the costs of equipment installation, depreciation or rental, maintenance and repair. This rate applies to services to patients using dialysis equipment that is furnished by the facility, but not under the provisions for 100 percent reimbursement of equipment costs. The lower target rate, entitled "Excluding Equipment Costs," does not include payment for any of these equipment costs. It applies when the facility provides dialysis equipment under the 100 percent equipment cost reimbursement provision.

The Office of Financial and Actuarial Analysis, HCFA, used payment data developed by OESRD to calculate the projected fiscal year 1980 average maintenance dialysis payments for hospital-based and independent facilities.

The law requires that the maximum target rate be based on the adjusted national average payment for dialysis services in the previous *fiscal* year. In other words, this requires us to base the calendar year 1981 target rate maximum on payments made for the October 1, 1979 to September 30, 1980 fiscal year. Section 1881(b)(6) of the statute requires the Secretary to base the determination of the level of payment on "the most recent data available to the Secretary at the time". Dialysis facilities are not able to report FY 1980 data timely enough for us to use in determining this rate. Therefore, we have used data from calendar year 1979—the most recent available data—and have indexed it to a 1980 fiscal year by using an inflation factor.

In order to apply such a factor, we needed to determine the base period (or time period) that the available data represented. The ESRD reporting system could be used only to develop data for facility accounting periods *ending* in calendar year 1979. As these accounting periods had varied date spans, there was no obvious well-defined base period. In the absence of evidence to the contrary, for purposes of adjustment for inflation, we assumed that the data represented costs that were evenly distributed throughout a calendar year 1979 base period.

A. *Hospital-based facilities.* We derived the fiscal year 1980 average in-facility maintenance dialysis payments for hospital-based facilities by increasing the average dialysis payments for the 1979 base period data by a weighted increase factor adjusted for regional variations. These factors were derived as follows:

i. We calculated the full year national increase for each of the three major components of the average payment (i.e., salaries (excluding payment for physicians' direct patient care services), supplies, and overhead), using appropriate data from the "Employment and Earnings Series" and "Consumer Price Index—Urban Wage Earners and

Clerical Workers—Revised," both from the Bureau of Labor Statistics. We derived salary increases from the data on hourly earnings in finance, insurance, and real estate because they represent workers in physicians' offices in the economic index computations. We derived supply cost increases from the consumer price index (CPI) for medical commodities, and used the CPI for all items to represent increases in overhead.

ii. We multiplied the component increase factors by the corresponding national weights to produce a weighted full year national increase (1980 over 1979).

iii. We had to adjust annual inflation factors applicable to calendar year data in order to make them applicable to fiscal year data. We used a compounding formula reflecting three-fourths of the calendar year increase (raising the calendar year factor to the three-fourths power) to obtain the final adjusted weighted national increase factor.

iv. We multiplied this final national factor by regional adjustment factors to obtain the regional increase factors. The regional adjustment factors were derived from the ratios of regional "per capita" ESRD reimbursement to the national "per capita" ESRD reimbursement for all reported fiscal years ending in calendar year 1979 (the most recent year for which data were available).

v. These regional increase factors were then multiplied by the appropriate 1979 base period values for hospital-based facilities to obtain the projected fiscal year 1980 average in-facility maintenance dialysis payment to hospital-based facilities by region.

B. *Independent facilities.* Independent facilities are not reimbursed on a cost basis. They are paid reasonable charges on a fee for service basis, subject to a screen limit of $138 per treatment. The per treatment reimbursement for dialysis in independent facilities has remained constant over the period in question. Therefore, it was not necessary to apply regional increase factors to payment data for independent facilities.

2. *Establishing target reimbursement rates for home hemodialysis.* The following procedure was used to establish the 1981 home hemodialysis target reimbursement rates per treatment for each region:

A. We multiplied each regional fiscal year 1980 average in-facility dialysis payment to hospital-based facilities, calculated in 1A above, by the corresponding number of treatments provided in the 1979 base period by hospital-based facilities for each region.

B. We added to each value calculated in 2A above the appropriate fiscal year 1980 average in-facility dialysis payment to independent facilities times the number of in-facility treatments provided in the 1979 base period by independent facilities for each region.

C. We divided each resulting value from 2B above by the total number of in-facility treatments provided in the 1979 base period by both hospital-based and independent facilities. The resulting values are the projected fiscal year 1980 average in-facility maintenance dialysis payments weighted between hospital-based and independent facilities by region.

D. We multiplied the regional average payments calculated in 2C above by 70 percent to derive the target reimbursement rates per treatment for 1981, which equal the maximum rates permitted under the statute.

3. *Example: Hypothetical Calculation of the "With Equipment" Rate for Region "A".* (The following numbers are for illustrative purposes only.)

A. We derive a total national increase factor from appropriate data from the Bureau of Labor Statistics (BLS), weighted by the portion of the total national average payment that is assigned to each of three cost component categories. In this example we use representative percentages of 35 percent, 35 percent, and 30 percent for, respectively, supplies, overhead, and salaries (excluding payment for physicians' direct patient care services).

Cost component	BLS increase factors	Weighting	Result
Supplies	8.04	35	2.8
Overhead	13.40	35	4.7
Salaries	8.46	30	2.5
Total national increase factor = 10			.10

B. To index base period data from calendar year 1979 to fiscal year 1980, we apply a compounding formula to the national increase factor (raising it to the three-fourths power).

1.00 + 0.10 = 1.10

$(1.10)^{\frac{3}{4}} = 1.0741$ or, 7.41 percent

(final adjusted weighted national increase factor)

C. We calculate regional variation from the ratio:

Region "A" per capita ESRD reimbursement/National per capita ESRD reimbursement

If the regional per capita equals $141.75, and the national per capita equals $150, then:

$141.75 ÷ 150 = 0.945 (regional adjustment factor)

D. We calculate the increase factor for Region "A" by multiplying the adjusted weighted national increase factor by the regional adjustment factor.

7.41 percent × 0.845 = 7.0 percent.

E. "Program data" show that in Region "A": Total Hospital-based Facility Costs (less physician fees) = $20,000,000

Total Independent Facility Costs = $17,000,000

Total Number of Outpatient Maintenance Dialysis Treatments = 268,794

F. We use the increase factor (7 percent) from item D. to adjust the hospital-based costs, and then add the independent costs.

$20,000,000 × 1.07 = $21,400,000

$21,400,000 + $17,000,000 = $38,400,000

G. We divide this by the total number of outpatient maintenance dialysis treatments.

$38,400,000 divided by 268,794 = $142.86

This is the adjusted regional average payment per in-facility treatment.

H. Finally, we derive the maximum rate allowed by law by multiplying the adjusted regional average in-facility payment by 70 percent.

$142.86 × 0.70 = $100

This would be the maximum "with equipment" target rate per treatment for home dialysis in Region "A".

4. *Schedule of target reimbursement rates for home hemodialysis.* Shown below is the schedule of regionally adjusted 1981 target reimbursement rates per treatment for home hemodialysis. Two sets of rates are shown. The higher set, entitled "Including Equipment Costs," applies where the facility is furnishing hemodialysis equipment, but not under the provision for 100 percent reimbursement of home dialysis equipment costs described in 42 CFR 405.438. The lower set, entitled "Excluding Equipment Costs," applies where the facility is furnishing the home dialysis equipment under the 100 percent reimbursement provisions of 42 CFR 405.438 (see discussion under section 1 above). In either case, if the facility chooses the target rate reimbursement option, it must furnish home dialysis equipment, including installation, maintenance, and repair, either directly or under arrangements.

Schedule of Target Reimbursement Rates Per Treatment for Home Hemodialysis—Calendar Year 1981

[Effective for Services Furnished on or after Jan. 1, 1981 through Dec. 31, 1981]

HHS region	Including equipment costs[1]	Excluding equipment costs[1]
Boston—Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island, Vermont	$108	$106
New York—New Jersey, New York, Puerto Rico, Virgin Island	111	109
Philadelphia—Delaware, District of Columbia, Maryland, Pennsylvania, Virginia, West Virginia	98	97
Atlanta—Alabama, North Carolina, South Carolina, Florida, Georgia, Kentucky, Mississippi, Tennessee	97	95
Chicago—Illinois, Indiana, Michigan, Minnesota, Ohio, Wisconsin	111	109
Dallas—Arkansas, Louisiana, New Mexico, Oklahoma, Texas	104	102
Kansas City—Iowa, Kansas, Missouri, Nebraska	109	106
Denver—Colorado, Montana, North Dakota, South Dakota, Utah, Wyoming	99	97
San Francisco—American Samoa, Arizona, California, Guam, Hawaii, Nevada	120	117
Seattle—Alaska, Idaho, Oregon, Washington	116	114

[1]Depreciation or rental, installation, maintenance and repair.

5. *Establishing target reimbursement rates for home peritoneal dialysis.* Under Medicare, peritoneal dialysis has always been subject to the same reimbursement rules as hemodialysis. As a result of medical consultations, we established an equivalence between peritoneal dialysis and hemodialysis furnished in the facility. Peritoneal dialysis is usually done in sessions of 10–12 hours duration, three times per week. The dialysate, tubing, machines and level of skilled labor required for hemodialysis and peritoneal dialysis are similar, and in the absence of cost data to the contrary, we set the reimbursement for normal peritoneal dialysis sessions at the same level as for hemodialysis.

Later case experience showed that sometimes peritoneal dialysis was furnished in a single extended session of 30 hours or more in a week, in place of three separate sessions. Because the labor, overhead and supplies were more related to the total time in dialysis than the number of separate sessions, we reimbursed the extended session the same as three normal dialysis sessions in a week. Further case experience indicated the need for another intermediate reimbursement level to correspond to changing medical patterns. As a result, we provided that peritoneal dialysis sessions of 20 hours duration furnished twice per week be reimbursed at a rate equivalent to one and one-half times the payment for a normal hemodialysis session.

In view of the limited data available on the cost of home peritoneal dialysis, a separate target rate has not been computed for that mode of dialysis. Because the target rate is related to the in-facility payment, we have set the following equivalencies between home peritoneal dialysis and home hemodialysis target rates to parallel the reimbursement for these respective modes of treatment furnished in the facility. We invite comments on the use of these equivalencies, and suggestions on other means of determining reimbursement for home peritoneal dialysis that would more accurately reflect the costs of services.

A. *Peritoneal dialysis sessions of less than 20 hours duration.* If a home peritoneal patient dialyzes for under 20 hours a session, the facility will be reimbursed routinely an amount per session equal to the reimbursement for one home hemodialysis treatment.

B. *Peritoneal dialysis sessions of less than 30 hours, but 20 hours or more duration.* If a home peritoneal dialysis patient dialyzes for 20–29 hours a session, the facility will be reimbursed routinely an amount per session equal to one and a half times the rate for one home hemodialysis treatment.

C. *Peritoneal dialysis sessions of 30 hours or more duration.* If a home peritoneal dialysis patient dialyzes for 30 hours or more per session, the facility will be reimbursed routinely an amount per session equal to three times the rate for one home hemodialysis treatment.

(Sec. 1102, 1814, 1833, 1861(v)(1), 1871, and 1881 of the Social Security Act (42 U.S.C. 1302, 1395f(b), 1395l, 1395(v)(1), 1395hh and 1395rr))

Dated: January 13, 1981.

Howard Newman,

Administrator, Health Care Financing Administration.

[FR Doc. 81-1741 Filed 1-15-81; 8:45 am]

BILLING CODE 4110-35-M

Privacy Act of 1974; Report of Altered System

AGENCY: Health Care Financing Administration, HHS.

ACTION: Notification of altered system.

SUMMARY: In accordance with 5 U.S.C. 552a(e)(4) and 5 U.S.C. 552a(o), we are proposing to amend the following notice of systems of records: 09–70–0001, Medicare Second Surgical Opinion Experiments.

We have provided background information about the amendments in the "Supplementary Information" section below.

DATES: HCFA has sent a Report of Altered System to the Congress and to the Office of Management and Budget on December 29, 1980. HCFA has requested that OMB grant a waiver of the usual requirement that a revision to a system of records not be put into effect until 60 days after the report is sent to OMB and Congress. If this waiver is granted, the alteration to the system will be effective on the date of the waiver.

ADDRESS: The public should address comments to the Privacy Officer, Office of Management and Budget, Health Care Financing Administration, Bay A–3, 1710 Gwynn Oak Avenue, Baltimore, Maryland 21207. Comments received will be available for inspection at this location.

FOR FURTHER INFORMATION CONTACT: Mr. Alan S. Friedlob, Office of Research, Demonstrations and Statistics, Room 1–E–6, Oak Meadows Building, 6340 Security Boulevard, Baltimore, Maryland 21207, Telephone (301) 597–2364.

SUPPLEMENTARY INFORMATION: System Notice 09–70–0001, Medicare Second Surgical Opinion Experiments, contains data on Medicare beneficiaries and physicians who have participated in the second opinion demonstration programs being conducted by Blue Cross and Blue Shield of Greater New York and Blue Cross and Blue Shield of Michigan. The purposes of collecting this data are to: (1) Operate referral centers to help eligible Medicare beneficiaries locate consultants and obtain second/third opinions, (2) collect information necessary to conduct referral operations and evaluate the impact of the program, and (3) modify claims processing systems to permit waiver of co-payment and deductible requirements under Part B of Medicare on all second/third surgical opinion claims.

The routine uses of System Notice 09–70–0001 are not being changed. Routine use 1(b), "collect information necessary to conduct referral operations and evaluate the impact of the program" is being further specified by extending systems notice 09–70–0001 to include records created by sample surveys associated with evaluation of the Medicare Second Surgical Opinion Experiments, the Consultation Program for Elective Surgery for Massachusetts Medicaid recipients, and the National Second Surgical Opinion Program (NSSOP. This information will be

collected by Abt Associates, Inc., Cambridge, Massachusetts under HCFA Contract No. 500–78–0047, "Evaluation of the Impact of Second Surgical Opinions for Elective Surgery."

Specifically, the amendments to systems notice 09–70–0001 are associated with the following survey activities:

Patient Telephone Survey: A large random sample of Medicare beneficiaries residing in New York and Medicaid recipients in Vermont or Connecticut (the control group for Massachusetts Medicaid recipients) will be surveyed by telephone to identify beneficiaries and recipients who have undergone or who are actively considering undergoing elective surgery. Data will be gathered on surgical recommendations or discussion of surgery, second opinions obtained, and surgery actually undergone.

Personal Interview with Patients: An in-depth interview survey of a sample of Medicare beneficiaries and recipients who participated in the New York second opinion demonstration and Massachusetts second opinion program, as well as a sample of telephone survey respondents who reside in New York and Vermont/Connecticut will be conducted. This survey will gather extensive data on patient characteristics, surgical recommendations/discussions, consultations, patient health attitudes, treatment received and health care costs.

Physician Mail Survey: The physician(s) of consenting respondents to the Personal Interview Survey will be surveyed. Data collected will include physician characteristics and attitudes as well as clinical details and prognosis of the specific case.

Physician Mail Survey—Special Case Study in Detroit SMSA: A random sample of 100 surgeons in the Detroit, Michigan SMSA will be surveyed to ascertain their awareness of the Michigan second opinion demonstration program, their attitude toward the program and towards second opinions in general, and estimates of the utilization of second opinions by their patients.

Patient Telephone Survey—Special Case Study in Detroit SMSA: A telephone survey of 200 patients in the Detroit, Michigan SMSA who have undergone elective surgery will be conducted. The data gathered will include their level of awareness of the Michigan second opinion demonstration program, how they learned of it, whether they used it, and whether they obtained a second opinion elsewhere.

NSSOP Patient Intake Log: This form is used to collect basic data on callers to 15 listholders participating in the NSSOP. This form also records caller consent to be contacted for a follow-up survey. This form has already received OMB clearance. These 15 listholders have been using this form (i.e., collecting data) since January 1980.

NSSOP Intake Log Patient Follow-up Questionnaire: A telephone survey of consenting callers to 15 listholders participating in the NSSOP will be conducted. Data will be obtained on the patient's experience with the NSSOP, their subsequent second surgical opinion experience (if any), and any treatment received subsequent to their call to the NSSOP. A version of this questionnaire has already received OMB clearance.

The notices below contain the amended uses as indicated above.

Dated: December 29, 1980.

Howard Newman,

Administrator, Health Care Financing Administration.

09–70–0001

SYSTEM NAME:

Medicare Second Surgical Opinion Experiments, HHS/HCFA/ORDS.

SECURITY CLASSIFICATION:

None.

SYSTEM LOCATION:

Blue Cross and Blue Shield of Greater Nw York, 622 Third Avenue, New York, N.Y. 10017, and 3 Park Avenue, New York, N.Y. 10016, and Blue Cross and Blue Shield of Michigan, 600 Lafayette East, Detroit, Mich. 48226; and Abt Associates, Inc., 55 Wheeler Street, Cambridge, Mass. 02138.

CATEGORIES OF INDIVIDUALS COVERED BY THE SYSTEM:

Physicians who practice, and Medicare beneficiaries who reside in the carrier area of Blue Cross and Blue Shield of greater New York (plus Queens) or in Macomb, Oakland, or Wayne Counties for which the Medicare carrier is Blue Cross and Blue Shield of Michigan.

Physicians who practice, and Medicaid recipients who reside in the States of Massachusetts and Connecticut or Vermont. Persons contacting National Second Surgical Opinion Program (NSSOP) listholders.

CATEGORIES OF RECORDS IN THE SYSTEM:

Physicians: personal identification and demographic data attitudes toward second opinion programs, clinical details and prognosis of patients who have sought second opinions, estimates of the use of second opinions by their patients.

Beneficiaries: personal identification, demographic data, and health status information pertinent to advisability of patient undergoing elective surgery, surgical recommendations/discussions, treatment received, patient health attitudes, awareness of second opinion programs, satisfaction with second opinion programs.

AUTHORITY FOR MAINTENANCE OF THE SYSTEM:

Section 402 of the Social Security Amendments of 1967, P.L. 90–248, as amended by Section 222(b) of the Social Security Amendments of 1972, P.L. 92–603, 42 U.S.C. 1395b–1.

PURPOSE(S):

To provide data necessary to operate second opinion referral centers and to determine the impact of second opinion programs on Medicare costs, surgery rates, consumer and provider decision-making regarding surgery, and quality of care.

ROUTINE USES OF RECORDS MAINTAINED IN THE SYSTEM, INCLUDING CATEGORIES OF USERS AND THE PURPOSES OF SUCH USES:

1. Blue Cross and Blue Shield of greater New York and Blue Cross and Blue Shield of Michigan will use the data to: (a) operate referral centers to help eligible Medicare beneficiaries locate consultants and obtains second/third opinions, (b) collect information necessary to conduct referral operations and evaluate the impact of the program, and (c) modify claims processing systems to permit waiver of co-payment and deductible requirements under part B of Medicare on all second/third surgical opinion claims (i.e., physician and ancillary service costs). The Office of Research, Demonstrations and Statistics (ORDS), HCFA, will use the information to coordinate all data collection, reimbursement, and evaluation activities. HCFA will contract via request for proposals with an independent third party which will use data in the system to evaluate the impact of the second surgical opinion programs.

2. Disclosure may be made to a congressional office from the record of an individual in response to an inquiry from the congressional office made at the request of that individual.

3. In event of litigation where the defendant is: (a) the Department, any component of the Department, or any employee of the Department in his or her official capacity; (b) the United States where the Department determines that the claim, if successful, is likely to directly affect the operations of the

Department or any of its components; or (c) any Department employee in his or her individual capacity where the Justice Department has agreed to represent such employee, the Department may disclose such records as it deems desirable or necessary to the Department of Justice to enable that Department to present an effective defense, provided such disclosure is compatible with the purpose for which the records were collected.

POLICIES AND PRACTICES FOR STORING, RETRIEVING, ACCESSING, RETAINING, AND DISPOSING OF RECORDS IN THE SYSTEM.

STORAGE:

Hardcopy intake forms, first opinion physician/surgeon reports and consultants' reports will be stored in locked metal file cabinets in the referral centers established within the contractors' carrier offices. Completed data tapes created from hardcopy forms will be stored in the tape libraries maintained by the contractors for storage of routine Medicare claims tapes and subject to the same security precautions.

RETRIEVABILITY:

Hardcopy stored in referral centers will be retrievable by beneficiary name. Beneficiary information stored on tape will be retrievable by beneficiary name and health insurance claim number; provider information stored on tape will be retrievable by physician name and provider number.

Where applicable, the evaluation contractor will merge the systems records created by survey sampling activities with systems records already covered by this systems notice. The systems records created by survey activity are temporary in nature, and patient and physician identifiers will not be retained.

SAFEGUARDS:

All records will be retained in secure storage areas accessible only to authorized employees of Blue Cross and Blue Shield of Greater New York, Blue Cross and Blue Shield of Michigan, and the evaluation contractor staff. All employees having access to records have been notified of criminal sanctions for unauthorized disclosure of information on individuals. After the hardcopy and tapes are validated and analyzed by the evaluation contractor, they will be returned to HCFA.

For computerized records, where appropriate, ADP systems security procedures will be instituted with reference to guidelines contained in the Department ADP Systems Manual, Part 6, "ADP Systems Security," and the National Bureau of Standards Federal Information Processing Standards Publications (FIPS PUB 41 and FIPS PUB 31) (e.g., use of password access). By taking all the aforementioned precautions, HCFA has reduced the risk of unauthorized access to a minimum.

RETENTION AND DISPOSAL:

Hardcopy data collection forms and magnetic data tapes with identifiers will be retained in secure storage areas. The disposal technique of degaussing will be used to strip magnetic tape of all identifying names and numbers in December 1987. Hardcopy will be destroyed at this time.

SYSTEM MANAGER(S) AND ADDRESS:

Director, Office of Research, Demonstrations and Statistics, Health Care Financing Administration Room 4228, HHS Building, 330 Independence Avenue, S.W., Washington, D.C. 20201.

NOTIFICATION PROCEDURE:

Any physician or Medicare beneficiary who participates in this demonstration as a provider or recipient of service may request his or her data record in writing. This request should be addressed to the system manager. To obtain data on physicians, the requestor should provide the name and business address of the physician; to obtain data on a Medicare beneficiary, the requestor should provide the beneficiary's name and home address.

RECORD ACCESS PROCEDURES:

Same as notification procedure. Requesters should also reasonably specify the record contents being sought. These access procedures are in accordance with Department regulations (45 CFR, section 5b.5(a)(2)).

CONTESTING RECORD PROCEDURES:

Contact the system manager at the address specified under notification procedure above, and reasonably identify the record and specify the information to be contested. These procedures are in accordance with Department Regulations (45 CFR, section 5b.7).

RECORD SOURCE CATEGORIES:

Referral Center Intake Forms are completed by a referral center analyst upon receiving a call from a Medicare beneficiary requesting a second opinion under the demonstrations. First Opinion Physician/Surgeon Report Forms are completed by the first opinion physician in the Blue Cross and Blue Shield of Michigan demonstration and by the first surgeon in the Blue Cross and Blue Shield of Greater New York demonstration. The consultant's report is completed by second/third opinion consultants who are participating in the demonstrations.

NSSOP Patient Intake Log to be completed by NSSOP listholders. NSSOP Intake Log Patient Followup Questionnaire to be completed by the evaluation contractor through telephone survey. Telephone Questionnaire of Medicare recipients in Connecticut or Vermont to be completed by the evaluation contractor. Patient Interview of Medicare beneficiaries in New York and Medicaid recipients in Massachusetts and Connecticut or Vermont to be completed by the evaluation contractor. Physician Mail Questionnaire to be completed by first opinion and second opinion physicians of patients who participate in the Patient Interviews. Physician Mail Questionnaire to be completed by surgeons who practice in Macomb, Oakland, and Wayne Counties, Michigan. Patient telephone survey of Medicare beneficiaries who reside in Macomb, Oakland, and Wayne Counties, Michigan to be completed by the evaluation contractor.

SYSTEMS EXEMPTED FROM CERTAIN PROVISIONS OF THE ACT:

None.

BILLING CODE 4110-35-M

Office of Human Development Services

White House Conference on Aging; Technical Committee, Meeting

The White House Conference on Aging Technical Committee was established to provide scientific and technical advice and recommendations to the National Advisory Committee of the 1981 White House Conference on Aging and to the Executive Director of the 1981 White House Conference on Aging in developing issues to be considered and to produce technical documents to be used by the Conference.

Notice is hereby given pursuant to the Federal Advisory Committee Act, (Pub. L. 92-463, 5 U.S.C. App. 1, sec. 10, 1976) that the Technical Committee on Physical and Social Environment and Quality of Life will hold their next meeting on Tuesday, January 27, 1981 from 9:00 am until 5:00 pm. The meeting will be held in Room 5051 of HHS-North Building, 330 Independence Avenue, S.W., Washington, D.C. 20201.

The purpose of the meeting will be to review and revise the draft final report.

Further information on the Technical Committee meeting may be obtained

from Mr. Jerome R. Waldie, Executive Director, White House Conference on Aging, Room 4059, 330 Independence Avenue, S.W., Washington, D.C. 20201, telephone (202) 245–1914. Technical Committee meetings are open for public observation.

Dated: January 12, 1981.

Mamie Welborne,

HDS Committee Management Officer.

BILLING CODE 4110-92-M

DEPARTMENT OF THE INTERIOR

Fish and Wildlife Service

Notice of Intent To Prepare an Environmental Impact Statement on the Proposed Preservation of Wildlife Habitat in an Area of Cape May County, New Jersey, Known as South Cape May Meadows; Correction

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Notice: Correction.

SUMMARY: This notice advises the public of a correction to the above document published in 46 FR 1040, January 5, 1981. The last sentence in the Supplemental Information Section should read, "The estimated completion date for the Draft EIS is April 1981."

Howard N. Larsen,

Regional Director.

January 7, 1981.

BILLING CODE 4310-55-M

Bureau of Land Management

Alabama; Meeting of Southern Appalachian Regional Coal Team

AGENCY: Bureau of Land Management, Department of the Interior.

ACTION: Meeting notice.

SUMMARY: Pursuant to the responsibilities set forth in 43 CFR Part 3400, the regional coal team for the Southern Appalachian Federal Coal Production Region, Alabama Subregion, will meet on February 17, 1981 to discuss the ranking, selection and scheduling process for proposed coal lease sales; alternative coal lease sale schedules; and potential impacts, including proposed mitigation measures on tracts proposed for Federal leasing in the Southern Appalachian Federal Coal Production Region, Alabama Subregion. Consultations with State Governor(s) will also be discussed, along with a draft Secretarial Issue Document containing recommendations for coal leasing in the subregion. These recommendations will be forwarded from the regional coal team chairman, through the Director, Bureau of Land Management, to the Secretary of Interior for his consideration in making a final decision on coal leasing in the Southern Appalachian Federal Coal Production Region, Alabama Subregion. Public attendence at the meeting is welcome. Additional time will be provided at the meeting for public comment prior to finalization of regional coal team recommendations.

DATE: The regional coal team will meet from 1:00 p.m. to 3:00 p.m. on Tuesday, February 17, 1981.

ADDRESS: The meeting will be held at the Sheraton University Inn, 4810 Skyland Boulevard East, Tuscaloosa, Alabama.

FOR FURTHER INFORMATION CONTACT: Bob Moore, Regional Coal Team Chairman, Bureau of Land Management (160), 18th and C Streets, N.W., Washington, D.C. 20240, (202) 343–4636.

Dated: January 12, 1981.

Pieter J. VanZanden,

Acting Eastern States Director, Bureau of Land Management.

[FR Doc. 81-1649 Filed 1-15-81; 8:45 a.m.]

BILLING CODE 4310-84-M

Adoption of Planning Criteria, Jordan, North Rosebud and New Prairie Management Plans

AGENCY: Bureau of Land Management, Interior.

ACTION: Adoption of planning criteria, Jordan, North Rosebud and New Prairie management plans.

SUMMARY: Planning criteria to prepare public land use decisions covering Baker, Prairie, Kinsey, Jordan and North Rosebud planning units in the Miles City District, Bureau of Land Management have been adopted by the District and approved by the Montana State Director. The criteria will be used to prepare the new Prairie and Jordan-North Rosebud Management Framework Plans. Both plans are Transition Period Category C Management Framework Plans. The criteria as well as issues to be addressed in the plan are available for public inspection at the Miles City District offices during normal business hours.

EFFECTIVE DATE: December 12, 1980.

FOR FURTHER INFORMATION CONTACT: Ray Brubaker, District Manager, Miles City District, BLM, P.O. Box 940, Miles City, Montana 59301.

SUPPLEMENTARY INFORMATION: In late August, 1980, a mailer for each of the planning areas explaining significant issues and concerns identified during personal interviews, public meetings, etc., were mailed to individuals and agency and governmental representatives. Of the approximately 3350 copies mailed (2500 Prairie and 850 Jordan-North Rosebud), 71 responses have been received (2%). The majority of responses concern wilderness, coal development and the value of public land administration. No new issues were identified but the candid responses have assisted in criteria revision and will be considered in the district's development of alternatives and in management decisions. A summary of the comments received relating to mailing of planning issues and criteria for Jordan-North Rosebud and New Prairie Planning Areas follows.

The District received 71 responses including 10 from state, federal or local governmental agencies which included comments applicable to two criteria maps, six were requests for further information with special interest expressed in: (a) public land, (b) how the planning area boundaries were formed, (c) cultural resource inventories, (d) air and water quality, loss of wildlife, environment and population impact, (e) forestry, and (f) social and economic impacts of mineral development. Fifteen responses concerned wilderness designation with four favorable to wilderness area designation, eight opposed to wilderness designation and two noncommittal. Two proposed establishmnent of a national monument rather than a wilderness for the Terry Badlands. Five comments related to areas of potential coal or other fuel energy development, including KRCRA boundary redefinition. Two comments concerned access to public land and favored the use of maps, markers, signs, and development of roads to facilitate general access to public land. Five comments expressed concern for ranching and farming and preservation of resources for food production. Four comments expressed opposition to federal ownership or control of land. Two comments favored disposing or trading parcels of scattered or isolated land to consolidate blocks of public land. Three comments expressed opposition to any federal land or resource planning. One comment favored development of corridors for highways, railroads, power lines, and pipelines to serve growth in civil industry and possible military defense. One comment expressed opposition to construction of a dam in northern Prairie County and in favor of road improvements. One comment

emphasized the need for interagency coordination of comprehensive planning.

These comments resulted from mailing approximately 2,500 copies of the New Prairie Planning Area maps and approximately 850 copies of the Jordan-North Rosebud Planning Area maps with return response cards for each. The mailings were distributed to all box holders within the planning areas and to all interagency addresses and energy companies who have expressed interest in information on these areas. A news release explaining the public response and BLM's application of the comments will be published in newspapers in circulation in the planning area. The major issues, problems and criteria for the planning areas are discussed below.

Vegetation Allocation

Draft decisions for vegetation allocation in the New Prairie and Jordan-North Rosebud MFP's and vegetation allocation decisions from the 1979 Redwater MFP will be analyzed in the Big Dry EIS. This EIS is scheduled for completion by 9–30–82.

Where negative surface owner views (by location, acreage and/or number of surface owners) precludes development of a logical mining unit, that area will be considered for deletion from further consideration for coal leasing.

Multiple use constraints, unsuitability criteria and surface owner consultation processes (except on PRLA's) will be applied to coal within the following areas: KRCRA's—Custer Creek and Knowlton; preliminary KRCRA's—Ismay and Carlyle; and revised KRCRA's—Lame Jones and Circle (where boundary revisions are made by USGS prior to 11–30–80).

In mid-November of 1980, the USGS identified high and moderate coal development potential for the Circle KRCRA. This KRCRA boundary revision necessitates updating the surface owner identification, completed in October 1980, to include the revised area. The preliminary KRCRA's for Ismay and Carlyle and a much expanded Lame Jones preliminary KRCRA were received from USGS on 10–8–80. Surface owners over Federal coal for the KRCRA's and preliminary KRCRA's have been identified. Resource data for the recently identified areas is comprised of photo interpretation data except for Federal surface where SVIM data is available.

In the forthcoming planning effort, the Bureau can: (1) include all identified high/moderate coal areas in the planning area and (after applying the data which is available), bring areas through the MFP as acceptable for further consideration for leasing pending further study; or (2) concentrate on smaller areas where resource data is available or can possibly be acquired in time to be available for application. At present, we expect to have the information necessary for at least the Meadowlark PRLA's by February, 1981 (see next paragraph). It is questionable if CRO–CDP maps, specific agricultural data, four seasons worth of wildlife data or cultural resources data could be acquired in FY 1981 for the other coal areas.

Analysis of the Meadowlark Farms PRLA's (M–2732, M–2733, M–2734) will be included in the New Prairie MFP. A *management decision* of whether to include the Meadowlark Farms PRLA coal in the Ft. Union (Coal) EIS for analysis along with the Redwater MFP coal must be made immediately as it affects the EIS time frame and the wilderness designation schedule (there is a direct conflict with WSA 684 on the Meadowlark Farms PRLA's).

It should be noted that coal decisions in the 1979 Redwater MFP are *final decisions* and will not be addressed in the current land use plan or the Big Dry EIS. The Redwater Coal including the Fred Woodson PRLA (M10195) will be addressed in the Fort Union EIS, however.

Wilderness

In accordance with W.O. Instruction Memo 80–352 Change 1, Category C Transition MFP's will identify and analyze conflicts between wilderness use and other resource values and uses, and will be used to recommend area(s) to Congress as suitable or unsuitable for wilderness designation. That memo states that the Wilderness EIS shall not be combined with the Grazing EIS.

Draft MFP Range Management decisions will focus on identification of problem areas, using SVIM range condition as the key indicator, and will propose adjustments/management/treatment/rehabilitation practices for problem areas. For those areas where adequate reservation for wildlife and/or watershed needs were not made in previous vegetation allocations, the current needs will be identified. Site productivity potential versus present livestock allocation will serve as guidance for management decisions. Present vegetation information will continue to guide grazing management in the remaining allotments until additional vegetation studies can be completed for those areas. The MFP decisions will document existing allocations and any needed changes. Actual on-the-ground changes in the allocation of livestock forage will be developed and implemented during activity planning after allotment specific studies are completed.

Draft vegetation allocation decisions for wildlife will identify geographic areas of significant competition for forage or cover between wildlife (primarily big game) and other vegetation users (as identified by Montana FG & P).

Draft vegetation allocation decisions for watershed will specify target cover values and management for all soils series areas using SVIM data and soils surveys. Where watershed condition is critically unstable and/or changes in management are needed or treatment is required to facilitate the desired watershed condition, these needs will be further identified.

Alternatives for allocation of the vegetation resource will be developed in the MFP and further analyzed in the Big Dry EIS. Major alternatives will include: (1) continuation of present grazing management levels, (2) alternative levels of management, (3) reduced levels or adjusted livestock use, (4) livestock forage maximization, (5) elimination of livestock use on public grazing lands.

Final decisions (on-going MFP's) and possible modified final decisions (Redwater MFP) for vegetation allocation will be developed as a result of the EIS. The wildlife and watershed management decisions reached in the MFP's will be used as background for development of alternatives in the EIS.

Since approximately 91% of the public surface in the New Prairie and Jordan-North Rosebud planning areas is in good or excellent range condition and no critical big game-livestock competition areas have been identified, extensive adjustments in vegetation allocation on public surface lands in these planning areas is not anticipated.

Coal

In order to analyze the public coal resource concurrently with other public resources, the Miles City District will proceed with the land use planning, unsuitability, and surface owner consultation processes, applying all the resource data available to the identified coal areas, preliminary and final. The draft coal decisions will identify the coal in the planning areas that is acceptable for further consideration for leasing, acceptable for further consideration for leasing pending further study, and that which is unsuitable.

FY 1981 AWP advises direct the Miles City District to process PRLA's M–2732, M–2733, M–2734, and M–10195. W.O. advises, via MSO (October, 1980) that any portion of the Meadowlark PRLA's (the first three above numbers) within the Terry Badlands WSA cannot be

offered for coal lease until Congress determines whether the area will be wilderness or not. This direction therefore becomes one of our Planning Criteria.

If it is desirable to lease coal in the PRLA's in 1983, wilderness consideration and environmental assessment of the PRLA coal (possibly in the Fort Union EIS) will have to be closely coordinated.

ACEC's

Areas that qualify for ACEC status will be considered for ACEC management as an MFP alternative.

Withdrawal Review

In order to coordinate the land use plans and withdrawal review process within the allowable time frame, the MFP draft decisions will prioritize the identified withdrawals (sequentially) for subsequent review. (This prioritization will be coordinated with the tentative review dates stated in the District Manager's memo of 9–10–80 to the State Director.) This schedule should allow systematic review and multiple use analysis of withdrawals within the 1991 completion date. However, pertinent BLM withdrawals will be fully addressed in the forthcoming planning effort.

Planning Criteria

Land use planning in the New Prairie planning area is both first and second generation. The Jordan-North Rosebud planning effort is all first generation. The Jordan-North Rosebud Planning effort is all in 1977 (the initial pre-planning analysis) and continuing to date. Numerous public meetings have been held and comments received. Revision of the PPA was completed in December, 1979. During FY 1980 the pre-planning analysis data was re-organized to the new format, i.e., Project Situation Analysis, and Project Situation Analysis Summary. Issues Criteria-Planning Criteria were developed and 3350 copies were mailed to boxholders in the planning areas and to governmental agencies of all levels for public comment and inter-agency coordination. The responses received will continue to be used in guiding development of the planning documents.

Quality Control

Pre-planning and planning documents are developed by a multidisciplinary team of resource specialists under the direction of a planning coordinator and in consultation with resource specialists in the resource area and with District and State Office specialists and with their counterparts in other agencies. Technical review is accomplished by the Division of Resources. Management review is completed by the Area Manager and District Manager.

The criteria for the New Prairie and Jordan-North Rosebud planning areas were prepared by an interdisciplinary team and were reveiwed by resource specialists in the District Division of Resources and in the Big Dry Resource Area, as well as by specialists in the State Office Division of Resources and Division of Planning and Environment. Public comments have been reviewed and analyzed and the issues and criteria revised accordingly.

Ray Brubaker,

District Manager.

BILLING CODE 4310-84-M

Designation of East Mojave National Scenic Area

AGENCY: Bureau of Land Management, Interior.

ACTION: Notice of designation of East Mojave National Scenic Area.

SUMMARY: The rich diversity of outstanding natural, scenic and cultural resources of this area of the East Mojave Region of the California Desert Conservation Area warrants it special recognition. The area will be managed in accordance with the California Desert Conservation Area Plan approved December 18, 1980. This designation as the East Mojave National Scenic Area will provide added emphasis to the Bureau of Land Management's plan to protect the area's outstanding natural, scenic and cultural resources.

Pursuant to the authority in section 601 of the Federal Land Policy and Management Act of 1976 (43 U.S.C. 1781), and 43 CFR Subpart 2070, those public lands administered by the Bureau of Land Management and described in the California Desert Conservation Area Plan as the East Mojave National Scenic Area are hereby designated the East Mojave National Scenic Area.

EFFECTIVE DATE: January 13, 1981.

ADDRESS: Any inquiries or suggestions should be sent to: District Manager, California Desert District, 1695 Spruce Street, Riverside, California 92507.

FOR FURTHER INFORMATION CONTACT: Gerald C. Hillier at the above address or 714 787–1462.

Cecil D. Andrus,

Secretary of the Interior.

January 13, 1981.

BILLING CODE 4310-84-M

Idaho Falls District Grazing Advisory Board, Meeting

Notice is hereby given in accordance with Pub. L. 92–463 that the Idaho Falls District Grazing Advisory Board will meet February 21, 1981.

The meeting will begin at 9:00 a.m. in the conference room of the Bureau of Land Management Office, 940 Lincoln Road, Idaho Falls, Idaho, 83401. The meeting is open to the public. Interested persons may make oral statements to the Board between 9:00 and 9:30 a.m. or file written statements for the Board's consideration. Anyone wishing to make an oral statement must notify the Idaho Falls BLM District Manager at the above address by February 6, 1981. Depending on the number of persons wishing to make oral statements, a per person time limit may be established.

The agenda for the meeting will include:

1. Update on status of projects discussed at the last meeting.
2. Discussion on Advisory Board projects and expenditure of Advisory Board funds.
3. Use of Range Betterment funds.
4. Election of officers.
5. Allotment Management Plans in the Little Lost River and Birch Creek Valley's.
6. Arrangements for the next meeting.

Summary minutes of the Board meeting will be kept in the District Office and be available for public inspection and reproduction, (during regular business hours) within 30 days following the meeting.

Dated: January 9, 1981.

O'dell A. Frandsen,

District Manager.

[W-70796 and W-70865]

Trailblazer Pipeline Project, Wyoming; Applications

Notice is hereby given that pursuant to Sec. 28 of the Mineral Leasing Act of 1920, as amended (30 U.S.C. 185) the Overthrust Pipeline Company and Colorado Interstate Gas Company have filed right-of-way applications (W–70796 and W–70865, respectively) to construct, operate, maintain, repair, replace and remove two segments of a 36" O.D. buried pipeline for the purpose of transporting natural gas from the overthrust belt in southwestern Wyoming to facilities located in Beatrice, Nebraska. The proposed pipeline will affect the following described public lands:

The purpose of this notice is to inform the public that the Bureau will be proceeding with consideration of whether the applications, affecting approximately 108 miles of public lands within the State of Wyoming, should be approved; and, if so, under what terms and conditions.

Interested persons desiring to express their views concerning these applications should do so promptly. Comments submitted should include your name and address, as well as a reference to the serial numbers assigned the applications; and should be sent to the Wyoming State Office, Bureau of Land Management, P.O. Box 1828, 2515 Warren Avenue, Cheyenne, Wyoming 82001.

Harold G. Stinchcomb,

Chief, Branch of Lands and Minerals Operations.

BILLING CODE 4310-84-M

INTERSTATE COMMERCE COMMISSION

Agricultural Cooperative: The Commission of Intent to Perform Interstate Transportation for Certain Nonmembers

Date: January 12, 1981.

The following Notices were filed in accordance with section 10526 (a)(5) of the Interstate Commerce Act. These rules provide that agricultural cooperatives intending to perform nonmember, nonexempt, interstate transportation must file the Notice, Form BOP 102, with the Commission within 30 days of its annual meetings each year. Any subsequent change concerning officers, directors, and location of transportation records shall require the filing of a supplemental Notice within 30 days of such change. The name and address of the agricultural cooperative, the location of the records, and the name and address of the person to whom inquiries and correspondence should be addressed, are published here for interested persons. Submission of information that could have bearing upon the propriety of a filing should be directed to the Commission's Office of Consumer Protection, Washington, D.C. 20423. The Notices are in a central file, and can be examined at the Office of the Secretary, Interstate Commerce Commission, Washington, D.C.

Agatha L. Mergewovich,

Secretary.

[FR Doc. 81-1574 Filed 1-15-81; 8:45 am]

BILLING CODE 7035-01-M

Motor Carriers; Permanent Authority Decisions; Decision-Notice

The following applications, filed on or after July 3, 1980, are governed by Special Rule 247 of the Commission's Rules of Practice, see 49 CFR 1100.247. Special rule 247 was published in the **Federal Register** on July 3, 1980, at 45 FR 45539. For compliance procedures, refer to the **Federal Register** issue of December 3, 1980, at 45 FR 80109.

Persons wishing to oppose an application must follow the rules under 49 CFR 1100.247(B). Applications may be protested *only* on the grounds that applicant is not fit, willing, and able to provide the transportation service and to comply with the appropriate statutes and Commission regulations. A copy of any application, together with applicant's supporting evidence, can be obtained from any applicant upon request and payment to applicant of $10.00.

Amendments to the request for authority are not allowed. Some of the applications may have been modified prior to publication to conform to the Commission's policy of simplifying grants of operating authority.

Findings

With the exception of those applications involving duly noted problems (e.g.s., unresolved common control, fitness, water carrier dual operations, or jurisdictional questions) we find, preliminarily, that each applicant has demonstrated its proposed service warrants a grant of the application under the governing section of the Interstate Commerce Act. Each applicant is fit, willing, and able to perform the service proposed, and to conform to the requirements of Title 49, Subtitle IV, United States Code, and the Commission's regulations. Except where noted, this decision is neither a major Federal action significantly affecting the quality of the human environment nor a major regulatory action under the Energy Policy and Conservation Act of 1975.

In the absence of legally sufficient interest in the form of verified statements filed on or before March 2, 1981 (or, if the application later becomes unopposed) appropriate authorizing documents will be issued to applicants with regulated operations (except those with duly noted problems) and will remain in full effect only as long as the applicant maintains appropriate compliance. The unopposed applications involving new entrants will be subject to the issuance of an effective notice setting forth the compliance requirements which must be satisfied before the authority will be issued. Once this compliance is met, the authority will be issued.

Within 60 days after publication an applicant may file a verified statement in rebuttal to any statement in opposition.

To the extent that any of the authority granted may duplicate an applicant's other authority, the duplication shall be construed as conferring only a single operating right.

Note.—All applications are for authority to operate as a motor common carrier in interstate or foreign commerce over irregular routes, unless noted otherwise. Applications for motor contract carrier authority are those where service is for a named shipper "under contract".

Volume No. OP1–002

Decided: January 6, 1981.

By the Commission, Review Board No. 2, Members Chandler, Eaton, and Liberman.

MC 153330F, Filed December 29, 1980. Applicant: JERRY E. BIRELEY d.b.a. J.E.B. DRAYAGE, 2715 Palm Ave., Livermore, CA 94550. Representative: Arden Riess, P.O. Box 6067, 319 E. Charter Way, Stockton, CA 95206. Transporting for or on behalf of the United States Government, *general commodities* (except used household goods, hazardous or secret materials, and sensitive weapons and munitions), between points in the U.S.

MC 153331F, filed December 29, 1980. Applicant: SURFACE FREIGHT CORPORATION, 151 Harvard Ave., Stamford, CT 06902. Representative: Leonard A. Jaskiewicz, 1730 M St., N.W., Suite 501, Washington, DC 20036. Transporting *shipments weighing 100 pounds or less* if transported in a motor vehicle in which no one package exceeds 100 pounds, between points in the U.S.

MC 153361F, filed December 17, 1980. Applicant: ACORN TRAFFIC CONSULTANTS, INC., P.O. Box 161, Brentwood, TN 37027. Representative: Henry E. Seaton, 929 Pennsylvania Bldg., 425 13th St., N.W., Washington, DC 20004. As a *broker of general commodities* (except household goods), between points in the U.S.

Volume No. OP1–006

Decided: January 8, 1981.

By the Commission, Review Board No. 2, Members Chandler, Eaton, and Liberman.

MC 147311 (Sub-4F), filed December 18, 1980. Applicant: T & S TRANSPORTATION, INC., 7420 Ranco Rd., P.O. Box 9729, Richmond, VA 23228. Representative: William P. Jackson, Jr., 3426 N. Washington Blvd., P.O. Box 1240, Arlington, VA 22210. Transporting *general commodities*, between Cheviot, Bridgetown, and Miamitown, OH, on the one hand, and, on the other, points in the U.S.

Note.—The purpose of this application is to substitute motor carrier for abandoned rail carrier service.

MC 147880 (Sub-1F), filed December 22, 1980. Applicant: AQUA-TERRA ORGANIC FARMS, INC., 257 Oak St., San Francisco, CA 94102. Representative: Ronald C. Chauvel, 100 Pine St., Suite 2550, San Francisco, CA 94111. Transporting, for or on behalf of the United States Government, *general commodities* (except used household goods, hazardous or secret materials, and sensitive weapons and munitions), between points in the U.S.

Volume No. OP4–194

Decided: January 12, 1981.

By the Commission, Review Board No. 2, Members Chandler, Eaton, and Liberman. (Member Liberman not participating.)

MC 60066 (Sub-24F), filed December 24, 1980. Applicant: BEE LINE MOTOR FREIGHT, INC., 1804 Paul St., Omaha, NE 68102. Representative: Donald L. Stern, Suite 610, 7171 Mercy Rd., Omaha, NE 68106. Transporting *shipments weighing 100 pounds or less* if transported in a motor vehicle in which no one package exceeds 100 pounds, between points in the U.S.

Agatha L. Mergenovich,

Secretary.

BILLING CODE 7035–01–M

Motor Carrier Permanent Authority Decisions; Decision-Notice

The following applications, filed on or after July 3, 1980, are governed by Special Rule 247 of the Commission's Rules of Practice, see 49 CFR 1100.247. Special Rule 247 was published in the **Federal Register** of July 3, 1980, at 45 FR 45539. For compliance procedures, refer to the **Federal Register** issue of December 3, 1980, at 45 FR 80109.

Persons wishing to oppose an application must follow the rules under 49 CFR 1100.247(B). A copy of any application, together with applicant's supporting evidence, can be obtained from any applicant upon request and payment to applicant of $10.00.

Amendments to the request for authority are not allowed. Some of the applications may have been modified prior to publication to conform to the Commission's policy of simplifying grants of operating authority.

Findings

With the exception of those applications involving duly noted problems (e.g., unresolved common control, fitness, water carrier dual operations, or jurisdictional questions) we find, preliminarily, that each applicant has demonstrated its proposed service warrants a grant of the application under the governing section of the Interstate Commerce Act. Each applicant is fit, willing, and able to perform the service proposed, and to conform to the requirements of Title 49, Subtitle IV, United States Code, and the Commission's regulations. Except where noted, this decision is neither a major Federal action significantly affecting the quality of the human environment nor a major regulatory action under the Energy Policy and Conservation Act of 1975.

In the absence of legally sufficient interest in the form of verified statements filed on or before March 2, 1981 (or, if the application later becomes unopposed) appropriate authorizing documents will be issued to applicants with regulated operations (except those with duly noted problems) and will remain in full effect only as long as the applicant maintains appropriate compliance. The unopposed applications involving new entrants will be subject to the issuance of an effective notice setting forth the compliance requirements which must be satisfied before the authority will be issued. Once this compliance is met, the authority will be issued.

On or before March 17, 1981, an applicant may file a verified statement in rebuttal to any statement in opposition.

To the extent that any of the authority granted may duplicate an applicant's other authority, the duplication shall be construed as conferring only a single operating right.

Note.—All applications are for authority to operate as a motor common carrier in interstate or foreign commerce over irregular routes, unless noted otherwise. Applications for motor contract carrier authority are those where service is for a named shipper "under contract".

Volume No. OP1–003

Decided: January 6, 1981.

By the Commission, Review Board No. 1, Members Carleton, Joyce and Jones.

MC 117730 (Sub-83F), filed December 11, 1980. Applicant: KOUBENEC MOTOR SERVICE, INC., Route No. 7, Huntley, IL 60142. Representative: Stephen H. Loeb, Suite 2027, 33 North LaSalle St., Chicago, IL 60602. Transporting *general commodities* (except classes A and B explosives and household goods as defined by the Commission), between points in the U.S., under continuing contract(s) with American Cyanamid Company of Wayne, NJ.

MC 140231 (Sub-11F), filed October 16, 1980. Applicant: LUMBER DISTRIBUTORS, INC., Building 149 Marsh Street, Southside, Port Newark, NJ 07114. Representative: Morton E. Kiel, Suite 1832, 2 World Trade Center, New York, NY 10048. Transporting (1) *construction materials, equipment and supplies*, (2) *materials, equipment and supplies* used in the manufacture and distribution of commodities in (1) above, (3) *lumber and wood products* as described in Item 24 of the Standard Transportation Tariff Code, (4) *metals*, (5) *minerals*, and (6) *commodities which because of size or weight*, require the

use of special equipment, between points in ME, VT, NH, MA, RI, CT, NY, NJ, PA, DE, MD, DC, VA, NC, WV and OH.

MC 148751 (Sub-9F) (Republication), filed November 6, 1980, previously noticed in the **Federal Register** issue of December 2, 1980. Applicant: LINCOLN FREIGHT LINES, INC., P.O. Box 427, Lapel, IN 46051. Representative: Norman R. Garvin, 1301 Merchants Plaza, East Tower, Indianapolis, IN 46204. Transporting (1) *paper and paper articles*, and (2) *materials, equipment and supplies* used in the manufacture and distribution of the commodities in (1) above (except commodities in bulk), between points in IL and MO, on the one hand, and, on the other, points in IN, KY, MI, MO, and OH.

Note.—The purpose of this republication is to add points in IL as a portion of the base territorial description.

MC 152171 (Sub-2F), filed December 22, 1980. Applicant: C & L TRUCKING, INC., P.O. Box 409, Judsonia, AR 72081. Representative: Timothy C. Miller, Suite 301, 1307 Dolley Madison Blvd., McLean, VA 22101. Transporting *general commodities* (except classes A and B explosives, and household goods as defined by the Commission), between points in the U.S., under continuing contract(s) with American Cyanamid Company of Wayne, NJ.

Volume No. OP1–001

Decided: January 7, 1981.

By the Commission, Review Board No. 2, Members Chandler, Eaton, and Liberman.

BILLING CODE 7035-01-M

Motor Carrier Permanent Authority Decisions; Decision-Notice

The following applications, filed on or after March 1, 1979, are governed by Special Rule 247 of the Commission's *Rules of Practice* (49 CFR 1100.247). These rules provide, among other things, that a petition for intervention, either in support of or in opposition to the granting of an application, must be filed with the Commission within 30 days after the date notice of the application is published in the **Federal Register**. Protests (such as were allowed to filings prior to March 1, 1979) *will be rejected.* A petition for intervention without leave must comply with Rule 247(k) which requires petitioner to demonstrate that it (1) holds operating authority permitting performance of any of the service which the applicant seeks authority to perform, (2) has the necessary equipment and facilities for performing that service, and (3) has performed service within the scope of the application either (a) for those supporting the application, or, (b) where the service is not limited to the facilities of particular shippers, from and to, or between, any of the involved points.

Persons unable to intervene under rule 247(k) may file a petition for leave to intervene under Rule 247(l) setting forth the specific grounds upon which it is made, including a detailed statement of petitioner's interest, the particular facts, matters, and things relied upon, including the extent, if any, to which petitioner (a) has solicited the traffic or business of those supporting the application, or, (b) where the identity of those supporting the application is not included in the published application notice, has solicited traffic or business identical to any part of that sought by application within the affected marketplace. The Commission will also consider (a) the nature and extent of the property, financial, or other interest of the petitioner, (b) the effect of the decision which may be rendered upon petitioner's interest, (c) the availability of other means by which the petitioner's interest might be protected, (d) the extent to which petitioner's interest will be represented by other parties, (e) the extent to which petitioner's participation may reasonably be expected to assist in the development of a sound record, and (f) the extent to which participation by the petitioner would broaden the issues or delay the proceeding.

Petitions not in reasonable compliance with the requirements of the rule may be rejected. An original and one copy of the petition to intervene shall be filed with the Commission indicating the specific rule under which the petition to intervene is being filed, and a copy shall be served concurrently upon applicant's representative, or upon applicant if no representative is named.

Section 247(f) provides, in part, that an applicant which does not intend to timely prosecute its application shall promptly request that it be dismissed, and that failure to prosecute an application under the procedures of the Commission will result in its dismissal.

If an applicant has introduced rates as an issue it is noted. Upon request, and applicant must provide a copy of the tentative rate schedule to any protestant.

Further processing steps will be by Commission notice, decision, or letter which will be served on each party of record. *Broadening amendments will not be accepted after the date of this publication.*

Any authority granted may reflect administrative acceptable restrictive amendments to the service proposed below. Some of the applications may have been modified to conform to the Commission's policy of simplifying grants of operating authority.

Findings

With the exception of those applications involving duly noted problems (e.gs., unresolved common control, unresolved fitness questions, and jurisdictional problems) we find, preliminarily, that each common carrier applicant has demonstrated that its proposed service is required by the present and future public convenience and necessity, and that each contract carrier applicant qualifies as a contract carrier and its proposed contract carrier service will be consistent with the public interest and the transportation policy of 49 U.S.C. 10101. Each application is fit, willing, and able properly to perform the service proposed and to conform to the requirements of Title 49, Subtitle IV, United States Code,

and the Commission's regulation. Except where specifically noted, this decision is neither a major Federal Action significantly affecting the quality of the human environment nor a major regulatory action under the Energy Policy and Conservation Act of 1975.

In those proceedings containing a statement or note that dual operations are or may be involved we find, preliminarily and in the absence of the issue being raised by a petitioner, that the proposed dual operations are consistent with the public interest and the transportation policy of 49 U.S.C. 10101 subject to the right of the Commission, which is expressly reserved, to impose such terms, conditions or limitations as it finds necessary to insure that applicant's operations shall conform to the provisions of 49 U.S.C. 10930(a) (formerly section 210 of the Interstate Commerce Act.)

In the absence of legally sufficient petitions for intervention, filed on or before February 17, 1981 (or, if the application later becomes unopposed), appropriate authority will be issued to each applicant (except those with duly noted problems) upon compliance with certain requirements which will be set forth in a notification of effectiveness of the decision-notice. To the extent that the authority sought below may duplicate an applicant's other authority, such duplication shall be construed as conferring only a single operating right.

Applicants must comply with all specific conditions set forth in the following decision-notices within 30 days after publication, or the application shall stand denied.

Note.—All applications are for authority to operate as a common carrier, by motor vehicle, in interstate or foreign commerce, over irregular routes, except as otherwise noted.

Volume No. 394

Decided: December 11, 1980.

By the Commission, Review Board No. 3, Members Parker, Fortier, and Hill.

MC 35320 (Sub-605F), filed June 13, 1980, and previously noticed in **Federal Register** issue of July 31, 1980. Applicant: T.I.M.E.-DC, INC., 2598 74th St., P.O. Box 2550, Lubbock, TX 79408. Representative: Kenneth G. Thomas (same address as applicant). *Over regular routes*, transporting *general commodities* (except those of unusual value, classes A and B explosives, household goods as defined by the Commission, commodities in bulk, and those requiring special equipment), (1) between Minneapolis, MN, and Seattle, WA, from Minneapolis, MN, over Interstate Hwy 94 to junction Interstate Hwy 90, then over Interstate Hwy 90 to Seattle, and return over the same route, serving no intermediate points, and (2) between junction Interstate Hwy 90 and U.S. Hwy 395, at or near Ritzville, WA, and Portland, OR, from junction Interstate Hwy 90 and U.S. Hwy 395 over U.S. Hwy 395 to junction WA Hwy 14, then over WA Hwy 14 to junction U.S. Hwy 730, at or near the WA–OR State line, then over U.S. Hwy 730 to junction Interstate Hwy 80N, at or near Boardman, OR, then over Interstate Hwy 80N to Portland, OR, and return over the same route, serving no intermediate points, as alternate routes for operating convience only.

Note.—Applicant intends to tack this authority with its existing regular-route authority. This republication clarifies the territorial description.

MC 52460 (Sub-279F), filed May 5, 1980, previously noticed in **Federal Register** issue of August 13, 1980, and corrected as published this issue. Applicant: ELLEX TRANSPORTATION, INC., P.O. Box 9637, 1420 West 35th St., Tulsa, OK 74107. Representative: Michael A. Calvert (same address as applicant). Transporting *foodstuffs*, (except in bulk), from the facilities of McIlhenny Company, at or near Avery Island, LA, and Collinsville, IL, to points in AL, AK, CO, FL, GA, IL, IA, KS, LA, MS, MO, NM, NC, OK, SC, TN, and TX.

Note.—The purpose of this republication is to correct the spelling of the company and clarify the origin.

MC 142960 (Sub-3F (Republication)), filed January 29, 1980, previously noticed in the FR issues of April 3, 1980 and October 15, 1980. Applicant: HUGH AND LAILA PIXLEY d.b.a. PIXLEY TRANSPORTATION, 1410 Oak, P.O. Box 927, Forsyth, MT 59327. Representative: Hugh Pixley (same address as applicant). *Contract carrier*, transporting *passengers and their baggage* in the same vehicle with passengers, between points in Boundary, Bonner, Kootenai, and Shoshone Counties, ID, Divide, Williams, McKenzie, Burke, Mountrail, Renville, and Ward Counties, ND, Spokane County, WA, Lincoln, Sanders, Mineral, Glacier, Flathead, Lake, Missoula, Granite, Powell, Lewis and Clark, Teton Pondera, Liberty, Cascade, Jefferson, Broadwater, Gallatin, Meagher, Chouteau, Hill, Blaine, Fergus, Judith Basin, Wheatland, Sweet Grass, Park, Phillips, Petroleum, Musselshell, Golden Valley, McCone, Roosevelt, Daniels, Sheridan, and Richland Counties, MT, under continuing contract(s) with Burlington Northern, Inc., of Missoula, MT.

Note.—The purpose of this republication is to indicate the points in ID and ND as county-wide points.

Volume No. 395

Decided: January 6, 1981.

By the Commission, Review Board No. 2, Members Chandler, Eaton, and Liberman.

MC 143140 (Sub-4F), filed April 29, 1980. Applicant: SEYMOUR BUS LINES, INC., Route 3, Maynardville, TN 37807. Representative: Lewis S. Witherspoon, 88 E. Broad St., Columbus, OH 43215. Transporting *passengers and their baggage*, in the same vehicle with passengers, in special and charter operations, in round-trip tours, beginning and ending at points in Davidson and Hamilton Counties, TN, Bell, Clay, Harlan, Knox, Laurel, Leslie, Letcher, and Whitley Counties, KY, and Lee, Wise and Scott Counties, VA, and extending to points in the U.S. (including AK but excluding HI).

Volume No. 396

Decided: January 6, 1981.

By the Commission, Review Board No. 1, Members Carleton, Joyce, and Jones.

MC 150640 (Sub-4F (Republication)), filed April 23, 1980, previously noticed in the **Federal Register** issues of July 15, 1980, August 26, 1980, and November 26, 1980. Applicant: EMERSON EXPRESS CO., INC., 545 Lyell Ave., Rochester, NY 14606. Representative: Raymond A. Richards, 35 Curtice Park, Webster, NY 14580. *Contract carrier*, transporting *scrap materials, metals, stainless steel, batteries*, and *reconditioned steel containers*, including *tubs*, between points in Monroe County, NY, on the one hand, and, on the other, New York, NY, points in Nassau and Suffolk Counties, NY, and points in AL, CT, IL, IN, KY, MA, MI, MO, NJ, OH, PA, and TN, under continuing contract(s) with (1) Krieger Waste Paper Co., (2) Genesee Scrap & Tin Bailing Corp. (3) Atkin's Waste Materials, Inc., (4) L. Atkin's Sons, and (5) Lyell Metal Co., Inc., all of Rochester, NY.

Note.—The purpose of this republication is to add the contracting shipper of Lyell Metal Co., Inc., named in (5) above.

Agatha L. Mergenovich,

Secretary.

BILLING CODE 7035-01-M

[Volume No. 1]

Motor Carrier Permanent Authority Decisons; Decision-Notice

Decided: January 12, 1981.

The following restriction removal applications, filed after December 28,

1980, are governed by 49 CFR 1137. Part 1137 was published in the **Federal Register** of December 31, 1980, at 45 FR 86747.

Persons wishing to file a comment to an application must follow the rules under 49 CFR 1137.12. A copy of any application can be obtained from any applicant upon request and payment to applicant of $10.00.

Amendments to the restriction removal applications are not allowed.

Some of the applications may have been modified prior to publication to conform to the special provisions applicable to restriction removal.

Findings

We find, preliminarily, that each applicant has demonstrated that its requested removal of restrictions or broadening of unduly narrow authority is consistent with 49 U.S.C. 10922(h).

In the absence of comments filed on or before February 10, 1981, appropriate reformed authority will be issued to each applicant. Prior to beginning operations under the newly issued authority, compliance must be made with the normal statutory and regulatory requirements for common and contract carriers.

By the Commission, Restriction Removal Board, Members Sporn, Alspaugh, and Shaffer.

Agatha L. Mergenovich,

Secretary.

MC 60014 (Sub-206X), filed January 8, 1981. Applicant: AEOR TRUCKING CO., Box 308, Monroeville, PA 15146. Representative: A. Charles Tell, Baker & Hostetler, Suite 1800, 100 East Broad St., Columbus, OH 43215. Applicant seeks to remove restrictions in Sub Nos. 9 and 38 which authorize transportation of iron and steel articles from named points in PA, WV, and OH to points in KY, TN, AL, and MS, and the transportation of "size and weight" commodities from points in 19 named states to points in the United States (with exeptions) in order to authorize roundtrip operations.

MC 115093 (Sub-26X), filed January 6, 1981. Applicant: MERCURY MOTOR EXPRESS, INC., 2511 North Grady Ave. (P.O. Box 23406), Tampa, FL 33607 (33623). Representative: Joseph W. Watson (same address as above). Applicant seeks to remove restrictions from the irregular-route portion of its lead Certificate No. MC–115093 which authorizes the transportation of general commodities between points in NC, TN, VA, WV, PA, MD, DE, NJ, RI, CN, MA, DC, and those in NY, on and south of NY Hwy 7, on the one hand, and, on the other, points in FL, GA, and SC, by (1) removing restrictions against handling articles of unusual value, household goods, commodities in bulk, commodities requiring special equipment, and those injurious or contaminating to other lading, and (2) removing restrictions on service (a) between points in FL, GA and SC, on the one hand, and, on the other, points in TN and (b) between points in SC, on the one hand, and, on the other, points in NC which require that the traffic move from, to or through points in a specified part of NC and SC.

MC 118831 (Sub-198X), filed January 5, 1981. Applicant: CENTRAL TRANSPORT, INC., P.O. Box 7007, High Point, NC 27264. Representative: Ben H. Keller, III, (same adress as applicant). Applicant seeks to remove restrictions in its Sub-No. 148 in order to (1) broaden the commodity description from dry chemicals, in bulk, to commodities, in bulk, (2) remove the territorial restrictions against transportation to AK and HI (3) remove restrictions against the transportation of fly ash to points in NC, SC, GA, and FL, and carbon to Covington, VA, and (4) authorize service between Richland County, SC, and points in the United States in place of its limited authority from a named facility near Eastman, SC, to points in the United States.

MC 136123 (Sub-9X), filed January 8, 1981. Applicant: MEAT DISPATCH, INC., P.O. Box 1058, Palmetto, FL 33561. Representative: William L. Beasley (same as above). Applicant seeks to remove restrictions in its Sub-No. 17 permit which authorizes it to serve Arcata Graphics Division of Depew, NY, under contract(s), in order to (1) broaden its commodity authority to transport such commodities as are manufactured in the printing industry, and (2) broaden its territorial authority to between points in the United States.

MC 138635 (Sub-125X), filed January 2, 1981. Applicant: CAROLINA WESTERN EXPRESS, INC. Box 3995, Gastonia, NC 28052. Representative: Eric Meierhoefer, Suite 423, 1511 K Street, N.W., Washington, DC 20005. The application seeks to remove restrictions in Sub-Nos. 46 and 68F to (1) broaden the commodity descriptions from general commodities (except those of unusual value, classes A and B explosives, household goods as defined by the Commission, commodities in bulk and those requiring special equipment) to general commodities (except classes A and B explosives) and (2) remove the restrictions limiting transportation to traffic moving on bills of lading of freight forwarders.

MC 144678 (Sub-35X), filed January 6, 1981. Applicant: AMERICAN FREIGHT SYSTEM, INC., 9393 West 110th Street, Overland Park, Kansas 66210. Representative: Harold H. Clokey, Vice President and General Counsel, American Freight System, Inc., 9393 West 110th Street, Overland Park, KS 66210. Applicant seeks removal of restrictions in Sub-Nos. 3F, 4F, and 8F in order to (1) broaden the commodity descriptions from general commodities (except those of unusual value, classes A and B explosives, household goods as defined by the Commission, commodities in bulk and those requiring special equipment) to general commodities (except classes A and B explosives and household goods as defined by the Commission); (2) authorize service at all intermediate points, and (3) in Sub No. 8 remove a restriction that authorizes service at the junction of Interstate Hwy. 35 and U.S. Hwy. 50 for purposes of joinder only, and a restriction that limits the regular route operations against the transportation of traffic moving between the Kansas City, MO–KS, Commercial Zone and Wichita, KS.

MC 145477 (Sub-1X), filed January 7, 1981. Applicant: MID–CITIES MOTOR FREIGHT, INC., 324 Michigan, St. Joseph, MO 65404. Representative: Tom B. Kretsinger, Kretsinger & Kretsinger, 20 East Franklin, Liberty, MO 64068. Applicant seeks to remove restrictions in its lead certificate in order to (1) broaden the commodity description from general commodities (except those of unusual value, classes A and B explosives, household goods as defined by the Commission, commodities in bulk, and those requiring special equipment) to general commodities (except classes A and B explosives, and household goods as defined by the Commission), and (2) remove the restriction limiting the authority to the transportation of traffic originating at and destined to Kansas City, Faucett, and St. Joseph, MO.

[FR Doc. 81–1571 Filed 1–15–81; 8:45 am]

BILLING CODE 7035–01–M

Motor Carrier Transfer; Decision Notice

As indicated by the findings below, the Commission has approved the following applications filed under 49 U.S.C. 10924, 10926, 10931 and 10932.

We find:

Each transaction is exempt from section 11343 (formerly section 5) of the Interstate Commerce Act, and complies with the appropriate transfer rules.

This decision is neither a major Federal action significantly affecting the quality of the human environment nor a major regulatory action under the Energy Policy and Conservation Act of 1975.

Petitions seeking reconsideration must be filed on or before February 5, 1981. Replies must be filed within 20 days after the final date for filing petitions for reconsiderations; any interested person may file and serve a reply upon the parties to the proceeding. Petitions which do not comply with the relevant transfer rules at 49 CFR 1132.4 may be rejected.

If petitions for reconsideration are not timely filed, and applicants satisfy the conditions, if any, which have been imposed, the application is granted and they will receive an effective notice. The notice will indicate that consummation of the transfer will be presumed to occur on the 20th day following service of the notice, unless either applicant has advised the Commission that the transfer will not be consummated or that an extension of time for consummation is needed. The notice will also recite the compliance requirements which must be met before the transferee may commence operations.

Applicants must comply with any conditions set forth in the following decision-notices on or before February 17, 1981, or within any approved extension period. Otherwise, the decision-notice shall have no further effect.

By the Commission, Review Board Number 5, Members Krock, Taylor, and Williams.

MC–FC–78801. By decision of December 1, 1980 issued under 49 U.S.C. 10926 and the transfer rules at 49 C.F.R. 1132 Review Board Number 5 approved the transfer to S&P Trucking, Inc., of Kennett, MO of Certificate No. MC 140475 (Sub-Nos. 2, 4, and 6) issued to Holcomb Trucking Company, Inc. of Holcomb, MO. The authority in Sub-Nos. 2, 4 and 6 was issued May 19, 1976, January 22, 1979, and November 6, 1980, respectively. This authority authorizes the transportation, over irregular routes, in interstate or foreign commerce, of (1) dry fertilizer and dry fertilizer materials, in bulk, from the facilities of Cargill Incorporated, at or near New Madrid, MO, to points in Arkansas, Illinois (except East St. Louis and those points in Illinois located within the St. Louis, MO-East St. Louis, IL commercial zone), Iowa, Kentucky, and Tennessee, 92) fertilizer and fertilizer ingredients (except petroleum and petroleum products), from points in Dunklin County, MO (except Malden), and points in Pemiscott County, MO to points in Alabama, Arkansas, Illinois (except East St. Louis and its commercial zone), Kentucky, Louisiana, Mississippi, and Tennessee, (3) dry fertilizer and dry fertilizer ingredients, from Memphis and Nashville, TN to points in Missouri, (4) dry fertilizer and fertilizer ingredients (a) from Nashville, TN to points in Missouri and (b) from the facilities utilized by United States Steel Corporation in Memphis, TN to points in Missouri, and (5) dry fertilizer and fertilizer ingredients, in bulk, in dump vehicles, from Memphis, TN (except the facilities utilized by United States Steel Corporation) to points in Missouri. Applicant's representative is: Thomas P. Rose, P.O. Box 205, Jefferson City, MO 65102.

MC 78854. By decision of November 19, 1980 issued under 49 U.S.C. 10926 and the transfer rules at 49 CFR Review Board Number 5 approved the transfer to Lane's Transport (Toronto) Limited of Certificate No. MC 120951 (Sub-No. 2) issued March 27, 1979 to Duggan's Trucking, Inc. authorizing the transportation in interstate or foreign commerce, over irregular routes, of general commodities (except those of unusual value, classes A and B explosives, household goods, as defined by the Commission, commodities in bulk, and those requiring special equipment), (1) between points in Erie County, NY, and (2) between points in Erie County, NY, on the one hand, and, on the other, points in Niagara County, NY. Applicant's representative is: Robert D. Gunderman, Suite 710, Statler Building, Buffalo, NY 14202.

Note.—Common control is involved.

MC–FC–78863. By decision of December 12, 1980, issued under 49 U.S.C. 10931 or 10932 and the transfer rules at 49 CFR 1132, Review Board Number 5 approved the transfer to D.C. Transport, Inc. d.b.a. Roughneck Trucking, Inc., of 2611 Albany, Houston, TX 77006 of Certificate of Registration No. MC 120750 (Sub-No. 1) issued 2/12/76, to D.C. Transport, Inc., of 10707 Goodnight, Dallas, TX 75220, evidencing a right to engage in transportation in interstate commerce corresponding in scope to No. 5091, dated 9/2/80 issued by the Railroad Commission of Texas, authorizing oilfield equipment and pipe, machinery, and various other named commodities, with certain restrictions, between points in Texas. TA lease is not sought. Transferee holds no authority.

MC–FC–78868. By decision of December 12, 1980 issued under 49 U.S.C. 10926 and the transfer rules at 49 CFR 1132, Review Board Number 5 approved the transfer to H & P Trucking, Inc., of Mt. Vernon, MO of Certificate MC 117568 (Sub-No. 21F) issued July 25, 1980 to Wade Truck Lines, Inc., of Verona, MO, authorizing the transportation of sand, gravel, rock, and asphalt, in bulk, in dump truck vehicles, over irregular routes, between points in McDonald, Barry, Stone, and Taney Counties, MO, and points in Benton, Washington, Madison, Marion, Baxter, Carroll, and Boone Counties, AR. Applicant's representative: Charles J. Fain, 333 Madison St., Jefferson City, MO 65101.

MC–FC–78827. By decision of November 5, 1980, issued under 49 U.S.C. 10926 and the transfer rules at 49 CFR 1132, Review Board Number 5 approved the transfer to FRANK'S TRUCKING CORP., of La Grange, IL, of Certificate MC 126949 issued September 2, 1976 to ATLANTIC COAST IMPORT CARRIERS, INC., of La Grange, IL authorizing the transportation by irregular routes of *cream and condensed milk*, in containers, *and butter*, from Columbus and Toledo, OH, Fort Wayne and Bluffton, IN, and points in that part of Michigan on and south of Michigan Highway 21 between Grand Rapids and Port Huron, and on and east of U.S. Highway 131 between Grand Rapids and the Michigan-Indiana State line; to Springfield, Worcester and Boston, MA, and points in Massachusetts within 20 miles of Boston and Providence, RI, New York, NY, Paterson, Newark, Hillside, Belleville, Woodbridge, and Perth Amboy, NJ, Wilmington, DE, Philadelphia, Hershey and Harrisburg, PA, and Baltimore, MD; and *empty containers* used in the transportation of the commodities described above, from the above-specified destination points to the above-specified origin points. Applicant's representative is: Joan Devitt, President, 316 S. 6th Avenue, La Grange, IL 60525.

MC–FC–78905. By decision of December 30, 1980, issued under 49 U.S.C. 10926 and the transfer rules at 49 CFR 1132, Review Board Number 5 approved the transfer to DAVID S. WRIGHT, d.b.a. WRIGHT'S TRANSFER & STORAGE, a portion of Certificate No. MC–20084 issued July 2, 1951, to LEO BERTRAND CRITES, d.b.a. CRITES TRANSFER, authorizing the transportation of *household goods* as defined by the Commission, (a) between points in Pendleton County, WV, on the one hand, and, on the other, points in VA, WV, KY, OH, PA, MD, and DC, (b) between Cumberland, MD, and points within 10 miles of Cumberland, on the one hand, and, on the other, points in NY on and south of US Hwy 6, and those in MD, NJ, PA, VA, WV, and DC,

and (c) between Mountain Lake Park, MD, and points within 20 miles of Mountain Lake Park, on the one hand, and, on the other, points in MD, PA, OH, VA, WV, and DC. Applicants' Representative is Edward N. Button, 580 Northern Avenue, Hagerstown, MD 21740.

Note.—Application for TA has not been filed. Transferee holds no authority from this Commission.

MC–FC–78903. By decision of December 30, 1980, issued under 49 U.S.C. 10926 and the transfer rules at 49 CFR 1132, Review Board Number 5 approved the transfer to BOUTWELL ENTERPRISES, INC., of Jay, FL, of Certificate MC–138102 (Sub-No. 2), issued November 28, 1973 and Certificate No. MC–138102 (Sub-No. 3), issued September 9, 1980, to CARSON D. BOUTWELL, d.b.a. BOUTWELL TRUCK LINES, of Jay, FL, authorizing the transportation of (1) *dry bulk fertilizer*, from Cottondale & Pensacola, FL, to points in AL and MS; and (2) *dry fertilizer*, from points in Escambia and Santa Rosa Counties, FL, to points in AL, GA, MS, and LA. Applicant's representative: Bobby A. Boutwell, P.O. Box 338, Jay, FL 32565.

Note.—Transferee does not hold any ICC authority. Application for TA has not been filed. This application was previously assigned docket MC–F–14520F.

MC–FC–78893. By decision of December 19, 1980, issued under 49 U.S.C. 10926 and the transfer rules at 49 CFR 1132, Review Board Number 5 approved the transfer to CAROLINA AGRICULTURAL DISTRIBUTORS, INC., a corporation of Plymouth, NC, of Certificate No. MC–145928 (Sub Nos. 2, 4 and 5) issued July 12, 1979, and April 30, July 7, and July 11, 1980, respectively, to PANTEGO DISTRIBUTING CO., INC. of Pantego, NC, authorizing the transportation of (1) *paper, paper products and wood pulp* from the facilities of Weyerhaeuser Co., Inc., in NC, to points in CT, FL, ME, MA, NH, NJ, NY, RI, VT, and the facilities of Weyerhaeuser Co., Inc. at Seymour, IN. (2) *Manufactured forest products*, from points in NC to points in CT, FL, ME, MA, NH, NJ, RI, VT, SC, GA, AL, MS, KY TN, WV, OH, MI, IL, IN, and WI, restricted to the transportation of traffic originating at the facilities of Weyerhaeuser Co., Inc. (3) *Forest products* from the facilities of Weyerhaeuser, Inc., in NC to points in Ny, NJ, DE, MD, PA, and VA. (4) *Lumber and lumber products, and iron, steel and aluminum articles* between Philadelphia, PA, on the one hand, and, on the other, Newport News, VA. Applicant's representative is: Peter A. Greene, 1920 N St., N.W., Washington, D.C. 20036. Application for temporary authority has been filed.

MC–FC–78880. By decision of December 11, 1980, issued under 49 U.S.C. § 10926 and the transfer rules at 49 CFR 1132, Review Board Number 5 approved the transfer to T. DEL FARNO TRUCKING CO., of Pawtucket, RI, of Certificate MC–144899 (Sub-No. 1F), issued June 25, 1980, to B.T. OILFIELD TRANSPORT, INC., of North Kingstown, RI, authorizing the transportation of (1) *machinery, equipment, materials, and supplies* used in, or in connection with, the discovery, development, production, refining, manufacture, processing, storage, transmission, and distribution, of natural gas and petroleum and their products and by-products, and (2) *machinery, materials, equipment, and supplies* used in, or in connection with, the construction, operation, repair, servicing, maintenance and dismantling of pipe lines, including the stringing and picking up thereof, between North Kingstown, RI, on the one hand, and, on the other, points in AR, CT, DE, GA, IL, IN, LA, MD, MA, MI, MS, NC, NJ, NY, OH, OK, PA, RI, SC, TX, VA, and WV. Applicant's representative: Frank J. Weiner, 15 Court Square, Boston, MA 02108.

Note.—Transferee holds Certificate MC 96165 and sub-numbers thereunder. Application has been filed for TA under 49 U.S.C. 11359.

MC–FC–78865. By decision of December 11, 1980 issued under 49 U.S.C. 10926 and the transfer rules at 49 CFR 1132, Review Board Number 5 approved the transfer to WACHUSETT TRANSPORATION CO., INC., of Clinton, MA, of Certificate MC 146219F, issued February 26, 1980, to FROZEN FOOD DELIVERY SERVICE, INC. (Shawmut Community Bank and T.H.E. Appraisal Corporation, Successors in Interest), of Berlin, MA, authorizing the transportation of *cereal, plastic articles, lunch and picnic kits, napkins, sugar, condiments, and straws* (except commodities in bulk), from the facilities of Van Brode Milling Co. Inc., at Clinton, MA, to points in AL, CA, FL, GA, IL, IN, IA, KS, MD, MI, MN, MS, MO, NE, NJ, NY, NC, ND, OH, OK, PA, SC, SD, TN, VA, WV, WI, and DC. Applicants' representative: James M. Burns, 1383 Main Street, Suite 413, Springfield, MA 01103.

Note.—Application for TA has been filed. Transferee holds no permanent authority from this Commission.

Agatha L. Mergenovich,

Secretary.

BILLING CODE 7035–01–M

DEPARTMENT OF LABOR

Occupational Safety and Health Administration

Federal Advisory Council on Occupational Safety and Health; Meeting

Notice is hereby given that the Federal Advisory Council on Occupational Safety and Health, established under Section 1.5 of Executive Order 12196 of February 26, 1980 (Vol. 45, No. 40), will meet on February 3, 1981 starting at 10:00 a.m. in Room N5437 A, B, C, and D, of the Frances Perkins Department of Labor Building, 200 Constitution Avenue, N.W., Washington, D.C. The meeting will be open to the public.

The agenda provides for:

I. Call to Order

II. Approval of Minutes of Meeting October 28, 1980

III. Announcements

IV. Update of Training Requirements in 29 CFR 1960

V. Report on Labor-Management Safety and Health Committees

VI. Committee Reports and Recommendations

A. Conference Committee

B. Special OPM-Standards

C. Interagency Task Group on Federal Employee Medical Records

VII. New Business

The Council welcomes written data, views or comments concerning safety and health programs for Federal employees, including comments on the agenda items. All such submissions received by close of business January 30, 1981, will be provided to the members of the Council and included in the record of the meeting.

The Council will consider oral presentations relating to agenda items. Persons wishing to orally address the Council at the meeting should submit a written request to be heard by close of business January 30, 1981. The request must include the name and address of the person wishing to appear, the capacity in which appearance will be made, a short summary of the intended presentation and an estimate of the amount of time needed.

All communications regarding this Advisory Council should be addressed

to Robert J. Broderick, Acting Director, Office of Federal Agency Safety and Health Programs, Department of Labor, OSHA, Bicentennial Building, 600 E Street, Suite 500, N.W., Washington, D.C. 20210, telephone (202) 376–3005.

Signed at Washington, D.C. this 12th day of January, 1981.

Eula Bingham,

Assistant Secretary.

BILLING CODE 4510-23-M

MERIT SYSTEMS PROTECTION BOARD

Regulation Review

AGENCY: Merit Systems Protection Board.

ACTION: Notice of Orders and opportunity to file comments in Board proceedings.

SUMMARY: 5 U.S.C. sec. 1205(e) authorizes the Board to review rules and regulations issued by the Office of Personnel Management and their implementation by other Federal agencies in order to determine if they have required or would require any federal employee to commit a prohibited personnel practice in violation of 5 U.S.C. sec. 2302(b). The Board has issued orders, described below, under section 1205(e). Those orders schedule five matters for review and deny review of some rules and regulations raised in petitions filed pursuant to section 1205(e)(1)(B).

DATES: In all of the matters scheduled for review, the respondents' briefs are to be filed by March 13, 1981. Interested persons are invited to file comments. These comments may be filed at any time prior to Board's determination but the Board cannot guarantee that it will be able to consider filed comments unless they are received by April 1, 1981. All filings are to be made in accordance with 5 CFR Part 1203, the Board's interim regulations governing review of OPM regulations. 46 FR 2326 (Jan. 9, 1981). All pleadings, briefs and comments received in these matters will be publicly available for inspection in the Office of the Secretary of the Merit Systems Protection Board.

ADDRESS: Office of the Secretary, Merit Systems Protection Board, Room 350, 1717 H Street, NW, Washington, D.C. 20419 (202) 632–4525.

FOR FURTHER INFORMATION CONTACT: Bruce Mayor, Office of the General Counsel, Merit Systems Protection Board (202) 653–8386.

SUPPLEMENTARY INFORMATION: The Board will review the following rules and regulations on its own motion:

a. Volume 5 CFR 432.201(a) which limits the coverage of 5 U.S.C. sec. 4303, *Actions based on unacceptable performance*, to actions based solely on unacceptable performance and 5 CFR 752.401(a)(2) which extends the coverage of adverse actions under 5 U.S.C. sec. 7512 to actions taken for both performance and conduct cases. (*In Re reduction-in-grade or removals for performance and non-performance related reasons*, Docket No. HQ12058110011). The issues to be addressed in this review are, whether these regulations: (1) deny federal employees substantial rights provided by Chapter 43 of the Civil Service Reform Act; (2) require the commission of prohibited personnel practices with respect to employees against whom a reduction-in-grade or a removal is proposed for performance and non-performance related reasons in violation of 5 U.S.C. sec. 2302(b)(11); and/or (3) deny federal employees an opportunity to demonstrate improved performance before they can be reduced-in-grade or removed.

b. Volume 5 CFR 735.206, which restricts federal employees from using official information in furtherance of a private interest and 5 CFR 1001.735–208 which restricts OPM employees from making public disagreements with or criticisms of officials, policies or practices of OPM or other Federal agencies in areas relating to OPM's functions. (*In Re disclosure of information*, Docket No. HQ12058110010). The issues to be addressed in this review are whether these regulations: (1) prohibit disclosure of information in areas which are protected under 5 U.S.C. sec. 2302(b)(8); (2) violate the "whistleblower" protections of the Civil Service Reform Act which restrict disclosure of information only where it is specifically prohibited by law or required by Executive order in the interest of national defense or the conduct of foreign affairs; and/or (3) require the commission of a prohibited personnel practice with respect to employees who disclose information which they reasonably believe evidences a violation of law, mismanagement, waste of funds, abuse of authority or a danger to public health or safety.

c. 335 Federal Personnel Manual, Chapter S1–5(c)(1)(b) (1979), which permits agencies to except from their competitive merit plans promotions which result from an employee's position being reclassified at a higher grade because of an accretion of duties. (*In Re exceptions from competitive plans*, Docket No. HQ1205811012). The issues to be addressed in this review are whether this rule: (1) permits the non-competitive promotion of an employee whose position is upgraded as a result of the addition of duties by planned management action;
(2) permits the granting of special preferences or advantages in violation of 5 U.S.C. 2302(b)(6); and/or discrimination in violation of 5 U.S.C. 2302(b)(1), and/or (3) permits the evasion of the Chapter 43 requirement that promotion determinations be based, in part, upon performance appraisals in violation of 5 U.S.C. 2303(b)(1).

The Board will also review the following rules and regulations raised in petitions filed with it pursuant to 5 U.S.C. 1205(e)(1)(B):

a. Volume 5 CFR 752.401(c)(9) which excludes from adverse action procedural requirements the furlough of seasonal, part-time and intermittent employees. (*National Treasury Employees Union* v. *Jule M. Sugarman, Acting Director, Office of Personnel Management*, Docket No. HQ120500006). The issues to be addressed in this review are whether: (1) the regulation impermissibly restricts, on its face or as implemented, the statutory procedures found at 5 U.S.C. 7511–7514 (Subchapter II) with regard to the specific personnel actions at issue or with regard to the class of employees involved and (2) Subchapter II implements or directly concerns the merit principles contained in 5 U.S.C.

2301(b)(2), (6) and (8)(A) so that their violation constitutes a prohibited personnel practice under 5 U.S.C. 2302(b)(11).

b. Federal Personnel Manual Supplement 335–1, Subchapter S6 which, as implemented by the Customs Service, has restricted the availability to employees and others of crediting plans used by promotion and selection panels to rate and rank candidates for employment and promotion. (*National Treasury Employees Union* v. *Jule M. Sugarman, Acting Director, Office of Personnel Management, et al.*, Docket No. HQ120500003). The issues to be addressed in this review are whether: (1) has the Customs Service arbitrarily refused access to such plans; and (2), in the event that it has, does the arbitrary refusal of access to crediting plans constitute a violation of sec. 2302(b).

The Board will not review the following rules and regulations raised in petitions filed with it pursuant to 5 U.S.C. 1205(e)(1)(B):

a. Volume 5 CFR 771.204, which permits agencies to exclude bargaining unit employees for the coverage of agency grievance systems, (Petition of Robert M. Tobias, et al., dated Feb. 7, 1980).

b. Volume 5 CFR 752.401(c)(2) which excludes actions which entitle employees to grade retention under Part 536 from adverse action procedural requirements. (Petition of Robert M. Tobias, et al., dated Feb. 7, 1980); and

c. Federal Personnel Manual Supplement 335–1 Subchapter S6 which instructs agency personnel to maintain proper security and control over examination materials used to evaluate employees for promotion and internal placement (Petition of Vincent L. Connery, dated Feb. 7, 1980). The Board will, as noted above, review the implementation of this rule by the Customs Service.

For the Board.

Ruth T. Prokop,

Chairwoman.

January 13, 1981.

BILLING CODE 6325–01–M

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–17434; File No. SR–Amex–80–33]

American Stock Exchange, Inc.; Proposed Rule Change

Pursuant to Section 19(b)(1) of the Securities Act of 1934 (the "Act"), 15 U.S.C. 78s(b)(1), as amended by Pub. L. No. 94–29, 16 (June 4, 1975), notice is hereby given that on December 31, 1980 the above-mentioned self-regulatory organization filed with the Securities and Exchange Commission a proposed rule change as follows:

The Exchange's Statement of Terms of Substance of the Proposed Rule Change

([Brackets] indicate material to be deleted and italics indicate material to be added.)

Article IV, Section 2(m)

Registered Address

(m) Every member [, member firm and member corporation] *and member organization* shall register with the Exchange an address and subsequent changes thereof where notices may be served. [The registered address of every member who personally transacts business upon the Exchange must be in its vicinity.[1]] Any notice mailed to a member or member organization at the last address registered at the Exchange shall be presumed to have been received by such member or member organization.

The Exchange's Statement of Purpose and Basis

The purpose and basis of the foregoing rule change is as follows: Article IV, Section 2(m) of the Exchange Constitution requires that every member and member organization register an address with the Exchange where notices may be served. The registered address of every member who personally transacts business on the Floor must be in the "vicinity of the Exchange". Notices mailed by the Exchange to a member's registered address are presumed to have been received by the member.

The local address requirement was originally intended to facilitate the expeditious clearance and settlement of transactions on the floor of the Exchange. However, the creation of modern clearance and settlement facilities such as the National Securities Clearing Corporation and the Depository Trust Company has eliminated the need for this requirement.

The proposed amendment is consistent with Section 6(b) of the Act in general and furthers the objectives of Section 6(b)(2) and 6(b)(5) of the Act in particular in that it would enhance the ability of qualified persons to become members of the Exchange and remove an impediment to and enhance the perfection of the mechanism of a free and open market and a national market system, by removing a geographical location requirement for members who wish to personally transact business on the floor of the Exchange. The proposed amendment is also consistent with Section 6(b)(5) in that it would foster cooperation and coordination with persons engaged in regulating, clearing, settling, and processing information with respect to, and facilitating transactions in securities, by making Exchange requirements consistent with the geographical location requirements for members of the National Securities Clearing Corporation.

Comments Received From Members, Participants or Others on Proposed Rule Change

No comments were solicited or received with respect to the proposed rule change.

Burden on Competition

The Amex has determined that no burden on competition will be imposed by the proposed amendment. On the

[1] This has been interpreted to encompass the New York metropolitan area.

contrary, elimination of the local registered address requirement for Floor members will enhance competition.

Within 35 days of the date of publication of this notice in the **Federal Register**, or within such longer period (i) as the Commission may designate up to 90 days of such date if it finds such longer period to be appropriate and publishes its reasons for so finding or (ii) as to which the above-mentioned self-regulatory organization consents, the Commission will:

(a) By order approve such proposed rule change, or

(b) Institute proceedings to determine whether the proposed rule change should be disapproved.

Interested persons are invited to submit written data, views and arguments concerning the foregoing. Persons desiring to make written submission should file six copies thereof with the Secretary of the Commission, Securities and Exchange Commission, Washington, D.C. 20549. Copies of the filing with respect to the foregoing and all written submissions will be available for inspection and copying at the principal office of the above-mentioned self-regulatory organization. All submissions should refer to the file number references in the caption above and should be submitted within 21 days of the date of this publication.

For the Commission by the Division of Market Regulation, pursuant to delegated authority.

George A. Fitzsimmons,

Secretary.

[FR Doc. 81-1501 Filed 1-15-81; 8:45 am]

BILLING CODE 8010-01-M

[Release No. 34-17440; File No. SR-NASD-80-27]

Self-Regulatory Organizations; Proposed Rule Change by National Association of Securities Dealers, Inc.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934, 15 U.S.C. 78s(b)(1), as amended by Pub. L. 94-29, 16 (June 4, 1975), notice is hereby given that on December 31, 1980, the above-mentioned self-regulatory organization filed with the Securities and Exchange Commission a proposed rule change as follows:

The NASD's Statement of the Terms of Substance of the Proposed Rule Change

The proposed rule change amends the numerical designation of one of the Rules of Fair Practice of the National Association of Securities Dealers, Inc., changing Article III, Section 35 to Article III, Section 34.

The NASD's Stated Purpose of the Proposed Rule Change

The purpose of the proposed rule change is to change the numerical designation of Section 35 to Section 34 thereby maintaining the consecutive numbering system employed in the Rules of Fair Practice of the Association. The proposed rule change makes no other changes to the affected rule or any other Rules of Fair Practice of the Association. In connection with this filing, the Commission's attention is directed to File No. SR-NASD-77-8 containing all documentation relating to the filing of Article III, Section 35 as approved by the Commission in Securities Exchange Act Release No. 16967 (July 8, 1980).

The NASD's Statement of Basis Under the Act for Proposed Rule Change

Section 15A(b)(2) of the 1934 Act requires that the Association possess the capacity to carry out the purposes of that Act. Implicit in that requirement is authority for the Association to administer rules adopted by the Association and approved by the Commission. The proposed rule change is being made pursuant to that authority.

Comments Received From Members, Participants or Others on Proposed Rule Change

No comments were solicited or received regarding the proposed rule change.

The NASD's Statement on Burden on Competition

The Association believes that, because of the technical nature of the proposed rule change, no burden will be imposed on competition.

The foregoing rule change has become effective, pursuant to Section 19(b)(3) of the Securities Exchange Act of 1934. At any time within sixty days of the filing of such proposed rule change, the Commission may summarily abrogate such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Securities Exchange Act of 1934.

Interested persons are invited to submit written data, views and arguments concerning the foregoing. Persons desiring to make written submissions should file 6 copies thereof with the Secretary of the Commission, Securities and Exchange Commission, Washington, D.C. 20549. Copies of the filing with respect to the foregoing and of all written submissions will be available for inspection and copying in the Public Reference Room, 1100 L Street NW., Washington, D.C. Copies of such filing will also be available for inspection and copying at the principal office of the above-mentioned self-regulatory organization. All submissions should refer to the file number referenced in the caption above and should be submitted within 21 days of the date of this publication.

For the Commission by the Division of Market Regulation, pursuant to delegated authority.

George A. Fitzsimmons,

Secretary.

January 12, 1981.

[FR Doc. 81-1502 Filed 1-15-81; 8:45 am]

BILLING CODE 8010-01-M

[Release 34-17441; File No. SR-NASD-80-28]

Self-Regulatory Organizations; Proposed Rule Change by National Association of Securities Dealers, Inc.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934, 15 U.S.C. 78s(b)(1), as amended by Pub. L. No. 94-29, 16 (June 4, 1975), notice is hereby given that on January 5, 1981, the above-mentioned self-regulatory organization filed with the Securities and Exchange Commission a proposed rule change as follows:

Statement of the Terms of Substance of the Proposed Rule Change

Text of Proposed Rule Change

The following is the full text of a proposed amendment to Schedule D under Article XVI of the Association's By-Laws. (New language is italicized.)

Part XI of Schedule D of the Association's By-Laws is deleted in its entirety and replaced with the following:

XI—Publication and Dissemination of Quotations to the News Media

The NASDAQ Committee shall recommend lists of quotations of NASDAQ securities for dissemination by the news media. The criteria for such lists shall be determined by the NASDAQ Committee in light of the space available for publication and the information desired by the news media and the investing public. The criteria shall be based on the dollar value of securities traded except in the case of:

A. Convertible debt securities, which shall be based on the principal amount outstanding, and

B. Securities subject to a distribution, which shall be initially based on the size of the distribution.

The NASDAQ Committee may, under appropriate circumstances, grant exceptions to its established criteria if it determines that it is in the public interest to do so.

Purpose of Proposed Rule Change

The proposed rule change revises Part XI of Schedule D of the Association's By-Laws. The revision clearly states that the criteria for inclusion in the quotation lists constitute only recommendations to the media. The amendment also will permit revisions of the size or number of lists, as well as the precise criteria for determining eligibility for inclusion in any recommended list, which will become immediately effective under the provisions of Section 19(b)(3) of the Act.* At the same time, the proposed rule does clearly state the basis upon which these criteria will be applied. It distinguishes between equity and debt issues, and new and established issues. This will permit the Association to respond quickly to changing market conditions, media requirements or requests from issuers, the investing public, or the securities industry. Therefore, the Association believes the proposed rule change will permit it to administer its quotations list program in a more efficient and responsive fashion.

Basis Under the Act for the Proposed Rule Change

Section 15A(b)(11) provides that an association of brokers and dealers shall not be registered as a national securities association unless the Commission determines that the rules of the association contain provisions governing the form and content of quotations relating to securities sold otherwise than on a national securities exchange, which may be distributed or published by any member or other persons associated with a member, and the persons to whom such quotations may be supplied. Such rules relating to quotations shall be designed to produce fair and informative quotations to prevent fictitious or misleading quotations and to promote orderly procedures for collecting, distributing and publishing quotations.

Comments Received From Members, Participants or Others on the Proposed Rule Change

Comments regarding this proposed rule change were neither solicited nor received.

*The criteria will be submitted to the Commission in a separate filing.

Burden on Competition

Since this rule change only deals with recommendations of the content of the lists for dissemination by the news media, the Association does not anticipate any burden on competition.

Within 35 days of the date of publication of this notice in the **Federal Register**, or within such longer period (i) as the Commission may designate up to 90 days of such date if it finds such longer period to be appropriate and publishes its reasons for so finding or (ii) as to which the above-mentioned self-regulatory organization consents, the Commission will:

(a) By order approve such proposed rule change, or

(b) Institute proceedings to determine whether the proposed rule change should be disapproved.

Interested persons are invited to submit written data, views and arguments concerning the foregoing. Persons desiring to make written submission should file six (6) copies thereof with the Secretary of the Commission, Securities and Exchange Commission, Washington, D.C. 20549. Copies of the filing with respect to the foregoing and of all written submissions will be available for inspection and copying in the Public Reference Room, 1100 L Street, N.W., Washington, D.C. Copies of such filing will also be available for inspection and copying at the principal office of the above-mentioned self-regulatory organization. All submissions should refer to the file number referenced in the caption above and should be submitted on or before February 9, 1981.

For the Commission by the Division of Market Regulation, pursuant to delegated authority.

George A. Fitzsimmons,

Secretary.

January 12, 1981.

BILLING CODE 8010-01-M

[Release No. 34-17431; File No. SR-NYSE-80-42]

Self-Regulatory Organization; Proposed Rule Change by New York Stock Exchange, Inc.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934, 15 U.S.C. 78s(b)(1), as amended by Pub. L. No. 94-29, 16 (June 4, 1975), notice is hereby given that on December 15, 1980 the above mentioned self-regulatory organization filed with the Securities and Exchange Commission a proposed rule change as follows:

The Exchange's Statement of the Terms of Substance of the Proposed Rule Change

The proposed amendments to Rule 460, if adopted, would formally adopt a provision of Rule 460 which the Securities and Exchange Commission (SEC or Commission) contends was never validly adopted by the Exchange's Board of Directors and (ii) to add to Rule 460 a provision that specialists and persons affiliated with specialists should avoid acquiring or owning more than 5 percent of a stock in which they or one of their affiliates is registered as specialists.

The Exchange's Statement of Basis and Purpose

The basis and purpose of the proposed amendment to Rule 460 are as follows:

The Supplementary material to Rule 460—i.e., .10 thereunder—provides that a specialist should not be in a control relationship with any specialty stock company and states that this applies to ownership of 10 percent or more of the stock of the company and entering into business transactions involving, for example, loans or the acceptance of finder's fees.

The purpose of the restriction is to prevent a potential conflict between the specialist's obligation to maintain a fair and orderly market and his acquisition of "insider" status. Such a conflict might make it difficult for the specialist to act solely in the interest of a fair and orderly market.

In a recent review of an Exchange disciplinary proceeding against a member for violations of various rules (including Rule 460.10) the SEC—while upholding the sanction imposed by the Exchange—set aside one of the Exchange's findings of a violation of Rule 460.10 on the grounds that "the record indicates that Subsection .10 was never validly adopted as a rule by the Exchange's Board of Directors".

While the Exchange disagrees with the SEC's contention that Rule 460.10 "was never validly adopted," in order to avoid future enforcement problems, the Exchange's Board has formally approved the provision and the Exchange is now asking the Commission to approve it pursuant to Rule 19b-4.

* * * * *

Also, in September 1978, the Board approved a rule change (Proposed Rule 98(b)), as included in File No. SR-NYSE-78-59 which was designed to codify and Exchange policy that a specialist and persons affiliated with a specialist should avoid acquiring or owning, either individually or as a group, more than 5

percent of the stock of a specialty company. In any case where 5 percent is exceeded, the Exchange could require that stock be liquidated.

The 5% policy is designed to supplement, and provide a buffer, to the absolute prohibition against owning more than 10% of the stock. It seems appropriate therefore that the 5% policy should be included in Rule 460.10.

At the same time, the Exchange is proposing a minor change to the language originally proposed in SR-NYSE-78-59 to make clear that the rule contains latitude to enable the 5% limit to be exceeded where circumstances warrant. And, the Exchange is also adding a reporting requirement in connection with the 5% policy.

* * * * *

With the proposed amendment to the supplementary material of Rule 460, as contained in Exhibit I, the Exchange also proposes to repeal subparagraph (c) of present Rule 98.10, which would be superseded by Rule 460.10, as proposed.

The Exchange's Basis Under the Act for Proposed Rule Change

The proposed rule changes are consistent with Section 6(b)(1) in that they would better enable the Exchange to enforce compliance by its members and persons associated with members with rules of the Exchange; specifically, Rule 460.10 and present Exchange policy which would be codified by the proposed amendment to this Rule.

Comments Received From Members, Paticipants or Others on Proposed Rule Changes

The Exchange has not solicited nor has it received any comments regarding the proposed rule changes.

Burden On Competition

The proposed rule changes will not impose any burden on competition not necessary or appropriate in furtherance of the purposes of the Act.

Within 35 days of the date of publication of this notice in the **Federal Register**, or within such longer period (i) as the Commission may designate up to 90 days of such date if it finds such longer period to be appropriate and publishes its reasons for so finding or (ii) as to which the above mentioned self-regulatory organization consents, the Commission will:

(A) By order approve such proposed rule changes, or

(B) Institute proceedings to determine whether the proposed rule changes should be disapproved.

Interested persons are invited to submit written data, views and arguments concerning the foregoing. Persons desiring to make written submissions should file six copies thereof with the Secretary of the Commission, Securities and Exchange Commission, Washington, D.C. 20549. Copies of the filing with respect to the foregoing and of all written submissions will be available for inspection and copying in the Public Reference Room, 1100 L Street, N.W., Washington, D.C. Copies of such filing will also be available for inspection and copying at the principal office of the above mentioned self-regulatory organization. All submissions should refer to the file number referenced in the caption above and should be submitted on or before February 9, 1981.

For the Commission by the Division of Market Regulation pursuant to delegated authority.

George A. Fitzsimmons,

Secretary.

January 9, 1981.

BILLING CODE 8010-01-M

[Release No. 34-17439; File No. SR-PSE-80-26]

Self-Regulatory Organization; Proposed Rule Change by the Pacific Stock Exchange, Inc.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934, 15 U.S.C. 78s(b)(1), as amended by Pub. L. No. 94-29, 16 (June 4, 1975), on December 9, 1980, the above-mentioned self-regulatory organization filed with the Securities and Exchange Commission a proposed rule change as follows:

The Exchange's Statement of the Terms of Substance of the Proposed Rule Change

The Pacific Stock Exchange Incorporated ("PSE") proposes to amend Article XI and XIV of its Constitution to prohibit violations of Board policies, required to be filed with the Securities and Exchange Commission, and to assure due notice before summary suspension or expulsion of members or member organizations.

The Exchange's Statement of Basis and Purpose of the Proposed Rule Change

The purpose of the proposed change is to provide procedural due process in the summary suspension or expulsion of members or member organizations and to prohibit violations of Board policies required to be filed with the Securities and Exchange Commission.

The proposed changes to the PSE Constitution are consistent with Section 6(b) of the Act in general and further the objectives of Sections 6(b)(5), 6(b)(6) and 6(b)(7) of the Act, in particular, in that they are designed to promote just and equitable principles of trade to protect investors and the public interest and to provide for members and member organizations to be appropriately disciplined for violations of the Securities Exchange Act of 1934 and the rules, policies and procedures of the PSE.

Comments Received From Members, Participants, or Others on Proposed Rule Change

Comments have neither been solicited nor received from members on the proposed rule change.

The Exchange's Statement on Burden on Competition

The exchange believes the proposed rule change will impose no burden on competition.

Within 35 days of the date of publication of this notice in the **Federal Register**, or within such longer period (i) as the Commission may designate up to 90 days of such date if it finds such longer period to be appropriate and publishes its reasons for so finding or (ii) as to which the above-mentioned self-regulatory organization consents, the Commission will:

(A) By order approve such proposed rule change, or

(B) Institute proceedings to determine whether the proposed rule change should be disapproved.

Interested persons are invited to submit written data, views and arguments concerning the foregoing. Persons desiring to make written submissions should file six copies thereof with the Secretary of the Commission, Securities and Exchange Commission, Washington, D.C. 20549. Copies of the filing with respect to the foregoing and of all written submissions will be available for inspection and copying in the Public Reference Room, 1100 L Street N.W., Washington, D.C. Copies of such filing will also be available for inspection and copying at the principal office of the above-mentioned self-regulatory organization. All submissions should refer to the file number referenced in the caption above and should be submitted on or before February 9, 1981.

For the Commission by the Division of Market Regulation, pursuant to delegated authority.

January 12, 1981.

George A. Fitzsimmons,

Secretary.

BILLING CODE 8010-01-M

[Release No. 34-17442; File No. SR-PHLX 80-29]

Self-Regulatory Organizations; Proposed Rule Change by Philadelphia Stock Exchange, Inc.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934, 15 U.S.C. 78s(b)(1), as amended by Pub. L. No. 94-24, 16 (June 4, 1975), notice is hereby given that on January 2, 1981, the above-mentioned self-regulatory organization filed with the Securities and Exchange Commission a proposed rule change as follows:

The Exchange's Statement of the Terms of Substance of the Proposed Rule Change

The Philadelphia Stock Exchange ("PHLX"), pursuant to Rule 19b-4 of the Securities Exchange Act of 1934 ("Act") proposes to amend Rule 631 ("Connection with Non-Members"), as follows : (brackets indicate words to be deleted; italics indicate words to be added).

Rule 631. No member or member organization shall establish or maintain any private wire connection, private radio, television or wireless system, between his or its offices and the office of any non-member without (notification) *application* to *and approval by* the Committee.

Every such means of communication shall be registered with the Committee. Notice of the discontinuance of any such means of communication shall be promptly given to the Committee.

The Exchange's Basis and Purpose of Proposed Rule Change

The purpose of the proposed rule change is to clarify the intent of the Rule 631 by providing that formal application to and approval by the Committee is a prerequisite to the installation of any type of communication line between the offices of a member or member organization and that of a non-member. Approval of such installation is based on compliance with the rules and policies of the Exchange and the Act and the rules and regulations thereunder.

The proposed rule change would enhance the PHLX's capacity to comply and enforce compliance by its members and persons associated with its members with the Act, the rules and regulations thereunder and its own rules.

Comments were not solicited or received.

The PHLX has determined that the proposed amendment will not impose any burden on competition.

Within 35 days of the date of publication of this notice in the **Federal Register**, or within such longer period (i) as the Commission may designate up to 90 days of such date if it finds such longer period to be appropriate and publishes its reasons for so finding or (ii) as to which the above-mentioned self-regulatory organization consents, the Commission will:

(a) By order approve such proposed rule change, or

(b) Institute proceedings to determine whether the proposed rule change should be disapproved.

Interested persons are invited to submit written data, views and arguments concerning the foregoing. Persons desiring to make written submissions should file six copies thereof with the Secretary of the Commission, Securities and Exchange Commission, Washington, D.C. 20549. Copies of the filing with respect to the foregoing and of all written submissions will be available for inspection and copying in the Public Reference Room, 1100 "L" Street, N.W., Washington, D.C. Copies of such filing will also be available for inspection and copying at the principal office of the above-mentioned self-regulatory organization. All submissions should refer to the file number referenced in the caption above and should be submitted on or before February 9, 1981.

For the Commission by the Division of Market Regulation, pursuant to delegated authority.

George A. Fitzsimmons,

Secretary.

January 12, 1981.

BILLING CODE 8010-01-M

VETERANS ADMINISTRATION

Station Committee on Educational Allowances; Meeting

Notice is hereby given pursuant to Section V, Review Procedure and Hearing Rules, Station Committee on Educational Allowances that on February 10, 1981, at 9:00 a.m., the Veterans Administration Regional Office, St. Petersburg, Florida, Station Committee on Educational Allowances shall, at the Federal Building, Room 621, 144 1st Avenue South, St. Petersburg, Florida, conduct a hearing to determine whether Veterans Administration benefits to all eligible persons enrolled in Lakeland college of Business and Fashion, Lakeland, Florida, should be discontinued, as provided in 38 CFR 21.4143, because a requirement of law is not being met or a provision of the law has been violated. All interested persons shall be permitted to attend, appear before, or file statements with the committee at that time and place.

Dated: January 9, 1981.

Carlos L. Rainwater,

Director.

BILLING CODE 8320-01-M

Vocational Rehabilitation and Counseling; Policies and Procedures

AGENCY: Veterans Administration.

ACTION: Public notice and request for comment.

SUMMARY: The Veterans Administration is publishing for public notice and comment a summary of new provisions to be administered in the vocational rehabilitation and counseling program. This summary of the Veterans' Rehabilitation and Education Amendments of 1980 will acquaint veterans, educational institutions and the public at large with the anticipated changes in the vocational rehabilitation and counseling program.

DATE: Comments must be received on or before February 17, 1981.

ADDRESS: Send written comments to: Administrator of Veterans Affairs (271A), Veterans Administration, 810 Vermont Avenue, N.W., Washington, D.C. 20420.

Comments will be available for inspection at the address shown above during normal business hours until February 27, 1981.

FOR FURTHER INFORMATION CONTACT: Dr. Stephen L. Lemons, Assistant Director for Policy and Program Development, Vocational Rehabilitation and Counseling Service (282), Veterans Administration, 810 Vermont Avenue, NW., Washington, D.C. 20420 (202-389-2026).

SUPPLEMENTARY INFORMATION: This publication contains DVB Circular 28-80-3, Vocational Rehabilitation and Counseling Provisions of the Veterans' Rehabilitation and Education Amendments of 1980 (Pub. L. 96-466). This circular contains a summary of the Veterans Administration vocational rehabilitation program. This circular has been implemented and has been

distributed through normal channels to interested persons. Comments received will be used in developing VA Regulations and policies to implement Pub. L. 96–466.

ADDITIONAL COMMENT INFORMATION

Interested persons are invited to submit written comments, suggestions, or objections regarding this document to the Administrator of Veterans Affairs (271A), Veterans Administration, 810 Vermont Avenue, NW., Washington, D.C. 20420. All written comments received will be available for public inspection at the above address only between the hours of 8 am and 4:30 pm, Monday through Friday (except holidays) until February 27, 1981. Any person visiting Veterans Administration Central Office in Washington, D.C. for the purpose of inspecting any such comments will be received by the Central Office Veterans Services Unit in room 132. Such visitors to a VA field station will be informed that the records are available for inspection only in Central Office and furnished the above address and room number.

Approved: January 7, 1981.

Max Cleland,

Administrator.

Vocational Rehabilitation and Counseling Provisions of the Veterans' Rehabilitation and Education Amendments of 1980 (Pub. L. 96–466); DVB Circular 28–80–3

November 7, 1980.

1. *Purpose.* This issue is to inform DVB field staff about changes to Chapter 31, title 38 U.S.C., resulting from the enactment of Pub. L. 96–466. While the focus is on the vocational rehabilitation provisions of the law, other aspects relevant to VR&C (Vocational Rehabilitation and Counseling) operations are also discussed.

2. *Background.* During FY 1978 the VA completed and submitted to the Congress a study of the VA vocational rehabilitation program as mandated by Pub. L. 95–202. The study included an analysis of the VA vocational rehabilitation program, a comparison of Chapter 31 provisions with the State/Federal program provisions, and recommendations for administrative and legislative changes needed to up-date and modernize the program. Subsequently, proposed legislation was introduced in both houses of Congress by request of the VA. After consideration of these and other proposals, Congress enacted Pub. L. 96–466, "Veterans' Rehabilitation and Education Amendments of 1980," which was signed into law on October 17, 1980. Title I of Pub. L. 96–466 updates and expands the VA vocational rehabilitation program. This complete revision of Chapter 31, the first since its inception in 1943, improves the vocational rehabilitation program and assures that service-connected disabled veterans will benefit from the latest concepts and methods developed in the field of rehabilitation. The VA has the authority to make the Chapter 31 program more responsive to the needs of service-disabled veterans, especially the more seriously disabled.

3. *Overview.* a. *Title I—Rehabilitation Amendments.* (1) *Purposes.* The purpose of the rehabilitation program is expanded to provide for all services and assistance necessary to enable service-disabled veterans to achieve maximum independence in daily living, and to the maximum extent feasible, to become employable and to obtain and maintain suitable employment. This statement of purpose significantly differs from the traditional view which limited vocational rehabilitation to restoration of employability through training, and the provisions of the new law clearly reflect this fundamental change in philosophy.

(2) *Eligibility and Entitlement.* Eligibility for and entitlement to services are organized around two basic concepts—employment handicap and serious employment handicap. Employment handicap must be shown in each case as part of the determination of basic entitlement. The basic period of eligibility has been extended from 9 to 12 years. Rehabilitation programs will not exceed 48 months, unless a longer period is warranted in the individual case. A finding of a serious employment handicap is a key factor in most provisions for extension of the period of eligibility beyond the basic 12-year period and for extension of the duration of a rehabilitation program beyond 48 months.

(3) *Extended Evaluation and Independent Living Services.* Those veterans for whom feasibility of vocational rehabilitation cannot be immediately determined will now enter extended evaluation programs and receive pretraining services. Such evaluation and services will be provided to determine if the veteran may attain a level necessary to either enter vocational rehabilitation training or a rehabilitation program having the objective of achieving maximum independence in daily living. For this last purpose, a special pilot program of limited scope and duration has been authorized to enable some of the most severely disabled veterans to undergo an intensive and innovative program of independent living services.

(4) *Individualized Planning.* Rehabilitation planning will now include not only those services needed to improve the veteran's ability to function in employment, but also in his or her family and community. An individual written rehabilitation plan, to be jointly developed by VA staff and the veteran, will be the means through which the goals of most rehabilitation programs are developed, and will delineate the means and time by which these goals will be achieved.

(5) *Allowances.* Enhanced financial provisions include an overall 17 percent increase in subsistence allowance, an increase in the revolving fund loan maximum, increased subsistence allowance for nominal pay or nonpay training, subsistence allowance during periods of extended evaluation, liberalization of post-rehabilitation payment and other considerations. Under a new option, Chapter 31 participants with remaining Chapter 34 entitlement may elect to receive the higher Chapter 34 educational allowance, in lieu of subsistence allowance and other training costs, while still being able to receive almost the full range of Chapter 31 services.

(6) *Employment Assistance.* To carry out the full purposes of the program, the scope of services and assistance has been broadened to include employment assistance as an integral part of the program for service-connected veterans who are or have been in vocational rehabilitation programs. In this way, veterans will be assisted to obtain and retain employment.

b. *Title III—Educational Assistance Program Adjustments.* While the basic provisions of this title are addressed in DVB Circular 22–80–39, VR&C staff should make note that effective October 1, 1980, mandatory counseling under Chapter 35 is repealed. Provisions for special restorative training, specialized vocational training and requested counseling are retained.

c. *Title IV—Post-Vietnam Era Veterans' Educational Assistance Program Adjustments.* Clarification of Chapter 32 is provided to indicate that effective October 1, 1980, individuals under this contributory program are eligible for counseling on request.

d. *Title V—Veterans' Employment Assistance Amendments.* This title addresses a variety of employment-related issues in title 38, U.S.C., Chapters 41, 42, and other chapters. The DVOP (Disabled Veterans Outreach Program) is continued and strengthened.

Specific priority groups of veterans are established; appointments of DVOP personnel are tied to State veteran population; and assignments of personnel are apportioned between local State employment offices and VA locations. These provisions, effective October 1, 1980, will assist the VR&C effort in fulfilling Chapter 31 training and employment initiatives. They will be discussed more fully in separate issues.

4. *Implementation.* Provisions effective October 1, 1980, or upon enactment are discussed in paragraph 5. These are for immediate implementation. During the period from enactment to March 31, 1981, all other provisions of Chapter 31, Title 38, U.S.C., will remain in effect. Provisions effective April 1, 1981, are discussed briefly in paragraph 6 and will be more fully developed in subsequent issues prior to the effective date.

5. *Provisions Effective October 1, 1980.* a. *Section 1508—Allowances.* This section deals with a variety of issues involving payment of subsistence allowance, including rate increases. The following provisions are for immediate implementation.

(1) *Subsistence Allowance.* Rates are increased 17 percent (see exhibit A). Hines DPC will adjust running IHL and NCD awards to show the new rates and will notify RO's (regional offices) of those cases in which RO input will be necessary. All new awards should use the new rates for periods of payment extending beyond October 1, 1980.

(2) *Nonpay Training.* On-job or work experience trainees in a Federal agency at nominal or no pay are eligible for subsistence allowance at the institutional rate, rather than OJT rate.

(a) All new entrance or reentrance awards for nonpay OJT trainees will be at institutional rates of subsistence allowance effective October 1, 1980. Both the authorization document (VA Form 22–1905, Authorization and Certification of Entrance or Reentrance Into Training and Certification of Trainee Status) and the award document (VA Form 22–1907a, Authorization of Subsistence Allowance) will be annotated in the "Remarks" section as follows: "Unpaid Federal work experience: in the receipt of institutional rates effective October 1, 1980."

(b) VR&C staff in each RO will immediately undertake a search to identify all Federal OJT or work experience cases with running awards paying the old OJT rate. VA Form 22–1905 will be prepared with the annotation in the "Remarks" section: "Adjust award for unpaid Federal work experience to pay insitutional rates effective October 1, 1980." Upon receipt of VA Form 22–1905, the adjudicator will prepare VA Form 22–1907a and annotate the "Remarks" section of the award form, "Unpaid Federal work experience: in receipt of institutional rates effective October 1, 1980." This project, including award preparation, should be completed no later than December 15, 1980.

(3) *Post-Rehabilitation Pay.* Post-rehabilitation pay will now extend for a 2-month period following the training program and will no longer be paid as a lump sum. Payment will be at the full-time rate for the type of training pursued, regardless of the rate of pursuit during the final enrollment period. When preparing VA Form 22–1905 for a post-rehabilitation payment, the VR&C staff member must clearly specify in the "Remarks" section that a 2-month post-rehabilitation payment should be made. Upon receipt of VA Form 22–1905, the adjudicator will prepare a reentrance award on VA Form 22–1907a to extend the veteran's last award period for exactly 2 months. In the "Remarks" section, the adjudicator will annotate: "Award represents 2-month post-rehabilitation payment." The lump-sum payment indicator in item 4 of the VA Form 22–1907a will no longer be used.

(4) *Incarcerated Chapter 31 Trainees.* Specific provisions of the law now restrict and, in some instances, prohibit payment of chapter 31 subsistence allowance to veterans incarcerated in a Federal, State or local penal institution, halfway house, or participating in a work release program. Immediately, VR&C staff will identify such trainees and suspend all running awards. Detailed instructions for processing these cases will be forthcoming in an appendix to this circular.

b. *Section 1512—Revolving Fund Loans.* The existing RFL (Revolving Fund Loan) benefit is modified to increase the maximum loan which may be authorized from $200 to an amount twice the monthly subsistence rate for a single veteran in institutional training (currently $564).

(1) *Loan Approval and Documentation.* Prudent management is a critical aspect of administering this substantially increased benefit. Strict assurance must be given that loans in any amount are authorized only for meritorious reasons. The VRS must make careful evaluation of the need for the loan and the amount of the loan. The VRS will document findings of the evaluation on VA Form 22–1905d, Special Report of Training.

(2) *Loan Amount and Repayment.* The loan amount shall not exceed that needed to assure the veteran's continuation in the program. Repayment should be made as quickly as possible, taking into account the effect of such terms upon the veteran's ability to continue in his or her rehabilitation program. The VRS must review with the veteran whether there is a need for other kinds of assistance, for example, assistance in budgeting.

(3) *Special Considerations.*

(a) New loan requests will not be approved until any outstanding RFL has been fully recouped.

(b) Any loan in excess of $200 will require Central Office approval. Such requests accompanied by complete documentation justifying the request will be forwarded to the Field Director (28).

(4) *Other Provisions.* Chapter 34 educational assistance allowance has been added to sources for RFL repayment. Also, note that chapter 31 trainees who elect to receive a chapter 34 educational assistance allowance are not eligible for the RFL benefit.

c. *Section 1516—Promotion of Employment and Training.* Employment as the goal of rehabilitation is emphasized by targeting veterans who are or have been participating under the chapter 31 program, any veterans with service-connected disabilities and Vietnam era veterans targeted under Title 38, U.S.C., Chapter 42, "Employment and Training of Disabled and Vietnam Era Veterans." Both direct outreach efforts to employers by VA staff and coordination with other Agencies are mandated in order to develop and establish employment and on-the-job training opportunities. Stations should include this in all VA/DOL (Department of Labor) local agreements. This section also authorizes payment to an employer/trainer which does not exceed the direct expenses incurred in providing on-job training or employment. Regulations to implement the provisions for payment to an employer/trainer will be developed in consultation with the DOL and distributed. No local action on payment to an employer/trainer will be taken until these regulations are received.

d. *Section 1518—Personnel Training, Development and Qualifications.* Ongoing professional training for VR&C personnel is authorized to enable them to provide such services under Chapter 31 in accordance with the most advanced knowledge, methods, and techniques available. VA may contract with consultants and/or agencies to provide training and staff development. Training in areas of mutual concern will be coordinated by the VA with DOL and RSA (Rehabilitation Services Administration). The Administrator will

establish qualifications for professional staff providing evaluation and rehabilitiation services under Chapter 31.

e. *Section 1519—Rehabilitation Research and Special Projects.* Research and special projects are authorized to advance psychological, educational, employment social, vocational, industrial and economic aspects of rehabilitation of veterans. Authorization is given to actively engage in and/or support studies, projects and research and to make grants and enter into contracts with educational institutions and other agencies. Cooperation with RSA, DOL, and NIHR (National Institute for Handicapped Research) in areas of mutual concern is also mandated. All such efforts will be undertaken only with prior Central Office approval.

f. *Section 1520—Pilot Program of Independent Living Services and Assistance.* Beginning in FY 1982 and continuing through FY 1985, a pilot program of independent living services will be provided for severely handicapped service-connected veterans for whom a vocational goal is not reasonably feasible, including veterans in long-term care facilities of the VA. Each year up to 500 veterans may enter this program, which will be implemented in the various geographic regions of the United States. An individualized written plan will be prepared in the same manner as for a veteran in a vocational rehabilitation program. Services necessary to carry out the rehabilitation plan will be provided through contractual arrangements made with outside agencies and organizations or through DM&S (Department of Medicine and Surgery). A report on these programs including accomplishments, cost effectiveness and legislative recommendations must be submitted to the Congress by September 30, 1984. Although the effective date for funding the pilot program is October 1, 1981, planning for program establishment will begin on October 1, 1980, the effective date of the program.

g. *Section 1521—Veterans' Advisory Committee on Rehabilitation.* This section requires the Administrator to appoint an advisory committee with whom to consult on a regular basis concerning the chapter 31 program. The members will include veterans with service-connected disabilities and persons distinguished in the general and special fields of rehabilitation. Ex officio members will represent DVB, DM&S, RSA, NIHR, and DOL. An annual report will be submitted to the Administrator and forwarded to Congress along with other relevant reports and recommendations.

h. *Other Provisions.* (1) *Section 1780—Payment of Educational Allowance or Subsistence Allowance.* Chapter 36, Title 38, U.S.C., is amended to provide that, in addition to weekends and legal holidays, up to 5 days in a 12-month period will not be counted as absences if the institution is not in session on those days due to teacher conferences or teacher training sessions, and regularly scheduled classes would otherwise have been held.

(2) *Section 1781—Limitations on Educational Assistance.* Chapter 36, Title 38, U.S.C., is amended to include subsistence allowance granted under chapter 31 as an additional category of prohibited payments to certain servicepersons and Government employees receiving training. This codifies existing VA Regulation 10022.

(3) *Section 1795—Limitation on Period of Assistance Under Two or More Programs.* Chapter 36, Title 38, U.S.C., is amended to include Chapter 32 entitlement used in consideration of the 48-month limitation under two or more programs. Although assistance received under Chapter 31 must be included with assistance under other chapters in considering the aggregate 48-month limitation on total training, additional months of benefits may be allowed under Chapter 31 when determined necessary to accomplish rehabilitation in the individual case.

i. *Title V—Disabled Veterans Outreach Program.* (1) *Scope and Eligibility.* The DVOP is placed on a continuing basis at a level of approximately 2,000 specialists nationwide. DVOP personnel are assigned only those duties directly related to meeting the employment needs of eligible veterans. Priority is as follows: Disabled Vietnam veterans who are participating in or have completed a program of vocational rehabilitation under Chapter 31, other disabled veterans, and eligible veterans included under employment emphasis under Chapter 42.

(2) *Location of DVOP Personnel.* No more than three-fourths of DVOP staff stationed in each State will be stationed at local State employment offices. DVOP staff not stationed at local employment offices shall be stationed at VA centers providing a program of readjustment counseling, veterans assistance offices, or other sites as may be determined appropriate for coordinated development of job training and employment opportunities.

6. *Provisions Effective April 1, 1981.* The majority of the provisions which complete the updating and expansion of the vocational rehabilitation program are effective April 1, 1981. Instructions governing the implementation of these provisions will be issued prior to that effective date.

a. *Section 1500—Purpose.* The purposes of chapter 31 are modified to include all services and assistance needed to "enable veterans with service-connected disabilities to achieve maximum independence in daily living and, to the maximum extent feasible, to become employable and to obtain and maintain suitable employment."

b. *Section 1501—Definitions.* Terms defined include employment handicap, serious employment handicap, rehabilitation program, vocational goal, vocational rehabilitation program, independence in daily living, program of independent living services and assistance, and rehabilitated to the point of employability.

c. *Section 1502—Basic Entitlements.* The conditions of basic entitlement for rehabilitation include the existence of a service-connected compensable disability incurred or aggravated during or after World War II. In addition, a serviceperson with a service-connected disability which will probably be classified as compensable who is hospitalized pending discharge is eligible. Need for rehabilitation because of an "employment handicap" must be established in all cases.

d. *Section 1503—Periods of Eligibility.* The basic 9-year period currently in effect is extended to 12 years. Conditions for extension beyond the basic period of eligibility have been liberalized for veterans with "serious employment handicaps," for veterans prevented from participating in a vocational rehabilitation program due to medical factors or due to eligibility not being established, and for severely disabled veterans participating in the pilot program of independent living services and assistance.

e. *Section 1504—Scope of Services and Assistance.* The statutory range of services and assistance available is expanded while retaining all services and assistance furnished under current law and regulations. New provisions include authorization for extended evaluation and reevaluations to determine potential for rehabilitation, to determine whether a serious employment handicap exists, to provide a basis for planning a rehabilitation program, and/or to improve the rehabilitation potential of a veteran. Placement and followup services and assistance necessary to establish severely disabled veterans in self-employment are also added. Many services and types of assistance

currently available through VA regulations are now included specifically in the law.

f. *Section 1505—Duration of Rehabilitation Programs.* The current basic 48-month period for rehabilitation services is continued, and conditions for an extension beyond 48 months have been liberalized to accomplish the purposes of vocational rehabilitation for a veteran with a serious employment handicap. A period for extended evaluation of up to 12 months is authorized if the VA is unable to determine whether the veteran can achieve a vocational goal, with additional 6-month extensions of that period possible for an individual veteran. A severely disabled veteran found to be in need of a program of independent living services and assistance may be authorized a rehabilitation program for a basic period of 24 months, but the period may be extended if it is determined that a longer period is necessary and likely to result in a substantial increase in the level of independent living.

g. *Section 1506—Initial and Extended Evaluations.* An initial evaluation will be made in all cases to establish eligibility for the Chapter 31 program, to determine whether a serious employment handicap exists, and to determine whether the achievement of a vocational goal is feasible. That initial evaluation shall consist of counseling and diagnostic or other services. In addition, an extended evaluation will be authorized when it cannot be determined whether the achievement of a vocational goal is reasonably feasible. Each veteran with a serious employment handicap will be provided counseling and an individually written vocational rehabilitation plan, whether pursuing a vocational goal or an independent living goal.

h. *Section 1507—Individualized Vocational Rehabilitation Plan.* The minimum essential elements of an individualized written plan of vocational rehabilitation are prescribed in the law for the veteran with a serious employment handicap. The plan developed jointly with the veteran will be reviewed annually and redeveloped if appropriate. A veteran not in agreement with an original or redeveloped plan may submit his or her objections and request a VA review of the plan. Time limits are established for the review process.

i. *Section 1508—Allowances.* (1) *Election of Chapter 34 Allowance.* A Chapter 31 eligible veteran may elect to use remaining Chapter 34 entitlement and receive educational assistance in lieu of subsistence allowance, but remain eligible for certain other Chapter 31 services. Despite election of Chapter 34 allowance, the veteran is a vocational rehabilitation trainee. The St. Paul DPC statistical system will be updated to reflect Chapter 34 award periods which form part of a program of vocational rehabilitation. System modifications to simultaneously reduce remaining Chapters 31 and 34 entitlement for such veterans will be developed.

(2) *Extended Evaluation.* Subsistence allowance is now authorized for veterans participating in extended evaluation.

(3) *Specialized Rehabilitation Facility.* For a veteran pursuing a rehabilitation program in residence at a special rehabilitation facility, authority has been granted to make payment to the facility for room and board in lieu of subsistence allowance. If such a payment to the facility is made, however, the veteran will receive the portion of the subsistence allowance for dependents for a full-time institutional program.

(4) *Temporary Hospitalization Rating.* If a hospitalized trainee is temporarily receiving compensation at the 100 percent level as a result of hospitalization in excess of 21 days, the sum of the combined Chapter 31 subsistence allowance and compensation benefits is limited either to the sum of the subsistence allowance due and the pre-hospitalization compensation rate received, or the 100 percent disability compensation rate, whichever is the greater.

j. *Section 1509—Entitlement to Independent Living Services and Assistance.* If it is determined that the achievement of a vocational goal is not reasonably feasible, a veteran is entitled to be considered as one of those selected to be in the pilot program of independent living services and assistance to achieve maximum independence in daily living.

k. *Section 1510—Leaves of Absence.* The authority to grant leaves of absence to veterans pursuing vocational rehabilitation training is continued. The current 30-day limit during a 12-month period is eliminated.

l. *Section 1511—Regulations to Promote Satisfactory Conduct and Cooperation.* Authority to establish regulations to promote satisfactory conduct and cooperation is continued. In addition, the VA must determine that all reasonable counseling efforts have been made prior to discontinuing services and assistance for failure to maintain satisfactory conduct and cooperation. The specific penalties formerly stated in the law are removed.

m. *Section 1513—Vocational Rehabilitation for Hospitalized Members of the Armed Forces and Veterans.* The VA will continue to afford vocational rehabilitation services and assistance to persons hospitalized pending discharge from military service. However, payment of subsistence allowance is prohibited. In addition, Chapter 31 services, including subsistence, subject to limitations in subparagraph i(4) above, may be provided to a veteran receiving care in a VA facility or other medical or hospital facility.

n. *Section 1514—Vocational Rehabilitation Outside the United States.* Regulations will be prescribed to allow provision of a vocational rehabilitation program outside the United States, if it is determined to be necessary for purposes of rehabilitation, and if it is in the best interests of the veteran and the Government. Some provisions of the previous law are eliminated and more flexibility is delegated to the VA than was formerly permitted.

o. *Section 1515—Rehabilitation Resources.* The VA will utilize facilities, staff and resources of the VA and those of other Agencies or public and private facilities or individuals for purposes of providing training, work experience, or other rehabilitation services, through contract agreement or other arrangements. A veteran pursuing on-job training or work experience in a Federal agency continues to be considered an employee of the United States under Chapter 81, title 5, U.S.C., but not for purposes of laws administered by the OPM (Office of Personnel Management). Medical care is to be provided in VA facilities or as otherwise set forth under Chapter 17, title 38, U.S.C.

p. *Section 1517—Employment Assistance.* The VA is now required to provide employment assistance to veterans with a service-connected disability who have participated under Chapter 31 or in a similar program under the Rehabilitation Act of 1973. The services to veterans include direct placement, assistance of DVOP staff, use of DOL's employment services, the services of OPM, placement facilities provided under the Rehabilitation Act of 1973 or other public or nonprofit organizations. The VA must assure that the veteran rehabilitated for self-employment in a small business is provided the full benefit of the resources of the SBA (Small Business Administration), including veterans preference. If a veteran trained under a State program is unable to obtain

necessary equipment, initial stocks and supplies through that program or from other sources, the VA may provide them.

7. *Inservice Training.* This legislation represents the most important change in the program since it was established in 1943, and it is essential that provisions are communicated to the regional office Director and to VR&C and other staffs who will be carrying out the program. Each person in the VR&C Division will be furnished a copy of this issue. A staff meeting will be scheduled and the circular's provisions will be reviewed in-depth. Staffs in other Divisions, including Adjudication and Veterans Services, will be invited to participate in these meetings or, if desired, the VR&C Officer will brief staffs of those Divisions as part of their own inservice training programs.

Dorothy L. Starbuck,

Chief Benefits Director.

RATES FOR SUBSISTENCE ALLOWANCE UNDER CHAPTER 31 OF TITLE 38, U.S.C.

Type of program	No deps.	One dep.	Two deps.	Add'l amt. for each dep. over two
Institutional training:[1]				
Full time	$282	$349	$411	$30
Three-quarter time	212	262	308	23
Half time	141	175	206	15

FEDERAL COMMUNICATIONS COMMISSION.

The Federal Communications Commission voted to hold a Closed Meeting on Thursday, January 29, 1981, following the Regular Open Meeting, at 1919 M Street, N. W., Washington, D.C. on the following subject:

Internal Personnel Matters

Additional information concerning this meeting may be obtained from Edward Dooley, FCC Public Affairs Office, telephone number (202) 254-7674.

The Public Notices for the Regular Open and Closed Meeting, for the above dates will be issued at a later date.

Issued: January 13, 1981.

Federal Communication Commission.

William J. Tricarico,

Secretary.

[S-0070-81 Filed 1-14-81; 10:08 am]

BILLING CODE 6712-01-M

2

FEDERAL COMMUNICATIONS COMMISSION.

During the Open Meeting scheduled for January 8, 1981, the Commission discussed the consideration of *FOIA Request for Employee Disqualification Statements filed pursuant to Section 19.735-204(e)(3) of the Rules.*

The prompt and orderly conduct of Commission business did not permit prior notice of this additional item.

Additional information concerning this matter may be obtained from Edward Dooley, FCC Public Affairs Office, telephone number (202) 254-7674.

Issued: January 13, 1981.

Federal Communications Commission.

William J. Tricarico,

Secretary.

4

FEDERAL RESERVE SYSTEM.

BOARD OF GOVERNORS

TIME AND DATE: 10 A.M., WEDNESDAY, JANUARY 21, 1981.

PLACE: Board Building, C Street entrance between 20th and 21st Streets NW., Washington, D.C. 20551.

STATUS: Open.

MATTERS TO BE CONSIDERED:

1. Proposal to revise Regulation C (Home Mortgage Disclosure) to implement amendments to the Home Mortgage Disclosure Act.

2. Request for an interpretation of Regulation Y (Bank Holding Companies and Change in Bank Control) that placement of equity interests in real estate projects is within the regulation's permissible lending activities.

3. Any items carried forward from a previously announced meeting.

Note.—This meeting will be recorded for the benefit of those unable to attend. Cassettes will be available for listening in the Board's Freedom of Information Office, and copies may be ordered for $5 per cassette by calling (202) 452-3684 or by writing to: Freedom of Information Office, Board of Governors of the Federal Reserve System, Washington, D.C. 20551.

CONTACT PERSON FOR MORE INFORMATION: Mr. Joseph R. Coyne, Assistant to the Board (202) 452-3204.

Dated: January 13, 1981.

James McAfee,

Assistant Secretary of the Board.

5

FEDERAL RESERVE SYSTEM.

Board of Governors

TIME AND DATE: Approximately 11:00 a.m., Wednesday, January 21, 1981, following a recess at the conclusion of the open meeting.

PLACE: 20th Street and Constitution Avenue, NW., Washington, D.C. 20551.

STATUS: Closed.

MATTERS TO BE CONSIDERED:

1. Personnel actions (appointments, promotions, assignments, reassignments, and salary actions) involving individual Federal Reserve System employees.

2. Any items carried forward from a previously announced meeting.

CONTACT PERSON FOR MORE INFORMATION: Mr. Joseph R. Coyne, Assistant to the Board.

Dated: January 13, 1981.

James McAfee,

Assistant Secretary of the Board.

7

NUCLEAR REGULATORY COMMISSION.

DATE: Monday, January 19 and Wednesday, January 21, 1981.

PLACE: Commissioners' Conference Room, 1717 H Street NW., Washington, D.C.

STATUS: Open/closed.

MATTERS TO BE CONSIDERED: *Monday, January 19:*

2:30 p.m.

1. Briefing on Spent Fuel Storage (approximately 1 hour, public meeting)
2. Briefing on a Significant Enforcement Action (approximately 1 hour, closed)

Wednesday, January 21:

10:00 a.m.

1. Meeting with AIF on Future of Nuclear Power Regulation (approximately 1½ hours, public meeting)

2:00 p.m.

1. Briefing on Adequacy of Sequoyah Ignition Systems (approximately 1½ hours, public meeting)

AUTOMATIC TELEPHONE ANSWERING SERVICE FOR SCHEDULE UPDATE: (202) 634-1498. Those planning to attend a meeting should reverify the status on the day of the meeting.

CONTACT PERSON FOR MORE INFORMATION: Walter Magee (202) 634-1410.

Walter Magee,

Office of the Secretary.

AGENCY PUBLICATION ON ASSIGNED DAYS OF THE WEEK

The following agencies have agreed to publish all documents on two assigned days of the week (Monday/Thursday or Tuesday/Friday).

This is a voluntary program. (See OFR NOTICE 41 FR 32914, August 6, 1976.)

Monday	Tuesday	Wednesday	Thursday	Friday
DOT/SECRETARY	USDA/ASCS		DOT/SECRETARY	USDA/ASCS
DOT/COAST GUARD	USDA/FNS		DOT/COAST GUARD	USDA/FNS
DOT/FAA	USDA/FSQS		DOT/FAA	USDA/FSQS
DOT/FHWA	USDA/REA		DOT/FHWA	USDA/REA
DOT/FRA	MSPB/OPM		DOT/FRA	MSPB/OPM
DOT/NHTSA	LABOR		DOT/NHTSA	LABOR
DOT/RSPA	HHS/FDA		DOT/RSPA	HHS/FDA
DOT/SLSDC			DOT/SLSDC	
DOT/UMTA			DOT/UMTA	
CSA			CSA	

Documents normally scheduled for publication on a day that will be a Federal holiday will be published the next work day following the holiday.
Comments on this program are still invited.
Comments should be submitted to the Day-of-the-Week Program Coordinator, Office of the Federal Register, National Archives and Records Service, General Services Administration, Washington, D.C. 20408

NOTE: As of September 2, 1980, documents from the Animal and Plant Health Inspection Service, Department of Agriculture, will no longer be assigned to the Tuesday/Friday publication schedule.

REMINDERS

The "reminders" below identify documents that appeared in issues of the **Federal Register** 15 days or more ago. Inclusion or exclusion from this list has no legal significance.

Rules Going Into Effect Today

AGRICULTURE DEPARTMENT

Agricultural Marketing Service—

82909 12-17-80 / Tomatoes grown in South Texas; production research and marketing promotion, committee membership, penalties for late assessment payments, etc.

ENVIRONMENTAL PROTECTION AGENCY

47832 7-16-80 / Identification and listing of hazardous waste; additions

INTERIOR DEPARTMENT

Indian Affairs Bureau—

82921 12-17-80 / Descendancy rolls of certain Delaware Indians; preparation, certification, and approval

82918 12-17-80 / Membership roll of Delaware Indians of Western Oklahoma; preparation, certification, and approval

Surface Mining Reclamation and Enforcement Office—

83166 12-17-80 / Steep-slope mining; interim variances from requirement to return mined land to original contour

JUSTICE DEPARTMENT

Immigration and Naturalization Service—

83195 12-18-80 / Preliminary examination on petitions for naturalization; designation of examiners

List of Public Laws

Note: No public bills which have become law were received by the Office of the Federal Register for inclusion in today's **List of Public Laws.**

A complete listing for the second session of the 96th Congress is published in the Reader Aid section of the issue of January 7, 1981

Department of Labor

Occupational Safety and Health Administration

Electrical Standards

DEPARTMENT OF LABOR

Occupational Safety and Health Administration

29 CFR Part 1910

Electrical Standards

AGENCY: Occupational Safety and Health Administration, U.S. Department of Labor.

ACTION: Final standard

SUMMARY: In this final standard, the Occupational Safety and Health Administration (OSHA) establishes "Design Safety Standards for Electrical Systems." This standard revises Subpart S of 29 CFR Part 1910 and is intended to simplify and update the former standard. OSHA has determined that electrical hazards in the workplace pose a significant risk of injury or death to employees, and that these regulations which draw heavily on the experience of the National Electrical Code are reasonably necessary to provide protection from these hazards. The final rule places relevant requirements of the National Electrical Code (NEC) into the text of the regulations, making it unnecessary for employers to refer to the NEC to determine their obligations and unnecessary for OSHA to continue to incorporate the NEC by reference. Additionally, the final rule clarifies certain provisions which were misunderstood by certain interested parties.

EFFECTIVE DATE: This revision of 29 CFR Part 1910, Subpart S becomes effective on April 16, 1981.

FOR FURTHER INFORMATION CONTACT: For information on the standard contact: Mr. Jerry Leonard or Mr. David Wallis; Office of Electrical and Electronic Engineering Safety Standards; OSHA; Rm. N3510; 200 Constitution Avenue, NW., Washington, D.C. 20210. (202–523–7207).

For information on compliance contact: Mr. Peter Wasko; Federal Compliance and State Programs; Division of Safety Programming; OSHA; Rm. N3106; 200 Constitution Avenue, NW, Washington, D.C. 20210. (202–523–8124).

For additional copies of this regulation contact: OSHA Office of Publications; U.S. Department of Labor; Room S–1212; Washington, D.C. 20210. (202–523–8677).

SUPPLEMENTARY INFORMATION:

I. Background

(1) Safety Problems of Electric Shock

It is well known that the human body will conduct electricity, and that if direct body contact is made with an electrically energized part while a similar contact is made simultaneously with another conductive surface which is maintained at a different electrical potential, a current will flow, entering the body at one contact point, traversing the body and then exiting at the other contact point, usually the ground. Each year many workers suffer pain, injuries and death from such electric shocks and throughout the past decade the National Center for Health Statistics has reported approximately 1000 accidental electrocutions annually in the United States with about a fourth being industry and farm related.

The effects that electric shock will have on an individual will depend upon the type of circuit, its voltage, resistance, amperage, pathway through the body and the duration of the contact. For example, electric shocks produced by alternating currents of powerline frequency (normally 60 Hertz) passing through the body from hand to foot for an average adult worker for one second can cause various effects on the body. Such effects range from a condition of being barely perceptible at 1 milliampere to involuntary muscular control from 9 to 25 milliamperes. The passage of still higher currents can produce ventricular fibrillation of the heart (cessation of rhythmic pumping action) from 75 milliamperes to 4 amperes and finally immediate cardiac arrest at over 4 amperes. Nearly instantaneous fatalities from electric shock can result from either direct paralysis of the respiratory system (at 20 milliamperes or more), failure of the heart to pump due to ventricular fibrillation (at 75 milliamperes or more), or immediate and complete heart stoppage (at 4 amperes or more). Even if the shocking current does not pass through vital organs or nerve centers, severe injuries such as deep internal burns can still occur. In some cases, injuries caused by electric shock can be a contributory cause of delayed fatalities.

Burns suffered in electrical accidents are of great concern. These burns may be of three basic types: electrical burns, arc burns and thermal contact burns. Electrical burns are the result of the electric current flowing in the tissues and may be either skin deep or may affect deeper layers (muscles, bones, etc.) or both. Tissue damage is caused by the heat generated from the current flow; if the energy delivered by the electrical shock is high, the body cannot dissipate the heat and the tissue is burned. Typically, such electrical burns are slow to heal. Arc burns, on the other hand are the result of high temperatures in close proximity to the body produced by electric arcs or by explosions. These burns are similar to burns and blisters produced by any high temperature source. Finally, thermal contact burns are those normally experienced from the skin contacting hot surfaces of overheated electrical conductors, conduits, or other energized equipment. All types of burns may be produced simultaneously.

Electrical shock currents, even at levels as low as 3 milliamperes, can also cause injuries of an indirect or secondary nature in which involuntary muscular reaction from the electrical shock can cause bruises, bone fractures and even death resulting from collisions or falls.

(2) Hazards Associated With Electricity

Most electrical systems use the earth to establish an electrical voltage reference system with respect to ground. This is done by connecting a portion of the circuit to ground. Since these systems use conductors which have voltages to ground, a shock hazard exists for persons who are in electrical contact with the earth and are exposed to the conductors. If a person comes in contact with an ungrounded conductor while he is in contact with the ground, he becomes part of the circuit and current passes through his body.

In addition to the shock hazard, electricity poses other hazards to employees. For example, when a short circuit occurs or current flow is interrupted, hazards are created from the resultant arcs. If high current is involved, these arcs can cause injury or can start a fire. Fires can also be created by overheating equipment or by conductors carrying too much current. Extremely high-energy arcs can damage equipment causing fragmented metal to fly in all directions. In atmospheres which contain explosive gases or vapors or combustible dusts, even low-energy arcs can cause violent explosions.

(3) Nature of Electrical Accidents

Electrical accidents, when initially studied, often appear to be caused by circumstances which are varied and peculiar to the particular incidents involved. However, further consideration usually reveals the underlying cause to be a combination of three possible factors. These consist of work involving unsafe equipment and installations, workplaces made unsafe

by the environment, and unsafe work performance.

(a) *Basic Contributory Factors.* Some unsafe electrical equipment and installations can be identified, for example, by the presence of faulty insulation, improper grounding, loose connections, defective parts, ground faults in equipment or unguarded live parts. The environment can also be a contributory factor to electrical accidents in a number of ways. Some unsafe environments affecting electrical safety would be, for example, atmospheres containing flammable vapors, liquids or gases, areas containing corrosive atmospheres, and wet and damp locations. Finally, some typical unsafe acts can be recognized as, for example, the failure to deenergize electrical equipment when it is being repaired or inspected, the intentional use of obviously defective and unsafe tools, or the use of tools or equipment too close to energized parts. For purposes of convenience, the first and second accident causing situations are sometimes combined and simply referred to as unsafe conditions. Thus, electrical accidents can be generally considered as being caused by unsafe conditions, unsafe acts, or, what is usually the case, combinations of the two. It should also be noted that inadequate maintenance can cause equipment or installations, which were originally considered safe, to deteriorate, resulting in an unsafe condition.

(b) *Typical Accidents from Unsafe Conditions.* Of the two primary causative factors influencing electrical accidents (i.e., unsafe conditions and unsafe acts) the ones involving unsafe conditions are more directly addressed by the provisions of the National Electrical Code. Since OSHA's revised electrical safety standards are initially directed towards minimizing unsafe conditions, a few typical examples of related accidents are given to illustrate these situations.

(i) California—1972. A nurseryman was electrocuted when he touched a conduit riser in a greenhouse. The greenhouse was wired with overhead open wiring on insulators. A short section of conduit was installed to enclose conductors feeding down to a time clock. A fulty splice in the clock energized the clock frame and conduit.

(ii) Florida—1973. A lead foreman and set-up man for a plastics corporation was installing a new injection molding machine. The employee was electrocuted when he touched a temperature control unit used in conjunction with the molding machine. The temperature control unit had been improperly wired.

(iii) Hawaii—1971. An installer of refrigerators for the retail-wholesale trade was electrocuted using an electric drill. While working on top of a prefabricated walk-in unit, the worker was in continuous ground contact when an electrical fault developed in the drill plug and the accident occurred.

(iv) California—1971. A worker engaged in electroplating was electrocuted when he touched an ungrounded 9 volt D.C. bus on an electroplating tank while in contact with the grounded tank. It was found that a 120-volt terminal on an A.C. timer coil was installed within ⅛ inch of the D.C. bus. A fault path had developed and a leakage current of 70 milliamperes at 120 volts was measured between the electroplating bus and the grounded tank.

(v) Florida—1974. A slag house operator for a slag plant was on a catwalk repairing and replacing guards on belt drives and pulleys. He had gained access to the catwalk by using a wooden ladder, but he descended from the catwalk by means of a power pole erected at the end of the platform. A 440-volt line with deteriorated insulation was anchored to the pole, and metal spikes for climbing and descending had been driven into the pole. As the victim stepped on the first cleat, he grabbed his chest, lost his grip and fell ten feet to the concrete floor. Electric shock was found to be the cause of death.

(vi) Idaho—1974. A lubricator working in the molding department of a plastics manufacturing plant was electrocuted. The accident resulted when the worker contacted a nozzle adaptor which was energized on the molding machine.

(vii) California—1966. An electrician received flash burns on his face when he closed a large 480-volt switch after replacing a blown fuse. The ceramic insulating block holding one end of the fuse was defective and apparently had originally caused the fuse to blow.

(viii) California—1972. A worker was electrocuted when he grasped the metal nozzle of a steam cleaning hose which was metal reinforced. The 120-volt switch in the motor terminal enclosure of the steam cleaning unit had vibrated loose and a terminal was contacting the metal enclosure. The unit was supplied by a three conductor cord; however, the ground prong on the attachment plug had been broken off. Another worker received a severe shock when he attempted to help the first worker.

(ix) Massachusetts—1970. A repairman working in an automobile body shop was electrocuted when the portable grinder which he was using developed a short circuit.

(x) Florida—1973. A carpenter's helper for a boat manufacturing firm was electrocuted when he plugged the router cord into an extension cord outlet box. Examination of the extension cord outlet box showed the ungrounded conductor had separated from its terminal and was touching the metal box.

While these electrical accident descriptions are typical, it must be emphasized that they only represent accidents within the category of unsafe conditions.

(c) Accident References. Although descriptive accident data was reviewed from a variety of sources, the typical representative data presented herein was taken from the following:

(i) Electrical Work Injuries in California, Department of Industrial Relations, Division of Industrial Safety State of California, 455 Golden Gate Avenue, San Francisco, CA 94101.

(ii) "Live and Learn" Publication, Department of Labor and Employment Security, Industrial Safety, State of Florida 1321 Executive Center Drive, East Tallahassee, Florida 32301.

(iii) Publication of Occupational-Related Electrocutions, Department of Labor and Industrial Relations, State of Hawaii, 825 Mililani Street, Honolulu, Hawaii 96813.

(iv) Industrial Accidents, Industrial Commission, State of Idaho, 317 Main Street, Boise, Idaho 83707.

(v) Department of Labor and Industries, Division of Industrial Safety, Commonwealth of Massachusetts, Leverett Saltonstall Bldg., Government Center, 100 Cambridge Street, Boston, MA 02202.

(4) Protective Measures and Present Regulations

There are various general ways of protecting employees from the hazards of electric shock, including insulation and guarding of live parts. Insulation provides an electrical barrier to the flow of current. To be effective, the insulation must be appropriate for the voltage, and the insulating material should be clean and dry. Guarding prevents the employee from coming too close to energized parts. It can be in the form of a physical barricade, or it can be provided by installing the live parts out of reach from the working surface. (This technique is known as "guarding by location.")

Grounding is another method of protecting employees from electric shock; however, it is normally a secondary protective measure. To keep guards or enclosures at a common

potential with earth, they are connected, by means of a grounding conductor, to ground. If a live part accidentally comes in contact with a grounded enclosure, any current flow is directed back to earth and the circuit protective devices (e.g., fuses and circuit breakers) can interrupt the circuit.

When employees are working with electrical equipment, they must use safe work practices. Such safety-related employee work practices include keeping a prescribed distance from exposed energized lines, avoiding the use of electrical equipment while wet, and locking-out and tagging equipment which is deenergized for maintenance.

Another important safety practice involves the use of electrical protective devices, such as rubber gloves and rubber mats for purposes of insulation against live parts, or hot sticks for purposes of both insulation and actuation of energized parts from a distance. However, to assure the protection of the employee, this equipment must be properly manufactured and maintained. With this equipment, regular maintenance becomes an important consideration in order to keep the equipment from deteriorating into an unsafe condition.

The regulations formerly contained in Subpart S of Part 1910 adopted the 1971 National Electrical Code by reference and set forth definitions with respect to some of the terms used by the NEC. The National Electrical Code is the most widely used code to safeguard people and property from the potential hazards associated with electricity. This code had its beginning prior to the turn of the century when the use of electricity was just starting. At this time, the code serves as the cornerstone of electrical safety in the United States. As such, it provides the basis for electrical safety regulations in over 2000 municipalities throughout all 50 States. Thirty-seven States and the District of Columbia have adopted it as their electrical safety law, and it is enforced by over 12,000 governmental electrical inspectors. This national system provides important assistance to OSHA in its mission to afford electrical safety in the workplace.

(5) Reasons for Proposed Revision

As noted earlier, electricity has long been recognized as a serious workplace hazard, exposing employees to such dangers as electric shock, electrocution, fires, and explosions. Indeed, the long history of the National Electrical Code attests to this fact. Since 1896, the NEC has represented the continuing efforts of experts in electrical safety to deal with these recognized hazards and to provide for safety in all electrical installations, including workplaces. OSHA has determined that electrical hazards in the workplace pose a significant risk of injury or death to employees, and that these regulations which draw heavily on the experience of the NEC, are reasonably necessary to provide protection from these hazards.

OSHA recognizes the important role that the NEC has played over the years in defining basic requirements for safety in electrical installations. The revision of Subpart S being promulgated by this document will maintain the protection presently afforded to employees by the 1971 NEC, as incorporated by reference in the present standards. While carrying forward those provisions which are considered necessary for employee safety, OSHA is providing greater flexibility for compliance with these provisions to the extent that employee safety warrants. OSHA has determined, therefore, that this revision of Subpart S contains requirements derived from the NEC which are reasonably necessary to protect employees from electrical hazards in the workplace.

Since the National Electrical Code (NEC) NFPA 70-1971 was adopted as a national consensus standard under Section 6(a) of the Act, three revisions of the NEC have been issued, the most recent being the 1981 edition. Because of the continual process by the National Fire Protection Association (NFPA) of updating the Code every three years, any specific edition which OSHA might adopt would likely be outdated within a few years. In addition, since the rulemaking process can become somewhat lengthy, a complete revision of the OSHA electrical safety standards every three years to keep pace with the NEC changes is not practical. To remedy this problem, OSHA's electrical safety standards should accommodate changes in technology without the need for constant revision and, where possible, be written in performance terms in order to allow alternative installation methods if they provide comparable safety to the employee.

Another difficulty with the current incorporation of the entire NEC by reference is that the NEC contains many details which are not directly related to employee safety. In addition, a further objective of OSHA in revising the standard is to obtain an improved standard which will provide employee safety and will be easier to use and understand, but will still be comprehensive enough to cover all significant electrical hazards.

Finally, since the NEC is an electrical installation design document, it does not generally contain explicit requirements for electricial safety-related work practices, electrical equipment maintenance or safety requirements for special equipment. OSHA, therefore, will also consider the development of regulations in these areas in subsequent rulemaking proceedings.

(6) General Approach

In view of the existing constraints and limitations imposed by the continued use of the 1971 version of the NEC, discussed previously, OSHA concluded that a revised standard tailored to fulfill OSHA's responsibilities and which would extract suitable portions from the NEC and other safety standards applicable to electrical safety was needed.

At the same time, and after discussions with OSHA staff, the NFPA decided that the NEC Correlating Committee, which periodically evaluates the NEC, should examine the feasibility of developing a document to be used as a basis for providing electrical safety in the workplace. In 1976, NFPA established the "70E Committee" to prepare a consensus standard for possible use by OSHA in developing a proposal for subsequent rulemaking. The 70E Committee visualized a standard consisting of four major parts:

Part I—Installation Safety Requirements,

Part II— Safety Related Work Practices,

Part III—Safety-Related Maintenance Requirements,

Part IV—Safety Requirements for Special Equipment.

The name given to this new document became NFPA 70E, "Electrical Safety Requirements for Employee Workplaces."

(7) Criteria for Part I of NFPA 70E

The NFPA 70E Committee derived Part I from the 1978 NEC; however, unlike the NEC, this Part was not intended to be applied as a design, installation, modification, or construction standard for an electrical installation or system. Rather, its content was excerpted from the NEC in order to apply only to electrical utilization systems which were part of the workplace. Although Part I of NFPA 70E is compatible with corresponding provisions of the NEC, it is not intended to be used, nor can it be used, in lieu of the NEC for the design and initial installation of utilization systems and equipment.

Although all of the requirements of the NEC may be related to electrical hazards, for practical purposes the Committee included in Part I of NFPA 70E provisions which are most directly associated with employee safety. In

determining which provisions should be included in Part I, the following guidelines were used by the 70E Committee.

(a) The provisions should give protection to the employee from electrical hazards.

(b) The provisions should be excerpted from the NEC in a manner that will maintain their intent as they apply to employee safety.

(c) The provisions should be selected and written in a manner that will reduce the need for frequent revision and avoid technological obsolescence.

(d) Compliance with the provisions should be determinable by means of an inspection during the normal state of employee occupancy without requiring shutdown of the electrical installation or damage to the building or finish.

(e) The provisions should not be encumbered with unnecessary details.

(f) The provisions should be written so as to enhance their understanding by the employer and employee.

(g) The provisions must not add any requirements not found in the NEC, nor may the intent of the NEC be changed even if the wording is changed.

(8) Source of 70E

The 1978 edition of the NEC was used as a source document for NFPA 70E, instead of the 1971 edition. Part I of 70E reflects a considerable improvement over the present OSHA standards incorporated in Subpart S. Generally, this improvement may be considered as being one achieved more from the elimination of requirements inappropriate to OSHA's needs rather than from the addition of new requirements. Typical examples of this method of simplification in the preparation of Part I of 70E relate to NEC chapters 3, 4, 6, 7, and 9, as discussed below. Although 70E does contain some additional requirements not contained in the 1971 NEC (as in chapters 6 and 7 of the 1978 NEC), such new provisions are relatively few in number.

Major deletions and additions, typical of those made in the preparation of 70E, are given in the following paragraphs:

(a) *Principal Deletions.* Chapters 3 and 4 of the 1971 and 1978 NEC deal with wiring methods and materials (Chapter 3) and equipment for general use (Chapter 4). Tables containing various specialized technical information have been deleted in 70E.

Typical topics of these chapters included insulation characteristics, allowable ampacities, electrical box sizes, flexible cord and motor full load currents. This type of information was deleted because it deals with items not directly related to the electrical hazard. For example, the composition of insulation on a conductor was deleted; however, the actual requirement that the conductor be insulated and that the insulation be approved for its intended purpose was retained. These changes result in a standard which is more performance oriented.

Chapter 6 of the 1971 and 1978 NEC describes special equipment requirements. Requirements from this chapter dealing with electrically operated organs and the installation of equipment and wiring used for sound-recording and reproduction have been deleted in 70E because electrical safety for employees is not directly affected by these items. Any hazard to the employee related to this type of equipment would most likely arise in the supply system which will still be covered.

Chapter 7 of the 1971 and 1978 NEC deals with special conditions. All requirements from this chapter involving stand-by power generation systems permanently installed, other than emergency systems, have been deleted. In these situations, primary electrical hazards to the worker are minimal since the effects of power outage are generally limited to product or process damage.

Chapter 9 of the 1971 and 1978 NEC provides a collection of tables containing technical data, together with a number of sample computations. This entire chapter is not included in 70E because it is solely and instructive guide for the design of certain electrical systems.

(b) *Principal Additions.* Chapter 6 of the 1971 NEC which deals with special equipment, has been supplemented by additional requirements found in the 1978 edition of the NEC. These additions are included in 70E. Specifically, new provisions for workplaces containing electrically driven or controlled irrigation machines and workplaces using electrolytic cells have been added. In the first type of workplace, the related electrical hazard is associated with the presence of an electrically driven or controlled machine, with one or more motors, used primarily to transport and distribute water for agricultural purposes. In the second type of workplace, equipment is installed consisting of electrolytic cells used for the purpose of refining or producing various materials. Such an installation contains electrical hazards because the employee's work is normally performed on or in the vicinity of exposed energized surfaces of the electrolytic cell lines and their attachments. As a consequence, special electrical safety requirements are needed and hence such provisions are included in 70E.

Chapter 7 of the 1971 NEC covers special conditions. An addition contained in the 1978 NEC involves fire protective signaling systems. Inasmuch as the installation of wiring and equipment of fire protective signaling systems, operating at 600 volts or less, has a definite effect on workplace safety, the new provisions have been included in 70E.

II. History of Regulation

The need for an uncomplicated and readily understandable standard, sufficiently general to minimize the need for changes, appeared to be satisfied by Part I of the NFPA 70E recommendations. OSHA carefully reviewed the work product of the 70E Committee and determined that its use as a source document for OSHA's design safety standard for electical utilization systems and equipment was appropriate and offered certain advantages in achieving a more simplified standard. OSHA prepared a notice of proposed rulemaking which contained proposed amendments of the electrical safety standards in Subpart S of 29 CFR Part 1910. The proposal was published in the **Federal Register** (44 FR 55274) on September 25, 1979. On November 20, 1979, OSHA published a notice correcting the proposal and extending the comment period (44 FR 66621).

The proposal represented an attempt to develop a comprehensive standard which would protect employees from recognized electrical hazards in the workplace. This was accomplished by examining the existing standards, the 1975 and 1978 edition of the NEC. The proposal streamlined the existing standard, which incorporated by reference the whole 1971 NEC, by deleting portions of the NEC which were not directly related to employee safety. OSHA's proposed revisions provided more flexibility, allowing employers alternative methods of compliance by phrasing the standard in terms of performance instead of specification.

The notice of proposed rulemaking invited interested persons to submit written comments on the proposed standard, to participate in a public meeting (which was held on November 8, 1979), and to file objections and requests for a public hearing. The original date for the close of the comment period was set for November 30, 1979, but was subsequently extended, at the request of commenters, to December 31, 1979 (44 FR 66621). Over 190 written comments were received, including several requests for a hearing which identified eight major issues:

1. Whether the proposal should be more performance oriented or, on the other hand, should provide greater specification.

2. Whether the scope of the standard is clear with respect to its coverage of public utilities.

3. Whether the proposal would change the existing "grandfathering" and "retroactive" provisions.

4. Whether the marking and approval requirements in proposed §§ 1910.303(a), 1910.303(e), and 1910.307(b)(4) deviate from the existing regulations and whether they relate to employee safety.

5. Whether the impedance and ampacity requirements of National Electrical Code (NEC) Section 250–51 should be included in the standard.

6. Whether the prohibition of the use of structural metal frames of buildings as the equipment grounding conductor (1978 NEC 250–58(a)) should be included in the standard.

7. Whether the definitions for Class II locations and their associated explanatory notes should be changed.

8. Whether installations of electrolytic cells should be covered by the guarding provisons of proposed § 1910.303.

In response to these hearing requests, OSHA published a notice of public hearing, listing these issues (45 FR 10375). The informal rulemaking hearing was convened by Judge Harmon Maxson on May 6, 1980, pursuant to section 6(b)(3) of the Act (29 U.S.C. 655(b)(3)) and 29 CFR Part 1911. The hearing lasted through May 8, 1980, and included testimony from over 50 witnesses. Judge Maxson established a post-hearing period for the submission of additional comments and briefs extending through July 8, 1980.

The entire record, including 73 exhibits, 5 addenda, and 490 transcript pages, was certified by Judge Maxson on August 27, 1980, in accordance with 29 CFR 1911.17. Copies of materials in the record, as well as an index of the record, may be obtained from the OSHA Docket Office, Room S6212, Frances Perkins Building, 200 Constitution Avenue, NW, Washington, D.C. 20210

This final standard is based on a full consideration of the entire record of this proceeding including materials discussed or relied on in the proposal, the record of the informal hearing, and all written comments and exhibits received.

III. Issues

The evidence submitted into the record is summarized and evaluated in the following discussions of each issue. The numbers in brackets refer to specific references in the May 6, 7, and 8, 1980, hearing exhibits (Ex.) and hearing transcript page numbers (Tr.).

1. *Whether the proposal should be more performance oriented or, on the other hand, should provide greater specification.*

Most of the language of the proposed standards was taken directly from the National Electrical Code. This was done to maintain continuity with the existing regulations, which incorporated the entire 1971 NEC by reference. Where the NEC language was rewritten emphasis was given to performance oriented terms. As stated by one witness, the criteria used by the NFPA 70E Committee in developing the base document was: "Whenever practicable, the standard promulgated shall be expressed in terms of objective criteria and of the performace desired" (Tr. 394). However, some commenters felt that the proposal was still too specific and suggested that the entire standard be more general. One commenter stated:

> Most accidents do not result from lack of or conformance to specification, but are performance failures, such as human and/or environmental failures. Another deficiency of specification standards is that the inflexibility of specification standards leads to specification-type citations which frequently fail to correct accident causes. * * * So long as a standard is specification oriented, it is sterile and freezes in place the state of technology and scientific applications to the industry (Ex. 44).

In a later submission, the same commenter stated, "The standards should allow the employer the use of reasoned judgment in the application of innovative methods, new technology and cost-saving practices so long as worker safety is not jeopardized" (Ex. 61). This commenter had earlier submitted an annotated copy of the proposal with suggested changes for all paragraphs which they felt were too specific (Ex. 2). Another comment contained a suggested revision of the entire standard which would reduce it to two pages of very general terms and stated, "Performance orientation allows for rapid technological improvements, alternative methods of accomplishing employee safety and a reduction of nuisance citations" (Ex. 12). In addition, a witness stated, "When specifications are detailed to this degree, they place a burden on OHSA compliance officers to become unnecessarily proficient in the technical language and application of the National Electrical Code and the proposed regulations" (Tr. 417–418).

In contrast to testimony supporting more general standards, one witness stated, "The most obvious and serious defect is the emphasis on writing the standard in general terms * * * The [Review] Commission and the circuit courts have ruled, in some instances, that standards written in general terms are vague and unenforceable" (Tr. 227).

A certain balance is required in order to make the standard both flexible and at the same time enforceable. OSHA has tried to make the standard as performance oriented as possible. However, it is impossible to express the standard in only performance terms without providing some specifications for employers and compliance officers. The final rule as adopted, therefore, is essentially a performance standard, with specifications included where necessary.

2. *Whether the scope of the standard is clear with respect to its coverage of public utilities.*

The scope of OHSA's former standard was stated in § 1910.308(c). The so-called "utility exemption" was contained in paragraph (c)(2)(v) and was identical to 1971 NEC Section 90–2(b)(5). In the proposal, OHSA continued the "exemption" in § 1910.302(e)(2)(v), which read the same as the earlier version:

> (2) *Not covered.* * * *
>
> (v) Installations under the exclusive control of electric utilities for the purpose of communication or metering; or for the generation, control, transformation, transmission, and distribution of electric energy, located in buildings used exclusively by the utilities for such purposes or located outdoors on property owned or leased by the utility, or on public highways, streets, roads, etc., or outdoors by established rights on priviate property.

OHSA's interpretation of this regulation, as stated at the public hearing, has been that "this provision excludes the *installations* of electric utilities used for such purposes as the generation, control, transformation, transmission and distribution of electric energy. Other codes and standards such as ANSI C–2, National Electrical Safety Code, address the installation design requirements for these facilities. Therefore, the NEC does not address these areas of electric design" (Tr. 25, emphasis added).

As stated by witnesses at the hearing, the scope provision of the standard does not grant exemptions (Tr. 68, 259, 426). Instead, the "utility exemption", as it is referred to, is simply a statement of installations which were never intended to be within the scope of the NEC, or of this standard. In other words the standard, like the NEC, does not contain provisions which are appropriate for dealing with utility installations either for the generation, control, transformation, transmission, and

distribution of electric energy, or for the purpose of communication or metering.

However, other utility installations not of the type noted above are covered. A proposal was submitted to the 1981 code writing panels to clarify the intent of the scope paragraphs. As noted by some witnesses (Tr. 261, 427), this proposal was accepted and a revised fine print note was added to the proposed 1981 NEC, reading as follows:

> It is the intent of this section that this Code covers all premises' wiring or wiring other than utility owned metering equipment, on the load side of the service point of buildings, structures, or any other premises not owned or leased by the utility. Also, it is the intent that this Code cover installations in buildings used by the utility for purposes other than listed in (b–5) above, such as office buildings, warehouses, garages, machine shops, recreational buildings which are not an integral part of a generating plant, substation, or control center.

The language of § 1910.302(a)(2)(v) provides that portions of a utility installation which are not integral parts of a generating plant, substation, or control center are covered by the standard.

The position that all aspects of public utilities operation should be covered by the proposed regulations was raised by two commenters. The first commenter expressed the concern that a large number of workers would not be protected by an electrical standard if the public utility industry were exempted from this standard. He cited a Bureau of Labor Statistics News Release which stated that six of every 10 fatalities from contact with electric current occurred to workers in the construction, transportation and public utilites industries (Ex. 25). However, most of those fatalities were in the construction industry; and, since the causes of those fatalities occurring in the transportation and public utilities industries were not broken down, it is not clear how many may have been caused by conditions covered in the regulations of this Subpart. Expressing the same concern, the other commenter stated, "To excluse the utility industry from Subpart S (electrical) of the Occupational Safety and Health Act is to deny fair and equal safety coverage to the largest number of workers exposed to these hazards on a daily basis." In support of his objection, this witness described several electrical accidents of which he had personal knowledge (Ex. 26). However, it must be noted that the causes of these accidents were related to construction and maintenance of power transmission and distribution lines and equipment; the electrical standards of Part 1910 do not apply to construction activities. (Regulations for the construction of power transmission and distribution lines are contained in OHSA's construction standards (29 CFR Part 1926). Regulations on the maintenance and design of these lines and equipment will be considered in future rulemakings.)

The question of whether other industries should have the same exemption as public utilities in areas where they are performing the same operations was raised by steel industry representatives (Ex. 61). As they noted, the National Electrical Safety Code (ANSI C-2) contains regulations covering the generation, control, transformation, transmission and distribution of electric energy. ANSI C-2 does specifically say in its scope that it is applicable to the systems and equipment operated by utilities, or similar systems and equipment of an industrial establishment or complex under the control of qualified persons. While questioning a witness representing the Edison Electric Institute, a steel industry representative noted that while the NEC and OSHA's Subpart S cover industrial substations, the ANSI C-2 Code says that it, too, covers industrial equipment, thus producing a conflict or overlap (Tr. 350).

The NEC and OSHA's Subpart S do contain provisions which are appropriate for most industrial substations. Such facilities are included in the scope of this standard, because they vary widely in the power and voltage involved and in the type of equipment that is used. While some industrial facilities may only include utility type equipment and operate similarly to a utility, this is not the general case. As a rule utilities operate at much higher voltages and with specially trained employees. In the situations where the industrial operation may be the same as that of an electric utility, there would not be an overlap since ANSI C-2 contains the provisions which would apply and neither the NEC nor OSHA's Subpart S contain provisions which would be applicable. However, since provisions are included in these standards which are appropriate for most industrial substations, these installations have been included in the scope of the final rule.

3. *Whether the proposal would change the existing "grandfathering" and "retroactive" provisions.*

a. *Terminology.*

The term "retroactive" has been used during this rulemaking to refer to provisions which were required by former § 1910.309(a) (and by proposed § 1910.302(b)(1)) to be implemented without regard to when the electrical installation was made. OSHA recognizes that this is an unorthodox use of the term "retroactive," since these provisions do not involve retroactivity in the true sense of the word. The so-called "retroactive" provisions of § 1910.309(a) required certain previously installed equipment to be updated as of the standard's effective date to meet a list of requirements from the 1971 NEC. In that sense, its application to existing installations was no different than that of the other national consensus standards which OSHA adopted under section 6(a) of the Act. In other words, employers who had not voluntarily met these standards before OSHA adopted them were now required to bring their facilities into compliance.

In this preamble, OSHA will refer to the requirements of § 1910.309(a) and proposed § 1910.302(b) as the "retroactive" provisions of Subpart S, in order to avoid further confusion, even though the term is not accurate.

Similarly, § 1910.309(b) (and proposed § 1910.302(b)(2)) which apply the entire electrical standard to installations made after March 15, 1972, are referred to as the "grandfathering" provisions, because they did not require that installations made before March 15, 1972, comply with the entire 1971 NEC (or as stated in § 1910.302(b)(2), comply with all of Subpart S).

b. *Background of the former § 1910.309*

OSHA's former General Industry Electrical Safety Standard included §§ 1910.309 (a) and (b), which read as follows:

> (a) The requirements contained in the following articles and sections of the National Electrical Code, NFPA 70–1971; ANSI C1–1971 (Rev. of C1–1968) shall apply to all electrical installations and utilization equipment: [4 articles and 74 provisions of the 1971 NEC were listed].
>
> (b) Every new electrical installations and all new utilization equipment installed after March 15, 1972, and every replacement, modification, or repair or rehabilitation, after March 15, 1972, of any part of any electrical installation or utilization equipment installed before March 15, 1972, shall be installed or made, and maintained, in accordance with the provisions of the 1971 National Electrical Code, NFPA 70–1971; ANSI C1–1971 (Rev. of C1–1968).

Under these provisions, the 4 articles and 74 provisions of the 1971 NEC, as listed in § 1910.309(a), applied to all electrical installations and utilization equipment, including those installed before the rule was published. If these installations and equipment did not comply with the listed provisions, they were required to be brought into compliance. Paragraph 1910.309(b), then, provided that equipment and

installations made after March 15, 1972, were subject to the entire 1971 NEC.

To the extent that § 1910.302(b) of the proposal was developed directly from these provisions, OSHA believed that it was clear that no new requirements were proposed for installations and equipment installed prior to March 15, 1972. In fact, the list of provisions in proposed § 1910.302(b)(1) was shortened, and the listed provisions were simplified significantly from those in § 1910.309(a).

However, as the rulemaking on Subpart S progressed, it became evident that there was considerable confusion over proposed § 1910.302(b)(1) and its antecedent, § 1910.309(a). Some parties contended that proposed § 1910.302(b)(1) actually added new "retroactive" requirements not found in § 1910.309(a). Others indicated that they did not understand either the proposed or the existing "retroactive" provisions. In this regard, OSHA believes that it will be helpful at this point to discuss the development of § 1910.309 as it has appeared in Subpart S since 1972.

On May 29, 1971, OSHA published, under Section 6(a) of the Act, its first package of national consensus and established Federal standards in 29 CFR Part 1910 (36 FR 10466). Various amendments were made less than three months later, on August 13–14, 1971, (36 FR 15101, 15438). Included in the initial package of standards was Subpart S of Part 1910, entitled "Electrical." Certain substantive provisions from the 1968 NEC were published nearly verbatim in Subpart S as § 1910.308 and §§ 1910.310–1910.328. The August 13, 1971 amendments provided that these sections became effective on August 27, 1971 (36 FR 15101). The remaining provisions of the 1968 NEC were incorporated by reference in § 1910.309, and employers were given an additional 5½ months, until February 15, 1972, to adjust to and come into compliance with these requirements.

However, before the expiration of the two year period established by section 6(a) of the Act for the adoption of national consensus standards as OSHA standards, the NFPA issued its 1971 edition of the NEC. The 1971 NEC thus became the latest edition of the national consensus standards for electrical safety. OSHA reviewed its existing standards and determined that there were potential conflicts between the two consensus standards, namely, the 1968 NEC and 1971 NEC. Under section 6(a) of the Act, the Assistant Secretary eliminated such conflicts by promulgating the standard which assured the greatest protection for employees.

OSHA determined that original §§ 1910.310–1910.328, as originally promulgated, were necessary elements of employee safety in existing installations, and that their coverage should be continued for all electrical installations, regardless of when made. It was also determined that for future installations and modifications of existing installations, the entire 1971 NEC should be applicable.

For existing installations, then, OSHA adopted only the Articles and Sections of the 1971 NEC which, in their 1968 versions, had been the sources for original §§ 1910.310–1910.328 (37 FR 3431, February 16, 1972). Where there was conflict between the 1968 provisions and the 1971 provisions, section 6(a) of the Act required the adoption of the version which "assures the greatest protection of the safety or health of the affected employees." (29 USC 655(a).) The Assistant Secretary selected the 1971 versions as being more protective than those of 1968. (This determination was also congruent with the NFPA's own determination, as stated in a new provision of the 1971 NEC, Section 90–1, that the 1971 Code contained "requirements considered necessary for safety.")

OSHA did not then publish sections 1910.308 and 1910.310–1910.328, taken from the 1971 Code, to replace those sections originally taken from the 1968 Code. Instead of publishing the text of these NEC articles and sections verbatim within Subpart S, OSHA chose to list them and incorporate them by reference in paragraph (a) of § 1910.309 and apply them to all electrical installations. Paragraph (b), on the other hand, incorporated the entire 1971 NEC by reference for application only to installations, modifications, repairs, and renovations made after March 15, 1972 (37 FR 3431, Feb. 16, 1972).

The format and content of § 1910.309, as promulgated in February 1972 has remained unchanged since then, except for the revision of a requirement from the 1971 NEC relating to ground-fault protection on construction sites.

It is clear from this discussion that OSHA's actions in applying only certain provisions of the 1971 NEC to existing installations were well within the authority of the Assistant Secretary under section 6(a) of the Act. Indeed, the promulgation of former § 1910.309 did not constitute the fullest possible exercise of section 6(a) authority, which could have resulted in the entire 1971 NEC being applied to all electrical installations. The Assistant Secretary acted to resolve the conflict between consensus standards in a manner which did not compromise the good faith efforts of employers to comply with the electrical standards as originally promulgated.

c. *Background of proposed § 1910.302(b)*

OSHA proposed to retain most of the requirements of former § 1910.309 in proposed § 1910.302(b). The proposed provision retained the dichotomy between old and new installations as contained in § 1910.309, as follows:

(b) *Extent of application.* (1) The requirements contained in the sections listed below shall apply to all electrical installations and utilization equipment regardless of when they were designed or installed: [28 sections of proposed Subpart S were listed, containing 46 provisions].

(2) Every new electric utilization system and all new utilization equipment installed after March 15, 1972, and every replacement, modification, repair, or rehabilitation, after March 15, 1972, of any part of any electric utilization system or utilization equipment installed before March 15, 1972, shall be installed or made, and maintained, in accordance with the provisions of §§ 1910.302 through 1910.308 of this subpart.

The requirements listed in proposed § 1910.302(b)(1) were all based on the 1971 NEC Articles and Sections contained in the former § 1910.309(a) list. Some of the requirements in the old list were proposed to be deleted (e.g., NEC Section 422–17). Others were written in more performance-oriented terms (e.g., NEC Articles 500, 501, 502, and 503), allowing alternative methods of compliance to those specified in the 1971 NEC. (These changes are noted in detail in section IV of this preamble.) Thus, the proposal provided much greater flexibility for the employer than did the former regulation.

The "retroactive" provisions in proposed § 1910.302(b)(1) related to such critical areas as grounding, guarding live parts, use of flexible cords, overcurrent protection, hazardous locations, identification of equipment and disconnecting means, and inspection of equipment. In evaluating the need for these requirements, OSHA reviewed 1971 and 1972 electrical accident data from the State of California. From this data, OSHA concluded that 70 percent of the electrical accidents which were attributable to unsafe conditions involved hazards addressed by the "retroactive" requirements.

Most of the comments and testimony introduced on the issue of the "retroactive" provisions were submitted by representatives of a single industry, involving feed and grain production (Tr. 168–169, 250–251, 264–269, 420; Ex. 19, 21, 28, 31, 32, 39, 54). Some argued that OSHA's former regulation was not recognized by industry as applying "retroactively" and that OSHA

compliance officers were interpreting it inconsistently (Ex. 31, 44).

However, the record clearly indicates that the "retroactive" provisions of § 1910.309(a) have been uniformly applied by OSHA to installations made prior to March 15, 1972. This fact is indicated by the evidence of citations submitted into the record (Ex. 55G). In addition, testimony of representatives from organizations such as the American Petroleum Institute, Underwriters Laboratories, Inc., and the National Fire Protection Association shows that industry in general has been well aware of the "retroactive" provisions of § 1910.309(a) during the nearly nine years since their original promulgation (Tr. 307, 324, 408–409).

Furthermore, the Occupational Safety and Health Review Commission, in *Delaware and Hudson Railway* (1980 OSHD ¶ 24,422), has ruled definitively that the "retroactive" provisions of § 1910.309(a) do apply to equipment installed before March 15, 1972. As the Commission noted:

> Respondent submits that section 1910.309(b) limits the application of section 1910.309(a) to equipment installed after March 15, 1972.
>
> Sections 1910.309 (a) and (b) must be read together. Section 1910.309(a) incorporates by reference certain specified sections of the NEC as occupational safety and health standards and provides that they "shall apply to *all* electrical installations. . . ." (emphasis added). Section 1910.309(a) contains no clause excluding previously installed equipment from its coverage. Section 1910.309(b), on the other hand, goes further than section 1910.309(a)'s incorporation of only specific sections of the NEC, and requires compliance with the entire electrical code. The terms of section 1910.309(b), however, limit its application to equipment installed, replaced, repaired, or rehabilitated after March 15, 1972. Because Respondent was cited for a failure to comply with an NEC provision specifically incorporated in section 1910.309(a), the date of installation of Respondent's equipment is irrelevant. (1980 OSHD ¶ 24,422, at p. 29787).

Several commenters argued that even if § 1910.309(a) by its terms applies to installations made prior to March 15, 1972, the NEC was not intended by its drafters to be applied "retroactively" in this way, but was only intended to be used prospectively, as an installation standard (Ex. 31, 32, 54, 69). These commenters argued that there was no evidence in the record that any other State or governmental agency had adopted the NEC "retroactively."

The 1971 NEC was totally silent on the question of its application to existing facilities. Had the drafters intended to limit its application to new installations, they could easily have included a statement to that effect in the scope provisions (Section 90–2) of the Code. (In fact, the NEC Code Making Panel which is responsible for the scope and introduction to the NEC rejected a proposal for the 1975 NEC which would have provided an exemption for existing installations. See pp. 1–3, *Preprint of the Proposed Amendments for the 1974 National Electrical Code*, Part II (NFPA, 1973).) Moreover, the 1971 NEC clearly indicated an intention to leave all such questions of application and enforcement to the enforcing authority. For example, section 90–7 provided:

> This Code is intended to be suitable for mandatory application by governmental bodies exercising legal jurisdiction over electrical installations. . . . The administrative authority supervising such enforcement of the Code will have the responsibility for making interpretations of the rules, for deciding upon the approval of equipment and materials, and for granting the special permission contemplated in a number of the rules.

In addition, section 90–1(b) of the 1971 NEC did not distinguish between safety in existing installations and safety in new installations:

> This code contains provisions considered necessary for safety. Compliance therewith and proper maintenance will result in an installation essentially free from hazard. . . .

Thus, the 1971 NEC contained no provisions which indicated an intent for that Code to apply only to new electrical installations. The question of how the Code would be applied was left to the authorities enforcing it, including OSHA.

Section 6(a) of the Act was enacted to provide protection to employees from workplace hazards as soon as possible. The urgency of this action was underscored by Congress' authorization to OSHA to proceed without regard to the rulemaking procedures of the Administrative Procedure Act (5 U.S.C. 553). Had OSHA chosen to apply the 1971 NEC only to new installations, such action would not have resulted in any improvement in employee safety under existing conditions. Furthermore, there would have been no coverage at all for these conditions.

OSHA's selection of provisions from the 1971 NEC to apply to all installations represented a means of complying with the letter and the spirit of section 6(a) of the Act. Virtually all of the "retroactive" provisions in former § 1910.309(a) (and, necessarily, in proposed § 1910.302(b)(1)) had been in the NEC in one form or another for many years prior to the 1971 edition. Hence, although they were now mandatory on a National scale for the first time, these provisions were already well known to employers across the country.

It is important to note that former § 1910.309(a) listed only a small portion of the 1971 NEC for application to installations made before March 15, 1972. Additionally, the overwhelming majority of these provisions originated in editions of the NEC dated 1937 or earlier (see Table following).

Table of "Retroactive" Provisions

"Approval Requirements"[1]		1899, pp. 6, 20, 26, 27, and 29 supplement.	

[1] The general approval requirement is not "retroactive" either in OSHA's present or proposed regulations. It is shown here to indicate its genesis.

Lastly, several commenters claimed that "retroactive" application of OSHA's electrical standards would result in a vast economic burden on employers without being necessary for employee safety (Tr. 169–171; Ex. 31, 56, 61, 62). To support their claim, two organizations submitted economic impact studies on their respective industries (Ex. 55J, 58).

As discussed more fully in the section on regulatory assessment (Section V), the exaggerated cost estimates in these industry studies can be attributed to a lack of clarity and proper organization in § 1910.307 as proposed. During the rulemaking, as is later noted, proposed § 1910.307 was viewed by various parties as imposing an "approval" requirement for electrical equipment in hazardous locations. This section applied to all such equipment, regardless of when installed, by virtue of its inclusion in the "retroactive" list in § 1910.302(b)(1). Thus, based upon this interpretation, the cost estimates in the industry studies included the unnecessary and enormous expense of removing acceptable equipment which was not "approved."

OSHA recognizes that proposed § 1910.307, as drafted, may have been susceptible to such reading. However, as

issue 4 in this section of the preamble makes clear, it was never OSHA's intention to require "approval" or "listing" or "labeling" of equipment in hazardous locations installed before March 15, 1972. Approval of this sort was only one of three alternatives which OSHA intended to allow for these locations. Although approval of equipment is certainly an acceptable means of compliance, § 1910.307 provides that other equipment will also be acceptable if it is intrinsically safe or if the employer can demonstrate that the equipment is of a type and design which provides protection from the hazards of the hazardous location. This performance requirement is, if anything, a less burdensome provision than the requirements from the 1971 NEC which have been enforced under § 1910.309(a).

Thus, many of the costs submitted in the industry studies are not imposed by the revision of Subpart S. The reorganization of § 1910.307 in the final standards will help to clarify the situation and remove the cause of the controversy surrounding both this section and the other "retroactive" provisions of § 1910.302(b)(1).

OSHA has considered the recommendations for eliminating "retroactive" provisions for older electrical installations and has concluded that a total exemption of all existing facilities is unwarranted. "Retroactive" application of the requirements listed in § 1910.302(b)(1) has been shown to be reasonably necessary for employee safety and has not been shown to be an unwarranted or extremely costly burden on employers. Therefore, § 1910.302(b)(1) has been adopted with no change from the proposal.

4. *Whether the marking and approval requirements in proposed §§ 1910.303(a), 1910.303(e), and 1910.307(b)(4) deviate from the existing regulations and whether they relate to employee safety.*

a. *Marking*

OSHA's previous standards on the general marking of electrical equipment were contained in 1971 NEC Sections 110-21 and 500-2(b). In the former standards, both requirements were "retroactive," and they read as follows:

110-21. *Marking.* The manufacturer's name, trademark, or other descriptive marking by which the organization responsible for the product may be identified, shall be placed on all electrical equipment. Other markings shall be provided giving voltage, current, wattage, or other ratings as are prescribed elsewhere in this Code. The marking shall be of sufficient durability to withstand the environment involved.

500-2. *Special Precaution.* * * *

(b) *Marking.* Approved equipment shall be marked to show the Class, Group and operating temperature, or temperature range, based on operation in a 40° C ambient for which it is approved.

The temperature range, if provided, shall be indicated in identification numbers, as shown in Table 500-2(b).

Identification numbers marked on equipment nameplates shall be in accordance with Table 500-2(b).

Exception: Equipment of the nonheat-producing type, such as junction boxes, conduit and fittings, are not required to have a marked operating temperature.

OSHA proposed to retain both provisions, with some minor modifications. Paragraph 1910.303(e) proposed requirements equivalent to NEC Section 110-21, except with the words "as are prescribed elsewhere in this Code" changed to the more performance-oriented "as may be required." In proposed § 1910.307(b)(4), the second and third sentences of NEC Section 500-2(b) were deleted, a related sentence from 1971 NEC Section 500-2(c) was added, and two new exceptions were also added. These changes resulted in no new obligations for employers.

Some commenters were concerned with the "retroactive" application of the general marking requirements, § 1910.303(e) (Tr. 309, 396-397; Ex. 19, 31). However, it must be noted that this requirement was not new to the NEC when the first OSHA electrical standards were promulgated. Indeed, this requirement can be found as far back as the 1918 National Electrical Code,[1] and it has been carried forward in all subsequent editions. More than half a century later, it was reasonable for OSHA to expect that most, if not all workplaces were in compliance with this provision when Subpart S was first promulgated.

The commenters also suggested that marking was not related to employee safety. However, since the required markings provide for proper identification and utilization of equipment, the requirement clearly provides protection for operating and maintenance personnel (Tr. 64, 73-74).

One commenter (Ex. 56) was concerned that otherwise safe equipment would have to be replaced for lack of the required markings and suggested that OSHA allow the employer to mark the equipment. In this regard, the standard does not specify that markings are only acceptable if they are part of the manufacturers' nameplates (though a nameplate would be acceptable). The standard allows the employer to place the required marking on equipment provided that it is done in a manner which ensures sufficient durability.

Many of the comments on OSHA's proposal, as well as some of the hearing exhibits, reflected misinterpretations of OSHA's marking requirements (Exs. 2, 19, 21, 31). The terms "marking", "labeling", and "approval", each of which has its own distinctive meaning within the context of Subpart S, were nonetheless used interchangeably by the commenters and witnesses. In this regard, it may be helpful to discuss the meanings of and relationships between these terms in the context of the standards.

"Marking" means no more than the identification of the key electrical parameters of a piece of electrical equipment. As noted above, § 1910.303(e) does not require that this "marking" take the form of a manufacturer's nameplate. Marking may be accomplished by any means which will provide the necessary information and will be capable of withstanding the operating environment of the equipment.

"Marking" does not mean the same thing as "labeling", as used in both the NEC and Subpart S. "Labeling" refers to the label of a nationally recognized testing laboratory, such as Underwriters Laboratories, Inc. (UL), or Factory Mutual Engineering Corporation, which indicates that the equipment in question has met criteria set by that laboratory for electrical safety. "Labeling," unlike "marking," is not required by Subpart S; however, if equipment is required by the Subpart to be "approved," equipment which is "labeled" is acceptable to OSHA.

The general requirement that all equipment be "approved", which was carried forward in proposed § 1910.303(a), only applies to installations made after March 15, 1972. This requirement was not contained in the list of "retroactive" provisions in former § 1910.309(a) and was also not contained in the list of proposed § 1910.302(b)(1). (See discussion of *Approval* in Section III, Issue 4b of this preamble.)

In brief, the general requirements for marking in § 1910.303(e) apply to all electric equipment; the general approval requirement in § 1910.303(a) applies to equipment installed after March 15, 1972; and there is no labeling requirement. If equipment is required to be "approved", unapproved equipment generally has to be replaced with "approved" equipment. On the other hand, equipment which is not properly marked need not be replaced but need

[1] P. 128 (Class D, Markings) 1918 "National Electrical Code", *Regulations of the National Board of Fire Underwriters for Electric Wiring and Apparatus, as Recommended by the National Fire Protection Association.*

only be marked with the necessary information.

Other commenters addressed § 1910.307(b)(4). They claimed that this paragraph required unnecessary marking of dust-tight equipment, which did not need to be marked for use in Class II, Division 2 locations (Tr. 274–275; Ex. 19, 34, 56). To support their views, they cited the 1981 NEC which has clarified the marking requirement by including an exception to Section 500–2(b) for dust-tight equipment in Class II, Division 2 and Class III locations. So that OSHA's standard would not conflict with the NEC, they suggested that § 1910.307(b)(4) be changed to read as follows:

(4) *Marking.* Approved equipment not covered in paragraphs (b)(4)(i) through (b)(4)(iv) of this section shall be marked to show the class, group, and operating temperature, or temperature range, based on operation in a 40° C ambient, for which it is approved. The temperature marking shall not exceed the ignition temperature of the specific gas or vapor to be encountered.

(i) Equipment of the nonheat-producing type, such as junction boxes, conduit, and fittings and equipment of the heat producing type having a maximum temperature not more than 100°C (212°F), shall not be required to have a marked operating temperature or temperature range.

(ii) Fixed lighting fixtures marked for use in Class I, Division 2 locations only, need not be marked to indicate the Group.

(iii) Fixed general purpose equipment in Class I locations other than fixed lighting fixtures which is acceptable for use in Class I Division 2 locations shall not be required to be marked with the Class, Group, Division or operating temperature.

(iv) Fixed dust tight equipment other than fixed lighting fixtures which are acceptable for use in Class II Division 2 and Class III locations shall not be required to be marked with the Class, Group, Division or operating temperature.

The proposed version allowed general-purpose equipment suitable for any Division 2 location to be unmarked. Since dust-tight equipment was acceptable for installation in Class II, Division 2 locations, proposed § 1910.307(b)(4)(iii) already accepted the use of unmarked, dust-tight equipment in Class II, Division 2 locations. However, in an effort to clarify this point and in agreement with the comments received, the suggested change has been included in the final rule.

b. *Approval*

OSHA's former regulation requiring all equipment to be approved was contained in 1971 NEC Section 110–2, which was not made applicable to equipment installed before March 15, 1972. Definitions and clarifications relating to approval were contained in former § 1910.308(d), and paragraph (d)(1) stated that approved meant "acceptable to the Assistant Secretary of Labor for Occupational Safety and Health." For the purpose of the former regulations, § 1910.308(d)(2) listed the types of installations or equipment which would be acceptable (and therefore "approved"). The definitions applied both to the general approval requirement and to provisions of the 1971 NEC which contained their own specific approval requirements.

In proposed § 1910.303(a), OSHA retained the same approval requirement as that contained in 1971 NEC Section 110–2. The definitions relating to approval were also retained. In keeping with the former standards, § 1910.303(a) was not proposed to be made applicable to equipment installed before March 15, 1972. However, § 1910.307 (dealing with equipment installed in hazardous locations) was proposed to be made applicable to all electric equipment. This proposed section corresponded to Articles 500–503 of the 1971 NEC, which were listed in § 1910.309(a) of the former standards as being "retroactive." Proposed § 1910.307 did contain some requirements relating to approval of equipment. In paragraph (c), this section required equipment to be one or more of the following: (1) intrinsically safe, (2) approved for the hazardous location, or (3) of a type and design which provides protection from the hazards arising from the combustibility and flammability of vapors, liquids, gases, dusts or fibers.

Equipment "approval" was intended to be only one means of compliance. Paragraphs (b)(1) and (b)(2) were not intended to establish substantive requirements unless the employer selected the means of compliance in § 1910.307(c)(2). Since they related only to approval, these paragraphs were not applicable if one of the other two methods of compliance were chosen.

There seemed to be confusion among the commenters about these approval requirements (Tr. 294; Ex. 31, 49). One assumed that the proposal required all equipment in hazardous locations to be approved regardless of when it had been installed and claimed that retrofitting of existing equipment would be required solely because such equipment was not approved (Ex. 56). The extent of the confusion is indicated by the testimony of one witness who believed that U.L. listed motors built between 1973 and 1975 would have to be replaced, because Underwriters Laboratories subsequently changed their standards (Tr. 275–276).

However, OSHA does not intend to require all equipment in hazardous locations to be "approved." Although hazardous locations are required to comply with § 1910.307, the approval requirement contained therein is only one of the three alternate methods by which employers can comply. The standard does not require existing equipment to be "approved," as long as the employer can demonstrate that it is safe for the hazardous location.

OSHA intended the requirements for approved and intrinsically safe equipment, as set forth in proposed paragraph (b) of § 1910.307 to be read totally in the context of the alternatives for compliance under paragraph (c) of that section. Thus, if an employer chose to comply with § 1910.307 by using approved or intrinsically safe equipment in hazardous locations, the requirements applicable to such equipment in paragraph (b) would specify what each compliance option entailed.

The general approval requirements in § 1910.303(a), then, do not apply to installations made before March 15, 1972. Therefore, that section does not require any changes to an employer's equipment if that equipment was installed before March 15, 1972. Additionally, with respect to the approval-related options contained in § 1910.307, OSHA has reorganized the final rule to state the agency's intent more clearly. Section 1910.307 requires that equipment in hazardous locations be one or more of the following: (1) intrinsically safe (§ 1910.307(b)(1)); (2) approved for the hazardous location (§ 1910.307(b)(2)); or (3) of a type and design which provides protection from the hazards arising from the combustibility and flammability of vapors, liquids, gases, dusts, or fibers (§ 1910.307(b)(3)). Requirements addressing each alternative set forth in § 1910.307 have been relocated to show that they apply only to that alternative. For example, if the employer selects to use approved equipment as a means of complying with § 1910.307(b), then new § 1910.307(b)(2)(i) indicates that such equipment must be approved not only for the Class and Division but also for the group of atmosphere involved.

5. *Whether the impedance and ampacity requirements of National Electrical Code (NEC) Section 250–51 should be included in the standard.*

Section 1910.304(f)(4) of the proposed electrical standards, which requires that the path to ground from circuits, equipment, and enclosures be permanent and continuous, was derived from Section 250–51 of the 1978 NEC. However, it does not contain the ampacity and impedance requirements of the grounding path which are in both the 1978 NEC (Section 250–51) and the former OSHA standards.

The proposed requirements of § 1910.304 specify that conductors and equipment be protected in accordance with their ability to safely conduct current, and § 1910.305 requires that wiring methods, components, and equipment for general use be approved for the purpose. It follows that if these two performance requirements are met, then all basic requirements applicable to ampacity and impedance will likewise be satisfied. For this reason, the ampacity and impedance requirements are omitted here without affecting employee safety. These changes reflect the general approach to simplify and clarify the proposed standard.

The record reflects general agreement that deletion of the ampacity requirement was justified (Ex. 22; Tr. 94, 398). The ampacity requirement of NEC Section 250–51 should be satisfied at the time of initial installation of the electrical utilization equipment or systems in which the equipment grounding conductors are a part.

There was considerable testimony plus comment in the record, however, on the proposed deletion of the impedance requirement. It was contended that the omission of this requirement would reduce the protection of employees against shock and electrocution. To achieve employee protection against shock and electrocution, it was argued the equipment grounding conductor must not only have continuity, it must also present a low impedance path which will permit sufficient fault current to flow thus assuring the rapid operation of the overcurrent device protecting the circuit (Ex. 22).

The same commenter, however, further indicated that a return to the impedance requirements of NEC 250–51 would still be inadequate because the quality of the equipment ground is generally an unknown value and requires verification. For example, NEC 250–51 paragraph (c) specifies no quantitative values but requires only that the grounding path have "sufficiently low impedance" to limit the voltage to ground and to facilitate the operation of the circuit protective devices in the circuit. Thus, the NEC specifies the ground path requirements in terms of performance and does not specify values of impedance. The commenter recommended (Ex. 22) that OSHA change the proposed § 1910.304(f)(4) to read as follows: "The path to ground from circuits, equipment and enclosures shall be permanent, continuous and have sufficiently low impedance to limit the voltage to ground and to facilitate the operation of the circuit protective devices in the circuit. The impedance of this path shall not exceed the levels given in Table S–4." (Table S–4 is contained in Exhibit 22 and specifies a maximum equipment ground impedance for different overcurrent device ratings at various circuit voltages.)

Mr. Robert West, an expert in the area of electrical grounding and its relationship to occupational safety standards, stated at the hearing (Tr. 113) that the impedance of equipment grounding conductors for most of the circuits in many operational workplaces cannot be accurately verified by testing. The reason for this is that the test current will flow in unknown conducting paths that are in parallel with the equipment grounding conductors. The witness cited (Tr. 110) examples of test situations which could occur with commercial testers showing the presence of a low impedance equipment grounding conductor when, in fact, the equipment grounding conductor is disconnected. Because of these problems, it was Mr. West's view that the standard should not require impedance testing. Mr. West indicated (Tr. 113) that the requirement for the path to ground from circuits, equipment, and enclosures to be permanent and continuous can be verified in most operational workplaces by visually inspecting grounding conductors and by checking the grounding conductor connections for tightness.

A representative of Monsanto Company (Tr. 337) also agreed with OSHA's deletion of the impedance requirement and submitted the results of a series of field tests performed to evaluate a particular equipment grounding conductor impedance measuring technique (Ex. 36). According to this witness, the tests were conducted to determine whether or not meaningful values of equipment grounding conductor impedance could be obtained through measurements using a commercially available tester designed for this purpose. The test results showed generally how the existence of parallel paths affect the measurement of equipment grounding conductor impedances. One significant test result was that impedance measurements will not always reveal a break (open conductor) in, or the absence of, the equipment grounding conductor.

In one instance, one commenter submitted what appeared to be inconsistent testimony concerning impedance testing. The initial submittal (Ex. 22) stated: "Instrumentation is commercially available that will quickly, easily and accurately measure the impedance of *only the equipment grounding conductor* under live circuit conditions" (emphasis added). However, in his post-hearing comment, the same commenter concluded that the impedance tester would not be able to measure the impedance of the conductor alone, but would only be able to measure the impedance of the total fault path: "The purpose of the impedance tester is to accurately determine the amount of impedance *in the anticipated fault path whether it is called an equipment grounding conductor or anything else*" (Ex. 68A) (emphasis added).

Where non-current-carrying metal parts of electrical equipment are required to be grounded, § 1910.304(f) specifies that only equipment grounding conductors be used and that the equipment grounding conductor must be installed either along with the circuit conductors or enclose the circuit conductors. The reason for keeping the ground return path and the phase legs in close proximity is to minimize the impedance of the fault circuit by placing conductors so their magnetic fields cancel each other and mutual inductance is minimized. This reduces the inductive reactance and allows sufficient current to flow, thus facilitating operation of the circuit protective devices.

Where conduit is used as an equipment grounding conductor, the ground-fault current flows through a conductor inside the conduit and returns through the conduit. When this occurs, practically all of the magnetic field is inside the conduit. This results in practically all of the inductive reactance of the circuit appearing on the inside conductor while the impedance of the conduit becomes approximately equal to its DC resistance.

Low resistance paths in parallel with the equipment grounding conductor will carry some portion of the total ground-fault current. These unknown and undefined parallel paths make it impossible to separate and measure the impedance of only the equipment grounding conductor alone.

Tests have shown that ground path impedance measurements involving extraneous parallel paths can give incorrect indications regarding disconnected or open grounding conductors (Ex. 17, 36). Under these conditions, as noted above, impedance measurements may not detect the presence of serious electrical hazards. They may well give the employee a false sense of security as to the safety of an installation. With limitations of this type, it appears that visual inspection and periodic maintenance are the only practical approach to assure a safe

condition of the equipment grounding conductor.

Additionally, one commenter (Ex. 22) referenced accident data involving electrical work injuries in California (1972) and claimed that a major factor contributing to the injuries was equipment not being grounded or having poor or inadequate grounding connections. A review of the actual accident descriptions, however, indicated the presence of such other causal factors as the total absence of proper equipment grounding means, interruption in the continuity of the equipment grounding conductor, or improper connection of grounding conductors. The data did not, therefore, indicate that the ohmic value of the equipment grounding conductor impedance was a significant factor in the accidents.

Grounding path resistances are usually determined in the design stage of equipment and electrical installations and are not intended to be measured in the field on a routine basis. OSHA's recognition of this fact has previously been incorporated into the OSHA standard on ground-fault protection (§ 1926.400(h) is the cognizant standard), where only a continuity test of the equipment grounding conductor is required. A quantitative test including an ohmic value is not considered necessary or appropriate for determining the presence of the equipment grounding conductor.

It is OSHA's belief that equipment grounding systems, installed in accordance with the requirements of this Subpart, will significantly reduce the chances for personnel injuries provided the continuity and permanence of the equipment grounding conductors and connections are maintained after the systems are placed in operation.

The path to ground from circuits, equipment and enclosures can usually be verified as being permanent and continuous by an inspection of equipment grounding conductors and the grounding conductor connections. In certain special cases, where extraneous parallel paths are not a problem, continuity tests can also be made to verify the presence and integrity of equipment grounding conductors. OSHA recognizes that impedance testing may lead to false assurances of the impedance, or even the very presence of the grounding conductor. Therefore, for this reason and since maintenance requirements are not the subject of this rulemaking, OSHA is not requiring such testing in these standards.

6. *Whether the prohibition of the use of structural metal frames of buildings as the equipment grounding conductor (1978 NEC 250-58(a)) should be included in the standard.*

The comments addressing this issue refer to proposed § 1910.304(f)(6), dealing with methods of grounding fixed equipment. Specifically, the comments concern the use of structural metal frames of buildings as equipment grounding conductors for AC equipment. Such use is permitted in the 1971 NEC and was carried forward in the proposed standard.

One commenter (Ex. 22) cited the 1978 NEC (Section 250–58) which explicitly states that this use is not acceptable, and argued that a similarly explicit statement should be included in the proposed OSHA standard.

It is noted that although the building of structural metal will, in many installations, possess sufficient ampacity to safely conduct ground-fault currents, the NEC no longer considers such a grounding path to be a valid substitute for the required equipment grounding conductor. The code's current position is that there is always the possibility that any path to ground other than the equipment grounding conductor may have insufficient capacity. This can result in a serious hazard in those installations where the presence of large-capacity circuits have the capability of producing thousands of amperes of fault-current. Also, where high-magnitude ground-fault currents are forced to flow in paths that are remote from the circuit conductors, magnetic fields are generated which can induce voltages in adjacent conductors. Such induced voltages may cause failure of components in low energy electric systems. Stray ground currents have also been known to cause arcing in piping systems.

On the other hand, from the standpoint of employee safety, installations where electric equipment is secured to, and in metallic contact with, the grounded structural metal frame of a building are essentially free of electrical shock hazards. This condition occurs because the electric equipment enclosures and the metal building frame will be approximately at the same potential if a ground fault occurs and will provide a measure of employee safety.

Mr. Robert West suggested that the proposed standard be changed to prevent the structural metal frame of a building from being used as an acceptable equipment grounding conductor for installations made after the date of the final rule (Tr. 115–116). However, he contended that the change should be applicable only to new installations. He noted that prior to the 1978 NEC, Section 250–58 of previous editions, including the 1971 NEC incorporated by OSHA, specifically stated that electrical equipment secured to and in electrical contact with the structural frame of a building was acceptably grounded. Therefore, he argued that it would be impractical to require changes to existing installations.

As a result of the testimony, OSHA has concluded that § 1910.304(f)(6)(ii) should be changed to reflect the latest NEC requirements. This change is accomplished by deleting the first sentence of proposed § 1910.304(f)(6)(ii) and adding two sentences as follows: "Electric equipment is considered to be effectively grounded if it is secured to, and in electrical contact with, a metal rack or structure that is provided for its support and the metal rack or structure is grounded by the method specified for the noncurrent-carrying metal parts of fixed equipment in paragraph (f)(6)(i) of this section. For installations made before April 16, 1981 only, electric equipment is considered to be effectively grounded if it is secured to, and in metallic contact with, the grounded structural metal frame of a building."

7. *Whether the definitions for Class II locations and their associated explanatory notes should be changed.*

The proposed definition of a Class II, Division 1 location (§ 1910.399(a)(25)(i)) was identical to the definition in OSHA's previous regulations and read as follows:

> A Class II, Division 1 location is a location: (1) in which conbustible dust is *or may be in suspension* in the air *continuously, intermittently, or periodically* under normal operating conditions, in quantities sufficient to produce explosive or ignitible mixtures; or (2) where mechanical failure or abnormal operation of machinery or equipment might cause such explosive or ignitible mixtures to be produced, and might also provide a source of ignition through simultaneous failure of electric equipment, operation of protection devices, or from other causes; or (3) in which combustible dusts of an electrically conductive nature may be present. (Emphasis added.)

In other words, a location in which a hazardous concentration of combustible dust could be suspended in the air under normal operations was classified as Class II, Division 1.

Contending that the proposed definitions were confusing and would conflict with the 1981 NEC, several grain- and feed-affiliated organizations objected to the proposal (Exs. 18, 19, 21, 31, 32, 39, 49 & 54). Their objections included the following:

(1) The definitions contain vague and improper terminology which requires subjective judgments to be made (Ex. 19).

(2) Code Making Panel 14 of the NEC which is responsible for the content of these definitions in the NEC has changed the definition of Class II hazardous locations in the 1981 National Electrical Code (Ex. 31). Thus, OSHA's proposed definition is inconsistent with the latest NEC.

(3) Hazardous location definitions contained in the proposed 1981 NEC would better identify types of potential hazards through the establishment of performance standards (Ex. 18).

The revised definition as submitted by Panel 14 and accepted for the 1981 NEC reads as follows:

A Class II, Division 1 location is a location: (1) in which combustible dust is *in the air under normal operating conditions, in quantities sufficient* to produce explosive or ignitible mixtures; or (2) where mechanical failure or abnormal operation of machinery or equipment might cause such explosive or ignitible mixtures to be produced, and might also provide a source of ignition through simultaneous failure of electric equipment, operation of protection devices, or from other causes; or (3) in which combustible dusts of an electrically conductive nature may be present. (Emphasis added).

This change would remove the words "or may be in suspension" and "continuously, intermittently, or periodically" from OSHA's former and proposed definitions. However, as stated by an OSHA witness, Dr. Jerry Purswell, Director of Safety Standards, this change "removes the clarification which is needed to realistically describe conditions which are encountered in these locations. Utilizing the proposed 1981 NEC change would permit one to classify a location as a Class II, Division 1 only when dust is actually witnessed, and to disregard the real and frequently existing situations which are presently described in the existing rules" (Tr. 32).

After hearing testimony relative to possible interpretations of the suggested definitions, two members of Code Making Panel 14 who were at the hearing, made the following statements: Mr. Leonard Corey—"After hearing the comments that have been made during this hearing, it would be my recommendation that the panel review this material one more time so that everyone gets a fair hearing on it" (Tr. 410); Mr. Peter J. Schram—"I submit that if the proposed revision of the code is interpreted in this manner [as stated before by Dr. Purswell] the area is not being classified as I intended as a member of Code Panel 14. Had this type of an interpretation been brought up at the meeting or during the voting, I do not believe I would have voted for all of the deletions in Section 500–5(a) of the code for the 1981 edition" (Tr. 464). Since the deadline for commenting on the proposed 1981 NEC had expired, these concerns could not be considered by the NEC Panel before the adoption of the 1981 NEC.

OSHA believes that the deletion of the words "or may be in suspension" would seriously compromise employee safety. It is necessary for the definition to cover not only situations in which explosive or ignitible concentrations of dusts are actually present, but also situations in which such concentrations may arise under normal operating conditions. In this respect, the definition of Class II, Division 1 locations contained in the 1981 NEC represents a potential decrease in employee safety compared to OSHA's former standard, and OSHA has decided not to delete the words "or may be in suspension" from the definitions.

However, based on the comments in the record, the words "continuously, intermittently, or periodically" have been deleted from the definition of Class II, Division 1 locations. For consistency, the language has also been deleted from the definition of Class I, Division 1 locations although most of the comments dealt only with Class II locations. OSHA agrees that these words are possibly confusing and do not enhance the definition.

Therefore, under § 6(b)(8) of the Act, the Assistant Secretary has determined that the 1971 NEC definition of Class II, Division 1 locations, except as noted above, better effectuates the purpose of the Act to provide a safe place of employment than the definition in the 1981 NEC.

The proposed definition of a Class II, Division 2 location (§ 1910.399(a)(25)(ii)) was also identical to the definition in OSHA's previous standards and read as follows:

A Class II, Division 2 location is a location in which combustible dust will not normally be in suspension in the air or will not be likely to be thrown into suspension by the normal operation of equipment or apparatus in quantities sufficient to produce explosive or ignitible mixtures, but: (*a*) Where deposits or accumulations of such combustible dust may be sufficient to interfere with the safe dissipation of heat from electric equipment or apparatus; or (*b*) where such deposits or accumulations of combustible dust on, in, or in the vicinity of electric equipment might be ignited by arcs, sparks, or burning material from such equipment.

Several commenters suggested that OSHA adopt the changes made in the definition of a Class II, Division 2 location in the 1981 NEC (Ex. 19, 32, 55L). They stated that OSHA's adoption of the suggested wording would clarify the difference between Division 1 and Division 2 in Class II locations. The suggested change was as follows:

Class II, Division 2. A Class II, Division 2 location is a location in which (a) combustible dust will not normally be in suspension in the air in quantities sufficient to produce explosive or ignitible mixtures, and dust accumulations are normally insufficient to interfere with the normal operation of electrical equipment or other apparatus; or (b) dust may be in suspension in the air as a result of infrequent malfunctioning of handling or processing equipment, and dust accumulations resulting therefrom may be ignitible by abnormal operation or failure of electrical equipment or other apparatus.

OSHA agrees with these comments and, in view of the absence of any opposition to this change, adopts it in the final standard. Although the wording has been revised, the intent of the definition remains the same and is clearer than that of the proposal, by giving specific examples and by better organization.

The proposed "fine print" notes to the definitions of Class II locations were basically the same as those in OSHA's former regulations (Article 500–5(a) and (b) of the 1971 NEC), and the proposal read as follows:

Class II, Division 1

Note.—This classification usually includes the working areas of grain handling and storage plants; rooms containing grinders or pulverizers, cleaners, graders, scalpers, open conveyors or spouts, open bins or hoppers, mixers or blenders, automatic or hopper scales, packing machinery, elevator heads and boots, stock distributors, dust and stock collectors (except all-metal collectors vented to the outside), and all similar dust-producing machinery and equipment in grain-processing plants, starch plants, sugar-pulverizing plants, malting plants, hay-grinding plants, and other occupancies of similar nature; coal-pulverizing plants (except where the pulverizing equipment is essentially dust-tight); all working areas where metal dusts and powders are produced, processed, handled, packed, or stored (except in tight containers); and all other similar locations where combustible dust may, under normal operating conditions, be present in the air in quantities sufficient to produce explosive or ignitible mixtures.

Combustible dusts which are electrically nonconductive include dusts produced in the handling and processing of grain and grain products, pulverized sugar and cocoa, dried egg and milk powders, pulverized spices, starch and pastes, potato and woodflour, oil meal from beans and seed, dried hay, and other organic materials which may produce combustible dust when processed or handled. Electrically conductive nonmetallic dusts include dusts from pulverized coal, coke, carbon black, and charcoal. Dusts containing magnesium or aluminum are particularly hazardous and the use of extreme precaution will be necessary to avoid ignition and explosion.

Several commenters claimed that the proposed fine print note is 25 years old and outmoded and that its emphasis is on types of machinery rather than on types of operation being performed. (Ex. 2, 19, 49, 56). One commenter stated that in many instances, with modern methods of dust control or complete rehandling of the grain or grain product, it is possible that many of the locations noted in the fine print notes would no longer be classified as either Class II, Division 1 or a Class II, Division 2 area (Ex. 49). It was further argued that these notes have been consistently misinterpreted by OSHA compliance officers as firm requirements for classification of locations instead of as guidelines (Ex. 56).

Regarding the explanatory fine print note, OSHA agrees with the comments of the grain and feed industry that the note should reflect the operation being done in the area rather than what equipment is located there. Commenters submitted to the record revised explanatory notes for both Class II, Division 1 and Class II, Division 2 locations (addendum #3). Since these suggested notes more accurately reflect the intent of the definition and describe operations rather than equipment, they have been included, with minor editorial changes, in the final rule. The new notes read as follows:

Class II, Division 1

Note.—This classification may include areas of grain handling and processing plants, starch plants, sugar-pulverizing plants, malting plants, hay-grinding plants, coal-pulverizing plants, areas where metal dusts and powders are produced or processed, and other similar locations which contain dust producing machinery and equipment (except where the equipment is dust-tight or vented to the outside). These areas would have combustible dust in the air, under normal operating conditions, in quantities sufficient to produce explosive or ignitible mixtures.

Combustible dusts which are electrically nonconductive include dusts produced in the handling and processing of grain and grain products, pulverized sugar and cocoa, dried egg and milk powders, pulverized spices, starch and pastes, potato and woodflour, oil meal from beans and seed, dried hay, and other organic materials which may produce combustible dust when processed or handled. Dust containing magnesium or aluminum are particularly hazardous and the use of extreme precaution will be necessary to avoid ignition and explosion.

Class II, Division 2

This classification includes locations where dangerous concentrations of suspended dust would not be likely but where accumulations might form on or in the vicinity of electric equipment. These areas may contain equipment from which appreciable quantities of dust would escape under abnormal operation conditions or be adjacent to a Class II, Division 1 location, as described above, into which an explosive or ignitible concentration of dust may be put into suspension under abnormal operating conditions.

8. *Whether installations of electrolytic cells should be covered by the guarding provisions of proposed § 1910.303.*

Section 110–17 of the 1971 NEC, which is referenced in the former regulations, requires live parts of equipment operating at 50 volts or more to be guarded. The 1978 NEC included a new Article 668 which permits electrolytic cells to operate with live parts exposed, provided that specific alternate safety measures are employed.

Electrolytic cells differ in certain respects from standard electrical installations. In a standard electrical circuit, all live parts are required to be insulated or guarded. One side of the circuit is connected to ground to provide a common reference and to stabilize voltages, and thus a potential exists between any live conductor and any grounded surface. A person coming in contact with both a live conductor and a grounded surface will provide a path for electric current to flow and will receive a shock varying in severity with the amount of current that flows through the body. The purpose of the guarding provisions of the NEC is to prevent contact with live parts since contact with grounded surfaces is very common.

In an electrolytic cell line, however, the actual working parts and some working surfaces are, by necessity, the bare live parts of an electric circuit. Employee contact with these live parts is necessary in normal electrolytic cell working procedures. Therefore, whereas a standard circuit necessitates guarding of live parts, employees working on electrolytic cells must be protected against contact with ground. The provisions of Article 668 of the 1978 NEC recognize the different working conditions of electrolytic cell lines and outline the procedures to be used as an alternative to guarding of live parts. The proposed regulations incorporated these electrolytic cell provisions in § 1910.306(h)(3).

Only one commenter (Ex. 20) objected to the provisions proposed in § 1910.306(h)(3). His position was that leaving the energized portions of the cell line unguarded would result in decreased safety protection for workers. To support his position, he cited an electrocution of a worker who died when he stepped into a floor hold and fell against the energized portion of an electrolytic cell. The commenter also state, "The workers typically wear rubber gloves and rubber boots. But if any other portion of the worker's body touches the cell, the worker is electrocuted" (Ex. 20).

As previously discussed, a worker would have to come in contact with both the energized portion of a cell and a grounded surface in order to be electrocuted. The accident referred to resulted when a floor hole was not covered and an otherwise guarded grounded surface was exposed to contact. However, this accident could have happened with a standard electrical circuit if a guard was left off of an energized portion of a conductor, and a worker came in contact with this conductor and a gounded surface.

Ten witnesses (Ex. 23, 24, 29, 38, 40, 41, 46, 51, 52 and 53) appeared in support of the provisions contained in § 1910.306(h)(3). The witnesses included representatives from the aluminum, chlorine, and copper industries. The operations of these industries differ but each requires the actual physical contact with the energized portion of the cell line for proper operation. Various methods of isolating the cell lines from ground were presented, including the insulation of any structural member with wood or fiberglass, and the guarding of grounding parts by distance. The witnesses contended that the addition of guards for the live parts would not enhance employee safety but would actually hinder cell operation and would create a safety hazard by blocking access and egress in emergency siutations. As pointed out at the hearing, if access to the cell is impeded by guards in an emergency situation such as a dry cell, a shorted cell, or an overflow, employees in the area would be subjected to acid burns, electrical flash burns, or injury from flying molten metal (Ex. 40).

The evidence submitted to the record reflects that the alternative procedures being used in cell line operation will provide a safer workplace for electrolytic cell employees than would guarding line parts of cells. In fact, the evidence in the record indicates that guarding live parts of cells may actually reduce employee safety. Therefore, the final rule incorporates the electrolytic cell provisions of § 1910.306(h)(3) as proposed.

IV. Summary and Explanation of the Final Standard

The final standard revising 29 CFR Part 1910, Subpart S, follows the language and format of the proposal with some changes. Most of the changes are editorial in nature. However, those that are substantive are discussed in

detail below. Where changes have been made concerning areas of the proposal which were major issues at the hearing, reference is made to the discussion of such issues in Section III of this preamble. The resulting final standard, which is based on the record considered as a whole, simplifies and clarifies the former Subpart S. The significance of this simplification is indicated by the reduction from the approximately 250,000 words in the National Electrical Code to the approximately 15,000 words in this final standard. As a consequence, the 1971 NEC (NFPA–70) will no longer be incorporated by reference in the OSHA standards.

Subpart S of Part 1910 as revised provides a systematic format both to satisfy present requirements and to accommodate future growth. Subpart S will eventually contain four major parts covering not only the design safety standards for electrical systems contained in this rulemaking (Part I), but also safety-related work practices (Part II), safety-related maintenance requirements (Part III), and safety requirements for special equipment (Part IV).

Some parts of the former §§ 1910.308 and 1910.309 have been deleted. Other parts of these sections have been incorporated into new sections without substantive change. (Any changes made were only editorial to reflect the change in format of the Subpart.) The following table summarizes the numbering changes from the former Subpart S to the final standard:

Redesignation Table

Former paragraph	New paragraph
§ 1910.308(a)	Deleted—unnecessary.
§ 1910.308(b)	Deleted—unnecessary.
§ 1910.308(c)	§ 1910.302(a).
§ 1910.308(d)(1)	§ 1910.399(a)(7).
§ 1910.308(d)(2)	§ 1910.399(a)(i).
§ 1910.308(d)(3)(i)	§ 1910.399(a)(77).
§ 1910.308(d)(3)(ii)	§ 1910.399(a)(75).
§ 1910.308(d)(3)(iii)	§ 1210.399(a)(2).
§ 1910.308(d)(3)(iv)	§ 1910.399(a)(22).
§ 1910.308(d)(3)(v)	§ 1910.399(a)(127).
§ 1910.309(a)	§ 1910.302(b)(1).
§ 1910.309(b)	§ 1910.302(b)(2).
§ 1910.309(c)	§ 1910.304(b)(f).

The following discussion summarizes the final standard and the effects this rulemaking has on the former provisions of §§ 1910.308 and 1910.309. Any changes made from the proposal are noted; otherwise, the requirements in the proposal have been adopted with no substantive change.

§ 1910.301 Introduction. The former introductory paragraphs, § 1910.308 (a) and (b), which incorporated the 1971 NEC into Subpart S by reference, have been deleted. A new introductory § 1910.301 addresses the new format followed in this Subpart. The basic areas which are or will be included in Subpart S of Part 1910 are set forth as follows:

(a) Design Safety Standards for Electrical Systems. The standards which are the subject to this rulemaking are contained in §§ 1910.302 through 1910.330. (At this time, however, only §§ 1910.302 through 1910.308 are being promulgated; §§ 1910.309 through 1910.330 have been reserved for possible future design safety standards for other electrical systems, such as power generating systems.)

(b) Safety-Related Work Practices. These regulations will be contained in §§ 1910.331 through 1910.360.

(c) Safety-Related Maintenance Requirements. These requirements will be contained in §§ 1910.361 through 1910.380.

(d) Safety Requirements for Special Equipment. These requirements will be contained in §§ 1910.381 through 1910.398.

(e) Definitions applicable to each of these four major divisions are contained in a common § 1910.399.

Since the areas covered by each of these four major divisions represent broadly diverse equipment, installations and practices, it is intended that each division will be further subdivided where appropriate. For example, within the category involving design safety standards for electrical systems, separate subgroupings could include electrical utilization systems, electrical power generation and transformation systems, electrical power transmission and distribution systems, and others, in the future.

The changes to Subpart S contained in the present document are limited to electrical utilization systems, as covered by the former OSHA electrical standards.

This standard places the relevant requirements of the National Electrical Code into the text of the regulations making it unnecessary to incorporate the National Electrical Code by reference. The former incorporation of the entire NEC is therefore being deleted.

§ 1910.302 Electric Utilization Systems (Scope and Extent of Application).

§ 1910.302(a). The provisions formerly in the scope paragraph, § 1910.308(c), have been carried forward in new scope paragraph § 1910.302(a). Additionally, as proposed, § 1910.302(a)(vi) in the final rule includes "industrial substations", which was inadvertently omitted in the adoption of the former OSHA standard.

§ 1910.302(b)(1). The National Electrical Code requirements formerly listed in paragraph § 1910.309(a), which were applicable to all electrical installations and utilization equipment, have been retained in part and deleted in part. The retained part no longer references sections of the NEC, but instead references the corresponding provisions of Subpart S. These requirements are carried forward as § 1910.302(b)(1). The deleted portion consists of the sections of the 1971 NEC which are inappropriate for OSHA's use or otherwise covered in this subpart. The specific sections deleted, along with the reasons for the deletions, and the new paragraph numbers of the retained NEC sections are given in the following distribution table:

Distribution Table

1971 NEC provision referenced in former § 1910.309(a)	New section of subpart S
Articles:	
500	These Articles were rewritten in performance terms and combined into § 1910.307.
501	
502	
503	
Sections:	
110–14(a)	Deleted—Covered by § 1910.303(a).
110–14(b)	§ 1910.303(c).
110–17(a), (b), and (c).	§ 1910.303(g)(2).
110–18	§ 1910.303(d).
110–21	§ 1910.303(e).
110–22	§ 1910.303(f).
240–16	§ 1910.304(e)(1)(iv).
240–19(a) and (b).	§ 1910.304(e)(1)(v).
250–3(a)	§ 1910.304(f)(1)(ii).
250–3(b)	Deleted—Inappropriate; this section is not a requirement but only states that certain systems over 300 volts may be grounded.
250–5 (a), (b), and (c).	§ 1910.304(f)(1) (iii), (iv), and (v).
250–7	Deleted—covered in § 1910.307.
250–42 (a), (b), (c), and (d).	§ 1910.304(f)(5)(iv) (a), (b), (c), and (d).
250–43 (a), (b), (c), (d), (e), (f), (g), (h) and (i).	Deleted—covered in § 1910.304(f)(5)(iv).
250–44 (a), (b), (c), and (d).	§ 1910.304(f)(5)(vi).
250–44(e)	Deleted—covered by § 1910.304(f)(5)(iv).
250–45 (a), (b), and (d).	§ 1910.304(f)(5)(v).
250–45(c)	Deleted—inappropriate; applies only to residences.
250–50 (a) and (b).	§ 1910.304(f)(3).
250–51	§ 1910.304(f)(4).
250–57(a) and (b).	§ 1910.304(f)(6)(i).
250–58 (a) and (b).	Deleted—inappropriate; these are not requirements but optional methods of meeting the grounding requirement.
250–59 (a), (b) and (c).	Deleted—inappropriate; these sections are not requirements but only suggest methods of grounding.
400–3 (a) and (b).	§ 1910.305(g)(1) (i) and (ii).
400–4	§ 1910.305(g)(1)(iii).
400–5	§ 1910.305(g)(2)(ii).
400–9	§ 1910.304(e)(1)(i).
400–10	§ 1910.305(g)(2)(iii).
422–8	Deleted—covered by § 1910.305(g)(1)(i).
422–9	Deleted—covered by § 1910.303(g)(2).
422–10	Deleted—covered by § 1910.303(b).

Distribution Table—Continued

1971 NEC provision referenced in former § 1910.309(a)	New section of subpart S
422-11	Deleted—inappropriate; this section addresses appliance construction detail requirements.
422-12	Deleted—inappropriate; this section addresses appliance construction detail requirements.
422-14	Deleted—inappropriate; this section addresses appliance construction detail requirements.
422-15 (a), (b) and (c).	Deleted—covered by § 1910.303(a).
422-16	Deleted—covered by § 1910.304(f) and the standard procedure for a variance request.
422-17(a)	Deleted—inappropriate; this is not a requirement, but a definition of a term no longer used in the standard.
422-17(b)	Deleted—covered by § 1910.303(a).
430-142	Deleted—covered by § 1910.304(f)(5)(iv).
430-143	Deleted—covered by § 1910.304(f)(5)(v).

The provisions which are listed in § 1910.302(b)(1) apply to all electrical installations and utilization equipment regardless of when they were designed or installed. For discussion of comments on and objections to the application of these provisions, see Issue 3 in Section III of this preamble.

§ 1910.302(b)(2). Proposed § 1910.302(b)(2), as well as former § 1910.309(b), applied the full coverage of Subpart S to "every replacement, modification, repair, or rehabilitation made to an existing installation after March 15, 1972." At the November 8, 1979, public meeting (Meeting Tr. 9–10) and at the public hearing (Tr. 26), OSHA officials interpreted this provision as being limited to "major" replacements, modifications, repairs, or rehabilitations. Other witnesses supported this interpretation but requested that the word "major" be added to § 1910.302(b)(2), to ensure consistent application by compliance personnel (Tr. 170, 269–270, 294).

Concerned that such wording could be ambiguous, OSHA requested the hearing witnesses to supply definitions or clarifications of what would be "major replacement, modifications, repairs, or rehabilitations." The respondents contended that "major" should refer to work which is similar to that involved when a new building or facility is built, a new wing is added, or an entire floor is renovated (Ex. 19, 55K, 62).

There is no objection to the addition of the word "major" to § 1910.302(b)(2) and OSHA agrees that it more accurately reflects the intent of this paragraph. Therefore, § 1910.302(b)(2) has been modified to indicate that "every major replacement, modification, repair, or rehabilitation, after March 15, 1972," must comply with all the requirements of § 1910.302 through 1910.308. Also, a note has been added to indicate that such "major" work includes work of a magnitude similar to that involved when a new building is built, a new wing is added to an existing facility, or an entire floor is renovated.

§ 1910.302(b)(3). A new § 1910.302(b)(3) has been added which contains a list of paragraphs that impose new requirements which were not in the 1971 NEC. Since the requirements in these paragraphs were not in the former standards, they will only apply to installations made after the effective date of these standards. The paragraphs involved are the following:

§§ 1910.303(h)(4)(i) and (ii)—Entrance and access to workspace (over 600 volts).
§ 1910.304(e)(i)(vi)(*b*)—Circuit breakers operated vertically.
§ 1910.304(e)(l)(vi)(*c*)—Circuit breakers used as switches.
§ 1910.304(f)(7)(ii)—Grounding of systems of 1000 volts or more supplying portable or mobile equipment.
§ 1910.305(j)(6)(ii)(*b*)—Switching series capacitors over 600 volts.
§ 1910.306(c)(2)—Warning signs for elevators and escalators.
§ 1910.306(i)—Electrically controlled irrigation machines.
§ 1910.306(j)(5)—Ground-fault circuit interrupters for fountains.
§ 1910.308(a)(1)(ii)—Physical protection of conductors over 600 volts.
§ 1910.308(c)(2)—Marking of Class 2 and Class 3 power supplies.
§ 1910.308(d)—Fire protective signaling circuits.

The effective date for these provisions is discussed and explained in Section VI of this preamble.

General

As was the case with the former provisions of Subpart S, the revised Subpart does not apply to construction and agriculture. It does apply to all other workplaces covered by OSHA, except that for maritime, § 1910.302(a)(2)(i) provides that ships and other watercraft are not covered. Some commenters pointed out that the proposed standard inadvertently contained requirements pertaining to construction, even though (as noted in the preamble to the proposal) 29 CFR Part 1910, Subpart S does not apply to this industry (Ex. 30). Therefore, the final standard reflects the deletion of the following proposed provisions or references which deal exclusively with construction.

§ 1910.305(a)(2)(i)(*a*)—Use of temporary wiring for construction.
§ 1910.305(a)(2)(iii)(*g*)—Splices on construction sites.

§ 1910.303 General Requirements. This section contains general requirements for electrical installations. These requirements address approval and use of equipment, splices, marking and identification, working clearances, and guarding of live parts. Approval and marking requirements were the only regulations in this section which were major issues. For detailed discussion on these topics, see Issue 4 in Section III of this preamble. Specific paragraphs and substantive changes from the proposal are discussed as follows:

Paragraph (a) requires approval of electrical equipment, while paragraph (b) gives provisions for the equipment's inspection and use. These two paragraphs basically require employers to provide equipment which is in safe condition and to ensure that it is used safely.

Paragraph (c) requires splices to be suitably made and insulated. Parts of electric equipment that produce arcs, sparks, or molten metal are required to be appropriately guarded by § 1910.303(d).

Marking and identification are covered in § 1910.303(e) and (f). In paragraph (e), electric equipment is required to be marked to identify who made the equipment and what the necessary electrical ratings are. Paragraph (f) requires branch circuits, feeders, services, and disconnecting means for equipment to be identified. In the proposal, this requirement read as follows:

(f) *Identification of disconnecting means.* Each disconnecting means required by this subpart for motors and appliances shall be legibly marked unless located and arranged so that its purpose is evident; and each disconnecting means required by this subpart for each service, feeder, or branch circuit shall be legibly marked to indicate its purpose at the point where the service, feeder or branch circuit originates. The marking shall be of sufficient durability to withstand the environment involved.

This wording is slightly different from the NEC and NFPA 70E. It was changed in an attempt to clarify the requirement without changing the intent. However, as evidenced by some of the comments received (Ex. 2), the modification created additional confusion regarding marking of service, feeder, and branch circuit disconnects. For example, the proposed subpart contained no requirements for these circuits to have disconnecting means, seemingly making the identification requirement for such disconnecting means superfluous. Therefore, OSHA is again revising the language to clarify the intent of the rule. This paragraph now clearly requires each service, feeder, or branch circuit to be identified, at its disconnecting means or overcurrent device, to indicate the circuit's purpose. However, no marking

is necessary if the purpose of the circuit is evident. This clarification, which is consistent with OSHA's former regulation, the NEC, and NFPA 70E, should clear up any misunderstanding created by the proposed requirement.

Paragraphs (g) and (h) set forth requirements pertaining to guarding of and working clearances around live parts of electric equipment. Regulations applying to equipment 600 volts or less can be found in § 1910.303(g), while paragraph (h) applies over 600 volts. One commenter (Ex. 12) pointed out that OSHA's proposal and NFPA 70-E contained an error in the exception to § 1910.303(h)(3)(i). In the second sentence, it was noted that "energized" should be "de-energized", as it is in 1978 NEC Section 110-34(a) from which the OSHA requirement was derived. The final rule contains this correction.

4. § *1910.304 Wiring Design and Protection.* This section covers the design requirements for wiring systems from the service conductors to the branch circuit conductors. It also covers requirements for the protection of electric conductors from both overcurrent and physical hazards.

Paragraph (a) requires that both the grounded circuit conductor and the equipment grounding conductor be identifiable and distinguishable from other conductors. These regulations have been written in more performance oriented terms than the former requirements which required that those conductors be identified in a specific manner.

A comment was received suggesting the inclusion of a provision which was contained in Section 410-55(c) of the 1971 NEC, but was not carried forward in the proposal on the presumption that it was covered by other proposed provisions. This provision prohibited the use of grounding terminals or grounding-type devices for purposes other than grounding. It was claimed that several fatalities in South Carolina were attributable to the placing of an ungrounded conductor on the grounding terminal of a receptacle, plug, or connector (Ex. 2). Similar accidents have been found in OSHA's records (Ex. 4).

Upon examining proposed provisions relating to grounding, OSHA has determined that the requirement of 1971 NEC Section 410-55(c) was not adequately covered elsewhere in the proposal. Therefore, since this provision is contained in OSHA's former regulations and since fatalities have occurred which are directly attributable to violations of this requirement, the following paragraph has been added to the final standard as new § 1910.304(a)(3):

(3) *Grounding Terminal.* A grounding terminal or grounding-type device on a receptacle, cord connector, or attachment plug may not be used for purposes other than grounding.

Paragraph (b) includes the requirements for sizing of outlet devices and for ground-fault protection for personnel on construction sites.

Paragraph (c) contains location and clearance requirements for low voltage (600 volts or less) conductors and lamps that are located outside. Paragraph (d) of this section requires that a disconnecting means be provided for the service entrance conductors. It also contains the location, marking and operational requirements for that disconnect.

Paragraph (e) contains overcurrent protection requirements for both low voltage and high voltage conductors.

Paragraph (e)(1)(vi) has been broken down into three separate paragraphs. The two provisions dealing with mounting and marking of circuit breakers have been renumbered as (e)(1)(vi)(*b*) and (*c*), and are effective only to equipment installed after the effective date of this standard, as noted in § 1910.303(b)(3).

The grounding requirements for electric systems are contained in paragraph (f) of this section. This paragraph is subdivided into seven categories as follows:

(1) Systems to be grounded.
(2) Conductors to be grounded.
(3) Grounding connections.
(4) Grounding path.
(5) Supports, enclosures, and equipment to be grounded.
(6) Methods of grounding fixed equipment.
(7) Grounding of systems and circuits of 1,000 volts and over (high voltage).

There were two major issues raised on the regulations contained in paragraph (f). One involved new § 1910.304(f)(4) *Grounding path.* This requirement, which is unchanged from the proposal, is discussed in issue number 5 of Section III of this preamble. The other major issue concerned new § 1910.304(f)(6) *Methods of grounding fixed equipment.* Paragraph (f)(6)(i) has been modified to prohibit the use of building steel as the equipment grounding conductor for installations made after the effective date of these standards. This subject is discussed in Issue 6 of Section III of this preamble.

All of the remaining requirements contained in paragraph (f) were contained in the former regulation, and any changes to those requirements are strictly editorial. For example, the word "devices" has been changed to "appliances" in § 1910.304(f)(5)(iv)(*f*)(*2*) because the equipment does not meet the definition of a "device", as set forth in § 1910.399(a)(38), meaning "a unit of an electrical system which is intended to carry but not utilize electric energy." Similarly, the word "portable" as used in § 1910.304(f)(7)(ii) has been changed to "portable or mobile", the equipment referred to in the applicable paragraphs is mobile but not necessarily easily carried. A similar change has also been made in the 1981 NEC.

§ *1910.305 Wiring Methods, Components, and Equipment for General Use.* This section contains installation requirements for equipment (in general), wiring components, and wiring methods. None of the requirements of this section were major issues during the rulemaking proceeding, except as to whether they should be more or less performance-oriented. (The performance vs. specification question is discussed in Issue 1 of Section III of this preamble.)

In response to comments received, OSHA has revised some provisions, and these revisions are discussed along with the requirements of this section:

Paragraph (a) deals with wiring methods. General wiring requirements (electrical continuity and wiring in ducts) are the subject of § 1910.305(a)(1). In this paragraph, continuity of metal raceways and enclosures is required and wiring in certain ducts is prohibited.

Paragraph (a)(2) gives requirements on temporary wiring, including its permitted uses. In general, temporary wiring is permitted to be of a class less than permanent wiring, but must follow most of the rules of permanent installations, except as noted in that paragraph. For the reasons discussed earlier under § 1910.302, the references to construction in §§ 1910.305 (a)(2)(i)(*a*) and (a)(2)(ii) have been deleted. Similarly, the first sentence of proposed § 1910.305(a)(2)(iii)(*g*), which related solely to construction, has been deleted.

Paragraphs (a)(3) and (a)(4) address two wiring methods, namely, cable trays and open wiring. These provisions give general installation and use requirements. In the final rule, proposed § 1910.305(a)(3)(i)(*b*)(*3*) has been renumbered § 1910.305(a)(3)(i)(*c*).

Paragraph (b) requires cabinets, boxes, and fittings to provide a complete enclosure for conductors and to have only smooth surfaces in contact with conductors.

Paragraphs (c) and (d) relate to switches, switchboards, and panelboards, and require protection from live parts.

Weatherproof enclosures are required for wet locations in paragraph (e).

Paragraph (f) requires conductors to have suitable insulation.

Paragraphs (g) and (h) cover the use of flexible cords and portable cables. Uses which are permitted and not permitted are listed in paragraph (g)(1), while paragraph (g)(2) details requirements for identification, splices, and termination of flexible cords. Requirements applicable to portable cables for use over 600 volts are contained in paragraph (h).

Fixture wires are addressed in § 1910.305(i). This paragraph gives permitted uses for fixture wires and does not allow their use for general branch circuit wiring.

Paragraph (j) contains requirements for wiring of equipment for general use. Paragraphs (j)(1) and (2) cover lighting equipment, plugs, and receptacles. Marking, guarding, and disconnection requirements for appliances are given in § 1910.305(j)(3).

Requirements for motors are contained in paragraph (j)(4). Motors are required to have suitable cover current protection and disconnection means. Guarding requirements are also provided in that paragraph.

Paragraph (j)(5) gives safeguarding requirements for transformer installations. Depending on their rating, some transformers must be in a vault. Stated in performance language, § 1910.305(j)(5)(vi) requires such vaults to be able to contain fires and combustible liquids. Although no specific fire rating is given, any vault constructed in accordance with NEC specifications in Article 450 would be acceptable.

Capacitor switching and charge drainage are addressed in § 1910.305(j)(6). Paragraph 1910.305(j)(6)(ii)(*b*), which gives switching specifications for series capacitors over 600 volts, was proposed as a new requirement and will apply only to installations made after the effective date of these standards.

Paragraph (j)(7) requires storage battery installations to have adequate ventilation.

6. § *1910.306 Specific Purpose Equipment and Installations.* This section contains regulations for equipment which is not adequately covered by the general requirement elsewhere in Subpart S.

Paragraph (a) covers electric signs and outline lighting. It includes specific requirements for disconnecting means and a requirement that access doors be interlocked to deenergize any live parts operating at over 600 volts when the sign or outline lighting is accessible to other than qualified persons. Paragraph (b) covers cranes and hoists and includes specific requirements for disconnects, control switches, and required working clearance.

Paragraph (c) includes specific requirements for disconnects and location of control panels associated with elevators, dumbwaiters, escalators, and moving walks.

A new provision requiring that a warning sign be mounted on or adjacent to the disconnecting means under certain conditions was included in § 1910.306(c)(1) of the proposal. This requirement has been renumbered in the final standard as § 1910.306(c)(2) and applies only to installations made after the effective date of these standards.

Specific requirements relating to disconnecting means, controls, guarding, grounding and labeling for electric welders, X-ray equipment for nonmedical and nondental use, and induction and dielectric heating equipment are included in paragraphs (d), (f), and (g).

Paragraph (e) contains disconnect requirements for data processing systems and was divided in the proposal into requirements for data processing rooms and requirements for general building areas. OHSA received comments (Ex. 2) stating that clarification should be made to indicate that disconnection of all equipment, such as typewriters and lights is not addressed by this paragraph. In addition, these same commenters questioned the extent of application to general building areas and requested clarification regarding when additional disconnects were required in those areas. The comments in the record are further supported by the decision of the NFPA 1981 NEC Code Committee to limit this requirement to electronic equipment, and only when installed in a computer room or data processing room. The change was made to avoid requiring associated equipment such as typewriters and even fire warning and fire supression systems to be disconnected with the data processing systems. These machines have nothing to do with protecting employees from hazards associated with data processing systems. Paragraph (e) in the final standard has therefore been modified to reflect these changes.

Paragraph (h) includes specific regulations on electrolytic cells. These requirements were not contained in the former standard but were proposed because of the unique operational requirements of these cells. These provisions, which are discussed in issue number 8 of Section III, have been adopted in the final rule as proposed.

Paragraph (i) contains specific requirements, which were not in the former standard, relating to electrically driven or controlled irrigation machines. This paragraph is applicable only to installations made after the effective date of these standards.

Paragraph (j) contains regulations for swimming pools, fountains, and similar installations other than therapeutic pools in health care facilities. Specific provisions include location requirements for lighting and receptacles and methods for determining which circuits require ground-fault circuit interrupters. Paragraph (j)(2)(c) in the proposal has been renumbered (j)(3) to make it clear that this requirement applies to all cord- and plug-connected equipment and not just to lighting fixtures and lighting outlets. Proposed paragraphs (j)(3) and (j)(4) have also been renumbered as (j)(4) and (j)(5) respectively and a note has been added to new § 1910.306(j)(5) indicating that it is applicable only to installations made after the effective date of these standards.

7. § *1910.307 Hazardous Locations.* Paragraph (a) gives the scope of this section and lists typical hazardous locations.

The remainder of this section was completely rearranged from the proposal to indicate its intent more clearly. The basic requirements for hazardous locations were contained in proposed § 1910.307(c), which read as follows:

(c) *Electrical installations.* Equipment wiring methods, and installations of equipment in classified locations shall be one or more of the following:

(1) Intrinsically safe.

(2) Approved for the classified location.

(3) Of a type and design which provides protection from the hazards arising from the combustibility and flammability of vapors, liquids, gases, dusts, or fibers.

The proposal was confusing to many interested persons in that other requirements or guidelines, which explained the three alternatives of § 1910.307(c), were scattered throughout § 1910.307. Confusion about these provisions appears to have been the cause of many of the misunderstandings discussed in relation to Issues 3 and 4 of Section III of this preamble.

In order to avoid the confusion and clarify the wording, OHSA has reorganized the final standard to combine the basic requirements with their respective related provisions. For example, provisions related to "approved" equipment have been combined under the option which allows the use of equipment which is "approved for the classified location." OHSA believes that this reorganization of § 1910.307 will make the section easier to understand.

Guidelines for determining what equipment and installations are "safe for the hazardous location" and thus meet § 1910.307(b)(3)] of the final standard (proposed § 1910.307(c)(3)] are contained in Chapter 5 of the current National Electrical Code (NFPA 70). However, these guidelines are not the only means of complying with the standard. Any equipment or installation which is shown by the employer to provide protection from the hazards involved will be acceptable. This performance-oriented approach will allow the employer maximum flexibility in providing safety for his employees.

8. § *1910.308 Special Systems.* Paragraph (a) of this section addresses electrical systems over 600 volts, nominal. Requirements are given for wiring methods, interrupting and isolating means, mobile and portable equipment, and tunnel installations. The provision in proposed paragraph (a)(1) requiring conductors emerging from the ground to be enclosed is a new requirement not in OHSA's previous standards. Therefore, in the final standard, this provision has been renumbered as paragraph (a)(1)(ii) and applies only to installations made after the effective date of these standards.

Paragraph (b) covers emergency power systems. Wiring for these systems is required to be separate from the normal supply wiring. Additionally, where emergency lighting is required, no space may be left in total darkness as a result of the failure of a single emergency lighting element.

Requirements for remote control, signaling, and power-limited circuits are contained in paragraph (c). Depending on the voltage, current, and power limitation, these circuits have been designated as Class 1, Class 2, or Class 3. Paragraph (c)(2) requires Class 2 and Class 3 systems to be marked; however, this requirement applies only to systems installed after the effective date of these standards, since this is a new requirement.

Fire protective signaling systems are covered in paragraph (d), which addresses classification, separation, and identification of these systems. Since this entire paragraph was not contained in OSHA's former standards, it applies only to installations made after the effective date of these standards.

Paragraph (e) applies to communications systems and contains provisions on protective devices, conductor and equipment locations, and grounding. Some commenters indicated that the proposal conflicted with both the 1971 and 1978 NEC by not making § 1910.308(e) the only provision in Subpart S covering communications systems (Ex. 45, 48). They suggested that OSHA include a statement in the regulation stating that communications systems were covered only in § 1910.308(e).

The omission of such a statement from the proposal was an oversight on OSHA's part. To correct this, OSHA has added the following sentence in § 1910.308(e):

> These installations need not comply with the provisions of §§ 1910.303 through 1910.308(d).

9. § *1910.399 Definitions.* This section provides definitions for Subpart S. The definitions in the final rule remain as proposed, except as follows:

(a)(24) "Class I locations": The definition of a Class I, Division 1 location has been changed by deleting the words "continuously, intermittently, or periodically." The rationale for this change is discussed in Issue 7 of Section III of this preamble. The note following this section has also been changed to more clearly describe this type of location.

(a)(25) "Class II locations": The definition of a Class II, Division 1 location has been changed by deleting the words "continuously, intermittently, or periodically." The definition of a Class II, Division 2 location (§ 1910.399(a)(25)(ii)) has also been changed to clarify the difference between Division 1 and Division 2 locations. Additionally, the fine print notes following these definitions have been modified to more accurately reflect examples of *locations* which could be classified as Class II locations considering advances in grain handling technology. The rationale for these changes is discussed in Issue 7 of Section III of this preamble.

(a)(128) "Utilization system": One commenter (Ex. 30) questioned this definition, stating that it was redundant with the definition of "premises wiring." However, the terms are not synonymous, and the final rule has been modified to clearly state that the utilization system includes not only the premises wiring system, but its associated utilization equipment as well.

V. Regulatory Assessment

In accordance with Executive Order No. 12044 (43 FR 12661, March 24, 1978), OSHA assessed the potential economic impact of the proposal. Based on the economic identification criteria developed by the Department of Labor (44 FR 5570, January 28, 1979), OSHA concluded that the subject matter of the proposal was not a "major" action which would necessitate further economic impact evaluation and the preparation of a Regulatory Analysis.

The proposal dealt with electrical installation safety requirements and was derived from the National Electrical Code, which was used as OSHA's previous standard. Since the proposal resulted in an overall simplification of OSHA's standards, the estimated cost of compliance was concluded not to be higher than the cost of compliance with the current OSHA standards.

This determination was based on a May 11, 1979, report by JRB Associates, Inc. The major finding of the economic impact assessment was that there would be no significant economic effect resulting from the promulgation of the proposed revisions to 29 CFR Part 1910, Subpart S, Electrical. The rationale for this conclusion was as follows:

—The proposed regulation contained no requirements other than those found in either 29 CFR Part 1910, Subpart S, or the 1978 National Electrical Code.

—Current industry practice for new installation is to conform to the 1978 National Electrical Code.

—Provisions in the proposed Subpart S had an antecedent in the 1978 National Electrical Code.

Several commenters took issue with OSHA's determination that the proposed revisions to Subpart S would not have a major economic impact on the affected industries. Detailed studies were submitted to the record by certain industry groups, notably the grain elevator industry and the feed manufacturing industry, which indicated that the costs of compliance with Subpart S as revised would be far greater than those associated with compliance with the current provisions. (Ex. 55], 58). However, a review of these studies reveals that their findings are based on certain misunderstandings of the scope and application of the former standards and OSHA's proposed revisions. These areas of concern are also discussed in detail in section III of this preamble, which deal with the "retroactive" and hazardous locations provisions of the standard. Nonetheless, OSHA believes that it may also be helpful to discuss these major areas of misunderstanding in the context of the regulatory assessment of the proposed standards.

OSHA's intent in proposing changes to Subpart S was to simplify compliance with the electrical standards, without reducing any of the employee protection currently provided. To that end, the proposed revisions to Subpart S approached the problem in three ways: first, performance language was substituted for the detailed requirements of the 1971 NEC, to provide flexibility for the employer; second, provisions of the 1971 NEC which were directed

primarily at property protection and not at employee protection were deleted; and third, all relevant provisions from the NEC were placed within Subpart S in place of the incorporation by reference of the NEC itself. The net result of the proposed revisions, therefore, was a significant decrease in the regulatory burden imposed by the electrical standards. In the limited circumstances in which the proposed standards imposed obligations not contained in the 1971 NEC as applied in the present standards, OSHA intended that these new obligations only apply to installations made after the effective date of the revised standards. (As noted in section VI of this preamble, OSHA acknowledged that this intention was not implemented totally in the proposal; such new provisions are more carefully and completely distinguished in the final standards.)

Concerning the question of the listed "retroactive" provisions in proposed § 1910.302(b)(1), it should be noted that the proposed revisions did no more than carry forward the provisions of current § 1910.309(a), which presently apply to all electrical installations, regardless of when they were made. Indeed, where the list has been modified, the changes simplify and reduce the compliance burden by eliminating requirements and allowing alternative compliance methods. There is no requirement imposed by the new § 1910.302(b)(1) that is not currently imposed on employers by virtue of § 1910.309(a) of the former standards. Thus, the costs of complying with these requirements cannot be attributed to the proposal.

OSHA based its economic impact analysis on the requirements of Executive Order No. 12044 (43 FR 12661, March 24, 1978), as supplemented by Department of Labor regulations (44 FR 5570, January 26, 1979). The regulatory assessment of the proposed regulations was intended to evaluate the incremental cost impact of the proposal over that of the existing regulations.

Since OSHA's proposal did not increase existing compliance requirements or establish new compliance requirements, it was found not to result in a major impact.

To support their view that OSHA's assessment was inadequate, two trade assocations submitted studies of the economic impact on their respective industries, based upon their interpretations of the proposal. One study claimed that it would cost the feed manufacturing industry about $785,000,000 to comply with OSHA's proposal, the other estimated costs of $825,000,000 for the grain elevator industry (Ex. 55J, 58).

It is difficult to evaluate the industry studies in depth: although specific compliance elements are mentioned in each study, the actual cost data are not adequately broken down to correspond to those elements. Therefore, there is no way to determine how much of their total cost estimates are attributable to which compliance activity. This is particularly troublesome for two reasons: first, when the costs are calculated based on an inaccurate reading of the standards, the magnitude of these unnecessary costs cannot be determined. It is noted, however, that in their other comments and testimony submitted to the record, these parties' primary concerns with the proposal centered on the costs of removal and replacement of unmarked, unlabeled and unapproved equipment in hazardous (classified) locations. As noted earlier, such requirements, and, therefore, their costs, are illusory. Clearly, then, if these costs constitute the greatest share of the total estimated compliance costs in these studies, the studies greatly overestimate the resources necessary for compliance with the standards.

Second, where repair costs are included as costs of compliance, such costs are also not properly attributable to the proposal. The proposal did not add any new requirements for existing installations; thus, where repairs are required for compliance with the proposal, they would also be necessary for compliance with the current standards. In addition, some repair costs may well be directed more towards routine operating repairs for continuing or resuming production in currently idle facilities than they are towards compliance with OSHA standards.

The inaccurate assumptions which appear to be the basis of much of the cost data in the industry studies have been discussed in depth in earlier sections of this preamble. The following discussion, therefore, represents a summation of the relevant issues as they pertain to the regulatory assessment.

Both industry studies assumed that all installations in hazardous locations were required to have "approved" equipment. (See issue 4(b) in section III of this preamble).

The studies also confused the terms "marking", "labeling", and "approval" and assumed that OSHA's standard differed from the NEC as to those terms (See Issue 4(a) in section III of this preamble). Contrary to the implications in the studies, the marking provisions in the standard do not require labeling or approval; they simply require identification of the various parameters of the equipment. This identification may be placed on the equipment using any means that is legible and durable enough to withstand the operating environment. As such, many of the costs indicated by the studies would not be incurred as employers would not be required to affix official manufacturers' labels or replace equipment which does not have such labels. Furthermore, the studies included in their estimates the cost of replacing otherwise acceptable equipment which is not listed or labeled, and hence not "approved." Such replacement of unapproved but otherwise acceptable equipment is not required by the standard if the equipment can be shown to meet one of the other compliance alternatives in § 1910.307.

Should some items of equipment not meet any of the compliance alternatives in § 1910.307, replacement of that equipment would be necessary. Assuming that an item of equipment would need to be replaced, the study did not take into account any possible salvage value of the used equipment. In addition, the studies did not consider the savings that might result from reduction in insurance premiums, property losses, and liability costs as a result of replacing unsafe equipment with safe equipment.

Where costs are imposed by the existing standards, the proposal does not increase these costs; to the contrary, as the assessment points out, the net impact of the proposal is expected to be an overall reduction in compliance costs due to the use of performance language and other reductions in the regulatory burdens imposed by the former standard.

One commenter contended that OSHA should have conducted a field survey to ascertain the present level of compliance with the current "retroactive" provisions in § 1910.309(a). Based on that survey, it was argued, OSHA should then have assessed not only the costs of compliance with new requirements imposed by the proposal, but the added costs of coming into compliance with the existing standards. (Ex. 69).

Because the proposed "retroactive" provision of § 1910.302(b)(1) did not increase compliance requirements over those of § 1910.309(a) (see Issue 3 in section III of this preamble), OSHA determined that the impact of the proposal in this regard was not major. Where industry is not currently in compliance with the existing standards, these costs cannot be attributed to the proposal. The regulatory assessment therefore, properly evaluated the incremental costs to be imposed by the proposed standard.

The regulatory assessment concluded that the only area in which increased costs might be expected is that of new provisions which were taken from the 1978 NEC and which were not in the 1971 NEC. Such costs were determined to be insignificant, particularly if the new provisions were to be applied only to installations made after the effective date of the final standards. This condition has been met by OSHA in the final revisions of Subpart S.

Therefore, after a careful review of the rulemaking record, OSHA has determined that this final standard is not a major action as defined in Executive Order 12044 and the Department economic criteria.

VI. Effective Date and Dates of Application

The scope and application of Subpart S, as set forth in paragraphs (b)(1) and (b)(2) of § 1910.302, essentially carry forward the provisions of § 1910.309 of the former standards. (The background and issues surrounding this section have been discussed at length in both Section III and Section IV of this preamble.) As in the case of previous § 1910.309(a), the provisions of Subpart S which are listed in new § 1910.302(b)(1) apply to all electrical installations, regardless of when they were made. Former § 1910.309(b) provided that the entire 1971 NEC applied to installations and modifications made after March 15, 1972. To be consistent with the former standard, the revision, in § 1910.302(b)(2), provides that the entire Subpart S applies to the same installations and modifications.

However, some of the provisions contained in the proposed regulations differed from or were not found in the previous regulations. These differences resulted from the use of the 1978 National Electrical Code as a base document. Since the previous regulations referenced the 1971 NEC, changes which were made in the subsequent editions of the NEC and which were included in the proposal appeared to impose new requirements.

OSHA had intended that all provisions in the proposal which were more stringent than the OSHA electrical standards in effect at the time would not apply to existing installations. Existing installations would not have to be retrofitted to meet these new requirements.

OSHA has added a new § 1910.302(b)(3) to indicate that the following new provisions apply only to installations made after April 16, 1981, the effective date of these standards.

(1) §§ 1910.303(h)(4)(i) and (ii). These requirements relate to access and entrance to workspace about equipment rated over 600 volts.

(2) § 1910.304(e)(1)(vi)(*b*). This requires the handle of vertically mounted circuit breakers to be in the up position when the breaker is on.

(3) § 1910.304(e)(1)(vi)(*c*). This provision would require circuit breakers used as switches in fluorescent lighting circuits to be marked "SWD."

(4) § 1910.305(j)(6)(ii)(*b*). This regulation addresses proper switching of series capacitors over 600 volts.

(5) § 1910.306(c)(2). This provision requires a warning sign for multicar elevator or escalator installations, under certain conditions.

(6) § 1910.306(i). This paragraph contains requirements for lighting protection and disconnection of electrically controlled or driven irrigation machines.

(7) § 1910.306(j)(4). This provision requires ground-fault circuit interrupters for fountain installations.

(8) § 1910.308(a)(1)(ii). This provision requires conductors over 600 volts emerging from the ground to be enclosed in a raceway.

(9) § 1910.308(c)(2) requires marking on Class 2 and Class 3 power supply units.

(10) § 1910.308(d). This paragraph contains requirements for fire protective signaling circuits.

In summary, § 1910.302(b) provides for three sets of provisions within Subpart S: paragraph (b)(1) contains the list of provisions applicable to all electrical installations; paragraph (b)(3) provides that the new requirements listed in that paragraph are only applicable to installations made after the effective date of these standards; and paragraph (b)(2) provides for the remainder of Subpart S to apply to new installations and major modifications made after March 15, 1972.

The effective date of these standards is (90 days after publication). The 90-day period between the issuance of the standards and their effective date is intended to provide sufficient time for employers and employees to become informed of the existence of the standards and their requirements.

The standards currently found in the existing Subpart S [§§ 1910.308–1910.309] will remain in effect until the standards contained in this document actually go into effect. Should the new standards be stayed, judicially or administratively, or should the standards not sustain legal challenge under section 6(f) of the Act, the current standards in Subpart S will remain in effect.

Any petitions for administrative reconsiderations of these standards or for an administrative stay pending judicial review must be filed with the Assistant Secretary of Labor for Occupational Safety and Health on or before March 2, 1981. Any petitions filed after this date will be considered to be filed untimely. This requirement is considered essential to permit the Agency to give full consideration to each petition and respond in advance of the effective date of the standards.

VII. Appendices

For informational purposes, one Appendix has been provided and two others reserved in this final standard. At this time only Appendix A is being promulgated. It contains a list of references which can provide guidance for employers who wish to know specifically what constitutes compliance with the performance standards. If an employer complies with the specific guidelines (the National Electrical Code, NFPA 70, in particular), that employer will be considered to be in compliance with the performance requirements given in OSHA's standard. At the same time, an employer may be in compliance with the standard although not complying with the specific requirements of the guidelines. In construing the meaning of the performance language in the standards in circumstances where the employer chooses not to comply with the specific provisions of the guidelines, OSHA will look at the specific guidelines among other things to determine whether the employer has complied with the standards' performance requirements. However, nothing contained in the appendices should be construed as establishing a mandatory requirement not otherwise imposed by the standard, or as detracting from an obligation which the standard does impose. In view of the nature of the appendices, changes in their contents may subsequently be made without rulemaking.

Three documents have been added to the list contained in the proposal. They are:

NMAB 353–1–79 Matrix of Combustion—Relevant Properties and Classifications of Gases, Vapors, and Selected Solids

NMAB 353–2–79 Test Equipment For Use in Determining Classifications of Combustible Dusts

NMAB–353–80 Classification of Combustible Dusts in Accordance with the National Electrical Code

VIII. Authority

This document was prepared under the direction of Eula Bingham, Assistant Secretary of Labor for Occupational Safety and Health, U.S. Department of

Labor, Third Street and Constitution Avenue, NW., Washington, D.C. 20210.

Accordingly, pursuant to sections 4(b)(2) and 6(b) of the Occupational Safety and Health Act of 1970 [84 Stat. 1592, 1593, 29 U.S.C. 653, 655], Secretary of Labor's Order No. 8–76 (41 FR 25059), and 29 CFR Part 1911, Subpart S of 29 CFR Part 1910 is revised as set forth below.

Signed at Washington, D.C. this 8th day of January, 1981.

Eula Bingham,

Assistant Secretary of Labor.

Part 1910 of Title 29 of the Code of Federal Regulations is hereby amended by revising Subpart S, Electrical, to read as follows:

* * * * *

Subpart S—Electrical

General

Sec.

1910.301 Introduction.

Design Safety Standards for Electrical Systems

1910.302 Electric utilization systems.
1910.303 General requirements.
1910.304 Wiring design and protection.
1910.305 Wiring methods, components, and equipment for general use.
1910.306 Specific purpose equipment and installations.
1910.307 Hazardous (classified) locations.
1910.308 Special systems.
1910.309—1910.330 [Reserved]

Safety-Related Work Practices

1910.331—1910.360 [Reserved]

Safety-Related Maintenance Requirements

1910.361—1910.380 [Reserved]

Safety Requirements for Special Equipment

1910.381—1910.398 [Reserved]

Definitions

1910.399 Definitions applicable to this subpart.
Appendix A—Reference Documents.
Appendix B—Explanatory Data [Reserved]
Appendix C—Tables, Notes, and Charts [Reserved]

Authority: Secs. 4(b)(2) and 6(b), 84 Stat. 1592, 1593 (29 U.S.C. 653, 655), Secretary of Labor's Order No. 8–76 (41 FR 25059), 29 CFR Part 1911.

Subpart S—Electrical

General

§ 1910.301 Introduction.

This subpart addresses electrical safety requirements that are necessary for the practical safeguarding of employees in their workplaces and is divided into four major divisions as follows:

(a) *Design safety standards for electrical systems.* These regulations are contained in §§ 1910.302 through 1910.330. Sections 1910.302 through 1910.308 contain design safety standards for electric utilization systems. Included in this category are all electric equipment and installations used to provide electric power and light for employee workplaces. Sections 1910.309 through 1910.330 are reserved for possible future design safety standards for other electrical systems.

(b) *Safety-related work practices.* These regulations will be contained in §§ 1910.331 through 1910.360.

(c) *Safety-related maintenance requirements.* These regulations will be contained in §§ 1910.361 through 1910.380.

(d) *Safety requirements for special equipment.* These regulations will be contained in §§ 1910.381 through 1910.398.

(e) *Definitions* applicable to each division are contained in § 1910.399.

Design Safety Standards for Electrical Systems

§ 1910.302 Electric utilization systems.

Sections 1910.302 through 1910.308 contain design safety standards for electric utilization systems.

(a) *Scope.* (1) *Covered.* The provisions of §§ 1910.302 through 1910.308 of this subpart cover electrical installations and utilization equipment installed or used within or on buildings, structures, and other premises including:

(i) Yards,

(ii) Carnivals,

(iii) Parking and other lots,

(iv) Mobile homes,

(v) Recreational vehicles,

(vi) Industrial substations,

(vii) Conductors that connect the installations to a supply of electricity, and

(viii) Other outside conductors on the premises.

(2) *Not covered.* The provisions of §§ 1910.302 through 1910.308 of this subpart do not cover:

(i) Installations in ships, watercraft, railway rolling stock, aircraft, or automotive vehicles other than mobile homes and recreational vehicles.

(ii) Installations underground in mines.

(iii) Installations of railways for generation, transformation, transmission, or distribution of power used exclusively for operation of rolling stock or installations used exclusively for signaling and communcation purposes.

(iv) Installations of communcation equipment under the exclusive control of communication utilities, located outdoors or in building spaces used exclusively for such installations.

(v) Installations under the exclusive control of electric utilities for the purpose of communication or metering; or for the generation, control, transformation, transmission, and distribution of electric energy located in buildings used exclusively by utilities for such purposes or located outdoors on property owned or leased by the utility or on public highways, streets, roads, etc., or outdoors by established rights on private property.

(b) *Extent of application.* (1) The requirements contained in the sections listed below shall apply to all electrical installations and utilization equipment, regardless of when they were designed or installed:

Sections:

1910.303(b)	Examination, installation, and use of equipment.
1910.303(c)	Splices.
1910.303(d)	Arcing parts.
1910.303(e)	Marking.
1910.303(f)	Identification of disconnecting means.
1910.303(g)(2)	Guarding of live parts.
1910.304(e)(1)(i)	Protection of conductors and equipment.
1910.304(e)(1)(v)	Location in or on premises.
1910.304(e)(1)(vi)	Arcing or suddenly moving parts.
1910.304(f)(1)(ii)	2-Wire DC systems to be grounded.
1910.304(f)(1)(iii) and 1910.304(f)(1)(iv).	AC Systems to be grounded.
1910.304(f)(1)(v)	AC Systems 50 to 1000 volts not required to be grounded.
1910.304(f)(3)	Grounding connections.
1910.304(f)(4)	Grounding path.
1910.304(f)(5)(iv)(a) through 1910.304(f)(5)(iv)(c).	Fixed equipment required to be grounded.
1910.304(f)(5)(v)	Grounding of equipment connected by cord and plug.
1910.304(f)(5)(vi)	Grounding of nonelectrical equipment.
1910.304(f)(6)(i)	Methods of grounding fixed equipment.
1910.305(g)(1)(i) and 1910.305(g)(1)(ii).	Flexible cords and cables, uses.
1910.305(g)(1)(iii)	Flexible cords and cables prohibited.
1910.305(g)(2)(ii)	Flexible cords and cables, splices.
1910.305(g)(2)(iii)	Pull at joints and terminals of flexible cords and cables.
1910.307	Hazardous (classified) location.

(2) Every electric utilization system and all utilization equipment installed after March 15, 1972, and every major replacement, modification, repair, or rehabilitation, after March 15, 1972, of any part of any electric utilization system or utilization equipment installed before March 15, 1972, shall comply with the provisions of §§ 1910.302 through 1910.308.

Note.—"Major replacements, modifications, repairs, or rehabilitations" include work similar to that involved when a new building or facility is built, a new wing is added, or an entire floor is renovated.

(3) The following provisions apply to electric utilization systems and utilization equipment installed after April 16, 1981:

§§ 1910.303(f)(4) (i)-(ii)	Entrance and access to workspace (over 600 volts).
§ 1910.304(e)(1)(v)(b)	Circuit breakers operated vertically.
§ 1910.304(e)(1)(v)(c)	Circuit breakers used as switches.
§ 1910.304(f)(7)(ii)	Grounding of systems of 1000 volts or more supplying portable or mobile equipment.
§ 1910.305(j)(5)(ii)(b)	Switching series capacitors over 600 volts.
§ 1910.306(c)(2)	Warning signs for elevators and escalators.
§ 1910.306(i)	Electrically controlled irrigation machines.
§ 1910.306(j)(5)	Ground-fault circuit interrupters for fountains.
§ 1910.308(a)(1)(ii)	Physical protection of conductors over 600 volts.
§ 1910.308(c)(2)	Marking of Class 2 and Class 3 power supplies.
§ 1910.308(d)	Fire protective signaling circuits.

§ 1910.303 General requirements.

(a) *Approval.* The conductors and equipment required or permitted by this subpart shall be acceptable only if approved.

(b) *Examination, installation, and use of equipment.* (1) *Examination.* Electrical equipment shall be free from recognized hazards that are likely to cause death or serious physical harm to employees. Safety of equipment shall be determined using the following considerations:

(i) Suitability for installation and use in conformity with the provisions of this subpart. Suitability of equipment for an identified purpose may be evidenced by listing or labeling for that identified purpose.

(ii) Mechanical strength and durability, including, for parts designed to enclose and protect other equipment, the adequacy of the protection thus provided.

(iii) Electrical insulation.

(iv) Heating effects under conditions of use.

(v) Arcing effects.

(vi) Classification by type, size, voltage, current capacity, specific use.

(vii) Other factors which contribute to the practical safeguarding of employees using or likely to come in contact with the equipment.

(2) *Installation and use.* Listed or labeled equipment shall be used or installed in accordance with any instructions included in the listing or labeling.

(c) *Splices.* Conductors shall be spliced or joined with splicing devices suitable for the use or by brazing, welding, or soldering with a fusible metal or alloy. Soldered splices shall first be so spliced or joined as to be mechanically and electrically secure without solder and then soldered. All splices and joints and the free ends of conductors shall be covered with an insulation equivalent to that of the conductors or with an insulating device suitable for the purpose.

(d) *Arcing parts.* Parts of electric equipment which in ordinary operation produce arcs, sparks, flames, or molten metal shall be enclosed or separated and isolated from all combustible material.

(e) *Marking.* Electrical equipment may not be used unless the manufacturer's name, trademark, or other descriptive marking by which the organization responsible for the product may be identified is placed on the equipment. Other markings shall be provided giving voltage, current, wattage, and other ratings as necessary. The marking shall be of sufficient durability to withstand the environment involved.

(f) *Identification of disconnecting means and circuits.* Each disconnecting means required by this subpart for motors and appliances shall be legibly marked to indicate its purpose, unless located and arranged so the purpose is evident. Each service, feeder, and branch circuit, at its disconnecting means or overcurrent device, shall be legibly marked to indicate its purpose, unless located and arranged so the purpose is evident. These markings shall be of sufficient durability to withstand the environment involvement involved.

(g) *600 Volts, nominal, or less.* (1) *Working space about electric equipment.* Sufficient access and working space shall be provided and maintained about all electric equipment to permit ready and safe operation and maintenance of such equipment.

(i) *Working clearances.* Except as required or permitted elsewhere in this subpart, the dimension of the working space in the direction of access to live parts operating at 600 volts or less and likely to require examination, adjustment, servicing, or maintenance while alive may not be less than indicated in Table S-1. In addition to the dimensions shown in Table S-1, workspace may not be less than 30 inches wide in front of the electric equipment. Distances shall be measured from the live parts if they are exposed, or from the enclosure front or opening if the live parts are enclosed. Concrete, brick, or tile walls are considered to be grounded. Working space is not required in back of assemblies such as dead-front switchboards or motor control centers where there are no renewable or adjustable parts such as fuses or switches on the back and where all connections are accessible from locations other than the back.

Table S-1.—*Working clearances*

Nominal voltage to ground	Minimum clear distance for condition[2] (ft)		
	(a)	(b)	(c)
0-150	[1] 3	[1] 3	3
151-600	[1] 3	3½	4

[1] Minimum clear distances may be 2 feet 6 inches for installations built prior to April 16, 1981.

[2] Conditions (a), (b), and (c), are as follows: (a) Exposed live parts on one side and no live or grounded parts on the othe side of the working space, or exposed live parts on both sides effectively guarded by suitable wood or other insulating material. Insulated wire or insulated busbars operating at not over 300 volts are not considered live parts. (b) Exposed live parts on one side and grounded parts on the other side. (c) Exposed live parts on both sides of the workspace [not guarded as provided in Condition (a)] with the operator between.

(ii) *Clear spaces.* Working space required by this subpart may not be used for storage. When normally enclosed live parts are exposed for inspection or servicing, the working space, if in a passageway or general open space, shall be suitably guarded.

(iii) *Access and entrance to working space.* At least one entrance of sufficient area shall be provided to give access to the working space about electric equipment.

(iv) *Front working space.* Where there are live parts normally exposed on the front of switchboards or motor control centers, the working space in front of such equipment may not be less than 3 feet.

(v) *Illumination.* Illumination shall be provided for all working spaces about service equipment, switchboards, panelboards, and motor control centers installed indoors.

(vi) *Headroom.* The minimum headroom of working spaces about service equipment, switchboards, panelboards, or motor control centers shall be 6 feet 3 inches.

Note.—As used in this section a motor control center is an assembly of one or more enclosed sections having a common power bus and principally containing motor control units.

(2) *Guarding of live parts.* (i) Except as required or permitted elsewhere in this subpart, live parts of electric equipment operating at 50 volts or more shall be guarded against accidental contact by approved cabinets or other forms of approved enclosures, or by any of the following means:

(a) By location in a room, vault, or similar enclosure that is accessible only to qualified persons.

(b) By suitable permanent, substantial partitions or screens so arranged that only qualified persons will have access to the space within reach of the live parts. Any openings in such partitions or screens shall be so sized and located that persons are not likely to come into accidental contact with the live parts or

to bring conducting objects into contact with them.

(c) By location on a suitable balcony, gallery, or platform so elevated and arranged as to exclude unqualified persons.

(d) By elevation of 8 feet or more above the floor or other working surface.

(ii) In locations where electric equipment would be exposed to physical damage, enclosures or guards shall be so arranged and of such strength as to prevent such damage.

(iii) Entrances to rooms and other guarded locations containing exposed live parts shall be marked with conspicuous warning signs forbidding unqualified persons to enter.

(h) *Over 600 volts, nominal.* (1) *General.* Conductors and equipment used on circuits exceeding 600 volts, nominal, shall comply with all applicable provisions of paragraphs (a) through (g) of this section and with the following provisions which supplement or modify those requirements. The provisions of paragraphs (h)(2), (h)(3), and (h)(4) of this section do not apply to equipment on the supply side of the service conductors.

(2) *Enclosure for electrical installations.* Electrical installations in a vault, room, closet or in an area surrounded by a wall, screen, or fence, access to which is controlled by lock and key or other approved means, are considered to be accessible to qualified persons only. A wall, screen, or fence less than 8 feet in height is not considered to prevent access unless it has other features that provide a degree of isolation equivalent to an 8 foot fence. The entrances to all buildings, rooms, or enclosures containing exposed live parts or exposed conductors operating at over 600 volts, nominal, shall be kept locked or shall be under the observation of a qualified person at all times.

(i) *Installations accessible to qualified persons only.* Electrical installations having exposed live parts shall be accessible to qualified persons only and shall comply with the applicable provisions of paragraph (h)(3) of this section.

(ii) *Installations accessible to unqualified persons.* Electrical installations that are open to unqualified persons shall be made with metal-enclosed equipment or shall be enclosed in a vault or in an area, access to which is controlled by a lock. If metal-enclosed equipment is installed so that the bottom of the enclosure is less than 8 feet above the floor, the door or cover shall be kept locked. Metal-enclosed switchgear, unit substations, transformers, pull boxes, connection boxes, and other similar associated equipment shall be marked with appropriate caution signs. If equipment is exposed to physical damage from vehicular traffic, suitable guards shall be provided to prevent such damage. Ventilating or similar openings in metal-enclosed equipment shall be designed so that foreign objects inserted through these openings will be deflected from energized parts.

(3) *Workspace about equipment.* Sufficient space shall be provided and maintained about electric equipment to permit ready and safe operation and maintenance of such equipment. Where energized parts are exposed, the minimum clear workspace may not be less than 6 feet 6 inches high (measured vertically from the floor or platform), or less than 3 feet wide (measured parallel to the equipment). The depth shall be as required in Table S-2. The workspace shall be adequate to permit at least a 90-degree opening of doors or hinged panels.

(i) *Working space.* The minimum clear working space in front of electric equipment such as switchboards, control panels, switches, circuit breakers, motor controllers, relays, and similar equipment may not be less than specified in Table S-2 unless otherwise specified in this subpart. Distances shall be measured from the live parts if they are exposed, or from the enclosure front or opening if the live parts are enclosed. However, working space is not required in back of equipment such as deadfront switchboards or control assemblies where there are no renewable or adjustable parts (such as fuses or switches) on the back and where all connections are accessible from locations other than the back. Where rear access is required to work on de-energized parts on the back of enclosed equipment, a minimum working space of 30 inches horizontally shall be provided.

Table S-2.—*Minimum Depth of Clear working Space in Front of Electric Equipment*

Nominal voltage to ground	Conditions[2] (ft)		
	(a)	(b)	(c)
601 to 2,500	3	4	5
2,501 to 9,000	4	5	6
9,001 to 25,000	5	6	9
25,001 to 75kV[1]	6	8	10
Above 75kV[1]	8	10	12

[1] Minimum depth of clear working space in front of electric equipment with a nominal voltage to ground above 25,000 volts may be the same as for 25,000 volts under Conditions (a), (b), and (c) for installations built prior to April 16, 1981.

[2] Conditions (a), (b), and (c) are as follows: (a) Exposed live parts on one side and no live or grounded parts on the other side of the working space, or exposed live parts on both sides effectively guarded by suitable wood or other insulating materials. Insulated wire or insulated busbars operating at not over 300 volts are not considered live parts. (b) Exposed live parts on one side and grounded parts on the other side. Concrete, brick, or tile walls will be considered as grounded surfaces. (c) Exposed live parts on both sides of the workspace not guarded as provided in Condition (a) with the operator between.

(ii) *Illumination.* Adequate illumination shall be provided for all working spaces about electric equipment. The lighting outlets shall be so arranged that persons changing lamps or making repairs on the lighting system will not be endangered by live parts or other equipment. The points of control shall be so located that persons are not likely to come in contact with any live part or moving part of the equipment while turning on the lights.

(iii) *Elevation of unguarded live parts.* Unguarded live parts above working space shall be maintained at elevations not less than specified in Table S-3.

Table S-3.—*Elevation of Unguarded Energized Parts Above Working Space*

Nominal voltage between phases	Minimum elevation
601 to 7,500	*8 feet 6 inches.
7,501 to 35,000	9 feet.
Over 35kV	9 feet + 0.37 inches per kV above 35kV.

*Note.—Minimum elevation may be 8 feet 0 inches for installations built prior to April 16, 1981 if the nominal voltage between phases is in the range of 601–6600 volts.

(4) *Entrance and access to workspace.* (See § 1910.302(b)(3).)

(i) At least one entrance not less than 24 inches wide and 6 feet 6 inches high shall be provided to give access to the working space about electric equipment. On switchboard and control panels exceeding 48 inches in width, there shall be one entrance at each end of such board where practicable. Where bare energized parts at any voltage or insulated energized parts above 600 volts are located adjacent to such entrance, they shall be suitably guarded.

(ii) Permanent ladders or stairways shall be provided to give safe access to the working space around electric equipment installed on platforms, balconies, mezzanine floors, or in attic or roof rooms or spaces.

§ 1910.304 Wiring design and protection.

(a) *Use and identification of grounded and grounding conductors.* (1) *Identification of conductors.* A conductor used as a grounded conductor shall be identifiable and distinguishable from all other conductors. A conductor used as an equipment grounding conductor shall be identifiable and distinguishable from all other conductors.

(2) *Polarity of connections.* No grounded conductor may be attached to any terminal or lead so as to reverse designated polarity.

(3) *Use of grounding terminals and devices.* A grounding terminal or grounding-type device on a receptacle, cord connector, or attachment plug may

not be used for purposes other than grounding.

(b) *Branch circuits.* (1) *Ground-fault protection for personnel on construction sites.* The employer shall use either ground-fault circuit interrupters as specified in paragraph (b)(1)(i) of this section or an assured equipment grounding conductor program as specified in paragraph (b)(1)(ii) of this section, to protect employees on construction sites. These requirements are in addition to any other requirements for equipment grounding conductors.

(i) *Ground-fault circuit interrupters.* All 120-volt, single-phase, 15- and 20-ampere receptacle outlets on construction sites, which are not a part of the permanent wiring of the building or structure and which are in use by employees, shall have approved ground-fault circuit interrupters for personnel protection. Receptacles on a two-wire, single-phase portable or vehicle-mounted generator rated not more than 5 kW, where the circuit conductors of the generator are insulated from the generator frame and all other grounded surfaces, need not be protected with ground-fault circuit interrupters.

(ii) *Assured equipment grounding conductor program.* The employer shall establish and implement an assured equipment grounding conductor program on construction sites covering all cord sets, receptacles which are not a part of the permanent wiring of the building or structure, and equipment connected by cord and plug, which are available for use or used by employees. This program shall comply with the following minimum requirements:

(*a*) A written description of the program, including the specific procedures adopted by the employer, shall be available at the jobsite for inspection and copying by the Assistant Secretary and any affected employee.

(*b*) The employer shall designate one or more competent persons (as defined in 29 CFR 1926.32(f)) to implement the program.

(c) Each cord set, attachment cap, plug and receptacle of cord sets, and any equipment connected by cord and plug, except cord sets and receptacles which are fixed and not exposed to damage, shall be visually inspected before each day's use for external defects, such as deformed or missing pins or insulation damage, and for indication of possible internal damage. Equipment found damaged or defective may not be used until repaired.

(*d*) The following tests shall be performed on all cord sets, receptacles which are not a part of the permanent wiring of the building or structure, and cord- and plug-connected equipment required to be grounded:

(*1*) All equipment grounding conductors shall be tested for continuity and shall be electrically continuous.

(*2*) Each receptacle and attachment cap or plug shall be tested for correct attachment of the equipment grounding conductor. The equipment grounding conductor shall be connected to its proper terminal.

(*e*) All required tests shall be performed:

(*1*) Before first use;

(*2*) Before equipment is returned to service following any repairs;

(*3*) Before equipment is used after any incident which can be reasonably suspected to have caused damage (for example, when a cord set is run over); and

(*4*) At intervals not to exceed 3 months, except that cord sets and receptacles which are fixed and not exposed to damage shall be tested at intervals not exceeding 6 months.

(f) The employer may not make available or permit the use by employees of any equipment which has not met the requirements of this paragraph (b)(1)(ii) of this section.

(g) Tests performed as required in this paragraph shall be recorded. This test record shall identify each receptacle, cord set, and cord- and plug-connected equipment that passed the test, and shall indicate the last date it was tested or the interval for which it was tested. This record shall be kept by means of logs, color coding, or other effective means, and shall be maintained until replaced by a more current record. The record shall be made available on the jobsite for inspection by the Assistant Secretary and any affected employee.

(2) *Outlet devices.* Outlet devices shall have an ampere rating not less than the load to be served.

(c) *Outside conductors, 600 volts, nominal, or less.* Paragraphs (c)(1), (c)(2), (c)(3), and (c)(4) of this section apply to branch circuit, feeder, and service conductors rated 600 volts, nominal, or less and run outdoors as open conductors. Paragraph (c)(5) applies to lamps installed under such conductors.

(1) *Conductors on poles.* Conductors supported on poles shall provide a horizontal climbing space not less than the following:

(i) Power conductors below communication conductors—30 inches.

(ii) Power conductors alone or above communication conductors: 300 volts or less—24 inches; more than 300 volts—30 inches.

(iii) Communication conductors below power conductors with power conductors 300 volts or less—24 inches; more than 300 volts—30 inches.

(2) *Clearance from ground.* Open conductors shall conform to the following minimum clearances:

(i) 10 feet—above finished grade, sidewalks, or from any platform or projection from which they might be reached.

(ii) 12 feet—over areas subject to vehicular traffic other than truck traffic.

(iii) 15 feet—over areas other than those specified in paragraph (c)(2)(iv) of this section that are subject to truck traffic.

(iv) 18 feet—over public streets, alleys, roads, and driveways.

(3) *Clearance from building openings.* Conductors shall have a clearance of at least 3 feet from windows, doors, porches, fire escapes, or similar locations. Conductors run above the top level of a window are considered to be out of reach from that window and, therefore, do not have to be 3 feet away.

(4) *Clearance over roofs.* Conductors shall have a clearance of not less than 8 feet from the highest point of roofs over which they pass, except that

(i) Where the voltage between conductors is 300 volts or less and the roof has a slope of not less than 4 inches in 12, the clearance from roofs shall be at least 3 feet, or

(ii) Where the voltage between conductors is 300 volts or less and the conductors do not pass over more than 4 feet of the overhang portion of the roof and they are terminated at a through-the-roof raceway or approved support, the clearance from roofs shall be at least 18 inches.

(5) *Location of outdoor lamps.* Lamps for outdoor lighting shall be located below all live conductors, transformers, or other electric equipment, unless such equipment is controlled by a disconnecting means that can be locked in the open position or unless adequate clearances or other safeguards are provided for relamping operations.

(d) *Services. (1) Disconnecting means. (i) General.* Means shall be provided to disconnect all conductors in a building or other structure from the service-entrance conductors. The disconnecting means shall plainly indicate whether it is in the open or closed position and shall be installed at a readily accessible location nearest the point of entrance of the service-entrance conductors.

(ii) *Simultaneous opening of poles.* Each service disconnecting means shall simultaneously disconnect all ungrounded conductors.

(2) *Services over 600 volts, nominal.* The following additional requirements apply to services over 600 volts, nominal.

(i) *Guarding.* Service-entrance conductors installed as open wires shall be guarded to make them accessible only to qualified persons.

(ii) *Warning signs.* Signs warning of high voltage shall be posted where other than qualified employees might come in contact with live parts.

(e) *Overcurrent protection. (1) 600 volts, nominal, or less.* The following requirements apply to overcurrent protection of circuits rated 600 volts, nominal, or less.

(i) *Protection of conductors and equipment.* Conductors and equipment shall be protected from overcurrent in accordance with their ability to safely conduct current.

(ii) *Grounded conductors.* Except for motor running overload protection, overcurrent devices may not interrupt the continuity of the grounded conductor unless all conductors of the circuit are opened simultaneously.

(iii) *Disconnection of fuses and thermal cutouts.* Except for service fuses, all cartridge fuses which are accessible to other than qualified persons and all fuses and thermal cutouts on circuits over 150 volts to ground shall be provided with disconnecting means. This disconnecting means shall be installed so that the fuse or thermal cutout can be disconnected from its supply without disrupting service to equipment and circuits unrelated to those protected by the overcurrent device.

(iv) *Location in or on premises.* Overcurrent devices shall be readily accessible to each employee or authorized building management personnel. These overcurrent devices may not be located where they will be exposed to physical damage nor in the vicinity of easily ignitible material.

(v) *Arcing or suddenly moving parts.* Fuses and circuit breakers shall be so located or shielded that employees will not be burned or otherwise injured by their operation.

(vi) *Circuit breakers.* (*a*) Circuit breakers shall clearly indicate whether they are in the open (off) or closed (on) position.

(*b*)Where circuit breaker handles on switchboards are operated vertically rather than horizontally or rotationally, the up position of the handle shall be the closed (on) position. (See § 1910.302(b)(3).)

(*c*) If used as switches in 120-volt, fluorescent lighting circuits, circuit breakers shall be approved for the purpose and marked "SWD." (See § 1910.302(b)(3).)

(2) *Over 600 volts, nominal.* Feeders and branch circuits over 600 volts, nominal, shall have short-circuit protection.

(f) *Grounding.* Paragraphs (f)(1) through (f)(7) of this section contain grounding requirements for systems, circuits, and equipment.

(1) *Systems to be grounded.* The following systems which supply premises wiring shall be grounded:

(i) All 3-wire DC systems shall have their neutral conductor grounded.

(ii) Two-wire DC systems operating at over 50 volts through 300 volts between conductors shall be grounded unless:

(*a*) They supply only industrial equipment in limited areas and are equipped with a ground detector; or

(*b*) They are rectifier-derived from an AC system complying with paragraphs (f)(1)(iii), (f)(1)(v), and (f)(1)(v) of this section; or

(*c*) They are fire-protective signaling circuits having a maximum current of 0.030 amperes.

(iii) AC circuits of less than 50 volts shall be grounded if they are installed as overhead conductors outside of buildings or if they are supplied by transformers and the transformer primary supply system is ungrounded or exceeds 150 volts to ground.

(iv) AC systems of 50 volts to 1000 volts shall be grounded under any of the following conditions, unless exempted by paragraph (f)(1)(v) of this section:

(*a*) If the system can be so grounded that the maximum voltage to ground on the ungrounded conductors does not exceed 150 volts;

(*b*) If the system is nominally rated 480Y/277 volt, 3-phase, 4-wire in which the neutral is used as a circuit conductor;

(*c*) If the system is nominally rated 240/120 volt, 3-phase, 4-wire in which the midpoint of one phase is used as a circuit conductor; or

(*d*) If a service conductor is uninsulated.

(v) AC systems of 50 volts to 1000 volts are not required to be grounded under any of the following conditions:

(*a*) If the system is used exclusively to supply industrial electric furnaces for melting, refining, tempering, and the like.

(*b*) If the system is separately derived and is used exclusively for rectifiers supplying only adjustable speed industrial drives.

(*c*) If the system is separately derived and is supplied by a transformer that has a primary voltage rating less than 1000 volts, provided all of the following conditions are met:

(*1*) The system is used exclusively for control circuits,

(*2*) The conditions of maintenance and supervision assure that only qualified persons will service the installation,

(*3*) Continuity of control power is required, and

(*4*) Ground detectors are installed on the control system.

(*d*) If the system is an isolated power system that supplies circuits in health care facilities.

(2) *Conductors to be grounded.* For AC premises wiring systems the identified conductor shall be grounded.

(3) *Grounding connections.* (i) For a grounded system, a grounding electrode conductor shall be used to connect both the equipment grounding conductor and the grounded circuit conductor to the grounding electrode. Both the equipment grounding conductor and the grounding electrode conductor shall be connected to the grounded circuit conductor on the supply side of the service disconnecting means, or on the supply side of the system disconnecting means or overcurrent devices if the system is separately derived.

(ii) For an ungrounded service-supplied system, the equipment grounding conductor shall be connected to the grounding electrode conductor at the service equipment. For an ungrounded separately derived system, the equipment grounding conductor shall be connected to the grounding electrode conductor at, or ahead of, the system disconnecting means or overcurrent devices.

(iii) On extensions of existing branch circuits which do not have an equipment grounding conductor, grounding-type receptacles may be grounded to a grounded cold water pipe near the equipment.

(4) *Grounding path.* The path to ground from circuits, equipment, and enclosures shall be permanent and continuous.

(5) *Supports, enclosures, and equipment to be grounded.*—(i) *Supports and enclosures for conductors.* Metal cable trays, metal raceways, and metal enclosures for conductors shall be grounded, except that:

(*a*) Metal enclosures such as sleeves that are used to protect cable assemblies from physical damage need not be grounded; or

(*b*) Metal enclosures for conductors added to existing installations of open wire, knob-and-tube wiring, and nonmetallic-sheathed cable need not be grounded if all of the following conditions are met: (1) runs are less than 25 feet; (2) enclosures are free from probable contact with ground, grounded metal, metal laths, or other conductive materials; and (3) enclosures are guarded against employee contact.

(ii) *Service equipment enclosures.* Metal enclosures for service equipment shall be grounded.

(iii) *Frames of ranges and clothes dryers.* Frames of electric ranges, wall-mounted ovens, counter-mounted cooking units, clothes dryers, and metal outlet or junction boxes which are part of the circuit for these appliances shall be grounded.

(iv) *Fixed equipment.* Exposed non-current-carrying metal parts of fixed equipment which may become energized shall be grounded under any of the following conditions:

(*a*) If within 8 feet vertically or 5 feet horizontally of ground or grounded metal objects and subject to employee contact.

(*b*) If located in a wet or damp location and not isolated.

(*c*) If in electrical contact with metal.

(*d*) If in a hazardous (classified) location.

(*e*) If supplied by a metal-clad, metal-sheathed, or grounded metal raceway wiring method.

(*f*) If equipment operates with any terminal at over 150 volts to ground; however, the following need not be grounded:

(*1*) Enclosures for switches or circuit breakers used for other than service equipment and accessible to qualified persons only;

(*2*) Metal frames of electrically heated appliances which are permanently and effectively insulated from ground; and

(*3*) The cases of distribution apparatus such as transformers and capacitors mounted on wooden poles at a height exceeding 8 feet above ground or grade level.

(v) *Equipment connected by cord and plug.* Under any of the conditions described in paragraphs (f)(5)(v)(*a*) through (f)(5)(v)(*c*) of this section, exposed non-current-carrying metal parts of cord- and plug-connected equipment which may become energized shall be grounded.

(*a*) If in hazardous (classified) locations (see § 1910.306).

(*b*) If operated at over 150 volts to ground, except for guarded motors and metal frames of electrically heated appliances if the appliance frames are permanently and effectively insulated from ground.

(*c*) If the equipment is of the following types:

(*1*) Refrigerators, freezers, and air conditioners;

(*2*) Clothes-washing, clothes-drying and dishwashing machines, sump pumps, and electrical aquarium equipment;

(*3*) Hand-held motoroperated tools;

(*4*) Motoroperated appliances of the following types: hedge clippers, lawn mowers, snow blowers, and wet scrubbers;

(*5*) Cord- and plug-connected appliances used in damp or wet locations or by employees standing on the ground or on metal floors or working inside of metal tanks or boilers;

(*6*) Portable and mobile X-ray and associated equipment;

(*7*) Tools likely to be used in wet and conductive locations; and

(*8*) Portable hand lamps.

Tools likely to be used in wet and conductive locations need not be grounded if supplied through an isolating transformer with an ungrounded secondary of not over 50 volts. Listed or labeled portable tools and appliances protected by an approved system of double insulation, or its equivalent, need not be grounded. If such a system is employed, the equipment shall be distinctively marked to indicate that the tool or appliance utilizes an approved system of double insulation.

(vi) *Nonelectrical equipment.* The metal parts of the following nonelectrical equipment shall be grounded: frames and tracks of electrically operated cranes; frames of nonelectrically driven elevator cars to which electric conductors are attached; hand operated metal shifting ropes or cables of electric elevators, and metal partitions, grill work, and similar metal enclosures around equipment of over 750 volts between conductors.

(6) *Methods of grounding fixed equipment.* (i) Non-current-carrying metal parts of fixed equipment, if required to be grounded by this subpart, shall be grounded by an equipment grounding conductor which is contained within the same raceway, cable, or cord, or runs with or encloses the circuit conductors. For DC circuits only, the equipment grounding conductor may be run separately from the circuit conductors.

(ii) Electric equipment shall be considered to be effectively grounded if it is secured to, and in electrical contact with, a metal rack or structure that is provided for its support and the metal rack or structure is grounded by the method specified for the non-current-carrying metal parts of fixed equipment in paragraph (f)(6)(i) of this section. For installations made before April 16, 1981, only, electric equipment shall be also considered to be effectively grounded if it is secured to, and in metallic contact with, the grounded structural metal frame of a building. Metal car frames supported by metal hoisting cables attached to or running over metal sheaves or drums of grounded elevator machines are also considered to be effectively grounded.

(7) *Grounding of systems and circuits of 1000 volts and over (high voltage.).*— (i) *General.* If high voltage systems are grounded, they shall comply with all applicable provisions of paragraphs (f)(1) through (f)(6) of this section as supplemented and modified by this paragraph (f)(7).

(ii) *Grounding of systems supplying portable or mobile equipment.* (See § 1910.302(b)(3).) Systems supplying portable or mobile high voltage equipment, other than substations installed on a temporary basis, shall comply with the following:

(*a*) Portable and mobile high voltage equipment shall be supplied from a system having its neutral grounded through an impedance. If a delta-connected high voltage system is used to supply the equipment, a system neutral shall be derived.

(*b*) Exposed non-current-carrying metal parts of portable and mobile equipment shall be connected by an equipment grounding conductor to the point at which the system neutral impedance is grounded.

(*c*) Ground-fault detection and relaying shall be provided to automatically de-energize any high voltage system component which has developed a ground fault. The continuity of the equipment grounding conductor shall be continuously monitored so as to de-energize automatically the high voltage feeder to the portable equipment upon loss of continuity of the equipment grounding conductor.

(*d*) The grounding electrode to which the portable or mobile equipment system neutral impedance is connected shall be isolated from and separated in the ground by at least 20 feet from any other system or equipment grounding electrode, and there shall be no direct connection between the grounding electrodes, such as buried pipe, fence, etc.

(iii) *Grounding of equipment.* All non-current-carrying metal parts of portable equipment and fixed equipment including their associated fences, housings, enclosures, and supporting structures shall be grounded. However, equipment which is guarded by location and isolated from ground need not be grounded. Additionally, pole-mounted distribution apparatus at a height exceeding 8 feet above ground or grade level need not be grounded.

§ 1910.305 Wiring methods, components, and equipment for general use.

(a) *Wiring methods.* The provisions of this section do not apply to the conductors that are an integral part of factory-assembled equipment.

(1) *General requirements.*—(i) *Electrical continuity of metal raceways and enclosures.* Metal raceways, cable armor, and othe metal enclosures for conductors shall be metallically joined together into a continuous electric conductor and shall be so connected to all boxes, fittings, and cabinets as to provide effective electrical continuity.

(ii) *Wiring in ducts.* No wiring systems of any type shall be installed in ducts used to transport dust, loose stock or flammable vapors. No wiring system of any type may be installed in any duct used for vapor removal or for ventilation of commercial-type cooking equipment, or in any shaft containing only such ducts.

(2) *Temporary wiring.* Temporary electrical power and lighting wiring methods may be of a class less than would be required for a permanent installation. Except as specifically modified in this paragraph, all other requirements of this subpart for permanent wiring shall apply to temporary wiring installations.

(i) *Uses permitted, 600 volts, nominal, or less.* Temporary electrical power and lighting installations 600 volts, nominal, or less may be used only:

(*a*) During and for remodeling, maintenance, repair, or demolition of buildings, structures, or equipment, and similar activities;

(*b*) For experimental or development work, and

(*c*) For a period not to exceed 90 days for Christmas decorative lighting, carnivals, and similar purposes.

(ii) *Uses permitted, over 600 volts, nominal.* Temporary wiring over 600 volts, nominal, may be used only during periods of tests, experiments, or emergencies.

(iii) *General requirements for temporary wiring.—(a)* Feeders shall originate in an approval distribution center. The conductors shall be run as multiconductor cord or cable assemblies, or, where not subject to physical damage, they may be run as open conductors on insulators not more than 10 feet apart.

(*b*) Branch circuits shall originate in an approved power outlet or panelboard. Conductors shall be multiconductor cord or cable assemblies or open conductors. If run as open conductors they shall be fastened at ceiling height every 10 feet. No branch-circuit conductor may be laid on the floor. Each branch circuit that supplies receptacles or fixed equipment shall contain a separate equipment grounding conductor if run as open conductors.

(*c*) Receptacles shall be of the grounding type. Unless installed in a complete metallic raceway, each branch circuit shall contain a separate equipment grounding conductor and all receptacles shall be electrically connected to the grounding conductor.

(*d*) No bare conductors nor earth returns may be used for the wiring of any temporary circuit.

(*e*) Suitable disconnecting switches or plug connectors shall be installed to permit the disconnection of all ungrounded conductors of each temporary circuit.

(*f*) Lamps for general illumination shall be protected from accidential contact or breakage. Protection shall be provided by elevation of at least 7 feet from normal working surface or by a suitable fixture of lampholder with a guard.

(*g*) Flexible cords and cables shall be protected from accidental damage. Sharp corners and projections shall be avoided. Where passing through doorways or other pinch points, flexible cords and cables shall be provided with protection to avoid damage.

(3) *Cable trays.* (i) *Uses permitted. (a)* Only the following may be installed in cable tray systems:

(*1*) Mineral-insulated metal-sheathed cable (Type MI);

(*2*) Armored cable (Type AC);

(*3*) Metal-clad cable (Type MC);

(*4*) Power-limited tray cable (Type PLTC);

(*5*) Nonmetallic-sheathed cable (Type NM or NMC);

(*6*) Shielded Nonmetallic-sheathed cable (Type SNM);

(*7*) Multiconductor service-entrance cable (Type SE or USE);

(*8*) Multiconductor underground feeder and branch-circuit cable (Type UF);

(*9*) Power and control tray cable (Type TC);

(*10*) Other factory-assembled, multiconductor control, signal, or power cables which are specifically approved for installation in cable trays; or

(*11*) Any approved conduit or raceway with its contained conductors.

(*b*) In industrial establishments only, where conditions of maintenance and supervision assure that only qualified persons will service the installed cable tray system, the following cables may also be installed in ladder, ventilated trough, or 4 inch ventilated channel-type cable trays:

(*1*) Single conductor cables which are 250 MCM or larger and are Types RHH, RHW, MV, USE, or THW, and 250 MCM or larger single conductor cables if specifically approved for installation in cable trays. Where exposed to direct rays of the sun, cables shall be sunlight-resistant.

(*2*) Type MV cables, where exposed to direct rays of the sun, shall be sunlight-resistant.

(*c*) Cable trays in hazardous (classified) locations shall contain only the cable types permitted in such locations.

(ii) *Uses not permitted.* Cable tray systems may not be used in hoistways or where subjected to severe physical damage.

(4) *Open wiring on insulators.*—(i) *Uses permitted.* Open wiring on insulators is only permitted on systems of 600 volts, nominal, or less for industrial or agricultural establishments and for services.

(ii) *Conductor supports.* Conductors shall be rigidly supported on noncombustible, nonabsorbent insulating materials and may not contact any other objects.

(iii) *Flexible nonmetallic tubing.* In dry locations where not exposed to severe physical damage, conductors may be separately enclosed in flexible nonmetallic tubing. The tubing shall be in continuous lengths not exceeding 15 feet and secured to the surface by straps at intervals not exceeding 4 feet 6 inches.

(iv) *Through walls, floors, wood cross members, etc.* Open conductors shall be separated from contact with walls, floors, wood cross members, or partitions through which they pass by tubes or bushings of noncombustible, nonabsorbent insulating material. If the bushing is shorter than the hole, a waterproof sleeve of nonconductive material shall be inserted in the hole and an insulating bushing slipped into the sleeve at each end in such a manner as to keep the conductors absolutely out of contact with the sleeve. Each conductor shall be carried through a separate tube or sleeve.

(v) *Protection from physical damage.* Conductors within 7 feet from the floor are considered exposed to physical damage. Where open conductors cross ceiling joints and wall studs and are exposed to physical damage, they shall be protected.

(b) *Cabinets, boxes, and fittings.*—(1) *Conductors entering boxes, cabinets, or fittings.* Conductors entering boxes, cabinets, or fittings shall be protected from abrasion, and openings through which conductors enter shall be effectively closed. Unused openings in cabinets, boxes, and fittings shall be also effectively closed.

(2) *Covers and canopies.* All pull boxes, junction boxes, and fittings shall be provided with covers approved for the purpose. If metal covers are used they shall be grounded. In completed installations each outlet box shall have

a cover, faceplate, or fixture canopy. Covers of outlet boxes having holes through which flexible cord pendants pass shall be provided with bushings designed for the purpose or shall have smooth, well-rounded surfaces on which the cords may bear.

(3) *Pull and junction boxes for systems over 600 volts, nominal.* In addition to other requirements in this section for pull and junction boxes, the following shall apply to these boxes for systems over 600 volts, nominal:

(i) Boxes shall provide a complete enclosure for the contained conductors or cables.

(ii) Boxes shall be closed by suitable covers securely fastened in place. Underground box covers that weigh over 100 pounds meet this requirement. Covers for boxes shall be permanently marked "HIGH VOLTAGE." The marking shall be on the outside of the box cover and shall be readily visible and legible.

(c) *Switches.*—(1) *Knife switches.* Single-throw knife switches shall be so connected that the blades are dead when the switch is in the open position. Single-throw knife switches shall be so placed that gravity will not tend to close them. Single-throw knife switches approved for use in the inverted position shall be provided with a locking device that will ensure that the blades remain in the open position when so set. Double-throw knife switches may be mounted so that the throw will be either vertical or horizontal. However, if the throw is vertical a locking device shall be provided to ensure that the blades remain in the open position when so set.

(2) *Faceplates for flush-mounted snap switches.* Flush snap switches that are mounted in ungrounded metal boxes and located within reach of conducting floors or other conducting surfaces shall be provided with faceplates of nonconducting, noncombustible material.

(d) *Switchboards and panelboards.* Switchboards that have any exposed live parts shall be located in permanently dry locations and accessible only to qualified persons. Panelboards shall be mounted in cabinets, cutout boxes, or enclosures approved for the purpose and shall be dead front. However, panelboards other than the dead front externally-operable type are permitted where accessible only to qualified persons. Exposed blades of knife switches shall be dead when open.

(e) *Enclosures for damp or wet locations.* (1) Cabinets, cutout boxes, fittings, boxes, and panelboard enclosures in damp or wet locations shall be installed so as to prevent moisture or water from entering and accumulating within the enclosures. In wet locations the enclosures shall be weatherproof.

(2) Switches, circuit breakers, and switchboards installed in wet locations shall be enclosed in weatherproof enclosures.

(f) *Conductors for general wiring.* All conductors used for general wiring shall be insulated unless otherwise permitted in this Subpart. The conductor insulation shall be of a type that is approved for the voltage, operating temperature, and location of use. Insulated conductors shall be distinguishable by appropriate color or other suitable means as being grounded conductors, ungrounded conductors, or equipment grounding conductors.

(g) *Flexible cords and cables.*—(1) *Use of flexible cords and cables.* (i) Flexible cords and cables shall be approved and suitable for conditions of use and location. Flexible cords and cables shall be used only for:

(*a*) Pendants;

(*b*) Wiring of fixtures;

(*c*) Connection of portable lamps or appliances;

(*d*) Elevator cables;

(*e*) Wiring of cranes and hoists;

(*f*) Connection of stationary equipment to facilitate their frequent interchange;

(*g*) Prevention of the transmission of noise or vibration;

(*h*) Appliances where the fastening means and mechanical connections are designed to permit removal for maintenance and repair; or

(*i*) Data processing cables approved as a part of the data processing system.

(ii) If used as permitted in paragraphs (g)(1)(i)(*c*), (g)(1)(i)(*f*), or (g)(1)(i)(*h*) of this section, the flexible cord shall be equipped with an attachment plug and shall be energized from an approved receptacle outlet.

(iii) Unless specifically permitted in paragraph (g)(1)(i) of this section, flexible cords and cables may not be used:

(*a*) As a substitute for the fixed wiring of a structure;

(*b*) Where run through holes in walls, ceilings, or floors;

(*c*) Where run through doorways, windows, or similar openings;

(*d*) Where attached to building surfaces; or

(*e*) Where concealed behind building walls, ceilings, or floors.

(iv) Flexible cords used to show windows and showcases shall be Type S, SO, SJ, SJO, ST, STO, SJT, SJTO, or AFS except for the wiring of chain-supported lighting fixtures and supply cords for portable lamps and other merchandise being displayed or exhibited.

(2) *Identification, splices, and terminations.*

(i) A conductor of a flexible cord or cable that is used as a grounded conductor or an equipment grounding conductor shall be distinguishable from other conductors. Types SJ, SJO, SJT, SJTO, S, SO, ST, and STO shall be durably marked on the surface with the type designation, size, and number of conductors.

(ii) Flexible cords shall be used only in continuous lengths without splice or tap. Hard service flexible cords No. 12 or larger may be repaired if spliced so that the splice retains the insulation, outer sheath properties, and usage characteristics of the cord being spliced.

(iii) Flexible cords shall be connected to devices and fittings so that strain relief is provided which will prevent pull from being directly transmitted to joints or terminal screws.

(h) *Portable cables over 600 volts, nominal.* Multiconductor portable cable for use in supplying power to portable or mobile equipment at over 600 volts, nominal, shall consist of No. 8 or larger conductors employing flexible stranding. Cables operated at over 2,000 volts shall be shielded for the purpose of confining the voltage stresses to the insulation. Grounding conductors shall be provided. Connectors for these cables shall be of a locking type with provisions to prevent their opening or closing while energized. Strain relief shall be provided at connections and terminations. Portable cables may not be operated with splices unless the splices are of the permanent molded, vulcanized, or other approved type. Termination enclosures shall be suitably marked with a high voltage hazard warning, and terminations shall be accessible only to authorized and qualified personnel.

(i) *Fixture wires.*—(1) *General.* Fixture wires shall be approved for the voltage, temperature, and location of use. A fixture wire which is used as a grounded conductor shall be identified.

(2) *Uses permitted.* Fixture wires may be used:

(i) For installation in lighting fixtures and in similar equipment where enclosed or protected and not subject to bending or twisting in use; or

(ii) For connecting lighting fixtures to the branch-circuit conductors supplying the fixtures.

(3) *Uses not permitted.* Fixture wires may not be used as branch-circuit conductors except as permitted for Class 1 power limited circuits.

(j) *Equipment for general use.*—(1) *Lighting fixtures, lampholders, lamps, and receptacles.* (i) Fixtures,

lampholders, lamps, rosettes, and receptacles may have no live parts normally exposed to employee contact. However, rosettes and cleat-type lampholders and receptacles located at least 8 feet above the floor may have exposed parts.

(ii) Handlamps of the portable type supplied through flexible cords shall be equipped with a handle of molded composition or other material approved for the purpose, and a substantial guard shall be attached to the lampholder or the handle.

(iii) Lampholders of the screw-shell type shall be installed for use as lampholders only. Lampholders installed in wet or damp locations shall be of the weatherproof type.

(iv) Fixtures installed in wet or damp locations shall be approved for the purpose and shall be so constructed or installed that water cannot enter or accumulate in wireways, lampholders, or other electrical parts.

(2) *Receptacles, cord connectors, and attachment plugs (caps).* (i) Receptacles, cord connectors, and attachment plugs shall be constructed so that no receptacle or cord connector will accept an attachment plug with a different voltage or current rating than that for which the device is intended. However, a 20-ampere T-slot receptacle or cord connector may accept a 15-ampere attachment plug of the same voltage rating.

(ii) A receptacle installed in a wet or damp location shall be suitable for the location.

(3) *Appliances.*—(i) Appliances, other than those in which the current-carrying parts at high temperatures are necessarily exposed, may have no live parts normally exposed to employee contact.

(ii) A means shall be provided to disconnect each appliance.

(iii) Each appliance shall be marked with its rating in volts and amperes or volts and watts.

(4) *Motors.* This paragraph applies to motors, motor circuits, and controllers.

(i) *In sight from.* If specified that one piece of equipment shall be "in sight from" another piece of equipment, one shall be visible and not more than 50 feet from the other.

(ii) *Disconnecting means.* (*a*) A disconnecting means shall be located in sight from the controller location. However, a single disconnecting means may be located adjacent to a group of coordinated controllers mounted adjacent to each other on a multi-motor continuous process machine. The controller disconnecting means for motor branch circuits over 600 volts, nominal, may be out of sight of the controller, if the controller is marked with a warning label giving the location and identification of the disconnecting means which is to be locked in the open position.

(*b*) The disconnecting means shall disconnect the motor and the controller from all ungrounded supply conductors and shall be so designed that no pole can be operated independently.

(*c*) If a motor and the driven machinery are not in sight from the controller location, the installation shall comply with one of the following conditions:

(*1*) The controller disconnecting means shall be capable of being locked in the open position.

(*2*) A manually operable switch that will disconnect the motor from its source of supply shall be placed in sight from the motor location.

(*d*) The disconnecting means shall plainly indicate whether it is in the open (off) or closed (on) position.

(*e*) The disconnecting means shall be readily accessible. If more than one disconnect is provided for the same equipment, only one need be readily accessible.

(*f*) An individual disconnecting means shall be provided for each motor, but a single disconnecting means may be used for a group of motors under any one of the following conditions:

(*1*) If a number of motors drive special parts of a single machine or piece of apparatus, such as metal and woodworking machines, cranes, and hoists;

(*2*) If a group of motors is under the protection of one set of branch-circuit protective devices; or

(*3*) If a group of motors is in a single room in sight from the location of the disconnecting means.

(iii) *Motor overload, short-circuit, and ground-fault protection.* Motors, motor-control apparatus, and motor branch-circuit conductors shall be protected against overheating due to motor overloads or failure to start, and against short-circuits or ground faults. These provisions shall not require overload protection that will stop a motor where a shutdown is likely to introduce additional or increased hazards, as in the case of fire pumps, or where continued operation of a motor is necessary for a safe shutdown of equipment or process and motor overload sensing devices are connected to a supervised alarm.

(iv) *Protection of live parts—all voltages.*—(*a*) Stationary motors having commutators, collectors, and brush rigging located inside of motor end brackets and not conductively connected to supply circuits operating at more than 150 volts to ground need not have such parts guarded. Exposed live parts of motors and controllers operating at 50 volts or more between terminals shall be guarded against accidental contact by any of the following:

(*1*) By installation in a room or enclosure that is accessible only to qualified persons;

(*2*) By installation on a suitable balcony, gallery, or platform, so elevated and arranged as to exclude unqualified persons; or

(*3*) By elevation 8 feet or more above the floor.

(*b*) Where live parts of motors or controllers operating at over 150 volts to ground are guarded against accidental contact only by location, and where adjustment or other attendance may be necessary during the operation of the apparatus, suitable insulating mats or platforms shall be provided so that the attendant cannot readily touch live parts unless standing on the mats or platforms.

(5) *Transformers.*—(i) The following paragraphs cover the installation of all transformers except the following:

(*a*) Current transformers;

(*b*) Dry-type transformers installed as a component part of other apparatus;

(*c*) Transformers which are an integral part of an X-ray, high frequency, or electrostatic-coating apparatus;

(*d*) Transformers used with Class 2 and Class 3 circuits, sign and outline lighting, electric discharge lighting, and power-limited fire-protective signalling circuits; and

(*e*) Liquid-filled or dry-type transformers used for research, development, or testing, where effective safeguard arrangements are provided.

(ii) The operating voltage of exposed live parts of transformer installations shall be indicated by warning signs or visible markings on the equipment or structure.

(iii) Dry-type, high fire point liquid-insulated, and askarel-insulated transformers installed indoors and rated over 35kV shall be in a vault.

(iv) If they present a fire hazard to employees, oil-insulated transformers installed indoors shall be in a vault.

(v) Combustible material, combustible buildings and parts of buildings, fire escapes, and door and window openings shall be safeguarded from fires which may originate in oil-insulated transformers attached to or adjacent to a building or combustible material.

(vi) Transformer vaults shall be constructed so as to contain fire and combustible liquids within the vault and to prevent unauthorized access. Locks and latches shall be so arranged that a

vault door can be readily opened from the inside.

(vii) Any pipe or duct system foreign to the vault installation may not enter or pass through a transformer vault.

(viii) Materials may not be stored in transformer vaults.

(6) *Capacitors.* (i) All capacitors, except surge capacitors or capacitors included as a component part of other apparatus, shall be provided with an automatic means of draining the stored charge after the capacitor is disconnected from its source of supply.

(ii) Capacitors rated over 600 volts, nominal, shall comply with the following additional requirements:

(a) Isolating or disconnecting switches (with no interrupting rating) shall be interlocked with the load interrupting device or shall be provided with prominently displayed caution signs to prevent switching load current.

(b) For series capacitors (see § 1910.302(b)(3)), the proper switching shall be assured by use of at least one of the following:

(1) Mechanically sequenced isolating and bypass switches,

(2) Interlocks, or

(3) Switching procedure prominently displayed at the switching location.

(7) Storage battiers. Provisions shall be made for sufficient diffusion and ventilation of gases from storage batteries to prevent the accumulation of explosive mixtures.

§ 1910.306 Specific purpose equipment and installations.

(a) *Electric signs and outline lighting.* (1) *Disconnecting means.* Signs operated by electronic or electromechanical controllers located outside the sign shall have a disconnecting means located inside the controller enclosure or within sight of the controller location, and it shall be capable of being locked in the open position. Such disconnecting means shall have no pole that can be operated independently, and it shall open all ungrounded conductors that supply the controller and sign. All other signs, except the portable type, and all outline lighting installations shall have an externally operable disconnecting means which can open all underground conductors and is within the sight of the sign or outline lighting it controls.

(2) Doors or covers giving access to uninsulated parts of indoor signs or outline lighting exceeding 600 volts and accessible to other than qualified persons shall either be provided with interlock switches to disconnect the primary circuit or shall be so fastened that the use of other than oridinary tools will be necessary to open them.

(b) *Cranes and hoists.* This paragraph applies to the installation of electric equipment and wiring used in connection with cranes, monorail hoists, hoists, and all runways.

(1) *Disconnecting means.* A readily accessible disconnecting means shall be provided between the runway contact conductors and the power supply.

(ii) Another disconnecting means, capable of being locked in the open position, shall be provided in the leads from the runway contact conductors or other power supply on any crane or monorail hoist.

(a) If this additional disconnecting means is not readily accessible from the crane or monorail hoist operating station, means shall be provided at the operating station to open the power circuit to all motors of the crane or monorail hoist.

(b) The additional disconnect may be omitted if a monorail hoist or hand-propelled crane bridge installation meets all of the following:

(1) The unit is floor controlled;

(2) The unit is within view of the power supply disconnecting means; and

(3) No fixed work platform has been provided for servicing the unit.

(2) *Control.* A limit switch or other device shall be provided to prevent the load block from passing the safe upper limit of travel of any hoisting mechanism.

(3) *Clearance.* The dimension of the working space in the direction of access to live parts which may require examination, adjustment, servicing, or maintenance while alive shall be a minimum of 2 feet 6 inches. Where controls are enclosed in cabinets, the door(s) shall either open at least 90 degrees or be removable.

(c) *Elevators, dumbwaiters, escalators, and moving walks.* (1) *Disconnecting means.* Elevators, dumbwaiters, escalators, and moving walks shall have a single means for disconnecting all underground main power supply conductors for each unit.

(2) *Warning signs.* If interconnections between control panels are necessary for operation of the system on a multicar installation that remains energized from a source other than the disconnecting means, a warning sign shall be mounted on or adjacent to the disconnecting means. The sign shall be clearly legible and shall read "Warning—Parts of the control panel are not de-energized by this switch." (See § 1910.302(b)(3).)

(3) *Control panels.* If control panels are not located in the same space as the drive machine, they shall be located in cabinets with doors or panels capable of being locked closed.

(d) *Electric welders—disconnecting means.* (1) A disconnecting means shall be provided in the supply circuit for each motor-generator arc welder, and for each AC transformer and DC rectifier arc welder which is not equipped with a disconnect mounted as an intergral part of the welder.

(2) A switch or circuit breaker shall be provided by which each resistance welder and its control equipment can be isolated from the supply circuit. The ampere rating of this disconnecting means may not be less than the supply conductor ampacity.

(e) *Data processing systems—disconnecting means.* A disconnecting means shall be provided to disconnect the power to all electronic equipment in data processing or computer rooms. This disconnecting means shall be controlled from locations readily accessible to the operator at the principal exit doors. There shall also be a similar disconnecting means to disconnect the air conditioning system serving this area.

(f) *X-Ray equipment.* This paragraph applies to X-ray equipment for other than medical or dental use.

(1) *Disconnecting means.* (i) A disconnecting means shall be provided in the supply circuit. The disconnecting means shall be operable from a location readily accessible from the X-ray control. For equipment connected to a 120-volt branch circuit of 30 amperes or less, a grounding-type attachment plug cap and receptacle of proper rating may serve as a disconnecting means.

(ii) If more than one piece of equipment is operated from the same high-voltage circuit, each piece or each group of equipment as a unit shall be provided with a high-voltage switch or equivalent disconnecting means. This disconnecting means shall be constructed, enclosed, or located so as to avoid contact by employees with its live parts.

(2) *Control.* (i) *Radiographic and fluoroscopic types.* Radiographic and fluoroscopic-type equipment shall be effectively enclosed or shall have interlocks that de-energize the equipment automatically to prevent ready access to live current-carrying parts.

(ii) *Diffraction and irradiation types.* Diffraction- and irradiation-type equipment shall be provided with a means to indicate when it is energized unless the equipment or installation is effectively enclosed or is provided with interlocks to prevent access to live current-carrying parts during operation.

(g) *Induction and dielectric heating equipment.* (1) *Scope.* Paragraphs (g)(2) and (g)(3) of this section cover induction

and dielectric heating equipment and accessories for industrial and scientific applications, but not for medical or dental applications or for appliances.

(2) *Guarding and grounding.* (i) *Enclosures.* The converting apparatus (including the DC line) and high-frequency electric circuits (excluding the output circuits and remote-control circuits) shall be completely contained within enclosures or noncombustible material.

(ii) *Panel controls.* All panel controls shall be of dead-front construction.

(iii) *Access to internal equipment.* Where doors are used for access to voltages from 500 to 1000 volts AC or DC, either door locks or interlocks shall be provided. Where doors are used for access to voltages of over 1000 volts AC or DC, either mechanical lockouts with a disconnecting means to prevent access until voltage is removed from the cubicle, or both door interlocking and mechanical door locks, shall be provided.

(iv) *Warning labels.* "Danger" labels shall be attached on the equipment and shall be plainly visible even when doors are open or panels are removed from compartments containing voltages of over 250 volts AC or DC.

(v) *Work applicator shielding.* Protective cages or adequate shielding shall be used to guard work applicators other than induction heating coils. Induction heating coils shall be protected by insulation and/or refractory materials. Interlock switches shall be used on all hinged access doors, sliding panels, or other such means of access to the applicator. Interlock switches shall be connected in such a manner as to remove all power from the applicator when any one of the access doors or panels is open. Interlocks on access doors or panels are not required if the applicator is an induction heating coil at DC ground potential or operating at less than 150 volts AC.

(vi) *Disconnecting means.* A readily accessible disconnecting means shall be provided by which each unit of heating equipment can be isolated from its supply circuit.

(3) *Remote control.* If remote controls are used for applying power, a selector switch shall be provided and interlocked to provide power from only one control point at a time. Switches operated by foot pressure shall be provided with a shield over the contact button to avoid accidental closing of the switch.

(h) *Electrolytic cells.* (1) *Scope.* These provisions for electrolytic cells apply to the installation of the electrical components and accessory equipment or electrolytic cells, electrolytic cell lines, and process power supply for the production of aluminum, cadmium, chlorine, copper, fluorine, hydrogen peroxide, magnesium, sodium, sodium chlorate, and zinc. Cells used as a source of electric energy and for electroplating processes and cells used for production of hydrogen are not covered by these provisions.

(2) *Definitions applicable to this paragraph.*

Cell line: An assembly of electrically interconnected electrolytic cells supplied by a source of direct-current power.

Cell line attachments and auxiliary equipment: Cell line attachments and auxiliary equipment include, but are not limited to: auxiliary tanks; process piping; duct work; structural supports; exposed cell line conductors; conduits and other raceways; pumps; positioning equipment and cell cutout or by-pass electrical devices. Auxiliary equipment also includes tools, welding machines, crucibles, and other portable equipment used for operation and maintenance within the electrolytic cell line working zone. In the cell line working zone, auxiliary equipment includes the exposed conductive surfaces of ungrounded cranes and crane-mounted cell-servicing equipment.

Cell line working zone: The cell line working zone is the space envelope wherein operation or maintenance is normally performed on or in the vicinity of exposed energized surfaces of cell lines or their attachments.

Electrolytic Cells: A receptacle or vessel in which electrochemical reactions are caused by applying energy for the purpose of refining or producing usable materials.

(3) *Application.* Installations covered by paragraph (h) of this section shall comply with all applicable provisions of this subpart, except as follows:

(i) Overcurrent protection of electrolytic cell DC process power circuits need not comply with the requirements of § 1910.304(e).

(ii) Equipment located or used within the cell line working associated with the cell line DC power circuits need not comply with the provisions of § 1910.304(f).

(iii) Electrolytic cells, cell line conductors, cell line attachments, and the wiring of auxiliary equipment and devices within the cell line working zone need not comply with the provisions of §§ 1910.303, and 1910.304 (b) and (c).

(4) *Disconnecting means.* (i) If more than one DC cell line process power supply serves the same cell line, a disconnecting means shall be provided on the cell line circuit side of each power supply to disconnect it from the cell line circuit.

(ii) Removable links or removable conductors may be used as the disconnecting means.

(5) *Portable electric equipment.* (i) The frames and enclosures of portable electric equipment used within the cell line working zone may not be grounded. However, these frames and enclosures may be grounded if the cell line circuit voltage does not exceed 200 volts DC or if the frames are guarded.

(ii) Ungrounded portable electric equipment shall be distinctively marked and may not be interchangeable with grounded portable electric equipment.

(6) *Power supply circuits and receptacles for portable electric equipment.* (i) Circuits supplying power to ungrounded receptacles for hand-held, cord- and plug-connected equipment shall be electrically isolated from any distribution system supplying areas other than the cell line working zone and shall be ungrounded. Power for these circuits shall be supplied through isolating transformers.

(ii) Receptacles and their mating plugs for ungrounded equipment may not have provision for a grounding conductor and shall be of a configuration which prevents their use for equipment required to be grounded.

(iii) Receptacles on circuits supplied by an isolating transformer with an ungrounded secondary shall have a distinctive configuration, shall be distinctively marked, and may not be used in any other location in the plant.

(7) *Fixed and portable electric equipment.* (i) AC systems supplying fixed and portable electric equipment within the cell line working zone need not be grounded.

(ii) Exposed conductive surfaces, such as electric equipment housing, cabinets, boxes, motors, raceways and the like that are within the cell line working zone need not be grounded.

(iii) Auxiliary electrical devices, such as motors, transducers, sensors, control devices, and alarms, mounted on an electrolytic cell or other energized surface, shall be connected by any of the following means:

(*a*) Multiconductor hard usage or extra hard usage flexible cord;

(*b*) Wire or cable in suitable raceways; or

(*c*) Exposed metal conduit, cable tray, armored cable, or similar metallic systems installed with insulating breaks such that they will not cause a potentially hazardous electrical condition.

(iv) Fixed electric equipment may be bonded to the energized conductive surfaces of the cell line, its attachments, or auxiliaries. If fixed electric equipment is mounted on an energized conductive

surface, it shall be bonded to that surface.

(8) *Auxiliary nonelectric connections.* Auxiliary nonelectric connections, such as air hoses, water hoses, and the like, to an electrolytic cell, its attachments, or auxiliary equipment may not have continuous conductive reinforcing wire, armor, braids, and the like. Hoses shall be of a nonconductive material.

(9) *Cranes and hoists.* (i) The conductive surfaces of cranes and hoists that enter the cell line working zone need not be grounded. The portion of an overhead crane or hoist which contacts an energized electrolytic cell or energized attachments shall be insulated from ground.

(ii) Remote crane or hoist controls which may introduce hazardous electrical conditions into the cell line working zone shall employ one or more of the following systems:

(*a*) Insulated and ungrounded control circuit;

(*b*) Nonconductive rope operator;

(*c*) Pendant pushbutton with nonconductive supporting means and having nonconductive surfaces or ungrounded exposed conductive surfaces; or

(*d*) Radio.

(i) *Electrically driven or controlled irrigation machines.* (See § 1910.302(b)(3).)

(1) *Lightning protection.* If an electrically driven or controlled irrigation machine has a stationary point, a driven ground rod shall be connected to the machine at the stationary point for lightning protection.

(2) *Disconnecting means.* The main disconnecting means for a center pivot irrigation machine shall be located at the point of connection of electrical power to the machine and shall be readily accessible and capable of being locked in the open position. A disconnecting means shall be provided for each motor and controller.

(j) *Swimming pools, fountains, and similar installations.* (1) *Scope.* Paragraphs (j)(2) through (j)(5) of this section apply to electric wiring for and equipment in or adjacent to all swimming, wading, therapeutic, and decorative pools and fountains, whether permanently installed or storable, and to metallic auxiliary equipment, such as pumps, filters, and similar equipment. Therapeutic pools in health care facilities are exempt from these provisions.

(2) *Lighting and receptacles.* (i) *Receptacles.* A single receptacle of the locking and grounding type that provides power for a permanently installed swimming pool recirculating pump motor may be located not less than 5 feet from the inside walls of a pool. All other receptacles on the property shall be located at least 10 feet from the inside walls of a pool. Receptacles which are located within 15 feet of the inside walls of the pool shall be protected by ground-fault circuit interrupters.

Note.—In determining these dimensions, the distance to be measured is the shortest path the supply cord of an appliance connected to the receptacle would follow without piercing a floor, wall, or ceiling of a building or other effective permanent barrier.

(ii) *Lighting fixtures and lighting outlets.* (*a*) Unless they are 12 feet above the maximum water level, lighting fixtures and lighting outlets may not be installed over a pool or over the area extending 5 feet horizontally from the inside walls of a pool. However, a lighting fixture or lighting outlet which has been installed before April 16, 1981 may be located less than 5 feet measured horizontally from the inside walls of a pool if it is at least 5 feet above the surface of the maximum water level and shall be rigidly attached to the existing structure. It shall also be protected by a ground-fault circuit interrupter installed in the branch circuit supplying the fixture.

(*b*) Unless installed 5 feet above the maximum water level and rigidly attached to the structure adjacent to or enclosing the pool, lighting fixtures and lighting outlets installed in the area extending between 5 feet and 10 feet horizontally from the inside walls of a pool shall be protected by a ground-fault circuit interrupter.

(3) *Cord- and plug-connected equipment.* Flexible cords used with the following equipment may not exceed 3 feet in length and shall have a copper equipment grounding conductor with a grounding-type attachment plug.

(i) Cord- and plug-connected lighting fixtures installed within 16 feet of the water surface of permanently installed pools.

(ii) Other cord- and plug-connected, fixed or stationary equipment used with permanently installed pools.

(4) *Underwater equipment.* (i) A ground-fault circuit interrupter shall be installed in the branch circuit supplying underwater fixtures operating at more than 15 volts. Equipment installed underwater shall be approved for the purpose.

(ii) No underwater lighting fixtures may be installed for operation at over 150 volts between conductors.

(5) *Fountains.* All electric equipment operating at more than 15 volts, including power supply cords, used with fountains shall be protected by ground-fault circuit interrupters. (See § 1910.302(b)(3).)

§ 1910.307 Hazardous (classified) locations.

(a) *Scope.* This section covers the requirements for electric equipment and wiring in locations which are classified depending on the properties of the flammable vapors, liquids or gases, or combustible dusts or fibers which may be present therein and the likelihood that a flammable or combustible concentration or quantity is present. Hazardous (classified) locations may be found in occupancies such as, but not limited to, the following: aircraft hangars, gasoline dispensing and service stations, bulk storage plants for gasoline or other volatile flammable liquids, paint-finishing process plants, health care facilities, agricultural or other facilities where excessive combustible dusts may be present, marinas, boat yards, and petroleum and chemical processing plants. Each room, section or area shall be considered individually in determining its classification. These hazardous (classified) locations are assigned six designations as follows:

Class I, Division 1
Class I, Division 2
Class II, Division 1
Class II, Division 2
Class III, Division 1
Class III, Division 2

For definitions of these locations see § 1910.399(a). All applicable requirements in this subpart shall apply to hazardous (classified) locations, unless modified by provisions of this section.

(b) *Electrical installations.* Equipment, wiring methods, and installations of equipment in classified locations shall be intrinsically safe, approved for the hazardous (classified) location, or safe for the hazardous (classified) location. Requirements for each of these options are as follows:

(1) *Intrinsically safe.* Equipment and associated wiring approved as intrinsically safe shall be permitted in any hazardous (classified) location for which it is approved.

(2) *Approved for the hazardous (classified) location.* (i) Equipment shall be approved not only for the class of location but also for the ignitible or combustible properties of the specific gas, vapor, dust, or fiber that will be present.

Note.—NFPA 70, the National Electrical Code, lists or defines hazardous gases, vapors, and dusts by "Groups" characterized by their ignitible or combustible properties.

(ii) Equipment shall be marked to show the class, group, and operating

temperature or temperature range, based on operation in a 40 degrees C ambient, for which it is approved. The temperature marking shall not exceed the ignition temperature of the specific gas or vapor to be encountered. However, the following provisions modify this marking requirement for specific equipment:

(*a*) Equipment of the non-heat-producing type, such as junction boxes, conduit, and fittings, and equipment of the heat-producting type having a maximum temperature not more than 100 degrees C (212 degrees F), need not have a marked operating temperature or temperature range.

(*b*) Fixed lighting fixtures marked for use in Class I, Division 2 locations only, need not be marked to indicate the group.

(*c*) Fixed general-purpose equipment in Class I locations, other than lighting fixtures, which is acceptable for use in Class I, Division 2 locations need not be marked with the class, group, division, or operating temperature.

(*d*) Fixed dust-tight equipment, other than lighting fixtures, which is acceptable for use in Class II, Division 2 and Class III locations need not be marked with the class, group, division, or operating temperature.

(3) *Safe for the hazardous (classified) location.* Equipment which is safe for the location shall be of a type and design which the employer demonstrates will provide protection from the hazards arising from the combustibility and flammability of vapors, liquids, gases, dusts, or fibers.

Note.—The National Electrical Code, NFPA 70, contains guidelines for determining the type and design of equipment and installations which will meet this requirement. The guidelines of this document address electric wiring, equipment, and systems installed in hazardous (classified) locations and contain specific provisions for the following: wiring methods, wiring connections; conductor insulation, flexible cords, sealing and drainage, transformers, capacitors, switches, circuit breakers, fuses, motor controllers, receptacles, attachment plugs, meters, relays, instruments, resistors, generators, motors, lighting fixtures, storage battery charging equipment, electric cranes, electric hoists and similar equipment, utilization equipment, signaling systems, alarm systems, remote control systems, local loud speaker and communication systems, ventilation piping, live parts, lightning surge protection, and grounding. Compliance with these guidelines will constitute one means, but not the only means, of compliance with this paragraph.

(c) *Conduits.* All conduits shall be threaded and shall be made wrench-tight. Where it is impractical to make a threaded joint tight, a bonding jumper shall be utilized.

(d) *Equipment in Division 2 locations.* Equipment that has been approved for a Division 1 location may be installed in a Division 2 location of the same class and group. General-purpose equipment or equipment in general-purpose enclosures may be installed in Division 2 locations if the equipment does not constitute a source of ignition under normal operating conditions.

§ 1910.308 Special systems.

(a) *Systems over 600 volts, nominal.* Paragraphs (a)(1) through (a)(4) of this section cover the general requirements for all circuits and equipment operated at over 600 volts.

(1) *Wiring methods for fixed installations.* (i) Above-ground conductors shall be installed in rigid metal conduit, in intermediate metal conduit, in cable trays, in cablebus, in other suitable raceways, or as open runs of metal-clad cable suitable for the use and purpose. However, open runs of non-metallic-sheathed cable or of bare conductors or busbars may be installed in locations accessible only to qualified persons. Metallic shielding components, such as tapes, wires, or braids for conductors, shall be grounded. Open runs of insulated wires and cables having a bare lead sheath or a braided outer covering shall be supported in a manner designed to prevent physical damage to the braid or sheath.

(ii) Conductors emerging from the ground shall be enclosed in approved raceways. (See § 1910.302(b)(3).)

(2) *Interrupting and isolating devices.* (i) Circuit breakers located indoors shall consist of metal-enclosed or fire-resistant, cell-mounted units. In locations accessible only to qualified personnel, open mounting of circuit breakers is permitted. A means of indicating the open and closed position of circuit breakers shall be provided.

(ii) Fused cutouts installed in buildings or tranformer vaults shall be of a type approved for the purpose. They shall be readily accessible for fuse replacement.

(iii) A means shall be provided to completely isolate equipment for inspection and repairs. Isolating means which are not designed to interrupt the load curent of the circuit shall be either interlocked with an approved circuit interrupter or provided with a sign warning against opening them under load.

(3) *Mobile and portable equipment.* (i) *Power cable connections to mobile machines.* A metallic enclosure shall be provided on the mobile machine for enclosing the terminals of the power cable. The enclosure shall include provisions for a solid connection for the ground wire(s) terminal to effectively ground the machine frame. The method of cable termination used shall prevent any strain or pull on the cable from stressing the electrical connections. The enclosure shall have provision for locking so only authorized qualified persons may open it and shall be marked with a sign warning of the presence of energized parts.

(ii) *Guarding live parts.* All energized switching and control parts shall be enclosed in effectively grounded metal cabinets or enclosures. Circuit breakers and protective equipment shall have the operating means projecting through the metal cabinet or enclosure so these units can be reset without locked doors being opened. Enclosures and metal cabinets shall be locked so that only authorized qualified persons have access and shall be marked with a sign warning of the presence of energized parts. Collector ring assemblies on revolving-type machines (shovels, draglines, etc.) shall be guarded.

(4) *Tunnel installations.* (i) *Application.* The provisions of this paragraph apply to installation and use of high-voltage power distribution and utilization equipment which is portable and/or mobile, such as substations, trailers, cars, mobile shovels, draglines, hoists, drills, dredges, compressors, pumps, conveyors, and underground excavators.

(ii) *Conductors.* Conductors in tunnels shall be installed in one or more of the following:

(a) Metal conduit or other metal raceway,

(b) Type MC cable, or

(c) Other approved multiconductor cable.

Conductors shall also be so located or guarded as to protect them from physical damage. Multiconductor portable cable may supply mobile equipment. An equipment grounding conductor shall be run with circuit conductors inside the metal raceway or inside the multiconductor cable jacket. The equipment grounding conductor may be insulated or bare.

(iii) *Guarding live parts.* Bare terminals of transformers, switches, motor controllers, and other equipment shall be enclosed to prevent accidental contact with energized parts. Enclosures for use in tunnels shall be drip-proof, weatherproof, or submersible as required by the environmental conditions.

(iv) *Disconnecting means.* A disconnecting means that simultaneously opens all ungrounded conductors shall be installed at each transformer or motor location.

(v) *Grounding and bonding.* All nonenergized metal parts of electric equipment and metal raceways and cable sheaths shall be effectively grounded and bonded to all metal pipes and rails at the portal and at intervals not exceeding 1000 feet throughout the tunnel.

(b) *Emergency power systems.* (1) *Scope.* The provisions for emergency systems apply to circuits, systems, and equipment intended to supply power for illumination and special loads, in the event of failure of the normal supply.

(2) *Wiring methods.* Emergency circuit wiring shall be kept entirely independent of all other wiring and equipment and may not enter the same raceway, cable, box, or cabinet with other wiring except either where common circuit elements suitable for the purpose are required, or for transferring power from the normal to the emergency source.

(3) *Emergency illumination.* Where emergency lighting is necessary, the system shall be so arranged that the failure of any individual lighting element, such as the burning out of a light bulb, cannot leave any space in total darkness.

(c) *Class 1, Class 2, and Class 3 remote control, signaling, and power-limited circuits.* (1) *Classification.* Class 1, Class 2, or Class 3 remote control, signaling, or power-limited circuits are characterized by their usage and electrical power limitation which differentiates them from light and power circuits. These circuits are classified in accordance with their respective voltage and power limitations as summarized in paragraphs (c)(1)(i) through (c)(1)(iii) of this section.

(i) *Class 1 circuits. (a)* A Class 1 power-limited circuit is supplied from a source having a rated output of not more than 30 volts and 1000 volt-amperes.

(b) A Class 1 remote control circuit or a Class 1 signaling circuit has a voltage which does not exceed 600 volts; however, the power output of the source need not be limited.

(ii) *Class 2 and Class 3 circuits. (a)* Power for Class 2 and Class 3 circuits is limited either inherently (in which no overcurrent protection is required) or by a combination of a power source and overcurrent protection.

(b) The maximum circuit voltage is 150 volts AC or DC for a Class 2 inherently limited power source, and 100 volts AC or DC for a Class 3 inherently limited power source.

(c) The maximum circuit voltage is 30 volts AC and 60 volts DC for a Class 2 power source limited by overcurrent protection, and 150 volts AC or DC for a Class 3 power source limited by overcurrent protection.

(iii) The maximum circuit voltages in paragraphs (c)(1)(i) and (c)(1)(ii) of this section apply to sinusoidal AC or continuous DC power sources, and where wet contact occurence is not likely.

(2) *Marking.* A Class 2 or Class 3 power supply unit shall be durably marked where plainly visible to indicate the class of supply and its electrical rating. (See § 1910.302(b)(3).)

(d) *Fire protective signaling systems.* (See § 1910.302(b)(3).)

(1) *Classifications.* Fire protective signaling circuits shall be classified either as non-power limited or power limited.

(2) *Power sources.* The power sources for use with fire protective signaling circuits shall be either power limited or nonlimited as follows:

(i) The power supply of non-power-limited fire protective signaling circuits shall have an output voltage not in excess of 600 volts.

(ii) The power for power-limited fire protective signaling circuits shall be either inherently limited, in which no overcurrent protection is required, or limited by a combination of a power source and overcurrent protection.

(3) *Non-power-limited conductor location.* Non-power-limited fire protective signaling circuits and Class 1 circuits may occupy the same enclosure, cable, or raceway provided all conductors are insulated for maximum voltage of any conductor within the enclosure, cable, or raceway. Power supply and fire protective signaling circuit conductors are permitted in the same enclosure, cable, or raceway only if connected to the same equipment.

(4) *Power-limited conductor location.* Where open conductors are installed, power-limited fire protective signaling circuits shall be separated at least 2 inches from conductors of any light, power, Class 1, and non-power-limited fire protective signaling circuits unless a special and equally protective method of conductor separation is employed. Cables and conductors of two or more power-limited fire protective signaling circuits or Class 3 circuits are permitted in the same cable, enclosure, or raceway. Conductors of one or more Class 2 circuits are permitted within the same cable, enclosure, or raceway with conductors of power-limited fire protective signaling circuits provided that the insulation of Class 2 circuit conductors in the cable, enclosure, or raceway is at least that needed for the power-limited fire protective signaling circuits.

(5) *Identification.* Fire protective signaling circuits shall be identified at terminal and junction locations in a manner which will prevent unintentional interference with the signaling circuit during testing and servicing. Power-limited fire protective signaling circuits shall be durably marked as such where plainly visible at terminations.

(e) *Communications systems.* (1) *Scope.* These provisions for communication systems apply to such systems as central-station-connected and non-central-station-connected telephone circuits, radio and television receiving and transmitting equipment, including community antenna television and radio distribution systems, telegraph, district messenger, and outside wiring for fire and burglar alarm, and similar central station systems. These installations need not comply with the provisions of §§ 1910.303 through 1910.308(d).

(2) *Protective devices.* (i) Communication circuits so located as to be exposed to accidental contact with light or power conductors operating at over 300 volts shall have each circuit so exposed provided with a protector approved for the purpose.

(ii) Each conductor of a lead-in from an outdoor antenna shall be provided with an antenna discharge unit or other suitable means that will drain static charges from the antenna system.

(3) *Conductor location.* (i) *Outside of buildings. (a)* Receiving distribution lead-in or aerial-drop cables attached to buildings and lead-in conductors to radio transmitters shall be so installed as to avoid the possibility of accidental contact with electric light or power conductors.

(b) The clearance between lead-in conductors and any lightning protection conductors may not be less than 6 feet.

(ii) *On poles.* Where practicable, communication conductors on poles shall be located below the light or power conductors. Communications conductors may not be attached to a crossarm that carries light or power conductors.

(iii) *Inside of buildings.* Indoor antennas, lead-ins, and other communication conductors attached as open conductors to the inside of buildings shall be located at least 2 inches from conductors of any light or power or Class 1 circuits unless a special and equally protective method of conductor separation, approved for the purpose, is employed.

(4) *Equipment location.* Outdoor metal structures supporting antennas, as well as self-supporting antennas such as vertical rods or dipole structures, shall be located as far away from overhead

conductors of electric light and power circuits of over 150 volts to ground as necessary to avoid the possibility of the antenna or structure falling into or making accidental contact with such circuits.

(5) *Grounding.* (i) *Lead-in conductors.* If exposed to contact with electric light and power conductors, the metal sheath of aerial cables entering buildings shall be grounded or shall be interrupted close to the entrance to the building by an insulating joint or equivalent device. Where protective devices are used, they shall be grounded in an approved manner.

(ii) *Antenna structures.* Masts and metal structures supporting antennas shall be permanently and effectively grounded without splice or connection in the grounding conductor.

(iii) *Equipment enclosures.* Transmitters shall be enclosed in a metal frame or grill or separated from the operating space by a barrier, all metallic parts of which are effectively connected to ground. All external metal handles and controls accessible to the operating personnel shall be effectively grounded. Unpowered equipment and enclosures shall be considered grounded where connected to an attached coaxial cable with an effectively grounded metallic shield.

§ 1910.309–§ 1910.330. [Reserved]

Safety-Related Work Practices

§ 1910.331–§ 1910.360. [Reserved]

Safety-Related Maintenance Requirements

§ 1910.361–§ 1910.380 [Reserved]

Safety Requirements for Special Equipment

§ 1910.381–§ 1910.398 [Reserved]

Definitions

§ 1910.399 Definitions applicable to this subpart.

(a) *Definitions applicable to §§ 1910.302 through 1910.330.*

(1) *Acceptable.* An installation or equipment is acceptable to the Assistant Secretary of Labor, and approved within the meaning of this Subpart S: (i) If it is accepted, or certified, or listed, or labeled, or otherwise determined to be safe by a nationally recognized testing laboratory, such as, but not limited to, Underwriters' Laboratories, Inc. and Factory Mutual Engineering Corp.; or (ii) with respect to an installation or equipment of a kind which no nationally recognized testing laboratory accepts, certifies, lists, labels, or determines to be safe, if it is inspected or tested by another Federal agency, or by a State, municipal, or other local authority responsible for enforcing occupational safety provisions of the National Electrical Code, and found in compliance with the provisions of the National Electrical Code as applied in this Subpart; or (iii) with respect to custom-made equipment or related installations which are designed, fabricated for, and intended for use by a particular customer, if it is determined to be safe for its intended use by its manufacturer on the basis of test data which the employer keeps and makes available for inspection to the Assistant Secretary and his authorized representatives.

(2) *Accepted.* An installation is "accepted" if it has been inspected and found by a nationally recognized testing laboratory to conform to specified plans or to procedures of applicable codes.

(3) *Accessible.* (As applied to wiring methods.) Capable of being removed or exposed without damaging the building structure or finish, or not permanently closed in by the structure or finish of the building. (See *"concealed"* and *"exposed."*)

(4) *Accessible.* (As applied to equipment.) Admitting close approach; not guarded by locked doors, elevation, or other effective means. (See *"Readily accessible."*)

(5) *Ampacity.* Current-carrying capacity of electric conductors expressed in amperes.

(6) *Appliances.* Utilization equipment, generally other than industrial, normally built in standardized sizes or types, which is installed or connected as a unit to perform one or more functions such as clothes washing, air conditioning, food mixing, deep frying, etc.

(7) *Approved.* Acceptable to the authority enforcing this Subpart. The authority enforcing this Subpart is the Assistant Secretary of Labor for Occupational Safety and Health. The definition of "acceptable" indicates what is acceptable to the Assistant Secretary of Labor, and therefore approved within the meaning of this Subpart.

(8) *Approved for the purpose.* Approved for a specific purpose, environment, or application described in a particular standard requirement.

Suitability of equipment or materials for a specific purpose, environment or application may be determined by a nationally recognized testing laboratory, inspection agency or other organization concerned with product evaluation as part of its listing and labeling program. (See *"Labeled"* or *"Listed."*)

(9) *Armored cable.* Type AC armored cable is a fabricated assembly of insulated conductors in a flexible metallic enclosure.

(10) *Askarel.* A generic term for a group of nonflammable synthetic chlorinated hydrocarbons used as electrical insulating media. Askarels of various compositional types are used. Under arcing conditions the gases produced, while consisting predominantly of noncombustible hydrogen chloride, can include varying amounts of combustible gases depending upon the askarel type.

(11) *Attachment plug (Plug cap) (Cap).* A device which, by insertion in a receptacle, establishes connection between the conductors of the attached flexible cord and the conductors connected permanently to the receptacle.

(12) *Automatic.* Self-acting, operating by its own mechanism when actuated by some impersonal influence, as, for example, a change in current strength, pressure, temperature, or mechanical configuration.

(13) *Bare conductor.* See *"Conductor."*

(14) *Bonding.* The permanent joining of metallic parts to form an electrically conductive path which will assure electrical continuity and the capacity to conduct safely any current likely to be imposed.

(15) *Bonding jumper.* A reliable conductor to assure the required electrical conductivity between metal parts required to be electrically connected.

(16) *Branch circuit.* The circuit conductors between the final overcurrent device protecting the circuit and the outlet(s).

(17) *Building.* A structure which stands alone or which is cut off from adjoining structures by fire walls with all openings therein protected by approved fire doors.

(18) *Cabinet.* An enclosure designed either for surface or flush mounting, and provided with a frame, mat, or trim in which a swinging door or doors are or may be hung.

(19) *Cable tray system.* A cable tray system is a unit or assembly of units or sections, and associated fittings, made of metal or other noncombustible materials forming a rigid structural system used to support cables. Cable tray systems include ladders, troughs, channels, solid bottom trays, and other similar structures.

(20) *Cablebus.* Cablebus is an approved assembly of insulated conductors with fittings and conductor terminations in a completely enclosed, ventilated, protective metal housing.

(21) *Center pivot irrigation machine.* A center pivot irrigation machine is a multi-motored irrigation machine which

revolves around a central pivot and employs alignment switches or similar devices to control individual motors.

(22) *Certified.* Equipment is "certified" if it (a) has been tested and found by a nationally recognized testing laboratory to meet nationally recognized standards or to be safe for use in a specified manner, or (b) is of a kind whose production is periodically inspected by a nationally recognized testing laboratory, and (c) it bears a label, tag, or other record of certification.

(23) *Circuit breaker.* (i) (600 volts nominal, or less). A device designed to open and close a circuit by nonautomatic means and to open the circuit automatically on a predetermined overcurrent without injury to itself when properly applied within its rating.

(ii) (Over 600 volts, nominal). A switching device capable of making, carrying, and breaking currents under normal circuit conditions, and also making, carrying for a specified time, and breaking currents under specified abnormal circuit conditions, such as those of short circuit.

(24) *Class I locations.* Class I locations are those in which flammable gases or vapors are or may be present in the air in quantities sufficient to produce explosive or ignitible mixtures. Class I locations include the following:

(i) *Class I, Division 1.* A Class I, Division 1 location is a location: (*a*) in which hazardous concentrations of flammable gases or vapors may exist under normal operating conditions; or (*b*) in which hazardous concentrations of such gases or vapors may exist frequently because of repair or maintenance operations or because of leakage; or (*c*) in which breakdown or faulty operation of equipment or processes might release hazardous concentrations of flammable gases or vapors, and might also cause simultaneous failure of electric equipment.

Note.—This classification usually includes locations where volatile flammable liquids or liquefied flammable gases are transferred from one container to another; interiors of spray booths and areas in the vicinity of spraying and painting operations where volatile flammable solvents are used; locations containing open tanks or vats of volatile flammable liquids; drying rooms or compartments for the evaporation of flammable solvents; locations containing fat and oil extraction equipment using volatile flammable solvents; portions of cleaning and dyeing plants where flammable liquids are used; gas generator rooms and other portions of gas manufacturing plants where flammable gas may escape; inadequately ventilated pump rooms for flammable gas or for volatile flammable liquids; the interiors of refrigerators and freezers in which volatile flammable materials are stored in open, lightly stoppered, or easily ruptured containers; and all other locations where ignitible concentrations of flammable vapors or gases are likely to occur in the course of normal operations.

(ii) Class I, Division 2. A Class I, Division 2 location is a location: (*a*) in which volatile flammable liquids or flammable gases are handled, processed, or used, but in which the hazardous liquids, vapors, or gases will normally be confined within closed containers or closed systems from which they can escape only in case of accidental rupture or breakdown of such containers or systems, or in case of abnormal operation of equipment; or (*b*) in which hazardous concentrations of gases or vapors are normally prevented by positive mechanical ventilation, and which might become hazardous through failure or abnormal operations of the ventilating equipment; or (*c*) that is adjacent to a Class I, Division 1 location, and to which hazardous concentrations of gases or vapors might occasionally be communicated unless such communication is prevented by adequate positive-pressure ventilation from a source of clean air, and effective safeguards against ventilation failure are provided.

Note.—This classification usually includes locations where volatile flammable liquids or flammable gases or vapors are used, but which would become hazardous only in case of an accident or of some unusual operating condition. The quantity of flammable material that might escape in case of accident, the adequacy of ventilating equipment, the total area involved, and the record of the industry or business with respect to explosions or fires are all factors to be merit considered in determining the classification and extent of each location.

Piping without valves, checks, meters, and similar devices would not ordinarily introduce a hazardous condition even though used for flammable liquids or gases. Locations used for the storage of flammable liquids or a liquefied or compressed gases in sealed containers would not normally be considered hazardous unless also subject to other hazardous conditions.

Electrical conduits and their associated enclosures separated from process fluids by a single seal or barrier are classed as a Division 2 location if the outside of the conduit and enclosures is a nonhazardous location.

(25) *Class II locations.* Class II locations are those that are hazardous because of the presence of combustible dust. Class II locations include the following:

(i) *Class II, Division 1.* A Class II, Division 1 location is a location: (*a*) in which combustible dust is or may be in suspension in the air under normal operating conditions, in quantities sufficient to produce explosive or ignitible mixtures; or (*b*) where mechanical failure or abnormal operation of machinery or equipment might cause such explosive or ignitible mixtures to be produced, and might also provide a source of ignition through simultaneous failure of electric equipment, operation of protection devices, or from other causes, or (*c*) in which combustible dusts of an electrically conductive nature may be present.

Note.—This classification may include areas of grain handling and processing plants, starch plants, sugar-pulverizing plants, malting plants, hay-grinding plants, coal pulverizing plants, areas where metal dusts and powders are produced or processed, and other similar locations which contain dust producing machinery and equipment (except where the equipment is dust-tight or vented to the outside). These areas would have combustible dust in the air, under normal operating conditions, in quantities sufficient to produce explosive or ignitible mixtures. Combustible dusts which are electrically nonconductive include dusts produced in the handling and processing of grain and grain products, pulverized sugar and cocoa, dried egg and milk powders, pulverized spices, starch and pastes, potato and woodflour, oil meal from beans and seed, dried hay, and other organic materials which may produce combustible dusts when processed or handled. Dusts containing magnesium or aluminum are particularly hazardous and the use of extreme caution is necessary to avoid ignition and explosion.

(ii) *Class II, Division 2.* A Class II, Division 2 location is a location in which, (*a*) combustible dust will not normally be in suspension in the air in quantities sufficient to produce explosive or ignitible mixtures; and dust accumulations are normally insufficient to interfere with the normal operation of electrical equipment or other apparatus; or (*b*) Dust may be in suspension in the air as a result of infrequent malfunctioning of handling or processing equipment, and dust accumulations resulting therefrom may be ignitible by abnormal operation or failure of electrical equipment or other apparatus.

Note.—This classification includes locations where dangerous concentrations of suspended dust would not be likely but where dust accumulations might form on or in the vicinity of electric equipment. These areas may contain equipment from which appreciable quantities of dust would escape under abnormal operation conditions or be adjacent to a Class II Division 1 location, as described above, into which an explosive or ignitible concentration of dust may be put into suspension under abnormal operating conditions.

(26) *Class III locations.* Class III locations are those that are hazardous because of the presence of easily

ignitible fibers or flyings but in which such fibers or flyings are not likely to be in suspension in the air in quantities sufficient to produce ignitible mixtures. Class III locations include the following:

(i) *Class III, Division 1.* A Class III, Division 1 location is a location in which easily ignitible fibers or materials producing combustible flyings are handled, manufactured, or used.

Note.—Such locations usually include some parts of rayon, cotton, and other textile mills; combustible fiber manufacturing and processing plants; cotton gins and cotton-seed mills; flax-processing plants; clothing manufacturing plants; woodworking plants, and establishments; and industries involving similar hazardous processes or conditions.

Easily ignitible fibers and flyings include rayon, cotton (including cotton linters and cotton waste), sisal or henequen, istle, jute, hemp, tow, cocoa fiber, oakum, baled waste kapok, Spanish moss, excelsior, and other materials of similar nature.

(ii) *Class III, Division 2.* A Class III, Division 2 location is a location in which easily ignitible fibers are stored or handled, except in process of manufacture.

(27) *Collector ring.* A collector ring is an assembly of slip rings for transferring electrical energy from a stationary to a rotating member.

(28) *Concealed.* Rendered inaccessible by the structure or finish of the building. Wires in concealed raceways are considered concealed, even though they may become accessible by withdrawing them. *[See "Accessible. (As applied to wiring methods.)"]*

(29) *Conductor.* (i) *Bare.* A conductor having no covering or electrical insulation whatsoever.

(ii) *Covered.* A conductor encased within material of composition or thickness that is not recognized as electrical insulation.

(iii) *Insulated.* A conductor encased within material of composition and thickness that is recognized as electrical insulation.

(30) *Conduit body.* A separate portion of a conduit or tubing system that provides access through a removable cover(s) to the interior of the system at a junction of two or more sections of the system or at a terminal point of the system. Boxes such as FS and FD or larger cast or sheet metal boxes are not classified as conduit bodies.

(31) *Controller.* A device or group of devices that serves to govern, in some predetermined manner, the electric power delivered to the apparatus to which it is connected.

(32) *Cooking unit, counter-mounted.* A cooking appliance designed for mounting in or on a counter and consisting of one or more heating elements, internal wiring, and built-in or separately mountable controls. (*See "Oven, wall-mounted."*)

(33) *Covered conductor.* See "Conductor."

(34) *Cutout.* (Over 600 volts, nominal.) An assembly of a fuse support with either a fuseholder, fuse carrier, or disconnecting blade. The fuseholder or fuse carrier may include a conducting element (fuse link), or may act as the disconnecting blade by the inclusion of a nonfusible member.

(35) *Cutout box.* An enclosure designed for surface mounting and having swinging doors or covers secured directly to and telescoping with the walls of the box proper. *(See "Cabinet.")*

(36) *Damp location.* See *"Location."*

(37) *Dead front.* Without live parts exposed to a person on the operating side of the equipment.

(38) *Device.* A unit of an electrical system which is intended to carry but not utilize electric energy.

(39) *Dielectric heating.* Dielectric heating is the heating of a nominally insulating material due to its own dielectric losses when the material is placed in a varying electric field.

(40) *Disconnecting means.* A device, or group of devices, or other means by which the conductors of a circuit can be disconnected from their source of supply.

(41) *Disconnecting (or Isolating) switch.* (Over 600 volts, nominal.) A mechanical switching device used for isolating a circuit or equipment from a source of power.

(42) *Dry location.* See *"Location."*

(43) *Electric sign.* A fixed, stationary, or portable self-contained, electrically illuminated utilization equipment with words or symbols designed to convey information or attract attention.

(44) *Enclosed.* Surrounded by a case, housing, fence or walls which will prevent persons from accidentally contacting energized parts.

(45) *Enclosure.* The case or housing of apparatus, or the fence or walls surrounding an installation to prevent personnel from accidentally contacting energized parts, or to protect the equipment from physical damage.

(46) *Equipment.* A general term including material, fittings, devices, appliances, fixtures, apparatus, and the like, used as a part of, or in connection with, an electrical installation.

(47) *Equipment grounding conductor.* See *"Grounding conductor, equipment."*

(48) *Explosion-proof apparatus.* Apparatus enclosed in a case that is capable of withstanding an explosion of a specified gas or vapor which may occur within it and of preventing the ignition of a specified gas or vapor surrounding the enclosure by sparks, flashes, or explosion of the gas or vapor within, and which operates at such an external temperature that it will not ignite a surrounding flammable atmosphere.

(49) *Exposed.* (As applied to live parts.) Capable of being inadvertently touched or approached nearer than a safe distance by a person. It is applied to parts not suitably guarded, isolated, or insulated. (See *"Accessible."* and *"Concealed."*)

(50) *Exposed.* (As applied to wiring methods.) On or attached to the surface or behind panels designed to allow access. [See *"Accessible.* (As applied to wiring methods.)"]

(51) *Exposed.* (For the purposes of § 1910.308(e), *Communications systems.*) Where the circuit is in such a position that in case of failure of supports or insulation, contact with another circuit may result.

(52) *Externally operable.* Capable of being operated without exposing the operator to contact with live parts.

(53) *Feeder.* All circuit conductors between the service equipment, or the generator switchboard of an isolated plant, and the final branch-circuit overcurrent device.

(54) *Fitting.* An accessory such as a locknut, bushing, or other part of a wiring system that is intended primarily to perform a mechanical rather than an electrical function.

(55) *Fuse.* (Over 600 volts, nominal.) An overcurrent protective device with a circuit opening fusible part that is heated and severed by the passage of overcurrent through it. A fuse comprises all the parts that form a unit capable of performing the prescribed functions. It may or may not be the complete device necessary to connect it into an electrical circuit.

(56) *Ground.* A conducting connection, whether intentional or accidental, between an electrical circuit or equipment and the earth, or to some conducting body that serves in place of the earth.

(57) *Grounded.* Connected to earth or to some conducting body that serves in place of the earth.

(58) *Grounded, effectively.* (Over 600 volts, nominal.) Permanently connected to earth through a ground connection of sufficiently low impedance and having sufficient ampacity that ground fault current which may occur cannot build up to voltages dangerous to personnel.

(59) *Grounded conductor.* A system or circuit conductor that is intentionally grounded.

(60) *Grounding conductor.* A conductor used to connect equipment or

the grounded circuit of a wiring system to a grounding electrode or electrodes.

(61) *Grounding conductor, equipment.* The conductor used to connect the non-current-carrying metal parts of equipment, raceways, and other enclosures to the system grounded conductor and/or the grounding electrode conductor at the service equipment or at the source of a separately derived system.

(62) *Grounding electrode conductor.* The conductor used to connect the grounding electrode to the equipment grounding conductor and/or to the grounded conductor of the circuit at the service equipment or at the source of a separately derived system.

(63) *Ground-fault circuit-interrupter.* A device whose function is to interrupt the electric circuit to the load when a fault current to ground exceeds some predetermined value that is less than that required to operate the overcurrent protective device of the supply circuit.

(64) *Guarded.* Covered, shielded, fenced, enclosed, or otherwise protected by means of suitable covers, casings, barriers, rails, screens, mats, or platforms to remove the likelihood of approach to a point of danger or contact by persons or objects.

(65) *Health care facilities.* Buildings or portions of buildings and mobile homes that contain, but are not limited to, hospitals, nursing homes, extended care facilities, clinics, and medical and dental offices, whether fixed or mobile.

(66) *Heating equipment.* For the purposes of § 1910.306(g), the term "heating equipment" includes any equipment used for heating purposes if heat is generated by induction or dielectric methods.

(67) *Hoistway.* Any shaftway, hatchway, well hole, or other vertical opening or space in which an elevator or dumbwaiter is designed to operate.

(68) *Identified.* Identified, as used in reference to a conductor or its terminal, means that such conductor or terminal can be readily recognized as grounded.

(69) *Induction heating.* Induction heating is the heating of a nominally conductive material due to its own I^2R losses when the material is placed in a varying electromagnetic field.

(70) *Insulated conductor.* See under "Conductor."

(71) *Interrupter switch.* (Over 600 volts, nominal.) A switch capable of making, carrying, and interrupting specified currents.

(72) *Irrigation machine.* An irrigation machine is an electrically driven or controlled machine, with one or more motors, not hand portable, and used primarily to transport and distribute water for agricultural purposes.

(73) *Isolated.* Not readily accessible to persons unless special means for access are used.

(74) *Isolated power system.* A system comprising an isolating transformer or its equivalent, a line isolation monitor, and its ungrounded circuit conductors.

(75) *Labeled.* Equipment is "labeled" if there is attached to it a label, symbol, or other identifying mark of a nationally recognized testing laboratory which, (a) makes periodic inspections of the production of such equipment, and (b) whose labeling indicates compliance with nationally recognized standards or tests to determine safe use in a specified manner.

(76) *Lighting outlet.* An outlet intended for the direct connection of a lampholder, a lighting fixture, or a pendant cord terminating in a lampholder.

(77) *Listed.* Equipment is "listed" if it is of a kind mentioned in a list which, (a) is published by a nationally recognized laboratory which makes periodic inspection of the production of such equipment, and (b) states such equipment meets nationally recognized standards or has been tested and found safe for use in a specified manner.

(78) *Location.* (i) *Damp location.* Partially protected locations under canopies, marquees, roofed open porches, and like locations, and interior locations subject to moderate degrees of moisture, such as some basements, some barns, and some cold-storage warehouses.

(ii) *Dry location.* A location not normally subject to dampness or wetness. A location classified as dry may be temporarily subject to dampness or wetness, as in the case of a building under construction.

(iii) *Wet location.* Installations underground or in concrete slabs or masonry in direct contact with the earth, and locations subject to saturation with water or other liquids, such as vehicle-washing areas, and locations exposed to weather and unprotected.

(79) *Medium voltage cable.* Type MV medium voltage cable is a single or multiconductor solid dielectric insulated cable rated 2000 volts or higher.

(80) *Metal-clad cable.* Type MC cable is a factory assembly of one or more conductors, each individually insulated and enclosed in a metallic sheath of interlocking tape, or a smooth or corrugated tube.

(81) *Mineral-insulated metal-sheathed cable.* Type MI mineral-insulated metal-sheathed cable is a factory assembly of one or more conductors insulated with a highly compressed refractory mineral insulation and enclosed in a liquidtight and gastight continuous copper sheath.

(82) *Mobile X-ray.* X-ray equipment mounted on a permanent base with wheels and/or casters for moving while completely assembled.

(83) *Nonmetallic-sheathed cable.* Nonmetallic-sheathed cable is a factory assembly of two or more insulated conductors having an outer sheath of moisture resistant, flame-retardant, nonmetallic material. Nonmetallic sheathed cable is manufactured in the following types:

(i) *Type NM.* The overall covering has a flame-retardant and moisture-resistant finish.

(ii) *Type NMC.* The overall covering is flame-retardant, moisture-resistant, fungus-resistant, and corrosion-resistant.

(84) *Oil (filled) cutout.* (Over 600 volts, nominal.) A cutout in which all or part of the fuse support and its fuse link or disconnecting blade are mounted in oil with complete immersion of the contacts and the fusible portion of the conducting element (fuse link), so that arc interruption by severing of the fuse link or by opening of the contacts will occur under oil.

(85) *Open wiring on insulators.* Open wiring on insulators is an exposed wiring method using cleats, knobs, tubes, and flexible tubing for the protection and support of single insulated conductors run in or on buildings, and not concealed by the building structure.

(86) *Outlet.* A point on the wiring system at which current is taken to supply utilization equipment.

(87) *Outline lighting.* An arrangement of incandescent lamps or electric discharge tubing to outline or call attention to certain features such as the shape of a building or the decoration of a window.

(88) *Oven, wall-mounted.* An oven for cooking purposes designed for mounting in or on a wall or other surface and consisting of one of more heating elements, internal wiring, and built-in or separately mountable controls. (See *"Cooking unit, counter-mounted."*)

(89) *Overcurrent.* Any current in excess of the rated current of equipment or the ampacity of a conductor. It may result from overload (see definition), short circuit, or ground fault. A current in excess of rating may be accommodated by certain equipment and conductors for a given set of conditions. Hence the rules for overcurrent protection are specific for particular situations.

(90) *Overload.* Operation of equipment in excess of normal, full load rating, or of a conductor in excess of rated ampacity which, when it persists for a sufficient length of time, would

cause damage or dangerous overheating. A fault, such as a short circuit or ground fault, is not an overload. (See *"Overcurrent."*)

(91) *Panelboard.* A single panel or group of panel units designed for assembly in the form of a single panel; including buses, automatic overcurrent devices, and with or without switches for the control of light, heat, or power circuits; designed to be placed in a cabinet or cutout box placed in or against a wall or partition and accessible only from the front. (See *"Switchboard."*)

(92) *Permanently installed decorative fountains and reflection pools.* Those that are constructed in the ground, on the ground, or in a building in such a manner that the pool cannot be readily disassembled for storage and are served by electrical circuits of any nature. These units are primarily constructed for their aesthetic value and not intended for swimming or wading.

(93) *Permanently installed swimming pools, wading and therapeutic pools.* Those that are constructed in the ground, on the ground, or in a building in such a manner that the pool cannot be readily disassembled for storage whether or not served by electrical circuits of any nature.

(94) *Portable X-ray.* X-ray equipment designed to be hand-carried.

(95) *Power and control tray cable.* Type TC power and control tray cable is a factory assembly of two or more insulated conductors, with or without associated bare or covered grounding conductors under a nonmetallic sheath, approved for installation in cable trays, in raceways, or where supported by a messenger wire.

(96) *Power fuse.* (Over 600 volts, nominal.) See *"Fuse."*

(97) *Power-limited tray cable.* Type PLTC nonmetallic-sheathed power limited tray cable is a factory assembly of two or more insulated conductors under a nonmetallic jacket.

(98) *Power outlet.* An enclosed assembly which may include receptacles, circuit breakers, fuseholders, fused switches, buses and watt-hour meter mounting means; intended to supply and control power to mobile homes, recreational vehicles or boats, or to serve as a means for distributing power required to operate mobile or temporarily installed equipment.

(99) *Premises wiring system.* That interior and exterior wiring, including power, lighting, control, and signal circuit wiring together with all of its associated hardware, fittings, and wiring devices, both permanently and temporarily installed, which extends from the load end of the service drop, or load end of the service lateral conductors to the outlet(s). Such wiring does not include wiring internal to appliances, fixtures, motors, controllers, motor control centers, and similar equipment.

(100) *Qualified person.* One familiar with the construction and operation of the equipment and the hazards involved.

(101) *Raceway.* A channel designed expressly for holding wires, cables, or busbars, with additional functions as permitted in this subpart. Raceways may be of metal or insulating material, and the term includes rigid metal conduit, rigid nonmetallic conduit, intermediate metal conduit, liquidtight flexible metal conduit, flexible metallic tubing, flexible metal conduit, electrical metallic tubing, underfloor raceways, cellular concrete floor raceways, cellular metal floor raceways, surface raceways, wireways, and busways.

(102) *Readily accessible.* Capable of being reached quickly for operation, renewal, or inspections, without requiring those to whom ready access is requisite to climb over or remove obstacles or to resort to portable ladders, chairs, etc. (*See "Accessible."*)

(103) *Receptacle.* A receptacle is a contact device installed at the outlet for the connection of a single attachment plug. A single receptacle is a single contact device with no other contact device on the same yoke. A multiple receptacle is a single device containing two or more receptacles.

(104) *Receptacle outlet.* An outlet where one or more receptacles are installed.

(105) *Remote-control circuit.* Any electric circuit that controls any other circuit through a relay or an equivalent device.

(106) *Sealable equipment.* Equipment enclosed in a case or cabinet that is provided with a means of sealing or locking so that live parts cannot be made accessible without opening the enclosure. The equipment may or may not be operable without opening the enclosure.

(107) *Separately derived system.* A premises wiring system whose power is derived from generator, transformer, or converter winding and has no direct electrical connection, including a solidly connected grounded circuit conductor, to supply conductors originating in another system.

(108) *Service.* The conductors and equipment for delivering energy from the electricity supply system to the wiring system of the premises served.

(109) *Service cable.* Service conductors made up in the form of a cable.

(110) *Service conductors.* The supply conductors that extend from the street main or from transformers to the service equipment of the premises supplied.

(111) *Service drop.* The overhead service conductors from the last pole or other aerial support to and including the splices, if any, connecting to the service-entrance conductors at the building or other structure.

(112) *Service-entrance cable.* Service-entrance cable is a single conductor or multiconductor assembly provided with or without an overall covering, primarily used for services and of the following types:

(i) *Type SE,* having a flame-retardent, moisture-resistant covering, but not required to have inherent protection against mechanical abuse.

(ii) *Type USE,* recognized for underground use, having a moisture-resistant covering, but not required to have a flame-retardant covering or inherent protection against mechanical abuse. Single-conductor cables having an insulation specifically approved for the purpose do not require an outer covering.

(113) *Service-entrance conductors, overhead system.* The service conductors between the terminals of the service equipment and a point usually outside the building, clear of building walls, where joined by tap or splice to the service drop.

(114) *Service entrance conductors, underground system.* The service conductors between the terminals of the service equipment and the point of connection to the service lateral. Where service equipment is located outside the building walls, there may be no service-entrance conductors, or they may be entirely outside the building.

(115) *Service equipment.* The necessary equipment, usually consisting of a circuit breaker or switch and fuses, and their accessories, located near the point of entrance of supply conductors to a building or other structure, or an otherwise defined area, and intended to consititute the main control and means of cutoff of the supply.

(116) *Service raceway.* The raceway that encloses the service-entrance conductors.

(117) *Shielded nonmetallic-sheathed cable.* Type SNM, shielded nonmetallic-sheathed cable is a factory assembly of two or more insulated conductors in an extruded core of moisture-resistant, flame-resistant nonmetallic material, covered with an overlapping spiral metal tape and wire shield and jacketed with an extruded moisture-, flame-, oil-, corrosion-, fungus-, and sunlight-resistant nonmetallic material.

(118) *Show window.* Any window used or designed to be used for the display of goods or advertising material, whether it is fully or partly enclosed or entirely open at the rear and whether or not it has a platform raised higher than the street floor level.

(119) *Sign.* See *"Electric Sign."*

(120) *Signaling circuit.* Any electric circuit that energizes signaling equipment.

(121) *Special permission.* The written consent of the authority having jurisdiction.

(122) *Storable swimming or wading pool.* A pool with a maximum dimension of 15 feet and a maximum wall height of 3 feet and is so constructed that it may be readily disassembled for storage and reassembled to its original integrity.

(123) *Switchboard.* A large single panel, frame, or assembly of panels which have switches, buses, instruments, overcurrent and other protective devices mounted on the face or back or both. Switchboards are generally accessible from the rear as well as from the front and are not intended to be installed in cabinets. (See *"Panelboard."*)

(124) *Switches.*

(i) *General-use switch.* A Switch intended for use in general distribution and branch circuits. It is rated in amperes, and it is capable of interrupting its rated current at its rated voltage.

(ii) *General-use snap switch.* A form of general-use switch so constructed that it can be installed in flush device boxes or on outlet box covers, or otherwise used in conjunction with wiring systems recognized by this subpart.

(iii) *Isolating switch.* A switch intended for isolating an electric circuit from the source of power. It has no interrupting rating, and it is intended to be operated only after the circuit has been opened by some other means.

(iv) *Motor-circuit switch.* A switch, rated in horsepower, capable of interrupting the maximum operating overload current of a motor of the same horsepower rating as the switch at the rated voltage.

(125) *Switching devices.* (Over 600 volts, nominal.) Devices designed to close and/or open one or more electric circuits. Included in this category are circuit breakers, cutouts, disconnecting (or isolating) switches, disconnecting means, interrupter switches, and oil (filled) cutouts.

(126) *Transportable X-ray.* X-ray equipment installed in a vehicle or that may readily be disassembled for transport in a vehicle.

(127) *Utilization equipment.* Utilization equipment means equipment which utilizes electric energy for mechanical, chemical, heating, lighting, or similar useful purpose.

(128) *Utilization system.* A utilization system is a system which provides electric power and light for employee workplaces, and includes the premises wiring system and utilization equipment.

(129) *Ventilated.* Provided with a means to permit circulation of air sufficient to remove an excess of heat, fumes, or vapors.

(130) *Volatile flammable liquid.* A flammable liquid having a flash point below 38 degrees C (100 degrees F) or whose temperature is above its flash point.

(131) *Voltage (of a circuit).* The greatest root-mean-square (effective) difference of potential between any two conductors of the circuit concerned.

(132) *Voltage, nominal.* A nominal value assigned to a circuit or system for the purpose of conveniently designating its voltage class (as 120/240, 480Y/277, 600, etc.). The actual voltage at which a circuit operates can vary from the nominal within a range that permits satisfactory operation of equipment.

(133) *Voltage to ground.* For grounded circuits, the voltage between the given conductor and that point or conductor of the circuit that is grounded; for ungrounded circuits, the greatest voltage between the given conductor and any other conductor of the circuit.

(134) *Watertight.* So constructed that moisture will not enter the enclosure.

(135) *Weatherproof.* So constructed or protected that exposure to the weather will not interfere with successful operation. Rainproof, raintight, or watertight equipment can fulfill the requirements for weatherproof where varying weather conditions other than wetness, such as snow, ice, dust, or temperature extremes, are not a factor.

(136) *Wet location.* See "Location."

(137) *Wireways.* Wireways are sheet-metal troughs with hinged or removable covers for housing and protecting electric wires and cable and in which conductors are laid in place after the wireway has been installed as a complete system.

(b) *Definitions applicable to §§ 1910.331 through 1910.360 [Reserved].*

(c) *Definitions applicable to §§ 1910.361 through 1910.380 [Reserved].*

(d) *Definitions applicable to §§ 1910.381 through 1910.398 [Reserved].*

Department of Labor

Occupational Safety and Health Administration

Occupational Noise Exposure; Hearing Conservation Amendment

DEPARTMENT OF LABOR

29 CFR Part 1910

Occupational Noise Exposure; Hearing Conservation Amendment

AGENCY: The Occupational Safety and Health Administration (OSHA) of the United States Department of Labor.

ACTION: Final rule.

SUMMARY: This final rule establishes a hearing conservation program, including exposure monitoring, audiometric testing, and training, for all employees who have occupational noise exposures equal to or exceeding an 8-hour time-weighted average of 85 dBA. This amendment covers all employees except those engaged in construction or agriculture. This rule is the outgrowth of the proposed revision of the occupational noise exposure standard which was proposed in 1974. By its action today, OSHA is deferring final action on two issues raised in the 1974 proposal: the permissible exposure level for occupational noise and the appropriate method of compliance with the permissible exposure level. These two issues will continue to be governed by the existing standard.

OSHA plans to study these two issues further and will in the near future reopen the record for the submission of new evidence on these issues.

EFFECTIVE DATE: This standard will become effective April 15, 1981. Start-up dates: Employee exposure monitoring shall be completed by October 15, 1981. Dosimeters used to measure employee exposures must meet the specifications in the standard by April 15, 1983. Baseline audiograms shall be completed by April 15, 1982.

FOR FURTHER INFORMATION CONTACT: Dr. Alice Suter, Office of Physical Agents Standards, Occupational Safety and Health Administration, Room N-3718, U.S. Department of Labor, 200 Constitution Avenue NW., Washington, D.C. 20210, Telephone (202) 523-7151.

Copies of any portion of the record including the Final Environmental Impact Statement and Regulatory Analysis may be obtained by contacting: Docket Officer, Docket No. OSH-11, Room S-6212, U.S. Department of Labor, 200 Constitution Avenue, N.W., Washington, D.C. 20210, Telephone (202) 523-7894.

I. Introduction

Rationale for Amendment

Noise is one of the most pervasive occupational health problems. It is a by-product of many industrial processes. Exposure to high levels of noise causes temporary or permanent hearing loss and may cause other harmful health effects as well. The extent of damage depends primarily on the intensity of the noise and the duration of the exposure.

There is an abundance of epidemiological and laboratory evidence that protracted noise exposure above 90 decibels (dB) causes hearing loss in a substantial portion of the exposed population, and that more susceptible individuals will incur hearing loss at levels below 90 dB (Ex. 11; Ex. 12; Ex. 17; Ex. 26-2). This is discussed more fully in the Health Effects section below. Noise-induced hearing loss in an irreversible condition that progresses with increased exposure, and is exacerbrated by the normal aging process. Although such a loss may be slight at first, continued exposure may result in a loss that is severe enough to affect seriously an individual's ability to understand speech. In some cases, even slight losses in the audiometric frequencies that are critical for the understanding of speech can adversely affect an individual's ability to earn a living and to function in society in general. It constitutes a serious physical, psychological, and social handicap. Such impairment of a critical functional capacity clearly is the type of material impairment of health, which Congress, in Section 6(b)(5) of the Act, directed the Secretary to prevent.

Noise can also cause other adverse effects, such as degraded job performance, increases in accidents and absenteeism, job dissatisfaction, headaches, fatigue, sleeplessness, stress-related illnesses, and other effects that are more difficult to quantify and identify as noise-related than is hearing loss (Ex. 2C-108, p. 2; Ex. 2C-111, p. 1; Ex. 96, pp. 277-281; Ex. 189-8, p. 2; Ex. 28A, pp. 18-24, 27-28, 41-44, 46-49; Ex. 32, App. B, Gulian, pp. 6-11; Ex. 79, p. 2; Ex. 173, pp. 1-2, 7-8; Ex. 84, attach. 2, pp. 1-2).

OSHA's existing standard for occupational exposure to noise (29 CFR 1910.95) specifies a maximum permissible noise exposure level of 90 dB for a duration of 8 hours, with higher levels allowed for shorter durations. (This level is called a time-weighted average sound level, abbreviated TWA.) Employers must use feasible engineering or administrative controls, or combinations of both, whenever employee exposure to noise in the workplace exceeds the permissible exposure level. Personal protective equipment may be used to supplement the engineering and administrative controls where such controls are not able to reduce the employee exposures to within permissible limits. The standard also requires employers to administer a "continuing, effective hearing conservation program" for overexposed employees, but the standard does not define such a program.

OSHA proposed a revised noise standard in 1974, which maintained the current standard's 90 dB time-weighted average exposure limit, but required exposure monitoring, and articulated the requirements for hearing conservation programs. There was a great deal of controversy in the rulemaking proceedings about alternative permissible exposure limits and their technical and economic feasibility, but few challenged the concept or the appropriateness of a hearing conservation program. (Tr. 551-553; Tr. 210; Ex. 306, Secs. J2C, J1C, J4C; Ex. 305; Ex. 2C-16A; Ex. 2C-16B)

Analysis of the hearing record reveals information gaps in the area of extra-auditory physiological effects of noise (adverse health effects other than loss of hearing, such as high blood pressure), and also in the areas of economic and technological feasibility of noise control. The Agency needs to obtain additional material and to perform additional impact analyses before issuing a comprehensive new regulation. Therefore, for the present, OSHA will leave the permissible exposure level and compliance mechanisms of the current noise standard unchanged and continue its enforcement. The Agency will defer the final decision on methods of compliance and the permissible exposure level until it has obtained and evaluated the necessary information. The decision to implement a hearing conservation program is separate and severable from the remaining issues.

While such information is being obtained, employees must be afforded additional protection against the effects of noise. Information in the record indicates that many employees are not receiving the benefits of engineering controls to reduce their exposures to within the permissible exposure limits. In fact, there are some 2.9 million workers in American production industries with TWAs in excess of 90 dB, and an additional 2.3 million whose exposure levels exceed 85 dB. These workers, who face a significant risk or material impairment of health or functional capacity, will receive greatly increased protection from the promulgation and enforcement of these hearing conservation requirements, which amend certain provisions of the present noise standard. The provision of

this protection in the form of a well-defined hearing conservation program does not depend upon a determination of an appropriate exposure level or compliance strategy. These issues were treated separately in the proposal and the decision to implement a hearing conservation program first is consistent with the mandate of the Act that, insofar as possible, workers be protected from any material impairment of health or functional capacity.

Hearing conservation programs constitute commonly accepted industrial hygiene practice. Many companies already have instituted programs for their noise-exposed workforce (Ex. 306; Ex. 147A; Ex. 147C). This amendment clarifies what a hearing conservation program must be, and gives direction to the implementation of such a program.

Hearing conservation includes noise exposure monitoring, audiometric testing, the use of hearing protective devices where necessary, and employee education. All of these elements are reasonably necessary and appropriate for a continuing effective hearing conservation program. These procedures will result in considerable benefits for more than 5.2 million employees. Hearing protective devices will reduce the incidence of noise-induced hearing loss and also the various extra-auditory effects described below. Audiometric tests will enable employers and employees to take proper precautions to prevent further deterioration of hearing. Monitoring and educational programs will increase general awareness of noise problems, and promote the effective use of ear protectors. Another benefit, which was suggested by a National Institute for Occupational Safety and Health study, is a reduction in workplace accidents and absenteeism (Ex. 26–11, pp. ii, 5–2).

At this time the Agency does not believe that a hearing conservation program alone is the solution to the problem of workplace noise. The Agency continues to support the policy, reflected in the existing standard and not affected by this amendment, that engineering control of noise is preferable to the use of personal protective devices. The record contains considerable evidence that hearing protectors do not always provide as much attenuation in practice as the manufacturer indicates (Ex. 319, B–12, p. 4; Ex. 300A, p. 91; Ex. 301, p. 33), that many workers dislike using hearing protectors (Ex. 79, pp. 7–8; Ex. 94, pp. 9–10; Ex. 78, p. 14), and that protectors can be very uncomfortable (Ex. 73, Attach. 4, p. 1; Ex. 79, p. 7; Ex. 321–45A, pp. 1–11; Ex. 94, p. 10; Ex. 78, p. 14). In fact the degree of protection provided by such devices is questionable since they may become unseated through talking or chewing during the course of the workday.

When hearing protectors are relied upon, the adequacy of protection will depend upon the quality of the hearing protector, the tightness of the fit, and its use by employees. Permanent hearing loss can occur before it is identified by audiometric testing and, of course, extra-auditory effects cannot be detected by audiometry. Thus, none of these measures are as effective as controlling the hazard at the source.

Physical Properties of Sound

Sound consists of pressure changes in a medium (usually air), caused by vibration or turbulence. These pressure changes take the form of alternating compression and rarefaction of molecules, producing waves that propagate away from a vibrating or turbulent source. The magnitude and the type of effect on humans depend on three physical parameters of sound: level, frequency, and duration. Sound pressure level is a logarithmic measure of the magnitude of the pressure change, which is perceived as loudness. Sound pressure level is expressed in decibels, abbreviated dB. The magnitude, or intensity, of sound is perceived as loudness. The entire range of audible sound pressure (for individuals with normal hearing a range of more than ten million to one), can be compressed into a practical scale of 0 to 140 dB. Because of the logarithmic scale, a small increase in decibels represents a large increase in sound energy. Technically, each increase of 3 dB represents a doubling of sound energy, an increase of 10 dB represents a tenfold increase, and a 20-dB increase represents a 100-fold increase in sound energy.

The frequency of a sound is the number of times that a complete cycle of compressions and rarefactions occurs in a second. The descriptor, which used to be "cycles per second," is now hertz, abbreviated Hz. Frequency is perceived as pitch. The audible range of frequencies for humans with good hearing is 20 Hz to 20,000 Hz. Most everyday sounds contain a mixture of frequencies generated by a variety of sources. A sound's frequency composition is referred to as the spectrum. Frequency spectrum can be a determinant of the annoyance caused by noise, with high frequency noise being generally more annoying than low frequency noise. Also, narrow frequency bands or pure tones (single frequencies) can be somewhat more harmful to hearing than is broad band noise.

The third important parameter is the way a sound level varies over time. The duration of a sound can be measured in microseconds (the duration of a gunshot) to indefinitely long periods (typical of the hum of an electrical transformer). Industrial noise is usually described as continuous, fluctuating, intermittent, or impulsive. Continuous noise, like the sound of a fan or a motor, remains relatively constant for a long period of time. Fluctuating noise, such as the sound of a vehicle in different gears, rises and falls in intensity over a period of time. Intermittent noise ceases or falls to low levels between "on-times," or periods of much higher levels. Drilling or sawing operations are examples of intermittent noise. Impulse noise is characterized by a sharp rise in sound pressure level to a high peak, followed by a rapid decay. Impulses can occur in quiet conditions, or they can be superimposed on a background of continuous or fluctuating noise, which is typical of the production industries. Sometimes a distinction is made between impulse noise, which is non-reverberant, and impact noise, which is reverberant. Since impulsive noise in industry can be either reverberant or non-reverberant, and since the relevant parameter is pulse duration, only one term, "impulse noise," will be used.

Sound levels are relevant under this standard only as they affect employees. If the employee is not present while high sound levels are being generated, OSHA is not concerned. The Agency is concerned with employee *exposure*, which is the accumulation of noise levels experienced by employees, as these levels are distributed over the workshift. This distinction is important because some comments in the record reflected a misunderstanding of the difference between workplace sound levels and employee levels (Ex. 14–96, p. 1; Ex. 14–79, p. 1). Although the frequency spectrum of a sound may have some effect on hearing loss, it is primarily the combination of level and duration that determines the degree to which noise will cause hearing loss and extra-auditory health effects. The manner in which level and duration are combined, for purposes of predicting adverse effects or calculating noise "dose" or 8-hour time-weighted average sound level, depends upon the "exchange rate." This combination is sometimes referred to as the "doubling rate," or the "time-intensity" tradeoff. A 5-dB exchange rate is used in 29 CFR 1910.95 and in this amendment. Specifically, a 5-dB increase in level is permitted for each halving of duration.

or conversely, a doubling of duration necessitates a 5-dB decrease in level.

Noise exposure can be described either in terms of an 8-hour time-weighted average sound level or a noise dose. For purposes of Section 29 CFR 1910.95 and this amendment the integration is performed according to a 5-dB exchange rate, referenced to a "criterion" level of 90 dB and a criterion duration of 8 hours. A worker's 8-hour time-weighted average sound level (TWA) is obtained from the time integral of the various noise levels experienced over the entire workshift. For example, for purposes of the hearing conservation amendment, the exposure of an individual who works 12 hours in continuous noise of 90 dB would correspond to a TWA of 93 dB.

Noise dose is the same concept expressed in percent. A dose of 50 percent means that one-half of the permitted TWA has been experienced. It could represent 8 hours at 85 dB, 4 hours at 90 dB, 16 hours at 80 dB, or other such combinations.

Hearing and Hearing Loss

The auditory system has three primary components: the outer ear serves to direct sound into the ear, the middle ear mechanically transmits the sound waves from the air to the fluid-filled inner ear, and the inner ear changes the sound waves from mechanical to neural energy. This last process is done in a small organ known as the cochlea, where sensory cells respond to the mechanical vibrations, change them into electrical energy, and transmit the message to the brain via the auditory nerve.

Noise-induced hearing loss can be temporary or permanent. Temporary hearing loss results from short-term exposures to noise, with normal hearing returning after a period of rest. This temporary decrease in hearing ability is called temporary threshold shift (TTS), a person's hearing threshold being the level of sound that he or she can just barely hear. For example, if a person with normal hearing works all day in a noisy environment, measurements at the end of the day would show that he or she could not hear as well as at the beginning of the day. But by the next morning, after a period of quiet, this person's hearing would have returned to normal. Generally, prolonged exposure to noise over a period of several years causes permanent damage to the sensory cells of the cochlea. A person who regularly sustains TTS will eventually suffer permanent hearing loss, which will occur gradually over time. The occurrence of TTS shows that a worker has been affected by noise, and if that individual continues to be exposed to the same levels of noise, it will result in a noise-induced permanent threshold shift (NIPTS).

The ability to hear sounds with clarity is a distinct attribute of normal hearing. Damage to the outer or middle ear can produce a problem with the perception of sound intensity. Damage to the cochlea or the auditory nerve is termed "sensori-neural," and causes impaired perception of intelligibility as well as intensity. Even if sounds are amplified, they still seem indistinct. Sensori-neural hearing loss is irreversible. People with noise-induced hearing loss sometimes can benefit from the use of a hearing aid, but the aid can never "correct" a hearing loss the way eyeglasses usually can correct for impaired vision (Ex. 231, written testimony, p. 5). Hearing aids merely amplify sound, but they do not make it clearer, or less distorted. Also, they amplify the unwanted noise as well as the wanted speech signals.

Noise-induced hearing loss is sensori-neural. It is a permanent condition, and cannot be treated medically. It is characterized by a declining sensitivity to high frequency sounds, usually to frequencies above 2000 Hz. The loss usually appears first and is most severe for the 4000-Hz frequency; the "4000-Hz notch" in the audiogram is typical of noise-induced hearing loss. With continued exposure, the loss spreads to the other audiometric frequencies, 500 through 6000 Hz. This phenomenon results in difficulties in the perception of speech. Most of the sound energy of speech is in the vowel sounds, and yet most of the intelligibility lies in the consonants. People with noise-induced, high-frequency hearing loss typically have difficulty hearing consonant sounds, and therefore have difficulty understanding speech (Ex. 9, p. 18). These problems will be discussed more fully in the Health Effects section below.

The hearing-impaired person is often frustrated by missing information that is vital for social or vocational functioning. Not only will people have to speak louder, but they must speak more clearly in order to be understood. In addition, background noise, such as radio, TV, or other people talking, has a much more disruptive effect on hearing-impaired individuals than on the normal listener because these individuals are less able to differentiate between the wanted signal and the unwanted background noise (Ex. 50, p. 6; Ex. 321–16 B, pp. 9, 10, 14, 49–50). People with noise-induced hearing impairments may be lost when trying to communicate in a group or on a noisy street.

Studies in the record show that some individuals suffer severe hearing losses as a result of noise exposure (Ex. 12, p. 158; Ex. 310, p. 22; Ex. 279, 11–13, p. 443; Ex. 26–2, p. 51). These individuals would rate themselves as hearing very poorly, or even as deaf (Ex. 29, p. 85).

Social relationships become increasingly difficult as the hearing impairment becomes more severe. Audiologist Dr. W. Grady Thomas of the University of North Carolina explains some of the difficulties experienced by the hearing impaired as follows:

> depression, isolation, suspicion and withdrawal from social contacts . . . can be expected in some individuals with moderate hearing loss. . . . Adjustment problems in adults who lose hearing are difficult because habit patterns are firmly established. . . . Also, the evaluation of self, to a great extent is affected by the individual's perceptions of the evaluation of himself by others. Having to continually ask people to repeat misunderstood speech messages can contribute to feelings of inadequacy and insecurity. (Tr. 815–816)

Other Adverse Effects

In addition to hearing loss, noise can cause other harmful effects. Noise can interfere with conversation to the extent that communication is virtually impossible, causing a feeling of isolation among workers. High levels of noise, even though they may be of relatively short duration, can mask warning shouts or signals. Injuries and even fatalities have been reported in conditions where the noise masked danger signals or cries for help (Ex. 26–1, p. 7; Ex. 78, p. 20).

There is increasing evidence that noise can cause adverse effects on general health. Laboratory and field studies implicate noise as a causative factor in stress-related illnesses, such as hypertension, ulcers, and neurological disorders. These effects, as well as more details on noise-induced hearing loss, will be discussed in subsequent sections of this preamble.

Measurement of Noise and Hearing Loss

There are two major types of instruments that are used to measure occupational noise. These are the noise dosimeter and the sound level meter. Noise dosimeters measure noise dose by directly integrating a function of the various sound levels over the entire workshift. For this reason they are quite useful in workplaces where noise levels vary throughout the workshift. The dosimeter gives a reading in terms of percentage of allowable exposure. The person being monitored wears the dosimeter throughout the workshift. Results of the monitoring are obtained after the dosimeter is taken off, either by pressing a button on the dosimeter or by plugging it into a master unit which then

gives a "readout." Since employee noise exposure is expressed either as percentage of allowable dose, or as a TWA, OSHA has included a chart in Appendix A, which presents the relationship between these forms of measurement.

A sound level meter registers the level of sound that occurs at a particular time. It is useful for measuring the noise level due to a given process, or for measuring a worker's exposure to sound that fluctuates relatively little. Sound level meters contain a microphone, an amplifier with a calibrated attenuator, a set of frequency response networks, and an indicator meter.

Most sound level meters and dosimeters are small, "general purpose" (Type 2) instruments, equipped with "weighting networks," which adjust the meter response to predetermined frequency portions of the measured sounds. The A-weighting network is most commonly used in the measurement of industrial and environmental noise. The A-weighting network discriminates against low-frequency sound and, to a lesser extent, against high-frequency sound. The rationale behind A-weighting is that low frequency sound, and some fairly high-frequency sound, is not as damaging or as irritating as sound in the mid-frequency range. Thus, A-weighted sound level appears to be a good predictor of human response to noise. A-weighted sound levels will be assumed throughout the amendment and preamble unless otherwise specified. Most general purpose sound level meters also have a C-weighting network, which basically reflects sound as it occurs in the environment, without any adjustment for human response. The C-weighting network is useful in determining the effectiveness of hearing protectors for particular noise conditions, since it does not discount the presence of low-frequency sound.

The frequency range is sometimes divided into octave bands. By measuring the sound level in each octave-band one can determine the spectrum of the noise. Each band is identified by its center frequency, such as 125, 250, 500, 1000, 2000, 4000 and 8000 Hz. Octave band measurements are necessary when selecting a room in which to perform audiometric testing, and in certain audiometer calibrations. They can also be helpful for assessing engineering control strategies. To determine the level of noise in different frequency bands, a sound level meter with an octave-band filter set is needed. This instrument is somewhat larger and more complex than the general purpose sound level meter that is used for measuring A-weighted and C-weighted sound levels.

The instrument that is used to test hearing is the audiometer. Audiometers produce pure tones at specific frequencies (e.g., 250, 500, 1000, 2000, 3000, 4000, 6000, and 8000 Hz) and at specific sound levels. OSHA has required that employee hearing be tested at the frequencies 500 through 6000 Hz, since these are the most important frequencies for understanding speech, and since they are useful for determining the cause of the hearing loss.

The record of a given individual's hearing sensitivity is an audiogram. An audiogram shows hearing threshold level measured in decibels as a function of frequency in hertz. It indicates how intense or loud a sound at a given frequency must be before it can be perceived, thereby providing a graphic representation of the status of the individual's hearing. With periodic audiometric testing it is possible to trace and document hearing loss, and by doing so, to prevent further loss from occurring. The audiogram is an important indicator of early hearing loss, since losses can occur so gradually that a person may not realize that he or she is becoming impaired until a substantial amount of hearing is lost.

There are two principal types of audiometers, manual and self-recording. When a manual audiometer is used the technician adjusts the level of the tone to the point where the individual being tested can just hear it, and the technician records the level as hearing threshold. A self-recording audiometer allows the test subject to adjust the level of the tone, and the intensity of the tone is constantly recorded by a stylus, which records the results on a moving card.

Hearing threshold levels, as they are recorded from the audiometer, are given in decibels above audiometric zero. Audiometric zero is not the same as 0 dB sound pressure level, the zero reference level to which sound level meters are set. Audiometric zero deviates somewhat from 0 dB sound pressure level at each test frequency. (For example, the deviation is 10 dB at 1000 Hz, and 8.5 dB at 2000 Hz.) Audiometric zero represents the median hearing threshold level of young people with normal hearing. While some individuals may have unusually good hearing sensitivity (as good as −10 dB), others may have hearing thresholds of 10 or 15 dB and still be considered within the range of normal. Therefore, audiometric zero (as opposed to 0 dB sound pressure level) reflects an adjustment to represent normal baseline hearing. Audiometric zero has been standardized for the U.S. population in American National Standard Specification for Audiometers S3.6—1969. This zero reference level is assumed throughout the amendment and preamble unless otherwise specified.

II. Health Effects

The effects of occupational noise can be divided into two principal categories: auditory effects and extra-auditory effects. There is a wealth of information on the relationship between noise exposure and hearing loss. Dose-response relationships have been well established. Numerous studies are available which describe the effects of noise on hearing as a function of level and duration. The effects are stated in terms of the audiometric frequencies at which the loss occurs, degree of hearing loss, anatomical changes (in animal experiments), and differential changes in hearing as variables such as age and sex interact with noise exposure.

The extra-auditory effects of noise involve complex physiological and psychosocial reactions, which are much more difficult to document. Although stress-related illnesses have been associated with noise exposure, isolating all of the factors which contribute to stress confounds efforts to provide a direct "cause and effect" relationship between noise and such stress-related conditions as hypertension or ulcers. Although precise dose-response relationships are lacking at this time, information on the extra-auditory effects is included in this discussion because the data are highly suggestive of adverse effects, and therefore provide added incentive for protecting noise exposed workers.

A. *Hearing Loss.*

There is no doubt that noise exposure causes hearing loss, which grows more severe as exposure continues over the years. Many witnesses spoke with first-hand knowledge of the effect of noise exposure on their hearing, and consequently, on their lives. Ruth Knowles, President of Local 1716 of the Textile Workers Union, testified as follows about her noise-induced hearing loss:

> It has been a gradual loss of hearing for me, so gradual that I never really realized it until a few years ago, when a relative asked me if I did not hear well. After then I started noticing that it was getting worse and that I was having to strain more to hear clearly. I became alarmed and consulted a specialist, only to be told that nothing could be done and that the hearing loss had been caused by high noise exposure.
>
> It is truly a sad, helpless feeling that you have been told that you have lost a significant part of your second most

important sensor. As time has passed, I have been embarassed because I was not able to hear well enough to know what was going on. I have even given an affirmative nod only to find out later that it shoud have been a negative answer. Socially speaking, there have been many, many instances that because of my hearing impairment, I would rather have stayed at home. It is difficult for me to hear and understand most waitresses in restaurants and a few times I have even had to tell them that I did not hear well, after which they speak so loudly that everyone around turns to look. My family has come to realize this problem and usually volunteers their help.

Also, I am never able to hear sales persons in grocery stores or bank tellers. At times it has become so disturbing that I have actually sat down and cried when I would get home. Persons who do not suffer any loss of hearing can't possibly realize the humiliation those of us who have impaired hearing go through. (Tr. 2021–2022).

Material Impairment

Section 6(b)(5) of the Occupational Safety and Health Act indicates that when dealing with a harmful physical agent the Secretary should set a standard which guards against material impairment of health or functional capacity, even if the worker is exposed for a working lifetime. As discussed below, noise is a harmful physical agent. The hearing conservation amendment is reasonably necessary to mitigate the significant risk of noise, which is present in most workplaces. This amendment is necessary to prevent large numbers of workers from suffering material impairment of health and functional capacity resulting from exposure to noise. As shown below, even assuming compliance with the current occupational noise exposure standard, many workers will still be at increased risk of suffering material impairment of functional capacity from noise in the workplace. The hearing conservation program prescribed in this amendment will save at least 189,000 workers from suffering material impairment after the program is fully effective. Accordingly OSHA finds that this amendment is reasonably necessary and appropriate, not only to provide healthful, but to provide safe places of employment.

OSHA defines material impairment of hearing as an average hearing level, with respect to audiometric zero, that exceeds 25 dB for the frequencies 1000, 2000, and 3000 Hz. This hearing level is sometimes called a "fence" in that it provides a demarcation point along the continuum of hearing levels, above which a hearing loss is considered, in the language of the Occupational Safety and Health Act, a "material impairment of health or functional capacity." Most audiologists and acousticians will agree that small amounts of hearing loss can be tolerated. If more than a small amount of loss is suffered, a person cannot function as well as a normally hearing individual. The selection of the point or "fence" beyond which an individual person cannot function as well becomes the definition of material impairment of hearing.

OSHA believes that the capacity to hear and understand speech is the most critical function of human hearing. Therefore the definition of material impairment of hearing is directly related to people's ability to understand speech as it is spoken in everyday social conditions. Assessing this ability can be done by a variety of speech audiometric tests. Since speech audiometry is not well standardized, researchers and administrators have used pure-tone thresholds to estimate hearing for speech. As explained in the introductory section, these thresholds are the lowest levels at which a listener can just barely hear discrete frequency tones.

There is very little debate about the usefulness of pure tones to assess hearing impairment, but there is some disagreement about the hearing level, or fence, at which material impairment begins, and about which audiometric frequencies to use in the assessment. Setting the fence at a high hearing level means that workers are allowed to lose quite a lot of hearing before the loss is considered to be a material impairment to be prevented. Setting the fence at a low hearing level means that relatively little hearing is lost before the loss or impairment is considered material. The lower the fence, the larger will be the number of workers identified as materially impaired. The selection of audiometric frequencies also has an effect on the number of workers that will be identified. Since noise-induced hearing loss affects the high frequencies earlier and more severely than the low frequencies, more workers will be identified as crossing the fence or suffering material impairment when high frequencies are used in the definition. It should be noted that the use of high frequencies in the definition of material impairment more accurately portrays a worker's actual hearing loss, since those frequencies are more severely affected by noise.

The hearing levels and audiometric frequencies that constitute the definition of material impairment of hearing have been identified through studies of the ability to communicate in everyday listening conditions. Some of these studies were submitted to the record, and the issue of material impairment received considerable attention.

Until now, the Agency had not conclusively defined material impairment of hearing. For purposes of the proposal, OSHA had used the definition of hearing handicap developed in 1959 by the American Academy of Ophthalmology and Otolaryngology (AAOO), a subgroup of the American Medical Association (Ex. 3, p. 44; Ex. 6, p. 12337). The AAOO definition, which has been used primarily for workers' compensation purposes, uses a 25-dB fence for average hearing levels at the frequencies 500, 1000, and 2000 Hz. Some comments to the record (Ex. 35, p. 1; Ex. 26–3, p. 5–24; Ex. 26–4, p. 1) favored this definition, because it was thought to describe an individual's ability to communicate under everyday conditions. However, several commenters pointed out that it would not be appropriate to use the same formula for prevention and compensation (Ex. 47, p. 5; Ex. 46, pp. 364–365; Ex. 51, p. 4; Ex. 57, pp. 9–10). Dr. H. E. von Gierke of the U.S. Air Force commented on this subject on behalf of the EPA. He states that: "Formulas developed for assessing hearing handicap for compensation purposes were never intended to be used for purposes of preventive criteria." (Ex. 47, p. 5).

In its criteria document NIOSH recommended that the defintion of material impairment be expanded to include the ability to hear and to understand speech in noisy or difficult listening conditions. NIOSH used an average loss of 1000, 2000, and 3000 Hz in the frequency averaging, still using a 25-dB fence (Ex. 1, pp. VI–11 through VI-14). Various studies and comments supported the 1000, 2000, and 3000 Hz definition as being more realistic than the 500, 1000, and 2000 Hz AAOO defintion, because good hearing in the higher frequencies (2000 and 3000 Hz) is very important for understanding speech especially when there is noise in the background, or when speech is not clear. It was also noted that everyday listening conditions are noisy at least part of the time rather than being completely quiet (Ex. 1, p. VI–13; Ex. 50, p. 16; Ex. 321–16B, pp. 9–10, 61; Ex. 5, p. 43803), which is the assumption in the AAOO formula.

Dr. Aage Moller, Professor of Physiological Acoustics at the Karolinska Institute in Stockholm, commented on the severity of the AAOO definition in his testimony for the AFL–CIO:

> The 26 dB hearing loss average value for frequencies 500, 1000 and 2000 Hz is (by AAOO) assumed to correspond to a beginning loss of ability to understand speech in the quiet. Historically this definition originates from the limit where workmen's

compensation was to be paid for loss of earning power. Such a hearing loss will no doubt by most people be regarded as a rather severe handicap in normal social life. It will with most people make it impossible or at least very difficult to participate in parties where more than one person speaks at a time. People with that degree of hearing loss will also have difficulties to understand novel words and numbers. It is thus somewhat surprising that this *"limit of a handicap"* at present has been accepted as *"the limit of a tolerable"* impairment of the hearing. It has been suggested to exchange 500 Hz with 3000 Hz to give more realistic estimates of beginning loss of intelligibility of speech. (Ex. 88, pp. 3–4).

William C. Sperry, a private individual whose hearing impairment was very close to the AAOO-identified point of beginning handicap, filed a comment (Ex. 184). He believed that his hearing loss was sufficient to warrant buying a hearing aid. Although the hearing aid sometimes helped, there were other times when hearing was extremely difficult. He stated:

In a situation where there is a high ambient noise level, such as parties, I might as well leave my hearing aid at home, and very often, I go home after a short while since the multitude of speakers and all of the noise frequently makes it impossible to follow conversations. In any situation, where there is background noise, such as an air-conditioner, I find that communication is difficult, with or without the hearing aid. . . . I submit to you that people with my hearing loss are considerably more than just barely impaired. A standard that allows an average of 25 dB hearing loss at 500, 1000 and 2000 Hz very definitely allows material impairment to occur, and does not prevent people from losing one of their most valuable abilities, namely the ability to communicate effectively with each other. (Ex. 184, pp. 4–5).

Finally it was pointed out that the AAOO formula does not distinguish between a person who has a noise-induced hearing loss and a person who has a conductive hearing loss since it includes 500 Hz and excludes the frequencies above 2000 Hz (Ex. 1, pp. VI–12 and VI–13). Conductive hearing loss (which can be the result of many nonoccupational factors such as ear infections) tends to be of the same magnitude across all frequencies so that the loss has a flat appearance on the audiogram. Noise-induced hearing loss produces a sloping configuration, the loss being much more severe in the high frequencies than in the low frequencies, especially in the early stages. Since 500 Hz is the last and least severely affected of the test frequencies, it is not nearly so important as 3000 Hz in characterizing the audiogram of the individual with noise-induced hearing loss.

In 1979 the American Medical Association (AMA) (Ex. 321–10, p. 2058) changed its formula for hearing handicap, and now advocates a low fence of 25 dB for hearing levels averaged at the frequencies 500, 1000, 2000, and 3000 Hz. The AMA has chosen to include 3000 Hz because it now recognizes the value of high-frequency hearing in more realistic listening situations (Ex. 321–10, p. 2058). However, the primary use of the AMA formula for "medico-legal" (compensation) purposes remains unchanged.

Another method for describing material impairment, developed by the Committee on Hearing, Bioacoustics and Biomechanics of the National Academy of Sciences (CHABA), was discussed by Dr. W. Dixon Ward (Ex. 222C, pp. 12–13) and Dr. Thomas (Ex. 51, pp. 7, 8). The CHABA report specified that a fence of 35 dB should be used if hearing levels at 1000, 2000, and 3000 Hz were averaged (Ex. 222C, pp. 12–13). CHABA's charge was to find a low fence for the frequencies 1000, 2000, and 3000 Hz that would yield the same compensation as a 25-dB fence at 500, 1000, and 2000 Hz (Ex. 51, pp. 7–8). Since this formula was specifically concerned with compensation, rather than with prevention, OSHA does not consider it appropriate for use in a standard to prevent material impairment of hearing. The CHABA committee made no attempt to define material impairment of hearing by examining research results on the ability to understand speech and to function in everyday life.

EPA (Ex. 189–5, p. 11) recommended a 25-dB fence for hearing levels averaged at the frequencies 1000, 2000, and 4000 Hz, and later submitted a study (Ex. 321–16B, pp. 60, 61) to support the same frequencies but using an even lower fence.

Other witnesses also recommended lower fences or higher frequencies than those employed by the AAOO. Dr. Karl Kryter of the Stanford Research Institute, testifying on behalf of EPA (Ex. 50, p. 6; Tr. 776–778) criticized the AAOO formula, and suggested a fence at least as low as 15 dB if the frequencies 500, 1000, and 2000 Hz were used. Joseph Hafkenschiel of the Communications Workers of America, recommended a 15-dB fence for the frequencies 500, 1000, and 2000 Hz (Ex. 82, p. 4), and others also argued that a 25-dB fence allows too much hearing loss (Ex. 189–5, p. 7; Ex. 184, p. 5; Ex. 50, p. 4). A fence of 15 dB at 500, 1000, and 2000 Hz would be equivalent to a hearing level of 25 dB if the frequencies 1000, 2000, and 3000 Hz were used (Ex. 50, p. 19).

A report submitted by the Center for Policy Alternatives at the Massachusetts Institute of Technology (Ex. 138A, pp. 2–2 to 2–3) recommended using a variety of fences to describe different degrees of hearing loss experienced by a noise exposed population.

Dr. William Burns, professor of physiology at the University of London, pointed out (Tr. 851) that the British Standard, Method of Test for Estimating the Risk of Hearing Handicap due to Noise Exposure (in draft form at the time of his testimony), estimated risk data for the frequencies 1000, 2000, and 3000 Hz, although the standard used a fence of 30 dB. This fence and frequency combination were also recommended by the British to the International Organization for Standardization (Proposal from the UK-Member Body of ISO/TC 43/SC 1 for a revision of ISO 1999—Acoustics—Assessment of Occupational Noise Exposure for Hearing Conservation Purposes). These two documents later were submitted to the record by EPA as Exhibits 266E (p. 15) and 279, 11–10 (p. 1).

Following the original recommendation of NIOSH, OSHA will consider as material impairment a 25-dB fence for the frequencies 1000, 2000, and 3000 Hz. The agency agrees with the many comments and studies cited to show that high-frequency hearing is critically important for the understanding of speech (Ex. 46, p. 363; Ex. 26–1, p. 3; Ex. 26–6, p. 830; Ex. 228, p. 8; Ex. 5, p. 43803; Ex. 51, pp. 6–7), and that everyday speech is sometimes distorted and often takes place in noisy conditions. Therefore, the Agency believes that 3000 Hz should be included in the definition of material impairment, and 500 Hz, since it is not so important for understanding speech (Ex. 1, p. VI–16; Ex. 26–6, p. 830; Ex. 26–7, p. 1217; Ex. 321–16B, pp. 42–44) and since it is last and least affected by noise, should be excluded from the definition.

OSHA has considered including the 4000-Hz frequency in the definition of material impairment as recommended by EPA, since hearing at this frequency appears to be particularly valuable at times when listening conditions are noisy and distorted (Ex. 26–6, p. 830; Ex. 26–7, p. 1217; Ex. 321–16B, pp. 34–45). However, OSHA recognizes that listening conditions are favorable at least part of the time, and until data become available to show the typical proportion of favorable to unfavorable listening conditions, or the average amount of distortion that occurs in everyday speech, OSHA will continue to use the 25-dB fence at 1000, 2000, and 3000 Hz as recommended by NIOSH (Ex. 1, p. VI–11) and others (Ex. 88, pp. 3–4, Ex. 26–7, pp. 1217, 1223; Ex. 50, pp. 6,

19). This is not to say that the 4000-Hz frequency has no importance for the understanding of speech and that unlimited loss should be allowed in that frequency, but only that it is not included in the definition of material impairment at this time. In the typical noise-induced hearing loss pattern, severe losses at 4000 Hz are almost always accompanied by losses at 3000 Hz which are nearly as severe (Ex. 12, p. 136, fig. 10.19; Ex. 26–2, pp. 36–47; Ex. 1, fig. 7). Therefore, losses at 4000 Hz would not be unaccounted for.

The Agency has accepted the recommendation of the Center for Policy Alternatives to examine the effects of noise on hearing by means of a variety of fences. In the discussion of the anticipated benefits of hearing conservation programs, the Agency uses fences at 15 dB, 25 dB, and 40 dB for the frequencies 1000, 2000, and 3000 Hz. The 25-dB fence, however, is considered the point at which impairment may be considered material.

Quantifying the Effects of Noise

The two most useful concepts for describing dose-response relationships for noise-induced hearing loss are the "percentage risk" and the "noise-induced permanent threshold shift" (NIPTS) concepts. The first concept involves predicting the percentage of a population that will develop material impairment of hearing as a result of given levels and durations of noise. The second concept is used to predict the amount of hearing loss in decibels that will occur as a result of given levels and durations of noise after subtracting for presbycusis (hearing loss from aging).

In order to better understand the methods of describing the effects of noise, the concept of presbycusis should first be discussed. Presbycusis is a natural phenomenon that affects most individuals if they live to be old enough. Some people will lose some hearing by the age of 40 or 50, while others will have normal hearing well into their 70s. Mature adults will seldom have hearing levels as low as 0 dB for all audiometric frequencies. As people age, their hearing levels become higher, and most individuals accept some hearing loss as a natural occurrence (Ex. 29, p. 84). However, when even a minor noise-induced hearing loss is added to presbycusis, the resulting loss can be sufficient to cross the fence into material impairment. Whether a hearing loss is one-third presbycusis and two-thirds noise-induced, or the other way around, the loss of functional capacity is the same. In most cases, people will not be materially impaired by presbycusis alone unless they live to be very old. When noise exposure is added, usually from an occupational source, many will become materially impaired when they are young or middle-aged, and the impairments will grow more severe as age increases. In addition, occupational noise exposures have the effect of making some people suffer more hearing loss at a younger age than they would if not exposed to occupational noise.

Since presbycusis, when it occurs, is a natural and inevitable condition, it is only reasonable to examine the impact of noise exposure on a population that includes some amount of presbycusis. After a working lifetime most individuals will be at least 60 years old, and will have experienced some amount of presbycusis. It is also useful to know the extent of damage produced by noise alone, so as to judge the magnitude of the effect at each audiometric frequency as a function of exposure level and duration. Therefore the Agency has quantified the effects of noise on hearing using both the percentage risk and the NIPTS methods.

The percentage risk method allows the inclusion of presbycusis in that the procedure estimates numbers of people whose hearing levels (including presbycusis or any other impairment) will exceed a certain fence due to noise exposure. It does not include people who will exceed a certain fence because of a hearing loss *only* from aging, since the calculation subtracts the percentage of a non-noise-exposed population who would cross the fence anyway from "natural" causes. The remainder is the population at risk of developing material impairment of hearing due to noise exposure.

OSHA believes that the data in Table 1 provide reliable and consistent estimates of the percentages of the population at risk of developing material impairment due to exposure to daily average noise levels of 80, 85 and 90 dB for a working lifetime.

Table 1

[Estimated percentages of the population at risk of exceeding a 25-dB fence at 500, 1000, and 2000 Hz as a function of average noise exposure level for 40 years. (EPA, Ex. 5, p. 43805)]

Organization	Noise exposure in dB	Risk (percent)
ISO	90	21
	85	10
	80	0
EPA	90	22
	85	12
	80	5
NIOSH	90	29
	85	15
	80	3

This table, which was submitted by EPA (Ex. 5, p. 43805), shows the percentage of the exposed population expected to exceed a 25-dB fence at the frequencies 500, 1000, and 2000 Hz. The risk figures were developed by the International Organization for Standardization (ISO) (based on the data for Baughn), EPA, and NIOSH. These organizations estimated percentage risk for the 500, 1000, and 2000 Hz combination since the AAOO definition of hearing handicap still was used widely at the time these percentage risk estimates were developed (ISO in 1975, Ex. 26–4; EPA in 1973, Ex. 31; and NIOSH in 1972, Ex. 1). Two of the three organizations have now advocated the inclusion of frequencies above 2000 Hz in the definition of material impairment (Ex. 5, pp. 43803, 43805; Ex. 1, pp. VI–11, VI–14). The ISO–1980 proposal, which still is in draft form at this time, does not prescribe a specific formula for risk assessment but provides an array of formulas that can be used for predictive purposes (Ex. 321–43A, p. 3).

It can be seen that the risk of material impairment at an average exposure level of 90 dB is a substantial 21 to 29 percent. The risk of incurring material impairment after a working lifetime of 85 dB is 10 to 15 percent, and at 80 dB is 0 to 5 percent. The inclusion of 3000 or 4000 Hz in the definition of material impairment would tend to make the percentages at risk somewhat higher, since hearing loss at these frequencies from noise exposure is almost always greater than it is at 500 and 1000 Hz.

Because these risk figures were developed virtually independently [1] by the three organizations, the percentages for each exposure level are slightly different. These differences are to be expected when using the percentage risk concept because the estimates can be influenced by the extent to which a noise-exposed population is screened to exclude people with nonoccupational hearing loss, and also by the extent to which the population includes hearing loss from aging (Ex. 5, p. 43806). For example, NIOSH suggested that its percentage risk estimates might be slightly higher than those derived from the "severely" screened population (Ex. 1, p. VI–31). (An exposed population that includes some amount of nonoccupational hearing loss and some presbycusis would be representative of the U.S. population, and thus the risk figures should not be unrealistic.)

[1] As mentioned above, the ISO risk estimates were derived from data collected by Dr. W. L. Baughn. The EPA also used Baughn's data, and averaged them with data collected by Drs. Burns and Robinson, and Dr. Passchier-Vermeer. All of these studies will be discussed in further detail below. Since EPA's estimates are based in part on the same data that were used by ISO, the relationship between the EPA and ISO risk estimates is not entirely independent.

Although Table 1 shows small differences, the risk estimates for the same exposure level are very similar.

The percentage risk concept, while easy to understand, is in some ways a limited descriptor of noise-induced hearing loss (Ex. 5, p. 43806; Ex. 47, pp. 9–10; Ex. 231, written testimony, p. 1). First, the use of a single fence such as 25 dB does not adequately describe the effects of noise on all of the impaired workers in that it does not quantify the amount of loss (Ex. 5, p. 43805; Ex. 231, p. 7). Everyone whose hearing threshold has exceeded the 25-dB fence is considered to have the same amount of hearing loss. The single fence conveys nothing about the people who start with excellent hearing and lose up to 25 dB from noise exposure, nor does it indicate how many people suffer severe losses, greater than 40 or 50 dB, for example (Ex. 5, p. 43806; Ex. 231, p. 7; Ex. 47, pp. 9–10). In an attempt to overcome these limitations, OSHA uses three fences to discuss the benefits anticipated from hearing conservation programs.

Noise-induced permanent threshold shift (NIPTS) is the actual shift in hearing level due to noise exposure, after corrections have been made for aging. NIPTS values may be designated for combinations of frequencies, but they are usually given for each audiometric frequency separately, and it can be helpful to examine hearing loss at individual frequencies. (The percentage risk method nearly always averages hearing levels at three or more frequencies.) The NIPTS method allows examination of the effects of noise on hearing level at 4000 and 6000 Hz, which, although they are not usually included in the definition of material impairment, are the frequencies where hearing is earliest and most severely affected by noise. NIPTS usually is presented for certain percentages of the exposed population, such as the median, the 90th and the 10th percentiles, the lower percentiles representing the more severely affected members.

The disadvantage in presenting the data only as NIPTS is that the full impact of noise exposure is not as easily comprehended as it is with percentage risk. Since NIPTS values do not include any hearing loss from nonoccupational causes, they do not reflect actual hearing levels. However, for comparing the effects of one exposure level against another they are very useful.

Table 2 shows NIPTS as a function of exposure level and exposure duration in years (see Johnson's Table 3, Ex. 310, pp. 27–28). NIPTS values are given for each audiometric frequency from 500 Hz to 6000 Hz, and are shown for the less sensitive 90th percentile, the median, and the more sensitive 10th percentile. When added to presbycusis values from a "normal" non-noise exposed population, these resulting hearing levels would reflect realistic hearing levels to be expected in noise exposed populations.

Table 2 is taken from a report by Col. Daniel Johnson of the U.S. Air Force, entitled "Derivation of Presbycusis and Noise Induced Permanent Threshold Shift (NIPTS) to be used for the Basis of a Standard on the Effects of Noise on Hearing" (Ex. 310, pp. 27–28). As in a previous report, which Col. Johnson had prepared for the EPA (Ex. 17), he averaged the hearing loss data from some well-known studies. While in the earlier report Col. Johnson used the data of Baughn, Burns and Robinson, and Passchier-Vermeer, in the more recent report he combined only the data of Burns and Robinson with those of Passchier-Vermeer. Details of these studies will be discussed further below.

BILLING CODE 4510-26-C

Studies of Noise and Hearing Loss

Numerous studies of the effects of noise on hearing were submitted to the record. For purposes of this discussion, the studies have been divided into the categories of continuous and impulsive noise. The word "continuous" refers here to time-varying exposures as well, since in most of the studies noise levels varied somewhat throughout the day (Ex. 11, p. 2–3; Ex. 12, pp. 93–99; Ex. 26–2, p. 10).

Exposure to intermittent (on and off) noise will not be treated separately since the same methods for predicting hearing loss from continuous noise apply to losses resulting from intermittent noise (Ex. 279, 11–3, p. 447; Ex. 54, pp. 16–17; Ex. 29, p. 217). There was some disagreement as to whether the 5-dB or the 3-dB exchange rate should be used in calculating the time-weighted average exposure level from noncontinuous noise. But since the current noise standard (29 CFR 1910.95) uses the 5-dB exchange rate, and since the permissible exposure level remains unchanged at this time, the debate over the exchange rate will not be treated extensively at this time.

OSHA has examined the many studies and reports in the record that describe the effects of continuous noise on hearing (Ex. 11; Ex. 17; Ex. 310; Ex. 12; Ex. 26–2; Ex. 36; Ex. 266 A; Ex. 304), and the Agency believes that they comprise the best available data on the subject. The results of the various studies are relatively consistent, both in terms of the population at risk, and the extent of NIPTS as a function of noise exposure. The various studies, if considered together, contain data on more than 10,000 subjects.

As stated above, Col. Johnson averaged the data of different researchers in the preparation of a report for EPA. Later, the EPA used Col. Johnson's analysis of those data in the development of criteria for the effects of noise (Ex. 31, p. 5–17) and for the identification of safe levels of noise (Ex. 30, p. C–5). The three studies that were used in the EPA reports were the subject of much discussion during the hearings. Although some criticisms were raised, they were also widely supported (Tr. 734, 738, 779, 785, 834). The three studies were the following:

"Relationship between Daily Noise Exposure and hearing loss based on the evaluation of 6,835 industrial noise exposure cases" by W. L. Baughn (Ex. 11).

"Hearing and Noise in Industry" by W. Burns and D. W. Robinson (Ex. 12).

"Hearing Loss Due to Exposure to Steady-state Broadband Noise" by W. Passchier-Vermeer (as displayed and used in "Prediction of NIPTS due to continuous noise exposure" by D. L. Johnson (Ex. 17).

The study by Dr. William L. Baughn of the General Motors Corporation was performed between 1960 and 1965 (Ex. 11). These data have been used in the development of the Air Force report "Hazardous Noise Exposure" (Ex. 48) and for the current ISO standard 1999, "Assessment of Occupational Noise Exposure for Hearing Conservation Purposes" (Ex. 11, p. iii). The data were published in 1973 as an Air Force technical report (Ex. 11). Dr. Baughn studied the effects of average noise exposures of 78 dB, 86 dB, and 92dB on 6,835 industrial workers employed in midwestern plants producing automobile parts. Approximately 20,000 subjects had been excluded from the study because there was insufficient information about their exposure histories, or because they had "mixed" exposures (including nonoccupational sources). Subjects with anatomical abnormalities (such as ear infections) were not screened from the noise-exposed or control groups. Noise measurements had been taken over a period of 14 years, and through interviews, exposure histories were estimated as far back as 40 years (Ex. 11, p. 2. Dr. Baughn "smoothed" the data and presented families of curves showing the numbers of people exceeding a 15-dB fence at 500, 1000, and 2000 Hz referenced to the ASA 1951 audiometric zero, which is the equivalent of a 25-dB fence referenced to the ANSI 1969 zero level. He also provided data for fences of 5 dB to 40 dB (ASA), which would translate to 15 dB to 50 dB (ANSI). Since the exposure categories were for 78 dB, 86 dB and 92 dB, Dr. Baughn interpolated so as to provide estimates for exposures to 80 dB, 85 dB and 92 dB. He also extrapolated to exposure levels up to 115 dB, but the data above 95 dB were not used in Col. Johnson's report or the comparisons shown earlier.

Figure 1 shows Baughn's estimates of the percentages of the exposed population that will cross a 25-dB fence as a result of exposure to daily average noise levels of 80 dB to 115 dB. Since these estimates use the frequencies 500, 1000, and 2000 Hz, the numbers of people crossing a 25-dB fence at 1000, 2000, and 3000 Hz would be expected to be greater.

BILLING CODE 4510-26-M

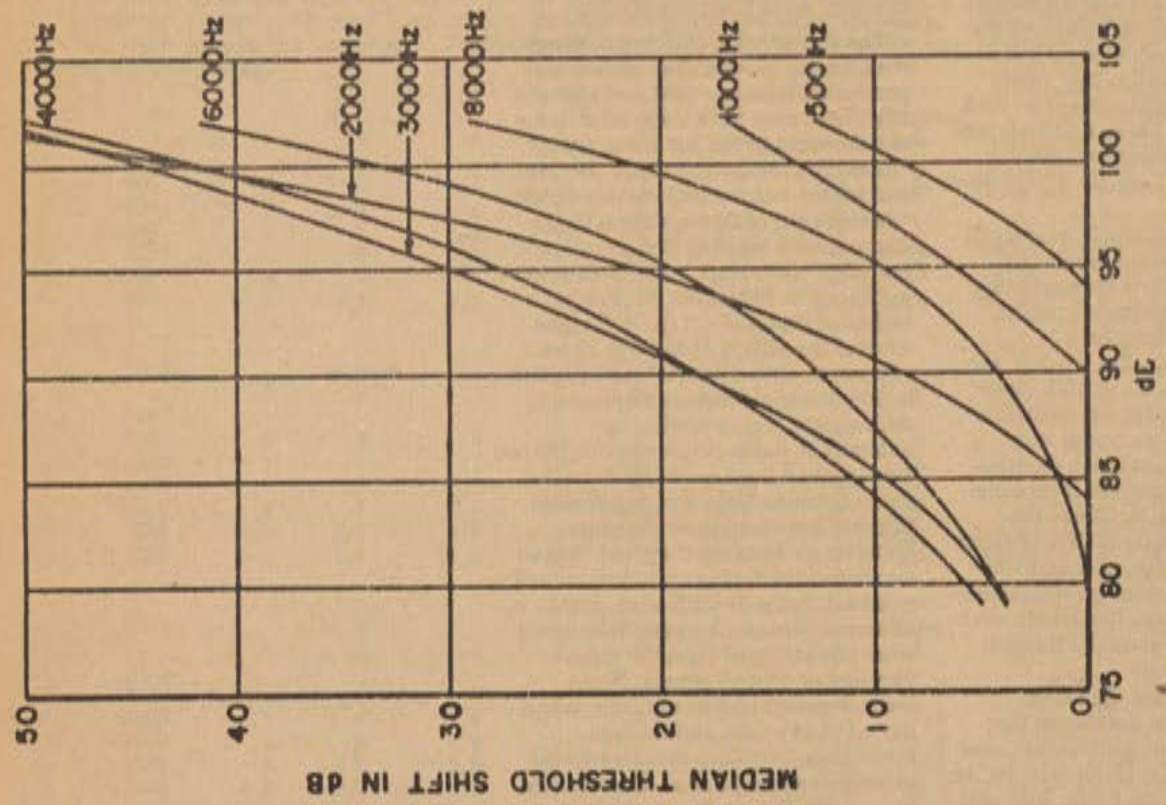

Figure 3. Median noise-induced threshold shift for various audiometric frequencies as a function of average daily noise exposure level for 40 years. Data are from Passchier-Vermeer (in Ex. 5, p. 43803).

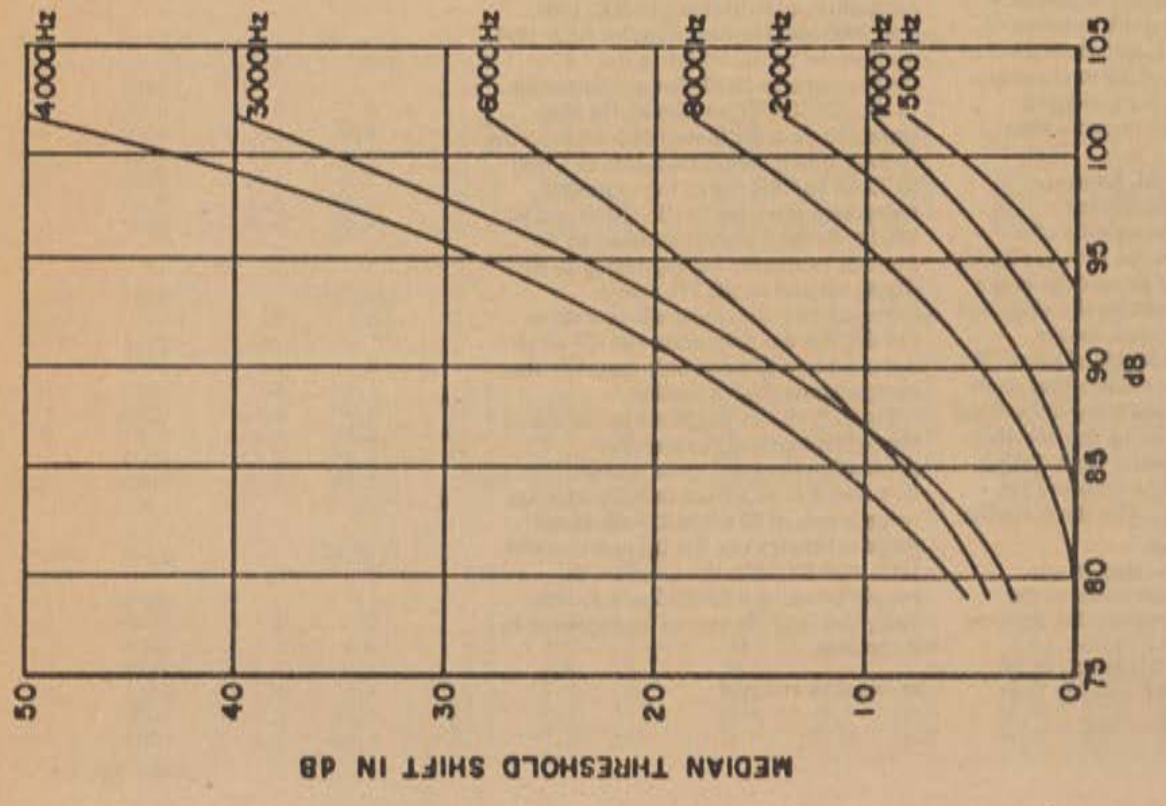

Figure 2. Median noise-induced threshold shift for various audiometric frequencies as a function of average daily noise exposure level for 10 years. Data are from Passchier-Vermeer (in Ex. 5, p. 43803).

BILLING CODE 4510-26-C

Baughn's study was criticized because in some cases as little as 20 minutes of recovery time was allowed prior to audiometric testing (Ex. 17, p. 2; Ex. 3, p. 39; Ex. 26–3, p. 5–15; Ex. 138A, p. 2–17). As a result the data may have been influenced to some extent by temporary threshold shift, which would have the effect of making the noise-exposed group's hearing threshold levels appear worse than they should. The study was also criticized because the control group may have had average exposures as high as 78 dB so that they may also have had a small amount of occupational hearing loss (Ex. 17, p. 2; Ex. 138A, p. 2–17). If the control group's hearing levels were slightly inflated, this would tend to reduce the difference between the hearing levels of the exposed and control groups. These potential flaws would have the tendency to offset each other when NIPTS is calculated. In addition, Dr. Kryter (Ex. 50, pp. 9–12) pointed out that any residual TTS after 20 minutes would be quite small (only 1 to 2 dB) for those subjects who had already incurred a noise-induced hearing loss. (TTS tends to become smaller after significant permanent loss is incurred.)

One practical limitation of the Baughn study is that the author did not provide hearing loss data at separate frequencies, but only at the combined frequencies of 50, 1000, and 2000 Hz, and then separately for 4000 Hz (Ex. 11, pp. 4, 30; Ex. 5, p. 43804). Thus, it is not possible to estimate hearing loss, for example, at only 2000 Hz, or for the combined frequencies 1000, 2000, and 3000 Hz. While this may result in some procedural problems for researchers and administrators, it does not detract from the validity of the study. The sample size appears to be the largest in any single hearing loss study, and the study has received support from other scientists and organizations. The results are not incompatible with other data in the record. Therefore, OSHA believes that the Baughn study represents a valuable contribution to the public record.

Dr. W. Passchier-Vermeer's data on steady-state noise exposure do not appear in the hearing record except as they are presented by Col. Johnson (Ex. 17 and Ex. 310). Dr. Passchier-Vermeer presented in 1968 an exhaustive review of hearing loss as a function of exposure to average noise levels of about 80 dB to 102 dB, having summed, analyzed, and correlated data from any sources (Ex. 17, pp. 2, 3, 12–14). The data consisted of laboratory and field studies conducted by British, Dutch, Swedish, and U.S. investigators.

Figure 2 shows median NIPTS at various frequencies as a function of noise exposure for a period of 10 years. Figure 3 shows median NIPTS after 40 years of noise exposure. These figures, which were submitted by EPA (Ex. 5, p. 43803), are taken from Dr. Passchier-Vermeer's reports. Of course the noise-induced permanent threshold shift would be expected to be more severe for the more susceptible individuals in the higher centiles of the population, such as the 19th or the 95th centiles.

BILLING CODE 4510-26-M

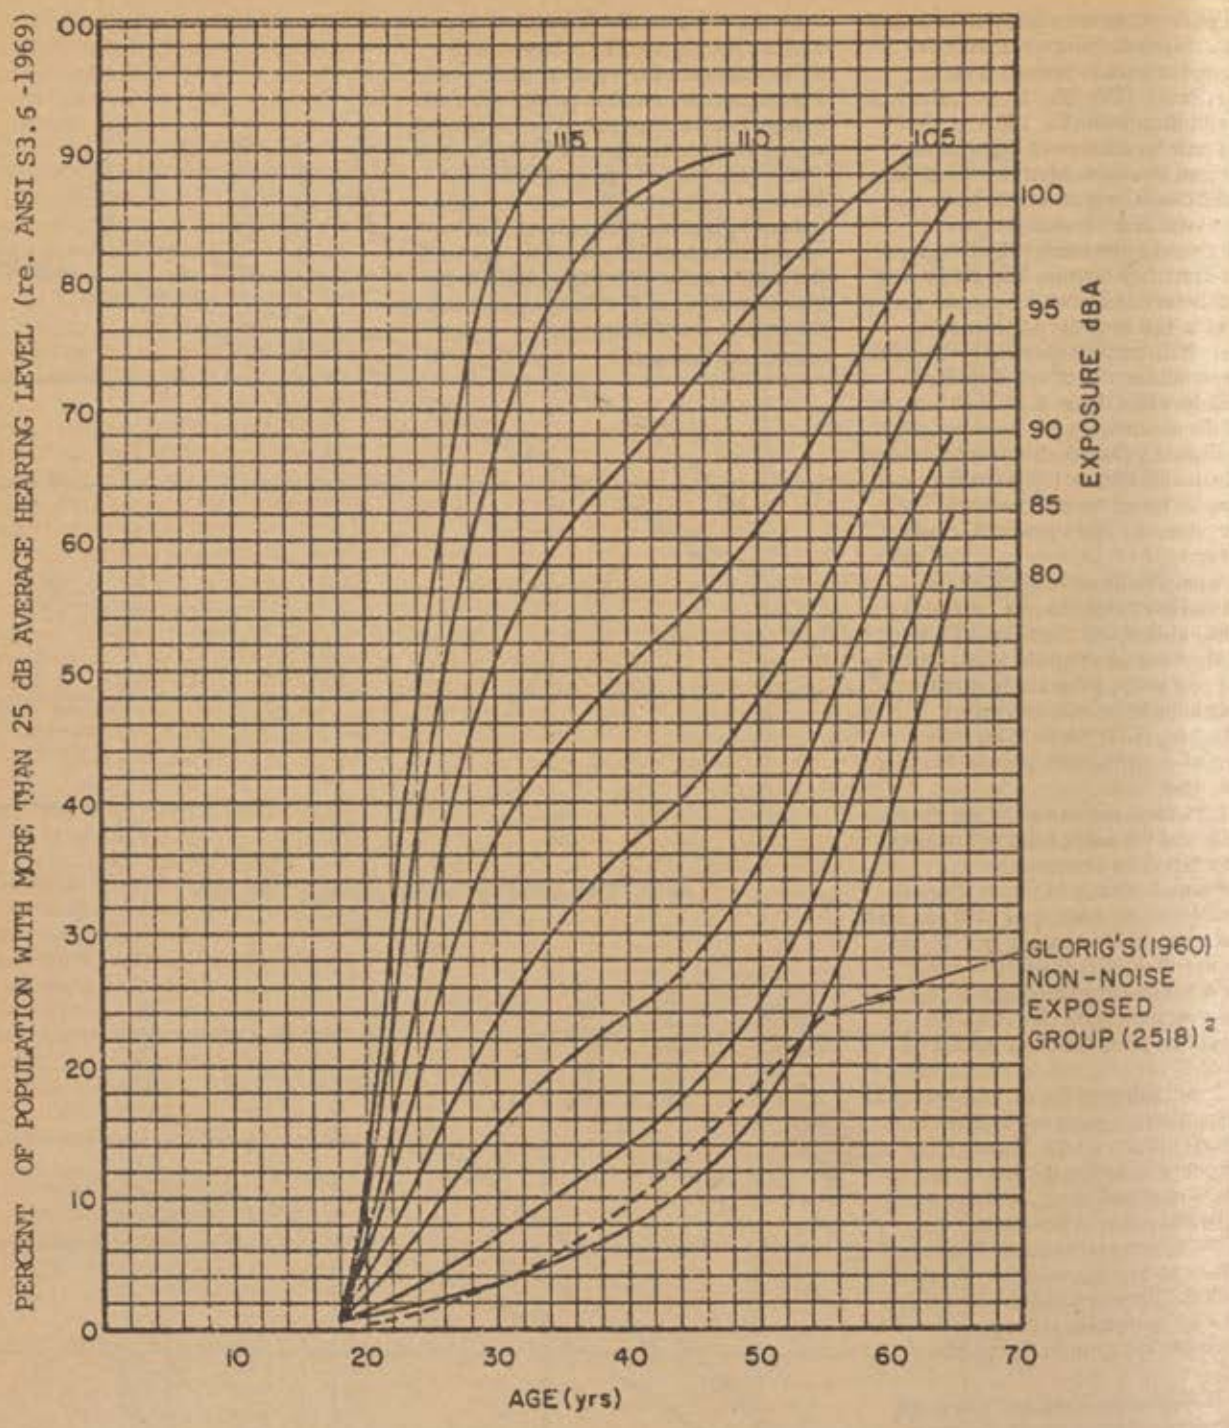

Figure 1. Percent of the population with more than 25 dB average hearing level for the frequencies 500, 1000, and 2000 Hz as a function of noise exposure level. From Baughn (Ex. 11, p. 41).

BILLING CODE 4510-26-C

Four of the 10 studies analyzed by Dr. Passchier-Vermeer were discussed briefly in documents prepared by NIOSH (Ex. 1), EPA (Ex. 31), and Drs. Burns and Robinson (Ex. 12). The NIOSH criteria document reported that Drs. Taylor, Pearson, Mair, and Burns studied 251 working and retired jute weavers who were exposed to average overall sound pressure levels of 99 to 102 dB. The investigators found the greatest deterioration of hearing occurred in the first 10 to 15 years of exposure (Ex. 1, p. 5 Table IV). NIOSH also reported on a study by Drs. Burns, Hinchcliffe, and Littler of 174 textile spinners and weavers exposed to average overall (unweighted) sound pressure levels of 100 to 101 dB. Hearing losses were found to be greater for the weavers than the spinners (Ex. 1, p. 6 of Table IV).

EPA's document entitled Public Health and Welfare Criteria for Noise described a study by Gallo and Glorig, which also was used by Dr. Passchier-Vermeer, as well as the study by Taylor et al., mentioned above. According to EPA (Ex. 31, p. 5–5), Drs. Gallo and Glorig measured the hearing levels of 400 men aged 18–65, and 90 women, aged 18–35, exposed to an average overall sound pressure level of 102 dB. The population had been screened to exclude nonoccupational noise exposure and otological abnormalities. The results showed that high-frequency hearing loss rose rapidly during the first 15 years of exposure, but that hearing loss in the mid-frequencies continued to rise in a linear manner up to 40 years of exposure.

Drs. Burns and Robinson (Ex. 12, pp. 220–228) also discussed the studies of Gallo and Glorig, and Taylor et al. In addition, they described a study by Dr. B. Kylin, which also was used by Dr. Passchier-Vermeer, of 89 men exposed for durations of 10 to 15 years, and 29 male controls. Neither population was screened for military noise exposure or for ear disease. (These factors should not have influenced the actual NIPTS since they were distributed evenly among the noise exposed and control populations (Ex. 12, p. 226).) Drs. Burns and Robinson compared the results of their study with those of the three selected studies (Gallo and Glorig, Taylor et al., and Kylin), and with the results predicted by Dr. Passchier-Vermeer on the basis of all of the studies she analyzed. They found, using median hearing loss values, that agreement among all of the results was good for the mid-frequencies (500, 1000, and 2000 Hz), but that their own data and method of prediction showed somewhat lower values (less hearing loss) for the higher frequencies (3000, 4000, and 6000 Hz) (Ex. 12, p. 227). The authors suggested that this finding might be due to differences in noise monitoring and subject selection techniques used by the various investigators (Ex. 12, p. 228).

Because the Passchier-Vermeer data resulted from a synthesis of many studies, some people argued that their quality was difficult to judge (Ex. 50, p. 8). Others noted that the original report only presented data for quartile groups (25th, 50th and 75th centiles) and neglected to address the more variant hearing levels found in the extremes of the population (Fx. 3, p. 39; Ex. 17, p. 2; Ex. 26–3, p. 5–14). Col. Johnson has extrapolated the data to the 10th and 90th centiles so that it would be averaged with those of the other studies (Ex. 17, p. 14 and Ex. 310, p. 7). Col. Johnson reported (Ex. 17, p. 14) that in a paper published in 1971, Dr. Passchier-Vermeer did publish the data for the 10th and 90th centiles, and these data were in agreement with Johnson's extrapolations.

The Passchier-Vermeer data are useful in that hearing levels are given for the discrete audiometric frequencies 500, 1000, 2000, 3000, 4000, 6000, and 8000 Hz, resulting from exposure levels of 80 dB, 85 dB, and 90 dB. Also, the Agency believes that averaging the results from a number of studies may be considered an advantage in that it ought to minimize any anomalies that might occur as a result of any one study. The Passchier-Vermeer data also were supported by various witnesses and comments to the record, (Ex. 47, p. 8; Ex. 216 A, p. 5).

Dr. W. Burns (Ex. 54) reported on a study of British factory workers that he and Dr. D. W. Robinson conducted between 1963 and 1968. The complete study was submitted to the record by OSHA as Exhibit 12. The study's population consisted of 759 subjects exposed to average noise levels between 75 dB and 120 dB and 97 non-noise exposed control subjects. The range of exposure durations was one month to 50 years. Exposure levels were taken in octave bands from 63 to 8000 Hz, and A-weighted measurements also were taken. Approximately 4000 audiograms were performed. Subjects were screened thoroughly to exclude exposure histories that were not readily quantifiable (to some extent unknown), exposure to gunfire, ear disease or abnormality, and language difficulties (Ex. 12, p. 12). The investigators found that hearing levels of people exposed to certain noise levels for certain durations were much the same as those of others exposed to higher levels for shorter times (Ex. 12, p. 17). They found that this relationship held for relatively short durations as well as for many years of exposure (Ex. 12, pp. 17–18). Consequently, they developed a mathematical formula to predict hearing levels in the frequencies 500 through 6000 Hz in various percentages of the exposed population due to specific levels and durations of noise (Ex. 12, pp. 100–151). Data from the Burns and Robinson study are shown combined with those of Dr. Passchier-Vermeer in Table 2 above.

The Burns and Robinson study has been criticized on the gounds that eliminating all workers with any form of nonoccupational hearing loss by extensive screening (which appeared to be more rigorous than in the other studies) would cause the resulting hearing levels to be an underestimate of the total "real-life" hearing loss picture (Ex. 40, p. 7; Ex. 50, p. 17). This problem has been eliminated in the analyses performed by Col. Johnson (Ex. 17 and 310) and by OSHA in the Benefits section, by using only the NIPTS data from Burns and Robinson and adding values for presbycusis from a normal, unscreened population (such as the U.S. Public Health Survey data).

The Burns and Robinson study was also criticized by Terrence Dear of the DuPont Company for including subjects exposed to impulse noise (Tr: 864–866), although the authors maintained that they tried to minimize such exposures, and that impulse noise exposures only would have occurred in a relatively small number of cases where subjects were exposed to high levels of continuous noise (Tr: 864–866; Ex. 12, p. 97).

On the whole, OSHA believes that the study by Burns and Robinson represents a very thorough, well-controlled study, with results that are extremely useful in predicting the effect of noise exposure on hearing.

NIOSH submitted to the record a report entitled "Occupational Noise and Hearing", 1968–1972 (Ex. 26–2). The dose-response relationships described in this report had been used by NIOSH in making the recommendations in its criteria document (Ex. 1). The report (Ex. 26–2, p. vi) presented background information about the study, and statistical analyses that were meant to complement the analyses that had already been published in the criteria document. NIOSH studied a population of 792 industrial workers exposed to average noise levels of 85 dB, 90 dB, and 95 dB, and a control population of 380 subjects who were exposed to average

levels below 80 dB. (Since the control population was exposed to levels as high as 80 dB, a few members of the group may have incurred some amount of occupational hearing loss, and therefore the study would be subject to the same criticism as the study of Dr. Baughn.) Although the exposures were primarily to steady-state noise, exposure levels fluctuated slightly within each category. The total population was screened to exclude subjects who had been exposed to noise from gunfire, and who showed some sign of ear disease or audiometric irregularity (Ex. 26–2, pp. 6–7). Subjects ranged in age from 17 to 65 years. Data were presented for hearing levels of the 10th, 25th, 50th, 75th, and 90th centiles for various age groups and exposure durations, resulting from average exposures to 85 dB, 90 dB, and 95 dB. The authors concluded that the data substantiated the results of other similar investigations, but that they pertained only to simple or "ordinary" noise environments, as opposed to complex environments such as lengthened exposures, seasonal exposures, impact or impulsive noise, and high frequency noise (Ex. 26–2, p. 15).

Data from the NIOSH study have not been used in the prediction of benefits from the hearing conservation amendment. Col. Johnson stated in his report (Ex. 17, p. 10) that he did not use the NIOSH data in the analysis performed for EPA because the data had not yet been "smoothed," which would make it difficult to make predictions. Also, the NIOSH data were limited to exposures of 85, 90 and 95 dB, thus preventing hearing loss estimates for exposures to 80 dB and 100 dB. Nevertheless, the data are generally consistent with the results of the other studies discussed above.

BILLING CODE 4510-26-M

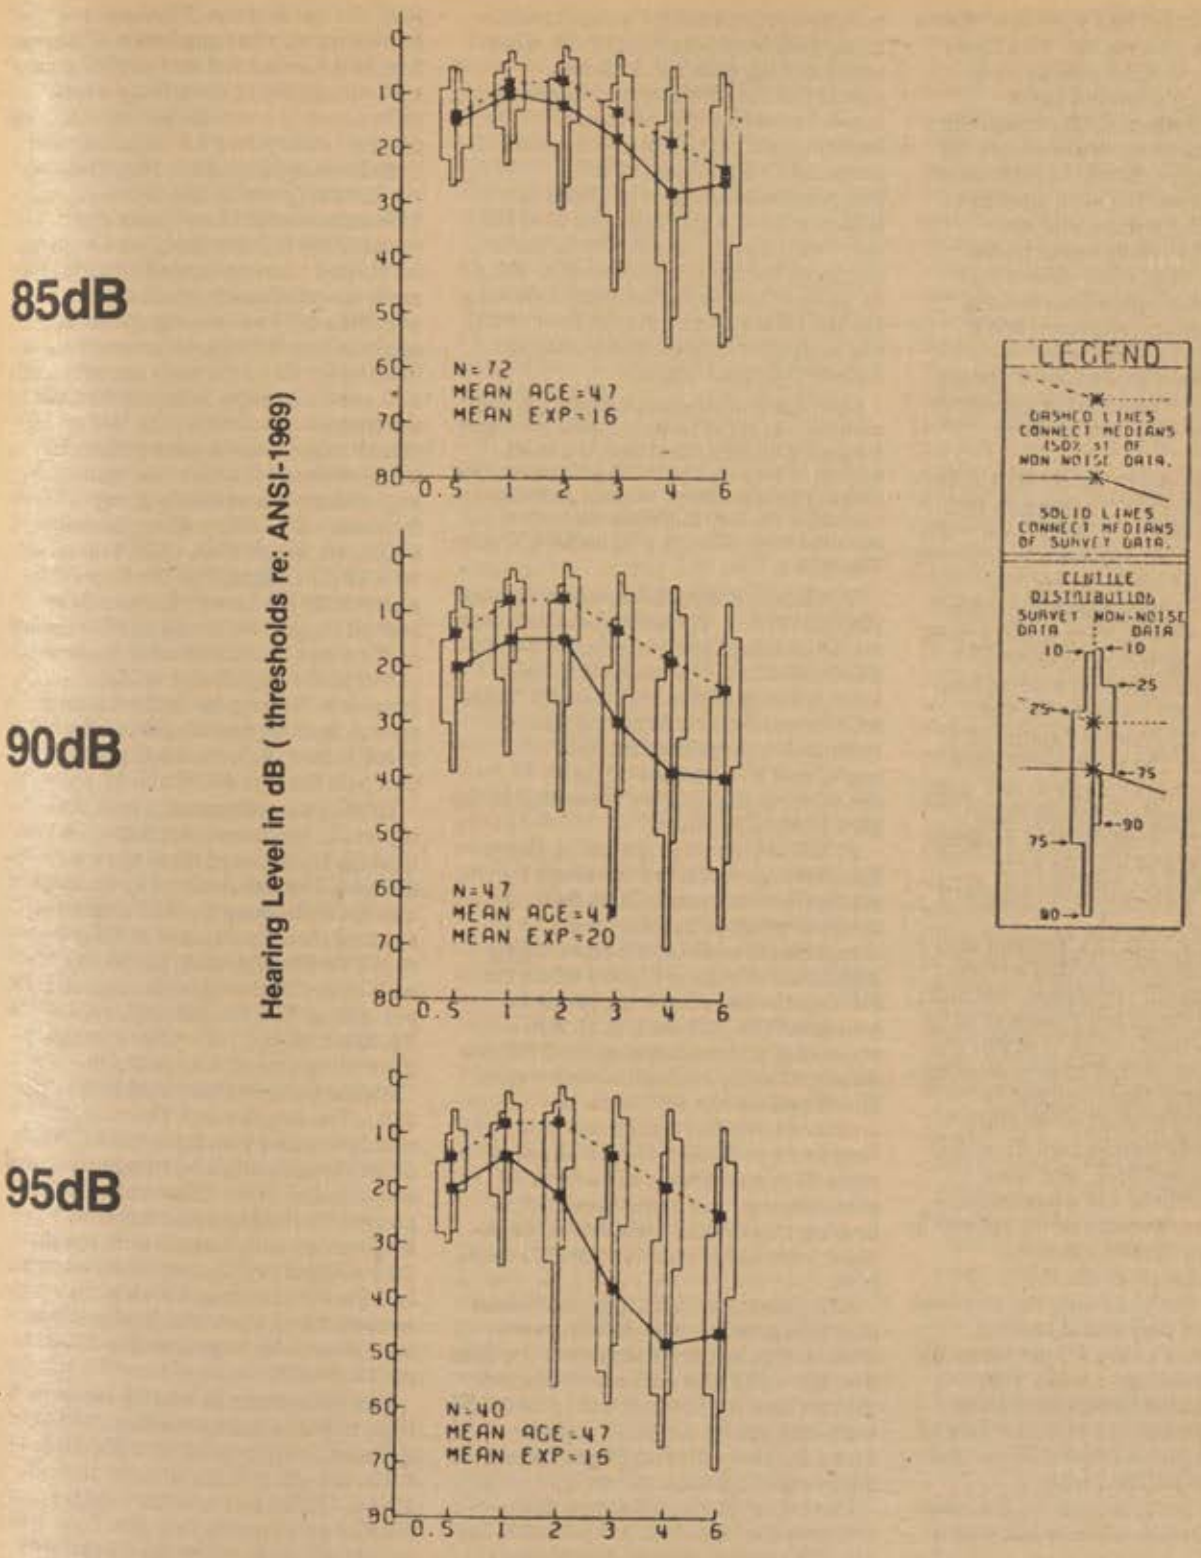

Figure 4. Hearing level distribution for workers aged 43 to 51 years exposed to daily average noise levels of 85dB, 90dB, and 95dB, and for non-noise-exposed workers.

Results of the NIOSH study are shown in Figure 4 (Ex. 26–2, p. 41). This figure shows hearing level by audiometric frequency as a function of noise exposure to levels of 85, 90, and 95 dB. Population distributions are shown for the least sensitive (labeled in this case the 10th centile) to the most sensitive (the 90th centile) groups, and are compared to the non-noise-exposed control group. This study shows that differences between median hearing levels increase with exposure level, duration, and age. Also, more importantly, the distribution of hearing levels becomes considerably greater as exposure level, duration, and age increase.

In another study, Dr. R. H. Martin, Dr. E. S. Gibson, and J. N. Lockington (Ex. 36) related the degree of employee hearing loss to average noise levels of 85 and 90 dB in industrial plants. The population consisted of 228 Canadian industrial workers ranging from 18 to 65 years of age who were screened to exclude non-occupational hearing loss. The control group consisted of 143 subjects with minimal occupational noise exposure. The study concluded that the risk of hearing loss at 500, 1000, and 2000 Hz increases significantly between 85 and 90 dB, leaving a portion of the population at risk [up to 22 percent] by a noise exposure standard of 90 dB.

Elliott Berger, with Drs. Royster and Thomas (Ex. 266A) examined a North Carolina industrial population that had been exposed for 10 to 12 years to daily average noise levels of 88 to 89 dB. The population consisted of 42 men working in one location of the plant and 58 women working in another location. Control subjects were drawn from the same geographical area, and were screened to exclude any occupational noise exposure. Because of the relatively short exposure duration and the moderate exposure levels, the investigators analyzed only the losses at 4000 Hz, where they found hearing levels somewhat worse for men than for women (Ex. 266A, pp. 82–83). They concluded that the observed hearing losses were compatible with the data of Baughn, Passchier-Vermeer, Burns and Robinson, and NIOSH, with compatibility being greater for the male than for the female subjects (Ex. 266A, pp. 81–85).

In the Inter-Industry Noise Study (IINS) (Ex. 304) the authors measured noise exposure and hearing levels of 348 industrial subjects. Daily average noise exposure levels were between 82 and 92 dB for durations ranging from 3 years to greater than 30 years. There were 228 matched control subjects whose noise exposures were less than 75 dB. After analyzing the data the authors concluded that differences in hearing levels between the control and experimental populations were not statistically significant at the frequencies 500, 1000, and 2000 Hz. Differences at 3000, 4000, and 6000 Hz were statistically significant for male subjects, but not for females (Ex. 304, p. 8). In an editorial immediately following the IINS Research Report in the Journal of Occupational Medicine (JOM), Dr. Robert O'Connor stated:

> From this study it appears that 90 dB is as protective as 85, as far as women's hearing is concerned. In the case of men, if a small amount of hearing loss in frequencies that are well beyond the speech range is considered unacceptable, then this study supports a standard of 85. (Ex. 304, p. 8) (in JOM, 17: 760–770, 1975, p. 770).

The Environmental Protection Agency (Ex. 321–16A, p. 2) stated that there were major technical problems in the design, administration, and analysis of the Inter-Industry Noise Study which "raise serious questions concerning the technical appropriateness and usefulness of a number of the conclusions which were presented in the 1978 JOM publication."

A NIOSH report prepared by Barry Lempert also criticized the study by stating that the results included only mean or average hearing level comparisons while much more highly significant effects are found when the full distribution of hearing levels is presented (Ex. 321–36A, p. 1). After reviewing and reanalyzing the IINS raw data, and using evaluation techniques developed for the 1972 criteria document, NIOSH reaffirmed that "exposure to 85 dBA should allow no more than an increase of 10 to 15 percentage points in the incidence of hearing impairment" relative to a non-noise exposed population (Ex. 321–36A, p. 4).

Col. Johnson and Dr. Thomas Schori also analyzed the raw data from the IINS, and submitted a review of the data (Ex. 321–21A). The authors concluded that the hearing levels found in the IINS were essentially the same as those found in other noise and hearing loss studies (Ex. 321–22A, p. 16).

Having reviewed the study, the critiques (Ex. 321–16A; Ex. 321–36A; Ex. 321–21A), and a critique of a critique (Motor Vehicle Manufacturers Assoc., Ex. 321–8A), OSHA has determined that the findings of the IINS do not contradict those of the studies described earlier. The Agency disagrees with the conclusions of Dr. O'Connor that 90 dB is as protective as 85 dB. Although the IINS did not find the differences between mean hearing levels of the female experimental and control groups statistically significant, there *were* differences at every frequency, showing greater hearing loss for noise-exposed than for control subjects (Ex. 804, p. 4). As Lempert pointed out, these differences would have been much larger if the full distribution of hearing levels had been presented, showing the more susceptible elements of the population. The same argument would apply to the differences between mean hearing levels of the male experimental and control groups, where systematic differences are shown. The fact that the standard deviations were greater for noise-exposed than for non-noise-exposed groups at nearly every frequency (Ex. 304, p. 4) supports this argument. In addition, OSHA disagrees with Dr. O'Connor that the frequencies above 2000 Hz "are well beyond the speech range," on the basis of the many studies and comments cited earlier, showing the importance of high-frequency hearing for understanding speech in everyday conditions (Ex. 46, p. 363; Ex. 26–1; p. 3; Ex. 26–6, p. 830; Ex. 228, p. 8; Ex. 5, p. 43803; Ex. 51, pp. 6–7).

Dr. Royster submitted a series of reports to the record (Ex. 321–22 A through H). Some of these reports discussed recent findings by Dr. Royster and his colleagues that differences in sex and race are evident in the growth of NIPTS (Ex. 321–22A, pp. 18–19), as well as in the growth of presbycusis (Ex. 321–22B, p. 510; Ex. 321–22C, pp. 116–118; Ex. 321–22D, pp. 1–2). After examining the audiograms of a large North Carolina industrial population (Ex. 321–22A), Drs. Royster and Thomas concluded that hearing threshold levels differ significantly according to race and sex and that these differences are greater for the higher audiometric frequencies and increase with age. In their subject population, black women had the best hearing, followed by white women, black men, and finally, white men after noise exposure (Ex. 321–22A, pp. 15, 18–19).

Sex differences in hearing levels have been noted in numerous studies of non-noise-exposed populations (Ex. 31, p. 4–4, Ex. 321–22, p. 7, Ex. 279, pp. 11–8, pp. 41–44). OSHA has incorporated the NIOSH presbycusis data (Ex. 1, pp. I–16 to I–17) for men and women separately in Appendix F of the amendment. Also, the Agency has calculated the benefits anticipated from hearing conservation programs using separate presbycusis data for men and for women. Actual NIPTS values have not been differentiated according to sex because

data for men and women shown separately were not available for the major studies mentioned above (Burns and Robinson, Passchier-Vermeer, Baughn, and NIOSH).

Drs. Burns and Robinson (Ex. 12, pp. 145–147) found small but persistent sex differences in noise-induced hearing loss, suggesting that NIPTS developed slightly more rapidly in men than in women. However, they did not present separate data for men and women. The IINS also showed slightly larger NIPTS values for men than for women both in the control and in the experimental populations (Ex. 304, pp. 4–8). Col. Johnson (Ex. 17 and Ex. 310) did not display NIPTS values separately for men and women, but he did show different data for certain non-noise-exposed populations, and therefore for certain estimates of the percentage at risk (Ex. 310). The studies by Baughn (Ex. 11), NIOSH (Ex. 26–2), Passchier-Vermeer (as reported by Johnson in Ex. 17), and Martin et al. (Ex. 36) did not present different NIPTS data for male and female subjects. OSHA believes that there is relatively little evidence available at this time to show that the hearing of men and women is differently affected by noise exposure, but that there is considerable evidence that differences exist in non-noise-exposed populations. Therefore, for estimating the benefits of hearing conservation programs, the Agency has used Col. Johnson's analysis of the Burns and Robinson and Passchier-Vermeer data, which shows sex differences for presbycusis but not for NIPTS. For any additional breakdown by sex or race the Agency will await further experimental evidence.

OSHA believes that the above studies are meritorious and are sufficient to make good estimates of the benefits to be derived from hearing conservation programs, despite any criticisms raised. Dr. von Gierke stated that "in spite of some uncertainties and everybody's desire for the 'perfect' study, there is adequate information available to predict with reasonable confidence the hearing impairment produced in the general population by a lifetime's exposure to continuous noise" (Tr. 705–706).

Discussion

Having established a definition of material impairment of hearing and discussed the various studies, some attention must be given to the various interpretations of the noise exposure and hearing loss data. Not all of the commenters interpreted the data in a similar manner.

Generally the argument for protecting workers above 85 dB is made on two grounds: analysis of NIPTS and of the percentage at risk showed that not only is the amount of hearing loss significantly greater at an average daily exposure level of 90 dB than at 85 dB, but also considerably more people are at risk of incurring material impairment (Ex. 40, p. 3; Ex. 47, p. 19; Ex. 57, p. 8; Ex. 82, pp. 1–4; Ex. 6, p. 12337; Ex. 26–1, p. 2).

Using the data of Baughn, Passchier-Vermeer, and Burns and Robinson, the Environmental Protection Agency found that half as many people are at risk of impairment at a daily average noise level of 85 dB as at 90 dB (Ex. 138A, pp. 1–4; Ex. 5, p. 43805; Ex. 189–5, p. 6). In addition, the amount of NIPTS doubles between 85 dB and 90 dB, especially for the frequencies 1000, 2000, and 3000 Hz (Ex. 5, p. 43804). In order to prevent *any* measurable hearing loss over a 40-year period the EPA identified a maximum 8-hour average daily noise exposure level of 75 dB (Ex. 5, p. 43803; Ex. 30, p. 4).

NIOSH also found that the population at risk due to lifetime exposures to average daily levels of 90 dB would be twice the size of the population at risk from 85 dB. The estimates were 29 percent and 15 percent, respectively (Ex. 1, Tables XV and XVII). Dr. Moller also noted that the number of impaired people doubles when average levels are increased from 85 to 90 dB (Ex. 88, p. 33).

There were numerous comments in the record concerning the amount of protection afforded by an average daily exposure level of 90 dB. Estimates of the percentage of unprotected workers ranged from 1 percent to 30 percent. Many commenters supported the 90-dB level based on OSHA's estimate that 98 percent of the population would be protected (Ex. 14–11, p. 1; Ex. 14–45, p. 1; Ex. 14–81, p. 1; Ex. 14–157, p. 2; Ex. 14–189, p. 1).

In OSHA's draft Environmental Impact Statement (Ex. 3, App. D, p. 12337) the Agency incorrectly stated that an exposure level of 90 dB would protect 98 percent of the exposed population. This estimate was based on the data and method of Burns and Robinson, using a 25-dB fence for the frequencies 500, 1000, and 2000 Hz, and a 30-year exposure duration. Later, an EPA representative (Ex. 40) pointed out that OSHA had neglected to perform one of the steps in the Burns and Robinson method, (step 7 on p. 132 of Ex. 12). Using the same data and method, the risk would actually be much greater than 2 percent (Ex. 40, pp. 5–6). Dr. Burns clarified the matter by explaining the distinction between hearing *level*, which includes presbycusis, and hearing *loss*, which does not (Ex. 54–2, pp. 1, 2).

Dr. Ward (Ex. 222C, p. 7) based his recommendation exclusively on Passchier-Vermeer's data, which, he claimed, showed that no workers would exceed a 25-dB hearing loss at the frequencies 500, 1000, or 2000 Hz due to exposure between 85 and 90 dB. For this reason Dr. Ward concluded that 90 dB protects workers from a "noticeable" hearing loss (Ex. 64, p. 3). This interpretation of Passchier-Vermeer's data is at variance with the interpretation of EPA and Col. Johnson. EPA submitted a graph of Passchier-Vermeer's data showing hearing loss as a function of noise exposure (Ex. 5, p. 43803). Although the median NIPTS from a 40-year exposure to 90 dB is essentially zero at 500 and 1000 Hz, it is nearly 10 dB at 2000 Hz. While the resulting average hearing levels would be quite small when added to the hearing loss from aging, they would be sufficient to ensure that some members of the exposed population would cross a 25-dB fence. Considering that nearly 3 million workers are exposed to daily averge noise levels of 90 dB and above, 50 percent of the population, or 1.5 million workers, would be expected to have at least this much NIPTS. Also, the NIPTS values would be expected to be larger for more sensitive individuals. Median NIPTS data say very little about actual hearing levels in the more susceptible members of the exposed population. As described above, when Johnson and EPA combined the data of Passchier-Vermeer with those of Baughn, and Burns and Robinson, the risk of crossing a 25-dB fence at 500, 1000, and 2000 Hz was 12 percent from exposure to 85 dB, and 22 percent from exposure to 90 dB (Ex. 5, p. 43805). Finally, as mentioned earlier, both the NIPTS and the risk are greater when 3000 Hz is included in the averaging and 500 Hz is eliminated.

OSHA has considered the definition of material impairment as it relates to hearing loss in light of a large body of data on the effects of noise on hearing. The Agency has determined that many workers will be at risk of material impairment of hearing, and possibly incur other kinds of physiological damage, when they are exposed to daily average sound levels above 90 dB over a working lifetime. Some workers will be expected to develop a material impairment of hearing if they are exposed to daily average sound levels between 85 and 90 dB, and a few will even develop a material impairment from average levels between 80 and 85 dB. Since it is possible to incur noise-induced hearing loss as a result of exposure to daily average levels less

than 90 dB, OSHA has determined that it is necessary to initiate audiometric testing and other aspects of the hearing conservation program at a time-weighted average sound level of 85 dB. The practice of requring an "action level," a point well below the permissible exposure level at which protective action is taken, is consistent with OSHA's policy of protecting workers before they are overexposed. Moreover, the final standard will identify those in the exposed population that might be more sensitive to noise, and protect them before they suffer further adverse effects. In keeping with this policy, employers may wish to provide audiometric testing for employees whose TWAs are between 80 and 85 dB, so that the few most susceptible workers might be identified and protected.

B. *Effects of Impulse Noise on Hearing*

The fact that impulse noise can be extremely damaging to hearing is widely supported in studies submitted to the record (Ex. 29, pp. 211–216, pp. 219–228, pp. 229–234; Ex. 30, App. G; Ex. 37 or Ex. 26–12(B); Ex. 279, 11–3 and 11–5). Although these studies suggest that there is no uniformly accepted definition of impulse noise, everyone agrees on certain of its characteristics. Impulse noise is characterized by a rapid rise time, high peak value of short duration, and a rapid decay. These sounds may be divided into two general categories: "A-duration" impulses are of very short duration (usually measured in microseconds) and are non-reverberant, in that they usually occur outside or in a sound-deadening environment. An example would be gunfire outdoors or in a sound-treated firing range. "B-duration" impulses are of longer duration (usually measured in milliseconds), and are reverberant mainly because they occur inside where the sound is augmented by reflective surfaces. B-duration impulses are more typical of industrial conditions where the sounds of metal impacting on metal, or short, high-level bursts of compressed air, are quite common. B-duration impulses are considerably more damaging to hearing than A-duration impulses of the same level because of the increased duration (Ex. 30, App. G, p. G–4).

There were a number of comments and exhibits in the record concerning impulse noise. Some were reports of studies, others were reviews of research on impulse noise, and others were discussions and recommendations for the standard.

In contrast to the studies of continuous noise mentioned above, dose-response relationships for impulse noise are not so easily defined. This may be due in part to the fact that the different studies of impulse noise varied considerably in such parameters as the subject (human or animal), the effect (TTS or NIPTS) and the stimulus (level, rise time, A-duration, B-duration, etc.). Also, there appears to be more individual variability associated with response to impulse noise than there is with response to continuous noise (Ex. 29, p. 227).

Many of the investigators and witnesses concluded that the best way to describe the effects of impulse noise was an approach called the "equal energy" method or rule (Ex. 54, pp. 16, 17; Ex. 279, 11–3, pp. 444, 449; Ex. 29, pp. 213–214; Ex. 321–21E, pp. 1–9; Ex. 80, App. B, p. 3, Ex. 81A, p. 3). According to this approach, equal amounts of sound energy produce equal effects on hearing, even though they are distributed differently in time. As explained in the introduction, sound energy is represented logarithmically by the decibel scale, an increase or decrease of 3 dB representing a doubling or halving of sound energy, and an increase or decrease of 10 dB representing a tenfold change in sound energy. Therefore, this approach is also called the 3-dB rule or the 3-dB exchange rate. It is somewhat more conservative than the 5-dB exchange rate presently used in OSHA's noise standard, 29 CFR 1910.95, and in this amendment.

Studies

In an article that OSHA had used to support the impulse requirements in the proposal, Dr. D. H. McRobert and Dr. Ward (Ex. 13) discussed their laboratory study of TTS due to short-duration impulses. The purpose of the study was to determine the appropriate trading relationship between sound level and number of impulses. Drs. McRobert and Ward used impulses with peak sound pressure levels of about 146 to 155 dB and about 2 milliseconds in duration. After establishing an individual's "critical level" (the level that produced a 20-dB TTS), the investigators lowered the level and increased the numbers of impulses. They found that subjects could tolerate greater numbers of lower-level impulses than would have been predicted by the equal energy rule (Ex. 13, p. 1299). On the basis of their experiment, Drs. McRobert and Ward recommended a 5-dB decrase in peak level for every tenfold increase permitted in number of impulses. However, they cautioned that this relationship would only be correct for non-reverberant impulses, not for reverberant impulses. In fact, they stated that it is probably erroneous to have a single dose-response curve for both reverberant and non-reverberant impulses (Ex. 13, p. 1300).

In a document submitted by EPA (Ex. 29, pp. 219–228), Drs. T. Ceypek, J. Kuzniarz, and A. Lipowczan reported on their field study of 213 drop-forge workers. The noise environment consisted of impulses with peak sound pressure levels of 127 to 134 dB and durations of 100 to 200 milliseconds repeated 3,000 to 10,000 times per day, superimposed on a background noise of about 110 dB. Subjects had been exposed to these conditions for one to 30 years. The results showed large hearing losses even after fairly short durations, such as two years (Ex. 29, pp. 221, 227). The authors concluded that impulses combined with continuous noise produced a more rapid development of permanent hearing loss than would continuous noise alone and that the loss observed after five years was the same as that which would be expected after 10 years of exposure to continuous noise (Ex. 29, pp. 221, 227). They also concluded that the criteria developed for gunfire (non-reverberant impulses) were inappropriate for such industrial conditions as dropforging (Ex. 29, pp. 221, 227).

In another chapter of the document submitted by EPA (Ex. 29, pp. 229–234), Dr. H. G. Dieroff described a laboratory study that he had conducted of the effects of impulse noise on guinea pigs. In an attempt to discover a mechanism causing the hearing loss that is different from the one involved in continuous noise-induced hearing loss, he studied the effects of impulse noise on the cochlear microphonic potential (MP), and on the secretion of succinodehydrogenase (SDH) activity in the cochlear. In so doing he compared a mechanical and a histochemical response to sound stimuli. He found that when guinea pigs were exposed to peak sound pressure levels of 162 dB for durations of 200 to 400 milliseconds the MP was very rapidly adversely affected, whereas any adverse SDH changes were not detected until much longer after they would have been predicted to appear with exposure to equivalent levels of continuous noise (Ex. 29, pp. 232–233). These seemingly conflicting results were not easily explained.

NIOSH submitted to the hearing record three studies on the effects of impulse noise (Ex. 26–12 (A) (B) and (C)), which had been performed at the Upstate Medical Center of the State University of New York by Drs. Roger Hamernik and Donald Henderson and their colleagues. In the experiments

chinchillas were used, a practice that is not unusual for laboratory studies of permanent hearing loss. In the first of these studies (Ex. 26–12(A), pp. 1–20), Dr. C. R. Perkins, with Drs. Hamernik and Henderson, explored the effects of the time interval between impulses on the magnitude of hearing loss. They exposed five chinchillas to 50 A-duration impulses with a peak sound pressure level of 155 dB and an interval between sound stimuli of one minute. Five more chinchillas were exposed to impulses of the same number and level, but with an interval between stimuli of only 10 seconds. The results showed that the group with the shorter interval between stimuli (and hence less recovery time) had much more temporary and permanent hearing loss than the group with the longer recovery interval (Ex. 26–12(A), pp. 6–7).

In the second study, Drs. Hamernik, Henderson, J. Crossley, and R. Salvi (Ex. 26–12(B), and Ex. 37) reported on a laboratory experiment on the interaction of continuous and impulsive noise. As justification for the experiment, the authors cited the high incidence of serious hearing losses among army personnel in the armored branch, where exposure to a combination of continuous and impulsive noise is common (Ex. 26–12(B), p. 117). Groups of chinchillas were exposed to 50 impulses having a 40-millisecond A-duration with peak sound pressure levels of 158 dB and 175 dB, a 2000 to 4000 Hz band of continuous noise of 95 dB, and two combination exposures of impulsive noise at 158 dB with continuous noise at 95 dB. Results showed that the combination of impulsive and continuous noise produced sizeable permanent hearing losses, whereas the TTS from the exposures to continuous noise alone and impulsive noise alone recovered fully with time (Ex. 26–12(B), pp. 118–119). The exposure to impulsive noise of 175 dB proved to be less damaging than the combined exposure (of 90 dB plus 175 dB), even though the impulse was 17 dB higher in level (Ex. 26–12(B), p. 119). When the combined exposure was interrupted with quiet periods of approximately 2 seconds, the damage was less severe even though the total sound energy was the same (Ex. 26–12(B), p. 120). Dr. Hamernik and his co-workers concluded that since the addition of the background noise to the impulses added very little to the total sound energy, the large increase in damage must be due to something else, such as "metabolic insufficiency" in the cochlea (Ex. 26–12(B), p. 120). The authors suggested that the interactive effect of impulsive and continuous noise might be similar to the drug-noise interaction, where damage due to the interaction can be two to four times greater than the damage expected from each stimulus alone (Ex. 26–12(B), p. 120).

In the third study (Ex. 26–12(C)) Drs. Hamernik and Henderson and Charles M. Woodford attempted to determine a safe level of B-duration impulses and to explore the trading relation between impulse intensity and duration. They exposed a total of 23 chinchillas to 50 impulses with the same duration (200 milliseconds) and interval between stimuli (one per minute), but with differing peak sound pressure levels. The investigators found that 50 impulses at the 140-dB level produced no permanent hearing loss or cochlear destruction, and was presumed safe for chinchillas, whereas the 155-dB level produced profound changes in hearing and cochlear structure, and was presumed hazardous (Ex. 26–12(C), pp. 2–3). In the group exposed to 150 dB some animals were severely affected, and others appeared to be nearly normal. The authors concluded that 150 dB may be close to a critical level at least for the number and temporal pattern of impulses that were used in the experiment (Ex. 26–12(C), p. 4).

Reviews

In a publication submitted by the Environmental Protection Agency, Drs. R. Coles, C. Rice, and A. Martin reviewed research on the effects of impulse noise performed before 1973 (Ex. 29, pp. 211–217). According to the authors (Ex. 29, p. 212), the first comprehensive set of recommendations for impulse noise was published in 1968 by Coles, Garinther, Hodge, and Rice. These recommendations were based on gunfire-induced TTS (Ex. 29, p. 212), and assumed that a similar amount of permanent hearing loss would occur after years of habitual exposure (Ex. 29, p. 214). They were applicable to military situations where about 10 to 20 exposures per year would occur (Ex. 29, p. 214). These criteria allowed A-duration impulses with peak levels up to about 175 dB, so long as the duration was extremely short (only a few microseconds). Peak levels must be reduced as duration increases. The authors also described (Ex. 29, p. 213) the attempt in 1970 of Coles and Rice to extend the criteria (previously based on gunfire-type impulses) to longer duration impulses, which would be typical of industrial conditions. Coles and Rice added data points to the criteria, indicating that the peak level should be considerably lower for B-duration than for A-duration impulses in order to produce the same amount of hearing loss. According to Coles et al. (Ex. 29, p. 213), this extension was based on TTS studies by Cohen, Kylin, and LaBenz in 1966, and Walker in 1969.

Another document (Ex. 279, 11–3), a report by Dr. Alan Martin entitled "The Equal Energy Concept Applied to Impulse Noise," presented an extensive review of research conducted before 1976 on the effects of impulse noise. In addition to some of the studies mentioned above, he discussed his own field study (Ex. 279, 11–3, p. 432) of 77 dropforge workers exposed to peak sound pressure levels of 65 to 448 Pascals (130 to 147 dB) with a repetition rate of 0.2 to 0.7 per second. Dr. Martin combined noise levels and duration according to the method advocated by Robinson (Ex. 12, App. 10, and Ex. 17, p. 14). His experiment supported the use of the equal energy (or 3 dB) rule for predicting the amount of permanent hearing loss resulting from all kinds and combinations of noise (Ex. 279, 11–3, pp. 437, 449). Instead of starting with critical peak levels and progressing to lower levels with increases of duration (like Coles et al. in Ex. 29, p. 212), Dr. Martin advocated building on the existing criteria for continuous noise, decreasing the duration as the level became higher (Ex. 279, 11–3, pp. 444–449).

Using the data from other impulse noise investigations, Dr. Martin combined level and duration of exposure according to the equal energy rule, and compared the results to studies of continuous noise. A study of 70 dropforgers by Guberan, Fernandez, Cardinet, and Terrier was supported by Dr. Burns (Ex. 54, pp. 9,11) as well as by Dr. Martin (Ex. 279, 11–3, p. 439) as supporting the equal energy rule for predicting hearing levels resulting from impulse noise. Dr. Martin also used Ceypek's data (Ex. 279, 11–3, p. 440) on dropforgers and achieved the same results. In addition he cited a study by Atherly (Ex. 279, 11–3, p. 443) of 50 trimmers who used pneumatic chisels on manganese bronze castings. Once again the observed hearing levels agreed very closely with predicted levels according to the equal energy rule, even in the extremes of the population distribution (at the first and 99th percentiles) (Ex. 279, 11–3, pp. 443–444). Dr. Martin concluded that these studies provided ample proof that the equal energy concept may be extended to include exposures to industrial impulse noises (Ex. 279, 11–3, p. 444).

Dr. Martin believed that the preponderance of the evidence indicated that the equal energy concept should be extended from steady-state noise

exposure to include industrial impulse noise. He concluded by stating:

> It is somewhat surprising that, in the past and in the context of injury to hearing, impulse noise has been treated as a special type of noise having different properties than steady-state noise. It is now apparent from research, as perhaps has been from a logical viewpoint for some time, that it merely forms part of a "temporal" continuum of noise, and therefore should be treated in a similar manner to the rest of that continuum. (Ex. 279, 11–3, p. 449).

Criteria and Standards

The current noise standard, 29 CFR 1910.95, limits impulse noise to a peak sound pressure level of 140 dB.

OSHA's proposal maintained the maximum allowable level for impulses at a peak sound pressure level of 140 dB but specified a maximum of 100 impulses at that level with a 10-dB decrease in level for each tenfold increase in number (39 FR 37775, October 24, 1974), (an equal energy approach). According to the proposal's preamble, this requirement was based on the study by Drs. McRobert and Ward (Ex. 13), discussed above. In addition the proposal defined "impulse or impact noise" as "a sound with a rise time of not more than 35 milliseconds to peak intensity and a duration of not more than 500 milliseconds to the time when the level is 20 dB below the peak." If impulses occurred more often than once every half second they were to be considered as continuous noise.

Certain other standards and criteria for impulse noise were submitted to the record. In a report entitled "Proposed Damage-Risk Criterion for Impulse Noise (Gunfire)" (Ex. 16), the Committee on Hearing, Bioacoustics, and Biomechanics (CHABA) modified the criteria of Coles et al. (Ex. 29, pp. 212–214; Ex. 279, 11–3, p. 421), making it about 10 dB more stringent (Ex. 16, p. 5) in order to protect a higher percentage (95 percent) of the exposed population (Ex. 16, p. 2). Even so, the criteria were designed to permit NIPTS of 10 dB at 1000 Hz, 15 dB at 2000 Hz, and 20 dB at 3000 Hz and above in a small percentage of the population (Ex. 16, p. 1). The criteria specified a maximum peak sound pressure level of 164 dB for the short pulses (25 microsecond or less), with a 2-dB decrease for each doubling of duration, dropping to a plateau of 152 dB for A-duration impulses or 138 dB for B-duration impulses (200 to 1000 milliseconds) (Ex. 16, pp. 2, 4–5).

The authors of the CHABA report cautioned that it was only a first attempt at reasonable damage risk criteria for impulses, and it rested heavily on the assumption of a constant relation between TTS and NIPTS, and that this assumption might be incorrect (Ex. 16, p. 6). However, they believed that the report designated "reasonable limits for the type of impulse noise to which most service personnel will be exposed: rifle and pistol reports from his own and his fellows' weapons, and single rounds fired by higher caliber armament in both reverberant and non-reverberant conditions." (Ex. 16, p. 6).

The NIOSH criteria document (Ex. 1) made very little mention of impulse noise, except to say that the provisions in the recommended standard were "intended to apply for all noise even though additional controls may be necessary for certain specific types of noise, such as some impact and impulsive noise." (Ex. 1, p. I–1). However, no specific recommendations were given for the measurement of impulse noise, or for calculating its contribution to the daily dose. In the supporting text NIOSH stated that industrial noise and hearing surveys dealing with this kind of exposure were just beginning at that time (1972) (Ex. 1, p. IV–9).

EPA submitted to the record a document entitled "Information on Levels of Environmental Noise Requisite To Protect the Public Health and Welfare With an Adequate Margin of Safety" (Ex. 30). This document contained a section on impulse noise (Appendix G), which modified the CHABA criteria so that the allowable levels would prevent 90 percent of the exposed population from incurring more than a 5-dB hearing loss at 4000 Hz (Ex. 30, App. G, pp. G–4, p. G–10). The allowable levels became accordingly more stringent. A peak sound pressure level of 152 dB was the maximum allowable level for impulses of 25 microseconds or less, with plateaus of 140 dB for A-duration impulses and 126 dB for B-duration impulses (Ex. 30, Appendix G, p. G–6). Unlike the CHABA criteria EPA recommended changes in peak level of 10 dB for every tenfold change in number of impulses based on a limit of 100 impulses (Ex. 30, App. G, p. G–4). The EPA "Levels" document indicated growing support for the extension of the equal energy rule to include impulsive as well as continuous noise exposure (Ex. 30, App. G, p. G–9). However, the authors recommended evaluating impulsive and continuous noise separately, "each according to its own criterion," until combining them according to the equal energy rule had been further justified by more research (Ex. 30, Appendix G, pp. G–8, G–9).

Recently Col. Johnson submitted to the hearing record a preliminary draft ANSI standard entitled "The Evaluation of the Effect on Human Hearing of Sounds with a Peak A-Weighted Sound Pressure Level Above 120 Decibels and a Peak C-Weighted Sound Pressure Level Below 140 Decibels" (Ex. 321–21E). Although the draft ANSI standard is intended to cover impulse noise, the committee decided against unequivocally defining impulse noise, impact noise, or types of non-impulsive noise (Ex. 321–21E, p. 1), and instead refers to "intense" sound (Ex. 321–21E, p. 3). The basic measurement used to assess the effect of intense sound on hearing is the A-weighted equivalent continuous level (calculated by the equal energy rule), and all sound between the levels specified in the title is to be included in the assessment (Ex. 321–21E, p. 1). The measuring system must be able to integrate properly the energy of very short impulses, and the sound environment must be sampled at least every 25 microseconds (Ex. 321–21E, p. 6).

Although the ANSI standard still is in the preliminary draft stages, the intent of integrating impulsive with continuous noise according to the equal energy rule appears to be quite clear.

Discussion

The topic of the maximum permissible peak sound pressure level of 140 dB will not be addressed in this discussion since the requirement is present in the existing standard, 29 CFR 1910.95, and remains unchanged at this time. However, the method with which impulses are to be included in employee dose is germane to the calculation of dose or TWA for purposes of the hearing conservation amendment.

Walter Nowikas, late president of Donley, Miller and Nowikas, Inc. (Ex. 161, 9 B; Tr. 3222), pointed out that OSHA's criteria were derived from studies of short duration impulses, and therefore were not appropriate for longer duration industrial impulses. He believed that the proposed limit of 100 impulses at 140 dB was excessive since it could exceed the allowable exposure for continuous noise when the sound energy was summed. To prevent this discrepancy, he suggested reducing the number of impulses by a factor of 10 (Ex. 14–42, p. 6). Mr. Nowikas recommended changing the criteria "to conform at least with the RMS equivalent" (the equivalent for continuous noise) (Ex. 161, p. 31).

Some comments favored integrating impulses in the manner suggested above by Dr. Martin (Ex. 279, 11–3) and later by Col. Johnson (Ex. 321–21E). Dr. Loren Kerr, Medical Director of the United Mine Workers (Ex. 80, App. B, p. 3),

suggested that the standard should read, "Impulse noise, when integrated by the equal energy rule, shall not produce equivalent levels in excess of Table G—16(a)." Dr. Burns (Ex. 54, p. 16) testified that he was "satisfied that impulse noise, suitably handled, is also amenable to a simple energy method of exposure."

In order to be sufficiently protective, Drs. Richard Bolt and Edgar Shaw, speaking for the Acoustical Society of America, recommended the equal energy rule until such time as more definitive criteria could be developed. They stated:

> It is regrettable that no simple but valid damage risk criterion covering all kinds of impulse and impact noise exposure has yet been found or appears within sight. In these circumstances, it may be wise to consider limits based strictly on the A-weighted daily total acoustic energy, i.e. the eight hour energy equivalent level Leq. Such a measure might prove overprotective by as much as 10 decibels in some circumstances, but would have the merit of simplicity with respect to interpretation and instrumentation. (Ex. 14–303, p. 2).

Other commenters pointed out that OSHA had proposed a standard that seemed to allow two separate doses—one for continuous noise, and one for impulse noise (Ex. 79, p. 7; Ex. 80, App. B, p. 3). On this subject Wookcock stated (Ex. 79, p. 7):

> * * * I would like to point out that OSHA has proposed a noise standard which, in effect, sets two separate levels—one for continuous noise and one for impulse and impact noise. Conceivably, the standard allows for a double exposure. This should be corrected so that both hazards are not permitted to exist at the same time.

Dr. Ward must have recognized this problem when he recommended using a combination of the 5-dB and 3-dB trading relations. He suggested using the 5-dB trading relation when calculating noise dose for exposures from 85 dB to 105 dB and the 3-dB trading relation for high level exposures above 105 dB (Tr. 1042–1043). He felt that this combination would bridge the gap between steady and impulsive noise (Ex. 64, Statement by W. Dixon Ward on behalf of AISI—July 1, 1975, pp. 10–11).

Conclusions

It is clear from examining the studies, reviews, standards and comments discussed above that the early criteria for impulse noise were developed using assumptions that are not generally applicable to industrial conditions. The studies on which they were based used A-duration (gunfire) impulses, even though they have been extrapolated to cover B-duration impulses (Ex. 29, pp. 212–213; Ex. 16, p. 6; Ex. 30, App. G, p. G–6). In addition, the early studies of gunfire noise did not include moderate or high levels of continuous noise in the background, which is typical of the industrial situation (Ex. 294, p. 1; Ex. 26–12(B), p. 117). Since the early criteria were meant to apply to the military situation they assumed only 10 to 20 exposures per year (Ex. 29, p. 214), whereas workers in industry often are exposed to impulsive noise on a daily basis.

When impulsive noise was combined with continuous noise, the studies and reports submitted to the hearing record showed fairly clearly that the hazard increased (Ex. 26–12 (B), p. 119; Ex. 29, pp. 221, 227). The study by Hamernik et al. (Ex. 26–12(B), p. 119) showed an effect that was not just additive but synergistic. Field studies where impulses were superimposed on background noise indicated that hearing loss was exacerbated. Ceypek et al. (Ex. 29, p. 221) found considerably more damage than would be expected from continuous noise. Dr. Martin (Ex. 279, pp. 449, 432–444), through the results of his own investigation and by evaluating the data from studies by Guberan et al., Ceypek et al., and Atherly, found that the best way to predict hearing loss was to extend the equal energy rule from continuous through impulsive noise. The draft ANSI standard submitted by Col. Johnson (Ex. 321–21 E, p. 1) supports this method for use in the U.S.

Therefore, OSHA has determined that, for purposes of the hearing conservation program, impulse noise should be combined with continuous noise for purposes of calculating employee noise exposure. Since industrial impulses are almost always superimposed on a background of moderate-to-high levels of continuous noise (Ex. 6, p. 12338; Ex. 26–12(B), p. 117; Ex. 29, p. 229; Ex. 29, p. 227; Ex. 30, p. G–8), and since both may be harmful, it is only reasonable to consider their effect together, rather than to treat each separately. There is ample justification for this approach in the studies and comments submitted to the hearing record (Ex. 26–12(B), pp. 117, 121; Ex. 279, 11–3, p. 449; Ex. 29, p. 213; Ex. 80, App. B, p. 3; Ex. 81A, p. 3; Ex. 54, p. 16). However, since there are still some uncertainties as to the ameliorative effects of certain temporal patterns (Ex. 26–12(A), pp. 6–7, 10; Tr. 1051; Ex. 26–12(B), p. 120), and since there usually are some quiet periods (or less noisy periods) during the work day (Ex. 64–5, p. 2; Ex. 64–6, p. 6; Ex. 6, p. 12338, Ex. 114, p. 7), the Agency cannot determine the precise effects of industrial impulses at this time, and therefore OSHA has chosen to retain the 5-dB exchange rate for purposes of the hearing conservation amendment. Until such time as another method, such as the equal energy rule (the 3-dB exchange rate), or a combination of the 3-dB and 5-dB exchange rate (as suggested by Dr. Ward, Tr. 1042–1043), is borne out by laboratory and field research, OSHA will continue to require the integration of all sound, including impulse noise, according to the 5-dB exchange rate in the computation of dose or TWA.

While the hearing conservation amendment does nothing to change the PEL or methods of compliance required by 29 CFR 1910.95(a) and (b)(1), it does require that all noise exposures above 80 dB, whether impulsive or steady state, be considered in determining whether an employee is included in the hearing conservation program. The decision to measure all noise exposures for purposes of the hearing conservation program is a pragmatic approach to the whole problem of impulse noise. For, while there is some dispute as to the precise definition and effect of impulse noise, there is general agreement that impulse noise is damaging. The hearing conservation program is designed to identify and protect those who show an increased susceptibility to the effects of noise. Accordingly, in computing an employee's noise dose or TWA for purposes of inclusion in the hearing conservation program, the impulsive component of the noise exposure is included. Moreover, there have been many technological advances in the capabilities of measuring instruments, and equipment now exists that can integrate impulse noise into the dose. Therefore, OSHA has determined that it is appropriate to include impulse noise in the dose computation for hearing conservation in order to provide employees exposed to significant amounts of this type of noise the protection of the amendment.

C. *Extra-Auditory Effects of Noise*

The most obvious physiological effect of noise is damage to the auditory system. However, depending upon the level, type, and duration of the noise, a variety of extra-auditory effects have been observed, which will be discussed in the following paragraphs. In addition, it should be noted that people who are exposed to noise at work may also be exposed to noise during their non-working hours. For example, many workers live in areas where there is highway and aircraft noise as well as noise from industrial plants. Industrial workers who live in the urban settings are sometimes stressed by noise 24

hours a day without respite, and without adequate opportunity to recover, either physiologically or psychologically. Thus, effects that might otherwise have been temporary would tend to become chronic.

Although there is a substantial body of data suggesting a wide variety of noise-induced physiological responses, specific responses to specific noise doses have not yet been identified. The evidence of noise-induced health effects is not conclusive for 8-hour exposures of 85 dB, or 90 dB, or even higher levels experienced over a working lifetime. However, to ignore this large body of data is to undervalue the significance of the adverse effects (Ex. 5, p. 43806; Ex. 138A, p. 2–31). Both testimony and written exhibits, including subjective and experimental evidence, indicate that noise can be harmful to human health (Ex. 2C–106, p. 2; Ex. 2C–111, p. 1; Ex. 2C–4, p. 1; Ex. 96, pp. 277–281; Ex. 189–8, p. 2; Ex. 28A, pp. 18–24, 27–28, 41–44, 46–49; Ex. 32, App. B, pp. 6–11; Ex. 79, p. 2; Ex. 173, pp. 1–2, 7–8; Ex. 84, Attach. 2, pp. 1–2).

During the 1975 and 1976 public hearings most of the evidence that was submitted was anecdotal, although some studies were submitted by individuals (Ex. 28A), unions (Ex. 88, Ex. 95, Ex. 96, Ex. 97, Ex. 98), and government agencies (Ex. 26–9; Ex. 26–10; Ex. 26–3; Ex. 26–11; Ex. 32; Ex. 40). Leonard Woodcock, then president of the United Auto Workers, stated:

> I am sure that there are many limitations to these studies, as there always seems to be in this sort of work. But we think there is truth to these studies since it matches our subjective experience. We expect that future research into this important area will offer more definitive data. (Ex. 79, p. 5)

According to Ruth Knowles, then president of Local 1716 of the Textile Workers Union (Tr. 2024), "Some workers have been forced to retire long before retirement age because of hypertension." She goes on to state that in her opinion the high noise exposure in the weave department could have been a factor in those instances.

The major concern over extra-auditory health effects from noise arises from the fact that noise has the ability to act as a general, non-specific, biological stressor (Ex. 138A, p. 2–31). Evidence suggests that the stress reaction produced by noise is not unlike that produced by other stressors; that is, a generalized reaction governed by sympathetic activation of the autonomic nervous system.

The concept of biological stress, first introduced by Dr. Hans Selye, has been described as "the nonspecific response of the body to any demand made upon it; a stereotyped, phylogenetically old adaptation pattern primarily preparing the organism for physical activity, e.g., fight or flight." (Ex. 138A, p. 2–32).

This stress reaction produces a widespread change in bodily activity. There is a rise in blood pressure, a rise in pressure inside the head and an increase in sweating. The heart rate increases, there are changes in breathing and there may be a sharp constriction of the muscles over the whole body (Ex. 26–9, p. 10–8). These change are likely to be mediated by increased adrenal secretion of the catecholamine hormones, epinephrine and norepinephrine (Ex. 138A, p. 2–32).

In the hearing record two theories were proposed to explain mechanisms by which these stress-related physiological changes can have an impact on human health. Two conceivable damage pathways were developed:

1. Abnormalities in blood pressure regulation that lead to hypertension.
2. Increased blood platelet adhesiveness that accelerates the development of atherosclerotic plaques in the walls of the arteries.

Each of these stress-related damage pathways is discussed in turn.

1. The theory that noise stress can result in hypertension is supported by Dr. Bruce Welch (Ex. 321–16E, pp. 1–11) and Dr. Ernest Peterson (Ex. 321–16D, pp. 1, 4, 10) as well as by numerous other researchers, referred to in these and other exhibits (Ex. 88, p. 6; Ex. 96, p. 279). Intense industrial sound impairs the regulation of blood pressure, the most distinct manifestation of which is an increased prevalence of hypertension (Ex. 321–16E, p. 2).

According to Dr. Welch, hypotension, or reduced blood pressure levels, also can result from noise stress (Ex. 321–16E, pp. 3–4). Both hyper- and Hypotension fundamentally are disorders of circulatory regulation. They are characterized by exaggerated and inappropriate cardiac and vasomotor response to changes in body position or physical and psychological stimuli (Ex. 321–16E, p. 8). This increase in vascular lability (or changeability) under noise stress affects the circulatory adjustments that must normally be made during the course of a working day (Ex. 321–16E, p. 9). For those who already have impaired circulation, excessive vascular lability can lead to congestive heart failure, cardiac ischemia, or cardiovascular stroke. In fact it has been established that hypertension, even at moderate elevations, is associated with increased risk of coronary and *cerebrovascular* disease (Ex. 321–16E, p. 3).

2. In a report submitted by EPA (Ex. 138A, p. 2–40) Hattis et al. proposed another pathway theory, which involves an increase in the adhesiveness of blood platelets. Increased platelet adhesiveness has clear potential for negative side effects, due to an increased tendency for the formation of thrombi, small aggregates of platelets and other blood components involved in the clotting process. These thrombi contribute to the buildup of atherosclerotic plaques, which gradually narrow the arteries and reduce the oxygen supply to vital tissues. A heart attack can occur when there is complete blockage of an artery to the heart muscle, or when the demand for blood oxygen is greater than that which can be supplied through a narrowed coronary artery. These effects can be cumulative, for the same thrombi that contributed to a gradual narrowing of the arteries can complete the sequence by forming the final occlusion leading to tissue death in the heart.

Two epidemiological studies that were submitted to the record are of particular importance. In a classic study of German iron and steel workers (Ex. 98, p. 219), Dr. Gerd Jansen found that 62 percent of the workers chronically exposed to noise levels above 90 dB had "peripheral circulatory symptoms", compared to 48 percent of those exposed to lower levels. Physiological and psychological examinations were performed to determine the extent to which the difference could be caused by non-occupational factors. Dr. Jansen concluded that noise interferes with involuntary bodily functions, and as such could be a serious health risk.

A NIOSH-sponsored study (Ex. 29, pp. 441–452) performed by the Raytheon Service Company lends further support to these findings. The medical records of factory workers routinely exposed to high noise levels (at or above 95 dB) were compared to those of a population exposed to lower noise levels (at or below 80 dB). Statistically significant differences in the number of cardiovascular and circulatory disorders as well as other health problems and complaints were found between the two groups. In a follow-up study the Raytheon Service Company compared medical records of workers exposed to high noise levels (prior to the implementation of a hearing conservation program) with records of the same workers after a hearing conservation program has been put into effect. The overall results indicated fewer accidents, diagnosed medical disorders, and absences during the period when workers were involved in a

hearing protection program. The Raytheon report summarizes: "In general, the results were interpreted as adding strong support to the hypothesis that prolonged exposure to high intensity noise increases the incidence of various medical, accident and attendance problems." (Ex. 26–11, pp. 5–1 and 5–2).

In an experimental study (Ex. 28A, pp. 42, 46–50) on the effects of prolonged exposure to tonal pulses, Dr. Robert Cantrell found statistically significant increases in plasma cortisal and blood cholesterol levels when compared with the pre-exposure levels of his experimental subjects. Significant increases were noted at noise levels of 80 and 85 dB, and were pronounced at 90 dB.

However, there was skepticism during the hearings about the importance of extra-auditory effects. The Edison Electric Institute maintained that:

> since there is no clear evidence on non-auditory noise impact, an occupational noise standard should not consider this area. We recommend that the federal government undertake additional long-term research as provided for in the OSH Act before promulgating standards for non-auditory noise effects (Ex. 73, p. 2).

According to Dr. Bruce Karrh of DuPont:

> I know of no significant report of extra-auditory physiological effects for persons with noise exposure levels below 115 dBA. We have not conducted a controlled scientific study on non-auditory effects of noise at our plants because of our experience with our hearing conservation program has not indicated a need for such a study (Ex. 114, p. 14).

In May of 1973 three Swedish researchers (Carlestam, Karlsson, and Levi in Ex. 29, p. 485) pointed out that "the evidence in favor of noise as a major pathogenetic environmental agent is rather shaky."

Between the 1975 hearings and the recent reopening of the record (April 1980), considerable research activity has occurred, and new and more persuasive evidence has been submitted to the record.

The EPA submitted an analysis by Dr. Welch (Ex. 321–16E) of over forty studies from European and Soviet bloc nations of the effects of noise exposure on the cardiovascular system. Dr. Welch found evidence of noise-induced structural changes in the heart, increased cardiac morbidity, cerebrovascular and peripheral vascular disorders, and hypertension (Ex. 321–16E, pp. 2–21). Dr. Welch admits that many of these studies suffered from methodological problems, although approximately half of them presented data in a statistically verifiable manner. Viewed as a whole, these studies represent a consistent body of data containing significant evidence that noise levels greater than 90 to 95 dB may increase the risk of cardiovascular disease in exposed workers. He concludes:

> In a practical sense, the available evidence now demands that prolonged exposure to high intensity sound be viewed in a much broader sense than heretofore as a serious threat to general human health. The evidence for associating long-term sound exposure with cardiovascular disease, in particular, is comparable to that for associating it with loss of hearing (Ex. 321–16E, p. 37).

In another report submitted by EPA (Ex. 321–16D, pp. 1–2), Dr. Peterson also discusses recent developments in research on the extra-auditory effects of noise. He finds that by far the largest body of evidence centers about the relationship between prolonged exposure to intense noise and cardiovascular performance. The most common occurrence is one of impaired regulation of blood pressure, which may be manifested either as hypotension or hypertension. Other signs and symptoms that occur more frequently in noise-exposed workers are abnormalities in cardiac pacing, reducing stroke volume, various ECG abnormalities, and narrowing of retinal arteries. Dr. Peterson also reported on his own work (Ex. 321–16D, pp. 6–10), a laboratory study of the effects of protracted noise exposure on rhesus monkeys. Monkeys were chosen as an animal model so as to closely approximate human response. As a result of life-like exposure scenarios (averaging 85 dB) for 9 months, the monkeys showed significant alterations in blood pressure that were sustained even after cessation of the stimulus.

A third submission by EPA (Ex. 321–16F) is a study of German brewery workers by Dr. H. Ising et al., who attempted to quantify the risk to the cardiovascular system associated with exposure to noise levels averaging 95 dB. Dr. Ising used each individual as his own control by comparing various cardiovascular indicators with and without the use of hearing protectors. In so doing he overcame some of the methodological problems discussed by Dr. Peterson (Ex. 321–16D, pp. 2–4) and Dr. Welch (Ex. 321–16E, pp. 35–37). Dr. Ising found that on days when people worked without hearing protection, there was a significant elevation in systolic blood pressure, changes in arterial wall elasticity, and increased levels of catecholamine hormones excreted in the urine. (The catecholamines are characteristically secreted in response to stress, and have been associated with increased blood platelet adhesiveness and with increases in blood pressure (Ex. 138A, pp. 2–32 and 2–33)).

Despite the quantity of evidence in the studies discussed above, clear dose-response relationships do not yet exist for the cardiovascular effects of noise. However, if, as the evidence suggests, there is a cause-effect relationship between noise and hypertension, the health implications would be widespread and serious (Ex. 79, p. 5; Ex. 266B, pp. 2, 13, 14–15; Ex. 138A, p. 2–31; Ex. 321–16E, p. 37; Ex. 29, p. 485). Therefore the Agency urges caution on the part of employers. OSHA has included the above evidence as a qualitative, if not a quantitative, argument for requiring hearing conservation programs.

Other extra-auditory effects are also discussed in the record. The report of the initial Raytheon study, mentioned above, described other possible effects of noise (Ex. 29, pp. 449, 451). In addition to cardiovascular effects, the investigators found evidence of digestive, respiratory, allergenic, and musculo-skeletal disorders. Over a period of 5 years the number of diagnosed disorders in every category was significantly higher for workers exposed to high noise levels that it was for those exposed to lower noise levels.

In his report (Ex. 321–16E, p. 31), Dr. Welch discusses neurological changes associated with long-term exposure to occupational noise. After reviewing the scientific literature, he finds that the sense of balance can be altered, that reaction time is impaired, and that there is decreased tactile sensitivity in the hands and feet. Dr. Cohen and Dr. Joseph Anticaglia (Ex. 96, pp. 277) suggest that noise-induced neurological changes may occur as a result of overstimulation of the brain's reticular formation, leading to a state of reflex hyperactivity and abnormal EEG response. The authors noticed that laboratory subjects complained about feelings of disorientation after exposure to high levels of noise (Ex. 96, p. 278). Studies cited by Dr. Edith Gulian (Ex. 97, pp. 38–39) support this observation with factory workers as well. It has also been suggested that high levels of noise reduce the eye's ability to focus clearly, and narrow the visual field (Ex. 97, p. 35; Ex. 96, p. 278). These effects can be significant from the standpoint of potential accidents and injuries (Ex. 96, p. 279).

There was information on the effects of noise on worker performance submitted to the hearing record. According to EPA's Public Health and

Welfare Criteria for Noise (Ex. 31, p. 8–2), a variety of effects have been observed in the literature. EPA cites research by Dr. D. O. Hebb to explain these effects. To paraphrase: Changes in stimulation (such as intense noise) produce arousal activity which originates in the reticular formation. An individual's level of arousal affects the performance of a task. Too little arousal produces inadequate performance whereas too much arousal interferes with performance. The optimum is somewhere at the top of an inverted U-shaped curve. Thus, noise can enhance, interfere with, or fail to affect the performance of certain tasks. The EPA concludes that:

> Continuous noise levels above 90 dBA appear to have potentially detrimental effects on human performance, especially on what have been described as noise-sensitive tasks such as vigilance tasks, information gathering and analytical processes. Effects of noise on more routine tasks appear to be much less important, although cumulative degrading effects have been demonstrated by researchers. Noise levels of less than 90 dBA can be disruptive, especially if they have predominantly high frequency components, are intermittent, unexpected, or uncontrollable. The amount of disruption is highly dependent on the type of task, the state of the human organism, and the state of morale and motivation (Ex. 31, pp. 8–6 and 8–7).

Noise can degrade job safety in some of the same ways that it degrades performance. It is logical to conclude that the same parameters that disrupt job performance (high noise levels, or noise that is high in frequency, intermittent, unexpected, or uncontrollable) can jeopardize job safety. In addition, there are other reasons why noise can be a safety hazard. Noise can effectively mask alarm signals and warning shouts. This includes signals from malfunctioning machines and the sound of approaching vehicles.

I.W. Abel, former president of the Steelworkers Union, reported the following:

> A recent study of the causes of 25 fatalities in railroad accidents by the Federal Railroad Administration showed the common factor was the workers' unawareness of the approach of the railroad cars or equiment that struck them. Many of these workers, the study pointed out, were working under exposure to a high level of noise (Ex. 78, p. 20).

Howard Pemberton, safety committeeman from Local 588 of the UAW, describes the workers' condition:

"They cannot escape the noise. They also tell us—and we know from our own experience—that they cannot hear instructions from the foremen, and that they must scream to carry on necessary communication" (Ex. 2C–74, p. 2).

Another way in which noise can lead to accidents (although the cause and effect relationship is less direct), is through workers' aversion to the noise. Dr. John Finklea, then Director of NIOSH, related the following incident:

> Several weeks ago, a worker fatality was reported in a power plant in the Cincinnati area. An investigation revealed that the accident victim and his fellow workers, irritated by the screeching sounds from a pulley drive in a conveyor system, had resorted to repeated "soaping" of the pulley unit to quiet the sound. Gaining access to the pulley for this purpose involved certain risks that were contrary to company work policy. Despite this, a worker in the course of soaping the pulley evidently became caught, was pulled into the moving conveyor and was killed. It is doubtful that even an 85 dBA noise limit would have prevented this accidental death. Yet the case deserves mention if only to show that non-auditory problems of noise cannot be ignored. Indeed, it should motivate more conservative approaches in specifying noise limits meeting both health *and* safety needs (Ex. 26–1, p. 7).

Finally, the general effect of worker absenteeism should be mentioned. Whether from psychological aversion to noise or the physiological consequences of noise stress, absenteeism appears to be higher among workers in noisy industries. According to anecdotal evidence from union witnesses, both fatigue and absenteeism are higher (Ex. 2C–74, p. 2; Ex. 79, p. 2). Studies in the record supported this contention. The Raytheon study mentioned earlier (Ex. 26–11, p. 3–172), found significant differences in absenteeism between groups of workers exposed to average noise levels above 95 dB and below 80 dB. Absenteeism in the high noise group was significantly decreased after the institution of a hearing conservation program.

A study by Schmidt, Royster, and Pearson (Ex. 321–22F, p. 28) found significant differences in absenteeism as well in accident records. The report by Dr. Gulian cites a study by Odescalchi of 50 noisy Italian companies (such as textile, steel and metal fabrication), where the annual number of absences is about 15 percent higher than in quieter ones (Ex. 97, p. 60). Other studies cited by Dr. Gulian are inconclusive on this issue, but enough data exist to be strongly indicative of increased absenteeism, which can be very costly to industry.

III. History of the Regulation

The occupational noise exposure standard, which is found at 29 CFR 1910.95, was originally promulgated as a standard under the Walsh-Healey Public Contracts Act, 41 U.S.C. 35 *et seq.* (See 34 FR 7946, May 20, 1965; 35 FR 1015, January 24, 1970). The Walsh-Healey occupational noise standard (41 CFR 50–204.10) was adopted under § 6(a) of the Occupational Safety and Health Act, 84 Stat. 1590, 29 U.S.C. 651 *et seq.* which, within two years of the effective date of the Act, allowed the Secretary to promulgate without regard to rulemaking any established Federal standard. (See also § 4(b)(2) of the Act).

The present noise standard limits an employee's noise exposure to 90 dB as an 8-hour time-weighted average (TWA). Employee exposure to noise above the permissible exposure level (PEL) must be reduced to within permissible limits by feasible engineering controls or administrative controls. Where such controls cannot reduce employee exposure to within permissible limits, they are to be supplemented with personal protective equipment. The OSHA noise standard also requires that the employer must administer a continuing effective hearing conservation program if exposures exceed the PEL. OSHA has interpreted this to require employers to provide audiometric testing for those employees exposed above the PEL without regard to the use of personal protective equipment. (See Industrial Hygiene Field Operations Manual, Chapter IV, pp. 9–16, OSHA Instruction CPL 2–2.20, April 2, 1979).

On August 14, 1972, the National Institute for Occupational Safety and Health (NIOSH) transmitted to the Department of Labor a criteria document, "Occupational Exposure to Noise" (HSM 73–11001) (Ex. 1), in accordance with section 20(a) and 22(d) of the Occupational Safety and Health Act, (29 U.S.C. 669(a), 671(d)), which authorizes the Secretary of Health, Education and Welfare to conduct research to develop criteria for dealing with harmful physical agents and to make recommendations to the Secretary of Labor concerning new or improved occupational safety and health standards. The criteria document recommended that employee noise exposures be limited to an 8-hour TWA of 85 dB in new installations and that the Secretary should study the feasibility of reducing the PEL in all facilities to an 8-hour TWA of 85 dB. In addition, the criteria document recommended audiometric testing not only for employees whose exposures exceeded the PEL but also for those employees whose exposures were reduced to within the PEL by the use of personal protective equipment.

On January 26, 1973 the Assistant Secretary of Labor for Occupational Safety and Health appointed an Advisory Committee on Noise pursuant to section 7(b) of the Act (29 U.S.C. 656). The Committee consisted of 15 members, representing a broad cross-section of individuals knowledgeable about noise hazards in the industrial environment. The Committee included representatives of employers and employees, as well as representatives of the public and the occupational safety and health professions. The purpose of this committee was to obtain and evaluate additional recommendations from labor, management, government, and independent experts. In its deliberations the Committee considered approximately 135 comments submitted to it by various interested parties (see Ex. 2(c)), as well as numerous oral presentations (see Ex. 2(a)). The Committee held meetings periodically during an eight-month period and on December 20, 1973 it transmitted its recommendations for a revised occupational noise exposure standard (see Ex. 2(b)) to the Occupational Safety and Health Administration (39 FR 6647, February 21, 1974).

Briefly, the Advisory Committee recommended that the permissible exposure level for occupational noise be an 8-hour time-weighted average of 90 dB, with exposures down to 85 dB integrated into the computation. Exposures to steady-state noise were not to exceed 115 dB at any time. In addition, the Advisory Committee recommended audiometric testing be done annually for all employees whose exposures equalled or exceeded 85 dB or would equal or exceed 85 dB but for the use of personal protective equipment.

OSHA considered the information and recommendations contained in the NIOSH Criteria document (Ex. 1), the Advisory Committee's recommendations (Ex. 2(b)), and other available information. On October 24, 1974, OSHA proposed a revision to its occupational noise exposure standard and solicited comments and objections to it from interested persons (39 FR 37773–37778). OSHA proposed to retain an 8-hour TWA of 90 dB as the PEL, with exposures down to 85 integrated into the time-weighted average. In addition, the suggested ceiling of 140 dB for impact noise exposure contained in the old standard (see 29 CFR 1910.95, Table G–16, note) was proposed to be modified to a mandatory ceiling of no more than 100 impulses of 140 dB per day, with a tenfold increase in the permissible number of impulses to which employees could be exposed for each 10 dB decrease in the peak pressure of the impulse. The proposal also required the employer to determine if any employees were exposed to an 8-hour time-weighted average of 85 dB or above and to measure the exposure of any employees so identified. Additional exposure monitoring was required within 30 days of any change of equipment or process which would affect the noise level. Employee exposures to impact or impulse noise were also required to be monitored.

Under the proposal, audiometric testing was to be required for all employees who had noise exposures equal to or exceeding 85 dB as an 8-hour TWA and for all employees who were using personal protective equipment to reduce their exposures to an 8-hour TWA of 90 dB. If the employee's audiogram showed a significant threshold shift (STS) when compared to the employee's first or baseline audiogram, the employee had to be retested within one month. If the diminution of hearing was confirmed on retest, then the employee had to be informed of the change in the hearing level, and had to be provided and fitted with, and instructed in, the use of hearing protectors. Employees whose audiograms showed that they had a significant threshold shift were required to wear hearing protectors under the proposal even if they were not exposed over the PEL.

The preference for engineering controls over personal protective equipment as a method of compliance was retained and clarified and a limited exception was proposed that would have allowed personal protective equipment to be used even where engineering or administrative controls were feasible if the employee overexposure occurred on no more than one day a week. Various other provisions in the proposal required the employer to keep records of employee exposure monitoring, audiometric tests, calibration of audiometers, and notifications of employee overexposures.

On December 18, 1974, the Administrator of the U.S. Environmental Protection Agency (EPA), acting under the authority of section 4(c)(2) of the Noise Control Act of 1972 (86 Stat. 1236, 42 U.S.C. 4903), published a notice in the **Federal Register** requesting that the Secretary of Labor review the proposed occupational noise exposure regulation and report to the Administrator within 90 days on the advisability of revising the proposed regulation (39 FR 43802). Briefly, EPA contended that the proposal "does not protect the public health and welfare to the extent required and feasible." EPA objected to the proposal's permissible exposure limit, including the use of a 5 dB time-intensity trade-off (doubling rate) in computing the PEL, and to the definition of significant threshold shift which was used in the proposal. On March 18, 1975, OSHA published in the **Federal Register** the Review and Report Requested by EPA (40 FR 12336). In its response, OSHA reviewed and explained the reasoning underlying its proposed regulation. OSHA noted that the document to which EPA objected was merely a proposal upon which the public had been invited to comment. The Assistant Secretary concluded that "no changes should be made in the proposal at this stage," since the proposal by its very nature did not represent a final agency position and EPA's objections would be aired along with objections raised by concerned persons at an informal public hearing. In addition, OSHA promised to consider EPA's request and the evidence contained therein along with the rest of the evidence in developing its final standard. To the extent that the final hearing conservation rule promulgated today deals with issues raised in the Request for Review and Report, they are discussed below under the appropriate topic headings.

In the notice of proposed rulemaking, interested persons were given approximately 45 days to submit written data, views and arguments on the proposal and to file objections and request a hearing thereon. The comment period was subsequently extended two more times (until March 21, 1975) because of the complexity of the issues raised in the proposal and in response to a number of requests for additional time in which to prepare responses. (See 39 FR 42929, 12/9/74; 40 FR 2822, 1/16/75). Thus, the public was given almost five months in which to file comments and objections on the proposal. OSHA received approximately 1000 written comments on the proposal (Ex. 14).

Section 6(b)(3) of the Act provides for informal public hearings on objections to a proposal. Many persons requested that hearings be held on the proposed occupational noise exposure standard and an informal public hearing was scheduled (40 FR 16336, 4/11/75). The rulemaking hearing was convened by Administrative Law Judge Milton Kramer on June 23, 1975. The hearing lasted through July 30, 1975. Over 90 parties, many of them represented by multi-witness panels, participated in the hearing. In addition, during the course of the hearing approximately 188 exhibits, many containing numerous documents,

were submitted to the record. Testimony at the hearing addressed every issue raised by the proposal, as well as environmental issues and economic issues. At the close of the hearing, a 45-day period for the receipt of post-hearing comments was authorized by Judge Kramer. The hearing record also remained open for receipt of an economic impact analysis.

On June 18, 1976, OSHA published a notice of availability of an economic impact analysis which had been prepared for the agency by Bolt, Beranek and Newman, Inc. (BBN) of Cambridge, Massachusetts (41 FR 24718). The economic impact analysis considered the possible inflationary impact and economic feasibility not only of the proposed noise exposure regulation, but of several alternatives such as a standard with a PEL of 85, and various compliance periods. Benefits to be derived from the alternatives were also considered. Basically the economic impact analysis was modeled after the guidelines for implementing Executive Order 11821 (see 39 FR 41501) although the proposal predated the Executive Order (see Ex. 192, p. iii). According to the BBN study noise exposure monitoring was estimated to cost approximately $12 per production worker, while audiometric testing for all workers exposed to an 8-hour TWA of 85 dB or above was estimated to cost about $20 per worker (Ex. 192, p. iv). The cost of keeping the PEL at 90 dB and instituting a hearing conservation program including audiometric testing was estimated to be approximately $241 million per year (Ex. 192, p. iv). BBN also estimated the relative probability of workers experiencing material impairment after 20 and 40 years of exposure at 85 dB as opposed to 90 dB (Ex. 192, pp. 2-26—2-36) and estimated the benefits of including hearing conservation requirements at or below the PEL (Ex. 192, pp. 2-34—2-36).

Interested persons were given an opportunity to comment on the BBN study and a second informal public hearing was scheduled to begin on August 24, 1976 (41 FR 24718). The notice also invited the submission of any new information that might be available on the issue of economic feasibility of the proposed standard and on any of the other issues discussed in the economic impact analysis itself. OSHA subsequently extended the period in which to file comments and rescheduled the public hearing in response to a number of requests for extensions of time (41 FR 32912, 8/6/76). OSHA received approximately 108 comments on the economic impact analysis (Ex. 193).

The economic impact hearing was convened on September 21, 1976 with Administrative Law Judge Jean F. Greene presiding. Approximately 70 parties were scheduled to appear at the hearing (Ex. 196), and approximately 69 exhibits were submitted to the record during the hearing. The hearing lasted through October 8, 1976. Those participating at the hearing were given 60 days from the close of the hearing in which to submit post-hearing comments.

During the hearing OSHA received many requests for information that was not contained in the economic impact analysis itself, but which was related to its preparation. OSHA, through arrangements with BBN, made available that portion of the requested information which had not been obtained under a pledge of confidentiality. BBN prepared a document (Ex. 278) which included some of the data requested at the hearing. In addition, BBN discussed and clarified many of the issues raised at the hearing. On January 28, 1977, OSHA published in the **Federal Register** a notice of the availability of the BBN post-hearing comment and additional information on the economic impact analysis (42 FR 5374). Those who participated at the hearing were given additional time in which to comment on the BBN submission. OSHA received approximately 18 comments on the BBN submission (Ex. 279).

Although the proposal was published before any of the Executive Orders requiring the preparation of Inflationary or Economic Impact Statements or Regulatory Analyses (Executive Orders 11821, 11949 and 12044), OSHA has prepared a Final Regulatory Analysis for this hearing conservation amendment which is generally consistent with the requirements of the most recent Executive Order on the subject. This analysis was based on information and methodologies contained in the noise record and uses standard techniques of economic and scientific analysis. In addition publicly available population and employment data, such as that published by the Bureau of Labor Statistics *(Employment and Earnings)* was used. Similarly, the estimates of the costs of compliance as well as benefits of the amendment were made using information from the record and publicly available data. The expected economic impact was developed using costs estimated by OSHA, on the basis of record information, publicly available data and standard techniques of economic analysis. OSHA has used the latest available data. Interested persons may request copies of the Final Regulatory Analysis through the Docket Office.

On April 18, 1980, OSHA again opened the record to introduce additional comments, letters and reports that had been sent to the agency since the last time the record had been open (45 FR 26366). Some corrected transcripts from the second hearing were submitted to the record as an exhibit and some updated cost data on hearing conservation programs were also submitted. Interested persons were given over 45 days in which to submit comments. The Agency subsequently extended the comment period until July 3, 1980 in response to requests for additional time (45 FR 40166, 6/13/80). Thus the public was given 11 weeks in which to submit comments on this information.

OSHA received a number of objections to its April 18, 1980, **Federal Register** notice. Some of these objections, as noted, requested additional time in which to comment, and some raised certain procedural objections (see Ex. 321-15A, 321-11, 321-14). Several comments expressed the belief that OSHA had selectively introduced exhibits into the record (Ex. 321-15A, p. 2, 321-11, p. 2). However, OSHA made no attempt to "select" correspondence to be submitted to the record or correspondence to be withheld. Rather, all the substantive comments on noise which the Agency had on file were submitted to the record. Any comments which may have been inadvertently omitted could have been resubmitted in response to the **Federal Register** notice.

The **Federal Register** notice invited comments "on the above materials only," and went on to explain that because of the length and repetition of the existing record the public was asked to refrain from resubmitting material already submitted. The record in this proceeding could be characterized as voluminous, verbose, redundant, and since it contains approximately 36,000 pages, unwieldy. The Agency has tried in every manner consistent with the statutory mandate to accommodate the reasonable demands and concerns of interested persons. However, some few persons apparently interpreted the **Federal Register** notice to mean that relevant new data would not be allowed into the record. (See Ex. 321-15A, 321-11, p. 2). The vast majority of commenters, however, construed the sentence correctly and did not resubmit evidence but instead confined their comments to the general subject matter of the additional submissions. A number

of the comments received in response to the Federal Register notice (see, for example, Ex. 323) did in fact constitute new evidence or studies on the subject matter of the new submissions. (See, for example, Ex. 321–44, 321–53D, 321–17, 321–19, 321–20A, 321–21, 321–22, 321–14D, 321–35, 321–13, 321–16).

In misconstruing the notice, several persons mentioned that they should be given a change to submit new evidence showing the effectiveness of hearing conservation programs and new updated cost estimates on engineering controls (Ex. 321–15A, 321–12A, p. 4; 321–11, p. 2–4; 321–53A, p. 2). As discussed above, the final rule here merely articulates hearing conservation requirements. Several issues, including the appropriate permissible exposure level and priorities among compliance strategies, have not been decided at this time. Both issues have been deferred for further study.

The Agency contemplates further economic studies and another hearing on these and other remaining issues. The record will be reopened to receive any new evidence on the relevant issues, including overall effectiveness of personal protective equipment as opposed to engineering controls in preventing material impairment, the permissible exposure level and the correct doubling rate, economic costs and consequences of various alternative strategies, benefits of the various strategies, and technological advances in engineering controls. Anyone wishing to do so may submit new evidence when the record is reopened.

Certain other participants requested that OSHA repropose the standard in view of advances in technology (Ex. 321–12A, p. 2; 321–11, p. 2). At the present time it is not contemplated that re-proposal will be necessary. The original proposal as well as the EPA Request for Review and Report and the OSHA response, all of which were printed in the Federal Register and actively debated at the hearing, gives the public ample notice of the wide range of regulatory alternatives that are being considered within the general parameters of the permissible exposure level and the method-of-compliance issues. Such alternatives include industry-by-industry standards, different compliance schedules, and a performance standard allowing the employer to choose the best method of compliance.

Another commenter (see Ex. 321–12A, p. 3) objected to a meeting with several audiologists which was held in August 1979. The meeting which was the subject of this objection had been held primarily to discuss various problems with the instructions contained in the Industrial Hygiene Field Operations Manual on audiometric testing as part of an effective hearing conservation program. Since some of the issues discussed at the meeting could have possible relevance to the hearing conservation amendment, OSHA included a detailed summary of the meeting in a group of noise-related materials submitted to the record of April 18, 1980 (see Ex. 317). Interested persons were given an ample amount of time in which to comment upon this material. Clearly, then, the business community as well as other interested persons were permitted "a further opportunity for input" (see Ex. 321–12A, p. 4) on the subject of the meeting.

A few other commenters objected that a new hearing was not being scheduled to discuss the new record submissions. (See Ex. 321–15, 321–15A, p. 2). Section 6(b)(3) of the Act does not indicate a "right" to a hearing every time something new is submitted to the record. Such an interpretation of section 6(b)(3) might even, for example, require a hearing in response to post-hearing comments, a procedure which could easily result in needlessly drawnout rulemakings.

As stated above, the Agency has tried at every point in the proceeding to accommodate all reasonable demands and concerns of the public. This has been done by according more time to respond at numerous junctures in the proceeding, clarifying ambiguities and considering numerous alternative approaches suggested by the public as well as by other government agencies. The public dialogue on the various issues raised during the course of this proceeding has been extensive and helpful. The record has been carefully reviewed and all opinions, comments and evidence therein have been considered in reaching the final decisions reflected in the hearing conservation amendment. The Agency believes this provides workers with adequate protection without undue burden on employers.

IV. Benefits

Summary and Conclusions

The primary purpose of this hearing conservation amendment is to prevent occupationally related cases of hearing impairment. Hearing impairment is a serious obstacle to a person's effectiveness as an employee and in the other aspects of life as discussed elsewhere in this preamble. Occupationally related hearing loss cannot be cured by hearing aids.

The noise record includes extensive evidence indicating that hearing conservation programs can reduce the number of cases of hearing impairment. Based on that record OSHA has made estimates of the number of hearing impairments prevented by the hearing conservation program prescribed herein. Evidence in the record amply demonstrates that many workplaces are not safe from hazards posed by noise. Present noise exposures pose a significant risk of harm to workers and can be lessened or reduced by instituting hearing conservation programs for workers exposed at or above a TWA of 85 dB.

OSHA estimates that hearing conservation programs for all employees exposed above 85 dB will eliminate 212,000 cases of material impairment of hearing after 10 years, 696,000 after 30 years and 898,000 cases at equilibrium. Even assuming full compliance with the present standard which requires hearing conservation programs for all employees exposed over 90 dB, this amendment would prevent 38,000 additional impairments within 10 years, 143,000 within 30 years, and 189,000 at equilibrium. Therefore the standard will significantly reduce the risk of hearing impairment present in many workplaces. Unfortunately this standard will not completely succeed in eliminating occupationally related hearing impairment. Approximately 162,000 cases of impairment will remain at equilibrium after the implementation of this standard.
