Abstract: The Environmental Radiation Ambient Monitoring System (ERAMS) is a national network of stations collecting sampling media that include air, precipitation, drinking water, surface water, and milk. Samples are sent to EPA's National Air and Radiation Environmental Laboratory (NAREL) in Montgomery, AL, where they are analyzed for radioactivity. ERAMS provides emergency response and ambient monitoring information regarding levels of environmental radiation across the nation. All stations, usually manned by state and local personnel, participate in ERAMS voluntarily. Station operators complete information forms that accompany the samples. The forms request descriptive information related to sample collection, e.g., sample type, sample location, length of sampling period, and volume represented.

Burden Statement: The annual public reporting and recordkeeping burden for this collection of information is estimated to average 0.37 hours per response.
