

the existence of flow control measures. Data also indicate that flow control is not essential for developing MSW capacity or for achieving recycling goals.

The Agency examined flow control nation-wide, finding that 35 states, the District of Columbia, and the Virgin Islands authorize flow control directly. Four additional states authorize flow control indirectly through mechanisms such as solid waste management plans and home rule authority. Eleven states do not have flow control authority. It is important to recognize that the Report presents a national perspective on flow control, and that the needs and objectives of state and local jurisdictions may differ significantly from a national viewpoint. Factors such as local waste generation rates, financial and market conditions, demographics, and the local economy affect the planning and implementation of solid waste management systems.
