

by the system is intended to power battery-operated handicap shopping carts, store equipment, and an electric demonstration vehicle. Energy in excess of those needs would be converted to AC and directed into the electric utility grid. The schematic design includes kiosks on both sides of the entry vestibule. One kiosk would house the recharging station for the DC-powered equipment and the other would contain an educational display.

The objectives of this project are to educate the public on global energy sustainability, promote alternative energy sources, and assist in making innovative technology feasible and accessible to mainstream America. Furthermore, the effort may serve as an effective example of corporate response to the Clinton Administration's goal of public-private cooperation to reduce greenhouse gases.

The total program cost is estimated to be \$234,400, with the DOE share being \$100,000 or 43%. This notice is published for public comment at least fourteen calendar days prior to making an award.
