RIN 2060–AD93

National Emission Standards for Hazardous Air Pollutants for Source Categories: Gasoline Distribution (Stage I)

AGENCY: Environmental Protection Agency (EPA).

ACTION: Direct final rule: amendments.

SUMMARY: The EPA is promulgating, as a direct final rule, amendments to the “National Emission Standards for Hazardous Air Pollutants for Source Categories: Gasoline Distribution (Stage I)” (the “Gasoline Distribution NESHAP”). These amendments implement a proposed settlement agreement with the American Petroleum Institute noticed for comment on November 15, 1996 regarding improvements in the screening equations for determining applicability of the Gasoline Distribution NESHAP. This action also addresses some clarifications to the NESHAP that were requested by other parties. These clarifications do not change the level of the standards or the intent of the NESHAP promulgated in 1994. In the proposed rules section of this Federal Register, the EPA is proposing a rule that is identical to this direct final rule. If significant, adverse comments are received on the proposed rule by the due date (see DATES section below), this direct final rule will be withdrawn and all such comments will be addressed in a subsequent final rule based on the proposed rule. If no significant, adverse comments are timely received on the proposed rule, then the direct final rule remains effective upon publication, and no further action is contemplated on the parallel proposal published today.

DATES: This rule is effective April 14, 1997, unless adverse comments are received by March 31, 1997. If adverse comments are received, the EPA will publish timely notice in the Federal Register withdrawing the direct final rule.

Judicial Review: Under section 307(b)(1) of the Clean Air Act (Act), judicial review of NESHAP is available only by filing a petition for review in the U.S. Court of Appeals for the District of Columbia Circuit within 60 days of today’s publication of these direct final amendments. Under section 307(b)(2) of the Act, the requirements that are the subject of today’s notice may not be challenged later in civil or criminal proceedings brought by the EPA to enforce these requirements.

ADDRESSES: Docket. Docket No. A–92–38, category VIII 1997 Amendments, containing information considered by the EPA in developing the final amendments, is available for public inspection and copying between 8:00 a.m. and 5:30 p.m., Monday through Friday, except for Federal holidays, at the EPA’s Air and Radiation Docket and Information Center, room M1500, U.S. Environmental Protection Agency, 401 M Street, S.W., Washington, DC 20460; telephone (202) 260–7548. A reasonable fee may be charged for copying. This docket also contains information considered by the EPA in proposing and promulgating the original Gasoline Distribution NESHAP.

FOR FURTHER INFORMATION CONTACT: For information concerning applicability and rule determinations, contact the appropriate EPA regional or Office of Enforcement and Compliance Assurance (OECA) representative:

Region I: Greg Roscoe, Air Programs Enforcement Office Chief, U.S. EPA, Region I, JFK Federal Building (SEA), Boston, MA 02203, Telephone number (617) 565–3221

Region II: Kenneth Eng, Air Compliance Branch Chief, U.S. EPA, Region II, 290 Broadway, New York, NY 10007, Telephone number (212) 637–4080, Fax number (212) 637–3998

Region IV: Lee Page, U.S. EPA, Region IV (AR–4), 100 Alabama Street, SW, Atlanta, GA 30303–3104, Telephone number (404) 562–9131, Fax number (404) 562–9095

compounds, nitrogen oxides, and carbon monoxide. The inventory covers point, area, non-road mobile, on-road mobile, and biogenic sources.

(c) The Knox and Lincoln Counties nonattainment area is classified as moderate. The Lewiston and Auburn nonattainment area is classified as moderate and consists of Androscoggin and Kennebec Counties. The Portland nonattainment area is classified as moderate and consists of Cumberland, Sagadahoc and York Counties. The Hancock and Waldo Counties nonattainment area is classified as attainment.

(d) The Governor’s designee for the State of Maine submitted 1993 periodic year emission inventories for the Hancock and Waldo Counties area on May 13, 1996 as a revision to the State Implementation Plan (SIP). The 1993 periodic year emission inventory requirement of section 182(3)(A) of the Clean Air Act, as amended in 1990, has been satisfied for the Hancock and Waldo counties area.

Section 2. Definition of Bulk Gasoline Terminal

A. Improvement of Emission Estimation Screening Equations

The EPA also issued a guidance memorandum (available on the TTN and in the docket). "Guidance Concerning Notifications Required by December 16, 1996 Under Gasoline Distribution NESHAP (40 CFR Part 63, Subpart R)." Bruce Jordan to EPA Regional Offices, November 21, 1996, clarifying the notification requirements for major sources that plan to be an area source by the first substantive compliance date of the rule, December 15, 1997.

As a result of the settlement agreement, the EPA has made modifications to the screening equations in the promulgated rule to make them more useful to facilities attempting to demonstrate that they are area sources, and therefore not subject to the control requirements of the NESHAP. These modifications are discussed in detail in Section II.A of this notice.

In response to requests by other parties, the EPA has also made several clarifications to the final NESHAP, as discussed in Section II.B of this notice, that are not a direct result of the settlement agreement. First, the language of the rule has been revised to clarify that the requirement for an excess emissions report applies to all affected facilities whether or not they have a continuous monitoring system. Second, the definition for bulk gasoline terminal has been inserted directly into the rule instead of cross-referencing the definition in the new source performance standards for bulk terminals. Third, the term "federally enforceable" has been replaced with the term "limitations on potential to emit" (PTE) to accommodate any eventual outcome of the EPA's current consideration of PTE issues. Fourth, the requirement that compliance be demonstrated upon the EPA's request has been clarified to include the calculations and assumptions used for the applicability screening equations. Fifth, the EPA has clarified the intended meaning of the term "refined or oxygenated gasoline containing methyl tert-butyl ether (MTBE)" as used in defining the parameter "CF" for the applicability screening equations. Sixth, the EPA has clarified that there is no requirement to submit emissions inventory documentation that a facility is not a major source to the Administrator for approval. These emissions inventory documents need only be maintained at the facility and provided upon request.

SUPPLEMENTARY INFORMATION: An electronic version of these final amendments and the proposal preamble is available on the Internet (access: http://tttnwftp.ttn.epa.gov).

The information presented in this preamble is organized as follows:

I. Background and Summary of Action

II. Summary of and Rationale for Rule Changes
II. Summary of and Rationale for Rule Changes

A. Improvement of Emission Estimation Screening Equations

The final Gasoline Distribution NESHAP provides two options for facilities to obtain area source status for this rule and thus not be subject to the control requirements of this major source standard. These options are the use of an emission screening equation or performance of an HAP emissions inventory for the facility. The emissions inventory provision is currently implemented outside the provisions of this rule and approved by the permitting authority. The screening equation option allows facilities to use a specified equation in the 1994 final rule to determine their area source status under this rule, as long as they are in compliance with the equation parameters and the recordkeeping and reporting requirements in the rule. These screening equations were developed to provide facilities with a way of determining whether they are a major source without obtaining an area source determination outside the provisions of this rule.

The 1994 final rule contains two screening equations in §63.420 (one for use by bulk gasoline terminals and one for pipeline breakout stations) to make an estimation of the total HAP emissions from the major gasoline operations at the facility. The equations identify facilities that have the potential to emit (PTE) less than 10 tons per year (tpy) of a single HAP or less than 25 tpy of a combination of HAP, which are the criteria for area sources. Since the equations in the final rule included only gasoline storage and transfer operations, the rule did not allow the equations to be used by facilities that have HAP emissions from other products (such as distillates) or that emit HAP from gasoline operations not accounted for in the equations.

The API, as part of the settlement, requested that the EPA incorporate additional modifications to those changes made to the screening equations before the 1994 promulgation in order to make the equations more useful to facilities attempting to determine whether they are area sources within the structure of the rule. The API said that the “other” HAP emissions not considered in the equation are routinely very low, and virtually every bulk gasoline terminal has such HAP emission sources. (The API’s comments were directed toward bulk terminals, but they can be applied to also cover pipeline breakout stations.) As a result, they felt that the equation, as promulgated, had very little utility as a means of screening for rule applicability. The EPA reviewed API’s supporting information and agreed that the utility of the screening equations needed to be improved.

The EPA and API investigated the development of a factor or expression to account for “other” HAP emission sources at marketing facilities. These other HAP sources consist of activities not already accounted for in the screening equations (i.e., sources other than gasoline storage vessels, gasoline loading racks and cargo tanks, and gasoline vapor leaks from equipment components). HAP emission sources not arising directly from the storage and handling of gasoline occur routinely in this source category, and include distillate fuel, additive tanks, wastewater storage/handling tanks, cleaning/degassing of tanks, subsurface recovery (and other remedial actions), service station tank bottoms storage, sample handling/laboratory activities, and pipeline transmix (interface) storage (i.e., transmix with no gasoline content). Gasoline mixtures in storage tanks, such as transmix containing gasoline, are considered to be “gasoline” in the emission screening equations and also in the standards.

The EPA agreed that the utility of the equations would be further enhanced by including a factor to account for these other HAP emission sources (OE). However, the EPA believed that it was necessary to limit the percentage of total facility HAP emissions that a facility could claim from other emission sources because such sources are most likely not currently permitted or subject to current enforceable limits on emissions, are part of another source category (“Organic Liquids Distribution (Non-Gasoline)”) that has yet to be studied, or are collocated at other facilities ( refineries, chemical plants, military bases) and not the primary source of emissions. The API surveyed some of its member companies and concluded that HAP emissions from other sources at gasoline bulk terminals are small, ranging from 0.1 to 3.5 tons/yr. Based on this information, API suggested limiting the OE value to 5 percent of total facility HAP emissions. The EPA agreed with API that limiting the value of OE to 5 percent is appropriate to represent typical facilities in this source category. If a facility finds that OE contributes more than 5 percent of its total HAP emissions, then the facility fits into a combination of source categories and must use the emissions inventory approach to determine area source determination outside the provisions of this rule.

Since the screening equations were originally and continue to be normalized, or set equal to “1,” to determine area source status, OE should thus be divided by either 10 or 25 (the tpy cutoffs defining a major source) to be incorporated into the equation. The API suggested, and the EPA agreed, that OE (in tpy) should be normalized by dividing by 25 (or multiplying by 0.04), since the OE factor will be calculated from a variety of emission sources and these emissions will most likely be composed of a combination of HAP, rather than a single HAP. Additionally, since the allowable value is small (5 percent of total facility HAP emissions), the resulting environmental effect from adding this parameter to an equation designed for screening purposes is expected to be small.

B. Clariﬁcations

1. Excess Emissions Reports

The EPA was requested after promulgation to clarify whether the owner or operator of a pipeline breakout station needs to submit the excess emissions report required under §63.428(h), even though the facility is not required to install a continuous monitoring system (CMS) in conjunction with the operation of a control device. The commenter also asked whether the information to be included in such a report would be limited to that indicated in §63.428(h)(4) (late repairs of leaking equipment), and whether the required reporting frequency would be semiannual or quarterly.

The final rule promulgated in 1994, in §63.428(h)(1) through (4), specifies information that must be included in excess emissions reports submitted by bulk gasoline terminals and pipeline breakout stations. In summary, there are four elements of information required to be included in the excess emissions report as excess emissions. They are:

(1) Exceedances or failures to maintain the monitored operating parameter value of the vapor processor,
(2) Failures to take steps to assure that reloadings of nonvapor-tight gasoline cargo tanks will not occur,
(3) Reloadings of nonvapor-tight gasoline cargo tanks before vapor tightness documentation on those tanks is obtained by the facility, and
(4) Certain information on equipment leaks for which no repair was attempted within 5 days or completed within 15 days after detection. The section also states that the excess emissions report is to be filed as required under §63.10(e)(3) of CFR part 63, subpart A (General Provisions). Section
Under § 63.428 are primarily intended to § 63.10. Items (1) through (3) required stations that elect to install a control would also apply to pipeline breakout the cargo tanks. However, item (1) tightness (test and repair) program for different elements of information may have arisen due to the different characteristics of bulk terminals versus the source required to install a CMS. Also, each owner or operator of an affected summary report'' shall be submitted by system performance report and/or a emissions and continuous monitoring 63.10(e)(3)(i) specifies that an ''excess emissions report applies to all affected sources that are to be used for quarterly if excess emissions are more than December 15, 1997 control equipment compliance date for all MACT source categories, including the Gasoline Distribution NESHAP. Accordingly, for the critical applicability date for the Gasoline Distribution NESHAP, the EPA wishes to clarify that State-enforceable limits that are enforceable as a practical matter will be treated by the EPA as acceptable limitations on potential to emit. If, as a result of the PTE rulemaking, a decision is made that yields a requirement that PTE limitations must be federally enforceable for some or all sources, an appropriate transition period will be given to allow time for such sources to obtain federally enforceable limits.

3. Potential To Emit and Federal Enforcement

The EPA is also replacing the term “federally enforceable” as a condition for some of the emission screening equation parameters with the term “limitations on potential to emit” (PTE). The purpose of this change is not to make any substantive decision regarding the PTE issues that are currently under review by the Agency, but rather to recognize that those issues exist and to minimize any confusion regarding how those issues should be dealt with in the interim as they relate to the Gasoline Distribution NESHAP. The EPA believes that using the term “limitations on potential to emit” will eliminate the need for subsequent amendments to this rule as it relates to PTE issues. PTE is defined in § 63.2 Definitions, of the General Provisions of subpart A of subpart A and the term “limitations on potential to emit” has been added to the list of definitions in § 63.21. As discussed in the February 29, 1996 (61 FR 7718) Gasoline Distribution final rule amendments, the EPA is considering a number of options regarding the requirements on potential to emit limits, in response to the National Mining court decision. In addition, the EPA created a 2-year transition period (January 1995 until January 1997) during which the EPA will recognize limitations on PTE, so long as those limits are enforceable as a practical matter. In a policy memorandum (available on the TTN and in the docket), “Extension of January 25, Potential to Emit Transition Policy,” John S. Seitz and Robert I. Van Heuvelen to EPA Regional Offices, August 27, 1996, the EPA has extended this transition period for 18 months until July 31, 1998, which is later than the December 15, 1997 control equipment compliance date for all MACT source categories, including the Gasoline Distribution NESHAP. Accordingly, for the critical applicability date for the Gasoline Distribution NESHAP, the EPA wishes to clarify that State-enforceable limits that are enforceable as a practical matter will be treated by the EPA as acceptable limitations on potential to emit. If, as a result of the PTE rulemaking, a decision is made that yields a requirement that PTE limitations must be federally enforceable for some or all sources, an appropriate transition period will be given to allow time for such sources to obtain federally enforceable limits.

4. Demonstration of Compliance

Section § 63.420(f) of the final rule requires an owner or operator to demonstrate compliance with any provision of the rule to which the facility is subject, upon request by the EPA. The rule has been amended to clarify that this demonstration also needs to be made, upon request, for the parameters and assumptions used in performing calculations for the applicability screening equations. This change does not impose any new requirements, but has been made to eliminate any chance for ambiguity in interpreting this rule provision.

1 A affected sources must either be in full compliance with the major source emission standards in the Gasoline Distribution NESHAP or have been determined to be an area source no later than December 15, 1997. Additionally, each affected source was required to submit an initial notification by December 16, 1996 if it is (1) a major source, (2) a major source on December 16, 1996 and plans to be an area source by December 15, 1997, or (3) using one of the emission screening equations in § 63.420. These latter major sources (no. 3) must include in the notification a non-binding description of and a schedule for the actions that are planned to achieve area source status (§ 63.428(a)).
5. Oxygenated Gasoline

The emission screening equations in § 63.420 of the final rule use the parameter “CF” to account for the higher HAP content of the modified gasolines that are marketed to comply with Federal and State ozone and carbon monoxide control programs. These reformulated and oxygenated gasolines, in addition to other formula changes, contain significant levels of oxygenate, frequently the HAP methyl tert-butyl ether (MTBE), which supplies oxygen in the combustion process to reduce the amount of carbon monoxide emitted in tailpipe exhaust. The higher CF factor of 1.0 for these gasolines that use MTBE as an oxygenate, versus a CF factor of 0.161 for “normal” gasolines, reflects the fact that the overall HAP content of reformulated and oxygenated gasolines using MTBE as an oxygenate is significantly higher than the HAP content of normal gasoline.

The definitions given in § 63.421 for reformulated and oxygenated gasolines cross-reference existing definitions already codified at 40 CFR 80.2(ee) and 40 CFR 80.2(rr), respectively. The CFR defines oxygenated gasoline as “gasoline which contains a measurable amount of oxygenate.” However, this definition may not adequately distinguish oxygenated gasoline from normal gasoline. The reason is that, in addition to its use as an oxygenate, MTBE is often used in generally smaller concentrations to boost the octane rating of normal gasoline. Although the MTBE present in these gasolines is generally minimal, the EPA was concerned that even these small amounts could be construed as qualifying a gasoline as “oxygenated.” The EPA’s intent was not to specify the higher CF factor for normal gasolines with minor amounts of MTBE, but only for those gasolines with a sufficient quantity of MTBE to create a substantially higher HAP content than found in normal gasolines.

Section 211(k) of the Act specifies a minimum oxygen content for reformulated gasolines of 2.0 percent by weight, while EPA guidelines issued in response to section 211(m) recommend a minimum oxygen content of 2.7 percent by weight for oxygenated gasolines. The EPA’s final regulations to implement the reformulated gasoline program, promulgated on February 16, 1994 (59 FR 7716), specify a minimum allowable per-gallon oxygen content for reformulated gasoline of 1.5 weight percent when the standards are being achieved on an average basis. In order to include all of the allowable modified fuels in the CF factor definition, the same oxygen content of 1.5 weight percent is being used in these rule amendments as the cutoff defining these high-HAP gasolines. Since reformulated and oxygenated gasolines are frequently oxygenated using MTBE, this minimum oxygen content was converted to MTBE volume percent. Based on the molecular composition and density of MTBE and a typical density for gasoline, the value of 1.5 percent oxygen by weight was calculated to be equivalent to 7.6 percent MTBE by volume (available in the docket). Since this value is not inconsistent with the existing definitions for reformulated and oxygenated gasolines, but only specifies a minimum gasoline MTBE content, the promulgated definitions for “reformulated gasoline” and “oxygenated gasoline” are being retained in the rule. The two definitions for the term CF have been amended to incorporate this minimum MTBE content.

The EPA emphasizes that this change merely clarifies the Agency’s intent in specifying a higher CF value for reformulated and oxygenated gasolines that use MTBE as an oxygenate. The higher CF factor of 1.0 is intended to be used in the screening equations by those facilities that handle gasoline blended with significant amounts (7.6 volume percent or more) of MTBE. The 1.0 factor should not be used by facilities that handle only gasoline having trace amounts of MTBE. The change has no effect on the control programs that require the marketing of these fuels, nor does it change or add any reporting, recordkeeping, or testing requirements for affected facilities.

6. Reporting Emissions Inventories

The owner or operator of a stationary source in this category is allowed to use methods other than the emission screening equations (typically an emissions inventory) to establish that the facility is not a major source, provided that he or she “has documented and recorded to the Administrator’s satisfaction that the facility is not a major source, or is not [collocated with] a major source” [40 CFR 63.420(a)(2) and (b)(2)]. Some confusion has been expressed as to whether these documents must in all cases be submitted to the Administrator for approval prior to December 16, 1996 as an alternative to the results of the screening equation or whether it is appropriate to maintain these records at the facility. This action clarifies that there is no requirement to submit these emissions inventory type documents for approval prior to or after December 16, 1996, and that these documents may be maintained at the facility. However, the owner or operator is required (§ 63.420(f), “upon request,” to demonstrate compliance with all of the applicability provisions, including this determination that the facility is not a major source.

III. Administrative Requirements

A. Paperwork Reduction Act

The information collection requirements of the previously promulgated NESHAP were submitted to and approved by the Office of Management and Budget (OMB). A copy of this Information Collection Request (ICR) document (OMB control number 2060–0325) may be obtained from Ms. Sandy Farmer, Information Policy Branch, Environmental Protection Agency, 401 M Street, S.W. (mail code 2136), Washington, DC 20460, or by calling (202) 260–2740. Today’s amendments to the Gasoline Distribution NESHAP have no impact on the information collection burden estimates made previously. No additional certifications or filings were promulgated. Therefore, the ICR has not been revised.

B. Executive Order 12866

Under Executive Order 12866 (58 FR 51735, October 4, 1993), the EPA must determine whether a regulation is “significant” and therefore subject to OMB review and the requirements of the Executive Order. The criteria set forth in section 1 of the Order for determining whether a regulation is a significant rule are as follows:

1. Is likely to have an annual effect on the economy of $100 million or more, or adversely and materially affect a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or State, local, or tribal government communities;

2. Is likely to create a serious inconsistency or otherwise interfere with an action taken or planned by another agency;

3. Is likely to materially alter the budgetary impact of entitlements, grants, user fees, or loan programs or the rights and obligations of recipients thereof; or

4. Is likely to raise novel or policy issues arising out of legal mandates, the President’s priorities, or the principles set forth in the Executive Order.

The Gasoline Distribution NESHAP promulgated on December 14, 1994 was treated as a “significant regulatory action” within the meaning of the Executive Order. An estimate of the cost and benefits of the NESHAP was prepared at proposal as part of the background information document.
(BID). This estimate was updated in the
BID for the final rule to reflect
comments and changes made in
developing the final rule. The
amendments issued today have no
impact on the estimates in the final BID.
Pursuant to the terms of Executive
Order 12866, it has been determined
that this action is a “non-significant
regulatory action” within the meaning
of the Executive Order. As such, this
action was not submitted to OMB for
review.

C. Regulatory Flexibility
The EPA has determined that it is not
necessary to prepare a regulatory
flexibility analysis in connection with
this final rule. When the Agency
promulgated the Gasoline Distribution
NESHAP, it analyzed the potential
impacts on small businesses, discussed
the results of this analysis in the
Federal Register, and concluded that
the promulgated regulation would not
result in financial impacts that
significantly or differently affect
small companies. Since today’s
action imposes no additional impacts,
the EPA has determined that these
amendments will not have a significant
economic impact on a substantial
number of small entities.

D. Unfunded Mandates Reform Act
Under section 202 of the Unfunded
Mandates Reform Act, signed into law
on March 22, 1995, the EPA must
prepare a budgetary impact statement to
accompany any proposed or final rule
that includes a Federal mandate that
may result in estimated costs to State,
local, or tribal governments in the
aggregate, or to the private sector, of
$100 million or more. Under section
205, the EPA must select the most cost
effective and least burdensome
alternative that achieves the objectives
of the rule and is consistent with
statutory requirements. Section 203
requires the EPA to establish a plan for
informing and advising any small
governments that may be significantly
affected by the rule. The EPA has determined that today’s
action does not include a Federal
mandate that may result in estimated
costs of $100 million or more to either
State, local, or tribal governments in the
aggregate, or to the private sector.
Therefore, the requirements of the
Unfunded Mandates Reform Act do not
apply to this action.

E. Regulatory Review
In accordance with sections 112(d)(6)
and 112(f)(2) of the Act, this regulation
will be reviewed 8 years from the date
of promulgation. This review may
include an assessment of such factors as
evaluation of the residual health risk,
any overlap with other programs, the
existence of alternative methods of
control, enforceability, improvements in
emission control technology and health
data, and the recordkeeping and
reporting requirements.

F. Submission to Congress and the
General Accounting Office
Under 5 U.S.C. 801(a)(1)(A) as added
by the Small Business Regulatory
Enforcement Fairness Act of 1996, the
EPA submitted a report containing the
final amendments and other required
information to the U.S. Senate, the U.S.
House of Representatives, and the
Comptroller General of the General
Accounting Office prior to publication
of the amendments in today’s Federal
Register. This rule is not a “major rule”
as defined by 5 U.S.C. 804(2).

List of Subjects in 40 CFR Part 63
Environmental protection, Air
pollution control, Hazardous
substances, Petroleum bulk stations and
terminals, Reporting and recordkeeping
requirements.

Carol M. Browner,
Administrator.

For the reasons set out in the
preamble, part 63 of chapter I of title 40
of the Code of Federal Regulations is
amended as follows:

PART 63—NATIONAL EMISSION
STANDARDS FOR HAZARDOUS
AIR POLLUTANTS FOR SOURCE
CATEGORIES

1. The authority citation for part 63
continues to read as follows:

Authority: 42 U.S.C. 7401 et seq.

2. Section 63.420 is amended by
revising the equation and the terms
“CF”, “CE”, “Q” and “EF” in paragraph
(a)(1), and by adding the term “OE” to
the list in paragraph (a)(1) to read as
follows:

§63.420 Applicability.

(a) * * *

CF=1.0 for bulk gasoline terminals and
pipeline breakout stations that
handle reformulated or oxygenated
gasoline containing 7.6 percent by
volume or greater MTBE;

CE=control efficiency limitation on
potential to emit for the vapor
processing system used to control
emissions from fixed-roof gasoline
storage vessels [value should be
added in decimal form (percent
divided by 100)];

Q=gasoline throughput limitation on
potential to emit or gasoline
throughput limit in compliance
with paragraphs (c), (d), and (f) of
this section (liters/day);

EF=emission rate limitation on potential
to emit for the gasoline cargo tank
loading rack vapor processor outlet
emissions (mg of total organic
compounds per liter of gasoline
loaded);

OE=other HAP emissions screening
factor for bulk gasoline terminals or
pipeline breakout stations (tons per
year). OE equals the total HAP from
other emission sources not
specified in parameters in the
equations for EF or EF. If the value
of 0.04(OE) is greater than 5
percent of either EF or EF, then
paragraphs (a)(1) and (b)(1) of this
section shall not be used to
determine applicability; * * *

* * * * *

(b) * * *

E =CF [6.7(T_F(1-CE)+
0.21(T_F)+0.093(T_E)+0.1(T_I)
+5.31×10
-6(C)+KQ)+0.04(OE);

where:

EP=emissions screening factor for
pipeline breakout stations,
and the definitions for CF, T_F, CE, T_E,
T_ES, T_I, C, and OE are the same
as provided in paragraph (a)(1)

3. Section 63.420 is amended in
paragraph (b)(1) by revising the
equation and the text following the
equation to read as follows:

§63.420 Applicability.

(a) * * *

(b) * * *

E =CF[0.59(T_F(1-CE)+0.17
(TE)+0.08(T_E)+0.038(T_I)+8.5×10
-6(C)+KQ)+0.04(OE)

* * * * *

CF=0.161 for bulk gasoline terminals and
pipeline breakout stations that
do not handle any reformulated or
oxygenated gasoline containing 7.6
percent by volume or greater methyl
tert-butyl ether (MTBE), OR

4. Section 63.420 is amended by
revising paragraph (f) to read as follows:

§63.420 Applicability.

(f) Upon request by the Administrator,
the owner or operator of a bulk

gasoline terminal or pipeline
breakout station subject to the provisions of any
paragraphs in this section including, but
not limited to, the parameters and assumptions used in the applicable equation in paragraph (a)(1) or (b)(1) of this section, shall demonstrate compliance with those paragraphs.

5. Section 63.421 is amended by adding in alphabetical order definitions for “bulk gasoline terminal” and “limitation(s) on potential to emit” to read as follows:

§ 63.421 Definitions.

Bulk gasoline terminal means any gasoline facility which receives gasoline by pipeline, ship or barge, and has a gasoline throughput greater than 75,700 liters per day. Gasoline throughput shall be the maximum calculated design throughput as may be limited by compliance with an enforceable condition under Federal, State or local law and discoverable by the Administrator and any other person.

§ 63.428 Reporting and recordkeeping.

(g) Each owner or operator of a bulk gasoline terminal or pipeline breakout station subject to the provisions of this subpart shall include in a semiannual report to the Administrator the following information, as applicable:

(h) Each owner or operator of a bulk gasoline terminal or pipeline breakout station subject to the provisions of this subpart shall submit an excess emissions report to the Administrator in accordance with § 63.10(e)(3), whether or not a CMS is installed at the facility. The following occurrences are excess emissions events under this subpart, and the following information shall be included in the excess emissions report, as applicable:

§ 180.473 Glufosinate ammonium; tolerances for residues.

DEPARTMENT OF THE INTERIOR

Bureau of Land Management

43 CFR Part 3800

Mining Claims Under the General Mining Laws; Surface Management

AGENCY: Bureau of Land Management, Interior.

ACTION: Final rule.

SUMMARY: The Bureau of Land Management (BLM) is amending its surface management regulations at 43 CFR subpart 3809. The final rule requires submission of financial guarantees for reclamation of all hardrock mining operations greater than casual use, increases the types of financial instruments acceptable to satisfy the requirement for a financial guarantee, and amends the noncompliance section of the regulations to require the filing of plans of operations by operators who have a record of noncompliance. In addition, the final rule removes section 3809.1–8 on existing operations, which is no longer applicable, because all activities that were in operation in 1980 and continue in operation have now complied with this section.

EFFECTIVE DATE: March 31, 1997.

ADDRESSES: Inquiries or suggestions should be sent to the Solid Minerals Group at Director (320), Bureau of Land Management, Room 501 LS, 1849 C Street, N.W., Washington, D.C. 20240.

FOR FURTHER INFORMATION CONTACT: Richard Deery, (202) 452–0350.

SUPPLEMENTARY INFORMATION: On July 11, 1991 (56 FR 31602), BLM published a proposed rule to require submission of financial guarantees for reclamation for all hardrock mining operations greater than casual use, to designate additional financial instruments that would satisfy the requirement for a financial guarantee, and to amend the noncompliance section of the regulations to require the filing of plans of operations by operators who have a record of noncompliance. The extended 90-day comment period expired on October 9, 1991. The BLM received 218 comments on the proposed rule, including 3 citizen petitions with numerous signatures. Of these comments, 58 were from public interest groups, 51 were from business entities or associations, 22 were from government agencies, and 135 were from individuals, not including the petitions. All of the comments were...
