Background

The final regulations that are the subject of these corrections established Federal agency micrographic program responsibilities, revised micrographic standards, modified coverage of

temporary records, and clarified inspection provisions. The regulations affected Federal agencies.

Need for Corrections

The final regulation intended to revise the title of the Part from "Micrographics" to "Micrographic Records Management" to better reflect the subject matter; due to a technical drafting error, the change in title was not made although the final rule displayed the revised title. In § 1230.12(d)(1)(i), a typographical error was made in the ANSI/AIIM standard referenced of aperture card formats.

SUPPLEMENTARY INFORMATION:

Background

Under the 1990 Clean Air Act Amendments (CAAA), States have the responsibility to inventory emissions contributing to NAAQS nonattainment, to track these emissions over time, and to ensure that control strategies are being implemented that reduce emissions and move areas towards attainment. The CAAA require ozone nonattainment areas designated as moderate, serious, severe, and extreme to submit a plan within three years of 1990 to reduce volatile organic compounds (VOC) emissions by 15 percent within six years after 1990. The baseline level of emissions, from which the 15 percent reduction is calculated, is determined by adjusting the base year inventory to exclude biogenic emissions and to exclude certain emission reductions not creditable towards the 15 percent. The 1990 base year emissions inventory is the primary inventory from which the periodic inventory, the Reasonable Further Progress projection inventory, and the modeling inventory
