

Research, NC, to take listed shortnose sturgeon as authorized by the Endangered Species Act of 1973 (ESA) (16 U.S.C. 1531-1543) and NMFS regulations governing listed fish and wildlife permits (50 CFR parts 217-222). The applicants requested a 2-year permit to take shortnose sturgeon in the rivers of NC, to determine their distribution and habitat use. Adult shortnose sturgeon will be collected by gillnetting, weighed, measured, photographed, tagged, have tissue samples taken, and be released. Up to 10 of these adult shortnose sturgeon will be tagged with an ultrasonic transmitter, and tracked. Eggs and larvae will be collected to gather information on spawning sites. On February 14, 1996, as authorized by the ESA, NMFS issued Permit 984 authorizing this research.

Notice was published on September 28, 1995 (60 FR 50189) that an application had been filed by the US Fish and Wildlife Service. The applicant requested authorization for a 5-year scientific research permit to take listed shortnose sturgeon in the Southeast US. The purpose of the research is to develop strategies that can be applied by fisheries managers to aid in the recovery of shortnose sturgeon populations. Research will be conducted mainly on non-releasable captive shortnose sturgeon and their progeny, with a maximum take in the wild of 50 adult fish annually for population assessment and biological comparison with hatchery fish. Wild fish will be released following measurement, tagging, and the collection of tissue samples. On February 23, 1996, as authorized by the ESA, NMFS issued Permit 986 for this research.

Issuance of these permits, as required by the ESA, was based on a finding that such permits: (1) Were applied for in good faith, (2) will not operate to the disadvantage of the listed species that is the subject of the permits, and (3) are consistent with the purposes and policies set forth in section 2 of the ESA.
