

Member remains free to deviate from the joint export price in independently exporting its commodities not dedicated to DMIA.

3. Act jointly to establish sales strategies in the Export Markets.

4. Process export orders on behalf of DMIA Members.

5. Exchange information regarding export transactions, including:

a. information that is already available to the dairy industry or to the general public;

b. information that is already exchanged among DMIA Members pursuant to the Cooperative Marketing Act of 1926, 7 U.S.C. Section 455;

c. information on costs specific to the Export Markets (such as ocean freight, inland freight to the terminal or port, terminal or port storage, wharfage and handling charges, insurance, agents, commissions, export sales documentation and service, and export sales financing);

d. information about U.S. and foreign legislation and regulation affecting sales to Export Markets;

e. information about the price, quantity, and delivery dates of products supplied by DMIA Members for export through DMIA's services;

f. information about terms and conditions of contracts for sales in the Export Markets to be considered by DMIA Members, including specifications from particular customers as well as customary terms and conditions;

g. information about DMIA's international marketing efforts and promotional activities undertaken by DMIA on behalf of its Members;

h. information about orders received by DMIA; and

i. information about the independent export operations of DMIA Members regarding the products specified herein, including but not limited to, sales and distribution networks established by DMIA Members, and prior export sales (including foreign customer and export price information).

6. Jointly sponsor promotional, sales and marketing efforts aimed at developing existing or new Export Markets.

7. Provide through DMIA Export Trade Facilitation Services to assist the export of Members' specified dairy commodities.

8. Share among the Members, on a proportionate basis, the profits or losses resulting from an export sale through DMIA, and the cost of Export Trade Facilitation Services.

9. Select a member to negotiate and arrange for transportation of the subject commodity.

10. Reimburse through DMIA the transport costs expended by the DMIA Member responsible for transporting the commodities for a particular export sale transacted through DMIA's clearing services, where such transport costs are shared by the Members on a proportional basis.

11. Meet to engage in the activities described in paragraphs one through ten above.

12. Utilize staff of the Wisconsin Federation of Cooperatives or, as needed the staff of a similar outside organization to implement the activities described in paragraphs one through eleven above.

13. Refuse to provide export clearing services and participation in the other activities described in paragraphs one through twelve above to non-members.

Dated: January 23, 1997.

W. Dawn Busby,

Director, Office of Export Trading Company Affairs.

BILLING CODE 3510-DR-P

National Oceanic and Atmospheric Administration

[Docket No. 970114007-7007-01; I.D. 010897C]

RIN 0648-ZA26

Financial Assistance for Research and Development Projects in the Gulf of Mexico and Off the U.S. South Atlantic Coastal States; Marine Fisheries Initiative (MARFIN)

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice.

SUMMARY: Subject to the availability of funds, NMFS issues this notice describing funding to assist persons in carrying out research and development projects that optimize the use of fisheries in the Gulf of Mexico and off the South Atlantic States of North Carolina, South Carolina, Georgia, and Florida involving the U.S. fishing industry (recreational and commercial), including fishery biology, resource assessment, socio-economic assessment, management and conservation, selected harvesting methods, and fish handling and processing. NMFS issues this notice describing the conditions under which applications will be accepted and how NMFS will determine which applications will be selected for funding. Areas of this Marine Fisheries Initiative (MARFIN) emphasis were

formulated from recommendations received from non-Federal scientific and technical experts, and NMFS research and operations officials.

DATES: Applications for funding under this program will be accepted between January 29, 1997 and 5 p.m. eastern daylight time on March 31, 1997.

Applications received after that time will not be considered for funding. No facsimile applications will be accepted.

Applications may be inspected at the NMFS Southeast Regional Office (see **ADDRESSES**) from April 4, 1997 through April 7, 1997.

ADDRESSES: Send applications to: Ellie Francisco Roche, Competitive Programs Manager, Cooperative Programs Division, Southeast Regional Office, NMFS, 9721 Executive Center Drive, N., St. Petersburg, FL 33702.

FOR FURTHER INFORMATION CONTACT: Ellie Francisco Roche, 813-570-5324.

SUPPLEMENTARY INFORMATION:

I. Authority

The Secretary of Commerce (Secretary) is authorized under 15 U.S.C. 713c-3(d) to carry out a national program of research and development addressed to such aspects of U.S. fisheries (including, but not limited to harvesting, processing, marketing and associated infrastructures), if not adequately covered by projects assisted under subsection (c) of this section, as the Secretary deems appropriate.

II. Catalog of Federal Domestic Assistance (CFDA)

This program is described in the "Catalog of Federal Domestic Assistance" (CFDA) under program number 11.433, Marine Fisheries Initiative.

III. Program Description

MARFIN is a competitive Federal assistance program that promotes and endorses programs that seek to optimize research and development benefits from U.S. marine fishery resources through cooperative efforts that involve the best research and management talents to accomplish priority activities. Projects funded under MARFIN are focused into cooperative efforts that provide answers for fishery needs covered by the NMFS Strategic Plan, available from the Southeast Regional Office (see **ADDRESSES**), particularly those goals relating to rebuilding overfished marine fisheries, maintaining currently productive fisheries, and integrating conservation of protected species and fisheries management.

Applications from multiple cooperating applicants that address

conservation and management needs over a wide range of a fishery or fishery organism are encouraged. Emphasis will be placed upon funding projects that have the greatest probability of recovering, maintaining, improving, or developing fisheries; improving the understanding of factors affecting recruitment success; and/or generating increased values and recreational opportunities from fisheries. Projects will be evaluated as to the likelihood of achieving these benefits through both short- and long-term research efforts, with consideration of the magnitude of the eventual economic or social benefits that may be realized. Short-term projects that may yield more immediate benefits and projects yielding longer-term benefits will receive equal consideration.

IV. Funding Availability

This solicitation announces that funding of approximately \$1.10 million may be available in FY 1997. MARFIN financial assistance started in FY 1986 and, for FY 1986 through FY 1995, awards totaled about \$16.8 million for financial assistance to conduct research for fishery resources in the Gulf of Mexico and off the South Atlantic states of North Carolina, South Carolina, Georgia, and Florida. There is no guarantee that sufficient funds will be available to make awards for all approved projects.

Project proposals accepted for funding for a project period over 1 year that include multiple project components and severable tasks to be funded during each budget period will not compete for funding in subsequent budget periods within the approved project period. However, funding for subsequent project components is contingent upon the availability of funds from Congress and satisfactory performance and will be at the sole discretion of the agency. Publication of this notice does not obligate NMFS to award any specific cooperative agreement or to obligate all or any parts of the available funds.

V. Matching Requirements

Applications must reflect the total budget necessary to accomplish the project, including contributions and/or donations. Cost-sharing is not required for the MARFIN program. However, cost-sharing is encouraged and, in case of a tie in considering proposals for funding, cost-sharing may affect the final decision. The appropriateness of all cost-sharing will be determined on the basis of guidance provided in applicable Federal cost principles. If an applicant chooses to cost-share, and if that application is selected for funding,

the applicant will be bound by the percentage of the cost share reflected in the cooperative agreement award.

The non-Federal share may include the value of in-kind contributions by the applicant or third parties or funds received from private sources or from state or local governments. Federal funds may not be used to meet the non-Federal share of matching funds, except as provided by Federal statute. Third party in-kind contributions may be in the form of, but are not limited to, personal services rendered in carrying out functions related to the project and use of real or personal property owned by others (for which consideration is not required) in carrying out the projects.

The total cost of a project begins on the effective award date of an authorized cooperative agreement between the applicant and the NOAA Grants Officer and ends on the date specified in the award. Accordingly, time expended and costs incurred in either the development of a project or the financial assistance application, or in any subsequent discussions or negotiations prior to the award, are neither reimbursable nor recognizable as part of the recipient's cost share.

VI. Type of Funding Instrument

The cooperative agreement has been determined to be the appropriate funding instrument. NMFS is substantially involved in developing program research priorities, conducting cooperative activities with recipients, and evaluating the performance of recipients for effectiveness in meeting national and regional goals for fishery research in the southeastern United States.

VII. Eligibility Criteria

A. Applications for cooperative agreements for MARFIN projects may be made, in accordance with the procedures set forth in this notice, by:

1. Any individual who is a citizen or national of the United States or a citizen of the Northern Mariana Islands.
2. Any corporation, partnership, or other entity, non-profit or otherwise, if such entity is a citizen of the United States within the meaning of section 2 of the Shipping Act, 1916, as amended (46 app. U.S.C. 802).
3. Colleges, universities, and game and fish departments of the several states.

B. Federal agencies, Federal instrumentalities, and Federal employees, including NOAA employees (full-time, part-time, and intermittent personnel or their immediate families), and NOAA offices or centers are not eligible to submit an application under

this solicitation or aid in the preparation of an application during the 60-day solicitation period, except to provide information about the MARFIN program and the priorities and procedures included in this solicitation. However, NOAA employees are permitted to provide information about ongoing and planned NOAA programs and activities that may have implication for an application. Potential applicants are encouraged to contact Ellie Francisco Roche at the NMFS Southeast Regional Office (see **ADDRESSES**) for information on NOAA programs.

VIII. Award Period

The award period for the project may be made for more than 1 year consisting of one, two, or three budget periods that correspond to the funding for the proposed project components. The award period will depend upon the duration of funding requested by the applicant in the Application for Federal Assistance, the decision of the NMFS selecting official on the amount of funding, the results of post-selection negotiations between the applicant and NOAA officials, and pre-award review of the application by NOAA and Department of Commerce (DOC) officials. Normally, each project budget period may be no more than 18 months in duration. NOAA policy limits the total duration of a project to 3 years.

IX. Indirect Costs

The total dollar amount of the indirect costs proposed in an application under this program must not exceed the indirect cost rate negotiated and approved by a cognizant Federal agency prior to the proposed effective date of the award or 25 percent of the Federal share of the total proposed direct costs dollar amount in the application, whichever is less. Institutions with indirect cost rates above 25 percent may use the amount above the 25-percent level as part of the non-Federal share. A copy of the current, approved, negotiated Indirect Cost Agreement with the Federal Government must be included with the application.

X. Profit or Fees

Profit or management fees paid to for-profit or commercial organization grantees are allowable at the discretion of NOAA. However, they shall not exceed 7 percent of the total estimated direct costs. There must be no profit or fees to the recipient in any overhead charge. Payment of fees or profit is based on successful completion of project objectives.

XI. Application Forms and Kit

Before submitting an application under this program, applicants should contact the NMFS Southeast Regional Office for a copy of this solicitation's MARFIN Application Package (see ADDRESSES).

Applications for project funding under this program must be complete and in accordance with instructions in the MARFIN Application Package. They must identify the principal participants and include copies of any agreements describing the specific tasks to be performed by participants. Project applications should give a clear presentation of the proposed work, the methods for carrying out the project, its relevance to managing and enhancing the use of Gulf of Mexico and/or South Atlantic fishery resources, and cost estimates as they relate to specific aspects of the project. Budgets must include a detailed breakdown, by category of expenditures, with appropriate justification for both the Federal and non-Federal shares. Applicants should not assume prior knowledge on the part of NMFS as to the relative merits of the project described in the application. Applications are not to be bound in any manner and must be one-sided. All incomplete applications will be returned to the applicant. Ten copies (one original and nine copies) of each application are required and should be submitted to the NMFS Southeast Regional Office, Cooperative Programs Division (see ADDRESSES). OMB has approved 10 copies, under Approval #0648-0175.

XII. Project Funding Priorities

A. Proposals for FY 1997 should exhibit familiarity with related work that is completed or ongoing. Where appropriate, proposals should be multidisciplinary. Coordinated efforts involving multiple institutions or persons are encouraged. The areas of special emphasis are listed below, but proposals in other areas will be considered on a funds-available basis.

In addition to referencing specific area(s) of special interest as listed below, proposals should state whether the research will apply to the Gulf of Mexico only, the South Atlantic only, or to both areas. Successful applicants may be required to collect and manage data in accordance with standardized procedures and formats approved by NMFS and to participate with NMFS in specific cooperative activities that will be determined by consultations between NMFS and successful applicants before project grants are awarded. All

recipients of financial assistance under this program shall include funding in their applications for the principal investigator to participate in an annual MARFIN Conference in Tampa, FL, at the completion of the project.

1. Bycatch

The bycatch of biological organisms (including interactions with sea turtles and marine mammals) by various fishing gears can have wide-reaching impacts from a fisheries management and an ecological standpoint, with the following major concerns:

a. *Shrimp trawl fisheries.* Studies are needed to contribute to the regional shrimp trawler bycatch program (including the rock shrimp fishery) being conducted by NMFS in cooperation with state fisheries management agencies, commercial and recreational fishing organizations and interests, environmental organizations, universities, Councils, and Commissions. Specific guidance and research requirements are contained in the Cooperative Bycatch Plan for the Southeast, available from NMFS (see ADDRESSES). In particular, the studies should address:

(1) Data collection and analyses to expand and update current bycatch estimates, temporally and spatially emphasizing areas of greatest impact by shrimping. Sampling effort should include estimates of numbers, weight, and random samples of size (age) structure of associated bycatch complex, with emphasis on those overfished species under the jurisdiction of the Councils.

(2) Assessment of the status and condition of fish stocks significantly impacted by shrimp trawler bycatch, with emphasis given to overfished species under the jurisdiction of the Councils. Other sources of fishing and nonfishing mortality should be considered and quantified as well.

(3) Identification, development, and evaluation of gear, non-gear, and tactical fishing options to reduce bycatch.

(4) Improved methods for communicating with and improving technology and information transfer to the shrimp industry.

b. *Pelagic longline fisheries.* Several pelagic longline fisheries exist in the Gulf and South Atlantic, targeting highly migratory species such as tunas, sharks, billfish, and swordfish. Priority areas include:

(1) Development and evaluation of gear and fishing tactics to minimize bycatch of undersized and unwanted species, including sea turtles, marine mammals, and overfished finfish species/stocks.

(2) Assessment of the biological impact of longline bycatch on related fisheries.

c. *Reef fish fisheries.* The reef fish complex is exploited by a variety of fishing gear and tactics. The following research on bycatch of reef fish species is needed:

(1) Development and evaluation of gear and fishing tactics to minimize the bycatch of undersized and unwanted species, including sea turtles and marine mammals.

(2) Characterization and assessment of the impact of longline, bandit gear and trap bycatch of undersized target species, including release mortality.

d. *Finfish trawl fisheries.* Studies are needed on quantification and qualification of the bycatch in finfish trawl fisheries, such as the flounder and fly-net fisheries in the South Atlantic.

e. *Gillnet fisheries.* Studies are needed on quantification and qualification of the bycatch in coastal and shelf gillnet fisheries for sciaenids, scombrids, bluefish and other dogfish sharks of the South Atlantic and Gulf of Mexico (particularly interaction with sea turtles and marine mammals).

2. Reef Fish

Some species within the reef fish complex are showing signs of being overfished, either through directed efforts or because they are bycatch of other fisheries. The ecology of reef fish makes them vulnerable to overfishing, because they tend to concentrate over specific types of habitat with patchy distribution. This behavior pattern can make traditional fishery statistics misleading. Priority research areas include:

a. *Collection of basic biological data for species in commercially and recreationally important fisheries.* (1) *Age and growth of reef fish.* (a) Description of age and growth patterns, especially for red, vermilion, gray, and cubera snappers; gray triggerfish; gag; black grouper; spottail pinfish; hogfish; red porgy; and other less dominant forms in the management units for which data are lacking.

(b) Contributions to the development of annual age-length keys and description of age structures for exploited populations for all species in the complex addressed in the Reef Fish and Snapper/Grouper Management Plans for the Gulf and South Atlantic, respectively, prioritized by importance in the total catch.

(c) Design of sampling systems to provide a production-style aging program for the reef fish fishery. Effective dockside sampling programs are needed over a wide geographic

range, especially for groupers, to collect information on reproductive state, size, age, and sex.

(2) *Reproduction studies of reef fish.*

(a) Maturity schedules, fecundity, and sex ratios of commercially and recreationally important reef fish, especially gray triggerfish, gag, and red porgy in the Gulf and South Atlantic.

(b) Studies of all species to characterize the actual reproductive contribution of females by age.

(c) Identification and characterization of spawning aggregations by species, area, size group and season.

(d) Effects of fishing on changes of sex ratios for gag, red grouper, and scamp, and disruption of aggregations.

(e) Investigations of the reproductive biology of gag, red grouper and other grouper species.

(3) *Recruitment of reef fish.* (a) Source of recruitment in Gulf and South Atlantic waters, especially for snappers, groupers, and amberjacks.

(b) Annual estimation of the absolute or relative recruitment of juvenile gag, gray snapper, and lane snapper to estuarine habitats off the west coast of Florida and to similar estuarine nursery habitats along the South Atlantic Bight; development of an index of juvenile gag recruitment for the South Atlantic based on historical databases and/or field studies.

(c) The contribution of live-bottom habitat and habitat areas of particular concern (*Oculina* banks) off Fort Pierce, FL, to reef fish recruitment.

(4) *Stock structure of reef fish.* (a) Movement and migration patterns of commercially and recreationally valuable reef fish species, especially gag in the Gulf and South Atlantic and greater amberjack between the South Atlantic and Gulf.

(b) Biochemical/immunological and morphological/meristic techniques to allow field separation of lesser amberjack, almaco jack, and banded rudderfish from greater amberjack to facilitate accurate reporting of catch.

(c) Stock structure of wreckfish in the South Atlantic and of greater amberjack in the Gulf and South Atlantic.

b. *Population assessment of reef fish.*

(1) Effect of reproductive mode and sex change (protogynous hermaphroditism) on population size and characteristics, with reference to sizes of fish exploited in the fisheries and the significance to proper management.

(2) Source and quantification of natural and human-induced mortalities, including release mortality estimates for charter boats, headboats, and private recreational vessels, especially for red snapper and the grouper complex.

(3) Determination of the habitat and limiting factors for important reef fish resources in the Gulf and South Atlantic.

(4) Description of habitat and fish populations in the deep reef community and the prey distributions supporting the community.

(5) Development of statistically valid indices of abundance for important reef fish species in the South Atlantic and Gulf, especially red grouper, jewfish, and Nassau grouper.

(6) Assessment of tag performance on reef fish species, primarily snappers and groupers. Characteristics examined should include shedding rate, effects on growth and survival, and ultimately, the effects of these characteristics on estimations of vital population parameters.

(7) Stock assessments to establish the status of major recreational and commercial species. Innovative methods are needed for stock assessments of aggregate species, including the effect of fishing on genetic structure and the incorporation of sex change for protogynous hermaphrodites into stock assessment models.

(8) Assessment of Florida Bay recovery actions on reef fish recruitment and survival.

c. *Management of reef fish.* (1) Research in direct support of management, including catch-and-release mortalities, by gear and depth.

(2) Evaluation of the use of reef fish marine reserves as an alternative or supplement to current fishery management measures and practices, especially in the South Atlantic. Field studies should focus on the Experimental *Oculina* Reef Reserve and Florida Keys National Marine Sanctuary sites and contrast these with control open sites.

(3) Characterization and evaluation of biological impacts (e.g., changes in age or size structure of reef fish populations in response to management strategies).

(4) Evaluation of vessel log data for monitoring the fishery and for providing biological, economic, and social information for management; and methods for matching log data to Trip Information Program samples for indices of effort.

3. *Sharks*

The Secretarial Fishery Management Plan for Sharks of the Atlantic Ocean (FMP) identifies a number of research needs, including:

a. Characterization of the commercial and recreational fisheries from historical and current databases. Emphasis should be on species composition, bycatch, stock identification, size, sex ratios, and

catch-per-unit-effort by season, area, and gear type.

b. Collection and analysis of basic biological data on movements, habitats, growth rates, mortality rates, age structure, and reproduction parameters. These data are of particular importance for blacktip and sandbar sharks.

c. Development of species profiles and stock assessments for sharks taken in significant quantities by commercial, recreational, and bycatch fisheries. Assessments can be species-specific or for species groups, following those identified in the FMP.

d. Identification of nursery area and methods to protect young sharks.

e. Evaluation of present regulations and improvement of methods to determine landings.

4. *Coastal Migratory Pelagic Fisheries*

The commercial and recreational demand for migratory coastal pelagics has led to overfishing for certain species, including some stocks of king and Spanish mackerel. Additionally, some are transboundary with Mexico and other countries and may ultimately demand international management attention. Current high priorities include:

a. Recruitment indices for king and Spanish mackerel, cobia, dolphin, and bluefish, primarily from fishery-independent data sources.

b. Assessment and management models for coastal pelagic resources that are dominated by single year classes, such as Spanish mackerel, dolphin, and bluefish.

c. Fishery-independent methods of assessing stock abundance of king and Spanish mackerel.

d. Release mortality data for all coastal pelagic species.

e. Improved catch statistics for all species in Mexican waters, with special emphasis on king mackerel. This includes length-frequency and life history information.

f. Information on populations of coastal pelagics overwintering off the Gulf of Mexico and the South Atlantic States of North Carolina, South Carolina, Georgia, and Florida, especially concerning population size, age and movement patterns.

g. Development of a practical method for aging dolphin.

h. Basic biostatistics for cobia and dolphin to develop age-length keys and maturation schedules for stock assessments.

i. Impact of bag limits on total catch and landings of king and Spanish mackerel.

j. Demand and/or supply functions for private recreational and commercial

king mackerel fisheries, including baseline cost and return data. Emphasis should be on changes in marginal values of producer and consumer surplus, since the studies would be used in allocation frameworks where total values are not necessarily required.

k. Determination of the stock structure of king mackerel from South Atlantic and Gulf waters.

l. Sociological and anthropological surveys of coastal pelagic fisheries.

5. Highly Migratory Pelagic Species

Several fisheries exist in the Gulf and South Atlantic that target highly migratory species, such as tuna and billfish. Changes in the temporal and spatial components of fishing effort and fishing gear and tactics need to be characterized and the effects quantified. Priority areas include:

a. Characterization of specific longline fisheries, including targeted species, stock identification, catch-per-unit effort, and biological parameters (e.g., sex ratios and reproductive state) by gear type, area, and season.

b. Evaluation of vessel log data for monitoring the fisheries.

c. Dependence of vessels and persons engaged in pelagic longlining on other fisheries. Particular emphasis should be placed on the extent to which the capital and/or labor engages in other fisheries at particular times of the year and reasons for this switching behavior.

6. Groundfish and Estuarine Fishes

Substantial stocks of groundfish and estuarine species occur in the Gulf and South Atlantic. Most of the database for assessments comes from studies conducted by NMFS and state fishery management agencies. Because of the historic and current size of these fish stocks, their importance as predator and prey species, and their current or potential use as commercial and recreational fisheries, more information on their biology and life history is needed. General research needs are:

a. *Red drum*. (1) Size and age structure of the offshore adult stock in the Gulf.

(2) Life history parameters and stock structure for the Gulf and the South Atlantic: Migratory patterns, long-term changes in abundance, growth rates, and age structure. Specific research needs for Atlantic red drum are estimates of fecundity as a function of length and weight and improved coastwide coverage for age-length keys.

(3) Catch-and-release mortality rates from inshore and nearshore waters.

b. Life history and stock structure for weakfish, menhaden, spot, and croaker in the Gulf and the South Atlantic:

Migratory patterns, long-term changes in abundance, growth rates, and age structure and comparisons of the inshore and offshore components of recreational and commercial fisheries.

c. Improved catch-and-effort statistics from recreational and commercial fisheries, including development of age-length keys for size and age structure of the catch, to develop production models.

7. General

There are many other areas of research that need to be addressed for improved understanding and management of fishery resources. These include methods for data collection, management, analysis, and better conservation. Examples of high-priority research needs include:

a. Update existing economics information on the for-hire fisheries (charter boats, headboats and guide boats) A study covering the year-round activities of the for-hire industry from Texas to North Carolina.

b. Development of improved methods and procedures for transferring technology and educating constituency groups concerning fishery management and conservation programs. Of special importance are programs concerned with controlled access and introduction of conservation gear.

c. Compilation of baseline socio-demographic data for describing the social and cultural framework of managed fisheries.

d. Design and evaluation of innovative approaches to fishery management with special attention given to those approaches that control access to specific fisheries.

B. Priority in program emphasis will be placed upon funding projects that have the greatest probability of recovering, maintaining, improving, or developing fisheries; improving the understanding of factors affecting recruitment success; and generating increased values and recreational opportunities from fisheries. Projects will be evaluated as to the likelihood of achieving these benefits through short- and long-term research efforts, with consideration given to the magnitude of the eventual economic benefits that may be realized.

XIII. Evaluation Criteria

Successful applicants generally will be recommended within 210 days from the date of publication of this notice. The earliest start date of awards will be about 90 days after each project is selected and after all NMFS/applicant negotiations of cooperative activities have been completed (the earliest start

date of awards will be about 300 days after the date of publication of this notice). Applicants should consider this selection and processing time in developing requested start dates for their applications. Proposed projects will be evaluated and ranked as follows:

A. Cooperatively developed applications that propose activities of two or more qualified applicants to address important fishery conservation and management issues or problems identified in the Project Funding Priorities for this solicitation may be evaluated as a group by NMFS. If selected for funding, individual cooperative awards may be made to each individual applicant. Application procedures for this type of proposal are also included in the FY 1997 MARFIN Application Package.

B. Unless otherwise specified by statute, in reviewing applications for cooperative agreements, including those that include consultants and contracts, NOAA will make a determination regarding the following:

1. Is the involvement of the applicant necessary to the conduct of the project and the accomplishment of its goals and objectives?

2. Is the proposed allocation of the applicant's time reasonable and commensurate with the applicant's involvement in the project?

3. Are the proposed costs for the applicant's involvement in the project reasonable and commensurate with the benefits to be derived from the applicant's participation?

4. Is the project proposal substantial in character and design?

C. Applications meeting the above requirements will be forwarded for technical evaluation. Applicants submitting applications not meeting the above requirements will be notified. Evaluations normally will involve experts from non-NOAA as well as NOAA organizations. Comments submitted to NMFS by each evaluator will be taken into consideration in the ranking of projects. NMFS will provide point scores on proposals, based on the following evaluation criteria:

1. Does the proposal have a clearly stated goal(s) with associated objectives that meet the needs outlined in the Project Narrative? (30 points)

2. Does the proposal clearly identify and describe, in the Project Outline and Statement of Work, scientifically valid methodologies and analytical procedures that will adequately address project goals and objectives? (30 points)

3. Do the principal investigators provide a scientifically realistic timetable to enable full accomplishment

of all aspects of the Statements of Work? (20 points)

4. Do the principal investigators define how they will maintain stewardship of the project performance, finances, cooperative relationships, and reporting requirements for the proposal? (10 points)

5. Are the proposed costs appropriate for the scope of work proposed? (10 points)

XIV. Selection Procedures

All applications will be ranked by a NMFS scientific panel into two groups: Recommended, and Not Recommended. Proposals ranked as Not Recommended will not be given further consideration for selection and funding. Recommended rankings will be presented to a panel of non-NOAA fishery experts who will individually consider the significance of the problem addressed in each project proposal, the technical evaluation, and need for funding. These panel members will provide individual recommendations to NMFS on each proposal classified as Recommended.

The non-NOAA panel members' individual comments, recommendations and evaluations, and recommendations of the NMFS scientific panel and NMFS Southeast Program Officer will be considered by the Regional Administrator, Southeast Region, NMFS (Regional Administrator). The Regional Administrator, in consultation with the Assistant Administrator for Fisheries, will: (a) Determine which projects do not substantially duplicate other projects that are currently funded by NOAA or are approved for funding by other Federal offices, (b) select the projects to be funded, (c) determine the amount of funds available for each project, and (d) determine which components of the selected projects shall be funded. The exact amount of funds awarded, the final scope of activities, the project duration, and specific NMFS cooperative involvement with the activities of each project will be determined in pre-award negotiations between the applicant, the NOAA Grants Office, and the NMFS Program Staff. Projects must not be initiated by recipients until a signed award is received from the NOAA Grants Office.

NMFS will make project applications available for review as follows:

A. Consultation with members of the fishing industry, management agencies, environmental organizations, and academic institutions: NMFS shall, at its discretion, request comments from members of the fishing and associated industries, groups, organizations, and institutions who have knowledge in the

subject matter of a project or who would be affected by a project.

B. Consultation with Government agencies: Applications will be reviewed by the NMFS Southeast Region Program Office in consultation with the NMFS Southeast Fisheries Science, including appropriate operations and laboratory personnel, the NOAA Grants Officer and, as appropriate, DOC bureaus and other Federal agencies.

XV. Other Requirements

A. Federal policies and procedures. Recipients and subrecipients are subject to all Federal laws and Federal and DOC policies, regulations, and procedures applicable to Federal financial assistance awards. Women and minority individuals and groups are encouraged to submit applications under this program.

B. Past performance. Any first-time applicant for Federal grant funds is subject to a pre-award accounting survey prior to execution of the award. Unsatisfactory performance under prior Federal awards may result in an application not being considered for funding.

C. Pre-award activities. If applicants incur any costs prior to an award being made, they do so solely at their own risk of not being reimbursed by the Government. Notwithstanding any verbal or written assurance that they may have received, there is no obligation on the part of DOC to cover pre-award costs.

D. No obligation of future funding. If an application is selected for funding, DOC has no obligation to provide any additional future funding in connection with the award. Renewal of an award to increase funding or extend the period of performance is at the total discretion of DOC.

E. Delinquent Federal debts. No award of Federal funds shall be made to an applicant or to its subrecipients who have any outstanding delinquent Federal debt or fine until either:

1. The delinquent account is paid in full;
2. A negotiated repayment schedule is established and at least one payment is received; or
3. Other arrangements satisfactory to DOC are made.

F. Name check review. All non-profit and for-profit applicants are subject to a name check review process. Name checks are intended to reveal if any key individuals associated with the applicant have been convicted of, or are presently facing, criminal charges such as fraud, theft, perjury, or other matters that significantly reflect on the applicant's management honesty or

financial integrity. Potential non-profit and for-profit recipients may also be subject to reviews of Dun and Bradstreet data or other similar credit checks.

G. Primary applicant certifications.

All primary applicants must submit a completed Form CD-511, "Certifications Regarding Debarment, Suspension and Other Responsibility Matters; Drug-Free Workplace Requirements and Lobbying," and the following explanations are hereby provided:

1. *Nonprocurement debarment and suspension.* Prospective participants (as defined at 15 CFR 26.105) are subject to 15 CFR part 26, "Nonprocurement Debarment and Suspension" and the related section of the certification form prescribed above applies;

2. *Drug-free workplace.* Grantees (as defined at 15 CFR part 26, Section 605) are subject to 15 CFR part 26, Subpart F, "Government-wide Requirements for Drug-Free Workplace (Grants)" and the related section of the certification form prescribed above applies;

3. *Anti-lobbying.* Persons (as defined at 15 CFR Part 28, Section 105) are subject to the lobbying provisions of 31 U.S.C. 1352, "Limitation on use of appropriated funds to influence certain Federal contracting and financial transactions," and the lobbying section of the certification form prescribed above applies to applications/bids for grants, cooperative agreements, contracts for more than \$100,000, loans and loan guarantees for more than \$150,000, or the single family maximum mortgage limit for affected programs, whichever is greater; and

4. *Anti-lobbying disclosures.* Any applicant who has paid or will pay for lobbying using any funds must submit a Form SL-LLL, "Disclosure of Lobbying Activities," as required under 15 CFR part 28, appendix B.

H. Lower tier certifications. Recipients shall require applicants/bidders for subgrants, contracts, subcontracts, or other lower-tier covered transactions at any tier under the award to submit, if applicable, a completed Form CD-512, "Certifications Regarding Debarment, Suspension, Ineligibility and Voluntary Exclusion-Lower Tier Covered Transactions and Lobbying" and disclosure form SF-LLL, "Disclosure of Lobbying Activities." Form CD-512 is intended for the use of recipients and should not be transmitted to DOC. A form SF-LLL submitted by any tier recipient or subrecipient should be submitted to DOC in accordance with the instructions contained in the award document.

I. False statements. A false statement on the application is grounds for denial

or termination of funds and grounds for possible punishment by a fine or imprisonment as provided in 18 U.S.C. 1001.

J. Intergovernmental review.

Applications under this program are subject to the provisions of E.O. 12372, "Intergovernmental Review of Federal Programs."

K. Requirement to buy American-made equipment and products.

Applicants are hereby notified that they are encouraged, to the extent feasible, to purchase American-made equipment and products with funding provided under this program.

Classification

Prior notice and an opportunity for public comments are not required by the Administrative Procedure Act or any other law for this notice concerning grants, benefits, and contracts.

Therefore, a regulatory flexibility analysis is not required for purposes of the Regulatory Flexibility Act.

This action has been determined to be not significant for purposes of E.O. 12866.

Cooperative agreements awarded pursuant to pertinent statutes shall be in accordance with the Fisheries Research Plan (comprehensive program of fisheries research) in effect on the date of the award.

Federal participation under the MARFIN Program may include the assignment of DOC scientific personnel and equipment.

Reasonable, negotiated financial compensation will be provided under awards for the work of eligible grantee workers.

Information-collection requirements contained in this notice have been approved by the Office of Management and Budget (OMB Control No. 0648-0175) under the provisions of the Paperwork Reduction Act. Notwithstanding any other provision of law, no person is required to respond to, nor shall any person be subject to a penalty for failure to comply with, a collection of information subject to the requirements of the Paperwork Reduction Act unless that collection of information displays a currently valid OMB Control Number. Public reporting burden for agency-specific collection-of-information elements, exclusive of requirements specified under applicable OMB circulars, is estimated to average 4 hours per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments regarding this reporting burden estimate

or any other aspect of this collection of information, including suggestions for reducing the burden, to NMFS (see ADDRESSES).

Authority: 15 U.S.C. 713c-3(d)

Dated: January 22, 1997.

Nancy Foster,

Deputy Assistant Administrator for Fisheries, National Marine Fisheries Service.

BILLING CODE 3510-22-F

National Weather Service Proposed Automation and Closure Certifications

SUMMARY: On January 7, 1997 (62 FR 981), the National Weather Service (NWS) published a notice and opportunity for public comment for 43 proposed automation and closure certifications. Since that time, it has been determined that at six of these sites, NWS is not ready to proceed with the proposed certifications. Accordingly, this notice is to advise that these six proposed automation and closure certifications are being withdrawn.

ADDRESSES: Inquiries regarding these withdrawals should be directed to Tom Beaver, Room 09356, 1325 East-West Highway, Silver Spring, MD 20910.

FOR FURTHER INFORMATION CONTACT: Julie Scanlon at 301-713-1698 X151.

SUPPLEMENTARY INFORMATION: In compliance with Public Law 102-567, the Secretary of Commerce must certify that automating, consolidating, relocating, and closing any field office will not result in any degradation of service to the affected areas of responsibility. Further, the Secretary must publish the proposed certification in the Federal Register for a 60-day public comment period. This certification authority has been delegated to the Under Secretary for Oceans and Atmosphere.

On January 7, 1997, the NWS published 43 proposed automation and closure certifications (62 FR 981). Since that time, it has been determined that at six of these sites, NWS is not ready to proceed with the proposed certifications. Accordingly, to avoid any confusion and ensure that the public does not waste time submitting comments unnecessarily, the NWS is withdrawing the following six proposed automation and closure certifications:

- (1) The residual Boston Weather Service Office (WSO);
- (2) Bridgeport, Connecticut WSO;
- (3) The residual Portland, Maine WSO;
- (4) Providence, Rhode Island WSO;
- (5) Hartford, Connecticut WSO; and
- (6) Worcester, Massachusetts WSO.

The NWS will propose these certifications for a 60-day public comment period at a later date.

Dated: January 23, 1997.

Elbert W. Friday, Jr.,

Assistant Administrator for Weather Services.
