Texaco Exploration and Production, Incorporated Denver Division, Denver, CO; Notice of Termination of Investigation

Pursuant to section 221 of the Trade Act of 1974, an investigation was initiated on November 14, 1994 in response to a worker petition which was filed on behalf of workers and former workers at the Denver Division of Texaco Exploration and Production, Incorporated, Denver, Colorado (TA-W-30,493).

The company has requested that the petition be withdrawn. Consequently, further investigation in this case would serve no purpose, and the investigation has been terminated.

Signed at Washington, D.C. this 12th day of January 1995.

Victor J. Trunzo,

Program Manager, Policy and Reemployment Services, Office of Trade Adjustment Assistance.

NUCLEAR REGULATORY COMMISSION

U.S. Enrichment Corporation's Gaseous Diffusion Plants Establishment of Local Public Document Rooms

The Nuclear Regulatory Commission (NRC) has established a local public document room (LPDR) for each of the U.S. Enrichment Corporation's (USEC) Paducah and Portsmouth gaseous diffusion plants located in Paducah, Kentucky, and Piketon, Ohio, respectively.

Members of the public may now inspect and copy documents and correspondence related to the Paducah and Portsmouth Plants at the following locations:

1. *USEC Paducah Plant:* Paducah Public Library, 555 Washington Street,

Paducah, Kentucky 42003. Hours of operation: Monday through Thursday 9:00 a.m. to 9:00 p.m.; Friday and Saturday 9:00 a.m. to 6:00 p.m.; and Sunday 1:00 p.m. to 6:00 p.m. Contact: Ms. Marie Liang, Assistant Director, telephone number (502) 442-2510.

2. *USEC Portsmouth Plant:* Portsmouth Public Library, 1220 Gallia Street, Portsmouth, Ohio 45662. Hours of operation: Monday through Friday 9:00 a.m. to 8:00 p.m.; Saturday 9:00 a.m. to 5:30 p.m.; and Sunday 1:00 p.m. to 5:00 p.m. Contact: Mr. Charles T. Cook, Director, telephone number (614) 354-5688.

Interested parties may visit or contact either of the LPDRs directly or may address their requests for records to the NRC's Public Document Room, 2120 L Street NW., Washington, DC 20555, or telephone (202) 634-3273.

Questions concerning the NRC's local public document room program or the availability of documents should be addressed to Ms. Jona L. Souder, LPDR Program Manager, Freedom of Information/Local Public Document Room Branch, U.S. Nuclear Regulatory Commission, Washington, DC 20555-0001, telephone number (301) 415-7170, or toll-free 1-800-638-8081.

Dated at Rockville, Maryland, this 24th day of January, 1995.

For the Nuclear Regulatory Commission.

Carlton C. Kammerer,

Director, Division of Freedom of Information and Publications Services, Office of Administration.

BILLING CODE 7590-01-M

[Docket No. 50-382]

Entergy Operations, Inc; Notice of Consideration of Issuance of Amendment to Facility Operating License, Proposed No Significant Hazards Consideration Determination, and Opportunity for a Hearing

The U.S. Nuclear Regulatory Commission (the Commission) is considering issuance of an amendment to Facility Operating License No. NPF-38 issued to Entergy Operations, Inc. (the licensee), for operation of the Waterford Steam Electric Station, Unit 3, located in St. Charles Parish, Louisiana.

The proposed amendment would modify the technical specifications (TSs) by adding a new TS 3.0.5, and the associated Bases. The new TS 3.0.5 will allow the equipment removed from service or declared inoperable to comply with ACTIONS to be returned to service under administrative controls

solely to perform testing required to demonstrate its OPERABILITY or the OPERABILITY of other equipment. This proposed change is based on the Combustion Engineering improved standard TSs approved by the NRC.

Before issuance of the proposed license amendment, the Commission will have made findings required by the Atomic Energy Act of 1954, as amended (the Act) and the Commission's regulations.

The Commission has made a proposed determination that the amendment request involves no significant hazards consideration. Under the Commission's regulations in 10 CFR 50.92, this means that operation of the facility in accordance with the proposed amendment would not (1) involve a significant increase in the probability or consequences of an accident previously evaluated; or (2) create the possibility of a new or different kind of accident from any accident previously evaluated; or (3) involved a significant reduction in a margin of safety. As required by 10 CFR 50.91(a), the licensee has provided its analysis of the issue of no significant hazards consideration, which is presented below:

The proposed change will allow an orderly return to service of inoperable equipment. Specification 3.0.5 will permit equipment removed from service to comply with required Actions to be returned to service under administrative controls to verify the operability of the equipment being returned to service or operability of other equipment. The administrative controls will ensure the time involved will be limited to only the time required to demonstrate the component or system operability. This new specification provides an acceptable method of demonstrating the operability of TS equipment before it is returned to service and allows for verifying other TS equipment is operable. Therefore, the proposed change will not involve a significant increase in the probability or consequences of any accident previously evaluated.

The proposed change will not alter the operation of the plant or the manner in which the plant is operated. The equipment is only being tested in its design configuration or being returned to service to allow testing of another component or system. Therefore, the proposed change will not create the possibility of a new or different kind of accident from any accident previously evaluated.

The proposed Specification will only allow the return to service of equipment that is expected to fulfill its safety function. The use of Specification 3.0.5 will be limited to the performance of testing on the equipment being returned to service or on other equipment that is dependent on the equipment being returned to service. The testing is limited to post maintenance testing and testing to prove operability. Therefore, the proposed change will not involve a significant reduction in a margin of safety.
