

of this reassessment are set forth in the report entitled "Food and Drug Administration Nutrition Labeling Information Study—December 1996, Raw Fruit/Vegetables and Raw Fish."

Based upon the results of this study that was conducted under contract, FDA once again concludes that substantial compliance by food retailers in providing nutrition labeling information for raw fruit and vegetables and for raw fish has been met. On a store count basis, more than 70 percent (73.0 percent for raw produce and 71.2 percent for raw fish) of the sampled stores selling raw fruit, vegetables, and fish voluntarily provided nutrition labeling information in an appropriate manner for these raw foods.

Data were also reported on an all commodity volume (ACV) basis. ACV data are weighted estimates that represent annual store sales volumes and reflect the percent of the market serviced. ACV data approximate more representatively than store counts the percent of the population exposed to the nutrition labeling information. ACV values were higher than those for sampled store counts.

For raw fruit/vegetables, stores in compliance account for 77.8 percent of the annual sales of all food stores. For raw fish, stores in compliance account for 74.0 percent of the annual sales of all food stores. A possible interpretation of these data is that about three-fourths of U.S. consumers are exposed to nutrition labeling information for raw fruit, vegetables, and fish. Because many consumers shop in more than one store, the actual level of consumer exposure is most likely to be even higher.

FDA will again survey retail stores in 1999 to determine whether substantial compliance in the provision of voluntary labeling information for raw fruit, vegetables, and raw fish continues to exist. If, at that time, substantial compliance is not met, the agency will propose to modify § 101.43 to make the program mandatory.

Dated: April 30, 1997.

William K. Hubbard,

Associate Commissioner for Policy Coordination.
