

once by oral gavage with strain AMMD. Normal weight gains were observed in all test animals during the observation period. No lesions were observed in any test animal. A waiver for genotoxicity, reproductive and developmental toxicity, subchronic toxicity, and chronic toxicity is requested. This testing is not generally required for microbial pesticides and the lack of toxicity along with the lack of exposure does not warrant such testing.

D. Aggregate Exposure

1. *Dietary exposure.* The species *Burkholderia (pseudomonas) cepacia* is a common inhabitant of soils, plant surfaces, and fresh water. Good Bugs, Inc. believes that use of this microbial pesticide as outlined is not expected to increase dietary exposure via food or water consumption. Transfer of the microbial pesticide to drinking water is unlikely due to the low survivability of the organism in the environment. Any low levels of oral exposure that may occur would not be harmful due to the lack of mammalian toxicity.

2. *Non-dietary exposure of Burkholderia (pseudomonas) cepacia strain AMMD.* Good Bugs, Inc. believes that treatment of turf as outlined in the experimental plan will be on limited acreage and, due to the low survivability of the organism, exposure will be minimal.

3. *Worker exposure via dermal exposure or inhalation.* Good Bugs, Inc. believes that worker exposure will be minimized by the label requirements of long-sleeved shirt, long pants, gloves, and the wearing of a respirator.

E. Cumulative Exposure

Biological control agents of this type generally work by outcompeting the disease organisms, therefore, not having a toxic mode of action that can be shared. However, other exposure can occur since another strain of *Burkholderia (pseudomonas) cepacia* is already registered with the Agency. Good Bugs, Inc. believes that since the Agency has registered this other strain and granted an exemption from tolerance, this added exposure does not present a hazard to human health in and of itself and thus does not add to cumulative exposure.

F. Safety Determination

1. Good Bugs, Inc. believes the safety of the U.S. population and that of infants and children will not be adversely affected by the use of *Burkholderia (pseudomonas) cepacia* strain AMMD. Strain AMMD was originally isolated from the rhizosphere of a pea and strains of *Burkholderia*

(*pseudomonas*) *cepacia* are widely distributed in nature and are readily isolated from soil, fresh water, and plant roots and leaves. Strain AMMD does not survive well in the phyllosphere and cannot be detected after 4 days.

2. Some strains of *Burkholderia (pseudomonas) cepacia* are infectious to individuals with cystic fibrosis or compromised immune systems. Some strains of *Burkholderia (pseudomonas) cepacia* can also cause skin infection of feet known as swamp rot. In addition, this bacterium has been isolated from nosocomial sources such as contaminated indwelling medical devices and antiseptic solutions. Good Bugs, Inc. believes that because of the importance of these clinical strains, it is critical that *Burkholderia (pseudomonas) cepacia* strain AMMD is distinguished from other strains. Two recent studies have determined that plant associated strains are distinct from clinical isolates. Molecular phylogenetic studies based on deoxyribonucleic acid (DNA)-DNA and DNA-ribosomal ribonucleic acid (RNA) hybridization of 150 isolates have identified 4 genomovars of *Burkholderia (pseudomonas) cepacia*. All cystic fibrosis isolates cluster in genomovar III; while environmental isolates (including phytopathogenic type strain) belong to genomovar I.

G. Existing Tolerances

1. A tolerance exemption for *Burkholderia (pseudomonas) cepacia*, Wisconsin isolate/strain M36 (a.k.a. Blue Circle Inoculant), was granted in 1992 by EPA.

2. It is not known if any international tolerance exemptions exist.

The text of the Revised Policy Statement follows:

Revised Policy

Any federal banking regulatory agency that proposes to take a formal enforcement action against any federally regulated financial institution or any institution-affiliated party shall notify in writing the other federal banking regulatory agencies and, where appropriate, a state supervisory authority prior to or at the initiation of such action. For the purposes of interagency notification, an enforcement action is initiated when the appropriate responsible agency official, or group of officials, determines that formal enforcement action should be taken. All notifications to other federal banking regulatory agencies shall be made to a designated contact person or persons as specified by each agency.

When there is an affiliation or other inter-institutional relationship, any federal banking regulatory agency that proposes to take an informal enforcement action against any federally regulated financial institution or institution-affiliated party shall notify in writing the other appropriate federal banking regulatory agencies and, where appropriate, a state supervisory authority prior to or at the initiation of such action.

In the event that complementary action (e.g., action involving a bank and its parent holding company, or a U.S. branch or agency and a foreign bank) is considered appropriate by two or more federal banking regulatory agencies, the preparation, processing, presentation, service, and follow-up of the

enforcement action shall be coordinated by the agencies directly involved.

The purpose of these procedures is to encourage notification to appropriate federal and state bank regulatory authorities at the earliest practicable date. These procedures are not intended to preclude or forestall any federal banking regulatory agency from initiating an enforcement action alone and on a timely basis against an institution or institution-affiliated party for which it has primary supervisory jurisdiction.

Dated: February 13, 1997.

Executive Secretary/Federal Financial Institutions Examination Council.
