SUPPLEMENTARY INFORMATION:

I. Abstract

The Census Bureau produces a monthly data series on the value of private single-family residential construction put in place. Estimates for the series are derived from the Bureau's Survey of Construction (SOC) by using a mathematical model and construction progress patterns. The application of the mathematical model requires us to subtract out nonconstruction costs from sales price or contract value that we collect for the SOC and add construction costs not normally

included in the contract value. The factors representing these corrections to the cost need to be updated in order to bring them up to date with today's housing market and recent innovations in construction. The factors currently in use were derived from two studies conducted in the early 1980's. The Census Bureau will conduct a special one-time study to re-estimate these factors based on current single-family construction data.

II. Method of Collection

A subset of the SOC respondents for single-family housing completions will be asked to provide the Census Bureau with up to nine construction cost items. The sample will be drawn from the single family units in the SOC that have been completed. The sample of 7,600 SOC respondents will be spread over a period of 13 months. The study is a mailout/mailback survey with telephone followups for nonresponse and data review. The respondents will be initially contacted within two months of the reported completion of the SOC.
