

Will County, Illinois: Site 1 (1,200 acres)—refinery complex located at I-55 and Arsenal Road, on the Des Plaines River, 8 miles south of Joliet, some 50 miles southwest of Chicago; Site 2 (94 acres)—Mokena storage facility (780,000 barrel capacity) located at 183rd St and Wolf Road, some 25 miles southwest of Chicago. The refinery (210,000 BPD) is used to produce fuels and petrochemical feedstocks. Fuel products include gasoline, jet fuel, distillates, residual fuels, naphthas and motor fuel blendstocks. Petrochemical feedstocks and refinery by-products include methane, ethane, propane, propylene, butane, butadiene, benzene, toluene, xylene, petroleum coke, carbon black oil and sulfur. Some 3.6 percent of the crude oil (90 percent of inputs), and some motor fuel blendstocks are sourced abroad.

Zone procedures would exempt the refinery from Customs duty payments on the foreign products used in its exports. On domestic sales, the company would be able to choose the Customs duty rates that apply to certain petrochemical feedstocks and refinery by-products (duty-free) by admitting incoming foreign crude oil and natural gas condensate in non-privileged foreign status. The duty rates on inputs range from 5.25¢ barrel to 10.5¢ barrel. The application indicates that the savings from zone procedures would help improve the refinery's international competitiveness.

In accordance with the Board's regulations, a member of the FTZ Staff has been designated examiner to investigate the application and report to the Board.

AGENCY: Import Administration, International Trade Administration, Department of Commerce.

EFFECTIVE DATE: April 17, 1997.

FOR FURTHER INFORMATION CONTACT: Brian C. Smith or Michelle A. Frederick, Import Administration, International Trade Administration, U.S. Department of Commerce, 14th Street and Constitution Avenue, NW., Washington, DC 20230; telephone: (202) 482-1766, or (202) 482-0186, respectively.

Scope of Order

The products covered by this order are brake rotors made of gray cast iron, whether finished, semifinished, or unfinished, ranging in diameter from 8 to 16 inches (20.32 to 40.64 centimeters) and in weight from 8 to 45 pounds (3.63 to 20.41 kilograms). The size parameters (weight and dimension) of the brake rotors limit their use to the following types of motor vehicles: automobiles, all-terrain vehicles, vans and recreational vehicles under "one ton and a half," and light trucks designated as "one ton and a half."

Finished brake rotors are those that are ready for sale and installation without any further operations. Semifinished rotors are those on which the surface is not entirely smooth, and has undergone some drilling. Unfinished rotors are those which have undergone some grinding or turning.

These brake rotors are for motor vehicles, and do not contain in the casting a logo of an original equipment manufacturer (OEM) which produces vehicles sold in the United States (e.g., General Motors, Ford, Chrysler, Honda, Toyota, Volvo). Brake rotors covered in this investigation are not certified by OEM producers of vehicles sold in the United States. The scope also includes composite brake rotors that are made of gray cast iron, which contain a steel
