Persons interested in reviewing environmental documents for the proposals listed above or obtaining information about EA's and FONSI's prepared for activities on the Gulf of Mexico OCS are encouraged to contact the MMS office in the Gulf of Mexico OCS Region.

FOR FURTHER INFORMATION: Public Information Unit, Information Services Section, Gulf of Mexico OCS Region, Minerals Management Service, 1201 Elmwood Park Boulevard, New Orleans, Louisiana 70123-2394, Telephone (504) 736-2519.

SUPPLEMENTARY INFORMATION: The MMS prepares EA's and FONSI's for proposals which relate to exploration for and the development/production of oil and gas resources on the Gulf of Mexico OCS. The EA's examine the potential environmental effects of activities described in the proposals and present MMS conclusions regarding the significance of those effects. Environmental Assessments are used as a basis for determining whether or not approval of the proposals constitutes major Federal actions that significantly affect the quality of the human environment in the sense of NEPA Section 102(2)(C). A FONSI is prepared in those instances where the MMS finds that approval will not result in significant effects on the quality of the human environment. The FONSI briefly presents the basis for that finding and includes a summary or copy of the EA.

This notice constitutes the public notice of availability of environmental documents required under the NEPA Regulations.

Dated: February 14, 1995.

Chris C. Oynes,

Regional Director, Gulf of Mexico OCS Region.

Bureau of Mines

Information Collection Submitted to the Office of Management and Budget for Review Under the Paperwork Reduction Act

A request extending the collection of information listed below has been submitted to the Office of Management and Budget for approval under the provisions of the Paperwork Reduction Act (44 U.S.C. Chapter 35). Copies of the proposed collection of information and related forms and explanatory material may be obtained by contacting the Bureau's clearance officer at the phone number listed below. Comments and suggestions on the requirement should be made directly to the Bureau clearance officer and to the Office of Management and Budget, Paperwork Reduction Project (1032-0112), Washington, D.C. 20503, telephone 202-395-3470.

Title: Gas Well Data—Survey of Helium-Bearing Natural Gas

OMB approval number: 1032-0112

Abstract: Respondents supply information which will be used by the U.S. Bureau of Mines, Division of Helium Field Operations, to evaluate the helium resources of the United States. This evaluation helps assure a continued supply of the valuable natural resource to meet essential Government needs. Results of the gas analyses, along with the data supplied, are published to provide valuable information to industry and to the public when those data are released by the supplier.

Bureau form number: 6-1579-A

Frequency: Annually

Description of respondents: Owners and operators of helium-bearing natural gas wells and transmission lines.

Estimated completion time: 15 minutes

Annual responses: 200

Annual burden hours: 50

Bureau clearance officer: Alice J. Wissman (202) 501-9569.

Dated: February 3, 1995.

Reah L. Graham,

Director, U.S. Bureau of Mines.

Bureau of Reclamation

Navajo Unit, Colorado River Storage Project, Colorado-New Mexico

AGENCY: Bureau of Reclamation, Interior.

ACTION: Notice of environmental scoping meetings.

SUMMARY: Pursuant to the National Environmental Policy Act and agency policy, the Bureau of Reclamation, in coordination with the Biology Committee for the San Juan River Recovery Implementation Program, will hold three environmental scoping meetings in March. The purpose of the meetings is to obtain public comment on a proposal to reduce winter flow releases from Navajo Dam. The Biology Committee has recommended that winter (November 1 through February 28) flow releases be reduced from 500 cubic feet per second (cfs) to 250 cfs, beginning in the winter of 1995. This reduced flow reflects average winter flows prior to the construction of Navajo Dam (1931-1962). This flow reduction is expected to result in a 600-650 cfs flow at Bluff, Utah. If unusually dry conditions occur, river flows would not be allowed to go below 500 cfs at that point in the river. The reduction in wintertime flows will allow more water to be stored during winter periods, provide a greater potential for the occurrence of spring spills, and a longer duration of those spills. These seasonal flood events are assumed to be beneficial to the maintenance of downstream endangered fish populations.

DATES: The scoping meetings will be held on:
