

Individualized responses to comments will not be provided.

The 12 taxa being considered in this recovery plan are: *Adenophorus periens* (pendant kihi fern), *Bonamia menziesii* (no common name (NCN)), *Diellia erecta* (NCN), *Flueggea neowawraea* (mehamehame), *Hibiscus brackenridgei* (ma'o hau hele), *Mariscus pennatifolius* (NCN), *Neraudia sericea* (ma'aloa), *Plantago princeps* (ale), *Sesbania tomentosa* ('ohai), *Solanum incompletum* (thorny popolo), *Spermolepis hawaiiensis* (NCN), and *Vigna o-wahuensis* (Oahu vigna).

These 12 taxa are all Federally listed as endangered and are currently found on one or more of the following Hawaiian Islands: Laysan, Necker, Nihoa, Niihau, Kauai, Oahu, Molokai, Lanai, Kahoolawe, Maui, and Hawaii. They are found in a wide range of vegetation communities (grasslands, shrublands, and forests), elevational zones (coastal to subalpine), and moisture regimes (dry to wet). They have been variously affected or are currently threatened by: habitat degradation and/or predation by pigs, goats, deer, and cattle; invasion and competition from naturalized, introduced vegetation; habitat loss from fires; human impacts from recreational activities; insect infestations; and the potential for extinction from stochastic events because of small population size and/or limited distribution.

The objective of this plan is to provide a framework for the recovery of these 12 taxa so that their protection by the Endangered Species Act (ESA) is no longer necessary. Immediate actions necessary for the prevention of extinction of these taxa include fencing for exclusion of ungulates, alien plant control, protection from fire, population and plant community monitoring and management, ex situ propagation, and augmentation of populations, as appropriate. Long-term activities necessary for the perpetuation of these taxa in their natural habitats additionally include public education, maintenance of fenced areas, long-term monitoring and management of populations and communities, and re-establishment of populations within the historic ranges of some taxa. Further research regarding current range, reproduction and reproductive status, pollinators, life history, limiting factors, habitat requirements, and minimum viable population sizes is needed to facilitate appropriate management decisions regarding the long-term perpetuation of each of these taxa.

Public Comments Solicited

The Service solicits written comments on the recovery plan described. All comments received by the date specified above will be considered prior to approval of these plans.

Authority: The authority for this action is section 4(f) of the Endangered Species Act, 16 U.S.C. 1533(f).

Dated: September 23, 1996.

Donald V. Friberg

Acting Regional Director, U.S. Fish and Wildlife Service, Pacific Region.
