BILLING CODE 3710-08-M

Corps of Engineers

Intent To Prepare a Draft Environmental Impact Statement (DEIS) for Dredged Material Placement at Duluth-Superior Harbor, Minnesota and Wisconsin

AGENCY: U.S. Army Corps of Engineers, DOD.

ACTION: Notice of intent.

SUMMARY: The U.S. Army Corps of Engineers, Detroit District, is evaluating the environmental impacts of dredged material placement alternatives for maintenance dredging at Duluth-Superior Harbor, Minnesota and Wisconsin. The Federal navigation project includes 17 miles of navigation channels, anchorage areas, and maneuvering basins, with channel depths ranging from 20 to 27 feet. Existing dredged material placement sites have insufficient capacity for future maintenance dredging needs. Alternatives under consideration for future dredged material placement include expansion of the existing Erie Pier Confined Disposal Facility (CDF) by increasing the dike heights, other diked in-water facilities, upland placement, habitat creation, and open water disposal. The no Federal action alternative will also be considered.

ADDRESSES: U.S. Army Corps of Engineers, Army Engineer District, Detroit, Environmental Analysis Branch, P.O. Box 1027; Detroit, Michigan 48231-1027.

FOR FURTHER INFORMATION CONTACT:

Duluth-Superior Harbor is located at the western end of Lake Superior between Duluth, Minnesota, and Superior, Wisconsin. The harbor is formed by the waters of the St. Louis River, the second largest tributary of Lake Superior. Approximately 113 docks or terminals at Duluth-Superior Harbor handle a variety of commodities including iron ore, coal, limestone, petroleum, steel and scrap iron, cement, general cargo, and grain.

Maintenance dredging for the Federal project averages about 150,000 yards per year. Much of the dredged material is placed in the Erie Pier CDF, which is located on approximately 82 acres along the northwest shore of Duluth-Superior Harbor. The CDF was constructed in 1979 to hold up to one million cubic yards of material dredged from the Federal navigation project over a 10 year period. Clean sand dredged from the outer parts of the harbor is generally used for beach nourishment to mitigate the effects of beach erosion along the lake.
