

exposure, which would be below the RfD.

Generally, EPA has no cause for concern if the total aggregate exposure is less than the RfD, therefore it may be concluded that there is a reasonable certainty of no harm will result to infants and children.

#### E. Conclusions

The available data indicate that there is reasonable certainty of no harm from the incremental exposure resulting from the potential residues of cyfluthrin from the use of Baythroid 2, EPA Reg. No. 3125-351, on citrus. Thus in accordance with the provisions of the FFDCA as amended August 3, 1996, regulations to establish the tolerance and maximum residue levels to support this use can be effected.

#### F. International Tolerances

There are no Codex maximum residue levels (MRLs) established for residues of cyfluthrin on citrus fruits or any resulting processed products.
