SUPPLEMENTARY INFORMATION:

I. Abstract

The 1996 Test Census is designed to
 test new and improved methodologies
 for reducing the differential in the
 census results among the various
 components of the population, and for
 containing costs associated with
 conducting a census. The Census
 Bureau will use the results of this test,
 in combination with other research, to
 decide how to conduct the 2000 census.
 The test will be conducted in two rural
 sites and one urban site with a
 combined housing unit total of about
 10,000. The rural sites (roughly 2,000
 housing units) will encompass two
 American Indian reservations. The
 urban site (roughly 8,000 housing units)
 will encompass six census tracts in
 Chicago, Illinois.

A primary objective for both the rural
 and urban components of the test is to
 refine the Integrated Coverage
 Measurement (ICM) program. Other
 objectives are listed below.

Major objectives for the rural
 component of the test:

- Use and evaluate tribal
 "administrative records," such as tribal
 rolls, utility records, tribal school
 records, and tribal voter registration as
 coverage improvement tools.

- Use improved address list
 development and collection
 methodology.

- Implement and evaluate a
 "partnership agreement" with the tribes,
 and expand the Tribal Liaison's role to
 include involvement in census
 operational activities.

- Test the use of statistical estimation
 techniques to improve the enumeration
 of residents on American Indian
 reservations and trust lands.

Major objectives for the urban
 component of the test:

- Test the ICM program in a
 reengineered census setting.

- Test techniques for measuring
 housing unit and noninstitutional group
 quarters coverage in a census setting.

- Test use of administrative records
 for coverage improvement.

- Test improved address listing
 techniques.

The 1996 Test Census will include
 four questionnaires—two self-
