**SUPPLEMENTARY INFORMATION:** NASA issued the *Final Tier 1 Environmental Impact Statement for Space Station Freedom*, in March 1991 (the "Tier 1 FEIS") followed by the associated Record of Decision to proceed with full-scale design and development of the concept known as Space Station Freedom.

At the time the Tier 1 FEIS was prepared, detailed design information was not available. As a consequence, some issues relating to the potential environmental effects of Space Station Freedom were deferred to the Tier 2 environmental impact statement. These issues included the impacts of any significant design modifications that might be incorporated as the design matured, and a quantitative analysis of the probability and consequences of inadvertent reentry into the Earth's atmosphere during assembly and operation. Other issues that were deferred included venting of nontoxic gases during operation and change to a hydrazine propulsion system.

On March 9, 1993, the President directed NASA to undertake a redesign of the Space Station Program in such a manner that reductions in the projected costs of Space Station Freedom could be realized. The result was the current ISS, which involves design modifications and agreements to include Russia as a partner.

The proposed action considered in this Tier 2 DEIS is to continue to provide U.S. participation in the

implementation of assembly and operation of the ISS. The Tier 2 DEIS considers the alternative to the proposed action, the "No-Action" alternative (i.e., cancellation of U.S. participation in the ISS).

Significant design changes that have occurred since the Tier 1 FEIS include, but are not necessarily limited to, the following: the number of research laboratories has been increased from three to six; the number of logistics modules has been increased from one to two; the pressurized volume has been almost doubled; the crew size has been increased from four to six; and the orbital inclination has been changed from 28.5 degrees to 51.6 degrees, improving access by Russian launch vehicles and additional mission control capabilities. Assembly of the ISS contemplates 27 NASA Shuttle launches (reduced from 29), 15 Russian launches, 1 European Space Agency launch, and 1 launch of a vehicle yet to be determined. This would increase the total number of launches through completion of assembly from 32 to 44. Accordingly, resupply flights to the completed ISS will now include Russian as well as NASA flights; whereas Space Station Freedom was to be resupplied exclusively by NASA Space Shuttle flights.

The design of the ISS has progressed to the point where it is now possible to conduct a quantitative analysis of the probability and consequences of inadvertent reentry into the Earth's atmosphere. The Tier 2 DEIS assesses the probabilities and potential impacts associated with inadvertent reentry, and addresses potential decommissioning options, including the plan presented in the Tier 1 FEIS. Other issues addressed in the Tier 2 DEIS include the following: the cumulative effects of the U.S. launches associated with the assembly and operation of the ISS, the change to the Unsymmetrical Dimethylhydrazine/Nitrogen Tetroxide propulsion system, and the venting and outgassing of nontoxic gases from the ISS. The Tier 2 DEIS addresses environmental effects on the United States and the integrated ISS impacts on the global commons.
