

the above-mentioned procedures to ensure their familiarity with respect to the removal of fuses during hot shutdown. Therefore, operators are trained and experienced in removing the fuses.

On the basis of this evaluation, the Commission concludes that the proposed action to close the PORV block valves prior to control room evacuation and to remove fuses from the PORV control circuit provides reasonable assurance that safe shutdown can be achieved in the event of a control room fire and is acceptable.

III

The Commission has determined, pursuant to 10 CFR Part 50.12, that this exemption as described in Section II above is authorized by law, will not present an undue risk to the public health and safety, and is consistent with the common defense and security. Furthermore, the Commission has determined that special circumstances as provided in 10 CFR 50.12(a)(2)(ii), are present in that application of the regulation, as interpreted by the staff, in the particular circumstances is not necessary to achieve the underlying purpose of the rule. The underlying purpose of Section III.G.1 of Appendix R is to ensure that safe shutdown can be achieved notwithstanding a fire or the consequences therefrom. Application of this section to the extent it precludes the removal of fuses as a fire protection feature is not necessary to achieve the underlying purpose of the rule because the licensee's proposal still provides reasonable assurance that one safe shutdown train will be operable and free of fire damage.

IV

Accordingly, the Commission hereby grants an exemption from the requirements of Section III.G.1 of Appendix R to 10 CFR Part 50 to allow removal of fuses from the PORV control circuit in the event of a control room fire.

Pursuant to 10 CFR 51.32, the Commission has determined that the granting of this exemption will have no significant impact on the quality of the human environment (59 FR 62415).

This exemption is effective upon issuance.

Dated at Rockville, Maryland, this 21st day of February 1995.
