### Prospective Grant of Exclusive License: Mouse Monoclonal Antibodies Specific for Normal Primate Tissue, Malignant Human Cultured Cell Lines and Human Tumors

**AGENCY:** National Institutes of Health, Public Health Service, DHHS.

**ACTION:** Notice.

**SUMMARY:** This is notice in accordance with 35 U.S.C. 209(c)(1) and 37 CFR 404.7(a)(1)(i) that the National Institutes of Health (NIH), Department of Health

and Human Services, is contemplating the grant of an exclusive world-wide license to practice the inventions embodied in U.S. Patent 5,242,813, U.S. Patent Applications 08/051,133 and 08/363,203 and corresponding foreign patent applications entitled "Mouse Monoclonal Antibodies Specific For Normal Primate Tissue, Malignant Human Cultured Cell Lines and Human Tumors" to Pharmacia, S.P.A. of Milano, Italy. The patent rights in these inventions have been assigned to the United States of America.

The prospective exclusive license will be royalty-bearing and will comply with the terms and conditions of 35 U.S.C. 209 and 37 CFR 404.7. The prospective exclusive license may be granted unless within sixty (60) days from the date of this published notice, NIH receives written evidence and argument that establishes that the grant of the license would not be consistent with the requirements of 35 U.S.C. 209 and 37 CFR 404.7.

The present invention includes three murine monoclonal antibodies (MAb), B1, B3 and B5. These antibodies react strongly with the Lewis Y blood group antigen on many human solid tumors but weakly with normal human tissues. MAb B3 reacts strongly with 10% of transitional cell carcinomas of the bladder, 75% of adenocarcinomas of the colon, 70% of adenocarcinomas of the lung, 65% with adenocarcinomas of the prostate, 40% of squamous cell carcinomas of the lung and 25% of large cell carcinomas. MAb B3 reacts heterogeneously with 70% of breast carcinomas. Several important characteristics of this antibody make it an ideal candidate for further development: (1) Its strong and uniform reactivity with many human solid carcinomas; (2) its limited reactivity with normal tissues; (3) its expression on both human and monkey tissues will allow for predictive preclinical toxicology studies in monkeys. Additionally, these antibodies, when incorporated as the targeting element of an immunotoxin, have been shown to allow efficient entry of toxin agents into cells. These antibodies should be useful in the diagnosis and treatment of some forms of cancer.

**ADDRESSES:** Requests for copies of the patent applications, inquiries, comments and other materials relating to the contemplated licenses should be directed to: Raphe Kantor, Ph.D., Technology Licensing Specialist, Office of Technology Transfer, National Institutes of Health, 6011 Executive Boulevard, Suite 325, Rockville, Maryland 20852-3804.
