BILLING CODE 4160-01-F

[Docket No. 95E-0183]

Determination of Regulatory Review Period for Purposes of Patent Extension; CPI® Ventak® P2 AICD System

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA) has determined the regulatory review period for CPI® Ventak® P2 AICD System and is publishing this notice of that determination as required by law. FDA has made the determination because of the submission of an application to the Commissioner of Patents and Trademarks, Department of Commerce, for the extension of a patent which claims that medical device.

ADDRESSES: Written comments and petitions should be directed to the Dockets Management Branch (HFA-305), Food and Drug Administration, rm. 1-23, 12420 Parklawn Dr., Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: Brian J. Malkin, Office of Health Affairs (HFY-20), Food and Drug Administration, 5600 Fishers Lane, Rockville, MD 20857, 301-443-1382.

SUPPLEMENTARY INFORMATION: The Drug Price Competition and Patent Term Restoration Act of 1984 (Pub. L. 98-417) and the Generic Animal Drug and Patent Term Restoration Act (Pub. L. 100-670) generally provide that a patent may be extended for a period of up to 5 years so long as the patented item (human drug product, animal drug product, medical device, food additive, or color additive) was subject to regulatory review by FDA before the item was marketed. Under these acts, a product's regulatory review period forms the basis for determining the amount of extension an applicant may receive.

A regulatory review period consists of two periods of time: A testing phase and an approval phase. For medical devices, the testing phase begins with a clinical

investigation of the device and runs until the approval phase begins. The approval phase starts with the initial submission of an application to market the device and continues until permission to market the device is granted. Although only a portion of a regulatory review period may count toward the actual amount of extension that the Commissioner of Patents and Trademarks may award (half the testing phase must be subtracted as well as any time that may have occurred before the patent was issued), FDA's determination of the length of a regulatory review period for a medical device will include all of the testing phase and approval phase as specified in 35 U.S.C. 156(g)(3)(B).

FDA recently approved for marketing the medical device CPI® Ventak® P2 AICD System. CPI® Ventak® P2 AICD System is indicated for the treatment of patients with ventricular fibrillation and/or ventricular tachyarrhythmia who are at high risk of sudden cardiac death. Subsequent to this approval, the Patent and Trademark Office received a patent term restoration application for CPI® Ventak® P2 AICD System (U.S. Patent No. Re. 34,879) from Cardiac Pacemakers, Inc., and the Patent and Trademark Office requested FDA's assistance in determining this patent's eligibility for patent term restoration. In a letter dated September 25, 1995, FDA advised the Patent and Trademark Office that this medical device had undergone a regulatory review period and that the approval of CPI® Ventak® P2 AICD System represented the first commercial marketing of the product. Shortly thereafter, the Patent and Trademark Office requested that FDA determine the product's regulatory review period.

FDA has determined that the applicable regulatory review period for CPI® Ventak® P2 AICD System is 1,178 days. Of this time, 620 days occurred during the testing phase of the regulatory review period, while 558 days occurred during the approval phase. These periods of time were derived from the following dates:

1. *The date a clinical investigation involving this device was begun:* December 20, 1991. FDA has verified the applicant's claim that the date the investigational device exemption (IDE) required under section 520(g) of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 360j(g)) for human tests to begin became effective on December 20, 1991.

2. *The date an application was initially submitted with respect to the device under section 515 of the Federal Food, Drug, and Cosmetic Act (21 U.S.C.*

360e): August 30, 1993. FDA has verified the applicant's claim that the premarket approval application (PMA) for CPI® Ventak® P2 AICD Systems (PMA P930035) was initially submitted on August 30, 1993.

3. *The date the application was approved:* March 10, 1995. FDA has verified the applicant's claim that PMA P930035 was approved on March 10, 1995.

This determination of the regulatory review period establishes the maximum potential length of a patent extension. However, the U.S. Patent and Trademark Office applies several statutory limitations in its calculations of the actual period for patent extension. In its application for patent extension, this applicant seeks 363 days of patent term extension.

Anyone with knowledge that any of the dates as published is incorrect may, on or before February 5, 1996, submit to the Dockets Management Branch (address above) written comments and ask for a redetermination. Furthermore, any interested person may petition FDA, on or before June 5, 1996, for a determination regarding whether the applicant for extension acted with due diligence during the regulatory review period. To meet its burden, the petition must contain sufficient facts to merit an FDA investigation. (See H. Rept. 857, part 1, 98th Cong., 2d sess., pp. 41-42, 1984.) Petitions should be in the format specified in 21 CFR 10.30.

Comments and petitions should be submitted to the Dockets Management Branch (address above) in three copies (except that individuals may submit single copies) and identified with the docket number found in brackets in the heading of this document. Comments and petitions may be seen in the Dockets Management Branch between 9 a.m. and 4 p.m., Monday through Friday.

Dated: November 30, 1995.

Stuart L. Nightingale,

Associate Commissioner for Health Affairs.

BILLING CODE 4160-01-F

Grassroots Regulatory Partnership Meeting; Southeast Region, New Orleans and Nashville Districts; Seafood Industry

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice of a public meeting.

SUMMARY: The Food and Drug Administration (FDA) (Office of External Affairs, Office of Regulatory Affairs, Office of the Southeast Region,

New Orleans and Nashville Districts, and Center for Food Safety and Applied Nutrition) is announcing a free public meeting as a followup to a meeting held in April 1995. The New Orleans and Nashville Offices of FDA will meet with interested persons in the States of Alabama, Louisiana, Mississippi, and Tennessee to address specific issues of concern to the seafood processing industry, other stakeholders, and FDA. Because the Interstate Shellfish Sanitation Conference addressed the issue of *Vibrio vulnificus* in raw oysters, this meeting will not cover that issue. Any other seafood issue will be open for discussion. The agency is holding this meeting to promote the President's initiative for a partnership approach between front-line regulators and the people affected by the work of regulatory agencies, and to create local partnerships.

DATES: The public meeting will be held on Friday, January 19, 1996, from 10 a.m. to 3:30 p.m.

ADDRESSES: The public meeting will be held at the Grand Casino Hotel Gulfport, 3305 West Beach Blvd., Gulfport, MS 39501, 601-870-7770 or 1-800-354-2450.

FOR FURTHER INFORMATION CONTACT: Sandra S. Baxter, FDA Nashville District, 297 Plus Park Blvd., Nashville, TN 37217, 615-781-5372, FAX 615-781-5383.

SUPPLEMENTARY INFORMATION: In the Federal Register of April 20, 1995 (60 FR 19753), FDA announced that a series of Grassroots Regulatory Partnership Meetings would be held. This document announces a followup meeting to the one held on April 25, 1995, in Atlanta, GA. Those persons interested in attending this public meeting should FAX or send their registration, and comments or questions desired to be addressed to the meeting to the above contact person by January 5, 1996. There is no registration fee for this meeting. However, due to space limitations, early registration is required. The goal of this meeting is to listen to concerns and ideas of the regulated seafood industry and other stakeholders, and to identify possible next steps for the agency.

Dated: December 1, 1995.

William B. Schultz,

Deputy Commissioner for Policy.

BILLING CODE 4160-01-F

[Docket No. 95E-0311]

Determination of Regulatory Review Period for Purposes of Patent Extension; VALTREX®

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA) has determined the regulatory review period for VALTREX® and is publishing this notice of that determination as required by law. FDA has made the determination because of the submission of an application to the Commissioner of Patents and Trademarks, Department of Commerce, for the extension of a patent which claims that human drug product.

ADDRESSES: Written comments and petitions should be directed to the Dockets Management Branch (HFA-305), Food and Drug Administration, rm. 1-23, 12420 Parklawn Dr., Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: Brian J. Malkin, Office of Health Affairs (HFY-20), Food and Drug Administration, 5600 Fishers Lane, Rockville, MD 20857, 301-443-1382.

SUPPLEMENTARY INFORMATION: The Drug Price Competition and Patent Term Restoration Act of 1984 (Pub. L. 98-417) and the Generic Animal Drug and Patent Term Restoration Act (Pub. L. 100-670) generally provide that a patent may be extended for a period of up to 5 years so long as the patented item (human drug product, animal drug product, medical device, food additive, or color additive) was subject to regulatory review by FDA before the item was marketed. Under these acts, a product's regulatory review period forms the basis for determining the amount of extension an applicant may receive.

A regulatory review period consists of two periods of time: a testing phase and an approval phase. For human drug products, the testing phase begins when the exemption to permit the clinical investigations of the drug becomes effective and runs until the approval phase begins. The approval phase starts with the initial submission of an application to market the human drug product and continues until FDA grants permission to market the drug product. Although only a portion of a regulatory review period may count toward the actual amount of extension that the Commissioner of Patents and Trademarks may award (for example, half the testing phase must be subtracted as well as any time that may have occurred before the patent was

issued), FDA's determination of the length of a regulatory review period for a human drug product will include all of the testing phase and approval phase as specified in 35 U.S.C. 156(g)(1)(B).

FDA recently approved for marketing the human drug product VALTREX® (valacyclovir hydrochloride). VALTREX® is indicated for the treatment of herpes zoster (shingles) in immunocompetent adults. Subsequent to this approval, the Patent and Trademark Office received a patent term restoration application for VALTREX® (U.S. Patent No. 4,957,924) from Burroughs Wellcome Co., and the Patent and Trademark Office requested FDA's assistance in determining this patent's eligibility for patent term restoration. In a letter dated October 5, 1995, FDA advised the Patent and Trademark Office that this human drug product had undergone a regulatory review period and that the approval of VALTREX® represented the first permitted commercial marketing or use of the product. Shortly thereafter, the Patent and Trademark Office requested that FDA determine the product's regulatory review period.

FDA has determined that the applicable regulatory review period for VALTREX® is 1,907 days. Of this time, 1,541 days occurred during the testing phase of the regulatory review period, while 366 days occurred during the approval phase. These periods of time were derived from the following dates:

1. *The date an exemption under section 505(j) of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 355(j)) became effective:* April 5, 1990. The applicant claims March 6, 1990, as the date the investigational new drug application (IND) became effective. The applicant claims that FDA waived the 30-day post-submission review period and the effective date of the IND relates back to the date of submission, March 6, 1990. According to FDA records, a safety meeting was held on March 23, 1990, for IND 34,526. The meeting is held within 30 days of receipt of an IND to determine its safety in humans. At the meeting it was agreed by the reviewing disciplines that the study was reasonably safe to proceed. There is no record of any waiver for this IND. If a waiver had been issued, there would have been no need to have the safety review meeting. Therefore, the correct IND effective date for IND 34,526 is April 5, 1990, 30 days after agency receipt of IND 34,526.

2. *The date the application was initially submitted with respect to the human drug product under section 505(b) of the Federal Food, Drug, and Cosmetic Act:* June 23, 1994. FDA has
