NUCLEAR REGULATORY COMMISSION

[Docket No. 247]

Consolidated Edison Company of New York; Notice of Consideration of Issuance of Amendment To Facility Operating License, Proposed No Significant Hazards Consideration Determination, and Opportunity for a Hearing

The U.S. Nuclear Regulatory Commission (the Commission) is considering issuance of an amendment to Facility Operating License No. DPR-

26 issued to Consolidated Edison Company of New York, Inc. (Con Edison or the licensee) for operation of the Indian Point Nuclear Generating Station Unit 2 (IP2) located in Westchester County, New York.

The proposed amendment would permit a one-time only extension of the current steam generator tube inservice inspection cycle. Technical Specification 4.13A.2.a requires steam generator tube examinations to be conducted at not less than 12 months and no later than 24 calendar months after the previous examination. Based upon the last examination during the 1995 refueling outage being completed on April 14, 1995, operation of the unit after April 14, 1997, would not be permitted. Con Edison proposes a one-time extension of the examination requirements, scheduled to be conducted during the 1997 refueling outage, to commence no later than May 2, 1997. Before issuance of the proposed license amendment, the Commission will have made findings required by the Atomic Energy Act of 1954, as amended (the Act) and the Commission's regulations.

The Commission has made a proposed determination that the amendment request involves no significant hazards consideration. Under the Commission's regulations in 10 CFR 50.92, this means that operation of the facility in accordance with the proposed amendment would not (1) involve a significant increase in the probability or consequences of an accident previously evaluated; or (2) create the possibility of a new or different kind of accident from any accident previously evaluated; or (3) involve a significant reduction in a margin of safety. As required by 10 CFR 50.91(a), the licensee has provided its analysis of the issue of no significant hazards consideration, which is presented below:

The proposed changes do not involve a significant hazards consideration since:

1. The proposed change does not involve a significant increase in the probability or consequences of an accident previously evaluated.

The proposed change does not involve any physical modifications to the plant or modification in the methods of plant operation which could increase the probability or consequences of previously evaluated accidents. The proposed change permits a one-time only extension of the current steam generator tube inservice inspection cycle. This extension would allow the steam generator tube examinations to be conducted during the 1997 refueling outage which will commence no later than May 2, 1997. The basis for acceptance of this increase in the technical specification limit is
