SUMMARY: The Director, Information Resources Group, invites comments on proposed information collection requests as required by the Paperwork Reduction Act of 1980.

SUPPLEMENTARY INFORMATION: Section 3517 of the Paperwork Reduction Act of 1980 (44 U.S.C. Chapter 3517) requires that the Director of OMB provide interested Federal agencies and persons an early opportunity to comment on information collection requests. OMB may amend or waive the requirement for public consultation to the extent that public participation in the approval process would defeat the purpose of the

information collection, violate State or Federal law, or substantially interfere with any agency's ability to perform its statutory obligations.

Director, Information Resources Group, publishes this notice with the attached proposed information collection request prior to submission of this request to OMB. This notice contains the following information: (1) Type of review requested, e.g., expedited; (2) Title; (3) Abstract; (4) Additional Information; (5) Frequency of collection; (6) Affected public; and (7) Reporting and/or Recordkeeping burden. DEPARTMENT OF ENERGY

Notice of Floodplain/Wetland Involvement for Operable Unit 2 Remedial Action At the Fernald Environmental Management Project

AGENCY: U.S. Department of Energy (DOE), Fernald Area Office.

ACTION: Notice of Floodplain/Wetland Involvement.

SUMMARY: The Fernald Environmental Management Project (FEMP), located approximately 18 miles (29 kilometers) northwest of downtown Cincinnati, Ohio, is divided into five operable units which will involve various removal and remedial actions. The subject of this Notice of Involvement is Operable Unit 2. The purpose of the Operable Unit 2 Remedial Action is to reduce risks to human health and the environment. Operable Unit 2 is defined by five subunits or areas: the Solid Waste Landfill, Lime Sludge Ponds, Inactive Flyash Pile, South Field, and Active Flyash Pile. The proposed Remedial Action Alternatives for Operable Unit 2 consist of excavation and disposal of Operable Unit 2 waste in an on-property disposal facility. Waste exceeding waste acceptance criteria would be disposed of off site.

Excavation activities involving the Solid Waste Landfill, Lime Sludge Ponds, and support facilities (i.e., pipeline and haul road) would impact wetland areas. Remedial activities involving the Inactive Flyash Pile, South Field, and Active Flyash Pile could impact floodplain areas. In accordance with 10 CFR 1022, "Compliance with Floodplain/Wetland Environmental Review Requirements," DOE will prepare the respective Floodplain/Wetland Assessment for the Operable Unit 2 Remedial Action and the appropriate Statements of Findings. The proposed activities will be performed in such a manner to avoid or minimize potential harm to or within wetland and floodplain areas. Maps and additional information are available from the DOE at the address below.

DATES: Written comments must be received by the DOE at the following address on or before January 19, 1995.

ADDRESSES: Mail comments and requests for further information to: Mr. Wally Quaider, Acting Associate Director, Office of Safety & Assessment,

U.S. Department of Energy, Fernald Area Office, P.O. Box 538705, Cincinnati, Ohio 45253-8705, Facsimile: (513) 648-3077.

FOR FURTHER INFORMATION CONTACT: Ms. Carol Borgstrom, Director, Office of NEPA Oversight, EH-25, U.S. Department of Energy, 1000 Independence Avenue, SW., Washington, D.C. 20585, (202) 586-4600 or 1-800-472-2756.

SUPPLEMENTARY INFORMATION: The Remedial Action for Operable Unit 2 would affect on-property wetlands and the 100- and 500-year floodplain of Paddys Run. Activities involving the Solid Waste Landfill would result in direct physical impact to a 0.1 hectare- (0.2 acre-) drainage ditch wetland on the northern boundary of the Solid Waste Landfill. Indirect impacts to a 0.02 hectare- (0.04 acre-) drainage ditch wetlands north and northwest of the Lime Sludge Ponds could include the migration of eroded soil and surface water runoff and the dispersion of fugitive dust to the wetland area. In addition, approximately 0.18 hectare (0.45 acre) of drainage ditch wetland areas would be filled as a result of the construction of a haul road and pipeline. Engineering controls would be implemented during all remedial activities to minimize impacts. Potential indirect impacts to the 100- and 500-year floodplain as a result of the remedial activities involving the Inactive Flyash Pile, South Field, and Active Flyash Pile include surface water runoff and sedimentation loading into the floodplain. Direct physical impact to the floodplain could also occur as a result of heavy equipment operating within the floodplain during remediation of the Inactive Flyash Pile and South Field; however, no change in flood elevations would be expected.

Proposed actions potentially affecting these areas are subject to the substantive requirements of laws, regulations, and orders pertaining to wetlands and floodplains protection. Additionally, Executive Order (E.O.) 11988—Floodplain Management—and E.O. 11990—Protection of Wetlands—implemented by 10 CFR 1022, require federal agencies to consider the effects of proposed actions on floodplains and wetlands. These regulations require federal agencies to avoid, to the extent possible, adverse impacts associated with the occupancy and modification of floodplains and the destruction and modification of wetlands, and to avoid direct or indirect support of floodplain and wetlands development where there is a practicable alternative. Where no practicable alternative exists, proposed

actions must include all practicable measures to minimize harm. Best management practices will be utilized during the proposed projects to minimize impacts to wetland and floodplain areas.

Issued in Miamisburg, Ohio on December 21, 1994.

Robert Folker,

Acting Manager, Ohio Field Office.
