Regulatory Guide; Issuance, Availability

The Nuclear Regulatory Commission has issued a revision to a guide in its Regulatory Guide Series. This series has been developed to describe and make available to the public such information as methods acceptable to the NRC staff for implementing specific parts of the Commission's regulations, techniques used by the staff in evaluating specific problems or postulated accidents, and data needed by the staff in its review of applications for permits and licenses.

Revision 1 of Regulatory Guide 1.160, "Monitoring the Effectiveness of Maintenance at Nuclear Power Plants," provides guidance on meeting the Commission's rules on maintenance and monitoring the effectiveness of maintenance in nuclear power plants. Although the concept of trigger values was included in the original guide as an option to be used as an alert to reveal emergency diesel generator performance problems that may need additional monitoring or corrective actions, it was clearly noted that conformance with such triggers was not a statistical demonstration of maintaining the emergency diesel generator reliability levels at levels selected for compliance with the station blackout rule (10 CFR 50.63). Since there has been continued misinterpretation of the triggers as related to statistical achievement of selected emergency diesel generator reliability, all language in this Revision 1 to Regulatory Guide 1.160 pertaining to emergency diesel generator performance and trigger values was deleted to avoid any misconceptions on their statistical significance. The Commission expects that in implementing the maintenance rule as applied to emergency diesel generators, each licensee will set performance goals that are consistent with the licensee's coping analysis performed to comply with the station blackout rule (10 CFR 50.63), unless there is a documented basis for the inconsistency.

No comments were received from the public regarding emergency diesel generator performance as related to the deletion of the trigger values. However, a number of comments were received requesting further clarification of
