Title: Hazardous Waste Industry Studies ICR Number 2050-0042, expires July 31, 1996.

Abstract: Under the Industry Studies Program, EPA's Office of Solid Waste is planning to conduct surveys of various industries during the rest of this fiscal year through FY 1999, primarily for the purpose of developing hazardous waste listing determinations as part of a rulemaking effort under Sections 3001 and 3004 of the Resource Conservation and Recovery Act (RCRA). Information

collected under authority of this ICR will be used to establish and expand an information data base with regard to hazardous waste generation and management by industry to support a goal of more effective regulation under Sections 3001 and 3004 of RCRA.

The information acquired through the Industry Studies Program has contributed to the effective development and implementation of the hazardous waste regulatory program. The ICR renewal, once approved, will allow continued and expanded data collection for the following program areas:

- Listing
- Land Disposal Restrictions (LDR) and Capacity
- Source Reduction and Recycling
- Risk Assessment

To support these hazardous waste program areas, EPA has been conducting surveys and site visits for various industries over the past 12 years under authority granted under RCRA Section 3007 and OMB #2050-0042. Responses to these surveys are mandatory and required by EPA to collect data for development of hazardous waste rulemakings as required by a consent decree signed December 9, 1994, which resulted from the *EDF v. Reilly* case.

These surveys will collect data on the following:

- Corporate/facility data—name, location, EPA hazardous waste identification number, and facility representative.
- Feedstock and product information—chemical and physical identification of feedstocks and raw materials.
- General process information—types of processes in place, and on-site wastewater treatment and disposition.
- Specific manufacturing processes, residuals—flow sheets, including types and points of introduction and generation of feedstocks, products, co-products, by-products, and residuals.
- General residuals management information—on-site and/or off-site management of residuals of concern.
- Residuals characterization—chemical/physical properties of the residuals, regulatory status (*i.e.*, whether the waste already is a hazardous waste).
- Residuals management units/facility-wide exposure pathway risk assessment information—management units that manage residuals of concern, operating and design information on units, potential releases from units, environmental descriptors surrounding management units, environmental monitoring in place, and past releases.
- Residual source reduction/recycling information—voluntary source
