

eradication program in the Lower Rio Grande Valley of Texas in the counties of Brooks, Cameron, Hidalgo, Starr, and Willacy. The proposed Lower Rio Grand Valley program would rely on integrated control methods, including the use of chemicals, on cotton crops. Consistent with the National Environmental Policy Act (NEPA), Aphids had prepared an environmental assessment (EA) that analyzes the potential effects of the program's alternatives and actions on the quality of the human environment.

The EA considers the characteristics of the Lower Rio Grande Valley and focuses on the Potential effects of chemical pesticides. Because of the presence of communities in proximity to cotton fields, certain program modifications and some additional protective measures have been proposed and adopted. The potential presence of endangered and threatened species in close proximity to program activities prompted APHIS to also prepare a biological assessment of endangered and threatened species which contains special protective measures for those species. All of these protective measures are designed to reduce the potential for adverse effects.

Consistent with important policy objectives and principles of "environmental justice" as expressed in Executive Order No. 12898, APHIS held a public meeting on November 29, 1994, in Weslaco, TX (59 FR 56458, Docket No. 94-119-1), and two public hearings on February 16, 1995 (60 FR 5617-5618, Docket No. 94-119-2; 60 FR 7747-7748, Docket 94-119-3), also in Weslaco, TX. The purpose of the November 1994 public meeting was to provide a forum for community input on health and environmental issues associated with implementation of the proposed boll weevil eradication program. APHIS considered the public's perspectives in its development of the EA for the proposed program. The purpose of the February 1995 public hearings was to provide the public additional opportunities to express views or question agency officials regarding the proposed eradication program, the EA, and the preliminary finding of no significant impact.

APHIS made the EA and the preliminary finding of no significant impact available for public review for a period of 30 days. Subsequent to that period, APHIS considered the comments that it received from the public (private individuals, organizations, industry, and government) before making final revisions in the EA.

The APHISA decisionmaker has confirmed the preliminary finding that the proposed eradication program will not significantly impact the quality of the human environment, and determined that an environmental impact statement does not need to be prepared, and that the program may proceed.

We are mailing copies of the final EA and final finding of no significant impact (in English or Spanish, as applicable) to all persons who submitted comments or manifested an interest in the proposed eradication program.

Done in Washington, DC, this 22nd day of march 1995.

Terry L. Medley,

Acting Administrator, Animal and Plant Health Inspection Service.

DEPARTMENT OF COMMERCE

Agency Form Under Review by the Office of Management and Budget

DOC has submitted to the Office of Management and Budget (OMB) for clearance the following proposal for collection of information under the provisions of the Paperwork Reduction Act (44 U.S.C. chapter 35).

Agency: Bureau of the Census.

Title: 1995 Census Test - Integrated Coverage Measurement (Dual System Estimation Follow-up Questionnaire).

Form Number(s): DG-1301.

Agency Approval Number: None.

Type of Request: New collection.

Burden: 525.

Number of Respondents: 2,100.

Avg Hours Per Response: 15 minutes.

Needs and Uses: Prompted by the need to improve estimation techniques during the decennial census, the Census Bureau has developed an Integrated Coverage Measurement (ICM) approach to be tested during the 1995 Census Test. The ICM approach will utilize a separately sampled group of blocks within the 1995 Census Test sites which will be independently listed and then interviewed. We will reconcile differences between the independent roster obtained during the ICM interviews and the census test results. This reconciliation will allow us to measure our coverage of persons in missed housing units and coverage of persons missed within housing units enumerated in the census test. Two techniques for estimating population coverage will be used in the 1995 Census Test -- Census Plus and Dual System Estimation (DSE). In DSE, a sample of persons counted in the ICM enumeration will be matched to regular census test results in the ICM sample blocks. Matching will be done

internally. However, follow-up will be necessary in cases where the information we have is insufficient to determine a person's residence or match status.

Affected Public: Individuals or households.

Frequency: One time only.

Respondent's Obligation: Mandatory.

OMB Desk Officer: Maria Gonzalez, (202) 395-7313.

Copies of the above information collection proposal can be obtained by calling or writing Gerald Taché, DOC Forms Clearance Officer, (202) 482-3271, Department of Commerce, room 5312, 14th and Constitution Avenue, NW, Washington, DC 20230.

Written comments and recommendations for the proposed information collection should be sent to Maria Gonzalez, OMB Desk Officer, room 10201, New Executive Office Building, Washington, DC 20503.

Dated: March 21, 1995.

Agency Form Under Review by the Office of Management and Budget

DOC has submitted to the Office of Management and Budget (OMB) for clearance the following proposal for collection of information under the provisions of the Paperwork Reduction Act (44 U.S.C. chapter 35).

Agency: Bureau of the Census.

Title: 1995 Census Test - Coverage Study.

Form Number(s): DG-1300.

Agency Approval Number: None.

Type of Request: New collection.

Burden: 160 hours.

Number of Respondents: 960.

Avg Hours Per Response: 10 minutes.

Needs and Uses: The Census Bureau is testing many new methods during the 1995 Census Test to enhance coverage and contain costs for the Year 2000 Decennial Census. Four of those new methods are the "Be counted" forms, refined rostering questions, the use of administrative records to improve coverage (simulated use only; administrative records will not be used to add persons to the census test count), and the use of automated matching and unduplication software. In order to evaluate these methods, the Census Bureau plans to conduct a Coverage Study in two of the three 1995 Census Test sites -- Oakland, CA and Paterson, NJ. The Coverage Study is designed to measure the degree to which each

method introduced or, in the case of administrative records, may introduce erroneous enumerations (EEs) into census test counts and to determine the demographic characteristics of the EEs. Enumerators will visit a sample of households to verify residency status and to collect demographic characteristics about persons that were either added or deleted from census test counts by means of one of the above methods.

Affected Public: Individuals or households.

Frequency: One time only.

Respondent's Obligation: Mandatory.

OMB Desk Officer: Maria Gonzalez, (202) 395-7313.
