

the agency should have indicated in the May 16, 1995 notice that the July 7, 1995 effective date was retroactively established as of May 4, 1995. To address these problems and to alleviate any potential ambiguity regarding the effectiveness of these amendments, NHTSA is issuing this notice to clarify that, effective May 4, 1995, the effective date of the amendments to 49 CFR Part 576, Record Retention, and 49 CFR 573.5(c)(8) (recall schedule), 573.7 (leased vehicle recordkeeping), and 577.5(h) (recall notification of lessees) that were published on April 5, 1995 will be January 2, 1996. All other amendments made by the April 5, 1995 final rule became effective on July 7, 1995.

Federal Motor Vehicle Safety Standards; Child Restraint Systems; Correction

AGENCY: National Highway Traffic Safety Administration (NHTSA), Department of Transportation.

ACTION: Final rule; correction.

SUMMARY: This document corrects a final rule that was published Thursday, July 6, 1995 (60 FR 35126). The rule amended Federal Motor Vehicle Safety Standard (FMVSS) No. 213, *Child Restraint Systems*, to add a greater array of sizes and weights of test dummies to Standard 213 for use in compliance tests.

EFFECTIVE DATE: January 3, 1996.

FOR FURTHER INFORMATION CONTACT: For nonlegal issues: Dr. George Mouchahoir, Office of Vehicle Safety Standards (telephone 202-366-4919).

For legal issues: Ms. Deirdre Fujita, Office of the Chief Counsel (202-366-2992). Both can be reached at the National Highway Traffic Safety Administration, 400 Seventh St., S.W., Washington, D.C., 20590.

SUPPLEMENTARY INFORMATION:

Background

This rule corrects a final rule that amended FMVSS No. 213, *Child Restraint Systems*, to add a greater array of sizes and weights of test dummies to

Standard 213 for use in compliance tests. The final rule was published Thursday, July 6, 1995 (60 FR 35126).

Need for Correction

As published, the final rule contains errors that may prove to be misleading and are in need of clarification. First, the effective date of the amendments adopted by the rule, as drafted, did not conform to the drafting requirements of the Federal Register. Second, one of the labeling requirements directed manufacturers to specify the sitting height of children for whom the restraint is recommended. This is an error because, while the proposed rule considered requiring a sitting height measure, NHTSA decided against this in the final rule. Third, there are redundant terms that are at the beginning of the section that specifies which dummy is used to test a child restraint recommended for use by older children (S7.1(c)). This document removes them.

NHTSA notes that the agency has received petitions for reconsideration requesting a delay in the January 3, 1996 effective date of the rule for add-on child restraints. These petitions are pending. This correction notice does not represent or imply any agency decision or other exercise of judgment concerning the merits of that request. NHTSA's evaluation of those petitions is on-going and a decision to grant or deny those petitions will be published shortly.

Correction of Publication

Accordingly, the publication on July 6, 1995 of the final rule (Docket No. 74-09, Notice 42), is corrected as follows:

1. On page 35127, in the first column, the **DATES** section is corrected to read as follows:

DATES: This rule is effective January 3, 1996.

However, manufacturers of built-in child restraint systems may comply with existing requirements for built-in systems (as of July 6, 1995) until September 1, 1996.

Manufacturers of add-on child restraint systems may comply with existing requirements for add-on systems (as of July 6, 1995) until January 3, 1996.

§ 571.213 [Corrected]

2. On page 35140, in the first column, in § 571.213, in S5.5.5(f)(3), line four, the word "sitting" is removed.

3. On page 35142, in the first column, in § 571.213, in S7.1(c), line one, the words "Except for a booster seat, a child" are corrected to read "A child".

Dated: September 26, 1995.

Changes in the List of Species in Appendices to the Convention on International Trade in Endangered Species of Wild Fauna and Flora

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Final rule.

SUMMARY: The Convention on International Trade in Endangered Species of Wild Fauna and Flora (CITES or Convention) regulates international trade in certain animals and plants. Species or other taxa for which such trade is controlled are listed in Appendices I, II, and III to CITES. The countries participating in this treaty, including the United States, adopted amendments to Appendices I and II at the ninth meeting of the Conference of the Parties (COP9) in November, 1994. The United States did not enter a reservation against any of the adopted amendments. This document incorporates all these amendments into the U.S. Fish and Wildlife Service's (Service) regulations implementing CITES. This rule includes an amended, complete listing of CITES-protected animal and plant taxa (50 CFR 23.23) that incorporates the adopted amendments. This new list also incorporates extensive recommendations of the Nomenclature Committee adopted by the Parties, including changes in scientific names and/or listing sequences resulting from adoption of new, standard, taxonomic references for birds and mammals. These taxonomic changes do not affect the status under CITES of any listed animal or plant and do not change the attendant responsibilities of the United States or any other CITES Party for regulating trade in same. The introductory text of the revised § 23.23 also incorporates new language regarding trade in certain ornamental plants, based on proposals submitted by Australia through the CITES postal procedures and adopted by the Parties in 1993.

DATES: The amendments set forth in this rule entered into effect and became enforceable on February 16, 1995, under the terms of CITES. Therefore, this rule is effective September 29, 1995.

ADDRESSES: Please send correspondence concerning this document to Chief, Office of Scientific Authority; U.S. Fish and Wildlife Service; 4401 North Fairfax Drive, room 725; Arlington, Virginia, 22203; fax number 703-358-2276. Express and messenger deliveries should be addressed to the Office of Scientific Authority; 4401 North Fairfax Drive, room 750; Arlington, Virginia, 22203. Materials received will be available for public inspection by appointment, from 8:00 a.m. to 4:00 p.m. Monday through Friday at the above address in Arlington, Virginia.

SUPPLEMENTARY INFORMATION:

Background

CITES regulates import, export, reexport, and introduction from the sea of certain animal and plant species. Species for which the trade is controlled are included in three Appendices. Appendix I includes species threatened with extinction that are or may be affected by trade. Appendix II includes species that, although not necessarily now threatened with extinction, may become so unless trade in them is strictly controlled. It also lists species that must be subject to regulation in order that trade in other currently or potentially threatened species may be brought under effective control (e.g., because of difficulty in distinguishing specimens of currently or potentially threatened species from those of other species). Appendix III includes species that any Party identifies as being subject to regulation within its jurisdiction for purposes of preventing or restricting exploitation, and for which it needs the cooperation of other Parties to control trade.

Any CITES Party may propose amendments to Appendices I and II for consideration either at meetings of the Parties held about every 2½ years or, occasionally, by a postal vote process. The text of proposals must be communicated to the CITES Secretariat at least 150 days before such a meeting. The Secretariat must then consult the other Parties and appropriate intergovernmental agencies, and communicate responses to all Parties no later than 30 days before the meeting. Amendments are adopted by consensus

or a two-thirds majority of the Parties present and voting.

Actions of the Parties

The ninth meeting of the Conference of the Parties to CITES was held November 7-18, 1994, in Fort Lauderdale, Florida. Decisions of the Parties on 79 different animal proposals and 42 different plant proposals to amend the Appendices I and II were reported in a proposed rule in the Federal Register on January 3, 1995 (60 FR 73). The same Federal Register also briefly described a report by the CITES Nomenclature Committee, which was adopted by Party vote. By recommending certain changes in spelling, names of taxa, and annotations, this report resolved a multitude of questions that have arisen over the years regarding appropriate nomenclature for taxa listed in Appendix I prior to adoption of the Berne listing criteria in 1977. The report also recommended a standard taxonomic reference for mammals different from that used previously. Adoption of this report has resulted in numerous changes in the scientific names and/or listing sequences of many taxa of mammals listed in Appendices I, II, and III. Similar types of changes have become necessary for birds, because of adoption of a standard taxonomic reference for birds by the Parties at COP8 in 1992. Until now, those changes had not been incorporated into 50 CFR § 23.23. Although many of these changes are taxonomically significant, they alter neither the status under CITES of any listed animal or plant nor the attendant responsibilities of CITES Parties for regulating trade in same. A copy of the report of the Nomenclature Committee is available from the Office of Scientific Authority (see **ADDRESSES**).

Both the January 3, 1995 proposed rule (60 FR 73) and a previous notice of November 8, 1994 (59 FR 55617) requested comments from the public on whether the United States should enter reservations against any of the listing amendments. If the United States were to enter a reservation, it would be treated as a country not party to CITES with respect to trade in that particular species. However, because of the requirements of other Parties, the U.S. Lacey Act Amendments of 1981, and relevant CITES resolutions, the effect of a reservation would be limited. More comprehensive discussions of any practical effects of entering a reservation and reasons for or against entering reservations are contained in the November 8, 1994 and January 3, 1995

Federal Register notices (59 FR 55617 and 60 FR 73, respectively).

Related Considerations

At COP9, the Parties voted to downlist the South African population of the white rhinoceros, *Ceratotherium simum simum*, from Appendix I to Appendix II "for the exclusive purpose of allowing international trade in live animals to appropriate and acceptable destinations and hunting trophies." The effect of this annotation is that any white rhinoceros part or product not meeting the specific conditions of the annotated downlisting is subject to a "zero" quota and therefore prohibited from international trade. One consequence of this annotated downlisting is that importers of sport-hunted trophies of white rhinoceros from South Africa now require only a CITES export permit from South Africa. Issuance of the export permit requires a finding by the South African CITES Scientific Authority that the export will not be detrimental to the survival of the species. When the population was listed on Appendix I, there was an additional requirement of an import permit from the importing country, based on the importing country's own findings that (a) the specimen was not to be used for primarily commercial purposes and (b) the import was for purposes not detrimental to the survival of the species.

In September 1992, Australia submitted three proposals on plants through the postal procedures of CITES (see 57 FR 53090, November 6, 1992). Two of these proposals dealt with certain considerations for ornamental plants and were accepted by the Parties. Changes to the appendices resulting from these two amendments entered into force on April 16, 1993. With these changes, the Parties (including the United States) agreed to the following trade policies: (1) trade in artificially propagated hybrids of Appendix I plant taxa requires only a certificate of artificial propagation; (2) those hybrids' cut flowers, seeds and pollen (including pollinia), and flaked seedling cultures and tissue cultures are exempt from CITES controls; and (3) flaked seedling cultures and tissue cultures of the 11 taxa of orchids then in Appendix I were exempted from CITES controls.

The third Australian proposal had sought exclusion of certain parts and derivatives of seven tree species in Appendix II from CITES controls. Australia decided to withdraw that proposal and to refer the topic to the CITES Plants Committee. Information related to this topic is in two documents (Doc. 9.52 and Com. 9.32) that are part

of the official record of COP9, and in Doc. SC.35.5 (Rev.) from the March 1995 meeting of the CITES Standing Committee.

Details regarding the three September 1992 proposals and the comments received in response to 57 FR 53090 (November 6, 1992) are available from the Service's Office of Scientific Authority. The results of the two accepted proposals are incorporated below into a revised 50 CFR § 23.23, which also includes the further modifications related to flaked seedlings and tissue cultures adopted at COP9 (see 60 FR 73, January 3, 1995).

Requests for Reservations and U.S. Decisions

In response to the November 8, 1994, and January 3, 1995, Federal Register notices, the Service received one request for the United States to enter a reservation on any of the amendments to Appendices I and II adopted by the Parties. The United States was asked to enter a reservation on the de-listing of *Aloe vera*, by Mr. Gary W. Lyons (of Gary Lyons Garden & Horticultural Consultant & Design, Los Angeles), a member of the IUCN/SSC Cactus and Succulent Specialist Group and a past chairman of the Conservation Committee of the Cactus and Succulent Society of America. Prior to COP9, artificially propagated whole plants of *Aloe vera* were in Appendix II, but their separate leaves and other parts and derivatives were not included. All other aloes, including wild *Aloe vera*, were included either in CITES Appendix II or Appendix I.

As one basis for his request, Mr. Lyons cited the confusion among experts about what plants are meant by the scientific name "*Aloe vera*." The adopted Swiss proposal to de-list *Aloe vera* considers *Aloe vera* var. *chinensis* (with *Aloe indica* indicated as a synonym), which is coral-flowered, as a species distinct from the yellow-flowered *Aloe vera* var. *vera* (synonym *Aloe barbadensis*). The practical effect of this taxonomic interpretation in the proposal is that the yellow-flowered plants have been de-listed, whereas the coral-flowered plants remain in Appendix II. However, Mr. Lyons stated that specimens of both of these entities are commonly cultivated and in trade under the common name *aloe vera* and the scientific name *Aloe vera* (or *Aloe barbadensis*).

Mr. Lyons also asserts, based on his familiarity with *Aloe* plants, review of the scientific literature, and a September 1994 discussion with one of the foremost field botanists for succulent plants in Africa and the Middle East

(Mr. John Lavranos), that *Aloe vera* (var. *vera*) could still be extant where native in the wild, perhaps in Ethiopia, Yemen, southern Saudi Arabia, Oman, or Iran.

Regardless of the merits of the above points, a reservation cannot be entered on the COP9 decision to de-list *Aloe vera* (i.e., other than the var. *chinensis*). CITES Article XV, paragraph 3, which provides for reservations to amendments to Appendices I and II, states that a Party that has entered a reservation "shall be treated as a State not party to the present Convention with respect to trade in the species concerned." Therefore a Party cannot, either in legal or in practical terms, unilaterally maintain a CITES listing that the Parties have voted to remove from the appendices. Therefore, the United States did not enter a reservation on the de-listing of *Aloe vera*.

At COP9, problems including those raised by Mr. Lyons were referred to the CITES Plants Committee for further consideration. The Plants Committee examined these issues further at its meeting of June 19–23, 1995, in Spain, agreeing that *Aloe vera* var. *chinensis* remains listed and that *A. vera* var. *vera* might not be extinct.

Procedural Requirements

This Federal Register notice implements changes in the list of species in the CITES appendices that have already been approved by the Conference of the Parties at their ninth meeting, and that the United States is bound to accept unless it entered reservations. The Service does not believe that implementation of any of these adopted amendments (or the adopted changes in nomenclature) would be contrary to the interests or laws of the United States. The period of time during which the United States could have entered a reservation against any of the amendments ended on February 15, 1995. The Service did not recommend the entry of any reservations, and none were taken by the United States. Therefore, these amendments to the CITES Appendices have been in effect for the United States since February 16, 1995.

This notice brings the information in 50 CFR § 23.23 into agreement with the current species listings in the CITES appendices. Earlier Federal Register notices informed the public about these amendments and provided opportunity for comment on them, including announced public meetings on September 14 and 16, 1994. Therefore, the Department of the Interior has determined that good cause exists for making this rule effective upon its date

of publication [5 U.S.C. 553(d)]. Accordingly, § 23.23 of 50 CFR is considered amended upon publication of this rule.

Because of the number of changes necessitated by the nomenclature report, a complete revision of the list of animals and plants included in Appendices I, II, and III to CITES (50 CFR § 23.23), rather than a separate list of changes to the existing list, is warranted and appears at the end of this rule. This fully revised and updated § 23.23 incorporates (a) the recommendations of the nomenclature report and (b) new or revised listings resulting from the amendments to Appendices I and II adopted at COP9, including, in paragraph (d), clarifying language regarding plant parts and derivatives. It also modifies language in paragraph (a) in order to clarify the organization of the table in paragraph (f), and corrects non-substantive, typographical errors in the current listing.

Additions and most other changes resulting from amendments adopted at COP9 appear in their appropriate positions in the list and are preceded by a "+" to permit rapid location. However, taxa that were deleted from CITES appendices, or taxa absorbed into a listed higher taxon (frequently a consequence of moving from Appendix I to Appendix II, for example) do not appear in the list. These types of changes can be traced by comparison of the new list with the list of COP9 listing decisions published in the January 3, 1995 Federal Register. In order to minimize difficulties for users, the scientific names formerly used for animal or plant taxa affected by the new taxonomic treatments still appear in the "Species" column of the new list but are cross-referenced to the new names.

The Department has determined that amendments to CITES Appendices, which result from actions of the CITES Parties, do not require the preparation of Environmental Assessments as defined under authority of the National Environmental Policy Act (42 U.S.C. 4321–4347). This rule was not subject to Office of Management and Budget review under Executive Order 12866. The Regulatory Flexibility Act (5 U.S.C. 601) does not apply to this listing process. The adjustments to the list in 50 CFR § 23.23 presented below are solely informational to provide the public with accurate data on the species covered by CITES. The listing changes adopted by the Parties took effect on February 16, 1995, under the terms of CITES. This rule does not contain information collection requirements that require approval by the Office of

Management and Budget under 44 U.S.C. 3501 *et seq.*

This document was prepared by Drs. Marshall A. Howe and Bruce MacBryde, Office of Scientific Authority, under the authority of the Endangered Species Act of 1973, as amended (16 U.S.C. 1531 *et seq.* and 87 Stat. 884, as amended).

Regulation Promulgation

Accordingly, for the reasons set out in the preamble of this document, Part 23 of Title 50, Code of Federal Regulations, is amended as follows: 1. The authority citation for Part 23 continues to read as follows:

PART 23—ENDANGERED SPECIES CONVENTION

1. The authority citation for Part 23 continues to read as follows:

Authority: Convention on International Trade in Endangered Species of Wild Fauna and Flora, 27 U.S.T. 108; and Endangered Species Act of 1973, as amended (16 U.S.C. 1531 *et seq.*).

* * * * *

2. Section 23.23 is revised in its entirety to read as follows.

(Note: For the convenience of the user, the "+" symbol that precedes certain entries denotes changes resulting from the November 1994 Conference of the Parties to CITES. This symbol will not appear in the Code of Federal Regulations.)

Subpart C—Appendices I, II and III to the Convention on International Trade in Endangered Species of Wild Fauna and Flora

§ 23.23 Species listed in Appendices I, II, and III.

(a) The list in this section includes species of wildlife and plants placed in Appendix I, II or III in accordance with the provisions of Articles XV and XVI of the Convention.

The list of species is organized as follows:

Major group	Subgroups
Mammals.	Orders, in taxonomic sequence.
Birds	Orders, in taxonomic sequence.
Reptiles	Orders, in taxonomic sequence.
Amphibians.	Orders, in taxonomic sequence.
Fishes ..	Orders, in taxonomic sequence.
Molluscs	Classes.
Arthropods.	Classes.
Plants ...	Families, in alphabetical sequence.

Within each Subgroup, lower taxonomic units (mainly genera, but sometimes families or subfamilies) are listed in alphabetical sequence. Within genera, the scientific names of the species are listed in alphabetical sequence. The scientific name takes precedence over the common name in determining if a species is listed.

(b) The appendix column of the list includes the annotation "pe" (=possibly extinct) for certain species. It also contains the names of Parties including species in Appendix III.

(c) For purposes of issuing United States certificates of exemption under Article VII(3), the date when the Convention applies to a species is the date when the inclusion of that species in the appendices enters into force under the terms of Article XV or XVI of the Convention. The date of first listing is retained if a species is transferred from one appendix to another or if a listed species is subsequently included with other species in the listing of a taxon above the species level. Such species are shown separately in this publication of the appendices. The date of a subsequent listing is used only if a species is entirely deleted from the appendices and is subsequently reincluded after an intervening period of time.

(d) Subject to the regulations of this part are all living or dead animals or plants in Appendix I, II or III, and all their readily recognizable parts and derivatives except for specified parts or derivatives of particular Appendix III animal species as excluded in the

particular listing and the following categorically excluded or exempted parts or derivatives of certain plants:

(1) For Appendix II and Appendix III plants and artificially propagated hybrids of Appendix I plants: Seedling or tissue cultures obtained *in vitro*, in solid or liquid media, transported in sterile containers; and

(2) For Appendix II and Appendix III plants: Seeds, spores, and pollen (including pollinia); and

(3) For artificially propagated hybrids of Appendix I plants:

(i) Seeds and pollen (including pollinia) and

(ii) Cut flowers; and

(4) For *Panax quinquefolius* (in Araliaceae), parts and derivatives other than roots and their readily recognizable parts.

(5) For artificially propagated or naturalized Appendix II Cactaceae species:

(i) Fruits and their parts and derivatives;

(ii) For *Opuntia* subgenus *Opuntia* species, separate stem joints (pads) and their parts and derivatives.

(6) For Orchidaceae species:

(i) In Appendix I, seedling or tissue cultures obtained *in vitro*, in solid or liquid media, transported in sterile containers;

(ii) In Appendix II, if artificially propagated:

(A) Cut flowers, and

(B) For *Vanilla* species, fruits and their parts and derivatives.

(e) The list of species set out in paragraph (f) is informational and not regulatory in nature. It is solely intended as a convenience to the public. The official list of species included in Appendices I, II, and III is the one maintained by the CITES Secretariat based on the decisions of the Parties to the Convention.

(f) The list of species in the Appendices to the Convention on International Trade in Endangered Species of Wild Fauna and Flora is provided below:

50 CFR Part 672

[Docket No. 950206041-5041-01; I.D. 091995B]

Groundfish of the Gulf of Alaska; Pollock in Statistical Area 62 of the Gulf of Alaska

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Closure.

SUMMARY: NMFS is prohibiting directed fishing for pollock in Statistical Area 62 in the Gulf of Alaska (GOA). This action is necessary to prevent exceeding the fourth quarterly allowance of total allowable catch (TAC) for pollock in this area.

EFFECTIVE DATE: 12 noon, Alaska local time (A.l.t.), October 4, 1995, until 12 midnight, A.l.t., December 31, 1995.

FOR FURTHER INFORMATION CONTACT: Thomas Pearson, 907-486-6919.

SUPPLEMENTARY INFORMATION: The groundfish fishery in the GOA exclusive economic zone is managed by NMFS according to the Fishery Management Plan for Groundfish of the Gulf of Alaska (FMP) prepared by the North

Pacific Fishery Management Council under authority of the Magnuson Fishery Conservation and Management Act. Fishing by U.S. vessels is governed by regulations implementing the FMP at 50 CFR parts 620 and 672.

The 1995 pollock TAC in Statistical Area 62 was established by the Final 1995 Harvest Specifications of Groundfish (60 FR 8470, February 14, 1995) as 15,310 metric tons (mt), determined in accordance with § 672.20(a)(2)(iv). As of September 2, 1995, the remaining pollock TAC for Statistical Area 62 is 3,124 mt. The fourth quarterly allowance of the TAC for Statistical Area 62 will become available at 12 noon, A.l.t., October 1, 1995, pursuant to § 672.20(a)(2)(iv).

The Director, Alaska Region, NMFS (Regional Director), has determined, in accordance with § 672.20(c)(2)(ii), that the 1995 fourth quarterly allowance of pollock TAC in Statistical Area 62 soon will be reached. Therefore, the Regional Director has established a directed fishing allowance of 2,742 mt after determining that 382 mt will be taken as incidental catch in directed fishing for other species in Statistical Area 62 of the GOA. Consequently, NMFS is prohibiting directed fishing for pollock in Statistical Area 62, effective from 12 noon, A.l.t., October 4, 1995, until 12 midnight, A.l.t., December 31, 1995.

After the effective date of this closure, the maximum retainable bycatch amounts at § 672.20(g) apply at any time during a fishing trip.

Classification

This action is taken under 672.20 and is exempt from review under E.O. 12866.

Authority: 16 U.S.C. 1801 *et seq.*

Dated: September 25, 1995.
Richard W. Surdi,
Acting Director, Office of Fisheries Conservation and Management, National Marine Fisheries Service.

Groundfish of the Gulf of Alaska; Shortraker/Rougheye Rockfish Species Group in the Central Regulatory Area

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Closure.

SUMMARY: NMFS is prohibiting retention of the shortraker/ rougheye rockfish species group in the Central Regulatory Area of the Gulf of Alaska (GOA). NMFS is requiring that catches of the shortraker/rougheye rockfish species group in this area be treated in the same manner as prohibited species and discarded at sea with a minimum of injury. This action is necessary because the total allowable catch (TAC) specified for the shortraker/rougheye rockfish species group in the Central Regulatory Area of the GOA has been reached.

EFFECTIVE DATE: 12 noon, Alaska local time (A.l.t.), October 1, 1995, until 12 midnight, A.l.t., December 31, 1995.
