NUCLEAR REGULATORY COMMISSION

[Docket No. 50-318]

Baltimore Gas and Electric Company; Notice of Consideration of Issuance to Amendment to Facility Operating License, Proposed no Significant Hazards Consideration Determination, and Opportunity for a Hearing

The U.S. Nuclear Regulatory Commission (the Commission) is considering issuance of an amendment to Facility Operating License No. DPR-69 issued to Baltimore Gas and Electric Company (BGE), for operation of the Calvert Cliffs Nuclear Power Plant, Unit No. 2, located in Calvert County, Maryland.

The proposed amendment would allow a modification to the Unit 2 Service Water System (SWS) which constitutes an unreviewed safety question as described in 10 CFR 50.59. BGE proposes to add a nitrogen system to the SWS head tanks to increase the pressure in the SWS by approximately 15 psi. This proposed modification is in response to the water hammer concerns expressed in Generic Letter (GL) 96-06. The concern of the GL was that a loss-of-offsite power would disable the SWS pumps and stop flow in the SWS for a short time. If this situation should occur concurrent with a loss-of-coolant
