SUPPLEMENTARY INFORMATION: OSM is making available for public comment, the draft supplemental EIS for the Proposed Mining Plan and Permit Application for the Fence Lake Mine, located in Catron and Cibola Counties, New Mexico, and Apache County, Arizona. The draft supplemental EIS describes the environmental impacts that would result from the life-of-mine mining plan to conduct surface coal mining operations in New Mexico, and the proposed construction and operation of a railroad corridor associated with this mine.

The Salt River Project Agricultural Improvement and Power District (SRP) of Phoenix, Arizona, has applied for Federal and State permits to conduct surface coal-mining and reclamation operations in New Mexico and Arizona as part of its proposed Fence Lake project. This proposed project has two basic elements: (1) The Fence Lake mine and its site facilities and (2) a 44-mile railroad corridor that would be associated with the proposed mine. The mine and its site facilities would be located in Catron and Cibola Counties, New Mexico, approximately 14 miles north of the town of Quemado. SRP proposes to establish a total permitted area of 18,119 acres at Fence Lake; however, only an estimated 8,432 acres, or less than one half of this permit area, would actually be disturbed by the mining operations and support facilities including the railroad corridor. The railroad corridor would be constructed west of the mine—spanning about 31 miles in Catron County, New Mexico, and about 13 miles in Apache County, Arizona—and would extend to the Coronado Generating Station that is located approximately 6 miles northeast of St. Johns, Arizona.

Under the proposed mining plan, SRP would mine a total of 81.3 million tons of coal at Fence Lake. Approximately 35.6 million of those tons would be Federal coal; the remaining 45.7 million tons would be State-leased and privately owned coal. The coal would be transported by railroad 44 miles west of the minesite to be used at SRP's existing Coronado Generating Station. The total mine life would be approximately 50 years—2 years for premining development, 38 years to recover approximately 81.3 million tons of coal and complete reclamation, and 10 years to obtain final bond release.
