U.S. Patent Number 5,389,523 is a method of immunoanalysis which combines immobilized immunochemistry with the technique of flow injection analysis, and employs microscopic spherical structures called liposomes, or lipid vesicles, as carriers of detectable reagents.

NIST may enter into a Cooperative Research and Development Agreement ("CRADA") to perform further research

on the invention for purposes of commercialization. The CRADA may be conducted by NIST without any additional charge to any party that licenses the patent.
