

be mitigated by implementing selective harvest techniques that would maintain owl foraging habitat in all harvested areas, protecting an 80-acre core nesting area for one of the two owl pairs known to exist in the HCP area, and planting conifer species on approximately 80 acres of currently unforested habitat within the HCP area which would result in a net increase in forested habitat over time. In addition, take of owls would be minimized using seasonal protection measures specified in the HCP.

The EA considers the environmental consequences of five alternatives, including the proposed action and no action alternatives. The Proposed Action alternative is issuance of the permit for the listed species and approval of the IA for the currently unlisted species. The No Action alternative would result in no immediate timber harvest. The "No-take" Harvest alternative would limit harvest to a level that would not take owls. The Delayed Operations alternative considered the delay of harvest activities until the State of California completes its California Board of Forestry Conservation Plan. The Maximum Timber Harvest alternative involves the implementation of clear-cutting activities in a manner that would not maintain either of the two owl territories on the property.
