NUCLEAR REGULATORY COMMISSION

[Docket Nos. 50-269, 50-270, 50-287]

Oconee Nuclear Station Units 1, 2, and 3; Notice of Consideration of Issuance of Amendments to Facility Operating Licenses, Proposed No Significant Hazards Consideration Determination, and Opportunity for a Hearing

The U.S. Nuclear Regulatory Commission (the Commission) is considering issuance of amendments to Facility Operating License Nos. DPR-38, DPR-47, and DPR-55 issued to Duke Power Company (the licensee) for operation of the Oconee Nuclear Station Units 1, 2, and 3 located in Seneca, South Carolina.

The proposed amendments would add a License Condition to address a revision to the Oconee Updated Final Safety Analysis Report to clarify the main turbine-generated missile protection criteria. The licensee has determined that this clarification is necessary in order to resolve an unreviewed safety question (USQ) related to the design of certain portions of the low pressure service water system piping as it relates to the separation criteria of Regulatory Guide 1.115, Revision 1, and Section 3.5.1.3 of NUREG-0800.

Oconee Unit 2 is currently in a forced outage for repairs on the High Pressure Injection System. It is the staff's position that a plant that is shut down may not restart if a USQ exists. The USQ associated with high trajectory turbine missiles was self-identified within the last 2 weeks as a result of engineering design reviews associated with the Oconee Service Water Project. Prior to the forced shutdown of Unit 2, the licensee aggressively developed a proposed license amendment to resolve the issue. Therefore, the issue could not have been resolved prior to the shutdown and must be resolved on an exigent basis so that it does not delay
