BILLING CODE 4140-01-M

Prospective Grant of Exclusive License: Mouse Monoclonal Antibodies Specific for Normal Primate Tissue, Malignant Human Cultured Cell Lines and Human Tumors

AGENCY: National Institutes of Health,
Public Health Service, DHHS.

ACTION: Notice.

SUMMARY: This is notice in accordance
with 35 U.S.C. 209(c)(1) and 37 CFR
404.7(a)(1)(i) that the National Institutes
of Health (NIH), Department of Health

and Human Services, is contemplating
the grant of an exclusive world-wide
license to practice the inventions
embodied in U.S. Patent 5,242,813, U.S.
Patent Applications 08/051,133 and 08/
363,203 and corresponding foreign
patent applications entitled "Mouse
Monoclonal Antibodies Specific For
Normal Primate Tissue, Malignant
Human Cultured Cell Lines and Human
Tumors" to Pharmacia, S.P.A. of
Milano, Italy. The patent rights in these
inventions have been assigned to the
United States of America.

The prospective exclusive license will
be royalty-bearing and will comply with
the terms and conditions of 35 U.S.C.
209 and 37 CFR 404.7. The prospective
exclusive license may be granted unless
within sixty (60) days from the date of
this published notice, NIH receives
written evidence and argument that
establishes that the grant of the license
would not be consistent with the
requirements of 35 U.S.C. 209 and 37
CFR 404.7.

The present invention includes three
murine monoclonal antibodies (MAb),
B1, B3 and B5. These antibodies react
strongly with the Lewis Y blood group
antigen on many human solid tumors
but weakly with normal human tissues.
MAb B3 reacts strongly with 10% of
transitional cell carcinomas of the
bladder, 75% of adenocarcinomas of the
colon, 70% of adenocarcinomas of the
lung, 65% with adenocarcinomas of the
prostate, 40% of squamous cell
carcinomas of the lung and 25% of large
cell carcinomas. MAb B3 reacts
heterogeneously with 70% of breast
carcinomas. Several important
characteristics of this antibody make it
an ideal candidate for further
development: (1) Its strong and uniform
reactivity with many human solid
carcinomas; (2) its limited reactivity
with normal tissues; (3) its expression
on both human and monkey tissues will
allow for predictive preclinical
toxicology studies in monkeys.
Additionally, these antibodies, when
incorporated as the targeting element of
an immunotoxin, have been shown to
allow efficient entry of toxin agents into
cells. These antibodies should be useful
in the diagnosis and treatment of some
forms of cancer.

patent applications, inquiries,
