

SUPPLEMENTARY INFORMATION:**Background**

Under section 4672(a), an importer or exporter of any substance may request that the Secretary determine whether that substance should be listed as a taxable substance. The Secretary shall add the substance to the list of taxable substances in section 4672(a)(3) if the Secretary determines that taxable chemicals constitute more than 50 percent of the weight, or more than 50 percent of the value, of the materials used to produce the substance. This determination is to be made on the basis of the predominant method of production. Notice 89-61, 1989-1 C.B. 717, sets forth the rules relating to the determination process.

Determination

On July 10, 1995, the Secretary determined that toluenediamine should be added to the list of taxable substances in section 4672(a)(3), effective October 1, 1995.

The rate of tax prescribed for toluenediamine, under section 4671(b)(3), is \$5.59 per ton. This is based upon a conversion factor for toluene of 0.78, a conversion factor for methane of 0.26, and a conversion factor for ammonia of 0.34.

The petitioner is Air Products and Chemicals, Inc., a manufacturer and exporter of this substance. No material comments were received on this petition. The following information is the basis for the determination.

HTS number: 2921.51.10

CAS number: 95-80-7, 823-40-5, 2687-25-4, and 496-72-0

Toluenediamine is derived from the taxable chemicals toluene, methane, and ammonia and is a solid produced predominantly by a two-step process. The first step is mixed-acid nitration of toluene to produce dinitrotoluene. The second step is the catalytic reaction of hydrogen and dinitrotoluene to produce toluenediamine.

The stoichiometric material consumption formula for this substance is:

C_7H_8 toluene+1.5 CH_4 (methane)+ 2 NH_3 (ammonia)+4 O_2 (oxygen) % $CH_3C_6H_3(NH_2)_2$ (toluenediamine)+5 H_2O (water)+1.5 CO_2 (carbon dioxide)

Toluenediamine has been determined to be a taxable substance because a review of its stoichiometric material consumption formula shows that, based on the predominant method of

production, taxable chemicals constitute 53.95 percent by weight of the materials used in its production.
