

area of environmental sciences, health effects and life sciences, and medical applications. Major program research emphasis is placed on characterization of human and microbial genomes, structural biology, cellular and molecular biology, global climate change, improved technology for cleanup of DOE contaminated sites, advanced imaging technologies, and molecular nuclear medicine. With the explosion of nucleic acid and amino acid sequence data that stems from genome projects, there is an immediate need for greatly improved experimental and computational approaches for protein structure determination. To help meet this need, and in support of diverse missions of DOE, OHER is initiating a new program in computational structural biology. The purpose of this program is to support research that will enhance understanding of structure-function relationships in biological macromolecules. These relationships are very important for diverse applications in biotechnology, including development of drugs for diseases, new and improved biomaterials, design of enzymes for effective and efficient removal of environmental contaminants, and the development and conversion of bio-mass for fuels. In particular, research applications that integrate existing software tools in novel ways and/or develop new computational strategies to exploit databases of macromolecular structural information towards furthering our understanding of the relationships between sequence and structure are of particular interest to the program at this time. This includes the goals of predicting the structure and function of newly discovered gene sequences and the prediction or design of the chemical properties and architectural arrangement of proteins or nucleic acids needed for a particular functional application. Examples of existing approaches that fall into this category are knowledge-based or molecular extension methods (e.g., homology model building or multiple sequence alignment), ab initio folding (finding structures that fit sequences) and the development of tools to assign existing or new sequences to specific structures (e.g., finding sequences that fit structures through threading or inverse folding algorithms). Attention should be also focussed on the problem of negative design, the identification of aspects of a sequence that precludes its fitting a known structure. More generally, the integration and joint utilization of the growing body of sequence, structural and physical

information is an area that offers new opportunities that are of interest to the program. Studies that rigorously compare existing tools and/or exploit the latest advances in multiple approaches (in algorithms, simulation, modeling and graphical representation/ visualization) or that include the development of new computational and visualization techniques for application to the prediction of protein and nucleic acid structure and the exploitation of structure to predict function, will also be considered particularly responsive. Collaborative projects with two to five principal investigators, of complementary expertise and each with independent funding, aimed at achieving a synergistic effect in improving structure prediction accuracy through such activities as evaluation of different potential functions, the development of shared code, or an integrated attack on a set of problems in an area of prediction or in testing current modeling techniques are also encouraged. Funds for such projects would be comparable to individual awards, but could be used to nucleate a larger group effort.

DATES: Formal applications submitted in response to this notice must be received by 4:30 p.m., E.D.T., April 25, 1996, to be accepted for a June merit review and to permit timely consideration of award in Fiscal Year 1996.

ADDRESSES: Formal applications referencing Program Notice 96-03 should be forwarded to: U.S. Department of Energy, Office of Energy Research, Grants and Contracts Division, ER-64, 19901 Germantown Road, Germantown, Maryland 20874-1290, ATTN: Program Notice 96-03. The same address as above must be used when submitting applications by U.S. Postal Service Express Mail, any commercial mail delivery service, or hand carried by the applicant.

FOR FURTHER INFORMATION CONTACT: Dr. Matesh N. Varma, Office of Health and Environmental Research, ER-73, U.S. Department of Energy, 19901 Germantown Road, Germantown, Maryland 20874-1290, telephone: (301) 903-3209, Fax: (301) 903-0567, (E-mail: matesh.varma@mailgw.er.doe.gov).

SUPPLEMENTARY INFORMATION: Before preparing a formal application, potential applicants must submit a brief preapplication in accordance with 10 CFR 600.10(d)(2), which consists of two to three pages of narrative describing research objectives and methods of accomplishment. These will be reviewed relative to the scope and research needs for the computational structural biology program.

Preapplications referencing Program Notice 96-03 should be received by January 23, 1996, and sent to Dr. Matesh N. Varma, Office of Health and Environmental Research, 19901 Germantown Road, Germantown, Maryland 20874-1290, (301) 903-3209. Telephone and fax numbers and e-mail addresses are required to be part of the preapplication. A response to the preapplication discussing potential relevance of a formal application will be communicated by February 20, 1996. It is anticipated that approximately \$2.0 million will be available for grant awards during Fiscal Year 1996 contingent upon availability of funds. We expect to award several grants in this area of research up to a few hundred thousand dollars per year. Information about development, submission, and the selection process, and other policies and procedures may be found in 10 CFR Part 605, and in the Application Guide for the Office of Energy Research Financial Assistance Program. The Application Guide is available from the U.S. Department of Energy, Office of Health and Environmental, ER-73, 19901 Germantown Road, Germantown, Maryland 20874-1290. Telephone requests may be made by calling (301) 903-5349. Electronic access to ER's Financial Assistance Guide is possible via the Internet using the following E-mail address: <http://www.er.doe.gov/>

The Catalog of Federal Domestic Assistance Number for this program is 81.049, and the solicitation control number is ERFAP 10 CFR Part 605.

Issued in Washington, D.C. on December 11, 1995.

D. D. Mayhew,

Associate Director, Office of Resource Management, Office of Energy Research.

BILLING CODE 6450-01-P

ENVIRONMENTAL PROTECTION AGENCY

[FRL-5398-3]

Agency Information Collection Activities Under OMB Review

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: In compliance with the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*), this notice announces that the Information Collection Request (ICR) abstracted below has been forwarded to the Office of Management and Budget (OMB) for review and comment. The

ICR describes the nature of the information collection and its expected cost and burden; where appropriate, it includes the actual data collection instrument.

DATES: Comments must be submitted on or before January 18, 1996.

FOR FURTHER INFORMATION OR A COPY

CALL: Sandy Farmer at EPA, (202) 260-2740, and refer to EPA ICR No. 1100.08.

SUPPLEMENTARY INFORMATION:

Title: National Emission Standards for Hazardous Air Pollutant (OMB Control No. 2060-0191; EPA ICR No. 1100.08). "This is a request for extension of a currently approved collection."

Abstract: On December 15, 1989 pursuant to Section 112 of the Clean Air Act as amended in 1977 (42 U.S.C. 1857), the Environmental Protection Agency promulgated NESHAPs to control radionuclide emissions from several source categories. The regulations were published in 54 FR 51653, and are codified at 40 CFR Subparts B, H, I, K, R, T, and W, and imposes the following radionuclide dose and emission standards: Subpart B—Underground Uranium Mines

10 mrem/yr

Subpart H—Department of Energy

10 mrem/yr, 20 pci/m²-s

Subpart I—Non-DOE not licensed by NRC

10 mrem/yr, 3 mrem/yr; iodine

Subpart I—Licensed by NRC

10 mrem/yr, 3 mrem/yr iodine

Subpart K—Elemental Phosphorous

2 curies/yr

Subpart R—Phosphogypsum Stacks

20 pci/m²-s

Subparts T and W—Uranium Mill

Tailings Piles

20 pci/m²-s

Information collected is used by EPA to ensure that public health continues to be protected from the hazards of airborne radionuclides by compliance with these. If the information were not collected, it is unlikely that violation of the standards would be identified and no corrective action would be initiated to bring the facilities back into compliance. Compliance is demonstrated through emission testing and/or dose calculation. Results are submitted to EPA Regional office annually or when required for verification of compliance and maintained for a period of 5 years.

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number. The OMB control numbers for EPA's regulations are listed

in 40 CFR Part 9 and 48 CFR Chapter 15. The Federal Register Notice required under 5 CFR 1320.8(d), soliciting comments on this collection of information was published on 08/25/95 (FR Doc. 95-21169).

Burden Statement: The annual public reporting and Record keeping burden for this collection of information is estimated to average 31 hours per response. Burden means the total time, effort, or financial resources expended by persons to generate, maintain, retain, or disclose or provide information to or for a Federal agency. This includes the time needed to review instructions; develop, acquire, install, and utilize technology and systems for the purposes of collecting, validating, and verifying information, processing and maintaining information, and disclosing and providing information; adjust the existing ways to comply with any previously applicable instructions and requirements; train personnel to be able to respond to a collection of information; search data sources; complete and review the collection of information; and transmit or otherwise disclose the information.

Respondents/Affected Entities: 6112.

Estimated Number of Respondents: 412.

Frequency of Responses: Annually or less than annually.

Estimated Total Annual Hour Burden: 188,708 hours.

Estimated Total Annualized Cost Burden: \$1,758,559.

Send comments on the Agency's need for this information, the accuracy of the provided burden estimates, and any suggested methods for minimizing respondent burden, including through the use of automated collection techniques to the following addresses. Please refer to EPA ICR No. 1100.08 and OMB Control No. 2060-0191 in any correspondence.

Ms. Sandy Farmer, U.S. Environmental Protection Agency, OPPE Regulatory Information Division (2136), 401 M Street, SW., Washington, DC 20460.

and

Office of Information and Regulatory Affairs, Office of Management and Budget, Attention: Desk Officer for EPA, 725 17th Street, NW., Washington, DC 20503.

Dated: December 5, 1995.

Joseph Retzer,

Director, Regulatory Information Division.

Agency Information Collection Activities Under OMB Review; EPA Indoor Environmental Quality Questionnaire

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: In compliance with the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*), this notice announces that the Information Collection Request (ICR) for "EPA Indoor Environmental Quality Questionnaire" abstracted below has been forwarded to the Office of Management and Budget (OMB) for review and comment. The ICR describes the nature of the information collection and its expected cost and burden; where appropriate, it includes the actual data collection instrument.

DATES: Comments must be submitted on or before January 18, 1996.

FOR FURTHER INFORMATION OR A COPY

CALL: Sandy Farmer at EPA, (202) 260-2740, and refer to EPA ICR No. 1619.02.

SUPPLEMENTARY INFORMATION:

Title: EPA Indoor Environmental Quality Survey (OMB Control No. 2060-0244; EPA ICR No. 1619.02). This is a request for an extension of a currently approved collection.

Abstract: The Indoor Environmental Quality Questionnaire is a component of the EPA Building Assessment Survey and Evaluation (BASE) program. In this program, EPA is conducting an indoor air quality (IAQ) study of 100-200 large commercial and public office buildings. The purpose of this study is to develop a national baseline assessment of the indoor air in such buildings. The activities EPA will conduct under this survey include Indoor Environmental Quality Questionnaire, building inspections, interviews with building maintenance workers, environmental measurements (e.g., ventilation rates, concentrations of indoor air pollutants), and other quantitative and qualitative assessments. By conducting this research, EPA will begin to be able to assess the key building parameters that affect IAQ and the incidence of certain IAQ-related health and comfort problems. The Indoor Environmental Questionnaire is a voluntary questionnaire asking for information pertaining to work station characteristics, working conditions, exposure to pollutants, health and well-being, and stress. Data from the Indoor Environmental Questionnaire will be used to compare the measured building parameters and health effects.
