Office of Surface Mining Reclamation and Enforcement

Availability of Final Supplemental Environmental Impact Statement

AGENCY: Office of Surface Mining Reclamation and Enforcement, Department of the Interior.

ACTION: Notice of availability of a final supplemental environmental impact statement (EIS) for the proposed mining plan and permit application, Fence Lake Mine, Catron and Cibola Counties, New Mexico and Apache County, Arizona, OSM–EIS–31.

SUMMARY: The Office of Surface Mining Reclamation and Enforcement (OSM) is making available a final supplemental environmental impact statement (EIS) on the proposed mining plan and permit application for the Fence Lake mine. This is a supplemental EIS to the 1990 Bureau of Land Management EIS and it updates the identified impacts and analyzes any new probable impacts of mining at the proposed Fence Lake mine. The supplemental EIS has been prepared to assist the Department of the Interior in making a decision on the mining plan and permit application submitted by Salt River Project (SRP) for a surface coal mining operation located approximately 14 miles northwest of Quemado, New Mexico, and for 13 miles of railroad in the State of Arizona.

ADDRESSES: Copies of the final supplemental EIS may be obtained from Richard J. Seibel, Regional Director, Western Regional Coordinating Center, Office of Surface Mining Reclamation and Enforcement, 1999 Broadway, Suite 3320, Denver, Colorado 80202–5733, Attn: Dr. Robert H. Block.

FOR FURTHER INFORMATION CONTACT: Dr. Robert H. Block, Project Manager and EIS Team Leader at the Denver, Colorado, location given under ADDRESSES (telephone: 303–672–5610).

SUPPLEMENTARY INFORMATION: SRP’s proposed Fence Lake mine consists of Federal, State and private coal leases situated on approximately 18,000 acres northwest of Quemado, New Mexico. The proposed mine would remove approximately 81.3 million tons of coal, by surface methods, over the 50 year life-of-mine. Approximately 1.8 million tons of coal would be removed each year from year 2 through year 28 and about 3 million tons of coal per year would be removed each year from year 29 through year 40. The project also includes a proposed 44-mile railroad corridor that would be constructed west from the mine to supply coal to the existing Coronado Generating Station, located approximately 6 miles from St. Johns, Arizona.

OSM has prepared the supplemental EIS to evaluate the alternative actions that the Department could take on the mining plan in the state of New Mexico and the permitting of the 13 miles of railroad corridor in the State of Arizona. In accordance with the New Mexico State Program, the New Mexico Mining and Minerals Department must take permitting actions on the proposed surface coal mining operation and 31 miles of railroad corridor within the State of New Mexico. Two alternatives are evaluated in the supplemental EIS:

(1) approval of the mining plan and permit application with conditions, and
(2) disapproval of the mining plan and permit application. OSM has identified “approval of the proposed mining plan and permit application package with conditions” as the preferred alternative.

Dated: March 22, 1996.

Richard J. Seibel,
Regional Director, Western Regional Coordinating Center.
