VSI's area of planned activity is to define, develop, ratify, test and promote open interface specifications which will facilitate the mix-and-match of intellectual property blocks from different sources onto a single silicon chip—much like combining various integrated circuits or other components onto a printed circuit board. By defining "Virtual Socket Interfaces" (hence the name "VSI"), VSI hopes to enable the use or reuse of intellectual property blocks from different sources in the design of "systems-chips", thereby shortening the design cycle and promoting the growth of the systems-chips industry. These open specifications will be designed to allow the mix-and-match of system-level-module intellectual property (including analog, digital, mixed signal and software intellectual property), as it relates to the design and development of systems-chips.

Membership in the VSI Alliance will be open to any individual or entity that is interested in supporting the objectives and goals of VSI and subscribes to its bylaws and membership agreements.
