ACTION: Notice of proposed change.

SUMMARY: The Military Traffic Management Command (MTMC), for the Department of Defense, is updating MTMC Freight Traffic Rules Publication (MFTRP) No. 1A for transport of military freight by motor carriers and MFTRP No. 10 for railroads. These changes include the new, standardized American National Standards Institute (ANSI) codes for accessorial and protective security services. When these rules publications are reissued, carriers must file tenders with ANSI codes, which are necessary to support the Department of Defense Electronic Data Interchange capabilities. Carriers will receive, on request, a copy of the initial draft of these revised publications. Suggestions from carriers for needed changes or additions to these publications will be considered, if received at Headquarters, MTMC, by July 27, 1995.

**Availability of Non-Exclusive,
Exclusive, or Partially Exclusive
Licensing of U.S. Patent Application
Concerning a Test for Antibodies in
Stool Specimens**

AGENCY: U.S. Army Medical Research and Materiel Command, DOD.

ACTION: Notice.

SUMMARY: In accordance with 37 CFR 404.6, announcement is made of the availability of U.S. Patent Application SN 08/376,977, entitled "Test for Antibodies in Stool Specimens," and filed January 23, 1995, for licensing. This patent has been assigned to the United States Government as represented by the Secretary of the Army.

ADDRESSES: Commander, U.S. Army Medical Research and Materiel Command, ATTN: Command Judge Advocate, Fort Detrick, Maryland 21702-5012.

FOR FURTHER INFORMATION CONTACT:

Mr. John F. Moran, Patent Attorney, 301-619-2065 or telefax 301-619-7714.

SUPPLEMENTARY INFORMATION: This invention provides a method for testing clinical samples suspected of containing systemic or mucosal antibodies to V. cholerae by coupling specific antigen to magnetic beads and exposing said beads to specimens suspected of containing specific antibodies. The method is particularly valuable for detecting mucosal antibodies in stool and can be used for detection of infection, indicating the immune status of individuals, and for epidemiological tracking.

While assays such as ELISA are available for quantitating a systemic immune response, means for evaluating mucosal immune responses are less well developed when though it is believed that the immune response to V. cholerae is predominantly controlled by the mucosal immune system. Because of the rapid nature of the assay and the immediate treatment of the sample with protease inhibitors, problems related to specimen processing are minimized. The method of invention is rapid, inexpensive, can be performed by minimally trained personnel, and provides a means for testing of clinical samples in either a laboratory or field setting.

Army Federal Register Liaison Officer.
