NUCLEAR REGULATORY COMMISSION

[Docket 70-1151]

Finding of No Significant Impact and Notice of Opportunity for a Hearing Renewal of Special Nuclear Material License SNM-1107; Westinghouse Electric Corporation Commercial Nuclear Fuel Division Columbia Fuel Fabrication Facility Columbia, SC

The U.S. Nuclear Regulatory Commission is considering the renewal of Special Nuclear Material License SNM-1107 for the continued operation of the Westinghouse Electric Corporation, Commercial Nuclear Fuel Division, Columbia Fuel Fabrication Facility (CFFF) located in Columbia, South Carolina.

Summary of the Environmental Assessment

Identification of the Proposed Action

The proposed action is the renewal of the license to continue manufacturing low-enriched nuclear fuel for a period of 10 years. The current license authorizes CFFF to receive, possess, use, and transfer special nuclear material in accordance with 10 CFR Part 70. CFFF is not requesting any changes to the authorized activities at the site. Principal activities at CFFF include the chemical conversion of uranium hexafluoride (UF₆) to uranium dioxide (UO₂) powder by the Ammonium Diuranate (ADU) Process or Integrated Dry Route (IDR); fabricating the UO₂ powder into pellets; loading the pellets into fuel rods and final fuel assembly; and scrap recovery operations.

The Need for the Proposed Action

CFFF is one of several facilities in the United States which fabricate fuel assemblies for light-water cooled nuclear reactors (LWR). As long as the current demand for nuclear energy continues, the production of the fuel must keep pace. Because the applicant is a major supplier of fuel for LWRs, denial of the license renewal for this facility would necessitate expansion of similar activities at another existing fuel fabrication facility or the construction and operation of a new plant.

Environmental Impacts of the Proposed Action

Effluent Monitoring

Gaseous, liquid, and solid effluents are produced from manufacturing operations at CFFF. The effluents may contain small quantities of ²³⁴U, ²³⁵U, ²³⁸U, ammonia (NH₃), calcium fluoride (CaF₂), and hydrofluoric (HF) gas. An
