Proposed Project

1. Survey to Evaluate the 1989 Revisions of the U.S. Standard Certificates of Live Birth and Death and the U.S. Standard Report of Fetal Death—New—OMB approved the information collections for the evaluation of the 1978 revisions of the U.S. standard certificates and reports under OMB No. 0937-0114. The standard certificates are used by state vital statistics offices as models in developing their own birth, death, and fetal death reporting forms. Data

obtained from these reporting forms in each individual state are used to compile national vital statistics. The standard certificates are the principle means of achieving uniformity of information upon which national vital statistics are based. To ensure that the standard certificates meet the various needs for which they are designed, it is essential that they be evaluated and revised periodically. This information collection will be used to evaluate the items on the 1989 revisions of the standard certificates and to determine if

there is other information that should be included on the standards that is needed for relevant public health research. Respondents will include individuals and organizations who are involved in the completion of vital records or who utilize vital statistics data and have an interest in the content of the standard certificates. The information collected will be used by a group of consultants to determine what changes may be needed in the 1989 standard certificates. The annual total burden hours are 3,000.
