#### **NUCLEAR REGULATORY COMMISSION**

**[Docket No. 50-298]**

#### **In the Matter of: Nebraska Public Power District (Cooper Nuclear Station); Exemption**

##### **I**

Nebraska Public Power District (the licensee) is the holder of Facility Operating License No. DPR-46, which authorizes operation of the Cooper Nuclear Station (CNS) at power levels not in excess of 2381 megawatts thermal. The facility consists of a boiling water reactor at the licensee's site in Nemaha County, Nebraska. The operating license provides, among other things, that CNS is subject to all rules, regulations, and orders of the Commission now or hereafter in effect.

##### **II**

Section 50.54(o) of 10 CFR Part 50 requires that primary reactor containments for water-cooled power reactors be subject to the requirements of Appendix J to 10 CFR Part 50. Appendix J contains the leakage test requirements, schedules and acceptance criteria for tests of the leak tight integrity of the primary reactor containment and systems and components which penetrate the containment.

Section III.D.2(a) of Appendix J to 10 CFR Part 50 requires that Type B leak

rate tests, except for airlocks, be performed during reactor shutdown for refueling, or at other convenient intervals, but in no case at intervals greater than two years. Type B tests are intended to detect local leaks and to measure leakage across each pressure-containing or leakage-limiting boundary for certain reactor containment penetrations.

NRC regulations in 10 CFR 50.12(a) provide for specific exemptions from the requirements of the regulations in Part 50 if: (1) the exemption is authorized by law, will not present an undue risk to the public health and safety, and is consistent with the common defense and security; and, (2) special circumstances are present. The regulations in 10 CFR 50.12(a)(2)(ii) provide that special circumstances are present where application of the regulation in the particular circumstances would not serve the underlying purpose of the rule or is not necessary to achieve the underlying purpose of the rule.

##### **III**

By letter dated December 27, 1994, the licensee requested a one-time exemption from the requirements of Appendix J, Section III.D.2(a) of the drywell head and manport penetrations. The requested exemption for an extension of the 2-year surveillance interval would allow these penetrations to be tested at the next refueling outage,
